(Revised 9/10/2008 OMB)

ANALYSIS CONTINUATION

education debt load data is available, the estimate incorporates a statewide average debt load calculated by the Institute of College Access and Success, which regularly publishes this data on a state-by-state basis. For the most recent reported year, average education debt amount was $25,000.

For the purpose of calculating annual program costs, the assumption is that approximately 5% of annual openings in the specified professions would be filled by individuals who: are Alaska residents, have qualifying debt, and, are hired on or after July 1, 2009. Also assumed is that the majority of these individuals would be employed in urban rather than rural locations resulting in the benefits being paid out over a longer period of time.

For FY10, assumes 419 participants at cost of $2.1 million
For FY11, assumes 838 participants at cost of $4.3 million
For FY12, assumes 1,257 participants at cost of $6.4 million
For FY13, assumes 1,676 participants at cost of $8.5 million
For FY14, assumes 2,095 participants at cost of $10.6 million
For FY15, assumes 2,514 participants at cost of $12.8 million

No adjustments are assumed for increases in average debt load or annual openings for this period. The interest rate on the debt is assumed to be 6.8% which is the standard rate on the unsubsidized federal Stafford Loan. Assuming repayment occurs over a reduced period of 6 years (normal repayment is ten years), total to be repaid per individual is $30,500.

With respect to program administrative costs, these estimates assume that by developing a web-based program management tool, the program can be supported by one mid-level, Range 13 administrative position to manage intake and processing of applications, as well as to serve as liaison with program participants and their employers.

The costs estimate relating to the capital appropriation is based upon the commission's experience developing a web-based program management tool for the state's need-based grant program.

CS FOR HOUSE BILL NO. 58( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES THOMAS, WILSON AND MILLETT, Harris, Ramras, Kerttula, Johnson

A BILL

FOR AN ACT ENTITLED

"An Act relating to a student loan repayment program for occupations or fields in which a shortage of qualified employees exists; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

FINDINGS; PURPOSE. (a) The legislature finds that a shortage of qualified employees in certain occupations and fields exists in this state.

(b) The purpose of this Act is to establish the Alaska qualified employees recruitment loan repayment program to provide financial incentives through the repayment, in whole or part, by the state of education loans from the corporation for qualified applicants upon the completion of a term of employment in the state.

*** Sec. 2.** AS 14.42.030(b) is amended to read:

(b) The commission shall

(1) administer the financial aid and interstate education compact

programs under AS 14.43.091 - 14.43.920 and 14.43.990, and AS 14.44;

(2) administer the provisions of AS 14.48 concerning regulation of postsecondary educational institutions;

(3) resolve disputes under a consortium or other cooperative agreement between institutions of public and private higher education in the state; [AND]

(4) serve as the state agency required under 20 U.S.C. 1001 - 1155; **and**

(5) perform duties assigned under AS 14.43.800 - 14.43.849 (Alaska qualified employee recruitment loan repayment program).

*** Sec. 3.** AS 14.42.040 is amended by adding a new subsection to read:

(c) The executive director of the commission shall administer the Alaska qualified employee recruitment loan repayment program under AS 14.43.800 - 14.43.849 in accordance with standards and eligibility criteria set by the commission.

*** Sec. 4.** AS 14.42.295(a) is amended to read:

(a) The board may elect to pay the state a return of contributed capital, or a dividend, for each base fiscal year that the corporation's net income equals or exceeds $2,000,000. The payment may not be less than 10 percent nor more than 35 percent, as approved by the board, of the corporation's net income for the base fiscal year, and is subject to the provisions of any applicable bond indentures of the corporation. If a payment is authorized under this section, payment must be made available by the corporation before the end of the fiscal year in which payment has been authorized. The corporation shall notify the commissioner of revenue when the amount of the payment authorized under this section is available for appropriation. **The money made available under this subsection may be appropriated for the Alaska qualified employee recruitment loan repayment program under AS 14.43.800 - 14.43.849.**

*** Sec. 5.** AS 14.43 is amended by adding new sections to read:

Article 11A. Alaska Qualified Employee Recruitment Loan Repayment Program.

Sec. 14.43.800. Program established. (a) There is established the Alaska qualified employee recruitment loan repayment program to provide financial incentives for qualified employees in certain occupations and fields to work in this

state through the repayment of education loans.

(b) The program is not a financial obligation of the corporation.

Sec. 14.43.810. Alaska qualified employee recruitment loan repayment program account. (a) The Alaska qualified employee recruitment loan repayment program account is created in the general fund. The account shall be used for the repayment of education loans from the corporation under the program and to pay for the costs of administering the program.

(b) The account includes money that the legislature appropriates from the corporation's dividend to the state under AS 14.42.295, the interest and earnings on money that are appropriated to the account, and funds contributed from federal or other sources and appropriated by the legislature to the account. If money available is inadequate to finance the requests from eligible applicants under this program for a fiscal year, additional money may be requested from the general fund and appropriated to the account for the program.

Sec. 14.43.820. Administration. (a) The Alaska qualified employee recruitment loan repayment program shall be administered by the executive director using

(1) the standards and eligibility criteria of the program established by the commission under AS 14.43.830; and

(2) the financial management standards for proper administration of the Alaska qualified employee recruitment loan repayment program account as established by the commission.

(b) The commission may adopt regulations to carry out its duties and the executive director's duties under the program.

Sec. 14.43.830. Eligibility criteria. (a) An applicant for loan repayment under AS 14.43.800 - 14.43.849 must meet the following criteria:

(1) the applicant is a resident of the state at the time of submitting the application and during the loan repayment period;

(2) the applicant was hired as a qualified full-time employee in an occupation or field specified under (b) of this section in this state on or after July 1, 2009, and within four years after attaining a degree that qualifies the applicant for the

specified occupation or field;

(3) the applicant is employed as a qualified employee in a specified occupation or field in this state during the loan repayment period;

(4) the applicant owes an outstanding education loan debt obligation to the corporation;

(5) the applicant shall agree to fulfill any requirement of the program.

(b) An applicant under this section must have completed a postsecondary program that qualifies the applicant to be employed and licensed in the state, if a license is required by state law, in an occupation or field specified by the Department of Labor and Workforce Development as having a shortage of qualified employees in the state.

Sec. 14.43.840. Conditions and limitations on loan payments. (a) The executive director shall repay a loan under this section directly to the corporation on annually over a period of not more than six years. The maximum annual repayment benefit under this section is

(1) for qualified employment in rural areas of the state,

(A) after one year of employment, 25 percent of the outstanding principal plus accrued interest;

(B) after two years of employment, 25 percent of the outstanding principal plus accrued interest;

(C) after three years of employment, 25 percent of the outstanding principal plus accrued interest;

(D) after four years of employment, the remaining outstanding principal plus accrued interest;

(2) for employment in areas of the state that are not rural,

(A) after one year of employment, 16.67 percent of the outstanding principal plus accrued interest;

(B) after two years of employment, 16.67 percent of the outstanding principal plus accrued interest;

(C) after three years of employment, 16.67 percent of the outstanding principal plus accrued interest;

(D) after four years of employment, 16.67 percent of outstanding principal plus accrued interest;

(E) after five years of employment, 16.67 percent of the outstanding principal plus accrued interest;

(F) after six years of employment, the remaining outstanding principal plus accrued interest.

(b) A repayment benefit must be conditioned on the availability of money for the program. The executive director shall monitor the outstanding repayment benefits made under the program to ensure the adequacy of the balance of the account to meet program needs. If the executive director finds that the balance of the account is

(1) sufficient to pay for existing repayment benefits but insufficient for new or pending applicants, the executive director shall pay existing benefits and shall approve repayment benefits available for new or pending applicants according to criteria approved by the commission; or

(2) insufficient to pay for existing repayment benefits, the executive director shall prorate the money available in the account among all existing benefit recipients and shall suspend the acceptance of new applications and the processing of pending applications under the program.

(c) An education loan or interest on a loan is not eligible for repayment under the program if the loan or interest is eligible for repayment under another source, including another loan repayment or forgiveness program.

Sec. 14.43.849. Definitions. In AS 14.43.800 - 14.43.849, unless the context otherwise requires,

(1) "account" means the Alaska qualified employee recruitment loan repayment program account established in AS 14.43.810;

(2) "executive director" means the executive director of the commission;

(3) "program" means the Alaska qualified employee recruitment loan repayment program;

(4) "rural" means a community with a population of 5,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of

1,500 or less that is connected by road or rail to Anchorage or Fairbanks.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Alaska Commission on Postsecondary Education may immediately proceed to adopt regulations necessary to implement this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2009.

*** Sec. 7.** Section 6 of this Act takes effect immediately under AS 01.10.070(c)

*** Sec. 8.** Except as provided in sec. 7 of this Act, this Act takes effect July 1, 2009.

MEMORANDUM

DATE: March 25, 2009

TO: Representative Seaton, Chair House Education Committee

FROM: Representative Thomas

RE: HB 58 Student Loan Repayment Program

Attached please find three potential amendments to HB 58. I have drafted them as three separate amendments so that the committee may accept or reject each of the proposals individually. The amendments are as follows:

1.) Amendment #1 changes the eligibility criteria to include applicants who work in fields that have been determined jointly by the Commissioner of the Department of Administration and the Commissioner of Labor and Workforce Development as having a shortage of qualified employees working for the state.

I have worked with both commissioners on this amendment and we are in agreement that this is the proper way to proceed at this time. This allows for both departments to work together in determining the employment needs of the state government and also allows for the eligibility to change as the needs of the state change. This is also consistent with the findings of the working group established by A.O. 237 (also attached) which state that a loan forgiveness/repayment program may help in recruitment for state jobs.

2.) Amendment #2 establishes a cap of $50,000 for the amount of the repayment benefit that each student may receive. For most applicants this will either be the entire amount of their student loans or a good chunk of it. It will also allow the state to better estimate how much a program like this will cost.

3.) Amendment #3 reaffirms that this program is not an entitlement and the commission may cancel or modify a person's repayment benefit at any time. This language was suggested by the Post Secondary Education Commission in order to make it clear that they are not obligated to pay a benefit where there are prohibitive circumstances. This program is subject to appropriation by the legislature and I want to make it clear that should the

legislature fail to make an appropriation, the commission is then not obligated to continue with the program if there is no money to fund the program.

Further, after discussions with the commission, the point was well made that if the needs of the state change and they are locked in to making payments to students for positions that are no longer lacking, the whole impetus of the bill may be lost. While they are using up funds for positions that are no longer in shortage, they may end up having to short fund applicants who are filling positions that are currently in high demand.

This amendment makes it clear that the commission is under no obligation to give out a repayment benefit where there is no longer a need or where there is no longer funding available.

Executive Working Group
FINAL Report to Governor Sarah Palin
Administrative Order No. 237
Recruitment and Retention of State Employees

I. INTRODUCTION:

Governor Sarah Palin signed Administrative Order No. 237 (AO 237) August 24, 2007. The order established an Executive Branch Working Group to address issues concerning recruitment and retention of State employees in the executive branch. The Working Group was tasked with researching and addressing the issue and providing the Governor with recommendations concerning the findings of the order.

A. The Working Group:

A Working Group, composed of seven members appointed by the commissioner of the Department of Administration was assembled to address recruitment and retention issues. The Working Group members included:

- Department of Administration, Commissioner Annette Kreitzer, chairman;
- Office of Management and Budget, Director Karen Rehfeld;
- Department of Health and Social Services, Commissioner Karleen Jackson;
- Department of Public Safety, Commissioner Walt Monegan;
- Department of Environmental Conservation, Commissioner Larry Hartig;
- Department of Labor and Workforce Development, Commissioner Click Bishop;
- Department of Transportation and Public Facilities, Commissioner Leo von Scheben.

The members' combined experience and accumulated knowledge from 75 plus years working in government service and over 75 years in the private sector ensured a broad-based approach to examining the recruitment and retention situation.

Meetings:
The Working Group held a total of four meetings during September and October. In the short time the Group met, we reviewed current State employee turnover rates that were at 16% in 2006, representing the mid-range for states responding to our request for information. As with other states and the private sector, more troubling is the number of State

employees eligible to retire now and in the next five years, and what that might portend for the State's ability to retain experienced, professional employees to balance and mentor less senior employees.

B. Input:

The Working Group polled the Commissioners from each State department for their views on the current status of recruitment and retention of State employees. Each labor union business manager was contacted and requested to give input. Hiring managers throughout State government, who are on the front lines of hiring decisions and frustrations with the current system of employee recruitment, were canvassed for their ideas and comments. The information gathered from the responses was compiled into a spread sheet which organized the data into categories.

The Working Group specifically requested suggestions without a monetary component, but recognizes there are some solutions that are in the monetary category. The State is faced with employee retention issues on both ends of the spectrum from recruitment to retaining knowledgeable, professional employees. The Working Group identified suggestions to quickly impact a majority of problems brought on by a tight salary schedule and personnel rules. Negotiating fair labor contracts is one piece of the financial puzzle, removing an outdated "longevity" step concept is another. These details are included under, "E. Financial Incentives".

C. Supplemental Data:

Appendices include Administrative Order No. 237, State Employee Unions summary sheet and statistics about State employees excluding the University of Alaska, the Legislature and the Court System. Our efforts were focused only on the Executive Branch departments represented at the Cabinet level.

II. IDENTIFY ISSUES AND PROPOSALS:

AO No. 237 charged the Working Group with identifying the recruitment and retention situation, the costs involved in training, changes that will allow the State to effectively serve its citizens while limiting expansion, opportunities for partnering and cross-training and cost neutral or low-cost solutions to increase worker satisfaction.

A. Costs of training new State employees:

Training costs are a significant expenditure for State agencies.

- A recent federal Department of Labor Study shows that turnover costs one-third to one-half times the annual salary of the employee, not including productivity loss.
- The State must clearly define a training/education track tied to proficiency and advancement in a job series. Some level of mandatory supervisory or other training might be necessary.
- The State may need to provide education incentives and professional development in an effort to provide career-long learning opportunities. The practice of providing education incentives among state agencies is currently inconsistent. The Working Group requested and is awaiting a survey of all departments showing what training and education the State currently pays for and what departments believe would be reasonable for the State to undertake.
- **We recommend analyzing the cost of a tuition reimbursement and student loan forgiveness program with payback obligations tied to time on the job, based on a sliding percentage from zero to five years.**
- Many departments have commented that the State has become a training ground for other prospective employers. By retaining employees longer with fair contracts and other potential financial considerations, we will lower our total cost of training.

B. Changes that restrain growth of government:

Even with significantly higher oil prices, today's production is only about one-third of what it used to be.

- The State must focus on the highest priorities by division and department to live within our means.
- Contracting some work out where appropriate, should be considered. This currently requires a feasibility study and could require revision to labor contract language.
- The State spends hundreds of millions of dollars on technology to improve and make public documents more accessible. Some of this technology will automate processes meaning that fewer employees will be needed to manually enter data like timesheets. The State needs to plan with these employees an exit strategy to other available State jobs.

C. Opportunities to cross-train within and encourage efficiencies:

The State cannot continue to heavily rely on retirees to return to work as a stop-gap measure to training new employees.

- Develop and implement knowledge transfer plans for soon to be retiring employees.
- High turnover positions must have a "desk manual" to ensure that the most basic information of the position is available when a new employee is hired. Documenting a high turnover position's responsibilities cuts down on the amount of time spent explaining the duties.
- From hiring managers on up, there must be a frank understanding that many entry level jobs will have high turnover. Accepting this and planning for it, while encouraging entry level employees to move up on a State career ladder, will help retention overall.

D. Cost-neutral or low-cost solutions to increase workplace satisfaction:

The State should continue to encourage work/life scheduling flexibility. Hiring managers particularly noted these suggestions related to flexible work schedules and recruitment efforts:

- Broader use of alternate work weeks (4-10's, 9-80's). Some departments are using flexible work schedules but this could be done on a more consistent basis.
- Encourage consideration of broader use of telecommuting and job sharing agreements. An approach could require employees to complete one year on the job in the office location, and be in the office several days a week as part of a telecommuting plan.
- Establish employee recognition and appreciation programs as part of a statewide culture. Department programs should complement the Governor's Statewide Denali Peak Performance Program. Many Commissioners commented that they look for opportunities to recognize excellent customer service or project work by employees.
- Initiate a health and fitness program as part of the State health benefit package. This could pay for itself over time through healthier employees, less sick leave usage, etc. We will need to work with and coordinate with union health trusts on this issue.
- Provide sabbaticals without a break in service or interruption of health benefits. For example, one month after 10 years, three months after 20 years. These could be used in conjunction with

annual leave for continuing education, travel, or just "recharging their batteries".

III. EVALUATE AND RECOMMEND:

The Working Group was charged with evaluating the hiring criteria and practices, education requirements and minimum qualifications, recruitment tools and whether there are ways to improve upon the merit principle to provide better incentives and retain quality employees.

A. Current hiring criteria and practices:

It will take time to inculcate the ideas we believe will result in efficiencies in the State's hiring practices. The processes in place have resulted from years of patchwork attempts to incrementally fix personnel system deficiencies.

- Revamp the classification process and review adequacy of classification resources in the Division of Personnel and Labor Relations to get through all current and backlogged requests and to be more responsive and proactive to workforce changes.
- Conduct a review of the classification system. Review all job classes, update and consolidate with more generic job classes. Minimize or eliminate single-position job classifications.
- Solicit input from younger workers on what it takes to attract, retain, and satisfy the new generation of workers.
- Encourage a broader use of flexibly classed positions, with easier movement between levels in a job series (i.e. I-II-III). (Current list is included in appendices.)
- Review the effectiveness of the HR integration. This should be scheduled in 2008. There continues to be some concern about the impact of the Human Resources integration and its impact on some departments.

B. Current education requirements and minimum qualifications for state employment:

The State needs to be more flexible in its efforts to attract qualified job candidates. The Working Group acknowledges that not every location in the State is having the same challenges drawing applicants.

- Change minimum qualifications to broaden applicant pools. This is not a "dumbing down" of the applicant pools as suggested by some, but a more strategic approach to actual job requirements.

Some examples include removal of a specific degree requirement (i.e. accounting, biology), and replacing with a general degree with a certain number of field-specific credit hours. Specific degree requirements could also be replaced by technical certification or demonstrated expertise. Several departments requested a minimum qualification waiver process.

C. Recruitment tools:

The Workplace Alaska recruitment portal needs to be changed to be more comparable to and competitive with links like monster.com and dice.com – this old technology is not attractive and does not present the State as a progressive, interesting employer. This change will require more planning as it will impact the Online Public Notice system.

- In the short term, we should enable applicants to post resumes on Workplace Alaska similar to other employment websites.
- Each department should have a web link to jobs available on its main website.
- Formalize employee surveys; upon initial hire, after one month, and/or at a minimum an exit survey upon termination. Some suggested making exit interviews mandatory.
- Encourage broader use of internship program. Partner with the University of Alaska on an apprenticeship program. Streamline internship classification with greater flexibility in I-IV levels.

D. Improvements to Merit System:

Efforts should be made to recognize exceptional work and eliminate barriers to employment and promotional opportunities.

- Provide more discretion for increased pay based on performance. Base performance incentives and service steps on the performance evaluations. Use steps (b) through (f) for performance incentives and steps beyond (f) for service steps. This recommendation cannot work if there is not a concomitant effort to prepare proper evaluations.
- Eliminate pay barriers that discourage employees from taking promotions, i.e. not enough pay for the added work and responsibility, loss of over-time pay, if applicable, etc.
- Expand our ability to promote existing employees. In some cases it is easier to hire a new State employee at an advanced step (based on recruitment difficulty or exceptional qualifications).

- Analyze the effectiveness of continued use of market-based pay adjustments. This process addresses specific pay issues but disrupts internal alignment and creates supervisor differentials.

E. Financial Incentives:

In certain areas, the State has become a training ground for the federal government. There is a 24% Alaska cost of living differential between the Federal and State governments that exacerbates this problem.

State labor contracts recently concluded will mean:

1. The 7,920 members of the General Government Unit (GGU) of Alaska State Employees Association will receive a 4% retroactive pay increase contingent on legislative appropriation. The 4% is retroactive to July 1, 2007, followed by 3% increases in FY08 and FY09.
2. The Teachers' Education Association of Mt. Edgecumbe ratified an agreement of a 3% retroactive raise in FY07, followed by 3% in FY08 and 3% in FY09.
3. Labor, Trades and Crafts, Local 71, has ratified an agreement for a two-year contract which includes a 5% increase in FY08 and 2% increase in FY 09. (about 1600 members)
4. Alaska Public Employees Association, bargaining on behalf of the Confidential Employees Association (195 members) ratified an agreement with the State on a three-year contract beginning July 1, 2007 which includes a 4% wage increase on that date, followed by a 3% increase beginning July 1, 2008 and a 3% increase beginning July 1, 2009.

In addition to the monetary components of union contracts the State is a party to, the State makes annual contributions on behalf of each employee to the Public Employee's Retirement System and the Teacher's Retirement System. In the FY09 budget, the State's share of this responsibility for all State employees (union and nonunion) is about $340 million.

The Working Group agrees that we cannot solve, in this fiscal year, all of the inequities that may have built up over time to make the State a less competitive employer. There are concrete steps that can be taken however, some of which will have long lasting effects:

- Eliminate the outmoded longevity steps where employees go years without a pay adjustment. What was meant as an inducement to retain employees has become a barrier to hiring and promoting professional employees. Removing the barrier can be accomplished in some labor contracts, but the statute (AS 39.27.022) must be updated as employees hired at an advanced step are often frozen at that pay range for up to seven years since the system does not recognize private or other government experience. The removal of this barrier would allow the State to recognize experience and provide merit increments in shorter spans of time. Currently, some employees must wait four, nine and 13 years for a pay increase.
- Salaries for the so-called "non-covereds" or non-union State employees will be impacted by the above action in addition to any changes made to the statutory salary schedule to reflect changes negotiated with union employees.
- HB 98 (CHAPTER 53 SLA 05) increased salaries of commissioners among others, but neglected to include deputy commissioner salaries. For a supervisory track beginning with a new single job classification of Administrative Services Manager, which could lead to promotion to a Deputy Division Director and then to Division Director, the Working Group recommends the following structure. We also recognize that professional job classifications within each agency also provide career tracks to director and other management positions. Any changes to existing positions resulting in increases will be absorbed by existing budgets.

Position	Previous	Current	Proposed	Comment
Commissioner	28E	28-30	No change	AS 39.20.080(a)
Deputy Commissioner		28 A-F	28-29	AS 39.20.080(b) requires legislation to increase
Assistant Commissioner		27	27-28	Not widely used, but can be helpful for very large agencies (e.g., HSS)
Division Director	26	27	No change	Increased Nov. 2006
Deputy Director		23	24 or 25	Implement in FY08-no legislation required
Assistant Director		22	23	Not widely used
Admin. Services Manager/Admin Operations Mgr I-III		22-24	23	Make a single job class to progress to deputy director
Administrative Manager I-IV		15-21	No change	

F. Healthy Work Environment:

We know by surveys and studies that employees value a healthy work environment: One where they are encouraged to be proactive about their own health and if a manager, to model good health habits to their co-workers and subordinates.

This cannot be a mandate. Employees must believe this is also important to their abilities in their jobs. This effort is to support those

who willingly want to maintain or make a change in their lifestyles to a healthier one.

As the provider of health insurance coverage for active and retired State employees, the State has incentive to look for ways to encourage both populations to be proactive about fitness and good health.

Through the Alaska Retirement Management Board and the Health Benefits Evaluation Committee (created in the Supervisory Union's labor contract, specific to the 5,500 State of Alaska employees and dependents covered by the Select Benefits health plan) recommendations are coming to the Commissioner of the Department of Administration to make changes to the health plans to entice employees to use preventive health and fitness measures, to provide coverage for colorectal cancer screening for retirees, and for well baby coverage for active employees. This work will continue in conjunction with the Governor's Health Care Strategies Planning Council.

IV. Conclusion:

The State can do better as an employer. We've started down a path to improving our stature as an employer with fair union contracts and a culture of high ethical standards.

The Working Group recognizes that the State must have a plan for implementing further change and intends to continue to meet to provide a roadmap to reach our ultimate goal of regaining and maintaining our status as a competitive employer.

There are many ways the State has constrained itself as an employer through our methods of recruitment. Changes will take time, effort and a commitment from State employees to implement. We can change the current situation and do more to provide a healthy work environment for our employees.

The Working Group evaluated suggestions and comments submitted by various groups throughout the State workforce. The many responses touched on in this report serve as a starting point for State action for current employees as well as those who will work here in the future.

Some have suggested that we should immediately initiate a salary survey. It is our recommendation that we focus on changes encompassed in this report over the next one to two years, and initiate a

salary survey in 2009-10 to help analyze the effectiveness of the changes and identify additional areas needing adjustment.

We encourage all commissioners to carefully review the data available for each department to plan for pending retirements and the knowledge transfer necessary for the State to successfully continue to provide services. The Division of Personnel and Labor Relations will work to streamline this process for departments and provide guidance and tips on successful implementation.

It is imperative that we continue to engage in an open conversation about ways we can improve and continue to meet our recruitment and retention needs.

Action Plan for Administrative Order No. 237

Near Term Actions:

- Continue negotiating and settling labor contracts which are fair and sustainable.
- Prepare legislation to repeal longevity step impediments and replace with a fair alternative.
- Prepare legislation to provide greater flexibility for deputy commissioner's pay.
- Implement deputy director pay increase in FY08.
- Review the training, education and certification survey of all departments and make recommendations for FY09 or FY10.
- There continues to be some concern about the impact of the Human Resources integration and its impact on some departments. A review of the effectiveness of the HR integration should be scheduled in 2008.
- Streamline the intern program process so it is easier for students to come back to work for the State in between college sessions, and it is less cumbersome for those wanting to hire interns.
- Analyze the effectiveness of continued use of market-based pay adjustments.
- Look for opportunities to promote effective healthy living habits that employees can maintain.

Within two years:

- Request funding in the FY09 budget to perform a geographic differential study in accordance with AS 39.27.030.

- Review the history of tuition reimbursement and student loan forgiveness programs and work with the Legislature to determine a flexible plan with payback obligations tied to time on the job, based on a sliding percentage from zero to five years.
- Every department must develop and implement knowledge transfer plans for soon to be retiring employees.
- Every department must continue to audit its use of flexible work schedules (using information already provided by DOA) to determine if broader use of flexible schedules would be welcomed by employees and still accomplish State priorities.
- Revamp the classification process and review adequacy of classification resources in the Division of Personnel and Labor Relations.
- Conduct a review of the classification system. Review all job classes, update and consolidate with more generic job classes. Minimize, eliminate single-position job classifications.

Within three years:

- Conduct a salary survey.
- Replace the Work Place Alaska portal (and the Online Public Notice System).
- Consider legislation to implement a 40-hour work week.

Ongoing Efforts:

- Continue efforts between the DOA and other departments to write less restrictive minimum qualifications for positions, which allow departments more discretion in hiring the most qualified, best person for the position.
- Continue to encourage a broader use of flexibly classed positions, with easier movement between levels in a job series (i.e. I-II-III). (Current list is included in appendices.)

Administrative Order No. 237
Executive Working Group
Status Report of Recommendations

The Executive Working Group on Recruitment and Retention set out a list of action items in the November 2007 report to the Governor. These items and their current status are listed below.

Action Items – Near Term

Action Item	Status	Details
Labor Contracts: ASEA-GGU, APEA-SU, APEA-CEA, PSEA, AVTECTA and IBU	**Completed**	Salary adjustments resulting from HB 417 and labor negotiations have had a cumulative impact of $150 million over three years (FY08-$56.4 million, FY09-$49.8 million, FY10-$44.2 million). See attached cost summary.
LTC, TEAME, ACOA	**Upcoming**	Contracts expire 6/30/09
MM&P, MEBA	**In Negotiations**	Contracts expired 6/30/08
Longevity Step Repeal and replacement with fair alternative	**Completed**	HB 417 repealed longevity steps and implemented pay increments for non-covered employees. PSEA negotiated similar provisions and Letters of Agreement have been signed with GGU, CEA and SU (pending) effective January 1, 2009. Cost to implement estimated at $2.3 million in FY09 and $1.5 million in FY10.
Flexibility for Deputy Commissioner Pay	**Completed**	HB 417 provides for appointment within range 28.
Deputy Director Pay Increase	**Completed**	Division Operations Manager, range 24 Deputy Director, range 25 (partially exempt only)
Training/Certification/ Education Survey Status	**No Action**	Will be put into New Work Plan
HR Integration Study	**Upcoming**	Development of the RFP will begin by October 1, 2008. RFP will be vetted through Working Group before release.
Streamline Intern Process	**Completed**	Levels were consolidated and flex staffing was implemented. Intern openings are now advertised through Workplace Alaska. This allows all interested parties to view/post internships in one central location.
Market-Based Pay	**On Hold**	A contractor will be hired to conduct a salary survey in 2009 to provide a more holistic approach.
Healthy Living Habits	**Ongoing**	Web Portal has been developed and usage is still in discovery stage. The database will be developed in 2009. Incentives for participation are under development.

Action Items – Within Two Years

Action Item	Status	Details
Geographic Differential Study	**In Progress**	$400.0 for study appropriated. The contractor began work on September 16, 2008. The report is planned to be completed by January 31, 2009. The budget impact of implementation will be presented to the 2009 Legislature.
Tuition Reimbursement & Student Loan forgiveness	**In Progress**	Many departments currently reimburse employees for tuition for job-related classes. Departments will be advised of available options. Review of student loan forgiveness will be put into new work plan.
Knowledge Transfer Plans	**In Progress**	DOPLR has a presentation available to assist agencies in the development of these plans.

Administrative Order No. 237
Executive Working Group
Status Report of Recommendations

Flexible Work Schedules (Alternate Workweeks)	**In Progress**	The number of agreements statewide has increased from 1,508 in 2007 to 1,941 in 2008. Effort is continuing to inform departments of available options.
Revamp Classification Process and Review of Resources	**In progress**	Classification studies are being limited to those in class series which have experienced a significant change in duties. A parallel process to address salaries will be explored in conjunction with comprehensive salary survey.
Classification System Review	**In progress**	When appropriate, job classifications are being consolidated and single position job classifications are being eliminated.

Action Items – Within Three Years		
Action Item	**Status**	**Details**
Salary Survey	**In Progress**	Plan to award contract to begin study in January 2009 with expected completion by October 2009.
Workplace Alaska Portal Replacement	**In Progress**	Task Order has been released for the development of system requirements.
Legislation for 40 hour Workweek	**No Action**	Consideration will be given to implement for select groups of employees.

Ongoing Efforts		
Action Item	**Status**	**Details**
Less Restrictive Minimum Qualifications	**In Progress**	21 job class specifications involving over 350 state jobs have been reviewed and updated to ensure MQs reflect current job requirements.
Broader Use of Flexibly Classed Positions	**Completed**	The use of flexibly classed positions has been broadened for use within any series so long as the work exists at the requested levels.
Administrative Clerk Study	**In Progress**	This comprehensive study of 1,150 clerical positions is scheduled for completion by June 30, 2009. The study will examine the changes in clerical work since the classes were last studied (in 1996) and will provide a benchmark for aligning other clerical, paraprofessional and entry-level job classes.
Revamp Employee Evaluation Process	**In Progress**	Newly established pay increments require completion of an evaluation. The evaluation process is being reviewed and streamlined to ensure that employees are evaluated in a meaningful and timely manner.

Discussion Items	
Item	Details
Sabbaticals	Explore concept for state employees with extensive service - 15 yrs and up.
Telecommuting	Explore concept for working from home up to three days a week. Policy is under review and development.

FAX 907-465-2652

Changes Made to HB 58 from Original Bill to Proposed Education CS

Section 1:

Findings and Purpose: remains the same.

Establishes that the purpose of the bill is to provide financial incentives to students who return to Alaska to work.

Section 2:

Remains the same.

Allows Alaska Student Loan Commission to perform duties assigned by the Alaska qualified employee recuitement loan repayment program. (Technical conforming language.)

Section 3:

Remains the same.

Allows the Executive Director of the Alaska Student Loan Commission to administer the Alaska qualified recruitment loan repayment program. (Technical conforming languge.)

Section 4:

Remains the same.

Allows unrestricted capital monies made available to Alaska Student Loan Corporation to be appropriated to the loan repayment program.

Section 5:

Changed Eligibility Criteria

HB 58 → In order to be eligible for the program the student must:

1.) Be a resident of the state when applying
2.) Be employed in a specified field:
   a. Biologist
   b. Education
   c. Dentist
   d. Nursing

Changed in CS → In order to be eligible for the program the student must:

1.) Be a resident at the time of applying for the program
2.) Is working full time in a field determined by the Department of Labor to be in a shortage in the state

3.) Applicant began working in the designated field in Alaska within four years of attaining his/her degree
4.) Student recieved a loan from the Alaska Student Loan Corporation

Changed Conditions and Limitations on Loan Repayment

Clarified that the loan repayment will only be for the outstanding loan amount at the time of the application to the program. Therefore if a student elects to pay some of the loan on their own, the state will not be reimbursing them for payments already made.

Sponsor Statement for HB 58 Student Loan Repayment Program

For every young person that leaves Alaska and doesn't return, Alaska loses a part of its future. Our students are leaving Alaska and choosing to stay elsewhere after they have attained their degrees. Alaska needs to do more to retain our best and brightest students.

The cost of living in Alaska is rising, wages are not keeping up, and the remoteness of our unique state brings its own set of challenges. Not only are these challenges present in our urban areas, but in our rural areas to an even greater degree. With an ever growing retiring work force, Alaska needs to address the problem before it reaches a crisis. Any assistance we can give to our graduating students to bring them home should be explored.

HB 56 proposes to repay the student loans of students who leave Alaska to attain degrees that are determined to be in shortage in the state. Repayment will be up to 100% of the loan incurred. The repayment schedule is four years if a graduate chooses to work in their field in a rural area and six years if the graduate chooses to work in an urban area. We want our young people to return home and build their careers here. Alaska cannot survive without them.

Paul Seaton
Attn: Hannah Harrison
State Capitol Room 102
Juneau, AK 99802

Dear Representative Seaton:

I am writing in support of HB 58: "An Act relating to a student loan repayment program for occupations or fields in which a shortage of qualified employees exists; and providing for an effective date." As you are aware, and as pointed out very substantively in an article authored by Jeff Hadland in the Monthly Labor Review May 2004 issue, Alaska's 'brain drain' of students trained in Alaska is not a myth it is real.

Another reality is the vacancy rates that are continuing to increase in positions vital to the state in a variety of areas, but particularly in natural resources management that includes geography. I am the Dean of the School of Natural Resources and Agricultural Sciences and Director of the Agricultural and Forestry Experiment Station. We train students for jobs critical to allow Alaska to continue to sustainably manage and develop its natural resources.

Almost all students require some financial aid to complete their post-secondary education. These loans are not easy to repay particularly in public sector employment where many entry-level salaries are low and recruitment and retention of qualified employees is difficult. Students are, therefore, attracted to higher paying jobs or leave the state. As our economy continues to falter, student loan repayment will be even more difficult and recruitment and retention possibilities will remain bleak.

HB 58 addresses not only the ability of students to pay back loans but also the recruitment and retention problem. It has my strong support and I know that our faculty would agree with my concurrence relative to the importance of this bill. I am grateful that Representatives Thomas, Wilson, Millet, Harris, Ramras, and Kerttula had the foresight to sponsor a bill that is destined to impact the success of Alaskan students.

Sincerely,

Carol E. Lewis, Dean and Director
School of Natural Resources and Agricultural Sciences
Agricultural and Forestry Experiment Station

Re: Support for HB 58

Dear Representative Thomas,

I am writing to express my support of HB 58, "an Act relating to a student loan repayment program for specified occupations or fields in which a shortage of qualified employees exists."

Recently I was in Juneau and had the wonderful opportunity to discuss this bill and I am pleased that this important issue is being addressed.

Alaska has high rates of risky behaviors and leading causes of death among our youth. Social Work is an ideal profession that is almost inexistent in our Alaskan communities. School social workers, medical social workers, and community social work counselors are all very important and needed for all the overall health of our State.

It is very difficult to fund our education to get into a position to benefit our State. This bill will help in educating our people who want to live and give back to their communities and culture.

Thank you for sponsoring this bill and supporting this bill that would greatly change the lack of service providers in our State.

Respectfully,

Shannon Johnson-Nanalook

Alaska's 'brain drain': myth or reality?

A variety of administrative data are used to determine if the long-term education, employment, and outmigration patterns of Alaska's youth are draining Alaska's labor force, causing 'brain drain'

Jeff Hadland

Alaska has one of the highest outmigration rates in the Nation. The general belief is that a disproportionately large percentage of Alaska's young adults leave Alaska after graduating from high school or after completing some postsecondary education in the State. Also, there is wide concern that the percentage of Alaskans who continue their education beyond high school is among the lowest in the Nation.[1] This article presents data to quantify these phenomena, sometimes characterized as a "brain drain," using a variety of administrative data.

This article tracks a study group of more than 16,000 Alaskans, age 15–16 in 1994 (hereinafter, 1994 Youth).[2] It follows this group through their postsecondary education in Alaska and at out-of-State institutions and examines their employment status in Alaska.

Summary of findings

- More than 62 percent of the 1994 Youth were still Alaskan residents in 2002, compared with 71.3 percent of the total Alaskan population.
- A little more than 55 percent of the 1994 Youth group had some reported postsecondary education, nearly identical to the postsecondary education rate of a group of 17- and 18-year-old Alaskan youth in 2000.
- Approximately 62 percent of the 1994 Youth group who pursued postsecondary education, did so exclusively in Alaska.
- More than 84 percent of the 1994 Youth who had received their postsecondary education exclusively in Alaska were still Alaska residents in 2002, compared with 51 percent of the 1994 Youth who had received postsecondary education exclusively outside the State were Alaska residents in 2002.
- Nearly 70 percent of the 1994 Youth group with postsecondary education had attended the University of Alaska at some time from 1996 through 2002.
- More than 12 percent of the total 1994 Youth group earned one or more degrees as of the end of 2002.
- Nearly 54 percent (8,659) of the 1994 Youth group were employed in Alaska in 2002 based upon a match with Alaskan unemployment insurance wage records. Average 2002 earnings varied by educational attainment, with highest average earnings in Alaska achieved by those youth who had earned a degree at the University of Alaska.

The number of young Alaskans entering the labor force each year is rapidly increasing. In 2002, there were nearly twice as many 16-year-old Alaskans (11,246) as there were new jobs created in Alaska from 2001 to 2002 (6,500). Nevertheless, a significant number of employment opportunities are available to new entrants to the labor force. The large number of new hires each quarter and an increasing number of workers approaching retirement age all present opportunities to young jobseekers. Although there is always the likelihood

Jeff Hadland is an economist for the Alaska Department of Labor and Workforce Development Research and Analysis Section, Juneau, AK. E-mail: Jeff_Hadland@labor.state.ak.us

4652

of a mismatch between skills of a new worker and job openings, tracking the postsecondary education and employment patterns of young Alaskans can be helpful in determining priorities and programs that could provide additional opportunities in the coming years for Alaska youth.

Methodology

More than 16,000 Alaskans age 15–16 in 1994 were identified based upon reported date of birth on their Alaska Permanent Fund Dividend application[3] and matched with unemployment insurance wage records, as well as a variety of administrative data. This cohort was tracked from 1994 to 2002 and monitored on its continuing education and employment outcomes. There is currently no high school graduate database available for Alaska, so this compilation was used as a proxy for that information. An additional group of 20,413 17- and 18-year-olds in 2000 was selected for tracking short-term postsecondary education choices.

The majority of the study group retained their Alaska residency during the 1994–2002 evaluation period and had identifiable postsecondary education both within and outside Alaska. No information was available for youth employed outside Alaska or youth who died or left the United States during this period. Youth arriving in Alaska after 1994 were excluded from the study group.

Administrative data. The Alaska Permanent Fund Dividend application form provides a few key demographic variables. Age, sex and place of residence information is collected from the file and used to identify the population, identify place of residence by year, determine continued residency and track in-State and estimate out-of-State migration.

Continuing education among Alaskan youth was tracked using University of Alaska and other Alaska postsecondary education files, as well as National Student Clearinghouse data showing education and degrees obtained in other Alaskan schools and in other States. Although not all out-of-State schools and all years were available, the Clearinghouse data helped to fill a gap in information about the large number of Alaskans who pursue postsecondary education outside the State. Although not all schools report information for all years, the data provided was the best available for postsecondary education activity and outcomes of the Alaska youth population.

Other available data In addition to industry and earnings information, Alaska's unemployment insurance wage record file contains occupation and place of work information for most wage and salary workers in the State. Employers are provided with special occupational coding manuals, based on the Standard Occupational Classification system that assist them in coding each of their worker's jobs. Besides providing information on the progress of workers through a career ladder, the coding manuals allow researchers to compare occupational information by matching an occupation with the typical education level for that occupation and examine earnings by occupation. In addition, occupation data associated with each worker are helpful in determining if workers were employed in an occupation related to their education and training. This information is collectively known as Alaska's Occupational Database. The Wage Record Interchange System could not be used to track the employment outcomes of youth that were employed outside the State because that file can be used only for evaluating the performance of certain federally funded training programs, primarily those associated with the Workforce Investment Act.

Characteristics of Alaska's youth

The study cohort of 16,114 Alaskans age 15–16 in 1994 had significantly more men (52.5 percent) than women (47.5 percent). In fact, the number of men exceeded the number of women in all age groups in Alaska in 1994. Also consistent with the overall population distribution in Alaska, the 1994 Youth population reported their residence as: 37.8 percent in Anchorage, 12.3 percent in Fairbanks, 10.4 percent in Matanuska-Susitna[4], and 8.7 percent in Kenai.

No information is currently available indicating whether the 1994 Youth were Alaskan high school students in 1994 or had graduated from an Alaskan high school in 1994. In 1996 and 1997, the Alaska Department of Education and Early Development reported that there were 12,209 high school graduates from Alaska's school districts, and this group represents a large percentage of the total high school-graduation-age population for those years. (The statewide dropout rate for grades 7–12 ranged from 3.4 percent to 4.1 percent from 1996 to 1998.)

For purposes of comparison, a second group of Alaskan youth age 17–18 in 2000 was selected and matched with administrative data. This group of recent high-school-graduation-age youth was examined to determine their employment and postsecondary education outcomes shortly after their high school years.

Residency and outmigration

Older youth and young adults typically have the highest migration rates of any other population group. These individuals are at a crossroads of their lives when they are either continuing their education or considering a serious job or career. To achieve these goals, many young persons consider moving to another location. Although the majority of Alaska's 1994 Youth study group chose to continue their work or education close to home, many others chose to leave Alaska to pursue their long-term goals.

4653

Due primarily to outmigration during the 1994–2002 period, there was a significant decline in the number of Alaska's 1994 Youth from 1994 though 1997 when most of the students would have been old enough to graduate from high school. In 1997, 82.6 percent of the 1994 Youth group were still Alaskan residents based upon Permanent Fund Dividend applications. By 2002, 62.5 percent of this population were still Alaska residents. (See chart 1.)[5]

Outmigration rates for Alaskan youth age 17–19 and age 15–16 in 1994 were the highest of any other age group. In comparison, 28.7 percent of all of Alaska's residents (Permanent Fund Dividend basis) were no longer Alaskan residents in 2002, fully 37.5 percent of 15- and 16-year-olds and 38.8 percent of 17- and 19-year-olds no longer resided in Alaska in 2002. (See table 1.) The migration rate for male and female youth was virtually the same for those in the 15- and 16-age-group.

Overall, 37.7 percent of the 1994 Youth age 15–16 were no longer residents of Alaska in 2002. Although there were significant differences in outmigration rates from Alaska by age group from 1994 to 2002, the migration rates by geographic area varied dramatically depending on where the youth lived in Alaska in 1994. (See table 2.) Boroughs in Southeast Alaska exhibited the largest outmigration rate for the 15–16 year old population, with only 50.5 percent of these youth from Ketchikan still in Alaska in 2002, 52.5 percent of the Juneau youth cohort remaining in Alaska, and 56.8 percent of the Sitka youth remaining in the State.

Some of Alaska's rural Boroughs and census areas had very low outmigration rates, with nearly 90 percent of the 1994 Youth of Wade Hampton, 88.4 percent of Dillingham youth, 85.9 percent of Nome youth, and 84.6 percent of Bethel youth remaining in-State through 2002.

By 2002, more than 14 percent of Alaska resident 1994 Youth moved to another borough or census area in Alaska. (See chart 2.) Rural resident youth were just as likely to move to another part of Alaska than to move outside Alaska. Following a wider variety of education or employment opportunities, those who moved from a rural area and stayed in Alaska were much more likely to move to Anchorage or Fairbanks than to another rural region.

Alaska generally has one of the highest interstate migration rates of any other State. Outmigration during the 1990's averaged 7.2 percent per year for the total population. Based upon analysis of Internal Revenue Service tax return data, 46.9 percent of gross migration (both "immigration" and outmigration) was to States in the western part of the United States. Washington and California were the two top States for interstate migration.[6] Alaska youth attended out-of-State postsecondary schools in these same "magnet" States.

Although some of the regions in Alaska with the highest

Age group	1994	1995	1996	1997	2002
Total	100	91.4	86.1	82.6	71.3
Age 14 years and under	100	91.5	86.9	83.9	74.8
15–16 years	100	91.2	86.9	82.6	62.3
17–19 years	100	88.9	82.3	77.2	61.2
20–29 years	100	87.8	80.6	76.0	65.9
30–39 years	100	92.1	86.8	83.5	74.1
40–49 years	100	93.4	89.2	86.5	76.2
50 years and older	100	91.5	86.2	82.1	65.9

NOTE: Continued residency in Alaska measured by application for Alaska Permanent Fund Dividend.

SOURCE: *Alaska Population Overview–1999 Estimates*, Alaska Department of Labor and Workforce Development, Research and Analysis, May 2000.

migration rates had slow growing or declining economies, this was not the entire explanation for this pattern. Some of the rural regions of Alaska with relatively low migration rates also exhibited slow growth prospects during the 1990's. Clearly, both economic, cultural factors and environmental factors play a part in the decision to leave Alaska for continuing education and pursuing economic opportunities.

There was very little flow from "resident" to "nonresident" status and back, over the course of the 9 years from 1994 through 2002. For those resident youth in 1994 who were still residents in 2002, more than 90 percent had been residents throughout the entire period. Once they left Alaska and became nonresidents, very few became residents again in later years. For the recent population study of Alaskan youth age 17–18 in 2000, 86.1 percent were still residents of Alaska in 2002 based upon Alaska Permanent Fund Dividend application.

Postsecondary education rates

Three sources of information were used to identify postsecondary education activity for Alaska's youth: University of Alaska student records from 1996 through 2002, Alaska training program records collected as part of an annual evaluation of State funded training programs, and data from the National Student Clearinghouse, 2000 through 2002. The National Student Clearinghouse data includes information

Table 2. Borough/census area place of residence of Alaskan youth age 15–16 in 1994 and place of residence in 2002

Residence in 1994	Residence in 2002

about the education and degree status of more than 90 percent of the students enrolled in the Nation's colleges and universities.

At least 55.3 percent (8,903) of the 1994 Alaskan Youth population had attended one or more postsecondary schools from 1996 through 2002. More than 34 percent (5,537) of these youth pursued their postsecondary education exclusively in Alaska, 7.4 percent (1,190) went to school exclusively outside Alaska, and 13.5 percent (2,176) attended postsecondary education institutions both inside and outside the State. Nationwide, about 63 percent of high school graduates age 16 to 24, and about 43 percent of all 18- to 24-year-olds had enrolled in college in 1999.

More than 6,200 of the 1994 Youth attended the University of Alaska at some time from 1996 through 2002. Of those youth, 34. 1 percent earned credits, and the remainder either withdrew from their course or courses, received an incomplete, or failed. Nearly 70 percent of the 1994 Alaska Youth that attended a postsecondary institution attended the University of Alaska.

More than 12 percent (1,989) of the 1994 Youth group had earned one or more degrees or certificates, or both, as of December 2002. From 1996 through 2002 ,838 of the youth earned one or more degrees and certificates of all types from the University of Alaska.

Residency and current employment status varied significantly depending upon the location of reported postsecondary education activity. Those 1994 Youth who had reported both in-State and out-of-State postsecondary education had the lowest current Alaska employment and residency, with only 25 percent of those youth residents of Alaska in 2002 and 18 percent reported working in the State in 2002. (See table 3.)

The number (and percent) of 1994 Youth who attended a postsecondary institution varied significantly by place of residence (See table 4 and chart 3). Rural areas had representatives among both the lowest and highest postsecondary participation groups. Lowest postsecondary participation (less than 45 percent) was reported in the North Slope Borough, Northwest Arctic Borough, and Bethel Census Area and the highest rates (more than 60 percent) were reported in Valdez-Cordova Census Area, Denali Borough, and Dillingham Census Area.

The 1994 youth in the urban areas of Anchorage, Fairbanks and Matanuska-Susitna attained the largest number of postsecondary degrees or certificates, and urban areas generally had higher rates of attainment. However, the Aleutians West Census Area and Denali Borough both had high rates of degree attainment, but with very small total numbers. In general, rural areas fared poorly in terms of degree attainment, with the North Slope Borough and Wade Hampton having less than 2 percent of their youth population reporting that they had achieved a degree or certificate as of 2002.

Postsecondary education, 2000

The 20,413 of Alaska's youth age 17–18 in 2000 were matched with University of Alaska and National Student Clearinghouse files to identify their participation in postsecondary education. (See table 4 and chart 4) Their participation mirrored the 1994 Youth group, with a 55.1-

Table 3. Residency and employment status in 2002 of Alaskan youth age 15–16 years in 1994

SOURCE: *Alaska Population Overview–1999 estimates*, Alaska Department of Labor and Workforce Development, Research and Analysis, May 2002.

percent rate for those attending one or more postsecondary institutions. Longer term tracking of the 2000 Youth group will likely result in higher postsecondary education participation rates than the 1994 group.

Although only the most ambitious 17-year-old would have had time to earn a Bachelor's degree by the end of 2002, more than 140 youth in this group had earned certificates or Associate degrees by that time.

For those youth who had received some postsecondary education, as of 2002, two-thirds had received that education exclusively in Alaska. The remainder received some postsecondary education outside the state, with 12.4 percent continuing their education exclusively outside Alaska.

Female youth more likely to participate in postsecondary education. More than 50 percent (4,279) of men in the 1994 Youth group had some reported postsecondary education and 60.2 percent (4,602) of the women had postsecondary education. A little less than 10 percent of the men earned a degree and more than 15 percent of the women were degree recipients. Nearly 59 percent of those with degrees were women. For those attending postsecondary schools, women were more likely to attend exclusively in Alaska.

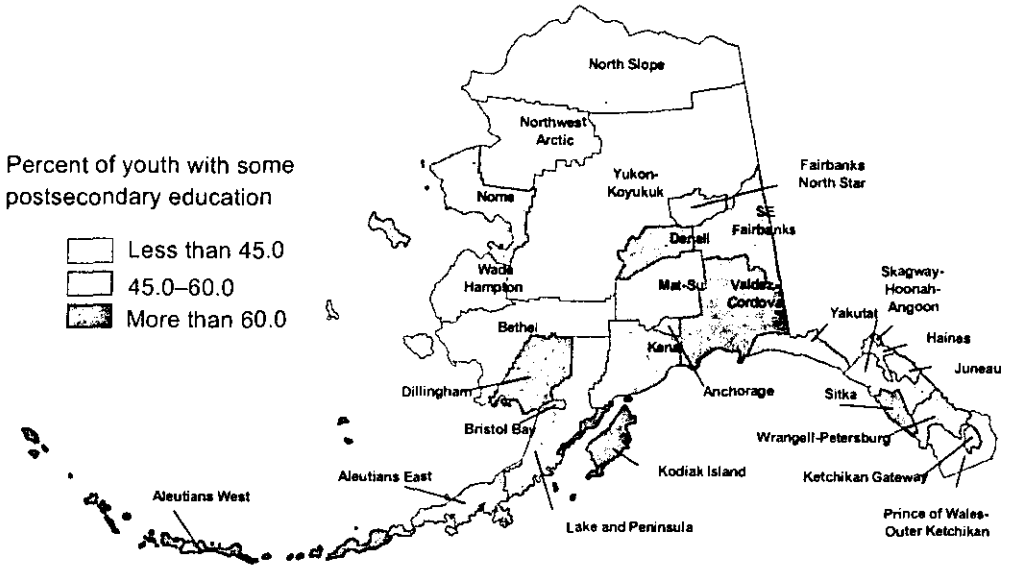
Alaska students matriculate along the west coast. The 1994 Youth group attended colleges and universities in every State in the Nation from 2000–02 (See chart 5). However, postsecondary education students who went to school at some time outside Alaska were most likely to attend colleges and universities in the western part of the United States. Based upon the State of the last school that the 1994 Youth group attended, Washington, Oregon, California, Colorado, Utah, Montana and Nevada were the top States for college and university attendance.

University of Alaska student data

Nearly 39 percent of the 1994 Youth (6,264 students) attended one or more terms at the University of Alaska from the fall of 1996 through the fall of 2002. However, a large percentage (46.7 percent) of the youth who attended the University of Alaska attended for three or fewer terms during the period. More than 62 percent of those youth who attended the

4657

Chart 3. Percent of 1994 Youth with some postsecondary education, 2002



SOURCE: Department of Labor Workforce Development, Research and Analysis, and Alaska Permanent Fund Dividend application data.

University of Alaska at some time during the period started their attendance by the fall of 1997.

As of fall 2002, 838 of the youth cohort had received one or more degrees from the University of Alaska. Based upon the first reported degree awarded, 488 had earned a baccalaureate degree; 308, an Associate's degree; and the remainder had earned advanced degrees or other certifications.

Each year, the University of Alaska awards approximately 1,300 bachelor's degrees. Chart 6 shows the number of degrees awarded and the 2002 resident and employment status for each year's degree recipients. As expected, the 2002 University of Alaska graduates have the highest current Alaska residency and employment rates, but those students who earned degrees early in the decade have relatively high and stable employment and residency rates as well. For the recent youth cohort, those Alaskans age 17–18 in 2000, 38.6 percent attended the University of Alaska at some time from 1996 through 2002. Nearly 16 percent were still attending the University of Alaska as of fall 2002.

Employment and earnings of University of Alaska students. A little more than 4,200 2002 graduates and former students of the University of Alaska from the 1994 Youth cohort were employed in Alaska in 2002. This group earned more than $79 million, based upon administrative record matches with Alaska unemployment insurance wage records. Students who earned one or more degrees at the University of Alaska had the highest average total Alaska earnings in 2002 when compared with all other 1994 Youth. (See chart 7 and table 5.) Workers who reported having between 61 and 90 University of Alaska credits had the second highest average earnings.

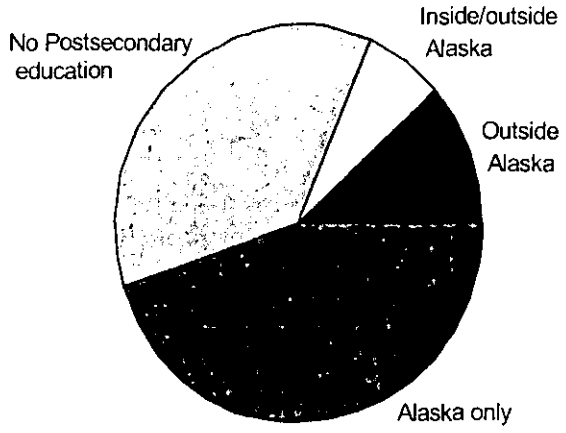
No matter the level of educational attainment, the male group earned more than the female cohort in Alaska in 2002. Nevertheless, there was a much larger number of reported female degree recipients and a much larger number who were employed in Alaska in 2002. (See table 6.) Women who earned a degree at the University of Alaska had wage and salary earnings approximately 50 percent greater than those females who did not attend the University of Alaska. In 2002, male youth who did not attend the university had average earnings that were 94 percent as much as the entire male youth cohort and female youth who did not attend earned 83.9 percent as much as all women in the group.

Employment and earnings of Alaska youth

Total wage and salary earnings in Alaska in 2002 for the 8,659 employed 1994 Youth were $149.2 million. These workers, representing 53.7 percent of the total 1994 Youth study group, earned on average $17,238 in 2002, compared with $25,808 average

4658

Chart 4. Postsecondary education status thru 2002 for year 2000 Alaskan youth age 17–18



SOURCE: Department of Labor Workforce Development, Research and Analysis.

annual earnings for all workers employed at some time during the year in Alaska in the same year. The largest number of workers and the highest total earnings were in the trade, transportation and utilities industry, however, highest average and median earnings were paid to workers in the natural resource and mining industry. (See table 7.)

Alaska's oil and mining industry has very high paying jobs. Average earnings for the 1994 Youth workers in that industry were $35,226; twice as much as the average for all of the 1994 Youth working in Alaska in 2002. But these 1994 Youth workers still earned significantly less than all workers employed in the natural resources and mining industry who average $62,557 annual earnings in 2002.

Although Alaska's unemployment insurance wage record file does not capture the number of hours worked for each employee, calendar quarters worked does provide some indication of attachment to the labor force over time. In 2002, 55 percent of the 1994 Youth employed in Alaska 2002 worked during all four quarters of the year suggesting a strong attachment to the labor force. (See chart 8.) However, nearly 64 percent of the 1994 Youth workers employed at some time during the year in Alaska earned less than $20,000 and about 40 percent earned less than $10,000. (See chart 9.) Workers who were employed during all four quarters earned an average of $25,129.

Youth with postsecondary education. Matching the 1994 Youth age 15–16 records with 2002 Alaska unemployment insurance wage records and education and residency administrative data, this study finds that the majority of total Alaska earnings were received by those youth who had reported some Alaska postsecondary education. Total earnings were $149.2 million, with $81.0 million going to youth with some Alaska postsecondary education (table 8). Those youth who had earned one or more degrees had the highest average earnings ($19,754), although those youth reporting some Alaska postsecondary education earned nearly as much, with $19,251 in 2002. Lowest average and total earnings were received by youth who had postsecondary education both inside and outside Alaska.

Based upon analysis of those 1994 Youth employed at some time during 2002, nearly 53 percent were employed by one employer during the year, 28.3 percent of workers were employed by two employers (either consecutively or concurrently), and 12.0 percent were employed by three employers in 2002. These workers were employed an average of 3.2 quarters per year.

Occupation and educational attainment

Alaska's unemployment insurance wage records contain Standard Occupational Classification- based occupational identifiers for more than 95 percent of unemployment insurance wage records. Minimum training level codes, assigned according to the Bureau of Labor Statistics classification system, can be used to determine if postsecondary education graduates, or those receiving significant postsecondary education are working in an occupation that require that level of training. If workers are employed in an occupation that requires only short-term on- the-job training, but they had received considerable postsecondary education, they can be considered "underemployed."

The 1994 Youth group has not had time for significant work experience following postsecondary education. Preliminary findings show that about one-third of the 991 youth who had degrees were employed in Alaska in 2002 in occupations with assigned training levels and were working in occupations in which a degree was required. (See table 9.)

However, a significant number of 1994 Youth with no reported degree information were working in occupations generally requiring degrees. Some of the occupations most frequently reported in this category include financial specialists, general and operations managers, biological technicians, preschool teachers, computer support specialists, recreation workers, accountants and auditors, engineering technicians, and health technologists. Incomplete educational attainment information and occupational coding issues both may be a factor in the discrepancy, but it is clear that a large number of the 1994 Youth

4659

SOURCE: Department of Labor Workforce Development, Research and Analysis, May 2002.

workers, whether or not degree status information was available, were employed in 2002 in occupations requiring a significant level of training. It should be noted that many of these workers had earned a significant number of credits from the University of Alaska.

Occupation and gender

Occupations most frequently held in 2002 by the 1994 Youth workers varied significantly by gender. (See table 10.) The top occupations in terms of total numbers and average earnings for the men were generally construction related occupations. Specifically, construction laborer had the highest number of men, and operating engineers/equipment operators had the highest average earnings for men. However, retail salesperson and janitors did make the top five in total numbers for men. The women were most frequently employed as office clerks, retail salespersons, and waiters/waitresses, with the highest average earnings paid to executive secretaries/administrative assistants.

Identifying employment opportunities

The relatively high migration rate among youth from Alaska is the result of many factors. The estimated number of youth leaving the State is quite high, but the overall rate of outmigration has not increased in recent years. In fact, the percentage of 18-year-olds leaving the State in the late 1990s (about 9 percent annually) was lower than that at any time during the decade.

Each year during the 1990s, at least 11,000 Alaska youth entered the labor force. This inflow was more than matched by a growing number of job openings. Current Occupational Employment Statistics projections estimate an increase in Alaska employment of 16.7 percent from 302,255 to 352,693 between 2000 and 2010, resulting in more than 12,000 job openings projected annually during this 10-year period. These projected openings are the combined result of employment growth and net separations from the occupations and do not include jobs resulting from employee turnover.

In addition to overall employment growth, there are additional opportunities available to new entrants to the labor force. Currently, the Alaska Department of Labor and Workforce Development estimates that there were nearly 68,000 nonresidents of Alaska employed at some time in Alaska in 2001. Alaska residency of workers is determined using Permanent Fund Dividend data. Industries, occupations, and employers that have high nonresident hire rates signal an unmet training need and a placement opportunity for Alaska's training programs.

Turnover in the workplace provides additional employment opportunities. In 2001, there were approximately 200,000 new

4661

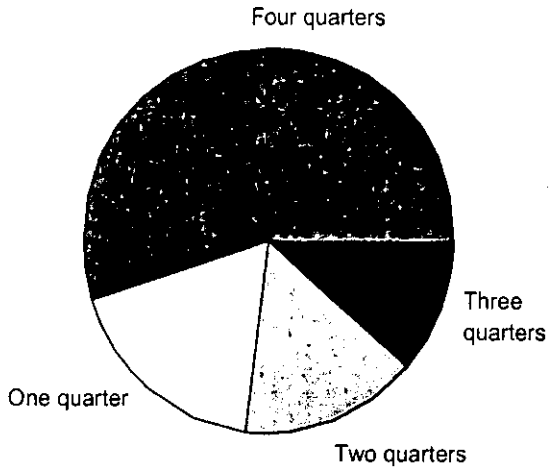
4662

Chart 8. Number of quarters worked in 2002, 1994 Youth age 15–16



SOURCE: Department of Labor Workforce Development, Research and Analysis.

"hires," defined as a worker, hired by an employer in a quarter, who had not worked for that employer at any time in the previous four calendar quarters. (See table 11.) These hires, along with other wage record transaction measures can help to identify employment opportunities for jobseekers and training needs for training providers.

Wage records matched with administrative data also help to identify rapidly changing retirement rates in particular industries and occupations. Alaska's population is "aging" rapidly, and assuming no significant change in the average retirement age, the quickly increasing average age of workers suggests that retirement (and death) will play an even larger role in the number of Alaska job openings during the next several years. In 2001, 16.6 percent of private sector workers in Alaska were age 50 and older and 8.5 percent were age 55 and older. More than 20 percent of workers in the oil industry and health care industry are age 50 or older, and in State government, more than 28 percent of all workers are older than age 50.

Given the relatively long lead time required to train workers in many occupations, the combination of increasing average age, turnover, and underlying growth in industry and occupations are all important in identifying training needs and opportunities.

SOURCE: *Alaska Population Overview–1999 estimates*, Alaska Department of Labor and Workforce Development, Research and Analysis, May 2002.

ALASKA'S YOUTH APPEAR TO BE participating in postsecondary education at rates comparable to youth in the rest of the United States, although there is a significant difference in participation rates between different geographic areas of Alaska. Overall outmigration from Alaska continues to be quite high, with the highest rates found in the older youth-young adult age groups. These high migration rates for youth and young adults suggest that brain drain is more reality than myth. Despite the high level of outmigration and participation in postsecondary education outside the State, the majority of Alaska youth age 15–16 in 1994 retained their Alaskan residency through 2002.

The 1990's was a period of slow economic growth in Alaska, with a shift in industry importance from resource extraction to services and retail. During the next decade, overall employment is expected to exhibit fundamental growth, while underlying

4664

Table 10. Top occupations in 2002 of youth age 15–16 in 1994

Occupation	Number of workers	Average earnings
Male		
Construction laborers	271	$20,436
Laborers and freight, stock, and material movers, hand	250	12,163
Retail salespersons	193	16,547
Carpenters	147	20,796
Janitors and cleaners, except maids and housekeeping cleaner	89	9,194
Combined food preparation and serving workers	73	7,526
Office clerks, general	71	15,966
Cashiers	69	10,522
Automotive service technicians and mechanics	63	23,107
Operating engineers and other construction equipment operators	61	40,389
Female		
Office clerks, general	239	15,006
Retail salespersons	208	13,012
Waiters and waitresses	165	8,915
Cashiers	162	8,528
Receptionists and information clerks	138	15,277
Teacher assistants	136	10,695
Bookkeeping, accounting, and auditing clerks	108	19,437
Executive secretaries and administrative assistants	108	21,340
Office and administrative support workers, all other	104	18,316
Combined food preparation and serving workers	73	5,567

SOURCE: *Alaska Population Overview–1999 estimates*, Alaska Department of Labor and Workforce Development, Research and Analysis, May 2002.

demographic shifts and turnover will provide an increasing number of job openings for the quickly growing young adult population in Alaska. Changes in the types of workers required and the number of youth seeking postsecondary education will continue to present opportunities and challenges to Alaska's educational institutions. □

Notes

[1] See Ronald A. Phipps, *Access to Higher Education in Alaska – Strategies for Success* (The Institute for Higher Education Policy, prepared for the Alaska Commission on Postsecondary Education, December 2000). The paper reports that in 1998, 24.2 percent of 19-year-old Alaskans enrolled in college and that in 1996, Alaska enrolled 38.9 percent of recent high school graduates anywhere as first-time freshmen in a college or university, compared with 58 percent of high school graduates in the Nation.

[2] Jeff Hadland, *Alaska Brain Drain? Using Alaska UI Wage Records and Administrative Data to Determine the Long Term Education, Employment and Migration Patterns of Alaska's Youth* (Alaska Department of Labor and Workforce Development, Research and Analysis Section, December 2004).

[3] The Alaska Permanent Fund is derived from earnings from the Alaska Permanent Fund, an oil revenue funded endowment. Each resident is entitled to the dividend after meeting eligibility requirements. In 2002, each Alaskan was paid $1,542.

[4] This borough is presented as "Mat-Su" in tables prepared by the Alaska Department of Labor and Workforce Development.

[5] Residency in Alaska was measured by application for the Alaska Permanent Fund Dividend on an annual basis. The Permanent Fund Dividend program allows absences from Alaska for education, military, illness, and other reasons.

Department of Natural Resources **DRAFT**
Status of Select Job Classes
As of August 12, 2008

On average, it takes 165 hours to go through the exit procedures for a departing employee and recruit, hire, and provide basic job training to a new employee. This is the equivalent of 4.4 weeks of work. If the first attempt at a hire is unsuccessful, the hours increase significantly as steps are repeated. The hours quoted are for the DNR employees. Additional hours are devoted to new hires in the Division of Personnel.

THIS IS AN INCOMPLETE DRAFT. TO BE ADDED:
Comparable salaries in the public and private sector (if info is verifiable)
Additional explanation of hiring difficulties specific to the job class

Cartographers
16 positions, 2 currently vacant, 5 retiring in 5 years
6 recent recruitments, 2 unsuccessful

Wildland Fire Resource Technicians
95 positions, 11 currently vacant, 11 retiring in 5 years
We are seeing a lot of turnover in these job classes, apparently from wages. Salary isn't competitive.

Foresters
51 positions, 8 currently vacant, 23 retiring in 5 years
12 recent recruitments, 7 with no hire made
Wildland Fire Resource Technicians and Foresters who are eligible for overtime will not apply for promotions (or transfers) to Forester positions that are overtime exempt. Fire positions are particularly impacted since fire qualifications and training are critical requirements. If the trained/experienced personnel won't move up into management, you only have options of hiring retirees for fire seasons (if even available). One Forester II position in fire has been open for two fire seasons due to no applicants. We are unable to fill Forester III and IV positions even with repeated recruitments in and out of state. Positions at the higher levels are critical.

Hydrologists
6 positions, 1 currently vacant, 3 retiring in 5 years
3 recent recruitments, 2 with no hire made

Land Surveyors
11 positions, 3 currently vacant, 4 retiring in 5 years
9 recent recruitments, 6 with no hire made

Natural Resource Managers
63 positions, 9 currently vacant, 31 retiring in 5 years
13 recent recruitments, 13 with no hire made

Natural Resource Specialists
148 positions, 24 currently vacant, 33 retiring in 5 years
113 recent recruitments, 27 with no hire made

Petroleum-Specific Job Classes
28 positions, 5 currently vacant, 8 retiring in 5 years

Recorders
40 positions, 4 currently vacant, 11 retiring in 5 years

Prepared by the ALASKA COMMISSION ON POSTSECONDARY EDUCATION
SECTIONAL ANALYSIS
Amendments to CS for HB58\P 2/25/09ver—Alaska Qualified Employee Recruitment Loan Repayment Program
Alaska education loan repayment for programs in specified occupations in workforce shortage fields leading to employment in Alaska

BILL SECTION	SECTION TITLE	PAGE	LINE	PURPOSE OF SECTION	COMMENTS/QUESTIONS	EFFECTIVE DATE
1	Findings and purpose	1	4-11	Describes the objectives/purpose of the proposed program		The Act takes effect July 1, 2009
2	ACPE authorized functions	1 2	12-14 1-9	Provides that the commission will perform assigned duties		
3	Executive Director and staff	2	10-13	Provides that executive director will administer the program		
4	Appropriation of funds	2	14-26	Provides that appropriation of the ASLC dividend to the state may be a fund source for the program		
5	Alaska Qualified Employee Recruitment Loan Repayment Program established	2 3	27-31 1 2 3-7 8-14	Provides for the repayment of education loans to qualified employees in specific occupations and fields if work in Alaska Provides that program is not a financial obligation of the ASLC Creates the program account in the general fund and designates it for repayment of eligible education loans and administrative costs Specifies the program account consists of ASLC dividend appropriations, contributions from other sources, interest and earnings, and general fund appropriations		
5	Administration	3	15-19 20-22	Provides that executive director administer the program with eligibility criteria provided in 14.43.830 Provides that the commission will establish standards for managing the program account

Sponsor statement

Hb 200 promotes healthy waters systems by allowing non-profits access to the Alaska Clean Water Fund for watershed protection and enhancement projects. It does this by establishing a linked deposit program to provide low-interest financing for water quality and nonpoint source pollution control projects.

The Clean Water Fund is a federal program administered by the Alaska Department of Environmental Conservation (DEC). It was established to fund projects that deal with the care of water and water systems. These projects range from the establishment of new wastewater treatment facilities to estuary conservation and management. Currently, the Alaska Clean Water Fund can be used only by municipalities and state agencies. HB 200 expands the impact of clean water dollars by allowing non-profits to borrow

ANALYSIS: *(Attach a separate page if necessary)*

The Department of Education and Early Development is submitting a zero fiscal note for HB 59.

This bill would require the department to develop early learning guidelines for an effective, cost efficient, and optional pre-elementary program provided under a statewide early childhood education plan. The department would submit a report to the legislature on the early childhood education plan by January 15, 2010.

CS FOR HOUSE BILL NO. 59( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES KAWASAKI, GARA, TUCK, AND PETERSEN

A BILL

FOR AN ACT ENTITLED

"An Act providing for the establishment of a statewide early childhood education plan and guidelines."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public

schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans"

include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15)**;**

(18) devise a statewide early childhood education plan for students three and four years of age that

(A) incorporates the early learning guidelines adopted by the board under AS 14.07.165(6);

(B) provides for the most effective and efficient coordination with or expansion of pre-elementary programs operating in

the state, including Head Start and programs and centers approved by the Department of Health and Social Services, to the extent permitted by law.

* **Sec. 2.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075, including the criteria and procedure under which a governing body uses a waiver to grant a diploma to a student; criteria regarding granting a waiver must include provisions that a waiver may only be granted for students who enter the system late or have rare or unusual circumstances meriting a waiver;

(6) early learning guidelines that support an effective, cost-efficient, and optional pre-elementary program provided under a statewide early childhood education plan approved by the department.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPORT: EARLY CHILDHOOD EDUCATION PLAN. On or before January 15, 2010, the Department of Education and Early Development shall prepare and submit a report to the legislature on the early childhood education plan devised under AS 14.07.020(a)(18), added by sec. 1 of this Act.

House Bill 59
Sponsor Statement

"An Act providing for the establishment of a statewide early childhood education plan and guidelines"

Alaska remains one of the only states that do not provide pre-Kindergarten (pre-K) education to its children on a statewide basis. HB 59 seeks to add Alaska to the ranks of states that recognized that children benefit from early education. Children who participate in early education programs earn more money as adults, enter the job market in much larger numbers, obtain college education in higher numbers, and remain off public assistance in greater numbers.

Alaska has a responsibility to provide the best education possible for its children. Currently, outside of few school district classrooms, the state only provides pre-K education through Head Start programs and through the Best Beginnings partnership. Head Start is only available to the poorest students, and which is underfunded (state funding has only marginally risen since 2002). Due to underfunding, the Alaska Head Start Association estimates that more than 50% of the children who qualify cannot receive Head Start education. Our Head Start program has consistently lagged far behind its need. Providing early public education opportunities is a crucial stepping stone to brightening the future of the young Alaskans.

Extensive research shows that a child's intellectual development is especially important before age six. A study by the National Institute for Early Education research in 2004 found that children who attended state-funded pre-kindergarten programs demonstrated improvements in vocabulary 31% greater than those who did not participate, and 44% greater in math. Young children who receive high quality early education do better in school academically and are more likely to stay in school, graduate, and go on to attend college.

The beneficial impact of early education also extends to the economy with multiple studies showing that funds invested in early education pay dividends in the long run. Every dollar invested in high quality pre-kindergarten programs saves Alaskans from paying for remedial and special education and public assistance. An ongoing study of 40-year old adults in Michigan who participated in the 1962 Perry Pre-Preschool Project found that adults with pre-K were more likely to be employed and earned 33 percent higher average income than their peers who did not have state funded early education.

Additionally, a study prepared for the University of Alaska Southeast, states that 87% of Alaska residents think it is important for state government to provide finical support for early education and child care.

HB 59: Alaska Pre-Elementary Program

Sectional Analysis

Section 1. Defines pre-elementary program as one provided by a school district for students 3 through 4 years of age.

Section 2. Established age of eligibility (3 – 4 year olds)

Section 3. Department of education shall devise and implement a statewide early education plan that incorporates early learning guidelines adopted by the education board and coordinates with Head Start.

Section 4. Defines pre-elementary program.

Section 5. Board of education shall adopt early learning guidelines that support an effective and cost-efficient optional pre-elementary program provided under a statewide early childhood education plan approved by the department.

State Capitol
Juneau, AK 99801

You asked for information on the value of prekindergarten programs. Specifically, you asked for a brief summary of current reports or studies that analyze the value of prekindergarten programs. In addition, you asked for a summary of Alaska's prekindergarten program that was discontinued in fiscal year 2003.

As you may know, prekindergarten programs (Pre-K) are generally defined as direct educational services to children who are not yet eligible for kindergarten. Usually, this refers to children ages 3 and 4, but occasionally may apply to younger children. Please keep in mind that there are a number of terms that are used interchangeably with prekindergarten including early education, preschool, early learning, school readiness, and child development. Although more than one-third of states provide state funding supplements to Head Start programs, these generally are not considered state-funded prekindergarten programs.

SUMMARY

According to the National Education Association (NEA), children who attend high quality prekindergarten programs are better prepared for kindergarten, have better language and math skills, better cognitive and social skills, and better relationships with classmates.[1] In addition, they note that children who attend prekindergarten are less likely to drop out of school, repeat grades, need special education, or get in trouble with the law when they are older. They also note that children with disadvantaged backgrounds, such as low-income or a single parent household, generally benefit more from quality prekindergarten programs than do children who are not disadvantaged. The NEA advocates for universal high quality prekindergarten programs because it "represents one of the best investments our country can make."

According to the Education Commission of the States (ECS), forty-three states currently fund early learning programs for young children, up from about ten states in 1980.[2] Generally, the goal of these programs is to promote school readiness so children have a better chance of future success, both in school and in life. The ECS notes that implementation of state-funded prekindergarten programs varies widely. As examples, some programs are half day, others full day; some programs are for only four-year-olds, others include three-year-olds, while others offer services to infants and toddlers; some prekindergarten programs are operated through local school districts, while others offer services through public and private centers. The ECS also notes that most states target programs for children with an identified risk factor such as poverty, low parental education, teen parents, and English as a second language. Some states and cities, however, are working towards making quality prekindergarten programs universally available.

[1] The National Education Association (NEA) works to advance the cause of public education in the United States. The NEA is the nation's largest professional employee organization, with 2.7 million members who work at every level of education, from pre-school to university graduate programs. The NEA has affiliate organizations in every state, as well as in more than 14,000 local communities across the United States. The NEA's URL is *http://www.nea.org/index.html*.

[2] The Education Commission of the States (ECS) is a nonprofit, nonpartisan interstate compact created in 1965 to improve public education by facilitating the exchange of information, ideas, and experiences among state policymakers and education leaders. The URL for the ECS is *http://www.ecs.org/*.

According to the National Conference of State Legislatures (NCSL), Georgia and Oklahoma were the first states to expand preschool to all four-year-olds.[3] Florida, Maryland, New York and West Virginia are in the process of phasing in their universal programs. The NCSL also notes that 36 states considered early education bills in 2005, and at least 28 states considered expanding preschool programs. According to the National Institute for Early Education Research (NIEER), approximately 738,000 children, or about 10 percent of all three- and four-year-olds in the nation, participate in state-funded prekindergarten programs.[4] The NIEER estimates that state spending on prekindergarten programs totals $2.54 billion.

We identified numerous reports or studies that articulate the benefits of high quality prekindergarten programs. We chose to summarize the following reports because they are generally more recent than others, often cited as a bellwether study or report, discuss a program that has been evaluated with some scientific rigor, or offer a thorough summary of the status of prekindergarten activities in the United States.

The Effects of Universal Pre-K on Cognitive Development

In 2005, the journal *Developmental Psychology* published the results of new research that confirms that Oklahoma's universal prekindergarten program helps four-year-olds prepare for school by improving their cognitive and language functioning. The children who participated in the state-funded universal prekindergarten program performed better on cognitive tests that measured pre-reading and reading skills, prewriting and spelling skills, and math reasoning and problem-solving skills, than those children who did not participate in the program. The research results also showed that the prekindergarten program improved performances for children from all races and income brackets (as measured by eligibility for a reduced-price lunch). According to the study, low-income children and Hispanic children benefited the most from the program.

Although the report provided very little information about the program, the researchers noted that Oklahoma's high prekindergarten teacher education requirements, and the state's willingness to compensate prekindergarten teachers at the same level as elementary and secondary school teachers in the public schools, distinguishes this program from others.

We include the report, entitled "The Effects of Universal Pre-K on Cognitive Development," as Attachment A.

---

[3] The National Conference of State Legislatures (NCSL), founded in 1975, is a bipartisan organization that serves the legislators and staffs of the nation's 50 states, commonwealths, and territories. The NCSL provides research, technical assistance and opportunities for policymakers to exchange ideas on most state issues. The URL for the NCSL is *http://www.ncsl.org/index.htm#*.

[4] The National Institute for Early Education Research (NIEER) supports early childhood education initiatives by providing objective, nonpartisan information based on research. The NIEER was established at Rutgers University's Graduate School of Education with a grant from The Pew Charitable Trusts. The URL for the NIEER is *http://nieer.org/*.

THE EFFECTS OF STATE PREKINDERGARTEN PROGRAMS ON YOUNG CHILDREN'S SCHOOL READINESS IN FIVE STATES

In 2004, the National Institute for Early Education Research (NIEER), examined a sample of more than 5,000 four-year-olds enrolled in high-quality, state-funded prekindergarten programs in the states of Michigan, New Jersey, Oklahoma, South Carolina, and West Virginia. The Institute compared achievement scores of children who just completed the preschool program with the scores of a sample of children who did not participate in a program. The results of the examination found significant improvement in children's early language, literacy, and mathematical development, regardless of the child's racial or economic background.

Among other things, the study found that the children who attended state-funded prekindergarten programs showed gains in vocabulary scores about 31 percent greater than the gains of those children who did not participate in a program. The researchers note that these higher scores translate into an additional four months of progress in vocabulary growth. In mathematics, including basic number concepts and such tasks as simple addition and subtraction, telling time, and counting money, the children who participated in the state-funded preschool improved their math skills by 44 percent compared to children who did not participate in a program.

As we noted above, this study examined programs in five states—Michigan, New Jersey, Oklahoma, South Carolina and West Virginia. The programs in Michigan, New Jersey and South Carolina target at-risk children (usually low-income children), while the programs in Oklahoma and West Virginia are universal. Although each state program is unique, all required licensed teachers with four-year college degrees and certification in early childhood. These programs also maintain low teacher to child ratios (the highest ratio being one teacher to ten children), and low maximum class sizes (the highest being 20 students). Unfortunately the report did not provide any additional information regarding the studied programs.

We include "The Effects of State Prekindergarten Programs on Young Children's School Readiness in Five States" as Attachment B.

THE 2004 STATE PRESCHOOL YEARBOOK

In 2004, the National Institute for Early Education Research produced the *2004 State Preschool Yearbook* that summarizes state-funded prekindergarten programs in the United States during the 2002-2003 school year. This document is parsed into three sections, the first of which provides background information on preschool education in the United States, a description of the methods used by the NIERR to collect and analyze the data, a national summary of NIEER's findings, and NIEER's national policy recommendations. The second section provides detailed profiles of each state's policies regarding preschool access, quality standards, and resources. The last section of the report includes tables that provide the complete survey data obtained from every state, Head Start and child care data. A few of the findings from the NIEER's study are as follows.

- In 2002-2003, 38 states funded one or more prekindergarten initiatives serving a total of nearly 740,000 children (this represents an increase of 45,000 students from the previous school year). Access was uneven across states, however, with 10 states accounting for over three-quarters of enrollment.

- State prekindergarten initiatives served more than six times as many four-year-olds as three-year-olds in 2002-2003. Twenty states enrolled at least 10 percent of their four-year-olds in state preschool programs, but only three states served at least 10 percent of their three-year-olds.

- Georgia and Oklahoma continued to be the only states that made prekindergarten universally available to children. Across the United States, only one out of ten children ages three and four were participating in state preschool programs, as most states targeted programs that only serve economically or otherwise disadvantaged children.

- In 2002-2003, twelve states did not have a state-funded prekindergarten program.

- States need to initiate or improve policies that establish stronger quality standards. Only one state, Arkansas, met all ten of NIEER's quality benchmarks, whereas 20 state initiatives met five or fewer benchmarks.[5]

- State policies regarding quality standards were inconsistent. For example, one state may emphasize comprehensive services while another stresses teacher qualifications.

- Only 13 state prekindergarten initiatives required teachers to have both a bachelor's degree and specialized training in early childhood education. In addition, only 13 programs required teachers to be paid on a public school salary scale.

- State funding for prekindergarten initiatives totaled $2.54 billion in 2002-2003. Over three-fifths of this funding was from five states—California, Georgia, New Jersey, New York, and Texas. Inadequate funding severely limited access and quality in most states.

- State spending per child enrolled in state-funded preschool ranged from less than $1,000 in Maryland to more than $8,700 in New Jersey. State spending per child averaged about $3,500, less than half of the total funding provided per child in federal Head Start or public K-12 education.

- Between the 2001-2002 and 2002-2003 school years, total state spending (adjusted for inflation) rose by $90 million, or four percent. However, state funding per child enrolled decreased by $90, and 21 states decreased total spending.

We include *The State of Preschool: 2004 State Preschool Yearbook* as Attachment C.

---

[5] The NIEER uses a quality standards checklist of ten items to compare standards of quality across different state prekindergarten programs.

THE HIGH/SCOPE PERRY PRESCHOOL PROJECT

According to *Education Week*, "The High/Scope Perry Preschool Project is perhaps the best-known study of the long-term effects of a high-quality prekindergarten education." During the mid-1960s, the High/Scope Educational Research Foundation selected and tracked a group of 123 African-Americans, age 3 or 4, who were born in poverty and at high risk of failing in school.[6] The children were randomly divided into a program group who received a high-quality preschool program based on High/Scope's participatory learning approach, and a comparison group who received no preschool program. This study provides a comprehensive evaluation of the long-term effect of quality prekindergarten on the lives of the participating students.

In their most recent evaluation of this group of students, the age of which was about 40, the High/Scope Educational Research Foundation was able to interview 97 percent of the study participants still living. Some of this study's major findings are as follows.

- A greater percentage of the group who received high-quality early education graduated from high school than did the non-program group (65% vs. 45%). This proved to be particularly true for the female participants (84% vs. 32%).
- A smaller percentage of females who received high-quality early education required treatment for mental impairment than did the non-program females (8% vs. 36%).
- A smaller percentage of females who received high-quality early education had to repeat a grade than did the non-program females (21% vs. 41%).
- The group who received high-quality early education on average outperformed the non-program group on various intellectual and language tests during their early childhood years, on school achievement tests between ages 9 and 14, and on literacy tests at ages 19 and 27.
- A greater percentage of the group who received high-quality early education was employed at age 40 than was the non-program group (76% vs. 62%).
- The group who received high-quality early education had median annual earnings more than $5,000 higher than the non-program group ($20,800 vs. $15,300).
- A greater percentage of the group who received high-quality early education owned their own homes (37% vs. 28%).
- A greater percentage of the group who received high-quality early education had a savings account than did the non-program group (76% vs. 50%).

[6] The High/Scope Educational Research Foundation is an independent nonprofit research, development, training, and public advocacy organization. High/Scope's mission is "to lift lives through education." Among other things, the High/Scope Educational Research Foundation provides training to preschool and elementary teachers and administrators, conducts research on the effectiveness of educational programs, and develops curricula for infant, toddler, preschool, elementary, and adolescent programs. The URL for the High/Scope Educational Research Foundation is *http://www.highscope.org/index.asp*.

- The group who received high-quality early education had significantly fewer arrests than did the non-program group (36% vs. 55% arrested five times or more).

- Significantly fewer members of the group who received high-quality early care than the non-program group were ever arrested for violent crimes (32% vs. 48%), property crimes (36% vs. 58%), or drug crimes (14% vs. 34%).

According to the High/Scope Educational Research Foundation, in constant dollars adjusted to 2000, the economic return to society of the Perry Preschool program was $258,888 per participant, on an investment of $15,166 per participant, or a $17.07 return for every dollar invested.

Researchers with the High/Scope Educational Research Foundation identified the following attributes that contribute to the success of their prekindergarten program.

- The teachers in the Perry Preschool program had bachelor's degrees and were certified to teach in elementary, early childhood, and special education. Teachers also received training, supervision, and assessments that support the Perry Preschool program educational model, and were paid 10 percent above the local public school district's standard pay scale.

- The Perry Preschool program had four teachers for 20 to 25 children.

- The Perry Preschool program was a two school year program, starting at age three.

- The Perry Preschool program consisted of daily classes (five days a week) of two-and-a-half hours or more.

- The teachers in the Perry Preschool program helped children plan, perform, and review their own work. The classroom was arranged and the day was scheduled to support children's self-initiated learning activities.

- Perry Preschool program teachers visited with families at home, at least once every two weeks.

We include *The High/Scope Perry Preschool Study Through Age 40, Summary, Conclusions, and Frequently Asked Questions* as Attachment D.[7]

[7] Additional information on the High/Scope Perry Preschool Project can be found at *http://www.highscope.org/Research/PerryProject/perrymain.htm.*

ABECEDARIAN EARLY CHILDHOOD INTERVENTION PROJECT

The Abecedarian Early Childhood Intervention Project began in the 1970s by the FPG Child Development Institute at the University of North Carolina at Chapel Hill.[8] The Abecedarian Project scientifically studied the potential benefits of early childhood education for children from low-income families. Children who were selected to participate in the program received full-time, high-quality instruction in a childcare setting from infancy through age five. Each child had an individualized plan of educational activities. These activities focused on social, emotional, and cognitive areas of development, and gave particular emphasis to language development. The children's progress was monitored over time with follow-up studies conducted at ages 12, 15, and 21.

So far, the findings demonstrate that important, long-lasting benefits are associated with the high-quality early childhood program. A sample of the benefits experienced by the program participants gleaned from the young-adult assessment (age 21) are as follows.

- The children who received early childhood education in the Abecedarian program are projected to make roughly $143,000 more over their lifetimes than those who did not take part in the program.
- The mothers of children who were enrolled in the program also expect earnings of about $133,000 more over their lifetimes than the mothers of the children who did not take part in the program.
- School districts saved more than $11,000 per child because participants are less likely to require special or remedial education.
- The children who received early childhood education in the Abecedarian project had higher cognitive test scores from the toddler years to age 21.
- Academic achievement in both reading and math was higher from the primary grades through young adulthood for the children who received early childhood education in the Abecedarian project.
- The children who participated in the program completed more years of education and were more likely to attend a four-year college.
- The mothers of the children who participated in the program achieved higher educational and employment status than did the mothers of the children who were not in the program. These results were especially pronounced for teen mothers.
- Taxpayers received four dollars in benefits for every dollar spent on high-quality early education programs.

[8] FPG Child Development Institute is a multidisciplinary institute at The University of North Carolina at Chapel Hill. The institute's mission is to cultivate and share the knowledge necessary to enhance child development and family wellbeing. The institute, through grants and contracts, conducts research and provides outreach services. The URL for the FPG Child Development Institute is *http://www.fpg.unc.edu/index.cfm*.

We include the FPG Child Development Institute's summary of the Abecedarian Project as Attachment E.

Early Childhood Development: Economic Development with a High Public Return

In 2003, economists with the Federal Reserve Bank of Minneapolis calculated that the potential annual return from a focused, high-quality early childhood education program is as high as 16 percent.[9] Most of the return benefits the economy as a whole because individuals who participate in high-quality early childhood education programs developed greater skills than they otherwise would have, which in turn contributes to the local economies (approximately 12% return). A smaller portion (approximately 4%) of the return benefits the children who received early childhood education in the form of higher wages later in life. The researchers used data from the High/Scope Perry Preschool Project to conduct their analysis.

In June 2005, as an expansion to their 2003 research, the Federal Reserve Bank of Minneapolis researchers proposed expanding the scope of early childhood education programming to meet the needs of all impoverished children ages five and younger, including newborns. In making this proposal, the researchers cited advances in brain research that indicate the most critical neurological development occurs between birth and age three.

In summary, the authors maintain that economic development schemes based on attracting specific companies or industries often waste taxpayer dollars, whereas investment in early childhood development yields high and dependable returns, in turn aiding long-term economic growth.

We include *Early Childhood Development: Economic Development with a High Public Return* as Attachment F.

Early Education in the States: A Year in Review—2004

In March 2005, the National Conference of State Legislatures (NCSL) produced, *Early Education in the States: A Year in Review—2004*, to provide detailed information about actions of state legislatures on early education issues. Among other things, this report contains a brief review of the research on early education, NCSL's comments on the role of state legislatures in early education, and a state-by-state summary of state bills, acts, executive orders, and proposals made in 2004 that pertain to early education.

In addition to summarizing many of the reports or studies we discussed above, the NCSL notes that incorporated into recent child development initiatives are three new components: enhancing

[9] The Federal Reserve Bank of Minneapolis is one of 12 regional Reserve Banks that, together with the Board of Governors in Washington, D.C., make up the Federal Reserve System—the United States' central bank. The URL for the Federal Reserve Bank of Minneapolis' early childhood education website is *http://minneapolisfed.org/research/studies/earlychild/*.

the role of parents; promoting innovation at the local level; and establishing state-level planning councils.

The NCSL notes that generally, state legislators should approach early education from a number of different perspectives. In some cases, early education has been one part of a larger education reform effort. Lately, legislators have made connections between early education and a state's ability to meet requirements of the No Child Left Behind Act. State legislators also view early education as part of the solution to reducing the achievement gap for children before they enter the early elementary grades. In addition, the positive results demonstrated in long-term economic research have prompted policymakers to consider early education as a long-term investment.

We include *Early Education in the States: A Year in Review—2004* as Attachment G.

OTHER INFORMATIVE SOURCES

During the course of our research, we identified additional sources of early childhood education information that you may find useful. We identify these sources and their website address in Table 1.

ALASKA'S TWO-YEAR KINDERGARTEN PROGRAM

As you know, Chapter 50, SLA 2003 (House Bill 154) amended Alaska Statute 14.03.080(c) to restrict education foundation formula funding of four-year olds attending kindergarten. At the time, approximately 30 of the 53 school districts in Alaska offered some form of a two-year kindergarten program, allowing both four- and five-year olds to attend (some school districts allowed all four-year olds to attend while others did not). Chapter 50, SLA 2003 restricts foundation formula funding to four-year olds for whom there is a realistic expectation that the child will successfully progress through the kindergarten curriculum and advance to the first grade the following school year. According to the Department of Education and Early Development's (DEED) fiscal note attached to HB 154, this amendment resulted in a savings of approximately $3.9 million.

Although the letter of intent Governor Murkowski included with HB 154 noted the $3.9 million saving that would result from the enactment of HB 154, the saving does not appear to be the primary motivation for the bill. Eddy Jeans, Manager of the School Finance and Facilities Section of the Alaska Department of Education and Early Development, testified during a House Education committee meeting, as well as numerous other committee meetings that discussed HB 154, that the intent of this bill was to address the policy question of whether the legislature wanted to fund four-year-olds in the kindergarten-through-12th-grade program.[10] He also pointed to an equity issue as not every school district in Alaska took advantage of the "loop-hole" in the law. According to Mr. Jeans, it would cost the state approximately $60 to $62 million annually to provide kindergarten for all four-year olds. Mr. Jeans noted that this estimate does not include any improvements to the capacity of districts' facilities, such as providing adequate classroom space.

Also during a House Education committee meeting, Kevin Sweeny, then Special Assistant to the Office of the Commissioner of the Department of Education and Early Development, testified, "the commissioner [of DEED] would agree that education would be better if the legislature funded all four-year-olds. In some districts it has shown that bringing kids in at four years old has helped them progress."[11] He also noted that the fundamental issue represented by HB 154 is whether the policy makers want to fund a statewide two-year kindergarten program through the foundation formula.

---

[10] Eddy Jeans, now the Director of School Finance with the Alaska Department of Education and Early Development, can be contacted at 907-465-2891

[11] In addition, in November 2001, the Alaska State Board of Education and Early Development adopted a resolution calling for voluntary preschool for all three- and four-year-old children. The resolution also expresses support for the development of pilot preschool programs in communities with low achievement scores on state exams, high poverty, and lack of Head Start or other early development programs.

Alaska Community Preschool Project - Alaska's Preschool Pilot Program

During each of the last two state fiscal years, the DEED received federally earmarked money to help fund the Alaska Community Preschool Project. During FY2005, the DEED distributed $800,000, through a competitive process, to seven school districts (serving eight communities), to offer high-quality preschool.[12] During FY2006, the program received $496,000 and funded services in seven communities in six districts (Juneau, Hoonah, King Cove, Sand Point, Bethel, Unalakleet and Minto). Federal funding for FY2007 has not been determined.

The purpose of this project is to augment existing preschool programs, that often operate in partnership with other entities such as Head Start, to bring them up to the teaching standards prescribed by the Feuerstein Instrumental Enrichment—Basic education model. So far the project has served roughly 200 children.[13]

Ready to Read, Ready to Learn Task Force

In May 2005, Governor Murkowski called for the establishment of the Ready to Read, Ready to Learn Task Force. The governor charged this task force with identifying the following:

- Ways Alaskans can improve the readiness of preschoolers to read and learn,
- Ways families can become better at teaching children to listen, speak, read and write,
- Ways preschools and childcare centers can provide the best possible start for children,
- Ways the business community can participate in this effort, and
- Ways state and local governments can support the effort.

[12] In FY2005, the DEED received a total $1.2 million, and spent the money not directed to district programs on training and materials. Paul S. Sugar, Education Specialist II with the Department of Education and Early Development, can be reached at 907-465-4862.

[13] The International Center for the Enhancement of Learning Potential (ICELP), the Feuerstein Instrumental Enrichment–Basic program is directed toward the younger child, from approximately three to seven years of age, and the very low functioning older individual. The program is designed for use in a classroom group setting, for smaller groups of targeted learners, and as a one-to-one therapeutic intervention. The program also provides an "early intervention" to enable students who are developmentally at risk, or those individuals who have not acquired basic foundational knowledge and skills, to respond to direct stimuli and develop cognitive functions.

First Lady Nancy Murkowski is the Chair of Task Force while the Alaska Humanities Forum has the lead in establishing and administering the task force.[14]

According to the Alaska Department of Health and Social Services, Governor Murkowski will ask the Alaska Legislature to provide $750,000 in fiscal year 2007 to improve childhood literacy and learning. This was announced by Nancy Murkowski at the Ready to Read, Ready to Learn Task Force held in Anchorage on November 10, 2005. The Department of Health and Social Services and the Department of Education and Early Development will use the funds to carry out recommendations currently being developed by the task force.

We include the Ready to Read, Ready to Learn Task Force's most recent newsletter "Task Force News" as Attachment H.

I hope you find this information to be useful. Please do not hesitate to contact us if you have questions or need additional information.

[14] The Alaska Humanities Forum was founded in 1972 by the National Endowment for the Humanities (NEH), the Forum is one of 56 state and territorial groups also supported by the NEH. The Forum is a 501(c)(3) non-profit organization with a mission to "use the wisdom and methods of the humanities to enrich the civic, intellectual and cultural life of all Alaskans." LEGISLATIVE RESEARCH REPORT

FEBRUARY 7, 2006

REPORT NUMBER 06.115

STATE AND FEDERAL FUNDING FOR HEAD START

PREPARED FOR REPRESENTATIVE LES GARA

BY BECKY TAYLOR, LEGISLATIVE ANALYST

You asked for the level of state and federal funding for the Head Start program for FY04 through FY06, and the Governor's proposal for FY07. You were also interested in the number of children enrolled for each of those years, and an estimate of the number of children that could be enrolled under the Governor's FY07 proposal.

Although state funding for the Head Start program remains fairly consistent under the Governor's proposed budget for fiscal year 2007, an anticipated one percent decrease in federal funds could reduce the program's overall funding level. Table 1 shows state and federal funding for FY04-FY06, as well as proposed funding for FY07. A one percent reduction in federal funds would result in a $272,394 decrease in total federal and state funding for the Head Start program from FY06 to FY07. Based on the average amount of state and federal funding per child served during FY04 and FY05, we estimate that a one percent decrease in federal funding could result in 29 fewer children served.[1]

Table 2 shows the number of children served by the Head Start program for FY04 and FY05, as well as estimates for the end of FY06 and FY07. Table 3 provides a more detailed description of the number of children served by the Head Start program so far this year, and the number of children on the waitlist by grantee.

[1] Paul Sugar, Education Specialist for the Department of Education and Early Development, points out that this method, which assumes a consistent cost per child served, may not accurately reflect how the Head Start program operates. Ultimately, local grantees decide how to handle budget cuts, and determine whether slots are lost. He notes that some sites may be able to maintain the number of children they serve for a few years by shuffling resources. Mr. Sugar can be reached at (907) 465-4862.

Table 1: State and Federal Funding for Head Start, FY04-FY07				
Funding Source	**FY04 (authorized)**	**FY05 (authorized)**	**FY06 (authorized)**	**FY07 (proposed)**
Total Federal	27,809,200	28,023,489	28,029,389	27,749,095
Direct Funding to Grantees	27,500,000	27,779,289	27,779,289	undetermined
Funding to the State	309,200	244,200	250,100	
State	6,385,200	6,320,700	6,330,400	6,338,300
Total Federal and State	34,194,400	34,344,189	34,359,789	34,087,395

Notes: The federal figure for FY07 reflects a projected 1% cut in federal Head Start funds.
The vast majority of federal funds go directly from the federal government to organizations that are Head Start grantees; however, a small amount of funding goes to the state to facilitate collaboration at the state, regional, and local levels around early childhood education issues.
In addition to the federal Head Start funds, grantees also receive federal Child and Adult Food Care Program reimbursements totaling $860,000 to $980,000.

Per child	$9,734	$9,356	Undetermined	
Average per child	$9,545			
Children Served[a]	3,513	3,671	3,600	3,571

Note: The total FY07 funding reflects a projected 1% cut in federal Head Start funds.
a) The number of children served for FY04 and FY05 are as of year end. In order to estimate the number of children served at the end of the year for FY06 and FY07, we divided the total amount of state and federal funding for those years by the average amount of federal and state funding per child for FY04 and FY05. This method assumes a consistent cost per child served, which may not accurately reflect how the program operates. Local grantees determine the most cost-effective way to handle budget cuts, and may or may not actually reduce the number of children they serve. As of the end of January 2006, 3,150 children have been served by the Head Start program during the 2005-2006 academic year.

LEGISLATIVE RESEARCH REPORT

JANUARY 18, 2008

REPORT NUMBER 08.087

HEAD START PARTICIPATION AND DECLINING SERVICES

PREPARED FOR REPRESENTATIVE LES GARA

BY TIM SPENGLER, LEGISLATIVE ANALYST

You asked for information on the Head Start program. Specifically, you wished to know how many Alaskan children have participated in the program in the last five years and how many communities have lost funding or closed their programs in that time period.

As you know, Head Start is a comprehensive child development program that serves children aged three to five who come from low income homes. The program's goals include increasing the child's social competence, such as the ability to deal with the everyday, present environment, and later responsibilities in life and school. Head Start also works with the families of these children to help educate and strengthen them by offering training and support to help facilitate growth and change.

According to Paul Sugar, Education Specialist II, with the Alaska Department of Education and Early Development (DEED), Head Start anticipates serving 3,504 children in fiscal year (FY) 2008.[1] This is a decrease of 167 children served since FY05. Mr. Sugar provided the figures for Table 1, which tracks the number of children served by Head Start in the last five fiscal years. As you will see, the number has dropped from a high of 3,671 in FY05, to its lowest point in five fiscal years.

Table 1: Children Served by Head Start in Alaska, FY04 - FY08

Children Served	FY04	FY05	FY06	FY07	FY08 (projected)
	3,513	3,671	3,656	3,606	3,504
Difference per Year		158	-15	-50	-102

Notes: Data include children from birth to five years of age.
Source: Paul Sugar, Education Specialist, Department of Education and Early Development. Mr. Sugar can be reached at (907) 465-4862.

[1] This number includes children from birth to five years. Mr. Sugar can be reached at (907) 465-4862.

Mr. Sugar points out that in the last five years, while state and federal funding for the Head Start program has remained relatively flat, costs have risen. Not only goods and services—such as heating fuel and transportation—but personnel costs have risen as well. As more teaching staff complete degree programs to meet increased federal requirements, their costs are rising. Insurance costs have also risen over the last five years.

Since fiscal year 2004, 19 communities have closed their Head Start programs.[2] Table 2 enumerates the closures over the last five fiscal years.

Table 2: Closures of Head Start Programs in Alaska, FY04 - FY08

	FY04	FY05	FY06	FY07	FY08	Total
Program Closures	1	6	6	5	1	19

Source: Paul Sugar, Education Specialist, Department of Education and Early Development. Mr. Sugar can be reached at (907) 465-4862.

Aside from closures, budgetary concerns have also caused some grantees to go from a center based model to a home visiting model. Others now use a central building site and transport children from nearby communities, while some urban programs have shortened their transportation area. Still others have had to lower the number of children that they serve.

With the current level of funding, Head Start serves just under half (48 percent) of the children in Alaska who are *three to five* year olds and live below the poverty line. Roughly 72 percent of the nearly 13,000 children between *birth and five* who the DEED estimates live below the poverty line are without Head Start early childhood education opportunities.

I hope you find this information to be useful. Please do not hesitate to contact us if you have questions or need additional information.

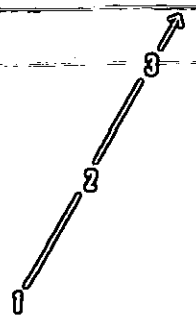
[2] One of these communities reopened services with a different grantee a second will reopen in February 2008.

A Summarized Economic Impact Report on Early Education and Child Care Services in ALASKA

step up early ed & child care

Based on the McDowell Group Report · July 2006

PREPARED FOR:
SYSTEM FOR EARLY EDUCATION DEVELOPMENT (SEED)
UNIVERSITY OF ALASKA SOUTHEAST



step up early ed & child care

STUDY FINDINGS ARE DETAILED ON THE FOLLOWING PAGES:

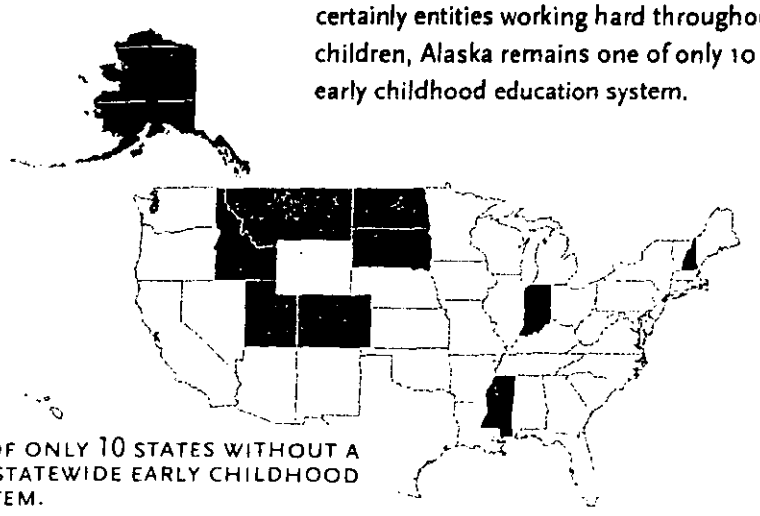
Demographics	Pg. 2
The Economic Impact on Alaska	Pg. 3
The Early Learning and Child Care Sector	Pg. 5
Impact on Alaska Families	Pg. 7
Alaskans Support Funding	Pg. 9

Why should you care about the availability of quality early education and child care in Alaska? Because stepping up early education for our children is critical for all of us.

LET US STEP YOU THROUGH THE FACTS.

1. Early childhood education and child care play a critical and measurable role in Alaska's economy
2. The availability of quality, affordable child care remains a challenge for many Alaska families
3. Alaskans across the state place a high priority on state funding for early education and child care

Until recently, there was no data specific to Alaska to demonstrate how the welfare of our youngest community members impacts the entire state – both in the short term and long term. But thanks to this study commissioned by the System for Early Education Development (SEED) and completed in July 2006 by McDowell Group, there is now local information to combine with the knowledge learned from national studies to provide an accurate baseline. What the statistics demonstrate is that Alaska lags behind much of the country in providing quality early education and child care to our residents. And while there are certainly entities working hard throughout Alaska to provide quality care for our children, Alaska remains one of only 10 states without a state-funded, statewide early childhood education system.



ALASKA IS ONE OF ONLY 10 STATES WITHOUT A STATE-FUNDED, STATEWIDE EARLY CHILDHOOD EDUCATION SYSTEM.

"Investment in early childhood development programs brings a real (that is, inflation-adjusted) public return of 12%, and a real total return, public and private, of 16%. We are unaware of any other economic development effort that has such a public return ...."

ART ROLNICK
SVP AND DIRECTOR OF RESEARCH
FEDERAL RESERVE BANK OF MINNEAPOLIS

LONG-TERM ECONOMIC IMPACTS OF QUALITY EARLY EDUCATION & CHILD CARE

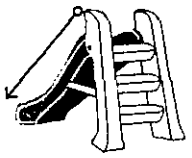
A host of studies have been done to track the long-term economic impact of high quality early child care development on society. Though none of these studies focuses on Alaska, the implications for Alaska are relevant. The results of these studies have shown conclusively that although investment is required to provide quality early care to infants, toddlers and youths, the rate of return far exceeds that initial investment.

The largest benefit provided by quality early care was increased earnings capacity projected from higher educational attainment, along with higher taxes paid from better paying jobs. Other benefits are lower criminal justice system costs, reduced welfare costs, savings for crime victims, and savings on school remedial services budgets. The results of several studies are highlighted below.

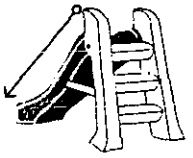
LONG-TERM BENEFITS OF EARLY EDUCATION AND CHILD CARE

29% higher **high school graduation rates**

20% higher **college attendance**



70% lower **crime incidence**



20% lower **welfare dependence**

$143,000 **additional earned income per capita, resulting from better employment**

Studies also note that expenditures on education that are focused on K-12 may be misplaced given that brains develop rapidly in the early years (0-4), then develop at a much slower pace from age 4 through 18. The implication is that the earlier the investment on early education, the higher the return on investment will be.

step 3

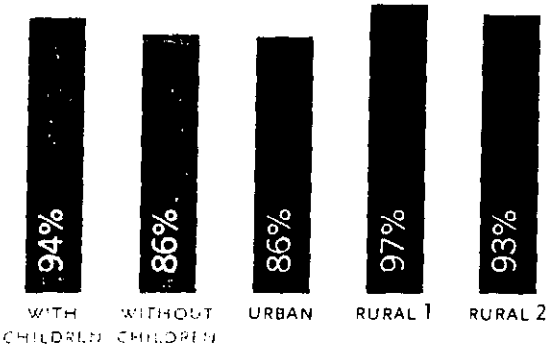
EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

9 of 10 alaskans support funding

The telephone survey described earlier also asked all households a series of questions about state funding support for early learning and child care services in Alaska. Results showed overwhelming support for the funding of early education and child care.

Nearly nine out of 10 Alaska residents (87 percent) think it is important or very important for state government to provide financial support for early education and child care. Among residents with children under six years of age, 94 percent think state support is important or very important. Even among residents without young children, 86 percent think state financial support is important or very important. Further, urban and rural residents alike feel it is important to provide funding for early education and child care.

THOSE STATING IT IS "IMPORTANT" OR "VERY IMPORTANT" FOR STATE GOVERNMENT TO PROVIDE FINANCIAL SUPPORT.



audiences who expressed above average support for early education and child care

Alaskans were also asked if the state should give early learning and child care high, medium or low funding priority. Two-thirds (66%) feel it should have high priority. A variety of population subgroups were more likely to give it a high priority. They include:

- 76% households with children under six
- 72% female residents
- 77% residents aged 35 to 44
- 76% low income residents <$25,000
- 73% high income residents >$100,000

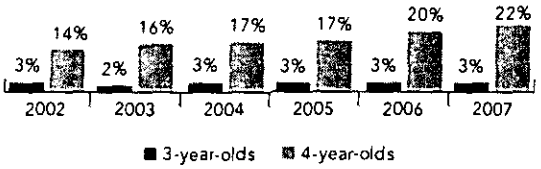
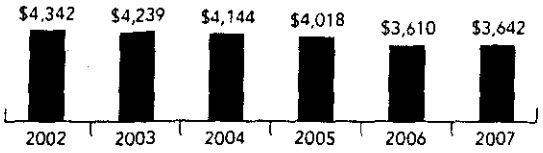
PERCENT OF NATIONAL POPULATION ENROLLED



■ 3-year-olds ▩ 4-year-olds

AVERAGE STATE SPENDING PER CHILD ENROLLED (2007 DOLLARS)



In 2006-2007, state-funded preschool education halted a troubling trend in per-child funding, achieved important milestones in expanding access, and continued the march toward higher quality standards.

WHAT'S NEW?

- State spending per child rose to $3,642 on average, halting, if not reversing, a trend of declining per-child commitment that has persisted for years.
- Total spending by state governments reached an all-time high of more than $3.7 billion.
- More than a million children attended state-funded preschool education, making states the largest source of public pre-K.
- Thirty of the 38 states with programs increased enrollment.
- Twenty-two percent of all 4-year-olds in the nation attended state-funded pre-K, an increase from 20 percent in the previous year.
- Access for 3-year-olds rose, perhaps signaling a new trend toward expanding services at this age, as well.
- Seven states improved on NIEER's Quality Standards Checklist, indicating that quality standards, while variable across states, continue to improve.
- A new ranking is provided for spending reported from *all sources*, which averaged $4,134 per child, despite incomplete data for some states. Using these more complete spending per child figures, we estimate that at least 19 of 38 states spend enough to meet all 10 benchmarks.

NATIONAL ACCESS

Total state program enrollment, all ages 1,026,037

States that fund preschool .....38 states

Income requirement .....27 state programs have an income requirement

Total state preschool spending.....$3,724,382,129 [3]

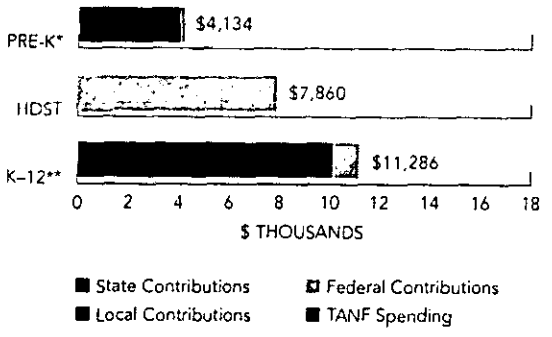
Local match required? .....14 state programs require a local match

State spending per child enrolled.....$3,642 [3]

State Head Start spending.....$134,921,487

All reported spending per child enrolled* $4,134

SPENDING PER CHILD ENROLLED



* Pre-K programs may receive additional funds from federal or local sources that are not included in this figure.

**K-12 expenditures include capital spending as well as current operating expenditures.

Data are for the '06–'07 school year, unless otherwise noted.

[1] The enrollment figure for federal Head Start, ages 3 and 4, is limited to children served in the 50 states and DC. The enrollment figure for total federal Head Start and Early Head Start, ages 0 to 5, includes all children served in any location, including the U.S. territories, and migrant and American Indian programs.

[2] This figure includes 13,501 children who attended programs that were considered to be state-funded preschool initiatives. These children are also counted in the state-funded preschool enrollment total.

[3] This figure includes federal TANF funds directed toward preschool at states' discretion

Executive Summary

STATE-FUNDED PRESCHOOL EDUCATION: A TURN IN THE ROAD

In 2006-2007, state-funded preschool education halted a troubling trend in per-child funding, achieved important milestones in expanding access, and continued the march toward higher quality standards.

WHAT'S NEW?

- State spending per child rose to $3,642 on average, halting, if not reversing, a trend of declining per-child commitment that has persisted for years.
- Total spending by state governments reached an all-time high of more than $3.7 billion.
- More than a million children attended state-funded preschool education, making states the largest source of public pre-K.
- Thirty of the 38 states with programs increased enrollment.
- Twenty-two percent of all 4-year-olds in the nation attended state-funded pre-K, an increase from 20 percent in the previous year.
- Access for 3-year-olds rose, perhaps signaling a new trend toward expanding services at this age, as well.
- Seven states improved on NIEER's Quality Standards Checklist, indicating that quality standards, while variable across states, continue to improve.
- A new ranking is provided for spending reported from *all sources*, which averaged $4,134 per child, despite incomplete data for some states. Using these more complete spending per child figures, we estimate that at least 19 of 38 states spend enough to meet all 10 benchmarks.

DISPARITIES

Behind the national averages lie large and growing disparities, making it ever more obvious that the chances for a child to benefit from state pre-K are largely determined by the state where he or she lives. The top 10 states in access now serve more than one-third of all their 4-year-olds. (See Box.) Longtime leader Oklahoma serves more than two-thirds of its 4-year-olds with high-quality state pre-K, and nearly three-quarters when special education is considered. In marked contrast, a dozen states still provide no state-funded preschool education to even their most disadvantaged families other than special education services for young children with disabilities. (See Box.)

State	Percent of 4-Year-Olds Served	
	State Pre-K	State Pre-K & Special Education
Oklahoma	68.4	73.2
Florida	56.7	61.8
Georgia	53.3	57.9
W. Virginia	45.8	55.3
Texas	45.2	48.6
Vermont	44.9	53.9
S. Carolina	37.8	43.8
Wisconsin	36.1	44.0
New York	34.6	44.6
Maryland	34.0	39.6

No-Program States
Alaska
Hawaii
Idaho
Indiana
Mississippi
Montana
New Hampshire
North Dakota
Rhode Island
South Dakota
Utah
Wyoming

Other important disparities across the states include:

- State spending ranges from nothing in 12 states to more than $10,000 per child in New Jersey.
- Degree requirements for teachers range from a bachelor's degree with teaching certificate in early childhood in some states to little more than a high school diploma in a number of other states
- Maximum class sizes and staff-child ratios range from no limit in Texas and Kansas to 15 children with a teacher and full-time assistant in New Jersey's Abbott program.

4733

GAINS FOR 3-YEAR-OLDS

Access for 3-year-olds in 2006-2007 rose 10 percent over the previous year and only two states serving 3-year-olds had substantive enrollment decreases. Access for this age group has increased 28 percent since NIEER began tracking the data in 2001-2002. This is a welcome development since the effects of poor educational opportunities for children at risk are clearly evident by age 3. Still, provision for 3-year-olds remains modest and concentrated in fewer states compared to programs for 4-year-olds. The new leader in serving 3-year-olds is Illinois, which became the first state committed to serving all 3-year-olds. Illinois now serves 19 percent of its 3-year-olds, matching the national average for 4-year-olds from just a few years ago.

Kentucky

MARCH TOWARD QUALITY

The rapid enrollment growth in state pre-K that NIEER has documented over the last six years only retains its value if quality is maintained. While funding and other commitments have not always kept pace with enrollment, it is noteworthy that states have continued their progress toward higher standards. In 2006-2007, improvements in program standards enabled seven states to meet more benchmarks on NIEER's Quality Standards Checklist.

High quality standards are preconditions for attaining educational effectiveness. Alone, they do not guarantee children a highly effective education. However, in conjunction with continuous improvement efforts focused on teaching in the classroom, high standards have helped states to produce substantial learning gains for children from all social and economic backgrounds as several studies now document.[1]

TOWARD A MORE CERTAIN COMMITMENT

Overall, there is more positive news than negative to report from 2007. For the first time since NIEER began collecting data on state pre-K programs, spending per child rose after adjusting for inflation. This important change occurred despite a rise in enrollment to an all time high. It is important for children and the nation that this trend continues. Fiscal Year 2007 was a relatively good year for state revenues. Future revenue projections are less rosy and a recession that could reduce state revenues even more sharply may loom on the horizon.

Even in a good budget year like 2007, all boats did not rise. Three states (Arizona, Oregon and Nebraska) cut nominal spending and nine failed to keep up with inflation. The result in those states was reduced enrollment, reduced funding per child, or both. In tough budget years there will be more pressure to reduce enrollments and inadequately fund state pre-K. What can be done to prevent this from happening?

4734

WHAT CAN BE DONE

As states set their fiscal year 2009 budgets, taxpayers and children's champions should ensure that investments in early education have priority over less-productive spending. Just as wise individuals set aside savings before budgeting for discretionary spending, public investments in the future should come first, not last in state budget making. This includes ensuring that states do not rob Peter's prenatal or infant-toddler care to pay for Paul's pre-K.

Attaching pre-K funding to state funding formulas for K-12 education could help ensure that pre-K funding would increase proportionally with enrollment as it expands, so that funding per child is more dependable. This need not mean that pre-K funding follow exactly the same formula as K-12 spending. For example, states like New Jersey have seen fit to bear a larger share of pre-K funding for disadvantaged children. However, the state share should be no less than for K-12.

GAUGING FUNDING ADEQUACY

The spending increase for 2007 does not erase previous declines. In inflation adjusted dollars, state pre-K funding per child still falls substantially below the level of 2001. We conducted a new analysis for this *Yearbook* that looks at all resources per child enrolled and estimates whether state programs are sufficiently funded to meet the benchmarks on our Quality Standards Checklist. (See Table 8.) We found that 19 states spent enough that they probably could meet all 10 of our benchmarks for minimum standards of quality. For most of the others, we have incomplete data as to local funding sources. Many of the remaining 19 might be allocating enough funds on average to meet all 10 benchmarks, once local funding is taken into account. A key issue is the extent to which local public schools add additional funds. However, even if local sources are making up the difference on average, there may be large variations in financial support depending on local ability to provide additional funding.

A FEDERAL ROLE?

In 2007, enrollment increased for both 3- and 4-year-olds, signifying renewed interest in states serving children for two years beginning at age 3. Even so, enrollment of 3-year-olds remains low relative to that for 4-year-olds. With the states shouldering a growing share of the cost of preparing the nation's children to succeed in school, it's fair to ask what role the federal government might play to ensure that progress continues. The federal government could play a vital role by providing an inducement to states to expand enrollment, particularly at age 3, and improve quality by offering matching funds. It could also have provisions designed to be counter cyclical—by providing states with more funding for pre-K when state revenues decline or fail to keep up with inflation due to an economic downturn.

4735

ACCESS: REACHING MORE CHILDREN

State-funded prekindergarten reached more children during the 2006-2007 school year than ever before, with total enrollments topping one million for the first time. State pre-K programs served 1,026,037 children in 38 states across the country, of which 1,008,597 were 3- and 4-year-olds. This represents an enrollment increase of more than 80,000 children from the previous year. Pre-K enrollment data for each state are reported in Tables 2 and 3, and additional information about Head Start and special education enrollment is provided in Tables 4 and 5. Key trends in the 2006-2007 program year were:

- Most enrollment increases were modest, but some states made large gains. Enrollment increased by 52 percent in Tennessee, 33 percent in Pennsylvania, and 17 percent in Illinois, Florida and New York.
- Three states with pre-K for all served more than half of the state's 4-year-olds: Oklahoma (68 percent), Florida (58 percent), and Georgia (53 percent). When preschool special education enrollments are taken into account state enrollments were even more impressive. When the federal Head Start program is included, enrollment of 4-year-olds hit 90 percent in Oklahoma, 71 percent in Florida, and 65 percent in Georgia. For the first time, 10 states served more than one-third of their 4-year-olds in regular state pre-K.
- Thirty states increased enrollment of 4-year-olds. Of the seven states that decreased enrollment of 4-year-olds, only Ohio decreased enrollment by more than 5 percent. Enrollment of 4-year-olds has grown by 56 percent since 2001-2002, a gain of more than 300,000 children nationwide.
- In the 26 states serving 3-year-olds, enrollment increased in all but five. Still, only five states served more than 10 percent of their 3-year-olds outside of preschool special education. Since 2005-2006, there was a 10 percent increase in the number of 3-year-olds served. Two-thirds of this increase was due to Illinois' expansion initiative, Preschool for All, which took it to first place in providing access for 3-year-olds. Vermont and New Jersey follow closely, with more than 15 percent served.

Overall, enrollment in state prekindergarten programs continued to increase so that 22 percent of 4-year-olds and 3 percent of 3-year-olds were served in state-funded pre-K programs across the country. These increases are encouraging, but uneven growth persists. Children and families in the 12 states with no provision of state pre-K are increasingly disadvantaged relative to those in the rest of the nation.

4736

QUALITY STANDARDS: ENSURING VALUE

The quality of a prekindergarten program plays a critical role in determining its value to the children who attend it and the taxpayers who support it. All states require classrooms to meet some specific quality standards to receive state prekindergarten funds. The *Yearbook* uses a research-based checklist of quality benchmarks to compare quality standards across the states.

Each benchmark represents a different program component, covering broad areas such as staff qualifications, class size, comprehensive services, and early learning standards. (A list of the benchmarks and summary of the supporting research is provided on pages 25-29.) Although each benchmark is important, they are not all equally important and do not encompass every aspect of quality. The benchmarks are best viewed as preconditions for quality and evidence of a state's commitment to ensure that every child enrolled receives an effective education. Standards do not cover everything required to ensure a good education. For example, teachers must be adequately paid and properly supported and supervised. Also, the benchmarks focus on policy requirements rather than actual practice, and some classrooms may exceed or fail to meet state-level requirements. The total number of benchmarks is a rough gauge of a state's commitment to quality, and attention should be paid to the specific benchmarks met and not just the total number.

States improved their prekindergarten quality standards modestly, as the median number of benchmarks met increased from 6.5 to 6.8 for 2006-2007. (The NIEER benchmarks for state quality standards remain unchanged from the previous two school years.) Key findings for the 2006-2007 school year are:

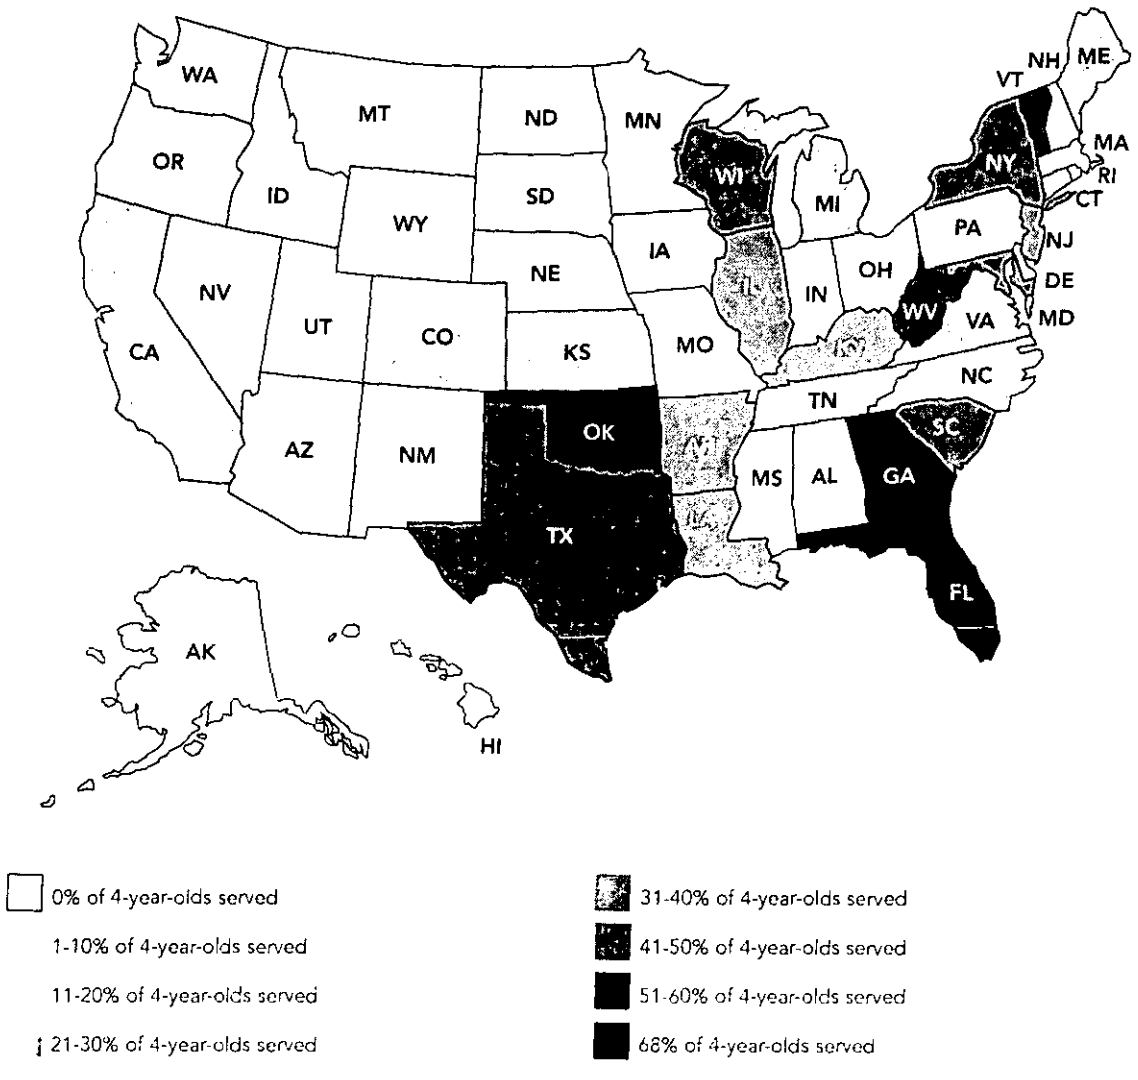
- North Carolina and Alabama met all 10 of the NIEER quality benchmarks. Eight additional states funded pre-K initiatives that met nine of the 10 benchmarks—Arkansas, Illinois, New Jersey, New Mexico, Oklahoma, South Carolina, Tennessee, and Washington.
- Only eight state-funded preschool initiatives met fewer than half of the NIEER benchmarks. Among this shrinking group of states, Arizona, Kansas and Maine have scheduled improvements in their standards to take effect in the next two years.

4737

- Fewer than half the 38 pre-K states required all lead teachers in their programs to hold a bachelor's degree. Most of the others required bachelor's degrees only in certain circumstances, typically in public school settings. Eight states did not require any state prekindergarten teachers to have bachelor's degrees. The lack of progress in this area is particularly disappointing.

Despite continuing room for improvement in teacher education requirements, the overall situation regarding quality standards is positive. More than 80 percent of the states with programs met benchmarks for comprehensive early learning standards and staff-child ratios of 1:10 or better. More than 70 percent of the states met benchmarks for class sizes of 20 or fewer children, prekindergarten specialized training for lead teachers, and site visits. State pre-K initiatives in Colorado, Iowa, Missouri, New Mexico, New York, Pennsylvania, South Carolina, and Washington each met new benchmarks effective with this report. For a complete summary of the benchmarks met by each state prekindergarten initiative during the 2006-2007 school year, see Table 6 on page 19.

FIGURE 1: PERCENT OF 4-YEAR-OLDS SERVED IN STATE PRE-K



4738

RESOURCES: TRACKING THE FUNDING

During the 2006-2007 school year states continued to increase funding for state prekindergarten, partly to increase enrollment and partly to maintain or improve quality. Pre-K programs must be sufficiently funded in order to provide children with a quality education. Some states provide adequate funding for their state pre-K programs entirely through the use of state dollars, while others employ additional local and/or federal dollars to reach adequate funding levels. Another group of states does not appear to fund state pre-K at a level consistent with a high-quality education. However, this often is difficult to determine as some states are unable to report the amount of funding provided by local schools and other sources.

- In 2006-2007, states spent $3.72 billion on preschool initiatives, an increase of $467 million (without adjusting for inflation), or 14 percent, from the previous year. State pre-K spending ranged from just more than $3 million in Nevada, a state with about 72,000 3- and 4-year-olds, to $533 million in Texas, which has about 758,000 3- and 4-year-olds.
- Average state spending per child enrolled was $3,642. Compared to the previous year, this is an increase of $175 per child without adjusting for inflation (and an increase of $32 adjusted for inflation). However, states continued to vary greatly in their per-child spending. New Jersey was the top ranked state, spending $10,494 per child. Three states, New Jersey, Oregon, and Connecticut, spent more than twice the national average. Twelve states continued to spend nothing on state pre-K. Despite the increase, on average, states still spent much less per child on a year of pre-K than on a year of K-12.
- The national average of per-child spending was $4,134, when combining state, local, and locally allocated federal funds, despite incomplete data reported.

The good news is that for the first time in *Yearbook* history, there was an increase rather than a decrease in inflation-adjusted per-child state spending. Spending per child enrolled increased in more than half of the states offering state pre-K programs. This one increase does not entirely offset previous declines, and inflation-adjusted per-child state spending is still down $700 nationally from 2001-2002. Over this time, all but eight states have increased nominal per-child spending, suggesting that states are struggling to maintain spending levels in light of enrollment increases and inflation. Tables 7 and 9 provide more detailed information on state spending.

This *Yearbook* includes two resource rankings for state preschool programs. As in the previous four *Yearbooks*, this fifth edition provides rankings based on the amount of funds states spend for each child enrolled. However, state spending does not account for all money contributed to state prekindergarten initiatives. Some states rely on local and locally allocated federal dollars to adequately fund their programs. In an attempt to paint a more complete picture of the resources employed in state prekindergarten programs, this *Yearbook* presents a new ranking of programs based on all the spending per child that states could report to us. In interpreting this new ranking, it is important to recognize that some states were unable to report spending from other sources. This new ranking will underestimate total spending for some, if not all, of those states. There are few large differences between the states positions on the two resource rankings. The problem of inaccurate rankings on expenditures from all sources is likely to be most severe toward the middle of the distribution. Those states at the very top and very bottom are unlikely to change rank much even with more complete information. The national average of per-child spending from all reported funding was $4,134, though this figure surely underestimates the true national average if all spending could be identified. Table 8 shows the per-child spending in each state, using all known sources.

Three states serve as examples: Colorado, Maryland, and Florida. In 2006-2007, Colorado spent $2,047 per child in state dollars and was ranked 36th nationally in per-child spending. However, Colorado also collects information on local spending required by the state school funding formula. Including these mandatory local dollars, Colorado spent $3,194 per child and is ranked 29th in spending from all known sources. Maryland is another state that benefits from the new resource ranking. Based on state spending alone, Maryland spent $2,918 per child and was ranked 27th nationally. However, after including local and federal dollars, Maryland spent $6,132 per child and was ranked 13th in per-child spending from all known sources. The picture is quite different in Florida where the VPK program is funded entirely by state funds. The state spent only $2,335 per child and was ranked 34th in state per-child spending. Florida's ranking dropped to 38th in per-child spending from all known sources.

4739

The 2007 *Yearbook* also presents an analysis of which states funded their state prekindergarten initiatives sufficiently to be able to meet the NIEER quality benchmarks. Half of the states had pre-K programs that we determined were sufficiently funded to meet all 10 benchmarks, though based on an examination of state policies, nine of these states actually met seven or fewer of the benchmarks. Those states might be able to raise their standards to meet all the benchmarks without incurring added costs. Of the 19 states that did not sufficiently fund their state pre-K to meet all 10 NIEER benchmarks (as judged by all reported spending), only five states met eight or more NIEER benchmarks. Both Alabama and North Carolina, which met all 10 NIEER benchmarks, sufficiently funded their programs.

Some of the 19 states that did not appear to be adequately funded *based on reported spending* are states that also did not provide complete spending information beyond state spending. Those states may come closer to adequately funding their programs than reported in Table 8 if funds from all sources were taken into account. Illinois is an example of such a state. Illinois reported only state spending, although the state pre-K program is also supported by local dollars. By our calculations a half-day pre-K program in Illinois meeting the NIEER quality benchmarks should cost about $4,520 per child, but the state spent $3,322 per child. Local spending in Illinois from other sources (donated private facilities and other in-kind contributions, public facilities costs outside the pre-K budget, etc.) may have been sufficient for the program to have been adequately funded. This is especially likely because Illinois meets nine of the NIEER benchmarks. Florida, on the other hand, does not appear to adequately fund its pre-K program and may have little funding besides that from the state. The state currently spends $2,335 per child, but would need to spend about $4,055 to meet the NIEER benchmarks. It seems unlikely that most providers in Florida, who are primarily private, could find the additional resources needed to make up the difference on their own.

* For each state, a full-day estimate (F) or half-day estimate (H) of per-child spending was used, based on the operating schedule of the state pre-K program. For states that operated both full and half-day programs, a half-day estimate was generally used. State estimates were constructed from a national estimate adjusted for state cost of education differences. The national estimate was obtained from Cault, B. Mitchell, A. Williams, E., Dey, J. S. Sorokina, O. (2007), Meaningful Investments in Pre-K: Estimating the Per-Child Costs of Quality Programs. Washington, DC: Institute for Women's Policy Research. The state cost index was obtained from: Taylor, L. & Fowler, W. (2006). A comparable wage approach to geographic cost adjustment. Washington, DC: IES, US Department of Education.

For details about how these figures were calculated, see the Methodology section and Roadmap to the State Profile Pages.

4748

WHAT QUALIFIES AS A STATE PRESCHOOL PROGRAM?

Our *Yearbook* focuses on state-funded preschool initiatives meeting these criteria:

- The initiative is funded, controlled, and directed by the state.
- The initiative serves children of prekindergarten age, usually 3 and/or 4. Although initiatives in some states serve broader age ranges, programs that serve only infants and toddlers are excluded.
- Early childhood education is the primary focus of the initiative. This does not exclude programs that offer parent education but does exclude programs that mainly focus on parent education.
- The initiative offers a group learning experience to children at least two days per week.
- State-funded preschool education initiatives must be distinct from the state's system for subsidized child care. However, preschool initiatives may be coordinated and integrated with the subsidy system for child care.
- The initiative is not primarily designed to serve children with disabilities but may include children with disabilities.
- State supplements to the federal Head Start program are considered to constitute *de facto* state preschool programs if they substantially expand the number of children served and the state assumes some administrative responsibility for the program. State supplements to fund quality improvements, extended days, or other program enhancements and that expand enrollment minimally are not considered equivalent to a state preschool program.

While ideally this report would identify all prekindergarten funding streams at the state, local, and federal levels, there are a number of limitations on the data that make this extremely difficult to do. For example, prekindergarten is only one of several types of educational programs toward which local districts can target their Title I funds. Many states do not track how Title I funds are used at the local level and the extent to which they are spent on prekindergarten. Another challenge involves tracking total state spending for child care, using a variety of available sources, such as CCDF dollars, TANF funds, and any state funding above and beyond the required matches for federal funds. Also, although some of these child care funds may be used for high-quality, educational, center-based programs for 3- and 4-year-olds that closely resemble programs supported by state prekindergarten initiatives, it is nearly impossible to determine what proportion of the funds are spent this way.

AGE-GROUPINGS-USED-IN-THIS-REPORT

Children considered to be 3 years old during the 2006–2007 school year are those who were eligible to enter kindergarten two years later, during the 2008–2009 school year. Children considered to be 4 years old during the 2006–2007 school year were eligible to enter kindergarten one year later, during the 2007–2008 school year. Children considered to be 5 years old during the 2006–2007 school year were already eligible for kindergarten at the beginning of the 2006–2007 program year.

Roadmap to the State Profile Pages

How to interpret data on the individual state profiles:

For each state that has a prekindergarten initiative, we present one page with a description of the state's program followed by a page with data on the program's key features.

On the top of the first page for each state are two sets of bar graphs:

- The first set shows percentages of the state's 3-year-olds and 4-year-olds enrolled in the state program.
- The second set shows the state's spending per child enrolled in the state prekindergarten initiative.

Both sets of bar graphs depict changes in state prekindergarten over time, from fiscal year 2002 (which corresponds to the 2001–2002 school year) through fiscal year 2007 (the 2006–2007 school year). Most of the 2002–2006 data used for comparison purposes come from NIEER's previous *Yearbooks*, although spending figures are adjusted for inflation and represent 2007 dollars. There are also some exceptions in cases where states revised data or reported data differently. In such cases we adjusted data to ensure comparability across program years.

The bar graphs are followed by a narrative describing the main features of the state's initiative, with details such as the initiative's origins, the types of settings in which prekindergarten can be offered, and eligibility criteria for children. The narrative also notes unique or particularly interesting aspects of the state initiative that may not be highlighted elsewhere in the report, along with relevant new developments. Some descriptive information in the narratives was originally included in *Seeds of Success* from the Children's Defense Fund and the *Quality Counts 2002* issue of *Education Week*.

At the bottom of the first page of each state profile are 4 numbers showing how the 38 states with prekindergarten rank on the following measures:

- The percentage of the state's 4-year-old population enrolled in the state's prekindergarten program (Access Ranking–4s)
- The percentage of the state's 3-year-old population enrolled in the state's prekindergarten program (Access Ranking–3s)
- State expenditures per child enrolled in the program (Resources Ranking–State Spending)
- All reported expenditures per child enrolled in the program, including local and federal spending as well as state spending (Resources Ranking–All Reported Spending)

For the first time, two rankings on resources are included. The Resources Ranking–State Spending corresponds to resources rankings in previous *Yearbooks*. The Resources Ranking–All Reported Spending is new, and provides a more complete picture of spending in states employing local and federal funding sources. However, because states vary in their ability to report spending from these other sources, the new ranking is imperfect and sometimes underestimates total spending.

Information for states that have more than one prekindergarten initiative is presented slightly differently and is explained in the individual state profiles. Louisiana, New Jersey, New Mexico, New York, Pennsylvania, South Carolina, Vermont, and Wisconsin each have more than one distinct initiative.

The 12 states that did not fund state prekindergarten initiatives in 2006–2007 are also given state profile pages. For most of these states, the space usually filled by a description of a state's initiative is left blank, and the table on the quality standards is omitted. However, these profiles provide information on special education enrollment, federally funded Head Start enrollment, and state-funded Head Start enrollment. Information on K–12 spending and federal Head Start spending is also provided. Where applicable, state Head Start spending is reported.

4750

The sections below provide an overview of information contained in data tables on the state profile pages and explain why these elements are important. Data in the tables are for the 2006–2007 program year, except when noted.

ACCESS

The first item in the Access data table is total state program enrollment. This is the number of children enrolled at a specific point in time. Following that is the percentage of school districts (or in some cases, counties or communities) offering state prekindergarten. This information shows the extent of the initiative's geographic coverage. Next, the table shows what, if any, income requirement is used in determining eligibility for the program.

Data on the hours of operation (hours per day and days per week) and operating schedule (academic or calendar year) are shown as additional measures of access. Parents working full time may find it difficult to get their children to and from a program that operates only a few hours a day. The number of hours children participate in preschool also matters for other reasons—for example, it can influence how much impact a program has on children's development and learning.

The Access data table also shows enrollment of 3- and 4-year-old children in two federally funded prekindergarten programs outside the state prekindergarten initiative: preschool special education and Head Start. The final item in the table reports how many children are participating in Head Start slots funded by the state.

Two Access pie charts illustrate the percentages of 3-year-olds and 4-year-olds in the state enrolled in the state prekindergarten initiative, special education, and Head Start. The remaining children are categorized as enrolled in "Other/None." These children may be enrolled in another type of private or publicly funded program (e.g., state-subsidized child care) or may not be attending a center-based program at all. For the purposes of these charts, it was assumed that there was no overlap across the three types of programs. In fact, children may be enrolled in more than one program, although there is no way to determine the extent to which this occurs. Therefore, the proportion of children enrolled in one of these three major programs may be overestimated.

4751

QUALITY STANDARDS CHECKLIST

State policies in 10 critical areas related to quality are shown. For each area, states receive a checkmark when their policy meets or exceeds the related benchmark standard. On the right-hand side of the page, a box displays the total number of benchmarks met by the state. The Quality Standards Checklist represents a set of minimum criteria needed to ensure effective prekindergarten programs, especially when serving disadvantaged children, but is not intended as an exhaustive catalog of all features of a high-quality program. Meeting all 10 standards is not necessarily sufficient for ensuring high quality. However, each of these standards is essential, and no state's prekindergarten policies should be considered fully satisfactory unless all 10 benchmarks are met.

The limitations of research are such that judgment inevitably plays a role in setting specific benchmarks based on evidence. As studies find that the potential benefits from strong preschool education programs exceed costs by 7 to 17 times, we gave more weight to the risk of losing substantial benefits by setting benchmarks too low than to the risk of raising costs by setting benchmarks too high.[1] Currently, costs of many programs are quite low. Thus, benchmarks steer closer to the characteristics of programs demonstrated to produce reasonably large educational benefits for children in randomized trials and the strongest quasi-experimental studies (e.g., High/Scope Perry Preschool and Chicago Child Parent Centers) and farther from the characteristics of programs found to have weak effects in rigorous studies.[2]

Four of the items we use to gauge the quality of state prekindergarten programs involve teacher credentials and training. State pre-K policies are evaluated based on whether programs require teachers to have a bachelor's degree[3]; whether they require teachers to have specialization in pre-K education[3]; whether they require assistant teachers to have at least a Child Development Associate (CDA) or equivalent credential[4]; and whether they require teachers to have at least 15 hours of annual in-service training.[5] Teacher qualifications receive this emphasis in our checklist because research shows this area to be critical in determining program quality. Better education and training for teachers can improve the interaction between children and teachers. This, in turn, affects children's learning.

Class size and staff-child ratios are also emphasized in the Quality Standards Checklist. States are expected to limit class sizes to 20 at most[6], and to have no more than 10 children per teacher.[7] With smaller classes and fewer children per teacher, children have greater opportunities for interaction with adults and can receive more individualized attention. The importance of class size and staff-child ratios in determining the quality of programs has been confirmed by several studies.

Benefits and costs of investments in preschool education: Evidence from the Child–Parent Centers and related programs. *Economics of Education Review, 26*, 126–144. Barnett, W.S., & Belfield, C. (2006). Early childhood development and social mobility. *Future of Children, 16* (2), 73-98.

[3] Based on a review of the evidence, a committee of the National Research Council recommended that preschool teachers have a BA with specialization in early childhood education. Bowman, B. T., Donovan, M. S., & Burns, M. S. (Eds.). (2001). *Eager to learn. Educating our preschoolers.* Washington, DC: National Academy Press. Burchinal, M. R., Cryer, D., Clifford, R. M., & Howes, C. (2002). Caregiver training and classroom quality in child care centers. *Applied Developmental Science, 6*, 2–11. Barnett, W. S. (2003). Better teachers, better preschools: Student achievement linked to teacher qualifications. *Preschool Policy Matters, 2*. New Brunswick, NJ: National Institute for Early Education Research, Rutgers University. Whitebook, M., Howes, C., & Phillips, D. (1989). *Who cares? Child care teachers and the quality of care in America* (Final report of the National Child Care Staffing Study). Oakland, CA: Child Care Employee Project.

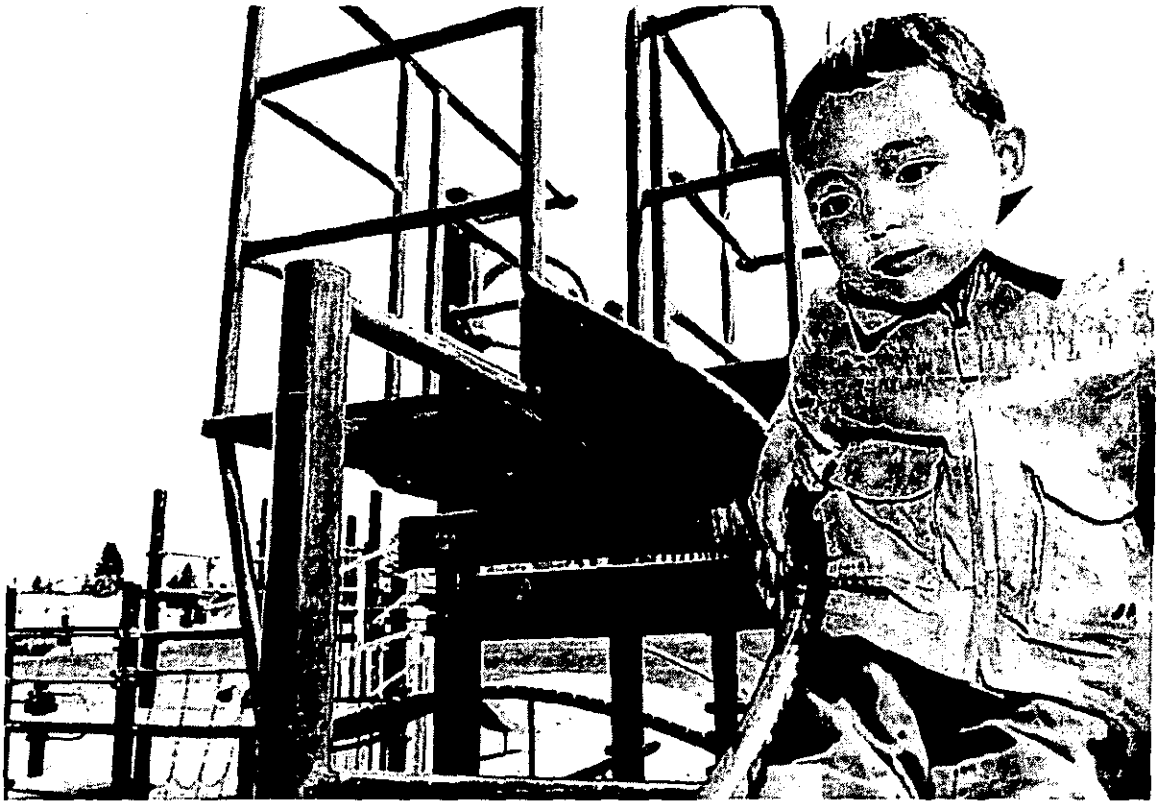
[4] Preschool classrooms typically are taught by teams of a teacher and an assistant. Research focusing specifically on the qualifications of assistant teachers is rare, but the available evidence points to a relationship between assistant teacher qualifications and teaching quality. There is much evidence on the educational importance of the qualifications of teaching staff generally. Bowman et al. (2001). Burchinal et al. (2002). Barnett (2003). Whitebook et al. (1989). The CDA has been recommended to prepare assistant teachers who are beginning a career path to become teachers rather than permanent assistants. Kagan, S. L., & Cohen, N. E. (1997). *Not by chance: Creating an early care and education system for America's children* [Abridged report]. New Haven, CT: Bush Center in Child Development and Social Policy, Yale University.

[5] Good teachers are actively engaged in their continuing professional development. Bowman et al. (2001). Frede, E. C. (1998). Preschool program quality in programs for children in poverty. In W. S. Barnett & S. S. Boocock (Eds.), *Early care and education for children in poverty: Promises, programs, and long-term results* (pp. 77–98). Albany, NY: SUNY Press. Whitebook et al. (1989) found that teachers receiving more than 15 hours of training were more appropriate, positive, and in accord with children in their teaching practices.

[6] The importance of class size has been demonstrated for both preschool and kindergarten. A class size of 20 is larger than the class size shown in many programs to produce large gains for disadvantaged children. Barnett, W. S. (1998). Long-term effects on cognitive development and school success. In W. S. Barnett & S. S. Boocock (Eds.), *Early care and education for children in poverty: Promises, programs, and long-term results* (pp. 11–44). Albany, NY: SUNY Press. Bowman et al. (2001). Finn, J. D. (2002). Class-size reduction in grades K–3. In A. Molnar (Ed.), *School reform proposals: The research evidence* (pp. 27–48). Greenwich, CT: Information Age Publishing. Frede (1998). NICHD Early Child Care Research Network. (1999). Child outcomes when child care center classes meet recommended standards for quality. *American Journal of Public Health, 89*, 1072–1077. National Association for the Education of Young Children. (2005). *NAEYC early childhood program standards and accreditation criteria.* Washington, DC: Author.

[7] A large literature establishes linkages between staff-child ratio, program quality, and child outcomes. A ratio of 1:10 is smaller than in programs that have demonstrated large gains for disadvantaged children and is the lowest (fewest number of teachers per child) generally accepted by professional opinion. Barnett (1998). Bowman et al. (2001). Frede (1998). NICHD Early Child Care Research Network (1999). National Association for the Education of Young Children (2005).

4752



Early learning standards are critical to quality,[8] because they offer programs guidance and ensure that they cover the full range of areas essential to children's learning and development. States should have comprehensive early learning standards covering all areas identified as fundamental by the National Education Goals Panel[9]—children's physical well-being and motor development, social/emotional development, approaches toward learning, language development, and cognition and general knowledge. These standards should be specifically tailored to the learning of preschool-age children so that it is appropriate for their level of development, and should be required by the state or actively promoted for use in state prekindergarten classrooms.

The Quality Standards Checklist also addresses the comprehensive services that prekindergarten programs should be expected to offer. Programs should provide at least one meal[10]; vision, hearing, and health screenings and referrals[11]; and additional parent involvement opportunities such as parent conferences, or support services such as parent education.[12] These items are included because preparing children for success in school involves not only their cognitive development but also their physical health and social/emotional wellbeing.

The Quality Standards Checklist focuses on state prekindergarten policy requirements rather than practice. A state with good policies may have some programs that fail to comply with these policies; conversely, a state with weak policies may have many programs that exceed state standards. While evaluating implementation of standards is outside the scope of this report, the checklist does include an indicator of whether states are taking steps to monitor programs' implementation of the quality standards. Policies requiring strong state quality standards are essential, but it is also necessary to have a means of ensuring that programs meet those standards.[13]

[8] Current practice too frequently underestimates children's capabilities to learn during the preschool years. Clear and appropriate expectations for learning and development across all domains are essential to an educationally effective preschool program. Bowman et al. (2001). Frede (1998). Kendall, J. S. (2003). Setting standards in early childhood education. *Educational Leadership 60*(7), 64–68.

[9] National Education Goals Panel. (1991). *The Goal 1 Technical Planning Subgroup report on school readiness*. Washington, DC. Author.

[10] Good nutrition is essential for healthy brain development and for children's learning. Shonkoff, J. P., & Phillips, D. A. (Eds.). (2000). *From neurons to neighborhoods. The science of early childhood development*. Washington, DC. National Academy Press.

[11] For some children, preschool provides the first opportunity to detect vision, hearing, and health problems that may impair a child's learning and development. This opportunity should not be missed. Meisels, S. J., & Atkins-Burnett, S. (2000). The elements of early childhood assessment. In J. P. Shonkoff & S. J. Meisels (Eds.), *Handbook of early childhood intervention* (pp. 231–257). New York: Cambridge University Press.

[12] Families are the primary source of support for child development and the most effective programs have partnered with parents. Bowman et al. (2001). Frede (1998).

[13] Monitoring of program quality and external accountability for pre-K are essential components of program standards. Bowman et al. (2001).

4753

RESOURCES

A table in the Resources section shows total state spending for the prekindergarten initiative, whether a local match is required, amount of state Head Start spending (if applicable), state spending per child enrolled in the program, and all reported (state, local, and federal) spending per child enrolled in the program. These measures offer different views of a state's resources for prekindergarten that together provide a more complete picture. For example, total spending by a small state may appear relatively low, but may prove to be fairly high relative to the number of children enrolled. A state with a high total funding level for its prekindergarten initiative may have a low per-pupil spending level if it enrolls a large number of children. As a result, children may not be receiving the extent or intensity of services they need for the prekindergarten program to have a substantial impact. In some states, local communities contribute substantial additional funds to state pre-K. In such cases, the figure that includes all reported spending is the best gauge of the level of available resources, to the extent that information about local spending is available.

A bar chart in the resources section compares prekindergarten spending to federal Head Start spending and K–12 spending. Different colors indicate different funding sources—state, local, and federal. A separate color is used to indicate any TANF funds that a state directs toward its prekindergarten initiative. While TANF funds are federal dollars, it is the state's decision to devote these funds to prekindergarten as opposed to other purposes. Finally, data on the amounts of local and federal pre-K funds used are included in the bar chart when available.

4754

ACCESS

Total state program enrollment ..... Number of children in state pre-K program

School districts that offer state program ..... Percentage of school districts in state where program is offered (may include programs not provided by district itself)

Income requirement ..... Maximum family income for participants

Hours of operation ..... Hours per day and days per week programs operate

Operating schedule ..... Annual schedule of operation (academic year or entire calendar year)

Special education enrollment ..... Number of 3- and 4-year-olds served by the Preschool Grants Program of the Individuals with Disabilities Education Act

Federally funded Head Start enrollment ..... Number of slots for 3- and 4-year-olds in Head Start funded with federal money

State-funded Head Start enrollment ..... Number of slots for 3- and 4-year-olds in Head Start funded with state money

QUALITY STANDARDS CHECKLIST

POLICY	STATE PRE-K REQUIREMENT
Early learning standards	National Education Goals Panel content areas covered by state learning standards for preschool-age children must be comprehensive
Teacher degree	Lead teacher must have a BA, at minimum
Teacher specialized training	Lead teacher must have specialized training in a pre-K area
Assistant teacher degree	Assistant teacher must have a CDA or equivalent, at minimum
Teacher in-service	Teacher must receive at least 15 hours/year of in-service professional development and training
Maximum class size 3-year-olds 4-year-olds	Maximum number of children per classroom must be 20 or lower
Staff-child ratio 3-year-olds 4-year-olds	Lowest acceptable ratio of staff to children in classroom (e.g., maximum number of students per teacher) must be 1:10 or better
Screening/referral and support services	Screenings and referrals for vision, hearing, and health must be required; at least one additional support service must be provided to families
Meals	At least one meal must be required daily
Monitoring	Site visits must be used to demonstrate ongoing adherence to state program standards

RESOURCES

Total state pre-K spending ..... Total state funds spent on state pre-K program

Local match required? ..... Whether state requires local providers to match state monetary contributions to program and amount of any required match

State Head Start spending (when applicable) ..... Total state funds spent to supplement federal Head Start program

State spending per child enrolled ..... Amount of state funds spent per child participating in pre-K program

All reported spending per child enrolled ..... Amount of state, local, and federal funds spent per child participating in pre-K program

Alaska PTA

*every*child. *one* voice.

2007-2008 Legislative Platform

The Alaska PTA will support legislation and regulations, which promote the Purpose of the PTA cited as follows:

a. To promote the welfare of children and youth in home, school, community and place of worship.
b. To raise the standards of home life
c. To secure adequate laws for the care and protection of children and youth
d. To bring into closer relation the home and the school, that parents and teachers may cooperate intelligently in the education of children and youth
e. To develop between educators and the general public such united efforts as will secure for all children and youth the highest advantages in physical, mental, social, and spiritual education.

This legislative platform is the authority for selecting those areas of legislation to be addressed by the Alaska PTA. Positions taken on state and federal legislation will conform to policies adopted in this basic platform, priorities approved at the Legislative Issues Conference, resolutions adopted at Convention and positions adopted by Alaska PTA Board.

A. SCHOOL GOVERNANCE

The Alaska PTA supports legislation and regulations that will:

1. Maintain local school district self-governance; require financial accountability, timely and effective communications between all parties regarding school performance records and local control of all public schools.
2. Require bargaining unit within School Districts to give a three-day strike notice.

B. FUNDING FOR PUBLIC EDUCATION

The Alaska PTA supports legislation and regulations for state and local funding for public education, that is adequate, equitable, stable and accountable. To achieve this, Alaska PTA supports the following concepts:

1. Public education is primarily a responsibility of both state and local governments and must be a top funding priority.
2. The Alaska Legislature must consider new, stable sources of revenue to fund education and initiate forward funding for education. This would enable school districts to initiate, improve upon and maintain educational programs that show results in achieving high academic and or life skills performance by students according to their abilities. These programs will allow students to pass all appropriate and required tests while maintaining a safe and sound environment that promotes and facilitates learning.
3. The Department of Education and Early Development should annually compile data on the finances of all School Districts and make this information readily available to the public in a comprehensible and relevant format. Uniform accounting procedures should be required by the State in order that district expenditures for programs and administrative costs can be computed equitably, while showing number of participants within the program for the fiscal period reported.

7. Ensure any environment, in which a child is placed, is safe and adequately staffed, and encourage efforts to remove children from adult jails and lockups, in order to place children in more appropriate facilities
8. Encourage cooperation at all levels of government with comprehensive emergency management services, and support sponsorship of emergency preparedness programs in cooperation with the appropriate local school governing bodies.
9. Require 60 minutes of daily physical education by accredited professional instructors for every primary and secondary school.
10. Support Denali kid care to ensure that children, teens (through age 18) and pregnant women of both working and non-working families who meet the current) income guidelines have access to affordable health insurance.
11. Require confidential reporting to the state where every child is receiving their 1-12th grade education be it public, private or home schooling.

E. EARLY CHILDHOOD EDUCATION AND CHILD CARE

The Alaska PTA supports legislation and regulations, which will:

1. Support a comprehensive program to provide training for parents of all children from birth to age 5.
2. Provide high-quality, developmentally appropriate preschool programs, for all children age 3-5
3. Improve licensing for day care, preschool programs, and foster home parents to ensure high standards.
4. Provide day care assistance to families in need to allow them to pay for quality programs.
5. Support a statewide system of resource and referral centers to help parents find accessible, affordable, quality childcare.

F. PUBLIC INVOLVEMENT

The Alaska PTA supports legislation and regulations, which will:

1. Provide opportunities for parent and community participation in all aspects of education, including input to the classified/certified employee's evaluation process.
2. Allow volunteers to deduct from their federal tax return volunteer miles driven at the same rate as business usage.
3. Include parents, community members, and educational professionals in all aspects of student performance standards.
4. Alaska PTA strongly supports and advocates for the development and implementation of the parental involvement policies of NCLB that will:

- Train Teachers and staff to apply the six standards of parent involvement:
    1. Communicating
    2. Parenting
    3. Student Learning
    4. Volunteering
    5. School decision making and advocacy
    6. Collaborating with the community
- Engage parents
- Provide parents with clear and timely information about NCLB
- Develop effective advocates

Our view: Alaska needs a plan to make public schools better

Quality gap

(11/16/08 21:39:10)

Alaska has handicapped its young children by being one of only 12 states with no state-funded education system for pre-kindergarten students.

Here's another gloomy statistic at the other end of the public education system: Only about two-thirds of Alaska high school students graduate in four years, compared with the U.S. average of three-fourths graduating.

And of Alaska students who do graduate, only a third start college. Nationwide, nearly half of high school graduates are college-bound. So what's the plan to improve the odds for Alaska kids?

There isn't one -- but state commissioner of education Larry LeDoux wants to change that. Last week, the state sponsored the first education summit in many years, engaging about 400 parents, students, educators, university officials and others in a discussion about what's needed.

Friday they came up with about 50 goals, including offering state-funded preschool to the families of every 3-, 4- and 5-year-old in Alaska.

A sampling of other goals:

- Evaluating pre-school programs to make sure they're adequately preparing children for school.

- Establishing a statewide telecommunications network, with equal access for all students.

- Defining what a student needs to know to be a skilled worker or a college student -- not just the minimum standards the state now sets for handing out high school diplomas.

Meeting these goals would take school funding to another level. A much higher one, though no one made any estimates.

The true test of Alaska's commitment to our young people will not be whether a group of smart, dedicated people can produce an admirable list of goals, but whether the state administration and the Legislature will support them financially.

We can't say right now which reforms the state should adopt and pay for and which not.

They need to be thought through. The list will go up on the state Web site, be adopted and perhaps refined by the state Board of Education, and be publicized so that anyone in Alaska can comment.

But it's worth noting that other states, not as wealthy as ours, do offer state-funded pre-school, for example.

And it's clear that Alaska isn't doing enough to ensure the success of its students. If it were, we wouldn't have such abysmal graduation rates.

BOTTOM LINE: Alaska needs to take a hard look at steps that will improve public education, like state-funded pre-kindergarten.

Off the trail

Campaign is over, Gov. Palin; come back home and govern

Gov. Sarah Palin electrified the Republican Party base during the presidential election -- but her base now is right here in Alaska.

At least it is supposed to be.

The governor was absent when the state sponsored a big, statewide conference to chart the future of Alaska's educational system last week. Instead of lending her weight to the effort to improve education, the governor was in Miami giving a speech on the future of the Republican Party.

She had been back in Alaska briefly after the Palin-McCain ticket lost the presidential election. Long enough to say, hi, I'm back. Then she was gone on another partisan political errand.

There are pressing issues to be addressed in the state, such as low graduation rates, plummeting North Slope oil prices, proposals to build alternative energy projects, the gas pipeline.

Welcome back, again, Gov. Palin. The state needs you.

BOTTOM LINE: It's time for the governor to re-focus on Alaska's needs.

A Valuable Investment

By Abbe Hensley, executive director, Best Beginnings - as published in our November 2008 E-newsletter.

Even in these stressful, nail-biting times, there's one investment that holds its value. Economists are touting it as one of the best bets available for economic development. This sure-fire investment? It's early learning. Myriad studies and research continue to reinforce what is already a powerful case: preparing babies and young children to succeed in school and life has profound impacts on the economy.

The components of quality early learning – positive and purposeful parenting, high quality and accessible child care and early education programs – build strong brains during the critical years from birth to 5. When we build strong brains, we stoke educational achievement and workplace skills, both vital to a productive workforce and a strong and vibrant economy. Early learning contributes to the economy in two ways. It saves money by reducing crime, teen pregnancy, and welfare dependency. And it generates revenue by paving the way for higher educational attainment and a resulting increase in earning potential.

Preparing children for success is far more than just a family matter. That's why economists and business leaders around the country are jumping on the early learning bandwagon. Nobel laureate economist James Heckman is one of the nation's leading experts on the impact of high quality early education on workforce productivity and economic development.

In "Schools, Skills and Synapses" (c 2008 Western Economic Association International), Heckman summarizes a domino effect: rising high school dropout rates result in lower college enrollment. Lower college enrollment results in sluggish growth of workforce skills. Declining workforce skills result in less productivity and a weaker economy.

We already know the path to success in school starts at birth. Those first five years of life are critical for establishing how a child will fare in school and ultimately in life. According to Heckman, the evidence suggests that a child's early environment plays a powerful role in shaping adult outcomes.

It's in our self-interest to create the early learning system we need. We all benefit when more kids graduate from high school and when more people have jobs, pay taxes, and contribute to their communities and the economy.

Early learning – it's everybody's business.

Best,

Abbe

Abbe Hensley, executive director of Best Beginnings, was director of outreach services for the U.S. Department of Education-funded PBS Ready To Learn Service. Prior to that, she worked with educational children's television and community outreach at KAKM in Anchorage and at WETA in Washington, D.C. She has served on the Alaska State Board of Education, as president of the Alaska PTA, and as vice president for leadership for National PTA.

Early Childhood Development: Economic Development with a High Public Return

Art Rolnick
Senior Vice President and Director of Research

Rob Grunewald
Regional Economic Analyst

Federal Reserve Bank of Minneapolis

Note: The following paper was developed in March 2003 with Minnesota audiences in mind. However, the authors subsequently discovered a high degree of interest throughout the country in their research on the economics of early childhood development and the universality of the issues discussed. This paper also motivated the October conference at the Minneapolis Fed.

Early childhood development programs are rarely portrayed as economic development initiatives, and we think that is a mistake. Such programs, if they appear at all, are at the bottom of the economic development lists for state and local governments. They should be at the top. Most of the numerous projects and initiatives that state and local governments fund in the name of creating new private businesses and new jobs result in few public benefits. In contrast, studies find that well-focused investments in early childhood development yield high public as well as private returns.

Why the case for publicly subsidizing private businesses is flawed and misguided

Over the last few years, the future of Minnesota's economy has been called into question. The resulting debate illustrates how little is understood about the fundamentals that underlie economic development. While many recognize the success of the Minnesota economy in the past, they see a weakening in the foundations of that success. Some point to the decline in corporate headquarters located in Minnesota. Some point to the lack of funding for new startup companies, particularly in the areas of high-tech and biotech. Some point to the possible loss of professional sports teams. Some think the University of Minnesota is not visible enough in the business community. And still others raise the broader concern that Minnesota's citizens and policymakers have become too complacent and unwilling to make the public commitment to be competitive in a global economy.

Those who raise these concerns conclude that Minnesota and local governments need to take a more active role in promoting our economy. Often that implies that the state or local governments subsidize private activities that the market is not funding. Proponents of this view argue that without such subsidies, either well-deserving businesses will not get funded or other states will lure our businesses to greener pastures.

State and local subsidies to private businesses are not new. In the name of economic development and creating new jobs, Minnesota, and virtually every other state in the union, has a long history of subsidizing private businesses. We have argued in previous studies that the case for these subsidies is short-sighted and fundamentally flawed.[1] From a national perspective, jobs are not created—they are only relocated. From a state and local perspective, the economic gains are suspect because many would have been realized without the subsidies. In summary, what often passes for economic development and sound public investment is neither.

If subsidizing private businesses is the wrong way to promote Minnesota's economy, then what is the right way?

To answer this question, we need to understand that unfettered markets generally allocate scarce resources to their most productive use. Consequently, governments should only intervene in markets when they fail.

Market failures can occur for a variety of reasons; two well-documented failures are goods that have external effects and those with public attributes. Unfettered markets will generally produce the wrong amount of such goods. Education has long

4762

been recognized as a good that has external effects and public attributes. Without public support, the market will yield too few educated workers and too little basic research. This problem has long been understood in the United States and it is why our government, at all levels, has supported public funding for education. (According to the Organization for Economic Cooperation and Development, for example, the United States in 1999 ranked high on public funding of higher education.[2]) Nevertheless, recent studies suggest that one critical form of education, early childhood development, or ECD, is grossly underfunded. However, if properly funded and managed, investment in ECD yields an extraordinary return, far exceeding the return on most investments, private or public.

A convincing economic case for publicly subsidizing education has been around for years and is well supported. The economic case for investing in ECD is more recent and deserves more attention.

Public funding of education has deep roots in U.S. history. John Adams, the author of the oldest functioning written constitution in the world, the constitution of the Commonwealth of Massachusetts, 1779, declared in that document that a fundamental duty of government is to provide for education.[3] Publicly funded schools have been educating children in the United States ever since. Today over 85 percent of U.S children are educated in publicly funded schools. John Adams argued for public funding of education because he realized the importance of educated voters to the well-being of a democracy. We suspect that he also understood the economic benefits that flow to the general public.

Investment in human capital breeds economic success not only for those being educated, but also for the overall economy. Clearly today, the market return to education is sending a strong signal. Prior to 1983, the wages of a worker with an undergraduate degree exceeded a worker with a high school degree by roughly 40 percent. Currently, that difference is close to 60 percent. The wage premium for an advanced degree has grown even more. Prior to 1985, the wages of a worker with a graduate degree exceeded those of a worker with a high school degree by roughly 60 percent. Today, that difference is over 100 percent.

Minnesota represents a good example of the economic benefits that flow from education. Evidence is clear that our state has one of the most successful economies in the country because it has one of the most educated workforces. In 2000, almost a third of persons 25 and older in Minnesota held at least a bachelor's degree, the sixth highest state in the nation. To ensure the future success of Minnesota's economy, we must continue to provide a highly educated workforce.

The economic case for public funding of early childhood development

Knowing that we need a highly educated workforce, however, does not tell us where to invest limited public resources. Policymakers must identify the educational investments that yield the highest public returns. Here the literature is clear: Dollars invested in ECD yield extraordinary public returns.

The quality of life for a child and the contributions the child makes to society as an adult can be traced back to the first few years of life. From birth until about 5 years old a child undergoes tremendous growth and change. If this period of life includes support for growth in cognition, language, motor skills, adaptive skills and social-emotional functioning, the child is more likely to succeed in school and later contribute to society.[4] However, without support during these early years, a child is more likely to drop out of school, receive welfare benefits and commit crime.

A well-managed and well-funded early childhood development program, or ECDP, provides such support. Current ECDPs include home visits as well as center-based programs to supplement and enhance the ability of parents to provide a solid foundation for their children. Some have been initiated on a large scale, such as federally funded Head Start, while other small-scale model programs have been implemented locally, sometimes with relatively high levels of funding per participant.

The question we address is whether the current funding of ECDPs is high enough. We make the case that it is not, and that the benefits achieved from ECDPs far exceed their costs. Indeed, we find that the return to ECDPs far exceeds the return on most projects that are currently funded as economic development.

Many of the initial studies of ECDPs found little improvement; in particular, they found only short-term improvements in cognitive test scores. Often children in early childhood programs would post improvements in IQ relative to nonparticipants, only to see the IQs of nonparticipants catch up within a few years.[5]

However, later studies found more long-term effects of ECDPs. One often-cited research project is the High/Scope study of the Perry Preschool in Ypsilanti, Mich., which demonstrates that the returns available to an investment in a high-quality ECDP are significant. During the 1960s the Perry School program provided a daily 2 1/2-hour classroom session for 3- to 4-year-old children on weekday mornings and a 1 1/2-hour home visit to each mother and child on weekday afternoons. Teachers were certified to teach in elementary, early childhood and special education, and were paid 10 percent above the local public school district's standard pay scale. During the annual 30-week program, about one teacher was on staff for every six children.[6]

Beginning in 1962, researchers tracked the performance of children from low-income black families who completed the Perry School program and compared the results to a control group of children who did not participate. The research project provided reliable longitudinal data on participants and members of the control group. At age 27, 117 of the original 123 subjects were located and interviewed.[7]

The results of the research were significant despite the fact that, as in several other studies, program participants lost their advantage in IQ scores over nonparticipants within a few years after completing the program. Therefore a significant contribution to the program's success likely derived from growth in noncognitive areas involving social-emotional functioning. During elementary and secondary school, Perry School participants were less likely to be placed in a special education program and had a significantly higher average achievement score at age 14 than nonparticipants. Over 65 percent of program participants graduated from regular high school compared with 45 percent of nonparticipants. At age 27, four times as many program participants as nonparticipants earned $2,000 or more per month. And only one-fifth as many program participants as nonparticipants were arrested five or more times by age 27.[8]

Perry School Preschool's Estimated Impact per Program Participant

Table 1A Benefit/Cost Analysis

	Present Value in 1992 Dollars Discounted at 3%		
Benefits*	**For Participant**	**For Public**	**Total**
Child care provided	738	0	738
More efficent K-12 education, such as less grade retention and higher achievement	0	6,872	6,872
Decrease in public adult education costs	0	283	283
Increase in participants' earnings and employee benefits	21,485	8,846	30,331
Decrease in crime	0	70,381	70,381
Increase in publicly funded higher education costs	0	-868	-868
Decrease in welfare payments	-2,653	2,918	265
Total Benefits	19,570	88,433	108,002
Cost of Program	0	-12,356	-12,356

Estimated return on $1 invested in program:

For Participant and Public: $8.74 ($108,002 in Benefits/$12,356 for Cost of Program)

For Public: $7.16 ($88,433 in Benefits/$12,356 for Cost of Program)

* Benefits and costs were measured from ages 3 through 27 and projected for ages 28 through 65.

Data source: *The High/Scope Perry Preschool Study Through Age 27*

Other studies of ECDPs, while not solely focused on 3- to 4-year-old children, also show improvements in scholastic achievement and less crime. For example, the Syracuse Preschool Program provided support for disadvantaged children from prenatal care through age 5. Ten years later, problems with probation and criminal offenses were 70 percent less among participants compared with a control group.[9]

As the result of the Abecedarian Project in North Carolina, which provided children from low-income families a full-time, high-quality educational experience from infancy through age 5, academic achievement in both reading and math was higher for program participants relative to nonpar-

Perry School Preschool's Estimated Impact per Program Participant

Table 1B Real Internal Rate of Return*

Benefits**		Average Annual Effect in 1992 Dollars		
		For Participant	For Public	Total
Child care provided	(Ages 3-4)	385	0	385
More efficent K-12 education	(Ages 5-17)	0	747	747
Decrease in public adult education services	(Ages 20-25)	0	89	89
Increase in participants' earnings and employee benefits	(Ages 18-27)	2,142	714	2,856
	(Ages 28-65)	1,070	357	1,427
Decrease in crime	(Ages 18-27)	0	8,923	8,923
	(Ages 28-65)	0	1,565	1,565
Increase in publicly funded higher education costs	(Ages 20-25)	0	-225	-225
Decrease in welfare payments	(Ages 18-27)	-392	431	39
	(Ages 28-65)	-31	34	3
Cost of program	(Ages 3-4)	0	-6,444	-6,444
Estimated Real Internal Rate of Return		4%	12%	16%

* The internal rate of return is the interest rate received for an investment that consists of payments and revenue occurring at regular periods. The above amounts were allocated annually across the age groups listed.

** Benefits and costs were measured from ages 3 through 27 and projected for ages 28 through 65.

Data source: *The High/Scope Perry Preschool Study Through Age 27*

ticipants into young adulthood. Furthermore, participants had fewer incidences of grade retention and special education placements by age 15.[9]

The High/Scope study conducted a benefit-cost analysis by converting the benefits and costs found in the study into monetary values in constant 1992 dollars discounted annually at 3 percent. The researchers found that for every dollar invested in the program during the early 1960s, over $8 in benefits was returned to the program participants and society as a whole (see Table 1A).

While 8-to-1 is an impressive benefit-to-cost ratio, policymakers should place this result in context with returns from other economic development projects. Perhaps another project can boast a higher benefit-to-cost ratio. Unfortunately, well-grounded benefit-to-cost ratios are seldom computed for public projects. However, an alternative measure—the internal rate of return—can be used to more easily compare the public, as well as private, return to investments. (The internal rate of return is the interest rate received for an investment consisting of payments and revenue that occur at regular periods.)

To calculate the internal rate of return for the Perry School program, we estimated the time periods in which costs and benefits in constant dollars were paid or received by program participants and society (see Table 1B). We estimate the real internal rate of return for the Perry School program at 16 percent. "Real" indicates that the rate of return is adjusted for inflation.

While program participants directly benefited from their increase in after-tax earnings and fringe benefits, these benefits were smaller than those gained by the general public. Based on present value estimates, about 80 percent of the benefits went to the general public (students were less disruptive in class and went on to commit fewer crimes), yielding over a 12 percent internal rate of return for society in general. Compared with other public investments, and even those in the private sector, an ECDP seems like a good buy. This analysis suggests that early childhood development is underfunded; otherwise, the internal rate of return on an ECDP would be comparable to other public investments.

As with virtually all studies, there are caveats to the High/Scope findings. On the one hand, the High/Scope study may overstate the results we could achieve today. Problems facing children 30 years ago were different from the problems facing children today. Single parenthood, parental drug use, neighborhood crime are higher in many areas of the country than they were 30 years ago. Therefore, the rate of return of an ECDP today may be lower than the Perry School program.

Furthermore, in reviewing our method of calculating the internal rate of return, one could argue that some of the payments and revenue streams assigned should have started or ended in different years, or that assigning an even distribution distorts the actual payments and revenue made. Nevertheless, we find that the final result holds,

even when payments and revenue are adjusted to a more conservative distribution.

On the other hand, the High/Scope study may understate the results we could achieve today. First, the High/Scope study doesn't measure positive effects on children born to participant families after the study period. The knowledge gained by parents participating in the program likely transferred to their younger children. Second, the study may further understate the effects because it doesn't take into account effects on future generations. With increased education and earnings, participants' children would be less likely to commit crime and more likely to achieve higher levels of education and income than if their parents hadn't attended the Perry School program. A chain of poverty may have been broken.

The returns to ECDPs are especially high when placed next to other spending by governments made in the name of economic development. Yet ECD is rarely considered as an economic development measure.

For example, tax increment financing and other subsidies have recently been used to locate a discount retail store and an entertainment center in downtown Minneapolis, and to relocate a major corporate headquarters to suburban Richfield and a computer software firm to downtown St. Paul. Can any of these projects, which combined represent an estimated quarter of a billion dollars in public subsidies, stand up to a 12 percent public return on investment? From the state's point of view, if the subsidy is simply moving businesses within the state, the public return is zero. If the subsidy is required for the business to survive, the risk-adjusted public return is not merely small but could be negative.

As our lawmakers review proposals to build or improve the state's major professional sports stadiums, let's not make the same mistake. The various proposals to build new baseball and football stadiums and improve the current basketball stadium total over $1 billion. Can new stadiums offer a comparable public return on investment as an ECDP? How does a new stadium reduce crime, increase earnings and potentially break a chain of poverty? We propose that this $1 billion plus be invested in a project with a much higher public return.

Proposal: Minnesota Foundation for Early Childhood Development

Our proposal—to create a foundation for early childhood development in Minnesota—isn't born in a vacuum. For several years the state of Minnesota has sponsored initiatives to help prepare children for kindergarten, specifically, Early Childhood Family Education, or ECFE, School Readiness and state-funded Head Start programs. These programs often work together in supporting early childhood development.

ECFE provides support to parents and their children from birth until kindergarten enrollment to promote the healthy growth and development of children. The program offers classes for parents and

Table 2 Cost Estimate to Educate all 3- and 4-Year-Old Children from Low-Income Families in Minnesota at a Two-Year, High-Quality ECDP

Annual cost of program	
Number of 3- and 4-year-old children living in poverty*	20,000
Cost per child**	$ 9,500
Total	$ 190,000,000
Current funds available	
Federal and state annual funds for Head Start (Serves about 13,300 children at an annual cost of $5,750 per child)	$ 80,000,000
School Readiness (Estimate that 30 percent of children participating in the program live in poverty)	$ 3,000,000
Early Childhood Family Education (Estimate of amount currently spent on 3- and 4-year-old children who live in poverty)	$ 2,000,000
Total	$ 85,000,000
Total annual need (Cost—Current funds available)	$ 105,000,000
$1.5 billion endowment invested in AAA corporate bonds yielding an average 7 percent annual return	$ 105,000,000

4766

children, and provides optional home visits. About $20 million in state aid was allocated to ECFE in 2001, which supported programs for more than 300,000 parents and children.[11]

Between the ages of 3 1/2 to 5 years, children can participate in School Readiness programs that provide a wide array of prekindergarten activities in collaboration with other early childhood and community programs. Funding for School Readiness was about $10 million in 2001 and reached 43,030 children.[12]

The state of Minnesota also allocated almost $19 million to supplement federal funding ($59 million) for Head Start programs in 2000, with about 13,300 children and their families participating in comprehensive education, health and social services. However, according to a state report, only 45 percent of eligible children and their families received Head Start services. Some of these eligible children between the ages of 3 1/2 to 5 years who didn't receive help from Head Start participated in School Readiness programs.[13] However, it is unlikely that participation of high-needs children in a lower-cost, less comprehensive program demonstrated the returns available in a part- to full-day, long-term program.

We propose that the Minnesota state government create the Minnesota Foundation for Early Childhood Development to fill the gap between the funds currently available for ECFE, School Readiness and Head Start and the amount necessary to fully fund a high-quality program for all 3- and 4-year-old children living in poverty in Minnesota. A one-time $1.5 billion outlay would create an endowment that could support ECDPs on an annual basis. The foundation would receive donations from government, private foundations, individuals and businesses. With the foundation's funds invested in corporate AAA bonds, earning about 7 percent per year, we estimate that the $105 million in annual earnings would cover the yearly costs required to fully fund comprehensive, high-quality ECDPs for all children from low-income families in Minnesota (see Table 2).

The Minnesota Foundation for Early Childhood Development would provide funding for well-supported and highly effective ECDPs, whether supplementing funds for an existing Head Start center or helping start a new program. The Foundation would provide additional resources to enhance existing programs, such as boost teacher qualification and compensation, reduce teacher-student ratios and expand curriculum resources. Furthermore, the Foundation would provide start-up funds for new ECDPs to help reach all eligible children.

We contend that funding for ECDPs should reach the level of model program status, such as the Perry School program, since this is the level at which high returns have been demonstrated. Well-funded ECDPs would ensure that all teachers have a degree in early childhood education and are paid at a level that keeps turnover to a minimum. Furthermore, ECDPs would maintain low student-to-teacher ratios and use high-quality curriculum materials. Funds should also be allocated for research to track the improvement of participating children and identify where additional support may be needed. Participation in these programs should be voluntary, but incentives may be provided for families to participate. ECDPs should work effectively with parents and include them in the education process with their children.

Conclusion

The conventional view of economic development typically includes company headquarters, office towers, entertainment centers, and professional sports stadiums and arenas. In this paper, we have argued that in the future any proposed economic development list should have early childhood development at the top. The return on investment from early childhood development is extraordinary, resulting in better working public schools, more educated workers and less crime. A $1.5 billion investment to create the Minnesota Foundation for Early Childhood Development would go a long way toward ensuring that children from low-income families are ready to learn by the time they reach kindergarten.

Granted that in today's tight fiscal environment, $1.5 billion is a particularly large sum, which may mean we can't fully fund the program immediately. But we should be able to fully fund the endowment over the next five years. After measuring the public impact on the quality of life that such a foundation can provide, the costs of not making such an investment are just too great to ignore.

Fact Sheets

The Benefits of High-Quality Pre-K

Pre-k benefits children, their families, and their communities. From improved academic outcomes to the economic savings to schools and states, the benefits of high-quality pre-k are irrefutable.

Successful Students

Pre-k increases high school graduation rates.

Chicago children who attended a pre-k program were 29 percent more likely to graduate from high school than their peers who did not have pre-k. (Source: Chicago Longitudinal Study)

Pre-k helps children do better on standardized tests

Michigan fourth graders who had attended pre-k passed the state's literacy and math assessment tests at higher rates than their peers who had no pre-k. (Source: "State Efforts to Evaluate the Effects of Pre-Kindergarten", Yale University Child Study Center)

Pre-k reduces grade repetition.

Maryland fifth graders who attended pre-k were 44 percent less likely to have repeated a grade than their peers who did not attend pre-k. (Source: "State Efforts to Evaluate the Effects of Pre-Kindergarten", Yale University Child Study Center)

Pre-k reduces the number of children placed in special education.

Among Chicago children, those who attended pre-k were 41 percent less likely to require special education services than their peers who did not attend. (Source: Chicago Longitudinal Study)

Responsible Adults

Pre-k reduces crime and delinquency

Chicago children who did not attend pre-k were 70 percent more likely to be arrested for a violent crime by age 18 than their peers who had been pre-k participants. (Source: Chicago Longitudinal Study)

Pre-k lowers rates of teen pregnancy.

North Carolina children who attended pre-k were less likely to become teen parents than their peers who did not attend pre-k (26 percent vs. 45 percent). (Source: The Carolina Abecedarian Project)

Pre-k leads to greater employment and higher wages as adults

Forty-year-old adults in Michigan who attended pre-k as children were more likely to be employed and had a 32 percent higher average income than their peers who did not have pre-k. (Source: The High Scope Perry Preschool Project)

Pre-k can lead to more stable families

Forty year old adults in Michigan who attended pre-k as children were more likely to report that they were getting along very well in their families as did their peers who did not attend pre-k. 76 percent vs. 64 percent. (Source: The High Scope Perry Preschool Project)

Stronger Communities

Every $1 invested in high quality pre-k saves taxpayers up to $7

Pre-k results in savings by reducing the need for remedial and special education, welfare, and criminal justice services, according to a number of studies. (Sources: "The Economics of Investing in Universal Preschool Education in California", Rand Corporation, The High Scope Perry Preschool Project)

Pre-k improves efficiency and productivity in the classroom

Children who attended pre-k at Head Start centers had more advanced skills in areas such as following directions, problem-solving, and joining in activities, all of which allow teachers to spend more time working directly with children and less on classroom management. (Source: "The Head Start Family and Child Experiences Survey", U.S. Department of Health and Human Services)

Children Benefit from High-Quality Pre-K

- Increased Educational Success
  - Less grade repetition
  - Less special education
  - Improved social behavior and cognitive
  - Higher high school graduation rates
- Increased Life Success
  - Lower teenage pregnancy rates
  - Less involvement in crime
  - Higher employment and earnings

Society Benefits from High-Quality Pre-K

- More productive workforce
- Increased competitiveness
- Reduced crime
- Increased school achievement
- Significant return on investment
  - Savings in K-12 costs
  - Savings in social services costs
  - Savings in crime costs
  - Increased tax revenue

Economic Returns of Pre-K

	Cost Savings per $1 Invested
Perry Preschool	**$17**
Abecedarian	**$4**
Chicago Child Parent Centers	**$7**

Includes savings from less welfare usage, decreased crime and incarceration costs, and higher participant productivity/earnings

Policy Brief

CROCUS
Center for Research on Children in the U.S.

Inside the Pre-Kindergarten Door: A deeper look at what makes a high-quality pre-K classroom

Deborah A. Phillips, William T. Gormley, Jr., and Amy Lowenstein, Georgetown University

We explored the "black box" of pre-K classrooms to identify promising targets for public investments in classrooms that promote learning.

Our study looked inside the classroom door of pre-K programs in the relatively stringent policy context of Tulsa, Oklahoma. We investigated three primary research questions: 1) What are children's experiences with regard to classroom emotional and instructional climate and exposure to academic instruction in Tulsa's pre-K classrooms? 2) Are the Tulsa pre-K classrooms characterized by higher-quality classroom environments and greater instructional time for four-year-old children as compared to comparable classrooms in other states? 3) Do program auspice (Head Start or TPS pre-K) and teacher characteristics and practices predict variation in classroom processes in Tulsa's publicly-funded four-year-old classrooms?

The rapid growth in state pre-K programs represents a national experiment focused on finding the best means of launching all young children on a trajectory of school success. In just the past five years, there has been a 40% increase in the number of four-year-olds enrolled in state pre-K programs. This trend has generated interest in the impacts of early childhood education on children's academic and social development, as well as questions related to how policy makers can focus public resources to produce high-quality classroom experiences for children. Our study addresses the latter question in the context of Tulsa, Oklahoma's pre-K program, which has generated extremely strong cognitive impacts across racial and income groups. Our sample is pre-kindergarten (pre-K) classrooms run by the Tulsa Public Schools (TPS) and four-year-old Head Start classrooms run by the Community Action Project (CAP) of Tulsa County.

All Pre-K Programs Are Not Created Equal

Teacher and classroom standards vary widely across states with pre-K programs.

State-funded pre-K programs vary extensively in teacher standards. For example, while 26 states require a BA degree and early childhood certification for all pre-K lead teachers, 8 states do not require any teachers to have a BA degree, and 10 states do not require teachers to have specialized training in early childhood education (ECE). The majority of states require a teacher-child ratio of 1:10, but 12 states allow less stringent ratios in some or all of their pre-K classrooms. Oklahoma has among the most stringent state pre-K standards, with its requirements that every classroom's lead teacher have a BA degree and an early childhood certification, a maximum class size of 20, and teacher-to-student ratio of 1:10. Salaries and benefits are the same as those of elementary school teachers, and strong support exists for focused instructional in-service training. These standards and practices apply not only to pre-K programs based in the TPS system, but also to collaborating Head Start and child care programs.

KEY FINDINGS

TPS Pre-K and Head Start Classrooms

Tulsa's pre-K classrooms offer higher levels of instructional support than their counterparts in other states. Compared to national samples, Tulsa pre-K teachers in both TPS and Head Start devoted more time to pre-literacy; TPS pre-K teachers also devoted more time to math and science.

We used the Classroom Assessment Scoring System (CLASS) to capture instructional and emotional climate in the classroom. The quality of the climates that children were exposed to in the TPS pre-K and Head Start classrooms varied across our outcome measures and within each measure. The quality of Instructional Support was notably lower (3.21, on average) than the quality of Emotional Support (5.23, on average), and the ranges within each of these quality indices were substantial (1.40 to 5.94 for Instructional Support, 3.25 to 6.80 for Emotional Support). Based on other studies, however, it appears that higher levels of Instructional Support are more difficult to achieve than higher levels of Emotional Support. Although both are 7-point scales, they may be calibrated differently, making direct comparisons of Instructional and Emotional Support problematic.

In order to assess the quantity of academic instruction, we used the Child Engagement section of the Emerging Academics Snapshot (CE-EAS). The most notable descriptive finding using this instrument is the relatively large amount of time spent on literacy activities (consuming 24–30% of instructional time) as compared to time spent on math, science, or social studies. This likely reflects the strong emphasis placed on literacy in early educational contexts in the United States today.

Comparison of Tulsa Programs to National Samples

When compared to other school-based pre-K programs from multi-state samples, teachers in the Tulsa TPS pre-K classrooms, and to a lesser extent the Tulsa Head Start classrooms, received significantly higher ratings on aspects of classroom management and instructional support, specifically, how well teachers use classroom time, maximize students' engagement in learning, and provide feedback that expands understanding (Figures 1 and 2 show significant differences). On dimensions related to the emotional climate (e.g., warm/fun emotional tone, teachers who are responsive to students' needs and consider students' interests and points of view), however, the Tulsa pre-K classrooms did not differ from those in the multi-state samples. The Tulsa pre-K teachers in both TPS and Head Start classrooms also devoted substantially more time to pre-literacy activities as compared to their counterparts in the multi-state study, and the TPS pre-K teachers devoted significantly more time to math and science than other school-based pre-K programs.

Predicting Classroom Climate and Instructional Time Allocation

Teacher and program characteristics have success at predicting instructional time allocation, but not the climate in the classroom.

A critical question for policy purposes concerns how to produce the kinds of pre-K classrooms that generate learning and social gains. We examined which teacher characteristics and practices predicted higher-quality classroom processes in the Tulsa pre-K classrooms. To this end, we investigated associations between the outcomes of classroom climate and instructional time allocation and the inputs of school auspice (TPS pre-K or Head Start); teachers' educational backgrounds, experience, undergraduate GPAs, and curricular choices; and whether the classroom was on a full- or half-day schedule. None of these program or teacher characteristics predicted variation in the quality of the instructional or emotional climate that children experienced in Tulsa's pre-K programs, as measured by CLASS.

In contrast, the teachers' allocation of instructional time was affected by several of the inputs we examined (see Table 1, next page). The location of the classroom in a Head Start or TPS pre-K program was the most consistent predictor of children's exposure to instructional activities. Teachers in Head Start classrooms spent significantly less time practicing letters and sounds and on math activities, but they spent more time on social studies than did their counterparts in TPS pre-K classrooms.

Of the teacher characteristics, years of classroom experience showed the most consistent associations with classroom time allocation. More experienced teachers showed a pattern of results suggesting that they devote

more time to pre-literacy activities. The teachers' educational backgrounds, specifically whether they had majored in ECE and their GPA, played significant, but less influential roles.

The teachers' choice of curricula also affected their use of instructional time in ways that correspond to the differing emphases of the different curricula. These findings need to be interpreted cautiously in light of the extremely common practice, among the Tulsa teachers, of integrating multiple curricula and the fact that this research was not designed as a curriculum evaluation study.

POLICY IMPLICATIONS

The policy priority should be to identify effective teachers and reward them appropriately.

In some respects, our research supports generally cautious findings from the education literature—it is possible to identify differences in classroom quality and classroom practices, but it is difficult to explain them. Although Tulsa's pre-K classrooms are superior to those of other school-based and Head Start pre-K classrooms with college-educated, early-childhood-certified teachers, it is hard to pinpoint teacher characteristics that account for the higher levels of instructional support in Tulsa. It is possible to identify some teacher characteristics that help to explain differences in how pre-K classroom time is spent, but these variables may have limited predictive power. It is important to keep in mind that these conclusions are drawn in the context of Oklahoma's relatively stringent pre-K policy environment, the general effect of which we have not assessed.

The two most powerful variables we have identified are auspices (school-based programs differ from Head Start) and teacher experience. If our goal is to have pre-K teachers devote more time to literacy and math in the classroom, then **we should direct more experienced teachers to pre-K classrooms and equip Head Start teachers to spend similar amounts of high-quality time on math and literacy instruction as their school-based counterparts.**

However, we always need to **recruit new teachers into the system**. Recent teacher recruitment initiatives, including the Teach for America program and the North Carolina TEACH program, have helped to lure bright, talented college graduates and mid-career professionals into public school classrooms, including many inner-city classrooms that need them desperately. Public officials might wish to expand the pre-K components of these programs and evaluate the outcomes. Similarly, the federal No Child Left Behind law is an important focus for efforts to bring greater attention and resources to the nation's pre-K classrooms.

Other strategies for recruiting new teachers, including **salary bonuses, also are worth considering, especially if they provide financial incentives** to qualified and motivated teachers who are willing to serve at-risk children. New York City's Teaching Fellows Program, for example, has narrowed the teacher quality gap between more advantaged and less advantaged public schools.

At a minimum, we need to ensure that we do not lose effective pre-K teachers for reasons, such as wage disincentives, that can be prevented. Although teacher salaries in Tulsa are not notably high, pre-K teacher salaries in Tulsa are close enough to the prevailing wage rate that they have attracted many bright, dedicated, and energetic teachers into pre-K classrooms. **Compensating pre-K teachers at the same wage rate as other teachers**

4778

may be an excellent strategy for promoting effective teaching in four-year-old classrooms.

Ultimately, we need to do a better job of identifying effective teachers and rewarding them. Getting children started on successful school trajectories is a daunting and extremely important job. Efforts to predict who will and will not be an effective teacher remain elusive, which signals **the need to observe teachers as they practice their craft and to evaluate the progress made by their students.** Under the Denver Pro Comp plan, for example, teachers whose students perform better receive higher compensation than teachers whose students perform worse; teachers also are rewarded for ongoing professional development. An alternative would be for principals or peers to reward teachers based on their own assessment of teachers' performance. We are sympathetic to the intent of these initiatives and would urge funders to evaluate their impacts on both the teaching workforce and student performance.

APPENDIX: METHODS

We examined classroom climate and exposure to academic instruction to gain insight into classroom processes that may help explain the highly successful outcomes of the Tulsa pre-K program.

Our classroom sample included virtually the entire universe of state-funded morning classrooms for four-year-olds in Tulsa and 106 of the 129 total pre-K classrooms (78 of the 100 TPS pre-K classrooms and 28 of the 29 Head Start classrooms).

Of the 106 lead teachers in the participating classrooms, 104 completed questionnaires about their educational background and training, employment history, and use of pre-K curricula. Seventy-seven of the teachers who completed questionnaires provided consent for us to obtain a copy of their college transcript.

Between February and May of 2006, classroom observations were conducted by pairs of trained observers in the 106 participating classrooms. We chose two instruments to assess the classrooms: the Classroom Assessment Scoring System (CLASS), used to capture the instructional and emotional climate in the classrooms, and the Child Engagement section of the Emerging Academics Snapshot (CE-EAS), used to capture exposure to academic instruction. CLASS is generally portrayed as a measure of classroom quality, whereas CE-EAS is most accurately viewed as a measure of the quantity of academic instruction.

We consolidated the 11 CLASS dimensions into three composites: emotional support, classroom management, and instructional support. Furthermore, we focused on 10 out of 14 CE-EAS activities, selected to capture individual children's exposure to instruction and activities in a range of skill domains.

Comparison to Other National Samples

In order to place the descriptive data from the Tulsa classrooms in a broader context, the National Center for Early Development and Learning (NCEDL) Multi-State Study of Pre-Kindergarten and the State-Wide Early Education Programs (SWEEP) Study provided comparison classroom data from 11 states.

We restricted our cross-site comparisons to classrooms with a lead teacher who had both a BA-degree and was certified to teach children ages four through third grade (to match the early childhood certification requirement in Tulsa). A total of 241 classrooms from the NCEDL/SWEEP sample met these criteria. The six Tulsa classrooms in which the lead teacher was not early-childhood-certified also were excluded.

Hierarchical Linear Modeling

In order to examine predictors of variation in classroom processes in the Tulsa pre-K programs, we used hierarchical linear modeling (HLM) to take into account the nesting of classrooms within TPS pre-K and Head Start programs. The Head Start/TPS pre-K variable was modeled as a school-level variable, and the other independent variables (teacher has a BA in ECE, teacher has MA, teacher experience, teacher's undergraduate GPA, full day/half day classroom, teacher's use of curricula) were modeled as classroom-level variables.

AUTHORS' NOTE AND ACKNOWLEDGEMENTS

The authors of this report are Deborah A. Phillips, Professor, Georgetown University Department of Psychology; William Gormley, Jr., University Professor, Georgetown Public Policy Institute; and Amy Lowenstein, Ph.D. Candidate, Georgetown University Department of Psychology. We would like to thank the Foundation for Child Development, the David and Lucile Packard Foundation, the Spencer Foundation, and the A.L. Mailman Family Foundation for their generous financial support. We also thank the Tulsa school leadership, principals, and teachers without whom this research would not have been possible. The authors alone are responsible for the contents of this report.

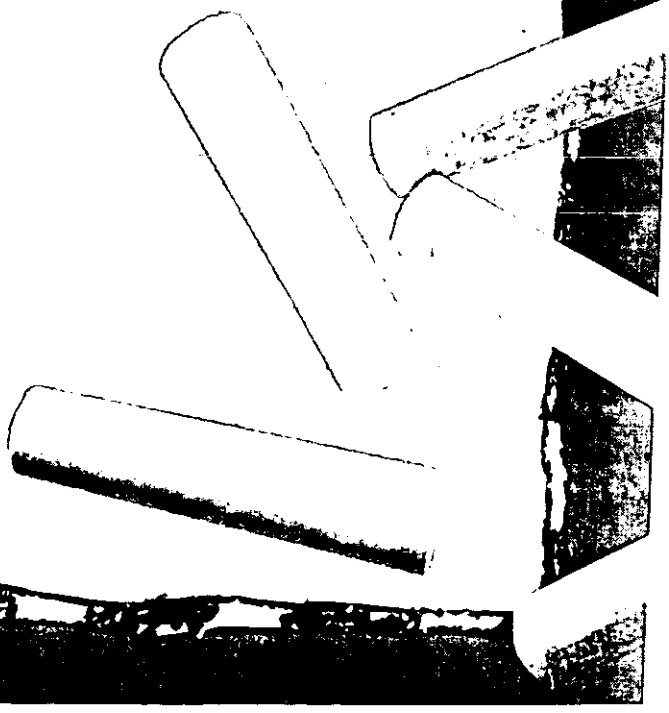
State Profiles



Alaska

NO PROGRAM

Alaska does not have a state-funded prekindergarten initiative, although the state has provided a supplement to federal Head Start programs since the 1980s. State funding through Alaska's Head Start supplement is available to any federally recognized Head Start program in the state, and totaled more than $6 million during the 2006-2007 school year. These funds are targeted toward quality improvement through professional development and school readiness activities, and wherever possible, funds are used to serve additional children and families. In 2006-2007, approximately 500 additional children were served in both Early Head Start and Head Start settings.

HB 59: Alaska Pre-Elementary Program

Sectional Analysis

Section 1. Department of Education shall devise and implement a statewide early education plan that incorporates early learning guidelines adopted by the education board and coordinates with Head Start and other child care providers.

Section 2. Board of Education shall adopt early learning guidelines that support an effective and cost-efficient optional pre-elementary program provided under a statewide early childhood education plan approved by the department.

Section 3. Requires the Department of Education and Early Education Plan to submit a report to the Legislature by January 15, 2010

Subject: HB 130 and HB 59

Dear Chair Seaton and Members of the Education Committee:

Both of these bills will be heard by the House Education Committee Monday.

HB 59 directs the Department of Education and Early Development to create a statewide plan for educating students ages three and four. It does not specify what that plan would be so it would permit DEED broad discretion to devise a plan that fits the needs of the state. Such a plan would facilitate making quality pre K education available to those who want it while also providing support to parents who have their children at home. Early education is something the Anchorage School Board supports. Research and common sense tell us that children learn much of what they need to know in the early years before enrolling in kindergarten or first grade. This is especially true for the skills and knowledge needed to be prepared to learn in kindergarten and first grade. I urge you to support HB 59.

HB 130 also addresses an issue that is of importance to the Anchorage School Board. This bill would allow districts to administer anonymous questionnaires. We are particularly interested in giving the Youth Risk Behavior Survey to our students. Data from that survey is used by districts and other agencies to apply for grants that help us reduce under aged drinking, drug use, and other behavior that we know is bad for children and society as a whole. Unfortunately, getting enough parents to turn in a permission slip is difficult. When they turn them in, they usually give permission, but more often than not the permission slip gets lost somewhere between the school and the home. If enough tests are not given, we do not have valid data and lose out on an opportunity to address many of these serious problems. We would still be required to notify parents and give them the opportunity to refuse permission. Parents who are concerned about the content of anonymous surveys are generally more proactive about getting the forms turned in, so I believe they will be adequately protected by this bill. I urge you to support HB 130.

Subject: HB 59

Honorable Chairman Seaton,

I missed this morning's meeting on HB 59, but am hoping that there will be more discussion on this subject of taking rights away from parents.

Is it not enough that most willingly donate their children to the government from kindergarten through college? However, we are now are on the road for mandatory pre-school as well. History DOES repeat itself and, with anything that is "suggested" by the government, this early childhood education "plan" will eventually become mandatory.

Not "if", but "when".

No matter how the govt. tries, parents know what is best for their children and that cannot be substituted. Parents have a right to raise and make decisions for their own children. Please help to stop this recent madness.

Lisa

TABLE 7-1 Summary of Key Findings of the High/Scope Perry Preschool Study Through Age 40

Outcome		Performance Comparison	Savings to Public
Education: In general, the program group required fewer special services for educable mental impairment; scored better at some data collection points on standard tests of intelligence and language; had more positive outlooks on school; and program parents had higher goals for their children (attending college, for example).	Special education services required	Program: 1.1 years No-program: 2.8 years	$7,303
	Attitude toward school (participants reporting preparing schoolwork at home)	Program: 68% No-program: 40%	
	Graduated from regular high school	Program: 65% No-program: 45% (higher program graduation rates due to much higher percentage of program females graduating vs. no-program females)	
Crime Rates: In general, participants in the program group were arrested fewer times; were arrested fewer times for violent, drug, or property crimes; and spent fewer months in prison or jail.	Average number of arrests	Program: 2.3 No-program: 4.6	$171,473
	Arrested 5 or more times	Program: 36% No-program: 55%	
Economic Welfare: In general, in middle adulthood significantly fewer program participants reported receiving social welfare services; held higher-paying jobs; owned and paid more per month for residences; owned a car.	Employed at age 40 (continued trend from previous data collection)	Program: 76% No-program: 62%	$16,846
	Median annual salary	Program: $20,800 No-program: $15,300	
	Owned own home at age 40	Program: 37% No-program: 28%	
Health/Family: In general, program males reported better relationships with their families; raised their own children; and were married.	Male participants raising their own children	Program: 57% No-program: 30%	
	Males reporting getting along "very well" with families	Program: 75% No-program: 64%	
Total Cost-Benefit Ratio: In general, savings to the public for program participation was highest in reduced crime rates and associated costs (88%), increased payment of taxes from higher earnings, and reduced need for special education services. Reduced dependence on welfare services also contributed to public return. Worth noting is that male program participants account for 93% of the public return.		Cost of Program	$15,166
		Total return/savings of program at age 40	$195,621 to general public
		Return to public on program investment at age 40	$12.90 per dollar (compared to the $7.16 cost-benefit ratio at age 27)

This is the document I referred to in my testimony on HB59 this AM. It is out of the text I teach at UAF--Foundations and Best Practices in Early Childhood Education, Follari (2007). Actually the Legislative Research Report does an excellent job of supporting exemplary early childhood education and care. It answers the question about the outcomes for children who have preschool before elementary school with some pretty convincing statistics--like 31% higher in vocabulary and 44% higher in math than children not in state preschool programs--see P. 4 in the research report.
See also information on p. 6 and p.8 about the longitudinal studies done on Children in such program and the $ savings for school districts and other state/local government services. Fill free to contact me if you have further questions--I would be glad to help out.

ANALYSIS: *(Attach a separate page if necessary)*

The Alaska Parents as Teachers Act, provides for a competitive grant for pre-elementary students to receive teaching services through the student's respective parent/guardian and support by EED. Cost were determined as follows:

FY10 & FY11 650 student pilot program each year: 650 x $3000=$1,950,000.00
FY12 - FY15 Approximately: 9,600 pre-elementary students;
of those approx: (3,500) students receive Headstart services;
Approximately: (500) will be covered under the Governor's proposed pilot pre-kindergarten program
Resulting in: 5,600 pre-elementary students that could qualify for this grant.
Approximately: $3,000 per student cost.
$16,800,000 TOTAL GRANT
In addition to the grant the department will need to hire one position to oversee and service this program.

LEGISLATIVE RESEARCH REPORT

APRIL 7, 2009

REPORT NUMBER 09.219

EARLY EDUCATION PROGRAM COMPARISON

PREPARED FOR REPRESENTATIVE CHRIS TUCK

BY TIM SPENGLER, LEGISLATIVE ANALYST

You asked for a comparison between the Parents as Teachers early education program and any state-funded early education program in Alaska. Specifically, you wanted the report to include the following:

- Services provided by the programs;
- Annual costs per child or family;
- Number of children currently served;
- Ages of those children; and an
- Urban/rural disaggregation of children served.

Head Start is the only early education program currently receiving state funding.[1] The program serves children through five years of age from low income homes. Head Start services include education, health, dental, nutrition, mental health, special needs, and family services. The program's goals include increasing the child's social competence, such as the ability to deal with the everyday, present environment, and future responsibilities in life and school. Head Start also works with the families of these children to help educate and strengthen them by offering training and support to facilitate growth and change. Services are offered primarily in centers (classrooms) and sometimes in homes, where work with the family is emphasized. Typically children attend Head Start classrooms three and a half hours a day, four days a week, according to Dirk Shumaker, Vice President, Alaska Head Start Association.[2] In Alaska, there are 17 Head

[1] Head Start serves children aged three through five years while Early Head Start serves infants and toddlers until the age of three. For this report, we use "Head Start" to mean all children from birth through age five, served in the program. Information on Head Start comes from various sources including personal communication with Paul Sugar, Education Specialist, Department of Education and Early Childhood Development. Mr. Sugar can be reached at (907) 465-4862.

[2] Some Head Start programs offer full day classes that are six and a half hours per day. Dirk Shumaker can be reached at (907) 279-2021.

907-465-3991
907-465-3908 (fax)

Alaska Legislature
Legislative Research Services

State Capitol
Juneau, AK 99801

Start grantees providing services in approximately 100 communities. In fiscal year 2008, Head Start served around 3,500 students.[3]

Parents as Teachers (PAT) is an early childhood parent education and family support program that attempts to help parents give their children a positive start in life. The program, which is administered in Alaska by the Rural Alaska Community Action Program, Inc. (RurAL CAP), works with parents prenatally and until their children are six years of age.[4] Personalized home visits from a trained parent educator are the centerpiece of the PAT program. These visits can be weekly, bi-weekly, or monthly depending on the program's capabilities and the family's needs. During these visits, the parent educator helps parents understand what to expect in each developmental stage and offers practical suggestions on how to encourage learning, manage challenging behavior, and promote strong parent-child relationships. Parents as Teachers also facilitates group gatherings where a number of families learn together and share their successes and challenges. Additionally, PAT conducts developmental screenings to ensure that children are on-track and to detect possible delays. Referrals to other agencies are also offered with the family's consent.[5] There are Parents as Teachers programs in 48 Alaska communities, and during the 2007-2008 school year, PAT served 963 children.

There are minimum requirements for both Head Start teachers and Parents as Teachers parent educators. All Head Start teachers must have attained a Child Development Associate (CDA). Among the CDA requirements are 120 hours of early childhood training and workplace observations by a CDA advisor. In 2011, all Head Start teachers will be required to have associate degrees in early childhood education (or a related field) and by 2013 half must have bachelor degrees. To become a certified parent educator for PAT individuals must attend a five to seven day Born to Learn Institute.[6] Institute training includes child development education, parenting strategies, personal and group meeting facilitation, and screenings. Additionally, there are follow-up courses a parent educator must complete to retain his or her certification.

Both Head Start and Parents as Teachers have multiple grantees (primarily tribal entities, school districts, and non-profits organizations) that may administer their programs in slightly different ways depending upon available resources and community needs. Although both programs are geared at enriching the early education of children, they have different approaches—Head Start is classroom based and child focused, while PAT is home-visit based and parent focused—making it difficult to draw meaningful comparisons.[7] Notwithstanding these differences, we present in Table 1, the most recent figures available comparing the number of children served, and costs for both programs. While Head Start is significantly costlier, it is important to remember that it usually serves children four days a week—three and a half hours a day—in a classroom, whereas PAT usually involves parent educators conducting one to four home-visits per month.

---

[3] According to the *Alaska Head Start Association, Fact Sheet, 2008-2009 Program Year*, (found through *http://www.akheadstart.org/)* Head Start enrollment in fiscal year 2009 is around 3,100.

[4] RurAL CAP is a private, statewide, nonprofit organization that attempts to improve the quality of life for low-income Alaskans (*http://www.ruralcap.com*).

[5] Information on Parents as Teachers comes from various sources including direct correspondence with Melissa Pickle, PAT Alaska State Coordinator, (907) 865-7345.

[6] PAT in Alaska has two trainers who live in the state and conduct the vast majority of the Born to Learn Institutes.

[7] For example, it would obviously be more costly to run a program that has the overhead associated with a center.

Table 1: Head Start and Parents as Teachers, Children Served and Costs

Table 1: Head Start and Parents as Teachers, Children Served and Costs

	Head Start	Parents as Teacher
Number of Children Served	3,557	963
Estimated Annual Cost	$8,000-12,000 (per child)	$3,000 (per family)

Notes: Head Start figures are for Fiscal Year 2008, while Parents as Teacher numbers are for program year 2007-2008 (both programs primarily operate for nine months during the school year). For a child in a Head Start urban setting, costs average around $8,000 while costs can go upward of $12,000 in the most remote rural areas. Parents as Teacher estimates are per family. During the 2007-2008 school year, PAT served 963 children from 809 families.
Sources: Paul Sugar, Education Specialist, Department of Education and Early Development, (907) 465-4862. Melissa Pickle, PAT Alaska State Coordinator, (907) 865-7345.

Melissa Pickle, Parents as Teachers, Alaska State Coordinator, notes that the cost of a PAT program varies from program to program. Costs depend on a variety of issues such as how often a parent educator visits a family, how frequently groups for parents are provided, where the program is located, and what services are offered. The PAT cost estimate of $3,000 per family is based on a parent educator visiting 40 families once a month (or 20 families twice a month), and one group meeting per month, throughout the school year.

Alaska Head Start programs are primarily funded by the federal Department of Health and Social Services, according to Paul Sugar, Education Specialist, Department of Education and Early Development. Mr. Sugar explains that this funding goes directly to the local nonprofit and tribal grantee organizations that administer the programs. The state provides additional funding to ensure grantees meet the federal funds matching requirement and to improve program quality and serve additional children and families, whenever possible.

In Table 2 we provide a disaggregation of the ages of children served by Head Start and Parents as Teachers in Alaska. This reflects fiscal year 2008 data for Head Start and the 2007-2008 school year numbers for Parents as Teachers.

Table 2: Ages of Children Served, Head Start and Parents as Teachers

Age	Prenatal	Under One	One	Two	Three	Four	Five	Total
Head Start	N/A	149	143	213	1,169	1,549	334	3,557
Parents as Teachers	31	122	212	230	208	108	52	963

Notes: Children served in Head Start programs in Alaska are for fiscal year 2008. Parents as Teachers numbers are for the 2007-2008 school year. Complete specific age information for one of PAT's sites (Ft. Wainwright) was unavailable. At least 11 children, ages birth to three, were served at this site during this time period. For this table, we divide these 11 among the under one, one year, and two year categories.
Sources: Paul Sugar, Education Specialist, Department of Education and Early Development, (907) 465-4862. Melissa Pickle, PAT Alaska State Coordinator, (907)865-7345.

According to Paul Sugar, approximately 40 percent of children currently in Head Start programs live in Anchorage, Fairbanks, Juneau, or the Mat-Su Valley. The remaining 60 percent of program participants reside in more rural areas of the state. Parents as Teachers, meanwhile, also serves the majority of its clients in rural areas with only around 28 percent of its families hailing from these four urban centers, according to Melissa Pickle.[8]

According to all the sources we reviewed, there are myriad benefits educationally and socially for children with access to early childhood education. For instance, we include, as Attachment A, a report by the RAND Corporation that finds that early childhood education yields multiple benefits for both children and society at large.[9] The benefits noted include academic achievement, delinquency and crime reduction, and labor market success. We also include, as Attachment B, fact sheets from Head Start and Parents as Teachers that highlight program successes.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

[8] The vast majority of the children served by PAT in urban communities come from Fairbanks where the Fairbanks Native Association runs the PAT program.

[9] The RAND Corporation is a non-profit research organization providing analysis and solutions for public and private sector issues. *(http://www.rand.org.)*

There is increasing recognition that the first few years of a child's life are a particularly sensitive period in the process of development, laying a foundation in childhood and beyond for cognitive functioning; behavioral, social, and self-regulatory capacities; and physical health. Yet many children face various stressors during these years that can impair their healthy development. Early childhood intervention programs are designed to mitigate the factors that place children at risk of poor outcomes. Such programs provide supports for the parents, the children, or the family as a whole. These supports may be in the form of learning activities or other structured experiences that affect a child directly or that have indirect effects through training parents or otherwise enhancing the caregiving environment.

As part of a recent study, RAND researchers synthesized what is known from the scientifically sound research literature about the short- and long-term benefits from early intervention programs, the features that are associated with more-effective programs, and the economic gains that accrue from investing additional resources in early childhood. We summarize those findings here. A companion research brief focuses on the characteristics and number of children who may need help to overcome threats to healthy development, such as resource disparities in early childhood. It also addresses the consequences of those threats for educational outcomes and beyond.

Key findings:

- Early childhood intervention programs have been shown to yield benefits in academic achievement, behavior, educational progression and attainment, delinquency and crime, and labor market success, among other domains.
- Interventions with better-trained caregivers and smaller child-to-staff ratios appear to offer more favorable results.
- Well-designed early childhood interventions have been found to generate a return to society ranging from $1.80 to $17.07 for each dollar spent on the program.

A Range of Benefits

The study focused on programs that provide child development services from the prenatal period until kindergarten entry and that had scientifically sound evaluations. A literature review identified twenty such programs, nineteen of which demonstrated favorable effects on child outcomes. Fifteen of the effective programs were judged to have a "strong" evidence base because they measured outcomes at the time of kindergarten entry or beyond. The remaining four were not judged to have a strong evidence base because, as of the last follow-up, the participants had not yet reached kindergarten age. Many or all of the children in those programs were as young as age 2 or 3, so there is less information as to the lasting effects of the program on outcomes of interest. The evidence base for these programs was designated "promising."

Although these programs represent varied approaches to early intervention, they fall into one of three broad approaches (see the accompanying table). Programs in the first group concentrate primarily on providing parent education and other family supports through home visiting or services provided in other settings (e.g., medical provider offices, classrooms in child-care centers). A second approach focuses on providing early childhood education, typically in a center-based setting, for one or two years prior to school entry. A third strategy combines the two approaches, with early childhood education services provided in centers

supplemented by parental education delivered in the same setting or through home visits.

These nineteen early intervention programs demonstrated significant and often sizable benefits in at least one of the following domains: cognition and academic achievement, behavioral and emotional competencies, educational progression and attainment, child maltreatment, health, delinquency and crime, social welfare program use, and labor market success. In some cases, the improved outcomes in these domains were demonstrated soon after the program ended; in other cases, the favorable impacts were observed through adolescence and in the transition to adulthood. In the case of the Perry Preschool Program, lasting benefits in multiple domains have been measured thirty-five years after the intervention ended.

Even though findings suggest that early benefits in terms of cognition or school achievement may eventually fade, the evidence indicates that there can be longer-lasting and substantial gains in outcomes such as special education placement and grade retention, high school graduation rates, labor market outcomes, social welfare program use, and crime. A few studies indicate that the parents of participating children can also benefit from early intervention programs, particularly when they are specifically targeted by the intervention.

Effective Early Childhood Intervention Programs Included in Study

Home Visiting or Parent Education
DARE to be You
Developmentally Supportive Care: Newborn Individualized Developmental Care and Assessment Program*
HIPPY (Home Instruction Program for Preschool Youngsters) USA
Incredible Years
Nurse-Family Partnership Program
Parents as Teachers*
Project CARE (Carolina Approach to Responsive Education)—without early childhood education
Reach Out and Read*
Home Visiting or Parent Education Combined with Early Childhood Education
Carolina Abecedarian Project
Chicago Child-Parent Centers
Early Head Start*
Early Training Project
Head Start
High/Scope Perry Preschool Project
Houston Parent-Child Development Center
Infant Health and Development Program
Project CARE—with early childhood education
Syracuse Family Development Research Program
Early Childhood Education Only
Oklahoma Pre-K
NOTES: All listed programs are judged to have a strong evidence base, except those marked with an asterisk. For the latter, a substantial number of children were as young as age 2 or 3 at the time of the most recent follow-up, so their evidence base is judged to be promising.

Features of Effective Programs

Policymakers and providers considering early childhood intervention programs may choose to adopt one of the proven program models shown in the table, several of which already operate on a large scale or are being replicated on a larger scale. Beyond these proven models, the literature offers some guidance about those features that are associated with better outcomes for children. Based on experimental and quasi-experimental evaluations of program design features, as well as comparisons of effects across model programs, three features appear to be associated with more effective interventions:

- Programs with better-trained caregivers appear to be more effective. In the context of center-based programs, this may take the form of a lead teacher with a college degree as opposed to no degree. In the context of home visiting programs, researchers have found stronger impacts when services are provided by nurse home visitors as opposed to a paraprofessional or lay professional home visitor.
- In the context of center-based programs, there is evidence to suggest that programs are more successful when they have smaller child-to-staff ratios.
- There is some evidence that more intensive programs are associated with better outcomes, but not enough to indicate the optimal number of program hours or how they might vary with child risk characteristics.

Ideally, we would like to know more about intervention features that generate better outcomes for children so that policymakers and practitioners can achieve optimal program designs for the children and families they serve. Thus, continued evaluation of model programs and effective program features is essential.

Economic Returns from Effective Early Intervention Programs

It is noteworthy that the features associated with more successful programs tend to be costly. This suggests that more money may need to be spent to obtain greater benefits—at least up to a point. It is therefore reasonable to ask whether devoting resources to achieve benefits associated with successful but more costly programs is worth the investment.

Notably, many of the benefits from early childhood interventions listed above can be translated into dollar figures and compared with program costs. For example, if school outcomes improve, fewer resources may be spent on grade repetition or special education classes. If improvements in school performance lead to higher educational attainment and subsequent economic success in adulthood, the government may benefit from higher tax revenues and reduced outlays for social welfare programs and the criminal justice system. As a result of improved economic outcomes, participants themselves benefit from higher lifetime incomes, and other

members of society gain from reduced levels of delinquency and crime.

Researchers have conducted benefit-cost analyses, using accepted methodologies, for a subset of the programs we identified as having favorable effects. For those programs with benefits that could readily be expressed in dollar terms and those that served more-disadvantaged children and families, the estimates of benefits per child served, net of program costs, range from about $1,400 per child to nearly $240,000 per child. Viewed another way, the returns to society for each dollar invested extend from $1.80 to $17.07. Some of the largest estimates of net benefits were found for programs with the longest follow-up, because those studies measured the impact for outcomes that most readily translate into dollar benefits (e.g., employment benefits, crime reduction). Large economic returns were found for programs that required a large investment (over $40,000 per child), but returns were also positive for programs that cost considerably less (under $2,000 per child). Programs with per-child costs in between these two figures also generated positive net benefits. The economic returns were favorable for programs that focused on home visiting or parent education as well as for programs that combined those services with early childhood education.

Because not all benefits can be translated into dollar values, these benefit-cost estimates for effective programs are likely to be conservative. Moreover, such analyses do not incorporate some of the other potential benefits that were not measured in the studies. These might include improved labor market performance for the parents of participating children, as well as stronger national economic competitiveness as a result of improvements in educational attainment of the future workforce. It is important to note that these findings represent the potential effects of well-designed and well-implemented interventions. They do not necessarily imply that all such early childhood interventions, delivered for any given amount of time, would generate benefits that offset costs.

For decisionmakers considering investments in early childhood interventions, these findings indicate that a body of sound research exists that can guide resource allocation decisions. This evidence base sheds light on the types of programs that have been demonstrated to be effective, the features associated with effective programs, and the potential for returns to society that exceed the resources invested in program delivery. These proven results signal the future promise of investing early in the lives of disadvantaged children. ■

Parents as Teachers
An Evidence-Based Home Visiting Program

A range of research studies conducted and supported through state governments, independent school districts, private foundations, universities and research organizations, demonstrate that Parents as Teachers makes a measurable difference in the lives of parents and their children. The following summary lists some of Parents as Teachers' evidence-based research outcomes from across the United States:

Parents as Teachers Helps All Children Enter School Ready to Learn

- 7,710 public school children from a stratified random sample of Missouri districts and schools were examined at kindergarten entry and at the end of third grade. Results showed that participation in Parents as Teachers, together with preschool, not only positively impacts children's school readiness and school achievement scores, but also narrows the achievement gap between children in poverty and those from non-poverty households. With at least 2 years of Parents as Teachers combined with a year of preschool, 82% of poor children were ready for school at kindergarten entry -- a level identical to nonpoverty children with no Parents as Teachers or preschool.[i]
- Parents as Teachers children showed better school readiness at the start of kindergarten, higher reading and math readiness at the end of kindergarten, higher kindergarten grades, and fewer remedial education placements in first grade.[ii]
- Children in high poverty schools who participated in Parents as Teachers were equivalent to those of children at low poverty schools with no preschool enrichment (Parents as Teachers or preschool). In addition, when children attending high poverty schools participated in both Parents as Teachers and preschool, their scores were significantly higher than those of children in low poverty schools with no preschool enrichment (Parents as Teachers or preschool).[iii]
- 87% of Native American children served by Parents as Teachers through its Baby FACE program were ready for preschool by age 3.[iv]

Parents as Teachers Supports Later School Achievement

- The aforementioned 2007 study of 7,710 Missouri public school children also showed that length of participation in PAT was a significant predictor of children's third grade achievement on the Missouri Assessment Program Communication Arts test.[v]
- PAT children scored significantly higher on standardized measures of reading and math at the end of first grade than did comparison children. In addition, teachers rated PAT children's achievement progress higher than control group children's progress in all areas.[vi]
- PAT children continued to perform better than non-PAT children on standardized tests of reading and math achievement in second grade. Compared to non-PAT children, PAT children required half the rate of remedial and special education placements in third grade.[vii]

Parents as Teachers Prevents Child Abuse

- The U.S. Advisory Board on Child Abuse and Neglect states, "home visiting and center-based programs with a parental focus can help prevent child abuse and neglect."[viii] The Task Force on Community Preventive Services recommends early childhood home visitation as an effective method for preventing child abuse and neglect.[ix]
- In a randomized trial, adolescent mothers who received case management and Parents as Teachers were significantly less likely to be subjected to child abuse investigations than control group mothers who received neither case management nor Parents as Teachers.[x]
- In another randomized trial, adolescent mothers in an urban community who participated in Parents as Teachers scored lower on a child maltreatment precursor scale than mothers in the control group. These adolescent mothers showed greater improvement in knowledge of discipline, showed more positive involvement with children, and organized their home environment in a way more conducive to child development.[xi]

- Parents as Teachers families had fewer documented cases of abuse and neglect in comparison to the Missouri state average.[xii]

Parents as Teachers Increases Parental Involvement

- Results of a multi-site randomized trial showed that for families with very low income, those who participated in Parents as Teachers were more likely to read aloud to their child and to tell stories, say nursery rhymes, and sing with their child.[xiii]
- A significantly higher proportion of Parents as Teachers parents initiated contacts with teachers and took an active role in their child's schooling. For example, 63% of parents of Parents as Teachers children versus 37% of parents of comparison children requested parent-teacher conferences.[xiv]
- Parents as Teachers parents demonstrated high levels of school involvement, which they frequently initiated, and supported their children's learning in the home.[xv]
- Parents as Teachers parents read more to their children, use more techniques to support book/print concepts, and have more children's books in the home.[xvi]

Parents as Teachers Improves Children's Health and Development Outcomes

- Annual health and developmental screenings is a core component of Parents as Teachers. Of the 200,000 plus children screened in the most recent program year, 13% were identified with possible health/developmental delays and were referred on for additional follow up services. 70% of those referred received follow-up services.[xvii]
- Children participating in Parents as Teachers were much more likely to be fully immunized for their given age, and were less likely to be treated for an injury in the previous year.[xviii]
- At age 3, Parents as Teachers children performed significantly above national norms on a measure of school-related achievement, despite the fact that the sample was over-represented on all traditional characteristics of risk. More than one-half of the children with observed developmental delays overcame these delays by age 3.[xix]

Benefits of Head Start (HS) and Early Head Start (EHS) Programs

The federal government's historical commitment to sponsor and encourage research and evaluations in the HS and EHS programs has generated a large corpus of research on HS and EHS. This research reveals that HS and EHS programs provide educational, economic, health, and law enforcement benefits.

Educational Benefits

Substantial research finds that HS and EHS programs provide educational benefits. Recent FACES data shows that HS graduates, by the spring of their kindergarten year, were essentially at national norms in early reading and early writing and were close to meeting national norms in early math and vocabulary knowledge.[1] By the spring of their kindergarten year, HS graduates' reading assessment scores reached national norms, and their general knowledge assessment scores were close to national norms.[2] The HS Impact Study reveals small to moderate statistically significant positive impacts for 3- and 4-year-old children enrolled in HS on pre-reading, pre-writing, vocabulary, and parent reports of children's literacy skills.[3] This study found that a higher proportion of HS parents read to their children more frequently than those parents of children who were not enrolled in HS.[4] In another recent study funded by the U.S. Department of Health and Human Services, HS children were found to perform better on cognitive, language, and health measures than their comparison group counterparts did.[5] Reliable studies have found that HS children experience increased achievement test scores and that HS children experience favorable long-term effects on grade repetition, special education, and graduation rates.[6]

Likewise, findings from the EHS Impact Study show that EHS children on average had a higher cognitive development score than their control group had.[7] EHS children at age 3 had larger vocabularies than the control group children had. EHS children demonstrated a higher level of social-emotional development than their control group did.[8]

Economic Benefits

Research shows that HS is a wise investment for society. The preliminary results of a randomly selected longitudinal study of more than 600 HS graduates in San Bernardino County, California, showed that society receives nearly $9 in benefits for every $1 invested in these HS children. These benefits include increased earnings, employment, and family stability, and decreased welfare dependency, crime costs, grade repetition, and special education.[9] Properly trained HS parents can decrease Medicaid costs by $198 per family.[10]

Health Benefits

Studies demonstrate that HS and EHS improve the health of the children and families they serve. The HS Impact Study demonstrated that a much higher proportion of HS children received dental care than those children who did not receive HS services.[11] A higher proportion of parents with 3-year-old children in HS reported that their child was either in excellent or very good health as compared with those parents who did not have children enrolled in HS.[12] The HS Impact Study showed that HS reduces the frequency and severity of problem behavior as reported by their parents.[13] Recent research suggests that Head Start reduced the mortality rates for 5- to 9-years-old children from causes that could have been affected by the participation in Head Start when they were 3- and 4-year-olds.[14] HS provides health and dental services to children and families who might otherwise not have them.[15] Parents who participate in HS are found to have greater quality of life satisfaction; increased confidence in coping skills; and decreased feelings of anxiety, depression, and sickness.[16] HS children are at least eight percentage points more likely to have had their immunizations than those children who did not attend preschool.[17] Similarly, EHS children had a higher immunization rate than children in a control group.[18]

Law Enforcement Benefits

Along with improving the health of its children and families, HS benefits its children and society-at-large by reducing crime and its costs to crime victims.[19] HS children are significantly less likely to have been charged with a crime than their siblings who did not participate in HS.[20]

RE: HB 69

Dear Representative Seaton:

I am writing in opposition to HB 69 – The Alaska Parents as Teachers Act. Even the title reference of this bill is appalling to me as parents have always been the teachers of their children and until about 30 years ago most children under the age of five were at home being taught by mothers and fathers very successfully and with love and nurturing. Parents did not need "experts" guiding and advising them in how to do this.

I don't know why such bills are being originated but I do believe that the expectation of academic preparedness at an earlier and earlier age is partly to blame. There is ample evidence that structured academics at too early of an age as well as early separation from parents is physically, intellectually, socially, and emotionally harmful to young children. The best environment for young children, and the one most supported by child psychologists, is with loving parents in a secure and nurturing home, learning through natural experience, exploration and imaginative play. This environment does not require taxpayer funded, expensive "professional" guidance. As for the case of a severely dysfunctional home, no amount of "professional" guidance from the department of education will remedy such a situation and it is another agency, the department of youth and family services that is better suited to give assistance in such cases.

As a mother, teacher and taxpayer, I am against public money being used for a "voluntary" parent education home visitation program which I fear won't remain voluntary for long. I also believe this is in great part a push by the NEA for more head counts resulting in more membership, hence more funds routed their way. The state should not be raising our children!! Soon we'll be required to have a taxpayer funded education "expert" in the delivery room. Parenting is a God given right and responsibility given to parents, not the state.

The more responsibility you take from people the more irresponsible they will become. Give responsibility back and you might be surprised at the results. It's funny that all the parenting books we are encouraged to read as parents tell us not to do for our children what they can do from themselves – ie. teaching responsibility, yet the state is so willing to swoop in and snatch away responsibility from parents to raise their own children.

Respectfully,

Rhonda L Stark

Memo

From: Louie Flora, Staff, Rep. Seaton
To: Legal Services
RE: final bill request
Date: April 10, 2009

The attached amendment was incorporated into HB 69 version 26-LS0281\C which was adopted by the House Education Committee and passed from committee this morning.

Please incorporate into a final to be read across the floor as soon as possible.

Also, the committee adopted an amendment to fix a typo in version C occurring on page 2, line 18 changing "indentified" to "identified"

Thanks,

Louie

Louie Flora

Subject: HB 69
Importance: High

Dear members of the House Education Committee,

I strongly encourage you to support HB 69, establishing a voluntary home visiting program for parents of young children. An evidence-based option for families like this is a critical component of a comprehensive early childhood system in our state. Best Beginnings promotes parents as a child's first and most important teacher, and a program established through HB 69 will help parents who choose to participate to provide appropriate and foundational early learning experiences for their children.

Thank you for your consideration of this important issue.

Best,
Abbe Hensley

Subject: Oppose HB 69 "Alaska Parents as Teachers Act"

Dear Chairman Seaton and Members of the House Education Committee:

Please oppose HB 69, Alaska's Parents as Teachers Act.

For many reasons we oppose the bill and consider its implementation a step backwards in actually accomplishing the state education goal of achieving student academic excellence. Overall state graduation rates are abysmally and shamefully low (Service High School reported a forty- eight percent failure rate) and adding another program to our failing system will not be sufficient to revive it.

Putting aside the academic hurdle, however, we still must carefully evaluate the significant cost incurred to the state to implement and administer the program. It is certain to be astronomically and prohibitively high. Considering our state's dire financial situation I cannot see how adding this to the state budget is advisable.

Thank you for considering our view and we would appreciate voting NO on HB 69.

Sincerely,

Doug and Wendy McKinnis

Subject: RE: STOP hb69 (big brother)

Representatives,

Hb69 is parental invasion. Please don't listen to lobbyists from certain programs, departments, and organizations who will benefit financially from this bill!! Taxpayers money should not be spent on Case workers checking up on parents in their own homes. I realize that this bill states that this is volunteer only, but this bill will be the first step of Government mandate in future legislative sessions. -A total violation of parental rights! There is not sufficient evidence that a program like this is even needed! It may be true, that children who get an early start at home happen to do better in school, but its not because they had 'an early start' its because they have parents that spend time with them. The real studies show that children who do poorly in school aren't dumb, or deprived of preschool, they have a dysfunctional home life. Early childhood education is the sole responsibility of the parents, however they see fit. I believe the whole premise behind the "Early Childhood Development movement" is parents wanting their children to be educated in daycare, so they both can go to work, so they can have their big house and toys and assume they won't feel guilty about leaving them if they are being well educated.

If I was to spend lots of loving time with my children, and not teach them a single shape/color/letter/number before they turn 6, I know they would still would do exceedingly well in school, because they will come from a loving family and be old enough to process the information -Without government control!

Please don't waste tax payer $$ on this, or your precious legislative time, please work on something that is actually beneficial. A great idea for an educational program would be to continue programs like ECFE (early childhood family education) where parents bring their children to a school and meet with a government paid mom and tot class. Also; a "Why Mothers should stay at home with their children" workshop. Couple that with an extensive abstinence program for the unmarried (that doesn't involve handing out condoms to kids and teaching them that a baby is merely a couple of cells) and that would be a great way to spend tax payers money, (and save a lot of money in the long run)

:)
Jessie Chilstrom

Mother of 4 who enjoys not having big brother watching me parent!

I support the new Freedom of Choice Act for women:

2 Choices:

1. Leave clothes on?
2. Take clothes off?

Beyond that **-there is no more choice for you!!**

CS FOR HOUSE BILL NO. 69( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES TUCK, PETERSEN, KAWASAKI AND GARA

A BILL

FOR AN ACT ENTITLED

"An Act establishing in the Department of Education and Early Development a voluntary parent education home visiting program for pre-elementary aged children."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Parents as Teachers Act.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

FINDINGS. The legislature finds that

(1) a parent is a child's first and most influential teacher;

(2) a parent's ability to enhance a child's development and ability to enter school ready to succeed can be significantly enhanced through parent education and family support that will help parents prepare their child to succeed in school;

(3) undiagnosed and unaddressed developmental and health problems can

impede overall development and school readiness and can contribute to grade retention for a child;

(4) early childhood home visits can lead to positive outcomes for children and families, including increased school readiness, sustained school success, improved child health and development, positive parenting practices, and reductions in child maltreatment.

*** Sec. 3.** AS 14.03 is amended by adding a new section to article 1 to read:

Sec. 14.03.165. Parent education home visiting program. (a) The statewide voluntary parent education home visiting program is established in the department. The program shall be implemented through an implementation plan submitted by a local agency and approved by the department to provide home visits and resource information to participating families of a pre-elementary aged child, birth through five years of age.

(b) The program must include

(1) an opportunity for a participating family to receive home visits to a participating family's home or a mutually agreed on location by a trained parent educator employed by the department or a local agency once a month unless the trained parent educator determines that more frequent visits are required to provide indentified services, in which case, the family must be afforded the opportunity to receive more frequent home visits;

(2) parent group meetings, arranged by the local agency, to occur not less than once a month;

(3) annual developmental and health screenings as recommended by the Department of Health and Social Services;

(4) referrals to and information on available community resources;

(5) research and evidence based interventions;

(6) program outcomes that demonstrate, five years or less after implementation of the program,

(A) enhanced school readiness;

(B) increased parent understanding of child development and developmental milestones;

(C) a reduction in the incidence of child abuse and neglect;

(D) increased identification of health problems and developmental delays through regular screenings;

(E) improvement of child health indicators, including immunization rates; and

(F) increased parental involvement.

(c) A local agency may apply for funding to provide services under the program by submitting an implementation plan for review and approval by the department. The implementation plan must include

(1) an outline of the agency's plans for delivering the services required for the program under (b) of this section;

(2) a description of the collaborative agreements the agency will form with community service providers to meet the needs of the families participating in the program;

(3) a needs assessment for the community to be served by the agency;

(4) an annual evaluation of and reporting on the program that includes the

(A) number of families and children served;

(B) number of aggregate visits and average number of visits conducted for each family;

(C) demographic information for participating families;

(D) number and type of health and developmental delays identified;

(E) number of group parent meetings held;

(F) average cost for each family served;

(G) number of children screened and receiving referrals for further evaluation; and

(H) the number of referrals to other community organizations and resources.

(d) The department shall adopt regulations to implement this program, including standards for the qualification and approval of trained parent educators that require fingerprinting and criminal justice history screening of applicants.

(e) In this section,

(1) "developmental and health screening" means the process of measuring the progress of a child to determine whether the child suffers a delay or potential delay in normal development or is advanced in one or more areas of development including understanding and use of language, perception through sight or hearing, motor development and hand-eye coordination, health, and physical development;

(2) "family" means one or more biological or adoptive parent and one or more of the parent's pre-elementary aged children;

(3) "local agency" means a school district, regional educational attendance area, or a not for profit organization that provides community services;

(4) "trained parent educator" means a person employed by the department or a local agency who has been trained and approved to provide parent education under the program.

* **Sec. 4.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards

prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a

school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15)**;**

(18) establish standards and provide technical assistance and oversight for the statewide parent education home visiting program under AS 14.03.165.

Subject: HB 69 Participation Rates

Good Morning,
Thank you for the opportunity to address the Education Committee on Friday regarding HB 69.

Currently, 85% of Hoonah's children receive some level of Parents as Teachers services. Parents decide which activities in which to participate. Some families attend all activities and have more frequent visits, while others have other levels of participation depending upon their employment, obligations with older children, and family circumstances. There is no penalty for families who miss personal visits or cannot attend play groups, Family Nights, screenings, or other program activities. Participation is completely voluntary at all levels.

I strongly urge passage of HB 60. If I can provide any further information regarding the Parents as Teachers components or the parent educators, please don't hesitate to contact me.

Thank you for your diligence on behalf of Alaska's children.

Subject: House Bill 69

Dear House Education Chairman Paul Seaton,

We sincerely oppose the HB 69 that is currently on the table.

My husband and I feel that even with the amendments that there is no room for this sort of legalistic overseer mentality of the state into private homes if there is no other record of children not thriving.

The God given ablility to raise children falls first and foremost to all parents unless given up by said parents, NOT the state. This is America we live in not a socialist society.

Please encourage members of your committee to re-evaluate their postitions regarding this ridiculous bill. There is surely a better way to help children in our state without such a program.

Even though it is stated as volenteer, it's a well know fact that many of our 'volenteer' programs become mandated. There is absolutely NO WAY to provide such a service as this without bias which further leads to our desire for this bill to be thrown out completely.

Please refocus your efforts so that we may support you in the future.

Sincerely,
Dr. Brian M. York, M.D. Major USAF

Subject: HB 69

Representative Seaton,

Thank you for your service to the people of the state of Alaska. I am writing to voice my opposition HB 69 - Early Childhood Ed: Rating & Home Visits and I would urge you to vote against it.

I agree that parents are the first and most influential teacher in child's life. However, parents, not state bureaucrats, are also the best qualified to determine what is best for their individual children.

In the absence of evidence of abuse or neglect, state officials should not interfere with the upbringing of children by their parents. HB 69 is an infringement of parental rights. What is voluntary today often becomes mandatory tomorrow. The cost of $3000 per child or family to administer this program is too great. In these challenging economic times we should not be implementing programs that would have to be in place in every city or village whether the parents want the services or not.

Thank you for your consideration.
Sincerely,
Stephanie Taylor

Subject: HB 69

You may have already received an email from my wife on this subject from this email, but I want to reaffirm that both me and my wife feel this is a bad idea for the state and for the people's rights.

- I believe this is intrusion into parents rights to raise their child as they feel best.
- This increases the size of government at a time when Alaska has a projected budget short-fall. An increase in government is not in the best interest of Alaska. I am against larger government.
- The bill will be very difficult to enforce and
- The "Voluntary" program is simply a lead-in for a mandatory program once the "bugs" are worked out.
- Monthly meetings with a "qualified caseworker" can be very subjective.

Sincerely,

Christopher T. Davis, P.E.

To:Representative

We would like to express our OPPOSITION to HB 69. It is a bold = step for the government to step in and dictate this into law. The = government officials need to look at their current statistics in the = role they are performing in the education realm. The percentages of = children's scores on tests, the percentage graduating in relation to the = number who started kindergarten, and those matriculating on after = graduation...it's not too impressive. Leave the children to those who = know best...the parents.

Cordially,
Cliff and Maureen Henry

Representative Seaton,

We are writing to you to express our ***strong opposition*** to House Bill 69. There are many places available for parents to take their young children to be evaluated if there are concerns. i.e.; community health centers, doctors, midwives, schools, churches ect.. Therefore it is not necessary or wise to make intrusions upon individual households even on a voluntary basis. The money that would be used for this could benefit children in a much more efficient and practical manner by simply giving them the basic necessities that they require such as food, warm clothing, shelter and heat. Help a family with basic necessities and leave the parenting decisions to the parent, NOT the state.

Sincerely,

Mr. and Mrs. Brian Casey

Dear Representative Seaton,

Even in the amended form, this bill is not one I would like to see passed. My personal objection is that of funding for the bill at a time when our ecomony is so bad. Secondly, I do not believe parents need to have someone come to their home to instruct them in how to be "good parents".

PLEASE OPPOSE THIS BILL.

Subject: HB69

I would like to say that I hope you'll make the sensible decision to vote against HB69. Most importantly, with today's financial and budgetary cut backs it would not make sense to pass a bill that would have an endless need for funds. Especially for curriculum covering prenatal through age 5! Any parent who cares about their children will pay attention to them, read to them, keep their expanding minds stimulated and love them with enough attention to help them prepare to be a life long learner. It's parents like these who already have nurturing skills who would seek out such programs, not the neglectful, abusive parents the supporters of HB69 think they're reaching out to. They won't seek out accountability. Not only is there no reason for a curriculum, but people with only 37 or so hours of training are not the level of skilled professionals I'd want the children of my country to rely on. There are already many different groups parents can join through doctors' offices,! nurses, churches, not to mention friends and family.

If this group is so certain they have THE answers to raising everyone's children, why don't they create their course for parents to purchase or check out at the library! It could be the entire 37 hours-5hours per week for 8 weeks!

I listened to the presentation on February 11, 2009, and it sounds to me like this group would like to set up a big bureaucracy to oversee the many programs that are already out there. And they would of course be in charge! And they want the Alaska budget to pay for their entry into this field of influence, when they themselves state that parents are the most influential with their children. It sound like this group would like to become most influential.

While I'm sure that intentions are truly honorable, I believe this would turn into a mess. When I watch the news and see the mayor take away funding for fire fighters, in other words public safety items of the budget, as a beginning way to balance the budget, I lose patience with politics. Instead, lets not add HB69 to our budget. Schools keep getting more money without proving their worth with results. (Firefighters and medics save lives every day.) This will be more of the same. Parents are best at raising their children by their own creative solutions. They can make the best choices for their children, whom no one but God loves more than they do.

Please vote no on HB69.

Thank you for your time.

Sincerely,
Donna Worthen

To: Rep. Paul Seaton
Cc: Rep.Bill.Stoltz@legis.state.ak.us
Subject: Fw: HB 69

Dear Mr. Seaton & Stoltz:

I am forwarding an e-mail I sent to Rep. Fairclough. Through communication with her office I was told she is no longer on Ed. committee.

I don't know what studies the authors of HB 69 are siting. I looked up several on Wed. & the common factor appeared to be parent involvement and not any particular program.

I know from speaking with teachers that parent involvement is key to a child succeeding in school. I don't know if that involvement can be legislated. If a parent doesn't have any interest in helping with homework, feeding their children nutritious food, and making sure their children get appropriate amounts of sleep, it is going to be difficult for the best of teachers.

I come from a long line of individuals that never participated in a pre-k program, but still pursued higher education because it was a value in our family. The government didn't step in telling us how to do it.

We should not have laws based on those that won't step up to encourage their children to receive the free education offered in our state. The more people that won't take personal responsibility force the rest of us to be under government control.

Wouldn't the money be better spent with children that have already come through pre-k & elementary school but are slipping off during jr. & sr. high?

I apologize for the somewhat incoherent ramblings. I have my own family that I am in a hurry to tend to.

I hope that you will consider what I have said.

Sincerely,
Ingrid Gavalya

Subject: HB 69

Dear Ms. Fairclough,

I have a number of objections to HB 69. First of all, I thought that there was a budget crisis in our state. I don't think state dollars will be best utilized on something parents and their family doctors are already able to do. When children are school age any issues that are present will be detected and addressed.

My biggest objection to this bill is the governments intrusion to families. I understand that it is "voluntary" but, for how long.

My now 11 yr old daughter was told when she was 3 that she had AD/HD. We were at a Halloween party and another guest, an ophthalmologist that was some how partnered with the school district, told me she had training with ADD & AD/HD. She was very intent on telling me to get my daughter help. I took it seriously & spoke to my pediatrician's office nurse. She laughed! My daughter had been their patient since birth & they saw no indicators through our visits or conversations. This nurse told me after raising 4 children of her own & being a pediatric nurse for years, her experience was all 3 yr olds have "AD/HD". Needless to say my daughter does not have AD/HD. She excels in academics and is definitely high energy so she swims, runs, & hikes.

If a counselor came into my home to so my then toddler in one snippet of life would we have decided to medicate & treat her like she had a disorder? I have 2 more children with different personalities. My 8 yr. couldn't read when she started kindergarten would we have labeled her & put her into another program? My third child is 3 yrs old, and is prone to temper tantrums. Should I put her in an anger management program? My dog doesn't always come when she calls. Does she need a hearing program or is she passive aggressive? Maybe I am the common factor & need to begin **mandatory** parenting classes accompanied by shock therapy. Where does the insanity end?!?!

Sincerely,
Ingrid Gavalya

Dear Representatives, Feb. 19. 2009

First and Foremost, thankyou for your work with Alaskan children. I am writing you to ask for your support, and vote on house Bill 169 (Alaska Parent as teachers).

I am a parent activley involved in Hoonah's PAT program. This program has helped me become the parent I am today. I have learned patience, love, and how to help my children learn and grow.

P.A.T offers several programs such as handling pregnancy, breastfeeding, and learning the developmental stages of your child. They offer a tots clinic to conduct an ages and stages screening at no cost to my family.

I have two daughters and one son. My daughter Zada is seven years old, My Second daughter Shayla is five. I have one son named Mitchel 3½ months. All of my children have participated in P.A.T All of my children enjoy family fun nights, which is also presented by the Hoonah PAT.

All parent educators have worked hard to ~~be~~ answer my questions. It

really helps me be the confident parent I want to be!

Please consider a yes vote to house bill 169!

Melissa Thaalesen

Dear Representative,

I am pleased with the program parents as teachers. The one in Hoonah is helping. It helps the children there in school and at home.

The classes they have is helpful, and family time is being together at meal time & play time.

I've worked with my boys and later their children and even my Great children. I am a great Grant parent.

Dear Representatives

Me gusta esté programa porqué se trata de ayudar a los niños y padres de familia. a como Tratar de educar o enseñar a sus hijos lo cual a mi persona creo que es un excelente programa para todo el pueblo que tanto lo necesitan y pienso que todos los niños estan felices de venir o que lo visiten a su hogar para brindales su gran ayuda

Vote ayes on HB 69 Alaska parents as teachers. Andrea Atkinson

Feb 19 2009

Dear Representatives

I like this program because it helps children and parents of the family to teach their children. The program helps parents to educate and teach their children. For this I personally feel that it is a ~~elegant~~ program for the whole community. Please think of how happy it makes the children when they come to the program and when Parent Educators visit their homes. We need your help.

Vote Yes on HB 69 Alaska Parents As Teachers.

Feb 19, 09

Dear Representatives,

Thank you for your work for Alaska children. It is programs such as PAT that help provide the educational programs a child needs to succeed in the (school) K-12 levels.

Please support House Bill 69 Alaska parents as Teachers. The program PAT has become wide spread and is fairly new, I know it is greatly important to have such programs to help children develope a stable education.

I am a parent in Hoonah PAT and the program has helped my son in many ways, Social interaction, Communication, and helped in preparing him for the school setting.

Thank You

Carrie Lindoff

Dear Representatives

Thank you for your work with Alaska's children. Please support House Bill 69 Alaska's Parents As Teachers Program

We are parents concerned over funding for the Parents As Teachers programs here in Alaska. We strongly believe that through programs like these new parents like us could benifit.

This Program has helped us out with a prenatel program, lamaze, that helped out a lot during labor. Helped with our daughters learning & Social skills, provided reading material to check out. Family nights where we can Socialize with other families & make toys and games for our children.

Also taught classes to make regelia and how to weave something that we can pass on to our child. We think it's an excellent program

Dear Representatives,

My name is Wilma G. Davis, As a former Parents As Teacher Educator, I would like to thank you all for your support for our Alaska children. My experience as Parent Educator gave me the advantage of having a very successful child care program in Juneau. I became a strong advocate of young children and their families.

The PAT program gave me all the knowledge and the information about early childhood education and the importance of age appropriate activities to enhance their development. Being

there for the parents make a big difference on how they worked with their children at home. Reassuring them that they are their children's best teacher is the greatest job of the Parent Educator.

Thank You Again...

Respectfully Yours,
Wilma G. Davis
P.O. Box 592
Hoonah AK. 99829

P.S.
Please support / vote yes on HB 69

Alaska Parents As Teacher.

Dear Alaska State Representatives:

First, I would like to thank you - each one of you, for your time and efforts toward improving life for Alaskans, especially Alaskan youth.

I am writing to ask that you please VOTE YES on HB69 Alaska Parents As Teachers. I am a parent that participates and benefits from Hoonah Parents As Teachers.

PAT has helped me from the time I was pregnant with my son until present (my son is 4½ years old now) with being an effective parent and teacher to my son. PAT has trained staff and a wonderful resource library to draw from. Home visits are so helpful and Parent-Child Playgroups are well planned, educational and fun for kids. My son's favorite place to go during the week is to his playgroup on Fridays.

Thank you for supporting HB69 - Vote Yes.

Dear Representatives,

My name is Mónica Zaragua and I live in Hoonah. I am a parent and am actively involved in the Hoonah Parents as Teachers (PAT) program. I am writing this letter to ask that you support and vote yes on House Bill 69.

My son Jaden and I have been attending PAT since he was born and he is now 3 years old. I really enjoy all of the fun things that they offer my family.

PAT is a wonderful organization that offers many helpful things to me and my son. They do a Tots clinic which is a clinic that allows me to have my son checked by very skilled proffessionals at no cost to me which I greatly appreciate. They also have a family fun night every month where my son and I can have dinner and play games and also do arts and crafts with other families from the community who are also involed in the PAT.

PAT has helped me with many things. I have learned a lot from these caring and wonderful people. They work very hard to answer all of my questions so that I can be the best parent and teacher for my young son. My son Jaden also loves

coming to PAT for our home visits and for Family fun night. We are all like one big happy family.

I really hope you consider this and vote yes on House Bill 69.

Thank you

Sincerely,
Monica J. Zarazua
& Jaden L. Washington

Subject: RE: HB 69

While I appreciate the information that you e-mailed me showing support for HB69, I must emphasize that these families all have children who were only introduced into the PAT program AFTER having been diagnosed by a physician or educational program such as the ILP (Infant Learning Program). The bill being put forth by the House does not recommend follow-up by PAT representatives as your e-mails suggest, but, instead, immediately filters 'professionals' into the families lives without referral or provocation.

If I had a DOWNS child or a severely special needs child, I would appreciate and accept any and all interventions available to me to include those into my home. HOWEVER, this bill does not claim to represent strictly the disabled child nor does it present itself as a PAT program which is dependent on the referrals of other professionals for in-home consultation.

HB69 says NOTHING about whether or not a child needs special accommodations in order to present the professional in the home of the family. It also says NOTHING about the IEP/ILP process that would be in place for said individuals.

IF it is the House intent to propose a bill that would allow professionals into a house/family environment based on a NEEDS ASSESSMENT, it would be more welcomed than a BLANKET "we have the right" statement.

The letters of support that were sent to me are all from a NEEDS ASSESSED HOME in one fashion or another. NOT EVERY FAMILY HAS A NEEDS ASSESSED SITUATION AND NOT EVERY FAMILY SHOULD BE THROWN INTO THAT ARENA WITHOUT THEIR CONSENT. Consent is REQUIRED for any meeting regarding a child with regard to service to be provided. HB69 would violate that notice of intent and consent for services that are now mandated by the Federal Government.

I still stand in opposition to this program due to the amount of funding it would require, the limited professionals that are currently handling cases and the fear that they would be over loaded, and the obvious (to me) intrusion into my personal life and that of my family. If I asked for help, great, but DO NOT THROW YOURSEVES AT ME AND DEMAND THAT I ACCEPT.

> Dear Alaskans Concerned about HB 69,
>
> HB 69, legislation relating to a voluntary home visiting program for pre-elementary aged children, has certainly engendered a huge amount of concern. This is not surprising, given that the proposal relates to having a quasi-government person in private homes, working to address the needs of young children. I

did not initially feel very positive about supporting such a policy, even leaving aside the question of cost in the current fiscal climate.

However, I was very much surprised to learn at the first hearing that the program has been functioning for 14 years in Alaska and that there are currently about 47 "Parents as Teachers" around the state, many of them operating through school districts or Head Start programs, and most of them funded by federal grants. It turns out that the reason HB 69 was filed was not to implement the program but rather to bring it under the Department of Education and to provide the relative stability of state funding.

So, in my mind there are two questions:

1. Is this good policy for Alaska?
2. Is this the best use of our limited financial resources?

I have not fully answered those questions yet for myself, but I ask you to please read the attached document. It consists of four supportive emails, each providing a unique perspective. The comments which have contact information have been included with the express permission of the original authors. I think you will see that while the program may not be needed at all for your children or your families, it is immensely valuable to other families.

Thank you, always, for sharing your concerns.

Cc: Rep. Chris Tuck

Greetings,

I would like to tell my parent story about Parents As Teachers and why I feel that it is important to our state to fund this program. I am a mother who works full-time and has an Associate degree in Early Childhood Education. Although I have firsthand knowledge about child development, I still feel that I can utilize the program for support and access new resources and information for my own children.

Last year, my child was diagnosed with Autism. I felt both devastated and completely helpless. The doctor recommended 10 hours weekly of Speech, Physical and Occupational Therapy for him to be able to catch up to his peers. At that time, he was getting about 1 hour weekly of Speech Therapy from the School District, and I could not afford nor take the time off work to be able to take him to weekly appointments for specialized therapies.

I began working with my child at home in earnest with the Parents as Teachers program, tailoring the activities to his IEP goals. He also attends Head Start, along with the School District preschool. These three programs work so well together, individualizing for his needs at school as well as PAT providing activities to work on at home with him. I can see the progress that he makes through the monthly visit summaries, helping me to track his development.

Our Parent Educator brings information on child development, books for literacy and songs and fingerplays to practice with him. We are also able to attend group meetings, which are social groups of PAT families doing activities with and for our children. Our PAT program has a book incentive program, where for each home visit or group meeting attended, you can receive a ticket, which you can then trade for books at the center. My little boy loves to go in and choose his own books to take home, which helps me feel like I am giving him a love of literacy.

Today my 4 year-old son is almost speaking in full sentences, where just a year ago he was averaging one word sentences. His social skills have greatly improved, he is now able to play with his peers and interact in a playgroup. Although we still have a ways to go to reach our goals for him, the PAT program has given me the support and resources I

needed to help my child overcome these obstacles.

I believe that state funding is imperative to help this program achieve funding stability and to reach all children 0-5 in the state of Alaska. This is a research based program that has been proven time and time again to help parents form good foundations in strenghtening the development of their children. When we give parents the right tools to teach their children, we are investing in the future.

Thank you,

Nicole Creek

Subject: HB69 Comments

Importance: High

Dear Legislative Staff,

As a parent, this type of legislation seems a LOT over the top. I have read the House Bill as presented and have not been able to pinpoint any additional benefit to any individual or family within the state.

We already have the Infant Learning Program which benefits children age 0-3, the Child Find program which is available to parents from ages 3-5 and the educational school setting for children ages 5-21.

The above mentioned programs continually struggle for enough money to meet the known needs of the communities they serve. Our community (Mat-Su Area) currently only holds 2 Child Find weekends per year due to lack of funding and resources for those children determined in need of services. It takes an average of 3 months to get children determined in need of services though this specific program INTO the schedule of the therapist or teacher due to the high need and minimal professionals on staff.

HB 69 reads that DOE will have oversight of all educational facilities within the state with exception to UAA/UAF. However, DOE is CURRENTLY required to meet the needs set out in this bill for all public educational facility within the state, and any additionally accredited facility – secular or non which has petitioned for accreditation. SO this is NO CHANGE.

HB 69 will require that millions of dollars be spent on Health and Social Services which is already a bedraggled, under-funded department within our state.

How much money will we throw at a 'new' program rather than work within the means of the programs we currently have that DO work? The idea that every family in the state will be visited by a 'qualified caseworker' on a 'monthly' basis is fiscally irresponsible. Also, offering grants to individuals or programs to offer services which would otherwise be under the umbrella of the above 3 programs would under cut the professionalism of the current offerings. Instead, why do we not offer more support to the programs that are working? Why do we not have more therapists in the school systems to help alleviate top heavy caseloads or to allow more students to actively participate in them? This would allow more Child Find Intakes throughout the year where more children could be seen and entered into an educational setting.

It is unreasonable to believe that EVERY household in the state would be visited on a monthly basis by a 'volunteer' (paid by the state in some fashion). I am completely disenchanted with our current government if they TRULY BELIEVE that this Bill will 'fix' what is apparently 'wrong' with our families.

Not only is it unreasonable, it is an invasion of personal privacy and I take a offense to the thought that a state representative will be empowered at any time to come into my home and 'educate' me on how to properly raise my children.

As a tax payer, I don't want to spend nor do I authorize my legislature to spend millions or possibly billions of dollars to send a caseworker to EVERY home EVERY month for a minimum of 5 YEARS – Estimated out at $50.00/hour for 2 hours per month for 12 months per family over the 5 year period that would equal not less than $6,000.00 per child per annum. This does not include paperwork time, drive time/fuel costs, or any overhead related to said employee.

I can not express enough how against this type of legislation I am.

If you have any questions please call me at (907) 244-7486. Or you may e-mail me at lstotler@mtaonline.net in

response.

I can only hope that my comments are not too late and that they do not fall on deaf ears.

Sincerely,

Linda Stotler

Subject: HB 69 Alaska Parents as Teachers

Representatives of the House Education Committee,

I needed to summarize for other public uses my last week's testimony regarding Parents as Teachers. I thought it may be of some use to you for your future deliberations on HB 69.

I have worked in the Parents as Teachers program for the past 14 years. I was fortunate enough to be the first parent educator hired when Hoonah implemented PAT in 1995, the first program in Alaska. The program has now expanded to 47 communities across Alaska.....because it works!

PAT is a win-win program: parents are empowered to take control of their children's learning from birth. Parent educators offer families personalized visits, which are conducted at the location of the parents' choosing. Usually it is in the home, but visits also occur at Head Start, child care centers/homes, McDonald's, or church basements. Visits occur where the families choose to visit. The advantage of the homes is that parent educators can coach the parent with the parent-child activity using the materials normally found in the child's environment. 70% of Hoonah's visits occur at homes; 30% occur at other places.

PAT is a "strengths model" which stresses that parents are the experts of their children, and that families will set their own goals for their children. Empowerment results when the parent educator is the resource who offers research-based strategies and options. It is the parents who choose which options are appropriate for their family and circumstances.

I became a National Trainer for the Parents as Teachers National Center in 1995. I periodically train new parent educators in Alaska and the lower 48, although Alaska is my priority. The training is intense, and parent educators must pass daily assessments, a role-play of a personal visit with a family, and be evaluated as competent to deliver the PAT services to families. Not every participant in the trainings is certified, and the standards are strict. Parent educators are not state employees or caseworkers, but are local residents hired by the local program who operates Parents as Teachers.

Parents as Teachers works with all family configurations: single parents, teen parents, grandparents raising grandchildren, foster and adoptive parents, and extended families rearing children. Each family's goals are different; each personal visit is different as a result.

Parents as Teachers works equally well with families who choose differing education avenues for their children: home schooling, public schools, or private schools. PAT is the first step in parents taking control of their children's learning at birth. Private schools aren't an option in Hoonah, but PAT has been popular with home-schooling parents here. One of our current PAT parent educators and one of our previous parent educators also homeschooled their children, a clear indication

that the partnership works very well.

School readiness is so vital to children. Independent research shows that children who participate in Parents as Teachers enter Kindergarten ready to learn, and they have great success throughout their elementary years. This is true regardless of which educational option families choose at age 5.

I urge you to vote yes on HB 69. The Parents as Teachers' vision is that "All children will learn, grow, and develop to their full potential." All Alaskan communities can achieve this as a reality through Parents as Teachers.

If I can provide any information about the Parents as Teachers program, the training component, or other aspects of PAT, please don't hesitate to contact me.

Thank you for your time and for your work on the Education Committee on behalf of Alaska's youngest citizens.

Representative Chris Tuck
State Capitol Building
4th Floor, Room 426
Juneau, AK 99801
Phone: (907) 465-2095

Dear Representative Chris Tuck,

I am writing to ask you to support continued funding for the RurAL CAP Parents as Teachers (PAT) Program. My daughter and I are participants in the Anchorage PAT Program and I want to share with you some of the ways the program has impacted our lives.

Our PAT Family Visitor provides home visits every other week. At each visit she shares information on brain development and how I can foster my daughter's growth and development. We always learn a new activity that is specific to my daughter and her milestones. Each visit also includes a book or literacy activity and often we get a book to keep and add to our own collection. We enjoy each visit and the fun activities our PAT Family Visitor shares with us.

The PAT Program holds group socializations at least twice every month. These provide opportunities for children and parents to get together, play, learn something new and have fun! We are looking forward to our next group social at the public library where we will learn about all of the activities they provide for children.

Our PAT Family Visitor has also been a huge support to me in the loss of one of my children. She has offered me resources and even more importantly an ear to listen when I'm having a rough day. Although I don't think I will ever completely heal from this loss; the PAT Program has provided me with some of the tools I need to be the best mother I can be for my daughter.

The PAT Program has taught me that I am my daughter's first and best teacher. My daughter was born 10 weeks premature and is flourishing; I am certain that our participation in the PAT Program has given her an advantage and has given me the tools and resources I need to better support her growth and development. The PAT Program has empowered me to be an advocate for my daughter.

I hope that you will share this with your colleagues and please encourage them to also support funding for the RurAL CAP PAT Program.

Sincerely,

Alicia Notti

RurAL CAP PAT Parent

Subject: in support of HB69

I was hoping to give a verbal testimony, but I've got to get to work now. So please accept this e-mail as my testimony of support for this house bill.

A little background information:

My name is Anastasia Lane. I was raised in Seward, and am now raising my own family here as well. I have two children who have been involved in the local Head start program and parents as teachers programs. As many of you know, developmental disorders and learning disabilities are on the rise. My oldest child is on the Autism Spectrum, and it was from the wonderful educators in the Head start program that first to alerted me that my child was significantly behind her peers in her development. On the other hand, the year before she was enrolled in Head Start, the "educators" at a different daycare/preschool program repeatedly told me that my child was "just fine"... "and I was worrying over nothing". This was obviously detrimental to my daughters' future as I chose to believe them, because that's what I wanted to hear. Had I not been told by these so-called "educators" that she was "just fine" ; we would not have lost over a year of therapies that could have significantly helped her. I am truly grateful to the teachers at Head Start for seeing what other educators could not. I fully believe in a "checks and balance" system, because of my personal experiences. I believe that an agency or person who wants to be an early childhood educator should be held accountable for their success or failure as an educator as well as supports be in place for them.

When my second child was born, the Head start program had already been removed. I signed up for voluntary Parents as teacher program because I was very concerned about his development. I didn't know what "typical development" was as my experiences thus far had been significantly skewed. I truly welcomed our "home visits" and not for one moment did I feel it was an invasion

of my privacy. I would save up my questions throughout the week to ask at our "home visits" and absorbed the information like a sponge. Those home visits were a ray of sunshine in an otherwise frightening time for my family. I believe the teachers and agencies who provide these services should be held accountable; whether it be an agency, an individual, or a parent. I am in support of establishing a rating system for early childhood education; and hope you will pass HB69 in support of many families in Alaska.

Sincerely,

Anastasia Lane

Want to do more with Windows Live? Learn "10 hidden secrets" from Jamie. Learn Now

My name is Jane Sullivan,

I have my degree in ECE. I am a home school parent of five children. I have also worked as a parent educator for Hoonah PAT.

My husband and I decided to HS our children because we felt we could provide their best educational opportunities at home. This decision was based on their individual learning styles, their interest in different subjects and our learning goals for each child. Home schooling is not easy, it requires discipline, organization and a willingness to understand that I could not do it all myself. I utilized the local school resources often, the library, auto shop classes, writing workshops, science fairs and of course curriculum materials. I participated in state and federal required testing; this provided us with the opportunities to verify our children were learning at or above their grade level.

Our oldest two children are

college graduates, dean's list students and scholarship recipients

I see PAT as an extension of these same dynamics.

PAT encourages the parents to understand that they are their child's first teacher. Parents see themselves as being vital and important to their child's development and learning ability. Parents want their children to learn, they want to understand how their child is developing, if their child is bonding appropriately, crying too much, crawling at the right time, walking or even holding an object correctly. PAT educators do exactly that. Educating parents about what is happening, what to expect, how to respond and where to find resources when they need assistance. IE: interactive play groups, workshops, education opportunities.

I saw my PAT role as a facilitator; to help parents understand the incredible impact, joy and pride they can experience as parents of young children. The parents I worked with recognized the positive effect that early learning had on their children.

ANALYSIS: *(Attach a separate page if necessary)*

The Alaska Parents as Teachers Act, provides for a competitive grant for pre-elementary students to receive teaching services through the student's respective parent/guardian and support by EED. Cost were determined as follows:
Approximately: 9,600 pre-elementary students;
of those approx: (3,500) students receive Headstart services;
Approximately: (500) will be covered under the Governor's proposed pilot pre-kindergarten program
Resulting in: 5,600 pre-elementary students that could qualify for this grant.
Approximately: $3,000 per student cost.
$16,800,000 TOTAL GRANT
In addition to the grant the department will need to hire one position to oversee and service this program.
Education Administrator I at $102,400 plus travel at $20,000 = **$122,400**

Fax (907) 465-3810
Toll-free (866) 465-2095

- There are approximately 65,000 children ages 0-5 in Alaska, living in 48,507 households.[i]
- An average of 1.34 children ages 0-5 live in these households.[ii]
- Based on census data and estimates from the long-established universal-access Parents as Teachers program in Fairbanks[iii], about 4.4% of families who qualify for Parents as Teachers would actually use the program.
- Rural participation might be slightly higher, but current and detailed census data is unavailable by town.
- This indicates that HB 69 would serve roughly 2,860 children in 2,134 households each year.
- Already, roughly 800 families are served by existing federally-funded Parents as Teachers Programs.[iv]
- With an average Parents as Teachers program cost of $3000 per family household applied to families not currently in a Parents as Teachers program[v], the Department of Education grant for HB69 is more accurately estimated at $3.98 million.

[ii] *Economic Impact of Early Education and Child Care in Alaska.* McDowell Group, Inc. July 2006. Page 7.
[iii] The Fairbanks Parents as Teachers program has been in operation for XX years, and has a stabilized demand for services. Fairbanks has 10,072 children of 0-5 years of age, according to the Bureau of Vital Statistics. (Total number of 0-4 year olds in Fairbanks is 6,722. Estimate for the number of 5-year olds was determined by averaging the number of children of each age in the 0-9 range). Currently, 375 children are enrolled in Parents As Teachers and another 50 families are on the wait list.

PARENTS AS TEACHERS ALASKA

2008 FACT SHEET

Parents as Teachers (PAT) is an evidence based international home visitation program dedicated to providing parent education services to families with children prenatal to five years of age through home visits and group meetings.

2008 HIGHLIGHTS

Services for Children and Families 2007-2008:

- 31 communities served
- 809 families served
- 963 children served
- 36 prenatal women served
- 95 homeless families were served
- 573 Alaska Native/American Indian children served
- 726 children received developmental screenings with 71 found to need further evaluation
- 239 families linked to other services

Percentages of Enrolled Children by Agency/ Organization:

- 19% school districts
- 79.5% non-profit organizations
- 1.5% military programs

Professional Development:

- Trained and certified 32 Parent Educators and 7 supervisors in the Prenatal to 3 Years Curriculum
- Certified and trained 24 Parent Educators in the 3 Years to Kindergarten Curriculum
- 496 participants from 41 Communities attended PAT workshops/training institutes

ETHNICITY OF CHILDREN SERVED

Detailed Survey Results: Child Care Funding 26
Demographics 27

The purpose of this study was to measure the economic impacts of business, organizations and individuals that provide early education and child care services to Alaskan children under six years of age. Economic impacts are measured in terms of employment, spending on child care services, and the role that child care services play in making it possible for Alaska families to earn income. From this study, three key conclusions can be drawn about Alaska's early education and child care industry:

- Early childhood education and child care services play a critical role in Alaska's economy.
- Alaskans place a high priority on funding for education, including early childhood education.
- The availability of quality, affordable child care remains a challenge for many Alaska families.

Detailed study findings are summarized below.

Demographics

- In 2004, Alaska's population included 62,913 children under six years of age, according to State of Alaska estimates.
- Approximately 63 percent (39,400 children) are living in households where all available parents are in the labor force. These children resided in approximately 29,400 Alaska households.
- Among Alaska households where all available parents are in the labor force, 26 percent are single-parent families, including 18 percent where the mother is the only parent at home and 8 percent where the father is the only parent at home.

Economic Impacts

The economic impact of the early education/child care sector includes jobs for thousands of Alaskans, millions of dollars in spending by households and governments, and indirect contributions of Alaska's resident labor force and family income.

- At least 6,500 Alaskans directly participate in the child care sector workforce. Total direct and indirect employment is estimated at 7,400 jobs, accounting for $124 million in annual payroll.
- In Alaska, State and federal government spending totaled approximately $88 million on early education/child care programs and child care assistance in FY 2005. The Federal government contributed 85 percent of this total ($75 million), while the state contributed 15 percent ($13 million).
- Alaska families spend approximately $130 million on child care services in Alaska annually. The cost of full-time child care in Alaska generally ranges

from $400 to $900 per month, depending on the age of the child and the location of the care. Working parents with two children under six years of age may spend $15,000 or more a year on child care services.

- In total, approximately $240 million is spent annually on early education and child care services, including household and government spending.

- There are 29,400 Alaskans in the workforce because child care services are available to them. This accounts for 8.2 percent of the Alaska resident workforce.

- Though specific data is not available, based on economy-wide averages, families using child care services earned total annual wages estimated at $850 million. This is an average of $28,820 per family in additional annual income indirectly made possible by child care services, equal to approximately 40 percent of Alaska's mean family income in 2003.

This study also examines research conducted elsewhere in the U.S. that measures the broader societal economic benefits stemming from quality child care services. This research has shown conclusively that although investment is required to provide quality early care to infants, toddlers, and preschoolers, the rate of return far exceeds that initial investment. Benefits include:

- increased earnings capacity projected from higher educational attainment along with higher taxes paid from better paying jobs,

- lower criminal justice system costs,

- reduced welfare costs, and

- savings on school remedial services budgets.

Household Survey Findings

This study included a telephone survey of 725 randomly selected Alaska households from across the state. The primary purpose of the survey was to collect information on the types of child care services Alaska families use and how much households spend on child care services. The survey also collected information on Alaskans' attitudes about the importance of state government funding for early education and child care services.

The survey sample included 323 Alaska households with a total of 459 children under six. About two-thirds (65 percent) of these children were less than 4 years of age, and one-third (35 percent) were 4 or 5 years old.

Alaska household use of child care services

- Approximately 58 percent of children in the surveyed households received child care services of some type during the month of January 2006 (the time period considered in the survey). This includes 54 percent of the children under 4 years of age and 62 percent of children aged 4 or 5.

- Among children in child care services, 49 percent were in a preschool or child care center. Just under one-third (31 percent) were being cared for at someone else's home. Just over one-quarter (27 percent) were receiving child care services in their own home. Eight percent were in a Head Start program.

Some children were cared for in more than one setting, such as Head Start and home care.

- Children spent an average of 26 hours per week in a preschool or child care facility (among children enrolled in preschool or a child care center). The average was 25 hours for care at someone else's home, 20 hours for in-home care, 18 hours in a Head Start program, and 11 hours in a before or after school care program. Again, some children are cared for in more than one setting.

- Forty-five percent of Alaska households with children under six in a child care situation found it difficult or very difficult to find acceptable child care. About the same percentage (49 percent) found it either easy or very easy to find acceptable child care.

- Among Alaska households with children under six, 36 percent reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment or had in some way restricted the number of hours they could work.

- When asked which factor had the greatest impact on ability to find acceptable child care, cost was most often cited. Half (50 percent) indicated that cost had the greatest impact, while 26 percent cited quality and 23 percent cited availability. Cost is the more critical issue in urban Alaska while availability is the more important issue in rural Alaska.

- About one in seven households with children in child care services received some form of child care assistance during the month of January.

Government funding priority for early education/child care

- Nearly nine out of ten Alaska residents (87 percent) think it is important or very important for state government to provide financial support for early education and child care.

- When compared to other government services, Alaskans also give early learning a high priority for state funding. Two-thirds (66 percent) of Alaskans feel that the state should give early learning and child care a high funding priority. Among the categories of government spending presented to survey respondents, only K-12 education earned more "high priority" ratings.

- More than three-quarters of Alaska residents feel that early learning and child care is more important to fund than support for local government or construction of new roads and highways. Only K-12 education was rated as more important to fund than early learning, child care by more Alaskans, among the categories of government spending presented to survey respondents.

CHAPTER I. INTRODUCTION AND INDUSTRY PROFILE

Scope of Study

The purpose of this study is to measure the economic impacts of the early education and child care sector of Alaska's economy. This study focuses on education and care of children under six years of age. Economic impacts are measured in terms of employment, spending on child care services, and the role that child care services play in making it possible for Alaska families to earn income. This study also examines research conducted elsewhere in the U.S. that measures the broader societal economic benefits stemming from quality child care services.

A key component of this project was a telephone survey of 725 randomly selected households. The primary purpose of the survey was to collect information on the types of child care services Alaska families use and how much households spend on child care services. The survey also collected information on Alaskans' attitudes about the importance of state government funding for early education and child care services.

Industry Profile

Alaska's early education and child care sector includes a wide variety of service providers. It includes any program providing care for children birth to age 6. Examples of these programs include center-based child care, family child care, Head Start, Early Head Start, private and public preschools, Montessori programs, and Pre-kindergarten services. It includes licensed and unlicensed providers.

The State of Alaska approves or licenses six types of providers; Approved Provider, Approved Relative, Approved In-home, Licensed Center, Licensed Group Homes and Licensed Home. The Municipality of Anchorage licenses child care facilities within its boundaries. The military also certifies child care providers serving the military population in Alaska. Child care providers must be Approved, Licensed, or certified by the military to participate in the state's child care assistance program.

Approved Provider: Provides child care for up to and including four children unrelated to the provider. Approved Providers may care for no more than a total of five different children under 12 years of age, including the provider's own children. No more than two of these children may be under 30 months of age. This category of provider needs to be licensed within 12 months to continue to be eligible for payment through the Child Care Assistance Program. There are 288 approved providers in Alaska.

Approved Relative: Has the same requirements as Approved Provider except the only eligible children are the caregiver's grandchildren, great-grandchildren, sibling (only if living in a separate residence), niece or nephew (not great niece or nephew). These providers are not required to be licensed to continue to be eligible for payment through the Child Care Assistance Program. There are 572 approved relative providers in Alaska.

Approved In-home Provider: Provides child care in the child's own home. There are 387 in-home providers approved by the state of Alaska.

Licensed Center: A licensed child care facility for 13 or more children. There are 217 licensed centers in the state.

Licensed Group Home: A licensed child care facility for nine through 12 children and may be in an occupied residence. There are 88 licensed group homes in Alaska.

Licensed Home: A licensed child care facility, usually in an occupied residence, for no more than eight children. There are 435 licensed homes in Alaska.

A total of approximately 2,000 approved or licensed providers are included in the preceding categories.

Other providers: There are a variety of other child care providers in Alaska that may not be recorded in the state's data, including providers that do not require state approval or licensing. These include:

- **Facilities on military bases** (Fort Richardson, Eielson Air Force Base, Fort Wainwright, Elmendorf Air Force Base and the Kodiak Coast Guard Base all have child care centers and family child care homes that are certified by the military.)
- **Tribal groups** (There are 136 family child care providers who are tribally approved, but not state approved or licensed. There are also 142 tribally-approved in-home child care providers.)
- **Head Start programs** (There are 18 Head Start grantees in Alaska, which operate 138 programs in 106 communities across Alaska. Sixteen (16) Head Start programs are also licensed as child care programs by the state.)
- **Preschools** (There are 22 certified preschools in Alaska including four preschools that are also licensed as child care facilities. There are also 41 school districts that offer preschool programs for children with special needs and their peers.)
- **Legally exempt providers** (Child care providers are legally exempt from licensing requirements as long as they care for no more than four children unrelated to them. The number of such providers in Alaska is not known.)
- **Others** (Providers who are not licensed or approved by the State of Alaska or the Municipality of Anchorage who care for more than four unrelated children are considered to be operating illegally. No doubt such providers exist, but the number is unknown.)[1]

Demographic Profile

According to Alaska Department of Labor and Workforce Development (DOLWD) estimates, in 2005 there were 63,785 children under six years of age residing in Alaska. This component of Alaska's population has been growing at an annual rate of 1.7 percent since 2001, slightly faster than the overall population growth rate of 1.2 percent. In 2004, there were 62,913 children under six years of age in Alaska, according to DOLWD estimates.

[1] Source: http://health.hss.state.ak.us/dpa/programs/ccare/eligible-providers.html

4875

U.S. Census data for 2000 provides more detailed data on Alaska's population of children under six years of age. In 2000, Census data indicates there were 57,620 children under six years of age living in Alaska.[2] Just over 90 percent lived with their own parents, while 8 percent lived with other relatives, 2 percent with non-relatives, and less than 1 percent in group quarters.

Alaska's Population of Children Under 6 Years of Age, by Living Arrangement, 2000 Census

Living Arrangement	Number of Alaska Children Under 6 Years of Age	Percent of Total
With Own Parents (or parent)	51,908	90.1%
With Other Relatives	4,437	7.7%
With Non-Relatives	1,074	1.9%
In Group Quarters	201	0.3%
Total	**57,620**	**100%**

Source: 2000 Census, Summary File 1. Table P29, Relationship by Age For the Population Under 18 Years.

Also according to Census data, in 2000 there were 41,915 families in Alaska with related children under six years of age.[3] This includes married couple families and single householder families. This indicates that households with children under six years of age had an average of 1.34 children under 6.[4]

Alaska Families with Related Children Under 6 Years of Age, by Family Type, 2000 Census

Family Type	Number of Alaska Families with Children Under 6 Years of Age	Percent of Total
Married-couple families	30,367	72.4%
Male Householder, no wife present	3,467	8.3%
Female Householder, no husband present	8,081	19.3%
Total	**41,915**	**100%**

Source: 2000 Census, Summary File 3. Table P17, Family Type by Presence of Related Children Under 18 Years of Age by Age of Related Children.

Alaska's population of children under six years of age included 32,463 children living in households with their own parents, where both parents were in the labor force, or in the case of single parent households, that parent was in the labor force.[5] Based on data for children that are living with their own parents, almost two-thirds (62.5 percent) of Alaska's children under six years of age lived in families where all parents were in the labor force (as of 2000). If it is assumed that this held true for all children under six, including those living with relatives or non-relatives (rather than with their own parents), the total number of children in households where all available adults are in the labor force would have been 35,887 in 2000.

[2] Source: 2000 Census, Summary File 1. Table P29, Relationship by Age For the Population Under 18 Years.

[3] Source: 2000 Census, Summary File 3. Table P17, Family Type by Presence of Related Children Under 18 Years of Age by Age of Related Children

[4] Based on Census data there were 56,345 children under six living their parents or parent, or with a relative. These children resided in 41,915 households, for an average of 1.34 per household.

[5] Source: 2000 Census, Summary File 3. Table P46. Age of Own Children Under 18 Years in Families and Subfamilies by Living Arrangements by Employment Status of Parents.

Alaska Children Under 6 Years of Age, by Employment Status of Parents, 2000 Census

Family Type	Number of Alaska Families with Children Under 6 Years of Age	Percent of Total
Living with two parents, both in labor force	21,098	65%
Living with father, in labor force	3,781	12%
Living with mother, in labor force	7,584	23%
Total	**32,463**	**100%**

Source: 2000 Census, Summary File 3, Age of Own Children Under 18 Years in Families and Subfamilies by Living Arrangements by Employment Status of Parents.

If the average of 1.34 children under six years of age per household is assumed to hold true for households where all parents are in the labor force, in 2000 there would have approximately 26,800 Alaska households in need of child care services of some type.[6]

The Census Bureau's 2004 American Community Survey provides more recent data. According to that data, there were 55,308 children under 6 years of age living with their own parents, including 35,608 children living in households where all parents are in the labor force.[7] This is a 9.7 percent increase over 2000 in the number of children living in households where all parents are in the labor force.

Applying this percentage increase to the number of households in need of child care services indicates that in 2004, there were 29,400 Alaska households in need of child care services for their children under six years of age.

In summary, in 2004, Alaska's population included 62,913 children under six years of age. Approximately 63 percent (39,400) of these children live in households where all available parents are in the labor force. These children reside in 29,400 Alaska households. This suggests that in 2004 there were 29,400 Alaska households potentially in need of child care services. For several reasons, which are described in the next chapter, the number of households actually requiring child care services is likely somewhat higher than this estimate.

[6] An estimated 35,387 children in households where all parents are in the labor force divided by an average of 1.34 children under six per household.

[7] Source: U.S. Census Bureau, 2004 American Community Survey, Alaska, Selected Economic Characteristics: 2004.

CHAPTER II. ECONOMIC IMPACT ANALYSIS

This chapter examines the economic impact of the early education and child care sector in Alaska. The chapter begins with an overview of published employment data, followed by an assessment of employment based on licensing and other data. Following that is an analysis of published wage and earnings data. In addition, total household and government spending on child care services and programs are estimated. Finally, several landmark studies conducted elsewhere in the country, which assessed broader socioeconomic benefits of quality child care services, are summarized. Though not specific to Alaska, the findings of these studies are certainly relevant to this project.

Employment

This analysis indicates that 6,400 Alaskans participate in the state's early education and care workforce. This estimate is derived from a variety of published and unpublished data sources, as described below.

Data Sources

There are a number of government data sources for employment in the child care sector in Alaska. For reasons described below, all provide an incomplete picture of the number of people who earn income providing child care. It is important to describe these data sources, however, as they are often cited in discussions about the role of child care employment in the economy.

State of Alaska data sources: The Alaska Department of Labor and Workforce Development (DOLWD) compiles and publishes employment data for non-agricultural wage and salary employers in Alaska. For 2004 (the latest available full-year data), DOLWD reports 167 employers in the "Child Day Care" sector (classification number 6244 in the North American Industry Classification System, NAICS[8]). These employers reported total average monthly employment of 1,532 workers. Peak month employment occurred in May at 1,603 workers, and low-month employment occurred in July at 1,376 workers.

This data presents only a partial picture of employment in child care services in Alaska, for two reasons. First, it excludes self-employed workers, who account for a significant portion of the child care workforce. Second, it fails to capture child care workers employed by larger organizations or businesses, for which employment is reported in other sectors of the economy. For example, child care employment in a hospital would most likely be reported in the health care sector rather than the child care sector. This is not a matter of misreporting by DOLWD, but rather a matter of how organizations and businesses report their employment to DOLWD.

To estimate child care-related employment not captured in DOLWD data for the child care services sector, the study team examined licensing data provided by Alaska Department of Health and Social Services Child Care Program Office. By cross checking that licensing data with DOLWD employment data for all employers in the state, the study team was able to identify licensed child care centers whose employment was not captured in the DOLWD data for the child care sector. That analysis identified another 1,100 workers (annual average) employed by

[8] This sector is comprised of "establishments primarily engaged in providing day care of infants or children. These establishments generally care for preschool children, but may care for older children when they are not in school and may also offer prekindergarten education programs." http://www.census.gov/epcd/naics02/naics02/622441.htm

organizations such as health care facilities, school districts, private schools, university campuses, recreation centers, for-profit businesses and others.

Federal government data sources: The U.S. Department of Labor, Bureau of Labor Statistics (BLS), published similar data. For 2004, BLS reports 1,535 employees with 155 private establishments and 50 employees with one federal government establishment. This data suffers from the same limitations as DOLWD data in that it does not include the self-employed, and it does not capture misclassified employment.

The U.S. Census Bureau publishes data on non-employers – those self-employed child care providers that have no paid employees. The Bureau's 2003 Nonemployer Statistics show that in sector 6244, Child day care services, there were 2,118 nonemployer establishments in Alaska in 2003.

Other data sources: State licensing data probably provides the most comprehensive data on child care industry employment in Alaska. The state's licensed and approved provider database includes the number of employees for each provider. That data indicates that licensed centers had total staff of 3,621, licensed group homes had staff of 184, and licensed homes had staff of 411. (It is important to note that this data is not comparable with DOLWD data because it is a measure of the total number of participants, not annual average employment.) State data also indicates that are 351 approved providers/relatives and 391 in-home care providers.

However, this data is also incomplete in that it excludes a number of providers who are not required to have state approval or licenses. This includes Head Start programs, military establishments, tribal providers, certified preschools, school district preschools, and others.

Head Start programs account for significant employment in Alaska. According to data provided by the Alaska Department of Education and Early Development, Head Start programs around the state were staffed by a total of 901 workers in 2004-2005.[9]

Certified pre-schools in Alaska had total staff of 113. Some of this employment is captured in the state licensing data. Employment data for school district preschools is not available and therefore was not included in this report.

Employment at child care facilities on military bases includes 75 caregivers at Fort Richardson Army Base, 87 at Eielson Air Force Base, 26 at the Kodiak Coast Guard base, 83 at Fort Wainwright and 219 at Elmendorf Air Force Base. These estimates include providers in center-based facilities as well as certified home care providers.

Tribal organizations that are not state approved or licensed account for approximately 278 workers.

Finally, there are 33 people employed by the State of Alaska Child Care Program Office; 20 people employed by the Municipality of Anchorage child care licensing office; 38 people employed by the three child care resource and referral agencies; 42 people employed by grantees who determine child care assistance eligibility; 16 people employed by child care food programs; and at least 12 people employed by Tribal organizations to administer their federal child care funds – for a total of 162 people in program administration, licensing, etc.

[9] Source: Head Start Program Information Reports, Alaska Department of Education and Early Development.

Employment Summary

The various sources of child care sector employment described above account for just over 6,900 jobs. There is, however, some duplication among the data sets (several Head Start programs and preschools are captured in the state licensing data, for example). After adjusting for this duplication, it is estimated that at least 6,500 Alaskans participate in the child care sector workforce. This should be viewed as a very conservative estimate in that it does not include an undetermined number of at-home providers who care for four or fewer unrelated children or any number of related children and therefore are not required to be licensed.

Child Care and Early Education Employment in Alaska, 2005

	Employment
Licensed Centers	3,621
Licensed Group Homes	184
Licensed Homes	411
Approved Provider/Relative	351
Head Start Programs	901
Certified Preschools	113
State In-home Care Providers	391
Military Facilities	490
Tribally-approved family child care and In-home providers	278
Program Admin., Resource and Referral Staff	162
Total	**6,902**
Net Total (after adjustment for double-counting)	**6,500**

In 2004, the Alaska economy included 428,000 jobs. Though child care and early education account for a small portion of total employment (1.5 percent), the sector's employment is comparable to other significant industries in Alaska.[10] For example, the residential and nonresidential building construction sector employed an average of 6,000 workers in Alaska in 2004. Alaska's air transportation sector employed an average of 6,400 workers that year.

Wages and Revenue

Wage Data

Published wage data for Alaska (and for other states) is incomplete. Much of the payroll earned in the sector is misclassified in other sectors of the economy, and much of the income is not reported at all. Nevertheless, a review of available data is informative.

DOLWD payroll data indicates that the 1,532 workers employed in the "child day care" sector earned a total annual payroll of $24.7 million in 2004. The average monthly wage was $1,342. This average is well below the average for all sectors of the Alaska economy. In 2004, the average monthly wage in Alaska was $3,218.

[10] Includes wage and salary employment and proprietors employment, from the Bureau of Economic Analysis.

BLS also reports total wages in private child care establishments of $24.7 million plus $1,133,000 in wages at the one reported federal government establishment. BLS also reports an average weekly wage of $309 for employees of private establishments and $434 in the federal facility in 2004. Average annual pay was $16,093 in private establishments and $22,547 in the federal facility.[11]

DOLWD publishes wage data for several hundred occupations in Alaska, including workers in the child care sector. Child care workers earned an average hourly wage of $9.87 in 2004, while administrators in preschool and child care programs earned an average wage of $19.07[12] The average hourly wage in all sectors of the Alaska economy is approximately $20 per hour.

Hourly Wage Rates in Alaska's Child Care Sector

	Mean	Median	Mean Entry	Mean Experienced
Ed Admin, Preschool & Child Care Center/Program	$19.07	$16.90	$11.67	$22.76
Child Care Workers	$9.87	$9.11	$7.89	$10.86

Child Care Provider Revenue and Government Funding

There are two sources of spending on early education and child care services, government funding for child care assistance programs and program administration, and spending by parents on child care services. Again, published data portrays only a partial picture. This section describes the published data, summarizes government program spending, and assesses household spending on child care services, based on survey results and other demographic data.

Published Data

U.S. Census Bureau 2002 Economic Census data indicates that businesses engaged in providing child care services in Alaska had total receipts of $45.1 million in 2002. This data is for 174 establishments.[13] This data is incomplete in that it excludes revenue for child care services offered by larger organizations or businesses outside the child care sector. These revenues are reported in other sectors of the economy. It also excludes non-employer establishments. U.S. Census Bureau non-employer statistics indicate that Alaska's 2,118 non-employer establishments engaged in child care had $25.2 million in receipts in 2003.[14]

State and Federal Government Spending

The State of Alaska Department of Health and Social Services Child Care Program Office has a FY 2006 budget of $44.7 million. This includes $37.7 million in federal funds and $7 million in State funds.[15]

Of the Program's total budget $32.6 million is spent as payments to child care providers on behalf of parents who qualify for financial assistance. The remaining $12.1 million is spent on child care licensing and Child Care Grant programs, grants

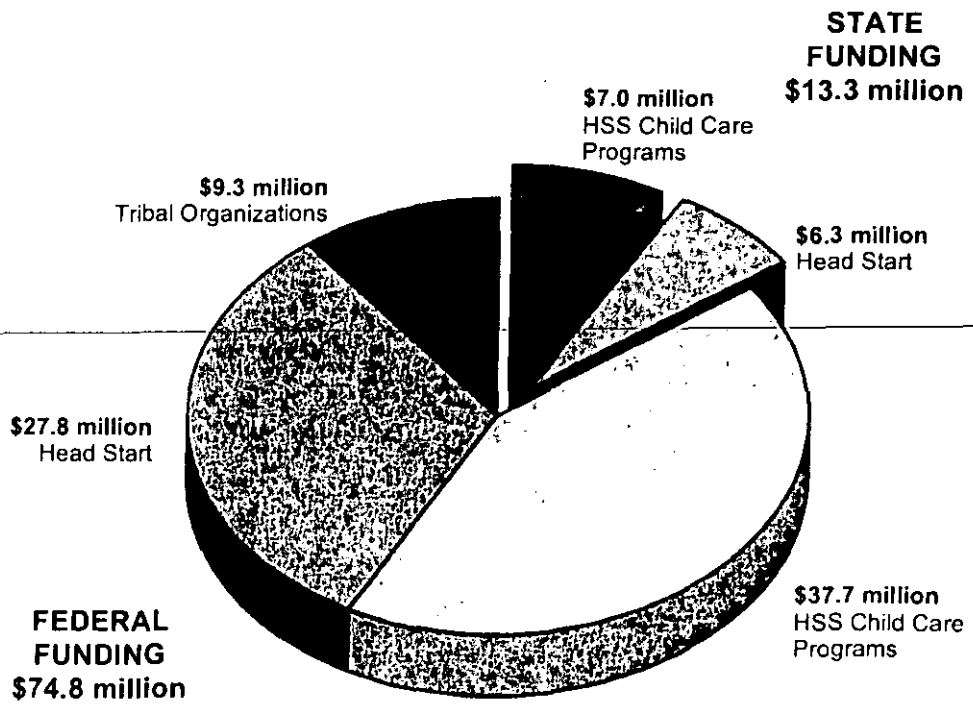
[15] A portion of child care program funding is spent on services for children six years of age and over. Though no detailed data is available, it is estimated that approximately one-quarter of this spending is on children six years of age and over.

to determine child care assistance eligibility, child care resource and referral agencies, special child care initiatives, and the Child Care Program Office.

The federal government gives $9.3 million directly to tribal organizations in Alaska for child care services. Federal allocations to Alaska tribal organizations range from $24,000 to $1.7 million. Among the tribal organizations receiving over $1 million in funding include the Association of Village Council Presidents, Cook Inlet Tribal Council, Tanana Chiefs Council, and Central Council of Tlingit & Haida Indian Tribes of Alaska.

State and federal government funding for Head Start programs in Alaska totals $34 million for FY 2006. This includes $27.8 million in federal funds paid directly to grantees and $6.3 million in state funds.

State and Federal Funding for Child Care Services in Alaska



Survey Results

Data from the telephone survey of 725 Alaska households provides an indication of how much money Alaska households spend on child care services each year (detailed survey results are provided in Chapter III). Among the 725 households in the survey sample:

- 323 households reported children under six years of age
- These households reported 459 children under six years of age (1.4 per household)
- 58 percent of these children (266 children) were receiving child care services.

This survey data is consistent with demographic data available from the Census. In 2000, the Census recorded 38,758 families with children under 6 years of age and a total of 51,908 children under six residing in Alaska (counting only children living with their parents), or 1.34 children under six per household. Among children under six, 32,463 children, or 63 percent, were in households where all available parents were in the labor force.

Survey results indicate that households spent approximately $318 per month per child for child care. This average includes full-time and part-time care in all types of settings, including centers, others' homes, in-home, Head Start (for which there is generally no cost to parents) and others.

Applying the $318 per month average to all children under six in households where all parents are in the labor force indicates total Alaska household spending on child care of approximately $150 million annually. This is based on the estimate that in 2004, there were 39,400 children living in households where all available parents were in the labor force.

There are several reasons why this estimate of total spending on child care services could either understate or overstate actual spending on child care services. This estimate may slightly overstate spending in that it is possible for a parent or both parents to be in the labor force and not need paid child care services. For example, parents could work different times of day, each looking after children when not at work. Similarly, in single parent households, the parent could stay home with children during the school day then work during hours when older siblings are available to provide care. It is also true that not all people in the labor force are actually employed. Depending on the time year and location around the state, unemployment rates can vary from 5 percent to 15 percent (or higher in rural areas).

At the same time, this estimate of total household spending on child care does not include money spent on child care by parents on who are in school or otherwise engaged in training programs. Further, the total estimate does not capture child care expenditures where the mother or father are not in the labor force but nevertheless occasionally or regularly enroll their children in a child care service. Nationally, 31 percent of the 8.2 million preschoolers (children under five) of non-employed mothers were in at least one child care arrangement on a regular basis.[16]

Another source of uncertainty around the spending estimate is the seasonality of child care expenditures. The $318 per month estimate is for the month of January. For many households the need for child care spending changes in the summer, when children are out of school. Further, many local economies in Alaska are very seasonal, with seafood industry, tourism and other economic activity occurring primarily in the summer. For parents employed in these industries, the need for child care services can be greatest in the summer.

In any case, the $318 per month average expenditure, which includes full-time, part-time and unpaid care (such as Head Start), is reasonable given child care services rates around Alaska. The following table provides data on prevailing child care rates in Alaska.

[16] Source: "Who's Minding the Kids? Child Care Arrangements: Winter 2002," U.S Census Bureau, October 2005.

Current Child Care Rates in Alaska

Full Time	Infant	Toddler	Preschool Age
Licensed Center Care & Group Home	$480-$900	$475-$810	$375-$775
Licensed Home	$480-$970	$440-$921	$300-$850
Approved Care	$464-$600	$400-$500	$400-$500
Part Time	**Infant**	**Toddler**	**Preschool Age**
Licensed Center Care & Group Home	$250-$600	$237-$550	$205-$550
Licensed Home	$200-$720	$200-$700	$180-$700
Approved Care	$303-$400	$295-$361	$240-$293

Source: HSS Child Care Program Office.

The average rate for full time infant care was $655, for toddlers $572, and for preschoolers $572, according to data from the 2005 Market Rate Survey.

National data also generally supports the $318 per month estimate used in this study. For example, data published by the Congressional Research Service indicates median child care payments for families with children under five years of age with working mothers averaged $69 per week in 1999, or approximately $310 per month. Converting this to 2005 dollars suggests median monthly spending of $362.[17] This estimate (and the 1999 estimate) is total family payments and may include families with two children under five years of age. Nationally, there were 1.42 children under six years of age in households with any children under six.[18] The average number of children under five would be somewhat lower. Nevertheless, if we assume an average of 1.4, median per child spending would be approximately $260, slightly below the average calculated in this study for Alaska families.

Summary

In Alaska, revenue to child care providers for the direct care of children includes household spending on child care and government spending on child care assistance programs. Based on the preceding analysis, Alaska households may be spending $150 million annually on child care services for children under six years of age. Government spending on child care totals $88 million for FY 2006 (government spending that goes directly to providers is estimated at $77.5 million annually, also based on FY 2006 budgets).[19] Together, approximately $238 million is spent in Alaska on child care services for young children, including $228 million in total revenue to providers.

Summary of Employment, Income and Spending

The preceding analysis indicates that direct employment in Alaska's child care sector totaled 6,500 jobs in 2004 and $228 million in provider revenue. Using IMPLAN, an input/output economic impact model widely used in Alaska and elsewhere, it is possible to estimate other aspects of the child care sector's economic impact in Alaska, including indirect and induced effects. Indirect impacts occur when child care providers (businesses) spend money in support of their businesses, for example, on rent, food or other supplies related to providing child care services. This

[17] Inflation adjustment based on Consumer Price Index – All Urban Consumers, 1999 – 2005, U.S. City Average. From U.S. Department of Labor, Bureau of Labor Statistics.

[18] Census 2000 Summary File 3, Tables P15 and P16.

[19] This includes $32.6 million through the State of Alaska, $33 million for Head Start programs, and 90 percent of $9.3 million in funding to tribal organizations (assuming 10 percent is spent on program administration).

spending creates additional jobs and income in the support sector. Induced impacts occur when employees in the child care sector spend their payroll dollars on goods and services.

IMPLAN indicates the total direct, indirect and induced impact of the child care sector in Alaska is 7,400 jobs and $124 million in total annual labor income (employee payroll and income for proprietors).[20] This estimate of labor income includes $96 million in direct income and $28 million in indirect and induced income.

Contribution to Alaska's Labor Force and Household Income

Child care providers make it possible for 29,400 Alaskans to enter the labor force (one adult for each household with children under six years of age where all parents are in the labor force). The particular employment status and characteristics of these parents are unknown. However, it is possible to broadly approximate the income implications of child care services for these households.

According to DOLWD data, in 2003, Alaska's workforce included 309,000 Alaska residents (81.9 percent of the state's total labor force). These residents earned $8.92 billion in wages.[21] The 29,400 Alaskans (a 2004 estimate) that are in the workforce because child care services are available to them account for 9.5 percent of the Alaska resident workforce. If these working parents also account for 9.5 percent of all Alaska resident wages, their total annual wages would be just under $850 million (based on 2003 wage data). This indicates an average of $28,820 per family in additional Alaska annual income indirectly made possible by child care services, equal to approximately 40 percent of Alaska's mean family income in 2003.[22]

Other data suggests a similar household income impact related to adding a second wage earner. In 2004, median family income for families with one wage earner was $43,709. Median family income for families with two wage earners was $77,159, a difference of $33,450.[23]

This analysis of course assumes that the typical parent who is in the labor force because child care services are available to him or her earns the same wages as the average Alaska worker. This may or may not be true given the demographics of families with young children. Nevertheless, it is clear that the availability of child care has major implications on income for Alaska residents in general and on family household income in particular.

National Research on the Economic Benefits of Child Care

A host of studies have been done to track the long term economic impacts of high quality early childcare development on society. Though none of these studies focuses on Alaska, the implications for Alaska are relevant.

[20] IMPLAN analysis indicates that $225 million in provider revenue should directly account for 6,045 jobs, quite close to the employment measured in this study. This estimate does not include government program administration or resource referral jobs, which are theoretically captured in the measure of indirect impacts.

[21] Source: *Alaska Labor Force Working to Its Best – 2003*, Alaska Department of Labor and Workforce Development, January 2005.

[22] Based on 2003 mean family income $71,532, from 2003 American Community Survey, U.S. Census Bureau.

[23] U.S. Census Bureau, American Community Survey, 2004, Table B19121, Median Family Income in the Past 12 Months (In 2004 Inflation-Adjusted Dollars) by Number of earners in Family.

The results of these studies have shown conclusively that although investment is required to provide quality early care to infants, toddlers, and youths, the rate of return far exceeds that initial investment. The largest benefit by those provided with quality early care was increased earnings capacity projected from higher educational attainment along with higher taxes paid from better paying jobs. Other benefits are lower criminal justice system costs, reduced welfare costs, savings for crime victims, and savings on school remedial services budgets. The results of several studies are described below.

Return on investment

The Ypsilanti/Perry Study, which tracked 58 low-income children who participated in a two-year program starting at age three, shows a nearly 13:1 cost-benefits ratio ($12.90 per dollar spent) after tracking the participants up to age 40. This calculates to a benefit of $258,888 per participant.[24]

The Chicago Longitudinal Study, which tracked 1,400 low-income children who participated in a one and a half year early-childhood intervention programs, shows a 7:1 cost-benefits ratio, or $47,559 in benefits to society per participant.[25]

A recent California study by RAND Labor and Population examining the impact of instituting a one-year public preschool program in that state determined that California would receive a return of $1.95 to $4.21 for every dollar invested, with an average rate of return of $2.62. To understand the lower ratio it should be noted that the California program, unlike the Chicago and Ypsilanti programs, would not focus only on children from low-income families. The California study also focused on a shorter program span.[26]

Studies also note that expenditures on education that are focused on K-12 may be misplaced given that brains develop rapidly in the early years (0-4), then develop at a much slower pace from age 4 through 18. The implication is that the earlier the investment on early education, the higher the return on investment will be.

High school graduation rates

Studies indicate early education results in higher achievement, grade retention, and less need for special education placement, resulting in students more likely to graduate from high school. Long-term studies in five school systems (Louisville, Kentucky; Rome, Georgia; Chicago, Illinois; Ypsilanti, Michigan; and Baltimore, Maryland) show a significant positive effect on the high-school graduation rate. The Chicago Longitudinal Study showed a high-school completion rate of 29 percent higher than the comparison group that does not have the benefit of quality early care

[24] In the 1960s, the High/Scope Perry Preschool Project targeted children from low-income African-American families. Children were provided with a comprehensive preschool program including education and health and family support services. Three- and four-year-old children attended the preschool program five days a week, two and one half hours a day, for three quarters of the year. The high-quality preschools were staffed by teachers who were well-qualified, who served no more than eight children at a time, and who visited these families as part of the program to discuss their child's development. The two-year cost of the program was $14,400 per child and was funded by the state of Michigan. Source: Schweinhart, Lawrence J. "The High/Scope Perry Preschool Study Through Age 40: Summary, Conclusions, and Frequently Asked Questions." Ypsilanti, MI: High/Scope Press, November 2004. [25] Source: A. Reynolds et. al., "Age 21 Cost-Benefit Analysis of the Title I Chicago Child-Parent Center Program: Executive Summary," June 2001. The Chicago Longitudinal Study. Available at: *www.waisman.wisc.edu/cls/cbaexecsum.htm*

[26] Source: Karoly, Lynn A. & Bigelow, James H. "The economics of investing in universal preschool education in California." Rand Corporation, March 30th 2005. Available at: www.rand.org/pubs/monographs/2005/RAND_MG349.pdf

(50 percent compared to 39 percent). In the Ypsilanti study, individuals who participated in the early care project significantly outperformed those who had not academically, with 65 percent of early care participants finishing high school compared with 45 percent of the control group. This difference was even greater when it came to females, with 84 percent of early care females graduating versus 32 percent of others.

Teenage birth rates

In a study at the University of North Carolina at Chapel Hill, young adults in the intervention group were, on average, two years older (19 years) when their first child was born compared with those in the control group (17 years). This study, called the Abecedarian Project, followed 111 infants from low-income families through their childhood, with half given early intervention child care for five years.

In the Ypsilanti study, rates of teenage pregnancy were also dramatically lower.

College attendance

The Abecedarian study provided low-income infants with five years of high quality early education. Those with early care were significantly more likely still to be in school at age 21: 40 percent of the early care group compared with 20 percent of the control group. A significant difference was also found for the percent of young adults who ever attended a four-year college. About 35 percent of the young adults in the early care group had either graduated from or were at the time of the assessment attending a four-year college or university. In contrast, only about 14 percent in the control group had done so.

Cost of grade retention and special education

Sixteen studies of early childhood programs show a reduction in grade retention and special education rates. The studies were conducted in school systems in Chicago, Houston, Milwaukee, Harlem, Washington, DC, and Pittsburgh. The Chicago Longitudinal Study, one of the nation's largest and longest studies of public early-childhood education, showed a 40 percent drop in retention and in special education placement. Further, a study of the Pittsburgh Early Care Initiative (ECI) found that in school districts within ECI communities the average primary grade retention rate was 23 percent; for ECI children, the rate was less than 2 percent. In these same Pittsburgh communities, the average special education placement rate was 21 percent; for ECI children, the rate was less than 1 percent.

Crime

Long-term studies show that preschool programs significantly reduce the juvenile crime rate and had found that the risk of arrest for teens and young adults can be cut in half by enrollment in quality early care. Studies show that children without early care were 70 percent more likely to be arrested for violent crimes by the age of 18 than those with early care. The Ypsilanti Study shows significantly fewer lifetime arrests and significantly fewer arrests for violent crimes, property crimes, and drug crimes.

Welfare

The Ypsilanti study showed that fewer participants received welfare benefits (59 percent versus 80 percent for the control group). It shows that many more women participants were married (40 percent versus 8 percent) and that fewer women participants had children born out of wedlock (57 percent versus 83 percent).

Employment rate, earnings, and home ownership

Studies, including a 1997 report by the National Conference of State Legislatures, have concluded that early childhood education is critical to the productivity and earnings-power of the workforce and the nation's economic health. An analysis of the Abecedarian study found that children in high quality early care programs can expect to make roughly $143,000 more over their lifetimes than children not receiving these benefits, and that mothers of these same children can expect higher earnings – about $133,000 more over their lifetimes. The Ypsilanti Longitudinal Study found that at age 27, participants earned $2,000 more per year than the nonparticipating control group. By age 40, 60 percent of the participants earned more than $20,000 per year compared to just 40 percent of the non-participants.

In the Abecedarian study, young employment rates were higher (65 percent) for the treatment group than for the control group (50 percent). In the Ypsilanti project, significantly more members of the program group were employed at age 40 (76 percent versus 62 percent) than the non-program group.

Many more members of the Ypsilanti project early care participants owned their own homes. At age 27, 27 percent of participants owned their own home versus 5 percent of non-participants, and at age 40, 37 percent of participants owned their own home versus 28 percent of non-participants. In the Chicago Longitudinal Study, the per capita tax revenue from the improved earning power of preschool attendees was projected to be over $20,000.

In February 2006, the McDowell Group conducted a telephone survey of 725 randomly selected households from throughout Alaska. The sample included 462 households from urban Alaska, defined as all communities with more than 8,000 residents. The sample also included 111 surveys from households in communities with between 2,000 and 8,000 residents (labeled "Rural I") and 151 surveys from households in communities with fewer than 2,000 residents (labeled "Rural II"). In conducting statewide analysis of survey results, data from these areas of the state were weighted to reflect their actual proportion of the state's population.

The survey asked all households a series of questions about state funding support for early learning and child care services in Alaska. Households with children under six years of age were asked about their use of child care services. Households with children under six years of age that were receiving child care services were asked a series of questions about the nature and cost of that child care.

For the total survey sample, the maximum margin of error is ±3.8 percent at the 95 percent confidence level. The margin of error is higher for survey subsamples, as illustrated in the following table.

***Maximum* Margin of Error by Survey Sample Size at the 95% Confidence Level**

Sample Size ("n")	Maximum Margin of Error
700	±3.8%
500	±4.5%
400	±5.0%
300	±5.8%
200	±7.1%
100	±10%

Survey results are provided below. Sample sizes for each subgroup are reported as the "n". For example, for the Rural I subsample described above, the n is equal to 111. A copy of the survey instrument is provided in the appendix to this report.

Perceived Importance of State Funding for Early Education and Child Care Services in Alaska

Nearly nine out of ten Alaska residents (87 percent) think it is important or very important for state government to provide financial support for early education and child care. Among residents with children under six years of age, 94 percent think state support is important or very important. Even among residents without young children, 86 percent think state financial support is important or very important. Further, urban and rural residents alike feel it is important for state government to provide funding for early education and child care.

How important do you think it is for State government to provide financial support for early learning and childcare for children under 6 years old?

	Total (n= 725)	With children <6 yrs (n=323)	Without children <6 yrs (n=402)	Urban (n=464)	Rural I (n=111)	Rural II (n=151)
Very important	56%	72%	53%	55%	69%	56%
Important	31	22	33	31	28	37
Not important	8	3	9	9	4	4
Not at all important	4	3	4	5	0	3
Don't Know/Refused	1		1	1	0	0

Residents in communities with populations of between 2,000 and 8,000 residents (Rural I) were more likely to consider government funding for early education and child care very important: 69 percent compared to the statewide average of 56 percent.

A variety of other population subgroups expressed above average support for state funding of early education and child care. They include:

- Alaska residents aged 45 to 54 (66 percent stating "very important").
- Female residents (64 percent stating "very important," compared to 46 percent for males).
- Residents with annual household income under $25,000 and residents with income greater than $75,000 (both groups were at 63 percent "very important")

Other subgroups expressed below average support for state funding of early education and child care, including:

- Residents less than 25 years of age (47 percent stating "very important").
- Residents over 65 (41 percent stating "very important").

Funding Priority

Alaskans also give early learning a high priority for state funding. Two-thirds (66 percent) of Alaskans feel that the state should give early learning and child care high funding priority. Among the categories of spending presented to survey respondents, only K-12 education was rated as a high priority more often.

I'm going to read you a list of state-funded programs. Please tell me what level of funding priority you think the state should give to each program: high, medium, or low.

	All Households (n=725)			
Funding Priority	High	Medium	Low	Don't know
K-12 education	88%	10%	1%	1%
Early learning and childcare	66	23	10	1
University education	57	35	6	2
New roads/highways	31	52	16	1
Support local government	31	51	17	1

Subgroups that placed the highest priority on early learning and child care include:

- Households with children under six (76 percent rating high priority)
- Female residents (72 percent)
- Residents aged 35 to 44 years (77 percent)
- Low income residents (<$25,000 annual income, 76 percent)
- High income residents (>$100,000 annual income, 73 percent).

Subgroups that placed lower than average priority on funding for early education and child care included:

- Residents aged 65 or over (42 percent)

Relative Importance

A third question regarding Alaskan's perception of the importance of funding for early and child care focused on relative importance. More than three-quarters of Alaska residents feel that early earning and child care is more important to fund than support for local government or construction of new roads and highways. Almost two-thirds (63 percent) feel that funding for early leaning and child care is more important than funding for university education. Among the various programs, only K-12 education is viewed as more important than early learning and child care (only 25 percent of households thought it more important to fund early learning and child care than K-12 education).

Which do you think is more important to fund, early learning and child care or...

	Percent stating early learning is more important to fund
Support for local government	78%
Construction of new roads and highways	76
University education	63
K-12 education	25

This series of questions regarding perceived importance of State funding for early education and child care services in Alaska indicates that Alaskans place a high priority on funding for education in Alaska, including early education and child care. Additional survey research would be warranted to further prioritize early education spending relative to a broader range of state-funding programs (including health and social services, public safety, etc.), identify specific early education and child care programs that residents feel are most important to fund, and identify preferred funding sources for early education and child care programs.

Child Care Services Used by Alaskan Families

Type of Care

The survey sample included 323 households with children under 6 years of age. These households included a total of 459 children under 6. About two-thirds (65 percent) of these children were less than 4 years of age, and one-third (35 percent) were 4 or 5 years old.

Approximately 58 percent of children in the surveyed households received child care services of some type during the month of January, 2006.[27] This includes 54 percent of the children under 4 years of age and 62 percent of children aged 4 or 5.

Among the 42 percent of children who did not receive child care services in January, about 10 percent were not in a child care setting because such services were either too expensive, not available, of poor quality, or some combination of these factors.

Among those children receiving child care services, 49 percent were in a preschool or child care center. Just under one-third (31 percent) were being cared for at someone else's home. Just over one-quarter (27 percent) were receiving child care services in their own home. Eight percent were in a Head Start program.

Type of Child Care Services Used by Alaska Households*

Types of Child Care	Total (n= 268)	Urban (n=117)	Rural I (n=32)	Rural II (n=40)
Preschool or child care center	49%	43%	27%	36%
Care at someone else's home	31	42	52	22
Care in your home	27	34	26	21
Head start	8	0	8	32
Before or after school care	8	7	11	2
Other	1	0	0	3
Don't know	0	0	0	0

*Percentages do not add to 100% because households may have children in more than one child care setting. Sample sizes ("N") for Total are number of children under six years of age. Sample sizes for subgroups are number of households.

Survey results show some regional variation in types of child care used. First, households in communities with populations of between 2,000 and 8,000 residents (Rural I) appear to be less likely to utilize preschool or child care centers. Also, households in communities of under 2,000 residents are much more dependent on Head Start programs. Caution is urged, however, in drawing any firm conclusions from this data due to small sample sizes.

Among children in preschool or a child care center, an average of 26 hours per week was spent in a preschool or child care facility. The average was 25 hours for care at someone else's home, 20 hours for in-home care, 18 hours in a Head Start program, and 11 hours in a before or after school care program.

Average Hours per Week in Care By Type of Care

Type of care	Average Hrs.
Preschool or childcare center (n=117)	26
Care at someone else's home (n=93)	25
Care in your home (n=69)	20
Head start (n=25)	18
Before or after school care (n=18)	11

[27] The survey asked households about their child care usage during the month of January, 2006, the month preceding the date of the survey.

Finding Acceptable Child Care

About as many Alaskans found it difficult to find acceptable child care as found it easy. Forty-nine (49) percent of households with children under six in a child care situation found it either easy or very easy to find acceptable child care. Forty-five (45) percent found it difficult or very difficult.

In general, how easy or difficult is it for you to find acceptable childcare?

	Total (n= 268)
Very easy	19%
Easy	30
Difficult	29
Very difficult	16
Don't know	2
Refused	4

Urban households apparently found it somewhat easier to find acceptable child care than rural households. For example, 15 percent of urban households found it very easy, while 6 percent of Rural I households and 7 percent of Rural II found it very easy.[28]

Among households with children under six years of age, 36 percent reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment or had in some way restricted the number of hours that they could work.

In the last 12 months, has the quality, cost or availability of child care prevented anyone in your household from seeking employment or restricted the number of hours that they could work?

	Total (n=324)	Urban (n=196)	Rural I (n= 49)	Rural II (n=79)
Yes	36%	37%	37%	26%
No	62	62	63	62
Don't know/Refused	2	1	-	2

Among households in Alaska's smallest communities (the "Rural II" areas, or communities under 2,000 residents), 26 percent reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment or had in some way restricted the number of hours that they could work. This difference (to the extent that it is statistically significant) between rural and urban in this regard is probably not due to better child care service in rural areas, but rather to the fact that rural areas have fewer employment opportunities available.

Among those households where cost, quality or availability of child care services have been a constraint, cost was a major factor for 78 percent of households. Availability had a major impact on 56 percent of households and quality on 48 percent.

[28] Data in the tables is for children under six in a child care situation, while regional data is for households with children under six, thus the household average is slightly less than the average for all children under six.

4893

Factors Affecting Ability to Find Acceptable Child Care

(n=116)	Major Impact	Minor Impact	No Impact	Does not apply
Cost	78%	12%	7%	3%
Availability	56	28	11	2
Quality	48	35	12	3

When asked which factor had the greatest impact on their ability to find acceptable child care, cost was most often cited. Half (50 percent) indicated that cost had the greatest impact on their ability to find acceptable child care, while 26 percent cited quality and 23 percent cited availability.

Cost is apparently more of an issue in urban Alaska while availability is more of an issue in rural Alaska. Just over half of urban households (54 percent) indicated that cost had the greatest impact, compared to 29 percent in Rural I areas and 21 percent in Rural II areas. Conversely, within Rural II areas, just over half of households reported that availability had the greatest impact, compared to 43 percent of Rural I and only 19 percent of urban areas. (Caution is urged in interpreting this data due to small subsample sizes.)

Which of these three factors, quality, cost, or availability, has the greatest impact on your ability to find acceptable child care?

	Total (n=116)	Urban (n=75)	Rural I (n= 19)	Rural II (n=22)
Cost	50%	54%	29%	21%
Quality	26	26	28	26
Availability	23	19	43	53
Don't know/Refused	1	1	-	-

Spending on Child Care

Alaska households with children under six years of age in child care services spent an average of $318 on child care in January. This is a weighted average based on the number of children in each type of child care setting multiplied by the average monthly expenditure for that type of service. Average expenditures for each type of service are shown in the following table. These averages include children receiving care ranging from just a few hours per week to full-time.

Average Monthly Spending on Child Care by Type of Care and Age of Child

	Total	0-3 years	4-5 years
Head start (n=25)	$15	$48	$-
Preschool or childcare center (n=117)	334	406	258
Before or after school care (n=18)	239	-	239
Care at someone else's home (n=93)	293	318	233
Care in your home (n=69)	161	212	87
Other (n=3)	17	10	55

Among survey respondents, the cost of full-time care (31 or more hours per week) in a child care center averaged $517 per month. The cost of full-time care in someone else's home averaged $429 per month.

Financial Assistance

About one in seven households with children in child care services received some form of child care assistance during the month of January. As would be expected, survey data also indicates that financial assistance is concentrated in lower-income households.

Financial Assistance for Child Care Services By Household Income Level*

Financial Assistance?	Total (n= 268)	<$25,000 (n=34)	$25-$35K (n=19)	$35-$50K (n=24)	$50-$75K (n=42)	$65-$100K (n=37)
Yes	14%	29%	38%	31%	0%	0%
No	78	67	62	47	97	88
Don't know/Ref.	8	5	0	22	3	12

*Sample sizes ("N") for Total are number of children under six years of age. Sample sizes for subgroups are number of households.

Among the small number of households in the survey sample receiving financial assistance for child care services, the average assistance for the month of January was $539.

Additional Survey Results: Importance of Child Care Funding

How important do you think it is for State government to provide financial support for early learning and childcare for children under 6 years old?

	Total (n= 725)	Male (n=299)	Female (n=425)	Married (n=446)	Not Married (n=265)

Investment in *Parents as Teachers*: Results for Children, Families and Communities

Benefits Parents as Teachers is an evidence-based home visiting program with demonstrated positive outcomes for children, families and communities.

What Experts Say: An Independent Cost-Benefit Analysis

Very early investment in children produces significant long-term impacts for individuals and communities.[1] A 2004 study conducted by the Washington State Institute for Public Policy titled "Benefits and Costs of Prevention and Early Intervention Programs for Youth[2] found that:

- The benefit of Parents as Teachers is estimated at $4,300 per child from higher test scores alone.
- Parents as Teachers realized an $800 per child return on investment (ROI) for communities ($4,300 in benefits of the program minus cost over 2.5 years).
- For children up to age three, Parents as Teachers had the largest benefit per dollar of cost ($1.23) of all reviewed pre-kindergarten education programs.

Investment in Parents as Teachers has Huge Potential Impact for Children

There is a 'time-value of early education' with early investment producing the most significant results.

- Every year 4 million children are born in the United States; if each of these children participated in Parents as Teachers, **more than 17 billion dollars in benefits could be realized.** [3,4]
- With no specified parental age or income eligibility criteria, all parents of young children can be served, thereby increasing the program's impact exponentially.

How Parents as Teachers Makes the Difference:

↑Parent knowledge of child development, improve parenting practices

- Most brain development occurs in the first few years of a child's life and parents are the most important influence for children during this critical period. Children's early learning and brain development prepare them for school and life success; insufficient supports for development diminish children's potential.

↑Early detection of developmental delays and health issues

- Allows for early intervention which is more cost effective and successful for children, reducing the need for costly remedial and special services in schools.

↓Child abuse and neglect

- Safe, healthy and cared for children are able to put all their energy into learning and growing in order to be ready to succeed in school. Children who have been abused and neglected have higher rates of juvenile delinquency, teen pregnancy, school failure, alcohol use, and psychiatric illness.[5]

↑School readiness and school success

- Children who are prepared for kindergarten continue to do well in the early grades of elementary school and then are more likely to graduate from high school and to go on to be successful in life.[6]

Home Visiting is Integral to High-quality Preschool Programs

Research shows that children who participate in high-quality preschools receive immediate benefits from improved kindergarten readiness and long-term benefits from improved achievement, better employment and reduced delinquency and criminal behavior; there is a strong return on investment (ROI). [7]

- Home-visiting was included in all the preschool programs with demonstrated results and the benefits from home visiting cannot be separated from the rest of the program - Perry/High-Scope (1960s), Abecedarian (1970s), Chicago Parent-Child Centers (1980s)
- Parents as Teachers has been chosen by many preschool programs as the home visiting curriculum to support their other early childhood services.

Parents as Teachers Addresses Delays Early

Parents as Teachers detects delays and refers children for early intervention which results in long-term savings: [8,9]

Annual special education costs per student = **$8,080** [10]
Annual cost for non-special education student = **$4,394**

Parents as Teachers screens children for delays and provides referrals to appropriate resources so children can receive early intervention. In the 2005-2006 program year:

- Thousands of delays were identified:[11]
  - 3,686 social emotional problems
  - 5,129 vision problems
  - 5,838 physical delays and health problems
  - 6,640 hearing problems
  - 30,134 developmental delays
  - 18,779 children with delays accessed specialized follow-up services
- More than 100,000 families were connected to a community resource.

Parents as Teachers: Focused on Parents and Children from All Kinds of Families

Parents as Teachers has been shown to be effective for high risk families as well as those without multiple risk factors.

- Recent studies have demonstrated a PAT-impact for children of all socio-economic groups.[12]
- Parents as Teachers shows promise in narrowing the achievement gap between poor children and their more affluent peers.
- Participation in Parents as Teachers increases a child's chance of attending preschool.[13]
- Parents who participated in Parents as Teachers were more involved in their child's school, which increases the chances of long-term academic success.[14]

By promoting good brain development and positive parenting, Parents as Teachers sets children on successful educational paths, which ultimately decreases public spending and promotes stronger communities.

Dear Mr. Seaton,

Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are the best qualified to determine what is best for their individual children.

Mr. Seaton, though this is masked in 'voluntary participation' right now, it is not necessary and wasteful spending. Anyone I know with kids 0-5 actively seeks out opportunities and does not need this service.

Thank you for your time,

Respectfully,

Erica Johnson

Subject: Parent of 8 --house bill 69

Hello,
I'm a parent of eight. I have 2 children under 5 right now. I love this state and having my family here is extremely important to me. I hope all my kids raise families in this state. I figure I have nearly 150 family members in this state currently plus extended family from family. Why would I want the state to create more government? Why would I want to fund more government? When has the state been better for my kids than me and my husband or additional family? Would you want someone coming into your home and watching you? Just because parenting does not come with a complete set of manuals -- does not mean that we want to create programs that could very easily become required participation intrusions. No one says that is what will happen but it will... given time.

Please, for the benefit of current families and families to come, do not vote for the Alaska Parents as Teachers Act. It is a terrible way to spend resources and it is not helping parents and children grow into families. Government really does need to stay out of the home.
Remember that working on these committees and in our government does not mean that it is your responsibility to grow programs - we voted you there for many other reasons... Cutting things is fine with me (programs and taxes/fees).

"Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are best qualified to determine what is best for their individual children."

Thank you for your service. Our family appreciates your willingness to serve this great state. Your self sacrifice is a blessing to me. It allows me the privilege to work with my family and do community service in my local area. I appreciate you doing your part and really -- you are doing even more. THank you for all the time and energy you give toward learning, doing, and helping us all. We put a lot of trust in your discernment. I know discernment is a big, very giant part of what a legislator needs to have and I hope you each have a been blessed with an over flowing amount of it. Protect our families and this state.

Thank you again,
Hiedi Kroeker
Chugiak, AK

PS -- and to any staff that has to deal with the emails or this topic, thank you for your hard work as well. You are the glue that holds our state all together. You are awesome!

Subject: Concerning HB69
Importance: High

Dear Mr. Seaton,

Thank you for your willingness to serve our state. I am writing you in reference and concern to Bill HB69. I have grown up in a good family and a fine education neither of which has been controlled by the government. I will never excuse abuse of a child and I know there is measures needed in such cases. I have also seen families who have been torn apart by what the government thought were good choices. I urge you to please vote NO on this bill because even though the government may mean well, they are continuing to take away the rights of the parent to raise their children. Our America was built on the freedoms that made it great. Please stand to fight for that freedom. Thank you for your time!

Sincerely,
Kim Bodiker

Subject: Please Reject HB 69

Dear State Representatives:

Our comments below relate to **House Bill 69, the Alaska Parents as Teachers Act.**

Please stop progress of this intrusive and financially onerous bill.

First:

Please note the title of the bill: "Alaska Parents as Teachers Act" The bill's title sounds great, but after a careful reading of the bill's contents, is clearly misleading. Parents **are,** as the bill states, their children's first teacher. We would like to add for clarity, however, the important accompanying parental role of principal, and think it reasonable that during the first five years of a child's life, parents should, except in rare cases, clearly fill both of these roles.

It is important to note the bill's purpose is not to propose legislation declaring the rights of parents as primary governor of their young children's education. Ironically, it instates a bureaucrat to oversee the parents, effectively stripping them of their reasonable and traditional role of principal overseer and giving it to one or several state government agencies.

The bill should instead be titled: Alaska Parents are No Longer Principals Act, because, if approved by law and taken advantage of by parents, the state would assume the role of the children's principal, leaving the remaining duty of teacher to the parent.

Seeing it this way, the bill's title is true as the parent indeed would be the teacher, but absent from the title is the implication that the government would replace the parental role as principal.

The home visiting program establishes voluntary, regularly scheduled state involvement. At intervals of **no less than** once per month, a state representative would visit the home of the child. This is unacceptable.

Due to the progressively invasive and expanding nature of government, the program is likely to turn into a mandatory program.

This bill opens the door to eradicating or at least obscuring already codified, state-recognized rights of parents, **as principals**, to decide the educational path their children take and could transfer education rights away from the parents to the state. This must never happen in our free society.

Second:

To approve this financially onerous bill is irresponsible.

How much will this program cost? How many new hires? Training costs? Transportation costs? Per diem? Record keeping? Judiciary concerns?

Can you justify the cost even if you like the provisions of the bill?

Third:

Implementation of this bill will not likely improve the horrible performance and graduation record the state public education system has earned during recent evaluations. Since the state of Alaska has not provided, as a whole, quality education over twelve years of a student's life, it is unlikely the addition of five or more years under the same system will salvage the woeful situation.

Again, please vote against HB 69.

Thank you for your time and consideration of our thoughts.

Sincerely,

Doug and Wendy McKinnis

To: Rep. Paul Seaton
Subject: Vote against House Bill 69

Representative Seaton:

Thank you for your dedicated service to the State of Alaska. I am writing to respectfully request that you please vote against House Bill 69, Alaska Parents as Teachers Act. This Bill proposes to remove a parent's right to be ultimately responsible for the upbringing of their children. Parents know their individual children infinitely better than any government official could (particularly one who would only see a child once a month as stated in the HB69 guidelines.) Parents are the most qualified to discern what is best for their children.

Furthermore, in these tough economic times, why create another expensive program for Alaska State Government to pay for when many of these services are currently available? It is already very easy for parents who want to get help to find answers to their questions. Additionally, there is a "safety network" of professionals already in place that is responsible to report signs of abuse.

Respectfully submitted,

Catherine Gilliland

To: Rep. Paul Seaton; Rep. Cathy Munoz; Rep. Bryce Edgmon; Rep. Wes Keller
Subject: House Bill 69

Dear Representatives:

I'm writing to express my concerns over House Bill 69, which I understand you will be discussing tomorrow. I've read the bill, as well as Chris Tuck's sponsor statement, and while I recognize the good intentions, I'm concerned that this is an attempt at a quick fix to a vast problem which will create an invasive and meddling encroachment into family privacy instead of a fruitful program for parents and children. To be honest, this looks less like an early childhood education initiative than a way for CPS to cast a wider net.

It is concerning to me that, while this program is described as "voluntary", the way in which parents will be recruited isn't clearly outlined, a target demographic isn't specified, and the reasons for discontinuing the monthly visits does not include parental disinterest as an option. This makes me wonder how voluntary this program will really be, and if the goal is in fact to make it far-reaching and mandatory. I also imagine, given the program's vague descriptions and ambitious goals, that the reality will be overburdened caseworkers presenting parents with a basic and generic template for early childhood health and home preschool, utilizing the same sort of standards and methods that are mostly failing students in the K-12 programs instead of showing parents how to utilize their own life experience and easily accessible community resources (such as schools, parks, and libraries).

I've taken a quick look at the National "Parents as Teachers" program, as well as the Perry Preschool Project, and I understand the lure of what look like successful case studies in helping the most at-risk children succeed in school. But I hope you'll also consider studies that paint a different picture, like the Early Childhood Longitudinal Study conducted by the U.S. Department of Education in the late 1990's. I know of this study from a summary in the book *Freakonomics* by Steven D. Levitt and Stephen J. Dubner, in which they present a list of surprising findings. Briefly, this study found that there are eight factors in early childhood that actually have an impact, positive or negative, on later test scores:

-- highly educated parents

-- parents with high socioeconomic status

-- mother aged thirty or older at time of child's birth

-- low birthweight

-- parents speak English at home

-- child is adopted

-- parents are involved with the PTA

-- many books are present in the home.

On the other hand, there are eight other factors that have no correlation with with test scores:

-- family is intact

-- parents recently moved to a better neighborhood

-- mother stayed home between birth and kindergarten

-- Headstart attendance

-- regular museum attendance

-- regular spankings
-- television viewing frequency

-- child is read to daily or almost daily.

Levitt and Dubner provide analysis on these factors in greater detail, coming to the following conclusion: "Here is the conundrum: by the time most people pick up a parenting book, it is too late. Most of the things that matter were decided long ago – who you are, whom you married, what kind of life you lead... It isn't so much a matter of what you *do* as a parent; it's who you are."

Please also consider the following sources for ideas on why families should choose their own early childhood education solutions, and why less is often more:

The Case Against Universal Preschool:

Subject: Please vote yes on HB 69

Good morning,
I have worked in the Parents as Teachers program for the past 14 years. I was fortunate enough to be the first parent educator hired when Hoonah implemented PAT in 1995, the first program in Alaska. The program has now expanded to 46 communities across Alaska.....because it works.

PAT is a win-win program, parents are empowered to take control of their children's learning from birth. Parent educators offer families personalized visits, which may be conducted at the location of the parents' choosing. Usually it is in the home, but visits also occur at Head Start, child care centers/homes, McDonald's, or church basements. It's where the families choose to visit.The advantage of the homes is that parent educators can coach the parent with the parent-child activity using the materials normally found in the child's environment.

PAT is a "strengths model" which stresses that parents are the experts on their children, and that the families will set their own goals for their children and family. Empowerment results when the parent educator is the resource who offers research-based strategies and options. It is the parents who choose which options are appropriate for their family and circumstances.

I became a National Trainer for the Parents as Teachers National Center in 1995. I periodically train new parent educators in Alaska and the lower 48, although Alaska is my priority. The training is intense, and parent educators must pass daily assessments, a role-play of a personal visit with a family, and be evaluated as competent to deliver the PAT services to families.
Not every participant in the trainings are certified, and the standards are strict

I plan to testify at the House Education Committee hearing on Wed morning. I anticipate there may be more questions that just will not be covered within the time period. I will be very glad to provide information to you or your staff at any point. Please don't hesitate to call me

School readiness is so vital to children. Independent research shows that children who participate in Parents as Teachers enter Kindergarten ready to learn, and they have great success throughout their elementary years. I would be very happy to get summaries of the research to you as you desire.

Please vote yes on HB 69. The Parents as Teachers' vision is that "All children will learn, grow, and develop to their full potential." All Alaskan communities can acheive this as a reality through Parents as Teachers.

Thank you for your time.

Subject: stop hb69 (big brother)

Representatives,

Taxpayers money should not be spent on Case workers checking up on parents in their own homes. I realize that this bill states that this is volunteer only, but this bill could be the first step of Government mandate in future legislative sessions. – Violating parental rights. There is not sufficient evidence that a program like this is even needed! It may be true, that children who get an early start at home happen to do better in school, but its not because they had 'an early start' its because they have parents that spend time with them. The real studies show that children who do poorly in school aren't dumb, or deprived of preschool, they have a dysfunctional home life. Early childhood education is the sole responsibility of the parents, however they see fit. I believe the whole premise behind the "Early Childhood Development movement" is parents wanting their children to be educated in daycare, so they both can go to work, so they can have their big house and toys and assume they won't feel guilty about leaving them if they are being well educated.

If I was to spend lots of loving time with my children, and not teach them a single shape/color/letter/number before they turn 6, I know they would still would do exceedingly well in school, because they will be old enough to process the information –Without government control!

Please don't waste your precious legislative time on this, work on something that is actually beneficial, a great idea for an educational program would be "Why Mothers should stay at home with their children." Couple that with an extensive abstinence program for the unmarried (that doesn't involve handing out condoms to kids) and that would be a great way to spend tax payers money, (and save money in the long run)

Representative Paul Seaton,

Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are best qualified to determine what is best for their individual children. I feel that the resources are already available for parents to access a free evaluation, if they are concerned or would like additional support information regarding parenting or their child's developmental needs. These services are available for children birth up to three years of age through local infant learning programs and through the school district for children three to five years of age. I work in the field of early intervention as a speech pathologist and if additional money were spent on advertising to help parents know that these resources already exist, then there would not be a need to mandate or offer anymore than what is already available.

Thank you for considering my thoughts.

Sincerely,

Sheri Massong

Representative Seaton,

Please consider opposing HB 69, the Parents as Teach Act.

I feel this Act would impose an invasion of privacy toward citizens in the state of Alaska.

The formative years (ages 0 through 5) are crucial in the upbringing of children. Submitting them to home
visits, mandatory checks, health screenings would create an insecure environment for the parents as well as the child. With government officials constantly entering homes, an attitude of dependency on the government will result allowing the inability to perform as responsible adults in the upbringing of children.

This type of intrusion is considered, in my opinion, as a move toward socialism.

Thank you

Dear Education Committee:

We are strongly opposed to House Bill 69, called the "Alaska Parents as Teachers Act". We implore you to not allow this bill to pass. As we have seen from our legislative officials in the past, they often set up "voluntary programs" that turn into mandates within a just few years. The original bills pass on the ignorance of your constitutes to actually to believe these bills to be harmless or well meaning and that they won't ever be forced upon people but are rather to work in conjuction with their freedoms, like the seatbelt law. However, too often these 'first bills' are then twisted or extrapolated into mandates that constrict or eliminate our constitutional rights.

Do not pass this bill, for while the authors may have had good intentions, the implications as a forthcoming manadate are clearly seen and intrude upon the homeschooling freedoms our State has to offer.

Subject: House Bill 69-Alaska Parents as Teachers Act

Importance: High

Dear House Education Committee,

Please vote *AGAINST House Bill 69* on behalf of all Alaskan Parents and Children.

I believe that this Act is a direct interference in the rights/responsibility of parents to be the "teacher" of their child as this Bill seemingly infers.

There are already other avenues provided by the state for parents that are unwed/young/ or without a support group to receive assistance in raising their children so they have every opportunity to achieve their greatest potential in safety, health and academics!

It appears to me that this bill would like to use Alaskans' money to 'assess' early readiness for school, determine if the medical needs of the child are being met and reduce neglect and maltreatment of children with additional guidelines, checklists, and monitoring. All of these needs are met in other departments in this state.

I ask you not to further negate the role of the parents (by invoking government agendas and goals into a family unit- this Bill did not state a time when the voluntary visits could be ended by the family) by allowing this legislation to be passed.

Children are uniquely like their parents. Parents are uniquely qualified to aid them in their whole development as no government agency or official could ever hope to be.

Thank you for your time and commitment to represent those your serve,

Robin Angaiak

Representative Seaton,

I wanted to write to you and encourage you to oppose House Bill 69.
This bill is the last thing Alaska home school families need. In light of our current economic situation, we don't need another government program to drain funding from our already sagging educational system.
Many military families choose to home school our children for the flexibility and stability it provides. Instead of having a child change schools every two or three years, they get the benefit of an enthusiastic, caring teacher as well as a very low student-to-teacher ratio. This bill proposes monthly monitoring of young children, many who are not even of school age, by a state official, in addition to progress updates already in place with other state-run programs.

Bottom line, oppose this effort to put in place another wasteful system on top of other systems already working. More systems, more money and more programs is NOT the path to successfully educating our youth.
Thank you for your time and service.

Subject: HB 69

We are writing to you to inform you that we do not support HB 69 concerning a proposed monthly visit into the homes w/ children 5 and under. We know that it is currently being introduced as volunteer program; however, we see it as a potential stepping stone to a mandated program. We do realize that there is abuse in some homes and those children need to be protected. Do you think that those families are going to be the families who "volunteer" to have government step into their homes? For those who would like governmental support, let them request help from the social services that are already in place. Rather than instituting more programs, perhaps more funding and support from the government should be directed toward our current social service agencies for such requests.
We do not support governmental intrusion and control when it crosses over the threshold of our home. For the majority, parents and families know best how to care for, teach and instill social behaviors into our children.
Please do not vote for HB 69.

Thank you,

Greg and Julie Wohrle

Subject: HB 69

Dear Representative Paul Seaton,
As a member of the House Committee, you will soon be asked to vote for or against HB 69 which is a voluntary request for parental meetings, child screenings and annual development analysis of the children involved in and taught by their parents. These are the normal concerns of any parent and especially a home schooling parent for their child/student. If a parent determines their child is developmentally lagging the parent will take necessary action. To assume otherwise is to completely misunderstand the intent of parents who choose to home school.It requires serious sacrifice, the ablitlily to live on one income, amazing organizational skills and determination to persevere in times of challenge, illness or stress. Anyone who is willing to dedicate themselves to home school their child (ren) has a desire to see their child succeed and would take every step necessary to promote the normal development and health of their child. It is an insult to home school parents to have the state assume otherwise. I realize that this is a voluntary program at this time but history shows that what begins as voluntary often leads into mandatory. The Alaska Constitution states that parents may teach their children and let us not infringe on that right by instituting actions on behalf of the state that will lead to a step by step reduction in this parental right. The overloaded public classrooms should be more of a concern than the individualized attention of the parent for their child's education.Thank you very much for your attention to this matter.

Dear Sirs and Madam,

I am writing to you in regards to House Bill 69, the Alaska Parents as Teachers Act. I believe that this bill would interfere with the right of parents to direct the upbringing of their children. I would encourage you to vote against the passage of this bill.

It is the parents and not state officials that are best qualified to determine what is best for their individual children. As a parent of six children, two of which are special needs, I knew when there was a problem long before any professional. I have tailored the raising of my children, all of them, to their own uniquie talents and ablilities. There is no way that a "specialist" would know more about my childrens unique personalities than their father or I. We have raised each child with the same love and care, but have also worked with each child to develope that child's unique needs. There is no "specialist" that can do that any better. They do not live with other people's children on a 24/7 basis. They may have a basic understanding of child behavior and development, but that does not mean that they know what is best for an individual child. I have been involved with each of my children from before they were born. I have received advice on raising of my children from parents, friends and even strangers, but in the end it all comes down to what I know of each of my children and how any advice received would best work for that child or not even work at all. There is no one that is better qualified in the raising of the six children that God has blessed my husband and I with.

Again,I would encourage you to vote against the passage of House Bill 69. In the absence of any abuse or neglect, state officials shoould not interfere with the upbringing of children by thier parents.

Thank you for your time and attention.

Sincerely,
Linda Hill

Subject: House Bill 69

Good Afternoon,

I am writing to oppose House Bill 69, and ask that you do the same.
It's grossly intrusive and unnecessary. It leaves the determination to the state of Alaska whether children are being educated properly from infancy. It infringes upon parental rights to educate their children as they see fit. While it is only voluntary initially, I don't trust that some misguided legislator down the pike would make it a hard requirement for all families.

I believe that parents, not state bureaucrats, are best qualified to determine what is best for their individual children. In the absence of evidence of abuse or neglect, state officials should not interfere with the upbringing of children by their parents. While this bill may have been crafted with good intention, it is short sighted and the unintended consequences may have lasting, ultimately damaging ripple effects.

Frankly put, parents who are interested in teaching their child the basics at home to prepare them for school will take the initiative to teach them. They don't need government representatives showing up unannounced to gauge their progress or requiring them to show up at group meetings. There are more early education helps available, many for free, than at any other time in recent memory. Parents for whom this is important will do due diligence. No amount of legislation will modify behavior of parents for whom education is not a priority.

his plan is out of line not only for what it explicitly entails, but also for the otential abuses that can arise as a result of its passage.

I appreciate your time.

Lisa Corliss

Dear Representative Seaton,
Please, at tomorrow's meeting of the House Education Committee, give opposition to House Bill 69, the Alaska Parents as Teachers Act. Parents are the best ones to determine their childs well being, and not the State. I know this is a "voluntary" at this point, part of this bill, but, I know that will just 'open the doors' for mandatory intervention and State powers, before too long. Please, vote **against** this intrusion into families lives. Though I have no children in this age group, I have grandchildren who will fall into this, should it ever become mandatory.
Thank you,
Sincerelly,

Dear Representatives:

Re: HB 69, the so-called "Nanny Bill"

Outside of the obvious need for intervention in cases of child abuse, I view even the slightest suggestion of this government interference in the home life of Alaskans as an affront to the intelligence and a denigrating of the personal capabilities of her citizens . Do you, our representatives, those we have sent to Juneau to work for us, feel so superior and have so little regard for the quality of your constituents? Do you really think any government employee is superior in even one aspect of parenting to a child's parents? Do you actually think that we parents are so incompetent as to need government oversight to successfully raise our children? If you can't answer a resounding "Yes!" to any of those questions, then why are you proposing such legislation??

George Washington described government as "Brute Force." HB 69 goes way beyond mere garbage and gets into Washington's definition. And don't tell me it's not at all like that, that it's only "voluntary." No person who has watched government and studied history should ever be naive enough to believe such a thing would not eventually become mandatory. In that case, Alaska does not have enough court time or jail space to accommodate the multitudes who would meet government intruders with force at the edge of their property.

You probably think that those of us who voted you into office were pretty smart for making such a brilliant choice. If we're bright enough to vote you in, don't you think we can do a better job raising these children we value more than life itself, do a better job than can our representatives and agency hirelings? I encourage you to oppose this junk bill before it goes any farther.

Sincerely,

Roderic H. Perry

Hi Paul,

I am concerned with HB 69 "Alaska Parents as Teachers Act" in front of your House Education committee. I would urge you to oppose this bill. I am a strong supporter of either the State or Tribe stepping into the home when there is evidence of abuse or neglect, but I do not support allowing the State to interfere with families even on a volunteer bases (things that are voluntary quickly become mandatory.) This bill would impact the rights of parents to direct the up bringing of their own children, as a father of a 3 and 4 year old, this makes me worried.

Thanks for your understanding
Don

Dear Rep. Seaton,
We would like to voice our opposition against House Bill 69. We do not oppose parents as teachers, but rather the state coming in to private homes. We believe parents are in position to make the best decisions for their children, not the state. Although the program would be voluntary if put in place, our fear is that it would eventually become mandatory, thus violating parental rights.
We hope you will sincerely consider our views.

With kind regards,
Roy, Eleonore, Vincent and Mitchell Butler

Representative Paul Seaton,

I called your office yesterday to ask your thoughts and to give you mine on HB 69, but, you were unavailable. I spoke with Mr. Flora, instead. I thought that I would send you an e-mail today to follow up. I am opposed to this, or any other bill, that would create another layer of bureaucracy or agency and could infringe on the rights of parents to raise their children as they see fit. I don't believe the state has extra money to be wasting on new programs that do the same thing that programs that are already in existence are doing, whether in the private sector, by volunteer agencies or existing government programs. Not only would HB 69 waste money and enlarge state government, it could become a mandatory program, as many pieces of legislation without a sunset clause do. In this case, it would infringe on my rights and the rights of my children, if they have kids, to raise our families as we see fit. I think this is a bad piece of legislation and should be killed in committee.

Thanks for your time,
Bill Spencer

Subject: House Bill 69

As an Alaskan and a mother of two, I am very concerned about House Bill 69 which institutes a program in which the state begins to meddle in people's homes and the upbringing of their children. This is a dangerous precedent in that it increases dependence on state "experts" to tell parents what is and is not allowed or acceptable in the home. Rather than encouraging this kind of dependence, state legislators should be encouraging parents to study childcare and education on their own and to make their own informed decisions in cooperation with their doctors, families, churches/places of worship, and teachers. The state has absolutely no place in my home or any other person's home, especially not when it concerns the way our children are raised. Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are best qualified to determine what is best for their individual children.

Subject: Please oppose HB 69

Representative Seaton,

Please consider opposing HB 69, the Parents as Teach Act.

I feel this Act would impose an invasion of privacy toward citizens in the state of Alaska.

The formative years (ages 0 through 5) are crucial in the upbringing of children. Submitting them to home
visits, mandatory checks, health screenings would create an insecure environment for the parents as well as the child. With government officials constantly entering homes, an attitude of dependency on the government will result allowing the inability to perform as responsible adults in the upbringing of children.

This type of intrusion is considered, in my opinion, as a move toward socialism.

Thank you
Barbara Andersen

Subject: House Bill 69

I am writing to ask you to vote no on House Bill 69. I know that is sounds like a great program to help children but it has so many ideals that just aren't right. If a program is voluntary then it should be outside of a person's home. These lessons should be held in a more neutral place, where parents can schedule it into their time and where precious family time is not imposed upon. More and more appointments and hectic schedules are already ruining families. And everyone knows that people are not going to act naturally when a stranger enters their home.

Moral questions also arise like what if the parent disagrees with the social worker? What if they just don't see eye to eye, who does that put at fault and what would the implications of that be.

The bottom line is that parents are best qualified to know the needs of their individual children. I am the parent of 6 and none of them are the same in any way. What works with one doesn't always work with the other. Classes are great. Help is great but a government worker entering a home should always raise flags of caution.

I love living in Alaska because I feel like it is one of the most politically free places on earth. I hope to fight to keep it that way. Thank you, Lisa Henderson

To: Rep. Paul Seaton

Subject: opposing HB 33, and HB 59/69

Honorable Representative Seaton:

I am writing to you requesting that you consider rejection of HB33 that would raise the age of compulsory attendance for students.

There is no evidence, through research or history, that forcing students to remain in school longer will reduce the dropout rate

The power and decision making for our children's education should be left in the hands of the parents and not the government. Let us decide as parents when formal education should begin for our young children..

Compulsory education has resulted in excessive government control and expanding it will not lower the drop out rate but only be more costly to taxpayers.

Also, that you would reject HB 59/69 which is a voluntary parent education home visiting program for children from birth to age five.

Although this would begin as a voluntary program, it is most likely the first step to a mandatory program. I believe that parents, not state officials, are best qualified to determine what is best for their children.

I am vehemently against HB33 and HB 59/69 and am asking you to please vote against both of these bills.

Respectfully,

Mr. Flora,

It was nice to visit with you about HB 69 yesterday. As I told you on the phone I am opposed to this piece of legislation and think it would waste state money on an unnecessary intrusion into families lives. This bill would create state duplication of services that are already available through existing agencies and private charitable organizations. I think with the forecast budget shortfalls the state is facing we don't need to be increasing the scope of government programs.

Thanks,
Bill Spencer

ANDREW P. HOPE BUILDING
320 West Willoughby Avenue • Suite 300
Juneau, Alaska 99801-1726

February 12, 2009

Dear Honorable Legislators:

As the elected President of the Central Council of Tlingit and Haida Indian Tribes of Alaska (Central Council), I am writing to express my support for House Bill No. 69 (HB 69), an act "establishing in the Department of Education and Early Development a voluntary parent education home visiting program for pre-elementary aged children and establishing a rating system for early childhood education."

Alaska's children represent our future and with our poor graduation rates, it is important that we support any attempts to improve our children's success in education. HB 69 would give thousands of Alaskan parents a chance to provide their children with the benefits of early education. Studies have shown that children's intellectual development is especially important before age six and early childhood education has proven to have great outcomes as it has shown to increase graduation rates, college attendance, and job earning potential.

I hope that the Alaska State Legislature will consider the positive outcomes of early education and support our parents in the effort to insure a bright future for our children and Alaska.

Sincerely,

William E. Martin
President

To: Rep. Paul Seaton
Cc: Rep.Bill.Stoltz@legis.state.ak.us
Subject: Fw: HB 69

Dear Mr. Seaton & Stoltz:

I am forwarding an e-mail I sent to Rep. Fairclough. Through communication with her office I was told she is no longer on Ed. committee.

I don't know what studies the authors of HB 69 are siting. I looked up several on Wed. & the common factor appeared to be parent involvement and not any particular program.

I know from speaking with teachers that parent involvement is key to a child succeeding in school. I don't know if that involvement can be legislated. If a parent doesn't have any interest in helping with homework, feeding their children nutritious food, and making sure their children get appropriate amounts of sleep, it is going to be difficult for the best of teachers.

I come from a long line of individuals that never participated in a pre-k program, but still pursued higher education because it was a value in our family. The government didn't step in telling us how to do it.

We should not have laws based on those that won't step up to encourage their children to receive the free education offered in our state. The more people that won't take personal responsibility force the rest of us to be under government control.

Wouldn't the money be better spent with children that have already come through pre-k & elementary school but are slipping off during jr. & sr. high?

I apologize for the somewhat incoherent ramblings. I have my own family that I am in a hurry to tend to.

I hope that you will consider what I have said.

Sincerely,
Ingrid Gavalya

Subject: HB 69

Dear Ms. Fairclough,

I have a number of objections to HB 69. First of all, I thought that there was a budget crisis in our state. I don't think state dollars will be best utilized on something parents and their family doctors are already able to do. When children are school age any issues that are present will be detected and addressed.

My biggest objection to this bill is the governments intrusion to families. I understand that it is "voluntary" but, for how long.

My now 11 yr old daughter was told when she was 3 that she had AD/HD. We were at a Halloween party and

another guest, an ophthalmologist that was some how partnered with the school district, told me she had training with ADD & AD/HD. She was very intent on telling me to get my daughter help. I took it seriously & spoke to my pediatrician's office nurse. She laughed! My daughter had been their patient since birth & they saw no indicators through our visits or conversations. This nurse told me after raising 4 children of her own & being a pediatric nurse for years, her experience was all 3 yr olds have "AD/HD". Needless to say my daughter does not have AD/HD. She excels in academics and is definitely high energy so she swims, runs, & hikes.

If a counselor came into my home to so my then toddler in one snippet of life would we have decided to medicate & treat her like she had a disorder? I have 2 more children with different personalities. My 8 yr. couldn't read when she started kindergarten would we have labeled her & put her into another program? My third child is 3 yrs old, and is prone to temper tantrums. Should I put her in an anger management program? My dog doesn't always come when she calls. Does she need a hearing program or is she passive aggressive? Maybe I am the common factor & need to begin **mandatory** parenting classes accompanied by shock therapy. Where does the insanity end?!?!

Sincerely,
Ingrid Gavalya

Subject: HB69

I would like to say that I hope you'll make the sensible decision to vote against HB69. Most importantly, with today's financial and budgetary cut backs it would not make sense to pass a bill that would have an endless need for funds. Especially for curriculum covering prenatal through age 5! Any parent who cares about their children will pay attention to them, read to them, keep their expanding minds stimulated and love them with enough attention to help them prepare to be a life long learner. It's parents like these who already have nurturing skills who would seek out such programs, not the neglectful, abusive parents the supporters of HB69 think they're reaching out to. They won't seek out accountability. Not only is there no reason for a curriculum, but people with only 37 or so hours of training are not the level of skilled professionals I'd want the children of my country to rely on. There are already many different groups parents can join through doctors' offices,! nurses, churches, not to mention friends and family.

If this group is so certain they have THE answers to raising everyone's children, why don't they create their course for parents to purchase or check out at the library! It could be the entire 37 hours-5hours per week for 8 weeks!

I listened to the presentation on February 11, 2009, and it sounds to me like this group would like to set up a big bureaucracy to oversee the many programs that are already out there. And they would of course be in charge! And they want the Alaska budget to pay for their entry into this field of influence, when they themselves state that parents are the most influential with their children. It sound like this group would like to become most influential.

While I'm sure that intentions are truly honorable, I believe this would turn into a mess. When I watch the news and see the mayor take away funding for fire fighters, in other words public safety items of the budget, as a beginning way to balance the budget, I lose patience with politics. Instead, lets not add HB69 to our budget. Schools keep getting more money without proving their worth with results. (Firefighters and medics save lives every day.) This will be more of the same. Parents are best at raising their children by their own creative solutions. They can make the best choices for their children, whom no one but God loves more than they do.

Please vote no on HB69.

Thank you for your time.

Sincerely,
Donna Worthen

Representative Seaton,

We are writing to you to express our ***strong opposition*** to House Bill 69. There are many places available for parents to take their young children to be evaluated if there are concerns. i.e.; community health centers, doctors, midwives, schools, churches ect.. Therefore it is not necessary or wise to make intrusions upon individual households even on a voluntary basis. The money that would be used for this could benefit children in a much more efficient and practical manner by simply giving them the basic necessities that they require such as food, warm clothing, shelter and heat. Help a family with basic necessities and leave the parenting decisions to the parent, NOT the state.

Sincerely,

Mr. and Mrs. Brian Casey

You may have already received an email from my wife on this subject from this email, but I want to reaffirm that both me and my wife feel this is a bad idea for the state and for the people's rights.

- I believe this is intrusion into parents rights to raise their child as they feel best.
- This increases the size of government at a time when Alaska has a projected budget short-fall. An increase in government is not in the best interest of Alaska. I am against larger government.
- The bill will be very difficult to enforce and
- The "Voluntary" program is simply a lead-in for a mandatory program once the "bugs" are worked out.
- Monthly meetings with a "qualified caseworker" can be very subjective.

Sincerely,

Christopher T. Davis, P.E.

Subject: House Bill 69

Feb. 12, 09

Dear Mr. Seaton,
Please reject House Bill 69 and any other legislation that involves home visits for "help in parenting". The end result of this will be eventual State influence or control of our families. The State can't manage itself, and I have no faith that it can do much good for Alaskan families. If a parent desires help in parenting, there are already many services in place to assist them: pediatricians, grandparents and other relatives, neighbors and friends, day care providers, etc.

If the State wants to assist in parenting, it can work with local governments to cut property and sales taxes so that families can more easily afford for mothers to stay home and care for their children.

Thank you.

Subject: HB 69

Representative Seaton,

Thank you for your service to the people of the state of Alaska. I am writing to voice my opposition HB 69 - Early Childhood Ed: Rating & Home Visits and I would urge you to vote against it.

I agree that parents are the first and most influential teacher in child's life. However, parents, not state bureaucrats, are also the best qualified to determine what is best for their individual children.

In the absence of evidence of abuse or neglect, state officials should not interfere with the upbringing of children by their parents. HB 69 is an infringement of parental rights. What is voluntary today often becomes mandatory tomorrow. The cost of $3000 per child or family to administer this program is too great. In these challenging economic times we should not be implementing programs that would have to be in place in every city or village whether the parents want the services or not.

Thank you for your consideration.
Sincerely,
Stephanie Taylor

Subject: Regarding HB 69

Dear Representative Seaton,
Please **oppose HB 69**, the Parents as Teachers bill, at the meeting Friday, February 13th at the hearing.
No ammendments to this bill would make it acceptable to responsible families. You know it would not be a good idea to have government officials coming into someone's home and instructing them on how to be a "good"(by whose standards) parent.
Sincerely,
Carol and John Broussard

Subject: Alaska needs House Bill 69

Our families in Alaska need House Bill 69. Parents as Teachers is an amazing resource that Alaska needs to adopt for the assurance of our children's success! The answer to change the struggles that our school districts face today is to educate and empower parents to be involved in their child's educations, from the beginning! Parents as Teachers is the vehicle that can facilitate that change.

Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are best qualified to determine what is best for their individual children.

This bill concerns me greatly on many levels. Who would "pay" for all of the people to perform these "in home visits." How will it be determined that they are qualified to meet each child's individual needs? Who knows their own child best? A state worker? Or the parent?

It sickens me that our great state of Alaska, the last frontier, the smaller government state has even contemplated this type of legislation. I vote in every primary. I vote in ever official election. I guarantee that whoever votes for this bill will NEVER receive a vote from me or my family members. I will do my best to make sure my friends know who not to vote for as well.

Please vote against House Bill 69

Subject: Parent of 8 --house bill 69

Hello,
I'm a parent of eight. I have 2 children under 5 right now. I love this state and having my family here is extremely important to me. I hope all my kids raise families in this state. I figure I have nearly 150 family members in this state currently plus extended family from family. Why would I want the state to create more government? Why would I want to fund more government? When has the state been better for my kids than me and my husband or additional family? Would you want someone coming into your home and watching you? Just because parenting does not come with a complete set of manuals -- does not mean that we want to create programs that could very easily become required participation intrusions. No one says that is what will happen but it will... given time.

Please, for the benefit of current families and families to come, do not vote for the Alaska Parents as Teachers Act. It is a terrible way to spend resources and it is not helping parents and children grow into families. Government really does need to stay out of the home.
Remember that working on these committees and in our government does not mean that it is your responsibility to grow programs - we voted you there for many other reasons... Cutting things is fine with me (programs and taxes/fees).

"Please vote against House Bill 69, the Alaska Parents as Teachers Act, which would interfere with the right of parents to direct the upbringing of their children. Parents, not state officials, are best qualified to determine what is best for their individual children."

Thank you for your service. Our family appreciates your willingness to serve this great state. Your self sacrifice is a blessing to me. It allows me the privilege to work with my family and do community service in my local area. I appreciate you doing your part and really -- you are doing even more. THank you for all the time and energy you give toward learning, doing, and helping us all. We put a lot of trust in your discernment. I know discernment is a big, very giant part of what a legislator needs to have and I hope you each have a been blessed with an over flowing amount of it. Protect our families and this state.

Thank you again,
Hiedi Kroeker
Chugiak, AK

PS -- and to any staff that has to deal with the emails or this topic, thank you for your hard work as well. You are the glue that holds our state all together. You are awesome!

Subject: Please Reject HB 69

Dear State Representatives:

Our comments below relate to **House Bill 69, the Alaska Parents as Teachers Act.**

Please stop progress of this intrusive and financially onerous bill.

First:

Please note the title of the bill: "Alaska Parents as Teachers Act" The bill's title sounds great, but after a careful reading of the bill's contents, is clearly misleading. Parents **are,** as the bill states, their children's first teacher. We would like to add for clarity, however, the important accompanying parental role of principal, and think it reasonable that during the first five years of a child's life, parents should, except in rare cases, clearly fill both of these roles.

It is important to note the bill's purpose is not to propose legislation declaring the rights of parents as primary governor of their young children's education. Ironically, it instates a bureaucrat to oversee the parents, effectively stripping them of their reasonable and traditional role of principal overseer and giving it to one or several state government agencies.

The bill should instead be titled: Alaska Parents are No Longer Principals Act, because, if approved by law and taken advantage of by parents, the state would assume the role of the children's principal, leaving the remaining duty of teacher to the parent.

Seeing it this way, the bill's title is true as the parent indeed would be the teacher, but absent from the title is the implication that the government would replace the parental role as principal.

The home visiting program establishes voluntary, regularly scheduled state involvement. At intervals of **no less than** once per month, a state representative would visit the home of the child. This is unacceptable.

Due to the progressively invasive and expanding nature of government, the program is likely to turn into a mandatory program.

This bill opens the door to eradicating or at least obscuring already codified, state-recognized rights of parents, **as principals**, to decide the educational path their children take and could transfer education rights away from the parents to the state. This must never happen in our free society.

Second:

To approve this financially onerous bill is irresponsible.

How much will this program cost? How many new hires? Training costs? Transportation costs? Per diem? Record keeping? Judiciary concerns?

Can you justify the cost even if you like the provisions of the bill?

Third:

Implementation of this bill will not likely improve the horrible performance and graduation record the state public education system has earned during recent evaluations. Since the state of Alaska has not provided, as a whole, quality education over twelve years of a student's life, it is unlikely the addition of five or more years under the same system will salvage the woeful situation.

Again, please vote against HB 69.

Thank you for your time and consideration of our thoughts.

Sincerely,

Doug and Wendy McKinnis

Subject: House Bill 69

Dear Representatives:

I'm writing to express my concerns over House Bill 69, which I understand you will be discussing tomorrow. I've read the bill, as well as Chris Tuck's sponsor statement, and while I recognize the good intentions, I'm concerned that this is an attempt at a quick fix to a vast problem which will create an invasive and meddling encroachment into family privacy instead of a fruitful program for parents and children. To be honest, this looks less like an early childhood education initiative than a way for CPS to cast a wider net.

It is concerning to me that, while this program is described as "voluntary", the way in which parents will be recruited isn't clearly outlined, a target demographic isn't specified, and the reasons for discontinuing the monthly visits does not include parental disinterest as an option. This makes me wonder how voluntary this program will really be, and if the goal is in fact to make it far-reaching and mandatory. I also imagine, given the program's vague descriptions and ambitious goals, that the reality will be overburdened caseworkers presenting parents with a basic and generic template for early childhood health and home preschool, utilizing the same sort of standards and methods that are mostly failing students in the K-12 programs instead of showing parents how to utilize their own life experience and easily accessible community resources (such as schools, parks, and libraries).

I've taken a quick look at the National "Parents as Teachers" program, as well as the Perry Preschool Project, and I understand the lure of what look like successful case studies in helping the most at-risk children succeed in school. But I hope you'll also consider studies that paint a different picture, like the Early Childhood Longitudinal Study conducted by the U.S. Department of Education in the late 1990's. I know of this study from a summary in the book *Freakonomics* by Steven D. Levitt and Stephen J. Dubner, in which they present a list of surprising findings. Briefly, this study found that there are eight factors in early childhood that actually have an impact, positive or negative, on later test scores:

-- highly educated parents

-- parents with high socioeconomic status

-- mother aged thirty or older at time of child's birth

-- low birthweight

-- parents speak English at home

-- child is adopted

-- parents are involved with the PTA

-- many books are present in the home.

On the other hand, there are eight other factors that have no correlation with with test scores:

-- family is intact

-- parents recently moved to a better neighborhood

-- mother stayed home between birth and kindergarten

-- Headstart attendance

-- regular museum attendance

-- regular spankings
-- television viewing frequency

-- child is read to daily or almost daily.

Levitt and Dubner provide analysis on these factors in greater detail, coming to the following conclusion: "Here is the conundrum: by the time most people pick up a parenting book, it is too late. Most of the things that matter were decided long ago – who you are, whom you married, what kind of life you lead... It isn't so much a matter of what you *do* as a parent; it's who you are."

Please also consider the following sources for ideas on why families should choose their own early childhood education solutions, and why less is often more:

The Case Against Universal Preschool:

Subject: Vote against House Bill 69

Representative Seaton:

Thank you for your dedicated service to the State of Alaska. I am writing to respectfully request that you please vote against House Bill 69, Alaska Parents as Teachers Act. This Bill proposes to remove a parent's right to be ultimately responsible for the upbringing of their children. Parents know their individual children infinitely better than any government official could (particularly one who would only see a child once a month as stated in the HB69 guidelines.) Parents are the most qualified to discern what is best for their children.

Furthermore, in these tough economic times, why create another expensive program for Alaska State Government to pay for when many of these services are currently available? It is already very easy for parents who want to get help to find answers to their questions. Additionally, there is a "safety network" of professionals already in place that is responsible to report signs of abuse.

Respectfully submitted,

Catherine Gilliland

Subject: Please vote yes on HB 69

Good morning,
I have worked in the Parents as Teachers program for the past 14 years. I was fortunate enough to be the first parent educator hired when Hoonah implemented PAT in 1995, the first program in Alaska. The program has now expanded to 46 communities across Alaska.....because it works.

PAT is a win-win program, parents are empowered to take control of their children's learning from birth. Parent educators offer families personalized visits, which may be conducted at the location of the parents' choosing. Usually it is in the home, but visits also occur at Head Start, child care centers/homes, McDonald's, or church basements. It's where the families choose to visit.The advantage of the homes is that parent educators can coach the parent with the parent-child activity using the materials normally found in the child's environment.

PAT is a "strengths model" which stresses that parents are the experts on their children, and that the families will set their own goals for their children and family. Empowerment results when the parent educator is the resource who offers research-based strategies and options. It is the parents who choose which options are appropriate for their family and circumstances.

I became a National Trainer for the Parents as Teachers National Center in 1995. I periodically train new parent educators in Alaska and the lower 48, although Alaska is my priority. The training is intense, and parent educators must pass daily assessments, a role-play of a personal visit with a family, and be evaluated as competent to deliver the PAT services to families.
Not every participant in the trainings are certified, and the standards are strict

I plan to testify at the House Education Committee hearing on Wed morning. I anticipate there may be more questions that just will not be covered within the time period. I will be very glad to provide information to you or your staff at any point. Please don't hesitate to call me

School readiness is so vital to children. Independent research shows that children who participate in Parents as Teachers enter Kindergarten ready to learn, and they have great success throughout their elementary years. I would be very happy to get summaries of the research to you as you desire.

Please vote yes on HB 69. The Parents as Teachers' vision is that "All children will learn, grow, and develop to their full potential." All Alaskan communities can acheive this as a reality through Parents as Teachers.

Thank you for your time.

Date: February 9, 2009

To: Representative Paul Seaton, Chair
House Education Committee

From : Representative Chris Tuck
House District 29

RE: Description of Differences between HB 69 and HB 69 CS

The committee substitute for House Bill 69, "Alaska Parents as Teachers Act" contains several minor technical changes to House Bill 69. The changes in the committee substitute are as follows:

- Uses the phrase "participating family" in place of "participant" throughout.
- Page 2, lines 15-20 – Amended to make educator-parent visits optional, and allow for parents to opt into more than one meeting per month, and deletes references to cost considerations for reducing visits.
- Page 4, lines 9-10 – Definition of "family" added for clarification of program inclusion.
- Page 4, Line 12 – Added subsection (4) – "'trained parent educator' means agency employee trained and certified in the program curriculum."

The committee substitute also removes the section establishing a pre-K program rating system. Changes related to that are as follows:

- Page 1, Line 3 – Deleted "and establishing a rating system for early childhood education."
- Page 6, Line 18-21 – Deleted section 18.

HB 69: Alaska Parents as Teachers Act

Sponsor Statement

Every parent has the same desire – to see their children receive the foundations for a successful future. Unfortunately, not all parents have the resources to put their children into preschool or other early education programs. HB 69 will provide educational services as early as possible, to those who need it and want it, right into their home.

Alaska's children represent the security and future opportunities for our families, communities and our state. Yet Alaska remains among less than 10 states that do not provide statewide pre-kindergarten education to its children. This bill is an attempt to implement cost-effective, fact-based solutions to Alaska's poor graduation rates. Enhancing parental involvement in the homes of children who could benefit from it is consistent with the views of many Alaskans, across the political spectrum.

HB 69 seeks to add Alaska to the ranks of the vast majority of states that have recognized the validity of studies showing that children who benefit from early education earn more money as adults, enter the job market in much larger numbers, obtain college education in higher numbers, remain off public assistance in greater numbers, and remain out of jail in much greater numbers.

Alaska has a responsibility to provide the best education possible for its children. Currently, outside of a few school district classrooms, the state only provides pre-K education through the Head Start program, which is only available to the poorest students, and which is underfunded. Currently there are close to 1,000 Alaska children on Head Start Waiting lists, and Head Start isn't available in many Alaska communities.

HB 69 fills the pre-K education gap by providing parents with expert advice and educational materials to use while instructing their children in their home. The plan also offers health and developmental screenings to indentify problems early which is more cost-effective and successful for children. In home education is far less expensive than traditional educational efforts that require building construction and student transportation. It is not a replacement for effective pr-kindergarten classrooms, but is a cost-effective alternative, and is needed as long as Alaska remains far from implementing a statewide pre-kindergarten plan that makes pre-k education available to all Alaska families who wish to participate.

Extensive research shows that a child's intellectual development is especially important before age six. A study by the Parents as Teachers National Center in 2007 found that children who participated in parentally guided in-home pre-Kindergarten programs were more prepared upon entering kindergarten and performed better on achievement tests than those children not receiving in–home pre-K education. Young children who receive high quality early education do better in school academically, are better behaved in classes, and are more likely to stay in school, graduate, and go on to attend college.

The beneficial impact of early education also extends to the economy with multiple studies showing that funds invested in early education pay dividends in the long run. Every dollar invested in high-quality pre-kindergarten programs save taxpayers up to $7. Pre-K results in savings by reducing the need for remedial and special education, welfare, and criminal justice services. An ongoing study of 40-year-old adults in Michigan who participated in the 1962 Perry Preschool Project found that adults with pre-K were more likely to be employed and earned 33 percent higher average income than their peers who did not have state-funded early education.

Additionally, a study prepared for the SEED program at the University of Alaska Southeast states that 87 percent of Alaska residents think it is important for state government to provide financial support for early education and child care.

Please contact our offices if you have any questions or need any information.

MEMORANDUM January 22, 2009

SUBJECT: Sectional Summary of HB 69 (Work Order No. 26-LS0281\S)

TO: Representative Chris Tuck

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides a short title for the bill.

Section 2. Sets out legislative findings related to the bill.

Section 3. Establishes a home visiting program in the Department of Education and Early Development for the benefit of families with children ages birth through five. Provides for implementation through local agencies, as defined, using an implementation plan and state funding applied for by the local agency. Describes specified program components.

Section 4. Adds two mandates to the Department of Education and Early Development: (1) to establish a preschool rating system; and (2) to provide technical assistance and monitoring of the program established under section 3.

House Bill 69 would create a voluntary parent education home visiting program for pre-elementary aged children and establish a rating system for early childhood education. This program would be located in the Department of Education and Early Development (DEED).

A parent education home visiting program has the potential to create more referrals to the Department's Infant Learning Program, but there is no way to estimate the number of additional children that might be referred. This creates an indeterminate fiscal impact for the Department.

ANALYSIS: *(Attach a separate page if necessary)*

House Bill 69 would create a voluntary parent education home visiting program for pre-elementary aged children and establish a Dept. Education & Early Development rating system for early childhood education.

Section 14.03.165 (3) includes "annual developmental and health screenings as recommended by the Department of Health and Social Services." Alaska has approximately 47,500 children ages 0-4 years, and approximately 10,000 new babies are born in Alaska each year. Until we can determine the number and location of the children who may become enrolled in this program, there is no way to estimate the fiscal impact of this bill. This creates an indeterminate fiscal impact for the Division of Public Health.

Representative Chris Tuck
Capitol Building Room: 426
Juneau, AK 99801

Dear Representative Tuck:

I write this letter in support of House Bill 69: Parents as Teachers. It is well known that parents are their children's first teachers. Sadly, however, many parents lack the skills and/or knowledge to send their children to school ready to learn. The voluntary Parents as Teachers home visiting program for families with children prenatally up to kindergarten entry age highlighted in HB 69 appears ideally suited to fill this gap.

Please know that the Kake City School District fully supports HB 69 and urges its passage. The future of our community, state and nation requires our best efforts to secure rich educational opportunities for our children beginning at the earliest possible age, ideally in the family home.

We in Kake are thankful for the current Parents as Teachers and Head Start programs operating in our district and feel that an expansion of the Parents as Teachers program state wide would bring forth results far exceeding the funds required to implement the program. Please contact our district office if we can provide additional support.

Respectfully,

Ralph O. Crosslin

Representative Chris Tuck
Fax (907) 465-3810
Attn: Aurah Laneau

Dear Rep. Tuck,

I am a Head Start Teacher Aide in Kake. Our program has received four three year old children in the past two to three years as early entries to our program which serves ages three to five year old children. The early entry children have entered our program as soon as they turn three vs. having to wait on the calendar school year before they can start. The reason for their early entry is because they have been identified as having some sort of developmental or physical delays. These children are identified through either the Early Infant Leaning Program or the Parents as Teachers Program. The early intervention they have received has allowed them to overcome delays that left unaddressed likely would be carried with them throughout their lives. While children are still young they can learn to correct behaviors and impediments. If not addressed early problems become habit.

I feel early identification of correctable concerns is the primary asset to having the Parents as Teacher Program (PAT). In addition, the program is a very much needed partnership with the parent. Most parents have no idea what is developmentally appropriate for their children. Developmentally appropriate means knowledge of: at what stage a child is ready to learn what, when it is best to introduce new things and how to do so in order for the child to best ingest it. To put it as simple as possible, the PAT program can help a parent see that the basics like talking to, interacting with and reading to your child from the beginning of life is instrumental to their learning ability.

Please, on behalf of Alaska's children; help provide this valuable tool to the communities that have no idea what they are missing.

Sincerely,

Cathy Henderson

Cathy Henderson

February 9, 2009

Dear Representative Tuck,

Hello, my name is Wanda Friday and I am the Teacher Director at the Head Start Center here in Kake. I am writing in support of the Parents As Teachers program (House Bill 69). I think it is a very valuable program – it not only benefits the infants/toddlers & their families, but parents and parents-to-be as well! I am the PAT home visitor's supervisor here in Kake and I am required to accompany her on 3 home visits & to observe three of her group socials. I have seen first hand what activities and information is provided to parents & children. The home visitor wears many, many hats! She provides activities for the parents to do with their child on the visit & for them to also continue doing throughout the week (until their next visit) which helps the child strengthen & develop specific skills. The home visitor also provides parents with information about their child's development. On every visit, each child receives a storybook that they get to keep, which promotes literacy! Last, but not least, the home visitor is an advocate for children & parents, whether it is helping families with an immediate need (such as emergency assistance for fuel or food) or helping them get a referral for medical services.

The PAT program is valuable to me because they help us find children for our program. Most importantly, the PAT program works with the Infant Learning Program to help identify children with special needs and they both work together to make sure children and their families receive all of the services they need. We have wonderful success stories here in Kake regarding children who have transitioned from Infant Learning & the Parents As Teachers program into our center. The sooner needs are identified, the sooner children can receive the services they need to help them succeed in school and in life. Thank you for your time and thank you for supporting this wonderful program!

Sincerely, Wanda R. Friday

Representative Les Gara
State Capitol, Room 500
Juneau, Alaska 99801-1182

Dear Representative Gara,

Early learning begins in the home. Recognizing the invaluable role parents have in leading their young child's education is an important indicator of future school success. As our state begins to shape a high quality voluntary pre-kindergarten system, we must include opportunities for parents to assume and expand their role as their child's primary teacher.

Based on RurAL CAP's forty-three year history of providing early childhood services in Alaska, we highly support your efforts to provide Parents as Teachers services to families with children prenatal to age five. The Parents as Teachers model ensures all children enter kindergarten prepared to learn; engages parents in their child's education; provides access to important brain research on the early years; and connects parents to an ongoing source of community support as their child undertakes their K-12 education.

We applaud you and your colleagues for recognizing the importance of the early years as critical years in a child's development. We must set state priorities that reflect this awareness. We look forward to the opportunity to share testimony with the legislature about the effectiveness of the Parents as Teachers model. No other model produces such strong outcomes for children and families with such a modest investment of resources.

Sincerely,

Debi Baldwin

Representative Les Gara
716 W 4th Ave #310
Anchorage, AK 99501

Dear Representative Gara,

As members of the Southwest Region School District team, we are writing to ask for your support of the legislation supporting the Parents as Teachers program. This bill would support funding for Parents as Teachers programs in the communities that our school district serves.

The district knows the importance of the development of young children's minds during the first few years of life and the priorities of the state need to support that development. The Parents as Teachers program has had a positive impact on the children in the communities of Southwest Region School District. The program has increased the school readiness component of the children's early education, which has a positive effect on improving school success in later years and increasing parents' involvement in their child's education. This legislation would help children start school ready to learn.

We urge you to support this legislation. The investment of educational resources into the early years of children's lives and parental involvement will benefit those parents and children for a lifetime.

Cordially,

Jack Foster, Superintendent

David Piazza, Director of Instruction & Information Services

Representative Les Gara
Alaska State Legislature
Juneau, AK

Dear Representative Gara,

On behalf of all families with young children, thank you for your support for expansion of the Parents as Teachers (PAT) Program. As a nation we have spent millions of dollars doing research on how young children learn and develop. We have the information proving that learning in the early years is critical to developing the ability to become a life long learner. We have the information proving that in the first years of life a child learns through active engagement with a consistent, caring parent. In this age of technology and TV babysitting it is imperative that parents have the opportunity to learn how to engage their children in age-appropriate activities that foster optimal development.

The PAT program fills this critical need in our community. It provides families with crucial, scientifically based information presented in a way that is culturally appropriate. The bi-monthly home visits and weekly group socializations offer an opportunity for parents to understand the growth and development of their children. PAT helps to build the early foundation skills that both children and families need to ensure early learning, school readiness and success.

The PAT program has become an invaluable community partner for Infant Learning. PAT expands health and developmental screenings for children and helps identify children who may need additional support at an early age. PAT teachers are an important referral source for ILP. We offer our full support to this valuable program, both in our community and statewide and look forward to many years of continued collaboration.

Sincerely,

Nancy Wells

To: Aurah Landau
Subject: One more letter of support

Dear Representative Gara,

I am writing this letter in support of establishing voluntary Parents As Teachers home visiting programs for children ages prenatally to age five in the state of Alaska.

I am the Director of Homer Children's Services/Birth 2 Three, an Early Intervention-Infant Learning Program in Homer, Alaska. I am also a Developmental Specialist for this agency. We currently provide early intervention services such as physical therapy, speech therapy, occupational therapy, special instruction and family service coordination to children in southern Kenai Peninsula that are experiencing developmental delays.

We also have a "Universal Access" program, which is operated under our "Parents As Teachers" program model. This program is offered to children and families prenatally to age three, regardless of delay. We team this program with our weekly playgroup activities, and have had huge success with identifying and meeting the needs of families in our community whose children may not meet the 50% developmental delay requirement that "Part C" early intervention dictates.

Our agency educator provides home visiting services utilizing "Parents as Teachers" curriculum as an added service to our weekly playgroup activity. This service is offered universally to families, with the only requirement being age (prenatal to age three for our agency).

The benefits of having this service available to families has been astonishing, to say the least. I can tell you with all certainty that this truly falls in the category of "proactive" care and support to families with young children. We are able to begin the journey with the family right from the start; ideally prenatally. This journey includes education in prenatal topics, breastfeeding, preparing for your newborn, fatherhood, postpartum depression, child development, parenting techniques, etc. The journey with our agency's home visitor/educator includes family support, community resource connection, a rich lending library of toys/equipment/books and other educational resources. We also join with other related agencies such as Public Health Nurses, to offer joint home visits to further support child and family needs.

The results of this effective service have been exciting. Our agency is able to establish a relationship early with a family, helping them to become more familiar with child development and early education needs. We are involved early in the child's life, and therefore if we have concerns about development, we can address the needs quickly and often with results that will bring the child to age appropriate development in a shorter span of time. We have been able to identify children and refer them to early intervention through this program.

Additionally, our program offers services of developmental screening through the Child Abuse Prevention and Treatment Act (CAPTA), which is an unfunded mandate. We have seen an increase in the number of referrals to our agency over the past year by 300%. The referrals are received from our local Office of Children's Services, and are children under the age of three that have experienced substantiated abuse or neglect. In other words, they are the children who are under age three, whose families are referred to OCS. Birth 2 Three provides developmental screening to these children and provides services as appropriately determined by the results of the screening.

Many of these children are not yet significantly delayed in development, but are living within a family that poses a high risk environment. It may just be a matter of time until a developmental delay exists with many of these children. The "Parents As Teachers" home visiting program is often a great fit for these families, whose child may not qualify for early intervention. Home visiting allows for relationship building with the family, support and mentorship. The burden that this lifts from our OCS system has been established already and results have been positive.

As wonderful as this sounds, I would like to address the limitation that our agency is experiencing. This involves adequate funding of our "Parents As Teachers" home visiting program. We must locate other sources of funding, which for Homer Children's Services/Birth 2 Three, is sought after through United Way of Kenai Peninsula and the City of Homer. Although very much appreciated, this has not adequately funded the need of the "Parents As Teachers" program. We could be offering a great deal more to families; frequency of home visits, more resources, educational materials, activities, and increasing our enrollment of families. Additionally, our funds for this program are being threatened with the existing trends of the economy. Birth 2 Three may not be able to continue to offer this service to families in the future without support.

"Parents As Teachers" is a program that is modeled after best practices, is family-centered and family-strengthening. I believe that if we can get behind this initiative and bring this home visiting model to our state of Alaska, while funding it appropriately, we will see positive results. These results could be obtained within a fairly short time-span and with cost-effectiveness, quite possibly acting as the catalyst in moving our state toward reducing the incidence of child abuse and neglect.

Thank you for your consideration, passion and hard work on this initiative. If you have any questions, comments, or need further information, please don't hesitate to call me.

January 15, 2009

The Honorable Les Gara
Alaska House of Representatives
State Capitol, Room 500
Juneau, AK 99801-1182

Dear Representative Gara:

Parents as Teachers National Center enthusiastically endorses the legislation that you have introduced in the current session of the Alaska legislature to expand the availability of Parents as Teachers services for families with young children in your state. We applaud your commitment to help Alaska parents be their child's first and most important teacher.

Established in Missouri 25 years ago, Parents as Teachers has grown to be the largest evidence-based home visitation program in the nation; currently serving one third of a million children each year in the United States. More than 3,000 programs provide Parents as Teachers services to families in all 50 states and eight countries outside the United States. Because of this longevity and broad implementation of Parents as Teachers, we have considerable experience implementing the model with families from a range of cultural and demographic backgrounds such as Native American, military, rural, and low income.

Parents as Teachers is a proven home visitation program that produces measurable outcomes for children and families in a range of areas:

Increased School Readiness

- 7,710 Missouri public school children were examined at kindergarten entry and at the end of third grade. Results showed that participation in Parents as Teachers, together with preschool, not only positively impacts children's school readiness and school achievement scores, but also narrows the achievement gap between children in poverty and those from non-poverty households.
- Parents as Teachers children showed better school readiness at the start of kindergarten, higher reading and math readiness at the end of kindergarten, higher kindergarten grades, and fewer remedial education placements in first grade.

Sustained School Success

- Parents As Teachers children scored significantly higher on standardized measures of reading and math at the end of first grade than did comparison children.

- Parents As Teachers children continued to perform better than non-Parents As Teachers children on standardized tests of reading and math achievement in second grade.

Prevention of Child Abuse and Neglect

- Adolescent mothers who received Parents as Teachers services and case management were significantly less likely to be subjected to child abuse investigations than control group mothers who received neither case management nor Parents as Teachers services.
- Adolescent mothers in an urban community who participated in Parents as Teachers scored lower on a child maltreatment precursor scale than mothers who did not participate in Parents as Teachers.

Increased Parental Involvement

- Parents as Teachers parents demonstrated high levels of school involvement, which they frequently initiated, and supported their children's learning in the home.
- A significantly higher proportion of Parents as Teachers parents initiated contacts with teachers and took an active role in their child's schooling.

Improved Child Health and Developmental Outcomes

- Children participating in Parents as Teachers were much more likely to be fully immunized for their given age, and were less likely to be treated for an injury in the previous year.

Parents as Teachers is committed to conducting ongoing research evaluations of our programs, not only to exhibit our effectiveness, but to continually improve our program to ensure that we provide the highest quality services possible to meet the needs of families. The attached summary provides more detailed information and citations for these and other Parents as Teachers research studies.

Complementing these Parents as Teachers specific research outcomes, is the growing body of research that shows an impressive return on investment for quality early childhood programs. Some studies show that for every dollar invested in quality early childhood programs particularly for children living in low income families, there is up to a $17 return on investment. Art Rolnick, Ph.D., Director of Research at the Minneapolis Federal Reserve Bank, argues that, "Investing in human capital is economic development. And you get the most payoff the earlier you invest."

We stand ready to work with you and your colleagues in Alaska to support this bill through enactment and look forward to working with the state and local organizations to ensure effective program implementation. Please feel free to contact us if you have any questions or if we can be of further assistance.

Sincerely yours,

Susan S. Stepleton, Ph.D.
President and CEO
Parents as Teachers National Center

Subject: Letter of Support

Hi, my name is Mary Jane Kasayulie. I am a former PAT teacher and a former mom of a child that was in PAT. I would fully support the PAT program. I am a firm believer in the PAT program. I have a daughter and my family benefited from the program. I have been working in Early Childhood Program for most of my career and I believe earlier the interventions the more a child can benefit from any schooling because it is the foundation of a childs learning skills.

I know work for the Infant Learning Program here in Dillingham and I know that it is making a difference in children's lives. I know that I t also helps parents understand the importance of what more their children can have. Being from a small community they don't have all the programs at their grasp and to bring out Parents As Teacher educators it would make it a lot better. Teach young as the baby in the mother womb. As early childhood educators I know we can make a difference in a child. One think I look at and let parent know if deal with the issues young and help make brighter children. As children get older they have issues with being embarrassed of being in a program but when they are young, they are just happy that someone wants to play with them.

Thank you,

Mary Jane Kasayulie

Anchorage, AK 99501

Dear Debi,
This letter is in support of RurAL CAP's Parents As Teachers (PAT) program to provide home-based services for families with children aged birth the three years old.

There is a need in the community for such apparent education and support program for families.

RurAL CAP's PAT program will provide families with crucial, scientifically based information on how children grow and learn. The ideas, suggestions, and activities that well trained local staff provides will help parents. There is need for consistent services to parents like workshops on Parenting Skills, Health, Nutrition, and Prenatal and Newborn Care in our community.

The program provides regular home visits that build on families' strengths and support parents in enhancing their children's early development. The program also provides health and developmental screening of children, identifying children who may need additional support at and early age. The earlier health or developmental needs are identified, the better the chance that intervention will be successful.

Sincerely,
Augusta M Askoak

January 13, 2009

Representative Les Gara
State Capitol, Room 500
Juneau, AK 99801-1182

To Representative Gara:

I am writing in regards to the proposed legislation to establish voluntary Parents as Teachers home visiting programs for families with children prenatally up to kindergarten entry age. As the Parents as Teachers Alaska State Coordinator I fully support the designation of state funds to support this important program and the services it provides to the children and families.

In 2007, the Alaska Governor's Summit on Early Learning recommended in the home services that would provide all parents with access to home-based education and support. Parents as Teachers is an established research based home visiting program that meets that recommendation. Research has shown that families that participate in Parents as Teachers programs engage in more language and literacy promoting behaviors with their children. Furthermore, children who were involved in Parents as Teachers score higher on kindergarten readiness tests and on standardized measures of reading, math and language in the elementary grades.

In addition to these positive outcomes for children and families, Parents as Teachers has also been shown to provide an excellent return on investment; meaning the program makes economic sense. By creating opportunities for Parents as Teachers in Alaska, not only will our state will be providing families with the opportunity to better prepare their children for entering into kindergarten and to lay a solid foundation for future learning, but also making a solid investment in our future. Thank you.

Sincerely,

Melissa Pickle

I am writing in support of Alaska's Parents As Teachers.

Twenty-one employees from our Early Childhood Partnership districts (Chugach School District, Bering Strait School District, Kuspuk School District, and Lake and Peninsula School District) were able to participate in an excellent training provided by RurAL Cap called Parents As Teachers November 3-11, 2008. The PAT home intervention program and family group meetings are being implemented in 14/24 sites (58.33%) in the partnership districts. It will be implemented next year in the remaining sites. Our partnership currently serves 150 students ages 3 and 4.

We were only able to offer this service due to an ANE grant we received.
We are currently in funding year 1 of 3.

The following are quotes by participants in the training:

[redacted]alie Egli, Unalakleet: "I believe with proper implementation, PAT may be the answer to our search for a quality research-based program to help our preschool children transition successfully into kindergarten."

Tonya Christensen, Port Heiden: "If we can get parents more involved, children will have more success in school."

Evelyn Chamberlain, Aniak: "PAT has lots of ideas on how to read to a child to issues such as toilet training biting, etc."

Valerie Engebretson, Nondalton: "There is so much we take for granted in our busy lives that we don't see all the great things we can share and learn with our children. PAT is a great experience for you to share with your child."

LeeAnn Galusha, Chenega Bay: "I love the resources that PAT provides."

Anna Gregorieff, Tatitlek: "Great material, great info!"

Unknown: "PAT empowers parents and gives our children the early interventions they need."

Waynna Fremin, Aniak: "The children in our communities deserve to be given this opportunity! Thanks for providing our district with this training."

Glenda Egli, King Salmon: "PAT provides a wealth of resources to support parents with their child's early learning and growth."

Subject: Parents As Teachers Program

Dear Representative Gara,

I am writing this letter in support of establishing voluntary Parents As Teachers home visiting programs for children ages prenatally to age five in the state of Alaska.

I am the Director of Homer Children's Services/Birth 2 Three, an Early Intervention-Infant Learning Program in Homer, Alaska. I am also a Developmental Specialist for this agency. We currently provide early intervention services such as physical therapy, speech therapy, occupational therapy, special instruction and family service coordination to children in southern Kenai Peninsula that are experiencing developmental delays.

We also have a "Universal Access" program, which is operated under our "Parents As Teachers" program model. This program is offered to children and families prenatally to age three, regardless of delay. We team this program with our weekly playgroup activities, and have had huge success with identifying and meeting the needs of families in our community whose children may not meet the 50% developmental delay requirement that "Part C" early intervention dictates.

Our agency educator provides home visiting services utilizing "Parents as Teachers" curriculum as an added service to our weekly playgroup activity. This service is offered universally to families, with the only requirement being age (prenatal to age three for our agency).

The benefits of having this service available to families has been astonishing, to say the least. I can tell you with all certainty that this truly falls in the category of "proactive" care and support to families with young children. We are able to begin the journey with the family right from the start; ideally prenatally. This journey includes education in prenatal topics, breastfeeding, preparing for your newborn, fatherhood, postpartum depression, child development, parenting techniques, etc. The journey with our agency's home visitor/educator includes family support, community resource connection, a rich lending library of toys/equipment/books and other educational resources. We also join with other related agencies such as Public Health Nurses, to offer joint home visits to further support child and family needs.

The results of this effective service have been exciting. Our agency is able to establish a relationship early with a family, helping them to become more familiar with child development and early education needs. We are involved early in the child's life, and therefore if we have concerns about development, we can address the needs quickly and often with results that will bring the child to age appropriate development in a shorter span of time. We have been able to identify children and refer them to early intervention through this program.

Additionally, our program offers services of developmental screening through the Child Abuse Prevention and Treatment Act (CAPTA), which is an unfunded mandate. We have seen an increase in the number of referrals to our agency over the past year by 300%. The referrals are received from our local Office of Children's Services, and are children under the age of three that have experienced substantiated abuse or neglect. In other words, they are the children who are under age three, whose families are referred to OCS. Birth 2 Three provides developmental screening to these children and provides services as appropriately determined by the results of the screening.

Many of these children are not yet significantly delayed in development, but are living within a family that poses a high risk environment. It may just be a matter of time until a developmental delay exists with many of these children. The "Parents As Teachers" home visiting program is often a great fit for these families, whose child may not qualify for early intervention. Home visiting allows for relationship building

with the family, support and mentorship. The burden that this lifts from our OCS system has been established already and results have been positive.

As wonderful as this sounds, I would like to address the limitation that our agency is experiencing. This involves adequate funding of our "Parents As Teachers" home visiting program. We must locate other sources of funding, which for Homer Children's Services/Birth 2 Three, is sought after through United Way of Kenai Peninsula and the City of Homer. Although very much appreciated, this has not adequately funded the need of the "Parents As Teachers" program. We could be offering a great deal more to families; frequency of home visits, more resources, educational materials, activities, and increasing our enrollment of families. Additionally, our funds for this program are being threatened with the existing trends of the economy. Birth 2 Three may not be able to continue to offer this service to families in the future without support.

"Parents As Teachers" is a program that is modeled after best practices, is family-centered and family-strengthening. I believe that if we can get behind this initiative and bring this home visiting model to our state of Alaska, while funding it appropriately, we will see positive results. These results could be obtained within a fairly short time-span and with cost-effectiveness, quite possibly acting as the catalyst in moving our state toward reducing the incidence of child abuse and neglect.

Thank you for your consideration, passion and hard work on this initiative. If you have any questions, comments, or need further information, please don't hesitate to call me.

Respectfully,

Subject: Letter of Support

Hi, my name is Mary Jane Kasayulie. I am a former PAT teacher and a former mom of a child that was in PAT. I would fully support the PAT program. I am a firm believer in the PAT program. I have a daughter and my family benefited from the program. I have been working in Early Childhood Program for most of my career and I believe earlier the interventions the more a child can benefit from any schooling because it is the foundation of a childs learning skills.

I know work for the Infant Learning Program here in Dillingham and I know that it is making a difference in children's lives. I know that I t also helps parents understand the importance of what more their children can have. Being from a small community they don't have all the programs at their grasp and to bring out Parents As Teacher educators it would make it a lot better. Teach young as the baby in the mother womb. As early childhood educators I know we can make a difference in a child. One think I look at and let parent know if deal with the issues young and help make brighter children. As children get older they have issues with being embarrassed of being in a program but when they are young, they are just happy that someone wants to play with them.

Thank you,

Mary Jane Kasayulie

Subject: House Bill 69
Importance: High
Follow Up Flag: Follow up
Flag Status: Flagged

Dear Ms. Fairclough,

I have grave concerns about this HB69...even though it is supposed to be a "volunteer"
situation, too often it is the first step into a mandatory situation.

I don't believe that the government needs to decide what is best for my child and I REFUSE to have
any government official step foot in my home, voluntarily or for any other reason. Government has no right to enter
our home without cause (ie: crime committed) and if this bill passes, there will be all kinds of lawsuits when you decide to make it a mandatory program which we all know that this is where it is headed!

It is time for government to STEP back from interfering with families and the choices they make.
This is just another example of Government overreaching into our lives. This is beyond the scope of your reason for being in Juneau and if you pass this, I will do everything in my power to make sure you do NOT go back for another term! Trust me, you should know how independent Alaskans are and how we detest governmental interference in our life and our choices. If you want to commit political suicide, then go ahead and pass it.....there are too many of us that care too much to just let this slide. We send you to Juneau to REPRESENT us, not to DICTATE to us!

I recognize that the Dept. of Education would love to do away with home-educators and this is the first step to try and trample more of our Constitutional choice of parents choosing what is best for his/her child. With Obama as president, we are sliding faster and faster toward Socialism and Communism and this is one of those first steps toward that end.

This country was founded as a REPUBLIC which has to do with governing by law, not a government interfering in
our lives. If you don't understand how a Republic works, then you don't need to be in Juneau representing
Alaskans.

I not only ask this HB69 be voted down if it comes up for a vote, but I PLEAD with you to vote NO on it.
It sets up a very dangerous precedent and its time to stop it NOW!

Please respond.

Sincerely,
Rod Perry
Karen Perry

Subject: HB 59 & 69

Honorable Representative Keller,
I am writing to you to request that you consider opposing House Bills 59 & 69. These two bills greatly undermine the integrity of the home by restricting the autonomy and authority of the parent's rights to both educate themselves and their children alike. Both of these bills reflect the growing belief that the government and/or the experts know what is best for the family and especially for children. House Bill 69 states, "a parent is a child's first and most influential teacher" if this is the truth upon which this bill is based then I implore you to vehemently oppose this bill by voting against it. Protect the rights of parents to raise, train, and direct their children's education without the interference of overbearing government unlike many European nations are now experiencing. I am pasting to this email an article from parentalrights.org reporting on Belgium's educational system for they, too, adapted a similar policy which has now led to the termination of children up to one year of age if found to have any diminished quality of life; all without parental consent. Is the right to kill our children really the mark of progress to a better society as this article states or is it barbarism pure and simple? This all began with government reaching it's unrestrained arm into the educational system under the guise of government, not parents, knowing what is best for themselves and their children. I strongly encourage you to read carefully the content of this article then vote against Bills 59 & 69 for passing these bills will only place our state and our country one step closer to the realities that Belgian parents face today.
Respectfully,
Pauline LaForest

Watching Out for Her Little Ones
Belgium and the UN Convention on the Rights of the Child

Winter is finally upon us, ushering in the joys of the holidays and, at least for most of the country, the arrival of cold weather. As the temperature falls and the days get shorter, Moms and Dads brace themselves for the first signs of inevitable winter sicknesses: everything from a simple cough and cold to wheezing, strep, and the dreaded stomach flu. For many Americans, the solution to these illnesses is a simple medication, or

perhaps vaccination in certain cases, but the choice of proper treatment is left to the parents.

Now imagine a place where the government threatens parents with fines, or even jail time, if they refuse to vaccinate their children - all in the name of "watching out" for the best interests of "its" children. Imagine a country that permits doctors to terminate the lives of "deficient" children up to a year old, even without parental consent, for the sake of "a better society". To find such a place, you need look no further than the nation of Belgium.

This Won't Hurt a Bit . . .

In March 2008, Belgium made international headlines when it sentenced two sets of Belgian parents to five months in prison, and fined them 4,100 euros ($8,000).[1] The crime? Failing to vaccinate their children against polio. The government, hiding behind privacy laws, declined to comment on why the parents had refused the vaccine in the first place, or how long a reprieve they had been given in which to comply before going to jail.[2]

Unlike the United States, which allows most parents to refuse vaccinations based on religious or philosophical objections, Belgian parents can only opt-out of vaccinations if they can prove that their child might have a bad physical reaction to the vaccine.[3] In the absence of such proof, Belgian parents have no choice but to either consent to vaccinations, or accept the criminal punishments that accompany refusal.

Monitoring Their Education

According to the United Nations, Belgium has the best education system among all developed nations.[4] The Belgian government is also deeply involved in education. Parents can place their children in community schools, or in public or private schools.[5] Unlike their American counterparts, however, Belgium's "private schools" are not strictly run by private individuals, but receive subsidies from the government, along with significant oversight from national and local education ministries.[6] All schools - even within the home - are required to teach children "respect for human rights and fundamental freedoms and the cultural values of the child and others," under Article 29 of the UN Convention on the Rights of the Child.[7] Public, private, and home schools are all inspected by the government to insure compliance, and disobedience could result in the children being placed in a school of the government's choosing.[8]

Unfortunately, Belgians are discovering too late that it is difficult to rein in the government once it gains power in all schools. In September 2006, the town of Merchtem banned all persons in local schools from speaking French, even though the town is only nine miles from Brussels, a French-speaking metropolis.[9] Anyone caught speaking anything other than Dutch on school premises - even parents picking up their children - is subject to reprimands.[10] Parents are not even allowed to have parents' meetings in their native language, but must use an interpreter instead.[11]

In 2008, the town of Liedekerke - also near Brussels - followed suit by banning French-speaking children from holiday outings.[12] According to Marc Mertens, secretary of Liedekerke's town council, public outings should have "a Dutch character," and monitors should be able to "refuse children who 'disturb' the outings." Of course, Mr. Mertens said, smiling, "one can understand 'disturb' in different ways."[13]

Building a Better Society

The Belgian government's authority over the health and education of its children is deemed by many as a mark of progress toward a "better society" where children's rights are properly recognized and protected. Those that satisfy the government's standards live in peace. For the rest, there is no peace, and sometimes, they are not even allowed to live.

Since 2002, Belgium has allowed doctors to terminate the lives of infants under the age of 12 months if they feel the baby is somehow disabled or deficient, and is likely to suffer in life as a result.[14] More than half of the Belgian babies who die before they are a year old are killed by deliberate medical intervention.[15] In 16% of cases, parental consent was not even considered.[16] To put these numbers in perspective, the CIA World Fact Book estimates that roughly 106,000 babies are born in Belgium each year.[17] Even using conservative estimates of Belgium's rate of assisted-suicide in infants, one can estimate that some 470 children will die before they celebrate their first birthday. Of these 470, more than 200 will die not from natural causes, but from direct medical intervention. Forty (40) of them will die regardless of their parents' wishes, objections, or pleadings. Such a program might produce a "better society," but one is left in horror at the ultimate sacrifice of innocent babies.

Unfortunately, the program has been deemed so "successful" in Belgium that in March 2008, the government began considering legislation that would also make assisted-suicide available to teenagers and younger children who are terminally-ill.[18]

In Belgium's Shadow

Although much of American society still largely resists government control of children and their families, shadows of Belgium's pro-government approach are being cast upon our shores. In November 2007, parents in Prince George's County, Maryland were shocked and outraged when they were ordered to take their children in for shots, or face fines and jail time.[19] "Our goal is to get kids in school, not to put parents in jail," said Glenn Ivey, the county's attorney, "but if parents continue to be recalcitrant, they face up to 10 days in jail and a $50 a day fine."

The drastic measures had parents and physicians up in arms. Dr. William Schaffner of the Vanderbilt University School of Medicine described the county's hard-nosed stance as "grabbing the parents by the collars and saying, 'You must vaccinate your children.'"[20] Dierdre Young, the mother of a high school freshman and junior, agreed: "What good are you going do if you lock up the parents? Then the parents can't feed [their children].

They still can't come to school. They still don't have their shots. So what have you solved?"[21]

Someone in Belgium must have forgotten to ask that question.

Subject: Oppose House Bill 69

Representative Paul Seaton

Please oppose house bill 69 ~ establishing a voluntary parent education home visiting program for children from birth to age five administered by the Department of Education and Early Development. Although this would begin as a voluntary program, it is most likely the first step to a mandatory program. Most parents, not state officials, are best qualified to determine what is best for their children and establishing a parent parent education home visiting program for children from birth to age five administered by the Department of Education and Early Development will be both costly and unnecessary.

Thank you

Dear Representative Paul Seaton,

I am writing to strongly encourage you to oppose HB69 – the Alaska Parents and Teachers Act. While the state of Alaska is facing a tremendous annual budget shortfall of greater than a billion dollars, adding spending for unnecessary and unrequested services is irresponsible. We need to focus on maintaining the infrastructure we have and not expanding the government in the face of unprecedented economic times. The State's fiscal responsibility however, concerning this bill is the least of my concern.

While I agree with helping and improving the lives of our children in any way we can, I believe that this bill, if passed, will have frightening unintended consequences. What starts out as voluntary, history has proven to often become mandatory down the road. I see no provisions to protect parents from potential abuses of the power given to the State. Consider the following questions:

- Who determines what "school ready" means? A child who is highly active may not be considered school ready until he/she is "calmed down" through the use of controversial drugs such as Ritalin. Do parents lose all choice in matters like this if the case worker determines it is necessary? And if parents trump the "professional decision" what kind of repercussions might they experience if a type of vendetta attitude arises in the case worker?

-There are many different philosophies on raising and teaching children – just look at all the books written on the subject. Which one is correct? Who determines this – the case worker or the parent?

-Consider the possibility of personality conflicts between parents and case workers. What protections are there in this bill for parents from State abuses?

-Can a parent cancel the visits at any time without repercussions?

-HB 69 cites "a reduction in the incidence of child abuse and neglect". Does this mean that parents who voluntarily participate in the program are then under investigation for child abuse and/or neglect? To answer "no" to this is not credible – the statement implies that it is true.

On the surface HB 69 looks wonderful, but in truth it opens the door for a number of possible abuses with no provisions to protect the parents. Additionally, for this to become an acceptable bill there would have to be language stating that this bill cannot and will never be amended from a "voluntary" program to a mandatory program".

Please keep all of this in mind as you make your decision on this matter. I urge you to oppose this bill in its current form.

Sincerely,
Aaron Lorentzen

Dear Representative Paul Seaton,

I am writing to strongly encourage you to oppose HB69 – the Alaska Parents and Teachers Act. While the state of Alaska is facing a tremendous annual budget shortfall of greater than a billion dollars, adding spending for unnecessary and unrequested services is irresponsible. We need to focus on maintaining the infrastructure we have and not expanding the government in the face of unprecedented economic times. The State's fiscal responsibility however, concerning this bill is the least of my concern.

While I agree with helping and improving the lives of our children in any way we can, I believe that this bill, if passed, will have frightening unintended consequences. What starts out as voluntary, history has proven to often become mandatory down the road. I see no provisions to protect parents from potential abuses of the power given to the State. Consider the following questions:

- Who determines what "school ready" means? A child who is highly active may not be considered school ready until he/she is "calmed down" through the use of controversial drugs such as Ritalin. Do parents lose all choice in matters like this if the case worker determines it is necessary? And if parents trump the "professional decision" what kind of repercussions might they experience if a type of vendetta attitude arises in the case worker?

-There are many different philosophies on raising and teaching children – just look at all the books written on the subject. Which one is correct? Who determines this – the case worker or the parent?

-Consider the possibility of personality conflicts between parents and case workers. What protections are there in this bill for parents from State abuses?

-Can a parent cancel the visits at any time without repercussions?

-HB 69 cites "a reduction in the incidence of child abuse and neglect". Does this mean that parents who voluntarily participates in the program are then under investigation for child abuse and/or neglect? To answer "no" to this is not credible – the statement implies that it is true.

On the surface HB 69 looks wonderful, but in truth it opens the door for a number of possible abuses with no provisions to protect the parents. Additionally, for this to become an acceptable bill there would have to be language stating that this bill cannot and will never be amended from a "voluntary" program to a mandatory program".

Dear House Education Committee Members and Representative Fairclough (my representative),

I am writing to express my thoughts about House Bill 69 that is up for vote soon. I am really curious why you feel the need to implement such a program, especially when our economy is troubled and budget cuts are being made all over the place! There are much more needed programs that are being cut or reduced because of our current financial state. What exactly is your purpose in starting such a program? Parents have taken care of and been responsible for their children since the beginning of time and I don't know why you feel that government money should be spent on a program that would send someone into homes to monitor families that choose to participate. The family unit is something that doesn't require government supervision or checks unless there are significant red flags! Our family has actually been able to experience both sides of this coin. Growing up we were a foster home and took in children who were taken from their parents by the state for many various reasons. It was quite an education and taught me a lot. After I was married and had my own children, one of them fell and broke his leg at a young age. Our ER doc, who wasn't even familiar with his medical history, accused us on the spot of child abuse and called us in. What a journey that was! They almost took our sick son away from us to put him with strangers who didn't know anything about his medical history based on what one doctor who had never even laid eyes on him before said. I feel I have a unique perspective because I've seen both sides of the process. There are parents who abuse and don't care for their children, yes! Should we turn a blind eye, no! But, there are also parents who love their children and do what they feel is best for their children and I believe that most parents fall into this category. It was a very traumatic experience that we walked through and thankfully the case was closed with no findings, but it has forever changed me. In a country that is supposed to be "free" how can you justify sending someone into a family's home to "monitor" their children at such a young age. There are so many variables that can make each child present so differently, yet you must admit that the overwhelming majority of parents really is going to do the best that they know how for their children! Why is an employee of the state (who may or may not even have children of their own - which by the way will teach you a lot more about parenting than any textbooks) be more justified to decide what's right for a child than their own parents who are with them every single day? I feel strongly that spending money that we don't have on a program that isn't necessary is a big waste! Thank you for your time and attention and for your service to our state and our country!

Sincerely,
Christine Garrison

Subject: HB 69 -- opposed

Dear Representative --

As a parent and strong supporter of family and education, I am opposed to HB 69 - "Alaska Parents as Teachers Act."

We are a family in the Chugiak area and as such I would like my opinion to be known: that although some may mean well with the HB 69, I feel that it is an intrusion on parental rights. Even though it is a voluntary program in this initial form, I believe that it would only be a matter of time before it became a requirement for parents. There seem to be several programs that are currently available for parents who have a concern about the welfare of their child's mental or physical well being at the early stages of growth. I think that these options should be strengthened and made *readily available* to folks who have a concern for the child.

Sincerely,
Lillian Person

Alaska--Calls Needed to Oppose Government Nanny Bill

Dear HSLDA Members and Friends:

Do you want the government to become your child's nanny?

Your calls are needed to stop House Bill 69, the "Alaska Parents as Teachers Act," which would establish a parent education home visiting program for children from birth to age 5. These visits would be conducted by the Alaska Department of Education and Early Development at least once every month. The program would involve monthly parent group meetings and annual developmental and health screenings of the children. Although this would begin as a voluntary program, it is most likely the first step to a mandatory program.

HSLDA believes that parents, not state bureaucrats, are best qualified to determine what is best for their individual children. In the absence of evidence of abuse or neglect, state officials should not interfere with the upbringing of children by their parents.

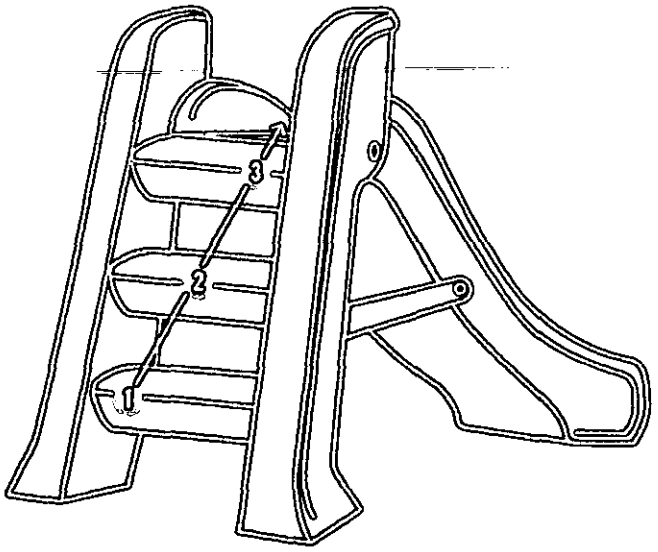
A Summarized Economic Impact Report on Early Education and Child Care Services in Alaska

step up early ed & child care

Based on the McDowell Group Report *July 2006*

PREPARED FOR:
SYSTEM FOR EARLY EDUCATION DEVELOPMENT (SEED)
UNIVERSITY OF ALASKA SOUTHEAST



5060 ⟹ Full Report Available at www.mcdowellgroup.net

step up early ed & child care

STUDY FINDINGS ARE DETAILED ON THE FOLLOWING PAGES:

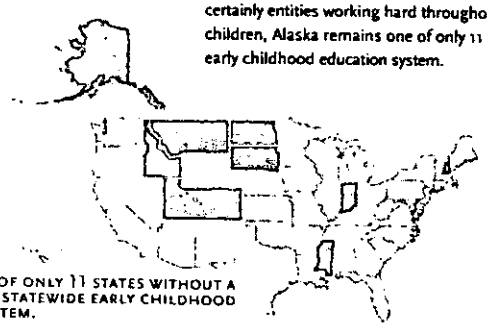
Demographics	Pg. 2
The Economic Impact on Alaska	Pg. 3
The Early Learning and Child Care Sector	Pg. 5
Impact on Alaska Families	Pg. 7
Alaskans Support Funding	Pg. 9

Why should you care about the availability of quality early education and child care in Alaska? Because stepping up early education for our children is critical for all of us.

LET US STEP YOU THROUGH THE FACTS.

1. Early childhood education and child care play a critical and measurable role in Alaska's economy
2. The availability of quality, affordable child care remains a challenge for many Alaska families
3. Alaskans across the state place a high priority on state funding for early education and child care

Until recently, there was no data specific to Alaska to demonstrate how the welfare of our youngest community members impacts the entire state – both in the short term and long term. But thanks to this study commissioned by the System for Early Education Development (SEED) and completed in July 2006 by McDowell Group, there is now local information to combine with the knowledge learned from national studies to provide an accurate baseline. What the statistics demonstrate is that Alaska lags behind much of the country in providing quality early education and child care to our residents. And while there are certainly entities working hard throughout Alaska to provide quality care for our children, Alaska remains one of only 11 states without a state-funded, statewide early childhood education system.



ALASKA IS ONE OF ONLY 11 STATES WITHOUT A STATE-FUNDED, STATEWIDE EARLY CHILDHOOD EDUCATION SYSTEM.

"I believe that high quality early childhood programs are critically important for the health and well-being of our community, and they are especially important for the health and well-being of our children. ... What can never be forgotten or taken lightly is that these programs provide a proven economic benefit to the organizations they serve. It is important that we recognize that. Research has shown that organizations who offer these services on-site for their employees retain these employees for an additional five years. The value of keeping these employees for this extended amount of time is immeasurable, and as a leader of an organization with more than 4,000 employees, I can tell you that recruiting talent is expensive, difficult and time consuming. Keeping our talent in the first place is without a doubt the best way to ensure we can sustain and live out our mission at Providence, and I'm grateful for the role our Center for Child Development plays in doing that each day."

AL PARRISH, CHIEF EXECUTIVE
PROVIDENCE HEALTH SYSTEM IN ALASKA

SCOPE OF THE ALASKA STUDY

The purpose of this study is to measure the economic impacts of the early education and child care sector on Alaska's economy. This study focuses on education and care of children under six years of age. Economic impacts are measured in terms of employment, spending on child care services, and the role that child care services play in making it possible for Alaska families to earn income.

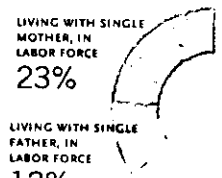
This study also examines research conducted elsewhere in the U.S. that measures the broader societal economic benefits stemming from quality child care services.

A key component of this project was a telephone survey of 725 randomly selected households. The primary purpose of the phone survey was to collect information on the types of child care services Alaska families use and how much money households spend on child care services. The survey also collected information on Alaskans' attitudes about the importance of state government funding for early education and child care services.

ALASKA WORKING PARENT DEMOGRAPHICS

To best understand the data, it is critical to first understand the scope of the population we are considering. In 2004, Alaska's population included 62,913 children under six years of age, according to the Alaska Department of Labor and Workforce Development (DOLWD). Of these children, approximately 63 percent (39,400 children) were living in households where all available parents were in the labor force, whether families were dual-income or single-parents. These children resided in 29,400 Alaska households, all of which were potentially in need of child care services.

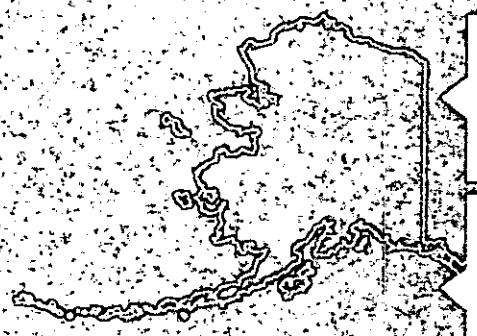
Detailed look at the 39,400 children under the age of six, where all available parents are in the workforce



step 1 EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

THE ECONOMIC IMPACT ON ALASKA

Mounting evidence shows that investment in quality early learning and child care is critical to building and maintaining a viable state economy. The economic impacts of the early education and child care sector includes jobs for thousands of Alaskans, millions of dollars in spending by households and governments, and indirect contributions of Alaska's resident labor force and family income.



JOBS
DIRECT & INDIRECT:
7,400 in child care workforce

CONTRIBUTION TO THE WORKFORCE:
29,400 Alaskans can join the workforce because they have child care

WAGES
DIRECT & INDIRECT:
$124 million in child care workforce payroll

CONTRIBUTION OF HOUSEHOLD INCOME:
$850 million in annual wages paid to working families with child care

IMMEDIATE IMPACT OF QUALITY EARLY EDUCATION AND CHILD CARE

Child care providers make it possible for **29,400** Alaskans to enter the labor force (one adult for each household with children under age 13 in a case where all parents are in the labor force). The 29,400 Alaskans that are in the workforce because child care services are available to them, account for 9.5 percent of the Alaska resident workforce. If these working parents also account for 9.5 percent of all Alaska resident wages, their total annual wages would be just under $850 million. This translates to an average of $28,920 per family in additional Alaska annual income, undeniably made possible by child care services, is equal to approximately 20 percent of Alaska's mean family income in 2003.

Other data suggests a similar household income impact related to adding a second wage earner. In 2004, median family income for families with one wage earner was $33,709. Median family income for families with two wage earners was $77,159 - a difference of $33,972. This analysis assumes that the typical parent who is in the labor force because child care services are available to him or her earns the same wages as the average Alaska worker. This may or may not be true given the demographics of families with young children. Nevertheless, it is clear that the availability of child care has major implications on income for Alaska residents in general, and on family household income in particular.

step 1 →

"Investment in early childhood development programs brings a real (that is, inflation-adjusted) public return of 12%, and a real total return, public and private, of 16%. We are unaware of any other economic development effort that has such a public return ...."

ART ROLNICK
SVP AND DIRECTOR OF RESEARCH
FEDERAL RESERVE BANK OF MINNEAPOLIS

LONG-TERM ECONOMIC IMPACTS OF QUALITY EARLY EDUCATION & CHILD CARE

A host of studies have been done to track the long-term economic impact of high quality early child care development on society. Though none of these studies focuses on Alaska, the implications for Alaska are relevant. The results of these studies have shown conclusively that although investment is required to provide quality early care to infants, toddlers and youths, the rate of return far exceeds that initial investment.

The largest benefit provided by quality early care was increased earnings capacity projected from higher educational attainment, along with higher taxes paid from better paying jobs. Other benefits are lower criminal justice system costs, reduced welfare costs, savings for crime victims, and savings on school remedial services budgets. The results of several studies are highlighted below.

LONG-TERM BENEFITS OF EARLY EDUCATION AND CHILD CARE

29% higher **high school graduation rates**

20% higher **college attendance**

70% lower crime incidence

20% lower welfare dependence

$143,000 **additional earned income per capita, resulting from better employment**

Studies also note that expenditures on education that are focused on K-12 may be misplaced given that brains develop rapidly in the early years (0-4), then develop at a much slower pace from age 4 through 18. The implication is that the earlier the investment on early education, the higher the return on investment will be.

step 1 → EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

THE EARLY LEARNING AND CHILD CARE SECTOR

When understanding the economic impact of early education and child care, the actual workforce in this field is often overlooked. Yet it has been found that at least 6,500 Alaskans participate in the child care sector workforce.

The estimate of 6,500 participants is derived from a variety of sources (as described in the full McDowell Group report). It must be understood that this is a conservative estimate, however. It does not include an unknown number of at-home providers who care for four or fewer unrelated children, or any number of related children, and therefore are not required to be licensed.

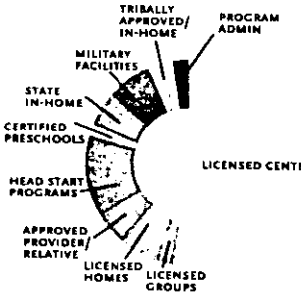
Yet, even without these added positions, the size of this workforce is comparable to other significant industries in Alaska. For example, the residential and non-residential building construction sector employed an average of 6,000 workers in Alaska in 2004, and Alaska's air transportation sector employed an average of 6,400 workers that same year.

SIZE OF COMPARABLE INDUSTRIES IN ALASKA

6,500 Workers in child care

6,400 Workers in air transportation sector

6,000 Workers in residential and nonresidential building construction



DETAILED LOOK AT THE CHILD CARE AND EARLY EDUCATION WORKFORCE IN ALASKA

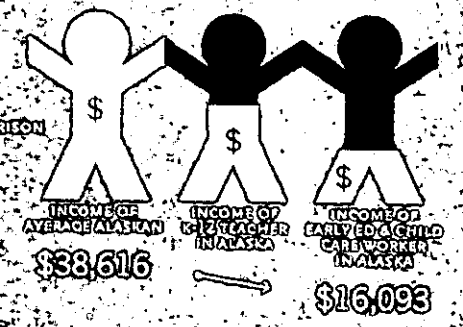
"As Executive Dean of the College of Rural and Community Development, I understand the importance of early childhood education. We have strong partnerships with the State of Alaska, tribal entities and Head Start organizations to train students who will serve as providers, educators and role models for their communities. It is impressive to see the impact early care and education has on Alaska's economy."

BERNICE JOSEPH,
EXECUTIVE DEAN
UNIVERSITY OF ALASKA FAIRBANKS
COLLEGE OF RURAL AND
COMMUNITY DEVELOPMENT

Not only is Alaska's early education and child care sector significant in size, it features a wide variety of service providers. It includes any program providing care for children from birth to age six. Examples of these programs include center-based child care, family child care, Head Start, Early Head Start, private and public preschools, Montessori programs, and pre-kindergarten services.

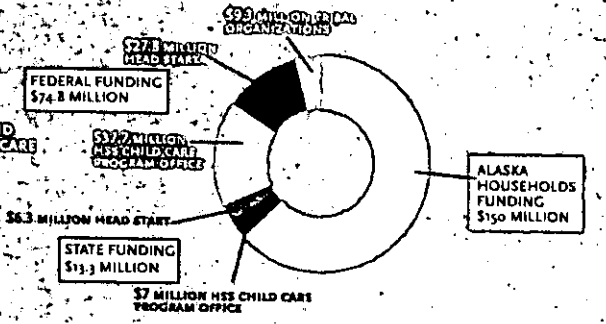
Despite the prominence of individuals employed in this workforce, there is a very low correlation in compensation. DOLWD payroll data indicated that the average monthly wage of an individual employed in this sector was $1,342. This is well below the average for all sectors of the Alaska economy; the average monthly wage in Alaska for this same time period was $3,218 – nearly three times that amount.

To put this in further context, it has been found that providers of early education and child care earn less than half of what the average elementary school teacher earns, even though the difference in age of those they teach may be less than one year.



CHILD CARE SERVICES REVENUE AND FUNDING

There are two sources of spending on early education and child care services – government funding and spending by parents on child care services. Based on the analysis of the McDowell Group report, Alaska households may be spending $150 million annually on child care services for children under six years of age. In comparison, government spending on child care totals $88 million in Alaska, with nearly $75 million of that contribution coming from federal funding. Together, approximately $240 million is spent in Alaska on child care services for young children.



step 2

THE AVAILABILITY OF QUALITY, AFFORDABLE CHILD CARE REMAINS A CHALLENGE FOR MANY ALASKA FAMILIES

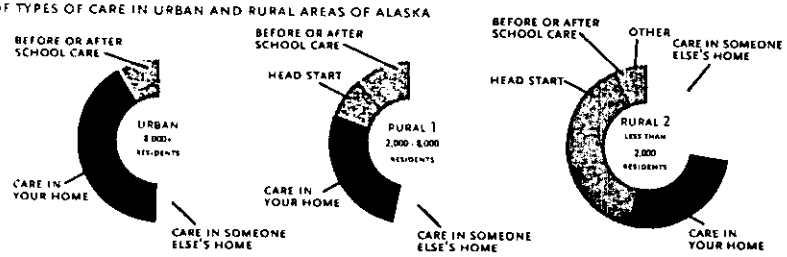
"I emphasize strongly how important it is to give the children the best start ... to have the children have a good early learning experience."

IMPACT ON ALASKA FAMILIES

To better understand how the early education & child care sector directly impacts families, 725 Alaska households were asked about their use of child care services as a part of this study's telephone survey. The findings of this study are understood to be the first set of data on this topic directly applicable to Alaska.

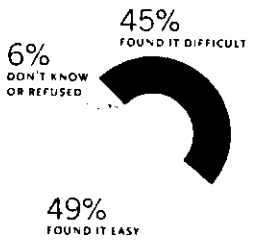
The survey sample included 323 households with children under six years of age. The sample included households from urban Alaska, defined as all communities with more than 8,000 residents. The sample also included surveys from households in communities with between 2,000 and 8,000 residents (labeled "Rural I"), as well as surveys from households in communities with fewer than 2,000 residents (labeled "Rural II"). In conducting statewide analysis of the survey results, data from these areas of the state were weighted to reflect their actual proportion of the state's population.

COMPARISON OF TYPES OF CARE IN URBAN AND RURAL AREAS OF ALASKA



Approximately 58 percent of children in the surveyed households received child care services of some type during the month of January 2006. Among those children receiving child care services, 49 percent were in a preschool or child care center. Just under one-third were being cared for in someone else's home, with over one-quarter receiving care in their own home. Eight percent were in a Head Start program. This total adds up to more than 100 percent, as some children received care in more than one setting.

FINDING ACCEPTABLE CHILD CARE



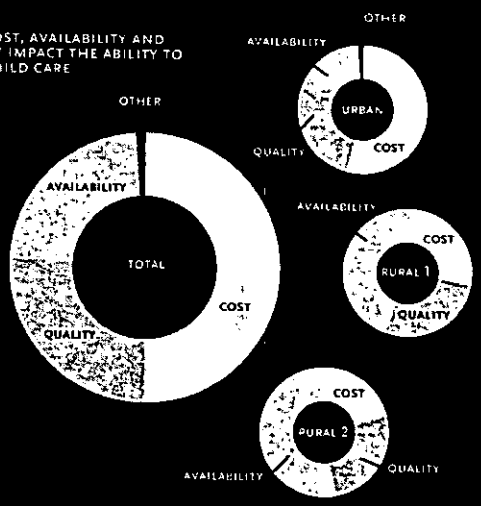
FINDING ACCEPTABLE CHILD CARE

This study also found that 45 percent of Alaska households with children under six in a child care situation found it difficult or very difficult to find acceptable child care. About the same percentage (49 percent) found it either easy or very easy to find acceptable child care.

Finding quality early education and child care programs proved to be an issue both in rural and urban areas of the state.

36% of households with children under the age of six reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment, or had in some way restricted the number of hours that they could work.

HOW COST, AVAILABILITY AND QUALITY IMPACT THE ABILITY TO FIND CHILD CARE



FACTORS AFFECTING ABILITY TO FIND ACCEPTABLE CHILD CARE

Among households in Alaska's smallest communities (the "Rural II" areas, or communities under 2,000 residents), 26 percent reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment, or had in some way restricted the number of hours that they could work. The difference between rural and urban in this regard is probably not due to better child care service in rural areas, but rather to the fact that rural areas have fewer employment opportunities available. Among those households where cost, quality or availability of child care services have been a constraint, cost was a major factor for 78 percent of households. Availability had a major impact on 56 percent of households, and quality on 48 percent.

COST MOST OFTEN CITED

When asked which factor had the greatest impact on their ability to find acceptable child care, cost was most often cited. Half (50 percent) indicated that cost had the greatest impact on their ability to find acceptable child care, while 26 percent cited quality, and 23 percent cited availability.

MONTHLY COST OF FULL-TIME CHILD CARE

Cost is apparently more of an issue in urban Alaska, while availability is more of an issue in rural Alaska. Just over half of urban households indicated that cost had the greatest impact, compared to approximately one quarter of those in rural areas. Conversely, within rural areas, approximately half the households reported that availability had the greatest impact, compared to only 19 percent of urban areas.

COST IS A LARGE ISSUE

It is not a surprise that cost is a significant issue. The cost of full-time child care in Alaska ranges from $400 to $900 per month, depending on the age of the child and the location of the care. Given these figures, it was perhaps surprising to find that just one in seven Alaska households with children in child care services received some form of child care assistance.

Just 1 in 7 Alaska households with children under six in child care services received financial assistance for child care

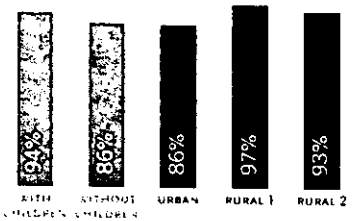
step 3 EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

9 of 10 alaskans support funding

The telephone survey described earlier also asked all households a series of questions about state funding support for early learning and child care services in Alaska. Results showed overwhelming support for the funding of early education and child care.

Nearly nine out of ten Alaska residents (87 percent) think it is important or very important for state government to provide financial support for early education and child care. Among residents with children under six years of age, 94 percent think state support is important or very important. Even among residents without young children, 86 percent think state financial support is important or very important. Further, urban and rural residents alike feel it is important to provide funding for early education and child care.

THOSE STATING IT IS "IMPORTANT" OR "VERY IMPORTANT" FOR STATE GOVERNMENT TO PROVIDE FINANCIAL SUPPORT.



audiences who expressed above average support for early education and child care

Alaskans were also asked if the state should give early learning and child care high, medium or low funding priority. Two-thirds (66%) feel it should have high priority. A variety of population subgroups were more likely to give it a high priority. They include:

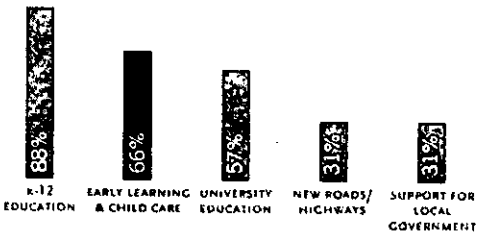
- 76% households with children under six
- 72% female residents
- 77% residents aged 35 to 44
- 76% low income residents <$25,000
- 73% high income residents >$100,000

"The data shows what I have also personally experienced – that the issue of quality early education and child care is one of the most important social issues facing us in Alaska today."

JIM CALVIN, MCDOWELL GROUP

alaskans place priority on funding early education and child care

Alaskans also give early learning a high priority for state funding, when compared to other state-funded programs. Among the categories of spending presented to survey respondents, only K-12 education was rated as a high priority more often.



THE RELATIVE IMPORTANCE OF EARLY EDUCATION AND CHILD CARE

To press this matter further, a third question regarding Alaskans' perception of the importance of funding for early learning and child care focused on relative importance. More than three-quarters of Alaska residents feel that early learning and child care are more important to fund than support for local government or construction of new roads and highways. Almost two-thirds (63 percent) feel that funding for early learning and child care is more important than funding for university education. Among the various programs, only K-12 education is viewed as more important than early learning and child care.

report conclusion - next steps

This series of questions regarding perceived importance of state funding for early education and child care services in Alaska indicate that Alaskans place a high priority on funding for education in Alaska, with a high interest in early education and child care.

end notes

This piece serves as a condensed summary of the July 2006 McDowell report titled "Economic Impact of Early Education and Child Care Services in Alaska." This complete study was commissioned and prepared for the System for Early Education Development (SEED), based at the University of Alaska Southeast. This publication is funded by a grant from the U.S. Department of Education, Fund for the Improvement of Education.

You may download a full copy of the report at http://seed.alaska.edu or request the full report from the SEED administrator at 907.796.6414.

We thank you for taking the time to review this report, which contains critical data regarding the future of Alaska's children and our economy.

The McDowell Group study team would like to acknowledge the invaluable assistance provided by the Project Steering Committee. The Committee included Mary Lorence *(Manager, Alaska Child Care Programs, Department of Health and Social Services)*, Joy Lyon *(Executive Director, Association for the Education of Young Children, Southeast Alaska)*, Mary Lou Madden *(Madden Associates)*, and Carol Prentice *(SEED Program Manager)*. In addition, SEED would like to recognize the contribution made by SEED Council members Candace Winkler and Cindy Harrington.

SEED also appreciates the collaboration with Alaska's *Ready to Read, Ready to Learn Task Force*, 28 Alaskan leaders dedicated to improving the literacy and learning skills of Alaska's pre-kindergarteners.

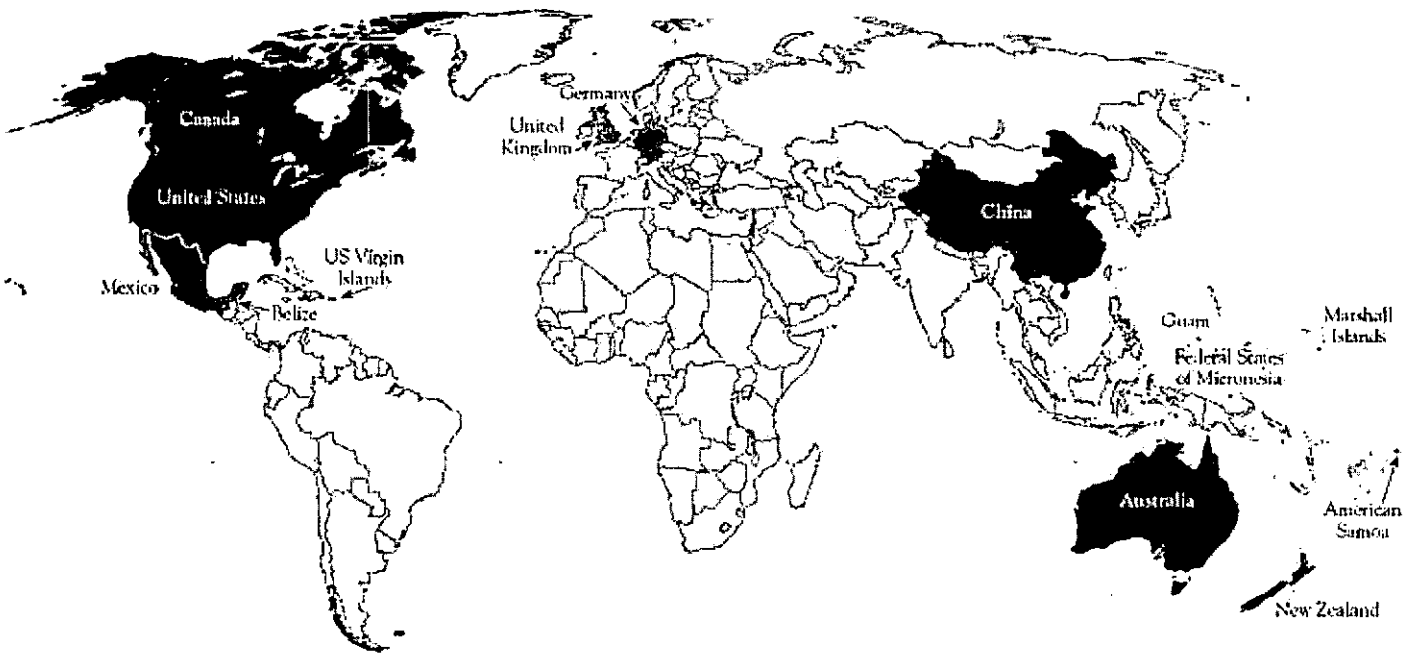
Parents as Teachers Programs Around the World



Parents as Teachers

Parents as Teachers

PARENTS AS TEACHERS

4 Components

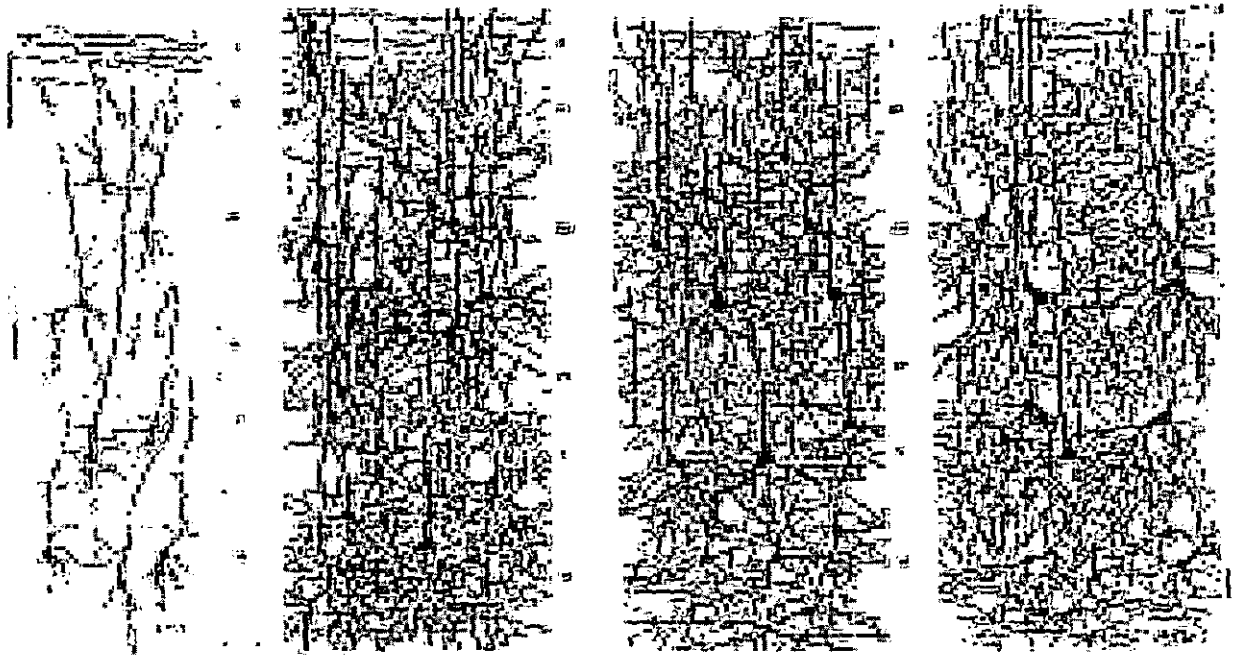
- Personal visits
- Parent group meetings
- Screenings
- Resource referrals

5071

Mission: To provide the information, support and encouragement parents need to help their children develop optimally during the crucial early years of life.

Parents as Teachers

Development of the Human Cerebral Cortex



Newborn 2 years 4 years 6 years

Parents as Teachers

5073

Parents as Teachers Program Goals

1. Increase parent knowledge of early childhood development and improve parenting practices.
2. Provide early detection of developmental delays and health issues.
3. Prevent child abuse and neglect.
4. Increase children's school readiness and school success.

Proven Outcomes for Parents

- Increased knowledge of child development and child rearing practices
- Engage in more language and literacy promoting activities with their children
- Increased involvement in children's schooling
- PAT families have fewer documented cases of child abuse and neglect

Proven Outcomes for Children

- Exhibit higher levels of kindergarten readiness with these gains maintained through the 3rd grade

- Fewer special education and remedial education placements in Kindergarten through 3rd grade

Proven Outcomes for Children Continued

- More likely to display positive social and self help behaviors
- 4 - 5 months ahead in language development on the Preschool Language Scale at age 3

Alaska's Children

- Approximately 65,000 children 0 to 5 years of age
- Nearly half of Alaskan children entering school are unprepared to read or learn
- Among the highest rates of child abuse and neglect, with approximately 50% of reports of harm are for children 0 to 5 years of age
- Highest high school drop out rate in the country

A Call to Action

Ready to Read Task Force

- Provide in the home support to increase engagement of parents in their child's learning

Governor's Summit on Early Learning

- Provide all parents with access to home-based education and support

Alaska Education Plan

- Increase parent involvement

Parents as Teachers

Parents as Teachers

Parents as Teachers: An Evidence-Based Home Visiting Program

A range of research studies conducted and supported through state governments, independent school districts, private foundations, universities and research organizations, demonstrate that Parents as Teachers makes a real difference in the lives of parents and their children.

Research Highlights

4 Independent Randomized Controlled Trials (RCT)
6 published reports; 5 of them peer-reviewed

Length of participation in PAT was a significant predictor of children's third grade achievement.

"...the PAT program improved parenting practices in ways that promote both school readiness and subsequent academic achievement." (p.116).

From: Zigler, E., Pfannenstiel, J.C., & Seitz, V. (2008). The Parents as Teachers program and school success: A replication and extension. *Journal of Primary Prevention*, 29, 103-120.

PAT parents were more involved in children's school activities and engaged their children more in home learning activities, especially literacy-related activities.

"...children of parents involved in a PAT program should enter school with 'stronger' readiness skills than their non-PAT peers."

From: Albritton, S., Klotz, J., & Roberson, T. (2004) The effects of participating in a Parents as Teachers program on parental involvement in the learning process at school and in the home. *E-Journal of Teaching and Learning in Diverse Settings, 1(2)*, 108-208. http://www.subr.edu/coeducation/ejournal/Albritton%20et%20al.Article.htm.

PAT parents read to their children more often and were more likely to enroll them in preschool, both of which increased school readiness.

"...the PAT program was highly effective in helping impoverished parents prepare their children to enter school."(p.81)

From: Pfannenstiel, J.C., Seitz, V., & Zigler, E. (2002). *Promoting school readiness: The role of the Parents as Teachers program. NHSA Dialog: A Research-to-Practice Journal for the Early Intervention Field, 6, 71-86.*

==========

More details about Parents as Teachers' evidence-based research outcomes from across the U.S.:

Parents as Teachers Helps All Children Enter School Ready to Learn

- 7,710 public school children from a stratified random sample of Missouri districts and schools were examined at kindergarten entry and at the end of third grade. Results showed that participation in Parents as Teachers, together with preschool, not only positively impacts children's school readiness and school achievement scores, but also narrows the achievement gap between children in poverty and those from non-poverty households. With at least 2 years of Parents as Teachers combined with a year of preschool, 82% of poor children were ready for school at kindergarten entry—a level identical to nonpoverty children with no Parents as Teachers or preschool.[i] A reanalysis using a subset of the above data strongly confirmed these findings.[ii]
- Parents as Teachers children showed better school readiness at the start of kindergarten, higher reading and math readiness at the end of kindergarten, higher kindergarten grades, and fewer remedial education placements in first grade.[iii]
- Children in high poverty schools who participated in Parents as Teachers were equivalent to those of children at low poverty schools with no preschool enrichment (Parents as Teachers or preschool). In addition, when children attending high poverty schools participated in both Parents as Teachers and preschool, their scores were

significantly higher than those of children in low poverty schools with no preschool enrichment (Parents as Teachers or preschool).[iv]

- 87% of Native American children served by Parents as Teachers through its Baby FACE program were ready for preschool by age 3.[v]

Parents as Teachers Supports Later School Achievement

- The aforementioned 2007 study of 7,710 Missouri public school children also showed that length of participation in PAT was a significant predictor of children's third grade achievement on the Missouri Assessment Program Communication Arts test.[vi]
- PAT children scored significantly higher on standardized measures of reading and math at the end of first grade than did comparison children. In addition, teachers rated PAT children's achievement progress higher than control group children's progress in all areas.[vii]
- PAT children continued to perform better than non-PAT children on standardized tests of reading and math achievement in second grade. Compared to non-PAT children, PAT children required half the rate of remedial and special education placements in third grade.[viii]

Parents as Teachers Prevents Child Abuse

- The U.S. Advisory Board on Child Abuse and Neglect states, "home visiting and center-based programs with a parental focus can help prevent child abuse and neglect."[ix] The Task Force on Community Preventive Services recommends early childhood home visitation as an effective method for preventing child abuse and neglect.[x]
- In a randomized trial, adolescent mothers who received case management and Parents as Teachers were significantly less likely to be subjected to child abuse investigations than control group mothers who received neither case management nor Parents as Teachers.[xi]
- In another randomized trial, adolescent mothers in an urban community who participated in Parents as Teachers scored lower on a child maltreatment precursor scale than mothers in the control group. These adolescent mothers showed greater improvement in knowledge of discipline, showed more positive involvement with children, and organized their home environment in a way more conducive to child development.[xii]
- Parents as Teachers families had fewer documented cases of abuse and neglect in comparison to the Missouri state average.[xiii]

Parents as Teachers Increases Parental Involvement

- Results of a multi-site randomized trial showed that for families with very low income, those who participated in Parents as Teachers were more likely to read aloud to their child and to tell stories, say nursery rhymes, and sing with their child.[xiv]
- A significantly higher proportion of Parents as Teachers parents initiated contacts with teachers and took an active role in their child's schooling. For example, 63% of parents of Parents as Teachers children versus 37% of parents of comparison children requested parent-teacher conferences.[xv]
- Parents as Teachers parents demonstrated high levels of school involvement, which they frequently initiated, and supported their children's learning in the home.[xvi]
- Parents as Teachers parents read more to their children, use more techniques to support book/print concepts, and have more children's books in the home.[xvii]

Parents as Teachers Improves Children's Health and Development Outcomes

- Annual health and developmental screenings is a core component of Parents as Teachers. Of the 200,000 plus children screened in the most recent program year, 13% were identified with possible health/developmental delays and were referred on for additional follow up services. 70% of those referred received follow-up services.[xviii]
- Children participating in Parents as Teachers were much more likely to be fully immunized for their given age, and were less likely to be treated for an injury in the previous year.[xix]
- At age 3, Parents as Teachers children performed significantly above national norms on a measure of school-related achievement, despite the fact that the sample was over-represented on all traditional characteristics of risk. More than one-half of the children with observed developmental delays overcame these delays by age 3.[xx]

PAT Alaska

A Special Feature with Information on Parents as Teachers (PAT) Involvement and Early Childhood Development

Update

As a research-based parent education and family support program developed over 20 years ago, evaluation has been integral to the success of the Parents as Teachers program since its inception. The first evaluation of PAT was funded through a contract from the Missouri Department of Elementary and Secondary Education. Subsequent studies have been supported by the State of Missouri and other states, independent school districts, and private foundations. A few studies have been carried out by individual researchers. Overall, evaluations of PAT show these general outcomes for families:

OUTCOME: *PAT Parents are more involved in their children's schooling.*

PAT parents demonstrated high levels of school involvement, which they frequently initiated, and supported their children's learning at home. 95% of PAT parents attended special events at their schools, nearly 67% worked as volunteers in the school or classroom monthly, 75% participated in PTA and PTO meeting, and 67% communicated with their child's teachers by phone on average 4 times a year. Most parents (85%) initiated a contact with the school or teacher. 75% of parents always assisted with home activities related to school work.

Phannenstiel, J. Lambson, T. and Yarnell, V. The Parents as Teachers Program.: Longitudinal follow-up to the second wave study. Overland Park, KS: Research and Training Associates, 1996.

Participating parents were more likely to regard their school as responsive to their child's needs than were parents of comparison group children. 53% of PAT parents rated their district as "very responsive", versus 29% of comparison group parents.

Pfannenstiel, J. and Seltzer, D. Evaluation Report: New Parents as Teachers Project Overland Park, KS. Research and Training Associates, 1985; Phannenstiel, J., and Seltzer, D. New Parents as Teachers: Evaluation of an Early Parent Education Program.. Early Childhood Research Quarterly, 4, 1-18, 1989.

A significantly higher proportion of PAT parents initiated contact with teachers and took an active role in their child's schooling. For example, 63% of parents of PAT children versus 37% of parents of comparison children requested parent-teacher conferences.

Pfannenstiel, J. New Parents as Teachers Project: A Follow-Up Investigation. Overland Park, KS: Research & Training Associates, 1989.

More PAT parents attended parent conferences than parents in the comparison group. 9% of parents of PAT kindergartners "always" attended.

O'Brien, T., Garnett, D.M. and Proctor, K. (2002) Impact of the Parents as Teachers Program. Cañon City, CO (Fremont County) School Year 1999-2000. Center for Human Investment Policy, Graduate School of Public Affairs, University of Colorado at Denver

Parents as Teachers

A fun, early learning program for soon-to-be parents and parents with children up to five years of age.

Research Shows:

PATchildren outscored their peers on measures of school readiness and later school achievement.

PAT children were more advanced than other 3 year-olds in language and social development , problem-solving, and other intellectual skills.

PAT children performed better than non-PAT children in elementary school.

PAT parents took a more active role in special education; lower incidence of abuse and neglect.

What We Do:

Personalized home visits with a certified Parent Educator, trained in child development, who is eager to help give their children the best beginning.

Family Play Times where families can learn new things about children parenting and share experiences with other parents.

Regular Developmental Screenings to ensure children's development is on track and to detect possible delays.

A Resource Network that can help parents find services in their community, if needed, that are beyond what PAT can provide.

How to Contact Us:

Melissa Pickle- PAT Alaska State Coordinator at mpickle@ruralcap.com or (907) 865-7345

OUTCOME: *PAT parents engage in more language- and literacy-promoting behaviors with their children.*

PAT is as effective for the lowest-income families as for those with more moderate incomes. Of particular note were the positive effects on parenting behavior and the impacts made on language-and literacy-promoting behaviors for families with very low income. In families with very low income, those who participated in PAT were more likely to read aloud to their child and tell stories, say nursery rhymes, and sing with their child.

Wagner, M. and Spiker, D. Multisite Parents as Teacher Evaluation: Experience and Outcomes for Children and Families, 2001. www.sri.com/policy/cehs/early/pat.html

PAT parents engaged in a wide variety of activities that supported learning in the home. Over 75% of PAT parents reported taking their child to the library regularly, modeling enjoyment of reading and writing several times a week, and giving children the opportunities to purchase or receive books several times a month.

Phannenstiel, J., Lambson, T. and Yarnell, V. The Parents as Teachers Program: Longitudinal follow-up to the second wave study. Overland Park, KS: Research & Training Associates 1996.

OUTCOME: *PAT parents are more knowledgeable about child-rearing practices and child development.*

Parents who received the neuroscience infused *Born to Learn* curriculum showed improvements in parent knowledge (general development and neuroscience knowledge), parenting behavior, and parenting attitudes.

McGilly, K. (2000) Chicago Born to Learn Neuroscience Project: Final Report to Robert R. McCormick Tribune Foundation. St. Louise, MO: Parents as Teachers National Center, Inc.

95% of parents rate PAT as "very special" and over 85% report that they learned to more effectively interact with their child, understand child development more, and spend more time with their children.

Research and Training Associates (2002) BIA Family and Child Education Program: 2001 Report.

OUTCOME: *PAT children score higher on kindergarten readiness tests and on standardized measures of reading, math and language in first through fourth grades.*

PAT children scored significantly higher on standardized measures of reading and math at the end of first grade than did comparison children. Teachers rated PAT children's achievement progress higher than control group children's progress in all areas.

Phannenstiel, J. New Parents as Teachers Project: A Follow-Up Investigation. Overland Park, KS: Research & Training Associates, 1989.

PAT children were rated by their teachers as performing at high levels of proficiency in all areas assessed. When compared to their grade-level peers, 91% of PAT children were rated by their teachers as equal to or better than average. Overall, the relative level of achievement children demonstrated at age three on completion of the PAT program was maintained at the end of the first/second grade.

Phannenstiel, J. , Lambson, T. and Yarnell, V. The Parents as Teachers Program: Longitudinal follow-up to the second-wave study. Overland Park, KS: Research and Training Associates, 1996.

Third graders who had received PAT services with screening services from birth to age three scored significantly higher on standardized measures of achievement than their non-participating counterparts. PAT children had a national percentile rank of 81, while non-participating students rank of 63 on the Stanford Achievement Test. PAT graduates were less likely to receive remedial reading assistance or to be held back a grade in school. In fourth grade, PAT graduates still scored significantly higher overall and on all Stanford Achievement subtests (reading, math, language, science social studies) than did non-PAT fourth graders.

Coates, D. Early childhood evaluation. Missouri: A Report to the Parkway Board of Education, 1994; Coates, D. Memo on one-year update on Stanford scores of students early childhood evaluation study group; Parents As Teachers program leads to elementary school success, Parkway School District news, Spring, 1997.

Pre-kindergarten assessments showed that compared to matched comparisons, PAT children had better language skills and were twice as likely to be reading-ready by kindergarten.

Drazen, S and Haust, M. Raising reading readiness in low-income children by parent education. Paper presented at the annual meeting of American Psychological Association, August 1993.

PAT children showed better school readiness at the start of kindergarten, higher reading and math readiness at the end of kindergarten, higher kindergarten grades, and fewer remedial education placements in first grade. PAT children continued to perform better than non-PAT children on standardized tests of reading and math achievement in second grade. Compared to non-PAT children, PAT children required half the rate of remedial and special education replacements in third grade.

Drazen, S. and Haust, M. The effects of the Parents and Children Together (PACT) Program on school achievement. Binghamton, NY: Community Resource Center, 1995. Drazen, S. and Haust, M. Lasting academic gains from an early home visitation program. Paper presented at the annual meeting of the American Psychological Association, August, 1996.

Upon entry to kindergarten, PAT children scored significantly higher than children from the comparison groups on measures of language and self-help/ social skills.

Coleman, M. Rowland, B. & Hutchings, B. Parents as Teachers: Policy implications for early school intervention. Paper presented at the 997 annual meeting of the National Council on Family Relations, Crystal City, A, November, 1997; Parents as Teachers: Kindergarten screening final report. Rutherford County, VA: Rutherford County Schools, May 1998.

For all areas of development, teachers rated PAT children higher, with 5 of 8 areas achieving statistical significance. PAT children also had better attendance, with an average of 95%. 65% of the PAT third graders scored in the proficient or advanced categories of the Colorado Student Assessment Program (CSAP) achievement test, as compared to 54% of the comparison group. More than one-fourth of the comparison group scored in the unsatisfactory range on the CSAP, while only 3% of the PAT third graders scored in this range.

O'Brien, T., Garnett, D.M., and Proctor, K. (2002). Impact of the Parents as Teachers Program. Cañon City, CO (Fremont County) School Year 1999-2000. *Center for Human Investment Policy, Graduate School Public Affairs, University of Colorado at Denver.*

Findings from a school readiness assessment project involving 3,500 kindergartners in Missouri showed that Parents as Teachers achieves its goal of preparing children for success in school. Among children whose care and educa- were solely home-based, those whose families participated in PAT scored significantly higher on the School Entry Profile. However, the highest performing children were those who participated in PAT combined with pre-school, center-based child care, or both.

Children from high-poverty schools scored above average on all areas of development when they entered kindergarten with a combination of PAT and any other pre-kindergarten experience (preschool, center-based care, and/or home based care).

Phannenstiel, J. School Entry Assessment Project: Report of Findings, 1999. For the full School Entry Assessment Project report, go to http://www.patnc.org/researchevaluation.asp#beyond.

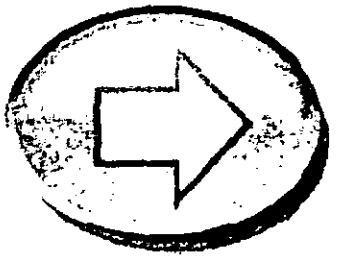
A recently published journal article reports that parent participation in PAT has important effects on children's school rediness and that PAT is "highly effective in helping impoverished parents prepare their children to enter school." The most powerful finding that emerged from the study was that the school readiness scores of children in high poverty schools with no pre-school enrichment (PAT or preschool). In addition, when children attending high poverty schools participated in both PAT and preschool, their scores were significantly higher than those of children in low poverty schools with no preschool enrichment (PAT or preschool).

Phannenstiel, J C., Seitz, V., & Zigler, E. (2002) Promoting school readiness. The role of Parents as Teachers Program. NHSA Dialog: A Research-to-Practice Journal for the Early Intervention Field, 6, 71-86.

Conclusion

In sum, PAT has a long history of evaluation research that reflects positive outcomes for families and young children.

How does PAT meet the definition of scientifically based research?

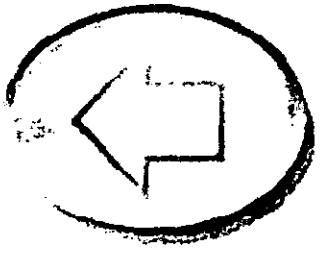


Parents as Teachers Born to Learn curricula content is based on reliable and current research in the areas of child development and neuroscience. The information shared with parents is not anecdotal information, but content based on the key characteristics of reliable research (studies that use the scientific method have been replicated, and generalizable, meet rigorous standards of peer review, and have converging results). Research on brain development confirms the critical nature of the early years. In collaboration with neuroscientists from Washington University School of Medicine in St. Louise, Parents as Teachers National Center, Inc. developed the *Born to Learn* curriculum to translate the latest neuroscience and child development is woven throughout the curriculum and is documented by scientific references.

Parents as Teachers Born to Learn curricula and training address what reliable research has identified as the essential components of school readiness. Based on research in child development and early education, the National Education Goals Panel identified five areas that play key roles in children's success in school. Measures of school readiness, the Panel determined, include physical well-being and motor development, social and emotional development, approaches to learning, language development, and cognition and general knowledge. The ***Born to Learn*** curricula and training are designed to support the development of the whole child and include visit plans and content that address each of these research-based school readiness dimensions.

Parents as Teachers places a premium on the kinds of experiences to which young children are exposed and affirms the crucial role of parents in orchestrating those experiences. Parents are the principle architects of their children's development. Reliable research indicates the important role of parents in young children's lives and that the more extensive the parent involvement in their children's education, the higher the student achievement. The Parents as Teachers model is designed to enhance parents' involvement in their children's education.

How does PAT fit with the No Child Left Behind Act?



- **NCLB empowers parents to get involved in their child's education. PAT engages parents in their child's development and education from the earliest years and increases parental involvement.**
- **NCLB requires stronger accountability for results. PAT has proven effective in increasing a child's school readiness and later school success.**
- **NCLB stresses using scientific -based research. PAT curricula are based on reliable and current research in the area of child development and neuroscience.**

The information in this Update was provided by Dr. Karen Guskin, Research and Quality Improvement Director, Parents as Teachers National Center

Alaska
GOVERNOR'S SUMMIT ON EARLY LEARNING
2007

Recommendations

The Alaska Governor's Summit on Early Learning brought together over 150 Alaskans from a wide variety of sectors across the state to develop recommendations for Governor Sarah Palin's early learning policy agenda. Participants were asked to address these goals:

Goal A **All children, especially those most in need, have access** to early literacy and learning opportunities in their home or in out-of-home settings;
Goal B **These services are coordinated**; and
Goal C **Parents, grandparents, and extended family are engaged** in young children's learning with needed support, resources, and incentives.

After hearing from national speakers on early learning and economic development, brain research and early learning, and early learning public policy, and from Alaskan leaders, participants broke into small groups. Participants discussed how to create a **System Infrastructure** for early learning in Alaska and how to provide early learning opportunities to children **In the Home** and to children in **Programs Outside the Home**. Their top recommendations include the following:

- **Implement a voluntary Quality Rating and Improvement System (QRIS)** which is a method to assess, improve, and communicate the level of quality in early care and education settings (addresses all three goals, and is a priority in the areas of both "System Infrastructure" and "Programs Outside the Home")

- **Conduct a comprehensive public engagement campaign** to inform parents, extended families, community members, and business about the economic and social "return on investment" in the early years and what they can do to support early learning (addresses Goal C, and is a priority in the area of "In the Home")

- **Increase funding for Head Start** to enable more low-income children to participate (addresses Goal A, and is a priority in the area of "Programs Outside the Home")

- **Increase the child care assistance reimbursement rates** (addresses Goal A, and is a priority in the area of "Programs Outside the Home")

Supported By BEST BEGINNINGS Alaska's Early Childhood Investment

- **Increase the eligibility guidelines for child care assistance** so more families can participate in the workforce (addresses Goal A, and is a priority in the area of "Programs Outside the Home")

Other Recommendations

System Infrastructure

- **Provide sustainable state resources** to support early learning (examples are an early learning endowment, a formula for funding, trust fund, or savings account)
- **Develop a public-private entity** to oversee and coordinate early learning activities (examples are the Denali Commission, cabinet level structure, new department, or single coordinating office with multiple departmental linkages)
- **Develop community-level database & coordinated system** to identify services and organizations that provide early learning services across Alaska
- **Conduct community needs assessments** to develop system of support for families and children (multi-agency system and strong community buy-in)

In the Home

- **Encourage employer flexibility and financial assistance** for parents of young children, (examples are tax credits, paid parental leave, parenting resources, flexible schedules, and other family-friendly policies)
- **Provide all parents with access to home-based education and support** (examples are expansion of home visiting, parenting classes, and financial supports)
- **Develop culturally relevant materials** (listening to groups, using technology, have incentives and mechanisms to share, template to produce own materials)

Programs Outside the Home

- **Create a statewide professional development plan** that ensures there are adequate supports to build an early care and education workforce (examples are wage incentive programs and financial supports for education and training)
- **Create a liability insurance pool for child care centers and a health insurance pool for child care workers, with financial support**
- **Provide incentives to businesses** to support the creation and maintenance of quality early care and education programs

EXECUTIVE SUMMARY

Ready to Read, Ready to Learn Task Force Report & Recommendations

Too many of our children are failing in school. The problem begins before age 6. As a result, almost half of Alaska children begin school unprepared to read or learn. They are set up for failure.

Common sense and science tell us we can do much better in preparing young children to be ready to read and ready to learn. It is a societal imperative and our obligation as Alaska's stewards to give our children the opportunity to succeed. Nothing else we do will have a more positive impact on Alaska's economic and social health.

The Alaska Ready to Read, Ready to Learn Task Force has charted a course for success in this report. During deliberations, the 27 members learned:

- Almost half of Alaska children enter school unprepared to read or learn. This is not the child's failure. Society – parents, educators, politicians and professionals – must accept responsibility.
- Scientific research shows critical brain development occurs between birth and age 6. Children are born ready, willing and able to learn.
- Investments in early childhood literacy and learning pay dividends many times over. Children will be more successful in school, be less likely to get into trouble, grow into more productive adults, and contribute to the common good of society. The bottom line: Every dollar invested in quality early learning programs will return $7 to $17.
- Alaska lags far behind most states in addressing early childhood literacy and learning issues.

The Task Force – business, civic, nonprofit, philanthropic, education and government leaders – met from November 2005 through the summer of 2006. In developing their recommendations, Task Force members were advised by Alaska and national experts in early childhood education.

The recommendations lay the foundation for success. There is much work to do and a role for everyone.

THE RECOMMENDATIONS

The Task Force has recommendations in three areas: In the Home, Out of the Home in Child Care & Early Education Programs, and Looking Ahead. The first two focus on children from birth to age 6 in their environments. The third focuses on long-term sustainability of the investment in Alaska's young children.

In the Home

Three recommendations increase early literacy skills, family literacy skills, early learning skills and parenting skills for all populations in Alaska:

1. Increase the engagement of parents, grandparents and extended family in their child's learning by providing resources and incentives.

2. Develop and increase access to quality, culturally engaging reading materials.

3. Increase proven, family centered literacy programs by partnering with other organizations.

Out of the Home in Child Care & Early Education Programs

Four recommendations increase access to voluntary, affordable and quality early care and education:

4. Distribute Alaska's Early Learning Guidelines (ELGs) in family friendly formats.

5. Implement a quality rating system (QRS) to help parents evaluate child care and early learning programs and to guide program improvement.

6. Increase the professional development opportunities and qualifications for early childhood educators and provide appropriate compensation.

7. Develop a statewide system of voluntary and affordable early childhood education.

"If you want to work on the core problem, it's early school literacy."

– James Barksdale, former CEO of Netscape

Looking Ahead

Four recommendations establish a sustainable early childhood literacy and learning system with accountability for outcomes:

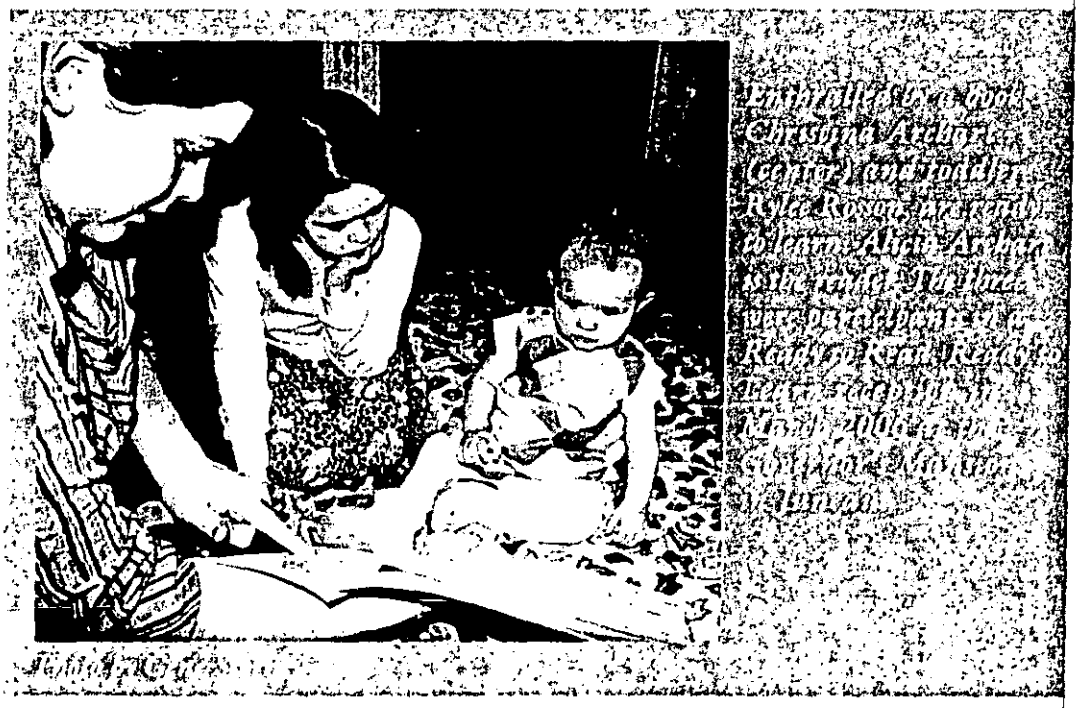
1. Create a commission, council, public-private consortium or other entity to implement Task Force recommendations.

2. Develop a multi-year work plan for implementing recommendations.

3. Educate Alaskans about the social imperative of preparing children from birth to age 6 to be ready to read and learn.

4. Ensure future funding from private, nonprofit, foundation and government sources.

These recommendations chart a course for the future. It is the responsibility of all Alaskans to prepare Alaska's young children to be ready to read and ready to learn.



"A failure establishes only this, that our determination to succeed was not strong enough."

– Christian Nevell Bovee, 19th century author

INTRODUCTION

Goal: Every child in Alaska arrives at school ready to read and ready to learn.

"If you look critically at the failure in our educational system, you must conclude that the child's failure and the school's failure are largely determined before the child enters the educational system at age 6."

– Irving Harris, former CEO, Procter & Gamble

The Problem

Alaska's young children have joined a disturbing national trend. They are entering school less and less prepared to succeed. This is cause for alarm and action. A battery of studies and data reinforce what parents instinctively know: An ill-prepared child is far more likely to fail in school and become a burden on society. Declining pre-kindergarten trends contribute to Alaska's low scores on standardized third-grade tests, poor performance on the High School Graduation Qualification Exams and an unacceptably high dropout rate.

Percentage of Alaska kindergartners showing desired learning and literacy skills.

The Growing Momentum

Concerned Alaskans met in August 2004 and May 2005 to discuss early childhood literacy and learning. At the May 2005 meeting, Gov. Frank Murkowski embraced the importance of the initiative and supported formation of a grassroots task force. Twenty-seven statewide leaders were assembled to draft a blueprint identifying what Alaskans could and should do to improve school readiness in young children. This report is their response. During the past seven months, the Ready to Read, Ready to Learn Task Force has immersed itself in this foundational issue. It has sought advice from national and Alaska experts, and has digested a large amount of data and research to develop a plan that will work in every community in the state. The plan for success is contained in this report.

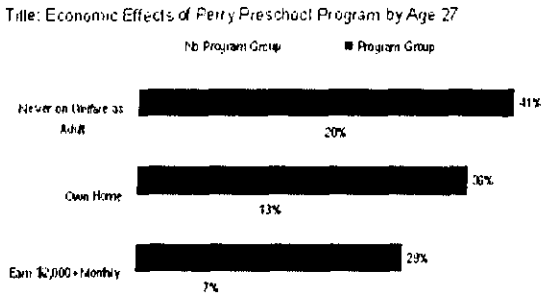
Most Alaskans agree there's a critical need to invest in young children. A report commissioned by the System for Early Education Development (SEED), *"Economic Impact of Early Education and Child Care Services in Alaska,"* found 87 percent of Alaskans surveyed thought early learning and child care were high priorities – higher than state funding for road construction, local government or university education. Only K-12 education rated higher.

Why this age group?

Recent research demonstrates what parents and early childhood educators have known for years: A critical period for brain development occurs between birth and age 6. Parents who read, tell stories and have positive daily interactions with their young child promote the child's brain development. Quality child care and early education do the same. Children gain the skills and confidence they need to succeed from these positive early experiences.

Why is this problem growing?

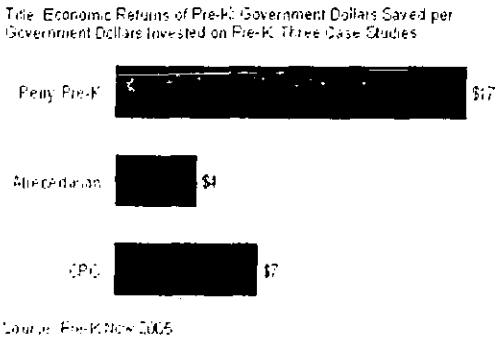
Many factors contribute to this problem. Parents often don't have the tools or resources they need. Being an effective parent takes skills often passed from generation to generation. Alaskans, a highly mobile and migrant population, are frequently separated from this rich source of parenting knowledge. Those who do have access to extended family may still struggle. An increasing need for families to earn multiple incomes places a premium on time, energy and other prerequisites for effective parenting. Also, quality early care and education is not affordable for many parents. Investing time and money in young children can counter this growing problem.



Source: National Institute for Early Education Research

Why is this my problem?

This trend impacts everyone, not just children and their families. Credible long-term studies such as the High/Scope Perry Preschool Project, the Carolina Abecedarian Project and Chicago's Child-Parent Centers (CPC) demonstrate children who are in quality early learning programs have higher literacy skills, increased graduation rates and better attitudes toward school. These children also grow into adults who are less likely to commit crimes, or require welfare assistance and who earn higher salaries.



Source: Pre-K Now 2005

Our children need to acquire the skills to make them successful in life. They represent Alaska's future as parents, employees, employers, citizens and leaders. It is imperative to increase the number of children arriving in kindergarten who are ready to read and learn.

"Today a reader, tomorrow a leader."

– Margaret Fuller, journalist

IN THE HOME

Parents are children's first and best teachers

"What a child doesn't receive, he can seldom later give."

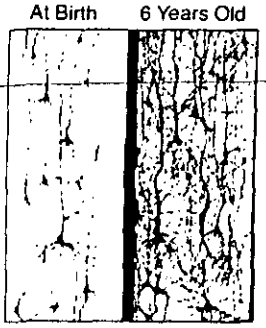
- P.D. James, novelist

Objective: Increase skills in early literacy, family literacy, early learning and parenting for all populations in Alaska.

We cherish the memories of stories told by our parents or of the books they read to us. Our child's delight and excitement captivate us as we pass down those stories and read some of the same books to them. These are precious moments of learning shared between a parent and a child. As parents, we are our children's first and best teachers.

We intuitively know these interactions within the family are critical in preparing children to read and learn. No technology or machine can replace this human process passed from one generation to the next. Some parents and families, however, need help in meeting the challenges of raising young children and fulfilling the role of first teacher. It is in Alaska's best interest to help.

Parents want their children to have a good start in life. Most parents are aware children learn from birth. What they may not know is how much the brain and lifelong learning capabilities develop in the first six years. Research shows brain connections grow dramatically from birth to age 6. Children need quality early literacy and learning environments during this period.



SYNAPTIC DENSITY: Synapses are created with astonishing speed in the first years of life. The more positive learning experiences children have, the more connections between brain cells will be made. This increases their ability to learn.

Drawing by H.T. Chugani

Task Force recommendations:

- Increase the engagement of parents, grandparents and extended family in their child's learning by providing resources and incentives.

- Develop and increase access to quality, culturally engaging reading materials.

- Increase proven, family centered literacy programs by partnering with other organizations.

Increase the engagement of parents, grandparents and extended family in their child's learning by providing resources and incentives.

Quality information about parenting should be available to all parents. This should be provided through parent resource centers, libraries, web sites, wellness visits with health care providers and other community sources. One example is the Ready To Learn Service provided by KAKM-TV, which offers educational television, outreach to parents and free children's books. These books help families build a home library. Incentives, including vouchers for goods and services, could be used to encourage parents and family members to seek these resources.

Develop and increase access to quality, culturally engaging reading materials.

Access to reading materials is an essential ingredient for early literacy and learning development. Many Alaska communities, particularly those in remote or rural areas, don't have bookstores or libraries with adequate collections. This limits available reading materials for families.

In both Alaska's rural and urban communities, there are few children's books that reflect the state's diverse cultures and life. Research shows young children learn best when books are relevant to their lives. It is important more reading materials be written and published that speak to the families of today's young children in Alaska.

Increase access to family centered literacy programs by partnering with other organizations.

Family centered literacy programs build literacy skills of parents and children. There are many such programs across Alaska; more are in use nationwide. The Task Force recommends selection of programs and approaches that can be shown to work best in Alaska settings. They can be made available statewide by partnering with existing organizations.

End Results

We'll know we're successful in improving childhood literacy and learning skills in the home when:

- Parents and extended families are actively engaged in developing their children's literacy and learning skills.
- All homes and community and school libraries have and share abundant, quality and culturally engaging reading materials for young children.
- Research-based family literacy programs are available in all communities and are affordable for those who want to use them.
- Community leaders and community organizations join to support and promote family literacy.
- Alaskans know what literacy and learning skills are necessary for children to enter school ready to read and ready to learn.

"No skill is more crucial to the future of a child, or to a democratic and prosperous society, than literacy."

– Los Angeles Times, "A Child Literacy Initiative for the Greater Los Angeles Area"

OUT OF THE HOME

Quality child care & early education programs promote successful children

"I love to see the spark in a child's eye when they accomplish something they haven't done before."

– Staff member, Clinton Early Learning Center, Clinton, NY

Objective: Increase access to voluntary, affordable and quality early care and education.

Today's reality is that many young children will spend more waking hours in child care and early learning settings than with their families. For many children this experience begins in infancy and continues until they enter school. These critical early experiences shape who these children become and how they learn.

If we nurture and teach our children at home, we should expect the same positive learning environment outside of the home. Research surrounding the significance of quality early childhood education on children's later development is indisputable. Alaska, however, is just beginning to look comprehensively at how to improve the early learning experience for children and families. One idea is to provide guidelines for parents and early educators about what young children should know and be able to do. Another is to help parents identify quality child care programs.

Child care affects many of our children. There were approximately 63,000 children younger than age 6 in Alaska in 2004, according to the SEED report. Approximately 60 percent were in child care or early education settings. The numbers can be expected to increase with Alaska's population growth and exacerbate the current shortage of spaces in those programs.

Young families at the beginning of their earning potential wrestle financially with child care and early learning costs. Many parents already are paying what they can afford. Also, those providing the care often aren't earning a living wage. The low pay and lack of benefits lead to an unacceptable turnover rate among child care providers, who often enter the field with minimal skills and education.

The high turnover and resulting inconsistency of caregiving also have negative effects on a child's development. Research shows the younger the child, the higher the impact on long-term learning by caregiver changes.

As a public investment, early childhood development pays better returns than most, up to $17, according to the Federal Reserve Bank of Minneapolis. Research such as this led the Bill & Melinda Gates Foundation to substantially invest in early childhood learning in Washington State. The foundation looked at what could be

done to have the greatest impact on children who were failing and becoming dropouts. They saw it was in early care and education. As a result, the Gates Foundation pledged $9 million for early learning initiatives.

Task Force Recommendations:

1. Distribute Alaska's Early Learning Guidelines (ELGs) in family friendly formats.

2. Implement a quality rating system (QRS) to help parents evaluate child care and early learning programs and to guide program improvement.

3. Increase the professional development opportunities and qualifications for early childhood educators and provide appropriate compensation.

4. Develop a statewide system of voluntary and affordable early childhood education.

Distribute Alaska's Early Learning Guidelines (ELGs) in family friendly formats.

ELGs help parents and caregivers understand the expectations for children's development and learning. They spell out goals for what young children should know, understand and be able to do at critical stages of development. The State Board of Education and Early Development recently endorsed Alaska's ELGs. The Task Force recommends ELGs be published in multiple languages, in easy-to-read formats and be made available to families with young children through early care and education programs, pediatricians, libraries, businesses and online.

Implement a quality rating system (QRS) to help parents evaluate child care and early learning programs and to guide program improvement.

A QRS is a tool to help parents evaluate the quality of child care and early learning programs, a difficult task without some guiding criteria. It serves as a consumer guide, a benchmark for child care improvement and an accountability measure for funding. Criteria include ratio of teachers to children, family involvement and the skill and education level of the staff. A QRS also instills market-based motivation for fostering improvements by the program providers. Many states have implemented a QRS. The Alaska Department of Health and Social Services is in the early stages of developing a statewide QRS.

Increase the professional development opportunities and qualifications for early childhood educators and provide appropriate compensation.

Early educators need greater access to professional development offered through a variety of delivery systems. These must address the challenges faced by providers across the state, whether in rural or urban communities, such as long workdays, inflexible schedules and too few opportunities to access training.

Based on significant research, many states support increased wages for child care providers to improve recruitment and retention. Most importantly, it improves child outcomes. Alaska should do likewise.

Develop a statewide system of voluntary and affordable early childhood education.

Thirty-eight states have implemented a model of state-funded pre-kindergarten, not including Head Start. (Alaska is not one of them.) These states provide funding for pre-kindergarten in a variety of ways and utilize approaches that meet their needs within financial and political constraints.

The Task Force recommends Alaska develop a system of affordable and voluntary early childhood education. Such a system could provide handsome returns on the investment.

The Task Force further recommends community-based discussion to design a system that is effective in both urban and rural areas. To begin shaping that discussion, the Task Force has identified elements key to the design of any system. They are:

- The approach is voluntary and parents retain the choice of whether to have their children participate.
- Families can select a pre-kindergarten program from available choices, including those privately owned, faith-based, run by the community, operated by nonprofit organizations or are part of public-school systems.
- Local leaders and families actively participate in developing effective pre-kindergarten options.
- Families are provided with financial support or incentives.
- The system is phased in to allow communities and programs time to ensure appropriate planning.

End Results

We'll know we're successful in improving childhood literacy and learning outside of the home when:

- Parents are educated consumers of child care and early learning programs.
- The quality of child care and other early learning settings improves.
- Quality early childhood education is available and affordable for all children from birth to age 6.
- Alaskans recognize the importance and value of early childhood education.

"There is no substitute for books in the life of a child."

– Mary Ellen Chase, author and educator

LOOKING AHEAD

Turning the vision into a reality

Vision without action is a daydream. Action without vision is a nightmare
– Japanese Proverb

Objective: Establish a sustainable early childhood literacy and learning system with accountability for outcomes.

This report completes the job of the Task Force. The work, however, has just begun. The recommendations in this report will not become reality without an ongoing effort to keep the Ready to Read, Ready to Learn issue high on Alaska's agenda.

Task Force recommendations:

1. Create a commission, council, public-private consortium or other entity to implement Task Force recommendations.
2. Develop a multi-year work plan for implementing these recommendations.
3. Educate Alaskans about the social imperative of preparing children from birth to age 6 to be ready to read and learn.
4. Ensure future funding from private, nonprofit, foundation and government sources.

Create a commission, council, public-private consortium or other entity to implement Task Force recommendations.

Alaska has benefited from the work of many people involved in early childhood issues, but there hasn't been a unified voice. Interested parties include the business community, philanthropies, government agencies, the nonprofit sector and, most importantly, parents. Other states have created a body to govern or oversee early learning activities. Through the Task Force efforts, Alaska is on track to establish an entity that will ensure a comprehensive, coordinated approach to improve early literacy and learning.

Develop a multi-year work plan for implementing recommendations.

This report to the public, the governor and elected officials is the first step in a work plan that covers several years. Key elements of the work plan developed by the Task Force include:

- Launch a public education campaign.
- Obtain public feedback on early literacy and learning initiatives.
- Develop resources to assist families with early childhood learning.
- Support work on a QRS.
- Distribute and encourage the use of ELGs.
- Develop a voluntary and affordable early childhood education system statewide.

Educate Alaskans about the social imperative of preparing children from birth to age 6 to be ready to read and learn.

A critical element in this effort is educating Alaskans about the importance of early childhood literacy and learning. A long-term public education campaign is needed to help Alaskans understand this issue is a societal imperative. This campaign will involve partnering with Alaska's media outlets and collaborating with funding sources to develop a campaign specific to Alaska. It must be culturally relevant and engaging. It should raise awareness of this unparalleled opportunity to improve school readiness for Alaska's young children.

Ensure future funding from private, nonprofit, foundation and governmental sources.

Funding is essential in moving this effort forward. Resources currently are provided by a partnership that includes private business, nonprofits, foundations and government. This cooperative partnership will continue and can leverage support from additional funding sources.

End Results

We'll know we've successful in making the vision a reality when:

- There is an entity to guide and implement Task Force recommendations.
- Funds are obtained and maintained to support early literacy and learning.
- Early childhood learning is a societal imperative in Alaska.
- Children arrive at school ready to read and ready to learn.

PARTNERING FOR SUCCESS

Young children & families need everyone's support

"If you do not seek out allies and helpers, then you will be isolated and weak."

– Sun Tzu, 6th Century BC Chinese philosopher

There is work for everyone to do. Just as these recommendations are the result of Alaska's many sectors coming together around an important issue, so too will the future of this effort depend upon the commitment of all Alaskans. Here are some of the ways we can support the effort to improve the school readiness of Alaska's youngest children.

Business

It is in the long-term interest of businesses to support school readiness, as it helps assure tomorrow's work force has the skills to be successful in a competitive world. Employers should consider providing supports such as flexible leave, health benefits and subsidies to help employees with young children balance the demands of work and family. Research shows employers who provide such supports have higher retention rates, greater employee loyalty and increased productivity. A growing number of Alaska employers are making these investments. BP Alaska, Credit Union 1 and Providence Alaska Medical Center are just a few who have demonstrated their commitment to parents with young children by providing quality, on-site child care for employees. Other Alaska companies also support families with young children.

Nonprofits

The nonprofit sector can provide leadership and administrative support for this initiative. These organizations understand community dynamics and can mobilize people into action. The Alaska Humanities Forum, United Way of Anchorage's Success By 6 Initiative, Child Care Connection, Inc. and First Alaskans Institute are committed to supporting implementation of the recommendations in this report. Other nonprofits are encouraged to join.

Foundations

The support and leadership of the Rasmuson Foundation and The CIRI Foundation in this initiative demonstrate philanthropic resources can help bring about change. This sector can galvanize financial and intellectual resources, command the attention of Alaska's political leadership, foster research and pilot demonstration projects to move this effort forward.

Government

The Federal Reserve Bank study shows the economic impact of supporting early learning and how government can save money by investing in young children. The SEED report shows the public overwhelmingly supports government investment in early childhood education. The State of Alaska has committed funding to support the Ready to Read, Ready to Learn recommendations. Government at every level must recognize supporting early childhood learning is a good investment. For example, publicly funded libraries are a mainstay in early literacy and learning. Children who have the ability to learn and succeed will contribute to the long-term economic and civic vitality of their local communities and Alaska.

Faith-Based Community

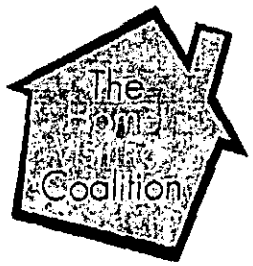
Alaska's faith-based community plays an important role for young children and their families through child care, early learning programs and support for families. These efforts will ensure more children will arrive at school ready to read and learn.

END RESULTS

We'll know we're successful when . . .

- Parents and extended families are actively engaged in developing their children's literacy and learning skills.
- All homes and community and school libraries have and share abundant, quality and culturally engaging reading materials for young children.
- Research-based family literacy programs are available in all communities and are affordable for those who want to use them.
- Community leaders and community organizations join to support and promote family literacy.
- Alaskans know what literacy and learning skills are necessary for children to enter school ready to read and ready to learn.
- Parents are educated consumers of child care and early learning programs.
- The quality of child care and other early learning settings improves.
- Quality early childhood education is available and affordable for all children from birth to age 6.
- Alaskans recognize the importance and value of early childhood education.
- There is an entity to guide and implement Task Force recommendations.
- Funds are obtained and maintained to support early literacy and learning.
- Early childhood learning is a societal imperative in Alaska.
- Children arrive at school ready to read and ready to learn.

5107



EDUCATION BEGINS AT HOME ACT (S. 667/H.R. 2343)

What is the "Education Begins at Home Act"?

The Education Begins at Home Act (S. 667 and H.R. 2343) is legislation reintroduced in the 110th Congress on February 16, 2007 by Senator Bond (MO) and Senator Clinton (NY) and on May 16, 2007 by Representative Davis (IL) and Representative Platts (PA). It is intended to give many more children a quality early childhood experience through the provision of home visitation services. The new funds will help states to establish or expand quality home visitation programs already underway in communities, and will target some specific groups of children and families for assistance. The legislation has been referred to the Senate Committee on Health, Education, Labor and Pensions and to the House Education and Labor and House Armed Services Committees.

What does the "Education Begins at Home Act" do?

The legislation will establish the first dedicated federal funding stream to support parents with young children through quality home visitation at the state and local level.

Specifically, the bill will:

- Provide $400 million over 3 years to states to expand access to parent education and family support services through quality early childhood home visitation programs;
- Provide $50 million over 3 years to partnerships at the local level to expand early childhood home visitation services to families with English language learners;
- Provide $50 million over 3 years to provide early childhood home visitation services to families with a family member in the Armed Forces; and
- Strengthen the early childhood home visitation component of Early Head Start.

Why is early childhood home visitation important?

The home is the first and most important learning environment for children, and parents are their child's most influential teachers. Home visitation delivers parent education and family support services directly to parents with young children, providing guidance on how parents can enhance their children's development from birth through kindergarten entry.

Home visitation is an effective, research-based and cost-efficient way to bring families and resources together to ensure that children grow up healthy and ready to learn. This legislation builds on existing models of quality early childhood home visitation programs, which together can help to meet the special needs of different children and families. This legislation will help states to create a system of early childhood home visitation that will ensure that families are receiving the most appropriate services to meet their needs.

What kinds of outcomes could one expect from early childhood home visitation programs?

A number of quality early childhood home visitation programs have yielded a range of positive outcomes for children and families. Because they have different areas of focus, different models may have a stronger impact on some outcomes than others, including:

- ***Improved children's readiness for school and success in school*** – Children whose parents participated in a quality home visitation program showed improved school readiness scores and higher scores on achievement and standardized tests and increased high school graduation rates.[1]
- ***Improved child health and development*** – Families who received quality home visitation were more likely to seek prenatal and well-child care and to have their children immunized.[2]
- ***Improved parenting practices*** – Parents participating in quality home visitation demonstrate more knowledge about child-rearing, have better communication skills and have less parenting stress.[3]
- ***Reductions in child maltreatment*** – Parents participating in quality home visitation had more age-appropriate expectations of their children and used more positive discipline. These indicators are which is important because a lack of appropriate expectations and use of negative discipline are shown to be precursors to abuse. In fact, the research shows fewer documented cases of abuse and neglect among children who received home visiting services .[4]

Under this legislation, what families will be eligible for home visitation services?

An eligible family is defined as a woman who is pregnant and the expectant father, and a parent or primary caregiver, including foster parents, kinship caregivers and certain non-custodial parents of a child until the child enters kindergarten. If they wish, states will be able to further define which families they serve with these new funds.

How will the funding be administered?

At the federal level, the Department of Health and Human Services (DHHS), in collaboration with the Department of Education, will make grants to states to establish or expand quality programs of early childhood home visitation. The funds can be used to supplement, not replace, existing state and local services for families. In each state, the

Governor will identify a state agency to take the lead in delivering early childhood home visitation services under this program.
Grants to serve families with English language learners will be made directly from DHHS to local entities. Grants to serve military families will be made by the Department of Defense to local entities.

How will funding be allocated to states?

Funds will be allocated to states based on the number of children from birth through age 5 who reside in that state, compared to the number of children of those ages who reside in all States that receive funds for the fiscal year. However, no state can receive more than $20 million in one fiscal year.

What will states be required to do to receive the funding?

To receive a state grant, a state will be required to submit an application that includes:

- A ***needs assessment*** describing the existing quality and capacity of early childhood home visitation programs and the families being served, and identifying gaps in services.
- A plan for ***how the state will implement one or more early childhood home visitation programs*** that help fill in its identified service gaps.
- A description of ***how the state will build on and promote collaboration among existing early childhood home visitation programs*** to ensure families are getting the most appropriate services to meet their needs.
- A description of ***how the state will promote channels of communication between staff of early childhood home visitation programs and staff of other early childhood education and early intervention programs*** such as Head Start, preschool programs, child care programs, and programs operating under the Individuals with Disabilities Education Act.
- A plan for providing ***training and technical assistance*** to staff of early childhood programs.

An ***evaluation plan*** that demonstrates how outcomes will be tracked and measured in the areas of: parent knowledge; children's health, cognitive, language, social-emotional and physical development indicators; child maltreatment indicators, school readiness indicators; and links to community services.

For what will states be able to use the funding?

States will be able to use the funding to:

- Provide eligible families with ***voluntary early childhood home visitation*** on at least a monthly basis, with a greater frequency for those families identified with additional needs;
- Offer ***annual health, vision, hearing and developmental screening*** for eligible children;

- Provide ***referrals*** for eligible families, as needed, ***to additional resources;***
- Offer ***group meetings*** to further enhance the information and skill-building addressed during home visits;
- Provide ***training and technical assistance*** to early childhood home visitation and early childhood care and education staff (required set-aside of 10%); and
- ***Coordinate various models of early childhood home visitation, early childhood education and care and early intervention*** to ensure families are receiving the most appropriate and effective services to meet their needs.

Are states required to use these funds for a particular home visitation model?

The legislation refers to establishing or expanding quality programs of early childhood home visitation. It is not limited to one particular model of service; instead the legislation details some of the characteristics of quality home visitation programs and limits the use of funds to programs with these components. A state will determine which model or models to utilize that meet those characteristics and best meet the needs of their families.

How will the implementation of quality home visitation programs be assured?

The legislation ensures implementation of quality home visitation programs through the application process, requirements regarding uses of the funds, and required evaluations and reporting. In particular:

- ***Applications will be reviewed by a peer review panel*** that includes representatives with backgrounds in the fields of home visitation and early childhood development
- States will be required to ***reserve 10 percent of the grant funds to provide training and technical assistance*** on topics such as effective methods of parenting education, home visiting and promoting early childhood development
- Grantees (state or local entity) will be ***required to provide a minimum of monthly visits***, with a greater frequency of services provided to families identified with additional needs
- Grantees (state or local entity) will be ***required to implement home visitation models that provide certain services*** as part of any home visit, such as providing parents with knowledge about age-appropriate child development and the skills to interact with their child to enhance age-appropriate development.
- Grantees (state or local entity) will be ***required to conduct an annual evaluation that includes tracking outcomes*** in the areas of: parental knowledge of early learning and development; child health, cognitive, language, social-emotional and physical development indicators; child maltreatment indicators; school readiness indicators; and links to community services.
- ***DHHS will be required to conduct an independent evaluation*** that, among other things, will track how grant funds have expanded access to early childhood home visitation programs, numbers of families served, impact of services on desired outcomes, the effectiveness of home visiting on different populations, the

effectiveness of training and technical assistance and will make recommendations for strengthening or modifying the Act.

What will be the reporting requirements for grantees?

State and local grantees will be required to submit an annual report to the Secretary. The reports will include a description of:

- the actual services delivered under the grant;
- outcomes for children and families served;
- the research based instruction, materials, and activities used; and
- the effectiveness of the training and technical assistance.

State reports must also include the following:

- after the second year of the grant, the results of the evaluations; and
- the annual program implementation costs, including the cost of providing services per family.

In addition, the Secretary will conduct an independent evaluation of the effectiveness of the Act.

Why include a section on strengthening Early Head Start?

Early Head Start is currently the largest federally-funded program that provides home visitation services to parents with young children. The proposed enhancements to the Early Head Start program are intended to incorporate best practices from the field of home visitation into the existing program.

Why is special attention given to families with English Language Learners and to military families?

Military families and families with English language learners face unique challenges when raising young children. Military families are frequently relocated and are often stationed far away from their natural support system of family and friends. Parents who serve in the military may also be separated from their spouses and children for long periods of time due to deployment. Parents who are English language learners must acclimate to a new country and culture, and learn how to navigate our education, health and social service systems. This legislation will target funding to help promote innovative home visitation approaches that will effectively reach and serve these families with unique needs.

Support the Education Begins At Home Act (EBAH)
S. 667/H.R. 2343
Senators Bond (R-MO) and Clinton (D-NY)
Representatives Davis (D-IL) and Platts (R-PA)

Home visiting delivers early education and support to families where they are—in their homes and on their terms. Through stand-alone programs or in partnership with center-based services, voluntary home visiting educates families, brings them up-to-date information about health, child development and school readiness, works with them to develop their child's literacy and language skills, and connects them to critical services. Home visiting is a bridge that links the resources of the community with the comfort of the home environment, empowering even hard-to-reach parents to build a better future for themselves and their children.

Home Visiting Is Based on Prevention

Home visitation is designed as part of a model of prevention. Home visitation aims to keep families safe, healthy, self-sufficient, and connected to support resources. This approach serves not only families directly, but broader communities as well; over time, the initial investment in home visitation serves to reduce future costs associated with health care, social services, criminal justice, special education, high school drop-outs and the child welfare system.

All home visiting programs focus on either pregnant women and/or parents with young children, age 0-5. While some home visiting programs target families deemed "at risk," all programs focus on parents, because of the parents' profound effect on their children's earliest years of life, and the crucial role they play on their children's future.

The Cost Effectiveness of Investing in Parents

In many ways, parenting is more difficult than ever before. Yet despite the overwhelming importance of parenting in the early years of a child's life, as a nation we invest few public resources on improving parenting practices through parent education and parent support.

In response, EBAH establishes the first dedicated federal funding stream to support the parents of young children through quality home visitation. In so doing, EBAH makes an early investment in parenting to help ensure healthy child development, school readiness and school success and stem the tide of a whole host of health care, social service, criminal justice, special education and child welfare costs in the future. Understanding that families with English language learners or with a parent in the military may face additional challenges, EBAH specifically targets funds for these families.

EBAH's Quality Controls

EBAH strives to insure that only the highest-quality programs are funded. To be eligible for grant funds, the Governor must designate a lead state agency such as the State education agency or State health and human services agency to carry out grant activities. Expert panels review and evaluate the quality of applications and make recommendations to the Secretary based on this review. Federal grants may only be used to fund home visitation programs that are grounded in empirically-based knowledge on home visiting and linked to determined outcomes. States are required to monitor program implementation to assure fidelity to the specified model. Programs must employ well-trained and competent staff and show strong organizational capacity to implement the program involved. In addition, participating home visitation programs must employ a solid referral network to other community resources and supports. Finally, EBAH requires independent evaluations at the state and federal levels, at the end of the grant's second year, which will assess outcomes consistent with program goals.

PARENT HANDOUT

Helping Your Child Learn About Shapes and Space

Understanding shapes and developing spatial sense will help your child learn geometry when he gets older.

The experiences he has during these early years form important pathways in his brain. The more times these pathways are used the more efficient they become. Young children generally learn about shapes and space in a specific order. They learn by

- exploring and using solid (three-dimensional) shapes in play
- matching solid objects to pictorial (two-dimensional) shapes.
- identifying and naming pictorial shapes.

Math is learned in a sequence. If you miss a step, it becomes difficult to grasp later concepts in the sequence. Many parents start with the last step in the above sequence when they teach their children shapes. If your child has not had enough experience exploring solid shapes he may have trouble identifying and naming pictures of shapes in books. Even if he is able to memorize the names of shapes he may not have the understanding of them that will help him later in school.

What you can do

You can help your child by providing solid objects that represent shapes. With a little creativity you can find objects around your house. Cans of food are cylinders, balls are spheres, party hats are cones, boxes or blocks are cubes or rectangular prisms. At first your child will use his own words to describe the shapes of objects (ball-shaped or round, box-shaped, ice cream cone-shaped), but if you use the correct geometric terms he will become familiar with them.

When your child explores solids during play and everyday activities he learns that round objects roll, that flat ones can be stacked, that nesting toys are similar in shape and are graduated in size, and that puzzles consist of various shapes that fit together. When he creates shapes from play dough or pipe cleaners, he sees and feels their characteristics. Eventually he learns that shapes have specific necessary attributes. For instance, he learns that cones can vary in size, color, material, and weight, but they must have a circle on one end and a point on the other.

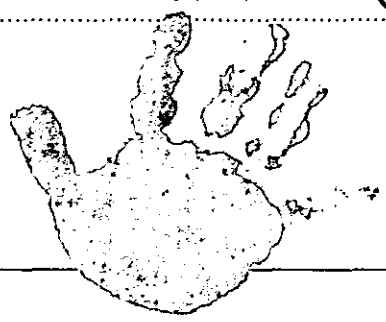
Another understanding your child will need for the study of math is spatial sense (a feel for his surroundings and the objects in them). Experiences that focus on direction, position, and relative shapes and sizes will help your child develop this sense. When he runs, climbs, swings, slides, plays with blocks, and puts puzzles together he is developing spatial sense. Using words to describe positions in space (for example, on, under, over, off, top, bottom, through, beside) of both your child and of objects he sees will help him understand their meanings. You can say, "You are on the slide. You put the doll under the blanket. I am standing beside the chair."

Ready for pictures

Once your child is familiar with solid shapes and their characteristics, he is ready to learn pictorial shapes (for example, circle, triangle, square, rectangle, oval). To help him make the move from objects to pictures, you can give him opportunities to trace around the solid objects so he can see how they look on paper. An easy way to do this is to help your child make solid shapes from playdough, use a plastic knife to slice them in half, and then match them to corresponding pictures. Dipping three-dimensional objects into paint and making prints with them also helps children understand the connection between solid items and their pictorial representations.

continued on back

© 2008 Parents as Teachers National Center, Inc.



GAMES TO PLAY

There are many fun ways to give your child opportunities to learn shapes and to develop spatial sense. Provide blocks and puzzles in a variety of shapes and store them where your child can easily get to them. Ask your child to find specific shapes in your home or outside. Talk with him about how the shapes are alike and different.

- Make common shapes with your child—first three-dimensional, then two-dimensional. There are many ways to make two-dimensional shapes, including play dough, cookie dough, sponges, wet sand, toothpicks and marshmallows, pipe cleaners, heavy string, and even your bodies. You and your child can make 2-dimensional shapes using crayons, finger paint, markers, chalk, and other drawing materials. Have your child describe the shapes he makes so he becomes familiar with terms such as round, flat, corners, curved, sides, and cone.
- Playing with toys that are made up of parts that can be combined into a whole is a good way to help children understand shapes and space. These include dolls with clothes, models that come apart, blocks, Legos, puzzles, and paper dolls with clothes. Folding and cutting activities, such as making a snowflake, are helpful. Other suggested toys include nesting cups or boxes, cups or pitchers for sand and water play, and games that use a grid system (such as tic-tac-toe).
- Play a game of Simon Says with your child. Give him instructions that involve positional words, such as "put your hands *on* your hips, *over* your head, *under* your chin." Set up an obstacle course in which your child will crawl *under* a table, *over* a cushion, *through* a box. These activities help him develop spatial sense.
- Hold a stuffed bear or other animal over a basket and ask your child, "Where is the bear?" See if he can tell you it is over the basket. Move the bear to another position (for example, beside or next to the basket), and repeat the question. Continue the game, asking your child to describe the bear's position in relation to the basket (for example, *in* the basket, *under* the basket, or climbing *up, down,* or *across* the basket). A variation of this game is to take turns with your child tossing a beanbag at a basket and describing where it lands.
- Put an object that represents a solid shape (for example, square block, cone-shaped party hat, small can, ball) into the toe of an athletic sock or paper bag. Have your child reach into the sock and guess the shape. Tell him to describe what the shape feels like before he looks at it. Let him choose a different shape to put in the sock for you to guess. Continue taking turns guessing and describing the shapes.
- With your child, make pipe cleaners into various shapes and use them to blow bubbles. What shapes are the bubbles? Your child will discover that the bubbles always turn out to be spheres, but will have fun trying.

Parents as Teachers

PARENT HANDOUT

Intellectual Development

YOUR CHILD – 4 YEARS

Look for your child to	Ways you can help
MATCHING, SORTING AND CLASSIFYING	
Put things into groups according to shape, size, or length.	Help your child start collections: rocks, leaves, bottle caps, buttons. Talk about how he might organize them. Use comparing words: bigger, smaller, longer, shorter.
Find which thing or picture does not belong.	Set out four items—three that are similar/same, and one that is different. Try a knife, fork, spoon, and crayon.
Sort things or pictures into two groups, according to category.	At the grocery store, point out how things are organized: produce here, books and magazines there, frozen foods there. At home, let him help you figure out where to put the things you bought. Talk about why they belong where he puts them.
Complete a 12- to 18-piece puzzle.	Buy a simple puzzle, or make one. Help your child choose a bright picture, glue it to a piece of cardboard, and cut it apart.
Pick out the *longest* item in a group.	Play a game of "drawing straws." Cut a drinking straw into three pieces. Place them in your fist so they appear to be the same length. Each pick one and compare. Longest straw "wins." Take turns.
Understand *more*, and be able to tell which of two groups has more.	Help your child sort a collection into two groups. Then suggest that he choose the group that has more, and you will use the group that has less.
CONCEPTS AND PATTERNS	
Name 8 basic colors.	Help your child make a book of colors.
Name penny, nickel, quarter, and dime.	Use coins to make patterns. Name the coins as you or your child set up a pattern: penny, penny, nickel, penny, penny, nickel...

Intellectual Development

YOUR CHILD 4 YEARS

Look for your child to	Ways you can help
CONCEPTS AND PATTERNS	
Name days of the week, in order.	Make a weekly schedule together. Make seven boxes across the page, and label them with the days of the week. Let your child help you write or draw in routines and special plans for each day.
Copy and continue a simple pattern.	Use beads or blocks to make a pattern for your child to copy. Name the colors and shapes as you place them: blue square, red square, blue square, red square.
Play a percussion instrument to the beat of familiar songs or speech patterns.	With your child, beat a spoon on a pan, in time to the rhythm of a favorite song.
Understand today, yesterday, and tomorrow.	Spend some time each night talking with your child about things that happened yesterday, today, and what may happen tomorrow.
Connects time with routine	Give him the idea of what to expect at different times in his day (e.g., bedtime is at eight).
Shows right hand/foot, left hand/foot upon request	Sing and dance the *Hokey Pokey*.
NUMBERS	
Count 10 items out loud	Play board games in which you have to count the squares to move ahead.
Recognize and name the numerals 1 through 5.	Borrow counting books from the library. Help your child make one of his own.
EXPLORE AND EXPERIMENT	
Enjoy learning about objects and materials by experimenting with them.	Let your child mix water and other "ingredients" together. What dissolves? What sinks? What floats? Encourage his exploration by using words like *wonder, predict, find out, try, observe*.

© 2008 Parents as Teachers National Center, Inc

Intellectual Development

YOUR CHILD 4 YEARS

Look for your child to	Ways you can help
REPRESENT IDEAS	
Begin to draw and build with an idea in mind.	Make drawing and building materials available for him to use in daily play. Ask him to tell you about his drawings and buildings. Write what he says on his drawings. Leave his buildings up when possible.
ATTENTION SPAN	
Keep his attention on something he chooses to do, unsupervised, for 10 minutes.	Give him uninterrupted time to play with open-ended materials that he enjoys: play dough, drawing materials, blocks, etc. Praise him for staying with the activity.

Video
Born to Learn™ Neuroscience Video: Segment #6, *Windows of Opportunity*

Materials
- The baby's own blanket
- A piece of yarn, ribbon, or elastic that will stretch across a crib
- Several of the baby's small toys or household items

Process

I. **Rapport-building**

II. **Observation.** Throughout the visit, consider the *whole child* as you share specific observations related to each domain of development.

III. **Discussion.** Incorporate throughout the visit.

A. **Review your previous visit using the Personal Visit Record.** Ask parents what they noticed as they practiced the parent follow-up activity(s).

B. **Parent comments and concerns.** Invite parents to share, now and throughout the visit.

C. **Developmental characteristics.** Use the handouts, *Your Child* or *Your Baby, Intellectual Development* and *Motor Development*. Ask which of these characteristics parents may be observing already. Record observations on the form, *Milestones: 1½ to 3½ Months* after the visit.

D. **Immunizations.** Use the handout, *Immunizations Are Important!* (Refer to the resource, *Preventable Diseases*.)
1. Discuss the importance of following the health care provider's immunization schedule.
2. Ask parents to tell you when the baby gets her shots. Note them in the home visit record.
3. Emphasize the importance of keeping careful records of immunizations. Ask the parents their plans for keeping track of their child's immunizations.

E. **Windows of opportunity.** Use the handout, *Windows of Opportunity*. (Refer to the resource, *Critical Periods: Windows of Opportunity*.)
1. There are periods of time in the development of the baby's brain when specific types of learning take place.
2. During these periods, the development of connections (synapses) between neurons is most sensitive to stimulation from the environment.
3. Once the sensitive period for an ability has passed, it is harder to change the structure of the brain to accommodate new learning. Synapses have become permanent and space in the brain has been taken up by synapses serving other abilities.

© 2005 Parents as Teachers National Center, Inc

5121

4. These important periods of brain growth are called "windows of opportunity" because parents have great opportunities to help their baby's brain develop during these times.
5. With parents, view and discuss video segment #6, *Windows of Opportunity.*

F. **Overhead batting.** To be able to bat at objects while lying on his back, a child has to coordinate motor, intellectual, and visual skills. It is a step toward being able to reach for and grasp objects.
   1. Motor: The baby is overcoming newborn reflexes and gaining control over the movement of his arms.
   2. Intellectual: The baby is realizing that objects exist apart from his body. His curiosity leads him to try and reach interesting objects.
   3. Visual: The baby's eyes are beginning to work together to give a sharp image of an entire object and he can see farther. This age is the beginning of a window of opportunity for the development of vision. The baby's eyes should move together to focus on an object, so that vision centers in the brain can integrate images from both eyes.

IV. **Parent-child activity:** Bat Mobile

A. **Rationale.** Tell the parents why this activity is important.
   1. Batting play helps babies:
      a. gain control over their arms.
      b. feed their curiosity.
      c. practice moving both eyes together.
      d. begin to coordinate eyes and hands together for play.

B. **Parent-child interaction**
   1. Bat Mobile
      a. Tie the yarn, ribbon, or elastic between the legs of a swing or chair, or across a crib, so that the baby can be placed underneath.
      b. Help the parents find objects around the house that will interest the baby and can be hung from the yarn.
      c. Use more yarn to tie the objects to the first piece at a height that the baby can reach while lying on his back.
      d. Show the baby how to raise his arm to bat the objects. Emphasize that it may take a while for the baby to learn how to do this. At first it will happen accidentally.
   2. Book sharing
      a. Ask if the parents have been propping a book so that the baby can see it.
      b. Emphasize that the parents can read aloud material such as newspapers or magazines of interest to them to the baby.
   3. Parent follow-up activity. Ask the parents to do the following during the time between visits:
      a. Allow the baby to play under his bat mobile several times a day.
   4. Optional/extended activity. Use this activity if time remains in the visit.
      a. Move the baby so that his feet will hit the batting mobile when he kicks.
      b. With parents, watch to see if he accidentally hits a hanging item.
      c. Explain that after weeks of play, the baby will learn that her feet can cause the items to move. Then he will purposefully repeat these actions.

C. **Shared observation.** Help the parents observe their child's play and consider these questions:
   1. Did the baby accidentally hit a hanging object with a hand?
   2. Did he seem to notice if he made an object move?
   3. Did he seem able to focus on the object with both eyes?

V. **Summary**

A. **Key observations.** Restate one or two key observations about the child's development.

B. **Parents' strength.** Point out a strength of the parents.

© 2005, Parents as Teachers National Center, Inc.

C. **Parent follow-up.** Remind parents to continue with the follow-up to the activity(s). Tell parents that you'll be eager to hear about their experiences with the follow-up activity(s) at your next visit. Review the following items with the parents before you leave:
   1. Resources/referrals
   2. Group meetings/community events
   3. Next visit

© 2005, Parents as Teachers National Center, Inc

CRITICAL PERIODS: WINDOWS OF OPPORTUNITY

Babies are born with millions and millions of connections (known as synapses) between neurons, but the nervous system is still quite immature. Between birth and adulthood many connections will strengthen, and others will disappear. Scientists now believe that there are two broad stages of the formation of synapses between brain cells. The early period occurs before birth, when experience is not yet required. During this early prenatal period, hundreds of millions of neurons are dividing from stem cells. These neurons then establish connections to set up brain circuits to control many unlearned, newborn behaviors and reflexes like breathing, heart rate, body temperature, blood pressure and reflexes. After birth, synapses begin to reorganize to strengthen some connections and eliminate others. This phase of development is very much dependent on experience.

Importance of stimulation in brain development

The later period of the reorganizing of connections between brain cells is very much controlled by the environment a baby experiences. Pathways that are used are integrated into the brain's permanent wiring. Connections that are not used appropriately are eliminated. It is essential that babies experience the world around them. Children reared in conditions of great deprivation and neglect have brains that show abnormalities that persist long after the deprivation is corrected.

Critical periods in brain development

Once the connections are stabilized between brain cells, there are limits to the brain's ability to rewire. There are time limits—critical periods—when environmental stimulation and practicing skills are most important. During these time periods, the brain is very active in making and breaking connections for particular abilities. These critical periods are "windows of opportunity." Nature flings these windows open at different times, some starting around birth, others later, and then either "closes," or at least "lowers" them as a child grows. While the windows are open, lack of appropriate stimulation or negative experiences can have great long-term impact. Brain development proceeds in waves. The timing of the "windows" is different for each skill a child develops.

Vision

In research with cats and monkeys, studies have shown that the two eyes compete for space in the cerebral cortex. If one eye has less visual experience than the other, for example by patching one eye, the closed eye loses out to the open eye. This means that if one eye is closed while the animal is between the ages of 3 and 12 weeks, the eye loses its synaptic connections and becomes blind. If the eye is unpatched before 12 weeks, the brain can recover from the deprivation. In a matter of days, new synapses form and the blind eye can see. If scientists waited too long, however, the loss of vision was irreversible.

Babies can see at birth, but not in detail, and lack depth perception, hand-eye coor-

© 2005, Parents as Teachers National Center, Inc

Windows of Opportunity

You have a golden opportunity to help your child's brain develop. Connections between brain cells are not formed haphazardly. They are promoted by your child's physical development, by her observation of what goes on around her, and by her active involvement with her world.

Window of opportunity defined

Vision, hearing, language, movement, problem solving—each of the areas in your child's brain responsible for different abilities has a sensitive period for development. During these prime times, your child's brain is most ready to make connections for learning new skills. These critical periods are called "windows of opportunity" because, during these times, parents have the opportunity to work with nature to help their baby develop the abilities she is acquiring.

How to tell when the window is open

Most prime times for learning begin very early, certainly during the first 3 years of life. By observing your baby, you can often tell what windows of opportunity are open at a given time.

For instance, your newborn stares intently into your face. She seems to concentrate on focusing her eyes a few feet away. Brightly contrasting patterns capture her attention. So, you can tell that the first few months are a prime time for your baby's brain to develop vision.

Consider your curious, active toddler. His body is always on the go and moving. He develops very inventive ways to get objects he desires. You see that the windows of opportunity are open for motor development and for such thinking skills as problem-solving. Connections for these abilities are forming at a fast rate.

My child's growing abilities:

_____

_____

_____

_____

_____

_____

© 2005, Parents as Teachers National Center, Inc.

When the window closes

While learning takes place most easily during these prime times, the brain will continue to use the same process of forming connections to learn and refine most abilities later in your child's life. It may be more difficult and take more effort, but new connections can usually be made.

Take full advantage of an open window

Your loving relationship with your child makes it easy to take advantage of the windows of opportunity for brain development whenever they occur. When you observe your baby's interests and give her your attention, you can be sure you are making the most of the opportunities for learning that nature provides.

You are your child's first and most influential teacher. Enjoy the opportunity!

1½ to 3½ MONTHS

YOUR CHILD'S SOCIAL-EMOTIONAL DEVELOPMENT

Look for your child to:	Ways you can help
Smile deliberately.	Eye contact and smiling are very important. Maintain eye contact with your baby while you feed or socialize with her. Always smile back when she smiles at you.
Become familiar with close family members.	Let your child feel secure in your love by cuddling, singing, rocking, and speaking softly to her.
Show excitement when seeing or hearing caregivers.	Offer her a lot of affection and attention while she is alert.
Use crying as a way to alert you to her needs.	Immediately respond to your baby when she cries. As she becomes confident that her needs will be met, she will cry less.
	Soothe and relax your baby when she is uncomfortable by gently massaging and stroking her back, shoulders, arms, and legs.
Use sucking to calm herself.	Allow her to suck to satisfy her emotional and sucking needs.

© 2005, Parents as Teachers National Center, Inc.

1½ to 3½ MONTHS

Look for your child to:	Ways you can help
Imitate some facial expressions.	Watch as your baby imitates your facial expressions. Imitate her in a reciprocal way to encourage a give-and-take exchange.

YOUR CHILD'S BRAIN

- Makes connections for feeling secure when your child's needs are met.
- Produces feelings of trust when you keep taking good care of your child.

PROCESS

I. Rapport-building

II. Observation. Observations are made throughout the visit. Consider the whole child as you and the parent share specific observations related to each domain of development.

III. Discussion. Incorporate throughout the visit. Ask questions to understand what the parents already know about each topic and seek out their perspectives.

A. Review your previous visit using the Personal Visit Record. Ask parents what they noticed as they practiced the parent follow-up activity(s).

B. Parent comments and concerns. Invite parents to share, now and throughout the visit.

C. Developmental characteristics. Use the handouts, *Intellectual* and *Language Development* that are appropriate for the child's age. Ask which of these characteristics parents may be observing already. Record observations on the form, *Milestones: 3, 4, or 5 Years* after the visit.

D. Early math concept development: Shapes and space. Use the handout, *Helping Your Child Learn about Shapes and Space*, to discuss shapes. (Refer to the resource, *Early Stages of Math Development: Shapes and Space.*)

1. The math that we remember as geometry helps us to describe and classify our physical world. It involves understanding shapes and spatial relationships.
2. As children explore their world, they learn that some things have their own shape (solids) and that some take the shape of their container (liquids/gels).
3. Children learn the names of geometric shapes after they have come to understand the similarities and differences between solid shapes.

© 2002 Parents as Teachers National Center, Inc.

5129

4. Children need to have experiences that allow them to move themselves and objects so they can develop spatial sense. Activities, such as climbing and block play, help children conceptualize relationships of objects such as position (over, under) and direction (left, down).

E. Language development in relation to shapes and space. Use the handout, *Helping Your Child Learn about Shapes and Space*, to discuss shapes. (Refer to the resource, *Early Stages of Math Development: Shapes and Space.*)

1. Children need to learn mathematical words to help organize their thinking about shape, position, and direction.
2. Parents can use position words often (top, bottom, over, under, beside, through, up, down, above, below, right, left) during daily routines to help her understand their meanings. Some words, especially *right* and *left*, take a lot of exposure to comprehend.
3. Children use language to describe shapes (*flat*, *curved*, *ball-shaped* [sphere], *can-shaped* [cylinder], *box* [cube]). This descriptive language is an important part of shape identification.
4. Parents can ask questions that encourage children to talk about shapes and positions (How is that shape like this one? How is it different? What if I turn this shape? and Where have you seen this shape before?)

F. Parenting topic. Choose a topic from the Parenting Topics section of the guide based on the family's needs, interests, and goals. Refer to the resource box at the beginning of the plan for possible parenting topics to consider. Use the parent handout to discuss the topic. Include the child in the discussion as much as possible.

IV. Parent–child activity: Shapes and Space

A. Rationale. Tell the parents why this activity is important.

1. Holding and manipulating three-dimensional shapes helps a child learn their properties and how to identify similarities and differences.
2. Moving objects in space helps a child to see where things are in relation to other things.
3. Because the dendrites in the brains of preschoolers are growing rapidly and excess synaptic connections are being pruned, it's important that children this age have varied and repeated experiences with shapes and spatial sense to form and keep the pathways that will support later math skills.

B. Shapes and Space

1. Activity description. Use the handout, *Shapes and Space Activity Page*, to share the directions with the parents.
   a. While playing the games, *Does It Roll?* and *Does It Stack?*, the parent and the child will explore familiar items of different shapes to learn more about their physical characteristics.
2. Activity set up. Involve the child and parents as much as possible.
   a. Show the parent the items you have brought and ask him if he would like to add any objects from his home.
   b. Spread the objects out on the floor or table.
3. Steps to facilitate
   a. Encourage the parent and child to explore the objects before beginning a game.
   b. Introduce the game *Does It Roll?* Have the parent and child select objects and try to roll them a short distance along a flat surface. Encourage them to make two piles—objects that roll and those that don't.
   c. Then play *Does It Stack?* by identifying which items will stack on top of each other and which will not. Invite the parent and child to create a new game that helps them learn more about the shapes.
   d. Continue to explore the similarities and differences in shapes. Have the parent and child use the washable markers to trace around each object onto the paper. Then play a matching game with the

© 2014 Parents as Teachers National Center, Inc.

three-dimensional objects and the two-dimensional tracings.

4. Strategies for supporting learning
   a. While the child is playing with the objects, encourage the parent to describe the objects using words such as *round*, *straight*, *curved*, or *flat*.
   b. Allow the child to take the lead in play. She will let you and the parent know when she is ready to move to the next part of the activity.
   c. Invite the child to share with you and the parent about what she is doing.
   d. Allow the child to make errors. Encourage the parent to model the appropriate response rather than correct his child.
   e. Model and encourage the parent to use open-ended questions to help the child organize and further her thinking. For example, "Why do you think it is not rolling straight?"

C. Book sharing/literacy experience

1. Give the book to the child and ask her to have the parent read it aloud.
2. Encourage the parent and child to find shapes in the illustrations.
3. If the child requests, have the parent re-read the book or give the book to the child to look at.
4. Go on a scavenger hunt and find the shapes in the book in the child's home environment. Have the parents and child refer to the book as a resource.
5. If desired, give the parent a page to add to the child's *Rhymes and Songs* book. Help the parent teach the rhyme or song to his child by repeating it several times.

D. Parent follow-up activity. Use the back of the *Shapes and Space Activity Page* to help the parent determine a follow-up activity. The following is a suggestion.

1. Take a walk around the home to find and name shapes in the environment. The child may want to hold an object of a certain shape and look for one that matches it.
2. Provide opportunities for the child to represent shapes and explore spatial relationships by drawing, building, and playing with puzzles.
3. Encourage play with big boxes or on playground equipment. Children learn about shapes and spatial relationships when they experience how they themselves fit in space as they go over, under, around, into, and through.

E. Optional/extended activity. Use this activity if time remains in the visit.

1. Introduce the sponges and stamp pad to the parent and child. Encourage them to select sponges and press them on the stamp pad and then onto the paper.
2. Ask the parent and child questions to get them to talk about the characteristics (straight, curved, flat, round, corners).
3. Ask the parent and child to name the two-dimensional shape that was created by the three-dimensional sponge. For example, a cone makes a triangle; a cube makes a square.

F. Shared observation. Help the parents observe their child's play. Use the back of the *Shapes and Space Activity Page* to summarize parents' observations.

1. In the area of intellectual development you and the parent may observe the child:
   a. exploring the objects using all her senses. She may demonstrate that she is noticing differences and similarities by sorting or matching the objects. She may not be able to identify the shapes by name.
   b. showing more of an awareness of spatial relationships by moving herself and objects over, under, around, and through things.
   c. finding a geometric shape when asked, but she may not be able to name it. She may have rigid beliefs about shapes (will only recognize a triangle if it has three equal sides).
   d. experimenting with rolling and stacking objects and sorting them by the results. She may try different ways to solve a problem or put a puzzle together.

© 2008 Parents as Teachers National Center, Inc.

5131

e. following the parent's directions to move an object in the environment or look for something by following directions (look under the bed and behind the box).

f. recognizing and identifying familiar geometric shapes in her environment, and understanding that there are many different forms of a specific shape. She will be able to match three-dimensional objects to two-dimensional shapes.

g. solving problems that deal with space such as fitting many blocks into a small container or putting puzzle pieces into a frame.

2. In the area of **language** development you and the parent may observe the child:

a. following the directions for the rolling and stacking games. She will demonstrate an understanding of familiar characteristics (e.g., locating a *round* object).

b. saying and responding to frequently used position words such as *on* and *under.*

c. describing how things are alike and different as she plays and using geometric shape words for objects in the environment.

d. using terms such as in *front of* and in *back of* or using the terms *first* and *last* to give directions.

e. using words, such as *beside*, *between*, and *middle*, to describe more complex spatial relationships.

f. experimenting with new, big words and making new words by combining ones she already knows.

3. Some questions you may want to ask the parent:

a. How did your child show her understanding of the similarities and differences in objects?

b. What describing words did your child use to show her understanding of shape?

c. How did your child show her understanding of position and direction?

V. Summary

A. Key observations. Restate one or two key observations about the child's development.

B. Parents' strength. Point out strengths you have observed.

C. Parent follow-up. Remind parents to continue with the follow-up to the activity(ies) and tell them that you'll be eager to hear about their experiences.

1. Parent follow-up activity(ies) for the next visit.
2. Review any action steps related to referrals or community resources.
3. Remind parents of upcoming group meetings or community events.
4. Set the date for the next personal visit.

Early Stages of Math Development: Shape and Space

Children learn about mathematics through their everyday activities. They learn when they play with objects and people, solve problems, and make observations in their surroundings. In early childhood, children need extensive experiences manipulating real objects to develop a sense of shape and space. These experiences will provide the foundation for the more formal study of math later, including geometry, which deals with solid shapes and their surfaces.

In early childhood, children need extensive experiences manipulating real objects to develop a sense of shape and space.

Young children generally learn about shapes through observation and handling of three-dimensional (3-D) objects. It is natural for them to explore and manipulate objects during play and other everyday activities. They learn that round objects roll, but cannot be stacked. They learn that flat objects do not roll, but can be stacked. When they put puzzles together, they notice the shapes of objects. When they nest containers, they discover those that are similar in shape and are graduated in size will fit inside each other. Children also learn about shapes when they construct them from playdough, pipe cleaners, or heavy string. Eventually, they learn that shapes have critical attributes. For instance, a cube *can* be blue or made of wood, but it *must* have 6 square sides, 12 edges and 8 corners.

Developing spatial sense

Children develop spatial sense (an intuitive feel for one's surroundings and the objects in them), by experiences that focus on the direction, orientation, and perspectives of objects in space, the relative shape and sizes of figures and objects, and how a change in shape relates to a change in size. When children climb, swing, slide and run in playgrounds, or when they play with blocks and puzzles, they are developing spatial sense.

When parents use position words (in, on, over, under, top, bottom, through, up, down, etc) often to describe what children are doing during play, they help children to understand their meanings. Parents can say, "You put that block beside this one. You are crawling under the table." Children need to hear such descriptions often in order to learn position words.

Children need to hear such descriptions often in order to learn position words.

Understanding two-dimensional shapes

Once children understand the differences and similarities among solid shapes and can match and sort them with some success, they can begin to understand two-dimensional (2-D) shapes (a ball shape is a circle, a cone is a triangle, etc.). They use familiar words to describe shapes (ball, box-shaped, etc.), but with the help of adults children eventually can learn the geometric terms of both 3-D and 2-D shapes: sphere (circle), cube (square), rectangular prism (rectangle), cone (triangle). The more children hear these terms at home the easier it will be for them to learn them.

5133

Parent Educator Resource

Parents often instruct their children to copy and draw shapes. While important, this is a fine motor rather than a mathematical skill. Children should be familiar with both 3-D and 2-D shapes before they master drawing them. Parents of preschoolers should be made aware that the best way to help their children learn about shapes is by providing a variety of objects that are similar and different in shape. They also can point out shapes in the environment and talk about how they are alike and different. They can provide blocks in a variety of shapes and puzzles in places that are easily accessible to their children. They can make shapes with their children—first three-dimensional ones from playdough or pipe cleaners; then two-dimensional ones using crayons or fingerpaint. Children are naturally creative. They can find many ways to form shapes—even with their bodies!

Learning through play

Children learn best about shapes and space when they are involved in enjoyable, hands-on activities. Activities that are helpful in learning early geometry (appropriate for preschoolers) include:

- Building structures with various types of blocks, Legos, or toothpicks and marshmallows
- Playing with toys that are made up of parts that can be combined into a whole (puzzles, dolls and doll clothes, paper dolls, models that come apart)
- Folding and cutting activities (such as making a snowflake)
- Completing obstacle courses (crawling under the table, through the box tunnel, over the cushion, etc.)
- Playing Simon Says and being asked to "put your hands on your hips, your hands above your head, your feet apart"
- Playing with nesting toys or boxes of graduated sizes
- Playing with sand and water
- Exploring indoor and outdoor environments to identify shapes and angles made by people and nature
- Creating shapes from playdough, cookie dough, pipe cleaners, heavy string, sponges, or their bodies
- Tracing shapes onto paper
- Reading maps
- Making graphs
- Playing tic-tac-toe and other games that use a grid system

© 2008, Parents as Teachers National Center, Inc.

Parent Educator Resource

Parent Educator Role

What to do

- Help parents understand that the best way to teach preschoolers about shapes and space (an important foundation for geometry) is to give them frequent opportunities to play with and create three-dimensional solid shapes, to see pictures of shapes, and to hear descriptions of shapes and position words.

How to do it

- Bring in a variety of objects that represent shapes, and help parents and children find them in their homes. Bring blocks, Legos, puzzles, and pictures of shapes. Describe shapes (is flat, has corners, is curved) and positions (on, under, over, between, beside).

Strengthening Families™

Programs that explain to parents the stages of math development and emphasize the parental role in helping children develop important early math concepts, such as shapes and space, strengthen parenting. Knowledge of parenting and child development is a protective factor in the prevention of child abuse and neglect.

To learn more about the Strengthening Families™ initiative, visit www.strengtheningfamilies.net

RESEARCH SUMMARY

Institute of Social and Economic Research
University of Alaska Anchorage • January 2009
R.S. No. 71

The Cost of Crime: Could The State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?

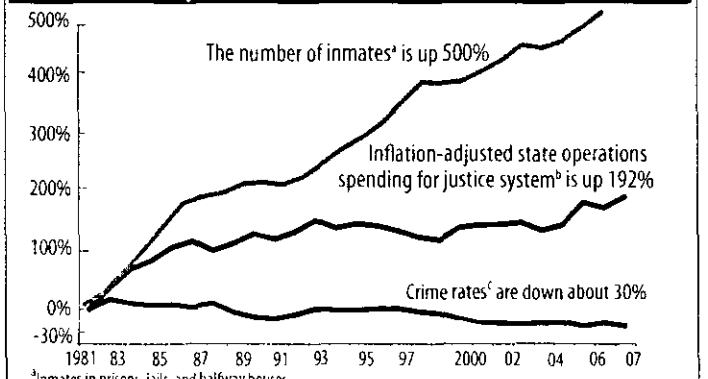
By Stephanie Martin and Steve Colt

Alaska's prison population is among the fastest-growing in the U.S., with five times more inmates in 2007 than in 1981. Spending for the state justice system has nearly doubled since 1981—but the crime rate has dropped only about 30%.

Here's the dilemma for the state, given the pattern shown in Figure 1: what can it do to hold down the number of inmates and stem the rising costs—while at the same time keeping the public safe and using tax dollars effectively?

Senator Hollis French asked ISER to project growth in the number of Alaska inmates and the associated costs—and then evaluate whether the state could reduce that growth by expanding intervention and prevention programs for people already in prison or at risk of ending up there. Alaska currently spends about $17 million a year for such programs, but they aren't available to many of those who might benefit from them.

Figure 1. Percentage Changes in Alaska Crime Rate, Spending for Justice System, and Number of Inmates, 1981-2007



[a]Inmates in prisons, jails, and halfway houses
[b]Spending for Departments of Corrections, Public Safety, and Law; court system; Division of Juvenile Justice; Public Defender Agency; and Office of Public Advocacy. Does not include capital spending or payment on debt.
[c]Rates per 100,000 for murder, rape, robbery, aggravated assault, burglary, larceny, and motor vehicle theft.
Sources: U.S. Department of Justice; state budget documents; Alaska Department of Corrections

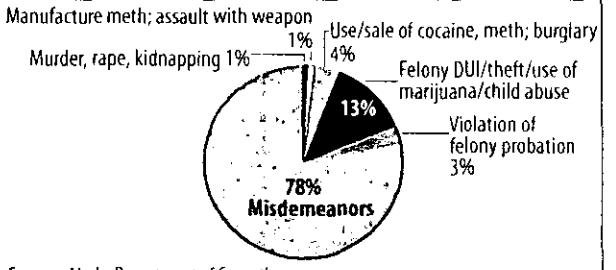
There are a wide range of such programs. But it is programs for adults who are already in prison or jail that have the most potential to save money and reduce crime in the next 20 years. That's because they can reach the most people.

We know that without any intervention, about two-thirds of those who serve their sentences and are released commit new crimes. Stopping at least some of them from committing more crimes would not only help improve public safety but also reduce growth in both the number of inmates and in spending.

Also, most of those released committed misdemeanors (Figure 2). Those who commit the most serious crimes serve long sentences and make up a small share of those released in any given year.

To analyze which programs have the most potential to reduce crime *and* save the state money, we worked with the Alaska Criminal Justice Working Group and the Washington State Institute of Public Policy. That institute did a similar analysis for Washington state and provided us with data it collected from program evaluations nationwide (see back page). What did our study show?

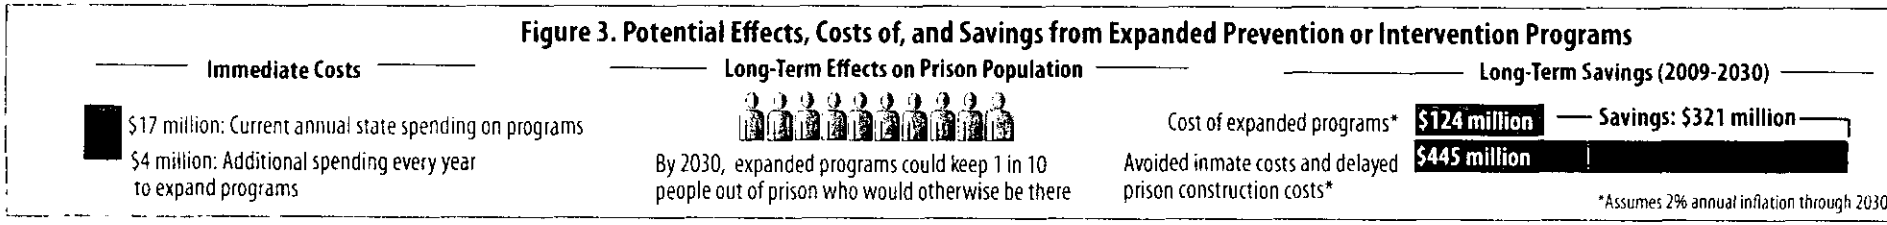
Figure 2. Who Gets out of Jail or Prison in Alaska?
(Total Releases, 2002-2007: 82,339)



Source: Alaska Department of Corrections

- *With no change in policies, the number of Alaska inmates is likely to double by 2030,* from 5,300 to 10,500.
- *If the state spent an additional $4 million a year to expand programs it already has, the prison population in 2030 might be 10% smaller* than projected—about 1,050 fewer inmates.
- *The state would spend about $124 million for expanded programs through 2030 but would avoid $445 million in costs—a savings of $321 million.* It would save money by incarcerating fewer people and by delaying prison construction costs. (Figures 3 and 8).
- *Education and substance-abuse treatment programs—in prison, after prison, and instead of prison—save the state two to five times* what they cost and reach the most people. Programs for teenagers are also very effective at reducing crime and saving money, but they reach fewer people.

Figure 3. Potential Effects, Costs of, and Savings from Expanded Prevention or Intervention Programs



5138

Why Consider Expanding Programs?

In 1980, 2 in 1,000 Alaskans were behind bars; today that share is approaching 10 in 1,000. The sharp increase started in the 1980s, when the state government began collecting large oil revenues. The state used some of that money to expand police agencies, courts, and other parts of the criminal justice system statewide. Also in the 1980s, it made sentencing for the most serious felonies more uniform and stiffened sentences.

The crime rate in Alaska has declined since the 1980s. But the number of Alaskans in prisons, jails, and halfway houses has increased much faster, as have costs for the state justice system. Alaska's prisons are full, and the 1,500-bed prison scheduled to open in 2012 is projected to be full soon after it opens.

Locking people up is expensive, whether their crimes are major or less serious. Alaska spends on average $44,000 a year per inmate in prisons, jails, and halfway houses. Adjusted for inflation, that's actually less than in the 1980s—but it's still a lot (Figure 4).

Studies in other states have shown that some intervention and prevention programs can help cut both costs and crime, either by keeping people who have served their sentences from committing new crimes after they're released, or preventing some people from going to prison in the first place.

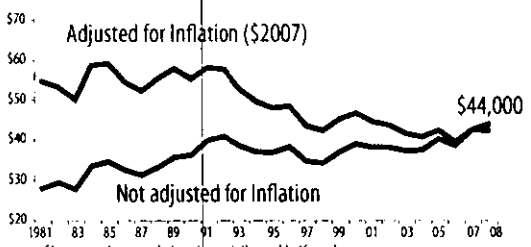
What Programs Did We Analyze?

The Alaska Criminal Justice Working Group gave us a list of programs to analyze. We looked for programs with the biggest potential payoff for the state—those that could reduce growth in both numbers of inmates and in spending for corrections, at a reasonable cost for the state.

Alaska already has a number of programs in place, and we found that expanding some of those would be most cost-effective. Table 1 lists the programs in our final analysis. As a guideline for what was a "reasonable" expansion, we used 10% to 20% of the eligible people not already served—except for very small programs that can't easily be expanded that much.

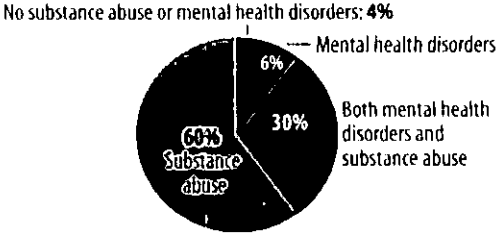
These programs would serve inmates, at-risk juveniles, and young children. They are all intended to reduce future crime in some way. Programs that treat substance-abuse or mental heath disorders have been shown to reduce recidivism—and as Figure 5 shows, almost all current inmates have those disorders.

Figure 4. Annual State Costs Per Inmate,* 1981-2008
(In Thousands of Dollars)



*Average cost of incarcerating people in prisons, jails, and halfway houses.
Source: Alaska Department of Corrections

Figure 5. How Many Alaska Inmates Have Substance Abuse or Mental Health Disorders?



Sources: Alaska Department of Corrections; Alaska Mental Health Trust

Table 1. Current Size and Potential Expansion of Intervention and Prevention Programs[a]

Programs	Currently serve	Reasonable expansion	Potentially eligible (2008)
Prison-based programs			
Education (adult basic; vocational)	More than 1,000	500	Almost all inmates (4,500)
Substance-Abuse (residential; intensive outpatient)	Close to 500	500	90% of inmates (approximately 4,000)
Sex-offender treatment[b]	0	50	10% of 500 eligible inmates
Transition from prison			
Transition for inmates with mental health disorders (Institutional Discharge Project)	70	100	36% of inmates (1,600)
Alternatives to Incarceration	500	500	Approximately 5,000[c]
Mental health, drug, alcohol courts; electronic monitoring; residential substance-abuse treatment			
Juvenile offenders	Approximately 500	1,000	Approximately 3,000
Aggression replacement training; family therapy; residential treatment; institutional transition			
Prevention	3,025	450	Approximately 8,000[e]
Head Start for 3- and 4-year olds from low-income families[d]			

[a]Programs included in our final analysis are those for which we found evidence that expansion would have significant pay-offs for the state at a reasonable cost. We evaluated additional programs not included here, either because there wasn't sufficient evidence to assess their effectiveness or because they weren't feasible to implement in Alaska at this time.
[b]To effectively reduce crime, sex offender treatment programs need to be offered in both prison and the community. Treatment is currently available only in the community, so the number served in prison is currently zero—but there are proposals to add treatment in prison.
[c]People facing low-level charges and with substance-abuse problems.
[d]Head Start is a federal program, but the state supplements federal money and Governor Sarah Palin has proposed additional state funding.
[e]We assume all children from families with up to double the poverty-level income would be eligible.

We looked at but excluded other programs from our final analysis. The criminal justice working group decided that a few programs, while effective elsewhere, wouldn't be feasible to implement in Alaska at this time. For other programs, there wasn't enough available evidence to judge how effective they were in saving money or reducing crime, or the available evidence showed them to be largely ineffective.

How Do the Programs Compare?

As Figure 3 (front page) shows, expanding programs to serve more of the eligible people would save the state about $321 million and reduce the projected number of inmates 10% by 2030. Figures 6 and 7 show how the various programs contribute to costs, savings, and reductions in the number of Alaskans behind bars.

- *Education and substance-abuse treatment programs for inmates save two to four times what they cost*, reduce recidivism by about four percentage points, and can reach the most people.

- *Intervention programs for juveniles who have committed crimes are very effective* at saving money and reducing recidivism, but they serve a much smaller number of people.

- *Programs that set up transition services for inmates with mental-health disorders* coming out of prison are among the most effective—but they can't readily be expanded to serve the many people who could benefit from them.

- *Alternatives to prison for some people charged with lesser offenses save the state money right away, and almost all reduce recidivism*. The exception is electronic monitoring, which is inexpensive but hasn't been shown to reduce future crime.

- *Treatment programs for sex offenders do reduce crime*, but they are very expensive and so don't save the state money.

- *Programs that prevent future crime by helping very young at-risk children are the most effective*. But the effects of spending for those programs aren't apparent until many years later.

Figure 6. How Effective Are Various Programs at Saving Money and Reducing Crime?

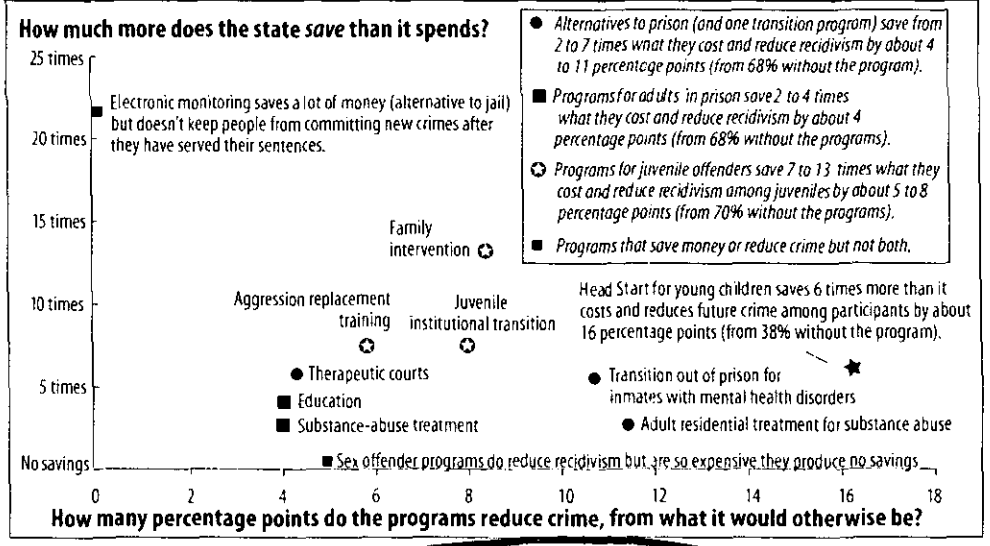


Figure 7. How Would Expanding Specific Programs Contribute to Reducing Growth in Numbers of Inmates?

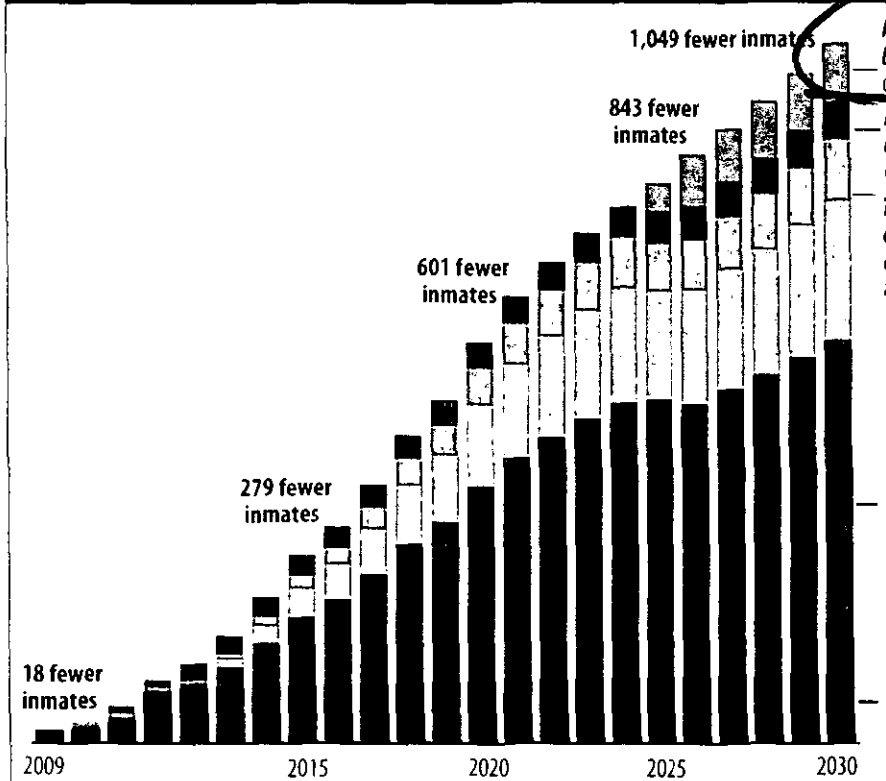


Pre-school programs for at-risk children cost about $1,000 per child but save many times that much, by reducing future crime. The effects of the spending aren't apparent for years, until the children grow up.

Programs for juveniles offenders cost an average of about $2,500 per person, but save almost 10 times that much by keeping kids out of prison. They serve only a subset of the population of 12- to-17-year-olds.

Transition programs for people with mental health disorders are extremely effective, add about $2,000 per person to inmate costs, and save about four times that much. But the programs currently serve very few people and can't readily be expanded to serve large numbers.

Programs that treat inmates for substance abuse add about $2,000 a person to inmate costs, but over time save about twice as much. They are effective, but can't readily be expanded to reach all the people who need them.

Education and job training programs in prison add about $1,000 to inmate costs, but they reach the most people and save about four times more than they cost. Because they are offered in every facility, they can easily be expanded and can reach more people. (Reductions in the number of inmates as a result of the sex-offender treatment program are also included here, but are only one or two people a year.)

Programs that keep people out of prison save the state money right away, because they cost much less than the $44,000 per person the state spends to lock people up. They include therapeutic courts for substance abuse and mental health disorders, electronic monitoring, and residential substance-abuse treatment.

Conclusion

In conclusion, Figure 8 shows how Alaska's corrections system got where it is and where it's likely to go—if intervention and prevention program are kept at their current levels, and if the most effective programs are expanded to serve more of the eligible people.

We found that the state could both reduce the number of Alaskans in prison or jail and save considerable money over the next 20 years, by adding about $4 million a year to the $17 million it currently spends to keep people from returning to prison— or prevent them from ever going there at all.

Spending more for these programs even as oil prices and state revenues are falling may not seem like a good idea. But Alaska also needs to look to the future—and over time the benefits of strategically expanding those programs that reduce crime and keep more Alaskans out of prison far outweigh the costs.

Method of Analysis

Our job was to assess whether specific programs could reduce long-term state spending for corrections by reducing growth in the number of inmates. As a starting point, we needed evaluations of how effective various programs are at reducing future crime.

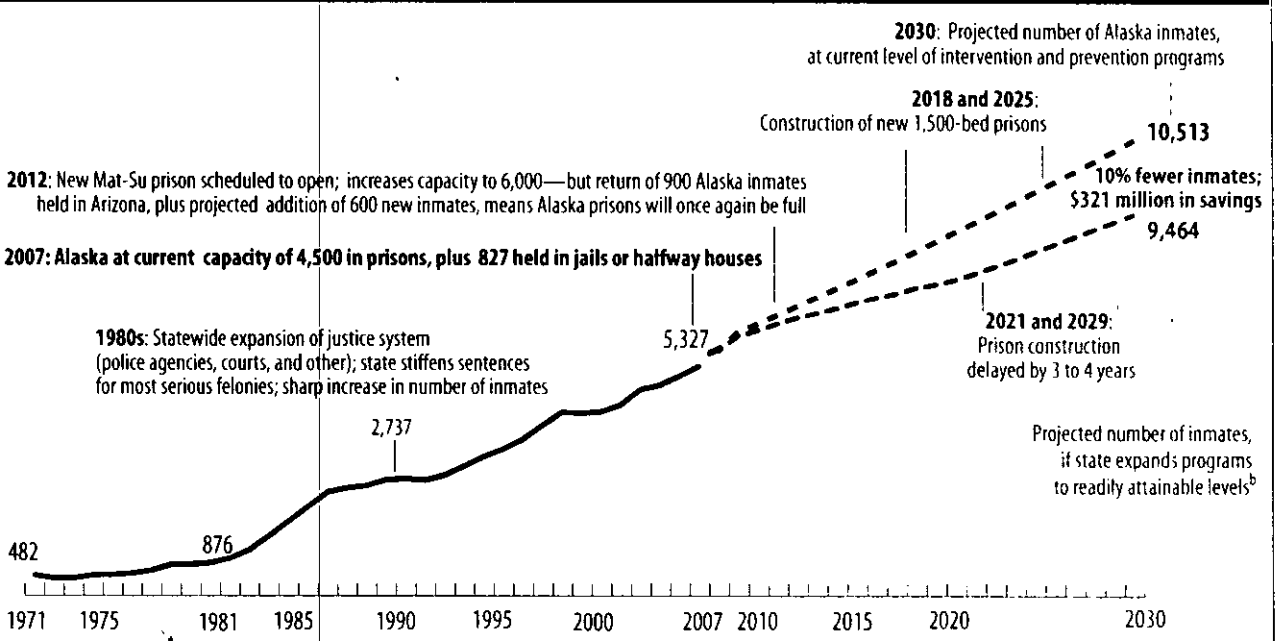
But except for some of the therapeutic court programs, most programs in Alaska have not been rigorously evaluated. Therefore, we used results of a Washington state assessment that systematically reviewed 571 program evaluations from around the country.

To be included, evaluations had to have carefully designed control groups, replicable results in multiple settings, and long-lasting effects. This method is evidence-based public policy, which merges research and practice. It is similar to clinical trials in medicine. Keep in mind that this is a new field, and only about 10% of programs in place nationwide have been evaluated at this standard.

With data from rigorous evaluations, the Washington State Institute of Public Policy created a model that estimated the effects of programs on recidivism—and then combined those results with a cost-benefit analysis to estimate the long-term effects on state spending and inmate populations.

We combined the institute's estimates of recidivism with Alaska data on program costs, eligible groups, and state population to estimate long-term effects on crime and state spending.

Figure 8. Average Number of Alaska Inmates,[a] 1971-2007, and Projected Number, 2008-2030



[a] Average daily number of people in prisons, jails, and halfway houses. [b] The number of people who could be readily added to program rolls varies considerably by program; see Table 1.

Sources: Alaska Department of Corrections; ISER projections of number of prisoners, based on Alaska Department of Labor projections of Alaska population 18-64 and assuming no change in current use of rehabilitation programs as well as expanded use; Washington State Institute of Public Policy

The authors thank the members of the Alaska Criminal Justice Working Group for their help in identifying programs to evaluate and for comments on drafts of this publication. The Alaska Legislature funded this group in 2007 and authorized the Alaska Judicial Council to act as its staff.

The group is chaired by a justice of the Alaska Supreme Court and Alaska's lieutenant governor. Other members include top policymakers from the departments of Corrections, Public Safety, Health and Social Services, and Law, as well as the Alaska Mental Health Trust Authority; the heads of the Alaska Public Defender Agency and the Office of Public Advocacy; the administrative and deputy directors for the Alaska Court System; the executive director of the Judicial Council, the U.S. attorney, and Anchorage's police chief.

This group meets monthly to talk about long-term justice issues, as well as to resolve any inter-branch issues that come up among the many agencies and organizations that deal with aspects of Alaska's justice system.

The authors also thank Elizabeth Drake and Steve Aos of the Washington State Institute of Public Policy for developing the methods and models we used and for helping us apply them to Alaska. For more information go to www.wsipp.wa.gov.

This research summary and many other publications on a wide range of topics are available on ISER's Web site:

Investing in Alaska's Young Children

January 2009

Alaska Early Care and Education
Public Policy Priorities for 2009

The following priorities are recommendations to assist public policy leaders in developing a system of early care and education to promote school readiness, strong families, and a strong workforce. These are advanced by a coalition of early care and education advocates working together to increase the accessibility and quality of early learning for young children and to strengthen families.

1. Denali KidCare: Increase the income eligibility guidelines for Denali KidCare (DKC) from 175% to a minimum of 200% of Alaska's federal poverty level (FPL). This change would restore eligibility to 1,300 children and 225 pregnant women. Children with access to preventative health care and developmental screenings have better outcomes for health and learning abilities throughout their lives.

2. Access to Quality Child Care: Increase child care reimbursement rates to the 75th percentile. This allows low-income children the opportunity to access higher quality programs, resulting in outcomes such as increased school readiness. Increase family eligibility to 85% of the state median income. This will enable the state to quantify and respond to support for families to enter or remain in the workforce.

3. Head Start: Increase Head Start funding by a total of $2,000,000. This will allow approximately 200 additional Alaskan children to receive Head Start services. Provide workforce development funds to enable Head Start staff to meet federal teacher qualification requirements.

4. Early Intervention: An increase of $2,000,000 will support currently enrolled children between the ages of birth and three who experience disabilities, and their families, and ensure a highly qualified staff as required in IDEA Part C. Due to flat funding since 2003, ILP programs are having difficulty covering operating costs and are unable to match the market's competitive wages making it increasingly difficult to recruit and retain qualified personnel. The funding increase will help expand staffing capacities to meet the demands of increased referrals, evaluations and therapy services for Alaska's young children.

5. Home Visiting: Establish research-based voluntary early childhood home visiting programs in Alaska, such as **Parents as Teachers**, with universal access for families with children prenatal up to kindergarten entry. Such programs increase parent knowledge of child development, improve

parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education have been shown to be reduced.

6. Pilot Voluntary Pre-K program: Maintain the $2,000,000 in the current budget for a pilot voluntary pre-K program. The need for Early Childhood Education in our state exceeds the capacity of the current system. Any new legislation needs to ensure that a comprehensive statewide plan is in place to coordinate pre-K services, and eliminate duplication or competition in early childhood service delivery.

7. Best Beginnings: Increase the Early Learning Coordination funding by $400,000. This leverages funding from the private sector and helps support the public-private partnership working to create and sustain a comprehensive statewide early childhood system. Work includes engaging broad-based collaborations at the local community level; implementing a public engagement campaign to raise awareness of early learning and educate parents and others on brain development and early literacy; and coordinating and supporting early literacy efforts such as Dolly Parton's Imagination Library.

8. Quality Rating and Improvement System: A QRIS is an organized method to assess, improve, and communicate the level of quality in early care and education settings outside the home. The system would provide a roadmap for individual early learning programs to improve their quality of care, thereby increasing parent access to a larger supply of quality options. The system would provide greater accountability for policy makers who govern public investments in Alaska's early care and education system and would ensure that publicly funded Pre-K services can be delivered through a variety of delivery systems that meet the needs of parents. A QRIS has been developed for Alaska and the next step should be a field test at a cost of $1.2 million.

These recommendations were created and supported by these early care and learning community partners working together to ensure the best outcomes for Alaska's children. The above recommendations are strongly supported by:

Alaska Child Care Resource and Referral Network • Best Beginnings • Alaska Association for the Education of Young Children • Alaska Head Start Association • Alaska Infant Learning Program Association

FAIRBANKS
Daily News - Miner

Alaska legislators push early education program

By Rena Delbridge

Published Thursday, February 12, 2009

FAIRBANKS - Time spent on a parent's lap with a book in hand and other early learning activities give children the tools they need to be successful in school.

Advocates seeking more state money to fund an early education program said a strong start often determines long-term success.

That in turn can help decrease drop-out rates, improve the prospects of higher education and good-paying jobs, reduce criminal behavior and save the state money down the road.

But it all starts at home, and Parents as Teachers program supporters want to give moms and dads the resources they need to start educating children as young as a couple of months.

House Bill 69 would funnel state money to the pre-kindergarten program, which already is running on federal grants in 47 Alaska communities. Local communities would apply to the state for program grants to serve parents with children up to 5.

"Parents are obviously the most influential people in children's lives," Rep. Pete Peterson, D-Anchorage, said. "They are their first teachers. What this bill does is just give the teachers some more building blocks to learn themselves what their children need to know so they can be more effective."

The House Education Committee heard the bill Wednesday, and is holding it for additional testimony.

Rep. Chris Tuck, D-Anchorage, is sponsoring the bill. He and co-sponsor Rep. Pete Peterson, D-Anchorage, held a press conference Tuesday detailing the bill. Rep. Scott Kawasaki, D-Fairbanks, and Rep. Les Gara, D-Anchorage, are co-sponsors.

They touted the legislation as a way to save Alaska money long-term by paying up front for

prevention, instead of down the road for intervention. Every $1 spent on early childhood education can net savings of $7 in the future as stronger students take their education further, stay out of the criminal justice system, and maintain steady, better-paying jobs, they said.

"It really does take more than one family member to raise a child," said Tuck, a former Anchorage school board member. "It takes a community."

The program will accomplish that, he said, and more. Parents will engage early in their children's education, increasing a student's likelihood of success long-term, he said.

The cost to the state would run in the millions each year, depending on how many families are served. Under Tuck's proposal, the Department of Education would administer the program, which could see more funding when state revenues are healthy.

The cost is little when the returns are considered, the legislators contend.

"This is an investment in the future of the state of Alaska," Peterson said. "Anything we can do to advance their education early on is just going to be better for the state."

Parents as Teachers sends trained, paid staff into private homes on request to guide parents in pre-kindergarten learning that helps kids develop the skills they will need in school. The program is available in 47 Alaska communities now, from the village of Hoonah in Southeast to Fairbanks.

But waiting lists can be long and federal funds are never certain year to year, program managers said.

Shirley Williams is director of Parents as Teachers in Fairbanks, where six trained educators are juggling to work a 50-family waiting list into their home visit schedules.

She noted strong results for children enrolled, and said most new families come to her through word-of-mouth, some signing up new babies before they're even born.

In Hoonah, director Lynne Osheim said the program is filling a major gap in education between age birth to 3.

Enrolled children could net 1,000 hours of "lap time" with parents and books before starting kindergarten, which can mean the difference between a basic vocabulary of 20,000 or 5,000 words.

"I've never met a parent — single, married, divorced, young, old, anything — who doesn't want what's best for their child," she said.

Nicki Shelton, a Parents as Teachers national trainer, shared a story of an Alaska child that, she said, is typical of many of the program participants.

The 2-year-old was enrolled speaking few words and with little vocalization. Weekly home visits from a parent educator helped the toddlers' parents understand what he needed to know and how to teach it.

At 4, the boy left the program.

"His language skills had reached the normal developmental level," Nikki said. "He was successful in kindergarten and all the way through elementary."

While parent educators do not diagnose developmental disabilities, they are trained to spot "red flags," she said. When such problems are caught and treated early, children have a better chance of learning the fundamentals that will carry them through the school years successfully.

"Our vision is that all children will learn, grow and develop to their full potential," Shelton said. "Every Alaskan child deserves this. With Parents as Teachers, every Alaskan community can make this a realistic goal."

The Honorable Chris Tuck
State Capitol, Room 426
Juneau, Alaska 9980-1182

Dear Representative Chris Tuck,

This letter is in support of House Bill 69, Alaska Parents as Teachers Act, establishing a voluntary parent education home visiting program for pre-elementary aged children and a rating system for early childhood education. The Governor's Council on Disabilities and Special Education (the Council) advocates for change that improves the lives of people with disabilities. One of the roles of the Council is to serve as Alaska's Interagency Coordinating Council for Infants and toddlers with Disabilities.

The Interagency Coordinating Council and parents as Teachers have two goals in common: (1) to ensure early detection of developmental delays and (2) increasing school readiness. The Council understands the importance of early detection of developmental delays and early intervention services for children. Many delays can be corrected before a child reaches school age, thus providing a cost saving for schools by decreasing the need for special education or remedial services. The Council also understands the importance of early detection and intervention for young children which leads to increased school readiness and later success in school.

The Early Intervention Committee of the Council recently completed an outreach trip to Haines to gather information on how early childhood intervention services are working for infants and toddlers with disabilities in rural communities. During our visit, we were impressed with the skills of Kim Phillips, Parents as Teachers staff in Haines. She was able to share with us her ability to help families identify the need for screenings if their child appears to have a delay. Then she assists them through the referral process, while continuing to provide support in the home environment during this stressful time. She works closely with the Infant Learning provider and the Headstart teachers to create a seamless early childhood system of services.

The Council supports the creation of a statewide Parents as Teachers program through House Bill 69 to provide families with early education including early detection of developmental delays and increased school readiness for young children.

If you have any questions, please feel free to contact me at (907) 269-8990.

Respectfully,

Stacey Messerschmidt, Chair
Governor's Council on Disabilities and Special Education

Early Learning Program

February 10, 2009

Dear Representative Chris Tuck,

This letter is to support House Bill 69 which would establish a voluntary Parents as Teachers home visiting program for families with children prenatally up to kindergarten entry age.

The Early Learning Program (ELP) based in Sitka serves children and families with special needs between the ages of birth and three. Since the children we serve are also served by the PAT program in a rural village that we service, collaboration between the programs is essential. To this end, the PAT teacher in Kake, Alaska has been exceptional in this area. When the PAT program began, the PAT teacher contacted the ELP program to see how the programs could work together. Over the past two years, the ELP and PAT program have developed a partnership in the following areas:

- Screening vision and hearing for all 0-3 children
- Conducting joint home visits for children enrolled in both the ELP and PAT
- Including the PAT program in the development of Individual Family Service Plans (IFSP's)
- Providing support to PAT teacher in the implementation of IFSP goals during home visits
- Assisting families in locating necessary resources such as Medicaid, Denali Kid Care and referrals to specialists (e.g., Ears, Nose and Throat doctors)

- Assisting families and children with special needs transitioning from ELP and PAT to the school district at the age of three

Prior to the PAT program starting up in Kake, the ELP, as an "outside" agency was not very successful in making contact with families. However, with the assistance of the PAT teacher, we were able to introduce our services and gain access to the children in need. The PAT program was the much needed bridge between the ELP program and families.

Along with the collaborative efforts, the PAT program provides the necessary supports and services to those children not eligible for the ELP. Eligibility for the ELP requires a delay of 50% or more in one or more areas of development. The PAT program is able to support all the children, particularly those who may be "at-risk" for developmental delay. Through the home visits and screening provided by the PAT program, children who might otherwise fall through the cracks are provided with necessary services and supports. In addition, the support for pre-natal families provides the opportunity for every infant to begin life in a supportive environment. The socializations provided by the program are instrumental in providing children with the chance to interact with other children and parents with the opportunity to meet other parents. There are no other programs in this particular village that provide the opportunity for these children to learn play skills and develop the social and emotional skills such as self-regulation, turn taking and sharing that are necessary for successful lives.

The Early Learning Program full supports House Bill 69. Without it many families will not receive the necessary support to enhance their child's growth and development.

Please do not hesitate to contact me at gtrujillo@cfc.org if you need any further information.

Sincerely,

Gail A. Trujillo

February 7, 2009

Representative Chris Tuck
Capitol Building Room: 426
Juneau, AK 99801

Dear Representative Tuck:

I write this letter in support of House Bill 69: Parents as Teachers. It is well known that parents are their children's first teachers. Sadly, however, many parents lack the skills and/or knowledge to send their children to school ready to learn. The voluntary Parents as Teachers home visiting program for families with children prenatally up to kindergarten entry age highlighted in HB 69 appears ideally suited to fill this gap.

Please know that the Kake City School District fully supports HB 69 and urges its passage. The future of our community, state and nation requires our best efforts to secure rich educational opportunities for our children beginning at the earliest possible age, ideally in the family home.

We in Kake are thankful for the current Parents as Teachers and Head Start programs operating in our district and feel that an expansion of the Parents as Teachers program state wide would bring forth results far exceeding the funds required to implement the program. Please contact our district office if we can provide additional support.

Respectfully,

Ralph O. Crosslin

Child Care
CONNECTION

February 5, 2009

Dear Representative Chris Tuck:

On behalf of Child Care Connection, Inc's Board of Directors and staff, I am writing to support current legislation to establish a voluntary parent education home visiting program for pre-elementary aged children and the implementation of a quality rating system for early childhood education in Alaska.

Home based education and support programs such as Parents as Teachers help parents understand what to expect during each stage of their young child's development, how to support their child's growth and learning, and how to prepare their young children for success in school. Parent success in this critical role largely depends on their understanding of child development, best parenting practice, how to detect their child's developmental delays and health issues, and their access to resources and supports in their community. Implementing a voluntary home visiting program in Alaska will provide parents, with access to expert guidance and assistance to ensure their child's healthy development and learning.

Beyond this critical parent education program, families with parents in the workforce need access to high quality early learning programs for their children while they work and contribute to Alaska's economy. Currently, Alaskan parents do not have a comprehensive way to objectively assess the overall quality of early learning programs in our communities. A Quality Ratings Improvement System (QRIS) would support parents in their search for high quality early learning programs through a five star rating scale evaluating the following factors: staff qualification and professional development, environment, curriculum and learning, leadership and management, and family engagement. A QRIS in Alaska would empower parents to become informed consumers who are better able to identify and seek high quality early learning programs for their children. The system would also provide a roadmap for individual early learning programs to improve their quality of care, thereby increasing parent access to a larger supply of quality options. Finally, the system would allow for greater accountability for policy makers who govern public investments in Alaska's early care and education system, providing coordinated support to all types of early education programs in Alaska.

As the leading agency of Alaska's Child Care Resource and Referral (AK CCR&R) Network, Child Care Connection staff talk with parents every day who share their concerns and challenges. Many parents we work with would benefit greatly from the support of the proposed home visiting program. Its early detection and screening component will be invaluable to the later success and wellbeing of each child touched by this program. Last year, our network worked with over 6,000 families as they struggled to find early learning programs that meet the needs of their children. Many of these parents need to find care for their children so they can go to work, but sometimes have to compromise the quality of their child's care because there are not enough quality programs to choose from. Parents who do find the quality care they need often cannot afford the cost of enrolling their child. I encourage you to support the creation of these two vital programs that will support families and young children both within their home environment, and within early learning programs statewide. Please contact me with questions or for further discussion regarding this letter of support. Thank you for your leadership on behalf of Alaska's young children.

Sincerely,

Candace Winkler

Representative Les Gara
Rep Les Gara@legis.state.ak.us

January 23, 2009

Dear Representative Gara,

I am writing this letter in support of establishing voluntary Parents as Teachers home visiting programs. The philosophy of Parents as Teachers is parents are children's first and most important teachers; empowering families to begin a lifelong involvement in the learning of their child.

Our Head Start program uses the Parents as Teachers curriculum for home visiting and can see the benefits to children and families first hand. For one parent who was deployed, receiving mailings with updates and pictures of his child and the Parents as Teachers handouts about developmental milestones helped to keep him connected while away.

Families in Alaska can be isolated from others. Home Visitors offer child development knowledge, parent support and encouragement. The key to healthy development are care givers who provide safe, secure, nurturing environments for children, Parents as Teachers gives families the tools.

Sincerely,

Laura Frisone
Family Services Coordinator

Alaska Infant Learning Program Association
Serving as an advocate for Infant Learning Program children, families and staff

700 Katlian St. Suite B Sitka, Alaska 99835
907-747-6960

February 10, 2009

Representative Chris Tuck
House of Representatives
State Capitol
Juneau, AK
99801-1182

Dear Representative Chris Tuck,

The Alaska Infant Learning Program Association is writing to support House Bill 69 which would establish a voluntary Parents as Teachers (PAT)home visiting program for families with children prenatal up to kindergarten entry age.

We know that the most important development of a young child occurs in the first few years of life, and our state priorities need to reflect this knowledge. Through the education and support of parents of young children, the Parents as Teachers program has proven effective in increasing children's school readiness, improving their later school success, and increasing their parents' involvement in school. If passed, this legislation would help Alaska's youngest start school ready to learn.

The PAT program provides the necessary supports and services to those children not eligible for Early Intervention/Infant Learning Programs (EI/ILP). In the State of Alaska, eligibility for EI/ILP requires a delay of 50% or more in one or more areas of a child's development. The PAT program is able to support the children who do not qualify, particularly those who may be "at-risk" for developmental delay. Through the home visits and screening provided by the PAT program, children who might otherwise fall through the cracks are provided with necessary services and supports. In addition, the support for pre-natal families provides the opportunity for every infant to begin life in a supportive environment. The socializations provided by the program are instrumental in providing children with the chance to interact with other children and parents with the opportunity to meet other parents. There are no other programs in Alaska besides PAT and EI/ILP that provide the opportunity for these children to learn play skills and develop the social and emotional skills such as self-regulation, turn taking and sharing that are necessary for successful lives.

Your ongoing support of Parents as Teachers is greatly appreciated!

Sincerely,

Gail A. Trujillo

February 9, 2009

I am a proud parent that has a child that is involved in the Parents as Teachers Program. And, so far, I am very pleased at the way the program is run. My child is advanced than other kids his age. He is 19 months and knows how to count to five and refers to his fingers when counting.

He likes to talk a lot and tries to imitate what we are saying. When we tell him what a name for certain items or things and he is able to catch on fast.

So, I would really recommend Parents as Teachers program and would happily tell all people that have kids to let their kids get involved in this program

Subject: HB 69 Parents as Teachers legislation/Hearing

February 9, 2009

Hello, my son is in the PAT program he will turn 2 this coming June and he enjoys his learning and play time and I truly believe that it starts from us the parents. He is 19 months old and he can count to five with our help and gives us a high five when we reach the fifth finger and he knows where his eyes, nose and ears are. We got him to say the letter S first and then he was able to pronounce words better, I fully support the program and we have a very encouraging lady who works for our local headstart.

Subject: in support of HB69

I was hoping to give a verbal testimony, but I've got to get to work now. So please accept this e-mail as my testimony of support for this house bill.

A little background information:

My name is Anastasia Lane. I was raised in Seward, and am now raising my own family here as well. I have two children who have been involved in the local Head start program and parents as teachers programs. As many of you know, developmental disorders and learning disabilities are on the rise. My oldest child is on the Autism Spectrum, and it was from the wonderful educators in the Head start program that first to alerted me that my child was significantly behind her peers in her development. On the other hand, the year before she was enrolled in Head Start, the "educators" at a different daycare/preschool program repeatedly told me that my child was "just fine"... "and I was worrying over nothing". This was obviously detrimental to my daughters' future as I chose to believe them, because that's what I wanted to hear. Had I not been told by these so-called "educators" that she was "just fine" ; we would not have lost over a year of therapies that could have significantly helped her. I am truly grateful to the teachers at Head Start for seeing what other educators could not. I fully believe in a "checks and balance" system, because of my personal experiences. I believe that an agency or person who wants to be an early childhood educator should be held accountable for their success or failure as an educator as well as supports be in place for them.

When my second child was born, the Head start program had already been removed. I signed up for voluntary Parents as teacher program because I was very concerned about his development. I didn't know what "typical development" was as my experiences thus far had been significantly skewed. I truly welcomed our "home visits" and not for one moment did I feel it was an invasion of my privacy. I would save up my questions throughout the week to ask at our "home visits" and absorbed the information like a sponge. Those home visits were a ray of sunshine in an otherwise frightening time for my family. I believe the teachers and agencies who provide these services should be held accountable; whether it be an agency, an individual, or a parent. I am in support of establishing a rating system for early childhood education; and hope you will pass HB69 in support of many families in Alaska.

Sincerely,

Anastasia Lane

Subject: comments for the House Education Committee

Dear Mr. Flora,
While telephoning my comments to the offices of members of the House Education Committee, I was asked to consider sending my comments to you via email. It is my understanding that you serve as aide to the House Education Committee.

I am writing regarding House Bill 69. I have read this bill and oppose its passage. As I read through the bill, I tried to see what issues and problems the authors seemed to address with the proposed voluntary home visit program. As a generalization, I believe a parent, not government, is better able to direct the life of a child. I have a degree in Elementary Education and as an educator and parent of 3, I see no reason to create this program. I believe we have resources and programs already in place that address the same concerns that House Bill 69 appears to address.

Please spend our money improving programs and resources already in place. Please assist the families of Alaska in cost effective ways. Please assist the children of Alaska in ways that do not substitute leadership and care from a government sponsored visitor for leadership and care from a parent or parents.

Sincerely,
Cynthia K. Bergstrom

Subject: Regarding HB69

Dear Representative Seaton,
I am writing this letter in regards to HB69. I do not support this bill. It's my opinion that this is yet another form of government getting too involved with our personal lives. I understand that there are children falling behind in school tests and scores and there is also problems with child abuse and neglect. I want our children to be safe and educated as much as everyone else does. In accomplishing this goal, I would think there are many other options and ideas that do not include government intruding on our parenting or in our personal lives. For instance, if the government wants to help the public so much with their young children, they could gather commitees together in individual towns and discuss ways the local people could help eachother. Then after some brainstorming and ideas are shared, we could do what we need to as a people for eachother without any further intervention from Big Brother except the usual child services when needed and other already in place programs for those who reach out for help or are reported for neglect or abuse. The point I'm trying to make is that we have the choice. If we need the help for specific situations, we will ask for it.
We don't need government forced parenting. This might sound outrageous or unpopular, but if you want to really help the children of Alaska, then help the marriages of Alaska. Get more drug and alcohol programs, promote homeschooling which I have found establishes a deep bound between parent and child. Encourage breastfeeding since it promotes bonding and helps the children to have higher IQ's and to be healthier. When supporting marriages and homeschooling and breastfeeding, do it in a non-forceful, non-bill anything way. We don't need more laws and government mandates, what we need is discussion tables at schools, correspondance programs, hospitals, counselors, and drug and alcohol facilities. How about some funding for marriage counseling. How about some vouchers for private schools including Christian Schools. There our children can learn about morals and values from the bible which says to love your neighbor and listen and learn from your elders who can later teach them about parenting. That's how the cycle should be. The older adults are supposed to train the younger adults. Not the government is supposed to train everybody. Also there should be encouragment for stay-at-home moms. The more a parent is around and active in the children's life, bonding and training the child, the better off the child will be emotionally and physically. Stay-at-home moms need encouragement and support like support groups with other moms.
These are ways that the government could help. It doesn't require bills or laws, it requires some time and energy to get the community working together to target areas which are positive in a child's life. I have many other ideas along with these but I feel like I've made my point for now.
Thank you for your time and I pray for your wisdom, Pamela Samash Nenana

Dear Representative Seaton,

I am opposed to the "Alaska Parents as Teachers Act" for the reason that I don't want the State to be involved within the home, or as an overseer for parents. Even though your office assured me that the version of this bill being discussed is purely on a voluntary basis, I am concerned about the incremental nature of government in people's private homes.

This bill sounds to me like a friendly piece of legislation to the U.N. Treaty on the Rights of the Child, which is very intrusive and completely removes the rights of the U.S. citizens. As a homeschooler I am both a parent and a teacher, and I see trouble down the road if legislation like this is approved.

Please oppose this bill. I strongly dislike it.

Sincerely,
Kaari Bouma in Homer

Mr. Seaton,

I am writing to express my opposition to the Parents as Teachers bill 69 that is up for consideration in hopes that you vote against it. We strongly believe that our tax money would be better spent elsewhere, as parents and not state officials can best determine what is best for their own children.

Thanks for your kind consideration of my request,

Diane Marble

Dear representative,

I work for the Parent as Teachers program in a remote part of Alaska. Predominantly the population is Athabaskan. There is little employment in the winter months and families rely on welfare and subsistence hunting to survive. As well as almost zero employment in the long winter there are also other problems with alcohol and substance abuse.

My program is fully enrolled and I have a waiting list. Due to the high unemployment we have a high number of father's attend the visits I conduct at in homes. Parents truly embrace the opportunity to learn more about their developing child and I can see them making life changing choices about their problems and perspective on life.

Father's are stepping up to fulfill the parenting role so needed. My father's are reading more to their children, getting involved in group activities and joining in with the sessions we have. This is a wonderful outcome for families in my region.

Not only father's benefit, I see teenager who are developing parenting skills, support a grandmother who is raising her small granddaughter, One of my younger mother's who is a convicted felon is changing her life around and volunteering in my program to clean toys. There are so many stories.

Please come to Tok/ Tanacross and Tetlin to see how my families are doing. I am sure you will see the wonderful benefits that I am seeing with the work I am doing to engage families of young children. Please support the house bill 69 to assist all Alaskans.

Yours sincerely

ALASKA DEPARTMENT OF REVENUE, TAX DIVISION
ADVISORY BULLETIN 2009 - 01

Subject: Production tax for gas used in the state under AS 43.55.011(o) and AS 43.55.900(24)

Alaska's Clear and Equitable Share (ACES) legislation enacted in December, 2007, included two amendments to the production tax statute dealing with gas used in the state. The statute at AS 43.55.011(o) allows a producer of gas used in the state and produced from a lease or property outside the Cook Inlet sedimentary basin the benefit of the tax ceiling under AS 43.55.011(j)(2).[1] The statute at AS 43.55.900(24) defines the phrase "used in the state" to mean delivered for consumption as fuel in the state, including as fuel consumed to generate electricity.

A manufacturing company, hereafter referred to as "the Company," has requested an Advisory Bulletin to clarify the meaning of gas used in the state. The Company uses gas for two purposes. A portion of the gas is used as a feedstock of raw material in the manufacturing process, by which gas is subjected to chemical reactions to synthesize another product. This gas is referred to as "process gas" or "feedstock gas". The remainder of the gas is used as fuel to run equipment such as heaters and compressors. This is referred to as "fuel gas". The Company raised the following question:

The definition of "used in the state" means delivered for consumption as fuel in the state. Under this definition would a nitrogen complex that uses natural gas to manufacture anhydrous ammonia qualify for "used in the state"?

Under the statutory definition of "used in the state," only that portion of the gas used as "fuel gas" by the Company would qualify. Gas is consumed as fuel when it is burned to provide energy. Gas used as a chemical feedstock is not gas consumed as fuel, as required by that definition. Therefore, the Company's feedstock gas produced outside the Cook Inlet sedimentary basin would not qualify for the production tax ceiling under AS 43.55.011(o).

We note that this limitation on the applicability of the tax ceiling applies only to gas produced from a lease or property outside the Cook Inlet sedimentary basin. Gas produced from a lease or property in the Cook Inlet sedimentary basin enjoys a tax ceiling under AS 43.55.011(j) regardless of whether it is delivered for consumption as fuel in the state.

This advisory bulletin is issued for the information and guidance of producers, explorers, and other interested persons. Opinions expressed here are strictly limited to the proposed conditions as presented above interpreted in accordance with existing Alaska production tax law. These interpretations do not address other possible effects under other tax types or other tax laws, and, as provided under AS 43.55.110(g), interpretations stated in this advisory bulletin are not binding on the Department or others.

Issued: February 10, 2009

Jonathan E. Iversen
Director

[1] The ceiling tax per Mcf (thousand cubic feet) under AS 43.55.011(j)(2) is derived by multiplying the average rate of tax that was imposed under AS 43.55 for taxable gas produced from all leases or properties in the Cook Inlet sedimentary basin for the 12-month period ending on March 31, 2006, times the average prevailing value for gas delivered in the Cook Inlet area for the 12-month period ending March 31, 2006, as determined by the Department of Revenue. The regulations at 15 AAC 55.440 provide that the average rate of tax for Cook Inlet for the 12-month period ending on March 31, 2006, was 4.947 percent and that the average prevailing value for gas delivered in the Cook Inlet area for the 12-month period ending March 31, 2006 was $3.585 per Mcf.

Subject: HB 69

Representative Seaton,

Please consider opposing HB 69, the Parents as Teachers Act.

I feel this Act would impose an invasion of privacy toward citizens in the state of Alaska.

The formative years (ages 0 through 5) are crucial in the upbringing of children. Submitting them to home visits, mandatory checks, health screenings would create an insecure environment for the parents as well as the child. With government officials constantly entering homes, an attitude of dependency on the government will result allowing the inability to perform as responsible adults in the upbringing of children.

Thank you

Thank you, **Representative Gardner et al!** I appreciate your time and input and especially the testimony of Jeff, Kelly and Jillian (sp), however, many questions re: HB 69 beg definitive answers.

The issue as I read HB 69 *and sponsor statement* is **voluntary in-home educator-parent "visits."**
The majority of testimony I heard this morning echoed **MENTAL HEALTH ISSUES** almost from start to finish.

Please help me understand the motivation behind this bill:

Q1 - Are the "trained parent educator(s)" PARENTS THEMSELVES with PRACTICAL EXPERIENCE?
Q2 - Since the children affected by this proposal are NOT public school enrollees, why is my state taking on MORE rather than LESS oversight of those young Alaskan citizens NOT within the age-purview of our compulsory education law?
Q3 - Instead of "...an attempt to implement cost-effective, fact-based solutions to Alaska's poor graduation rates..." (Sponsor Statement), shouldn't the focus be on older, enrolled students in the public schools as per our Constitutional mandate AND the students' mastery of in-school course content?
Q4 - Couldn't faith-based and community agencies and NPOs continue their assistance in specific cases IF AND WHEN INVITED?
Q5 - As you know, the Alaska Constitution mandates *general* oversight of public schools. The children in question in HB 69 are **aged newborn to five.** The working definition of "general" is **not specialized or restricted**; **not detailed or precise** (Webster's Dictionary - emphasis mine). Are the lines once again becoming blurred between true parental control and autonomous family management vs more government intrusion, no matter how well-intentioned?
Q6 - *Instead of tightening up, why not lighten up on families* throughout our state?
Q7 - At what cost is HB 69 to the STATE OF ALASKA $$ coffers?

When what appears to be "broke" insists on trying to FIX something that may NOT be broken, my *Suspicious-of-Big-Brother* antennae start to vibrate! Please forgive me, yet it seems HB 69 is opening the door to more government "answers" when the state of public education in Alaska

proves our state government hasn't been too successful in finding a winning recipe for themselves and their already-enrolled students although I remain hopeful.

I'm not a Catholic, but I remember reading a poignant, pertinient vignette about Mother Theresa in which she "...refused to admit she was old and ugly and poor and powerless..." and in so doing, "...she forced the rest of us to acknowledge she wasn't any of those things (from *A Different Kind of Teacher* by John Taylor Gatto).

In the same vein, my educated guess is that most Alaskan famillies are not dumb, dumber, dumbest, out of control, dysfunctional, or asking for state "visits" into their private homes; they are not inviting the legislature's or the Department of Education's expanded intervention. The sooner we acknowledge this, the better. Please consider **backing off and/or backing down on legislation** concerning individual and private family freedoms, personal and traditional decisions on child-rearing, responsibility and accountability. Can we stick to rewarding the good and punishing evil as CIVIL LAW was intended and stop playing busy-body? We can't afford this legislation AND there are more important issues at hand.

In my humble experience with state and federal governmental powers, ***"Voluntary"*** *now smacks of* ***"Enforcement"*** *later.*

Please help me to understand the motivation behind this piece of legislation.
Thanks for reading and **THANKS FOR ALL YOU DO TO ENSURE OUR FREEDOMS now and forever.**

Remaining convinced that LESS GOVERNMENT IS MORE and that government should quietly disappear from education except for ***general*** oversight,

Rory Schneeberger, Ed.D. (Ret)

From: carlsons@cvinternet.net

Hi, I am from Kenny Lake Alaska a small community right before Chitina. We are on the road system but the road litterally ends 25 miles from our house. Isolation is definately a problem for young families out here. Parents as teacher's program is perfect for such rural communities as it connects families with each other as well as the school as well as other services, through home visiting and group socials it is a very effective program and it is proven that when families get involved with their children at an early age they stay involved with their children through the school years. Parent as teachers has made such a difference in our community. I have worked with this program for 9 years it is an amazing program with great information about brain development as well as practical things for parents to do at home. It recognizes parents as a child's first and most important teacher. I am proud to be a part of this program. I see time and time again what a difference this information and connections make in helping families and children suceed.

Critical Questions and Comments in Opposition to
The (Proposed) Alaska Parents as Teachers Act – HB69

1. **Citizens of the State of Alaska are better served through enhancement and augmentation of pre-existing programs** and institutions as means to encourage good parenting and increase school readiness for children:
   (1) enhanced focus and better funding of existing school-based Parent-Teacher Associations; particularly to include parents of pre-school children
   (2) through better funding of existing "local agencies" towards better parenting
   (3) through better use of public service announcements that provide information of the SOA's existing resources for better parenting;
   (4) by producing and making available various media for parents in areas this Act is concerned with;

2. **The State of Alaska should continue to encourage the functionality of the family in other ways:** fund the "not for profit organization that provides community services" DIRECTLY instead of taking a hands-on role. What will become of this program if oil remains at $35/barrel?

3. Currently, this HB 69 lacks sufficient detail regarding the qualifications of caseworkers; especially for those not working for a public school.

4. It is not necessary, nor is it beneficial, for State of Alaska to institute such a program through HB69. Funds supplied directly to targeted regions around the State, by grants – not through direct control of the SOA, would be cheaper, more effective, and not expand the State's oversight into the homes of preschoolers. **A judge could easily latch onto this program and mandate it as a condition for those deemed at-risk, low income, or otherwise in need of more "help."**

5. The Bill unnecessarily, and possibly dangerously**, steps into areas of expertise that are better addressed directly through private (and possibly public) health care providers.** Specifically, the language stating that HB69 will promote "increased identification of health problems and developmental delays through regular screenings; improvement of child health indicators, including immunization rates . . ." Again, rather than use HB69 as a remedy for shortfalls in existing State programs, re-focus the existing programs to include the goals of HB69.

6. The Bill does not sufficiently define the criteria for a "not for profit organization that provides community services" in order to meet qualifications to receive program funding under this Bill.

7. **Although not mandatory for private schools, this Program would effectively rate non-participating schools as "unrated" or "non-**

participating;" effectively establishing non-performance criteria for non-participating schools.

8. The Bill does not specifically define how public and private pre-elementary programs will be rated on the one-to-five system.

OTHER QUESTIONS RE: HB69

(1) Is this Bill parent-teaching focused or child-observation-focused? If it is the goal of the State of Alaska to enhance parenting skills for their preschoolers, enhance funding to existing programs that target parenting skills. **Focus on our hospitals: Providence, Alaska Native Medical Center, etc. where there's an existing parent-child-care provider interface.**

(2) According to the language in the Bill, the effectiveness of the program would be determined partially by: "the number of children screened and receiving referrals for further evaluation; and the number of referrals to other community organizations and resources." **If the good intention of this Bill is to establish personal connections with existing community organizations and resources, why not encourage these existing organizations and resources through additional funding, PSA's, outreaches, etc., rather than create additional legislation?**

(3) Stated is that the Bill will "adopt regulations to implement this program." Why doesn't HB69 specify how implementation of the Program will occur?

(4) How will funding for this Program under HB69 be allocated when multiple local agencies (i.e., in geographic proximity to one another) apply to the Program for funding? Will city public schools be given preference, or rural educational associations? Will not-for-profit agencies be given equal consideration?

(5) What specific set of performance-based metrics are included in this legislation to track it's positive or negative impact on Alaskan citizens? According to the existing language of HB69, counselors must demonstrate intervention and referrals to prove their effectiveness – I feel these criteria has the potential, in some cases, to endanger the family's privacy, with the ultimate result being that families are disrupted rather than helped.

(6) Is it the State's intention, or could the State, mandate participation in this Program to citizens who receive State-sponsored health care, e.g., Denali Kid Care?

(7) The Bill does not specifically define how the ratings of public and private pre-elementary programs will be publicized – on the internet? Through our next election ballots? On TV? Pamphlets mailed to residents?

(8) The Bill lacks definition of "developmental and health screening." HB 69's scope is too broad; in particular, the definition of a "potential delay in normal development." **What are the repercussions to the child and family if a caseworker determines a "potential delay in normal development" for the child?**

Attachments: Critical Questions and Comments HB69.doc

All,

Regarding HB 69, attached are some specific questions and reservations I have at this time.

In summary, HB 69 is an unnecessary and detrimental expansion of government into the realm of the family. The State of Alaska should allocate resources to existing programs and organizations rather than create a new program.

Please do not proceed with HB 69.

Thank you for your hard work and for considering these comments and questions.

Respectfully,
Garret Slaugenhoup

PAT Alaska

A Special Feature with Information on Parents as Teachers (PAT) Involvement and Early Childhood Development

Update

No Child Left Behind and Parents as Teachers

The No Child Left Behind Act (NCLB) of 2001 empowers parents to get involved in their child's education, requires stronger accountability for results and stresses the use of scientific-based research. The Parents as Teachers program supports NCLB in the following ways:

Parents as Teachers has proven effective in increasing a child's school readiness and later school success. *Parent participation in the PAT program has important effects on children's school readiness and is "highly effective in helping impoverished parents prepare their children to enter school." 1 Kindergarten and third grade children who had participated in Parents as Teachers showed better outcomes in all areas of development and on standardized tests than a comparison group matched in gender, ethnicity, language and participation in the free/reduced lunch program. 2*

Parents as Teachers engages parents in their child's development and education from the earliest years and has proven effective in increasing parental involvement once the child reaches school age. *Research shows that parent involvement in their child's learning is positively related to achievement. Parents who participated in PAT demonstrated high levels of school involvement, which they frequently initiated, and supported their children's learning in the home. 3*

The Parents as Teachers Born to Learn curricula content is based on reliable and current research in the areas of child development and neuroscience . *The curricula was developed in collaboration with neuroscientists from the Washington University of School of Medicine in St, Louis and shares information with parents that is not anecdotal, but is content based on the key characteristics of reliable research.*

The Parents as Teachers supports the No Child Left Behind program goals of assisting young children and their parents prepare for academic success. *PAT can be funded by local school districts and/or operated in conjunction with programs such as Title 1; Parental Information and Resource Centers; William F. Goodling Even Start Family Literacy programs; Early reading First, and 21st Century Learning Centers.*

Seitz, V., Zigler, E., NHSA Dialog: A Research-to-Practice Journal for the Early Intervention Field, 2002, "Promoting School Readiness: The Role of the Parents as Teachers Program" p. 81 1 O'Brien, T., Garnett, D.M and Proctor, K. (2002). Impact of the Parents as Teachers Program. Ca_on City, CO, School Year 1999-2000. 1 Phannenstiel, J., Lambson, T. and Yarnell, V. The Parents As Teachers Program: Longitudinal follow-up to the seconf wave study. Overland Park, KS: Research & Training Associates,1996

Parents as Teachers

A fun, early learning program for soon-to-be parents and parents with children up to five years of age.

Research Shows:

PAT children outscored their peers on measures of school readiness and later school achievement.

PAT children were more advanced than other 3 year-olds in language and social development , problem-solving, and other intellectual skills.

PAT children performed better than non-PAT children in elementary school.

PAT parents took a more active role in special education; lower incidence of abuse and neglect.

What We Do:

Personalized home visits with a certified Parent Educator, trained in child development, who is eager to help give their children the best beginning.

Family Play Times where families can learn new things about children parenting and share experiences with other parents.

Regular Developmental Screenings to ensure children's development is on track and to detect possible delays.

A Resource Network that can help parents find services in their community, if needed, that are beyond what PAT can do.

How to Contact Us:

Melissa Pickle- PAT Alaska State Coordinator at mpickle@ruralcap.com or (907) 865-7345

What No Child Left Behind Funding Streams Can Support Parents As Teachers?

- **Title 1 (Title 1, part A)-** As the largest federal program supporting elementary and secondary education, Title 1 targets resources to districts and schools with high poverty rates. Title 1 has a parental involvement component which requires local school districts receiving Title 1 funds to develop a plan of parental involvement. *Schools receiving Title 1 funds may choose to use the funding to implement model parental involvement practices such as Parents as Teachers.*
- **Parental Assistance Information Centers (Title V, part D, Subpart 16) - -** This federal competitive grant program funds school-linked or school-based parental information and resource centers (PIRCs). These centers provide services that increase parental involvement in order to improve student academic achievement. Services include training, information, and support to parents, schools, and organizations that work with parents. *At least 30 percent of the grant awards must be used to establish, expand or operate early childhood parent educator programs— specifying Parents as Teachers and the Home Instruction Program for Preschool Youngsters. Over 50 of the PIRCs currently support Parents as Teachers programs.*
- **William F. Goodling Even Start Family Literacy Program (Title 1, part B, subpart 3) —** The Even Start Program provides low-income families with integrated literacy services for parents and their young children (birth through age 7). It is a state-administered grant program in which states award competitive grants. Local Even Start programs provide four core educational components: early childhood, adult education, parenting education, and parent-child activities. *The Parents as Teachers model incorporates and emphasizes early literacy throughout its parenting education and parent-child activities. Parents as Teachers programs often work in conjunction with adult literacy programs in the implementation of Even Start programs.*
- **Early Reading First (Title 1, part B, Subpart 2)** This program is a federally administered grant program. Grantees must use Early Reading First funds to provide preschool-age children with high quality oral language and literature-rich environments; provide staff professional development; provide scientifically based reading instructional materials; implement screening reading assessments or other appropriate measures; and integrate these materials, activities, tools and measures into the grantee's preschool program. *Parents as Teachers home visiting model can be used to support a preschool program's center-based early education by engaging parents as partners in creating a literacy-promoting environment for their children at home.*
- **21st Century Community Learning Centers (Title IV, part B) —** This program provides services during non-school hours to students and their families for academic enrichment. The services can be provided to parents of children that participate in the center or parents of pre-school age children that will be eligible for the center services. *The funds can support programs that promote parental environment and family literacy, such as Parents as Teachers.*

What is the Title 1 Decision-Making Process?

At the State level, no Title 1 money is specifically tied to parental involvement . However, there are no regulations preventing a state using Title 1 funds to support parenting education and parental involvement programs.

A school district and individual schools have this same option available. Additionally, a school district that receives over $500,000 in Title 1 funds is required to set aside 1% for parental involvement. In turn, the district must pass on 95% of the 1% to schools to support for parental involvement activities. Parents must be involved in the process that determines how these funds will be spent.

For more information or to submit a FAQ, contact Lynn Tiede, Public Policy Manager, Parents as Teach- National Center,

lynn.tiede@patnc.org

The information for this update is adapted from the Parents as Teachers National Center, St. Louis, MO.

investments in children are always investments in tomorrow.

* State funds are only one of many funding sources available to Parents as Teachers programs.

Guide to Funding

For Parents as Teachers programs

Parents as Teachers national center

FUNDING FOR PARENTS AS TEACHERS PROGRAMS

Running a successful PAT program depends on securing stable and diverse funding that can grow and expand to reflect the needs of the families served. In fact, the need for PAT programs to seek diversified funding sources for program growth is so important that it has been included as one of the standards in the "Program Design and Funding" section of *A Closer Look*, the National Center's guidelines for program quality standards.

There are two main categories of funding that support PAT programs: public and private funds. Each of these sources of funds has benefits and drawbacks, thus necessitating that PAT programs develop a mixture of funding that provides for both stability and growth. Ideally, no single funding source should account for more than 15% of a program's revenue in any single year. Therefore, PAT programs should continuously allocate both personnel time and resources to securing a mix of funding.

Tips for developing sustainable funding:

- **Be proactive.** Learn about different funding sources, beginning right in your own community. Become active in local and state initiatives that are working to support families with young children. Build relationships with your elected officials at the federal, state and local levels and identify private funders supporting family and childhood initiatives. Cultivate these relationships long before you are in "desperate need" of funding.

- **Think ahead.** Develop a 3-5 year funding plan now for your program's future. Ask questions like: what is the "lifespan" of our current funding? What do we need to do to be eligible for other kinds of funding or grants? What are the resources in our community to help with fund raising? What kinds of activities are covered by certain types of funding and which ones are not?

- **Budget time and money for fund raising.** Even the most effective PAT program can't succeed without adequate financial support. Allot time and money to write grants, research potential funding sources, and communicate with donors. Make it everyone's "job" to be on the lookout for funding ideas and sources.

- **Diversify your funding.** Develop a mix of sources that includes government, foundation, corporate, event, individual, and agency funding. Don't put all your funding "eggs" in one or two baskets.

- **Leverage your funding.** Funds from one source can often times be used to help secure funds from another source. Private funds from individuals and corporations can be used to leverage agency and government funds. Funders like to support a "winner." The more diversified your funding sources, the more attractive your program is to a new funder.

© 2005, Parents as Teachers National Center, Inc.

PUBLIC FUNDING

Public funding, i.e. funding supported by public tax dollars, is the primary revenue source for most Parents as Teachers programs. Public funding can come from federal, state or local government sources, such as state or federal grants or your local school district's budget. Because Parents as Teachers outcomes cut across many fields, public funding can come from a variety of sources that are targeted towards a variety of "primary" purposes.

The purpose of this *Parents as Teachers Guide to Funding* is to provide a general idea of places to look for funding for your PAT program and to provide an overview of some of the major funding streams that PAT programs currently use. This is not intended to provide detailed information on each funding stream, but to give you enough information to help you decide which streams are a potential fit for your program.

It is important to learn about each funding source and seek only those funds that are appropriate to your PAT program and local community. If you either receive or are seeking public funding, you need to be prepared to:

- **Educate yourself about the funding source.** This will help you be more effective in getting and maintaining public funding. Learn who the decision-makers are for the funding you are receiving. Is it members of Congress, state legislators, your county commissioner, or your local school board? Keep in mind that the funding amounts and guidelines for spending public money may be set at one level (e.g., in Congress or your state legislature), but the final decision on what specific programs are supported may be determined at another level (e.g., by your county or local school district). You will need to know what decisions are made at what level and by whom!

- **Get ready to advocate!** Public funding is subject to shifts in needs, the political environment and/or turnover in elected positions or government agency personnel. For example, early education may be the "hot" issue one year, but something else may become "hot" the next year and funding may be reduced or eliminated. War time expenses or natural disasters may also cause shifts in spending. However, the needs of children do not change. Part of the responsibility of receiving public funding is to continuously advocate and to educate the appropriate decision-makers about the importance of their investment in young children and in Parents as Teachers specifically.

Help us make this guide even more useful to our Parents as Teachers programs!

This guide is considered a work in progress. We need to incorporate the knowledge from those of you "in the field" who have accessed—or tried to access—these funding streams. If you have any advice, comments or corrections, please do not hesitate to contact Lynn Tiede, Public Policy Manager, at Lynn.Tiede@ParentsAsTeachers.org. We would appreciate your input!

© 2005, Parents as Teachers National Center, Inc.

LOCAL FUNDING

Although short, this is the most important section of the guide! Why? It's simple. Community-based programs need community-based support. Believe it or not, decisions about how public funds are spent—even state or federal funds—are often made at the local level or are dependent on local collaborations.

Regardless of where you seek funding, you need to start in your own backyard. Be proactive—start building relationships at your community and county level. In many cases, it is a local or county official that can help you access or "drawn down" state or federal funds to support your program. If you doubt this, read on to the descriptions of the state and federal funding streams and you will see the number of programs that require that you "start local."

A few places to seek out local funding/collaborative opportunities are:

- County health department
- Local school district
- Local children and family agencies and nonprofits
- Local mental health associations
- United Way
- Faith-based organizations
- Community early childhood initiatives

STATE FUNDING

By state funding we mean funding that comes directly from state revenues. States will have their own unique initiatives, programs and funding streams. It is impossible to cover all the state funding streams that could fund PAT programs, but here are a few general categories of funding that are often used. You will need to investigate further to find out what is available in your state.

State Early Childhood/ Community-based Initiatives: Many states have their own early childhood and/or community based initiatives. These initiatives may have specific goals around school readiness, or may have broader goals around support for families and children. In many cases, these funds can support Parents as Teachers programs at the local level.

A few examples of state early childhood/community-based initiatives are:

- *Smart Start* in North Carolina, which is designed to help ensure that young children enter school healthy and ready to succeed. The funds are administered through Local Partnerships that determine services based on local needs.
- The *Iowa Community Empowerment Initiative*, which created local community empowerment areas where citizens lead efforts to improve the well being of families with young children. Each community empowerment area establishes a board that is responsible for designing and funding services to meet local needs.
- The *Children and Families Commission in California*, which was created by Proposition 10. "Prop 10" was approved by California voters to add a tobacco tax that was then dedicated to help communities create comprehensive and integrated systems to support early childhood and school readiness. The funds are allocated to County Commissions, which plan and make decisions regarding how the

© 2005, Parents as Teachers National Center, Inc.

money should be spent to best meet local needs.

Resource: The National Governors Association Center for Best Practices provide links to websites of state early childhood initiatives: http://www.nga.org/center/divisions/1,1188,C_ISSUE_BRIEF^D_1891,00.html

State Children's Trust Funds: All 50 States, the District of Columbia and Puerto Rico have created Children's Trust Funds. These organizations serve as a catalyst for the development of community-based child abuse and neglect prevention programs in their states. They are also incubators for programs and services related to strengthening families to prevent child abuse and neglect. State trust and prevention funds receive revenue from a variety of sources such as surcharge fees on marriage licenses or other vital records, individual and corporate fundraising, and State and Federal resources.

Resource: The National Alliance of Children's Trust Funds http://www.msu.edu/user/millsda/index.html

State revenues devoted to support home visitation and/or a specific home visitation program: In some states, the legislature has devoted state funds to support early childhood home visitation programs broadly. Specific home visitation programs can also have funds designated for their use. For Parents as Teachers, this is the case in Kansas, Missouri and Oklahoma. In other states, funds have been allocated to other home visitation programs, such as Healthy Families America, Nurse Family Partnership, or HIPPY.

Funds designated for early childhood home visitation are very valuable resources. Consider working to establish one in your state. If an early childhood program other than PAT is already funded, explore collaborative opportunities.

© 2005, Parents as Teachers National Center, Inc.

FEDERAL FUNDING

Federal funding for Parents as Teachers programs can come from a variety of sources, including the Department of Education, Department of Health and Human Services and the Department of Justice. This section covers some of the major federal funding streams that can support Parents as Teachers programs. The descriptions include the purpose of the funding, eligible recipients, approved activities and uses of funding, and how Parents as Teachers connects to the funding. Additional "things to consider" are listed to further help you decide whether this funding stream is a fit for your program and community.

Keep in mind that federal funding is, at times, indistinguishable from state funding. For some federal funding streams you would apply directly to the federal agency that administers the programs (e.g., Parental Information Resource Centers). However, in most cases federal funds are allocated to state agencies to administer and/or deliver a specific program. A few examples are Even Start, Title V Community Prevention, Medicaid and TANF. Read through this section to find out more about these funding streams and how they are administered at the federal, state or local level.

The information provided should be enough to get you started, but does not go into great detail. Why? Because, as noted above, federal funding streams often flow down with only broad guidelines and requirements. The specific decisions for how the money is spent is often decided at the state or local level, and can vary greatly from state to state or community to community.

You will need to do further "investigation" into a funding stream that you are interested in accessing. You may also need to convince decision-makers to include Parents as Teachers programs in their funding plans.

The rest of this section provides more information on the following federal funding sources:

- Title I, Part A—Education for the disadvantaged
- Parental Information Resource Center grants
- 21st Century Community Learning Center grants
- Even Start
- Early Intervention Program for Infants and Toddlers with Disabilities (IDEA Part C)
- Early Reading First
- Head Start/Early Head Start
- Promoting Safe and Stable Families
- Title V Community Prevention Grants

© 2005, Parents as Teachers National Center, Inc.

TITLE I

Program Name: Title I, Part A—Education for the Disadvantaged—Grants to local education agencies

Authorizing legislation: Elementary and Secondary Education Act of 1965, as amended by No Child Left Behind Act of 2000.

Funding Agency: U.S. Department of Education (DOE)

Appropriations: FY04—$12.3 billion; FY03—$11.7 billion; FY02—$10.35 billion

Program Purpose: Title I funding helps to ensure that all children have the opportunity to obtain a high-quality education and reach proficiency on challenging state academic standards and assessments.

Funding recipients: Federal Title I funding flows through each level of our public education system. Below is the process (somewhat) simplified...

- Based on a federal formula, State Education Agencies (SEAs, or state departments of education) receive the Title I funding for their state. A limited amount of the funding is set-aside for state-level activities such as Title I administration and technical assistance.
- The rest of Title I funding is allocated to Local Education Agencies (LEAs, or local school districts) based on the number and percentage of low income children residing in the school district. LEAs utilize the funding for district-level activities such as professional development, transportation and supplemental educational services. As one of the required expenditures, 1% of the funds must support parental involvement. However, 95% of the 1% parental involvement set-aside must be passed on to schools for their parental involvement activities.
- The remaining funds are distributed to schools in the district with high concentrations of low-income children. Districts do have some discretion over what grade-level schools will receive the remaining funds. For example, a district can decide to use Title I funds for only elementary schools, middle schools, high schools, or even preschools. The exception, however, is that any school with more than 75% low-income children must receive their share of the Title I funds.
- Schools that receive Title I funds may use them in one of two ways: 1) If more than 40% of a school's population is comprised of low-income children, the school can operate a "school-wide" Title I program and the funds can be spent on activities for all children in the school. 2) If less than 40% of the school's population is comprised of low-income children, then the funds must be spent for services targeted only to those children that are Title I eligible.

Where to apply for funds: Your local school or school district

Activities supported by the funding: Title I funding is very flexible and schools can use it in a variety of ways, including, but not limited to:

- Hiring of instructional staff
- Professional development

© 2005, Parents as Teachers National Center, Inc.

- Before- or after-school programs
- Preschool programs
- Parental involvement activities, and
- School-wide reform

PAT connection: At the local level, schools and/or the school district can decide to spend a portion of their Title I funds to support parent education/involvement programs like Parents as Teachers. If a school is operating a "school wide" Title I program, all families attending that school could be eligible for service.

Things to consider:

- Title I funding is very flexible, which means there is often a lot of competition around how to use the funds. Be sure to tie your efforts to get PAT funded to school readiness. See link below for resource on PAT and No Child Left Behind.
- Keep in mind that it is very important to gain support from your local educators. Decisions regarding Title I funding are made locally—by your local school board and schools. Work with them to include PAT in their Title I plans.
- You will want to learn more about how your district is spending its required 1% set aside for parental involvement. Keep in mind that while 1% may not sound like a lot, it can be significant and in many cases has fully supported Parents as Teachers programs. Also, the 1% set aside is a minimum amount—your school district can decide to use more of their Title I funding for parental involvement activities.
- School districts will have a subcommittee, or Parent Council, on which parents serve and which helps decide how the parental involvement funds are spent. This can be an important community-based link to involve parents in advocating for support of PAT programs.

Relevant links: For more information on Title I, go to:

- U.S. Department of Education program overview at: http://www.ed.gov/programs/titleiparta/index.html

For information on how Parents as Teachers supports the goals of No Child Left Behind, go to:

- Parents as Teachers National Center website, Public Policy/Advocacy section at: www.patnc.org

© 2005, Parents as Teachers National Center, Inc.

PARENTAL INFORMATION RESOURCE CENTERS

Program: Parental Information Resource Centers (PIRCs)

Authorizing legislation: Elementary and Secondary Education Act of 1965, as amended by No Child Left Behind Act of 2000. Title V, Part D, Subpart 20.

Appropriations: FY04—$42 million; FY03—$42.2 million; FY02—$40 million

Funding agency: U.S. Department of Education (USDOE)

Program purpose: To implement effective parental involvement policies, programs and activities that lead to improvement in student academic achievement.

Funding recipients: Nonprofit organizations or a consortium of nonprofit organizations and a local education agency can apply as part of an open competitive grant process. The funding can be for up to 3 years and is administered directly from the USDOE to local grantees.

Where to apply for funds: Office of Innovation and Improvement, USDOE

Activities supported by the funding: The funding supports parental information and resource centers (PIRCs) in activities that assist parents in participating effectively in their children's education; that coordinate activities for parents with other federal, state and local services and programs that serve their children; and that provide support for state or local education personnel around parental involvement.

PAT connection: Parents as Teachers is specifically named as a "promising model" in the authorizing legislation for this program. By law, PIRCs are to spend 30 percent of their grant funds on an early childhood parent education program, like Parents as Teachers. Many PIRC grantees use a portion of their funding to support Parents as Teachers programs, training, and quality efforts.

Things to consider:

- This funding stream provides for more comprehensive services than just Parents as Teachers.
- At least half of the funds must be used to provide services in areas with children from low-income families.
- The need for advocacy around this funding stream is high. In recent years, the Administration has recommended to Congress that the funding for PIRCs be cut. However due to ongoing advocacy efforts, Congress has maintained the funding in the education appropriations bill.
- The opportunity to compete for this funding stream is no longer available on an annual basis. The "Requests for Proposals" for PIRC funding are now issued every 2-3 years.

Relevant links: For more information on PIRCs, go to:

- U.S. Department of Education program overview at: http://www.ed.gov/programs/pirc/index.html
- PIRC website at: http://www.pirc-info.net/index.asp

© 2005, Parents as Teachers National Center, Inc.

21ST CENTURY COMMUNITY LEARNING CENTERS

Authorizing legislation: Elementary and Secondary Education Act of 1965, as amended by No Child Left Behind Act of 2000. Title IV, Part B

Appropriations: FY04—$999 million; FY03—$993.5 million; FY02—1 billion

Funding agency: U.S. Department of Education (USDOE)

Program purpose: To support creation of learning centers that provide academic enrichment opportunities for children, particularly students who attend high-poverty and low-performing schools.

Funding recipients: State departments of education (a.k.a. state education agencies, SEAs); which in turn manage statewide competitions and award grants to local organizations.

Where to apply for funds: State Education Agency

Activities supported by the funding: The grantee may use the funds to carry out a broad array of before- and after-school activities to advance school achievement. These activities can include remedial education, academic enrichment, tutoring services, activities for English language learners, recreational activities, character education and parental involvement/family literacy.

PAT connection: Parents as Teachers programs can be funded as a parental involvement program, as part of the larger grant.

Things to consider:

- This funding stream provides for more comprehensive services than just Parents as Teachers. If your organization wants to provide the entire range of services, you would apply directly for the grant. Otherwise, you will want to collaborate with local entities that are applying or reapplying for this funding and see if Parents as Teachers can help them accomplish their goals.
- In recent years, funding for this program has come under scrutiny at the federal level. However, so far there have been successful advocacy efforts and the funding has been maintained. Congressional advocacy is recommended to help maintain this important funding stream.

Related links: For more information on 21st Century Community Learning Centers, go to:

- U.S. Department of Education program overview at: http://www.ed.gov/programs/21stcclc/index.html
- List of contacts in each state with next application due date: http://www.ed.gov/programs/21stcclc/contacts.html

© 2005, Parents as Teachers National Center, Inc.

EVEN START

Program: William F. Goodling Even Start Family Literacy Programs (Even Start)

Authorizing legislation: Elementary and Secondary Education Act of 1965, as amended by No Child Left Behind Act of 2000. Title I, part B, Subpart 3.

Appropriations: FY04—$246.9 million; FY03—$248.4 million; FY02—$250 million

Funding agency: U.S. Department of Education (USDOE)

Program purpose: To support local family literacy projects that target eligible families with children from birth through age seven.

Funding recipients: State education agencies (SEAs, or state departments of education) receive funding based on a formula. SEAs in turn manage statewide competitions and award grants to local education agencies (LEAs, or local school districts) and other local organizations, such as government agencies, Head Start programs, and other public and private community-based groups.

Where to apply for funding: State Education Agency

Activities supported by the funding: The funding supports integrated early childhood education, adult literacy, parenting education and interactive parent and child literacy activities.

PAT connection: Parents as Teachers incorporates nicely into the Even Start program, providing an effective model for the parent education and interactive literacy activities. Even Start programs are the second largest "partner" with PAT following local school districts.

Things to consider:

- This funding stream provides for comprehensive family literacy services, of which Parents as Teachers can be an integral part. If your organization wants to provide the entire range of services, you would apply directly for the grant. Otherwise, you will want to collaborate with local entities that are applying or reapplying for this funding and see if Parents as Teachers can help them accomplish their goals.
- This funding is targeted to low-income families. Priority is given to proposals that target areas with large numbers of low income families or to projects in empowerment zones or enterprise communities.
- Even Start funding does, at times, face challenges at the federal level. Congressional advocacy is recommended to help maintain this important funding stream.

Related links: For more information on Even Start, go to:

- U.S. Department of Education program overview at: http://www.ed.gov/programs/evenstartformula/index.html
- List of contacts in each state at: http://www.ed.gov/about/offices/list/oese/sasa/escontacts.html#state
- National Even Start Association at: http://www.evenstart.org/
- National Center for Family Literacy at: http://www.famlit.org/

© 2003, Parents as Teachers National Center, Inc.

IDEA

Program: Early Intervention Program for Infants and Toddlers with Disabilities (IDEA, Part C)

Authorizing legislation: Individuals with Disabilities Education Act, Part C, as amended. (reauthorization of this legislation is pending in Congress, as of fall 2004)

Funding agency: U.S. Department of Education (USDOE)

Appropriations: FY04—$444.4 million; FY03—$434.2 million; FY02—$417 million

Program purpose: To assist states in maintaining and implementing statewide systems of coordinated, comprehensive, multidisciplinary, interagency programs of early intervention services for infants and toddlers with disabilities and their families.

Activities supported by the funding: Lead agencies coordinate early intervention activities and develop formal agreements that define responsibilities for services to be delivered. Funds may be used to provide direct services that are not otherwise available. Types of services to be coordinated and/delivered include evaluation and assessment; specific intervention therapies needed (e.g., speech, occupational, physical); and supports to the families. Each family must have access to service coordination.

Funding recipients: Based on a formula, funding is provided to the state agency identified as the lead agency for this program. The state agency often contracts out direct services to local entities.

Where to apply for funding: You will need to contact your state's designated lead agency to find out more about IDEA, Part C in your state. Go to this link for a listing of IDEA, Part C lead agencies: http://www.nectac.org/partc/ptclead.asp

PAT connection: Home visits are a service that may be offered by your state to eligible families. If approved by your lead state agency, Parents as Teachers services may be partially or fully reimbursable for eligible families.

Things to consider:

- This is a complex program; you will need to first find out more about the specific guidelines in your state.
- This funding stream is targeted towards families with children with disabilities, although states have the option of serving children who are at risk of developing disabilities.
- If Parents as Teachers services are not currently covered in your state, consider working in conjunction with your elected officials (local and state-level) to advocate for including it as a service option for eligible families.

Related links: For more information on IDEA, Part C, go to:

- U.S. Department of Education program overview at: http://web99.ed.gov/GTEP/Program2.nsf/vwNetHeadings?OpenView and click on "special education"
- National Early Childhood Technical Assistance Center at: http://www.nectac.org/partc/partc.asp

© 2005, Parents as Teachers National Center, Inc.

EARLY READING FIRST PROGRAM

Authorizing legislation: Elementary and Secondary Education Act of 1965, as amended by No Child Left Behind Act of 2000. Title I, part B, Subpart 2.

Appropriations: FY04—$94.4 million; FY03—$74.5 million; FY02—$75 million

Funding agency: U.S. Department of Education (USDOE)

Program purpose: To support the development of early childhood centers of excellence that focus on all areas of development, especially on the early language, cognitive and pre-reading skills that prepare children for continued school success; and that serve primarily children from low-income families.

Funding recipients: Competitive grants, directly from USDOE to eligible local education agencies (LEAs, or local school districts), public or private organizations, or agencies located in a community served by an eligible LEA.

Where to apply for funding: Office of Elementary and Secondary Education, USDOE

Activities supported by the funding: Early Reading First grants can be used for professional development for teachers, research-based early language and reading development instruction and materials, screening assessments of children, providing preschool-age children with cognitive learning opportunities, and using research-based reading research to improve all aspects of the program, including instructional materials, parental engagement and teaching strategies.

PAT connection: Parents as Teachers can be utilized as a parental engagement strategy.

Things to consider:

- This funding stream provides for more comprehensive services, of which Parents as Teachers can be an integral part. If your organization wants to provide the entire range of services, you would apply directly for the grant. Otherwise, you will want to collaborate with local entities that are applying or reapplying for this funding and see if Parents as Teachers can help them accomplish their goals.
- This funding has remained stable at the federal level over the past several years.

Related links: For more information on Early Reading First, go to:

- U.S. Department of Education program overview at: http://www.ed.gov/programs/earlyreading/index.html
- NAEYC overview of the Early Reading First program at: http://www.naeyc.org/childrens_champions/federal/2002/erf_q&a.pdf

© 2005, Parents as Teachers National Center, Inc.

HEAD START

Program: Head Start/Early Head Start

Authorizing legislation: Head Start Act, as amended in 1998 (reauthorization of this legislation is pending in Congress, as of fall 2004)

Appropriations: FY04—$6.8 billion; FY03—$6.7 billion; FY02—$6.5 billion

Funding agency: Administration for Children and Families (ACYF), U.S. Department of Health and Human Services (DHHS)

Program purpose: Head Start and Early Head Start are comprehensive child development programs that serve children from birth to age 5, pregnant women, and their families. They are child-focused programs and have the overall goal of increasing the school readiness of young children in low-income families.

Funding recipients: Grants are awarded directly to local public agencies, private organizations, Indian Tribes and school systems.

Where to apply for funding: Regional Administration for Children and Families offices

Activities supported by the funding: Head Start grantees and delegate agencies provide a range of individualized services in the areas of education and early childhood development; medical, dental, and mental health; nutrition; and parent involvement. All Head Start programs must adhere to Program Performance Standards, which specifically define the services that Head Start Programs are to provide to the children and families they serve.

PAT connection: Parents as Teachers incorporates nicely into Head Start or Early Head Start programs. Head Start/Early Head Start programs can choose to implement PAT as their home visiting service option.

Things to consider:

- This funding provides for a more comprehensive, broader scope of services. PAT can serve as the home visiting (or home-based) component of a Head Start or Early Head Start program. If your organization wants to provide the entire range of services, you would apply directly for the grant. Otherwise, you will want to collaborate with local entities that are applying or reapplying for this funding and see if Parents as Teachers can help them accomplish their goals.
- This program is targeted towards low-income families.
- There are very specific program standards for Head Start, however they are compatible with Parents as Teachers practices and standards.
- An active Head Start advocacy network helps ensure relatively stable funding at federal level.

Related links: For more information on Head Start, go to:

- Head Start Bureau website at: http://www2.acf.dhhs.gov/programs/hsb/index.htm
- National Head Start Association website at: http://www.nhsa.org/

© 2005, Parents as Teachers National Center, Inc.

PROMOTING SAFE AND STABLE FAMILIES (PSSF)

Authorizing legislation: Social Security Act, Section 430, Title IV-B, Subpart 2, as amended

Appropriations: FY04—$405 million; FY03—$404.4 million

Funding agency: Administration for Children and Families (ACYF), U.S. Department of Health and Human Services (DHHS)

Program purpose: The goals of PSSF are to prevent the unnecessary separation of children from their families, improve the quality of care and services to children and their families, and ensure permanency for children by reuniting them with their parents, by adoptions or by another permanent living arrangement.

Funding recipients: This funding is allocated to states based on a formula. The funds are managed by the state child welfare agency, which develops a five-year child and family service plan. Some funds are passed on to community-based organizations to delivery PSSF services.

Where to apply for funds: State child welfare agency

Activities supported by the funding: PSSF activities include family support, family preservation, time-limited family reunification and adoption promotion. States must use a significant portion of their expenditures for each of these activities, unless the state can demonstrate that it is making other investments in these areas. Family preservation services typically are activities that help families alleviate crises that might lead to out-of-home placement. Family support services are focused on voluntary, preventative activities that help families nurture their children and avoid the onset of crises. These services are often provided at the local level by community-based organizations, and include activities such as respite care for parents and caregivers, early developmental screening, tutoring, center-based services and home visiting services. Some activities, such as parenting education and respite care, are considered both a family preservation and a family support service

PAT connection: States can use these funds for a wide array of family support services, including home visitation programs. Parents as Teachers can provide both parenting education and early developmental screening.

Things to consider:

- This funding is very flexible in its use, so there is usually a lot of competition for how the funds will be spent. You will need to find out if home visitation is part of your state's five-year plan and may need to advocate for its inclusion.
- The program is targeted to low-income families and there may be time-limits on services.
- This funding has been relatively stable at the federal level.

Related links: For more information on PSSF programs, go to:

- ACF's Children's Bureau program overview at: http://www.acf.hhs.gov/programs/cb/programs/fpfs.htm

© 2005, Parents as Teachers National Center, Inc.

TITLE V

Program: Title V Community Prevention Grants

Authorizing legislation: Juvenile Justice and Delinquency Prevention (JJDP) Act of 1974, Subchapter V, as amended.

Appropriations (for distribution to states): FY04—$16.6 million; FY03—distribution to states was suspended; FY02—$26.7 million

Funding agency: Office of Juvenile Justice and Delinquency Programs (OJJDP), Department of Justice

Program purpose: To fund collaborative, community-based delinquency prevention programs.

Funding recipients: The funding is allocated by Congress to states based on a formula. A State Advisory Group, or SAG, is appointed by the Governor to oversee the program and broader juvenile justice issues. States then award Community Prevention Grants to qualified local government through a competitive grant process. At the community level, among other requirements, a local Prevention Policy Board must be convened and a 3-year comprehensive prevention plan must be developed. Programs can be funded for up to 3 years.

Where to apply for funds: Work with your local Prevention Policy Board; or contact your state Title V coordinator (Go to this website for listing: http://ojjdp.ncjrs.org/titlev/grant.html)

Activities supported by the funding: Local communities analyze their juvenile justice risks, assets, and resources, and identify the gaps and select prevention programs that address those gaps. There are many types of prevention programs/activities that can be supported, including community- and problem-oriented policing, after school/recreation, prevention curricula, behavior management, academic skills enhancement, truancy prevention, parent training, family therapy, peer mediation and counseling, mentoring, vocational/job training, and leadership and youth development.

PAT connection: Parents as Teachers is identified by the OJJDP as an "exemplary" model family program. Local governments can incorporate Parents as Teachers into their comprehensive prevention plan and fund local programs.

Things to consider:

- This is much more comprehensive funding, within which Parents as Teachers can play an important role
- Start locally. Find out if your community has a Prevention Policy Board or if one could/should be established.
- If a community plan has already been put together, begin discussions about the next phase of planning/funding, and how Parents as Teachers can support the community's ongoing prevention efforts.

Related links: For more information on this program, go to:

- OJJDP Title V program overview at: http://ojjdp.ncjrs.org/titlev/about.html

© 2005, Parents as Teachers National Center, Inc.

GETTING STARTED: PRIVATE FUNDING

Even more so than government funding, private fund raising gives you the opportunity to spread the message about the work of your PAT program. Even if you don't receive the funding, you have a chance to broaden community awareness of PAT and expand the circle on interest in your work. Private fund raising is also a means to involve volunteers, friends, families, neighbors and relatives in the work of your PAT program.

Private funding can come from a wide variety of sources including private foundations, corporations, unions, religious groups, local agencies (e.g., United Way, Variety Club, etc.), service organizations (e.g., PTA's, Kiwanis, Junior League, sororities and fraternities, etc.), events and from individuals.

In the beginning, keep it simple. Hold picnics for PAT families and friends and include a bake sale. Ask local groups to underwrite group meetings by providing space and refreshments. Look for in-kind donations of office space, supplies, printing and equipment. Ask local organizations for volunteer assistance.

Service groups like the Junior League, United Way or Association of Fundraising Professionals often provide basic courses in how to do fund raising. Some corporations encourage their employees to volunteer with local organizations. Ask a local company for help with accounting or legal matters. Other resources to help you get started can be found at the website listed in this guide.

To start private fund raising, develop a checklist of requirements for doing fund raising in your community. These include such items as

- documentation of not-for-profit status
- state or local charitable registration requirements
- recruiting a board of directors
- reporting requirements.

It is important to follow all legal guidelines to be eligible for funding. Without the proper non-profit legal documentation, most foundations and corporations will not fund your program. Also, non-profit status insures that donations to your program are tax-deductible for the donor, an important consideration for most donors.

Online resources for starting a non-profit can be found at:

- The Management Assistance Program for Nonprofits. Particularly, see the article "Starting a Nonprofit Organization."
- The Internet Nonprofit Center.

Identifying potential funding sources

The single largest source of private funding in the US is individuals, far and away. In 2003 nearly 85% of all charitable dollars came from individuals, nearly $202 billion!

In other words, remember to ask your friends, neighbors, coworkers and the community to support your Parents as Teachers program.

There are dozens of ways to do this ranging from selling candy and food, to walk-a-thons and gala dinners. Start small, engage your community com-

© 2005, Parents as Teachers National Center, Inc.

mittee, and involve volunteers in these efforts. To get more ideas, talk with others in your community about successful grassroots fund raising programs. An online idea resource is www.grassrootsfundraising.org.

When identifying companies and corporations that can be potential donors, don't overlook your neighborhood fast food chain, pharmacy chain, and discount store. Almost all national corporations have local giving programs to support community programs. The decision making is usually left to the manager of the local store. Visit the corporate website for more information or talk with the store manager.

When you are ready to write a proposal to a corporation or foundation for support, one of your best online research resources to identify prospective donors is The Foundation Center at www.fdncenter.org. To find a list of the top foundation and corporate funders in your community or state, search the section "Researching Philanthropy." Under "FC Stats" you can select from a range of lists about grantmakers.

Another valuable website for researching prospective funders is the Grantsmanship Center at www.tgci.org. This site also has valuable information covering a wide range of non-profit and funding issues. One such article is a list of the regional directories of corporate and foundation funders by state (www.tgci.com/magazine/01fall/statedirs.asp).

Another resource can be your local library and other non-profit organizations. Libraries often have volumes about local corporate funding programs and private foundations. In addition to libraries, the local United Way may have a list of funding sources and grantmakers in your area. Finally, don't forget the annual reports of other non-profits. Most organizations will list funders in their annual reports. This will give you a starting point to identify possible prospects.

Narrow your search of prospects by areas of interest, geographic giving area, and limitations on grants. Each foundation will have a brief description of the types of programs they fund, the kinds of grants they make, the range of the size of the grants, application guidelines, and geographic areas of giving. Read these descriptions carefully.

You can further narrow your search by reviewing the most recent IRS Form 990 filed by the funder. Once again, copies of the 990 can be found online at the Foundation Center website under "Finding Funders." You will need to know the name and location of the funder to access the free online information. Foundations and corporations with information online will often list their giving guidelines and 990 on their website, too.

Grant writing

For either public or private funds, it is likely that you will need to submit a grant proposal. The single most important part of writing a successful proposal is to follow the grantmakers guidelines carefully. Answer the questions directly and use firm statistics and data only.

Many free, online resources will take you step-by-step in developing a competitive proposal. One of the most comprehensive is at www.mcf.org. The Minnesota Coun-

© 2005, Parents as Teachers National Center, Inc.

cil of Foundations provides a detailed guide on "Writing a Successful Grant Proposal."

Another comprehensive, free online resource is the Non-Profit Guides website at www.npguides.org. This site includes sample proposals.

More and more, programs are writing grants for technology funding. The Techsoup website offers numerous articles and guidelines on writing grants for technology. Visit www.techsoup.org to access their library of articles on writing technology grants.

Finally, ask for advice and help from an experienced grant-writer. Most will be happy to review your proposal and make helpful suggestions.

No matter how you begin your fundraising efforts, the important thing is to get started. When you are raising funds for your Parents as Teachers program you are spreading the word about the importance of early childhood development programs and services and building more understanding for the importance of your work in your community. Look at your fundraising efforts as a chance to "sing the praises" of your great program and good things will happen as your message grows.

© 2005, Parents as Teachers National Center, Inc.

PREPARATION

You are likely to find preliminary grant writing steps to be the most time consuming, yet most vital aspect of the process. If done well, your preparatory work will simplify the writing stage.

Define your project

- Clarify the purpose of your project and write a mission statement.
- Define the scope of work to focus your funding search.
- Determine the broad project goals, then identify the specific objectives that define how you will focus the work to accomplish those goals.

Example:

- Goal: To improve production quality.
- Objective 1: Recruit advanced production talent.
- Objective 2: Train mid-level producers.
- Objective 3: Upgrade production equipment.

These goals and objectives suggest the proposal will request support for recruitment activity, production training, and equipment purchase. In contrast, a different proposal with the same goal might focus only on equipment upgrades.

- Decide who will benefit. Benefits may extend beyond the direct beneficiary to include the audience, other institutions, etc.

- Draft expected project outcomes in measurable terms.

- Draft a timeline that includes the planning phase, the period of searching for funds, proposal writing, and the intended project start date. Periodically update the timeline as you learn more about submission deadlines, award timetables, etc.

Identify the right funding sources

- Foundation centers, computerized databases, station development offices, publications, and public libraries are some of the resources available to assist your funding search.
- Do not limit your funding search to one source.
- Look for a match between your project and the grants you seek by looking for consistency between the purpose and goals of your project and the funder. In addition, pinpoint specific funding priorities and preferences.
- Make direct contact with funders to support projects like yours.
- Request proposal guidelines. Also request a list of projects previously funded. Perhaps an annual report is available.
- Inquire about the maximum amount available. Also, find out the average size and funding range of awards.
- Determine if funding levels of the grants you select are appropriate for your project. Note whether there is a funding floor or ceiling.
- Find out whether the funder has other grant sources for which your project is eligible.

Contact the funders

- Think of the funder as a resource.
- Identify a project officer who will address your questions.
- Some funders offer technical assistance, others do not. Ask for technical assistance, including a review of proposal drafts.

© 2005, Parents as Teachers National Center, Inc.

an explanation of budget items, and certifications.

Narratives

- *Statement of need*—purpose, goals, measurable objectives, and a compelling, logical reason why the proposal should be supported. Background provides perspective and is often a welcome component.

- *Approach*—method and process of accomplishing goals and objectives, description of intended scope of work with expected outcomes, outline of activities, description of personnel functions with names of key staff and consultants, if possible.

- *Method of evaluation*—some require very technical measurements of results. Inquire about expectations.

- *Project timeline*—paints a picture of project flow that includes start and end dates, schedule of activities, and projected outcomes. Should be detailed enough to include staff selection and start dates.

- *Credentials*—information about the applicant that certifies ability to successfully undertake the proposed effort. Typically includes institutional or individual track record and resumes.

Tips on writing the narrative

Narratives typically must satisfy the following questions:

- What do we want?
- What concern will be addressed and why?
- Who will benefit and how?
- What specific objectives can be accomplished and how?
- How will results be measured?
- How does this funding request relate to the funders purpose, objectives, and priorities?
- Who are we (organization, independent producer) and how do we qualify to meet this need?

The HOOK:

There are many ways to represent the same idea. However, the HOOK tailors the description of the idea to the interest of a particular funder. The HOOK aligns the project with the purpose, and goals of the funding source. This is a critical aspect of any proposal narrative because it determines how compelling reviewers will perceive your proposal to be.

Budget

Budgets are cost projections. They are also a window into how projects will be implemented and managed. Well-planned budgets reflect carefully thought out projects.

Funders use these factors to assess budgets:

- Can the job be accomplished with this budget?
- Are costs reasonable for the market—or too high or low?
- Is the budget consistent with proposed activities?
- Is there sufficient budget detail and explanation?

Many funders provide mandatory budget forms that must be submitted with the proposal.

Don't forget to list in-kind and matching revenue, where appropriate.

Be flexible about your budget in case the funder chooses to negotiate costs.

© 2005, Parents as Teachers National Center, Inc.

- Inquire about how proposals are reviewed and how decisions are made.
- Inquire about budgetary requirements and preferences. Are matching funds required? Is in-kind acceptable as a portion of applicants' share? What may be counted as in-kind, and how might it be applied? Learn about payment processes, including cash flow.
- Remember, the contacts you make may prove invaluable, even if not for now.

Acquire proposal guidelines

Guidelines usually tell you about:

- submission deadlines
- eligibility
- proposal format: award levels forms, margins, spacing, evaluation process and restrictions on the number criteria of pages, etc.
- review timetable
- budgets
- funding goals and priorities
- award levels
- evaluation process and criteria
- whom to contact
- other submission requirements

Additionally:

- Read the guidelines carefully, then read them again.
- Ask the funder to clarify your questions.

Know the submission deadline

- Plan to submit your proposal on or preferably before the deadline.
- Be realistic about whether you have time to prepare a competitive proposal that meets the deadline.
- Know the funder's policies on late submissions, exceptions, and mail delays.
- Find out how the funder will notify you about the receipt and status of your proposal. Factor this information into your timeline.

Determine personnel needs

- Identify required personnel both by function and, if possible, by name. Contact project consultants, trainers, and other auxiliary personnel to seek availability, acquire permission to include them in the project, and negotiate compensation. Personnel compensation is important budget information.

Update your timeline

- This is a good point at which to update your timeline, now that you know about submission deadlines and review timetables. Factor into your schedule time to write multiple drafts, gather relevant and permissible materials, and prepare an impartial critique of your proposal for clarity, substance, and form.

WRITING THE PROPOSAL

Structure, attention to specifications, concise persuasive writing, and a reasonable budget are the critical elements of the writing stage.

There are many ways to organize proposals. Read the guidelines for specifications about required information and how it should be arranged.

Standard proposal components are: the narrative, budget, appendix of support material, and authorized signature. Sometimes proposal applications require abstracts or summaries,

© 2005, Parents as Teachers National Center, Inc.

Supporting materials

Supporting materials are often arranged in an appendix. These materials may endorse the project and the applicant, provide certifications, add information about project personnel and consultants, exhibit tables and charts, etc.

Policies about the inclusion of supporting materials differ widely among funders. Whether to allow them usually depends upon how materials contribute to a proposal's evaluation. Restrictions are often based on excess volume, the element of bias, and relevance.

Find out if supporting materials are desired or even allowed.

Be prepared to invest the time to collect resources, produce a tape, document capability, update a resume, collect letters, include reference reports or whatever is needed.

Authorized signatures

Authorized signatures are required. Proposals may be rejected for lack of an authorized signature. Be sure to allow the time to acquire a needed signature.

Specifications

Tailor proposal writing to specifications found in the guidelines. Include only the number of pages allowed. Observe the format. Is there a form to complete? Must the proposal be typed, double spaced, on 8½ x 11 inch pages? Are cover pages allowed or desired? Caution!—the beautifully bound proposal is not always appreciated or allowed. Be concise. Elaborations should add depth and scope, not page fillers. Be prepared to write one or more drafts.

Submission checklist

a. The proposal must be **NEAT, COMPLETE, and ON TIME,** with the requested number of copies and original authorized signatures.

b. Address the proposal as directed in the guidelines.

c. Be sure to include required documentation.

FOLLOW-UP

Contact the funding source about the status, evaluation, and outcome of your proposal. It is important to request feedback about a proposal's strengths and weaknesses, although this information is sometimes unavailable, especially with a large volume of submissions.

Reference information may also be useful if you choose to approach the same or different funder again with your idea.

Prepared by the ALASKA COMMISSION ON POSTSECONDARY EDUCATION
Structural Components for Hybrid Need/Merit Scholarship Programs
Creating a postsecondary scholarship grant program for Alaska residents based on high achievement and financial need.

OUTCOMES	RELATED STRUCTURAL COMPONENTS	IMPLEMENTATION ISSUES
Increase high school graduation rate of at-risk populations	Early (middle school) commitment of non-loan financial aid in return for enrolling in postsecondary education prep curricula Provide outreach and support services for at risk populations which target both the student and a parent or committed adult mentor (Per IN feedback—"mothers are key!")	Delayed benefits due to time remaining in pipeline for first cohorts of scholars to transition to postsecondary education Support services to this population will need to be intensive and people-dependent which translates into substantial costs. Could be mitigated by developing volunteer network
Increase college-readiness	Require core prep (high school) curricula*	Inevitable debate/concerns on variance of education program content between schools Must ensure all components of curricula are available statewide which may entail distance delivery mechanism.
Increase college-savings	Incent by providing state matching dollars up to a set value.	Requires partnership between State and AK College Savings Plan
Increase college going	Early (middle school) commitment of non-loan financial aid in return for enrolling in postsecondary education prep curricula	Requires partnerships with school districts and administering agency to enroll participants, track progress, and communicate with participants
Increase in state attendance	Restrict portability of aid to in-state institutions	Limits student choice beyond high school to in state programs of study.
Decrease remediation rates	Require core prep (high school) curricula with minimum GPA requirement or minimum assessment performance* Provide early high school assessment and programs to identify and address areas of deficiency no later than 10th grade	Inevitable debate/concerns on variance of education program content between schools Must ensure all components of curricula are available statewide which may entail distance delivery mechanism. Assessment tool would need to be identified. Minimum standards relative to college-readiness would need to be identified. Assessment tool would need to be provided at no cost to the students.
Shorten time to degree	Require or reward full-time attendance Provide monetary reward for accelerated degree completion Limit awards to no more than the equivalent of five semesters for	Requirement would eliminate individuals who are unable to be full-time students.

OUTCOMES	RELATED STRUCTURAL COMPONENTS	IMPLEMENTATION ISSUES
	associate programs and no more than nine semesters for baccalaureate programs	
Increase retention and completion	Require receiving institutions to commit to provide ongoing support to targeted students—academic, social, etc. Provide outreach and support services for at risk populations which target both the student and a parent or committed adult mentor At postsecondary level, create and foster scholar networks to facilitate intramural support Tier scholar award amounts to increase in accordance with year in school (50%, 75%, 100%, 100% of tuition from FR to SR years)	Requires resource commitment at receiving institutions Support services to this population will need to be intensive and people-dependent which translates into substantial costs. Could be mitigated by developing volunteer network Could be done using social online network structure but would need to be facilitated at both the institution and statewide levels
Workforce development	Provide additional aid funds above and beyond the basic award for students enrolled in Alaska's high need fields of study Provide stipend support while engaged in practicum opportunities for Alaska employers	Need to establish method for identifying these fields and subsequently apportioning additional funds. Could be living stipend structure to awards.
Promote adult re-training	Provide access mechanism relative to minimum assessment performance without regard secondary education curricula or performance	Assessment tool would need to be identified. Minimum standards relative to college-readiness would need to be identified. Assessment tool would need to be provided at no cost to the students. American College Testing/WorkKeys?
Optimize distribution of funds	Require all participants to complete the federal Free Application for Financial Aid (FAFSA) For adult-entry participants, require application for any other workforce training funds for which they qualify. Awards made only after consideration of all other non-loan aid available to the participant and limit total award by a not-to-exceed cost of attendance cap	Requires partnership between receiving institutions, administering agency and other related agencies managing workforce training and financial aid programs.
Enhance return on investment	Require core prep (high school) curricula with minimum GPA requirement or minimum assessment performance** Tier scholar award amounts to increase in accordance with year in	Inevitable debate/concerns on variance of education program content between schools Must ensure all components of curricula are available statewide

OUTCOMES	RELATED STRUCTURAL COMPONENTS	IMPLEMENTATION ISSUES
	school (50%, 75%, 100%, 100% of tuition from FR to SR years) Prohibit or limit use of awards to cover costs of remediation courses taken at the postsecondary education level Awards must be initially used within two years of high school graduation and have a final expiration date of six years after high school graduation	which may entail distance delivery mechanism. Possibly incent top performers by funding at 100% for Jr/Sr years only for top performers based on GPA
Sustainable program model	Create a program endowment Appropriate funds at the time students enter into commitment and manage the funds accordingly, truing up appropriations as scholars either continue to qualify or become ineligible. Attract private/corporate/foundation dollars through offer of tax-advantage	Money, money, money…
Create college-going culture in AK	Make college-saving incentives available to Alaskans beginning at birth In elementary school communicate with parents re: early (middle school) commitment of non-loan financial aid in return for enrolling in postsecondary education prep curricula Provide outreach and support services for at risk populations which target both the student and a parent or committed adult mentor (Per IN feedback—"mothers are key!")

RESEARCH SUMMARY

R.S. No. 70 University of Alaska Anchorage • November 2008

Connecting a Disjointed System: A First Look at Aligning Education in Alaska

By G. Williamson McDiarmid and Alexandra Hill

We've heard it before, but it's still true: too many Alaska students don't have the skills they need to move on to the next stage of education or to get good jobs. Too many drop out of high school, and too few of those who graduate go on to college or other post-secondary education—and among those who do go on to post-secondary education, many don't graduate within four or even six years.

Employers report that young people entering the work world directly after they graduate from high school (or right after they drop out) don't have the reading, writing, and math skills necessary for many of today's jobs, even entry-level ones.

Alaska is not alone in these problems, but the high-school dropout rate is higher than the U.S. average and fewer graduates go to college. A third of Alaska's high-school students don't even graduate, and only about a third graduate and start college right away (Figure 1).

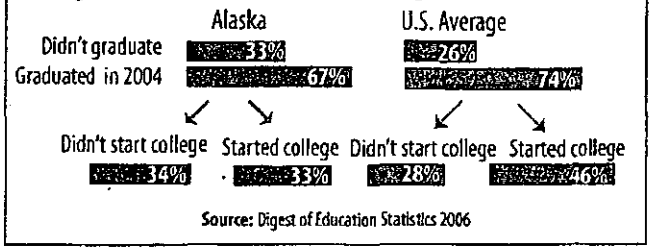
Many states have begun to address these problems by looking at education *alignment*—that is, coordinating the policies, programs, and mechanisms needed to support students as they move through the system from pre-school to elementary and high school and on to higher education or work.

Ideally, education levels would be coordinated so all students were prepared for the next step. In practice, many students—from kindergarten through college, vocational training, or work—enter without the knowledge and skills their teachers, professors, or employers expect. The students and their families are often frustrated that—despite indications to the contrary—they haven't been prepared for the next level. This frustration contributes significantly to the high dropout rates in both high school and college.

This publication summarizes a longer paper on the scope of alignment problems in Alaska and identifies areas where more research is needed or there are no data at all. It concludes with suggestions about steps the state should consider for improving alignment.

To move toward alignment, educators would synchronize their learning goals, curricula, and expectations. K-12 and early-childhood educators would agree on the skills children need entering kindergarten and first grade and how best to assess those skills. Likewise, businesses, higher education institutions, and schools would jointly determine the skills required for high-school graduates entering the workforce or college. To ensure that policies and resources supported such alignment, policymakers would need to collaborate in the process, working with educators from various education levels.

Figure 1. Students Who Started High School in 2000



Source: Digest of Education Statistics 2006

Transitioning to School: Early Childhood Education

We'll talk first about early childhood education—that is, education children receive before entering kindergarten. This is important, because several longitudinal studies have shown that children who receive high-quality early education are less likely to need special education or drop out, and as adults earn more and are less likely to commit crimes and receive welfare.

Alaska is one of only 12 states with no state-funded early education. It has federally mandated special education pre-school and federally funded Head Start programs in many communities. These programs together enroll about 16% of Alaska's 3-year-olds and 22% of 4-year-olds. Many more students in urban areas are enrolled in private pre-schools.

Overall, about two-thirds of Alaska children attend some sort of pre-school, according to the 2007 State Preschool Yearbook. But there is little information on how well these various programs prepare students to enter school.

How Many Alaska Children Aren't Ready for School?

The main source of data on Alaska children's readiness for school is the Developmental Profile. Teachers administer this assessment when children enroll for the first time in public school, usually kindergarten but sometimes first grade. The profile includes information on many aspects of development—physical and social, language and literacy, and cognitive.

Teachers rate children as "routinely," "inconsistently," or "never" exhibiting 11 measures of school readiness.

Data from recent profiles show that fewer than 5% of children rate "no" in physical well-being and social development. But about 10% fail to demonstrate the requisite skills in each of the areas of language and literacy development and cognitive development. Between 20% and 50% demonstrate these behaviors "inconsistently."

ISER and Avant-Garde Learning Foundation jointly carried out this research, funded by a grant from Shell Exploration and Production Alaska.

These statewide results mask wide variations among districts. In many, more than one-third of entering students don't meet some of the readiness measures, and in a few 60% or more don't. Those districts lose valuable time trying to catch children up, and some children never catch up.

What are the Limits of the Data?

We don't know how effective Head Start programs are. Some school districts with communities served by Head Start have Developmental Profile results similar to the state average, while in others the majority of children are rated as deficient on one or more measures. Little research has been done on what approaches are most effective for preparing Alaska Native children for school. Also, we lack data on the extent to which Head Start grantees coordinate with local school districts or with each other.

Districts report Developmental Profile results to the state without identifying individual children. Although the profile is a useful tool for teachers and parents, the lack of identifying information means the data cannot be disaggregated by student characteristics such as ethnicity, gender, or socio-economic status. Therefore, the profiles are not useful for tracking efforts to improve Alaska children's school readiness or for exploring the effectiveness of different programs.

Transition From High School To College or Work

What is the Issue?

Many Alaska high-school students graduate unprepared for post-secondary education or work. Alaska's colleges and universities find that many of their entering students—even those with good grades in high school–aren't ready for college-level work.

A 2006 national survey of 431 employers, published by Partnership for 21st Century Skills, reported that 42.4% of the respondents rated new entrants with high-school diplomas as "deficient" in their overall preparation for the entry-level jobs they typically fill, and 45.6% rated their preparation as "adequate" Almost no one (0.2%) rated their preparation as "excellent." Anecdotal information from Alaska employers suggests that Alaska's high-school graduates are no different from their counterparts Outside.

Available data also indicate that many of Alaska's high-school graduates are not prepared for college—but even within Alaska, what constitutes "prepared" can differ among institutions.

How Prepared Are Students for College?

The majority of Alaska students who enroll in college in the state go to one of the three University of Alaska campuses—Fairbanks (UAF), Anchorage (UAA), or Southeast (UAS). All three require students to demonstrate they're prepared for introductory level courses in English and math, through previous test scores (such as the SAT) or university placement tests.

Some requirements are similar across all campuses, but others are quite different. Table 1 shows (in abbreviated form) requirements to place into "freshman level" English. The information in the table raises two issues. First, it's neither easy to find nor to interpret. While academic advisors at the universities certainly know and can explain the requirements, prospective students, their parents, and teachers may be unable to get any clear sense of the actual skills and knowledge students need, or how they will demonstrate their proficiency. The other notable point is the difference in SAT/ACT scores required for entry into English 111 at UAA and UAF: SAT of 530 versus 430, ACT of 22 versus 17. That means students must score a bit above the mean (about 59th percentile) at UAA, but in the 20th to 30th percentile range at UAF.

Table 1. Prerequisites for ENGLISH 111 at University of Alaska

Campus	ACT	SAT	Accuplacer*	Other
UAF	17	430	Not mentioned	COMPASS (52) ASSET (45) HS GPA 3.0 or higher and permission
UAA	22	530	180 combined reading and sentence skills, including at>=85 reading, >=95 sentence skills	
UAS	n/a	n/a	454 combined essay, reading, sentence skills, including >=92 in both reading and sentence skills	Not mentioned

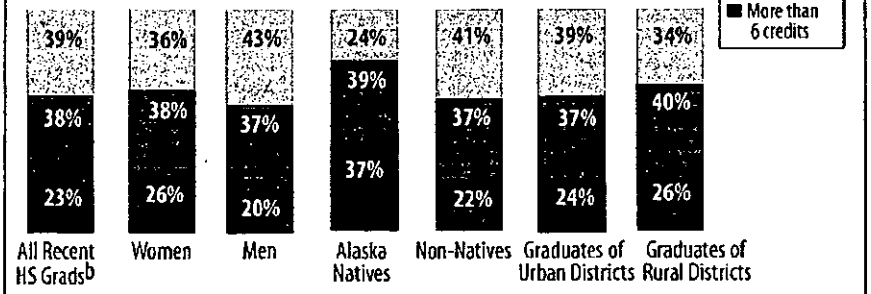
*Accuplacer scoring is not a simple cut-off score, but rather a set of minimum total score and subtest scores, simplified here for comparison.

Students assessed as unprepared are directed into "developmental" courses—which often don't count towards their degrees.

Data available at UAA allow us to see how many entering students had to take developmental courses. Among recent high school graduates enrolling at UAA for the first time, 60% take at least one developmental course. Almost one-quarter take more than 6 credits of developmental courses (Figure 2).

This analysis includes all students who enrolled at UAA for the first time in the fall semesters from 1998 through 2007. Further, we focused on "recent high-school graduates," defined as those who had graduated from high school either the same year as they enrolled at UAA or one year earlier. Thus, for example, students entering in fall semester 2007 were considered recent graduates if they had graduated in 2007 or 2006. Over the 10 fall semesters we examined, 15,713 recent high-school graduates enrolled.

Figure 2. Developmental Course Credits Taken by Recent High-School Graduates at UAA[a]



[a] Students who enrolled at UAA for the first time in fall semesters 1998 to 2007

[b] Those who graduated from high school either the same year or one year before they enrolled at UAA

Source: UAA Office of Institutional Planning, Research, and Assessment

5219

We disaggregated the data on recent high-school graduates to look at the numbers of Alaska Natives and non-Natives, men and women, and graduates of urban or rural Alaska high schools. Ethnicity was self-reported. Urban graduates are those who graduated from high schools in the Anchorage, Fairbanks, Juneau, Mat-Su or Kenai school districts; rural graduates are those from all the other districts. (About 15% of recent graduates were from other states or countries, or the location of their high school was unknown.)

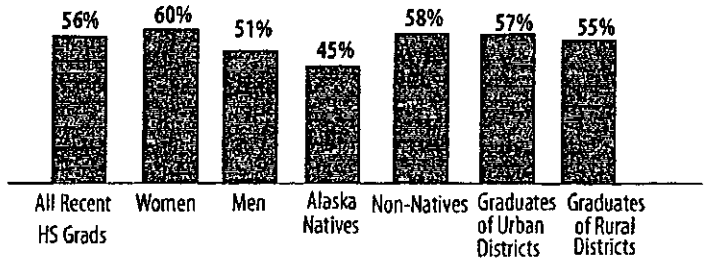
It's worth emphasizing that all but one of these sub-groups averaged high-school grade point averages (GPAs) of 3.0 or better. Men's average GPA was 2.98. We looked at the number of developmental credits these students took, categorizing these as none, 1 to 6 credits, or more than 6 credits.

Figure 2 shows that men are somewhat less likely to take developmental courses than women and to take fewer credits if they do. This may mean that men score better on placement tests (despite their slightly lower GPAs), or that they disproportionately enroll in programs that don't require college-level English or math (e.g., certificate programs in vocational fields). It's also possible that they are more likely to find ways around enrolling in recommended developmental course work—such as getting the professor's permission to enter a college-level course.

Alaska Natives are about 30% more likely than non-Natives to take at least one developmental course, and about 70% more likely to take more than 6 developmental credits. Graduates of rural high schools are somewhat more likely (about 8%) than graduates of urban high schools to take developmental courses.

How do the thousands of UAA students who take developmental courses do? Unfortunately, they're not highly successful. Overall, recent high school graduates pass just over half the developmental courses they attempt (Figure 3). Women are more successful than men and non-Natives more successful than Alaska Natives. There is little difference between students from urban and rural high schools.

Figure 3. Percent of Recent Alaska High-School graduates Who Passed Developmental Courses They Took (By Course Type and Credit)



See Notes, Figure 2. Source: UAA Office of Institutional Research, Planning, and Assessment

How Prepared are High-School Graduates for Work?

Alaska's students may graduate from high school unprepared for today's careers as well as for college. Although we lack comprehensive data for the state, we do know that employers often report they can't find qualified applicants for their openings. They also report that many of today's technical careers require as much mathematics or writing as entry-level college work.

A 2003 report on vocational education in Alaska noted that as accountability mandates and high-stakes testing were instituted between 1997 and 2003, the resources available for and participation in career and technical education in secondary schools declined. But no systematic data are available on how well prepared Alaska high-school graduates are to enter the workforce.

Do Current Requirements Prepare Students?

We've reported evidence that many of Alaska's students leave school unprepared for either college or work. But since many of these students did graduate from high school, does that imply that meeting the current graduation standards isn't enough to prepare students for college or work?

Alaska's state standards in English and math stop at the 10th grade level; science standards include 11th grade. The High School Graduation Qualifying Examination (HSGQE) is also the 10th grade level Standards-Based Assessment. Most districts require, in addition to the HSGQE, specific courses for graduation, without specifying the expectations of those courses. Others require students to demonstrate a particular level of proficiency in several areas.

The published high-school graduation requirements of the districts we reviewed (Anchorage, Bristol Bay, Aleutians East, Lake and Peninsula, Northwest Arctic, North Slope and Chugach) didn't make it clear whether those requirements went beyond the state's 10th grade standards. Although it was beyond the scope of this study to review all 53 districts in the state, we interviewed superintendents of four districts (Chugach, Aleutians East, Lake and Peninsula and Bristol Bay) and four principals in two of those districts. We asked them about their academic expectations for 11th and 12th graders, and whether they believed their graduation requirements ensured that graduates would be to be prepared for post-secondary education, job training, or work.

The superintendents and principals expect 11th and 12th graders to have passed the HSGQE and to be on track to graduate. They also expect those students to begin focusing on preparing themselves either for college or for work. They emphasized that students need to go beyond the graduation requirements to be fully prepared for college or work.

Some districts reported that teachers tell their students the minimum graduation level of work is equivalent to about 10th grade and will not prepare them for college-level coursework. And all the respondents said students have opportunities to learn far more than the minimum—and that too few students take advantage of those opportunities.

Summary and Recommendations

Reviewing national research and available data on Alaska, we see that:

- Up to one-third of Alaska children enter the public schools with no pre-school experience.
- In some school districts, more than half the entering children don't demonstrate all dimensions of school readiness educators expect to see.

• Research predicts that these students are more likely to need special education services and to drop out of high school.

• In the small sample of districts we canvassed, just meeting the high-school graduation requirements does not guarantee graduates that they are prepared for college or for technical training.

• Many high-school graduates who do enroll in Alaska universities find they are not prepared for college-level work.

• Employers report that they find many recent high-school graduates unprepared to embark on careers.

To address these problems—especially lack of alignment—effectively will require coordinated efforts among parents, educators, policymakers, and researchers. One approach that many states (30 as of 2006) are using is formal councils established to address problems from pre-school through college. A review by the Education Commission of the state found that while the specific membership, funding structures, and goals differ, such organizations typically aim to:

• Expand access to early learning for children ages 3 to 5, and improve their readiness for kindergarten

• Smooth student transitions from one level of learning to the next

• Close the achievement gap between white and minority students

• Upgrade teacher education and professional development

• Strengthen relationships between families and schools

• Create a wider range of learning experiences and opportunities for students in the final two years of high school

• Improve college readiness and college success

The commission also reported several states' successes, including reducing achievement gaps, increasing success on advanced placement testing, and raising higher education enrollment.

To be effective, councils need to work within a shared vision of the total system and commit to long-term efforts and real change. Andrea Venezia, a noted education researcher, cautions that, "convening a commission and holding cross-system discussions may be helpful, but these steps alone will not create meaningful K-16 reform. To be lasting and effective, the deliberations must be anchored in policy and finance reform and must reflect each state's culture and history." Any effort that hopes to be successful will have to convene key stakeholders, determine what additional data and analyses are necessary, undertake those research efforts, identify potential solutions, and make recommendations for change.

In our discussion we've identified both problems in the education system and gaps in the Alaska data. What don't we know?

• We need better data on children who enter school unprepared: numbers, areas of unpreparedness, pre-school experience, and progress in elementary school. The new Developmental Profile assessment, aligned with the state's early learning standards, has the potential to provide some of this information, if the Department of Education and Early Development is authorized and funded to link profile information with later student data and analyze it.

• We need better information on dropouts: numbers, demographics, and subsequent educational experiences and GED completion.

• We need to understand what districts expect of their 11th and 12th graders, and how they convey those expectations to students and parents. Do students and parents realize that the minimum graduation requirements will leave graduates unprepared for most post-secondary education and training and for many jobs? Do teachers understand what students need to succeed in college level work?

• We need to consider how to collect data about the success of high school and college graduates. If we want to hold high schools and universities accountable for preparing their students, we must be able to measure how well they do so. The state is creating a data system for tracking students in the public schools, from entry through high school graduation. What's missing is the capability to link P-12 data with university data with workforce data. Legal safeguards on data use present a challenge, but it's not insurmountable.

Finally, we hazard a few recommendations.

1. Alaska should create publicly funded, high-quality early childhood education that would be available to all families but voluntary. That would expand enrollment and help ensure that all students are prepared for kindergarten and first grade. Investing in school readiness will save money in the K-12 system and beyond.

2. We need to ensure that our high-school graduates are prepared for college or careers. Whether this should be through more rigorous high-school graduation requirements, better counseling, increased investments in career and technical education, or some combination of these and other approaches is not clear. But too many of our high-school graduates are unprepared for life.

3. The University of Alaska must be involved. UAF, UAS and UAA should communicate, as a single entity, their academic expectations for entering students. Increases in the number and quality of distance-delivery courses mean that students anywhere in the state can take classes, especially at the introductory level, from any campus. They should be able to do so without discovering they are unprepared for beginning college-level work.

4. The state should support these efforts and muster the resources to overcome the inevitable difficulties. Because change across so many institutions and interests is required, leaders should be prepared to persist over the long haul. Establishing a council to coordinate education at all levels is a step in the right direction.

5. Alaska is ahead of many states in developing its longitudinal student data system. It needs to continue to develop that system and improve links with other data systems.

This summary is based on a longer working paper of the same title. It will be available on ISER's Web site, www.iser.uaa.alaska.edu, under Education Studies. That paper includes full references for research cited here.

The authors thank Gary Rice and Yuan-Fang Dong of UAA's Office of Institutional Planning, Research, and Assessment; Diane Erickson of UAA; and the public school superintendents and principals who gave us their time.

Knocking at the College Door
Projections of High School Graduates by State and Race/Ethnicity, 1992-2022

ALASKA

At over 3.3 million, the nation's graduating class of 2007-08 is projected to be history's largest. In fact, 2007-08 will mark the last year in an era of continuous growth in the nation's production of high school graduates, a period that reaches back to 1994. Over that time, the number of graduates swelled by 35.7 percent. In 2008-09, however, our country will begin a protracted period during which its production of high school graduates is expected to stagnate, assuming existing patterns persist. The number of graduates nationally will dip slightly over the next several years before growth resumes at a slower pace around 2015. Ultimately, projections indicate that between 2004-05 (the last year of available actual data) and 2021-22, the number of high school graduates will grow by approximately 265,000, or 8.6 percent.

The national data obscure significant variations in this picture at the regional and state levels, however. Regionally, in the decade leading up to 2004-05, the number of high school graduates grew the fastest in the West at 34 percent, with the South growing by 23.5 percent, the Northeast by 20.7 percent, and the Midwest by 14.2 percent. But the regions face very different futures in the years to come. The South will see the most growth in its production of high school graduates, at about 9 percent by 2014-15; and the West's numbers will climb by 7.1 percent. But the number of graduates produced in the Northeast and the Midwest will decline – by 6.1 and 3 percent, respectively.

Figure 1. Percent Change in Graduates from Public and Nonpublic High Schools Between 2004-05 and 2014-15

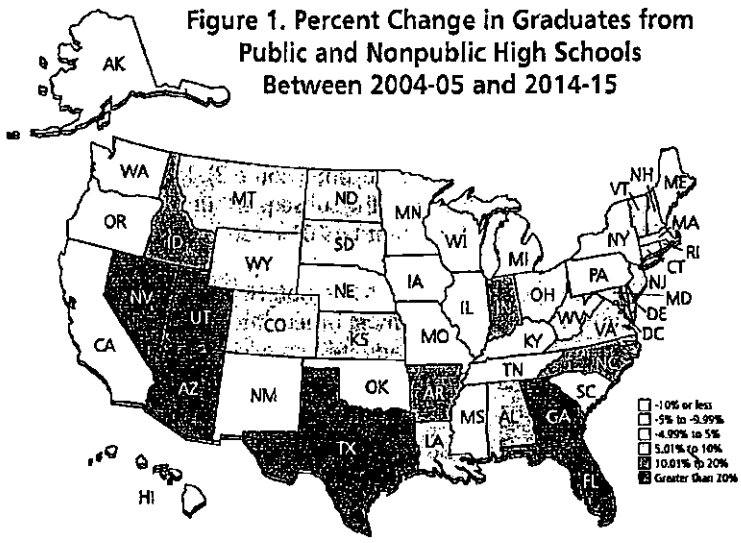


Figure 2. Alaska High School Graduates 1991-92 to 2004-05 (Actual), 2005-06 to 2021-22 (Projected)

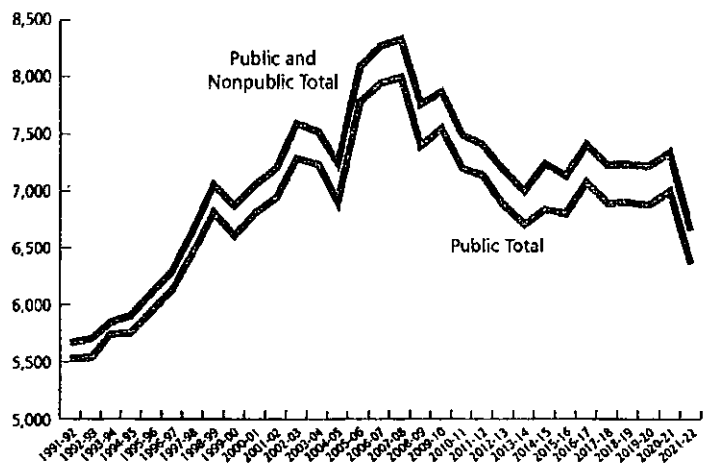


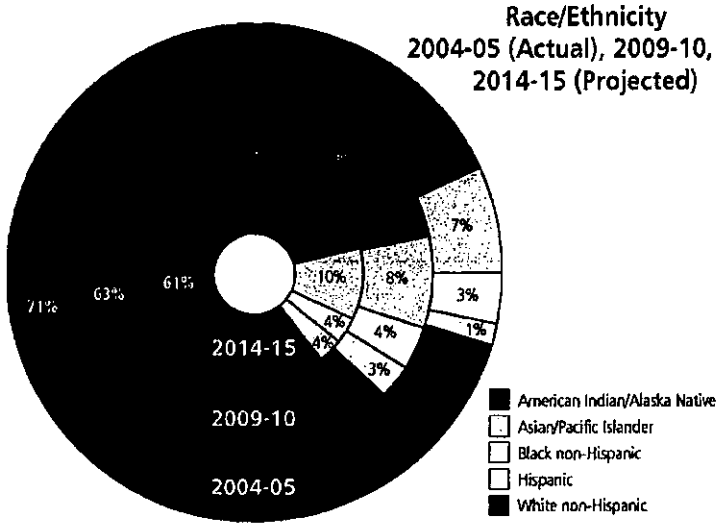
As with the national view, the regional picture masks considerable variation at the state level (Figure 1). Alaska produced about 1,340 more graduates in 2004 than it did a decade earlier, an increase of 22.7 percent, although the state experienced sporadic downturns in some years. Assuming that existing patterns of high school completion and migration continue, the state projects to produce about an equal number of high school graduates in 2014-15, although the intervening years will be somewhat unstable. The state's production of high school graduates will grow significantly through 2007-08, after which it will see general slippage punctuated by occasional increases over the subsequent six years.

Alaska was among the states with rapid growth in its production of high school graduates between 1991-92 and 2004-05, the most recent year of actual data from public schools (Figure 2). In 2004-05, 6,909 students graduated from public high schools in Alaska, a number that included 1,374 more graduates than were produced in 1991-92, representing growth of 24.8 percent. Nonpublic schools in the state

added an estimated 332 graduates in 2004-05, which itself was nearly two-and-a-half times more than graduated in 1991-92.

However, along with much of the rest of the nation, Alaska is poised to enter a new period characterized by much more stagnant growth in the production of high school graduates. After reaching a peak in 2007-08 at 8,327, Alaska will enter a period of diminishing numbers of high school graduates for most years through 2013-14, assuming a continuation of existing patterns of enrollment, progression, and completion. Between 2004-05 and 2007-08, the number of high school graduates is forecast to climb by 15 percent, but between then and 2013-14, it is projected to slide back by a roughly equal amount. Beyond that, the number of graduates will be relatively stable until 2021-22, the last year projected, when a big drop is anticipated. Alaska's nonpublic sector grew dramatically between 1991-92 and 2004-05 but still only accounts for less than 5 percent of the state's high school graduates.

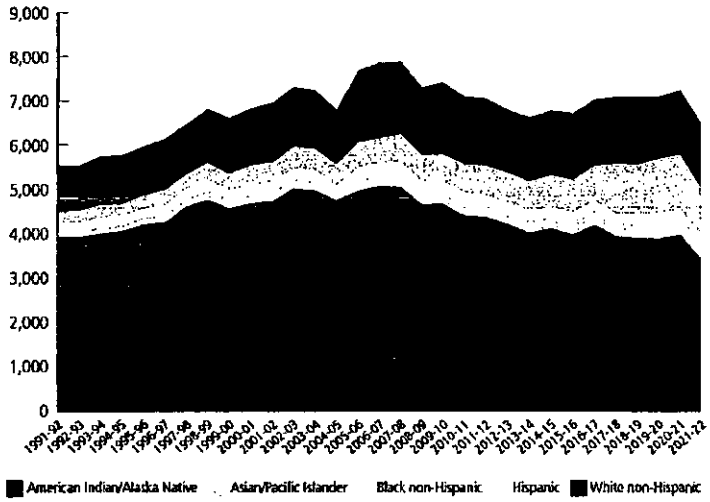
Figure 3. Composition of Alaska's Public High School Graduates by Race/Ethnicity 2004-05 (Actual), 2009-10, and 2014-15 (Projected)



The racial/ethnic composition of Alaska's public high school graduating classes will continue to show substantial diversification over the coming decade and beyond (Figure 3). In 2004-05, White non-Hispanics accounted for 70 percent of the graduates from public high schools, but the subsequent decade in Alaska will see declines in their share of public high school graduates, reaching down to 60.8 percent by 2014-15.

The decreasing proportion of White non-Hispanic high school graduates is consistent with the experience of states all over the country. But whereas in most other states the sweeping changes are the result of rapid growth in the number of Hispanic high school students and graduates, coupled with a shrinking number of White non-Hispanics in the educational pipeline, in Alaska the increase in the Hispanic population is not a significant factor. While the rate of Hispanics graduating from high school is rising sharply in Alaska, as elsewhere, their relatively low numbers are dwarfed by growth in the Asian/Pacific Islander and American Indian/Alaska Native populations. (Alaska's population has a larger proportion of those who identify as American Indians/Alaska Natives than does any other state in the nation.) Substantial declines in the number of White non-Hispanic high school graduates are also an important cause of the shifting racial/ethnic composition.

Figure 4. Alaska High School Graduates by Race/Ethnicity 1991-92 to 2004-05 (Actual), 2005-06 to 2021-22 (Projected)



Asian/Pacific Islander graduates from public schools in Alaska numbered 477 in 2004-05, but within a decade they are projected to number 706, an increase of 47.9 percent (Figure 4). In 2004-05, 1,233 American Indians/Alaska Natives graduated from public high schools in the state; that amount is projected to grow to 1,448 by 2014-15, a climb of 17.4 percent. Meanwhile, White non-Hispanics will likely see their numbers fall, with projections showing a drop from 4,756 in 2004-05 to 4,110 in 2014-15, or a 13.6 percent decline.

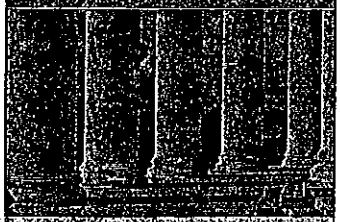
MEASURING UP 2008

THE STATE REPORT CARD ON HIGHER EDUCATION

Alaska



What is *Measuring Up*?

The purpose of a state report card is to provide the general public and policymakers with information they can use to assess and improve postsecondary education in each state. *Measuring Up 2008* is the fifth in a series of biennial report cards.

The report card grades states in six overall performance categories. **Preparation:** How adequately does the state prepare students for education and training beyond high school? **Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school? **Affordability:** How affordable is higher education for students and their families? **Completion:** Do students make progress toward and complete their certificates or degrees in a timely manner? **Benefits:** What benefits does the state receive from having a highly educated population? **Learning:** What is known about student learning as a result of education and training beyond high school?

Grades compare the current performance of each state with the best-performing states, but do not compare with past performance. Key indicators (back page) allow states to compare current performance with past performance.

THE NATIONAL CENTER FOR PUBLIC POLICY AND HIGHER EDUCATION

PREPARATION

C+ — *2008 Grade*

⇧ — *Change Over Time*

Alaska's fairly low performance in educating its young population could limit the state's access to a competitive workforce and weaken its economy.

- Eighth graders perform fairly poorly in math, science, and reading.
- There is a 13% gap between whites and all minorities in the percentage of young adults with a high school credential.

PARTICIPATION

F — *2008 Grade*

⇩ — *Change Over Time*

College opportunities for young and working-age adults are very poor.

- The percentage of working-age adults enrolled in higher education has declined by 39% since the early 1990s.
- Among young adults, 11% of Alaska Natives are enrolled in college, compared with 33% of whites.

AFFORDABILITY

F — *2008 Grade*

⇩ — *Change Over Time*

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 37% of their income, even after aid, to pay for costs at public four-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only six cents.

COMPLETION

F — *2008 Grade*

⇧ — *Change Over Time*

Despite some improvement, Alaska is one of the lowest-performing states in awarding certificates and degrees relative to the number of students enrolled.

- Twenty-two percent of college students complete a bachelor's degree within six years.
- Ten percent of Alaska Natives graduate within six years, compared with 25% of whites.

REPORT CARD	
Preparation	C+
Participation	F
Affordability	F
Completion	F
Benefits	C+
Learning	I

WHAT DO THE ARROWS MEAN?

⇧ State has increased or remained stable on the key indicator in the category.

⇩ State has declined on the key indicator in the category.

See back page for key indicator by category.

BENEFITS

C+ — *2008 Grade*

⇧ — *Change Over Time*

Only a fair proportion of residents have a bachelor's degree, and this weakens the state economy.

- Eight percent of Alaska Natives have a bachelor's degree, compared with 32% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about $2 billion higher.

LEARNING

I — *2008 Grade*

Like all states, Alaska receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

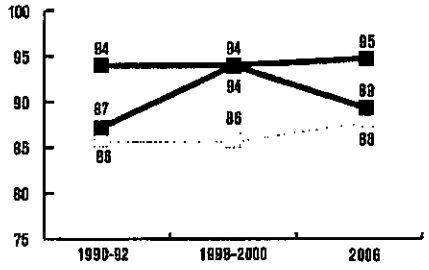
CHANGE OVER TIME: KEY INDICATORS — Alaska 2008

This page reflects Alaska's performance and progress since the early 1990s on several key indicators.

PREPARATION

The percentage of young adults in Alaska who earn a high school diploma has increased slightly since the early 1990s. High school completion is slightly above the U.S. average but below the top-performing states.

Percentage of 18-24 Year-Olds with a High School Credential*

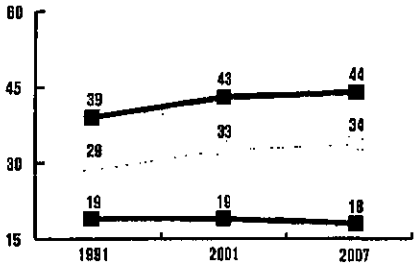


PARTICIPATION

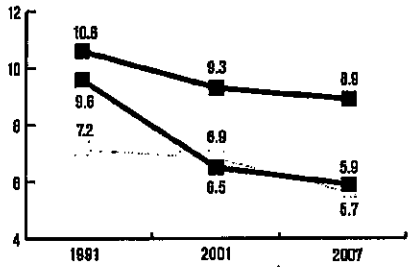
College enrollment of young adults in Alaska has declined slightly since the early 1990s. Compared with the national average and the top states, substantially fewer young adults are enrolled in Alaska (in percentages).

The enrollment of working-age adults, relative to the number of residents without a bachelor's degree, has declined in Alaska—as it has nationally and in the best-performing states. The percentage attending college in Alaska is slightly higher than the U.S. average but below the top states.

Percentage of 18-24 Year-Olds Enrolled in College*



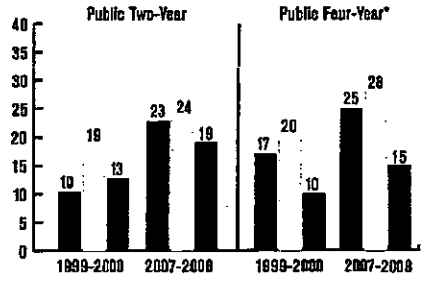
Percentage of 25-49 Year-Olds Without a Bachelor's Degree Enrolled in College



AFFORDABILITY

The share of family income, even after financial aid, needed to pay for college has risen substantially. To attend public two- and four-year colleges in Alaska, students and families pay less than the U.S. average but more than those in the best-performing states.

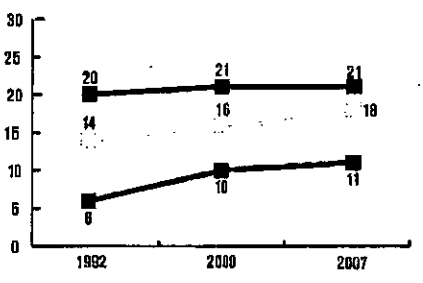
Percentage of Income Needed to Pay for Public Two- and Four-Year Colleges



COMPLETION

The number of undergraduate credentials and degrees awarded in Alaska, relative to the number of students enrolled, has increased since the early 1990s. However, Alaska is considerably below the U.S. average and the top states on this measure.

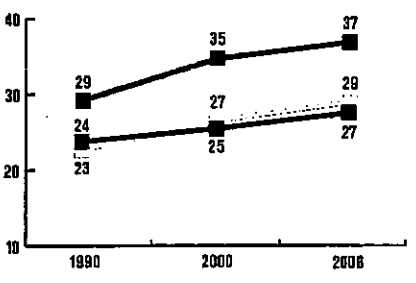
All Degree Completions per 100 Students*



BENEFITS

The percentage of residents who have a bachelor's degree has increased slightly in Alaska, but is below the U.S. average and the top states.

Percentage of 25-64 Year-Olds with a Bachelor's Degree or Higher*



Key indicator for the category.

To: Louie Flora
Subject: other resources
Attachments: Additional training resources.pdf

Hi, Louie,
At the last roundtable discussion, Rep. Wilson asked some questions about assistance available to low income folks trying to upgrade their skills from agencies other than ACPE. Please find attached some information staff has gathered.
Diane

See you tomorrow. D

Need-based (Low-income) Job Training Funding Sources

Workforce Investment Act (WIA) (Federal Program):
Adult Programs
Dislocated Worker Program

"Last resort funding"
Must apply for Pell Grant first.
Applicants should be "stable" that is have everyday living expenses covered to be eligible for WIA training funding.

These programs aim at vocational training for entering the workforce and are not available to fully fund a 4-year degree (may be used to fund the last two years of a 4-year program). Eligible programs may be up to two years or 104 training weeks and must be for "in demand" work skills.

There *may* be supportive services monies available in addition to funds for the training program itself; funds would be coordinated through partner agencies. These are not generally advertised and are determined completely on an individual, case-by-case basis.

State Training and Employment Program (STEP) (State Program):

Very "last resort" funding.
Used only if WIA funds not available.
Applicant must apply for Pell Grant first.

Training program must be vocationally in demand; trainee must express intent to remain in the state after training to work.

There *may* be supportive services funding available, but this is done completely on an individual basis by interviewing the person to determine their needs. Supportive services would be obtained through coordination with other aid programs.

Alaska Temporary Assistance Program (ATAP) (State Program)
Contracts with Nine Star Enterprises for many of their services:

The overall purpose of Nine Star's Employment Training programs is to assist Alaska Temporary Assistance recipients to **get a job, keep a job, and advance on the job** — thus making it possible for clients and their families **to live a better life.**

Nine Star is one of a network of agencies working together to provide employment support and services. Network members, who provide case management, job coaching, job clubs, job referrals, and other employment services to the Alaska Temporary Assistance Program client, include:

- Nine Star Education and Employment Services

- the Division of Public Assistance (DPA)
- Department of Labor (DOL)
- Alaska Housing Financial Corporation (AHFC)
- other agencies

Supportive services will be determined on a case-by-case basis and *may* include gas money, special tools required by the training program, auto insurance, auto registration, and bus passes. Nine Star collaborates and coordinates all services with WIA, Pell Grant funding, and any other funding source (including education loan programs if feasible) to meet each client's needs based on the family's eligibility for each supportive program.

Alaska Division of Vocational Rehabilitation

Eligible clients can choose from many different services—some without cost. Clients may share costs for others. Clients and their counselors choose specific services the client needs to be employable.

Free Services

- Medical exam to see if you qualify and to help plan your career.
- Counseling, especially about disability issues that affect you.
- Help choosing the job goal that's right for you.
- Referral to other agencies that can help you.
- Tests and other tools to better understand your talents, etc.
- On-the-job training with a real employer while you work.
- A short-term job try-out called a "Community Assessment."
- Training designed for you, to help you adjust to working.
- Job search and placement services.
- Interpreter, reader, and tutoring services.

Services Clients May Help Pay For

- All training (except on-the-job training)
- Books, training supplies, tools, equipment (including computers), and other supplies.
- Living expenses, see your counselor for details.
- Transportation (getting from place to place).
- Medical care and therapy
- Self-employment.
- Devices that help with your disability.
- Services to family members
- Work licenses.
- Any other goods or services.

Clients who receive Public Assistance or SSI will not have to pay for needed services. Where other state or federal programs offer overlapping services, DVR may ask clients to apply for and use those services first to ensure optimal use of DVR funding.

Subject: FW: Please support HB 94 - Student Aid
Follow Up Flag: Follow up
Flag Status: Red

From: Harry Need [mailto:hwneed@hotmail.com]
Sent: Wednesday, March 04, 2009 7:00 PM
To: Rep. Paul Seaton
Subject: Please support HB 94 - Student Aid

Rep. Seaton,

Please support HB94 - the Student-Aid bill. As a graduate student at UAA and a University employee, I am in a unique position to reflect on the circumstances that make this bill so critical to Alaska. Please read-on.

Over the past few years the traditional sources of student aid (federal loan programs, state loan programs and scholarships) remained static while the cost of educating Alaska's students increased. Higher tuition means that many of our students must look to increasingly restrictive and costly private loans to fund university expenses. These circumstances have multiple effects on students and Alaska. Outside schools often offer more scholarship money and, in this buyer's market, Alaska's capacity to attract the top students will decline. Students who might choose to remain in Alaska - if they had access to adequate financial support - enroll in out of state universities.

These circumstances also affect our ability to place students in the Alaskan marketplace. Employers seek diverse, well-prepared students, who want to live and work in Alaska. Since 80% of our alumni live in Alaska, students who study in here are more likely to remain here. If we are not attracting and retaining students of the highest caliber, our career placement rates suffer, directly impacting the Alaskan economy.

Like you, some of our students are interested in public service, not for profit and entrepreneurial careers - at least for some period of time. Whether they can pursue these goals depends on two factors: the availability and opportunity for these positions and their ability to repay their educational debt, given the lower salaries associated with those jobs. Students who find such jobs may be unable to accept them because of their debt burden. This is something we are in a position to address.

UAA processes over 10,000 student aid applications annually and about half of our students currently qualify for some sort of financial assistance. The typical full-time freshman pays about $13,000 per academic year for tuition, books, room and board. Federal Stafford loans cover up to $3,500 subsidized and $2,000 unsubsidized. If the student is from a very low-income household, she may be eligible for a Federal Pell grant for up to $4,700. Without an increase in general scholarship support the remainder must be sought from state and private loans.

In response to the current economic conditions, the Alaska State Student Loan Program will

significantly increase its credit limit next year and we estimate that 80% of our applicants will not qualify. Meanwhile, private loans are creating tiered repayment rates with interest that exceeds 16% and at greater total loan limits. Imagine UAA's future if we allow a generation of our students to graduate with over $30,000 of debt at 16% interest.

We need your help. By supporting the HB 94 - Student Aid, you directly impact our student's lives, the future of higher education in this state and Alaska's ability to attract and retain future leaders.

Please support HB 94.

Appreciatively,

Harry Need
UAA Graduate Student

Greetings Representative Seaton,

Please support HB 94 and encourage the other members of the House Education Committee to hear (and pass) HB 94 out of committee. Students across the state will greatly benefit from these need and merit based funds to help supplement the cost of their education during this economic downturn. If you have any questions please feel free to contact me.

03/04/09

Dear Representative Seaton,

I would first like to extend my sincerest appreciation for your attendance at the UA Legislative Affairs roundtable session on Saturday February 21, 2009. It was such a wonderful experience to actually have the opportunity to have the ear of the House Chair of Education for our great state for nearly an hour and a half. This proved to me that you have the students best interest at heart and I am grateful for it.

Today, I am writing to you to ask for your support for HB 94 the Alaska Achievers Incentive Program also known as the Scholarship Legislation. This bill is incredibly important to us as students and for the future generation of college students here in Alaska. With the current national economic downturn, I believe that we will start to see fewer opportunities for private scholarships and with the continued rise in tuition and book costs the dream of obtaining a college degree will not materialize for many Alaskans. Any help you can provide us to help move this Bill forward would be greatly appreciated.

Once again, thank you for your service and dedication to our wonderful State.

Sincerely,

Andrea DiLenge, President
United Students University of Alaska Southeast - Ketchikan
Member of The UA Coalition of Student Leaders

Hi Representative Munoz,
I am a student here at UAS in Juneau and also the Student Body President, we came to see you about supporting the University and for your support on HB 94, the Scholarship Incentive program. I wanted to let you know that we (Student Government) are in complete support of this bill and wanted to get your support in moving it forward and moving it out of committee (currently still the Education committee).
We appreciate your agreed support in this bill when we came to see you last week. Thanks for all your hard work and look forward to seeing you in the future.

Stephanie Ashley

February 23, 2009

The Honorable Paul Seaton
Chair, Education Committee
Alaska House of Representatives
State Capitol, Room 102
Juneau, AK 99801-1182

Dear Representative Seaton,

I am writing in response to your recent request that I *provide the Education Committee with recommendations on the best practices and needs for a needs- and merit-based scholarship program that would best serve Alaskan students.*

Because multiple factors impact access to and success in postsecondary education, any thoughtful response must consider the most fundamental factors. Based on my review of relevant research on the issue of student access and success, there appears to be consensus that key factors are: 1) academic preparedness (career or college readiness); 2) family financial capacity; and 3) student and parent access to critical information and support resources to complete secondary education, transition to, and succeed in postsecondary education programs. Finally, another factor appears to be a lack of recognition, particularly within Alaska's low-income population, of the importance of and need for youth to aspire to postsecondary education or training as an essential step for workforce and career readiness.

As the committee heard earlier this session from Taylor Foundation representatives, one approach in which many states are now engaged is the early commitment model. This model is predicated on the understanding that 21st century workforce and college preparation must begin no later than middle school if states are to increase the education pipeline's production of students who leave high school career- or college-ready.

One of the earliest such statewide programs is Indiana's 21st Century Scholars Program, established by the state legislature in 1990. In addition to reviewing outcome data for the IN program, I contacted Stan Jones, the executive officer of the Indiana Commission for Higher Education. Their program goals are:

- Reduce the high school dropout rate
- Prepare students for the workforce
- Increase opportunities for low-income students to attend college

printed on recycled paper

- Improve individual economic productivity and the quality of life for all Indiana residents

Indiana's program was implemented targeting students (and their families) in the 6th through 8th grade. To have a chance at program funding, students must have signed on to the program no later than 8th grade. The potential pool of participants was established based on their eligibility for free or reduced lunch at the time of enrollment in the program. Participants agreed to fulfill a pledge which included meeting certain academic performance standards, not using illegal drugs or alcohol or committing a crime, and applying for admission and federal financial aid at a state institution. In return, the student would receive the cost of four years of tuition at any public college or university in the state. Both parents and students would be provided support resources during high school, and participating college and universities are required to provide academic and social support resources to assist in the transition to and success in postsecondary education.

As early as 1995, positive results for Indiana began to emerge as their confirmed Scholars were completing high school and continuing to postsecondary education not only at higher rates (82%) than other low-income students (60%) but also at higher rates than all other students without regard to socio-economic status (77%). Commissioner Jones reports that another trend, in this instance concerning, was noted relative to scholars—even thought they were meeting the minimum grade requirements, they still required remediation at quite high rates upon entry into college. It was in the mid-1990s that Indiana business leaders, K-12 educators and higher education faculty worked together to establish a high school curriculum designed to prepare students for higher education (IN's Core 40). The Core 40 curricula constitute those courses which, if successfully completed in high school, all sectors agreed would produce high school graduates prepared for college or workforce success. The initial statewide implementation of the curriculum was voluntary with parents having the ability to "opt out" their child. However, effective with the high school graduating class of 2011, all Indiana secondary school graduates will be required to have completed the Core 40. Commissioner Jones states that they are experiencing reductions in remediation rates at the public institutions.

Having presented Indiana's relatively mature program as a model of best practices and integrated strategies which, when fully implemented, adequately resourced and sustained, are most likely to effect the greatest outcomes, we must acknowledge that designing, implementing, and sustainably funding such an initiative statewide would necessarily require key stakeholder involvement and input. Additionally, the reality in Alaska today is that a large number of our fellow residents, who are very much in need of workforce training or re-training, are no longer within the education pipeline. Because of our long history of low rates of college-going, any broad-based statewide program would need to have a mechanism for low-income adults to participate and prepare for high-skills, high-wage occupations.

Based on my perception of your committee members' concerns, I believe your key objectives are to 1) ensure any scholarship funds are targeting the neediest students, who 2) can also demonstrate their capacity to succeed in a program of study or training that results in them becoming career-ready. The universal availability of the Free Application for Federal Student Aid (FAFSA) provides a uniform means of assessing and sorting applicants by financial need. It is important, to most efficiently use (stretch) available program funding, to ensure that applicants exhaust all other sources of non-loan aid before receiving additional funds. In terms of assessing applicants' preparedness to succeed academically, that is more complex because there is no single assessment that is appropriate to the various types of postsecondary training. However, the American College Testing (ACT) organization has deployed its online assessment tool, WorkKeys, which is used in at least one state, Michigan, to determine qualification for their state merit aid program. With the caveat that I have no personal expertise in competency assessment, WorkKeys is one option to explore as an alternative to solely relying on a high school grade point average. WorkKeys is an assessment tool the Department of Education and Early Development is currently promoting to Alaska districts as a means of assessing student competencies.

I hope you find this information helpful. I have tried to provide a high-level response to your inquiry. If there are other program elements relative to which you would like specific recommendations or advice, I will do my best to produce additional information.

Sincerely,

Diane Barrans
Executive Director

Good morning, Louie,

Please find attached additional information requested either at or following last week's committee hearing re: HB94. One attachment is a list of vocational tech. training schools in Alaska. The second item is in response to Rep. Seaton's request for best practices recommendation re: needs/merit aid programs.

Let me know if further information is needed.

Regards,
Diane

February 12, 2009

To Whom It May Concern:

I am a current student at the University of Alaska Fairbanks, and I would like to voice my support of HB 94: Postsecondary Scholarships.

In times such as these, it is unacceptable that Alaskans who show promise do not move on to higher learning simply because of the rising costs. It has been proven that even a small scholarship or grant can be a major determining factor in the recruitment and retainment of otherwise motivated students. A 2007 report from the State Higher Education Executive Officers found that a $1,000 difference in the price of college may impact college enrollment for the most financially needy students by as much as nine percent. Moreover, financial reasons remain one of the most common reasons for students to choose not to go to college in the first place or to drop out part way through.

I urge you to support the creation of a needs-merit based program. It will keep achieving students in college; it will spur Alaska's economy; and it will promote higher Alaska high school graduation rates. There is no better time than now to invest in the future of Alaska, and there is no better way to do so then by investing in highly motivated Alaskans. This is a program that is good for Alaska today, tomorrow, and far into the future. Thank you for your representation in Juneau.

Representative David Guttenberg

"An Act creating a postsecondary scholarship program for Alaska residents based on high achievement and financial need."

The rising cost of an education is changing the perception of affordability among our middle and high school students and their parents, as well as adults who are interested in continuing their education. For students approaching their high school graduation, the cost of a postsecondary education is the most important topic discussed by the student and the family. For nontraditional or continuing students, it can be the primary factor in the decision to further their education. It is unacceptable that Alaskans who show promise do not move on to higher learning simply because of the cost.

A 2007 report from the State Higher Education Executive Officers found that a $1,000 difference in the price of college may impact college enrollment for the most financially needy students by as much as nine percent. A 2007 Western Interstate Commission for Higher Education report determined that for every $160 in increased tuition, low income enrollments dropped by .5 percent in four year, public institutions and by 2.3 percent in community colleges. Perhaps most alarming, a recent internal University survey found that the number two reason why students dropped out was because of financial reasons.

Alaska's high school graduation rates are among the lowest in the country. The 2008 report from Editorial Projects in Education Research Center showed Alaska's graduation rate at 67.6 percent. There is no doubt that more students will be encouraged to graduate by providing the promise of a postsecondary education. Action is desperately needed. HB 94 will establish a program within the Alaska Commission on Postsecondary Education. This program will help reduce the costs of a postsecondary education for those students who demonstrate academic success as well as financial need. By so doing, this program will increase educational opportunities for more bright, hardworking, and capable Alaskans so they may be ready to fill Alaskan jobs.

I urge your support of HB 94.

MEMORANDUM February 9, 2009

SUBJECT: Sectional summary for HB 94, creation of Alaska achievers' incentive scholarship program (Work Order No. 26-LS0433\A)

TO: Representative David Guttenberg
Attn: Christian Gou-Leonhardt

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. States the intent of the legislature for establishing the Alaska achiever's incentive scholarship program.

Section 2. Adds a new article to AS 14.43 that creates the Alaska achiever's incentive scholarship program. The article includes the following sections:

Sec. 14.43.190. Creates the Alaska achievers' incentive scholarship program, to be administered by the Alaska Commission on Postsecondary Education. Sets the minimum amount for a scholarship. Authorizes the adoption of regulations to administer the program.

Sec. 14.43.193. Provides eligibility requirements for a scholarship award that include residency, a certain grade point average, an unmet financial need, and acceptance or attendance at a postsecondary institution.

Sec. 14.43.195. Establishes the Alaska achievers' scholarship fund as an endowment fund. Provides that the fund consists of appropriations, donations to the fund, and income earned on investment of fund assets. Requires the commissioner of revenue to manage the fund and to invest the assets to yield at least a five percent annual rate of return over time. Requires the commissioner of revenue to identify five percent of the average month-end market value of the fund for appropriation to scholarships or for any other public purposes.

Sec. 14.43.199. Defines the terms "commission," "qualifying postsecondary institution," and "unmet financial need."

MEASURING UP 2008

THE STATE REPORT CARD ON HIGHER EDUCATION

Alaska

PREPARATION

C+ *2008 Grade* ↑ *Change Over Time*

Alaska's fairly low performance in educating its young population could limit the state's access to a competitive workforce and weaken its economy.

- Eighth graders perform fairly poorly in math, science, and reading.
- There is a 13% gap between whites and all minorities in the percentage of young adults with a high school credential.

PARTICIPATION

F *2008 Grade* ↓ *Change Over Time*

College opportunities for young and working-age adults are very poor.

- The percentage of working-age adults enrolled in higher education has declined by 39% since the early 1990s.
- Among young adults, 11% of Alaska Natives are enrolled in college, compared with 33% of whites.

REPORT CARD	
Preparation	C+
Participation	F
Affordability	F
Completion	F
Benefits	C+
Learning	I

WHAT DO THE ARROWS MEAN?

↑ State has increased or remained stable on the key indicator in the category.

↓ State has declined on the key indicator in the category.

See back page for key indicator by category.

AFFORDABILITY

F *2008 Grade* ↓ *Change Over Time*

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 37% of their income, even after aid, to pay for costs at public four-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only six cents.

BENEFITS

C+ *2008 Grade* ↑ *Change Over Time*

Only a fair proportion of residents have a bachelor's degree, and this weakens the state economy.

- Eight percent of Alaska Natives have a bachelor's degree, compared with 32% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about $2 billion higher.

COMPLETION

F *2008 Grade* ↑ *Change Over Time*

Despite some improvement, Alaska is one of the lowest-performing states in awarding certificates and degrees relative to the number of students enrolled.

- Twenty-two percent of college students complete a bachelor's degree within six years.
- Ten percent of Alaska Natives graduate within six years, compared with 25% of whites.

LEARNING

I *2008 Grade*

Like all states, Alaska receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

What is *Measuring Up?*

The purpose of a state report card is to provide the general public and policymakers with information they can use to assess and improve postsecondary education in each state. *Measuring Up 2008* is the fifth in a series of biennial report cards.

The report card grades states in six overall performance categories: **Preparation:** How adequately does the state prepare students for education and training beyond high school? **Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school? **Affordability:** How affordable is higher education for students and their families? **Completion:** Do students make progress toward and complete their certificates or degrees in a timely manner? **Benefits:** What benefits does the state receive from having a highly educated population? **Learning:** What is known about student learning as a result of education and training beyond high school?

Grades compare the current performance of each state with the best-performing states, but do not compare with past performance. Key indicators (back page) allow states to compare current performance with past performance.

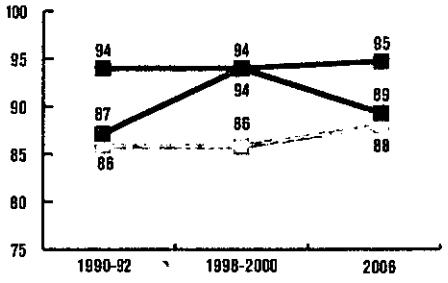
CHANGE OVER TIME: KEY INDICATORS — Alaska 2008

This page reflects Alaska's performance and progress since the early 1990s on several key indicators.

PREPARATION

The percentage of young adults in Alaska who earn a high school diploma has increased slightly since the early 1990s. High school completion is slightly above the U.S. average but below the top-performing states.

Percentage of 18-24 Year-Olds with a High School Credential*

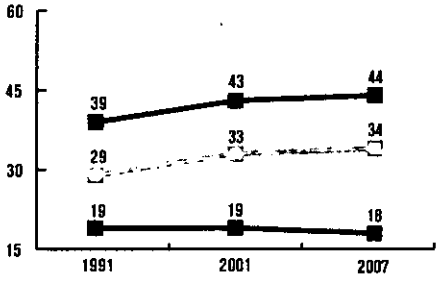


PARTICIPATION

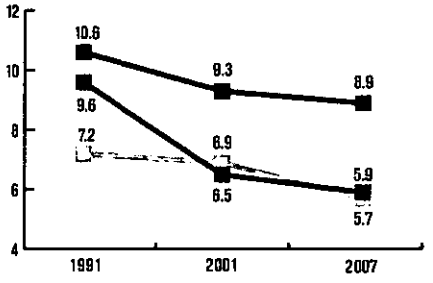
College enrollment of young adults in Alaska has declined slightly since the early 1990s. Compared with the national average and the top states, substantially fewer young adults are enrolled in Alaska (in percentages).

The enrollment of working-age adults, relative to the number of residents without a bachelor's degree, has declined in Alaska—as it has nationally and in the best-performing states. The percentage attending college in Alaska is slightly higher than the U.S. average but below the top states.

Percentage of 18-24 Year-Olds Enrolled in College*



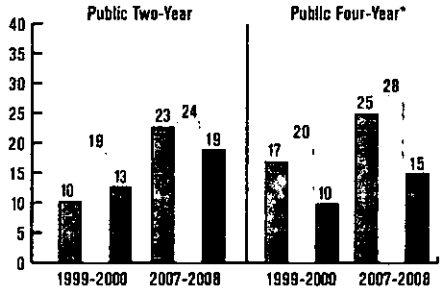
Percentage of 25-49 Year-Olds Without a Bachelor's Degree Enrolled in College



AFFORDABILITY

The share of family income, even after financial aid, needed to pay for college has risen substantially. To attend public two- and four-year colleges in Alaska, students and families pay less than the U.S. average but more than those in the best-performing states.

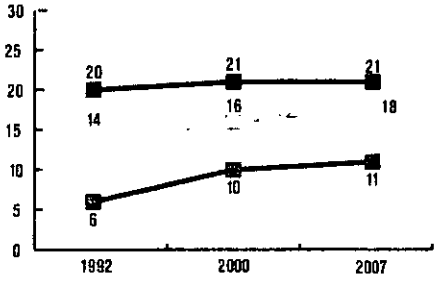
Percentage of Income Needed to Pay for Public Two- and Four-Year Colleges



COMPLETION

The number of undergraduate credentials and degrees awarded in Alaska, relative to the number of students enrolled, has increased since the early 1990s. However, Alaska is considerably below the U.S. average and the top states on this measure.

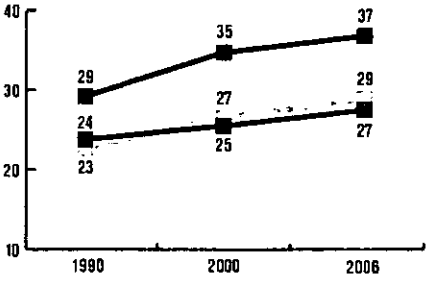
All Degree Completions per 100 Students*



BENEFITS

The percentage of residents who have a bachelor's degree has increased slightly in Alaska, but is below the U.S. average and the top states.

Percentage of 25-64 Year-Olds with a Bachelor's Degree or Higher*



*Key indicator for the category.

Compliments of
Senator Johnny Ellis

PATRICK F. TAYLOR FOUNDATION

February 10, 2009

Juneau Legislative Information Office
The Honorable Johnny Ellis
State Capitol
Juneau, Alaska 99801-1182

VIA FAX

Dear Senator Ellis:

This letter serves as the *Patrick F. Taylor Foundation* official endorsement of Alaska's ***Achiever's Incentive Scholarship Program***, based on high achievement and financial need, ***House Bill No. 94***. This Bill is a first step in establishing a comprehensive scholarship program for Alaska young people to pursue a postsecondary education. There is no greater investment of the state financial resources then that of educating the young people who will be the future leaders of the great State of Alaska.

House Bill No. 94 should be enacted now, with the understanding that, like all legislation, that the Bill will be improved with further legislation over time to create a more comprehensive program, which will be open to all students who meet certain established criteria. The goal is to encourage all students to take a more rigorous curriculum in order to be adequately prepared to pursue their postsecondary education. The objective of preparing students is, not only to enroll, but to graduate in their chosen fields.

We, at the *Patrick F. Taylor Foundation*, are ready to assist you in the passage, implementation, and monitoring of this legislation at our own expense.

Please feel free to contact the *Patrick F. Taylor Foundation* if we can assist with this most important endeavor!

Sincerely,

James A. Caillier
Executive Director

AMENDED AND APPROVED
Date: 2-3-09

ANCHORAGE, ALASKA
AR NO. 2009–20

A RESOLUTION OF THE ANCHORAGE MUNICIPAL ASSEMBLY IN SUPPORT OF ACTION BY THE TWENTY-SIXTH LEGISLATURE OF THE STATE OF ALASKA TO CREATE THE POSTSECONDARY SCHOLARSHIP GRANT PROGRAM INTRODUCED IN SENATE BILL NO. 33 TO ENHANCE ACCESS TO THE UNIVERSITY OF ALASKA BY ALASKA ACHIEVERS.

WHEREAS, legislation to create the Alaska Achievers' Incentive Scholarship Program, with both merit and needs-based components, has been pre-filed for the 26th Legislature – First Session as Senate Bill No. 33 **and House Bill No. 94**, as attached; and

WHEREAS legislation supporting the Alaska Achievers' Incentive Scholarship Program was introduced in the 25th Legislature as HB 397 and HB 403; and

WHEREAS, the Alaska Achievers' Incentive Scholarship Program will provide a state-funded scholarship program with both merit and needs-based components to enhance access to the University of Alaska postsecondary school system by academically successful students who also demonstrate financial need and wish to seek further education; and

WHEREAS, the Alaska Achievers' Incentive Scholarship Program was designed through efforts of the Coalition of Student Leaders, a statewide organization of collegiate student governments, serving and representing over 30,000 students in the University of Alaska postsecondary school system; and

WHEREAS, SB No. 33 implementing the Alaska Achievers' Incentive Scholarship Program has the support of the University of Alaska Administration; and

WHEREAS, education is a core value to share throughout the state.

NOW, THEREFORE, the Anchorage Assembly resolves as follows:

Section 1. The Anchorage Assembly applauds the program design and advocacy efforts of the Coalition of Student Leaders which have lead to the introduction of state legislation to create the Alaska Achievers' Incentive Scholarship Program.

Section 2. The Anchorage Assembly supports creation of the Alaska Achievers' Incentive Scholarship Program and the Alaska Achievers' Scholarship Fund to

enhance access to the University of Alaska, with both merit and needs-based components.

Section 3. The Anchorage Assembly encourages the 26th Alaska State Legislature to create the postsecondary scholarship grant program introduced in Senate Bill No. 33 to enhance access to the University of Alaska by Alaska Achievers.

PASSED AND APPROVED by the Anchorage Assembly this 3rd day of February 2009.

ANALYSIS: *(Attach a separate page if necessary)*

This bill is intended to improve the quality of education loans sufficiently to maintain the Alaska Student Loan Corporation's (ASLC) capacity to issue revenue bonds, backed by loan assets, to finance future lending activities. Implementation of the proposed changes is not expected to require additional appropriations. It is feasible that these changes will positively impact ASLC revenues through improved collections on the loans, but it is not possible to estimate that impact at this time due to the complexity of factors impacting loan collections.

Let's call the meeting to order

Let the record reflect that it is 8:00 a.m. on Wednesday, February 11th, 2009

Present are:

Representative Keller

Representative Muñoz

Representative Wilson

Representative Gardner

Representative Edgmon

Representative Buch

And myself, Chair Seaton

At this time I would like to remind everyone to turn off their cell phones and address questions through the chair.

Today we will hear a presentation on:

The Department and Health and Social Services, and the Mental Health Trust's "Bring the Kids Home" program.

We will also hear an Education Committee Bill,

HB 109 EDUCATION LOANS: SUPPLEMENTAL & FAMILY

And

We will begin discussions on

HB 69 EARLY CHILDHOOD EDUCATION: RATING & HOME VISITS, Sponsored by Representative Tuck

Alaska State Legislature

Rep. Cathy Muñoz, Vice-Chair
Rep. Wes Keller
Rep. Bob Buch

Rep. Peggy Wilson
Rep. Bryce Edgmon
Rep. Berta Gardner

Rep. Paul Seaton, Chairman
HOUSE EDUCATION COMMITTEE

HB 109
Sponsor Statement

HB 109 requires that, as a condition of eligibility for an Alaska Supplemental Education Loan (ASEL), a borrower must have good credit or, if unable to document a history of good credit, must apply with a credit-worthy co-signer. Administered by the Alaska Commission on Postsecondary Education (ACPE), these loans are funded by the Alaska Student Loan Corporation (ASLC). ASLC issues bonds in the capital markets using its various AlaskAdvantage education loans as collateral pledged to support the bonds. The loans are in two categories: those with a federal guaranty (Stafford, Federal PLUS and Grad PLUS) and non-guaranteed State loans. With bonds collateralized by guaranteed loans, investors know they can rely on the backing by the federal government. ASELs have no guarantee and therefore the underlying quality is a primary concern. ASLC has determined that unless the credit quality of ASELs is improved, they will not be usable as collateral.

Compared to credit standards imposed by lenders in other states, ASEL credit requirements are among the least restrictive for alternative education loans. ACPE currently only reviews histories for bad credit. If an applicant has no credit history they may borrow without a co-signer. In today's national economic climate, bond investors are extremely averse to bonds backed by certain asset types. Unfortunately, in this new environment ASELs are viewed as subprime loans. ASLC financial advisors indicate there is little likelihood this conservative investor perspective will change in the future. Passage of HB 109 is intended to permit ACPE to improve ASEL quality so they will be more positively received in the bond market. If ASLC is unable to finance the ASEL program through the capital markets, in the future the State would have to directly fund this program or ASELs would be unavailable. ACPE estimates that its annual loan demand through the ASEL program will continue to be $40 to $50 million.

HB 109 also allows ASLC to set the interest rate for Family Education Loans (FEL) in accordance with the rate set for the ASEL (not to exceed 8.25%). The FEL program allows a family member to take out a loan on behalf of another family member. This program accounts for less than 2% of ASLC loans. Currently ASLC must charge the 5% interest rate set in statute for the FEL. HB 109 gives ASLC the flexibility to set the interest rate according to the current fiscal environment.

The Legislature should carefully examine changes that put limitations on borrowers. However, HB 109 is necessary for ACPE and ASLC to continue to meet their shared mission to promote, support, and provide access to postsecondary education for Alaskans and in Alaska, without relying on the State General Fund to finance its operations.

Representative_Paul_Seaton@legis.state.ak.us

Briefing on: ASLC Liquidity Issues and Proposed Plan of Action

- The Alaska Student Loan Corporation (ASLC), created by the legislature in 1988 to provide a source of financing for state-administered education loans, has successfully issued bonds from 1988 through 2007. ASLC's tax-exempt bond issues have been structured using education loans as collateral.

- In 2008, due to the extended disruption in the capital markets, ASLC was unable to issue bonds. One reason for that was contagion from the sub-prime mortgage-backed bond market had spread to student loan-backed bonds—particularly in regards to non-federally guaranteed education loans such as the Alaska Supplemental Education Loans (ASELs). Rating agencies, financial partners and investors have substantially altered their level of scrutiny and qualitative standards for asset-backed bonds, resulting in ASELs being viewed as sub-prime loans.

- In short, ASELs as they exist today are no longer of sufficient quality to be effectively used to back bonds. In order for ASLC to be able to efficiently use ASELs to back bonds in the future, the credit standards applied to borrowers of these loans must be strengthened.

- Failure to make the proposed changes will seriously compromise ASLC's ability to finance its programs and operations in the capital markets. In that event the options will be 1) the State of Alaska will have to directly fund the ASEL program at an annual cost of approximately $50 million, or 2) ASLC will substantially cease originating ASELs effective in 2009.

- In addition to the proposal to raise the credit standard for the ASEL, because in the increases in the costs of financing the loan program, there is also a need to alter the interest rate on the Alaska Family Education Loan (FEL). That loan rate is currently set in statute at 5%. The proposal is to set the FEL rate at the same rate charged on the ASEL—currently that rate is 7.3% and is capped in statute at 8.25%. Proposal would allow the Corporation to set the rate on these loans using the same program-costs based formula used for the ASEL.

- The timing of a change in the ASEL credit standard is fortunate in that it coincides with the 2008 increase in the federal Stafford loan limits.[1] Stafford loans, also offered by ASLC for Alaska students, are a federal entitlement to any student attending an accredited institution and no credit standard is considered in making these loans (except that the borrower may not be in default on an existing federal education loan). Furthermore, in January 2009 congress introduced a stimulus bill which provides for an additional increase in the Stafford loan limits of $2,000 per year for an undergraduate program.

The actions described above are proposed at the recommendation of ASLC Executive Officer and Alaska Commission on Postsecondary Education Executive Director Diane Barrans. She is available to respond to questions or concerns and can be contacted at diane.barrans@alaska.gov or 465.2113.

[1] **Annual Stafford borrowing limits are for dependent and independent students respectively: 1) $5,500 and $9,500 (freshman), 2) $6,500 and $10,500 (sophomore), 3) $7,500 and $12,500 (junior/senior), and 4) $20,500 (all graduate).**

Eligibility

- Borrower (family member applying for loan) must be an Alaska resident
- Student must have a high school diploma or equivalent (i.e., GED)
- Student must be enrolled and admitted into an eligible program on a full-time basis
- Neither the student nor the borrower can be in default on a federal or state education loan
- Neither the student nor the borrower may be past due on an Alaska child support obligation
- Borrower must not have an adverse credit history

How to Apply

You can apply online, stop by our office in Anchorage or Juneau, or an application is available for download. Remember:

1. Family members may only borrow up to the student's cost of attendance as certified by the school, not to exceed the annual limits listed above.
2. Discuss financial aid options with the school. Many schools offer different financial aid programs. School financial aid experts can advise you regarding which aid is suitable for you. The school may also have specific criteria and deadlines, and you may miss out if you apply without first discussing your options with the school. Inform your school of your financial aid decisions.

[1]The APR assumes a principal loan amount of $8500, origination fee of 3%, freshman student, and a repayment term of 10 years. The APR does not include the effects of borrower benefits.

*Interest rates and AlaskAdvantage Borrower Benefits are subject to approval annually by the Alaska Student Loan Corporation. Interest rates on loans issued prior to the 2006/2007 academic year are variable and change annually. Click here for a chart of rates. AlaskAdvantage Borrower Benefits apply to both new fixed rate loans and existing variable loans.

Borrowing Limits	Annual Limit[1]	Lifetime Maximum
Career Training (Vocational)	$6,500	
Undergraduate	$8,500	$42,500
Graduate	$9,500	$47,500
Undergrad + Grad		$60,000

[1]Loan amounts are pro-rated based on the term of attendance; e.g., an undergraduate student attending only one semester is eligible for 1/2 the annual loan limit, or $4,250.

Eligibility

- FAFSA may be required
- High school diploma or equivalent (i.e., GED)
- Minimum half-time enrollment in eligible program
- Not in default on a federal or state loan
- Not have an adverse credit history (option to apply with credit-worthy cosigner)
- Alaska resident or attending an eligible school in Alaska
- Not past due in child support obligations

You can apply online, or you can download an application. Before you apply for loan programs, we recommend you:

1. Complete the Free Application for Federal Student Aid (FAFSA).
   You can complete the FAFSA online at http://www.fafsa.ed.gov/ anytime after January 1st.
2. Discuss your financial aid options with your school. Many schools offer different financial aid programs. Your school financial aid experts can advise you regarding which aid is suitable for you. Your school may also have specific criteria and deadlines, and you may miss out if you apply without first discussing your options with your school. Inform your school of your financial aid

decisions.

[1]The APR assumes a principal loan amount of $8500, origination fee of 3%, freshman borrower, and a repayment term of 10 years. The APR does not include the effects of borrower benefits.

College financial aid system facing stiff test

By DAVE CARPENTER
The Associated Press
Sunday, January 25, 2009; 4:26 AM

CHICAGO -- Finding financial aid for college this year promises to be tougher than any final exam. The quest for money that begins for students and parents every January has taken on new urgency in 2009 amid fears that loans and grants will be scarcer than in the past due to the recession.

"The financing system for college is in real crisis," said Barmak Nassirian, associate executive director of the American Association of College Registrars and Admissions Officers. "Every one of the participants in the system is experiencing hardship _ higher education institutions, states, aid donors and families all are cash-strapped."

Federal student loans remain readily available _ with some funding even increased recently by Congress. But the prospect that grants and scholarships may be cut at many schools, combined with the shrinking availability of private loans, has fueled widespread angst at a time when more people than ever are seeking help. Applications for federal aid for the current academic year already are running 10 percent above last year's record pace, according to the Department of Education.

Savings held in Section 529 plans _ the state-sponsored investment funds for college that are popular for their tax breaks _ have been depleted by the worst bear market in decades and home equity values have plummeted. That has sapped two sources most tapped by parents to fund their children's higher education. Colleges' endowments have been similarly walloped.

Private student loans are especially hard hit. Last year, 60 private lenders provided $19 billion to students. Now, 39 of those have stopped lending to students and the remaining firms have made it harder to borrow, according to Finaid.org, a Web site that tracks the industry.

"The stress level is high," said Rod Bugarin, financial aid adviser for the New York-based college consulting firm IvyWise.

Numerous revenue-short states are likely to consider cutting aid in one way or another, and public colleges and universities are expected to raise tuition _ in some cases by double digit percentages _ as they set rates for next year.

Scholarships from civic groups and local companies across the country also are likely to decline, Bugarin said, although it's too early to know the extent.

What it all means is that families and college counselors are having to hold difficult conversations about reduced savings and the need to take on more debt and lower sights to focus on more affordable schools.

"There are no sure answers because we're in new territory," said Bruce Hammond, a Washington, D.C.-based college admissions consultant and co-author of "The Fiske Guide to Getting into the Right College." "But students with high need and lesser credentials are going to have to brace themselves

for less aid."

Jean Kliphuis, 46, of Huntington, N.Y., is concerned about the tightening vise of college costs and how to pay for them as she studies aid prospects for daughter Katie, a high school senior who has applied to six schools. Jean is a librarian and her husband Tim is self-employed in the office equipment business. As middle-income parents of three children, their tab for college could be overwhelming if they didn't do all their homework on aid options.

"There is money out there, but you have to jump through a lot of hoops to get it," Kliphuis said. "So my husband and I are jumping through the hoops."

The key to success in the "convoluted" financial aid process is good information, she said, and there's lots of it available through schools' aid offices and online at such sites as Collegeboard.com and Princetonreview.com.

Indeed, the news isn't all bad. The federal government has authorized some $95 billion in grants, loans and work-study assistance to help almost 11 million students and their families pay for college this year, and its recent commitments mean that total will all but certainly be exceeded next year.

"It's scary, but not as scary as people might think," said Lauren Asher of the California-based Institute for College Access and Success, an independent nonprofit group.

Among the encouraging developments for parents and students:

_ The government broadened student borrowing in the midst of the credit crunch, ensuring the continued flow of federal loans that families depend on ahead of costlier private ones. Among other changes, annual borrowing limits for unsubsidized Stafford loans, which students can take out regardless of income, were raised by $2,000 and parents can now defer repayment of federal loans until after their child leaves school.

Stimulus proposals that would give students more financial aid also are progressing through Congress.

"This certainly has been an unprecedented disruption in the student loan marketplace," said Mark Kantrowitz, publisher of Finaid.org. "But Congress and the Department of Education have acted quickly to avert a crisis."

_ No school is known to have withdrawn pledged financial aid this academic year despite financial setbacks that have prompted them to make cuts elsewhere. A number of top institutions, from Harvard, Yale and Duke to smaller institutions with large endowments, announced expanded aid last year and have insisted they will stick to those commitments.

Aid can make a huge difference in affordability. The average list price of tuition and fees for the current academic year is $6,585 for in-state students at four-year public universities and $25,143 at private colleges, with some costing far more. But grants and tax breaks lower the average net price to about $2,900 at public universities and $14,900 at private schools, according to the College Board.

_ Some students will benefit from the turmoil, especially at colleges with high tuitions and scarce resources.

"These places continue to jack it up," Hammond said of tuition increases, "so if you can pay the full

outrageous fee in this economy, as long as you can walk and chew gum you will be admitted. And if you're pretty good _ average, even _ you might get a $10,000 merit scholarship."

Admissions experts recommend considering a range of fallback options, from lower-cost public schools to community colleges or even waiting a year to save more money. And colleges and parents alike are hedging their bets on next year and beyond.

Administrators at Ohio State University see no big immediate impact on aid from the economy but are concerned about what may happen over the longer term, said Bill Shkurti, chief financial officer. The school's endowment has fallen by as much as 30 percent from $1.5 billion a year ago but accounts for just 2 percent of operating revenue, he said.

The University of North Carolina at Wilmington, with a much smaller enrollment and endowment, similarly has taken a hit. In a scenario likely to be repeated on many campuses, financial aid director Emily Bliss says the school is bracing for unpleasant conversations with parents about next year as it relies more on loans in its aid packages and eliminates some of the "free" money.

"Grants and scholarships won't all come through," she said. "It's difficult for us to tell families that, because our heart is breaking for them knowing what they're going through."

AP Education Writer Justin Pope contributed to this report.

Paying for college

State stepping in as banks bail out of student loans

As the number of private lenders shrinks, Utah agency expects to help thousands of borrowers

By Brian Maffly
The Salt Lake Tribune
Salt Lake Tribune

Article Last Updated:08/15/2008 03:35:18 AM MDT

For the first time, the state of Utah has begun originating student loans, a shift that will ensure that any Utah college student who needs financial assistance can get it, although it will cost more.

The Utah Higher Education Assistance Authority (UHEAA), the agency that oversees financial aid to Utah students, is bracing for loan applications worth $100 million this academic year after big banks all but abandoned the federally guaranteed loan program.

Last fall, Congress cut what participating lenders could make on student loans at the same time money became more scarce. That created a double disincentive for financial institutions to lend to college students. With fewer lenders available, Utah students are expected to flock to UHEAA, agency director David Feitz told his board Thursday.

"We would rather have a full cadre of lenders, but that is unlikely to happen in the near future until Congress raises the yields," he said.

Adding to the pressure was a recent move by Congress to raise the maximum students can borrow by $2,000 (to $5,500 for freshman, $6,500 for sophomores and $7,500 for upperclassmen). Feitz estimated UHEAA will see applications worth one-fourth of the state's total student loan volume this coming year, but he won't know how much until students begin applying as they return to school.

"It could be $60 million, it could be $200 million," Feitz said of a development that represents a profound change in the way UHEAA conducts business.

UHEAA has access to $121 million to lend over the coming academic year.

The U.S. Department of Education promises to buy participating states' loans issued this year under the Federal Family and Education Loan program (FFELP). This would enable states to "recycle" the money back to students in the form of new loans. The UHEAA board voted unanimously Thursday to approve Utah's participation in the complex arrangement.

Feitz cautioned that the program, which runs only for one year, isn't a permanent solution to the liquidity mess that has caused "tremendous chaos" in the $50 billion system that subsidizes the popular Stafford and PLUS loan programs.

"Now we're calling on Congress and the departments of Treasury and Education to take additional action to further stabilize the student loan program for years to come," he said.

In recent months four banks - Wells Fargo, Zions, J.P. Morgan Chase and Key - pulled out of Utah's program, leaving only U.S. Bank. Fifteen credit unions, led by America First, still lend to students, but the banks' departure left a vacuum. Wells Fargo and Zions were the top lenders last year, accounting for more than half of the state's student loan volume.

Lenders also have become picky about which institutions they work with. One Utah school, Snow College, found itself with no lenders, so UHEAA last month began lending directly to students at the Ephraim school.

"Were in a pretty good place, a much better place than our sister agencies across the country," board chairman David Jordan said. "From the students' perspective, this will work. We will be able to help them without depleting our resources."

bmaffly@sltrib.com

Utah students can expect to pay more for college loans under steps taken by the Utah Higher Education Assistance Authority to preserve universal access to federally guaranteed loans.
But the news isn't all bad.

"I'm not aware of lenders offering better terms than what UHEAA is offering," said John Curl, the University of Utah's financial aid director. "We encourage students to research who they're going to get loans from and find the best terms they can get. They are going to have to pay more interest; that's unfortunate."

Congress last year cut the rate on some student loans from 6.8 to 6 percent. But in order to participate in an emergency federal bail-out measure, Utah slashed two rate reductions. Until now, students who had payments automatically drawn from their accounts received a 1.25-point reduction and another 2-point reduction after four years of timely payments. Losing these benefits adds $1,763 to the cost of servicing a $15,000 loan.

On Thursday, the UHEAA board suspended issuing consolidation loans to avoid tying up scarce capital needed to serve current students. Former students looking to simplify repayment plans have other options for consolidating their loans in the federal program.

But Utah students still get breaks on up-front costs of the most common loans, Stafford and PLUS. UHEAA continues to cover the 1 percent origination fee and 1 percent default fee, translating into a $100 subsidy on a $5,000 loan.

The Boston Globe A late try to salvage student loans

Patrick calls on pension board, colleges to invest in agency bonds

By Casey Ross, Globe Staff | August 7, 2008

Governor Deval Patrick has asked the state pension fund to invest $50 million and will ask Harvard University and other local colleges to invest millions more to provide student loans to thousands of families struggling to pay college tuition bills that are due in the coming weeks.

Patrick's 11th hour proposal, floated among key officials yesterday, would prop up the troubled 26-year-old Massachusetts Educational Financing Authority, which announced last week that it would be unable to provide student loans for this school year because of turmoil in the nation's credit markets.

The proposal would entail the investment funds buying portions of a $425 million bond sale that MEFA is planning this month. The agency would use the proceeds to finance student loans.

"We have 40,000 students and families who need help, and we're right up against it," Patrick said in an interview with the Globe last night. "This is a sound investment for the pension board and the endowments."

The governor and his aides, along with state lawmakers, have been brainstorming ways to restore student loan funds for the past week. MEFA had previously offered low-cost, fixed-rate loans, but now borrowers have to look to other lenders whose loans may carry higher rates and higher costs.

Yesterday, Patrick's top budget aide, Leslie Kirwan, asked the state pension board to consider buying $50 million of the upcoming MEFA bonds. Administration officials also hope the state investment would be seen as a show of confidence in the bond market and MEFA, spurring purchase by other investors that could finance more loans.

Patrick said he intends to call officials today from Harvard, Boston College, the University of Massachusetts, and the Massachusetts Institute of Technology, among other schools, about making similar investments in MEFA bonds.

The chairman of the state pension board, state Treasurer Timothy Cahill, was noncommittal about Patrick's request, but said the board would consider it.

The pension fund staff "will examine the options legally available to invest in any debt issuance set up by MEFA and report back to the trustees before any action is taken," Cahill said through a spokeswoman.

With $51.7 billion in assets, the pension fund invests monies for state employees and retirees. And while it is unusual for the fund to use anything other than financial returns as grounds for investment, the board has already committed funds to local projects that are intended to produce economic and social benefits within Massachusetts. The program was a major policy goal of Cahill, who got the pension board to adopt it in 2003.

Even without Cahill's commitment, Patrick has a strong start on getting the board to adopt his measure, as he appoints three of its nine members, one of whom is Kirwan.

Another board member, Robert Brousseau, reacted favorably to Patrick's request and said he did not hear strong objections from fellow board members at yesterday's meeting.

"I can't see anybody opposing it, but we have to see the parameters of the investment and what form it would take," said Brousseau, who represents teachers on the board.

Patrick said he is seeking swift consideration from the pension fund board because MEFA is planning to hold its bond sale within two weeks.

"We need action," he said. "If they need to call a special meeting to approve this, then I hope they will."

Meanwhile, representatives of the local colleges said the institutions will consider the investment.

"We're always more than happy to have discussions with the governor," said John Longbrake, a spokesman for Harvard University, the governor's alma mater. "We welcome the opportunity to learn more about the challenges MEFA is facing and to discuss ways to address them."

Robert Connolly, a spokesman for UMass President Jack Wilson, said: "This is an idea we're definitely willing to explore. We do see it as a potential win-win in terms of providing the university with a sound investment while helping families cope with their financial aid challenges."

Officials at the student lending agency, meanwhile, said Patrick's plan carries minimal risk to the investment funds because MEFA's bonds provide reliable returns. Executive Director Tom Graf said the default rate on the authority's loans is less than 1 percent. "This plan allows" the pension board "to make a stable investment that is especially warranted in this financial climate," he said.

The problems in the bond market, which started with the foreclosure crisis and spread to other credit markets, have imperiled student lenders across the country, prompting more than 50 agencies to stop making federal or private loans.

Graf said the size of the upcoming bond sale may change based on investor interest. If the sale is a success, he hopes the agency will then be able to offer loans with rates below 8.5 percent, which is the current charge for Federal Plus loans. Last year, the authority's private 20-year loan rate was 6.39 percent.

The agency made $400 million in private loans in the last school year, and another $110 million in federal student loans.

State Senator Brian A. Joyce, who authored a letter last week signed by other legislators urging Patrick to support MEFA, applauded the governor's actions. "This critically important to an awful lot of Massachusetts families," he said. "The governor can use his bully pulpit to ask for some assistance, and I wholeheartedly support what he's doing."

AP Associated Press

NH working on student loan problem

By Kathy McCormack, Associated Press Writer | August 6, 2008

CONCORD, N.H. --Turmoil in the financial markets has driven many lenders out of the student loan market, leaving students struggling to pay their fall tuition. That's a problem that New Hampshire officials are working on.

Many students "are being frozen out from having the loans they were expecting," said Mark Connolly, director of the state Bureau of Securities Regulation.

"In the last several days, our office has been engaged in discussions with some of the participants who have been involved in securitizing these loans in our state," Connolly said Wednesday.

"We are trying to encourage these participants to bring liquidity to these loans so students can plan for their academic year. If we are unable to successfully encourage these participants to bring liquidity to our student loan market, we will take regulatory action that in part will address the issue," Connolly said.

Connolly said his office has been involved with many other states in looking at the auction-rate securities market -- short-term investments that are a popular way for companies and some wealthy investors to store their cash -- which has rippled into the student loan market.

Dozens of lenders have left the federal student loan program, though where that has happened other lenders have stepped in or students have turned to a smaller program in which the Education Department makes loans directly to students.

Last month, the Massachusetts Educational Financing Authority, which provided more than $500 million worth of college financing last year, said it would not provide private loans this year because of turmoil in the financial markets. That affected about 650 New Hampshire college students from Massachusetts.

Earlier this year, the New Hampshire Higher Education Loan Corp., the state's leading provider of student loan financing, said it was suspending its private loan program because of market conditions. That meant more than 6,000 students had to find another place to borrow money.

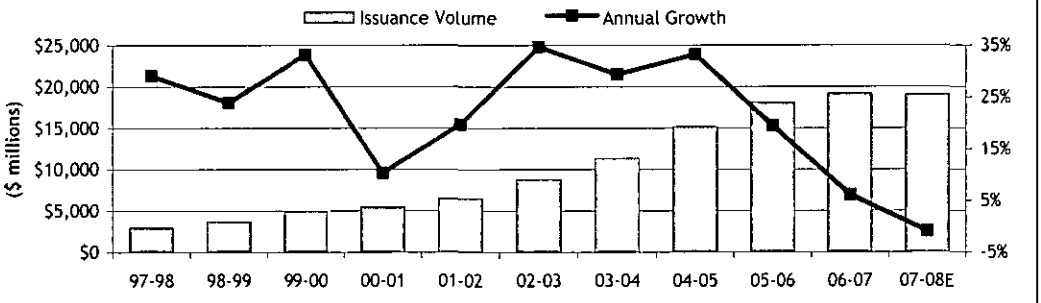
Overview

The rising cost of education has consistently outpaced growth in loan limits for federal student loan programs. The gap has been filled with the private education loan. Issuance of private, or nonfederal, education loans has grown from $3bn in academic year 1997-1998 to $19.1bn in academic year 2007-2008, according to College Board. Lenders involved in the federal student loan space have leveraged their school relationships, operating platform, and expertise to expand into private education lending. While early performance data seemed to indicate a smooth transition, the economic environment was strong and loan portfolios had yet to fully season. As the economy showed signs of weakness in 2007 and more private student loans entered repayment, cracks began to emerge in lender underwriting strategies.

Private Education Loan Growth



Source: College Board.

Deterioration in portfolio credit metrics combined with a widespread re-pricing of risk in the capital markets have made it more difficult for lenders to access the asset-backed securitization (ABS) markets for private student loan term funding. Lenders have pulled back on origination volume by tightening underwriting standards and cancelling certain school relationships, but many lenders have had to arrange expensive funding facilities for un-securitized private loans on their balance sheets. Government funding programs, like the Term Asset-Backed Loan Facility (TALF) may temporarily increase investor buying of private loan deals, but they will not truly re-ignite interest. This will necessitate re-educating investors on the risk/rewards of the product and, potentially, making changes to the loans to make them more attractive to investors. Continued deterioration in portfolio credit quality and an inability to secure cost-effective funding could result in negative rating action for student lenders.

In this report, Fitch will:

- Discuss how college costs, federal student aid, and legislation drive growth trends in the private education loan;
- Explain how dislocations in the capital markets have impacted funding options for loans and how the structure of the private student loan may need to change;
- Provide an analysis of recent credit trends for large private lenders; and

- Discuss the impact of the bankruptcy of The Education Resources Institute, Inc. (TERI) on the private education loan market.

Private Education Loans

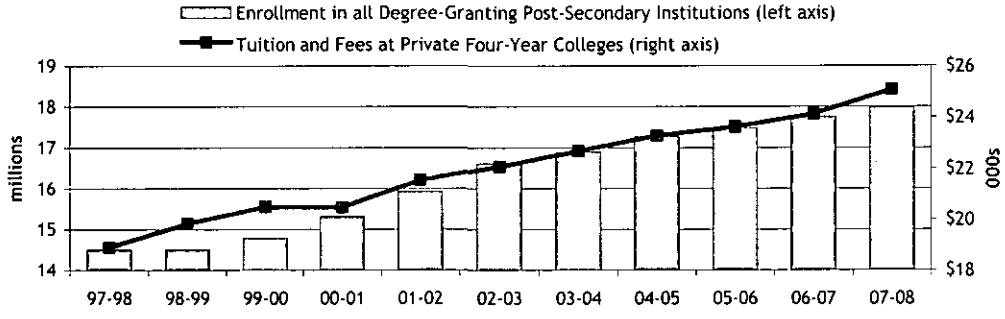
The private or nonfederal education loan has garnered increasing interest as growth in the product has surged over the last decade. Demand for private student loan ABS was relatively robust through 2006, given ample market liquidity and stable collateral performance, but investor interest waned in 2007 as market risk premiums increased and the weakening economic picture began to impact credit quality.

The following sections will discuss growth trends in the private education loan, funding alternatives, asset quality trends, and the impact of the bankruptcy of The Education Resources Institute), Inc. (TERI).

Growth

Private education loans have become an increasingly important component of education funding in the last decade, accounting for approximately 11.7% of total student aid in the 2007-2008 academic year, according to College Board, compared to 3.7% a decade ago. Growth in private student loans has been driven by increasing enrollment levels, rising tuition expenses and, until recently, static federal loan limits. Over the last ten years, enrollment in degree-granting post-secondary institutions grew 24% and average annual tuition and fees at private and public four-year institutions is up 32.7% and 53.3%, respectively. Meanwhile, federal Stafford loan limits remained static from October 1993 to June 2007.

Drivers of Private Education Loan Borrowing



Source: College Board and National Center for Education Statistics.

Fitch expects growth of the private loan product to change; however, as higher funding costs and deteriorating collateral performance have reduced the propensity to loan and some recent legislative change may have an impact on the demand for private education loans. On the legislative front, federal Stafford loan limits have increased twice in the last two years. The Deficit Reduction Act of 2006 increased base limits for freshman and sophomores receiving loans after July 1, 2007 by $875 and $1,000, respectively. Fitch believes this change contributed to the 0.9% decline in private education loans issued in academic year 2007-2008, as subsidized Stafford loans increased 11.1% during the year; well above the 3.3% average annual increase over the last ten years. The Ensuring Continued Access to Student Loans Act of 2008 (ECASLA) increased federal loan limits further by allowing undergraduates to borrow an additional $2,000 in unsubsidized loans per year after July 1, 2008.

Loan Limits for Subsidized and Unsubsidized Federal Stafford Loans

	Pre-Deficit Reduction Base Subsidized/ Unsubsidized	Post-Deficit Reduction Base Subsidized/ Unsubsidized	Pre-ECASLA Additional Unsubsidized	Post-ECASLA Additional Unsubsidized
1st year undergraduate	$2,625	$3,500	$4,000	$6,000
2nd year undergraduate	$3,500	$4,500	$4,000	$6,000
3rd year & beyond undergraduate	$5,500	$5,500	$5,000	$7,000
Graduate/Professional	$8,500	$8,500	$12,000	$12,000

Source: FinAid.org

The most critical change, however, was a provision in the Deficit Reduction Act which permits graduate and professional students to use PLUS loans to fund their entire cost of attendance, less other aid received. Historically, students funded a significant portion of their graduate programs, which tend to be more expensive than undergraduate programs, with variable-rate private education loans. Fitch expects graduate students to willingly switch to federal PLUS loans, which offer more attractive terms. PLUS loans were up a modest 1.25% in academic year 2007-2008, well-below the 12% annual average growth rate over the last decade, but Fitch believes PLUS loans will expand materially in the 2008-2009 academic year, at the expense of private loans.

Still, private education loans remain very relevant for international graduate students with no access to federal loans and in the undergraduate space, for borrowers whose parents cannot access PLUS loans, as the gap between federal loan limits and tuition expenses continues to be relatively wide. Fitch estimates that, based on current legislation, the gap between four-years of tuition and fees at a private undergraduate college and federal loan aid could be around $50,000. Recent dislocations in the capital markets and credit deterioration resulting from portfolio seasoning and a tougher economic environment, however, have reduced the profitability, and therefore, the availability of the private education loan. Fitch believes lenders that remain in the space are taking a closer look at the terms and structuring of the product in order to make them more attractive for investors while remaining useful for borrowers.

Lenders

Many large financial institutions participate in the private student loan market, particularly those with a sizeable retail franchise, as student loans are often part of the consumer product suite. Most large banks, however, do not disclose detailed information on their student loan portfolios, as it is not a significant contributor to the overall business. Large bank lenders include JPMorgan Chase, Bank of America, Citigroup, and Wells Fargo (including Wachovia).

Private Education Loan Portfolios

($m)

	2002	2003	2004	2005	2006	2007	3Q 2008
SLM Corporation	$5,822	$8,305	$11,482	$16,437	$22,588	$ 28,328	$32,800
Student Loan Corp	$1,784	$2,643	$3,649	$4,812	$3,072	$4,696	$5,816
NelNet	$75	$92	$90	$97	$197	$275	$276

Source: Company Filings and Fitch Estimates.

More robust information is available for non-bank student lenders like SLM Corporation, Student Loan Corp. (which is 80% owned by Citibank, N.A.), and Nelnet, Inc. The portfolios of each have grown rapidly since 2002, but growth slowed materially in 2008, given the more difficult environment.

5270

Funding

Many private education loan providers have funded a portion of their portfolio in the ABS market in recent years, but investor risk aversion and underlying collateral deterioration has reduced the demand for private student loan ABS bonds.

SLM Corporation, the largest student loan provider, completed three private loan ABS transactions in 2006 totaling over $5bn in issuance, but it has not completed a private loan ABS transaction since its $2.2bn deal in March 2007. Only two private student loan deals were completed in 2008; one $140m deal from MRU Holdings, Inc. (My Rich Uncle) completed in July, which Fitch did not rate, and a $400m deal from the Massachusetts Educational Financing Authority, completed in August, rated 'AAA' by Fitch based on the financial guaranty provided by Assured Guaranty Corp.

SLM: Private Education Loan Securitization Activity

(For the Years Ended December 31; $ 000s)

Year	Amount	# Deals
2002	$690	1
2003	$3,503	3
2004	$2,535	2
2005	$3,005	2
2006	$5,088	3
2007	$2,001	1
2008	-	0
Total	**$16,822**	**12**

Source: Company Filings.

Large bank lenders have been able to leverage their deposit base to replace ABS funding, but non-bank lenders have had to rely on more expensive sources of debt to fund student loan portfolios. The weighted-average cost of SLM's March 2007 term ABS deal, excluding the auction rate tranche, was approximately LIBOR plus 15 basis points. In 2008, the company paid LIBOR plus 400 basis points for its $2.5bn, ten-year, unsecured corporate debt issuance and LIBOR plus 155 basis points for $3.8bn in private loan ABCP capacity, which matures in February 2009.

Higher funding costs and reduced margins led many lenders, like CIT, College Loan Corporation, KeyBank, and Astrive Student Loans (a registered trademark of The First Marblehead Corporation), to exit the business altogether. Those that remain have reduced origination volume and re-evaluated underwriting criteria. SLM, for example, has tightened its underwriting standards, terminated certain school relationships and reduced origination volume by 20% year-over-year, to approximately $6.3bn in 2008. Additionally, SLM is looking to expand the deposit base of its industrial bank, Sallie Mae Bank, in order to more cost-effectively fund the private loan portfolio. The bank had $2.3bn in term bank deposits as of December 31, 2008 and Fitch believes the deposit base will grow to keep pace with private loan originations in coming quarters.

Still, Fitch does not believe that lenders will abandon the ABS markets altogether, as it can be an efficient way to secure term funding for private student loans. While lenders are expected to re-educate investors on the attractive risk/return attributes of the private education loan in order to reduce funding spreads, the Federal Reserve is doing its part to get the ABS market functioning again with the introduction of the Term Asset-Backed Loan Facility.

Term Asset-Backed Loan Facility (TALF)

The Term Asset-Backed Loan Facility (TALF) is being developed with the intention of restoring liquidity to the ABS markets for consumer assets; including auto, credit cards, and student loans. Under the TALF, the Federal Reserve Bank of NY is expected to make up to $200bn of loans, which will be fully secured by eligible ABS. Eligible collateral will include, US dollar-denominated cash ABS with a long-term credit rating of 'AAA'. The underlying credit exposures must be auto loans, student loans, credit

card loans, or small business loans guaranteed by the US Small Business Administration. Student loans will include federally-guaranteed loans, including consolidation loans, and private student loans. Eligible ABS must be issued after January 1, 2009 and all or substantially all of the underlying credit exposures of eligible student loan ABS must have had a first disbursement date on or after May 1, 2007.

TALF loans will have a three-year term with interest payable monthly and the loans will not be subject to mark-to-market requirements. TALF loans are pre-payable, but will not allow for substitution of collateral and any repayment of principal on eligible collateral must be used to reduce the principal amount of the TALF loan. The interest rate will be set to encourage borrowers to purchase ABS. The facility will stop making loans on December 31, 2009, unless the facility is extended by the Federal Reserve. Expectations are for the TALF to be up and running in the first quarter of 2009.

Fitch believes the TALF could be an attractive, and much-needed, funding source for private student loans originated after May 1, 2007, although enhancement levels needed to create 'AAA' securities will likely be more expensive given revised stress scenarios which reflect more recent credit conditions. But restoring more permanent liquidity to the private education loan ABS market may take more than what the TALF, alone, can accomplish. Fitch believes lenders will need to convince investors that underwriting criteria is effective enough to identify and exclude the riskier borrowers and schools that yielded significant deterioration in their portfolios in 2007 and 2008.

Additionally, lenders may need to alter the structure of the private student loan, itself, to make it more liquid and attractive for investors. The maturity of a private student loan, for example, is typically 15 to 20 years, while the maturity of an auto loan is around 5 to 6 years. Investors may not be comfortable with the longer average life of a private student loan ABS transaction and it may be more difficult and more expensive to hedge the interest rate risks of a longer-dated asset. Still, shortening the life of the underlying loan can increase the borrower's monthly payments significantly, making it more difficult to stay current on payment and, therefore, leading to higher portfolio credit losses. Clearly, there will be a balancing act for lenders to consider.

Furthermore, Fitch believes the Deficit Reduction Act, which gave graduate students the increased ability to borrow federal loans, will change the make-up of private student loan portfolios. Of the last 7 private student loan ABS transactions facilitated by First Marblehead Corp, 10.4% of collateral, on average, was related to graduate student borrowers. Going forward, portfolios will be more heavily weighted to undergraduate students. Typically undergraduates do not have an extensive credit history, which means underwriting is often based on the credit risk of the co-borrower or co-signor, which is often a parent, guardian, or spouse. As underwriting policies have tightened, the portion of new loans with co-borrowers has increased. Therefore, newer originations are not solely dependent upon the student's ability to graduate and obtain meaningful employment, as the co-borrower, who is more likely to be established and have more at risk from a credit perspective, is also responsible for making payments. This should provide investors with additional comfort.

SLM has discussed adjusting its private education loan by shortening the product term, increasing the portion of the portfolio with a co-borrower, and requiring interest-only payments while students are in-school.

Asset Quality

Unlike federal student loans, private education loans do not come with a government guarantee against default, although the loans are generally non-dischargeable in bankruptcy and lenders will often obtain third-party insurance to limit the downside

risk. Federal student loans are underwritten based on need, but private education loans are underwritten based on a credit evaluation of the borrower and/or co-borrower and risk-based pricing is employed. While early statistical data of collateral performance was sound, Fitch remained cautious about early credit data, as the surge in origination volume meant that only a small portion of loans outstanding were in repayment status. In recent years, as loan portfolios have seasoned and the economy has slowed, credit performance of the private education loan product has deteriorated.

Private student loan credit performance metrics for SLM Corp, Nelnet, Inc. and Student Loan Corp (SLC) are presented in the table above. Nelnet's portfolio is significantly smaller than the other lenders, but many metrics have followed a similar pattern. Surprisingly, delinquency metrics were actually down at the end of 2007 relative to the prior year, but Fitch believes this was because lenders were employing forbearance policies more aggressively, perhaps believing that a borrower's inability to pay was a temporary blip. But delinquency rates rebounded in 2008, as lenders pulled back on forbearance, after realizing the economic downturn would have a more prolonged impact on a borrower's ability to pay, particularly given the significant increase in the unemployment rate. Borrowers receiving forbearance are being awarded shorter grace periods to ensure they do not get out of the habit of paying every month. SLM's forbearance levels declined from 13.9% of loans in repayment and forbearance in 2007 to 11.5% in 3Q2008, while STU's declined from 8.1% to 6.2%. Fitch believes forbearance levels may decline further in 2009, as lender's award payment programs only to borrowers that they believe can truly benefit, but the decline will accelerate the recognition of credit losses into current periods.

From a net charge-off perspective, metrics have deteriorated for all three issuers since 2006, with SLC increasing 220 basis points to 2.9% as of September 30, 2008, and SLM increasing 180 basis points to 3.4%. Still, both issuers believe they have identified the main source of credit deterioration (outside normal pressure from economic weaknesses) and that is: lending to students attending schools with lower graduation rates and lower average earning potential, given the degree programs offered.

SLM has divided its portfolio into traditional schools and non-traditional schools, where the latter refers to 'loans made to borrowers that are expected to have a high default rate as a result of a number of factors, including having a lower tier credit rating, low program completion and graduation rates, or where the borrower is expected to graduate, a low expected income relative to the borrower's cost of attendance'. The dispersion in portfolio performance is clear, with the traditional portfolio posting net charge-offs of 2.5% in the fourth quarter of 2008, while the non-traditional portfolio posted net losses of 16.1%. Delinquency statistics are also significant with traditional and non-traditional delinquencies of 7.1% and 28.9%, respectively. SLM has ceased lending to non-traditional schools, but Fitch believes the impact of the $4.95bn portfolio will remain for some time as only 60.6% of the portfolio was in repayment as of December 31, 2008.

Source: Company Filings.

Net charge-offs on SLM's traditional portfolio, which represents about 86% of the total private loan portfolio, have increased as well, given the tougher economic environment, with net losses rising from 0.6% in 2006. Fitch expects credit metrics to deteriorate further in 2009, as the unemployment picture remains weak for borrowers in and just entering repayment status.

SLC has also segmented its private loan portfolio into the following three categories: Insured CitiAssist, Uninsured CitiAssist Standard and Uninsured CitiAssist Custom. Standard loans are primarily related to CitiAssist loans that have been approved based on standard underwriting criteria and were originated on or after January 1, 2008. Custom loans are related to loans made to non-traditional students or loans with less stringent underwriting standards.

Approximately 78% of the private loan portfolio carries private insurance through

5274

United Guaranty Commercial Insurance Company of North Carolina/New Hampshire Insurance Company or through Arrowood Indemnity Company. Risk-sharing deductibles range from 5% to 20% up to maximum loss levels. As expected, net charge-offs on Insured CitiAssist loans remain relatively low at 0.8%, as of September 30, 2008, but SLC stopped insuring new CitiAssist loan originations on January 1, 2008, believing that higher loan losses would be more than offset by declines in insurance premiums paid.

* Annualized.
Source: Company Filings and Fitch Estimates.

Net losses on the uninsured portfolio amounted to 7.3% in the third quarter of 2008. Standard loans account for approximately 29% of the uninsured portfolio while custom loans account for about 71%. Net charge-offs on the standard portfolio amounted to 0.2% in the third quarter of 2008, while losses on the custom portion amounted to 9.3%. In the second quarter of 2008, SLC discontinued relationships with schools that generated higher-risk uninsured CitiAssist originations, which Fitch believes would be included in the custom portion of the portfolio. SLC has tightened underwriting criteria in response to the economic environment and plans additional tightening in the near-term.

A portion of the uninsured portfolio is covered by risk-sharing agreements with schools and universities, although that portion has been on a declining trend; from 75.9% of the uninsured portfolio in 2006 to 37.3% in the third quarter of 2008. Under the agreements, the school reimburses a specified percentage when losses exceed a certain threshold or the school pays a percentage of the total disbursed amount to compensate for future expected losses. Lenders to schools with riskier borrower profiles are subject to adverse selection.

While lenders like SLM and SLC are segmenting portfolios and modifying underwriting standards; balance sheets and securitization trusts continue to contain a significant amount of loans already originated which have yet to enter repayment status. As of September 30, 2008, only 38.1% of SLC's private loan portfolio was in repayment status, compared to 57.7% of SLM's portfolio at year-end. Fitch believes lenders have and will continue to build reserves in anticipation of poorer performance of loans made to 'non-traditional' schools and to incorporate general portfolio weakening due to the weaker economic environment. SLM's allowance as a percent of loans in repayment amounted

to 7.2% at year-end 2008 and SLC's allowance amounted to 4.6% at the end of the third quarter 2008.

The fact that private education loans are non-dischargeable in bankruptcy has come under an increasing amount of scrutiny in recent years, in the face of bankruptcy reform and political transition. Consumer protection has been a hot topic in recent months and Fitch believes recent developments in the mortgage market aimed at reducing a borrower's debt burden could expand into other asset classes. Consumer protection advocates have also highlighted the higher interest rates charged by lenders on private loans. The imposition of interest rate caps or limits would also make the private loan less attractive to lenders and investors.

The Education Resources Institute, Inc.

The Education Resources Institute, Inc. (TERI), a private, non-profit corporation and the largest guarantor of private student loans, filed for Chapter 11 bankruptcy protection on April 7, 2008. TERI provided private education loan guarantees to commercial banks underwriting loans according to its articulated standards. Participating banks included Bank of America, Charter One Bank, JPMorgan Chase, and RBS Citizens. These banks would often partner with First Marblehead Corporation (FMD), a student loan facilitator, to structure private student loan ABS transactions. FMD conducted ABS transactions out of its wholly owned subsidiary, National Collegiate Funding LLC and TERI guaranteed 100% of principal and accrued interest on defaulted loans in the trusts.

As discussed in the Asset Quality section, private education loan credit performance began to deteriorate in 2007 and early 2008 as the economic picture weakened. But compounding the issue for TERI was that a large portion of the collateral included in the National Collegiate Student Loan Trust (NCSLT) was originated through the direct-to-consumer channel (as opposed to the school channel), which has been more susceptible to fraud, as there is typically no verification with schools to ensure that funds are being used to pay a borrower's tuition. On average, of the last 7 NCSLT ABS transactions, completed in 2006 and 2007, approximately 80% of loan collateral was originated in the direct-to-consumer channel. So as the economy weakened, some TERI-guaranteed portfolios deteriorated quickly, given the higher direct-to-consumer exposure. TERI received an increasing amount of default claims and its liquidity profile weakened.

Fitch has downgraded and/or placed on Rating Watch Negative numerous classes of NCSLT ABS due to deteriorating collateral performance, beyond Fitch's expectations, combined with operational uncertainties related to the bankruptcy proceedings of TERI and concerns regarding the level of recoveries on defaulted loans in a post-TERI environment. Ongoing analysis is focusing on default level and loss timing projections for each pool. Depending on the outcome, Fitch expects that ratings currently on Rating Watch Negative could be downgraded by an additional zero to three notches.

Fitch believes the impact of the TERI bankruptcy is not limited to ABS transactions, as there are TERI-guaranteed loans residing on bank balance sheets which may, therefore, end up performing well-below management expectations. While student loans are generally not a material component to a large commercial bank's profitability, unexpected losses on what were believed to be insured loans, will only add to the challenges facing banks in the current environment.

Summary

Fitch believes tighter underwriting standards and structural changes to the private education loan product will help peak investor interest in the collateral, but true market liquidity is not likely to return until investors have more information about how

private student loan portfolios perform in the current stressed environment and the ABS markets are fully functioning without government intervention.

Even so, ABS spreads are not likely to return to pre-2007 levels, which means that many lenders that have temporarily cut origination volume may need to reassess the long-term risk/return attributes of the business. Based on these dynamics, the private student loan market will find a new equilibrium; however, this may not align with public policy interests and could necessitate further legislative action to restore a healthier balance of financing for this asset class.

Subject: Support of HB 126

March 9, 2009

Good evening, esteemed Representatives:

I am respectfully writing to communicate my *ardent* support of HB 126. The number one demographic in the homeless population in Alaska is children [1]. In my work with adolescents as a chemical dependency counselor, in special education departments at two Title I schools (Williwaw and Fairview), and as the Community-Service Learning Advocate working with Project Homeless Connect in Anchorage, I have seen the dire impact of homelessness upon a child's ability to learn and engage in school. These challenges are only exacerbated when a child is moved from school to school each year.

A child living in an "out-of-home" environment benefits from a consistent, stable school environment. Research shows that: "Since it takes the average child four to six months to recover academically after each school change, many children in foster care not only fail to recover, they actually lose ground." [2] A review of the literature explains that homelessness and unstable home life is related with decreased plasticity of the brain in early childhood, which has a negative impact on school achievement and the learning process. Therefore, many homeless children and youth are eventually referred to the Special Education system.

More disturbing is the correlation between youth who once in the special education become involved with the juvenile justice system. According to the U.S. Department of Justice, "...youth with learning disabilities or an emotional disturbance are arrested at higher rates than their non-disabled peers" [3]. Additionally, once in the juvenile system, these youth are more likely to have longer stays and/ or increased levels of incarceration. Homeless children and youth are at an increased risk for involvement in both the special education and juvenile justice systems, and both are systems that cost the state a considerable amount of money.

Passing HB 126 will ensure that children in the foster care system will receive the stability needed to make adequate annual yearly progress and increase school achievement and attachment. Increased scholastic achievement and attachment will help mitigate risks of involvement in the Special Education system and also will provide a higher opportunity for these children to identify with positive scholastic communities. Therefore, HB 126 helps to provide a resiliency factor against entering the juvenile justice system.

Not only will the school consistency in HB 126 help these children, but also it will support youth aging out of foster-care. Since Casey Family Programs is going to be transitioning out of Alaska, this means that we will be losing our non-state matching funds to receive Chaffee dollars for foster youth aging out of care. I'm sure you are aware of the gap in services this creates for youth in terms of housing and

other vital necessities. The proposed policy changes in HB 126 would continue to allow foster and "out-of-home" youth seeking secondary and post-secondary education to receive the Chaffee funds for housing, tuition waivers and other **much needed** forms of aide, so long as they remain in good academic standing. These policy proposals not only reward the self-determination and hard work of dedicated students, but also increase opportunities to develop healthy civic engagement and positive citizenship in Alaska's youth as they gain an education.

Although there will be some financial investment needed for the success of this Bill, the $15,000 per year in tuition and fees that this policy proposes is ***considerably*** less expensive than the $40,000 per year it costs the state for someone who becomes incarcerated. Moreover, supporting these youth *now* to gain an education increases their likelihood for independent living in the long run and decreases the chances that they will become permanently dependent upon the State, since with a good education they will be more able to become gainfully employed.

Please sign HB 126 into law. Alaska desperately needs this Bill.

Subject: attn: Jean Mischel re: Amendments to HB 126.

Hi Jean,

In House Education today the committee asked Rep. Gara to make a few additional changes to the bill. I believe Rep. Seaton's office will be requesting a new CS for the committee to adopt during the next meeting in order to see all the changes, including these new ones, and move the bill out. I've copied Louie from Rep. Seaton's office to this email so he's in the loop on the changes we're requesting.

I think we'll be trying to call as soon as Rep. Gara has a few moments. That might not be until after Finance today, or it could be within the next five minutes.

Thank you!

Subject: Amendments to HB 126.

Hi Katie – here is the additional work that needs to be done on HB 126 in addition to what was added into the CS by today's amendments.

We weren't clear what portions of the McKinney Vento act we are incorporating. We just want to incorporate the provisions relating to "transportation" and maintaining the school of origin.

So –

1. The only provision of the McKinney Vento Act we are incorporating is what's in 722 (g)(3) ("Local Education Agency Requirements"), 722 (g)(5)(A), "and the provisions cited therein".

Add a provision that states:

A School District may, but is not required to, hire additional staff to implement this section, and may utilize a "liason" provided under Section 722 (g)(1)(J)(ii) to implement the additional requirements of this section.

2. "Adequacy" – maybe just add "Educational" after "intellectual" on p. 3 line 31. Delete other references to adequate education.

20 Years Covenant House Alaska
Crisis Center · Community Services Center · Transitional Living

Representative Les Gara and Senator Bettye Davis
State Capitol
Juneau, AK 99801

February 23, 2009

Dear Representative Gara and Senator Davis,

Thank you for introducing legislation to address the needs of foster care youth, both while they are in the state's custody and when they "age-out" of the current system. Providing resources and support to our foster care children decreases the need for long-term public assistance and criminal justice resources. Responding to research that clearly identifies proven strategies for assisting our youth to independent adulthood is not only compassionate, it is fiscally sound policy.

Between 35% and 50% of foster care youth become homeless after being released from care. Covenant House Alaska (CHA) serves the homeless and at-risk youth of our state through four main programs (50% of CHA youth have been involved in the foster care system). Our Crisis Center provides shelter, food, clothing, primary health care and support resources to homeless youth. Our Community Services Center is a drop-in center that provides case management, employment assistance, educational tutoring, counseling and substance abuse referrals and life skills training. Two different programs, Rights of Passage and Passage House help youth transition to independent living and self-sufficiency. Youth can participate in either program for 18 months with up to 12 months of additional aftercare.

Through these programs, CHA is certain that increased job training, educational opportunities, rental assistance and social worker visits will benefit children in foster care. Similarly, offering consistency whenever possible through maintaining one school for children despite changes in foster care placement is essential. CHA appreciates the multi-faceted approach HB 126 and SB 105 offers.

Thank you for sponsoring this legislation and providing a voice to youth in foster care.

Sincerely,

Deirdre A. Cronin
Executive Director

Facing Foster Care in Alaska (FFCA)

February 17, 2009

Representative
Les Gara
Alaska State Legislator
AK State Capitol Rm 500
Juneau, AK 99801

Dear Representative Gara:

Your continued concern for Alaska's foster children and youth is admirable, and House Bill 126 demonstrates that concern.

As current and former foster youth of Alaska's child welfare system, we would like to thank you for your ongoing support in addressing the need for reform. Many of Alaska's foster children are being set up for failure due to a state system that is lacking many of the resources these young people need to succeed. Statistics show that youth who leave Alaska's foster care system become homeless at a rate of 40%, fall behind in their education, and have a high rate of adult incarceration. We wholeheartedly support your bill that creates opportunities for children and youth in foster care to succeed.

Thank you for your concern and your untiring pursuit to improve the lives of those who are less fortunate. You have our support.

Sincerely,

Amanda Metivier
FFCA Coordinator

February 23, 2009

The Honorable
Representative Paul Seaton
Alaska State Capitol Room 102
Juneau, AK 99801

February 23rd, 2009

Dear Representative Seaton

I am writing on behalf of Facing Foster Care in Alaska, to ask you to support House Bill 126. This bill will soon come to a vote in the Health, Education, & Social Services Committee. As current and former foster youth, we understand the dire need to reform Alaska's child welfare system.

Alaska's foster children are set up for failure due to a state system that is lacking many of the resources these young people need to succeed. Statistics show that youth who leave Alaska's foster care system become homeless at a rate of 40%, fall behind in their education, are at risk of early pregnancy, and have a high rate of adult incarceration. The purpose of this bill is to help children and youth in foster care throughout the state. It proposes mandatory home visits by social workers every 30 days, creates job training and higher education opportunities for youth who age out of foster care, and promotes educational stability for those children currently in foster care.

The members of Facing Foster Care in Alaska know that this is an important bill. It will benefit the community at large by creating opportunities for foster youth to become productive, successful members of society as adults.

Thank you for your support in improving the lives of Alaska's foster children.

Sincerely,

Amanda Metivier
FFCA Coordinator

ANALYSIS: *(Attach a separate page if necessary)*

The intent of CS HB 126 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

The Office of Children's Services Online Resourse for the Children of Alaska (ORCA) data base is mandated by the federal government and must be continuously updated to reflect changes in both state and federal law and policy. The following provides the estimated cost of ORCA updates that will be required to implement this bill.

ANALYSIS: *(Attach a separate page if necessary)*

The intent of CS HB 126 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

Sec. 11 amends AS 47.10.990 to change the definition of child to include under age 21 years if that person is living in out-of-home care as defined in AS 47.14.400.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CS HB 126 (EDC)

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

Foster care reimbursement payments will be made available to care for children who remain in the custody of the state, who are age 18 through 20;

Approximately 15% (17 children) of the 110 that turn age 18 annually will chose to stay in foster care until age 19; 10% (10) to age 20; 5% to 21 (6); totaling 34 children. This is based simply on program experience and the assumption that most children will want to leave foster care at age 18, but that others who have stable homes will decide to stay with their foster families and that most of these children will attend post secondary education programs.

In addition to the 33 children who may wish to participate in the program in its initial year, approximately 12 of those special needs children who are 18 years of age, 6 at age 19, and 6 at age 20 will remain in care for 2010, bringing the total for 2010 to 57 children. This is based on the current numbers of children who age out with special needs. We estimate that 18 children with special needs age out annually, with 6 of them already staying in foster care until age 20, leaving 12 that may chose to stay in care.

For years 2011 - 2015, the number of participants has been reduced to 35, where it may stabilize because OCS speculates those children reaching the age of 19 or 20 will more likely opt to chose the monetary stipend in this bill.

Calculations are based on 360 days at an average base foster care base rate of $35.33 a day 35.33 x 30 = 1,060. This calculation is used to equally distribute funding estimates, and makes very little difference to the resulting totals.

Currently, federal reimbursement for the extension of the foster program is not available, however, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20. This fiscal note assumes that option will be implemented when available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011 forward only.

SFY	# of Children	Age	Annual Cost Per Child	Total Est.	FFP	GF
2010	57	18,19, 20	$12,719	$724,972	$0	$724,972
2011	35	18,19,20	$12,719	$445,158	$55,631	$389,527
2012	35	18,19,20	$12,719	$445,158	$73,862	$371,296
2013	35	18,19,20	$12,719	$445,158	$73,862	$371,296
2014	35	18,19,20	$12,719	$445,158	$73,862	$371,296

CS FOR HOUSE BILL NO. 126(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GARA, Crawford, Kerttula

A BILL

FOR AN ACT ENTITLED

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers, loans, and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.096. Continuing the public education of a homeless student. (a) Except as provided in (b) and (d) of this section, the governing body of a school district shall comply with the requirements for continuing the public education of a homeless student in the student's school of origin and for providing transportation services for the remainder of the current school year or, if the student is attending school for a summer term, for the remainder of the summer term, under 42 U.S.C.

11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001), as those provisions existed on February 1, 2009.

(b) The requirements in (a) of this section do not apply if the student moves to a school district other than the school district in which the student's school of origin is located.

(c) If a homeless student is transferred to a school other than the student's school of origin, the school of origin shall provide a copy of the student's records to the student's new school within seven school days after notification of the transfer. The student's new school shall allow the student to attend school while awaiting the transfer of records under this subsection.

(d) A school district is required to comply with this section only

(1) if the legislature appropriates funds for the purpose; and

(2) to the extent possible using funds appropriated for the purpose.

(e) In this section,

(1) "homeless student" has the meaning given in 42 U.S.C. 11434a for "homeless child or youth," and the phrase "awaiting foster care placement" in that definition shall be interpreted to include all students who are placed in out-of-home care and in the custody of the Department of Health and Social Services under AS 47.10.080(c) or who are committed to the custody of the Department of Health and Social Services under AS 47.12.120(b)(1) or (3);

(2) "school of origin" means the school in which the student was last enrolled.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14;

(2) was placed in out-of-home care for a period of not less than six consecutive months on or after the person became 16 years of age;

(3) has applied for educational grants or scholarships that the person is otherwise eligible for as recommended by the educational institution;

(4) has applied for an available federal education loan; and

(5) is under 29 years of age.

(b) The amount of the waiver to which a person is entitled under this section is the amount of unmet need for tuition, room, and board expenses, as determined by the commission, after deducting funding for the school year from education loans, grants, or scholarships received by a person eligible for a waiver.

(c) The proceeds of an education loan, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

(d) A state-supported educational institution in the state is required to provide a waiver under (a) of this section only if the legislature appropriates funds for the purpose of offsetting waivers under this section. If an appropriation is not sufficient to fully offset waivers for each person entitled to a waiver under (a) of this section, the institution may offer full or partial waivers to eligible applicants as funding permits and at the discretion of the institution.

*** Sec. 3.** AS 14.43.160 is amended by adding a new paragraph to read:

(7) "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 4.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

*** Sec. 5.** AS 47.05.060 is amended to read:

Sec. 47.05.060. Purpose and policy relating to children. The purpose of this title as it relates to children is to secure for each child the care and guidance, preferably in the child's own home, **as well as an education,** that will serve the moral, emotional, mental, **intellectual,** and physical welfare of the child and the best interests of the community; to preserve and strengthen the child's family ties unless efforts to preserve and strengthen the ties are likely to result in physical or emotional damage to the child, removing the child from the custody of the parents only as a last resort when the child's welfare or safety or the protection of the public cannot be adequately

safeguarded without removal; and, when the child is removed from the family, to secure for the child adequate custody, **education,** and care and adequate planning for permanent placement of the child.

*** Sec. 6.** AS 47.05.065 is amended to read:

Sec. 47.05.065. Legislative findings related to children. The legislature finds that

(1) parents have the following rights and responsibilities relating to the care and control of their child while the child is a minor:

(A) the responsibility to provide the child with food, clothing, shelter, education, and medical care;

(B) the right and responsibility to protect, nurture, train, and discipline the child, including the right to direct the child's medical care and the right to exercise reasonable corporal discipline;

(C) the right to determine where and with whom the child shall live;

(D) the right and responsibility to make decisions of legal or financial significance concerning the child;

(E) the right to obtain representation for the child in legal actions; and

(F) the responsibility to provide special safeguards and care, including appropriate prenatal and postnatal protection for the child;

(2) it is the policy of the state to strengthen families and to protect children from child abuse and neglect; the state recognizes that, in some cases, protection of a child may require removal of the child from the child's home; however,

(A) except in those cases involving serious risk to a child's health or safety, the Department of Health and Social Services should provide time-limited family support services to the child and the child's family in order to offer parents the opportunity to remedy parental conduct or conditions in the home that placed the child at risk of harm so that a child may return home safely and permanently; and

(B) the state also recognizes that when a child is removed from

the home, visitation between the child and the child's parents or guardian and family members reduces the trauma for the child and enhances the likelihood that the child will be able to return home; therefore, whenever a child is removed from the parental home, the Department of Health and Social Services should encourage frequent, regular, and reasonable visitation of the child with the child's parent or guardian and family members;

(3) it is the policy of the state to recognize that, when a child is a ward of the state, the child is entitled to reasonable safety, adequate care, and adequate treatment and that the Department of Health and Social Services as legal custodian and the child's guardian ad litem as guardian of the child's best interests and their agents and assignees, each should make reasonable efforts to ensure that the child is provided with reasonable safety, adequate care, and adequate treatment for the duration of time that the child is a ward of the state;

(4) it is in the best interests of a child who has been removed from the child's own home for the state to apply the following principles in resolving the situation:

(A) the child should be placed in a safe, secure, and stable environment;

(B) the child should not be moved unnecessarily;

(C) a planning process should be followed to lead to permanent placement of the child;

(D) every effort should be made to encourage psychological attachment between the adult caregiver and the child;

(E) frequent, regular, and reasonable visitation with the parent or guardian and family members should be encouraged; [AND]

(F) parents and guardians must actively participate in family support services so as to facilitate the child's being able to remain in the home; when children are removed from the home, the parents and guardians must actively participate in family support services to make return of their children to the home possible; **and**

(G) the child should continue to attend the child's school of

origin as provided under AS 14.03.096;

(5) numerous studies establish that

(A) children undergo a critical attachment process before the time they reach six years of age;

(B) a child who has not attached with an adult caregiver during this critical stage will suffer significant emotional damage that frequently leads to chronic psychological problems and antisocial behavior when the child reaches adolescence and adulthood; and

(C) it is important to provide for an expedited placement procedure to ensure that all children, especially those under the age of six years, who have been removed from their homes are placed in permanent homes expeditiously.

*** Sec. 7.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in **out-of-home care** [FOSTER HOMES] or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if

they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section [,] who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as

defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)**;**

(16) persons under 21 years of age who were in the custody of the department under AS 47.10 or AS 47.14 and who were placed in out-of-home care for a period of not less than six consecutive months on or after reaching 16 years of age.

*** Sec. 8.** AS 47.07.020 is amended by adding a new subsection to read:

(o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 9.** AS 47.10.080 is amended by adding a new subsection to read:

(v) A social worker employed by or under contract with the department shall, not less than monthly, conduct visits with a child committed to the custody of the department under (c) of this section. The visits must be of sufficient substance and duration to address issues pertinent to case planning and service delivery to ensure the child's safety, permanency, and well-being. The majority of the visits conducted under this subsection must be at the location of the child's current placement. Nothing in this paragraph creates a private right of action against the department or the department's contractors. In this subsection, "visit" means face-to-face contact between social worker and child.

*** Sec. 10.** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age**;**

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 21 years of age if that person is living in out-of-home care;

*** Sec. 11.** AS 47.10.990 is amended by adding a new paragraph to read:

(33) "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 12.** AS 47.18.300(a) is amended to read:

(a) The department, in coordination with local public and private agencies, shall design, develop, and implement **an out-of-home care** [A FOSTER CARE] transition program to provide support and services to individuals who

(1) reach or have reached the age of 16 or older while in state **custody and placed in out-of-home** [FOSTER] care and have not yet reached 23 years of age; and

(2) meet other eligibility criteria established by the department under (b) of this section.

*** Sec. 13.** AS 47.18.310 is amended to read:

Sec. 47.18.310. Program design. The department, in coordination with local public and private agencies, shall design the program as a continuation of the training efforts related to independent living skills that were initiated **for a child in state custody who was placed in out-of-home care and** [WHEN THE STATE FOSTER CARE RECIPIENTS WERE] identified as being likely to remain in **out-of-home** [STATE FOSTER] care until reaching **not less than** the age of 18. The program design must require that program participants are directly involved in identifying the program activities that will prepare them for independent living.

*** Sec. 14.** AS 47.18.320(a) is amended to read:

(a) Subject to the availability of an appropriation made for the purposes of AS 47.18.300 - 47.18.390, the program may provide

(1) education and vocational training;

(2) assistance in obtaining basic education and training;

(3) career and employment services;

(4) training in basic life skills;

(5) housing and utility assistance;

(6) mentoring and counseling; and

(7) other appropriate services to complement the efforts of former state foster care recipients **or a child who was in state custody and placed in out-of-home care** to achieve self-sufficiency.

*** Sec. 15.** AS 47.18 is amended by adding a new section to read:

Sec. 47.18.335. Monetary living expense stipend. The department shall

provide to an individual receiving services under the program a monthly stipend in an amount set by the department that is not less than the daily rate provided to a licensed foster parent for necessary living expenses. The stipend shall continue for a period of not more than one year after the individual leaves out-of-home care. The department may adopt regulations to implement this section.

*** Sec. 16.** AS 47.18.390(1) is amended to read:

(1) "program" means the **out-of-home** [FOSTER] care transition program authorized under AS 47.18.300 - 47.18.390;

*** Sec. 17.** AS 47.18.390(3) is repealed and reenacted to read:

(3) "out-of-home care" has the meaning given in AS 47.14.400.

AMENDMENT

OFFERED IN THE HOUSE

TO: CSHB 126(EDC), Draft Version "P"

Page 1, line 9, through page 2, line 2:

Delete all material and insert:

"Except as provided in (b) and (d) of this section and notwithstanding the availability of federal funding, the governing body of a school district shall comply with the requirements for continuing the education of a homeless student under 42 U.S.C. 11432(g)(3)(A) and (B) and 11432(g)(5)(A) (McKinney-Vento Homeless Education Assistance Improvement Act of 2001), as those provisions existed on February 1, 2009, for the remainder of the school year, or, if the student is attending school for a summer term, for the remainder of the summer term."

Page 2, following line 13:

Insert a new subsection to read:

"(e) Nothing in this section is intended to limit a school district's compliance with 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001) or to require the hiring of additional personnel if the school district is receiving federal funding under that Act."

Reletter the following subsection accordingly.

(3) Local educational agency requirements

(A) In general

The local educational agency serving each child or youth to be assisted under this part shall, according to the child's or youth's best interest -

(i) continue the child's or youth's education in the school of origin for the duration of homelessness -

(I) in any case in which a family becomes homeless between academic years or during an academic year; or

(II) for the remainder of the academic year, if the child or youth becomes permanently housed during an academic year; or

(ii) enroll the child or youth in any public school that nonhomeless students who live in the attendance area in which the child or youth is actually living are eligible to attend.

(B) Best interest

In determining the best interest of the child or youth under subparagraph (A), the local educational agency shall -

(i) to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian;

(ii) provide a written explanation, including a statement regarding the right to appeal under subparagraph (E), to the homeless child's or youth's parent or guardian, if the local educational agency sends such child or youth to a school other than the school of origin or a school requested by the parent or guardian; and

(iii) in the case of an unaccompanied youth, ensure that the homeless liaison designated under paragraph (1)(J)(ii) assists in placement or enrollment decisions under this subparagraph, considers the views of such unaccompanied youth, and provides notice to such youth of the right to appeal under subparagraph (E).

(5) Coordination

(A) In general

Each local educational agency serving homeless children and youths that receives assistance under this part shall coordinate -

(i) the provision of services under this part with local social services agencies and other agencies or programs providing services to homeless children and youths and their families, including services and programs funded under the Runaway and Homeless Youth Act (42 U.S.C. 5701 et seq.); and

(ii) with other local educational agencies on interdistrict issues, such as transportation or transfer of school records.

A BILL

FOR AN ACT ENTITLED

"An Act relating to continuing the secondary public education of a homeless student; relating to the purpose of certain laws as they relate to children; relating to tuition waivers, loans, and medical assistance for a child placed in out-of-home care by the state; relating to foster care; relating to children in need of aid; and relating to out-of-home care transition to independent living."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.096. Continuing the public education of a homeless student. (a) Except as provided in (b) of this section, the governing body of a school district shall comply with the requirements for continuing the public education of a homeless student in the student's school of origin and for providing comparable education and transportation services during the homelessness under 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act of 2001).

(b) The requirements in (a) of this section do not apply if

(1) the student moves to a school district other than the school district in which the student's school of origin is located; or

(2) the superintendent of the school district makes a written finding that a waiver of the requirements is in the student's best academic interest and the finding is mailed to the school board and to the person in charge of children's services for the Department of Health and Social Services.

(c) If a homeless student is transferred to a school other than the student's school of origin, the school of origin shall provide a copy of the student's records to the student's new school within 7 school days after notification of the transfer. The student's new school shall allow the student to attend school while awaiting the transfer of records under this subsection.

(d) In this section,

(1) "homeless student" has the meaning given in 42 U.S.C. 11434a for "homeless child or youth," and the phrase "awaiting foster care placement" in that definition shall be interpreted to include all students who are placed in out-of-home care and in the custody of the Department of Health and Social Services under AS 47.10.080(c) or who are committed to the custody of the Department of Health and Social Services under AS 47.12.120(b)(1) or (3);

(2) "school of origin" means the school that the student attended when permanently housed or the school in which the student was last enrolled.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.

Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home care. (a) A person who enrolls as a student in good standing in a state-supported educational institution in the state is entitled to a waiver of tuition, fees, and room and board expenses if the person provides adequate proof that the person

(1) was in the custody of the state under AS 47.10 or AS 47.14;

(2) was placed in out-of-home care for a period of not less than six consecutive months on or after the person became 16 years of age;

(3) has applied for educational loans, grants, or scholarships that the

person is otherwise eligible for as recommended by the educational institution; and

(4) is under 29 years of age.

(b) The educational institution may require an eligible recipient to apply for a loan under AS 14.43.112.

(c) The proceeds of an education loan, including a loan under AS 14.43.112, grant, or scholarship received by a person eligible for a waiver under this section must be paid to the educational institution to offset the person's tuition, fees, and room and board expenses.

*** Sec. 3.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.112. Education loans for a child who was in out-of-home care. (a) The commission may, subject to the loan conditions under AS 14.43.120 and the eligibility requirements under AS 14.43.125, make a loan in a school year to a person who is eligible for a tuition waiver under AS 14.43.086 to offset the person's tuition, fees, and room and board expenses as provided under that section. Notwithstanding the limits under AS 14.43.120(d), a loan made under this section may not exceed $4,000 annually for a full-time undergraduate or graduate student or $2,000 annually for a half-time undergraduate or graduate student attending a state-supported educational institution in the state.

(b) The commission may not require repayment of or assess interest on a loan made under this section before six months after the completion of the program for which the loan was paid unless the borrower fails to complete the program in five years.

*** Sec. 4.** AS 14.43.160 is amended by adding a new paragraph to read:

(7) "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 5.** AS 36.30.850(b)(42) is amended to read:

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the **out-of-home** [FOSTER] care transition program;

*** Sec. 6.** AS 47.05.060 is amended to read:

Sec. 47.05.060. Purpose and policy relating to children. The purpose of this title as it relates to children is to secure for each child the care and guidance, preferably in the child's own home, **as well as an adequate education,** that will serve

the moral, emotional, mental, **intellectual,** and physical welfare of the child and the best interests of the community; to preserve and strengthen the child's family ties unless efforts to preserve and strengthen the ties are likely to result in physical or emotional damage to the child, removing the child from the custody of the parents only as a last resort when the child's welfare or safety or the protection of the public cannot be adequately safeguarded without removal; and, when the child is removed from the family, to secure for the child adequate custody**, education,** and care and adequate planning for permanent placement of the child.

*** Sec. 7.** AS 47.05.065 is amended to read:

Sec. 47.05.065. Legislative findings related to children. The legislature finds that

(1) parents have the following rights and responsibilities relating to the care and control of their child while the child is a minor:

(A) the responsibility to provide the child with food, clothing, shelter, education, and medical care;

(B) the right and responsibility to protect, nurture, train, and discipline the child, including the right to direct the child's medical care and the right to exercise reasonable corporal discipline;

(C) the right to determine where and with whom the child shall live;

(D) the right and responsibility to make decisions of legal or financial significance concerning the child;

(E) the right to obtain representation for the child in legal actions; and

(F) the responsibility to provide special safeguards and care, including appropriate prenatal and postnatal protection for the child;

(2) it is the policy of the state to strengthen families and to protect children from child abuse and neglect; the state recognizes that, in some cases, protection of a child may require removal of the child from the child's home; however,

(A) except in those cases involving serious risk to a child's health or safety, the Department of Health and Social Services should provide

time-limited family support services to the child and the child's family in order to offer parents the opportunity to remedy parental conduct or conditions in the home that placed the child at risk of harm so that a child may return home safely and permanently; and

(B) the state also recognizes that when a child is removed from the home, visitation between the child and the child's parents or guardian and family members reduces the trauma for the child and enhances the likelihood that the child will be able to return home; therefore, whenever a child is removed from the parental home, the Department of Health and Social Services should encourage frequent, regular, and reasonable visitation of the child with the child's parent or guardian and family members;

(3) it is the policy of the state to recognize that, when a child is a ward of the state, the child is entitled to reasonable safety, adequate care, and adequate treatment and that the Department of Health and Social Services as legal custodian and the child's guardian ad litem as guardian of the child's best interests and their agents and assignees, each should make reasonable efforts to ensure that the child is provided with reasonable safety, adequate care, and adequate treatment for the duration of time that the child is a ward of the state;

(4) it is in the best interests of a child who has been removed from the child's own home for the state to apply the following principles in resolving the situation:

(A) the child should be placed in a safe, secure, and stable environment;

(B) the child should not be moved unnecessarily;

(C) a planning process should be followed to lead to permanent placement of the child;

(D) every effort should be made to encourage psychological attachment between the adult caregiver and the child;

(E) frequent, regular, and reasonable visitation with the parent or guardian and family members should be encouraged; [AND]

(F) parents and guardians must actively participate in family

support services so as to facilitate the child's being able to remain in the home; when children are removed from the home, the parents and guardians must actively participate in family support services to make return of their children to the home possible; **and**

(G) the child should continue to attend the child's school of origin as provided under AS 14.03.096;

(5) numerous studies establish that

(A) children undergo a critical attachment process before the time they reach six years of age;

(B) a child who has not attached with an adult caregiver during this critical stage will suffer significant emotional damage that frequently leads to chronic psychological problems and antisocial behavior when the child reaches adolescence and adulthood; and

(C) it is important to provide for an expedited placement procedure to ensure that all children, especially those under the age of six years, who have been removed from their homes are placed in permanent homes expeditiously.

*** Sec. 8.** AS 47.07.020(b) is amended to read:

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in **out-of-home care** [FOSTER HOMES] or private child-care

institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under 21 years of age and not covered under (a) of this section [,] who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title

XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of

this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII)**;**

(16) persons under 21 years of age who were in the custody of the department under AS 47.10 or AS 47.14 and who were placed in out-of-home care for a period of not less than six consecutive months on or after reaching 16 years of age.

*** Sec. 9.** AS 47.07.020 is amended by adding a new subsection to read:

(o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

*** Sec. 10.** AS 47.10.080 is amended by adding a new subsection to read:

(v) A social worker employed by or under contract with the department shall, not less than monthly, conduct visits with a child committed to the custody of the department under (c) of this section. The visits must be of sufficient substance and duration to address issues pertinent to case planning and service delivery to ensure the child's safety, permanency, and well-being. The majority of the visits conducted under this subsection must be at the location of the child's current placement. Nothing in this paragraph creates a private right of action against the department or the department's contractors. In this subsection, "visit" means face-to-face contact between social worker and child.

*** Sec. 11.** AS 47.10.990(3) is amended to read:

(3) "child" means a person **who is**

(A) under 18 years of age**;**

(B) [AND A PERSON] 19 years of age if that person was under 18 years of age at the time that a proceeding under this chapter was commenced**; and**

(C) under 21 years of age if that person is living in out-of-home care;

* **Sec. 12.** AS 47.10.990 is amended by adding a new paragraph to read:

(33) "out-of-home care" has the meaning given in AS 47.14.400.

* **Sec. 13.** AS 47.18.300(a) is amended to read:

(a) The department, in coordination with local public and private agencies, shall design, develop, and implement **an out-of-home care** [A FOSTER CARE] transition program to provide support and services to individuals who

(1) reach or have reached the age of 16 or older while in state **custody and placed in out-of-home** [FOSTER] care and have not yet reached 23 years of age; and

(2) meet other eligibility criteria established by the department under (b) of this section.

* **Sec. 14.** AS 47.18.310 is amended to read:

Sec. 47.18.310. Program design. The department, in coordination with local public and private agencies, shall design the program as a continuation of the training efforts related to independent living skills that were initiated **for a child in state custody who was placed in out-of-home care and** [WHEN THE STATE FOSTER CARE RECIPIENTS WERE] identified as being likely to remain in **out-of-home** [STATE FOSTER] care until reaching **not less than** the age of 18. The program design must require that program participants are directly involved in identifying the program activities that will prepare them for independent living.

* **Sec. 15.** AS 47.18.320(a) is amended to read:

(a) Subject to the availability of an appropriation made for the purposes of AS 47.18.300 - 47.18.390, the program may provide

(1) education and vocational training;

(2) assistance in obtaining basic education and training;

(3) career and employment services;

(4) training in basic life skills;

(5) housing and utility assistance;

(6) mentoring and counseling; and

(7) other appropriate services to complement the efforts of former state foster care recipients **or a child who was in state custody and placed in out-of-home care** to achieve self-sufficiency.

*** Sec. 16.** AS 47.18.390(1) is amended to read:

(1) "program" means the **out-of-home** [FOSTER] care transition program authorized under AS 47.18.300 - 47.18.390;

*** Sec. 17.** AS 47.18 is amended by adding a new section to read:

Sec. 47.18.335. Monetary living expense stipend. The department shall provide to an individual receiving services under the program a monthly stipend in an amount set by the department that is not less than the daily rate provided to a licensed foster parent for necessary living expenses. The stipend shall continue for a period of not more than one year after the individual leaves out-of-home care. The department may adopt regulations to implement this section.

*** Sec. 18.** AS 47.18.390(3) is repealed and reenacted to read:

(3) "out-of-home care" has the meaning given in AS 47.14.400.

Conceptual Amendment #

OFFERED IN THE HOUSE EDUCATION COMMITTEE

TO: CSHB 126

Page 2, line 22:

Insert new subsection (e) which reads: "A school district is not required to comply with the requirements of this section to the extent the legislature has not appropriated sufficient funds to implement its requirements."

Page 3, line 9:

Insert new subsection (d) which reads: "A state-supported educational institution is not required to comply with the requirements of this section to the extent the legislature has not appropriated sufficient funds to implement its requirements."

Educational Stability for Youth in Foster Care

The McKinney-Vento Act[1] applies to many children in DFCS custody and provides those children with rights that promote educational stability.

What is the McKinney-Vento Act?

- McKinney-Vento is a federal law that promotes stability, access, and academic success for homeless youth. McKinney-Vento also provides assistance for homeless youth with enrollment in a new school, transportation to school, and other educational and supplemental services. It promotes educational stability by allowing homeless youth to remain in their school of origin even if homelessness has caused them to move outside the school district. School of origin is defined as the school a student attended before becoming homeless or the school where the student was last enrolled.

Are children in foster care homeless?

- In order to be eligible for the benefits and services provided for by the McKinney-Vento Act, a student must meet the criteria for homelessness. Some children in foster care meet the criteria and are therefore considered homeless under the Act.
- The McKinney-Vento Act defines homeless children and youth as "(A) individuals who lack a fixed, regular and adequate nighttime residence…; and (B) includes – (i) children and youths who are sharing the housing of other persons due to loss of housing, economic hardship, or a similar reason; are living in motels, hotels, trailer parks, or camping grounds due to the lack of alternative accommodations; *are living in emergency or transitional shelters; are abandoned in hospitals*; *or are awaiting foster care placement*…."[2] Thus, some children in DFCS custody are considered homeless for the purpose of the McKinney-Vento Act, specifically children living in shelters, abandoned in hospitals, and children awaiting foster care placement
- Using McKinney-Vento to secure rights for children in foster care helps to minimize educational disruption. The child is able to remain in the same school, continue with the current academic curriculum, and is less likely to fall behind academically.

Are children covered by McKinney-Vento after they move into a foster home?

- Once the provisions of McKinney-Vento have been met, an eligible child remains eligible for services for the remainder of that school year even if s/he moves into a foster home.
- When the next school year begins, if the child continues to live in a foster home, s/he will no longer qualify under McKinney-Vento and at that time may have to transfer to a school in the district where s/he is residing.

What about the documents schools require to enroll a child in school?

- McKinney-Vento requires schools to immediately enroll homeless children in school even without records normally required for enrollment, such as previous academic records, medical records including immunization records, proof of guardianship, and proof of residency.
- The enrolling school must contact the last school attended to obtain relevant records to facilitate enrollment and the school should refer the child to the school liaison for assistance in obtaining immunization records.

What if the child has moved out of district and the old school refuses to allow the child to continue to attend?

- All decisions about where a homeless child shall be allowed to go to school must be made according to the child's best interests. In determining best interests of the child, the local educational agency shall "to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian."[3]

Atlanta, GA 30322

Tel 404.727.6664
www.childwelfare.net
childlaw@law.emory.edu

- ❖ Whenever there is a disagreement between a school and a parent, guardian, or youth, the school must:
  - Immediately enroll the student in the school the parent, guardian, or youth chooses;
  - Keep the student at that school until the disagreement is settled;
  - Explain, in writing, its decision and the right to have the disagreement settled; AND
  - Send the parent, guardian or youth to the Georgia Liaison/Coordinator of Education for Homeless Children and Youth to settle the disagreement quickly. Please see the contact information below.

What if it is best to transfer the child to a new school in the district where the foster parents or relative placement live?

- ❖ Homeless children and youth have the right to stay in the school they went to before they lost their housing, to stay at whatever school they were enrolled in last, or to attend the local school where they are now living.

Is there any help with transportation?

- ❖ If McKinney-Vento applies to the child, then the school district must provide or arrange transportation for the student to stay at the school of origin, even if the student moves to a different city, county, or school district.
  - If a student is living in the same school district as the school of origin, then that school district has to provide transportation. If the student moves across district lines, then both districts have to work together to provide transportation.

What type of transportation will the school provide?

- ❖ Schools can provide transportation in different ways, including:
  - Re-routing school buses and making sure buses go to shelters, group homes and other places where students live;
  - Providing passes for public buses and subways, including passes for caretakers when needed;
  - Using the transportation systems social services use;
  - Using approved van or taxi services;
  - Reimbursing parents, guardians or youth for gas;
  - Working with service providers and public assistance agencies to make transportation plans or provide transportation;
  - Getting local businesses or other agencies to help with transportation costs; and

origin, as determined in paragraph (3)(A), in accordance with the following, as applicable:

(I) If the homeless child or youth continues to live in the area served by the local educational agency in which the school of origin is located, the child's or youth's transportation to and from the school of origin shall be provided or arranged by the local educational agency in which the school of origin is located.

(II) If the homeless child's or youth's living arrangements in the area served by the local educational agency of origin terminate and the child or youth, though continuing his or her education in the school of origin, begins living in an area served by another local educational agency, the local educational agency of origin and the local educational agency in which the homeless child or youth is living shall agree upon a method to apportion the responsibility and costs for providing the child with transportation to and from the school of origin. If the local educational agencies are unable to agree upon such method, the responsibility and costs for transportation shall be shared equally.

(2) COMPLIANCE-

(A) IN GENERAL- Each plan adopted under this subsection shall also describe how the State will ensure that local educational agencies in the State will comply with the requirements of paragraphs (3) through (7).

(B) COORDINATION- Such plan shall indicate what technical assistance the State will furnish to local educational agencies and how compliance efforts will be coordinated with the local educational agency liaisons designated under paragraph (1)(J)(ii).

(3) LOCAL EDUCATIONAL AGENCY REQUIREMENTS-

(A) IN GENERAL- The local educational agency serving each child or youth to be assisted under this subtitle shall, according to the child's or youth's best interest--

(i) continue the child's or youth's education in the school of origin for the duration of homelessness--

(I) in any case in which a family becomes homeless between academic years or during an academic year; or

(II) for the remainder of the academic year, if the child or youth becomes permanently housed during an academic year; or

(ii) enroll the child or youth in any public school that nonhomeless students who live in the attendance area in which the child or youth is actually living are eligible to attend.

(B) BEST INTEREST- In determining the best interest of the child or youth under subparagraph (A), the local educational agency shall--

(i) to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian;

(ii) provide a written explanation, including a statement regarding the right to appeal under subparagraph (E), to the homeless child's or youth's parent or guardian, if the local

educational agency sends such child or youth to a school other than the school of origin or a school requested by the parent or guardian; and

(iii) in the case of an unaccompanied youth, ensure that the homeless liaison designated under paragraph (1)(J)(ii) assists in placement or enrollment decisions under this subparagraph, considers the views of such unaccompanied youth, and provides notice to such youth of the right to appeal under subparagraph (E).

(C) ENROLLMENT- (i) The school selected in accordance with this paragraph shall immediately enroll the homeless child or youth, even if the child or youth is unable to produce records normally required for enrollment, such as previous academic records, medical records, proof of residency, or other documentation.

(ii) The enrolling school shall immediately contact the school last attended by the child or youth to obtain relevant academic and other records.

(iii) If the child or youth needs to obtain immunizations, or immunization or medical records, the enrolling school shall immediately refer the parent or guardian of the child or youth to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall assist in obtaining necessary immunizations, or immunization or medical records, in accordance with subparagraph (D).

(D) RECORDS- Any record ordinarily kept by the school, including immunization or medical records, academic records, birth certificates, guardianship records, and evaluations for special services or programs, regarding each homeless child or youth shall be maintained--

(i) so that the records are available, in a timely fashion, when a child or youth enters a new school or school district; and

(ii) in a manner consistent with section 444 of the General Education Provisions Act (20 U.S.C. 1232g).

(E) ENROLLMENT DISPUTES- If a dispute arises over school selection or enrollment in a school--

(i) the child or youth shall be immediately admitted to the school in which enrollment is sought, pending resolution of the dispute;

(ii) the parent or guardian of the child or youth shall be provided with a written explanation of the school's decision regarding school selection or enrollment, including the rights of the parent, guardian, or youth to appeal the decision;

(iii) the child, youth, parent, or guardian shall be referred to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall carry out the dispute resolution process as described in paragraph (1)(C) as expeditiously as possible after receiving notice of the dispute; and

(iv) in the case of an unaccompanied youth, the homeless liaison shall ensure that the youth is immediately enrolled in school pending resolution of the dispute.

(F) PLACEMENT CHOICE- The choice regarding placement shall be made regardless of whether the child or youth lives with the homeless parents or has been temporarily placed elsewhere.

(G) SCHOOL OF ORIGIN DEFINED- In this paragraph, the term 'school of origin' means the school that the child or youth attended when permanently housed or the school in which the child or youth was last enrolled.

(H) CONTACT INFORMATION- Nothing in this subtitle shall prohibit a local educational agency from requiring a parent or guardian of a homeless child to submit contact information.

(4) COMPARABLE SERVICES- Each homeless child or youth to be assisted under this subtitle shall be provided services comparable to services offered to other students in the school selected under paragraph (3), including the following:

(A) Transportation services.

(B) Educational services for which the child or youth meets the eligibility criteria, such as services provided under title I of the Elementary and Secondary Education Act of 1965 or similar State or local programs, educational programs for children with disabilities, and educational programs for students with limited English proficiency.

(C) Programs in vocational and technical education.

(D) Programs for gifted and talented students.

(E) School nutrition programs.

(5) COORDINATION-

(A) IN GENERAL- Each local educational agency serving homeless children and youths that receives assistance under this subtitle shall coordinate--

(i) the provision of services under this subtitle with local social services agencies and other agencies or programs providing services to homeless children and youths and their families, including services and programs funded under the Runaway and Homeless Youth Act (42 U.S.C. 5701 et seq.); and

(ii) with other local educational agencies on interdistrict issues, such as transportation or transfer of school records.

(B) HOUSING ASSISTANCE- If applicable, each State educational agency and local educational agency that receives assistance under this subtitle shall coordinate with State and local housing agencies responsible for developing the comprehensive housing affordability strategy described in section 105 of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12705) to minimize educational disruption for children and youths who become homeless.

(C) COORDINATION PURPOSE- The coordination required under subparagraphs (A) and (B) shall be designed to--

(i) ensure that homeless children and youths have access and reasonable proximity to available education and related support services; and

(ii) raise the awareness of school personnel and service providers of the effects of short-term stays in a shelter and other challenges associated with homelessness.

(6) LOCAL EDUCATIONAL AGENCY LIAISON-

(A) DUTIES- Each local educational agency liaison for homeless children and youths, designated under paragraph (1)(J)(ii), shall ensure that--

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

MEMORANDUM

DATE: February 24, 2009

TO: Representative Paul Seaton, Chair, House Education Committee

FROM: Representative Les Gara

RE: CS for HB 126 – Foster Care

Here is the list of changes in the committee substitute (26-LS0309\S).

- Section 4 – The definition of "out-of-home care" was changed to be consistent with the definition already in law under AS 47.14.400(e)(4). This change is reflected throughout the bill.

- Section 5 – This new section also applies "out-of-home" in lieu of "foster" care.

- Section 9 – This new section also applies "out-of-home" in lieu of "foster" care.

- Section 10 – New language to the previous Section 8 adds legal immunity for social workers relating to the monthly visit issue.

- Section 11 from the original bill was deleted because it unnecessarily affected juvenile prosecutions.

- Section 13 rewrites the original Section 12. The proposal in this section of the original HB126 could have been interpreted to mean that the program would apply only to those individuals that, at the time that the training efforts related to independent living skills were initiated, were identified as being likely to remaining in foster care until age 21. That would mean that if the training efforts were initiated when the individual was 16, and at that time it was believed that foster care would end shortly after the individual's 18th birthday, the program would not apply to that person, even if it later turns out that the individual needs to remain in foster care until age 21. If that interpretation was used, the proposed change to statute would be more restrictive than the current statute. The CS adopts changes requested by OCS to mitigate this concern.

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518

Representative_Les_Gara@legis.state.ak.us

- Section 14 – This new section adds language that reflects the broadened definition of youth in state custody, from "foster care" to "out-of-home care", for application to independent living programs.

- Section 16 – This new section also applies "out-of-home" in lieu of "foster" care.

- Section 17 – This revises the old Section 13, adding the language "living expense" to the title of the stipend and making more flexible the amount given to the youth to give more discretion to the department.

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

Sponsor Statement
HB 126: Success For Foster Youth

HB 126 is designed to fix some of the most glaring problems in our foster care system – problems that serve to deny opportunity and success to at risk foster youth. It is cost effective, and designed to supplement partial efforts that exist today. Given the number of foster youth in Alaska – approximately 2,000 – the cost of this effort will not be substantial, but the economic and human and opportunity cost of not passing it will be.

The legislation is an outgrowth of this past fall's bi-partisan legislative foster care conference, and work by Alaska's foster youth, who have become increasingly active in seeking solutions for the problems they face on a day to day basis.

Today roughly 40% of foster youth end up homeless at some point in their lives after leaving foster care. That's unacceptable, and HB 126 proposes cost effective solutions to that problems. It is estimated that less than 10% of our foster youth graduate from college. Foster youth end up in jail and on state-paid social services, and in social service treatment in greater numbers than their peers. Tolerating this costs Alaskans in terms of money, lost economic activity and human opportunity.

HB 126 does the following:

- It requires OCS to meet federal standards by requiring in person visits with foster children on a monthly basis. Many states impose such a requirement to spur compliance by their state agencies, and the language in HB 126 is taken from Minnesota. The most recent federal review of our system states that in roughly 1/3 of the cases OCS staff meet once every 8 months with foster youth. OCS is working on improving this, and OCS staff are eager to find ways to comply with the monthly visit standards that are so important if we are to protect our foster youth from harm, and learn their needs so they can succeed.

- It provides housing assistance to youth coming out of foster care, for up to a year. Current rules allow OCS to pay for one month of full rent, and then 2 months of rent at 50% of the youth's cost.

- It provides tuition and room and board for in-state job training and college. Currently there are a limited number of tuition-only scholarships available to youth, and some job training assistance. This provision would make that assistance complete. The room and

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109
Representative_Les_Gara@legis.state.ak.us

board component is crucial, as foster youth have no home they can live in after foster care ends.

- It requires that foster youth be allowed to remain in their current school when they suffer a foster family placement change. Bouncing youth between schools causes failure, and federal law provides partial funding to allow students to avoid school transfers.

- It requires that when foster youth are transferred to a new school, they be allowed to attend immediately, and requires that their transcript information be transferred to the new school within 7 days.

Federal funding is available for portions of this effort, and the limited number of foster youth in Alaska would make implementation of this effort relatively inexpensive. If we don't pursue this legislation, Alaska's foster youth will continue facing unfair barriers to their success – and that shouldn't be an acceptable option.

Please don't hesitate to contact us with questions.

MEMORANDUM February 12, 2009

SUBJECT: Sectional Summary (HB 126; Work Order No. 26-LS0309\E)

TO: Representative Les Gara
Attn: Katie Conway

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Provides for the continuation of a public education in a student's school of origin for a homeless student under federal specifications. Provides exceptions for a move outside of a school district or when a superintendent makes contrary findings in the student's best interest. Modifies federal definition of homelessness to include students who are placed in out-of-home care by the state.

Section 2. Provides for a waiver of tuition, fees, and room and board expenses at a state-supported educational institution for a person who was placed in out-of-home care under specified circumstances for a person who is 16 years or older. The school may require eligible applicants to apply for a loan under section 3.

Section 3. Provides for an education loan for students eligible under section 2 to offset unmet education expenses after a waiver is granted under section 2.

Section 4. Defines out-of-home care for purposes of student loans and waivers.

Section 5. Amends the state's purpose and policy related to children to include education and intellectual development.

Section 6. Amends the legislative intent related to children to include providing a public education as provided under section 1.

Section 7. Replaces the term "foster homes" with "out-of-home care" for purposes of

establishing medical assistance eligibility for certain persons and adds a category of eligibility for persons under 21 years of age who were in out-of-home care for a specified period of time on or after the person's 16th birthday.

Section 8. Establishes mandatory monthly visits by social workers employed by the department to make monthly home visits, as described, to all children in the custody of the department.

Section 9. Amends the definition of "child" for purposes of the child in need of aid statutes.

Section 10. Defines "out-of-home care" for purposes of the child in need of aid statutes.

Section 11. Defines "child" and "out-of-home care" for purposes of juvenile programs and institutions.

Section 12. Increases the maximum eligibility age from 18 to 21 for purposes of the foster care transition program.

Section 13. Establishes a monetary stipend to be paid to persons who are eligible for the foster care transition program.

ANALYSIS: *(Attach a separate page if necessary)*

Sections 3 and 4 of the bill amend the Alaska Student Loan statutes creating special loan terms and conditions for otherwise eligible borrowers, providing for a lower annual loan limit than would otherwise be available and provides for the loan to be interest-free to the borrower under certain conditions. The commission no longer makes loans under this section of law, and it is unclear whether the intent of the bill is to create a separate loan program for this special population that is in addition to the other loans available to them, or if this is to be an alternative to other borrowing. Currently, the commission administers newly originated state education loans (those not carrying a federal guarantee) pursuant to AS 14.43.170--AS 14.43.175. At the time of drafting of this note, the anticipated population of program participants is not known so related costs estimates could not be determined.

FACT SHEET

Educational Outcomes for Children and Youth in Foster and Out-of-Home Care

September 2007

For the over 800,000 children and youth served in foster care each year in the United States, educational success is a potential positive counterweight to abuse, neglect, separation, and impermanence. Positive school experiences enhance their well-being, help them make more successful transitions to adulthood, and increase their chances for personal fulfillment and economic self-sufficiency, as well as their ability to contribute to society. Unfortunately, the educational outcomes for children and youth in foster care are dismal. As this current research summary reveals, young people in foster care are in educational crises. Although data are limited, particularly national data, research makes it clear that serious issues must be addressed to ensure the educational success of children and youth in foster care.

National Foster Care Data

The following data are based on the U.S. Department of Health and Human Services AFCARS report: *Preliminary FY 2005 Estimates as of September 2006.*[1]

TABLE 1. NATIONAL FOSTER CARE STATISTICS

Children and Youth in Foster Care	Percentages/Numbers
Children and youth served in foster care during 2005	Over 800,000 (about 1% of child population[2])
Children and youth in foster care on September 30, 2005	513,000
Young children in foster care (age 0–4)	28% (142,163)
School age children in foster care (age 5–18)	71% (360,848)
Young adults in foster care (age 18–20)	5% (23,997)
Children and youth of color in foster care	57%
Male children and youth in foster care	52%
Number of youth who emancipated/aged out of foster care in 2005	9% (24,407)
Children and youth exiting foster care who had been in care for one year or more	50%
Children and youth exiting foster care who had been in care for three years or more	17%

School Placement Stability/Enrollment Issues

School Mobility Rates of Children and Youth in Foster Care

- Children and youth have an average of one to two home placement changes per year while in out-of-home care.[3]
- A 2001 study of more than 4,500 children and youth in foster care in Washington State found that, at both the elementary and secondary levels, twice as many youth in foster care as youth not in care had changed schools during the year.[4]
- In a 2000 New York study of 70 children and youth in foster care, more than 75% did not remain in their school once placed in foster care, and almost 65% had been transferred in the middle of the school year.[5]
- A 2004–2005 three-state study of youth aging out of care (the Midwest Study) by Chapin Hall revealed substantial levels of school mobility associated with placement in out-of-home care. Over a third of young adults reported having had five or more school changes.[6]

- School mobility rates are highest for those entering care for the first time. According to another Chapin Hall study in 2004 of almost 16,000 children and youth in the Chicago Public School system, over two-thirds switched schools shortly after their initial placement in out-of-home care.[7]
- A study of 1,082 Casey Family Programs foster care alumni served across the country found that over two-thirds (68%) of them had attended three or more different elementary schools and a third (33%) had attended five or more.[8]

Negative Effects of School Mobility

- A 1996 study of students in Chicago Public Schools found that students who had changed schools four or more times had lost approximately one year of educational growth by their sixth year.[9]
- A 1999 study found that California high school students who changed schools even once were less than half as likely to graduate as those who did not change schools, even when controlling for other variables that affect high school completion.[10]
- In the Casey national study of 1,082 foster care alumni throughout the country, youth who had had one fewer placement change per year were almost twice as likely to graduate from high school before leaving care.[11]
- A 2004 study in Philadelphia of 1,635 children over age two found that multiple placements and episodic foster care increased the probability of high mental health service use.[12]

Suspensions/Expulsions

- Two-thirds (67%) of youth in out-of-home care in the Midwest Study had been suspended from school at least once compared to 28% in a national sample of general population youth. About one sixth (17%) of the Midwest youth had been expelled compared with 5% of the general population sample.[13]

Enrollment Issues

- In the New York study, 42% of the children and youth did not begin school immediately upon entering foster care. Nearly half of these young people said that they were kept out of school because of lost or misplaced school records.[14]
- A 2001 Bay Area study of over 300 foster parents found that "missing information from prior schools increased the odds of enrollment delays by 6.5 times."[15]

Academic Outcomes

Academic Achievement

- The Washington State study found that children and youth in foster care attending public schools scored 16 to 20 percentile points below non-foster youth in statewide standardized tests at grades three, six, and nine.[16]
- Youth in foster care in the Midwest Study, interviewed primarily after completing 10th or 11th grade, on average read at only a seventh grade level. Approximately 44% read at high school level or higher. Few excelled in academic subjects, especially relative to a comparable national sample. Less than one in five received an "A" in English, math, history, or science.[17]
- Chapin Hall's research on Chicago Public School children and youth in out-of-home care indicates they lag at least half a school year behind demographically similar students in the same schools. (There is an overall achievement gap of upwards of one year. However, some of this is attributed to the low-performing schools that many of them attend.) Almost 50% of third to eighth grade students in out-of-home care scored in the bottom quartile on the reading section of the Iowa Tests of Basic Skills (ITBS) test.[18]

Grade Retention/Old for Grade

- In the Washington State study, twice as many youth in foster care at both the elementary and secondary levels repeated a grade compared to youth not in care.[19]
- Nearly 45% of youth in care in the New York State study reported being retained at least once in school.[20]
- In the Midwest Study, 37% of youth in foster care (compared with 22% of a comparable national sample) reported repeating a grade.[21]
- Chicago Public School students in out-of-home care were almost twice as likely as other students to be at least a year older for their grade, even after demographic factors were taken into account and comparisons made to other students attending the same schools.[22]
- The national study of Casey foster care alumni found that 36% of them had repeated a grade.[23]

Special Education Issues

Number of Youth in Special Education

- Numerous studies indicate anywhere between one-quarter and nearly one-half (23%–47%) of children and youth in out-of-home care in the U.S. receive special education services at some point in their schooling.[24] The national average of school-aged children and youth served in special education each year is close to 12%.[25]
- At both the elementary and secondary levels, more than twice as many foster youth as non-foster youth in the Washington State study had enrolled in special education programs.[26]
- Nearly half of the youth in foster care in the Midwest Study had been placed in special education at least once during the course of their education.[27]
- Chicago Public School students in out-of-home care between sixth and eighth grades were classified as eligible for special education nearly three times more frequently than students not in care. [28]
- 38% of Casey foster care alumni reported they had been enrolled in supplemental education classes for youth needing extra help.

Advocacy Regarding Special Education Services

- An Oregon study done in 2006 compared a group of 45 youth in foster care in special education to a group in special education, but not in foster care. They found that: [29]
  - » The education and transition plans of foster youth were lower in quality.
  - » The transition plans of the foster care group were half as likely as the comparison group's plans to contain goals regarding education after high school (31% vs. 60%).
  - » Youth in foster care were less likely to have an advocate (i.e., family member, foster parent, or educational surrogate) present at their planning process meeting (42% vs. 69%).
- In the Bay Area study, 68% of the school-age children in foster care reviewed were identified as having special needs, yet only 36% were receiving special education services.[30]
- In the New York study, Advocates for Children of New York found that:
  - » 90% of biological parents of children in foster care surveyed did not participate in any special education processes concerning their child.[31]
  - » 60% of caseworkers/social workers surveyed "were not aware of existing laws when referring children to special education" and over 50% said "that their clients did not receive appropriate services very often while in foster care."[32]
- A 1990 study in Oregon found that children who had multiple foster care placements and who needed special education were less likely to receive those services than children in more stable placements.

Mental, Emotional and Behavioral Issues

Mental Health

- In a 2005 study of foster care alumni in Oregon and Washington (the Northwest Alumni Study), 54% of alumni had one or more mental health disorders in the past 12 months, such as depression, social phobia or panic syndrome (compared with 22% of general population).[33]
- In the same study, 25% had post-traumatic stress disorder within the past 12 months (compared with 4% of general population), which is twice the rate of U.S. war veterans.[33]
- A 2003 study that surveyed key child welfare administrators in 92 localities about their policies for screening children entering out of home care found that only 43% of them provided comprehensive assessments that included physical, mental health, and developmental examinations.[35]

Emotional and Behavioral Issues

- Recent research in Chicago confirmed previous statewide research findings that children in foster care are significantly more likely than children in the general population to have a special education classification of an emotional or behavioral disturbance.[36]
- Several studies have found that children and youth in foster care are significantly more likely to have school behavior problems and that they have higher rates of suspensions and expulsions from school.[37]

High School Completion Rates

High School Completion Rates/Drop-Out Rates

- A 2006 report by the EPE Research Center indicates that the nationwide high school completion rate for all students is 70%. More are lost in ninth than in any other grade (9th: 35%; 10th: 28%; 11th: 20%; 12th: 17%).[38]
- Studies have found differing rates of high school completion (through a degree or GED), by youth in out-of-home care, though the measures have been defined somewhat differently:
  - » In the Washington State study, 59% of youth in foster care enrolled in 11th grade completed high school by the end of 12th grade.[39]
  - » The young adults in the Northwest Alumni Study and the Casey national alumni study completed high school (via diploma or GED) at rates of 85% and 86%, respectively, by age 25, which is comparable to the general population rate. Both studies found, however, much higher GED completion rates compared to the general population (5%): over one in four (29%) in the Northwest study,[40] and one in five (19%) in the Casey national study.[41]
  - » In the Midwest Study, approximately 58% of youth in foster care had a high school degree at age 19, compared to 87% of their same-age peers in a comparable a national sample.[42]
  - » A national study in 1994 of young adults who had been discharged from foster care found that 54% had completed high school.[43]
  - » In the Chapin Hall study of Chicago Public School youth, fifteen-year-old students in out-of-home care were about half as likely as other students to have graduated 5 years later, with significantly higher percentages of students in care having dropped out (55%) or incarcerated (10%).[44]
- A 1997 study on long-term outcomes for children in foster care on a national level found that youth in foster care are more than twice as likely (37% vs. 16%) to have dropped out of high school than non-foster youth. Five years later, 77% of the former foster youth who had dropped out of high school had completed a high school diploma or GED, compared with 93% of the non-foster youth who had dropped out.[45]

Factors Contributing to Dropping Out

- A 1995 nationwide study of over 17,000 students found that being retained even once between first and eighth grade makes a student four times more likely to drop out than a classmate who was never held back, even after controlling for multiple factors.[46]
- School mobility has also been implicated as a clear risk factor for dropout in several studies.[47]
- The recent EPE Research Center report indicates that repeating a grade, changing schools, and behavior problems are among the host of signals that a student is likely to leave school without a traditional diploma.[48]
- The book *Drop Outs in America* reports research that shows the following students are at risk for dropping out: students of color, students who had been held back, students who are older than others in their grade, and English-language learners.[49]

Postsecondary Preparation, Entrance, and Completion

College Aspiration/Preparation

- The majority (80%) of those youth in out-of-home care interviewed in the Midwest Study at age 17–18 hoped and expected to graduate from college eventually.[53]
- Foster youth with high educational aspirations, on average, were found to have higher reading achievement compared to foster youth with lower aspirations in a 2003 study of Illinois youth age 16–17.[54]
- A national study done in 1997 indicates that only 15% of youth in foster care are likely to be enrolled in college preparatory classes versus 32% of students not in foster care, even when they have similar test scores and grades.[55]
- Strong academic preparation has been found to be the single most important factor in enrolling and succeeding in a postsecondary program. However, in the United States, studies of the general population have found that:
  - » Only 32% of all students leave high school qualified to attend a four-year college.[56]
  - » Only 20% of all African American and 16% of all Hispanic students leave high school college-ready.[57]
  - » Between 30-60% of students "now require remedial education upon entry to college, depending on the type of institution they attend."[58]

Postsecondary Entrance/Completion Rates

- The Northwest Alumni Study[50] found that of the foster care alumni who were interviewed:
  - » 43% completed some education beyond high school.
  - » 21% completed any degree/certificate beyond high school.
  - » 16% completed a vocational degree (22% among those age 25 or older).
  - » 1.8% completed a bachelor's degree (3% among those age 25 or older) compared to the general population rate of 24%.
- Estimates from a range of studies vary widely for college enrollment rates (7–48%) and graduation rates (1–8%).[51]
- The Casey national alumni study reported college completion rates of 9% (at any age) compared to the general population rate of 24%.[52]

Social/Economic Issues

Social Issues

- In the Midwest Study, by about 19 years of age, young women in foster care were more than twice as likely to have been pregnant by age 19 compared with their peers not in foster care.[59]
- The Midwest Study also found that youth aging out of the child welfare system had higher rates of offending across a range of behaviors from property crimes to serious violent crimes than their same age peers. Both male and female foster youth, for example, were over 10 times more likely to report having been arrested since age 18 than youth in a comparative sample.[60]
- In the Northwest Alumni Study, more than one in five alumni reported experiencing homelessness since discharge from foster care.[61] In the Midwest Study, one in seven youth reported experiencing homelessness since leaving care.[62]

GED vs. High School Diploma

- In research done in 1998 analyzing the educational and labor market performance of GED recipients, it was found that individuals earning a GED credential instead of a high school diploma spend less time working, experience more job turnover, and earn lower wages. They were also half as likely to earn associate's degrees and even less likely to earn bachelor's degrees.[63]

Economic Impact

- Compared to graduates, the EPE Research Center found that high school dropouts are more likely to be unemployed, earn lower wages, have higher rates of public assistance, be single parents, and have children at a younger age.[64]

TABLE 2. SELECTED OUTCOMES BY EDUCATIONAL ACHIEVEMENT

	Employment Rate (Mar '06)	Unemployment Rate (Mar '06)	Earning Power (Median Earnings, '04)
Dropouts	42%	8%	$18,085
HS Graduate	60%	5%	$26,104
Some College	70%	4%	$30,610
College Grad	76%	2%	$47,317

(EPE Research Center, Diplomas Count, 2006)

- According to the Northwest Alumni Study, alumni of the foster care system experience difficult employment and financial situations once they become 18 and age out of the system.[65]
  - » One-third lived at or below poverty (three times the national rate).
  - » One-third had no health insurance (twice the national rate).
  - » Their employment rate was 80% (compared with 95% of same-aged members of the general population).
  - » 17% were currently receiving cash public assistance.

Supportive Factors

Staying in Foster Care After Age 18

- The Midwest Study[66] found that:
  - » Young adults who stayed in care after 18 were more than twice as likely to be enrolled in a school or training program as those who had been discharged.
  - » Young adults who stayed in care after 18, who had a high school diploma or GED, were over three times as likely as those no longer in care to be enrolled in a 2- or 4-year college.
  - » Compared to the 19 year olds still in foster care, those who left the system were more likely to have become pregnant.[67]

Table 3. Current Educational Enrollment: Midwest Study (n=603)

Educational Enrollment	Young Adults Still In Care	Young Adults No Longer In Care
Not Enrolled	33.3%	69.2%
High School or GED	20.9%	10.1%
Vocational Training	8.5%	9.1%
2-Year College	26.6%	7.9%
4-Year College	10.6%	3.8%

Caring, Stable Relationships

- A study conducted with 216 emancipated foster youth attending a four-year university found that social support was an important factor in their educational success: nearly 87% had either a friend of family member to ask for help or advice if needed, 80% had contact with their birth family, and 60% still maintained relationships with their foster or kin-care parents.[68]
- A qualitative study of 38 educationally high-achieving (obtained at least a BA degree) former foster youth found that most of the young adults had a mentor or a role-model, with whom the youth had a close relationship. One in three young adults believed that for former foster youth to succeed in higher education, they need the continued support and advice of a mentor or other adults who understands their experiences.[69]

Existence of Education Advocates

- Multiple studies indicate that foster children often lack a knowledgeable, consistent educational advocate.[70]
- Further studies indicate that foster parents, social workers, and judges who are entrusted with the welfare of the child in care too often lack the training and awareness to provide the educational advocacy that children in care especially need.[71]

Early Childhood Education/Early Intervention

General Early Learning Research

- Only 18% of the foster parents in the 2000 New York study reported that children under their care were enrolled in preschool programs. Of the foster parents who indicated that none of the foster children they cared for were enrolled in preschool programs, 80% reported that no one advised them to enroll these children in such programs.[72]
- The Chicago Longitudinal Study followed the education and social development of more than 1,500 low-income children served by the Chicago Child-Parent Center. When compared to a peer group who did not receive the center's services, participants had a 41% lower rate of juvenile arrest for violent offenses, 41% fewer special education placements, and 51% fewer allegations of child abuse and neglect. At age 21, the participants had a 20% higher rate of high school completion. Every dollar invested in the program returned four dollars to the public in reduced costs of crime, welfare, and remedial education (2001 data).[73]
- The High/Scope Perry Preschool is a multi-year study of 123 low income African-American children who were assessed to be at high risk of school failure. Fifty-eight received a high-quality preschool program at ages 3 and 4; the other 65 children received no preschool program. Forty years later, the group that received high-quality early learning had higher IQs at age 5, higher high school graduation rates, fewer arrests, and higher median annual incomes than those who received no preschool.[74]

Early Intervention

- A 2005 national study on 2,813 young children in child welfare found that about 40% of toddlers and 50% of preschoolers have high developmental and behavioral needs; however, only 23% of children overall are receiving services for these issues.[75]
- 89% of the biological parents in the 2000 New York study stated that they were unaware of, and never informed about, the Early Intervention program while their children were in foster care. Without parental consent, most children in foster care cannot receive these services.[76]

National AFCARS data (2002). National 2002 AFCARS case level data available from the Child Welfare League of America's National Data Analysis System (NDAS) indicate a mean of 2.5 placements with an average stay of 22 months in care for a median of 2 placements for a median length of stay of 12 months. (Personal Communication, Carrie Friedman, March 23, 2005). Note that the placement change rate is inflated by the large percentage of children who have a short-term shelter care placement before being placed in a regular foster home.

2009 Alaska
Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to develop better health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When you are finished, follow the instructions of the person giving you the survey.

Thank you very much for your help.

Directions

- **Use a #2 pencil only.**
- **Make dark marks.**
- **Fill in a response like this: A B ● D.**
- **If you change your answer, erase your old answer completely.**

1. How old are you?
   - A. 12 years old or younger
   - B. 13 years old
   - C. 14 years old
   - D. 15 years old
   - E. 16 years old
   - F. 17 years old
   - G. 18 years old
   - H. 19 years old or older

2. What is your sex?
   - A. Female
   - B. Male

3. In what grade are you?
   - A. 9th grade
   - B. 10th grade
   - C. 11th grade
   - D. 12th grade
   - E. Ungraded or other grade

4. Are you Hispanic or Latino?
   - A. Yes
   - B. No

5. What is your race? **(Select one or more responses.)**
   - A. American Indian or Alaska Native
   - B. Asian
   - C. Black or African American
   - D. Native Hawaiian or Other Pacific Islander
   - E. White

6. How tall are you without your shoes on?

   Directions: Write your height in the shaded blank boxes. Fill in the matching oval below each number.

   Example

Height	
Feet	**Inches**
5	***7***
③	⓪
④	①
●	②
⑥	③
⑦	④
	⑤
	⑥
	●
	⑧
	⑨
	⑩
	⑪

7. How much do you weigh without your shoes on?

   Directions: Write your weight in the shaded blank boxes. Fill in the matching oval below each number.

   Example

Weight		
Pounds		
1	***5***	***2***
⓪	⓪	⓪
●	①	①
②	②	●
③	③	③
	④	④
	●	⑤
	⑥	⑥
	⑦	⑦
	⑧	⑧
	⑨	⑨

8. During the past 12 months, how would you describe your grades in school?
   A. Mostly A's
   B. Mostly B's
   C. Mostly C's
   D. Mostly D's
   E. Mostly F's
   F. None of these grades
   G. Not sure

The next 4 questions ask about safety.

9. **When you rode a bicycle** during the past 12 months, how often did you wear a helmet?
   A. I did not ride a bicycle during the past 12 months
   B. Never wore a helmet
   C. Rarely wore a helmet
   D. Sometimes wore a helmet
   E. Most of the time wore a helmet
   F. Always wore a helmet

10. How often do you wear a seat belt when **riding** in a car driven by someone else?
   A. Never
   B. Rarely
   C. Sometimes
   D. Most of the time
   E. Always

11. During the past 30 days, how many times did you **ride** in a car or other vehicle **driven by someone who had been drinking alcohol?**
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

12. During the past 30 days, how many times did you **drive** a car or other vehicle **when you had been drinking alcohol?**
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

The next 10 questions ask about violence-related behaviors.

13. During the past 30 days, on how many days did you carry **a weapon** such as a gun, knife, or club?
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

14. During the past 30 days, on how many days did you carry **a gun?**
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

15. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club **on school property?**
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

16. During the past 30 days, on how many days did you **not** go to school because you felt you would be unsafe at school or on your way to or from school?
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

17. During the past 12 months, how many times has someone threatened or injured you with a weapon such as a gun, knife, or club **on school property?**
    A. 0 times
    B. 1 time
    C. 2 or 3 times
    D. 4 or 5 times
    E. 6 or 7 times
    F. 8 or 9 times
    G. 10 or 11 times
    H. 12 or more times

18. During the past 12 months, how many times were you in a physical fight?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or 7 times
F. 8 or 9 times
G. 10 or 11 times
H. 12 or more times

19. During the past 12 months, how many times were you in a physical fight in which you were injured and had to be treated by a doctor or nurse?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or more times

20. During the past 12 months, how many times were you in a physical fight **on school property?**
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or 7 times
F. 8 or 9 times
G. 10 or 11 times
H. 12 or more times

21. During the past 12 months, did your boyfriend or girlfriend ever hit, slap, or physically hurt you on purpose?
A. Yes
B. No

22. Have you ever been physically forced to have sexual intercourse when you did not want to?
A. Yes
B. No

The next question asks about bullying. Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.

23. During the past 12 months, have you ever been bullied **on school property**?
A. Yes
B. No

The next 5 questions ask about sad feelings and attempted suicide. Sometimes people feel so depressed about the future that they may consider attempting suicide, that is, taking some action to end their own life.

24. During the past 12 months, did you ever feel so sad or hopeless almost every day for **two weeks or more in a row** that you stopped doing some usual activities?
A. Yes
B. No

25. During the past 12 months, did you ever **seriously** consider attempting suicide?
A. Yes
B. No

26. During the past 12 months, did you make a plan about how you would attempt suicide?
A. Yes
B. No

27. During the past 12 months, how many times did you actually attempt suicide?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or more times

28. **If you attempted suicide** during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
   A. **I did not attempt suicide** during the past 12 months
   B. Yes
   C. No

The next 13 questions ask about tobacco use.

29. Have you ever tried cigarette smoking, even one or two puffs?
   A. Yes
   B. No

30. How old were you when you smoked a whole cigarette for the first time?
   A. I have never smoked a whole cigarette
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

31. During the past 30 days, on how many days did you smoke cigarettes?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

32. During the past 30 days, on the days you smoked, how many cigarettes did you smoke **per day**?
   A. I did not smoke cigarettes during the past 30 days
   B. Less than 1 cigarette per day
   C. 1 cigarette per day
   D. 2 to 5 cigarettes per day
   E. 6 to 10 cigarettes per day
   F. 11 to 20 cigarettes per day
   G. More than 20 cigarettes per day

33. During the past 30 days, how did you **usually** get your own cigarettes? (Select only **one** response.)
   A. I did not smoke cigarettes during the past 30 days
   B. I bought them in a store such as a convenience store, supermarket, discount store, or gas station
   C. I bought them from a vending machine
   D. I gave someone else money to buy them for me
   E. I borrowed (or bummed) them from someone else
   F. A person 18 years old or older gave them to me
   G. I took them from a store or family member
   H. I got them some other way

34. During the past 30 days, on how many days did you smoke cigarettes **on school property**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

35. Have you ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days?
   A. Yes
   B. No

36. During the past 12 months, did you ever try **to quit** smoking cigarettes?
   A. I did not smoke during the past 12 months
   B. Yes
   C. No

37. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip**, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits, or Copenhagen?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

38. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip on school property**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

39. During the past 30 days, on how many days did you smoke **cigars, cigarillos, or little cigars**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

40. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

41. How much do you think people risk harming themselves (physically or in other ways), if they smoke one or more packs of cigarettes per day?
   A. No risk
   B. Slight risk
   C. Moderate risk
   D. Great risk

The next 7 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes.

42. During your life, on how many days have you had at least one drink of alcohol?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 9 days
   D. 10 to 19 days
   E. 20 to 39 days
   F. 40 to 99 days
   G. 100 or more days

43. How old were you when you had your first drink of alcohol other than a few sips?
   A. I have never had a drink of alcohol other than a few sips
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

44. During the past 30 days, on how many days did you have at least one drink of alcohol?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

45. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 to 5 days
   E. 6 to 9 days
   F. 10 to 19 days
   G. 20 or more days

46. During the past 30 days, how did you **usually** get the alcohol you drank?
   A. I did not drink alcohol during the past 30 days
   B. I bought it in a store such as a liquor store, convenience store, supermarket, discount store, or gas station
   C. I bought it at a restaurant, bar, or club
   D. I bought it at a public event such as a concert or sporting event
   E. I gave someone else money to buy it for me
   F. Someone gave it to me
   G. I took it from a store or family member
   H. I got it some other way

47. During the past 30 days, on how many days did you have at least one drink of alcohol **on school property**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

48. How much do you think people risk harming themselves (physically or in other ways), if they have one or two drinks of an alcoholic beverage (beer, wine, or liquor) nearly every day?
   A. No risk

B. Slight risk
C. Moderate risk
D. Great risk

The next 5 questions ask about marijuana use. Marijuana also is called grass or pot.

49. During your life, how many times have you used marijuana?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 to 99 times
G. 100 or more times

50. How old were you when you tried marijuana for the first time?
A. I have never tried marijuana
B. 8 years old or younger
C. 9 or 10 years old
D. 11 or 12 years old
E. 13 or 14 years old
F. 15 or 16 years old
G. 17 years old or older

51. During the past 30 days, how many times did you use marijuana?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

52. During the past 30 days, how many times did you use marijuana **on school property**?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

53. How much do you think people risk harming themselves (physically or in other ways), if they smoke marijuana regularly?
A. No risk
B. Slight risk
C. Moderate risk
D. Great risk

The next 9 questions ask about other drugs.

54. During your life, how many times have you used **any** form of cocaine, including powder, crack, or freebase?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

55. During the past 30 days, how many times did you use **any** form of cocaine, including powder, crack, or freebase?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

56. During your life, how many times have you sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

57. During your life, how many times have you used **heroin** (also called smack, junk, or China White)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

58. During your life, how many times have you used **methamphetamines** (also called speed, crystal, crank, or ice)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

59. During your life, how many times have you used **ecstasy** (also called MDMA)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

60. During your life, how many times have you used a needle to inject any **illegal** drug into your body?
A. 0 times
B. 1 time
C. 2 or more times

61. During your life, how many times have you taken a **prescription drug** (such as OxyContin, Percocet, Vicodin, Adderall, Ritalin, or Xanax) without a doctor's prescription?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

62. During the past 12 months, has anyone offered, sold, or given you an illegal drug **on school property**?
A. Yes
B. No

The next 7 questions ask about sexual behavior.

63. Have you ever had sexual intercourse?

A. Yes
B. No

64. How old were you when you had sexual intercourse for the first time?
A. I have never had sexual intercourse
B. 11 years old or younger
C. 12 years old
D. 13 years old
E. 14 years old
F. 15 years old
G. 16 years old
H. 17 years old or older

65. During your life, with how many people have you had sexual intercourse?
A. I have never had sexual intercourse
B. 1 person
C. 2 people
D. 3 people
E. 4 people
F. 5 people
G. 6 or more people

66. During the past 3 months, with how many people did you have sexual intercourse?
A. I have never had sexual intercourse
B. I have had sexual intercourse, but not during the past 3 months
C. 1 person
D. 2 people
E. 3 people
F. 4 people
G. 5 people
H. 6 or more people

67. Did you drink alcohol or use drugs before you had sexual intercourse the **last time**?
A. I have never had sexual intercourse
B. Yes
C. No

68. The **last time** you had sexual intercourse, did you or your partner use a condom?

A. I have never had sexual intercourse
B. Yes
C. No

69. The **last time** you had sexual intercourse, what **one** method did you or your partner use to **prevent pregnancy**? (Select only **one** response.)
   A. I have never had sexual intercourse
   B. No method was used to prevent pregnancy
   C. Birth control pills
   D. Condoms
   E. Depo-Provera (injectable birth control)
   F. Withdrawal
   G. Some other method
   H. Not sure

The next 4 questions ask about body weight.

70. How do **you** describe your weight?
   A. Very underweight
   B. Slightly underweight
   C. About the right weight
   D. Slightly overweight
   E. Very overweight

71. Which of the following are you trying to do about your weight?
   A. **Lose** weight
   B. **Gain** weight
   C. **Stay** the same weight
   D. I am **not trying to do anything** about my weight

72. During the past 30 days, did you **exercise** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

73. During the past 30 days, did you **eat less food, fewer calories, or foods low in fat** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

The next 9 questions ask about food you ate or drank during the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

74. During the past 7 days, how many times did you drink **100% fruit juices** such as orange juice, apple juice, or grape juice? (Do **not** count punch, Kool-Aid, sports drinks, or other fruit-flavored drinks.)
   A. I did not drink 100% fruit juice during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

75. During the past 7 days, how many times did you eat **fruit**? (Do **not** count fruit juice.)
   A. I did not eat fruit during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

76. During the past 7 days, how many times did you eat **green salad**?
   A. I did not eat green salad during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

77. During the past 7 days, how many times did you eat **potatoes**? (Do **not** count french fries, fried potatoes, or potato chips.)
   A. I did not eat potatoes during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

78. During the past 7 days, how many times did you eat **carrots**?
   A. I did not eat carrots during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

79. During the past 7 days, how many times did you eat **other vegetables**? (Do **not** count green salad, potatoes, or carrots.)
   A. I did not eat other vegetables during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

80. During the past 7 days, how many times did you drink a **can, bottle, or glass of soda or pop**, such as Coke, Pepsi, or Sprite? (Do **not** include diet soda or diet pop.)
   A. I did not drink soda or pop during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

81. During the past 7 days, how many times did you drink a **can, bottle, or glass of a sugar sweetened drink**, such as sports drinks, sweetened energy drinks, Snapple, fruit punch, Kool-Aid, Tang, or Capri-Sun? (Do **not** include soda or pop, diet drinks, or 100% fruit juice.)
   A. I did not drink sugar sweetened drinks during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

82. During the past 7 days, how many **glasses of milk** did you drink? (Include the milk you drank in a glass or cup, from a carton, or with cereal. Count the half pint of milk served at school as equal to one glass.)
   A. I did not drink milk during the past 7 days
   B. 1 to 3 glasses during the past 7 days
   C. 4 to 6 glasses during the past 7 days
   D. 1 glass per day
   E. 2 glasses per day
   F. 3 glasses per day
   G. 4 or more glasses per day

The next 6 questions ask about physical activity.

83. During the past 7 days, on how many days were you physically active for a total of **at least 60 minutes per day**? (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

84. On an average school day, how many hours do you watch TV?
   A. I do not watch TV on an average school day
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

85. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Nintendo, Game Boy, PlayStation, Xbox, computer games, and the Internet.)
   A. I do not play video or computer games or use a computer for something that is not school work
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

86. In an average week when you are in school, on how many days do you go to physical education (PE) classes?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days

87. During an average physical education (PE) class, how many minutes do you spend actually exercising or playing sports?
   A. I do not take PE
   B. Less than 10 minutes
   C. 10 to 20 minutes
   D. 21 to 30 minutes
   E. 31 to 40 minutes
   F. 41 to 50 minutes
   G. 51 to 60 minutes
   H. More than 60 minutes

88. During the past 12 months, on how many sports teams did you play? (Include any teams run by your school or community groups.)
   A. 0 teams
   B. 1 team
   C. 2 teams
   D. 3 or more teams

The next 3 questions ask about other health-related topics.

89. Have you ever been taught about AIDS or HIV infection in school?
   A. Yes
   B. No
   C. Not sure

90. Has a doctor or nurse ever told you that you have asthma?
   A. Yes
   B. No
   C. Not sure

91. Do you still have asthma?

A. I have never had asthma
B. Yes
C. No
D. Not sure

The next 8 questions ask about other health topics.

92. How often does one of your parents talk with you about what you are doing in school?
A. Never
B. Less than once a month
C. About once or twice a month
D. About once or twice a week
E. About every day

93. Do you agree or disagree that your teachers really care about you and give you a lot of encouragement?
A. Strongly agree
B. Agree
C. Not sure
D. Disagree
E. Strongly disagree

94. Besides your parents, how many adults would you feel comfortable seeking help from if you had an important question affecting your life?
A. 0 adults
B. 1 adult
C. 2 adults
D. 3 adults
E. 4 adults
F. 5 or more adults

95. During an average week, how many hours do you spend helping or volunteering at school or in the community (such as helping elders or neighbors; watching young children; teaching or tutoring; peer helping; mentoring; or helping out at local programs, health clinics, faith organizations, tribal organizations, or environmental organizations)?
A. 0 hours
B. 1 hour
C. 2 hours
D. 3 to 5 hours
E. 6 to 10 hours
F. 11 or more hours

96. During an average week, on how many days do you take part in organized after school, evening, or weekend activities (such as school clubs; community center groups; music, art, or dance lessons; drama; church; or cultural or other supervised activities)?
A. 0 days
B. 1 day
C. 2 days
D. 3 days
E. 4 days
F. 5 days
G. 6 days
H. 7 days

97. Do you agree or disagree that you feel alone in your life?
A. Strongly agree
B. Agree
C. Not sure
D. Disagree
E. Strongly disagree

98. Do you agree or disagree that in your community you feel like you matter to people?
A. Strongly agree
B. Agree
C. Not sure
D. Disagree
E. Strongly disagree

99. Do you agree or disagree that your school has clear rules and consequences for behavior?
A. Strongly agree
B. Agree
C. Not sure
D. Disagree
E. Strongly disagree

This is the end of the survey.
Thank you very much for your help.

Memo

From: Louie Flora, Staff, Rep. Seaton
To: Legal Services
RE: final bill request
Date: April 10, 2009

HB 130 version 26-LS0405\S was adopted by the House Education Committee and passed from committee this morning.

Please put version S into a final to be read across the floor as soon as possible.

Thanks,

Louie

Alaska State Legislature

Representative Peggy Wilson
House District 2

MEMORANDUM

Date: April 7, 2009

To: Representative Paul Seaton, Chair, Education Committee

From: Representative Peggy Wilson PW

Re: HB 130 – Student Questionnaires and Surveys

I would like to request the House Education Committee schedule another hearing on HB 130.

During the first hearing of this bill in the Education Committee there were questions on the language differences in Section 1 and Section 2. There was further discussion on the necessity of the language "or an employee of a school district" in Section 1.

The Committee Substitute had standardized the language in Section 1 and Section 2 and has retained the language "or an employee of a school district" because the drafter didn't want to unintentionally leave out employees of the district.

CS FOR HOUSE BILL NO. 130( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES WILSON, Gardner

A BILL

FOR AN ACT ENTITLED

"An Act relating to questionnaires and surveys administered in the public schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.110(a) is repealed and reenacted to read:

(a) A school district or an employee of a school district may not administer or permit administration of a questionnaire or survey to a class or student unless written permission is obtained from the student's parent or legal guardian. This subsection does not apply to a questionnaire or survey that is anonymous or that concerns a matter of public record or public observation.

*** Sec. 2.** AS 14.03.110(b) is repealed and reenacted to read:

(b) If a school district or an employee of a school district administers or permits the administration of an anonymous questionnaire or survey, written permission from a student's parent or legal guardian is not required, but the school district shall provide each student's parent or legal guardian the opportunity to submit to the school principal a written denial of permission to take the questionnaire or survey.

*** Sec. 3.** AS 14.03.110(c) is repealed and reenacted to read:

(c) For purposes of (a) and (b) of this section, the school district shall provide a parent or legal guardian at least two weeks' written notice of the right to grant or deny permission to take the questionnaire or survey before administering the questionnaire or survey.

*** Sec. 4.** AS 14.03.110(d) is repealed and reenacted to read:

(d) Written notice required to be given to a parent or guardian under this section must include

(1) the date the questionnaire or survey is to be administered;

(2) a description of the content of the questionnaire or survey;

(3) the sponsor of the questionnaire or survey;

(4) the name of a person to contact at the school district;

(5) notice of the opportunity to review the questionnaire or survey to be administered;

(6) a description of how the questionnaire or survey will be administered to the student;

(7) a description of how to submit written permission or denial of permission to participate in a questionnaire or survey, including an anonymous or specific questionnaire or survey;

(8) notice of the opportunity for the student to refuse to answer specific questions on the questionnaire or survey, or to refuse to participate in the questionnaire or survey.

*** Sec. 5.** AS 14.03.110(e) is amended to read:

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey **by submitting to the school principal or to the teacher responsible for distributing the questionnaire or survey a written denial of permission for the student's participation**.

(1) It is a parents right to not have surveys given without active (signed) consent however . . .

Protection of Pupil Rights

20 USC §1232 h

DATE OF ISSUE: July 1, 2000
DATE OF EXPIRATION: June 30, 2004

REPLACES: Protection of Pupil Rights,
BEC 20 USC §1232 h,
issued July 1, 1998

The purpose of this BEC is to inform you of changes to the Protection of Pupil Rights Act as amended by Public Law 183-227, Title X, Section 1017, March 31, 1994, which revised 20 U.S.C. §1232h.

The Protection of Pupil Rights Law applies to programs regulated and funded by the U.S. Department of Education (USDOE) and which are subsequently administered at the state level by the Pennsylvania Department of Education. Section 439 of the General Education Provisions Act (20 U.S.C. 1232h) was amended as follows:

No student shall be required, as a part of any applicable program, to submit to a survey, analysis, or evaluation that reveals information concerning:

1. political affiliations;
2. mental and psychological problems potentially embarrassing to the student or his family;
3. sex behavior and attitudes;
4. illegal, anti-social, self-incriminating and demeaning behavior;
5. critical appraisals of other individuals with whom respondents have close family relationship;
6. legally recognized privileged and analogous relationships, such as those of lawyers, physicians, and ministers; or
7. income (other than that required by law to determine eligibility for participation in a program or for receiving financial assistance under such program);

without the prior written consent of the student (if the student is an adult or emancipated minor), or in the case of an umancipated minor, without the prior written consent of the parent. Such survey, analysis, or evaluation may, however, be conducted on a wholly voluntary basis, provided that the student and parents have been notified of their rights under Section 1232h and of the right to inspect all materials related to the survey, analysis or evaluation.

Additionally, in any covered programs, all instructional material, including teacher's manuals, films, tapes, or other supplementary instructional material which will be used in connection with any survey, analysis or evaluation of part of any applicable program shall be available for inspection by the parents or guardians of the children.

Local educational agencies (LEA's) shall give parents and students effective notice of their rights under the Protection of Pupil Rights law.

ALASKA PUBLIC HEALTH ASSOCIATION

Committed To Advancing Alaska's Public Health Since 1978

ALPHA

ALPHA RESOLUTION 7-2008

Support for Passive Parental Consent for the Youth Risk Behavior Survey

Sponsor: Jayne Andreen

Whereas the Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1988 by the Centers for Disease Control and Prevention (CDC) to help monitor the prevalence of behaviors that put young people at risk for the most significant health and social problems that can occur during adolescence and adulthood.

Whereas the survey examines six categories of adolescent behavior including: 1) behaviors that result in unintentional and intentional injuries; 2) tobacco use; 3) alcohol and other drug use; 4) sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies; 5) dietary behaviors; and 6) physical activity.[1]

Whereas Alaska's YRBS is a joint project between the Dept. of Education & Early Development and the Dept. of Health and Social Services and was established in Alaska in 1995.[2]

Whereas survey results are used at the national, state, and local level such as measuring progress towards the national Healthy People 2010 and the Healthy Alaskans 2010 health objectives.

Whereas, understanding the health risk behaviors of youth is critical for developing programs that address risk behaviors practiced and for measuring progress toward program goals.

Whereas Alaska's YRBS has been unable to collect reliable data consistently with the challenge of administering the survey under the active parental consent law AS 14.03.110, which requires written permission from all participating students' parents or legal guardians. [2]

Whereas employing active parental consent drastically increases costs and labor involved in conducting student surveys, and results in high failure rates for getting enough student responses to get usable data for larger surveys, and the potential for leading to inaccurate/misrepresentative data.[3]

Whereas Alaska is one of only three states in the nation that has a school survey law requiring active parental consent for surveys of this type.[3]

Whereas most states employ passive parental consent when administering such surveys which involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey. [3]

Whereas it is believed that the majority of parents consent to their students participating in such surveys and that most parental failures to provide active parental consent (written permission to participate) are driven by apathy, oversight, or student error, not by refusal. [4]

Whereas the survey is anonymous and voluntary.

Therefore be it resolved that the Alaska Public Health Association supports the content and the implementation of the Youth Risk Behavior Survey in Alaska with parental notification and passive parental consent

And be it further resolved that the Alaska Public Health Association supports changing the requirement for participation in the survey from active parental consent to passive parental consent.

(c) Nothing in this section limits the ability of a peace officer, chief a... officer, or other appropriate person, acting in compliance with local, state, or ... to search a locker or other container provided in a public or private school ... district. (§ 5 ch 33 SLA 1995)

Sec. 14.03.110. Questionnaires and surveys administered in public schools. (a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

(1) how the questionnaire or survey will be administered to the student;

(2) how the results of the survey or questionnaire will be used; and

(3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students. (§ 1 ch 23 SLA 1979; am §§ 1, 2 ch 63 SLA 1999)

Opinions of attorney general. — AS 14.03.110 — As long as survey questions are limited to the student's own activities and the survey does not ask the student questions about parents or other activities occurring within a student's home, the 1997 Youth Behavior Risk Survey does not impermissibly invade the domain of the student's private *'family'* affairs. September 28, 1998 Op. Att'y Gen. (Issued before 1999 amendment to this section.)

Sec. 14.03.115. Access to school records by parent, foster parent, or guardian. Upon request of a parent, foster parent, or guardian of a child under 18 years of age who is currently or was previously enrolled in a municipal school district or a school district that is a regional educational attendance area, the school district shall provide a copy of the child's record. This section does not apply to

(1) a record of a child who is an emancipated minor; or

Pupil Rights Law Allows Parents to Opt Students Out of Surveys

EMAIL THIS ARTICLE

A 1998 federal law, the Protection of Pupil Rights Amendment (PPRA), allows parents to inspect instructional materials used in connection with any U.S. Department of Education-funded "survey, analysis, or evaluation." The law, often called the "Hatch amendment" or the "Grassley amendment" for the members of Congress who introduced it, also requires schools to obtain written parental consent before minor students participate in Education Department-funded surveys that ask questions about personal or family matters.

As the result of recent amendments to PPRA in the No Child Left Behind education law (Public Law 107-110, signed January 8, 2002), parents have additional rights to examine materials with regard to the surveying of minor students, even when the surveys are not Education Department-funded, and to opt their children out of surveys and certain non-emergency medical examinations.

The Family Policy Compliance Office (FPCO) in the U.S. Department of Education, which administers the Family Educational Rights and Privacy Act (FERPA), has responsibility for the expanded Protection of Pupil Rights law, also known as the "Tiahrt amendment."

The original PPRA law required schools and contractors to make educational materials available for inspection by parents and provided a list of survey questions that would trigger the need for written parental permission. Those requirements remain in place. The trigger questions include inquiries about:

1. political affiliations or beliefs of the student or the student's parent;
2. mental and psychological problems of the student or the student's family;
3. sex behavior or attitudes;
4. illegal, anti-social, self-incriminating, or demeaning behavior;
5. critical appraisals of other individuals with whom students have close family relationships;
6. legally recognized privileged or analogous relationships, such as those with lawyers, physicians, and ministers;
7. religious practices, affiliations, or beliefs of the student or student's parent; or
8. income, other than that required by law to determine eligibility for participation in a program or for receiving financial assistance under such program.

The PPRA compliance office in the U.S. Department of Education points out that these requirements apply when a survey is funded, at least in part, by any program administered by the U.S. Secretary of Education.

Under the Tiahrt amendment that took effect in 2002, additional requirements are now in place, and they apply as well to surveys funded by sources other than the U.S. Department of Education. The law now requires public elementary and secondary schools to "develop and adopt policies—in conjunction with parents," regarding:

1. the rights of parents to inspect, upon request, a survey created by a third party before the survey is administered or distributed by a school to students;
2. arrangements to protect student privacy in a survey if it includes any of the eight items noted above;
3. the right of parents to inspect any instructional materials used as part of the education curriculum;
4. administration of physical examinations or screenings that the school may administer to students;
5. collection, disclosure, or use of personal information collected from students for the purpose of marketing, selling;
6. the right of parents to inspect any instrument used in collecting information for marketing or selling.

Schools must notify parents of their PPRA policies at least once annually and must give parents ample opportunity to opt out (remove their child) from participation in surveys containing one or more of the eight items of information specified in the original law.

Parents are also allowed to remove their children from any non-emergency invasive physical examination or screening that is required for attendance or is not necessary to protect the immediate health and safety of the student or other students.

Explanation of the Protection of Pupil Rights Amendment is posted on the Education Department's Family Policy Compliance Office website at http://web.archive.org/web/20041030221359/http://www.ed.gov/offices/OM/fpco/ppra/index.html. The compliance office indicates it will publish regs covering the new parts of the law.

Sectional Analysis

House Bill 130

"An Act relating to questionnaires and surveys administered in public schools."

Section 1. Requires a school district to get written permission to administer a questionnaire or survey. It exempts anonymous surveys. Surveys that concern public information are also exempted.

Section 2. Requires a school district to provide a parent or guardian the opportunity to deny permission to take an anonymous questionnaire or survey. Written permission is not required.

Section 3. Defines a 2 week time frame for school districts to notice parents of an upcoming questionnaire or survey so that they may either deny permission, for anonymous, or grant permission, for non-anonymous, surveys.

Section 4. Defines what a written notice must contain.

Section 5. Adds language to current statute that defines how a parent can deny permission for student to participate in an anonymous survey.

SPONSOR STATEMENT
House Bill 130
"An Act relating to questionnaires and surveys administered in the public schools."

HB 130 changes parental consent requirements for surveys in schools from active to passive for anonymous surveys. Written permission is still required for non-anonymous surveys. With this bill written denial of permission will be required for anonymous surveys.

School-based surveys are a reliable method for gathering valuable population-based information on youth that helps policy makers, educators, program planners and parents to better understand important health and social issues that affect their chances of program success.

Routine standardized surveys such as the national and state Youth Risk Behavior Survey track trends over time and help guide and evaluate important health and prevention programs. State and federal grant programs that rely on these surveys include tobacco prevention and control, obesity prevention, diabetes, heart disease and stroke, safe and drug free schools and other substance abuse prevention, injury prevention, including violence and suicide prevention, HIV and STD prevention, and more.

Current Alaska statute requires active parental consent on youth participation in surveys. Active parental consent requires written permission to participate in the survey. Active parental consent overburdens the school system and drastically increases the costs and labor involved in conducting student surveys.

Though research and experience suggests that the vast majority of parents would consent to their students participating in such surveys, many schools are unable to use the data they collect because there are not enough participants. Most of the research indicates parental failures to provide written permission are driven by apathy, oversight, or student error – not by refusal. With passive parental consent, the parent is notified and informed about the nature of the survey and allows for the parent to provide a written refusal to participate in the survey.

Notification of surveys and their content will still be sent to every parent of a child that is a candidate to participant in the survey. A parent will have the option of reviewing the entire survey and how it will be administered before it is administered. Any parent who doesn't want their child to participate will have the option to opt-out of the survey.

Mayor Matt Claman

Health and Human Services Commission

Peggy Wilson, Representative
State Capitol, Room 408
Juneau, AK 99801-1182

March 11, 2009

Dear Representative Wilson,

I am writing to you as chair of the Municipality of Anchorage Health and Human Services Commission on behalf of our 15 members and the many health organizations we represent. We would like to thank you for all of your hard work and dedication to the state.

As the Health and Human Services Commission, our primary mission is to ensure the health and well-being of the Anchorage community. We rely on current information regarding the health and social status of the Anchorage community to determine our priorities and drive action. Critical to our mission is reliable community data including data about the health and well being of our City's youth.

The Municipality of Anchorage Health and Human Services Commission supports HB 130 "An Act relating to questionnaires and surveys administered in the public schools" to encourage greater participation in school-based surveys. Routine standardized surveys such as the national and state Youth Risk Behavior Survey track trends over time and help guide and evaluate im portant health and prevention programs. The overall statewide response rate to Youth Risk Behavioral Survey (YRBS) in 2005 was 55 percent, which did not meet the required response rate of 60 percent to make it a valid survey. The State was unable to use the data or publish the report since the data would not be representative of the high school population. Anchorage students are a critical sample for the success of YRBS because of they represent approximately 40% of all high school students in the state. The information gathered through school-based surveys is used to inform programs and initiatives about youth behavior that help drive prioritization of efforts to improve community health. An increase in survey participation improves the reliability and validity of survey responses significantly, which provides organizations like Municipality Department of Health and Human Services with critical, current information regarding the health and social status of youth in our community.

Again, thank you for your commitment to our state and its youth. I would appreciate the opportunity to talk with you on this matter at your convenience.

Sincerely,

Brian Saylor PhD MPH, Chair
Anchorage Health and Human Services Commission

Cc. Mayor Matt Claman
Diane Ingle, Director DHHS

Community, Security, Prosperity

Planned Parenthood® of the Great Northwest

March 9, 2009

The Honorable Peggy Wilson
Alaska State House Representative
State Capitol, Rm 403
Juneau, AK 99801-1182

Dear Representative Wilson:

On behalf of Planned Parenthood of the Great Northwest (PPGNW), I'm writing in support of House Bill 130, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Planned Parenthood relies on the results of the school-based Alaska Youth Behavior Risk Survey to determine where our efforts should be in terms of education and STI prevention programs. For accurate survey results it's critical to get as many survey responses as possible. Planned Parenthood recognizes that the current regulations of active parental consent for anonymous surveys decrease the response rate significantly.

House Bill 130 will increase the accuracy of the vital information Planned Parenthood and many other organizations rely on to serve Alaska's young people. Thank you for addressing this issue.

Sincerely,

Clover Simon
Vice President of Alaska
Planned Parenthood of the Great Northwest
(907) 770-9705

Alaska BRFSS HIGHLIGHTS 2007

Behavioral Risk Factor Surveillance System

Introduction

Modification of risk behaviors that contribute to chronic disease, premature death and impaired quality of life is an important public health challenge. The Behavioral Risk Factor Surveillance System (BRFSS) collects information on risk factors, chronic disease prevalence and preventive practices that is essential for the development of chronic disease prevention and health promotion efforts aimed at modifying key risk factors. The BRFSS is conducted in all 50 states, the District of Columbia, Guam, Puerto Rico and the US Virgin Islands and is now the longest running and largest telephone health survey in the world. The State of Alaska began surveillance using the BRFSS in 1991 and has continued yearly since. The Alaska BRFSS is a collaborative project of the Centers for Disease Control and Prevention and the Alaska Division of Public Health.

In 2007, 2,552 health interviews were conducted using a standardized BRFSS questionnaire. The interviews were conducted over the telephone from the Health Survey Lab in Juneau using randomly selected telephone numbers. Households were contacted and one adult 18 years of age or older per household was randomly selected to complete the survey. These data were weighted to represent the state's adult population. This report presents highlights from data collected in 2007.

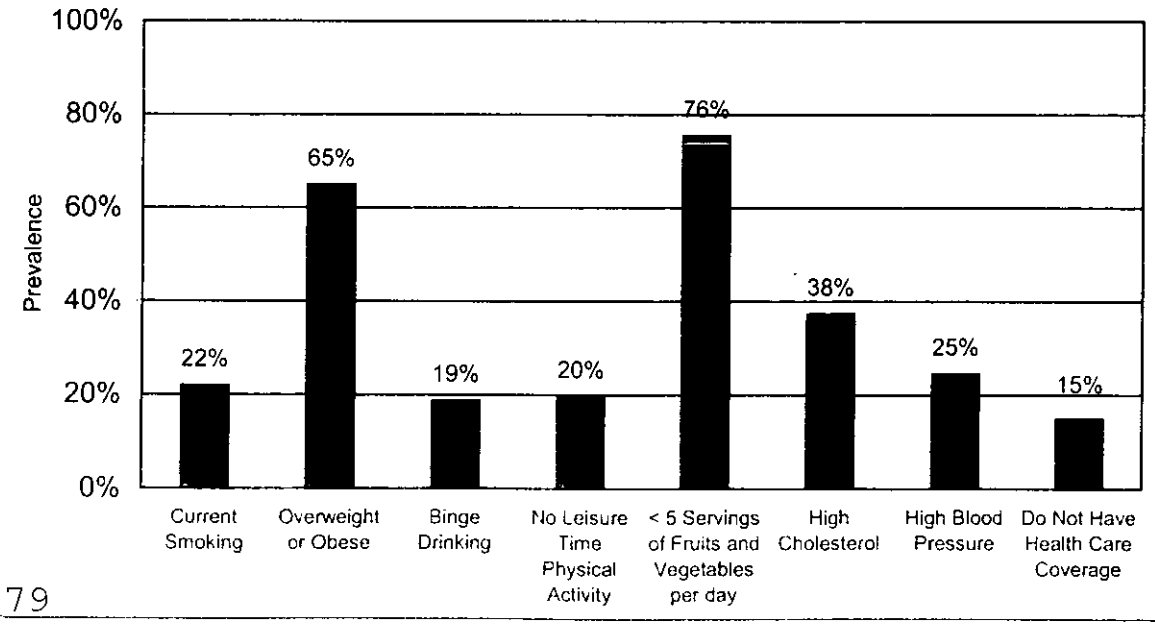
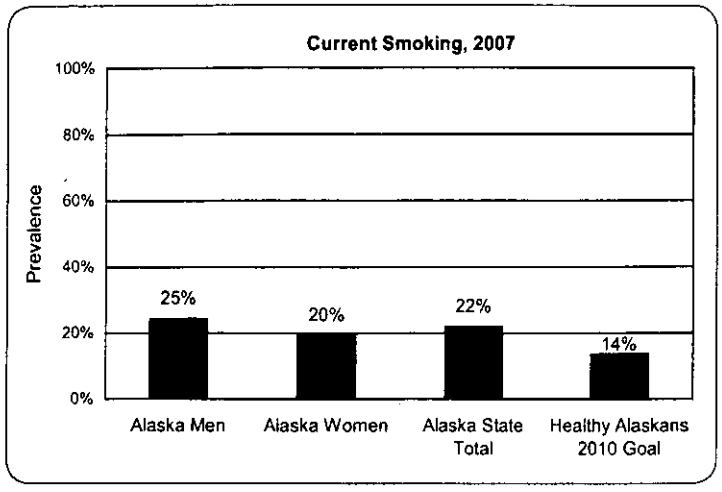
Prevalence of Selected Risk Factors Among Alaskan Adults, 2007



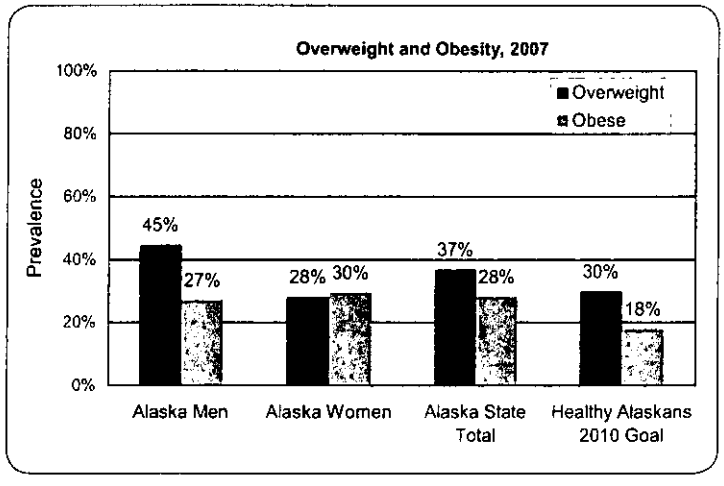
5379

Indicator Data



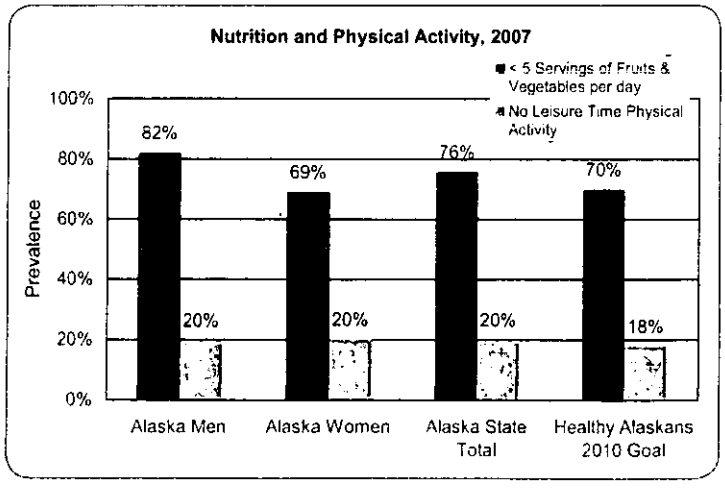
Tobacco Use

In 2007, 22% of Alaskan adults reported current smoking, that is, had smoked at least 100 cigarettes in their lifetime and reported they currently smoke either some days or everyday. (Smoking prevalence rates may differ slightly from those reported by the Tobacco Prevention and Control Program, who estimate smoking prevalence from a combination of the BRFSS and a supplemental tobacco survey.) This is higher than the Healthy Alaskans 2010 goal of 14%. Alaska Natives have a particularly high prevalence of smoking (38%), significantly higher than other race groups (data not shown).



Overweight and Obese

People who are overweight or obese are at increased risk of chronic disease and premature death. In 2007, 37% of Alaskan adults were overweight and 28% were obese based on Body Mass Index (BMI). Respondents with a BMI of 25.0 to less than 30.0 were considered overweight and those with a BMI of 30.0 or greater were considered obese. Both of these indicators are greater than the Healthy Alaskans 2010 goals of 30% for overweight and 18% for obese.

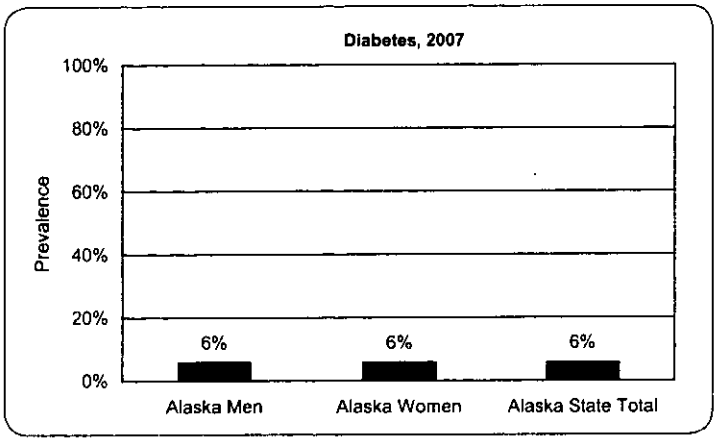


Nutrition and Physical Activity

Getting regular physical activity and eating recommended amounts of fruits and vegetables can reduce the risk of chronic disease and help in maintaining current weight or with losing weight. In 2007, 20% of Alaskan adults reported no leisure time physical activity in the past 30 days and 76% reported eating less than 5 servings of fruits and vegetables per day.

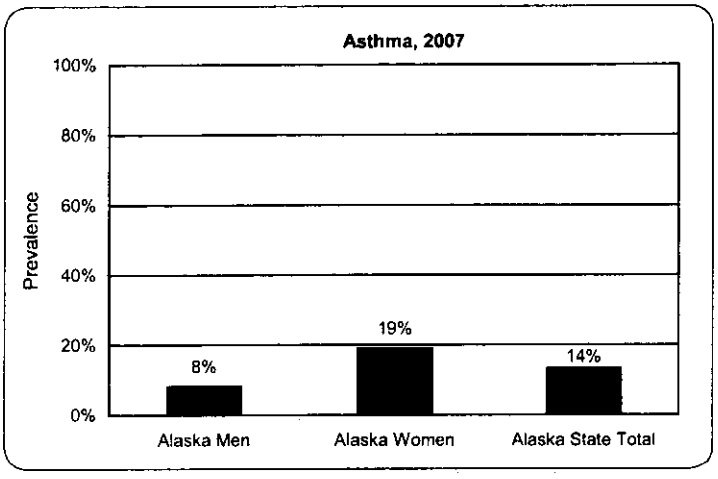
Diabetes

Diabetes increases the risk for heart disease and stroke and can result in blindness and renal disease. In 2007, 6% of Alaskan adults reported being told they have diabetes. There was no difference between men and women in the prevalence of diabetes.



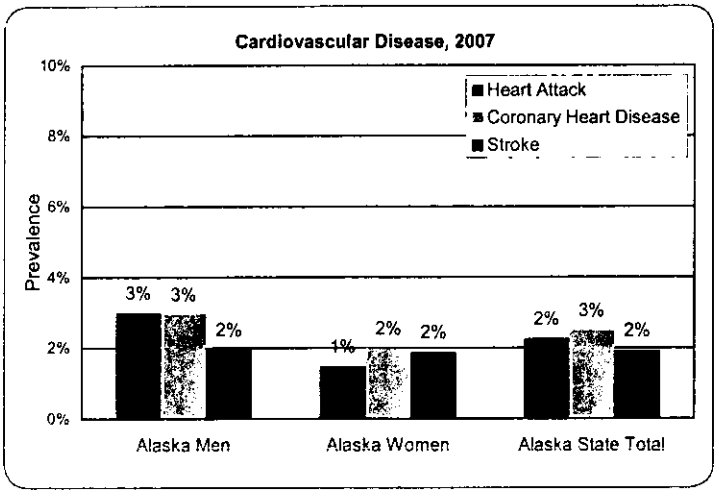
Asthma

Asthma is a leading cause of restricted activity. In 2007, 14% of Alaskan adults reported ever being told they have asthma. Significantly more women than men reported asthma.



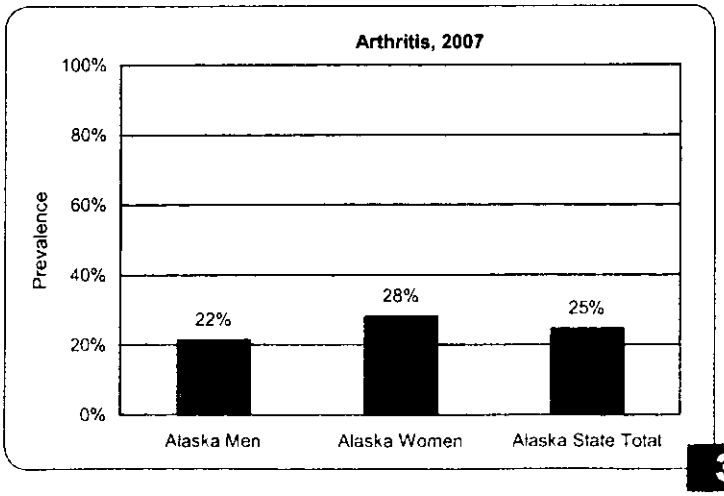
Cardiovascular Disease

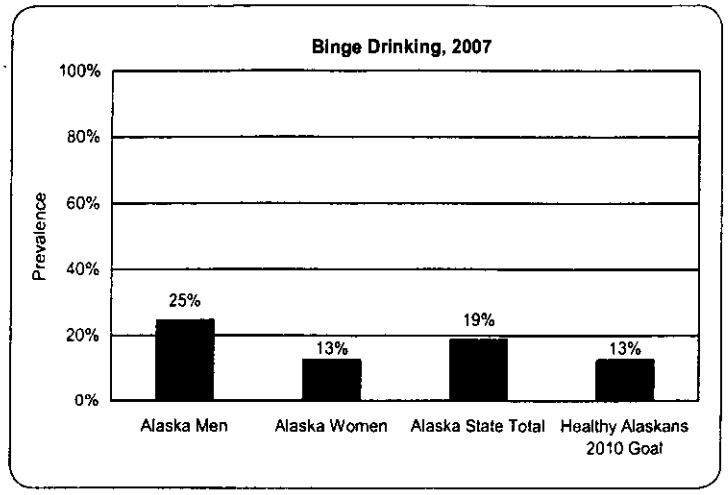
Heart disease is a leading cause of death in Alaska and the US as a whole. The BRFSS asks respondents if they have ever been told they have had a heart attack, been told they have coronary heart disease or been told they had a stroke. In 2007, 2% of Alaskan adults said they have had a heart attack, 3% said they have coronary heart disease and 2% said they have had a stroke.



Arthritis

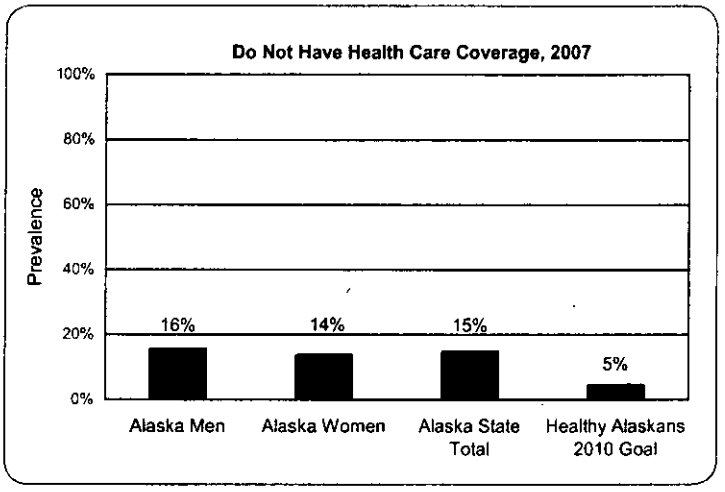
In 2007, 25% of Alaskan adults reported being told by a doctor that they had arthritis. Arthritis covers a variety of different joint conditions and can affect people of all ages.





Binge Drinking

Binge drinking is associated with injury, both intentional and unintentional. Nineteen percent of Alaskan adults reported binge drinking on the 2007 BRFSS; the Healthy Alaskans 2010 goal for binge drinking is 13%. Binge drinking was defined as having had 5 or more drinks (men) or 4 or more drinks (women) on one or more occasions in the past 30 days. Binge drinking among males (26%) was significantly higher than among females (12%).



Do Not Have Health Care Coverage

Many Alaskans lack access to primary health care and preventive services. Reasons include distance from sources of care and lack of health care coverage. On the 2007 BRFSS, 15% of Alaskan adults reported not having health care coverage. The goal of Healthy Alaskans 2010 is to reduce the proportion of Alaskans without health care coverage to 5%.

More information about the Alaska Behavioral Risk Factor Surveillance System can be found at http://www.hss.state.ak.us/dph/chronic/hsl/brfss/default.htm

All Alaska Behavioral Risk Factor Survey Annual Reports can be downloaded from http://www.hss.state.ak.us/dph/chronic/hsl/brfss/publications.htm.

Risky teen behavior

State law compromises ability to assess how safe our kids are

(06/03/08 23:28:47)

Everyone needs to know how safe Alaska teenagers are.

Fortunately, there's a way to find out.

An anonymous, scientific survey of young people sponsored by the federal Centers for Disease Control and Prevention shows trends in teens' behavior, from cigarette, alcohol and drug use to sex.

The Youth Risk Behavior Survey, just out for 2007, is a tested longtime report with controls for accuracy.

It tells adults how well they're addressing kids' problems within each state as well as nationally: Are anti-tobacco programs aimed at Alaska kids working? Are we sending an effective message about declining to ride with an impaired driver on prom night?

But trend information on Alaska kids is spotty because the state has erected unreasonable hurdles to getting students to participate.

In 2001 and 2003, because of those hurdles, Anchorage failed to get enough responses for a valid local version of the study. In 2005, the state didn't get enough responses back.

It's time to get rid of the obstacles.

It used to be that districts had to notify parents and give them a chance to opt out of the survey. Any student who wanted to could opt out on his own.

That worked well. State and local districts were able to survey randomly selected students and know that they represented a larger group.

In 1999, responding to parental complaints that the survey is too invasive and personal, the Legislature passed a law saying school districts must get written permission from parents in advance before a student may participate in even an anonymous survey that asks personal questions.

Alaska has to get at least 60 percent of the statewide students chosen in a random sample to participate before the survey results are usable -- before they can be deemed representative of all Alaska students.

Anchorage, to get valid local results, has to do the same.

Both the state and Anchorage achieved it this year, but only by spending tremendous effort and money. The state gave $70,000 to districts to help them get the responses and still came up with

just enough, said Todd Brocious of the Alaska Department of Education.

"What makes it so precarious for us is that a single district deciding not to participate can sabotage us for getting usable data," he said.

The Anchorage School District spent about $33,000 on mailings, pizza parties for classes that got all the permission slips back (yes or no, didn't matter), and extra pay for high school counselors who did extra work.

Rep. Peggy Wilson of Wrangell led an effort during the past Legislature to return Alaska to the old system in which parents had to make the effort to opt out. Her bill, as it passed the House, would have applied only to this one biannual survey. It died in the Senate.

The information obtained from the youth risk survey is invaluable. It helps groups obtain grants to work on teen issues. It tells lawmakers, schools, parents and others where kids need help.

If an individual parent doesn't want his child to participate, or a teen chooses not to himself, that's fine. No problem. But it's ridiculous and costly to have the permission system set up the way it is. The Legislature should change it.

BOTTOM LINE: Accurate reporting on teen risks is too important to be held hostage to a clunky state law.

Our kids

Tobacco message, cops in schools help out

Over the past 12 years, the percentage of Anchorage high school students who are frequent smokers has plunged from 16.4 percent to 3.4 percent.

That's one of the most dramatic results of the Anchorage Youth Risk Behavior Survey, which includes information from 1995, 2005 and 2007.

It's a sample of the important things we need to know about teens, and of why the survey matters.

School officials say the report shows that a concerted assault on smoking -- ads, tougher laws and higher taxes, for example -- is inducing teens to avoid tobacco.

Other results from this year's survey:

• Fewer kids were involved in fights or threatened with weapons on school grounds in 2007 vs. 2005. The police officers in schools are definitely making a difference, says Superintendent Carol Comeau.

• The trend is for fewer Anchorage teens to feel that their teachers and other adults really care about them -- a finding that could lead to more troubled youth, says Comeau.

The entire survey is online at the Anchorage School District Web site.

CALIFORNIA healthy kids SURVEY

GUIDELINES FOR PASSIVE CONSENT

Based on recent change to state law,[1] CDE has determined that under certain circumstances LEAs conducting the California Healthy Kids Survey (CHKS) have the option of using passive parental consent, rather than active (written) consent as previously required.[2] Under passive-consent procedures, parents/guardians inform the school only if they *don't want* their child to participate in a study (opt out).[3] To adopt passive consent, the following conditions must be met:

- The survey is limited to grades 7 through 12. Passive consent cannot be used below grade 7.[4]
- It is anonymous, confidential, and voluntary. Active consent must still be used if respondent data are linked to a respondent's name in any form or manner, such as in longitudinal tracked surveys.
- The school board formally adopts, in consultation with parents, a written passive consent policy for the administration of the CHKS (and any other survey or test) consistent with California Education Code sections 51513 and 51938(b) and the federal Protection of Pupil Rights Act (PPRA), 20 USC 1232h.
- Parents/guardians are notified in writing at the beginning of the school year about the survey and when it is to be administered, and given a reasonable opportunity to review the survey and to decline their child's participation (opt out).
- Parents/guardians are notified of any substantive changes in survey policies, dates, or content that occur after the initial notification.
- The parental notice contains all the required elements specified in the CHKS Guidebook for protection of human subjects and in the federal Protection of Pupil Rights Act.
- Questions are not added to the survey that elicit reports of parental attitudes or behaviors or any other category that requires active consent under Ed Code 51513 but not exempted under Ed Code 51938.

The following guidelines are designed to help you determine whether you should switch from written to passive consent and the steps you should take if you decide to make the change.

Benefits of Passive Consent

- Passive consent involves less cost and labor, particularly for the classroom teacher.
- If you have *not* been successful in meeting your target sample using written consent, passive consent will likely increase your response rates.
- Research also suggests that passive consent will result in a more representative sample, as many hard-to-reach subgroups, including groups at high-risk of substance use and other problem behaviors, are underrepresented in written consent surveys.[5]

---

[1] See Education Code 51938(b), which stipulates: "Notwithstanding Section 51513, anonymous, voluntary, and confidential research and evaluation tools to measure pupils' health behaviors and risks, including tests, questionnaires, and surveys containing age appropriate questions about the pupil's attitudes concerning or practices relating to sex may be administered to any pupil in grades 7 to 12, inclusive, if the parent or guardian is notified in writing that this test, questionnaire, or survey is to be administered and the pupil's parent or guardian is given the opportunity to review the test, questionnaire, or survey and to request in writing that his or her child not participate."

[2] Written consent requirements and strategies are detailed in the CHKS Guidebook, available online at www.wested.or/hks.

[3] As described in the CHKS Guidebook, under active-consent procedures parents must confirm in writing that they consent or not, usually by signing and returning a form. If a form is not returned, it must be assumed that parental permission is not granted.

[4] Education Code 51938(b) authorizes passive consent only for grades 7 through 12 (see note 1).

Considerations for Changing from Active to Passive Consent

- **Written consent provides extra protection** against surveying a student whose parents did not receive notification or did not approve of participation but failed to inform the school. This extra protection may be important if risk behavior surveys are a sensitive issue in your community.
- If passive consent reduces the burden on the classroom teacher, **schools must take special precautions** to demonstrate that they made every reasonable effort possible to inform parents about the survey (and any subsequent changes) and to give them opportunities to opt out.
- If your sample changes (e.g., becomes more representative), it will **complicate interpretation of current trends**. Did student behavior change or the sample? Most research suggests reported AOD use will increase. WestEd will provide talking points to address this issue.
- **If you have been meeting your target response rates using written consent**, you might want to continue using it to avoid the issues listed above, especially if your district will still need to use written consent with 5th grade.

Recommendations for Passive Consent Implementation

Survey procedures must ensure that parents receive the consent materials, pay attention to them, and have sufficient time and opportunities to refuse participation. To assure PPRA compliance and reduce the risk of inadvertently surveying a child without parent permission, we recommend the following:

- **Stress that survey participation is voluntary in all communications**. This is a key requirement for the use of passive consent procedures in the PPRA. Notify students in writing and verbally (before survey administration) that they have the right to decline participation and to not answer any question that makes them uncomfortable. Make sure nothing is done that might cause a student to feel uncomfortable if he doesn't want to participate.
- **Send all consent information and forms via a method that guarantees receipt**, such as by mail. Preferably, use a method that documents receipt. For example, the information can be put into a parent handbook that the parent signs for.
- **Use multiple contact techniques**. Do everything possible to insure parents receive notification.
- **Make sure all materials are language appropriate** for parents with limited English reading ability.[6]
- **Make disapproval notification convenient**. Again, use multiple venues: a written form that can be turned into a teacher, a phone number to call, or email address. Each channel should reach a single person or office, identified in district policies, responsible for monitoring consent. This will help avoid parent refusals from slipping through the cracks.
- **Document** all your efforts to notify parents.

For more information about consent procedures, call your regional CHKS advisor at 888.841.7536.

---

[5] The application of active-consent procedures to anonymous, voluntary surveys with rigorous data safeguards and minimal risks to students—such as the CHKS— has been criticized for jeopardizing access to essential information by imposing overly rigid, stringent, and costly consent procedures.

[6] CDE policy is that, in addition to English, notification must also be in each primary language other than English where 15 percent of the students speak that primary language.

FAQs - Conducting In-School Surveys
Written by Tasha Snyder, Agricultural Sciences

The school setting is an optimal location to survey large numbers of students for research projects. Before planning a data collection study, however, it is important to be aware of federal guidelines and policies that contain regulations relevant for researchers conducting in-school studies of youth. These guidelines have implications for sampling, the informed consent process, and survey content.

Q: What federal regulations should I be aware of before planning an in-school study of youth?

A: The two key federal regulations you need to be familiar with are the Family Education Rights and Privacy Act (FERPA) and the Protection of Pupil Rights Amendment (PPRA). Both federal regulations apply to any institution receiving funds from the U.S. Department of Education.

FERPA

Initially signed into law in 1974, FERPA regulations are periodically updated, most recently under the No Child Left Behind Act of 2001. The main function of FERPA is to protect parent's rights regarding inspection and modification of their child's educational records. Under FERPA regulations parents have the right to inspect their child's educational records, request a correction to any errors in those record, and *parent's **written permission** must be sought before releasing their child's educational records.* Schools may release limited contact information for students (name, address, phone number, attendance record, date and place of birth, honors and awards) without written parental permission, but parents must be notified of these requests and given the opportunity to request that their child's information not be released.

PPRA

Part of the FERPA and No Child Left Behind legislation, PPRA is designed to protect parent's and pupil's rights regarding inspection of any materials - as part of the instructional curriculum or study instruments - to which students are exposed. Instructional and survey materials must be made available for parents to review, and *schools must obtain **written parental consent** before their minor students participate in any study that asks about the following:*

- political affiliations or beliefs of the student or student's parents;
- mental and psychological problems that are potentially embarrassing to the student and/or his or her family;
- sexual behaviors and attitudes;
- illegal, antisocial, self incriminating and demeaning behavior;
- critical appraisals of family members;
- legally protected relationships, such as those with lawyers, clergy and physicians;
- religious practices or beliefs of the student or student's parents; or
- income

Under PPRA schools are required to develop and adopt policies in conjunction with parents regarding their rights to inspect research surveys and instructional materials, protect students' privacy related to the eight items noted above, administering physical exams to students, and collecting student information intended to be used for marketing purposes. In addition, parents must be made aware in advance of dates when data collection studies will occur and of their rights to withdraw their children from participating in any study that asks about the eight items listed above, any marketing surveys, and any non-emergency physical exam or screening.

For a complete description of the FERPA and PPRA regulations, recent Supreme Court rulings, and a history of the legislation, see the following urls:

http://personalinfomediary.com/FERPA_info.htm
http://www.ed.gov/policy/gen/guid/fpco/hottopics/ht10-28-02.html

Q: What are the implications of the FERPA and PERPA regulations for the design, sampling, and implementation of my in-school study?

A: There are two main implications for study design and implementation. First, the content of your survey largely determines the level of parental consent required. In-school studies with surveys that contain sensitive questions related to any of the eight items described above must first provide parents full information about the study and survey content and then obtain written parental consent before a student can participate in the study. Surveys that contain more benign questions might not require active written parental consent but rather "passive" consent where parents are notified of the study, usually at least 2-3 weeks in advance, and reply to deny consent, rather than provide it. This type of scenario is addressed on a case-by-case basis by the IRB. Regardless though, all parents must be notified of the dates when data collection will occur so they can choose to withdraw their child from the study, even after giving written parental permission to participate.

Second, the level of consent required has important implications for the representativeness of your sample and can introduce sample bias into your study. Findings from several recent studies consistently highlight how sampling bias is introduced into research involving youth when active written parental consent is required (Dent, Galaif, Sussman, Stacy, Burtun and Flay 1993; Ellickson and Hawes 1989; Esbensen, Miller, Taylor, He and Freng 1999; Henry, Smith and Hopkins 2002). Two studies in particular, Esbensen et al. (1999) and Henry et al. (2002), compare samples from the same population involving active written parental consent with those involving passive parental consent and document how response rates are affected and bias is introduced.

Esbensen et al. (1999) collected data from 7th grade students in six U.S. cities and employed a sampling design that used passive parental consent for their pre-test wave of data collection, and then were required to obtain active parental consent for a subsequent wave of data collection on the same sample. This design provides a unique opportunity to compare the two samples of the same population, and determine how passive and active parental consent procedures differentially impact sample selectivity. Regarding response rates, in their pre-test survey, where passive parental consent was used, only 13 of the 2,496 eligible 7th grade students (0.4%) could not participate because their parents denied consent. When active parental consent was required for their first wave of data collection the response rate and sample size of their study were considerably reduced. Between 23% and 45% of youth did not participate in the study, depending on the site, due to non-response from the parents. Extensive follow-up of non-respondents found that 78% of the parents subsequently provided consent for their child to participate in the study, and 22% refused to provide consent. This suggests that non-response indicates passive

acceptance rather than being synonymous with refusal. Thus, the active written parental consent process that is required by PPRA could result in an unnecessarily large non-response rate, preventing students from participating in studies.

Regarding sample bias, Esbensen et al. (1999) provide strong evidence that the characteristics of the students whose parents did not respond were different from those whose parents responded, thus introducing bias into their sample. Comparing the pre-test sample with the sample of responders to the active parental consent, including those who allowed their children to participate and those who did not, revealed that the sample of responders was more likely to be white, to come from intact homes (two married parents), and to have parents with more than a high school education. In addition, parents of "at-risk" youth (positive attitudes towards and engagement in delinquent behaviors) were less likely to return consent forms at all. This study documents a selection bias introduced by the active parental consent procedure, and recommends that a mailing be sent home to parents notifying them of the study, and that the parents be given 2-3 weeks to deny their child's participation in the study, after which time period the consent is implied.

More recently, similar findings were reported when Henry et al. (2002) conducted an in-school study of 7th grade students in nine school districts in rural Pennsylvania. Active written parental consent was required for all students participating in their study, however, the project was able to access secondary data on several student characteristics for all eligible students--including GPA and absence from school--which allowed them to determine whether and how their sample was biased on these important characteristics. This study further made comparisons between the consent, non-consent, and non-response groups and determined not only if bias was introduced into their sample, but whether it originated from the non-consent group, the non-response group, or both. Findings revealed that the students whose parents declined their consent did not differ significantly from those whose parents provided consent, but that the students with non-responding parents did differ significantly from those who consented on two key educational variables. The students whose parents provided consent had fewer days of school absence and higher grade point averages compared to the students with non-responding parents. Thus, comparisons of the three groups (consenters, decliners, and non responders) find that the students eliminated from the study because of the lack of permission due to non-responders is the source of sample bias, not the presence of decliners. The result is that the Henry et al. (2002) sample represents students who are less "at-risk" for poor outcomes, thus introducing sample bias.

Both of these studies employed the numerous strategies suggested to increase return rates for active written parental consent. **These strategies include designing effective informational and consent forms, working with key school personnel, multiple mailings to parents, providing rewards for classrooms that have high return rates (such as pizza or ice cream parties), and following up with non-responders** (Esbensen et al., 1999; Fletcher and Hunter, 2003; Henry et al., 2002). Even though these strategies were implemented, both studies report biased samples due to the high degree of non-response associated with written active parental consent procedures.

Q: Yikes! So, what's a child and youth researcher planning to use in-school data collection to do?

A: Well, there really isn't much you can do to completely avoid sampling bias with in-school youth surveys of sensitive topics where active written parental consent is required. The FERPA and PPRA regulations were developed and instituted with the goal of protecting the rights and privacy of parents and students, not to promote easier access to students for research purposes.

Following the suggestions outlined above will help reduce bias in your study. Also keep in mind that sampling bias is an issue for most primary data collection studies.

Youth Risk Behavior Survey Background

The Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1988 by the Centers for Disease Control and Prevention (CDC). Its purpose is to help monitor the prevalence of behaviors that put young people at risk for the most significant health and social problems that can occur during adolescence and adulthood. It is an anonymous school-based survey of high school students and it is administered on the national and state level every other year. The survey examines six categories of adolescent behavior:

- behaviors that result in unintentional and intentional injuries;
- tobacco use;
- alcohol and other drug use;
- sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies;
- dietary behaviors; and
- physical activity.

Value of the YRBS

The YRBS is the largest and most respected source of data of its kind in the US. Survey results have tremendous value at the national, state, and local level such as measuring progress towards the national Healthy People 2010 and the state Healthy Alaskans 2010 health objectives. Results allow health and educational professionals to track the prevalence of youth risk behaviors over time, to compare their state to other states or to the nation, and when conducted on the local level it allows local communities to measure themselves compared to the rest of the state. Understanding the health risk behaviors of youth is critical for developing programs that address risk behaviors practiced in their jurisdiction and for measuring progress toward program goals.

YRBS in Alaska

Alaska's YRBS is a joint project between the Dept. of Education & Early Development and the Dept. of Health and Social Services. Alaska first participated in the YRBS in 1995 and has attempted to conduct the survey most every other year since then, with varying degrees of success. Alaska has produced statewide reports in 1995, 1999 (without Anchorage), and in 2003.

Typically 42 schools (approximately 20 districts) in Alaska are scientifically selected from among the high schools in Alaska to participate in the statewide survey. With their cooperation, classrooms from within each school are randomly selected to participate in the survey which generally results in just over 2,000 high school students being eligible to participate. In addition, school districts are given the option to conduct a survey of their entire district in order to gain a better understanding and measure of risk behaviors in their communities. Up to 20 districts each survey year opt to take advantage of this opportunity with the service provided free of charge by the state. In total the YRBS program distributes approximately 12-13,000 surveys for this purpose. Strict precautions are in place to absolutely ensure student confidentiality and participation in the survey is completely voluntary. Students answer the multiple choice questions about their current and past risk behaviors, which are collected and sent to the state for processing. State results are then shared federally with CDC.

Response Rates

In order to ensure that the YRBS data are representative of high schools in Alaska, the majority of surveys need to be completed. Alaska sets a minimum overall response rate of 60% to be able to confidently report the results. The overall response rate is calculated by multiplying the rate of participation of schools with the student response rate. The higher the response rate the more accurate the results. In general, participation rates in Alaska have improved (more schools selected are cooperative) but the student response rate has declined and jeopardized the survey. In 1995, 82% of schools participated and 78% of students in those schools completed the survey resulting in an overall response rate of 64%. In 2005, 93% of the schools participated and 59% of students completed the survey resulting in a 55% overall response rate which was not adequate.

Barriers to Success

A major barrier to success has been the active parental consent law which went into effect at the end of 1999. Alaska's active parental consent law, AS 14.03.110, prohibits schools from administering surveys or questionnaires at public schools that inquire into personal or family affairs, or anything else that is not a matter of public record or readily observable in public (regardless of whether or not the surveys are anonymous and voluntary) without first getting written permission from all participating students' parents or legal guardians. Alaska is one of only two or three states in the nation that has a school survey law requiring active parental consent for surveys of this type. Most states employ passive parental consent when administering such surveys. Passive parental consent involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.

Advantages to active parental consent are greater parental involvement and less risk of students being included in surveys without parental approval. Disadvantages of active parental consent include the drastically increased costs and labor involved in conducting student surveys, the high failure rates for getting enough student responses to get usable data for larger surveys, and the potential for leading to inaccurate/misrepresentative data. Research and our experience suggests that the vast majority of parents consent to their students participating in such surveys and that most parental failures to provide written permission are driven by apathy, oversight, or student error, not by refusal.

Costs

In recent years (since the enactment of active parental consent) more and more resources (time and money) have been spent on YRBS. Since the process of active parental consent places more of a burden on the school administrators and staff, the EED has offered financial incentives to participating schools since 2003 and costs have more doubled. This money has helped schools implement the survey but has not guaranteed its success as far as student response rates. This does not include the basic expense of operating the YRBS, such as the costs for supplies, copying, shipping and staff time.

Support for YRBS in Alaska

The YRBS in Alaska is endorsed by:

- Association of Alaska School Boards
- Alaska Action for Healthy Kids
- All Alaska Pediatric Partnership
- American Heart Association, Pacific/Mountain Affiliate
- American Lung Association of Alaska
- American Cancer Society, Alaska
- Alaska Health Education Consortium
- Alaska Tobacco Control Alliance
- Alaska Native Tribal Health Consortium

Alaska

2007 Youth Risk Behavior Survey (YRBS) Results

These risk behaviors among high school students[1] ...

Unintentional Injuries and Violence

- 7% Rarely or never wore a seat belt
- 24% Rode with a driver who had been drinking alcohol, during the past month
- 24% Carried a weapon during the past month
- 29% Were in a physical fight during the past year
- 11% Attempted suicide during the past year

Alcohol and Other Drug Use

- 40% Drank alcohol during the past month
- 26% Reported episodic heavy drinking during the past month[2]
- 21% Used marijuana during the past month
- 8% Ever used cocaine
- 14% Ever used inhalants

Sexual Behaviors

- 45% Ever had sexual intercourse
- 13% Had sexual intercourse with ≥ 4 people
- 31% Had sexual intercourse during the past three months
- 39% Did not use a condom during last sexual intercourse[3]

Tobacco Use

- 53% Ever tried cigarette smoking
- 18% Smoked cigarettes during the past month
- 7% Smoked cigarettes on ≥ 20 days during the past month
- 10% Used smokeless tobacco during the past month
- 10% Smoked cigars during the past month

Dietary Behaviors

- 84% Ate fruits and vegetables < 5 times/day during the past 7 days
- 22% Drank soda or pop one or more times a day during the past 7 days (not including diet soda or pop)

Physical Activity

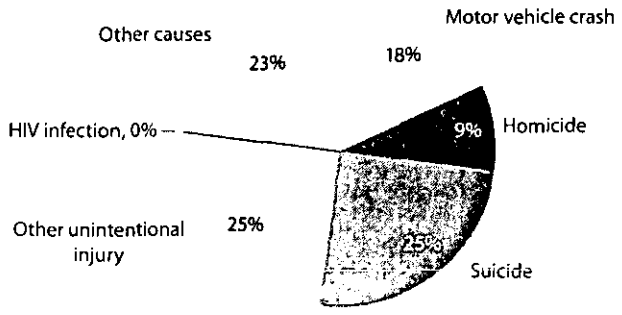
- 58% Did not meet currently recommended levels of physical activity[4]
- 53% Did not attend physical education class
- 82% Did not attend physical education class daily

Overweight

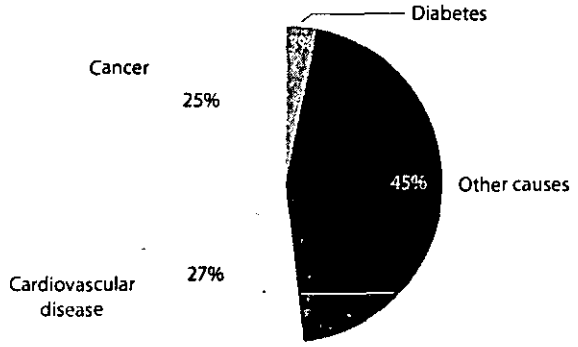
- 16% Were overweight[5]
- 11% Were obese[6]

... contribute to these leading causes of death[7]

Youth Aged 10-24 Years



Adults Aged 25 Years and Older



[1] High school students grades 9-12 in Alaska excluding alternative schools and boarding schools, weighted data.

[2] Students who had five or more drinks of alcohol in a row within a couple of hours on at least 1 day during the past 30 days

[3] Among students who had sexual intercourse during the past 3 months.

[4] Students who were not physically active for a total of at least 60 minutes per day on 5 or more days of the past 7 days.

[5] Students who were at or above the 85th percentile but below the 95th percentile for body mass index by age and sex.

[6] Students who were at or above the 95th percentile for body mass index by age and sex.

[7] 2003-2005 Alaska mortality data, Centers for Disease Control and Prevention.

Kodiak Island Borough School District
Office of the Superintendent
722 Mill Bay Road
Kodiak, AK 99615
(907) 481-6200

March 2, 2009

Twenty-Sixth Alaska State Legislature
House of Representatives
State Capitol
Juneau, AK 99801

Dear Representatives:

Kodiak Island Borough School District wholeheartedly endorses House Bill 137. A substantial number of Kodiak Island students come to us from the United States Coast Guard as well as the United States Navy.

We eagerly join this compact's intent to remove the barriers to educational success imposed on the children of military families due to the frequent moves and deployment of their parents. We will be committed to supporting and enforcing the rules and provisions of this compact. It is our District's goal to provide uniform collection and sharing of information; and to promote coordination, flexibility and cooperation between educational systems and families in order to achieve educational success for the student.

We thank Representative Coghill for sponsoring House Bill 137. His concern is for the best interest of the children whose parents are serving this nation with such honor. We appreciate their service and this bill represents a small token of thanks as well as removes several obstacles that are imposed upon their children during their service to our country.

Sincerely,

Stewart McDonald
Superintendent

Case Study #1

Commissioned Personnel

Family of a Major General, United States Air Force; stationed in Virginia

Due to multiple reassignments for our family, my son attended ten different schools prior to graduating from high school. Though he was certified as academically advanced by previous school systems, he was denied advanced placement in one school system solely because he was not in that system for the required period of time. He was denied advanced placement in another system due to its different qualifying criteria as compared to previous jurisdictions. For one four year period during which we were reassigned each year, my son was required to read Romeo and Juliet for each of those four years despite having done so in each preceding state. He was denied the opportunity to participate in sports on more than one occasion because we were reassigned after team tryouts and he was told he was too late. Finally, we had to take the drastic measure of placing him in a private school after one reassignment because, in order for him to graduate on time from his assigned public school, he would have been required to stay in school for an extra year since the new school system refused to accept all of his credits that he had completed in the previous jurisdiction.

My daughter, currently a high school freshman, has attended seven different schools. She had an IEP (Special Education: Individual Education Plan) from one state that was not continued in the next state because her success out-scored their expectation of what her aptitude score indicated she could achieve. In our current state of residence, she is required to pass six course competency tests, even though she took some of those courses in a different state. Furthermore, the preparatory curriculum for these tests is different than in the last jurisdiction so her burden has been needlessly increased. What is most problematic is that, in order for her to graduate high school on time, she must pass an exit exam which is designed for students who have been in this particular state system for twelve years. For that reason, and because previously earned credits have not been accepted by the present jurisdiction, she must take summer school courses every summer for the next three years.

Case Study #2

Enlisted Personnel

Family of a Technical Sergeant, United States Air Force; stationed in Florida

My daughter is 10 years old and is in the 5th grade. Our family moved to Patrick AFB, Florida from Kirtland AFB in New Mexico last May on military orders. My husband is in the Air Force. We enrolled my daughter in elementary school in Florida during the summer and her new school requested her school records in August from her previous school in New Mexico. By the middle of October, the records had not yet been sent to the new school. After repeated written requests, phone calls and emails from Florida school officials and myself to her previous school in New Mexico, some of her records arrived in late October. However, her complete record did not arrive until November 19th.

When her records finally arrived, the school transferred her to the fifth grade QUEST class which is an advanced placement class for students who are gifted and talented. This is where she should have been placed at the beginning of the semester. However, due to the inexplicable delay in transferring her records, her new school placed her in a less challenging learning environment. Therefore, she spent almost a whole semester in an inappropriate classroom setting. The effects of this delay, which may seem to be of little consequence to adults, have been severe and profound for my 10 year old. She was miserable in school for months, forced to study material she had already mastered. She was bored and restless, and she sometimes got into trouble as a result. She is also not where she should be academically and has some catching up to do.

Despite this setback, now that she is in the proper class, she is back to being my happy, well behaved student. However, had legislation such as the proposed compact been in place in time for my daughter, we could have avoided this situation entirely.

HB 137

"An Act relating to an interstate compact on educational opportunity for military children; amending Rules 4 and 24, Alaska Rules of Civil Procedure; and providing for an effective date."

Section 1: AS 14. Adds a new chapter:
Chapter 34. Interstate Compact on Educational Opportunity for Military Children

Article I – Purpose
This article describes the purposes of this compact which is to remove barriers to educational success for military children by facilitating enrollment, placement, and timely graduation; providing enforcement of rules, uniform collection and sharing of information; and promoting coordination, flexibility, and cooperation among member states.

Article II – Definitions
This article provides definitions for terms used throughout the compact.

Article III – Applicability
This article defines the children covered by this compact.

Article IV – Educational Records and Enrollment
This article outlines how sending and receiving states handle a military student's unofficial and official educational records. The Interstate Commission determines what information must be included in the records, and the time line for providing the records. It provides a 30-day grace period for immunizations. Kindergarten and first grade entrance is addressed for both grade level and age.

Article V – Placement and Attendance
This article describes course placement; education program placement, and special education services to address federal requirements for students with disabilities. Placement flexibility and absences related to deployment are also addressed.

Article VI – Eligibility
This article provides information on enrollment eligibility. It prohibits the student from being charged a tuition if the student lives in a different jurisdiction, and allows the student to continue to attend the school they were enrolled in while residing with the custodial parent. The military student shall have as many opportunities as possible to participate in extracurricular activities, even if they have missed the application deadlines.

Article VII – Graduation
This article facilitates on-time graduation by providing procedures for waivers, exit exams and transfers during a military student's senior year.

Article VIII – State Coordination
This article establishes requirement for creation of a State Council or other existing body to provide coordination among its government, local and military agencies. Membership requirements are also addressed.

Article IX – Interstate Commission on Ed Opportunity for Military Children
This article deals with creating the commission and its responsibilities, powers, and duties. It details membership, voting rights, meetings, executive committee, bylaws and rules, data collection, and a process for reporting alleged violations.

Article X – Powers and Duties of the Interstate Commission
This article lists the powers and duties of the Interstate Commission: Dispute resolution; promulgate rules; issue advisory opinions; enforce compliance; and other powers and duties related to establishing and running and supporting the state councils at a national level.

Article XI – Organization and Operation of the Interstate Commission
This article provides the structure for the Interstate Commission to organize, establish bylaws, set up executive and other committees, establish procedures for meetings, and providing for start-up rules for the initial administration of the compact.

Article XII – Rulemaking Functions of the Interstate Commission
This article gives the Interstate Commission rulemaking authority, and rulemaking guidelines and a provision for judicial review of a proposed rule.

Article XIII – Oversight, Enforcement, and Dispute Resolution
This article addresses oversight, enforcement and dispute resolution specifically. Oversight: Charges the executive, legislative and judicial branches of state governments regarding the purpose and intent of the Compact. It further states that the Interstate Commission shall receive all service of process and has standing to intervene. Further addresses consequences of default by a member state. Dispute Resolution: If requested the Interstate Commission will attempt to resolve disputes and provide rules for mediation and binding dispute resolution. Enforcement: The Interstate Commission shall enforce the rules and provisions of this compact and may initiate legal action to enforce compliance with the provisions of the compact.

Article XIV – Financing the Interstate Commission
This article provides a method for the Interstate Commission to pay its reasonable expenses by collecting annual assessments from each member state. There are limits on incurring obligations and the need for accurate accounting of all receipts and disbursements, and the requirement for a yearly audit by a certified or licensed CPA.

Article XV – Member States, Effective Date and Amendment
States are eligible to become members, the compact becomes effective when no less than 10 states enact the compact into law and the member state passes the law. Rules for how amendments become effective and binding.

Article XVI – Withdrawal and Dissolution
This article addresses how member states withdraw from the compact, what their responsibilities of notice, time, and responsibility for assessments. This article also addresses reinstatement, and compact dissolution.

Article XVII – Severability and Construction
Provisions of this compact are severable and any portion deemed unenforceable does not affect the remaining compact. The compact should be liberally construed, and nothing in this compact inhibits other interstate compacts.

Article XVIII – Binding Effect of Compact and Other Laws
Nothing in this compact prevents the enforcement of other laws that are not inconsistent with this compact. Conflicting laws are superseded by the compact to the extent of the conflict. All rules of the Interstate Commission are binding on the members states. Any provisions that exceed constitutional limits are ineffective to the extent of the conflict of the member state.

Sec. 14.34.020 Compact Administrator.
Establishing a compact administrator and the duties of that office.

Sec. 14.34.030 State Council.
Establishes the state council as a subcommittee of the membership.

Sec. 14.34.040 Regulations.
The board may adopt regulations to implement this chapter.

Sec. 14.34.090 Short Title.
Interstate Compact of Educational Opportunity for Military Children

Section 2: Uncodified law of the State of Alaska is amended by adding a new section:

INDIRECT COURT RULE AMENDMENTS. The changes made by Sec. 1 of this Act have the effect of changing Alaska Rules of Civil Procedure:

(1) Rule 4 – entitles the Interstate Commission to receive service of process of a judicial proceeding that pertains to a Compact provision or rule.

(2) Rule 24(b) - entitles the Interstate Commission to intervene in a judicial proceeding in which the validity of a compact provision or rule is at issue.

Section 3: Uncodified law of the State of Alaska is amended by adding a new section:

CONDITIONAL EFFECT OF CERTAIN PROVISIONS.

Provisions set out in Section 1 concerning service of process and standing to intervene, take effect only if Section 2 receives two-thirds majority vote of each house required by the State Constitution.

Section 4: Uncodified law of the State of Alaska is amended by adding a new section:

CONDITIONAL EFFECT OF ACT; COMMISSIONER'S DUTY TO NOTIFY.

When Sections 1 and 2 of this Act will take effect and notification requirements when the 10 or more states have ratified this compact.

Section 5: Setting out the effective dates of this Act to be not less than 10 states other than this state ratify the Compact or July 1, 2009, whichever is later.

Sponsor Statement

HB 137

"An Act relating to an interstate compact on educational opportunity for military children; amending Rules 4 and 24, Alaska Rules of Civil Procedure; and providing for an effective date."

The purpose of House Bill 137 is to eliminate some of the barriers that face children of military personnel as they transition from one school system to another. The average student will move from six to nine times from kindergarten to 12th grade.

While the armed services has done much to ease the transition for children of military personnel, there is much that can be done at the state and local levels to ensure that these children are afforded the same opportunities for educational success as other children.

Alaska enjoys a close relationship with our service men and women and their families and recognizes the sacrifice and stress they face with frequent moves and deployment. There are 12,106 active duty children between the ages of five and 18 plus the children of active members of the guard and reserve that will benefit from this compact.

Eleven states in 2008 adopted this compact and presently 22 states have pending legislation to join the compact. Passing this legislation will help remove some of that stress by providing the children timely enrollment as the children move from one school district to another.

Chair Seaton and Members of the Education Committee,

I am writing to urge your support for this compact which will be heard by your committee Monday morning.

This compact will provide useful support to our military members and their families. Anchorage educates a large number of students of military families. Many of these families have major transitions during the year as parents are deployed or transferred to or from Anchorage. We work closely with Ft. Richardson and Elmendorf AFB to make these transitions easier, and this Compact will assist us in that process.

ANALYSIS: *(Attach a separate page if necessary)*

Estimated cost to join Interstate compact on Educational Opportunity for Military Children. The compact requires the state to establish a state council to oversee the implementation of the compact. EED recommends a five member state council. The council will consist of the Commissioner of the Department of Education and Early Development, Superintendents of Anchorage and Fairbanks School Districts, a state legislator and the Military advisor appointed to the State Board of Education and Early Development.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. _____

ANALYSIS CONTINUATION

Military compact, page 2 of fiscal note

Article VIII - State Coordination

Estimated travel cost.
Two, two day meetings a year. One in Anchorage and one in Juneau.
Four members will travel for each meeting.
Airfare is estimated at $500
Per Diem is estimated at $60 a day
Hotel is estimated at $200 a night

Estimated total travel cost is $6,080.

Contractual Component - Estimated buy in for membership in the compact is $1 per dependent of an active duty militaryparent. Alaska currently has 16,200 active duty military dependents, therfore membership is $16,200.

Re: IN SUPPORT OF HB137
Hearing: Fri, 20 Mar 09 at 0800

Dear Representative Coghill and Committee Members

Partnership and collaboration are longstanding keystones for military and local community support to Alaska public school students. In this spirit, I provide my support to House Bill HB137 "Interstate Compact on Educational Opportunities for Military Children."

HB137 is groundbreaking legislation written specifically for the unique requirements of a transient student population. Issues such as enrollment, testing standards and graduation requirements are addressed through the interstate compact. These types of standards allow a military student to progress without fear of having to reaccomplish work to meet a new requirement after a move. Additionally, this compact provides an avenue for states to not only establish this list of standards but to collaborate on future issues as they arise.

I look forward to increased cooperation with those who set policy for and educate our children in Alaska. The changes implemented from HB137 will directly impact the social, emotional and academic experience of transitioning students who attend Hawaii public schools.

I personally appreciate the hard work and dedication of all those involved with HB137. Thank you for your submission and continued support of our military families.

Very respectfully

Re: **In SUPPORT of HB# 137 "Interstate Compact on Educational Opportunities for Military Children"**

Dear Representative Coghill:

The United States Army, Pacific (USARPAC) would like to inform you of our **support** for the Interstate Compact on Educational Opportunities for Military Children (House Bill #137). When considering the number of school-age military children impacting each state, Alaska has approximately 12,000 school-age military dependents attending public, private, and homeschooling venues. As these students move from state to state, many of them encounter considerable challenges when dealing with enrollment, eligibility, placement, extra-curricular activities, and graduation requirements. Often, military students lose course credits due to multiple school transfers and are often improperly placed in courses due to the varying school requirements.

USARPAC appreciates all that Alaska public schools have done on behalf of our military children regarding transition and deployment issues. The Interstate Compact on Educational Opportunities for Military Children will only serve to compliment and augment what is already being done in the Alaska public schools. Additionally, this bill will join Alaska with other states in an effort to streamline the school transition process and create much needed uniformity between states.

For these reasons, USARPAC supports this compact and encourages the Alaska House of Representatives to pass House Bill #HB137. If you need additional information, please contact my Well Being/Education Specialist, Ruth Davis, at 808-438-4177 or E-mail nancy.ruth.davis@us.army.mil.

Subject: Support of House Bill #137, "Interstate Compact on Educational Opportunities for Military Children"

Dear Mr. Coghill:

The United States Army Alaska (USARAK) would like to inform you of our support for the Interstate Compact on Educational Opportunities for Military Children (House Bill #137). In the state of Alaska, there are approximately 12,000 school age children of active duty military personnel. As these students move from state to state, many of them encounter considerable challenges when dealing with enrollment, eligibility, placement, extra-curricular activities, and graduation requirements. Often, military students lose course credits due to multiple school transfers and are sometimes improperly placed in courses due to the varying school requirements. The Interstate Compact on Educational Opportunities for Military Children will help to ease this frustration and will aid military students in the school transition process.

USARAK appreciates all that Alaska public schools have done on behalf of our military children regarding transition and deployment issues. The Interstate Compact on Educational Opportunities for Military Children will only serve to complement and augment what is already being done in the Alaska public schools. Additionally, this bill will join Alaska with other states in an effort to streamline the school transition process and create much needed uniformity between states.

For these reasons, USARAK supports this compact and encourages the Alaska House of Representatives to pass House Bill #137.

Sincerely,

Stephen R. Layfield

Rep. Berta Gardner

Rep. Paul Seaton, Chairman
HOUSE EDUCATION COMMITTEE

HB 147
Sponsor Statement

HB 147 repeals AS 14.17.520, a ten year old provision in Alaska statutes requiring that 70% of a school district's operating expenditures be dedicated to the instructional component of the district budget, regardless of their geographical location, student population size, or any other factor. AS 14.17.520 is considered an accountability measure to ensure school districts are spending funds on instructional programs.

The rising cost of education is affecting the way school districts address their spending. Fuel, electricity, and building maintenance expenses can radically change from year to year.

There are two types of school districts that have been chronically unable to meet the 70% requirement: districts that have an operating budget of $3 million or less and those that spend 20% or more of their budget on operation and maintenance. Currently, if a school district is unable to meet the 70% requirement, they must file a waiver through the State Board of Education & Early Development which can either be approved or denied. Approval allows the district to operate with their submitted budget, but requires justification for their failure to comply with the 70% requirement. Denial of a waiver can require the district to revise its budget to meet the 70%.

AS 14.17.520 has become outdated. The current statewide assessment system is a better accountability program to determine if school districts are meeting their student's needs through good instructional practices. The state assessment system measures student proficiency in reading, writing and mathematics from one year to the next. In fact, with the passage of SB 285 last year the department of education has the authority and responsibility to intervene in chronically low performing schools and districts. SB 285 requires the Department of Education to redirect school district resources to improve instructional practice intended to increase student proficiency. This accountability system provides a better use of school district and state resources to increase student achievement.

State Capitol, Room 102 Juneau, AK 9980 - Phone: 465-3923 - Fax: 465-3472 - Toll Free (800) 665-2689
Representative_Paul_Seaton@legis.state.ak.us

Repealing AS 14.17.520 will remove the 70% requirement and waiver process, saving almost half of Alaska's school districts, the State Board of Education and EED staff a redundant yearly process that does not measure the effectiveness or ability of a district to deliver a quality educational program to its children.

Staff contact: Hannah Harrison – 465.6256

Economic Development only upon a finding of abuse of discretion or upon a finding that there is no substantial evidence to support the determination.

(b) Motor vehicles subject to the motor vehicle registration tax under AS 28.10.431 shall be treated as taxable property under this section.

Sec. 14.17.520. Minimum expenditure for instruction.

(a) A district shall budget for and spend a minimum of 70 percent of its school operating expenditures in each fiscal year on the instructional component of the district budget.

(b) The commissioner shall reject a district budget that does not comply with (a) of this section and, unless a waiver has been granted by the board under (d) of this section, shall withhold payments of state aid from that district, beginning with the payment for the second full month after rejection and continuing until the school board of the district revises the district budget to comply with (a) of this section.

(c) The commissioner shall review the annual audit of each district for compliance with the expenditure requirements of (a) of this section. If the commissioner determines that a district does not meet those requirements, the commissioner shall advise the district of the determination, calculate the amount of the deficiency, and deduct that amount from state aid paid to the district for the current fiscal year. A deduction in state aid required under this subsection begins with the payment for the second full month after the determination, unless a waiver has been granted by the board under (d) of this section.

(d) A district that has been determined by the commissioner to be out of compliance with the requirements of this section may, within 20 days of the commissioner's determination, request a waiver by the board of the imposition by the commissioner of any reduction in state aid payments under (b) or (c) of this section. The request must be in writing and must include an analysis of the reasons and causes for the district's inability to comply with the requirements of this section. The board may grant the waiver if the board determines that the district's failure to meet the expenditure requirements of this section was due to circumstances beyond the control of the district. The request must also be submitted to the Legislative Budget and Audit Committee, which shall review the district's request and forward the committee's recommendations on it to the board.

(e) The commissioner shall submit an annual report on actions taken by the commissioner or the board under this section to the Legislative Budget and Audit Committee by April 15 of each year.

(f) In this section, "instructional component" includes expenditures for teachers and for pupil support services.

Support

ALASKA DEPARTMENT OF EDUCATION & EARLY DEVELOPMENT

Resolution of The State Board of Education & Early Development

Minimum Expenditure for Instruction

Resolution 01-2009

WHEREAS, the State of Alaska now has in place an extensive system of accountability, approved by the federal government, for schools and school districts; and

WHEREAS, the accountability system uses assessments to measure school and school district progress in reading, writing and mathematics in nine subgroups of students and in the student body as a whole in grades 3 through 10; and

WHEREAS, the accountability system is accompanied by regulations specifying actions that schools and districts must take to improve; and

WHEREAS, the Alaska Department of Education & Early Development has in place programs and services designed to assist schools and districts to improve; and

WHEREAS, the state administers a high school graduation qualifying examination in accordance with state law and aligned with statements of legislative intent; and

WHEREAS, since 1998 Alaska Statute 14.17.520 requires that at least 70 percent of school districts' operating fund expenditures be spent on instruction; and

WHEREAS, the assessment data since 1998 does not demonstrate there is a relationship between student achievement and the percentage of districts' operating funds spent on instruction; and

WHEREAS, districts consume valuable staff time each year to prepare requests for waivers of the minimum expenditure requirement, when needed, from Alaska Statute 14.17.520; and

WHEREAS, the department consumes valuable staff time each year reviewing districts' instructional budgets, expenditures and requests for waivers, and preparing an annual report to the legislature; and

WHEREAS, the minimum expenditure requirement also places a burden on the Legislative Budget & Audit Committee to review the districts' waiver requests and forward recommendations to the State Board of Education & Early Development; and

WHEREAS, the department has seen that nearly all districts that request waivers have small budgets that are heavily affected by rising fixed costs in necessary non-instructional areas such as heating;

THEREFORE, BE IT RESOLVED, the State Board of Education & Early Development respectfully requests the Alaska Legislature to reconsider or amend the statute that requires districts to spend a minimum of 70 percent of their operating funds on instruction, in acknowledgement that a system of accountability directly tied to student achievement is now in place.

Esther Cox, Chair
On behalf of the State Board of Education
& Early Development

December 5, 2008

Phone: 907-465-6256

Dear Honorable Representative Seaton,

The Galena City School District has never been in a profile of requesting forgiveness from the State Board of Education which demonstrates "error of intent" of this law. An economy of scale provides certain compliance for schools with larger student populations and penalizes the smaller districts. There's really no problem with each and every school district in the state being accountable for spending percentages in different budget categories and well we should be. The nature of facilities, management, and other basic operations costs quickly place smaller districts in violation. This evolves to be an exercise of time, as to my knowledge, no school has been sanctioned or punished for their status, nor should they be. Ultimately rising costs and declining enrolments present obvious draw-downs on school funding to a point school boards must prioritize spending. Logic should tell us that small top-heavy operations will tumble. Please receive this as a position of support for HB 147 from the Galena City Schools Board of Trustees. Thank You

Sincerely,

James E. Smith
Superintendent

Hannah Harrison

Subject: HB 147 Repeal of the Minimum Expenditure Requirement

Follow Up Flag: Follow up
Flag Status: Yellow

Representative Seaton, in response to a member of your staff, I agreed to provide you with the reasons why I favor the repeal of the minimum expenditure requirement (70%) for instruction. Although the 70% expenditure requirement may have been warranted when it was first put into law, the requirement has outlived its usefulness. First, which was true from the outset, the 70% for instruction requirement violates a fundamental premise of economics, namely what is commonly known as the economy-of-scale. It is patently unfair to hold small, rural school districts, like Copper River School District, to the same standard of administrative efficiency as large, urban districts, like Anchorage, Fairbanks, Mat-Su, Kenai, Juneau, et al. It is like comparing the price of goods in a mom and pop store to those of Costco. Yet, that is exactly what the current law does. Second, I believe the current statutory requirement is focused on the wrong thing: input (funding). Instead, the Alaska Legislature ought to put its principal focus on output (student achievement). In fact, current state and federal district/school accountability laws, which are focused on output (student achievement), negate the need for a law such as the 70% requirement for instruction currently in A.S. 14.17.520. This is true, from my perspective, because student assessment data tell you much more about the effectiveness of districts/schools than what percentage of its expenditures a district spends on instruction.

If I recall correctly, during a recent committee discussion of the subject legislation, you mentioned to Eddy Jeans, of the Alaska Department of Education and Early Development, that the same districts which do not meet the 70% requirement, also, are the ones that fail to make adequate yearly progress (AYP) under the No Child Left Behind Act.
Copper River School District does not meet the 70% requirement but makes AYP. Anchorage and Fairbanks, on the other hand, meet the 70% requirement but do not make AYP. Where should the Alaska Legislature's primary effort toward ensuring effective and efficient schools be placed? I, for one, believe it ought to be on output (student achievement), not input (funding). Thus, I urge you and your colleagues to repeal the 70% requirement for instruction.

† Minimum Expenditure for Instruction Percentages for FY1999 and FY2000 Budgets and Audits have been removed.

Department of Education & Early Development
70% Minimum Expenditure for Instruction – Summary

History:
In 1998, the legislature passed the new public school funding formula. Included in this legislation is the requirement for school districts to spend 70% of the school operating fund on instruction. The 70% requirement in AS 14.17.520 began in FY1999 and was phased in over three years from 60% to 70%. The minimum expenditure for instruction requirement was 70% in FY2001 and thereafter. Concurrently, with the 70% requirement, the districts and department were required to improve statewide comparability and consistency in data reporting. In addition to the percentage phase in there were changes in the chart of accounts and related regulation that impacted the district's percentages prior to FY2002.

Progress:
The financial information reported in the FY2002 budgets, including the instructional percentages, provides a baseline for comparative data in future years. The FY2002 data represents full implementation of the minimum expenditure law, substantial progress in consistent statewide data, and full reporting under the revised chart of accounts.

FY2009 is the eleventh year under the new law. For the first several years of the law there was an increase in the number of waivers. The increase was due to the phased-in implementation percentage and changes in data collection and comparability from one year to the next.

FY2009 Budget Waiver Requests:
The FY2009 budget waiver request process continues to follow the procedures and patterns of prior years. While looking at the budget waivers it may be helpful to remember the recent changes affecting education funding. HB273, which passed last session, places 50% of the increased ISER cost factors into statute and continues to increase these cost factors by 12.5% each year until the factors are fully implemented. The ISER cost factors are higher than the previous cost factors in statute, and when fully implemented these will provide many districts with increased funding when enrollment levels remain steady. Because the 50% ISER was funded at 50% outside the formula in FY2008 and now at 50% inside the formula (in statute) for FY2009, this will likely not generate a revenue increase for districts in FY2009. In general, expect to see flat revenues from ISER in FY2009 with gains in future years if district enrollment levels remain steady. HB273 also implements increased intensive special education student funding over a three year period beginning in FY2009. There will be some revenue increases from the intensive component in the FY2009 budgets, but these increases will be most noticeable in the larger districts that are not requesting waivers. Finally, HB273 implements a hold harmless provision that provides districts a portion of the funds that would be lost from a decrease in the school size adjusted enrollment caused by lower enrollment. When districts decrease 5% or more from prior year to current year in the school size adjusted enrollments, the hold harmless provision provides 75% funding for the decrease in year one, 50% in year two and 25% in year three. This hold harmless provision allows districts time to plan and adapt to the lower enrollment and funding levels. The hold harmless provision does not significantly affect the current budget and waiver process, but this provision will help to stabilize districts if the enrollments come in low during the actual October 2008 count period for FY2009.

Another item affecting FY2009 are TRS and PERS rates. FY2009 is the second year that the legislature has made a direct appropriation to the TRS and PERS retirement plans and reduced the rates that employers are required to pay. This direct appropriation and reduced employer rate frees up the money that was spent on the higher TRS and PERS rates to be spent on other expenditures at the district. For FY2009, the TRS rate that school districts are required to contribute is 12.56% and the PERS rate is 22%. Due to required governmental accounting standards that the state and school districts are required to

follow, even though school districts are contributing at the 12.56% and 22% rates, the budgeted revenues and expenditures must include the portion that the state directly deposits to the plans. Districts must increase their revenues and expenditures in budgets and audits to show the portion the state contributed. Therefore, in general, budgeted expenditures will be higher in FY2009 even when other factors at the district remained flat. The entry for the retirement on-behalf is most noticeable in the instructional categories due to the savings from 54.03% down to 12.56% from the TRS rate. FY2008 was the first year and a transitional year for the on-behalf accounting entry so most district budgets do not reflect the increased expenditures until FY2009. This means the reader will notice that in general, most district budgets are larger in FY2009 and the instructional expenditures are slightly increased. This is in general but not true for all districts. In some districts with dropping enrollment, substantial increases in non-instructional expenditures or other reasons the increased budget or instructional percentages is off-set and not apparent. The department identified this element on EED's cover sheet for each district. The department took into account the difference this element accounted for when evaluating FY2009 waivers; this explanation is provided for those readers who notice the budgets are larger than last year.

When the department reviewed the FY2009 waivers, the department took into account the impact to the instructional percentage from the on-behalf accounting entry and evaluated whether districts had maintained or increased instructional spending without regard to the accounting entry. We found that districts did maintain prior instructional budgeting practices and that the districts continued to follow the intent of the law for instructional spending. We evaluated where districts directed funding that was freed up from lower retirement rates or funding increases. We found that, in general, the freed up funding from decreased retirement rates or increased funding went to instructional categories or to non-instructional fixed cost categories such as energy. For all districts, we evaluated the increases to non-instructional categories and followed up with districts when additional information was needed. The department's recommendation for a district's waiver is based on the districts' information and explanations.

After taking into account the TRS/PERS changes and increases in other categories such as energy, the FY2009 budgets and waiver requests continue to follow the two patterns identified over the past five years during the budget and waiver review. The two patterns identified are that waiver requests are most often needed from: 1) Districts with budgets of approximately $3 million or less, and 2) Districts with operations and maintenance over 20% of the operating fund budget.

For FY2009, there are eight school districts requesting budget waivers that have operating budgets of approximately $3 million dollars or less. These range from Pelican ($596,797) to Pribilof ($2,827,102). All eight districts were under $3 million and requested budget waivers in both FY2007 and FY2008. The eight districts with operating fund budgets below $3 million are identified in the schedule on page six of this report.

For FY2009, there are 15 school districts in the category of Operations and Maintenance expenditures over 20%. The 15 districts with operations and maintenance expenditures of 20% are identified in the schedule on page six of this report. In many of these districts there were multiple rural sites contributing to high operations and maintenance. Energy costs were a significant component in the costs in this category.

The remaining five districts requesting waivers have a variety of components that contribute to falling below the 70%. The board packet includes all 28 school district waiver requests. The department will present these waiver requests, provide additional information, and answer questions during the October 27, 2008 board meeting.

Conclusion:

The department's internal auditors review the budgets when they are received on July 15 of each year. The budget review includes many components including compliance with law and regulation; review of revenues; review of expenditures at the object level; review of beginning and ending fund balance; review of use of chart of accounts for consistent statewide reporting; observation of staffing levels by function; observation of progress towards 70% as revenues increase; and a phone call and discussion with each district superintendent and/or business manager. During this process the districts correct any outstanding items.

After the budget review, those districts below 70% must revise their budget or submit a waiver to the state board. The department's internal auditors review the waivers when they are received September 20 of each year. The waiver review covers multiple components, including checking for accuracy to make sure that the dollars and issues discussed match the district's budget. The internal auditors review total revenues from current to prior years and evaluate changes to expenditure levels in each function. The districts' reasons and causes are evaluated to ensure that the reasons forwarded to the state board correspond to the dollars and activities as reported in the budgets and audits; for example, if the district reports insurance costs increased, the department compares insurance expense at the district over several years to confirm the increase.

The waiver review process was developed to provide assistance to the state board in their decision making process and to provide specific information to include in the department's April 15 annual report to the Legislative Budget & Audit Committee. The following three spreadsheets summarize components of the 70% minimum instructional expenditure requirement:

- Operating Fund Minimum Expenditure for Instruction and Summary
- Districts' Reasons and Causes for FY2009 Budget Waiver Requests
- Minimum Expenditure for Instruction Calculation Overview.

♦ ISSUE

In accordance with AS 14.17.520 the board is asked to consider the Pelican City Schools FY2009 request for waiver of the 70% minimum expenditure for instruction requirement.

♦ BACKGROUND

Pelican City Schools FY2009 Operating Budget Expenditures:

Function	FY08 Dollars	FY08 %	FY09 Dollars	FY09 %
Instructional: 100 – 400	$296,732	59%	$353,140	59%
School Administration Support Services: 450	32,455	6%	40,418	7%
District Administration: 510	21,004	4%	21,622	4%
District Administration Support Services: 550	34,436	7%	42,832	7%
Operation & Maintenance: 600	109,869	22%	127,785	21%
Student Activities: 700	7,900	2%	11,000	2%
Community Services: 780	0	0%	0	0%
Total	**$502,396**	**100%**	**$596,797**	**100%**

History of Instructional Expenditures Requiring a Waiver and Actual Enrollments

	FY01	FY02	FY03	FY04	FY05	FY06	FY07	FY08	FY09
Instructional %	68%	58%	59%	63%	61%	56%	60%	59%	59%
Enrollment *	23	19	18	15	11	14	15	16	15

* Pelican City School District operates one school in the community of Pelican. The FY2009 enrollments are budget projections.

The FY2009 budget includes TRS/PERS on-behalf which was not included in the FY2008 budget. The TRS/PERS on-behalf increases the instructional expenditures and accordingly the total expenditures for FY2009.

♦ OPTIONS

Grant the Pelican City Schools request for waiver of the FY2009 70% minimum expenditure for instruction requirement.
Deny the district's request.

♦ ADMINISTRATION'S RECOMMENDATION

Approve the district's waiver request based on the district's reasons and causes:

- Low district-wide enrollment.
- Operations and maintenance.

♦ SUGGESTED MOTION

I move the State Board of Education & Early Development grant the Pelican City Schools FY2009 request for waiver of the 70% minimum expenditure for instruction requirement in accordance with AS 14.17.520(d).

REVISED

State of Alaska Board of Education & Early Development
801 West 10th Street, Suite 200
PO Box 110500
Juneau Alaska 99811

PELICAN SCHOOL DISTRICT'S REQUEST FOR WAIVER

The Pelican School District requests a waiver for not meeting the minimum expenditure for instruction requirement of AS 14.17.520. Although we are submitting a revised budget to reflect minor changes in personnel costs, the percentage for instruction remains at 59%. Expenditures of $596,797 for FY-09 will require the use of $49,000 of carry over funds.

Although the School Board is committed to being accountable for providing increased academic growth for each of its students in the most efficient manner, we are unable to comply with the minimum expenditure for instruction due to continued low enrollment (16 ADM) and the escalating costs for energy, freight, transportation, operations and maintenance. The round trip airfare from Pelican to Juneau is only $30 less than the cost of flying round trip to Seattle from Juneau. These things are beyond our control. The items budgeted outside of instruction are fixed and necessary to maintain the facilities and support the program. There are no extras, and limited funding due to minimum enrollment does not allow us to provide music or art programs in the classroom for our kids. We have two certified teachers and 1.10 aides. (77% paid for by grants.) Our Superintendent/Principal administrative services total fte .25 and Business Manager/Tech Support services are combined into a .75 fte position. It should be noted that an additional $41,000 in grants for FY-09 will be spent in Instruction.

Increased state support and conservative spending last fiscal year allowed the Board to transfer $31,000 to it's CIP fund, to assist in replacing the boiler in the high school this fall, which is an urgent need, and to contribute to the District's $900,00 local share of it's major maintenance grant request to the legislature. It's unknown at this point where the balance of the local share will come from.

Providing education services in the most efficient manner continues to be the goal and focus of the School Board. We appreciate your consideration of our request.

Connie Newman
Superintendent

Subject: Revised FY09 School Operating Budget and Waiver Request

Dear Chairperson Cox and Members of the State Board:

The Bristol Bay Borough School District acknowledges its statutory responsibility to expend 70% of its operating budget on instruction, and to do all that it can to keep our administrative costs at 30% or less of our total budget. This has been a challenge for our district for many years, and again this year I am requesting that we be granted a waiver in accordance with AS 14.17.520(d).

The Bristol Bay Borough School District requests a waiver to the 70% minimum expenditure for instruction requirement due to reasons and causes beyond the district's control, including the high costs of heating and utilities, the declining student enrollment, and the high costs associated with shipping for needed supplies and equipment, bringing in service providers and technical assistance to our community, and staff, student, and administrative travel for activities and professional development opportunities.

To illustrate each of the reasons listed above, I have written a few general remarks and included detail that may help further explain the challenges we face in Naknek.

Heating costs, electricity, and fuel costs continue to have a growing impact on our overall budget. In 2008-2009 these costs are estimated to be over $320,000.00 or approximately 9 % of our entire budget. This is an overall increase of approximately $35,000.00 from a year ago.

Transporting goods to rural Alaska will always be expensive and more and more we see service providers attaching fuel surcharges to the costs of every air and barge load. It is also a common practice of our utility providers. Having less students in the building means less revenues, but it also means those fixed costs associated with transportation, and heating and lighting a building are spread between less students and we have no real control in this area. Our declining enrollment is due mostly to the high costs of goods and services in the region and we believe it is not an indication of our community's distrust or dissatisfaction with our school programs.

Staff turnover and staffing costs were also part of why we must request a waiver. Once again this year the district hired three new teachers and a new administrator, and in each case the salary and benefit packages for the new employees was less than the person was paid last year for the same job. We are making an effort to put more money into professional development for teachers and other staff and in time that commitment will make a difference in reducing all staff turnover. In time we will do more to support new teachers and mentoring efforts and that could make all the difference in helping our new hires stay in Naknek for a longer period of time.

In spite of our projection of 30 less students, our board supported maintaining staffing at the same levels as last year. This helped eliminate the shift in percentages that would have occurred if we had reduced our teaching staff by 2-3 teachers, as might happen whenever we see a 30 student drop in enrollment. Our commitment to put qualified staff in front of students and to make sure those services continue at the same level is important.

Travel costs to bring in related service staff to support special education needs and persons who provide or participate in staff development opportunities is another cost that is often beyond our control. In our region, where there is a single air carrier bringing in passengers for most of the school year, there is little competition and limited options in terms of what we will pay for these opportunities and required services.

I could list other concerns, but these are the ones that I feel adequately illustrate our situation. In reviewing other waiver requests from previous superintendents, I understand the importance of due diligence in this area to always strive for the 70/30 goal and I remain committed to that end. In this latest budget revision I have tried to shift monies to staff development and classroom materials and resources that will make a difference in the way we serve students and positively impact our student performance. An effort is being made to bring the community together and look at our long range goals and plans so that we can work proactively and not reactively, especially in the areas of staffing, educational technology, and instructional supplies and materials central to our mission.

The Board has known for many years that we must continue to rely on the superintendent and the building principal to shoulder responsibility for oversight and management of our curriculum and instruction, assessment, special education, personnel and human resources, community schools, federal programs and grants, and all other programs that might be handled by additional administrators in a larger district. We also acknowledge that other staff members help in these areas, and so many others. In this way we keep our administrative overhead down in both numbers and overall costs. We continue to be committed to those goals.

It is for those reasons listed and others that the Bristol Bay Borough School District requests the Department's approval of its revised FY 2009 School Operating Fund Budget as well as our Waiver Request, both of which are enclosed.

Respectfully yours,

Jack Walsh
Superintendent

State of Alaska Board of Education & Early Development
801 West 10th Street, Suite 200
PO Box 110500
Juneau, AK 99811-0500

Dear State Board of Education & Early Development:

The Copper River School District is requesting a waiver of the 70% minimum expenditure for instruction as set forth in AS 14.713.520.

During the past school year the District has continued its efforts to provide educational services in the most financially efficient manner, without lowering its high quality of education and teaching standards. The District will continue to try to meet the minimum expenditure requirement by reviewing expense classifications and working directly with the Department of Education.

Each school in the Copper River School district made Adequate Yearly Progress for 2007-2008 school year. Our district's success is based on a strong and deliberate administrative support system that provides staff development, instructional leadership, and managerial support that enables teachers and instructional aides the freedom to focus on individual student achievement.

The main factors that result in the District not meeting the 70% instructional expenditure are described as follows: The district ADM has dropped by 109 students over the past 3 school years (18% decrease) which reduces our revenue. This drop in ADM does not change the high fixed costs necessary to maintain a facility. Therefore, our Maintenance Budget negatively affects the 70% instructional expenditures. Also our District covers approximately 23,100 square miles with school sites that have small populations. This equates to .02 students per square mile. The per student cost to operate and maintain these facilities is greater due to their small size (ranging from $1,975 per student to $5,039 per student).

cc'd: Eddy Jacobs

The District operations and maintenance budget (O & M) represents 21% of the school operating fund expenditures. These fixed O & M costs do not allow the District to meet the 70% instructional expenditure which is beyond our control.

The Workers' Compensation rate has increased by .85% for all employees except the Maintenance/Custodial staff which has increased by .95%. Health/life insurance has increased by 8.48%.

On behalf of the Copper River School District Board of Education and the students, the District is requesting a waiver of the 70% requirement for expenditures in instruction as set forth in AS 14.713.520.

Sincerely,

Loreen M Kramer

Juneau, AK 99811-0500

Dear State Board of Education:

Please accept this waiver request from the Klawock City School District pursuant to Alaska Statute 14.17.520. The Klawock City School district requests a waiver to the 70% minimum expenditure for instruction requirement due to causes beyond the control of the district.

Despite our best efforts the district's ability to reach 70% continues to be challenged by low enrollment due to the regional economy and increasing fixed non-instructional costs. These fixed costs include energy, health insurance, transportation and shipping and professional services.

Our district has maintained instructional spending in spite of flat revenues and rising costs. After taking into account the FY2009 required accounting entry for the state's PERS/TRS contribution, our actual dollars and percentage support spent in the instructional categories has been maintained at the same level from FY2007 to FY2008 and now FY2009. Again, we have maintained instructional support during a time of rising costs and level revenues. We anticipate that other than a very slight increase from the $100 base student allocation (BSA), our actual FY2009 state revenues will remain nearly identical to FY2008 and FY2007 levels. In other revenue categories, such as local and federal dollars, the district anticipates additional challenges due to the effects of the regional economy.

Specific non-instructional expenditures beyond the control of the district include costs for operations and maintenance. The district must provide for increasing energy costs, increasing costs for professional services, transportation and shipping. We now expect that our actual energy costs will be significantly higher then what was originally budgeted. As our facility ages we are experiencing an increasing need to hire professional services with expertise, training and certification outside that of our one full-time

maintenance employee. For example, we must hire outside help in the areas of heating, plumbing, and electrical and other technical areas in which our maintenance person does not have the necessary background. In addition to professional services these services also require shipping and travel and those components themselves have also increased over the years.

Other non-instructional fixed costs that impede our ability to reach 70% include items such as health insurance and costs associated with maintaining required reporting. For the FY2009 school year we have had to increase some hours for several of our non-certified positions. In the past, we have attempted to handle the increased paperwork brought on by state and federal mandates by simply increasing the workload of existing employees. This has resulted in burnout and people leaving their positions. As a result we have added hours and staff to attempt to compensate for the additional workload. In addition, increases in health insurance costs in the non-instructional categories impacts our ability to meet the 70%. At this time the district has by chance achieved some savings in health insurance in the instructional components because some of our certified staff are covered by other health care programs outside the district; this is not the case with our non instructional staff and thus causes a higher non-instructional percentage. Other challenges in this area include increasing professional fees for required audit and compliance requirements.

It should be noted that with a budget of just slightly more than $2.8 million, cutting costs in non-instructional areas is extremely difficult. Many fixed costs cannot be avoided. Flexibility is limited by contractual obligation, facility requirements, State and Federal mandates, energy costs, supplies and materials costs, shipping and transportation costs and the list goes on.

It must be stated that the Klawock City School District continues to make every effort to protect our instructional program. We continue to offer a variety of extended learning opportunities for our students and the District has always made "Adequate Yearly Progress" under NCLB.

Our district faces the same challenges with the 70% requirement that we have in past years. It is hoped that our work towards the 70%, our student achievement and this explanation along with the information provided to the department is acceptable and that a request for a waiver will be approved. If you have any questions, please feel free to contact me a 755-2917.

Sincerely,

Richard E. Carlson
Superintendent

From: Larry LeDoux, Commissioner **Agenda Item: 5**

♦ ISSUE

The board is asked to consider 28 school district requests for waiver of the 70% minimum expenditure for instruction requirement for Fiscal Year 2009 budgets.

♦ BACKGROUND

- AS 14.17.520 requires that a school district budget for and spend a minimum of 70% of its school operating expenditures in each fiscal year on the instructional component of its budget. The requirement was phased in over three years from 60% to 70%. FY2001 was the first year of the full 70% requirement. AS 14.17.520(d) allows a district unable to comply with the requirement to request a waiver from the board. The board may grant the waiver if it determines that the district's failure "was due to circumstances beyond the control of the district." A copy of AS 14.17.520 follows this memorandum.

- The law requires that the board consider requests for waivers under two separate conditions. Each fall, the board considers waivers of the requirement based on the school district's proposed budget for the current school year. In the spring, the board is asked to consider waiver requests if a school district had budgeted at the required amount but failed to meet the requirement on the actual audited expenditures for the prior school year. The following table highlights the required instructional percentage since the minimum expenditure law was passed and the number of waivers requested and granted under both the budget and audit requirements:

Fiscal Year	% Required	# of Budget Waivers Granted	# of Audit Waivers Granted
1999	60%	13	2
2000	65%	16	4
2001	70%	24	0
2002	70%	29	1
2003	70%	27	3
2004	70%	32	1
2005	70%	32	1
2006	70%	32	2
2007	70%	24	5
2008	70%	24	Consider in March 2009

- After review, analysis, and investigation of FY2009 budgets, the department sent notification to each district accepting or rejecting its budget.

- The department has prepared a seven-page overview detailing the process, history, results and calculations for the minimum expenditure requirement. The instructions to the affected school districts and the seven-page overview follows this memorandum.

- The requests and supporting documentation are provided for each district under separate tabs.

- **OPTIONS**

Approve all 28 district waiver requests.
Approve each individual district waiver request.
Do not approve the district waiver requests.

- **ADMINISTRATION'S RECOMMENDATION**

Approve all 28 district waiver requests.

- **SUGGESTED MOTION**

I move the State Board of Eduction & Early Development approve the district waiver requests for 70% minimum expenditure for instruction requirement for Fiscal Year 2009 for the following school districts: Alaska Gateway, Aleutian Region, Aleutians East Borough, Bering Strait, Bristol Bay Borough, Chatham, Copper River, Cordova, Hoonah City, Hydaburg City, Iditarod Area, Kake City, Klawock City, Kuspuk, Lake and Peninsula, Lower Yukon, Nome City, North Slope Borough, Northwest Arctic Borough, Pelican City, Pribilof, Saint Mary's, Southeast Island, Southwest Region, Tanana City, Wrangell Public, Yukon Flats, and Yukon Koyukuk.

Alaska Statute 14.17.520

Sec. 14.17.520. Minimum expenditure for instruction.

(a) A district shall budget for and spend a minimum of 70 percent of its school operating expenditures in each fiscal year on the instructional component of the district budget.

(b) The commissioner shall reject a district budget that does not comply with (a) of this section and, unless a waiver has been granted by the board under (d) of this section, shall withhold payments of state aid from that district, beginning with the payment for the second full month after rejection and continuing until the school board of the district revises the district budget to comply with (a) of this section.

(c) The commissioner shall review the annual audit of each district for compliance with the expenditure requirements of (a) of this section. If the commissioner determines that a district does not meet those requirements, the commissioner shall advise the district of the determination, calculate the amount of the deficiency, and deduct that amount from state aid paid to the district for the current fiscal year. A deduction in state aid required under this subsection begins with the payment for the second full month after the determination, unless a waiver has been granted by the board under (d) of this section.

(d) A district that has been determined by the commissioner to be out of compliance with the requirements of this section may, within 20 days of the commissioner's determination, request a waiver by the board of the imposition by the commissioner of any reduction in state aid payments under (b) or (c) of this section. The request must be in writing and must include an analysis of the reasons and causes for the district's inability to comply with the requirements of this section. The board may grant the waiver if the board determines that the district's failure to meet the expenditure requirements of this section was due to circumstances beyond the control of the district. The request must also be submitted to the Legislative Budget and Audit Committee, which shall review the district's request and forward the committee's recommendations on it to the board.

(e) The commissioner shall submit an annual report on actions taken by the commissioner or the board under this section to the Legislative Budget and Audit Committee by April 15 of each year.

(f) In this section, "instructional component" includes expenditures for teachers and for pupil support services.

Department of Education & Early Development
Division of School Finance

September 1, 2008

Dear Superintendent:

In accordance with regulation 4 AAC 09.120, the Alaska Department of Education & Early Development (the department) reviewed your FY 2009 school operating fund budget and rejected it, at this time, for not meeting the 70% minimum expenditure for instruction requirement in Alaska Statute 14.17.520. Alaska Statute 14.17.520(d) allows a district to request a waiver from the requirements of this statute within 20 days of this determination. A revised budget or waiver request must be submitted to the department by **September 20, 2008**.

The waiver request letter must include a statement of the reason(s) and cause(s) that are beyond the district's control and account for the district's inability to comply with the minimum expenditure for instruction requirement. The body of the waiver request letter is to contain a persuasive argument providing detailed information to support the reasons and causes that account for the districts inability to comply with the minimum expenditure for instruction requirement. You are encouraged to submit any additional documentation that would aid the department in understanding more fully the reason(s) and cause(s) behind the districts inability to comply with the minimum expenditure requirement.

Enclosed is a document outlining the budget review and waiver request instructions and a spreadsheet with the district's function and object code comparisons. If you need further information, **assistance is available** from the Department of Education & Early Development, Division of School Finance. Please contact Elwin Blackwell at (907) 465-8665.

Sincerely,

Eddy Jeans
Director

Enclosure

5440

September 1, 2008

The following information is provided to summarize the budget review and waiver process. Further information can be obtained from Alaska statutes, regulations, or the Department of Education & Early Development - School Finance.

AS 14.17.520, minimum expenditure for instruction, requires school districts to budget and expend 70% of their school operating expenditures on instruction. Budgets are due to the Department of Education & Early Development (the department) by July 15, annually. The calculation for the FY2009 budgeted minimum expenditure for instruction is functions 100-400 divided by functions 100-780.

Budget Review

Following the July 15 due date, the department reviews each budget and notifies the district by September 1 of approval or rejection. As presented in 4 AAC 09.120, a budget will be rejected when:

1. not in the form required by the department;
2. not balanced;
3. does not meet the local effort provisions of AS.14.17; or
4. does not meet the minimum expenditure for instruction requirement of AS 14.17.520.

Notification that a budget is rejected will include the department's specific reasons for the rejection. A district must resubmit an amended budget within 20 calendar days of the date of the notification for those budgets rejected under 1, 2 or 3 above. For those budgets rejected under 4 above, the district must either resubmit an amended budget that complies with the requirement or request a waiver from the State Board of Education & Early Development within 20 calendar days of the date of the rejection notification.

Waiver Request Instructions

For FY2009 there is a new format for the waiver request. The waiver request must contain two parts:

PART 1) a separate Cover Letter to the state board with a copy sent to LB&A and a copy sent to the department. The cover letter should request the waiver and include the reasons and causes and supporting information for the waiver request.

PART 2) Additional information in the form of the template (used in prior years and described below) sent to Elwin Blackwell at the department.

PART 1: The waiver request is to be in a letter format and is to be addressed to the State Board of Education with a carbon copy going to the chair of the Legislative Budget and Audit committee. The waiver request letter should start by requesting a waiver from the State Board of Education then move to the reasons and causes statement.

The reasons and causes statement must clearly identify the reasons and causes that are beyond the districts control and prevent the district from budgeting in compliance with the minimum expenditure

for instruction requirement. **The reasons and causes statement should be clear**, such as, *"The [District Name] requests a waiver to the 70% minimum expenditure for instruction requirement due to reasons and causes beyond the districts control including [districts reasons and causes, examples declining enrollments, increasing energy costs]."* A comparative spreadsheet has been supplied that details out by function and object code the districts current and prior year budgets and the last three years audited financial statement information. The spreadsheet should be used as a tool to aid the district in identifying and explaining the reasons and causes for not meeting the minimum expenditure for instruction requirement.

The paragraphs that follow the reasons and causes statement are to contain an explanation and discussion of the details supporting the reasons and causes. These paragraphs should convince the State Board of Education that it is not possible based on the reasons and causes to budget at the minimum expenditure for instruction. If the district, for example, cited declining enrollments in the reasons and causes then the district would want to explain the decline by telling how much enrollments have declined from the prior year or over the last several years. The district would then want to discuss how the declining enrollments have impacted funding and the instructional program. The district, if relevant, should discuss what they have done to mitigate the impacts on the instructional programs.

The reasons and causes statement, the explanation, and discussion of the details are to be based on the current budget. The district may want to include supporting evidence from the prior year financial statements that supports the reasons and causes statement. The waiver request letter should conclude by summarizing why the district needs a waiver for this budget.

The State Board of Education & Early Development may grant a waiver if it determines the district's inability to meet the requirement is due to circumstances beyond the control of the district.

In accordance with statute submit your waiver to:

State of Alaska Board of Education & Early Development
801 West 10th Street, Suite 200
PO Box 110500
Juneau, Alaska 99811-0500

In accordance with statute a copy of your waiver request must be submitted to:

The Honorable Ralph Samuels, Chair
Legislative Budget and Audit Committee (LB&A)
State Capital, Room 204
Juneau, AK 99801-1182

PART 2: Separately from your cover letter, provide the district template as a work-paper for the department's review. The template format is the same as prior years and an example is attached. The template includes the budget allocations in table form, a district profile with the location, number of schools per community, average daily membership and size of the district and an explanation of major events in the instructional functions and major events for the non-instructional functions. The district profile should also include pertinent climatic and geographic information and other facts providing a clear understanding of the circumstances affecting the cost of delivering educational services.

The additional information is to be submitted to:

Elwin Blackwell, Internal Auditor

March 9, 2009

The Honorable Paul Seaton
House of Representatives
Alaska State Capitol, Room 102
Juneau, AK 99801-1182

Dear Representative Seaton,

We are writing to you regarding the current minimum expenditure requirement (70/30 rule) for school districts. We are in support of HB147, which proposes that this requirement be eliminated. The 70/30 rule is no longer effective or necessary for financial accountability. The more recent state accountability initiative requires analysis of individual schools and districts, resulting in redirection of funds toward instruction.

The current law requires that school districts spend 70% of their general fund budgets on instruction. If they do not, the district must submit a waiver request for review by the State Board of Education. We are one of the 22 districts that cannot meet the 70% requirement, our average expenditure on instruction is 67%. Due to structural issues such as small schools and high utility costs, it has become clear that there is little possibility that we will reach the 70% goal.

The waiver process is very time consuming for both the school districts and the State Board. If a district does not apply for and receive a waiver and there is spending of less than 70% on instruction, state funds may be denied. This has happened on three occasions, and it is unfairly punitive to rural districts.

Since the minimum expenditure requirement was put into law, financial accountability has improvement, according to the Department of Education and Early Development. Furthermore, the State Board of Education has passed a resolution asking that the legislature repeal this requirement.

Thank you for your consideration of this matter.

Sincerely,

Jack Foster
Superintendent

Lee Ann Andrew
Director of Administrative Services

Dear Representative Seaton:

The Bering Strait School District strongly supports HB 147, eliminating the 70/30 requirements of AS 14.17.520. While the District supports the goal of channeling the maximum educational dollars to the classroom, the District believes that this statute is not an effective means toward that end.

From the earliest discussions of the bill that eventually became AS 14.17.520, the Bering Strait School District has opposed the requirement that Alaska school districts expend at least 70 per cent of the operating budget on instruction or risk the threat of loss of education foundation funding. Our objection is not with the goal, but with the rigid standard that fails to factor in the differences in regions, schools and districts. The statute fails to recognize the enormous differences that exist among districts statewide while applying one broad brushed standard to all districts.

More specifically, HB 147, repeal of AS 14.17.520 (the statute), should be passed because:

- The statute does not allow for the higher utility and operating costs that exist in rural and remote areas. Since the legislation was passed in 1995, utility costs have increased over 300 per cent in rural areas. The corresponding increases in airline fares and freight rates have driven up costs throughout school budgets. These

DISTRICT OFFICE

(907) 624-3099 FAX
http://www.bssd.org

increases have had a more significant impact on small and rural districts. The statute makes no provision for cost increases that are not distributed evenly at 70 per cent for instruction versus 30 per cent for non-instruction.

WHITE MOUNTAIN

- The statute does not allow for the higher administrative costs that exist in small and rural districts. Small districts must comply with all of the compliance and reporting requirements of large districts. In Alaska, district with 200 students is required to file all of the same state and federal reports required of a district ten times its size. While a large district can spread the administrative burden over thousands of students or cover it as part of a $100 million budget, smaller districts simply cannot do that. Since administration is categorized as part of the 30 percent for non-instruction, the statute fails to recognize the disproportionate burden on small and rural districts.

- The statute does not provide any allowance for changing economic conditions and the impact that those changes have on school budgets. In addition to enormous changes in utility costs, employee benefit costs have increased fourfold since 1995. While funding has been provided by the legislature to cover most of the increases in the retirement plans, other benefits such as health care and workers compensation have also taken larger and larger bites from the budget. These cost increases do not fall neatly into the 70/30 plan. They often have a greater impact on the non-instructional side of the budget.

- The waiver process provided in the statute is not a valid tool that leads districts to eventual compliance. Over half of all districts in the state have been unable to comply with the statute since it was implemented. The list of noncompliant districts increases almost every year. The process of filing a waiver has become an

http://www.bssd.org

arduous task that increases administrative burden but must be performed in order for a budget to be accepted by the state. The process is time consuming for the districts, for the Department, and for the State Board of Education.

We appreciate the opportunity to comment on this legislation, and we look forward to the repeal of AS14.17.520.

Sincerely,

Jim Hickerson,
Superintendent

Sponsor Statement – HB 184

HB184 adjusts the current bond debt cap for the University of Alaska to reflect today's construction prices. Current Alaska Statute allows the University of Alaska to borrow money, issue debt or enter into long-term obligations for the purchase of facilities, goods or services without having to provide notice to the legislature as long as the annual debt service payment doesn't exceed $1.0 million. HB184 bumps up the threshold to $2.5 million.

The current bond debt cap limit of $1.0 million was originally issued in 1990. At that time, $1.0 million in annual debt service was the cost of financing a $15.0 million capital project. Taking into account construction inflation in Alaska, a $15.0 million capital project built in 1990 would cost about $40.0 million today. Annual debt service on $40.0 million is $2.5 million assuming a 4.5% interest rate and a 25-year straight line amortization.

The University has operated a viable debt program over the last 18 years. It has issued 14 general revenue bonds plus other financing arrangements that have been critical in securing funding for capital projects. The University has never suffered a rating downgrade. In fact, in December 2007, Moody's Investor Service upgraded the University credit rating to Aa3. The University continues to monitor its debt capacity and compliance with tax exempt bond covenants. Currently, the amount of debt service outstanding is $11.2 million. This is less than half the Board of Regents' policy limit of 5% of unrestricted revenues which is $26.2 million for FY08. This equates to $127 million in outstanding debt with the ability to issue a total of $317 million in debt.

By increasing the bond debt cap approval level, the administrative burden of compliance with the statute for smaller bond issues would be reduced for both the legislature and the University. At the same time, legislative oversight would be retained for larger financings.

I would appreciate your support for HB184.

Sec. 14.40.253. Financing notice and approval. If the University of Alaska tends to enter into an obligation, except for refinancing obligations, under AS 4.40.040(a)(5) with an annual payment by the university anticipated to exceed 1,000,000, the university shall provide notice to the legislature. The notice must include he anticipated annual payment amount, the anticipated financing, and the total construction, acquisition, or other costs of the project. The university may not enter into n obligation requiring a financing notice under this section, other than a refinancing bligation, unless the project has been approved by the legislature by law. An appropriation for the project does not constitute approval of the project for the purpose of this ection. (§ 2 ch 181 SLA 1990; am § 2 ch 90 SLA 1999)

Sec. 14.40.254. University revenue bonds. (a) Subject to AS 14.40.253, the board may issue revenue bonds to pay the cost of acquiring, constructing, or equipping a facility that the board determines is necessary.

(b) The board may enter into an agreement with a trustee or bond owner for the purpose of securing payment of revenue bonds issued by the University of Alaska to acquire, construct, or equip a facility that the board determines is necessary. The agreement may include the fixing and collection of fees, charges, or rentals pledged to secure payment of the revenue bonds and agreement regarding the use of the proceeds of the revenue bonds.

(c) The state pledges not to limit or alter rights vested under this section in the University of Alaska to fulfill the terms of a contract with revenue bond owners.

(d) The board may pledge revenue received by the University of Alaska as fees, charges, or rentals in order to secure payment of the revenue bonds. A pledge of revenue received by the University of Alaska is considered a perfected security interest and is valid and binding from the time the pledge is made. The pledge creates an immediate lien against property pledged without physical delivery or other act. (§ 1 ch 26 SLA 1991)

Sec. 14.40.255. Investment of surplus money. If the Board of Regents determines that there is a surplus of money, received in the form of state and federal appropriations, above the amount sufficient to meet current and projected cash expenditure needs of the university, the surplus must be invested as set out in AS 37.10.071. Income earned on investments made under this section may be retained by the university and expended in accordance with AS 37.07 (Executive Budget Act.) (§ 4 ch 143 SLA 1986; am § 5 ch 141 SLA 1988)

Sec. 14.40.257. Reimbursement for costs of capital projects. (a) Subject to appropriations for the purpose, during each fiscal year, the legislature may appropriate an amount to reimburse the University of Alaska for the cost to be paid by the university during that same fiscal year for the principal and interest on outstanding debt for the projects listed in (b) of this section.

Chapter 181

AN ACT

Relating to public finance, including lease-financing, and to the disposal of certain property; repealing certain lease-purchasing approval; and providing for an effective date.

---

* Section 1. AS 14.40.040 is amended to read:

Sec. 14.40.040. GENERAL POWERS OF THE UNIVERSITY. There is created and established a corporation to be called the University of Alaska. It may in that name

(1) sue and be sued;

(2) receive and hold real and personal property;

(3) contract and be contracted with;

(4) adopt, use, and alter a corporate seal;

(5) borrow money, issue debt, or enter into lo obligations, for the purchase of facilities, goods, or servic obligations may secure, in whole or in part, debt issued by party;

(6) do and have done all matters necessary for the of any function set out [FORTH] in this chapter.

* Sec. 2. AS 14.40 is amended by adding a new section to read:

Sec. 14.40.253. FINANCING NOTICE AND APPROVAL. If the U... ty of Alaska intends to enter into an obligation, except for refinancing obligations, under AS 14.40.040(5) with an annual payment by the university anticipated to exceed $1,000,000, the university shall

provide notice to the legislature. The notice must include the anticipated annual payment amount, the anticipated financing, and the total construction, acquisition, or other costs of the project. The university may not enter into an obligation requiring a financing notice under this section, other than a refinancing obligation, unless the project has been approved by the legislature by law. An appropriation for the project does not constitute approval of the project for the purpose of this section.

* Sec. 3. AS 18.55.255 is amended to read:

Sec. 18.55.255. DISPOSAL OF SURPLUS PROPERTY [PROCEDURE FOR SALE OF LAND]. The authority may convey real or personal property that it determines is in excess of its needs. Except as provided in (b) and (c) of this section, the sale [SALE OF LAND] shall be by public auction or by sealed bids at a price not lower than the fair market value determined by an appraisal made within 180 days before [OF] the sale by a qualified appraiser. Public notice shall be given by publishing notice of the sale at least once a week for two consecutive weeks in a newspaper of general circulation within the area in which the property to be sold is located and by posting notice of sale in at least two public places in the area. In no event may [SHALL] the auction be held less than 30 days after the last day of publication. If no acceptable bids are received the authority may sell the property at negotiated sale [,] within six months after [OF] the date of the auction. A negotiated sale may not be made on an appraisal made more than nine months before the date of sale. The price at a negotiated sale may not be less than the appraised value.

* Sec. 4. AS 18.55.255 is amended by adding new subsections to read:

PO Box 756540
Fairbanks, AK 99775-6540

March 24, 2009

The Honorable Representative Mike Kelly
State Capitol, Room 513
Juneau, Alaska 99801-1182

Dear Representative Kelly:

On behalf of the University of Alaska and President Hamilton, I offer this letter of support for House Bill 184: "An Act relating to debt authorization of the University of Alaska". My position is Controller for the University of Alaska and I oversee its debt function.

AS14.40.253 requires that when the University anticipates a financing will exceed $1.0 million in annual debt service, notice to and approval from the Legislature is required. This bill updates the statute for construction inflation by increasing that threshold to $2.5 million. I believe this bill will reduce the administrative impact to the University and Legislature for approving smaller debt issuances. At the same time, Legislative oversight is retained for relatively large debt issuances.

AS14.40.253 was originally issued in 1990 and construction inflation in Alaska has been steady since. In 1990, $1.0 million of annual debt service was about a $15 million capital project financing. Now, that same project costs about $40 million, or approximately $2.5 million in annual debt service.

The University has solid credit ratings from Standard and Poor's at AA-, and Aa3 from Moody's Investors Services. With $127 million in debt currently outstanding, the University is below half of the Board of Regents' debt policy limit of five percent of unrestricted revenues, or $317 million. The University's track record shows that it has used debt prudently and responsibly to further its strategic mission in the state.

I appreciate your support of House Bill 184. If there are any questions, please contact me.

Sincerely,

Myron J. Dosch

Myron Dosch

Subject: Re: Heads up HB 184

Derek -

To follow up on this morning's House Education Committee hearing on HB184.

All UA capital projects need capital project receipt authority regardless of the source(s) of funding.

Under AS14.40.253, if the capital project anticipates annual debt service over $1.0m, then notice _and_ approval is needed. The approval referred to here is not receipt authority, rather it is specific approval language that would need to be written into a bill. (This is why the statute says "An appropriation for the project does not constitute approval of the project for the purpose of this section.")

If the project anticipates annual debt service under $1.0m, AS14.40.253 does not apply. All that is needed is receipt authority. The university can issue debt without any special notice or approval.

Hope this helps,

Myron

Subject: HB 137 Compact: Education of Military Children

Follow Up Flag: Follow up
Flag Status: Blue

Chair Seaton and Members of the Education Committee,

I am writing to urge your support for this compact which will be heard by your committee Monday morning.

This compact will provide useful support to our military members and their families. Anchorage educates a large number of students of military families. Many of these families have major transitions during the year as parents are deployed or transferred to or from Anchorage. We work closely with Ft. Richardson and Elmendorf AFB to make these transitions easier, and this Compact will assist us in that process.

Sponsor Statement

House Bill 197

House Bill 197 opens the door to students and parents to pursue education more closely aimed at their interests. Across the state Charter Schools are working to decrease the number of dropouts and improve the quality of education. The problem is that most of these schools are located in our larger communities and only serve those communities.

HB 197 will change that by allowing for Open enrollment virtual charter schools to invite and accept students from other parts of the state that want to learn in a specific Charter School discipline. It also assists charter schools; some of which are struggling with limited enrollment numbers. While the charter language and education brings students into the classroom. It may not always provide enough students to meet ADM requirements. By expanding the number of students who may participate in the program the necessary funding formula becomes easier to reach.

HB197 brings Charter Schools into the 21st Century by combining classroom with the virtual electronic reality we have all come to accept as the new education enabler. Please support HB 197, its good for students and its good for a Charter School system this body has strongly supported over the years.

Sectional Analysis

House Bill 197

Section 1

AS 14.03.256 will expand a Charter Schools ability to enroll students from outside of the specific district they are serving. Students will be permitted to enroll at any time throughout the school year for online course that meet or exceed state education standards. School must provide the materials needed for the course work and establish individual learning plans for students. The goal for high school students is graduation and preparation for postsecondary programs that meet the need of the student. The course work requirement for the virtual charter school established specific guidelines for the school, the student and hopefully the parents.

It is expected that the school will exceed the requirements of minimum high school graduation. This will be accomplished through:

1. Direct engagement with the student and the student's parent to establish a learning plan.
2. assessments with results on coursework including a students progress.
3. an electronic means in which to access and review educational records by those authorized to review them.

Additional language in the section allows the school to contract with other educational entities to provide materials and support for the program.

Section 2

Restricts the counting of part time students enrolled in open enrollment virtual charter schools from local ADM figures.

Section 3

Changes the formula for enrollment from 150 students to 140 students in districts with more than 475 students.

ANALYSIS: *(Attach a separate page if necessary)*

This bill creates open enrollment throughout the year for virtual charter schools that are not correspondence schools by meeting specific requirements as defined in HB197.

In addition it would increase funding to charter and alternative schools with an Average Daily Membership [ADM] of 140 by giving those schools that qualify the ability to go through the school size formula independently.

The GF appropriation capitalizes on the Public Education Fund [PEF].

STATE OF ALASKA
THE LEGISLATURE

2006

Source
HCS CSSCR 28(HES)

Legislative Resolve No.
43

Relating to the innovative application of education technology tools to provide improved distance education programs in the state.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS education technology is rapidly developing to provide managed student access to unprecedented arrays of information on the Internet, including curricula, resource and reference materials, search engines, world news, communication, calculations, tables, definitions, and all student records; and

WHEREAS education technology is rapidly developing to economically provide powerful teaching tools that are capable of generating individualized student learning plans, supplemental and tutorial services, evaluations, communications, assignments, and learning problem diagnostics that can be available on the Internet at any time, from any place in the world, from any computer; and

WHEREAS education excellence is attainable by using a curriculum that encourages student discovery, innovation, and proficiency as ways to avoid merely teaching to the test and to prevent student boredom and teacher burnout; and

WHEREAS, according to a 2003 United States Bureau of the Census report, the state

leads the nation at 68.5 percent of our households connected to the Internet; and

WHEREAS the federal, state, and local contributions averaged $10,114 for each student enrolled in the state during the 2003-2004 school year; and

WHEREAS the state has the highest median cost for each student in the nation at $16,665, reflecting the high cost of education in rural Alaska; and

WHEREAS 37 percent of Alaska schools have less than 100 students, and 24 percent have less than 50 students, with many of the schools located in remote, rural settings; and

WHEREAS the results of the 2003 National Assessment of Education Progress, which is the state's only national and ongoing assessment of student reading and mathematics performance, reveals that performance is only at about 30 percent proficiency, which is at, or below, the national average; and

WHEREAS increasing demands have been placed on rural education programs in the state by the federal No Child Left Behind Act, including employment of highly qualified teachers, provision of supplemental services, and the requirement to restructure districts and to offer parental choice options; and

WHEREAS rural education challenges in the state include

(1) high teacher turnover rates;

(2) high costs of teacher housing;

(3) cultural differences between teachers and rural communities;

(4) the need to group a small number of students in small schools into 13 grade, ability, and interest levels;

(5) the difficulty of meeting the needs of isolated students with special needs and gifts; and

(6) the difficulty of providing special interest curriculum such as Native language education; and

WHEREAS public school facilities, employment needs, and related economic considerations are valued critical components of rural Alaska communities; and

WHEREAS the Alaska Department of Education and Early Development has continued to improve statewide assessment tools in response to legislative intent that provides an increasingly reliable measure of K-12 proficiency;

BE IT RESOLVED that the Alaska State Legislature encourages the innovative and

responsible application of education technology tools to improve distance education programs that will enhance rural education in the state; and be it

FURTHER RESOLVED that the Alaska State Legislature encourages local school boards and administrators to look for ways to regroup rural students, especially those in small schools, into virtual educational program groups selected for efficiency, skill and age level, and student and parent interest, and to use educational technology to provide quality teachers for these groups from a distance; and be it

FURTHER RESOLVED that the Alaska State Legislature encourages local school boards and administrators to provide the restructuring, choice, and supplemental services required for schools failing to achieve Annual Yearly Progress under the federal No Child Left Behind Act and state law, and to improve student proficiency as measured by the National Assessment of Education Progress; and be it

FURTHER RESOLVED that the Alaska State Legislature encourages reallocation of savings available from the efficiencies of scale from regrouping of students across rural boundaries to help pay for the application of educational technology while ensuring that rural remote school facilities and local employees are retained in the process; and be it

FURTHER RESOLVED that the Alaska State Legislature requests local school boards and administrators to apply for the grants available under AS 14.14.115 as a means of installing education technology; and be it

FURTHER RESOLVED that the Alaska State Legislature requests superintendents of public school districts to distribute copies of this resolution to each member of the district's school board.

COPIES of this resolution shall be sent to Al Weinberg, Superintendent, Alaska Gateway School District; Joe Beckford, Chief School Administrator, Aleutian Region School District; Dennis Maasjo, Superintendent, Aleutians East Borough School District; Carol Comeau, Superintendent, Anchorage School District; Brett Agenbroad, Superintendent, Annette Island School District; John Davis, Superintendent, Bering Strait School District; Richard Hebhardt, Superintendent, Bristol Bay Borough School District; Vance Cortez-Rucker, Superintendent, Chatham School District; Bob Crumley, Superintendent, Chugach School District; James Elliot, Superintendent, Copper River School District; Don Clark, Superintendent, Cordova City School District; Ron Erickson, Superintendent, Craig City

School District; Dan Beck, Superintendent, Delta/Greely School District; Dale Olson, Superintendent, Denali Borough School District; Arnold Watland, Superintendent, Dillingham City School District; Ann E. Shortt, Superintendent, Fairbanks School District; Jim Smith, Superintendent, Galena City School District; Woody Wilson, Superintendent, Haines Borough School District; Howard Diamond, Superintendent, Hoonah City School District; Bill Raduenz, Superintendent, Hydaburg City School District; Joe Banghart, Superintendent, Iditarod Area School District; Peggy Cowan, Superintendent, Juneau Borough School District; Eric Gebhart, Superintendent, Kake City School District; Gary Stevens, Superintendent, Kashunamiut School District; Donna Peterson, Superintendent, Kenai Peninsula Borough School District; Harry Martin, Superintendent, Ketchikan Gateway Borough School District; Richard Carlson, Superintendent, Klawock City School District; Betty Walters, Superintendent, Kodiak Island Borough School District; Marty Laster, Superintendent, Kuspuk School District; Steve Atwater, Chief School Administrator, Lake and Peninsula School District; William Ferguson, Superintendent, Lower Kuskokwim School District; John Lamont, Superintendent, Lower Yukon School District; Robert Doyle, Chief School Administrator, Mat-Su Borough Schools; Robert Thomason, Superintendent, Nenana City Schools; Stan Lujan, Superintendent, Nome Public Schools; Trent Blankenship, Superintendent, North Slope Borough Schools; Norman Eck, Superintendent, Northwest Arctic Borough Schools; Connie A. Newman, Superintendent, Pelican City Schools; Gary Jacobsen, Superintendent, Petersburg City Schools; Malcolm Fleming, Superintendent, Pribilof Schools; David Herbert, Superintendent, Saint Mary's Schools; Steve Bradshaw, Superintendent, Sitka Borough Schools; Michael Dickens, Superintendent, Skagway City Schools; Jim Nygaard, Superintendent, Southeast Island Schools; Jack Foster, Superintendent, Southwest Region Schools; Dorothy Jordan, Superintendent, Tanana Schools; Darrell Sanborn, Superintendent, Unalaska City Schools; Lance Bowie, Superintendent, Valdez City Schools; Susan Sciabbarrasi, Superintendent, Wrangell City Schools; Timothy MacDonald, Superintendent, Yakutat City Schools; Linda Evans, Superintendent, Yukon Flats Schools; Christopher Simon, Superintendent, Yukon/Koyukuk Schools; Joe Slats, Chief School Administrator, Yupiit Schools; Bill Denkinger, Director, Mt. Edgecumbe High School; and the Honorable Ted Stevens and the Honorable Lisa Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Table 1. Total revenues per pupil at the 5th, median, and 95th percentile cutpoints, federal range ratio, and numbers of districts and students for public elementary and secondary regular school districts, by state and independent charter school districts: Fiscal year 2006

State and independent charter school districts	Total revenues per pupil			Federal range ratio[1]	Number of districts	Number of students
	5th percentile	Median	95th percentile			
United States	**$7,349**	**$10,173**	**$21,048**	**1.9**	**13,766**	**48,097,541**

Independent charter school districts[2]	5,811	8,357	16,976	1.9	1,569	487,783

† Not applicable. The District of Columbia and Hawaii consist of one school district each.

[1]The federal range ratio indicates the difference between the amount per pupil of the district at the 95th percentile and the district at the 5th percentile divided by the amount per pupil for the district at the 5th percentile.

[2]All associated schools are charter schools.

NOTE: How to read this table: Using Alabama as an example, this table shows that 5 percent of school districts have total revenues per pupil of $7,267 or less. If all school districts were listed by size of total revenues per pupil, the district at the midpoint (median) would have total revenues per pupil of $8,190. Five percent of school districts have total revenues per pupil of $10,739 or more. The federal range ratio shows that the total revenues per pupil for district at the 95th percentile are approximately 50 percent higher than the total revenues per pupil for district at the 5th percentile. National figures do not include independent charter school districts. National and state figures include charter schools that are affiliated with regular school districts. Only regular school districts matching the Common Core of Data (CCD) "Local Education Agency Universe Survey" and with student membership greater than zero were used in creating the national and state figures; 92.1 percent of all school districts met these criteria. Independent charter school districts matching the Common Core of Data (CCD) "Local Education Agency Universe Survey" with revenues greater than zero and expenditures greater than zero were included in the charter school analysis; 97.6 percent of charter school districts met these criteria.

*** Sec 3. AS 14.17.600(a)** is amended to read:

Sec. 14.17.600. Student counting periods.

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that counting period and other student count information that will aid the department in making a determination of its state aid under the public school funding program. For [*centralized correspondence study*] **public schools that operate an open enrollment year around program**, the October report shall be based on the period from July 1 through the fourth Friday in October. The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

*** Sec. [*3*] 4.** AS 14.17.905(b) is amended to read:

NACOL
North American Council for Online Learning

PARTNERSHIP FOR
21ST CENTURY SKILLS

Introduction:

Online learning through virtual schools is one of the most important advancements in attempting to rethink the effectiveness of education in the United States. The virtual school provides access to online, collaborative and self-paced learning environments – settings that can facilitate 21st Century skills. Today's students must be able to combine these skills with the effective use of technology to succeed in current and future jobs.

The full promise of virtual learning is dependent, however, on its ability to incorporate 21st century skills in its instructional design, delivery and implementation. Virtual school leaders, administrators and teachers must ensure that students who learn in online environments are gaining the skills necessary to compete as citizens and workers in the 21st century. This document attempts to articulate a vision for 21st century learning in virtual schools, and identify ways in which online learning can improve outcomes for all students.

The Case for 21st Century Education:

In an increasingly competitive global economy, it is not enough for students to acquire subject-level mastery alone. Skills like creativity, problem-solving, communication and analytical thinking are necessary for all levels of success, from entry-level jobs to engineering and technical fields. However the U.S. K-12 education system as a whole does not yet teach and measure these skills directly. Some sobering statistics:

- Eighty-four percent of employers say K-12 schools are not doing a good job of preparing students for the workplace; 55 percent say schools are deficient in preparing students with basic employability skills (such as attendance, timeliness and work ethic); 51 percent cite math and science deficiencies; and 38 percent cite reading and comprehension deficiencies.[i]
- A very small percentage of 4th and 8th grade students US students (less than 30%) perform at a proficient level in math, while up to 20% lack the competence to perform even basic mathematical computations.[ii]

The implications of such trends are troubling:

5477

- **U.S. students are falling behind their peers internationally.** We can no longer claim that US educational results are unparalleled. Students around the world outperform American students on assessments that measure 21st century skills.
- **U.S. innovation is falling behind.** Innovation and creativity no longer set US education apart. Innovators around the world rival Americans in breakthroughs that fuel economic competitiveness.
- **Workplace jobs and skill demands are not being satisfied.** Leading high tech employers routinely lament the lack of a skilled workforce for the jobs of today, and are alarmed by the prospect of filling the jobs of tomorrow.

If our students are going to compete successfully in the global economy, more must be done to support their acquisition of 21st century skills. Without this shift in educational priorities, the prospects for our students—and our nation—will be diminished significantly.

The Case for Virtual Schools

E-learning is already a major driver for education and training beyond K-12 in higher education, employee training and lifelong learning. In higher education, the Sloan Consortium reported that 2.5 million students enrolled in at least one class online in 2004, equivalent to 11% of all students in accredited degree-granting institutions. Growth in online higher education programs steadily increases by 400,000 students annually. (Source: Sloan Consortium)

Online learning is an essential delivery system for training in the business world. Many corporations today use e-learning for training employees:

- 77% use distributed learning*, up from 4% nine years ago—73% increase in less than a decade!

Why do they spend money on distributed learning?

- A 60% faster learning curve.
- IBM's Basic Blue management training: 2284% ROI
- Motorola: $30 in productivity gains for every $1 spent over 5 years.
- Union Pacific: performance increase of 35%. (Source: ThinkEquity Partners, Emerging Trends in Post-Secondary Education: The View to 2012, Dec. 2002. *Distributed learning is online learning alone or blended with multi-media and/or traditional methods.)

21st Century Data through Learning Management Systems

Online delivery through learning management systems can improve data-driven decisions and strengthen the school to parent connection. Online learning allows rich data environments to better inform instructional and administrative decision-making to improve student achievement. Learning

management systems include tools that allow parents to view grades, completed or incomplete assignments, teacher feedback, and updates or announcements from teachers. While most middle or high school parents in traditional school settings will admit that they know very little about what goes in during the school day, parents of online students can be as involved as they want to be at the click of a button. As the use of learning management systems grows for online learning, it is quite conceivable that their use will also grow in traditional settings—especially as the lines between online learning and traditional learning continue to blend.

Increasing Opportunities for All Students

In the United States, 40% of high schools do not offer a full college preparatory curriculum. Schools lacking advanced courses are more likely to be in rural or low income communities. Students have more choices and increased access to educational excellence through online learning. Students seeking high quality math, science, foreign languages and other courses that may not be available locally, now have the ability to enroll online.

In addition, students have many choices for personalizing and individualizing instruction to meet their needs. For example, at Florida Virtual School, these options include what month of the year they want to start, what time of day they want to work, where they want to work, and they even have choices about how to respond to assignments. Students may have the option to demonstrate mastery through a PowerPoint presentation, a podcast, a traditional essay, or through the creation of a website. These kinds of options give students the opportunity to shine in their areas of strength.

Do Virtual Schools Produce 21st Century Outcomes?

Mastery of 21st century skills occurs through intentional instructional design, direct instruction of quality curriculum and meaningful assessments—regardless of whether the students complete courses online or in a brick and mortar building. Virtual schools inherently are well-equipped to provide expanded and innovative learning opportunities. It is critical that virtual school leaders embrace a 21st century skills vision for all those who are teaching and learning online to build on their strengths and achieve outcomes that matter for their students.

Virtual school leaders, in course design and quality standards, should include 21st century skills directly, intentionally and measurably. Many programs use high quality course design standards. Ensuring that 21st century skills are included in the standards is essential.

Imagine a geography course online. The assignment requires students to work in teams to identify the best possible location for a new public park in a

given city, using GPS mapping software and online research databases. Students must collaborate with their team members online, delegate tasks and co-author a PowerPoint presentation making their case. They are assessed not only on factual knowledge, but also on being able to analyze information, solve problems, collaborate and communicate effectively. Formative assessments build toward the final project.

Imagine, now, a "traditional" teacher interested in acquiring the skills to facilitate such an exciting and supportive learning environment for students. Perhaps this teacher would collaborate with a middle school or high school language teacher. Both teachers would require professional development in how to move into the online environment, to successfully facilitate students to work together, to develop content knowledge and application, and to develop thinking skills that are not limited to a single content area. Professional development of current teachers and preparation of future teachers requires re-thinking in order to ensure student success in life and work.

Virtual Schools and 21st Century Skills

Virtual schools and online learning is growing rapidly – an estimated 30% annually in K-12 education. Recent research highlights that virtual schools expand access to rigorous academic courses and curriculum; and, training teachers to teach online can improve instruction. When virtual schools intentionally focus on student mastery of 21st century skills, these schools take full advantage of their inherent strengths. They enable:

Global Awareness

In 21st century communities, neighborhoods and workplaces, an understanding of world cultures and the ability to relate to individuals from diverse backgrounds are required skills. Students in online learning environments are well-equipped to develop these skills because they have access to greatly expanded networks of people. Students can easily work with and learn from individuals from all over the world, leading to enhanced awareness of the global nature of communities in the 21st century.

One example of this is the online Chinese Language course offered by the Michigan Virtual High School (MVHS). It is a semester-length course that introduces both language and culture to beginning Chinese language learners. A qualified native Chinese-speaking instructor, with expertise in second language learning teaches the MVHS course. The course employs a task-based language-learning curriculum that focuses on enhancing basic communication skills and cross-cultural, global awareness and understanding. This online course uses a combination of self-study and virtual meeting modules, and is

designed around four components: an e-textbook, a group problem-solving project, IP-based audio conferencing and discussion, and a group writing project.

Self-Directed Learning

The fast-paced nature of the knowledge economy means that citizens and workers must know how to continue learning throughout their lives and careers. Directing one's own learning path is not only valuable, but necessary, in the 21st century. Online learning environments provide ample opportunities for self-paced and self-directed learning, reinforcing these necessary skills. Virtual schools are unique in their abilities to empower students in making flexible, individual choices based on their own interests and schedules.

> "I think that students should take online courses because it teaches them how to be independent about their studies. I feel that it helps you out with college in the long run. College is more independent than high school and online classes do help." – Colorado Online student

For example, at Florida Virtual School students can choose the rate at which they will complete courses, ranging from a traditional 36-week school year to a reduced or extended time frame depending on individual needs. In doing this, students learn to effectively manage their time, using the module or unit organizers provided in each course and customizing them to fit their unique needs. Since students are able to complete and submit assignments at any time of the day or night, any day of the week, they enjoy significant flexibility while still being held accountable for the end product by instructors. This is a model not unlike the working world of today, where telecommuting and virtual offices are a reality, but accountability and quality expectations for the end product remain high.

Information and communications technology (ICT) Literacy

The rate at which new information becomes available today is astounding when compared to previous decades. In order to succeed in the 21st century, students must master the ability to use appropriate technologies to process, analyze and present information efficiently and effectively in school, life and work settings. Because virtual schools require students to master technology as part of their everyday learning, students are able to exercise and refine their 21st century technology skills in settings that are quite similar to those they will encounter in the real world.

Today's graduates must be adept with the tools of collaboration and communication that are the reality of a global, web-driven workplace. Online learning affords unprecedented opportunities for students to complete their work using applications that are common to today's workers, such as web-based conferencing, project management, or digital media and communications tools.

> "In an online class, the student must learn a host of technical skills such as posting to discussions, attaching documents, and accessing online whiteboards. This teaches self sufficiency and basic computer skills regardless of what class they are taking. Although I teach algebra, my online students learn much more than just the algebra curriculum. They're learning other valuable skills that prepare them for the 21st century." – Matt Vangalis, Florida Virtual Online Algebra teacher

Problem Solving Skills

All citizens and workers in the 21st century must be able to think analytically and solve problems if they are to be successful—whether they are entry level employees or high level professionals. Virtual schools are uniquely suited to enhance these skills because they rely upon competency-based learning models that focus on demonstrable knowledge and skills, not seat time. Further, problem-solving most often requires team or group thinking and development, skills that are routinely developed in online courses.

Such an approach is illustrated by Florida Virtual School, which designs curriculum and teaching practices around the idea of using problem solving skills and real world applications. For example, in a Geometry class, students are directed to complete a project which requires some real world architectural skills. After sharing digital examples of floor plans and blueprints, students are directed to draw a front view of a home. In another assignment, students learn about slope, pitch, rise, and run as they directly relate to local buildings.

Time Management and Personal Responsibility

Skills like problem solving are practically meaningless if students cannot manage their time efficiently and productively. Virtual learning environments encourage students to hone these important life skills. Online classes are structured in ways that require students to be effective in managing their time and responsibilities. Collaborative assignments and tools allow students to coordinate and communicate within groups to delegate tasks and meet deadlines efficiently. All of this reinforces the student's ability to manage his/her

> "The hardest part about taking an online course is staying up to date. This course taught me more self-discipline in one semester than in all of my other years combined." – Colorado Online student

own workload in ways that reflect real world working environments.

It is important to note, however, that while most virtual schools have enormous potential to enhance 21st century learning, this potential can be realized only if online students are taught these skills in intentional and measurable ways. It is imperative that all students of virtual schools master the skills that are necessary for success in work and life in the 21st century.

Principles - 21st Century Virtual Schools

We believe that 21st century learning is critical to virtual schools. We believe:

- The framework identified by the Partnership for 21st Century Skills should be integrated, wherever possible, into all aspects of virtual school curriculum, instruction and assessment.
- Online students should be expected to demonstrate mastery of 21st century skills as a distinct outcome of their educational experiences.
- Virtual school teachers should be provided with appropriate opportunities to learn effective techniques and best practices for teaching 21st century skills in online environments. Pre-service teachers should have these skills within the course of preparation.
- Collaboration among leaders of virtual schools and those advocating for 21st century skills is vital to producing enhanced learning opportunities for students who are learning online today.

Action Steps – 21st Century Virtual Schools

The following action steps are proposed for virtual school leaders and advocates:

- Ensure that online courses are designed to teach students 21st century skills in direct and measurable ways.
- Project- and portfolio-based assignments must include 21st century skills as outcomes.
- Ensure that online teachers can access a well-designed professional development strategy for online instruction of 21st century skills.

- Identify and employ all applicable high-stakes and formative classroom assessments that can be used in online environments to measure 21st century skills.

- Pursue collaborative efforts with others who are working to integrate 21st century skills into K-12 education: national and state education leaders, community leaders, district leaders, school leaders, etc.

Conclusion

Online learning through virtual schools is one of the most important advancements transforming education in the U.S. It is imperative that 21st century skills be incorporated into the design, delivery and implementation of virtual schools. By expanding access to high quality, rigorous academic courses teaching 21st century skills, we can expand the opportunities for all students. Both P21 and NACOL share a vision of the future of K-12 education that will increase access to educational excellence for all students, teach 21st century skills and improve outcomes for a 21st century society.

Appendix 1: Example

Broward County Public Schools, in partnership with Florida Virtual School, uses online learning in middle and high schools to develop global awareness, self-directed learning, information and communications technology literacy, problem solving, time management and personal responsibility in our student population. An online AP and Honors American History course included:
* Real world problem solving
* Evidence of strong collaboration
* Extensive and varied measures for evaluation

The project increased 21st century skills and created opportunities for students by offering advanced placement and honors courses online. The online courses allowed the students a non-traditional approach to demonstrating content mastery via a wide array of submission styles. The assignment formats consisted of, but were not limited to: timelines, poetry, essays, use of graphics, images and pictorial essays, discussion groups within the class, and a group thematic multimedia presentation. The online courses were designed to deliver rigorous, interesting, web-based, and interactive course content. The curriculum of the project centered on the events of World War II for both the United States and Japan. Through this collaborative project, Japanese and American students had the opportunity to engage in a healthy discourse regarding these topics via videoconferencing and email interaction. Special attention was paid to Japanese-American internment, as well as our present relationship with Japan.

Using videoconferencing technologies, Broward County's Pompano Beach High School students studying Japanese as a foreign language, and their teacher Satako Sagne Fisher, acted as interpreters enabling online students to interact with Japanese high school students in Chiba, Japan. Use of information and communication technologies also provided opportunities for local guest speakers: a Japanese-internment camp prisoner, a Holocaust survivor, and a professor of Asian Studies from Nova-Southeastern University, to videoconference and discuss and debate the similarities and differences between the two confinements during the Second World War with students. Guest speakers also discussed survival stories from both the European concentration camps and the Japanese-American internment camps.

There were four different groups of students who participated in the project: students in Chiba, Japan; online students from Broward Virtual School; and traditional students from both Pompano Beach and Coral Springs high schools. During the course, students presented multimedia presentations they created to understand curriculum themes within the AP and honors

American History courses. These multimedia presentations were subsequently housed on a district server and included as both online and traditional course content for future teacher and student use. Emphasis was placed on core curriculum, problem solving and real-world application.

This project, while researching and studying the social science curriculum of World War II using online course content and technologies, had a deeper rationale. Incorporated into the fabric of this project was a desire to build a bridge across the cultures between students from both countries. By using online and videoconferencing technologies, students of these two countries collaborated "face to face" in an effort to form a dialogue of mutual respect and understanding that created new content and encouraged cultural awareness.

This project was subsequently the recipient of the 2004 Cisco Growing with Technology Award for Innovative Use of the Internet and the 2005 United States Distance Learning Association Bronze Award for Videoconferencing and Online Teaching.

Sponsor Statement
House Bill 204

An Act increasing the number of students pursuing a medical education who are provided postsecondary educational services and programs; and providing for an effective date

The intent of House Bill 204 is to help ensure that Alaska has an adequate supply of doctors to meet the health care needs of its citizens. It would expand the number of Alaskan students able to receive medical training through the Wyoming, Washington, Alaska, Montana, and Idaho (WWAMI) program each year from 20 to 24. This is the maximum number that the University of Alaska can accommodate within its existing facilities and with its current faculty. Expansion of this program over time to train 30 Alaskan students annually is one of the primary recommendations of the Alaska Physician Supply Task Force.

This task force was established to address the severe shortage of doctors in Alaska. In its 2006 report, the task force found that Alaska has 375 fewer doctors than needed and the 17th lowest physician-to-population ratio in the nation. This shortage is undermining Alaskans' access to health care and increasing costs throughout the state. Seniors are having particular difficulty finding primary care physicians, causing many to forego treatment or face dangerously long wait times. Internal medicine specialists and psychiatrists are in especially short supply as are doctors of all types in rural Alaska.

This shortage is expected to worsen as Alaska's population increases and ages. The task force reported that over the next 20 years, nearly twice as many practicing physicians will be needed – about 1,100 more than the current 1,347 in patient care – to meet demand as the state's senior population triples. To complicate matters, one-third of our existing physicians are expected to retire in the next 10-15 years.

Additionally, Alaska is far behind other states in the production of doctors. Alaska is one of six states without an independent in-state medical school. The state's primary vehicle for training doctors is the regional WWAMI program. In 2007, the legislature expanded the number of Alaska-funded seats in the program from 10 to 20. This bill continues the incremental expansion of the program as it has been shown to be an effective means of recruiting doctors to the state. Fifty percent of Alaskans who enter WWAMI end up practicing in Alaska. The percentage increases to 80% when graduates from other WWAMI states are counted as returned.

As the national supply of physicians shrinks, recruitment of doctors to Alaska will become ever more competitive. Expanding the number of Alaskans trained through WWAMI is one effective step the state can take to ensure that all Alaskans have access to needed health care.

5488

I respectfully request favorable support of House Bill 204.

ANALYSIS: *(Attach a separate page if necessary)*

HB204 proposes to facilitate the expansion of the annual class size of Alaskan participants in the Washington, Wyoming, Montana, Idaho, and Alaska regional medical education program at the University of Washington School of Medicine (UWSM). Using cost projections provided by UWSM, this fiscal note reflects additional general fund expenses assuming the annual class size is increased from 20 to 24 participants effective 2011, with the first twenty-four-student cohort entering the program in fall 2010. The first year of the program is conducted at the University of Alaska Anchorage, and, therefore, first year fiscal impacts are not reflected herein. The increased costs in the ACPE budget take affect when the first class of 24 begin their second year of training at UWSM.

Alaska Commission on Postsecondary Education

(Revised 9/10/2008 OMB)

Alaska's Shortage of Doctors

- Alaska faces a severe shortage of doctors. A 2006 report from the Alaska Physician Supply Task Force estimates that Alaska has 375 fewer doctors than needed.

- Alaska ranks 17th lowest in the nation in terms of its physician-to-population ratio with 2.05 doctors per thousand residents compared to the national average of 2.38 per thousand.

- This shortage is affecting access to care throughout the state and increasing costs. Patients with Medicare are having particular difficulty finding primary care physicians. Many face dangerously long wait times to see a doctor.

- The shortage is likely to worsen over the next 20 years as Alaska's population increases and ages. Experts predict that by 2025, nearly twice as many physicians in practice will be needed – about 1,100 more than the current 1,347 in patient care – to meet expected demand as the state's elderly population triples. To complicate matters, one-third of the physicians in Alaska are expected to retire in the next 10-15 years.

- To correct this deficit and reach an adequate supply of doctors by 2025, Alaska needs to add more than 60 physicians per year. Unfortunately, as the national supply of physicians shrinks, recruitment will become even more competitive.

- Alaska also lags far behind other states in the production of doctors. We are one of six states without an independent in-state medical school.

- We do, however, fund 20 seats at the regional WWAMI medical school. One of the primary recommendations of the Physician Supply Task Force is to incrementally increase the number of Alaska-funded WWAMI seats to 30.

- SB 18 calls for the increasing the number to 24 as that is all UAA can handle in its current facility and with existing faculty.

- 50% of Alaskan students who enter WWAMI end up practicing in Alaska. The percentage increases to 88% when WWAMI graduates from other states are included.

- Building in-state capacity for medical education will help make Alaska more self-sufficient and less susceptible to outside factors that can undermine the health of Alaskans.

- Expanding the WWAMI class is one of many strategies being proposed to address this problem. Others include instating a loan repayment program (such as that proposed in SB 139), increasing support for residency programs in Alaska, and expanding training programs for mid-level practitioners, such physician's assistants.

- A combination of strategies is likely to achieve the greatest success for Alaska as we compete nationally for doctors and other health care providers.

WWAMI *is* Alaska's Medical School!

UNIVERSITY *of* ALASKA
ANCHORAGE

WWAMI is a collaborative medical school among universities in five northwestern states (**W**ashington, **W**yoming, **A**laska, **M**ontana, and **I**daho) and the University of Washington School of Medicine.

The Alaska WWAMI Program began at the University of Alaska Fairbanks (as WAMI) in 1971. The program moved to the University of Alaska Anchorage in 1989. Historically, ten Alaska residents were admitted to the Alaska WWAMI program each year. However, through the combined efforts of the Alaska WWAMI Program, the University of Alaska, and the Alaska legislature, the Alaska WWAMI class size has been doubled.

The Alaska WWAMI Program now admits 20 students per year!

Students apply to the **University of Washington School of Medicine**; upon admission, Alaska's WWAMI students complete their first year of medical school at the **University of Alaska Anchorage**. The first year of training includes courses in basic sciences and an introduction to clinical medicine.

Students from all five WWAMI states attend second-year courses at the University of Washington School of Medicine in Seattle. The third and fourth years of the medical school curriculum are comprised of "clerkships"--rotations in the various medical specialty areas. These clerkships may be taken in any of the five WWAMI states. Students who choose the "Alaska Track" can take nearly all of these clerkships in Alaska.

Alaskans can now complete approximately
3 of the 4 years of medical school in Alaska!

Alaska WWAMI Payback Obligation

The education of all Alaska WWAMI medical students is subsidized by the State of Alaska via payments to the University of Washington School of Medicine. The State of Alaska views these subsidies as loans that are repayable once medical education is complete. Loan repayment can be deferred during residency training. Repayment can take two forms. The loan can simply be repaid in regular payments, or it can be forgiven by medical practice in the State of Alaska. For Alaska WWAMI medical students who entered medical school in the fall of 2007 or later, complete loan forgiveness requires three (3) years of medical practice in a rural setting in Alaska or five (5) years in an urban location in the state.

WWAMI Overview and Frequently Asked Questions (FAQs):

WWAMI Overview

WWAMI provides Alaska residents with high quality medical education. WWAMI is a collaboration among universities in five northwestern states (Washington, Wyoming, Alaska, Montana and Idaho) under the overarching administration of the University of Washington School of Medicine (UWSOM). After admission, Alaska students attend the University of Alaska Anchorage for the 1st year of medical school. Students attend the 2nd – 4th years of medical school at UWSOM with 3rd and 4th years including opportunities for training rotations throughout the region.

Each year 20 Alaskans are admitted to Alaska WWAMI. Alaska's WWAMI medical students take their first-year courses at the University of Alaska Anchorage. Students from all WWAMI states take second-year courses in Seattle. The series of clinical clerkships that comprise the third and fourth years of the curriculum may be taken in any of the five WWAMI states. The "Alaska Track" allows students the option to take nearly all of these clerkships in Alaska.

The Alaska Commission on Postsecondary Education (ACPE) is the fiscal agent for the State of Alaska which funds Alaska's WWAMI participation and is the servicer for the WWAMI loan obligation.

WWAMI FAQS

Who should Alaskans contact if they are interested in information about the WWAMI program?
The Director of the WWAMI program at the University of Alaska Anchorage can be contacted at 3211 Providence Drive Engr 331, Anchorage, AK 99508. The e-mail address is aywwami@uaa.alaska.edu and the phone number is (907)786-4789.

How are new participants selected for participation in the WWAMI program?
Each year the Alaska WWAMI and the UWSOM Admissions Committees work together to interview and select 20 Alaskans for the program. The Alaska WWAMI office at UAA certifies an applicant's eligibility for the program based on responses to an Eligibility Questionnaire. Once an Alaska applicant is admitted, ACPE is prompted to send the individual the WWAMI service obligation Master Promissory Note (MPN) and a related cover letter. Individuals who accept the offers of admission must sign the MPN and return it to ACPE by July 30, prior to beginning their program of study.

What is the annual WWAMI repayment obligation based upon?
During the first year of medical school at University of Alaska Anchorage, the principal balance of the loan will be zero. However, by signing the WWAMI Master Promissory Note, each participant has entered into a loan contract and will have a loan repayment obligation for their second, third, and fourth years of medical school at UWSOM. In accordance with state statute governing the WWAMI program, the financial support to be repaid is equal to 50 percent of the amount the State pays to UWSOM, on behalf of the participant, plus interest.

How is Alaska's payment disbursed to UWSOM?
ACPE annually issues a single warrant to UWSOM to cover the entire amount the State pays for Alaska's contractual costs for the program. An annual Notification of Award letter is sent to each participant advising them of the amount of their financial obligation for the related program year.

How does the service obligation discharge a WWAMI participant's financial obligation?
The participant who successfully completes the graduate education program for which the financial support was provided and is employed within Alaska in a qualifying medical residency program or other qualifying professional medical practice and who is otherwise qualified shall have the outstanding principal[1] and accrued interest forgiven and considered a grant in accordance with the following percentages:

(1) for employment in rural[2] areas of the state,
  (a) up to three years of employment, 33 1/3 percent for each year;

[1] No amount due and payable prior to the participant entering deferment or forgiveness-qualifying employment is subject to forgiveness.
[2] "Rural" is defined in Alaska law as a community with a population of 7,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of 3,500 or less that is connected by road or rail to Anchorage or Fairbanks.

(2) for employment in areas of the state that do not qualify under the program definition as rural,
(a) up to five years of employment, 20 percent for each year.

Participants employed as physicians in the state must immediately notify ACPE of the date their qualifying employment began. ACPE will make available to the participant the necessary forms for documenting completion of each annual period of documenting employment until such time as the obligation is fully discharged.

What are the impacts on my forgiveness benefits if I move from a rural to a non-rural community while performing my qualifying service, or vice versa?
Participants who initially practice medicine in a rural community will receive their first forgiveness of 33 and 1/3 percent of the loan after their first year of practice. If the participant should then choose to move to a non-rural community and practice medicine, he or she will then receive forgiveness benefits of 20 percent of the remaining loan amount for each year they practice medicine until the balance of the loan is forgiven. The same is true for a participant who practices medicine in a non-rural community and receives forgiveness of 20 percent of the loan and then moves to a rural community to practice medicine. The subsequent forgiveness will be for 33 and 1/3 percent of the remaining loan balance until the loan balance is forgiven.

Forgiveness Benefit	Forgiveness % for all rural practice	Forgiveness % for 2 years of rural practice	Forgiveness % for 1 year of rural practice	Forgiveness % for all non-rural practice
1	33 1/3%	33 1/3%	33 1/3%	20 %
2	66 2/3%	66 2/3%	53 1/3%	40%
3	100%	86 2/3%	73 1/3%	60%
4		100%	93 1/3%	80%
5			100%	100%

Are participants required to make payments while engaged in employment which satisfies their WWAMI service obligation?
Generally not. It is critical for a participant to immediately advise ACPE of qualifying employment. Once ACPE is in receipt of documentation the participant is in full-time, qualifying employment in Alaska, the repayment requirement will be deferred. The deferment continues until either the entire period of service is completed or the participant ends the full-time employment or leaves the state, whichever occurs first. However, if a participant enters otherwise qualifying employment after the start of repayment and has past due payments, that participant must pay the loan obligation current **before the employment will be considered part of the qualifying period.** Additionally, those payments made prior to entering into qualifying repayment will not be subject to forgiveness.

Who is required to repay a WWAMI loan?
Any participant who fails to fully satisfy the terms of their service obligation is required to repay their outstanding WWAMI financial obligation plus accrued interest. The obligation converts to a regular loan status at the time the participant fails to qualify for a permitted deferment and the active repayment period begins. In the event a participant is in active repayment for a period of time and thereafter enters qualifying employment, any amount of the loan obligation which was not yet due and payable may be deferred and subsequently be subject to forgiveness in the increments noted above.

Will ACPE facilitate payment arrangements for participants in a contractual arrangement with a third-party organization for payment of their WWAMI loan?
ACPE cannot facilitate payment arrangements or otherwise bill a third party but will accept payment on behalf of the borrower from any source.

What repayment deferment provisions are available to WWAMI participants?
In addition to the qualifying employment deferment, WWAMI participants are eligible for deferment:

- while enrolled in a medical education residency program or fellowship required for their specialty field of practice;
- while performing a service obligation to the National Health Services Corps, the Indian Health Service, or a Uniformed Services Scholarship Program; or,
- while totally, temporarily disabled.

What if a WWAMI participant is in a medical education residency program in Alaska?
WWAMI participants in an Alaska medical education residency program can claim that period of service as qualifying under their WWAMI obligation so long as they hold an Alaska medical license or residency permit and have proof of full-time employment for the relevant period.

Alaska State Medical Association

4107 Laurel Street • Anchorage, Alaska 99508 • (907) 562-0304 • (907) 561-2063 (fax)

February 24, 2009

Honorable Kim Elton
Alaska State Senate
Chair, Senate Education committee
Capitol Room 506
Juneau, Alaska

RE: SB 18 – Increase WWAMI Class Size

Dear Senator Elton:

The Alaska State Medical Association (ASMA) represents Alaska physicians statewide and is primarily concerned with the health of all Alaskans.

ASMA supports SB 18 and urges you and the Senate Education Committee to support it as well.

ASMA has long supported increasing the WWAMI class size and worked hard several years ago to double the matriculants from 10 to 20 per year. In fact, ASMA has had a policy to increase the class size to 30 when it is practicable to do so.

It is ASMA's understanding that a sponsor substitute will be offered to only include the first step to increasing the class size to 24 (from 20). ASMA has been told by the bill sponsor's, Senator Wielechowski, staff that the University of Alaska will be more comfortable to increase the class size in steps. ASMA understands and appreciates the many considerations that the University as well as the University of Washington Medical School need to factor in so that a quality medical education is provided. They are the ones best suited to comment on those factors.

ASMA supports the "step" process with first going to a 24 member class size. However, ASMA still supports going to 30 when it is practicable and feasible to do so.

Finally, "growing" our own physicians, we believe, will help in attracting and retaining physicians to practice in Alaska. However, we are still going to have to make a concerted effort to recruit physicians from other parts of the country to meet with Alaska's need for well trained physicians to provide the health care necessary for all Alaskans.

Sincerely,

Thomas P Vasileff

By: Thomas P. Vasileff, MD, President
For: The Alaska State Medical Association

February 26, 2009

The Honorable Kim Elton, Chair
Senate Education Committee
Alaska State Capitol, Room 506
Juneau, AK 99801-1182

RE: SB 18 (Wielechowski)--Support

Dear Chair Elton:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Education Committee to support SB 18, authored by Senator Bill Wielechowski and co-sponsored by Senators Ellis, Thomas, and Paskvan.

It is no secret that Alaska has a shortage of physicians which is expected to get worse over the next few years. AARP members in many Alaska communities already tell us that they are unable to find a physician who will accept them as Medicare beneficiaries.

The one bright spot in this shortage is the WWAMI program which has traditionally provided ten slots for family practice physicians to spend their residency in Alaska. Senator Meyer's bill last year increased the number to twenty. Upon completion of their medical education, most of these physicians have chosen to stay here and practice in our cities as well as in our remote communities.

You and your Senate Committee colleagues have seen the Alaska Physician Supply Task Force report produced jointly by the University of Alaska and the Department of Health and Social Services. This excellent report should serve us as a roadmap for our future directions in physician training.

The former exodus of Alaska retirees has been reversed over the past few years. Because of our improved health services and provider community, older Alaskans have determined that they can remain here after retirement, close to their friends and families.

If older Alaskans are unable to find a physician willing to see them, we will be back with the situation of retirees leaving the state so they can be assured of access to health professionals.

SB 18 offers us another real meaningful opportunity to begin to meet this need. Adding another four family practice residents to twenty-four won't solve our problem but it is an excellent step to address our long term needs for an expanded physician workforce.

Our AARP members, your constituents, want to stay here after retirement. An affirmative vote on SB 18 will help accomplish that.

Jennie Chin Hansen, President
William D. Novelli, Chief Executive Officer

Honorable Nancy Dahlstrom
Alaska State House
Capitol, Room 411
Juneau, Alaska

RE: HB 204 – Increase WWAMI Class Size

Dear Representative Dahlstrom:

The Alaska State Medical Association (ASMA) represents Alaska physicians statewide and is primarily concerned with the health of all Alaskans.

ASMA supports HB 204 and thanks you for taking the leadership and initiative in introducing it.

ASMA has long supported increasing the WWAMI class size and worked hard several years ago to double the matriculants from 10 to 20 per year. In fact, ASMA has had a policy to increase the class size to 30 when it is practicable to do so.

Finally, "growing" our own physicians, we believe, will help in attracting and retaining physicians to practice in Alaska. However, we are still going to have to make a concerted effort to recruit physicians from other parts of the country to meet with Alaska's need for well trained physicians to provide the health care necessary for all Alaskans.

Sincerely,

Thomas P. Vasileff

Our view: Attracting doctors

Legislature can raise Alaska's stake in competition for docs

(03/10/09 18:54:04)

Alaska's shortage of primary care doctors has been described as grim. A study two years ago found we needed 400 more doctors to provide the same level of care as is available elsewhere in the country. One result is that few doctors will accept the low rates paid by Medicare, the government insurance for those 65 and older. It's a horrible situation for Alaska's senior citizens.

Two bills introduced during this legislative session would help relieve the shortage of doctors and other health care workers, and both are worth passing.

Senate Bill 18 would increase the number of state-subsidized medical students in each class of the WWAMI program operated through the University of Washington. Alaska WWAMI students spend their first year of study at UAA.

These students offer an excellent return -- according to the Alaska Physician Supply Task Force study in late 2006, half of Alaska WWAMI students end up practicing in the state, and a few WWAMI students from other states join them.

The state raised the number of Alaska WWAMI students in each class to 20 in 2007.

SB 18 would increase the number by a modest amount, to 24. That's the most UAA can accommodate without incurring expensive overhead costs, said Sen. Bill Wielechowski of Anchorage, the bill's sponsor.

Adding the four students would cost the state little to no money the first year. But by the fourth year, when we would have an additional 16 Alaska students in med school, the state cost is estimated at $550,000 per year.

A second bill, SB 139, calls for the state to pay financial incentives to already-qualified doctors, nurses or other health workers if they take certain jobs in Alaska.

The bill, with a bipartisan group of sponsors, would carry out a plan developed by a group of health care professionals including representatives of the Alaska Primary Care Association and the Alaska State Hospital and Nursing Home Association.

The state would offer financial incentives to as many as 90 workers, from physicians to nurses, to come work in Alaska. Those who take hard-to-fill jobs, or treat a share of uninsured patients or those on Medicare or Medicaid, would get priority.

Each person would be guaranteed the incentive for three years as long as they kept working here.

The state would either repay part of their student loans or, if the health worker didn't have loans, simply pay them directly. The individual payments would range from $20,000 per year for nurses, physicians assistants and some others, to $35,000 for doctors, pharmacists and dentists, to $47,000 for doctors who accept the hardest-to-fill positions.

The state's cost for three years' worth of incentives would be $7.5 million.

That sum is large enough to cause concern this year, with a big drop in state revenues anticipated.

But consider this: Forty-four of the 50 states already offer financial incentives to lure health workers. Alaska is not competitive for health care jobs, and people are suffering because of it.

BOTTOM LINE: The Legislature should pass two bills to relieve a critical shortage of health care workers in Alaska.

Research Matters No. 43: How Hard is it for Medicare Patients to Find Family Doctors? March 25, 2009

For the past few years, Alaskans have been hearing reports about primary-care doctors turning away Medicare patients. Medicare pays primary-care doctors only about two-thirds of what private insurance pays, even after a sizable increase in 2009. But until now, there were no broad figures to show how many primary-care doctors have decided not to see Medicare patients. So ISER surveyed primary-care doctors statewide to find out—and got better than an 85% response rate. A new publication by Rosyland Frazier and Mark Foster reports the survey findings.

- There's a major problem for Medicare patients looking for new family doctors in Anchorage, a noticeable problem in the Mat-Su Borough and Fairbanks, and little problem in other areas. In Alaska's smaller communities, most doctors still accept new Medicare patients.
- The ISER survey found only five primary-care doctors in private practice willing to take new Medicare patients in Alaska's largest city.
- Another five doctors at the Anchorage Neighborhood Health Center see new Medicare patients. The number of Medicare patients at the center has more than doubled since 2001.
- Most primary-care doctors (even in Anchorage) will still see established Medicare patients—that is, patients they've seen in the past.
- About one in ten primary-care doctors ISER surveyed have "opted out" of the Medicare system. That means they will not accept Medicare payments, but some will still see Medicare patients who agree to pay the entire doctor's bill themselves. Most of those doctors are in Anchorage.
- The 2009 increase in Medicare payments didn't persuade primary-care doctors to open their doors to significant numbers of new Medicare patients. But it's certainly possible that the increase—spearheaded by Alaska's U.S. senators—kept more doctors from turning away Medicare patients.

The Honorable Paul Seaton, Chair
House Education Committee
Alaska State Capitol, Room 102
Juneau, AK 99801-1182

RE: HB 204 (Dahlstrom)--Support

Dear Chair Seaton:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Education Committee to support HB 204, authored by Representative Nancy Dahlstrom and co-sponsored by Representative Beth Kerttula.

It is no secret that Alaska has a shortage of physicians which is expected to get worse over the next few years. AARP members in many Alaska communities already tell us that they are unable to find a physician who will accept them as Medicare beneficiaries.

The one bright spot in this shortage is the WWAMI program which has traditionally provided ten slots for family practice physicians to spend their residency in Alaska. Senator Meyer's bill last year increased the number to twenty. Upon completion of their medical education, most of these physicians have chosen to stay here and practice in our cities as well as in our remote communities.

You and your colleagues have seen the Alaska Physician Supply Task Force report produced jointly by the University of Alaska and the Department of Health and Social Services. This excellent report should serve us as a roadmap for our future directions in physician training.

The former exodus of Alaska retirees has been reversed over the past few years. Because of our improved health services and provider community, older Alaskans have determined that they can remain here after retirement, close to their friends and families.

If older Alaskans are unable to find a physician willing to see them, we will be back with the situation of retirees leaving the state so they can be assured of access to health professionals.

HB 204 offers us another real meaningful opportunity to begin to meet this need. Adding another four family practice residents to bring the total to twenty-four won't solve our problem but it is an excellent step to address our long term needs for an expanded physician workforce.

Our AARP members, your constituents, want to stay here after retirement. An affirmative vote on HB 204 will help accomplish that.
AARP requests an "AYE" vote on HB 204.

CS FOR HOUSE BILL NO. 204( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES DAHLSTROM, Kerttula

A BILL

FOR AN ACT ENTITLED

"An Act increasing the number of students pursuing a medical education who are provided postsecondary educational services and programs; providing student loan forgiveness for residents who received a medical education degree under an agreement with the Alaska Commission on Postsecondary Education and who provide medical services in a qualified practice in the state; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.42.033 is amended to read:

Sec. 14.42.033. Agreements for medical education. The commission shall enter into agreements with government or postsecondary education officials of this state or other states to provide postsecondary educational services and programs to Alaska residents pursuing a medical education degree sufficient to accommodate **24** [AT LEAST 20] new program participants each year. An agreement with another state must be limited to services and programs that are unavailable in Alaska. The

commission shall require a person participating in a medical education program offered under this section to agree to the repayment condition imposed under AS 14.43.510.

*** Sec. 2.** AS 14.43.510(b) is amended to read:

(b) If a program participant under (a) of this section has graduated from the medical education program for which the financial support was received and is employed in the state in the field for which the person received the financial support, including employment in the state in a medical residency program, the repayment obligation shall be forgiven and considered a grant in an amount equal to the following percentages plus accrued interest:

(1) for employment in rural areas of **or for services provided in a qualified practice in** the state,

(A) one year employment **or practice**, 33 1/3 percent;

(B) two years employment **or practice**, an additional 33 1/3 percent;

(C) three years employment **or practice**, an additional 33 1/3 percent;

(2) for employment **or practice** in [AREAS OF] the state that **does not qualify under (1) of this subsection** [ARE NOT RURAL],

(A) one year employment, 20 percent;

(B) two years employment, an additional 20 percent;

(C) three years employment, an additional 20 percent;

(D) four years employment, an additional 20 percent;

(E) five years employment, an additional 20 percent.

*** Sec. 3.** AS 14.43.510(e) is amended to read:

(e) **Except as provided in (j) of this section, for** [FOR] purposes of qualifying for forgiveness under this section, a person must be a full-time employee **or practitioner** for a period of at least six months in order to qualify for a prorated forgiveness benefit. In this subsection, "full-time employee" does not include seasonal or temporary employment.

*** Sec. 4.** AS 14.43.510(i) is amended to read:

(i) In this section,

(1) "qualified practice" means a health care office, clinic, or other facility in which medical services are provided by a physician who received a medical education under an agreement provided under AS 14.42.033 that

(A) can demonstrate that patients who are uninsured or who are covered under Medicare or medical assistance constitute a significant percentage of the total number of patients it serves, and that it openly advertises itself as serving these patients; or

(B) is located in a medically underserved area of the state as determined by the commissioner of health and social services;

(2) "rural" means a community with a population of 7,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of 3,500 or less that is connected by road or rail to Anchorage or Fairbanks.

*** Sec. 5.** AS 14.43.510 is amended by adding a new subsection to read:

(j) The Department of Health and Social Services may establish in regulation standards for a qualified practice that provides services under (b)(1) of this section. The standards must

(1) define "medically underserved area"; and

(2) specify what constitutes a "significant percentage" of patients for purposes of qualifying a practice for loan forgiveness under (i)(1)(A) of this section.

*** Sec. 6.** This Act takes effect July 1, 2010.

FAX: (907) 465-1398

March 28, 2009

The Honorable Paul Seaton, Co-Chair
The Honorable Cathy Muñoz, Co-Chair
House Education Committee
Alaska State Capitol, Rooms 102 and 409
Juneau, AK 99801-1182

Subject: Support for HB 204

Dear Chair Seaton and Chair Muñoz:

The Alaska Commission on Aging (ACoA) encourages support of HB 204, a bill to expand Alaska's participation in the WWAMI Medical School program to increase the supply of doctors needed to meet the growing health care needs of all Alaskans. WWAMI is a unique five-state collaborative program that presently allows 20 Alaskan medical students to enroll. HB 204 would increase the number of slots from 20 to 24 students on July 1, 2010. This bill is authored by Representative Dahlstrom and co-sponsored by Representative Kerttula.

Alaska, as with the rest of the nation, is experiencing a shortage of health care workers, particularly with doctors and nurses. For many doctors in our state, retirement is just around the corner and replacing those experienced medical providers with newly trained doctors is a priority for all Alaskans, and a critical need for people 65 years and older who have various medical conditions.

The Alaska Physician Supply Task Force Report states that Alaska will need nearly twice as many physicians in the next twenty years as it currently has if the state is to meet the expected demands from a growing population of seniors. Similarly, the demand for registered nurses is increasing during a period when many health care professionals are retiring. The pool of qualified medical providers continues to shrink as the demand for services increases.

Alaska now has the highest rate of growth of persons 65 and older in the nation, according to the 2007 report by the U.S. Administration on Aging. This increased growth rate is due to the fact that more Alaska's seniors and high proportion of Baby Boomers are choosing to remain in state following retirement, close to their families and friends, which is made possible by improved health care and home and community based services. Alaska benefits from seniors contributing approximately $1.6 billion of revenue to the state each year from their retirement pensions, medical payments, and other income in addition to their volunteering, caregiving, and mentoring provided to younger generations. If older Alaskans are unable to find a physician willing to serve them, they may be forced to leave the state in search of access to health care professionals, resulting in a significant financial and social loss for our state.

The Alaska Commission on Aging supported Senator Meyer's bill in 2007 to increase the number of WWAMI slots from ten to twenty. HB 204 offers another meaningful opportunity to increase the number of slots for medical students and for Alaska to prepare for the health care demands of our growing senior population. The University of Washington, which is ranked first in primary care medical schools nationwide and seventh in

geriatrics, not only allows WWAMI medical students to pay in-state tuition, but the program also provides an incentive for those completing medical school to return to Alaska to practice medicine.

ACoA respectfully requests your support of HB 204 to improve primary health care access for all Alaskans, including Alaska seniors. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your support of this important legislation.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello
ACoA Executive Director

CS FOR HOUSE BILL NO. 206( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act establishing a career assessment requirement in public schools; and relating to secondary school competency testing."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.073. Secondary student career assessment. (a) Each school district in the state shall require students in grade 12 to complete a career preparedness assessment as described in (b) of this section.

(b) The commissioner shall select for use in the state an assessment designed to measure a student's level of preparedness to make the transition to work or college. The assessment must assess a student's career aptitude and readiness for postsecondary education or training in the areas of

(1) applied mathematics;

(2) reading for information; and

(3) locating information.

New Text Underlined [DELETED TEXT BRACKETED]

L
3

(c) Subject to the availability of appropriations, the department shall

(1) obtain a license that enables school districts to administer the assessment described in (b) of this section with no charge assessed to the district by the vendor of the assessment;

(2) provide districts with training and support in administering the assessment;

(3) provide a report to each student on the results of the student's assessment, based on nationally recognized criteria for evaluating a student's preparedness to make the transition to work or college; and

(4) provide to the Alaska Commission on Postsecondary Education information needed to determine a student's eligibility for financial assistance.

(d) The results of a student's career preparedness assessment shall be displayed in summary form on the student's high school transcript.

*** Sec. 2.** AS 14.03.075 is repealed and reenacted to read:

Sec. 14.03.075. Secondary student competency testing. (a) Each public secondary school in the state shall require students to take a competency examination in the areas of reading, English, and mathematics. The department shall determine the timing, form, and contents of the examination and shall score completed examinations. The contents of the examination must conform to state performance standards and measure college readiness. The results of the competency testing shall be included in the student's transcript.

(b) A student who fails the examination required under this section shall be retested at least once during a school year on those portions of the examination that the student has not passed. A student who passes any portion of the test may not retake that portion of the test. This subsection does not apply to a student who is a child with a disability if the student's individualized education program team recommends that the student not be retested.

(c) A student who is a child with a disability and who does not achieve a passing score on the examination required under (a) of this section, with or without accommodation, may complete an alternative assessment program required by the student's individualized education program or required in the education plan

developed for the student under 29 U.S.C. 794. An alternative assessment program must, to the maximum extent possible, conform to state performance standards established for the competency examination required under (a) of this section. This subsection does not apply to a student unless the department determines that the student has taken and failed to pass the competency examination with or without accommodations and the department approves the student's alternative assessment program described under this subsection.

(d) The department shall by regulation establish uniform standards for

(1) pre-examination study materials; and

(2) procedures to be followed during administration of an examination.

(e) The department shall by regulation establish uniform standards for an alternative assessment program required under (c) of this section. The alternative assessment program required under (c) of this section applicable to an individual student may not be changed after February 1 of the student's junior year of study.

(f) In this section,

(1) "child with a disability" has the meaning given in AS 14.30.350;

(2) "individualized education program team" means a group of people that translates child assessment information regarding a child into a practical plan for specially designed instruction and delivery of services for the child, consisting of the persons necessary to qualify the team under appropriate federal regulations applicable to a child with a disability who is eligible for special education services under AS 14.30.

*** Sec. 3.** AS 14.03.120(d) is amended to read:

(d) Annually, before the date set by the district under (e) of this section, each public school shall deliver to the department for posting on the department's Internet website and provide, in a public meeting of parents, students, and community members, a report on the school's performance and the performance of the school's students. The report shall be prepared on a form prescribed by the department and must include

(1) information on accreditation;

(2) results of norm-referenced achievement tests;

(3) results of state standards-based assessments in reading, writing, and mathematics;

(4) a description, including quantitative and qualitative measures, of student, parent, community, and business involvement in student learning;

(5) a description of the school's attendance, retention, dropout, and graduation rates, [INCLUDING THE NUMBER AND PERCENTAGE OF STUDENTS WHO RECEIVED A DIPLOMA UNDER A WAIVER FROM THE COMPETENCY EXAMINATION REQUIRED UNDER AS 14.03.075(a),] as specified by the state board;

(6) the annual percent of enrollment change, regardless of reason, and the annual percent of enrollment change due to student transfers into and out of the school district;

(7) if Native language education is provided, a summary and evaluation of the curriculum described in AS 14.30.420;

(8) the number and percentage of students in each school who take and who successfully complete an alternative assessment program in reading, English, or mathematics; and the number and percentage of pupils in each school who successfully complete the alternative assessment program but who do not reach the state performance standards at the competency exam level in reading, English, or mathematics; a school may not report results under this paragraph unless the school complies with the family educational rights and privacy requirements of 34 C.F.R. 99;

(9) the performance designation assigned the school under AS 14.03.123 and the methodology used to assign the performance designation, including the measures used and their relative weights; and

(10) other information concerning school performance and the performance of the school's students as required by the state board in regulation.

*** Sec. 4.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under

AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075 [, INCLUDING THE CRITERIA AND PROCEDURE UNDER WHICH A GOVERNING BODY USES A WAIVER TO GRANT A DIPLOMA TO A STUDENT; CRITERIA REGARDING GRANTING A WAIVER MUST INCLUDE PROVISIONS THAT A WAIVER MAY ONLY BE GRANTED FOR STUDENTS WHO ENTER THE SYSTEM LATE OR HAVE RARE OR UNUSUAL CIRCUMSTANCES MERITING A WAIVER].

Sec. 14.03.075. Secondary student competency testing.

(a) A student may not be issued a secondary school diploma unless the student passes a competency examination in the areas of reading, English, and mathematics or receives a waiver from the governing body. A governing body may not grant a waiver to a student before the student's final semester of attendance. The department shall determine the form and contents of the examination and shall score completed examinations.

(b) A student who fails the examination required under this section shall be retested at least once during a school year on those portions of the examination that the student has not passed. A student who passes any portion of the test may not retake that portion of the test. A student who, when retested, passes the portions of the test not previously passed and who meets any other graduation requirements shall receive a diploma from the school district. This subsection does not apply to a student who is a child with a disability if the student's individualized education program team recommends that the student not be retested.

(c) Notwithstanding (a) of this section,

(1) a student who is a child with a disability and who does not achieve a passing score on the examination required under (a) of this section, with or without accommodation, is eligible to receive a diploma if the student successfully completes an alternative assessment program required by the student's individualized education program or required in the education plan developed for the student under 29 U.S.C. 794; an alternative assessment program must, to the maximum extent possible, conform to state performance standards established for the competency examination required under (a) of this section; this paragraph does not apply to a student unless the department determines that the student has taken and failed to pass the competency examination with or without accommodations and the department approves the student's alternative assessment program described under this paragraph; and

(2) a student who transfers into a public high school in this state shall receive a diploma if the student

(A) meets graduation requirements imposed by the governing body and the state; and

(B) has passed a competency examination in the state from which the student transferred.

(d) A student who fails to qualify for the issuance of a diploma under (a) of this section or a retest under (b) of this section by the end of the student's final semester of attendance, but who has met all other graduation requirements of a governing body and the state, shall be awarded a certificate of achievement. A certificate of achievement may include the following information:

(1) the portions of the examination described under (a) of this section that were passed;

(2) the student's attendance record; and

(3) other information indicating the qualifications of the student that the governing body determines appropriate.

(e) The department shall by regulation establish uniform standards for

(1) pre-examination study materials; and

(2) procedures to be followed during administration of an examination.

(f) The department shall by regulation establish uniform standards for an alternative assessment program required under (c)(1) of this section. The alternative assessment program required under (c)(1) of this section applicable to an individual student may not be changed after February 1 of the student's junior year of study.

(g) In this section,

(1) "child with a disability" has the meaning given in AS 14.30.350 ;

(2) "individualized education program team" means a group of people that translates child assessment information regarding a child into a practical plan for specially designed instruction and delivery of services for the child, consisting of the persons necessary to qualify the team under appropriate federal regulations applicable to a child with a disability who is eligible for special education services under AS 14.30.

(3) locating information.

(c) Subject to the availability of appropriations, the department shall

(1) obtain a license that enables school districts to administer the assessment described in (b) of this section with no charge assessed to the district by the vendor of the assessment;

(2) provide districts with training and support in administering the assessment;

(3) provide a report to each student on the results of the student's assessment, based on nationally recognized criteria for evaluating a student's preparedness to make the transition to work or college; and

(4) provide to the Alaska Commission on Postsecondary Education information needed to determine a student's eligibility for financial assistance.

(d) The results of a student's career preparedness assessment shall be displayed in summary form on the student's high school transcript.

Sec. 14.03.074. Secondary student enrollment in postsecondary institution. (a) A secondary student who passes all portions of the examination required under AS 14.03.075 may enroll in a postsecondary institution in the state that is approved by the commissioner if

(1) the student is enrolled in a public secondary school in the state;

(2) the student is otherwise eligible to enroll, as determined by the postsecondary institution; and

(3) the postsecondary courses will be completed before the student's graduation from secondary school.

(b) The school district in which the student is enrolled in secondary school shall make arrangement for the fees for the appropriate postsecondary courses in which the student enrolls under this section.

*** Sec. 2.** AS 14.17.600 is amended to read:

Sec. 14.17.600. Student count periods. (a) Within two weeks after the end of the **80-school-day period ending the second Friday in February** [20-SCHOOL-DAY PERIOD ENDING THE FOURTH FRIDAY IN OCTOBER], each district shall transmit a report to the department that, under regulations adopted by the department,

reports its ADM for that count period and other student count information that will aid the department in making a determination of its state aid under the public school funding program. [FOR CENTRALIZED CORRESPONDENCE STUDY, THE OCTOBER REPORT SHALL BE BASED ON THE PERIOD FROM JULY 1 THROUGH THE FOURTH FRIDAY IN OCTOBER.] The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

(b) Upon written request and for good cause shown, the commissioner may permit a district to use **an 80-school-day** [A 20-SCHOOL-DAY] count period other than the period set out in (a) of this section. However, a count period approved under this subsection must be **80** [20] consecutive school days unless one or more alternate count periods are necessary to permit a district to implement flexible scheduling that meets the district's needs and goals without jeopardizing the state aid for which the district would ordinarily be eligible under this chapter.

*** Sec. 3.** AS 14.17.600 is amended by adding new subsections to read:

(c) The student count conducted for the immediately preceding school year shall be used for calculating state aid under AS 14.17.410.

(d) A student who is enrolled and graduates from secondary school during the counting period shall be included in the student count for the full counting period.

*** Sec. 4.** AS 14.17.610(a) is amended to read:

(a) **Except as provided in (d) of this section, the** [THE] department shall determine the state aid for each school district in a fiscal year on the basis of the district's student count reported under AS 14.17.600 **for the preceding fiscal year**. On or before the 15th day of each of the first nine months of each fiscal year, one-twelfth of each district's state aid shall be distributed on the basis of the data reported for the preceding fiscal year. On or before the 15th day of each of the last three months of each fiscal year, one-third of the balance of each district's state aid shall be distributed, after the balance has been recomputed **under (d) of this section** [ON THE BASIS OF STUDENT COUNT AND OTHER DATA REPORTED FOR THE CURRENT

FISCAL YEAR].

*** Sec. 5.** AS 14.17.610 is amended by adding a new subsection to read:

(d) If the student count made and reported by a district under AS 14.17.600 for the current year is higher than the count made under that section for the preceding fiscal year, the department shall recompute the state aid, including per school student count data, to adjust for the higher student count, and the higher count shall be used for the student count for the current year and for the estimates made for the succeeding fiscal year under AS 14.17.500. The student count must be submitted to the department by March 1 of the current year for a recomputation to be made under this subsection.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION. In the first school year following the effective date of this Act, the student count completed in the immediately preceding school year shall be used as the student count under AS 14.17.610(a), as amended by sec. 4 of this Act.

CS FOR HOUSE BILL NO. 206(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act establishing a career assessment requirement in public schools; relating to postsecondary courses for secondary school students; and relating to student counts for school funding purposes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding new sections to read:

Sec. 14.03.073. Secondary student career assessment. (a) Each school district in the state shall require students in grade 12 to complete a career preparedness assessment as described in (b) of this section.

(b) The commissioner shall select for use in the state an assessment designed to measure a student's level of preparedness to make the transition to work or college. The assessment must assess a student's career aptitude and readiness for postsecondary education or training in the areas of

(1) applied mathematics;

(2) reading for information; and

(3) locating information.

(c) Subject to the availability of appropriations, the department shall

(1) obtain a license that enables school districts to administer the assessment described in (b) of this section with no charge assessed to the district by the vendor of the assessment;

(2) provide districts with training and support in administering the assessment;

(3) provide a report to each student on the results of the student's assessment, based on nationally recognized criteria for evaluating a student's preparedness to make the transition to work or college; and

(4) provide to the Alaska Commission on Postsecondary Education information needed to determine a student's eligibility for financial assistance.

(d) The results of a student's career preparedness assessment shall be displayed in summary form on the student's high school transcript.

Sec. 14.03.074. Secondary student enrollment in postsecondary institution. (a) A secondary student who passes all portions of the examination required under AS 14.03.075 may enroll in a postsecondary institution in the state that is approved by the commissioner if

(1) the student is enrolled in a public secondary school in the state;

(2) the student is otherwise eligible to enroll, as determined by the postsecondary institution; and

(3) the postsecondary courses will be completed before the student's graduation from secondary school.

(b) The school district in which the student is enrolled in secondary school shall make arrangement for the fees for the appropriate postsecondary courses in which the student enrolls under this section.

* **Sec. 2.** AS 14.17.500(a) is amended to read:

(a) A district shall prepare and submit to the department by **March 15** [NOVEMBER 5] of each fiscal year, in the manner and on forms prescribed by the department, an estimate of its ADM and other student count data, including per school student count data, for the **current and** succeeding fiscal year upon which

computations can be made to estimate the amount of state aid for which the district may be eligible under AS 14.17.400 in the succeeding fiscal year. In making its report, the district shall consider its ADM, other student count data, the pattern of growth or decline of the student population in preceding years, and other pertinent information available to the district.

*** Sec. 3.** AS 14.17.600(a) is amended to read:

(a) Within two weeks after the end of **each of** the 20-school-day **periods** [PERIOD] ending the fourth Friday in October **and the last Friday in February**, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that count period**, the average ADM over the two consecutive counting periods for the previous fiscal year, and, for the February report and October report, the current year,** and other student count information that will aid the department in making a determination of its state aid under the public school funding program. [FOR CENTRALIZED CORRESPONDENCE STUDY, THE OCTOBER REPORT SHALL BE BASED ON THE PERIOD FROM JULY 1 THROUGH THE FOURTH FRIDAY IN OCTOBER.] The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

*** Sec. 4.** AS 14.17.610(a) is amended to read:

(a) **Except as provided in (d) of this section, the** [THE] department shall determine the state aid for each school district in a fiscal year on the basis of the district's **averaged** student count **for the October and February counting periods** [DATA] reported under AS 14.17.600 **for the preceding and current fiscal years**. On or before the 15th day of each of the first nine months of each fiscal year, one-twelfth of each district's state aid shall be distributed on the basis of the [DATA REPORTED FOR THE] preceding fiscal year **entitlement**. On or before the 15th day of each of the last three months of each fiscal year, one-third of the balance of each district's state aid shall be distributed, after the balance has been recomputed **under (d) of this section** [ON THE BASIS OF STUDENT COUNT AND OTHER DATA

REPORTED FOR THE CURRENT FISCAL YEAR].

*** Sec. 5.** AS 14.17.610 is amended by adding a new subsection to read:

(d) If the averaged student count made and reported by a district under AS 14.17.600 for the current year is higher than the averaged count made under that section for the preceding fiscal year, the department shall recompute the state aid, including per school student count data, to adjust for the higher average student count, and the higher average count shall be used for the student count for the current year and for the estimates made for the succeeding fiscal year under AS 14.17.500. The February student count must be submitted to the department by March 15 of the current year for a recomputation to be made under this subsection.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION. In the first school year following the effective date of this Act, the student count completed in the immediately preceding school year shall be used as the average student count under AS 14.17.610(a) and (d), as amended and added by secs. 4 and 5 of this Act, as though two student count periods had occurred for that year and added.

MEMORANDUM March 3, 2010

SUBJECT: Effect of legislation on teacher contract (CSHB 206 ( ); (Work Order No. 26-LS0765\P))

TO: Representative Paul Seaton
Chair of the House Education Committee
Attn: Louis Flora

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the effect on a teacher contract of a new provision in the above referenced bill that would allow a high school student to enroll in a postsecondary institution and require school districts to provide fees for the postsecondary courses. You state that high school teachers currently volunteer to teach dual credit classes and wonder whether the bill provision would require compensation to those teachers under contract with the school district. The short answer is that the bill provision does not appear to affect payments made to public high school teachers but I do not have a teacher contract to review to determine whether specific contract conditions may be invoked.

The provision in question in HB 206 is as follows:

> **Sec. 14.03.074. Secondary student enrollment in postsecondary institution.** (a) A secondary student who passes all portions of the examination required under AS 14.03.075 may enroll in a postsecondary institution in the state that is approved by the commissioner if
>
> (1) the student is enrolled in a public secondary school in the state;
>
> (2) the student is otherwise eligible to enroll, as determined by the postsecondary institution; and
>
> (3) the postsecondary courses will be completed before the student's graduation from secondary school.
>
> (b) The school district in which the student is enrolled in secondary school shall make arrangement for the fees for the appropriate postsecondary courses in which the student enrolls under this section.

This section does not provide for additional fees to be paid to a high school but rather for fees associated with postsecondary courses for which a student enrolls to be paid to the postsecondary institution. The bill section allows a high school student to enroll in a

postsecondary institution that provides the courses. Therefore, a public school teacher under contract with a school district does not appear to be affected at all by the student's decision to enroll in a postsecondary institution or the district's requirement to pay for that.

If, on the other hand, a school district requires enrollment in a postsecondary institution in order to take dual credit courses offered at a high school in the district, the dual credit course may technically fall under the fee provision in subsection (b) of the bill provision. Since that course is already funded by the school district, the bill provision has no fiscal effect either on the district or on the teacher employed by the district, lacking any future incentive offered by a district to provide additional dual credit courses for which postsecondary enrollment is required under the bill.

The only current statute that appears relevant to this question is AS 14.20.158, which provides

> **Sec. 14.20.158. Continued contract provisions.** Continuation of the provisions of a teacher's contract under AS 14.20.145 or 14.20.155 does not
>
> (1) affect the alteration of the teacher's salary in accordance with the salary schedule prescribed by state law, or in accordance with a local salary schedule applicable to all teachers in the district and adopted by bylaws;
>
> (2) *limit the right of the employer to assign the teacher to any teaching, administrative, or counseling position for which the teacher is qualified*; or
>
> (3) limit the right of the employer to assign the teacher, as is reasonably necessary, to any school in the district. (emphasis supplied)

The standard teacher contract provisions in regulations at 4 AAC 18.010 do not address payment for dual credit courses.

I have not been provided, and cannot locate, a standard teacher contract for the state. It is conceivable that a provision in a teacher contract would require additional payment for dual credit courses, with or without this bill provision. Lacking a copy of a teacher contract that provides, for example, for a higher teacher salary for teaching a dual credit course that requires enrollment in a postsecondary institution for which additional fees are required to be paid by law by a school district, I don't see any affect of the bill provision on public high school teacher pay agreements.

If I may be of further assistance, please advise.

Alaskans Support High School "Exit Exam"

Approximately three-out-of-four Alaskans support keeping the high school graduation qualifying exam.

QUESTION: *"Currently, Alaskan students must pass the high school graduation qualifying exam, commonly known as the "exit exam", in order to receive a diploma. There is a bill before the Alaska State Legislature to eliminate the exit exam. Opponents of the exit exam say it keeps hundreds of Alaska students from earning diplomas and getting jobs, and is a waste of classroom time and resources. Supporters of the exit exam say that graduation rates have risen since the exit exam took effect, and that the exam is a useful tool to evaluate the performance of teachers and schools, and ensures students demonstrate at least minimum skills in reading, writing and math before receiving a diploma.*

What is your opinion -- do you feel the state should remove the exit exam requirement or should it be kept?"

STATEWIDE RESULTS:

24%	Remove exam
74%	**Keep exam**
2%	Unsure

Support for "Exit Exam" is strong and consistent throughout Alaska.

CROSSTABULATIONS:

October-February
2005-2009

Anchorage School District		
	October	February
2008/09	48348	48759
2007/08	48915	48065
2006/07	49539	48492
2005/06	49399	49163

DISTRICT EXPLANATION

Decrease enrollment from October to February is generally due to high school seniors graduating early. In 2009, the increase appears to be military students and other in-migration from outside of Alaska

Kenai Peninsula		
	October	February
2008/09	9172	9063
2007/08	9165	9097
2006/07	9314	9255
2005/06	9307	9310

2006/07	4154	4056
2005/06	4168	4113

DISTRICT EXPLANATION

In LKSD the difference is not significantly high. The difference of kids enrolled in October & February is less than 50 students every year. The differential average in this five years is 19 kids.

Ketchikan		
	October	February
2008/09	2244	2115
2007/08	2295	2210
2006/07	2335	2260
2005/06	2326	2320

DISTRICT EXPLANATION

Anecdotally, seasonal workers who work through the fall will depart with their families as the Christmas shopping season approaches to work retail.

Sitka		
	October	February
2008/09	1335	1303
2007/08	1400	1364
2006/07	1489	1423
2005/06	1515	1477

DISTRICT EXPLANATION

The numbers in February are not as accurate as October, due to the October count being the OASIS numbers which is done as an average over the months and February is just one day's enrollment. Also here are a couple of other reasons for the discrepancy, students graduate at semester, charter fisherman, tourism families and fisherman families leave during October, Coast Guard families transfer in December and the movement of students in and out of the Hanson House.

2006/07	370	349
2005/06	375	361

DISTRICT EXPLANATION

We have declining enrollment from outward migration of parents and students. There is no reason to believe this migration only happens over the summer. It is year round phenomenon. We have very few dropouts, but any reviewer will notice that our numbers have declined both from year to year and from October to March. This decline is not the result of large numbers of dropouts

MISCELLANEOUS COMMENTS

Hydaburg:

We don't keep data on February enrollment, so I can't do the survey. However, my experience here and in other districts has been that February enrollment is typically less than October enrollment. I recall Eddy Jeans once saying that when there was an optional February count, virtually no districts took advantage of it. That tells me that during the many years having the option to count ADM in February if it was higher that OCtober, districts didn't take the option because February enrollment was almost always lower than in October

Haines:

I asked our secretary and without digging out the old files, she is reasonably sure that our October and February enrollment haven't varied much in the past five years for the Haines Borough School District.

February 18, 2010

Honorable Representative Seaton and Honorable Education Committee Members
The following data and comments are respectfully submitted per your request:

Concerning Wrangell Public Schools

Wrangell Public School Counts				District Wide Dropout Rates
2005 Feb.	374	Oct.	370	4.8%
2006 Feb.	361	Oct.	355	1.1%
2007 Feb.	349	Oct.	346	1.1%
2008 Feb.	345	Oct.	324	0.5%
2009 Feb.	310	Oct.	317	1.1%

In Wrangell we have had a general decline in enrollment ever since the federal government chose to curtail forest production. Since about 1995 our enrollment numbers have been on a downward spiral. To assume that because we loose students between October and February there is a positive correlation to our dropouts is unfounded. In the above figures you will notice the same trend between February and October of the next year.

Generally each summer we do have some families that move to Wrangell. Because the job market here has been dismal they often are not able to make it through an entire winter. The most likely time for them to leave is after the permanent fund checks are distributed in October. Many of them move at Christmas time since this is a natural break for them.

The same is true of the summer months. Many families move as soon as school is out. It seems to be a natural break for them. Some families move north to the cities in Alaska and many of them move south to the lower forty-eight. Even though we have families moving to Wrangell the general trend over the last fifteen years has been more families with children moving out than moving in.

I can tell you without equivocation that every student who drops out has been contacted as well as the parent(s) of that student if we know their whereabouts. Even one dropout is too many in our view.

Concerning Bush Alaska

Having had some experience as an administrator in bush Alaska I can also share what sometimes happens there. Some families move to the cities when the permanent fund checks come out in October. They often stay one or two weeks, however, some stay much longer. There are many students who do not enroll in school during this time. Some families stay with friends or relatives until their money runs out.

ACCREDITED BY NORTHWEST ASSOCIATION OF SECONDARY AND HIGHER SCHOOLS

I have heard the comment from committee legislators that principals or school district personnel should make contact with drop outs and their families and encourage their return, see if there is a problem, determine if someone can help the student return, etc. In many of these instances school personnel does not know where these families are or how to get hold of them.

When and if these students traveling with their parents return to school, whether it is in their home school or the school of new residence, they often have missed so much school they cannot receive credit for the semester. Even more problematic is when the student is out of school for significant periods of two separate semesters, the end of the first semester and the beginning of the second. For many students this is adequate reason to drop out. And for many that is what they do.

I would contend that even if the school personnel could locate and contact these parents it would be of little consequence. The students of parents in the above situation, who allow their children to be out of school for long periods of time, are highly likely to drop out of school.

One simple answer to solve this problem is to change the permanent fund pay out. Give it out in June. A second answer is to fine parents when their children are out of school and unaccounted for. Garnishing an amount equal to the permanent fund from a parent of a child who is not in school would significantly curtail the dropout problem in Alaska.

I am not naive. I know these are difficult issues to address. But changing the permanent fund payday or fining parents who are delinquent in their duties would have a direct and positive correlation to improved school attendance and would lower Alaska's drop out rates.

In my opinion, lengthening the count period, splitting the count period, or otherwise tinkering with the count period assuming it will significantly address the dropout problem is short sighted. If there was a way for economists to apply a cost-benefit analysis to this idea they would likely predict the result to be insignificant or perhaps unrelated to the real issue at hand, dropouts.

It is difficult enough to reconcile student counts to one twentieth ($1/20^{th}$) of the foundation formula. With an eighty-day count we would be reconciling to one eightieth ($1/80^{th}$). Adding this bureaucracy to the burden of districts without a fiscal note to this legislation is just another unfunded mandate. And even though Mr. Jeans indicates he has no plans to add staff to the Dept. of Education in an effort to reconcile an eighty-day count I suspect the folks expected to do those reconciliations are groaning loud enough for you to hear it across town in the committee room.

The Education Committee is brave for tackling such difficult issues. The answers to complicated issues are often, as one would expect, complicated. Thank you for your willingness to look at the hard issues and try to find those complicated answers.

Sincerely yours,

Woody Wilson

Subject: Estimate for Juneau School District HB 206
Attachments: Extend Count Date to 80.pdf

Hi

I developed an estimated fiscal impact to extending the count date to 80 days for the Juneau School District as requested. I estimate that extending the counting period to 80 days would reduce state foundation by $57,000 in FY 2011, or slightly more than 1% of the District's basic need of $51,048,000. This would also reduce the maximum level of local municipal appropriation by $13,000 for a total impact to the District of $71,000.

I also see increased difficulty in administering the foundation program by the Alaska Department of Education and Early Development. Each and every school district is required to prepare a school calendar and submit it the Department of Education and Early Development. It will be highly unlikely that all districts have the same 80 days of school because of variations in when they take winter break and potential holidays such as Veteran's Day, Alaska Day, and Dr. Martin Luther King, Jr. birthday. Students transfer between district's and this can result in a student having more or less than 80 days because of the differences in calendars.

Sincerely,

David Means

Subject: RE: HB 206 amendment and renewed call for student count numbers

Dear Louie,

I am sitting here waiting for the fog to lift and realize I have been focused on answering your questions about counts, numbers, and how DGSD an REAA might be affected by this. What I continue to miss and need to address is the whole reason for this bill or so it seems...and that is that districts, after count, don't care whether a student drops out. The supposition with that thought is that our count goes down because we encourage, help, or just turn our heads to students dropping out.

DGSD lost 65 students last year when the oil prices hit the roof in our area. These students were from the elementary school, a Blue Ribbon School. Their parents left, either to Anchorage or the lower 48, because it was to darn expensive to live in our area.

80 days is not going to keep students in school in my are and I dare say there are not many who would find this a drop out reduction technique. We are doing everything we can at DGSD to keep students in school. I know all my colleagues are too. We might help students look for other career paths if traditional high school is not working but that is not to rid ourselves of students. For example at DGSD we are looking at moving 5th grade to Ft. Greely to have a comprehensive middle school (that is on base so there will be protests to that) but it will allow all the staff to wrap their arms around students from 5-8th grade. There will be a math focus if it happens and we will continuallly work on transition to high school. The students who drop out do so in most cases between 7-9th grade. Our New Horizons program hold on to fathers, mothers, and many of our Slavic Students. Those students, who make up 30% of our population are a group whose family does not recognize the high school diploma as a usealbrale certificate. They come from a European system where most students "leave" at 16 to work or apprentice unless you go to college. This is not wrong it is just different and it is something we work all the time to educate about. Will an 80 day count change that cultural thought, NO.

We also have a 9th grade academy to wrap our arms around the new 9th graders. It takes teacher and staff time to connect...that is what holds students in school not an 80 day count.

So will 80 days help stop drop outs, not in most schools. It might change the reporting for correspondence schools but for most of us it will not be what keeps a student in school. Not 80 or 60 or 40...the connection is person to student not money.

Hope that helps. PJ

Subject: HB 206 amendment and renewed call for student count numbers

Hi,

The purpose of this e-mail is to remind districts that HB 206 will be discussed on Friday in House Education. As you are aware, HB 206 Work-draft Version P is posted on the Basis web-site under the "documents" tab. This is the Work-draft with the 80-day count requirement. Following discussion with school districts we have proposed and amendment dealing with unanticipated increases in student count numbers occurring at the start of the 80-day count period. Please see the attached amendment allowing a 20-day count at the beginning, and providing a district with the ability to seek funding during the current year count period to cover the unanticipated increases. Recall that under the version P Work-draft districts are funded in the current year based on the previous year's count.

Deart louie

I have not had connectivity on the road. I am currently dealing with the enrollment of 3 intensive students (in Jan). 2 of which may require out of state residential. This is a huge cost to an REAA.

I have no one in our district who can compile. Feb counts for past years but I shall see what I can do today.

REAA's are most at risk. Without extra funds (in our case no large impact aide and no native Corp) we can not afford any touch to the BSA. I don't mind an 80 day count nor does our board as long as it does not increase our need for more personnel. We would welcome a way to petition for funds when something unusual arises like what has happened this year.

Thank you

To: Louie Flora
Subject: FW: HB 206 amendment and renewed call for student count numbers

Good Evening Mr. Flora:

Superintendent Peggy Cowan has requested that I provide the following information to you for the North Slope Borough School District.

1. During the past five years, what was your district's total enrollment in October?
2009 1592
2008 1626
2007 1656
2006 1745
2005 1721

2. During the past five years, what was your district's total enrollment in February?
2009 1538
2008 1582
2007 1634
2006 1712
2005 1671

3. Please explain briefly what caused any fluctuations within a given year.
The majority of the fluctuations between October and February from year to year are attributable to multiple factors: Transfers in and out of district; students temporarily left school due to family problems, pregnancy, medical/psych hospital; lack of progress, or excessive absences; early graduation in December. Additionally, some of the students identified as having excessive absences often could also fall into the category of having personal or family problems.

Please feel free to contact me if you have further questions.

Respectfully,

Vanni Prichard
Director of Assessment/Accountability
North Slope Borough School District

Subject: Enrollment

Good Afternoon Louie,

I submitted the data for our enrollment on an AASB survey. Here is the data I shared

October		February
2009	15	13
2008	15	15
2007	15	16
2006	13.6	11
2005	12	13.5

Families leave to find work in Winter.

I have read through the bill and was wondering how this will help students stay in school? Did I miss something?

Thank you,

Connie A. Newman, Superintendent
Pelican City Schools

Louie,

AASB just ran a survey with these same question, so hopefully that information is available. When I compared our February enrollments with those in October, we consistently have about 50 fewer students in February out of about 3900 students. We have students who enroll in August, drop out during the year and re-enroll the next August. Some of them actually graduate after 5 or 6 years of high school.

There has been some comment about the longer count period providing and incentive for district's to keep students in school. Nothing could be further from the truth. With rare exceptions school districts are doing everything in their power to keep students from dropping out.

I hope this helps.

To: Louie Flora
Subject: Comments on HB206

Mr. Flora,

I would like to add my comments on HB206, particularly Sec.(s) 2 through 4, as to what affects I believe it would have in our district, and other rural school districts.

1 If the intent of this bill is to reduce the dropout rate, it is at best misdirected. The cause and reasons for rural, mostly native students, to leave school are various and mostly beyond the control of a school or district. These factors include the economic, social and demographic conditions in the villages. No matter how dedicated and hard working a school or district staff is, these are variables beyond the control or the authority of the educational entity. Our district has some of the most dedicated and hardworking professional educators who devote more than their contracted time to providing their students with the best instruction possible, but for all that work and dedication, they are not the solution to socio-economic conditions.

2 Declining school enrollment is a product of a demographic shift from rural to urban environment. This demographic change is motivated by socio-economic factors that the local school authority has no influence over. If the State provided coherent and sustained economic development and social services in rural areas, such demographic migration might be ameliorated.

3 This would bill would impose undue and unnecessary costs on schools and districts already dealing with shrinking budgetary resources. The count period as it is structured now requires the expenditure of man hours to collect, collate, and validate the data the state requires. Prolonging the count period increases the demand for these resources, taking then away from other equally pressing administrative needs. Unless the State is going to subsidize the additional costs of this data collection, it is just one more unfunded mandate piled on an already burdened administrative staff.

4 If the goal is to reduce the dropout rate and increase graduation rates statewide, the relevant national research points fairly conclusively that establishing and maintaining early learning programs has been the most effective for keeping kids in school.

While the intentions of this bill should be applauded as well meaning and recognizes the problem of students not completing school, the bill does not recognize nor provide a solution for the causality of the problem.

February 18, 2010

Honorable Representative Seaton, Chair
House Education Committee - Alaska State Legislature

RE: HB206

Committee Members,

On behalf of the Board of the Alaska Association of School Business Officials, I would like to submit the following comments to the committee for consideration with regard to this bill.

The proposed extended 80-day is not an effective strategy for dropout prevention and unfairly penalizes school districts for a multifaceted problem. There are many reasons that students leave during the year, aside from dropping out. Review of data from past years suggests that districts will generally have lower counts under an 80-day system and reduced funding. Districts offer myriad counseling and instructional programs to support students most at risk of dropping out. If specific instances exist where this is not the case, efforts should be made to address those anomalies, rather than imposing an 80-day count on all districts.

Although the committee has tried to adjust for early grads and potential increases in enrollment, there will be unintended consequences of moving to an 80-day count, and an additional administrative cost. These impacts are not justified by the small possibility of an effect on dropouts.

We are in favor of the proposal to base funding on the prior year count, which would allow for better planning for school programs. However, this could be implemented with the current 20-day count system.

A proposed amendment to version P of the bill would allow an adjustment to the count only if the enrollment change is 10% or more. This is too high a threshold; if enrollment increases, districts need to receive funding accordingly.

Finally, the proposal for districts to "arrange for fees" for postsecondary courses is likely to be seen by some parents as a commitment for school districts to pay for these courses. This is a potential unfunded mandate on districts.

Respectfully,

Laura Hylton, President

Honorable Representative Seaton, Chair
House Education Committee
Alaska State Legislature

RE: HB206

Representative Seaton and Honorable Members of the House Education Committee:

I would like to start by saying we appreciate your efforts to confront the dropout problem in Alaska and working with the educational community to solve this dilemma. However, we feel the proposed 80-day count period is not an effective strategy for dropout prevention. The cause and reasons for rural students leaving school are various and mostly beyond the control of a school or district. These factors include the economic, social and demographic conditions in the villages. Simply put, our population in rural Alaska is often times transient. These students move from one village to the next to live with relatives or leave for brief periods of time. Most if not all of these students eventually return. They do not drop out.

The implications of HB206 could be severe. For small rural districts, such as LPSD, that already suffer from declining enrollment the 80 day count period would most likely mean the loss of even more student funding. Without adequate funding programs that specifically target dropout prevention (Preschool, Early Literacy, School to Life, Activities) would eventually go away and hence, dropout rates would increase. Small schools would also be threatened and several in our region might ultimately have to close. This leaves students with no school and very few options as far as continuing education. Our parents are not prepared to take these already struggling students and home school them through graduation. Lastly, as these schools close and students move on, the villages will begin to die. Without kids a village is not healthy and eventually ceases to exist. Unfortunately, we have seen this happen with Ivanof Bay and if an 80-day count goes into affect, we will likely experience the same fate for two or three more villages.

While the intentions of this bill should be applauded, it does not recognize nor provide a solution for the problem. In my opinion, this untested theory, could become a problem in itself for Bush Alaska. Funding will be reduced, programs will be cut, schools will close, and villages will die – this is a huge chance to take on a proposal with no research behind it. If the goal is to reduce the dropout rate and increase graduation rates statewide, the relevant national research points fairly conclusively that establishing and maintaining early learning programs has been the most effective for keeping kids in school.

Respectfully,

Ty Mase
Superintendent

Subject: HB206

Mr Flora:

I wanted to voice my concerns about HB206, which would call for an 80-day student count on which education funding would be based. It has been suggested that school districts would work harder to keep students from dropping out if there was a longer period of count. I do not believe this is the case. We often see a reduction in the number of students enrolled during the year, but this is not for lack of trying to keep them enrolled. Our district provides guidance support to all our students working to meet their individual needs and working to remove the barriers that keep them from finishing their coursework. We believe all children are worth "whatever it takes" to succeed.

I am also concerned with the added burden of an 80 day count. The extra paperwork involved will bog down already stretched staff members, and for the small possibility of an effect this effort will have on the dropout problem, it just seems unneeded.

Finally, I want to say that I do like the idea of basing next year's funding on this year's count. Currently, I am building our FY11 budget. Not only am I unsure how much money I will actually have to work with, I don't even know for sure what my FY10 funding will be as the final Foundation report has not yet been released. It is extremely difficult to operate that way especially when education dollars are so tight already.

Thank you for the opportunity to comment on HB206.

Cindy Reilly, CFO
Yukon Koyukuk School District

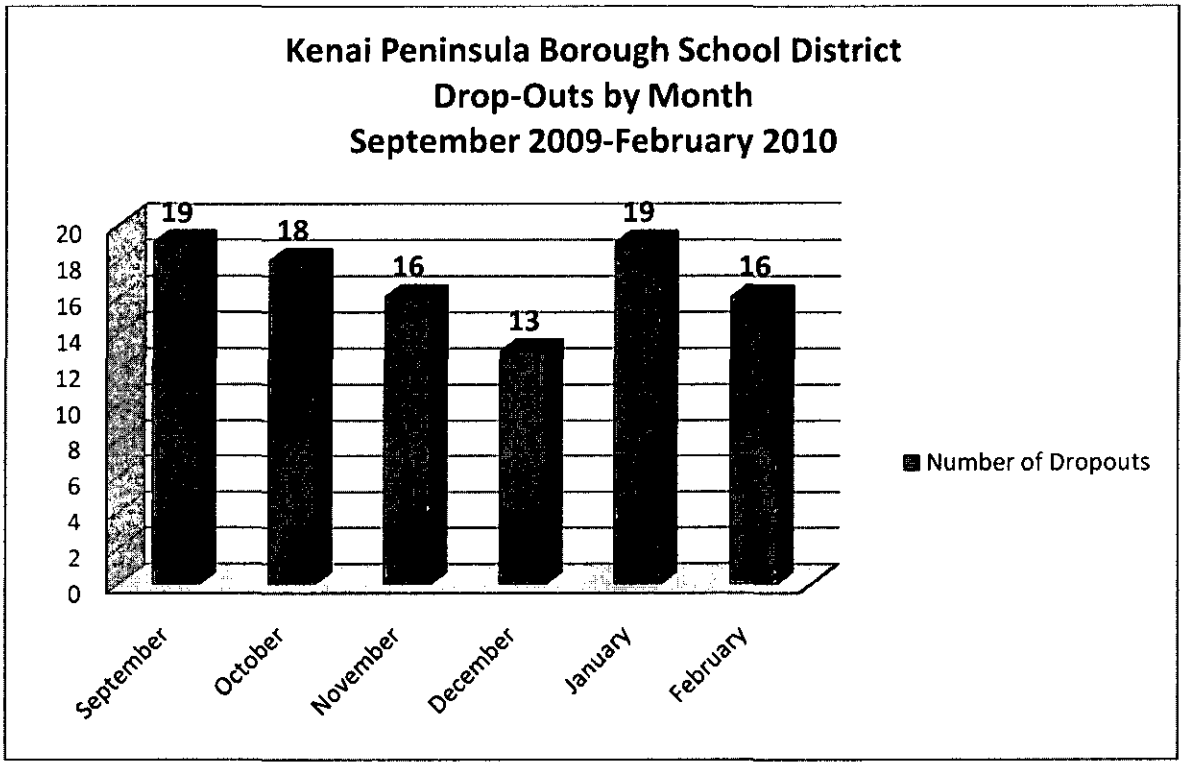
Cell (907)750-7660

The Kenai Peninsula Borough School District has a high rate of transiency. This transiency can be attributed to a number of factors. From September through February, a total of 155 students transferred into the district from a district outside of Alaska and a total of 190 students transferred into the district from another Alaska district. In addition, a total of 147 students transferred to another district in Alaska and a total of 138 students transferred out of the state during the same timeframe.

Concern has been expressed that after the October count period efforts to keep students in school are relaxed. As our data demonstrates, there is no correlation between the end of the count period and the number of dropouts. The reasons why students drop out are complex and often have little immediate connection with school.



The district offers its struggling students several options to help them stay in school including alternative schools, a district-wide correspondence program and a credit recovery program that is located within the high school. During the 2009-2010 school year a total of 222 students transferred to a total of 234 additional educational settings within the district.

Subject: Oct 1 and 2nd Friday in February Counts
Attachments: 2009-10.pdf

Louie,
I have attached the data that you requested regarding the comparison of ASD's enrollment on October 1 with the 2nd Friday in February. It is important to note that the October 1 count is from the Fall OASIS that is submitted to Alaska Department and Education and Early Development (EED)and is still considered preliminary because EED is still looking at the data from all districts. Our IT staff pulled the 2nd Friday in February data on Feb. 12.

The significant changes are an increase in our special education and English language learners—both groups are from programs where additional services are provided.

Here is a legend to use with the data:
AF AM=African American or Black
AKNA/AI=Alaska Native or American Indian
Asian
NH-OPI-Native Hawaiian or other Pacific Islander
Hispanic=Hispanic or Latino
ME=Reporting two or more races (multi-ethnic)
EDS=Economically Disadvantaged Students
SWD=Students with Disabilities
LEP=Limited English Proficient (English Language Learners)

If you have any questions, please let me know. Thanks. Laurel

Subject: HB 206 concern: 80 Day Count Provision

Hi,

I am very concerned with the 80-day student count provision in HB 206.

Here is an analysis of our student count over an 80 day period for last and this school years. You will see how the student membership fits a similar pattern each year. I would expect that other districts have the same membership pattern as this.

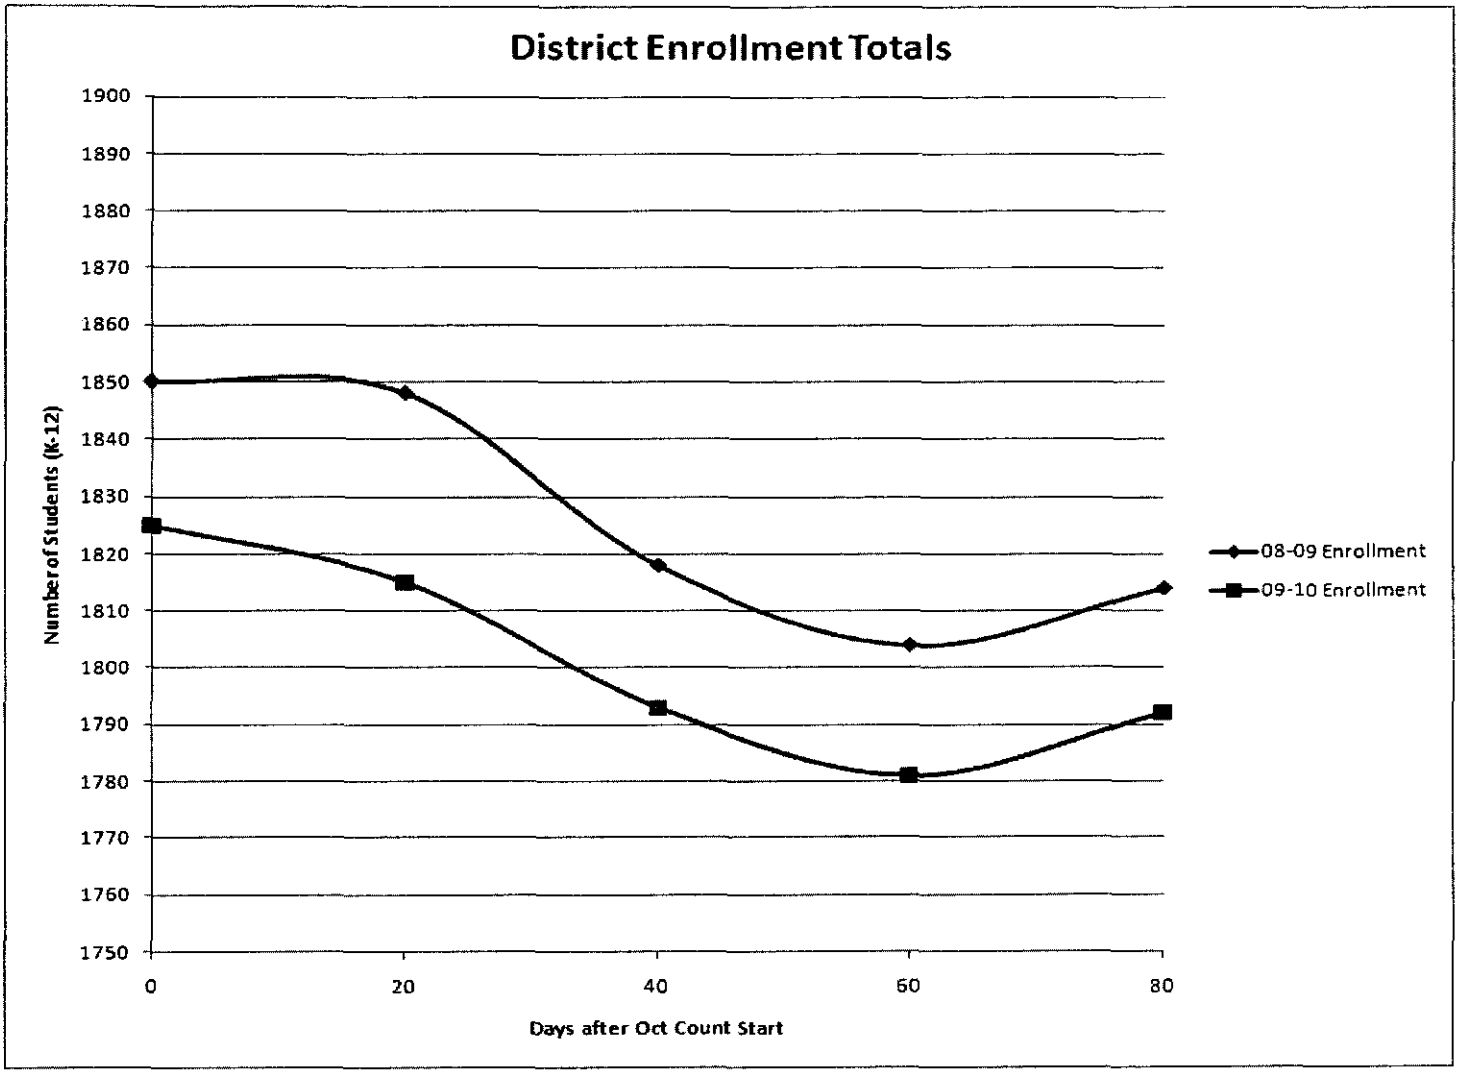
For last school year, FY2009, we had a decline of 1.8% in our student numbers over an 80 day period versus at the end of 20 days.

For the current school year, FY2010, we have a decline of 1.3% at the end of 80 days verses at the end of 20 days. This was a total of 23 students. We filed with District Court, in mid-December, 23 truancy cases with the District Attorney's office in Nome. We were instructed not to file them with the Kotzebue court. To date, about 60 days after filing the cases, I do not know of any result or any action taken by the court.

When the statement is made that the reason to have an 80-day count over a 20 day count is that schools push students out after 20 days of the count period is erroneous. All Northwest Arctic personnel are daily encouraging all students to be in school every day. Our teachers encourage good attendance habits. Our school board speaks to good attendance.

Northwest Arctic School District has about a $50 million budget. 1.3% of that budget is $650,000. This would cause Northwest Arctic to have $650,000 less in revenue to teach our students. With 85% of our budget being for personnel, and our fiscal plant items remaining constant regardless of our student count, we would have to reduce our teaching force by 7 or 8 teachers.

Below, please see a chart of our attendance over an 80 day period for last school year and this.



An 80 day count would be OK if a re-calibration (adjustment of about 2%) would be made to the funding formula to account for the natural decrease in enrollment experienced over the school year.

Please share this with Senator Seaton and the House Education Committee members.

Respectfully,

Norman Eck

RE: Kodiak Island Borough School District's Testimony Regarding House Bill 206

Dear Education Committee Chair Seaton and Education Committee Members:

Administration, School Board members and the finance department of Kodiak Island Borough School District (KIBSD) have reviewed House Bill 206 and would like to submit the following testimony for your consideration.

1. KIBSD is not in favor a provision that would limit our ability to offer students dual credit opportunities before they have taken and passed all three sections of the High School Graduation Qualifying Examination (HSGQE).

   Currently, KIBSD offers twenty dual credit courses that meet the approved course description for college, vocational and technical courses. A list of KIBSD's dual credit courses is enclosed with this document. Many of our students begin taking these dual credit classes as early as the ninth grade as well as seniors who have not yet passed all the required sections of the HSGQE. Dual credit courses give students the opportunity to not just work toward a high school diploma but to achieve certifications that would allow them to enter into the work force at an elevated level immediately following their graduation from high school.

2. KIBSD is not in favor of a mandated requirement to offer dual credit courses.

   The twenty dual credit courses currently being offered to Kodiak High School students are taught by ten teachers on a voluntary basis. These teachers do not receive an additional stipend from the university system but qualify as instructors of record. They have the ability to issue high school curriculum credit as well as approved syllabus college credit. The program could not suddenly expand due to a mandate; it takes time to develop a teacher's sense of collegial professionalism and willingness to voluntarily teach dual credit courses. A mandate would cause the union to become involved; thus, driving the delivery cost of dual credit courses to the point of jeopardizing the entire program.

3. KIBSD is not in favor of a requirement that would make Work Keys a high-stakes assessment.

   Our District utilizes Work Keys, in addition to a variety of other assessments, by allowing students to take multiple assessments throughout a school year to compile the vital information needed to study their own learning. Students become more meaningfully engaged in instruction and ultimately more connected to their life goals by studying their own learning. KIBSD also reaches into elementary grade levels with this low-stakes formative assessment methodology through Key Train. KIBSD intends to apply the knowledge gained through low-stakes formative assessments such as Key Train and Work Keys to a student's five-year career

plan; hence, laying the foundation for career choices and the pursuit of high school dual credit courses. Any legislation to increase the formality of the Work Key test would disrupt our low-stakes formative assessment process and hinder our ability to study student learning with students at their speed of learning. This combination of assessments, formative assessments and student options for dual credit helps to keep students engaged in school, graduate on time, and address drop-out issues.

Currently Kodiak High School has an over 80% graduation rate based on students graduating in four years. KIBSD graduation rate is 77.25% island-wide. Many of our students continue with an additional semester or school year and do in fact receive their high school diploma. Unfortunately, under current state reporting regulations, these students are not included in KIBSD's official graduation rate. KIBSD's current drop-out rate is 3.5%, which equates to twenty-eight students that we know by name. Of these twenty-eight students twenty have re-enrolled in our program to seek a degree but again, due to the rules of counting, are still considered drop-outs by the State. KIBSD boasts a higher graduation rate than we are allowed to report under the current rules and we attribute this success to the extra work we put into these students. I believe this type of success is shared by many school districts across Alaska who are engaged in similar programs.

4. KIBSD is not in favor of expanding the twenty-day student enrollment count to eighty days.

KIBSD researched its student enrollment records for the past five years focusing on the time frame of October through February and averaged a decline of 1.5%. The decline was not a consistent trend as each year indicated unique circumstances as follows:

School Year	Student Enrollment	Comments
2008/2009	-3	Enrollment declined between October to February mostly due to early graduation but was balanced by increased enrollment - early graduation at semester; some students enrolled in drug and alcohol rehabilitation programs; and some students transferred to other schools.
2007/2008	-30	Enrollment declined between October to February mostly due to early graduation - early graduation at semester; some students enrolled in drug and alcohol rehabilitation programs; and some students transferred to other schools.
2006/2007	-74	Enrollment declined between October to February due to excessive attendance expulsions (misused policy - policy has since been revised) - early graduation at semester; some students enrolled in drug and alcohol rehabilitation programs; and some students transferred to other schools. Nearly all the 74 students were brought back into the system by the beginning of the 2007/2008 school year.
2005/2006	+52	Enrollment increased between October to February due to more students enrolling than withdrawing - early graduation at semester; some students enrolled in drug and alcohol rehabilitation programs; and some students transferred to other schools.
2004/2005	-50	Enrollment declined between October to February due to early graduation at semester; some students enrolled in drug and alcohol rehabilitation programs; and some students transferred to other schools.

KIBSD believes educational programs should not be influenced by funding legislation through an eighty-day enrollment count but dependent on student progress and program need.

With an expanded eighty day count, school districts would experience increased reporting and related costs. Follow-up reporting to the State would also increase with a greater number of cross-over or double counted students; thus, growing the district level time, effort and cost to carry out this phase of the reconciliation. In addition, this measure will not effectively address drop-out rates because it does not specifically target grades 9-12. Rather, the expanded count requires that school districts dedicate additional State and local resources to track, report, and verify data for every student in grades K-12.

5. KIBSD is in favor of funding school districts based on the prior year student enrollment count.

   School district funding based on the prior year student enrollment count would establish reliable funding levels fundamental to the annual development of our budget as well as the preparation and establishment of educational programs.

In summary, Kodiak Island Borough School District is not in favor of House Bill 206 components that pertain to a provision that would limit our ability to offer dual credit courses to students prior to their passing the HSGQE; a mandated requirement to offer dual credit courses; a requirement that would make Work Keys a high-stakes assessment; or expanding the twenty-day student enrollment count to eighty days. Kodiak Island Borough School District is in favor of funding school districts based on the prior year student enrollment count.

Thank you for considering this testimony given by Kodiak Island Borough School District regarding House Bill 206.

Sincerely,

Stewart McDonald
Superintendent

HSGQE Proficiency Descriptors and WorkKeys Skill Levels

The tables for Reading and Mathematics below compare the Proficiency Descriptors for HSGQE to the WorkKeys Skills Levels descriptions. This comparison is only of descriptors prepared by EED, Assessment Unit. (A more thorough, rigorous comparison between assessments would need to be done at the item level.) Also, it is not clear which WorkKeys Skill Level (most skill areas are scored from level 3 to level 7) is most equivalent to Proficient on the HSGQE. The tables include the WorkKeys skills for the three main "certificate" levels.

Students in Alaska can earn a career readiness certificate (CRC) by taking WorkKeys assessments in three key skill areas: Reading for Information, Applied Math, and Locating Information.

CRC Level	WorkKeys Requirements
Bronze	scored at least a level 3 in each of the three core areas and has the necessary foundational skills for 35 percent of the jobs in the WorkKeys database
Silver	scored at least a level 4 in each of the three core areas and has the necessary foundational skills for 65 percent of the jobs in the WorkKeys database
Gold	scored at least a level 5 in each of the three core areas and has the necessary foundational skills for 90 percent of the jobs in the WorkKeys database
Platinum (new)	scored at least a level 6 in each of the three core areas and has the necessary foundational skills for nearly all of the jobs in the WorkKeys database

Competency areas highlighted in yellow in the WorkKeys section indicates those areas "may" be more challenging than the required competencies in the HSGQE proficiency descriptors, however significantly more detailed analysis would be required to determine the level of match between HSGQE and WorkKeys requirements.

While writing is required on the HSGQE it is not addressed in this document as writing is not currently a required component of WorkKeys in the Alaska regulations.

Reading

This comparison of descriptions for the HSGQE and skills for the WorkKeys assessments seems to show that, as might be expected from the description of the WorkKeys Reading for Information and Locating Information assessments (see below), there is some overlap in the areas of vocabulary; identifying main ideas; summarizing technical information; interpreting charts, graphs, tables, and illustrations; and following directions. There are areas in Summarize

Information and especially in Critique Arguments and Make and Support Assertions that do not seem to be addressed by the WorkKeys Reading for Information and Locating Information assessments.

> "The WorkKeys *Reading for Information* test measures the skill people use when they read and use written text in order to do a job. The written texts include memos, letters, directions, signs, notices, bulletins, policies, and regulations. It is often the case that workplace communications are not necessarily well-written or targeted to the appropriate audience. Reading for Information materials do not include information that is presented graphically, such as in charts, forms, or blueprints."
>
> "The WorkKeys *Locating Information* test measures the skill people use when they work with workplace graphics. Examinees are asked to find information in a graphic or insert information into a graphic. They also must compare, summarize, and analyze information found in related graphics."

Reading for Information and *Locating Information* contain informational text that would be found in the work place. The text types in the HSGQE are 60% informational and 40% literature.

HSGQE Proficiency Descriptors of the Minimum Competencies in Essential Skills for Reading	**WorkKeys Skills RFI (Reading for Information) LI (Locating Information)**
Use Context Clues A student proficient in the minimum competencies in essential skills	
uses context clues to determine the meaning of unfamiliar words within a text.	RFI:L3 Choose the correct meaning of a word that is clearly defined in the reading RFI: L3 Choose the correct meaning of common, everyday workplace words RFI:L4 Use the reading material to figure out the meaning of words that are not defined RFI:L5 Figure out the correct meaning of a word based on how the word is used RFI:L5 Identify the correct meaning of an acronym that is defined in the document RFI:L5 Identify the paraphrased definition of a technical term or jargon that is defined in the document RFI:L5 Apply technical terms and jargon and relate them to stated situations
Summarize Information A student proficient in the minimum	

competencies in essential skills	
summarizes events presented in a passage.	
determines and describes an author's position and/or viewpoint and applies it to a hypothetical situation.	
identifies relevant details and main ideas in a passage or parts of a passage.	RFI:L3 Identify main ideas and clearly stated details LI:L5 Sort through distracting information
summarizes technical information from a set of directions into a chart.	LI:L4 Summarize information from one or two straightforward graphics LI:L5 Summarize information from one or more detailed graphics
determines the purpose of a text.	
infers connections between ideas and events.	RFI:L4 Identify important details that may not be clearly stated
interprets charts, graphs, tables, and illustrations.	LI:L4 Find several pieces of information in one or two graphics LI:L4 Understand how graphics are related to each other LI:L4 Identify trends shown in one or two straightforward graphics LI:L4 Compare information and trends shown in one or two straightforward graphics LI:L5 Identify trends shown in one or more detailed or complicated graphics LI:L5 Compare information and trends from one or more complicated graphics
interprets information and applies it to new situations.	RFI:L5 Apply straightforward instructions to a new situation that is similar to the one described in the material
Critique Arguments A student proficient in the minimum competencies in essential skills	
locates supporting evidence in text.	
sorts and categorizes information.	

applies information from a text.	RFI:L5 Apply complex instructions that include conditionals to situations described in the materials
uses evidence to determine and support key ideas.	
describes the purpose behind language in an advertisement.	
differentiates between arguments based on opinions and arguments based on facts.	
Apply Multi-Step Directions A student proficient in the minimum competencies in essential skills	
follows multi-step directions to complete a task.	RFI: L3 Choose when to perform each step in a short series of steps RFI: L3 Apply instructions to a situation that is the same as the one in the reading materials RFI:L4 Apply instructions with several steps to a situation that is the same as the situation in the reading materials
determines and explains the reasons for using specific methods to complete a task.	RFI:L4 Choose what to do when changing conditions call for a different action (follow directions that include "if-then" statements)
identifies and sequences information from a variety of sources.	
locates specific information from multi-step directions from one or more sources.	
uses information from a chart to fill out a form.	LI: L3 Find one or two pieces of information in a graphic LI: L3 Fill in one or two pieces of information that are missing from a graphic
Make and Support Assertions A student proficient in the minimum competencies in essential skills	
identifies clear assertions (statements, opinions, or interpretations).	

identifies evidence and details from a text to support assertions.	

Mathematics

Most of the WorkKeys skills for Applied Math (see the description below) appear to compare to the Estimation and Computation skills of adding, subtracting, multiplying, and dividing numbers in various forms: positive and negative numbers, fractions, decimals, and percents. Some WorkKeys skills overlap with Numeration and Measurement. One skill assesses Geometry; no WorkKey skills cover Statistics and Probability and Functions and Relationships, however we have yet had time to review the new levels (6 and 7). It appears that the higher levels may cover some of these areas.

> "Applied Mathematics: This assessment measures the skill people use when they apply mathematical reasoning, critical thinking, and problem-solving techniques to work-related problems. The test questions require the examinee to set up and solve the types of problems and do the types of calculations that actually occur in the workplace. This test is designed to be taken with a calculator. A formula sheet that includes all formulas required for the assessment is provided. While individuals may use calculators and conversion tables to help with the problems, they still need to use math skills to think them through."

HSGQE Proficiency Descriptors of the Minimum Competencies in Essential Skills for Mathematics	WorkKeys Skills Applied Mathematics (AM)
Problem Solving, Communication, Reasoning, and Connections A student proficient in the minimum competencies in essential skills	*Problem Solving, Communication, Reasoning, and Connections are Process Skills. Students use Process Skills whenever they solve math problems.*
uses appropriate symbols to justify solutions to mathematics problems.	
uses a variety of problem-solving strategies (guess and check, working backwards, diagrams, patterns, etc.).	
solves multi-step problems in real-world context.	AM:L5 Find the best deal using one- and two-step calculations and then comparing results

Numeration A student proficient in the minimum competencies in essential skills	
reads, writes, models, and orders positive and negative numbers including fractions, decimals, percents, square roots, and numbers with simple exponents.	
converts between fractions, decimals, and percents.	AM: L3 Change numbers from one form to another using whole numbers, fractions, decimals, or percentages
compares, orders, and uses data containing mixed units of measurement (hours and minutes, feet and inches, metric units).	AM:L5 Calculate using mixed units (e.g., 3.5 hours and 4 hours 30 minutes)
expresses numbers in scientific notation.	
applies basic order of operations and rules of divisibility.	AM:L4 Put the information in the right order before performing calculations
Measurement A student proficient in the minimum competencies in essential skills	
accurately measures and draws distances and angles using a ruler or protractor.	
estimates and converts measurements of length and weight within the same system or between systems (standard and metric).	AM:L5 Decide what information, calculations, or unit conversions to use to solve the problem AM:L5 Look up a formula and perform single-step conversions within or between systems of measurement
identifies the appropriate tool and /or unit of measure with which to measure objects.	
solves problems involving rate, distance, time, scale, and money.	AM: L3 Convert simple money and time units (e.g., hours to minutes)
reads, writes, and uses money notation, determining possible combinations of coins and bills to equal given amounts; counts back change for any given situation.	

Estimation and Computation A student proficient in the minimum competencies in essential skills	
adds, subtracts, multiplies, and divides numbers in various forms: positive and negative numbers, fractions, decimals, and percents.	AM: L3 Solve problems that require a single type of mathematics operation (addition, subtraction, multiplication, and division) using whole numbers AM: L3 Add or subtract negative numbers AM:L4 Solve problems that require one or two operations AM:L4 Multiply negative numbers AM:L4 Add commonly known fractions, decimals, or percentages (e.g., 1/2, .75, 25%) AM:L4 Add up to three fractions that share a common denominator AM:L4 Multiply a mixed number by a whole number or decimal AM:L5 Divide negative numbers AM:L5 Calculate percent discounts or markups
solves multi-step problems using ratios and proportions.	AM:L4 Calculate averages, simple ratios, simple proportions, or rates using whole numbers and decimals
rounds numbers appropriately to solve problems.	
simplifies expressions involving simple exponents.	
Functions and Relationships A student proficient in the minimum competencies in essential skills	
analyzes, extends, and applies visual, numeric, and geometric patterns.	
evaluates and simplifies algebraic expressions and equations.	
converts representation of data between graphs, tables, and linear equations.	
solves linear equations, simple inequalities, and systems of linear equations.	

Geometry A student proficient in the minimum competencies in essential skills	
identifies and applies properties of angles, polygons, and lines (including parallel, perpendicular, and intersecting lines)	
uses formulas to calculate perimeters, circumferences, and areas	AM:L5 Calculate perimeters and areas of basic shapes (rectangles and circles)
applies the properties of equality and proportionality to solve problems involving congruent or similar shapes	
Probability and Statistics A student proficient in the minimum competencies in essential skills	
selects and uses appropriate scales of graphs	
reads data and predicts trends from tables, graphs, and charts	
analyzes, interprets, and appropriately labels bar graphs, line graphs, and circle graphs to display data	
determines the probability of an event	
selects an appropriate sampling group	

Dual Credit Courses
KHS and Kodiak College, UAA
Approved for 2009-2010

KHS Course	KOC Course Number	KOC Course Name	KIBSD Faculty	KOC Credit	Cost
Accounting	ACCT A120	Bookkeeping for Business	Jim Lambert	3	$75
Computerized Accounting & Business Co-op	ACCT A222	Intro to Computerized Accounting (QuickBooks)	Jim Lambert	3	$75
Advanced Auto Tech	ADT A102	Intro to Automotive Technology	David Morgan	3	$75
Mechanical Drawing	AET A100	Fundamentals of Drafting	Barry Altenhof	3	$75
Arch. Design Tech	AET A101	Fundamentals of CADD for Building Construction	Barry Altenhof	4	$100
Keyboarding or Computer Applications	CIOS A101	Keyboarding – Fall Semester*	Jim Lambert	3	$75
Multi-Media	CIOS A255	Multi-Media Applications	Matt Bieber	3	$75
Advanced Computer Apps	CIS A105	Intro to PC & Applications – Spring Semester**	Jim Lambert	3	$75
American Literature	ENGL A121	Intro to Literature	Ben Jackson	3	$75
Film as/and Literature	HUM A220	Film as/and Literature	Giovanni Tallino	3	$75
Spanish III	SPAN A101	Elementary Spanish I	Chad Pysher	4	$100
Welding I	WELD A112	Shielded Metal Arc Welding	A. Cavan & E. Raisley	4	$100
Welding II	WELD A114	Welding of High Strength Steel	A. Cavan & E. Raisley	4	$100
Advanced Welding Tech	WELD A157	Technical Drawing for Welders	A. Cavan & E. Raisley	3	$75
Boat Building	WELD A190	Selected Topics in Welding	Anthony Cavan	3	$75

Students must be enrolled for the full year to earn college credit except where noted.
List is subject to change. Call Kodiak College, UAA Student Services at 486-1235 for information.

2009-2010 Dual Credit Timeline:

Week of November 2nd – KoC Registrar visits KHS Keyboarding & Computer Applications classes to register students*

End of Feb 2010 – Kodiak College Registrar visits all other courses to register students**

*DEADLINE for students to register for Fall classes = Friday before WINTER BREAK
DEADLINE for students to register for yearlong classes = Friday before SPRING BREAK

Approved for Dual Credit but no students enrolled for 2009-2010

American Literature	ENGL A121	Intro to Literature	Dana Strong – Port Lions	3	$75
Spanish IV	SPAN A102	Elementary Spanish II	Chad Pysher	4	$100

Pending Approval – A Plus Certification course, Occupational Safety & Health course

2/8/2010

Questions from (H) EDC from 3/19/2010
Regarding Workkeys and the HSGQE

1. The regulation reads if a student takes the Workkeys in 11th grade, then retakes in 12th grade but scores higher then it is paid for by EED, if they do not score has high then either the student or the district would pay. Is this accurate? If it is accurate, what is the cost per test the student or district would pay?

The original intent of 4 AAC 06.717 (e) was that the state would pay for a second administration of any or all of the WorkKeys tests (doesn't specify 11th or 12th grade) if before the 2nd WorkKeys administration the student has used the instructional courseware and has shown a gain of at least one skill level in the courseware (e.g. Billy gets a Level 3 on WorkKeys math, then gets a level 4 on the math placement test in WIN or KeyTrain. Billy could then retake WorkKeys math at the state's expense, even if he ultimately gets a Level 3 on WorkKeys again.) Having said that, after re-reading the regulation, I believe it could be interpreted as you state below (i.e., Billy has to use WIN or KeyTrain after his first WorkKeys test, but EED would pay for the 2nd WorkKeys test only if he gets at least a Level 4 on WorkKeys that 2nd time.)

For students who want to retake WorkKeys, could they do that through the DOLWD?
As I mentioned in my previous email, EED and DOLWD have agreed on a policy that students will take WorkKeys at their high schools, whether it is the first test administration or a re-test. DOLWD will handle WorkKeys testing for its clients who are not in school. DOLWD currently offers WorkKeys testing at 13 of its 22 Job Centers (http://www.ajcn.state.ak.us/offices/index.html).

2. Right now it says the test results will be in the cumulative file, correct? I don't think we indicate it will be on transcript or diploma.

Correct -- the regulation says the WorkKeys scores will be kept in the cumulative record - nothing about transcript or diploma.

3. How can employers get a record of a student's/job-seeker's WorkKeys scores? Could DOLWD give WorkKeys scores to employers at students' request?

DOLWD will only have a record of WorkKeys scores for its clients who tested at a Job Center, and will release scores only if authorized by the individual. EED and each district will have a record of students' WorkKeys scores.

There are several ways in which a student may provide his/her own WorkKeys information directly to an employer:

- For each person (student or adult) who earns a National Career Readiness Certificate (NCRC), which means they obtained at least a Level 3 on all three tests, ACT issues an actual paper certificate that shows the level (Bronze, Silver, Gold, or Platinum), and the skills that were demonstrated. The student may show his/her certificate to an employer as part of the job application package or portfolio.

- ACT also provides a website that a certificate-earner may use to allow employers to verify the certificate online. [As an aside, ACT recommends that WorkKeys scores over 5 years old be considered out-of-date, although they no longer show an expiration date on the NCRC.]
- Alaska DOLWD's Labor Exchange System (ALEXsys - http://alexsys.labor.state.ak.us/) now provides a place for job applicants to list their WorkKeys NCRC level. All Alaska residents, including students, may establish an account in ALEXsys and keep track of their work history, education, certificates, skills, resumes, etc. Employers may search in ALEXsys for job candidates with a specific level of NCRC. Additionally, DOLWD is currently mounting a statewide outreach and education campaign to let Alaska employers know about WorkKeys and the NCRC (http://www.careerready.alaska.gov/employers.html for more info.)

4. How would WorkKeys information on a student transcript or cumulative record look?

It might look something like this:
WorkKeys Assessments
Applied Math - Level 4 (September 7, 2009)
Reading for Information - Level 3 (January 15, 2010)
Locating Information - Level 5 (April 28, 2010)
National Career Readiness Certificate (NCRC) - Bronze Level (issued May 5, 2010)
For more information about WorkKeys and the NCRC, please see
http://www.act.org/certificate/index.html

5. Information during the hearing was presented about the 12th grade class in 2008. Questions were asked about the data presented; those questions are in red, and the responses in green.

Class of 2008 Analysis

Number of grade 12 non-graduates	2787	
Number of grade 12 students coded by district as drops	1250	
Did any of these 1250 return and graduate since?		
Yes - 82		
Number of grade 12 continuing students (intend to attend in 08-09)	1537	
Did these students return and graduate since?		
Yes - 424		
Number of grade 12 non-graduates passing all parts of exam	1926	(69.1%)
Did any of these graduate due to passing local requirements since 2008?		
Yes - 452		
Number of grade 12 students who earned certificate of achievement	270*	
**Number not included in grade 12 non-graduates*		
Did any of these return and take the HSGQE and earn a diploma?		
Yes – 11		

6. One member of the committee asked for items sampler / practice tests from the HSGQE, those are attached to the email.

Please enter into the record my testimony to the House Education
(committee name)

committee on HB 206 (bill # / subject), dated 3/1/10

2 questions about the local district paying for college classes

1) Does this just apply to designated dual credit courses or also to approved (for instance, for a GT program or where local offerings are limited) (by the district) courses or to any course the student wants to take (at any price). The third option represents a blank check that is not manageable for local districts.

2) Not everyone who has passed the graduation qualifying exam is ready for college courses. The HSGQE is intended to be a minimum, not a college entrance exam. Correct me if I'm wrong, but I think the current language would allow a student to take algebra II or precalc at the community college and have the district pay for it, rather then avail themselves of the instruction in these subjects offered at the high School. Likewise they (student) could decide to take their electives as college classes at district expense, devastating the local budget and thus the offerings for other students at the high school.

Student Enrollment Count Mechanisms for School Funding: State Policies

States use different mechanisms for counting students for the purpose of funding school districts. These approaches have important consequences for accurately compensating districts for the students in their schools and for retaining students in school throughout the school year.

Considerations for Colorado

As state policymakers consider whether and how to establish a new student enrollment count for Colorado, it is important to understand the variation in these mechanisms among states. State decision-makers must recognize the incentives for school districts if changes are made to Colorado's current single October count date. Depending on the mechanism and the implementation of a change, some districts could gain funding and some districts could lose funding if the state's count mechanism is changed.

Funding needs are also a key issue for districts under the state's current single October 1 count date system. For example, districts may lack resources to effectively serve students who return to school after the count date. State policymakers will also need to consider the financial incentives for school districts to educate students created by these different approaches.

This document identifies general state count mechanisms, their specific characteristics, and advantages and disadvantage of each approach.

General Student Count Mechanisms

- **Single Count Date** – a count on one day near the beginning of the year
- **Multiple Count Dates** – calculation based on two or more count dates during the year
- **Average Daily Attendance (ADA)** – an average of a daily count during all or most of the year of students in attendance
- **Average Daily Membership (ADM)** - an average of a daily count during all or most of the year of students enrolled
- **Single Count Period** – an average of a daily count during a period of time near the beginning of the year
- **Multiple Count Periods** – an average of a daily count during two or more periods of time during the year

Year of Funding

Each of the mechanisms can apply the count to district funding for the year in which the count was taken, or for the subsequent year. Such options are discussed in more detail on page 4.

Single Count Date

The single count date is a count of the number of students in attendance in each school district on a particular date – usually October 1, which is when the federal government requires a count of the number of students eligible for the free and reduced price lunch program for purposes of Title I funding. An advantage of the single count date is that it is relatively simple and thus minimizes state administrative costs.

There are several disadvantages to this strategy. First, the single count date gives school districts no financial incentives to focus on retaining students after the count date. Second, in most cases, enrollment rises or falls somewhat from fall to spring, so by basing funding on one fall count, districts are more over-funded or under-funded than by using other approaches. Third, some students don't enroll in a public school until after October 1, so the districts receive no funding for these students under the single count date approach. For high schools, this means that schools have a financial disincentive to enroll out-of-school youth who try to reenroll after the count date. It also impacts districts with enrollment affected by seasonal employment in the local community, as in resort communities where enrollment can increase during the ski season.

States using single count date (13): CO, GA, CT, IN, IA, KS, MD, MA, NV, NH, NJ, UT, WV

Multiple Count Dates

States that use multiple count dates take a count of the number of students in attendance on two or more particular dates. States usually require two count dates – one in the fall and the other in winter or spring – with half (or some other specific percentage) of a district's funding based on the first count and half on the second. Using multiple count dates encourages districts to retain their students throughout the year, and it also provides more of an accurate enrollment count than the single count date. Using just two count dates, however, still translates into a large degree of inaccuracy and increases pressure on schools to ensure that students are in attendance for the two days of the count.

States using multiple count dates (5): LA, ME, MI, MT, WI

Average Daily Attendance (ADA)

States that use ADA fund districts based on an average of a count conducted every school day of students in attendance throughout the school year. This report also includes in this category one state that conducts the daily counts of students in attendance for most of the school year. Under

ADA, absent students are excluded from the daily count and the district's average is lowered accordingly. This component encourages school districts to improve attendance to avoid funding reductions. This full-year count is the most accurate in funding students who attend school and provides districts with the financial incentives to keep them in school and in attendance. School districts in several states that turned to ADA cited this mechanism as another reason to bolster their attendance policies. A disadvantage of ADA is that districts' funding is reduced when students are absent, regardless of whether they are excused or unexcused. This mechanism may also entail greater state administrative costs because of more and ongoing counts.

States using ADA (7): CA, ID, KY, MS, MO, NY, TX
**Idaho counts the 28 weeks in the school year with the highest ADA

Average Daily Membership (ADM)

States that use ADM fund districts based on an average of a count conducted every school day of students in enrolled in a school throughout the school year. This report also includes in this category the three states that count enrolled students for most of the school year. ADM differs from ADA because the daily count includes absent students. Advantages of this approach include greater accuracy, a financial incentive to keep students in school all year, and no funding affect on districts for absent students. However, because ADM is based on students being enrolled – whether or not they are attending classes – a drawback of this method is that it provides no financial incentive for boosting attendance. Also, because ADM involves more counts, or ongoing counting and reporting, it might be more time-consuming and costly to administer.

States using ADM (18): AR, AZ, AK, DE, FL, MN, NE, NC, ND, OK, OR, PA, RI, SC, SD, TN, VT, VA
**Arkansas counts during the first three-quarters of the school year; Virginia counts from beginning of the school year through March 31; and Arizona counts the first 100 or 200 days.

Single Count Period

Several states use a single count period, characterized by a specific, multi-week period, typically at the beginning of the year that occurs for less than half of the school year. Some of these states include absent students in this count and others do not, and some of these states refer to this method as ADA or ADM because they average each daily count during the period. This report, however, does not characterize the approach this way because the count is for less than half of the school year. The single count period yields a more accurate count than a single count date, but as with the single count date, provides no financial incentive for school districts to retain or accept students after the period ends. Also similar to the single count date, this approach does not allow for state funding of districts that enroll students after the count period ends.

States using single count period (3): Alabama uses ADM of the first 20 days after Labor Day; New Mexico and Wyoming use ADM of the first 40 days of school.

Multiple Count Periods

The two states that use the multiple count periods approach fund districts based on an average count of more than one specified period of time – week, month, multiple weeks/months – during the school year that amounts to less than half of the school year. One state uses a period at the beginning of the year and later in the year; another state allows districts to use the highest number of enrolled students during a specified number of weeks. One of these states includes absent students in this count (ADM) and the other does not (ADA). This report does not include these two approaches in the ADM or ADA categories because the counts are for less than half of the school year. Multiple count periods are more accurate than single count dates or periods and multiple count dates, and provide districts with more of a financial incentive to retain students. This mechanism, however, is less accurate and has less of a financial incentive to keep students than counting students every day. Partial year counts, such as multiple count periods and the single count period may offer states lower administrative costs than longer counts.

States using multiple count periods (2): Illinois uses ADA of the best 3 month period; Ohio uses ADM of the first full week in October and the first full week in February.

Year of Funding:

Regardless of the mechanism, some states use counts for the current school year, some use counts for the subsequent school year, and one state uses counts from the current year and previous year as a basis for funding districts.

- **Examples of states that apply the count to the current school year:** Colorado (October 1 of current school year); Alaska (ADM); Nevada (last school day of first month of school year); Ohio (ADM of first week in October and first week in February).

- **Examples of states that apply the count to the subsequent school year:** Iowa (third Friday of the September of the prior year); Kentucky (prior year final ADA); Maine (October 1 and April 1 of year prior to the year of funding; Massachusetts (October 1 of previous year).

- **Example of a state that applies counts from the current and previous years:** Michigan (February count date from previous school year and September count date from current school year).

ACTIVITY WINTER 2010

WorkKeys Prepares Criminal Justice Students in New Mexico for Industry Demands

Their performance on eight ACT WorkKeys assessments carries a lot of weight for students in the criminal justice program at Central New Mexico Community College (CNM).

To graduate, they must achieve specific skill levels on the Applied Mathematics, Applied Technology, Listening, Locating Information, Observation, Reading for Information, Teamwork, and Writing assessments.

"Students need to attain the median skill levels required for the police patrol officer WorkKeys occupational profile," said Kevin Daugherty, director of the criminal justice program at CNM. "We use this profile because it best reflects the skills needed in the industry as a whole."

Daugherty knows what the industry needs thanks to local employers who serve on the program's advisory committee. Criminal justice students take the Listening, Reading, and Writing assessments upon entry into the

They take the five other assessments upon exit from the program.

Students' WorkKeys scores account for 30 percent of their grade in the criminal justice capstone course, a one-credit hour competency course students take as they prepare to exit a program.

While preparing for and taking the WorkKeys assessments means extra work for students, Daugherty says the benefits have been significant. "Students' academic performance overall improves as their WorkKeys skill levels increase. Our graduates tell us how well the program prepared them for the workforce and that they appreciated the opportunity to improve their skills."

The majority of CNM graduates go on to complete a four-year degree in criminal justice. Others enroll in police academies, and some go directly to work in corrections, probation and parole, security, and forensics. A few students are active duty police officers, who

CNM, continued on page 15

is using eight WorkKeys assessments in several of its associate degree programs.

CNM, continued from page 8

enroll in the program to earn a degree for promotion purposes.

Criminal justice is one of 18 associate degree Career and Technical Education programs into which CNM has integrated the WorkKeys system. Faculty in these programs teach the skills that are assessed by WorkKeys.

Students take various WorkKeys assessments upon entry into or exit from programs to ensure they meet the skill levels required by the occupational profiles. CNM uses several assessments to qualify students for entry into two of its more popular programs—diagnostic medical sonography and radiologic technician. A growing number of the college's technical proficiency certificate programs—dental assistant, clinical laboratory assistant, and phlebotomist—also require WorkKeys testing.

In addition to their program degree or certificate, students earn a "WorkKeys Testing Results" document that lists the assessments taken and the scores earned. Students may also be eligible for a National Career Readiness Certificate by registering through the ACT system.

Requiring WorkKeys at CNM has proven to be a win-win situation for faculty, graduates, and employers.

"Faculty get better qualified students in their programs and are assured that their students are acquiring fundamental skills. Graduates gain a competitive edge by mastering skills in demand in the workplace, and employers get staff who are well prepared for their jobs," said David Licht, career analyst for CNM.

"We consider Central New Mexico Community College to be a major mover in economic development. An important part of our mission is to help provide New Mexico with the most highly trained labor force possible so we can be more competitive nationally and globally. WorkKeys assessments help us do just that."✦

HSGQE Proficiency Descriptors and WorkKeys Skill Levels

The tables for Reading and Mathematics below compare the Proficiency Descriptors for HSGQE to the WorkKeys Skills Levels descriptions. This comparison is only of descriptors prepared by EED, Assessment Unit. (A more thorough, rigorous comparison between assessments would need to be done at the item level.) Also, it is not clear which WorkKeys Skill Level (most skill areas are scored from level 3 to level 7) is most equivalent to Proficient on the HSGQE. The tables include the WorkKeys skills for the three main "certificate" levels.

Students in Alaska can earn a career readiness certificate (CRC) by taking WorkKeys assessments in three key skill areas: Reading for Information, Applied Math, and Locating Information.

CRC Level	WorkKeys Requirements
Bronze	scored at least a level 3 in each of the three core areas and has the necessary foundational skills for 35 percent of the jobs in the WorkKeys database
Silver	scored at least a level 4 in each of the three core areas and has the necessary foundational skills for 65 percent of the jobs in the WorkKeys database
Gold	scored at least a level 5 in each of the three core areas and has the necessary foundational skills for 90 percent of the jobs in the WorkKeys database
Platinum (new)	scored at least a level 6 in each of the three core areas and has the necessary foundational skills for nearly all of the jobs in the WorkKeys database

Competency areas highlighted in yellow in the WorkKeys section indicates those areas "may" be more challenging than the required competencies in the HSGQE proficiency descriptors, however significantly more detailed analysis would be required to determine the level of match between HSGQE and WorkKeys requirements.

While writing is required on the HSGQE it is not addressed in this document as writing is not currently a required component of WorkKeys in the Alaska regulations.

Reading

This comparison of descriptions for the HSGQE and skills for the WorkKeys assessments seems to show that, as might be expected from the description of the WorkKeys Reading for Information and Locating Information assessments (see below), there is some overlap in the areas of vocabulary; identifying main ideas; summarizing technical information; interpreting charts, graphs, tables, and illustrations; and following directions. There are areas in Summarize

Information and especially in Critique Arguments and Make and Support Assertions that do not seem to be addressed by the WorkKeys Reading for Information and Locating Information assessments.

> "The WorkKeys *Reading for Information* test measures the skill people use when they read and use written text in order to do a job. The written texts include memos, letters, directions, signs, notices, bulletins, policies, and regulations. It is often the case that workplace communications are not necessarily well-written or targeted to the appropriate audience. Reading for Information materials do not include information that is presented graphically, such as in charts, forms, or blueprints."
>
> "The WorkKeys *Locating Information* test measures the skill people use when they work with workplace graphics. Examinees are asked to find information in a graphic or insert information into a graphic. They also must compare, summarize, and analyze information found in related graphics."

Reading for Information and *Locating Information* contain informational text that would be found in the work place. The text types in the HSGQE are 60% informational and 40% literature.

HSGQE Proficiency Descriptors of the Minimum Competencies in Essential Skills for Reading	**WorkKeys Skills RFI (Reading for Information) LI (Locating Information)**
Use Context Clues A student proficient in the minimum competencies in essential skills	
uses context clues to determine the meaning of unfamiliar words within a text.	RFI:L3 Choose the correct meaning of a word that is clearly defined in the reading RFI: L3 Choose the correct meaning of common, everyday workplace words RFI:L4 Use the reading material to figure out the meaning of words that are not defined RFI:L5 Figure out the correct meaning of a word based on how the word is used RFI:L5 Identify the correct meaning of an acronym that is defined in the document RFI:L5 Identify the paraphrased definition of a technical term or jargon that is defined in the document RFI:L5 Apply technical terms and jargon and relate them to stated situations
Summarize Information A student proficient in the minimum	

competencies in essential skills	
summarizes events presented in a passage.	
determines and describes an author's position and/or viewpoint and applies it to a hypothetical situation.	
identifies relevant details and main ideas in a passage or parts of a passage.	RFI:L3 Identify main ideas and clearly stated details LI:L5 Sort through distracting information
summarizes technical information from a set of directions into a chart.	LI:L4 Summarize information from one or two straightforward graphics LI:L5 Summarize information from one or more detailed graphics
determines the purpose of a text.	
infers connections between ideas and events.	RFI:L4 Identify important details that may not be clearly stated
interprets charts, graphs, tables, and illustrations.	LI:L4 Find several pieces of information in one or two graphics LI:L4 Understand how graphics are related to each other LI:L4 Identify trends shown in one or two straightforward graphics LI:L4 Compare information and trends shown in one or two straightforward graphics LI:L5 Identify trends shown in one or more detailed or complicated graphics LI:L5 Compare information and trends from one or more complicated graphics
interprets information and applies it to new situations.	RFI:L5 Apply straightforward instructions to a new situation that is similar to the one described in the material
Critique Arguments A student proficient in the minimum competencies in essential skills	
locates supporting evidence in text.	
sorts and categorizes information.	

applies information from a text.	RFI:L5 Apply complex instructions that include conditionals to situations described in the materials
uses evidence to determine and support key ideas.	
describes the purpose behind language in an advertisement.	
differentiates between arguments based on opinions and arguments based on facts.	
Apply Multi-Step Directions A student proficient in the minimum competencies in essential skills	
follows multi-step directions to complete a task.	RFI: L3 Choose when to perform each step in a short series of steps RFI: L3 Apply instructions to a situation that is the same as the one in the reading materials RFI:L4 Apply instructions with several steps to a situation that is the same as the situation in the reading materials
determines and explains the reasons for using specific methods to complete a task.	RFI:L4 Choose what to do when changing conditions call for a different action (follow directions that include "if-then" statements)
identifies and sequences information from a variety of sources.	
locates specific information from multi-step directions from one or more sources.	
uses information from a chart to fill out a form.	LI: L3 Find one or two pieces of information in a graphic LI: L3 Fill in one or two pieces of information that are missing from a graphic
Make and Support Assertions A student proficient in the minimum competencies in essential skills	
identifies clear assertions (statements, opinions, or interpretations).	

identifies evidence and details from a text to support assertions.	

Mathematics

Most of the WorkKeys skills for Applied Math (see the description below) appear to compare to the Estimation and Computation skills of adding, subtracting, multiplying, and dividing numbers in various forms: positive and negative numbers, fractions, decimals, and percents. Some WorkKeys skills overlap with Numeration and Measurement. One skill assesses Geometry; no WorkKey skills cover Statistics and Probability and Functions and Relationships, however we have yet had time to review the new levels (6 and 7). It appears that the higher levels may cover some of these areas.

> "Applied Mathematics: This assessment measures the skill people use when they apply mathematical reasoning, critical thinking, and problem-solving techniques to work-related problems. The test questions require the examinee to set up and solve the types of problems and do the types of calculations that actually occur in the workplace. This test is designed to be taken with a calculator. A formula sheet that includes all formulas required for the assessment is provided. While individuals may use calculators and conversion tables to help with the problems, they still need to use math skills to think them through."

HSGQE Proficiency Descriptors of the Minimum Competencies in Essential Skills for Mathematics	WorkKeys Skills Applied Mathematics (AM)
Problem Solving, Communication, Reasoning, and Connections A student proficient in the minimum competencies in essential skills	*Problem Solving, Communication, Reasoning, and Connections are Process Skills. Students use Process Skills whenever they solve math problems.*
uses appropriate symbols to justify solutions to mathematics problems.	
uses a variety of problem-solving strategies (guess and check, working backwards, diagrams, patterns, etc.).	
solves multi-step problems in real-world context.	AM:L5 Find the best deal using one- and two-step calculations and then comparing results

Numeration A student proficient in the minimum competencies in essential skills	
reads, writes, models, and orders positive and negative numbers including fractions, decimals, percents, square roots, and numbers with simple exponents.	
converts between fractions, decimals, and percents.	AM: L3 Change numbers from one form to another using whole numbers, fractions, decimals, or percentages
compares, orders, and uses data containing mixed units of measurement (hours and minutes, feet and inches, metric units).	AM:L5 Calculate using mixed units (e.g., 3.5 hours and 4 hours 30 minutes)
expresses numbers in scientific notation.	
applies basic order of operations and rules of divisibility.	AM:L4 Put the information in the right order before performing calculations
Measurement A student proficient in the minimum competencies in essential skills	
accurately measures and draws distances and angles using a ruler or protractor.	
estimates and converts measurements of length and weight within the same system or between systems (standard and metric).	AM:L5 Decide what information, calculations, or unit conversions to use to solve the problem AM:L5 Look up a formula and perform single-step conversions within or between systems of measurement
identifies the appropriate tool and /or unit of measure with which to measure objects.	
solves problems involving rate, distance, time, scale, and money.	AM: L3 Convert simple money and time units (e.g., hours to minutes)
reads, writes, and uses money notation, determining possible combinations of coins and bills to equal given amounts; counts back change for any given situation.	

Estimation and Computation A student proficient in the minimum competencies in essential skills	
adds, subtracts, multiplies, and divides numbers in various forms: positive and negative numbers, fractions, decimals, and percents.	AM: L3 Solve problems that require a single type of mathematics operation (addition, subtraction, multiplication, and division) using whole numbers AM: L3 Add or subtract negative numbers AM:L4 Solve problems that require one or two operations AM:L4 Multiply negative numbers AM:L4 Add commonly known fractions, decimals, or percentages (e.g., 1/2, .75, 25%) AM:L4 Add up to three fractions that share a common denominator AM:L4 Multiply a mixed number by a whole number or decimal AM:L5 Divide negative numbers AM:L5 Calculate percent discounts or markups
solves multi-step problems using ratios and proportions.	AM:L4 Calculate averages, simple ratios, simple proportions, or rates using whole numbers and decimals
rounds numbers appropriately to solve problems.	
simplifies expressions involving simple exponents.	
Functions and Relationships A student proficient in the minimum competencies in essential skills	
analyzes, extends, and applies visual, numeric, and geometric patterns.	
evaluates and simplifies algebraic expressions and equations.	
converts representation of data between graphs, tables, and linear equations.	
solves linear equations, simple inequalities, and systems of linear equations.	

Geometry A student proficient in the minimum competencies in essential skills	
identifies and applies properties of angles, polygons, and lines (including parallel, perpendicular, and intersecting lines)	
uses formulas to calculate perimeters, circumferences, and areas	AM:L5 Calculate perimeters and areas of basic shapes (rectangles and circles)
applies the properties of equality and proportionality to solve problems involving congruent or similar shapes	
Probability and Statistics A student proficient in the minimum competencies in essential skills	
selects and uses appropriate scales of graphs	
reads data and predicts trends from tables, graphs, and charts	
analyzes, interprets, and appropriately labels bar graphs, line graphs, and circle graphs to display data	
determines the probability of an event	
selects an appropriate sampling group	

Testimony: HB 206 High School Assessment /Post Secondary Class

On behalf of Dr. Norman Eck, Superintendent, Northwest Arctic Borough School District

80-Day Count

- Makes a flawed assumption that school districts intentionally push students out of school after the count.
- In reality the count is below level in rural Alaska due to PDF checks being distributed at the same time as the count with parents often traveling to Anchorage for shopping, medical and other reasons once the dollars are available.
- Students who drop out midyear often re-enroll in spring hence many fifth and sixth year graduates across the state.
- Request to change distribution date until summer of before the winter holiday and leave the 20 day count in October in place.

Work Keys as an Additional or Replacement Assessment for Alaska Graduates

- This needs to be a voluntary assessment and used as career awareness program starting in early grades, not an end of high school assessment.
- Career awareness comes through exposure, and this assessment favors urban students with professional parents as opposed to rural students in communities with limited career/job options.
- Our understanding that in the pilot district this did not working smoothly. This will make it very difficult to run in rural Alaska.
- Having access to pencil/paper tests in lieu of on line testing dismisses the critical career awareness interactive lessons that accompany the full program.
- Recommend making Work Keys fully available as an instruction and assessment tool, but not required as a high school exit requirement.

Postsecondary Classes/Training Offered in High School

- If students are to have access to college classes while in high school, the State needs to set the criteria and cover the costs as it public schools mandate responsibility for K-12 students.
- If we have an option for additional grades we recommend full funding for 2-year kindergarten, giving all students in underperforming schools a boost toward success as opposed to providing funds for those already successful.

Wrangell High School College Class Enrollment 2009-2010

FINANCIAL AID

TUITION AND FEES

2009-2010 Tuition Schedule

Additional credits are assessed at the appropriate rate per credit. For non-res rates are $471 per credit for lower division, $489 for upper division, and $64· credit.

- Non-residents may take up to 4 credits per semester at the residen however, additional credits will cause all credits, including the first f re-assessed at the non-resident rate.
- For Alaskan residents, additional credits are assessed at $141 per c division, $159 for upper division, and $316 for graduate credit.
- Western Undergraduate Exchange (WUE) program: residents of Ariz California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, South Dakota, Utah, Washington and Wyoming and are eli WUE program. The WUE surcharge is 150% of the lower division re: rate.

Tuition prices vary, based upon the following criteria:

- Lower division (000 - 299 level), upper division (300-499 level) anc (600-699 level) courses.
- Resident - State of Alaska, Sister City, Yukon and Northwest Territo
- Non-resident - Residents of all non-WUE states, International stude
- WUE - residents of the 14 participating western states.

Following are three graphs showing tuition costs per credit for Resident, WUE Lower Division, Upper Division and Graduate level courses per semester. Sum to be determined.

LOWER DIVISION (000-299)

	Resident	WUE	Non-Res
	$141	$212	$471
1	$141	4 credits or less same as resident tuition	
2	$282		
3	$423		
4	$564		
5	$705	$1,060	$2,355
6	$846	$1,272	$2,826

Subject: RE: HB 206 also heard on Wednesday

I have a question about the proposed AS 14.03.074(b) in this bill. What does it mean that the district shall "make arrangement for the fee" of the post secondary school? Does that mean pay the fee? Or simply help facilitate the student paying the fee? When my son was enrolled in high school, he also enrolled in courses at Alaska Pacific University. The cost was over $13,000. It would have been nice for me if the school district had paid that, but it would probably have meant cutting some other student's remedial tutoring.

Board of Education

February 9, 2010

Comment on House Bill No. 206

Although the Kodiak Island Borough School District Board of Education supports many measures in HB 206, there are several obstacles that must be addressed before full support can be granted. KIBSD does support the notion of the "Hold Harmless" and the use of the previous year student count for funding of a school year budget. The security of knowing that an increase of students in a given year will result in additional funding for that increase is also appealing. Through special revenue grants, KIBSD currently implement Workkeys and provides opportunities for college credit while taking high school courses. HB 206 mandates this assessment and college credit option but is not clear on how funding will be provided to support cost of implementation. There are three concerns that present barriers to KIBSD to address.

First Concern

The 80-day count does not align with other mandated student counts. The current 20-day count satisfies several Federal mandated accounting requirements. These include:

- the Free and Reduced Lunch numbers, counted and reported by November of each year;
- the Title I low income student count factoring into the ESEA funding formula;
- the Title I-C counting period occurs through the first part of every year and is reported at the end of the 20-day count and affects free and reduce lunch funding;
- the Special Education Intensive Needs count is calculated on a single day during the establishment of the Average Daily Membership and utilizes the same personnel resources to collect the data; and
- special revenue funds and competitive grants requiring the Average Daily Membership are based on the 20-day count and are usually due in January of each year.

The 80-day count and conflicting required 20-day counts will produce different numbers resulting in non-representative data. KIBSD does not believe that the intent for this bill is to create complications between various reporting and funding documents.

Second Concern

Early graduation is a common practice for students who have earned their credits and met requirements for graduation before January. This practice is to the advantage of eligible students. These students are often advanced and wish to seek early entry into college/technical training programs; join the military; or other beneficial programs. Other students are fifth year seniors ready to complete their programs. An 80-day count will create pressure to stop this practice and require these students to graduate in May.

Third Concern

The conflicting 20-day and 80-day count models will require additional staff time and effort. The staff responsible for student count periods are otherwise occupied with conducting mid-year grant reporting, developing budgets, completing budget revisions, and preparing for student assessments in the months of January and February. The proposed 80-day count will create an additional unnecessary strain on already stretched resources.

We respectfully request that you take our observations and concerns under consideration as you address HB 206. Some of the provisions of HB 206 are anticipated to cause additional work for our staff and are likely to result in tangible or measurable benefits. We are hopeful that your committee will remove the provision for the 80-day count from HB206 and retain our current 20-day count period.

Thank You,

Norm Wooten
Board of Education President

Subject: Email Testimony Re: HB 206 Version P

Louie,

Thank you for providing me with the latest version of HB206. As we discussed last week, I am out-of-town at a school business conference and will not be able to testify today. I have had the opportunity to discuss the current version of the bill with several colleagues. If possible, please provide the following comments to the committee.

We are concerned with several issues in the current bill:

1) Requirement for career assessment appears to be an unfunded mandate for additional testing on school districts. We and our affiliate organizations under the Alaska Council on School Administrators (ACSA) have endorsed a position statement (see below) that opposes mandatory implementation of these types of programs. If implementation were to be required, funded professional development for staff would be essential.

2) Payment for postsecondary coursework under the proposed 14.03.074 appears to be another unfunded mandate on school districts. Although many districts already have dual credit arrangements and fee sharing structurs in place, the language in this bill may result in parents demanding that these existing systems be restructured and that school districts bear a potentially unlimited cost and administrative burden to provide these courses.

3) We do not feel that the 80-day count effectively addresses the dropout issue. We appreciate the addition of new language to address mid-year graduates and increases in enrollment. We also like the idea that baseline funding for the new school year will be determined by the prior year count. However, it is extremely likely that the 80-day count will result in lower counts for school districts, especially those in rural areas. There is often a drop in enrollment by mid-year, as families move out-of-district for various reasons, whereas they tend to move into rural districts in the summer and fall. The 80-day count will also impose an additional administrative burden on both districts and the state. Again, we do not feel it is an effective mechanism for addressing the dropout problem.

Thank you for your consideration and the opportunity to provide input to this process.

Position Statement 09-12

Work Ready College Ready Program Mandate

The Alaska Council of School Administrators recognizes the importance of building pre-vocational and vocational trainings and awareness statewide, but opposes mandatory implementation of the Work Ready

College Ready and Work Keys programs.

- There is no accountability mechanism built into the implementation plans for districts, schools, or students to gauge effectiveness or growth over time for students acquiring the critical work ready skills.

- The lack of appropriate infrastructure supporting the use of the program hinders the effectiveness of the program for our students.

- The Work Ready College Ready and Work Keys programs create another layer of "testing" for students that are not relevant for all students and are not directly aligned with our statewide model for improving student achievement and learning.

Adopted by the Alaska Council of School Administrators

Subject: Re: House Education Committee Meeting Schedule for Next Week

In the last week we have received information on HB206 and it's most recent version. While I will not be available for the House Education Committee Meeting on Friday, there are some thoughts I would like to share with Committee Members. I realize an email may be fairly informal, I can provide a follow-up if necessary.

As for the addition of a new testing requirement in career preparedness for all 12th grade students, I am not certain what real purpose this might serve for the state, school districts, the post secondary institutions, employers, and most importantly the individual students asked to take the test. Instituting a test in the 12th grade may suggest career readiness for some, but in what way will it be more informative then what we already have available through transcripts and other standardized measures? Testing in 12th grade in this area seems to be motivated by something other than better serving any individual student.

Like the HSGQE, which may be the last test the legislature required and believed would best serve the public, every test has its limitations and rarely is testing the 'silver bullet' people sometimes hope it will be. Some superintendents hope that this test will eliminate the need for an HSGQE, and would reduce the impact of a 'high stakes test' which occasionally denies students access to a diploma. If the new test eliminates the need for the HSGQE, that may be the best reason for a career preparedness test implementation.

On the issue of an 80 day student count period, I do not see where that would benefit many districts. The extended count period may only further complicate the current system since the 80 day period may see students make multiple moves between multiple districts. I do appreciate the forward funding suggestion which has been suggested frequently over the years. I also appreciate the consideration that the final funding may consider what best serves the district. I am concerned that the sponsor's statement suggests the current funding rules provide a 'hold harmless' safety net, when it actually spreads the funding void over a three year period rather than taking the full impact in any one year. Districts appreciate that relief, but we still lose funding equal to the amount more students would have generated.

The final point I wanted to make is that I believe districts and the UA system have been working on dual credit and other college course option for many years. These situations are most developed and robust in our largest communities and districts where teachers at both the hs and college level have the necessary academic background and have been working together for a while. In these instances they have reached agreements on course costs, and better articulating to parents and students which credits will be useful as students transition from high school. I believe these recommendations may help students in Alaska, but it will also further accentuate the differences in what can be offered in different districts where high turnover and limited personnel restricts available options. Other technologies may level the field some, (video conferencing, eluminate, etc) but there is still a discrepancy in how successful these classes are compared to live instructors on site.

Thanks for the opportunity to reply, I will try to be more timely next time. jack Walsh, Superintendent of Bristol Bay Borough School District

Re: HB 206 (80-day count period provision)

I have been involved in public education for 48 years, 42 years in Alaska. I have never known an educator who did not care if students dropped out of school, regardless of whether they had been counted for funding. In my opinion, the rationale given for the proposed 80-day count period discredits the motives of educators without providing significant real data to back it up.

Subject: comment on HB 206

Hello Sir, I appreciate your keeping us in the loop.

Current law holds districts harmless for a decrease in student count, That is only true for district wide. If my school drops below ten, it is cut from funding. We dropped three schools this year. Two would have been at 8-9, but I could not risk it as zero funding is a hard fall. This will simply compound the issue and close more schools. Unless there is something I do not understand. thanks, lauren

Conversation: HB 206 Version P and new sponsor statement
Subject: Re: HB 206 Version P and new sponsor statement

Mr. Flora,
In the bill 14.03.074 says a district Shall pay the costs for post-secondary.
What am I missing here? This states very clearly that we would indeed be paying for something.

Also in the bill 14.03.073 calls for a nationally recognized assessment.
We are one of two states with the wisdom to refuse National Standards.
I see this as a sell out and one that will hurt us all badly down the road.
I am attaching an article relating to the total lack of intelligence that National Standards represents for your information. I hope that in reading the message in the article you will understand my intense opposition to National Standards as see the extreme threat they represent to education and to our students.

You state that "the intent of the extended count is to provide an incentive for districts to maintain student numbers year-round"
I remain confused as to how counting my kids more or longer is going to keep any of them in school?
If you weight your cows every day they don't gain more weight or gain it any faster. If you want them to gain weight, you need to feed them more or better.
I see counting our kids longer in the same way. Unless we DO something different. Counting them for a longer period of time is of no more substance than a sack full of wind.

I thank you for your response, but I find this bill lacking in substance and common sense. It also has the potential to decrease funding for schools in enrollment decline as I see it, due to the way it is worded. I will be traveling tomorrow so I cannot testify. I would appreciate you sharing this note and my first with the committee. If it seems appropriate please feel free to do so.
My Thanks,
Doug Conboy
PS: I made a couple of typo corrections to the first note that will come along with this one. Please do me the favor of using this version if you do share it with the committee.

Subject: HB 206

Dear Representative Edgmon,

I have read the Sponsor Statement for HB 206 (Version P) and would like to share some concerns that I have with you:

1. I do not understand the rationale behind increasing the student count period from 20-days to 80-days as a funding incentive for districts to retain students in school. Is there research to back up the assumption that this measure will reduce the dropout rate? School administrators and teachers have an ethical obligation to do everything in their power to keep children from dropping out of school. It is somewhat insulting to me as a member of the profession to think that educators would want to keep kids in school solely to maintain funding. While schools certainly could do better to keep kids engaged in school, there has to be a better solution than increasing the count period.
2. The provision in the bill that would allow students to take college or vocational education credits for free once they have passed the HSGQE is problematic. Last year, 90% of our 10th graders passed the HSGQE on their first try. These students go on in their 11th and 12th grade years to take many of the courses offered through the District's rigorous curriculum; including advanced math, foreign language, music, art, and Career and Technical Education courses. Some of these courses are offered for college credit through our dual credit and Tech Prep programs. Through our MOA with the university, students earn these college credits at greatly reduced rates. Most of the courses are taught by our high school faculty. Students who want to earn college credit but cannot afford the tuition have access to scholarships. It has been my experience that if the student or the family has to pay the tuition or fill out the paperwork for a scholarship, they have an incentive to finish the course. If these courses are offered for free, as the bill proposes, who pays for the credits? Is the university able to offer so many more courses to students in rural Alaska? Does rural Alaska have the internet bandwidth capacity to handle distance delivered courses? As I may have mentioned to you previously, Unalaska does not presently have the capacity, both in terms of personnel and technology, to offer many distance-delivered or locally taught college courses.
3. The career preparedness requirement outlined in HB 206 is laudable. However, please keep in mind that since the passage of NCLB nearly 10 years ago, school districts have "tooled the factory" to produce students who are proficient in math and language arts. The goal mandated by the legislature was to have all students perform at grade level on the Standards Based Assessments and to pass the HSGQE. If the legislature changes the mandate to require all 11th grade students to pass the WorkKey's assessment, they need to know that schools will need to "re-tool." Presumably, the HSGQE was designed to measure what a student knows and is able to do with regard to their post-secondary education and career readiness. Is one to assume now that this assessment that the State has required students to pass for the last several years was flawed?
4. The Sponsor Statement says that "the HSGQE has been identified as a contributing factor to the high-school drop-out rate." Who has identified it at such? Is that statement based on empirical research or anecdotal comments? To the contrary, our District has often found that students who pass the HSGQE, especially ESL students and students with disabilities, have felt even more empowered to finish high

school! We recognize that there are problems with the HSGQE, but let's be careful to not throw out the baby with the bathwater.

I urge you and other members if the House Education Committee to consider the possible adverse consequences of HB 206. As written, this bill contains many complex components; each requiring extensive research and debate. I hope that UCSD board members and I can discuss this bill with you further during the legislative fly-in next week.

Respectfully,

John P. Conwell

Louie,

I am forwarding these comments for the meeting in the morning. If I can get to the LIO I will try to testify. Wrangell is already doing what the legislation is asking without all the bureaucracy of this legislation.

The WorkKeys is not valuable to college bound students and for the most part is a waste of money, energy, and valuable teaching time for those students. Please see my entire comments.

Would be nice to put the brakes on this thing until further expert testimony could be reviewed.

Thanks.

HB 206 (Version P) Sponsor Statement

Alaska has one of the highest high-school drop-out rates in the nation. HB 206 addresses this problem by providing incentives for districts to keep students by replacing the current 20-day student count period with an 80-day count for purposes of determining student numbers for school funding. HB 206 seeks to elevate student engagement by allowing students who pass the High School Graduation Qualifying Exam (HSGQE) to take college or vocational education credits for free until high-school graduation.

Students who do not pass all three sections of the HSGQE should not be disqualified from taking college or vocational education credits. Many very successful business people in this and other states could not pass all three sections of the qualifying exam. That should not penalize them or hold them back.

It also adds a student's career preparedness assessment scores to their high-school transcript.

The career preparedness requirement attempts to ensure that high school graduation is based on student competency for real-world employment applications. The Department of Education and Early Development (DEED) currently requires that all 11th graders take a career assessment test, in this case the WorkKeys Assessment.

The above statement is incorrect. "The department does "not" currently require....." It is the opinion of my School Board and the opinion I share that WorkKeys should not become a requirement since it has little, if any, value to most students in Wrangell. Students who are college bound will find WorkKey test documents useless for all practical purposes. Most colleges and universities do not recognize WorkKeys scores as having any value. Students entering a trade or going on to technical schools may find more value in the WorkKeys scores since they may find counselors, teachers, and employers who understand what those scores mean. One size does not fit all and we do not believe in mandating something that will have no value to a large number of our students.

WorkKeys is a job skills analysis and assessment system that sets out specific skills and levels of skills required by employers, so that students understand the connection between what they learn in school and what is required for each occupation. HB 206 builds on the DEED plan by requiring that the career preparedness assessment be taken again before a student exits high school, and requiring that those assessment scores be posted on a student's transcript. This would allow a student to use their final year of high school to improve specific skill and make their scores meaningful for employment or college qualification.

To my knowledge no college or universities currently uses WorkKey scores for entrance or anything else. Most do not even know what it is.

HB 206 allows students who take and pass all three sections of the HSGQE prior to graduation to take college credits or vocational school credits until graduation. This could allow students to advance toward an associate degree or vocational education certificate by the time they have graduated high school. New studies indicate all students should start college with at least six college credits to improve college graduation rates. The HSGQE has been identified as a contributing factor to the high-school drop-out rate. Students interpret that passing the exam means they have met their high school qualifying criteria, leading to a lack of interest in school. Incorporation of classes that are selected based on relevance to the individual student will help maintain interest and achievement.

Wrangell Public Schools currently offers 51 College Credits to students in a wide variety of classes. Will this bill help us defray the cost of these courses? This current school year Wrangell Public Schools is offering Math 105, Math 107, Math 108, Math 200, English 111, English 211, Early Childhood Development, Emergency Trauma Technician (ETT), Emergency Medical Technician I (EMT-I), Certified Nurse Assistant, Advanced Woodworking, Welding I (metals fabrication) and Welding II (metal fabrication). All these courses are concurrent or dual enrollment college courses. How will this bill benefit our students or our district?

HB 206 requires school districts to conduct an extended count period to determine school funding. This provision increases the count period from 20-days to 80-days and would provide a financial incentive for schools to retain their students for the whole year. School districts will be funded based on their prior year's count. Current law holds districts harmless for a decrease in student count, and HB 206 would allow districts with an increase in student numbers during the current year to receive an adjusted funding level for that year. Students who graduate from high-school in the middle of the 80-day count would be included in the full count period.

It is my belief that the prolonged count period will accomplish nothing but to perhaps cause more frustration for school secretaries, administrators, and IT people who have to compile these data. It is very possible that school districts may loose funding.

Will there be a fiscal note attached to the bill? Extending the count will not come without cost in each district and in DEED. Thickening the bureaucracy is not always a good thing without knowing if positive results can be gained. The assumption is that schools have control over whether or not the student attend and continue their education. Agreed, schools can influence this decision but schools certainly do not have control. Parents are the control in this instance. I fear schools will be punished for decisions made in the homes of their students.

Furthermore there are other reasons for school populations to increase and decrease that have nothing to do with drop outs. Drop out prevention seems to be the primary purpose for this legislation. How does the bill control for normal transience of school

populations. Transience is certainly not related to school drop outs but would cause a district to either gain or loose funds. For example:

> Village A has a fire that burns several homes. Families from Village A move to Village B. Village A has a significant decrease in student population over the count period and Village B has an increase. One school will be penalized while the other will be rewarded. Neither may have had an increase or decrease based purely on drop outs.

- Where will the money for tuition come from? Is it supposed to come from the school district's foundation formula? There is no fiscal note that I have seen yet so I may not understand how this is intended to be paid for.
- What about districts that use their own staff to teach the college courses through articulation agreements with universities and colleges. Are they reimbursed for the courses they are teaching since no university staff is involved other than the registrar?
- If the local district teaches these classes can they be reimbursed through the Governor's Scholarship Program?
- There would seem to be models that achieve the same result, like the current model used in Wrangell, without any need for legislation, additional counts, and additional bureaucracy. Why haven't these models been reviewed?

Thank you for the opportunity to comment.

Alaska Council of School Administrators

2 February 2010

House Education Committee Members
Alaska State Capitol

Dear Chair Seaton:

I will be unavailable to comment on HB 206 during the scheduled hearing on Friday, February 5, 2010. Please accept the following remarks on behalf of the Alaska Council of School Administrators.

It is the administrators' job to inform policy, but ultimately we are the implementers of policy decisions. As HB 206 is written, there are several administrative concerns regarding its implementation.

1) The proposed career preparedness assessment would be a new assessment. I am sure the committee realizes that in order to comply with No Child Left Behind mandates, our students have been subjected to an inordinate amount of testing. If there is to be a new assessment, no matter how appealing it may be, something MUST be taken off the table. We cannot support yet another layer of testing.

2) Districts should not be required to absorb new costs associated with students taking college or vocational credit courses.

3) Adjusting the student count period is a concern. At this point, we do not have the necessary data to fully understand the potential impact of proposed changes on school districts' funding. Our operating costs are definitely fixed by the fall, and in many cases have been predetermined the previous spring, once contracts are issued.

4) Some discussions in the previous hearing implied that districts are not trying hard enough to keep children in school, thus need a financial incentive to do so. While there may be isolated cases of student count abuse, please do not paint all districts with a broad brush. It is inaccurate to suggest that most school administrators disregard the vital issue of students who leave school early. That quite simply is not the case.

Thank you for taking the time to consider these points as you deliberate HB 206.

Sincerely,

Mary A. Francis, Ph.D.
Executive Director

Subject: HB317 & HB206

Representative Seaton,

You asked me yesterday for some additional information on school district pupil transportation contracts during my testimony on HB317.

I have discussed this matter with several of my colleagues and learned that there is variability in the CPI clauses of the contracts around the state. Some of the newer contracts may address both increases and decreases in CPI, whereas others only reference increases. Unfortunately there is no file of all the district contracts, so we'd have to contact each district to get more precise information. Also, some contracts have separate fuel clauses, which may be based on local rates. These rates may not go down, even if the Anchorage CPI does!

In light of this situation, and the uncertain economic times, we would certainly be in favor of the new language proposed in HB317.

Regarding HB206, I did not get a chance to testify on Monday, and I will be out-of-town for the next week, when I understand a new version may be available. I am concerned that the proposed change in the count procedure does not effectively address the dropout issue, and that it will result in reduced funding for districts. Quite often counts will be reduced as the year goes on, but this may be due to mid-year graduations and families moving, not solely to dropouts. While there is movement both in and out throughout the year, families are more likely to move to rural areas of the state in the summer, than in the dead of winter!

In addition to reducing the foundation funding in districts even where there is no dropout problem, a significant change to the count procedure may have other unintended consequences, such as increased closures of small schools "on the edge" of the 10-student minimum.

I am also concerned about possible unfunded mandates in this bill, which may include the additional career assessment exam and district-funded enrollment in post-secondary courses.

My colleagues and I await the expected new version of HB206, and we hope that there will be sufficient time to review it before your committee takes action on the bill. Although I will be traveling this week, I will continue to check BASIS.

Thank you for your consideration.

Subject: HB206

Chairman Seaton:

Thank you in advance for taking time to consider these comments.

It is our understanding that the current draft of HB206 contemplates adding a spring 20 day count period. To be candid, I have been unable to pull up the exact language in the bill, which likely reflects my inexpert use of the legislative website.

Having said that, the North Slope Borough School District opposes such a provision at this time, primarily because the ramifications of an additional counting period are unknown. Given that current funding is tied to this count and that state funding is one of the most critical elements of revenue, and thus our ability to serve students across the Slope, we would prefer further study before enactment of a statute.

We support continued study of school funding and of course, full funding of ISER and full recognition of rural cost differentials.

We appreciate your leadership and legislative support to rural schools across Alaska. Please feel free to contact me for any additional insight or if I can be of any help.

Cordially,

Fred

Subject: additional info

Louie,

This may or may not be information you are interested in for this up coming meeting but students can pick up college courses in Wrangell. We currently have a possible 51 college credit for students this year.

We have a host of academic and tech prep courses available to students. These are taught in Wrangell by teachers in Wrangell. If there is another small district doing more than this I am not aware. The courses are not virtual but I know offering college/dual credit courses has been an issue in the past with the legislature.

Subject: Kenai Position on HB206.

Louie,
Representative Seaton asked that I email him to let him know KPBSD's support for the proposed revision to HB206 that would change the way school enrollment is counted for funding purposes.

I understand that a current year enrollment would serve as the floor for funding for the following year. Should there be an increase to the enrollment from this floor, then the school district would receive additional funding.

KPBSD does not support the original language of HB206 that called for funding be based on an average of two counts.

Subject: HB 206

I think this bill should be reviewed and discussed with school boards and with superintendents at the upcoming legislative fly-in's. I know that other Superintendents have expressed that sentiment within our organization.

Two thoughts immediately come to mind. One is that if we have test that determines graduation/career readiness, we should need only one.
The second is that we have not had a problem with the count being in October and a second count would mean extra time and effort by staff that would draw away from the other demands we work hard to satisfy.

School District Comment on student count averaging

Dear Mr. Flora,

Thank you again for the opportunity to respond. The Galena City School District would support a second count period in an effort to allow school funding dollars to follow the students. We hear so often that student's move after the count period causing problems both for the school losing the student and the school receiving students. Larger districts have an economy of number and in my opinion are affected less. Some argue their challenge is simply larger. A second count would provide potential adjustment that (should, could, would) allow funds to follow the students. Some will argue, "schools already have staff contracted and to remove levels of funding will present financial shortfalls". School budgeting requires certain speculation; the legislature has mediated some of that through "hold-harmless" protection which possibly could serve this second count? In the end we support, "the money should follow the student".

Respectfully,

Jim Smith, Galena City Schools Superintendent

truancy

no citations issued, but that could be our problem if law enforcement is now pursuing the option if informed. In the past our local court system has been unwilling to prosecute truancy at any age. There could be a new attitude by the magistrate for Prince of Wales Island that we missed.

count averaging

we are a district of small schools. We will close as many as four of our ten schools this year because they do not have ten kids. So what happens when I have ten kids in October and then nine later in the year when they do the second count? Our funding is based on making the ten kid minimum. Ten comes with funding and nine comes with no money whatsoever. Or...I start with nine knowing someone is moving in later in the year and I have ten at the second count. So I get full funding when I hit ten later in the year?

We have enough trouble surviving the count period now. Having two adds an additional uncertainty to an already fragile financial situation.

Exam relevancy

I have no opinion. I think we have gone crazy over testing in general. I live on an island where kids need to know how to fix outboard engines, weld, do home repairs, plumbing and wiring. We offer none of these skills as we are so busy making sure they pass the tests and funnel our limited resources in that direction.

Subject: HB 215

Representative Seaton,

I'm writing this letter in an effort to gain more clarification on HB 215. The minimal information I can glean from the internet indicates that the crux of the bill is to assist School Districts budget development process by allowing us to use historic data for future allocations. As a school Business Manager I can appreciate the goal! Prior to assuming this role, I spent a decade managing a private investment group and serving on not for profit boards. Nothing has compared to the difficulty of the current school budget process.

My main concerns with the new format (count in October and count in February) are how it will impact the current cycles. State regulations require us to have a public budget process and turn in the budget to our respective cities by May 1st each year. If you run the count until the end of February that will leave less than two months for the State to analyze the numbers for potential duplication of students and the districts to resolve the duplicates, creation of budgets, public process, Board approval, and submission to the City and/or Borough for final approval.

Also, will the new legislation require a balancing of the numbers each year? Depending on how this is handled we could wind up right back where we started. If you or your staff could point me in the direction where I could find more clarification on this bill I would greatly appreciate it. My contact information is listed below. Thank you very much for your time and consideration.

Sent: Friday, January 08, 2010 12:21 PM
To: Louie Flora
Cc: Michael McCowan
Subject: RE: House Education Committee hearing on Drop-out prevention through proposed dual student counts January 20th

Dear Mr. Flora,
The Student Count briefing sheet still does not address the issue of forward funding. Technically the count for Oct. 2010 and Feb. 2011 (for example) should be used to plan the following years budget (FY 2011-2012). What is being proposed will put many districts, and especially REAA's in a situation where they cannot meet their obligations let alone plan a reasonable budget. As it is we do a projection that may or may not be accurate. Contracts are given out the March prior to the projections. If we do a count the way the document suggests that will be averaged for that school year, a district might be in a position that it would be unable to meet payroll or hold school for the required 180 days. I have been through such shortfalls in Oregon. Once I district must close its door because it has no other funds the impact to the town and businesses is huge.

I suggest if we wish to have a dual count, that is averaged, that the count be used to budget for the following school year so adjustments can be made. That would move our state to a more accurate forward funding model.

Many thanks,

PJ Ford Slack, Ph.D.
Superintendent Delta/Greely School District

Subject: House Education Committee hearing on Drop-out prevention through proposed dual student counts January 20th

Hello,

The House Education Committee will be holding a hearing on January 20th beginning at 8:00 a.m. (concluding at 10:00 a.m.) Under discussion will be the dual student count provision of CSHB 206 which I have attached to this e-mail along with a paper put together by staff at the Department of Education and Early Development for a House Education meeting in August of 2009. We have requested that the department clarify the model that they have put together in the briefing paper as it is somewhat confusing, and to describe the impact of this provision over a three year period. We have also requested that they model the impact of the provision on a small school district and a large school district.

Previously in August we requested school district comment on this provision and there was a discussion on it at that meeting. The committee chair would like to maintain a dialogue, and make sure that all districts have a clear understanding of this provision as we move forward with HB 206.

This provision has been added to HB 206 as one way to incentivize a decrease in student drop-out rates statewide.

Please let me know if you will be able to dial in from your office to this meeting. The dial in number is 1-888-295-4546.

Thank you for your assistance in this discussion.

Dropout Prevention: Student Views

(Editor's Note: The 18th Annual June Nelson Memorial Scholarship Competition included this essay question: ***Alaska's dropout rate, at 8 percent, is double the national average, according to the U.S. Department of Education. Thirty-eight percent of today's 9th graders will have no high school diploma 10 years from now. Knowing this, what can communities, parents and students do to decrease the dropout rate?*** Here are two essays based on that question from 2009 June Nelson Scholarship Competition winners.

By Marissa Chingliak
Akiachak School
Yupiit SD

Although many think that success is a result of luck, the truth is, as Marva Collins quotes, "Success doesn't come to you...you go to it." I view dropping out as a loss of motivation to succeed. I believe that parents, students and communities can work together to decrease Alaska's drop-out rate by motivating students to achieve and succeed.

I believe a solid education begins at home. First of all, a parent should teach their child the values of self-discipline, education and success. These concepts work closely together whether in school or in the workplace. Secondly, I believe that a parent should discipline their child so they know not to make decisions that will result in negative consequences. Otherwise the child will go their own way and easily get away with skipping or dropping out of school. Lastly, a parent should encourage their child to stay in school. I know from experience how a little encouragement from a parent goes a long way. Besides parents doing their part to decrease the Alaska drop-out rate, students can make a difference also.

Because we're in school for the majority of your young lives, it makes a big impact on our character. That is why I believe that students should set an example for other students. As a graduating senior, I have mentored some pre-3rd graders as well as some freshmen. I have had the privilege to watch them improve their attitude and work sills. I believe that a positive example will help mold an under-motivated student into a diligent young adult and will prevent dropping out of high school. Secondly, I think that students should encourage other students to stay in school. Many students who drop out feel they are mentally challenged and have no hope. Help and encouragement from another knowledgeable schoolmate will make a possible drop-out motivated to stay in school. Lastly, I think that a peer-mentoring program orchestrated by upperclassmen would be a great way to prevent dropouts. If a student is falling behind in school, a peer-mentor would not only help, but would be another reason to stay in school. In addition, students making a big difference in the Alaska drop-out rate, a community could also do their part in prevent it.

It takes a village to raise a child. A village-community can contribute a lot to decrease the Alaska drop-out rate. For example, if a student decides to drop out, I think that the tribal court should weigh the reasons for the decision. A tribal court judge can decide whether the reason is just, or if it isn't good enough, Another thing a community can do to prevent the Alaska drop-out rate is start a community tutoring program. They can hire professionals, such as teachers, to tutor students who are struggling in school. Often times, when a student struggles in school, their final decision is to just drop out. That is how a community tutoring program could decrease Alaska's drop-out rate. Lastly, a community can encourage a student to stay in school. There can never be too much encouragement, whether from a parent, student or a community. More encouragement just makes students feel content and cared for, and that will make a big difference in a young person's life.

When parents, students and communities work together, they can decrease the Alaska drop-out rate of 8 percent. Parents should start teaching and encouraging their child at home. Students from school can set a positive example for and help motivate struggling students. Communities can also become involved in helping support the efforts of parents and the school. I believe that all these components, working together, will help decrease the drop-out rate of Alaska.

By David Herbert
Seward High School
Kenai Peninsula SD

Paul is an ordinary guy. In middle school, he is the class secretary, has a B average in his classes and is popular among his peers. AT home he spends time hanging out with his older "bro" and teasing his little sister. His parents offer him support. He is looking forward to high school, in particular to sports (his brother thinks he has the right stuff for the football team).

Now let's look forward a few years: Paul is a senior now and does not have enough credits to graduate. After many talks with his counselor, Paul decides it is not worth the effort to try and make up the classes and he drops out. In just a few short years, he went from a student brimming with potential to a high school drop-out with limited options. What caused this change? There is no one source, but as we look back at his years in high school we can see problems and possible corrections.

As a freshman Paul's classes provided him with a challenge. Unlike in middle school, the variety of classes for each student meant that his teachers were less aware of each other's assignments and Paul had a difficult time making a schedule. On top of this, he had sport's practices after school, leaving him drained and hampering homework and projects. His B average slipped to a C. In his sophomore year, Paul struggled academically. To maintain his eligibility to play sports, he switched into easier classes. "Getting his art credits out of the way," he told his parents. During his junior year, things continued downhill. After scraping by his first quarter, Paul's grades slipped to a D average, making him ineligible for sports. Under pressure from his coach to get his grades up, he starting doing drugs and drinking with his friends to relieve the stress. Without sports to keep his grades up, he failed several of his classes. In his senior year he loses interest in school entirely and drops out.

Where did Paul go wrong? Or where did we go wrong?

It is obvious to see differences between his actions in middle school and in high school. These changes likely happened gradually and would be overlooked by school officials unless they have records and observations form the middle school and time to look them over. In cases like Paul's, his records should go onto a warning level to help his counselor better plan later classes. When, in his sophomore year, he starts to avoid hard classes to keep his grades up, he takes the first step to dropping out. Every middle school and high school should have enough counselors to successfully track each student and catch problems early.

Paul was motivated by sports to keep his grades up, but when he became ineligible he lost all interest in school. A simple solution to this would be to make required classes pass/fail. Students should be given chances to learn the material for a class without pressure on GPA and then given the chance to test out of it, earning a credit.

In his junior year, the major problem that every kid is warned about comes up... Drugs. The emphasis on how bad drugs are in elementary school and middle school is strong, but in high school there are very few reminders of this. It is very easy for students to forget their D.A.R.E. training after several years. Drugs are more often used by people with lower self-esteem and people under stress. The effects drugs have on a person's health are immense, but the damage they do to a person's reputation and standing can have a much more devastating outcome to their life. Not all students that do drugs will drop out of school. However, drug use is another sign that a student is having problems. Parents must stay tuned into their students' activities outside of school and schools should continue anti-drug education into the high school years.

Ultimately, the problem with dropouts cannot be solved with money or programs alone. It is individual attention from an early age that will motivate students to graduate. To combat a rising drop-out rate schools must provide more counselors to catch problems early and seek individual solutions. Further, schools must be innovative in grading methods, and provide alcohol and drug education during high school. The involvement of students, parents and the community are essential for all schools to be successful and lower the drop-out rate.

Estimated Impact of Federal Stimulus in Alaska

Estimate based on District % of 2008-2009 allocations.
Actual allocations will be based on 2009-2010 data when available.
2009-2010 allocations will be based on 2007 census data and the allocations may shift significantly from 2008-2009.

CS FOR HOUSE BILL NO. 206(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act establishing a career assessment requirement in public schools; relating to postsecondary courses for secondary school students; and relating to student counts for school funding purposes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding new sections to read:

Sec. 14.03.073. Secondary student career assessment. (a) Each school district in the state shall require students in grade 12 to complete a career preparedness assessment as described in (b) of this section.

(b) The commissioner shall select for use in the state an assessment designed to measure a student's level of preparedness to make the transition to work or college. The assessment must assess a student's career aptitude and readiness for postsecondary education or training in the areas of

(1) applied mathematics;

(2) reading for information; and

(3) locating information.

(c) Subject to the availability of appropriations, the department shall

(1) obtain a license that enables school districts to administer the assessment described in (b) of this section with no charge assessed to the district by the vendor of the assessment;

(2) provide districts with training and support in administering the assessment; and

(3) provide a report to each student on the results of the student's assessment, based on nationally recognized criteria for evaluating a student's preparedness to make the transition to work or college.

(d) The results of a student's career preparedness assessment shall be displayed in summary form on the student's high school diploma.

Sec. 14.03.074. Secondary student enrollment in postsecondary institution. (a) A secondary student who passes all portions of the examination required under AS 14.03.075 may enroll in a postsecondary institution in the state that is approved by the commissioner if

(1) the student is enrolled in a public secondary school in the state;

(2) the student is otherwise eligible to enroll, as determined by the postsecondary institution; and

(3) the postsecondary courses will be completed before the student's graduation from secondary school.

(b) The school district in which the student is enrolled in secondary school shall make arrangement for the fees for the appropriate postsecondary courses in which the student enrolls under this section.

*** Sec. 2.** AS 14.17.500(a) is amended to read:

(a) A district shall prepare and submit to the department by **March 15** [NOVEMBER 5] of each fiscal year, in the manner and on forms prescribed by the department, an estimate of its ADM and other student count data, including per school student count data, for the **current and** succeeding fiscal year upon which computations can be made to estimate the amount of state aid for which the district may be eligible under AS 14.17.400 in the succeeding fiscal year. In making its report,

the district shall consider its ADM, other student count data, the pattern of growth or decline of the student population in preceding years, and other pertinent information available to the district.

*** Sec. 3.** AS 14.17.600(a) is amended to read:

(a) Within two weeks after the end of **each of** the 20-school-day **periods** [PERIOD] ending the fourth Friday in October **and the last Friday in February**, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that counting period**, the average ADM over the two consecutive counting periods for the previous fiscal year, and, for the February report and October report, the current year,** and other student count information that will aid the department in making a determination of its state aid under the public school funding program. [FOR CENTRALIZED CORRESPONDENCE STUDY, THE OCTOBER REPORT SHALL BE BASED ON THE PERIOD FROM JULY 1 THROUGH THE FOURTH FRIDAY IN OCTOBER.] The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

*** Sec. 4.** AS 14.17.610(a) is amended to read:

(a) **Except as provided in (d) of this section, the** [THE] department shall determine the state aid for each school district in a fiscal year on the basis of the district's **averaged** student count **for the October and February counting periods** [DATA] reported under AS 14.17.600 **for the preceding and current fiscal years**. On or before the 15th day of each of the first nine months of each fiscal year, one-twelfth of each district's state aid shall be distributed on the basis of the [DATA REPORTED FOR THE] preceding fiscal year **entitlement**. On or before the 15th day of each of the last three months of each fiscal year, one-third of the balance of each district's state aid shall be distributed, after the balance has been recomputed **under (d) of this section** [ON THE BASIS OF STUDENT COUNT AND OTHER DATA REPORTED FOR THE CURRENT FISCAL YEAR].

*** Sec. 5.** AS 14.17.610 is amended by adding a new subsection to read:

(d) If the averaged student count made and reported by a district under AS 14.17.600 for the current year is higher than the averaged count made under that section for the preceding fiscal year, the department shall recompute the state aid, including per school student count data, to adjust for the higher average student count, and the higher average count shall be used for the student count for the current year and for the estimates made for the succeeding fiscal year under AS 14.17.500. The February student count must be submitted to the department by March 15 of the current year for a recomputation to be made under this subsection.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION. In the first school year following the effective date of this Act, the student count completed in the immediately preceding school year shall be used as the average student count under AS 14.17.610(a) and (d), as amended and added by secs. 4 and 5 of this Act, as though two student count periods had occurred for that year and added.

Subject: Re: HB 206

Hi Cathy:
Thanks for your response to my question and explaining the intent of this bill. This effort is laudable but I do not believe it is the appropriate way to support vocational/career and technical education.

Our state needs to decide what "test"-HSGQE or this WorkKeys, is required for high school graduation rather than adding another similar assessment system to the HSGQE on top of the overburdened testing we already have for our students and/or requiring them to take Workkeys twice?, once in 11th grade and once in 12th grade, as noted in this bill?.

Our students do not need this assessment to take classes at the University system as a prerequisite to enrollment. In fact, the UA system has their own assessment, Acuplacer, for entering freshmen, that we often encourage 11th and 12th grade students to take if they are considering UA system schools.

Regarding WorkKeys, the Juneau School District piloted this exam this year and had issues with the test processing and scheduling. The good news was that most of our 11th grade students who took the paper and pencil version of the test passed it. The technology side of accessing the online test for groups of students at one time, has not been easily accomplished nor resolved, so it is clear that we as a state are not ready to implement this as a requirement.

At this time, any of our high school students can take courses at the University through a small fund ($10,000) we set aside called College Connection. We have an agreement with UAS on who qualifies, min 2.5 GPA, teacher recommendation, and exhausted those course offerings at the high school, to enroll in a UAS class and have College Connection funds pay for it.

UAS has also been very generous in helping many of our students with free tuitions this year to offset some of these costs and issues and make available courses for these students.

We also have many opportunities for students to receive dual credit, be enrolled in a high school class taught by our high school teachers that is aligned with a UAS course, typically our vocational-related classes, and earn high school and university credit at the same time.

There is no question we need more money to support vocational/career and technical education opportunities for our high school students. We have limited funding from the federal Carl Perkins grant that is distributed statewide via a formula that unfortunately does not support Juneau with much more than $80,000 a year, and may not be used to pay for vocational teachers. This federal program has not had any funding increases for close to TWO decades.

Any state support/direct funding for vocational instructors, resources, facilities and support for partnerships with university programs would be greatly appreciated.

Thanks again for your support. Feel free to contact me if you have any questions about our career and

technical eduction programs in the district.

On Mar 31, 2009, at 2:10 PM, Rep. Cathy Munoz wrote:

> Hi Carin, thanks for the message on HB 206 sponsored by Rep. Paul Seaton. Paul is trying to expand vocational education opportunities with this bill. He proposes to allow a second WorkKeys examination to be given before graduation. Apparently all students are now required to take this assessment in the 11th grade. The bill would require that those scores be posted on the graduation transcript or certificate, and would allow students that had passed all 3 sections of the qualifying exam to take college or vocational school credits at the expense of the school district. He believes that this would allow students to advance toward an associate degree or voc. Ed certification by the time of graduation.
>
> It sounds like a good approach on the surface, but I would be concerned about the financial requirements for the local districts. The state would not be guaranteed to fund the program so I think that in order for it to be fair to the districts funding for this legislation should be considered as an addition to the current formula or in the special needs portion of the formula.
>
> I hope that this is helpful. Sincerely, Cathy Munoz

Subject: HB 215

Representative Seaton,

I'm writing this letter in an effort to gain more clarification on HB 215. The minimal information I can glean from the internet indicates that the crux of the bill is to assist School Districts budget development process by allowing us to use historic data for future allocations. As a school Business Manager I can appreciate the goal! Prior to assuming this role, I spent a decade managing a private investment group and serving on not for profit boards. Nothing has compared to the difficulty of the current school budget process.

My main concerns with the new format (count in October and count in February) are how it will impact the current cycles. State regulations require us to have a public budget process and turn in the budget to our respective cities by May 1st each year. If you run the count until the end of February that will leave less than two months for the State to analyze the numbers for potential duplication of students and the districts to resolve the duplicates, creation of budgets, public process, Board approval, and submission to the City and/or Borough for final approval.

Also, will the new legislation require a balancing of the numbers each year? Depending on how this is handled we could wind up right back where we started. If you or your staff could point me in the direction where I could find more clarification on this bill I would greatly appreciate it. My contact information is listed below. Thank you very much for your time and consideration.

Sincerely,

David W. Arp

Rep. Seaton:

Thank you for your dedication to and passion for education.

We recently read HB215, and are concerned that the proposed changes to the student count methodology could have unanticipated consequences.

Therefore, we respectfully request that the bill be tabled for this session and brought forward during the interim for committee work. Then, the changes could be studied and discussed in more depth by all of the school districts across Alaska.

Before closing, we should note that we all share in common the goal of accuracy.

Thanks again for the chance to comment on HB215.

Cordially,

Fred

THE WRITING TEST
Do you need to take it?

Retest Restrictions

While you can take the ACT as often as you wish, there are restrictions on how frequently you can test and receive test scores.

- You may not receive scores from more than one test taken during a scheduled national or international test date. For example, you may test on Saturday **or** on an authorized non-Saturday date (e.g., because your religious beliefs prohibit testing on Saturday) **or** on a rescheduled test date arranged by ACT—but not on more than one of those days. If you are admitted and allowed to test a second time, we will report only the scores from the first test. The second set of scores will be cancelled without refund.

- You may not receive scores from more than one test day per state administration (initial or makeup), if your school participates in ACT State Testing. If you are allowed to test more than once, we will report only the scores from the first test. The second set of scores will be cancelled.

- If you test or **want to retest** through another testing program **other than those listed above** (such as special or residual testing), you must wait a minimum of 60 days between retests. If you are allowed to test without waiting 60 days, your second set of scores will be cancelled without refund.

Hi Shana (cc Louie, Pete) -
Dual enrollment has many meanings.
Some secondary students (those dual enrolled through Tech Prep) pay a reduced fee ($25.00 per credit); other students - enrolled as a non-degree seeking student - pay the regular tuition and fees.
Tech prep courses are typically taught by faculty from the district, often using a facility the school district provides (hence the reduction in tuition costs).
A non-degree seeking student is one enrolled at a 'regular' UA course - typically held on a campus; taught by faculty under UA contract, right alongside other UA students.
For the most part, students are footing the bill - whether through Tech Prep or non-degree status.
We are currently exploring (actually developing) a UA policy that would allow UA to formally admit dual enrolled students to a UA certificate or associate degree (if they so desire). The recent changes in the HEOA allow universities to now allow this.
Saichi

Shana Crondahl wrote:

> Hi Saichi,
> Below is Louie's response, how they are thinking of amending the bill. I asked Pete, and he said he doesn't think the University of Alaska has a policy regarding dual enrollment of highschool students in university courses, but that the policy is campus by campus. Is that true, or is there also a university policy related to dual enrollment? I know that some campuses have their own policies.

This is in response to testimony that indicated school districts may have arrangements with colleges, or through native corporations etc. for fee reduction or fee payment, and we did not want the language to interfere with this, or create a scenario where the college would be required to charge the school district full course fees.

Subject: HB 206

Hi Louie
I listened to the House Education hearing on April 3 for HB 206, and gathered from the hearing that you would be working over the interim on how to have some sort of standard policy for high school students taking college and vocational classes and having school districts pay for the classes, so that students across the state had equal access to those classes. I don't believe the university or DEED has an overall policy addressing dual enrollment, but that policies vary from campus to campus and from school district to school district. In developing HB 206, if you need a university contact, the person to work with would be Saichi Oba.
Thanks,
Shana Crondahl

HB 206
Sponsor Statement

Alaska has one of the highest drop-out rates in the nation. HB 206 addresses this problem by providing two incentives for students to stay in school until graduation: adding a student's career preparedness assessment score to their high-school diploma, and allowing students who pass the High School Graduation Qualifying Exam to take college or vocational education credits for free until high school graduation.

The career preparedness requirement attempts to ensure that high school graduation is based on student competency for real-world employment applications. The Department of Education and Early Development (EED) currently requires that all 11th graders take a career assessment test, in this case the WorkKeys Assessment. WorkKeys is a job skills analysis and assessment system that sets out specific skills and levels of skills required by employers, so that students understand the connection between what they learn in school and what is required on the job. HB 206 builds on the EED plan by requiring that the career preparedness assessment be taken again before a student exits high school, and requiring that those assessment scores be posted on a student's transcript and graduation certificate. This would allow a student to use their final year of high school to improve upon specific skill and make their scores meaningful for employment or college qualification.

The second part of HB 206 allows students who take and pass all three sections of the High School Graduation Qualifying Exam prior to graduation to take college credits or vocational school credits at the expense of the school district until graduation. This could allow students to advance toward an associate degree or vocational education certificate by the time they have graduated high school. The High School Graduation Qualifying Exam has been identified as a contributing factor to the high-school drop out. Students interpret that passing the exam means they have met their high school qualifying criteria, leading to a lack of interest in school. Incorporation of classes that are selected based on relevance to the individual student will help maintain interest and achievement.

Representative_Paul_Seaton@legis.state.ak.us

Mr. Chairman and members of the committee, my name is Marcia Olson. I am a Career & Technical Education Program Specialist for the Department of Education, and I've been asked to give you a brief overview of the Alaska Career Ready program.

Alaska Career Ready is

- a program to ensure that Alaska students and job-seekers have the applied academic skills – sometimes called foundational skills -- that are required in various careers. These include skills such as Applied Math, Reading for Information, and Locating Information in graphical formats.
- The program provides the opportunity for students and job-seekers to do 4 main things: 1. assess their foundational skill levels; 2. practice and improve those skills; 3. learn what foundational skills are required by various careers; and 4. document their skills by earning a nationally-recognized certificate, called a Career Readiness Certificate.
- The program is a joint effort between the Department of Education and the Department of Labor.

Alaska Career Ready is based on the WorkKeys system.

- WorkKeys is a job skills analysis and assessment system developed by the ACT Company. ACT is probably better known for its college entrance exam, the ACT test. The WorkKeys system is housed in the Workforce Development Division of the ACT company, and is geared specifically towards foundational skills as they are used in the workplace.
- The WorkKeys system sets out specific skills and levels of skills so that employers, students, and job seekers are all speaking the same language and using the same measurement system to talk about these skills. The system gives students, in particular, a way to see the connection between what they learn in school and what skills they will actually need to use on a job.
- To determine the skills to be included in the WorkKeys system, ACT has analyzed or "profiled" over 15,000 specific jobs, and they continue to profile thousands more each year. Through these profiles, they have determined several skill areas that are important in most careers, including the 3 areas I mentioned earlier (Applied Math, Reading for Information, and Locating Information in visual formats. *(Teamwork, Observation, Writing, Business Writing, Applied Technology, and Listening.)*
- Within each skill area, they have determined varying complexities or "levels" for the skill. Each job profile reports the level of each skill that is recommended for success in that type of job.
- The results of all job profiles are kept in a database that is accessible on the WorkKeys website. This provides students and job-seekers with an easy way to find out what levels of skills are recommended for success in hundreds of different careers.
- So the job profiling is the first part of the WorkKeys system. Then, based on these profiles, the ACT company has developed assessments for each of these skill areas, so that individuals can find out where their skills are and compare them to the skills required for a different careers.
- If a person scores at least the minimum level on each of the three assessments (Reading, Math, and Locating), he/she will earn a nationally recognized "Career Readiness Certificate" issued by ACT, which lists the skills the person demonstrated.
- The WorkKeys system is used in approximately 25 states, and by employers, schools, and job training programs across the country, such as Subaru, Dow Chemical, Northrop Grumman, Chicago Public Schools, Syracuse University, Aims Community College, New Jersey State AFL-CIO, British Petroleum, and many others.

Alaska Career Ready also has an instructional component.

- There is a web-based instructional program that students and job seekers may use in order to practice and improve their skills. This software is not provided by the ACT company, but by an independent curriculum company called WIN. The lessons are based directly on the WorkKeys skills.
- The software provides practice tests, or "placement tests", to determine initial skill levels; tens of thousands of lessons to practice and improve these skills; and a built-in management system that records each learner's progress.

Education regulations

- Current regulations require assessments be given starting with the 2009-2010 school year.
- 11th graders—WorkKeys® Assessment in each of 3 areas (Applied Math, Reading for Information, and Locating Information).
- 6th and 8th graders—informal placement test in each of the same 3 areas. These are not the WorkKeys tests; they are practice tests available from within the instructional software.
- The Department of Education is providing training and technical support for schools to provide the assessments.

RE: Amendment to HB 206

Hi,

Can you please draft an amendment to HB 206 version P to address the concern that because version P uses the previous year's count to fund the current year, there could be significant shortfalls in funding if an unexpected increase occurs during the current year, for example if increase in military personnel occurs in the period between the previous year and the current year count period.

Please draft an amendment that states something to the effect of:

" if in the first twenty days of the 80 day count period it is determined that the student count has increased by more than 10 percent above the last year's number a school district can apply for a waiver from the Commissioner of the Department of Education & Early Development and the increased percent will receive funding at 80% of the previous years' funding level. Student population numbers will be adjusted at the end of the 80 day count period so that the increase will be accounted for in funding the next year."

Thanks,

Please call if any questions

Louie Flora

Staff, Rep. Seaton

AMENDMENT

OFFERED IN THE HOUSE BY REPRESENTATIVE SEATON

TO: CSHB 206( ), Draft Version "P"

Page 3, line 18:

Delete "The"

Insert "Except as provided in AS 14.17.610(d) and (e), the"

Page 3, line 23, following "**(d)**":

Insert "**and (e)**"

Page 4, line 2:

Delete "a new subsection"

Insert "new subsections"

Page 4, line 8, following "AS 14.17.500.":

Insert "A recomputation under this subsection shall take into account the supplement received by a district under (e) of this section and include the remaining balance owed in state aid for the increase in the current year student count that was the basis for the supplement if, at the end of the 80-day count period, the increase in the current year student count is the same or higher for the entire count period."

Page 4, following line 10:

Insert a new subsection to read:

"(e) Before a recomputation is made under (d) of this section, a district may request supplemental state aid by providing satisfactory proof on a form provided by the department that the student count conducted in the first 20 days of the 80-day

student count period in the current fiscal year is more than 10 percent above the count made in the 80-day student count period for the preceding fiscal year. The department shall provide an eligible district supplemental state aid before the recomputation period in an amount that is equal to 80 percent of the state aid owed for the difference in the student counts. Nothing in this subsection requires a district to seek supplemental state aid before a recomputation is made under (d) of this section."

HB 215

Subject: HB 130 & HB 215

Dear Chair Seaton and Committee Members:

These two bills will be heard by the House Education Committee on Friday.

The Anchorage School Board is in favor of HB 130. We believe we need the flexibility to administer anonymous surveys without going to the expense of attempting to get parental permission from enough parents so the data collected is valid. It isn't that parents tend to object, it's just that the permission form sometimes gets lost along the way. We would still be required to notify parents so they had an opportunity to refuse permission. Parents who do object to these surveys tend to be well informed and get their objections in. The data from these surveys, when valid, helps us address serious social problems such as teen pregnancy and illegal drug use.

HB 215 is fairly new, and the Anchorage School Board has not had time to take a position on this bill. Our administration has noted some potential concerns. First, count periods cost money and time. Conducting a second count will divert resources from the classroom to various administrative functions in our Records, IT, Accounting, and other departments.

Second, there may not be sufficient time between submitting the second count on March 15 for DEED to do its OASIS verification before making its April 15 payment to districts. This could result in double payments to districts for the same child.

A second count period certainly has some advantages. However, it must be remembered that most schools issue contracts to staff through the end of a school year. If we hire an aide in August to assist a special education student, we can not terminate that aide simply because the special education student moved to Palmer in February. On the other hand, the Mat-Su district can't get additional funding to hire an aide of its own when that student moves without a second count period. That is why ASD previously suggested a small discretionary fund within DEED that districts could apply for when students moved during the year. That might be a more equitable way to handle the movement of some of these more expensive children during the school year.

HB 215 is complex, and may have many consequences, both intended and unintended. I hope the committee takes time to analyze this bill thoroughly and gives districts time to weigh in on this over the interim before the bill moves on.

SPONSOR STATEMENT
HB 215

"An Act relating to student counts for school funding purposes; and repealing school experience for salary scales provisions."

HB 215 repeals salary scale limitations for hiring new out of state teachers, allowing for more competitive recruitment efforts. The bill will also average a spring and fall student count to determine school funding and make it applicable for the following school year which will give schools the ability to set budgets based on concrete funding numbers.

HB 215 will help address multiple problems facing Alaska's education system. It will help school districts hire staff for hard-to-fill positions. Specialty positions, such as therapists and special needs teachers are in high demand in school districts across the country, and we have a shortage here in Alaska. Current statutes limit the amount of out of state professional experience that may be used to establish a teacher's position on the salary scale. By repealing this antiquated statute, districts will be able to negotiate salaries on a case by case basis, this will help keep Alaska competitive with the rest of the country when vying for needed educational professionals.

Secondly, HB 215 will change the way student counts for school funding purposes are conducted. This will help schools set a budget that allows them to retain teachers. Current statutes provide for one student count held in October of each year. Funding for the same year is dependent on that count. By that time, school districts have already set their budget, and if the count doesn't match that budget schools can be forced to cut positions they had contracted for the full year, exposing themselves to lawsuits.

HB 215 will establish counts in October and in February. These counts will be averaged and then used to determine funding for the following year; allowing school districts to know the minimum funding they will get in the upcoming year and set their budgets with concrete funding numbers. There will be an additional average count using the February number, and the following October's number. If this average is higher, school funding will be increased for the current school year.

An additional benefit of having a student count in the late February is that it makes it in a school districts' best financial interest to keep students in school for the whole year. Drop out rates in Alaska are one of the highest in the nation. To better serve Alaska's youth, we need to do everything we can to improve our graduation rates and attack this problem from all angles.

REPRESENTATIVE PEGGY WILSON
HOUSE DISTRICT 2

Sectional Analysis

House Bill 215

"An Act relating to student counts for school funding purposes; and repealing school experience for salary scales provisions."

Section 1. Requires a school district to submit to the department by March 15 of each fiscal year student count data and an ADM estimate for the current and succeeding fiscal years so state aid can be estimated.

Section 2. Establishes two consecutive student count periods, one in February and one in October and requires that they be averaged. It also defines when those counts results need to be submitted to the Department.

Section 3. Requires that a school districts state aide is determined by student counts from both preceding and current fiscal years. Seventy five percent of this aide will be distributed equally on or before the 15th day of each of the first nine months of each fiscal year (July – March). The remaining balance of state aide will be distributed equally on or before the 15th day of the last three months of the fiscal year (April – June). Prior to distribution this balance will be recomputed under **Section 4.**

Section 4. Requires that the if the average student count for the current year is higher than the averaged count from the preceding fiscal year, the department will recomputed state aid, taking into account the higher average student count.

Section 5. Repeals the statute limiting school experience for salary scale provisions.

Section 6. Defines the transition to the new student count method. In the first year the student count from the preceding school year shall be used as if it were an averaged count.

Applicable Statutes.

Sec. 14.17.500. Student count estimate.

(a) A district shall prepare and submit to the department by November 5 of each fiscal year, in the manner and on forms prescribed by the department, an estimate of its ADM and other student count data, including per school student count data, for the succeeding fiscal year upon which computations can be made to estimate the amount of state aid for which the district may be eligible under AS 14.17.400 in the succeeding fiscal year. In making its report, the district shall consider its ADM, other student count data, the pattern of growth or decline of the student population in preceding years, and other pertinent information available to the district.

(b) Part-time students shall be included in the student count data in accordance with regulations adopted by the department.

(c) When reporting a district's ADM, a part-time student who is a correspondence student may not be counted as more than one full-time equivalent student.

Sec. 14.17.600. Student counting periods.

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that counting period and other student count information that will aid the department in making a determination of its state aid under the public school funding program. For centralized correspondence study, the October report shall be based on the period from July 1 through the fourth Friday in October. The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

(b) Upon written request and for good cause shown, the commissioner may permit a district to use a 20-school-day counting period other than the period set out in (a) of this section. However, a counting period approved under this subsection must be 20 consecutive school days unless one or more alternate counting periods are necessary to permit a district to implement flexible scheduling that meets the district's needs and goals without jeopardizing the state aid for which the district would ordinarily be eligible under this chapter.

Sec. 14.17.610. Distribution of state aid.

(a) The department shall determine the state aid for each school district in a fiscal year on the basis of the district's student count data reported under AS 14.17.600 . On or before the 15th day of each of the first nine months of each fiscal year, one-twelfth of each district's state aid shall be distributed on the basis of the data reported for the preceding fiscal year. On or before the 15th day of each of the last three months of each fiscal year, one-third of the balance of each district's state aid shall be distributed, after the balance has been recomputed on the basis of student count and other data reported for the current fiscal year.

(b) Distribution of state aid under (a) of this section shall be made as required under AS 14.17.410 . If a district receives more state aid than it is entitled to receive under this chapter, the district shall immediately remit the amount of overpayment to the commissioner, to be returned to the public education fund. The department may make adjustments to a district's state aid to correct underpayments made in previous fiscal years.

(c) Upon an adequate showing of a cash flow shortfall of a district, and in the discretion of the commissioner, the department may make advance payments to a district. The total of advance payments may not exceed the amount of state aid for which the district is eligible for the fiscal year.

Sec. 14.20.220. School experience for salary scales.

(a) *[Repealed, Sec. 52 ch 6 SLA 1984].*

(b) *[Repealed, Sec. 52 ch 6 SLA 1984].*

(c) *[Repealed, Sec. 52 ch 6 SLA 1984].*

(d) *[Repealed, Sec. 35 ch 46 SLA 1970].*

(e) For teachers holding bachelors' degrees, not more than six years of school experience outside the state may be substituted for a like period of school experience in the state when a teacher's position on the salary scale is established, and, for teachers holding masters' degrees, not more than eight years of school experience outside the state may be substituted for a like period of school experience in the state when a teacher's position on the salary scale is established.

(f) *[Repealed, Sec. 23 ch 37 SLA 1986].*

(g) In this section, "school experience" means a full-time elementary or secondary teacher in a public or nonpublic school as defined in AS

ATP Alaska Teacher Placement

Alaska Teacher Supply & Demand

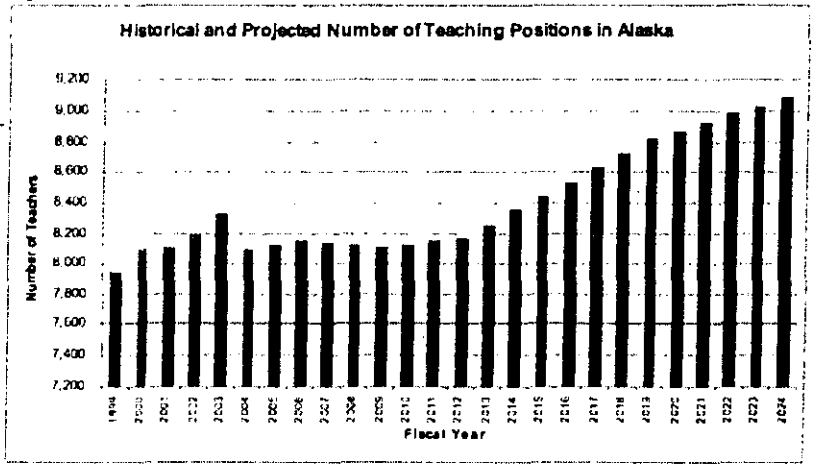
It is possible to learn quite a bit by looking at the annual supply and demand of teachers and school administrators across the state of Alaska.

We are frequently asked about the chances of being hired are for a school district, job category or school district. Well, this is our best information about the supply and demand of jobs by region and school district.

Trends can tell educators where jobs are likely to be found, and give some guidance as to patterns in high needs, and low needs certification areas. We only have overall numbers from this report, not specific data by certification area.

ⓘ **Warning:** Don't read TOO much into trend data. Statistics are useful, but only one piece of the puzzle.

- Download Supply & Demand Report



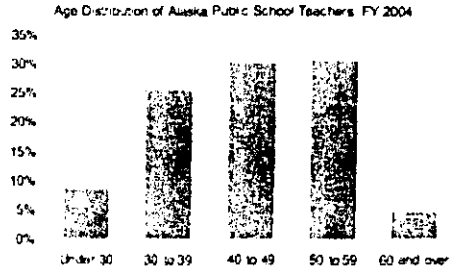
Supply & Demand in Context

Teacher supply and demand describes the ebb and flow of certified educators - teachers and administrators really - into and out of school districts in the state.

Why should you care? The supply and demand in any profession impacts the amount and characteristic of openings for new entrants.

We have taken the ISER data, and looked patterns of need to determine where openings are likely to occur.

Here's what we found of particular interest to job candidates:



- School population drives the number of teacher openings
- Alaska's school population (ADM) is expected to remain fairly stable until 2009
- School ADM is expected to increase significantly from 2010 on
- Alaska requires between 8,100 - 8,200 teachers working each year
- About 35% of Alaska's teaching force is between 50 and 59 years old
- Alaska allows retirement after 20 years of service
- About 33% of current teachers (2,700 or so) will likely retire by 2010
- Alaska replaces (turns over) 14% of its teachers yearly for various reasons
- 1134 teachers are either new to Alaska teaching, or moving each year!
- Alaska universities only graduate 220 - 230 teachers each year
- Alaska needs between 900 - 1000 teachers from Outside each year
- Lowerst Turnoer: Urban (sort of!) districts with 10% - 13% annually
- Highest Turnover: Southwestern, Interior & Western rural districts with 26% - 28% annually

Average Teachers Hired by District

We took data from the ISER 2005 Supply & Demand Report, and calculated the average number of teachers hired by each district in a typical year. ISER used data gathered over five schools between 1998 and 2003.

Average Number of Teachers Hired by District

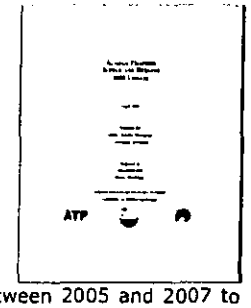
2005 Supply & Demand Update



Alaska Teacher Placement (ATP) has contracted with the Institute of Social and Economic Research (ISER) between 2005 and 2007 to identify and analyze trends in K-12 educator supply and demand in the State of Alaska, including teacher turnover rates.

This report is an analysis of Alaskan teacher supply and turnover data from 1999-2004, and projects supply and demand data for the next five years.

Is There a Teacher Shortage?

Concern has been expressed in recent years about a potential shortage of qualified teachers for the nation's schools. A number of factors are seen as contributing to shortfalls: Student enrollment is growing, the teaching corps is aging, and many teachers are nearing retirement age. Finding enough qualified teachers has been a problem for many schools and districts around the country, especially in Alaska. Often this difficulty has been seen as evidence of a national shortfall in qualified educators.

However, the United States does not have an overall shortage of teachers. Indeed, nationally, more teachers are trained than are needed on an annual basis. Nonetheless, there is a lopsided distribution of educators, both in terms of the geographic location of available teachers and in the numbers of teachers trained in particular fields. For example, there are shortages of teachers in specific subject areas, including special education, mathematics, and science (Darling-Hammond & Sykes, 2003).

Still, retaining current teachers, rather than training new ones, is the larger problem nationally. Ingersoll (2003a, 2003b) found that increasing student enrollment and teacher retirements due to an aging workforce are not the primary causes of teacher shortages. Rather, the major factor driving teacher shortages is teacher turnover, both from educators migrating to new positions and from those leaving the teaching profession altogether, prior to retirement age. Studies have found that between 40 and 50 percent of new teachers leave the profession within the first five years of their teaching career (Ingersoll and Kralik, 2004).

Factors in Teacher Turnover

The primary reasons for educator dissatisfaction(in national studies) were poor salaries, poor administrative support, and student discipline problems.

While these studies offer important findings, they do not fully address the unique circumstances in Alaska that contribute to teacher turnover. For instance:

- Many schools in Alaska are in remote locations accessible only by plane or boat, so access can be both expensive and difficult.
- Housing availability and housing costs are often problematic (NANA Pacific, 2004), and in some rural Alaskan communities, teacher housing even lacks water and sewer hookups.

- Health care, shopping options, entertainment, and other "city" amenities can be quite limited.
- Teachers in rural schools are often required to teach multiple subjects across several grade levels.
- Cultural differences can create difficulties, especially for those who come to Alaska from the "lower 48" states. Alaska is home to many Alaska Native cultures; each having distinct languages, belief systems, traditions, and cultural practices, and it can be difficult for non-Native educators to learn how to work effectively within Native communities.

No comprehensive study of teachers who leave their jobs has been conducted in Alaska. However, McDiarmid, et. al., (2002) surveyed a sample of teachers in Alaska (n=135) who left their jobs at the end of the 2000-2001 school year, to try to understand why teachers either changed districts or left the career of teaching entirely.

When asked why they changed districts, the vast majority of teachers cited personal or family reasons (80%). Many also indicated they wanted to reside elsewhere (63%), were dissatisfied with district administrative support (61%), community support of the school (51%) or school board support (45%).

Affordable housing and higher quality housing were also significant concerns (46% and 38%).

Salary was only a concern for 22 percent overall, although teachers moving between urban districts were much more likely to change positions due to salary (50%) than rural educators (14%).

Better medical care was of concern to rural educators (30%) and not at all (0%) for urban teachers changing districts.

When asked to explain why they left teaching completely, subjects cited family or personal reasons (59%), the choice to pursue another career (50%), dissatisfaction with job description or responsibilities (45%), and dissatisfaction with community support of the school (37%). Better salary or benefits were only cited by 21 percent of those leaving the teaching profession. Health issues were another significant reason for teachers' departure (18%).

I am writing in support of the proposed changes in the experience credits for outside teachers. Alaska cannot produce anywhere near the number of new teachers districts require annually. Thus, the proposed change will allow districts in Alaska to compete for effectively with their counterparts in other states.

Please make my statement in support of the the subject legislation a part of your committee's record.

Subject: HB 215

Dear Representative Seaton,

Thank you for the opportunity to be able to talk with you today concerning HB 215. I have done further review of HB 215 since our discussion, and would like to offer some further input on the bill. It seems that the more times I read the bill, the more I realize it affects multiple areas and could potentially have some unforeseen consequences.

I like the repeal of the teacher experience cap for out of state candidates and the attempt to set a base support amount. However, I have some concerns that the attempt to address drop out rates by using a second count period will in fact result in a financial disincentive for districts. Historical enrollment trends in our district indicate that our enrollments reach a low point in approximately February and then build to their highest levels in the fall. I believe that the effect of averaging a second count in February will lead to overall decreased funding support from the state.

I would like to have further time to determine the actual effects of this bill, and to see if we could come up with alternative solutions to the drop out problem without negatively affecting our financial support. Therefore, I am requesting that this bill be held in the House Education Committee for the interim.

Thank you for your consideration of my request and for your efforts on behalf of education.

Subject: HB 215

Dear Representative Seaton,

I have just become aware of a recently introduced bill (HB 215) which would significantly alter the existing funding mechanism for Alaska Schools. This proposed bill is a MAJOR departure from the existing foundation entitlement calculation mechanism and should require an extensive public review and study, prior to it being passed out of committee and or enacted.

My cursory review of this bill indicates that it would severely impact districts with declining enrollment such as Kenai and Ketchikan. It will also undo years of work to establish a better mechanism to allow Districts some assurance of a known funding amount for the current year. As an example, using counts from February, as proposed in the bill, to determine in part the current year funding entitlement would result in school funding that could not be determined until the end of April or May and possibly after school was out. This added additional unknown factor in establishing budgets and program planning; and is untenable for Alaskan Schools.

I believe that advancing this bill without further input and study could potentially damage the system for financing of public education system in Alaska.

I would request that you consider holding HB 215 in your committee until such time as public hearing can be held and an extensive analysis of the impact on affected schools and districts can be evaluated.

Your consideration of my input is appreciated.

Sincerely,

Dennis Niedermeyer

Amendment 1

Offered in the **House EDU Committee** By:Representative Wilson

To Bill Number: HB 215 Version: 26-LS0456/T

Date: 4/10/09

Delete Sections: 1,2,3,4,6.

Retain: **Section 5**

Amendment 1

Offered in the **House EDU Committee** By:Representative Wilson

To Bill Number: HB 215 Version: 26-LS0456/T

Date: 4/10/09

Delete Sections: 1,2,3,4,6.

Retain: **Section 5**

Memo

From: Louie Flora, Staff, Rep. Seaton
To: Legal Services
RE: final bill request
Date: April 10, 2009

The attached amendment was incorporated into HB 215 version 26-LS0456\T which was adopted by the House Education Committee and passed from committee this morning.

Please incorporate into a final to be read across the floor as soon as possible.

Thanks,

Louie

Dental HPSA Designation Overview

Also see:

- HPSA Designation Criteria
- Dental HPSA Designation Criteria
- Guidelines for Primary Medical Care/Dental HPSA Designation

There are three different types of HPSA designations, each with its own designation requirements:

- Geographic Area
- Population Groups
- Facilities

Geographic Areas must

- Be rational areas for the delivery of dental services
- Meet one of the following conditions
  - Have a population to full-time-equivalent dentist ratio of at least 5,000:1
  - Have a population to full-time equivalent dentist ratio of less than 5,000:1 but greater than 4,000:1 and unusually high needs for dental services
- Dental professionals in contiguous areas are overutilized, excessively distant or inaccessible to the population

Population Groups must

- Reside in a rational service area for the delivery of dental care services
- Have access barriers that prevent the population group from use of the area's dental providers
- Have a ratio of the number of persons in the population group to the number of dentists practicing in the area and serving the population group of at least 4,000:1
- Members of Federally recognized Native American tribes are automatically designated. Other groups may be designated if the meet the basic criteria described above.

Facilities must

- Be either Federal and/or State correctional institutions or public and/or non-profit medical facilities
- Federal or State Correctional facilities must:
  - Have at least 250 inmates and
  - Have a ratio of the number of internees per year to the number of FTE dentists serving the institution of at least 1,500:1
- Public and/or non-profit private dental facilities must:
  - provide general dental care services to an area or population group designated as having a dental HPSA and
  - have insufficient capacity to meet the dental care needs of that area or population group

AS 47.07.010. Purpose.

It is declared by the legislature as a matter of public concern that the needy persons of this state who are eligible for medical care at public expense under this chapter should seek only uniform and high quality care that is appropriate to their condition and cost-effective to the state and receive that care, regardless of race, age, national origin, or economic standing. It is equally a matter of public concern that providers of services under this chapter should operate honestly, responsibly, and in accordance with applicable laws and regulations in order to maintain the integrity and fiscal viability of the state's medical assistance program, and that those who do not operate in this manner should be held accountable for their conduct. It is vital that the department administer this chapter in a manner that promotes effective, long-term cost containment of the state's medical assistance expenditures while providing medical care to recipients. Accordingly, this chapter authorizes the department to apply for participation in the national medical assistance program as provided for under 42 U.S.C. 1396 - 1396p (Title XIX, Social Security Act).

AS 47.07.020. Eligible Persons.

(a) All residents of the state for whom the Social Security Act requires Medicaid coverage are eligible to receive medical assistance under 42 U.S.C. 1396 - 1396p (Title XIX, Social Security Act).

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under 21 years of age who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under 21 years of age who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed $1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under 21 years of age who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(8) persons under age 21 and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under 21 years of age not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 - 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(15) persons who have been diagnosed with breast or cervical cancer and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII).

(c) Receipt of medical assistance under this chapter is considered to be an additional benefit to these individuals and does not affect other assistance payments, federal or state, for which the recipient is eligible.

(d) Additional groups may not be added unless approved by the legislature.

(e) Notwithstanding (b)(4) of this section, a person is not eligible for Medicaid benefits until a final determination is made on the eligibility of that person for benefits under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act).

(f) A person may not be denied eligibility for medical assistance under this chapter on the basis of a diversion of income, whether by assignment or after receipt of the income, into a Medicaid-qualifying trust that, according to a determination made by the department,

(1) has provisions that require that the state will receive all of the trust assets remaining at the death of the individual, subject to a maximum amount that equals the total medical assistance paid on behalf of the individual; and

(2) otherwise meets the requirements of 42 U.S.C. 1396p(d)(4).

(g) A person's eligibility for medical assistance under this chapter may not be denied or delayed on the basis of a transfer of assets for less than fair market value if the person establishes to the satisfaction of the department that the denial or delay would work an undue hardship on the person as determined on the basis of criteria in applicable federal regulations.

(h) A person who meets the eligibility requirements of (a) or (b) of this section, except that the person is a qualified alien as defined in 8 U.S.C. 1641, is eligible for medical assistance unless the person is not eligible under the limited eligibility provision of 8 U.S.C. 1613.

(i) The department may allow a person under 19 years of age who is determined to be eligible for benefits under this chapter to remain eligible for those benefits for up to 11 calendar months following the month that the person is determined eligible for benefits or until the person is 19 years old, whichever occurs earlier.

(j) [See conditional effective date note]. A person may not apply for medical assistance coverage on behalf of a child under 18 years of age who is not emancipated unless the person is the parent or legal guardian of the child or, if the parent or legal guardian can be contacted and consents to the application, the person is

(1) an adult caretaker relative who lives with the child and who is exercising care and control of the child; or

(2) an employee of the department who is applying on behalf of a child who is in the custody of the department.

(k) [See conditional effective date note]. A child who is unemancipated may apply for medical assistance coverage on the child's own behalf if the parent or legal guardian of the child consents to the application. The department may waive consent under this section if the child expresses a reasonable fear of the child's parent or legal guardian or the department has been unable to contact the parent or legal guardian after the department has made reasonable efforts to do so. If a waiver of consent is granted, the department shall document the reason for the waiver in the child's medical assistance record.

(l) [See conditional effective date note]. Notwithstanding the eligibility provisions under (a) and (b) of this section, a person may not receive medical assistance under this section unless the person first enrolls in the Medicare program under 42 U.S.C. 1395 to the extent that the person is eligible to receive benefits and services under the program.

(m) [See conditional effective date note]. Except as provided in (g) of this section, the department shall impose a penalty period of ineligibility for the transfer of an asset for less than fair market value by an applicant or an applicant's spouse consistent with 42 U.S.C. 1396p(c)(1).

(n) [See conditional effective date note]. Except as provided under 42 U.S.C. 1396p(f) and 42 U.S.C. 1396u-1, the department shall include as an asset for eligibility purposes the value of an applicant's home if the equity value in the home exceeds $500,000 at the time the application is completed. Nothing in this subsection prohibits an applicant from reducing the equity value in the applicant's home by selling the home or by taking out a loan that affects the equity.

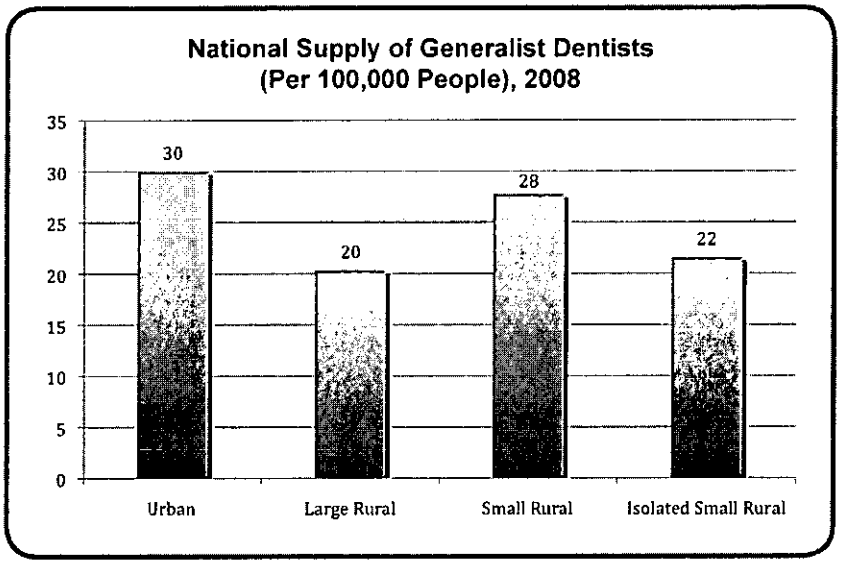
WWAMI RURAL HEALTH RESEARCH CENTER
Policy Brief • April 2009

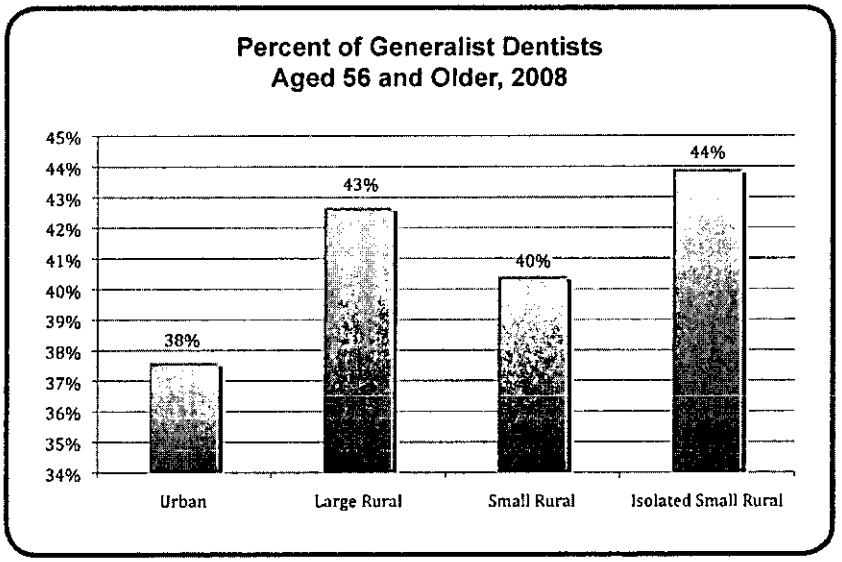
RHRC
Rural Health Research & Policy Centers
Funded by the Federal Office of Rural Health Policy
www.ruralhealthresearch.org

The Crisis in Rural Dentistry

Issues

Rural populations have fewer dentists, lower dental care utilization, and higher rates of dental caries and permanent tooth loss than urban populations.[1-5] Reports from the Surgeon General[4] and the Institute of Medicine[6] call for more dentists in rural locations. Federal and state programs have focused on expanding rural dentist supply to increase dental access and improve oral health, but efforts may need to intensify to meet the needs of rural communities.





Evidence

- Of the 2,050 U.S. rural counties, 1,221 (60%) are designated dental health professional shortage areas (HPSAs).[6]
- In 2008, there were 22 "generalist" (general practice, pediatric, or public health) dentists per 100,000 persons in rural areas compared with 30 in urban areas, nationally.[7]
- Nationally, rural areas had a higher percentage of generalist dentists aged 56 or older than urban areas (42% vs. 38%). This percentage was 44% in remote rural locations.[7]
- In 2004, dentists working at rural federally-qualified community health centers (CHCs) were in high demand and short supply. Almost half of rural CHCs had vacant dentist positions for over 7 months.[8]

Potential Solutions

The following strategies could be used to bolster the rural oral health care workforce:

- Admit dental students likely to choose rural careers, such as those from rural locations.
- Focus dental school expansion on the shortage of rural providers.
- Support rural programs and divisions within dental schools and their roles in teaching and mentoring students (e.g., training programs in rural general practice and pediatric dentistry).
- Provide rural experiences during dental education, such as rural training tracks.
- Increase opportunities for dental students and residents interested in rural careers to acquire the broad skill set needed for rural practice.
- Support loan repayment programs for dental students who enter rural practice.
- Enhance the ability of rural communities to recruit and retain dentists through locally-driven community, economic, and leadership development efforts.

PROVISIONS FOR LOAN FORGIVENESS/SCHOLARSHIPS AND GRANTS

Information derived from state statutes, regulations and various reports about programs that provide loan benefits and scholarship assistance in return for serving defined low-access communities or populations

More than half of the states have some kind of loan forgiveness / scholarship assistance programs in place.

States vary on the delivery and amount of the incentives. Some states provide scholarships while other state incentive programs pay off the loan *after* graduation. Either way, it is the equivalent of students not having to pay for some or all of dental school with the agreement that they will practice for a set amount of time in a manner that is intended to reduce access problems.

Overview of States:
The framework of each state law is basically the same—a contract with a limited number of dentists to perform dental services in an area designated underserved for a period of time (2-5 years). The amounts allocated per provider range from about $20,000 total to $125,000. The laws are pretty broad with respect to practice location and patients served—but are consistent in that they require that underserved patients be the focus of care delivery.

For instance, **Arizona** requires the dentists to serve full-time providing primary care services at eligible service sites. Many states use the federal designation Dental Health Professional Shortage Area (i.e. **California**, **Indiana**, **Oklahoma** and **Washington D.C.**) to determine where a dentist must locate. **Minnesota** dentists must agree to deliver at least 25 percent of the annual patient encounters to state public program enrollees or patients receiving sliding fee schedule discounts through a formal sliding fee schedule.

Presented here is a state-by-state summary of their loan forgiveness / scholarship grant programs. While the information contained in this document is of general interest the information presented here is a snapshot at a particular point in time. One cannot rely solely on this document as being a comprehensive and up-to-date list of states that have such provisions. For specific details on a particular state please contact the state dental society.

Alabama

The Board of Dental Scholarship Awards was established to provide scholarships and scholarship loans for the education of qualified applicants for admission to dental schools in Alabama who agreed to practice in underserved areas. Repayment could be based on service alone, or on a combination of service and payments, depending on the location of the practice, rural verses urban, and the duration of time in that practice. The terms of various types of repayment are set out in the law. The law was amended in 2007

to create the "Rural Dental Health Scholars Program" to provide for loans and scholarships to both high school and dental students who are interested in practicing in rural areas of the state.

Arizona

Requires primary care provider to contract with the Department to provide full-time continuous services at a specific eligible service site for a minimum of 24 months. Requires: a signed contract for current or prospective employment at an eligible service site or a letter of intent of employment at an eligible service site; A contract with the Department to serve full-time providing primary care services at the eligible service site for a minimum of 24 months, with 12-or 24-month contract extensions available upon mutual agreement with the individual in the senior leadership position at the service site; Agreement to work at least 32 of the minimum 40 hours per week; provider to charge for services at the usual and customary rates in the primary care area, except that patients unable to pay are to be charged a reduced rate according to the service site's sliding-fee scale or not charged; Agreement not to discriminate on the basis of a patient's ability to pay for care or the payment source, including Medicare or AHCCCS, and; Agreement to accept assignment for payment under Medicare and to participate in AHCCCS.

Arkansas

The state provides a forgivable loan program to assist Arkansas dental students attending specified out-of-state health and medical professional schools. The loans may be forgiven at the rate of one (1) year's loan for one (1) year's practice in Arkansas.

California

Provides loan repayment to recent dental school graduates who practice for three years in a community clinic or office in an underserved area. A "Dentally underserved area" is eligible for designation via the federal shortage designation criteria defined Title 42, Chapter I, Part, Appendix B (Criteria for Designation of Areas Having Shortages of Dental Professionals) or an area where unmet needs exist as determined by the state. Loan repayments are limited to ($105,000) per individual. After completing one year of service, $25,000 is awarded. After two consecutive years, $35,000 is awarded, for a total loan repayment of up to $60,000. After three consecutive years, $45,000 is awarded, for a total loan repayment of up to $105,000. Program extended until July 1, 2012 in 2009 S 599.

Colorado

The state dental loan repayment program pays all or part of the principal, interest, and related expenses of the educational loans of each eligible dental professional who agrees to provide care to underserved populations for at least 2 years. Funding includes moneys credited to the tobacco litigation settlement fund to the extent available, appropriations from state general fund, as well as other public and private donations. Section 25-23-104 (1), C.R.S.

Connecticut

Connecticut pays for part or all of qualifying educational loans (principal, interest and related expenses for dentists and hygienists). $15,000 per year, for minimum of 2 years and up to four (4) years with an extension in Community Health Centers and other eligible primary care sites in the state, designated by the federal government as Medically Underserved Areas (MUA) and as Health Professional Shortage Areas HPSA). Work time requirements under the Connecticut SLRP program are for a minimum of 40 hours/wk, (max of 8 hrs may be practice-related administrative activities).

Delaware

The State Loan Repayment Program for Dentists and Physicians is designed to recruit physicians and dentists to underserved areas of the state by repaying a portion of their educational debt in exchange for their commitment to practice in underserved area. The dental component was launched in 2001.

Georgia

Provides loan assistance to dentists who agree to practice full time (minimum 40 hours / week) in rural areas of the state. The dentist must maintain a Georgia Medicaid number and actively treat Medicaid patients.

The contracts with the "Dentists for Rural Areas Assistance Program" will be for one

year, renewable up to three times for a total of 4 years. The amount of the award shall be determined by the State Medical Education Board (SMEB) annually.

If the dentist defaults the penalty shall be immediate liability for two times the original principal amount of the loan award.

Hawaii

A Hawaii law enacted in 2008 establishes the Hawaii Health Corps Program working group; provides for the development of a plan to establish a program for tuition loan repayments and stipends for physician and dentist participants serving in underserved areas; provides that priority placement in the program will be for graduates of the John A. Burns School of Medicine; requires participants to commit and serve as first responders in the event of a declared emergency.

Idaho

The Rural Health Care Access Fund provides grants to improve access to primary care medical services in areas designated as primary care health professional shortage areas and medically underserved areas. Individual grant awards are limited to $35,000, direct and indirect costs, per year. Applicants may propose projects for funding for up to three years. Title 39, Chapter 59, Idaho Code.

Illinois

Provides grants to Illinois students enrolled or accepted in Illinois dental schools, and who contract to practice dentistry in a designated shortage area in the State. Student must be certified by the school as being eligible to receive financial aid. Upon the Illinois licensure of the student to practice dentistry, the student shall serve as a general practice dentist in a designated shortage area in the State. The term of this service shall be as provided in the Dental Student Grant Act.

2007 S 387 was enacted. Creates the Loan Repayment Assistance for Dentists Act (110 ILCS 948). Requires the Department of Public Health to establish an educational loan repayment assistance program for dentists who practice in designated shortage areas in this State for 2 years. There law enumerates requirements of participation and the penalty is to repay the amount of the benefit received if the dentist does not fulfill the terms agreed upon. The law was amended in 2009 by adding eligibility of dental hygienists for loan repayment assistance and by adding up to two subsequent one-year grants for dentists. Dentists currently are eligible for a two year grant. 2009 S 275.

Indiana

The Indiana health care professional recruitment and retention fund provides loan repayment for student loans up to $40,000 ($20,000 per year) incurred by dentists agreeing to serve a two-year stint in federally designated shortage area or an area approved by the state as underserved.

In 2009 H 1573 was enacted:
The Indiana dental recruitment fund is established to provide grants to dentists and dental hygienists to encourage the full-time delivery of dental care in underserved areas and to increase the number of minority dentists and dental hygienists in Indiana. To qualify one must be licensed and have entered into an agreement with the recruitment committee to: (A) either: (i) commit to working five (5) years in a underserved area or as a minority dentist or dental hygienist in Indiana for a yearly grant of thirty-five thousand dollars ($35,000); or (ii) commit to working two (2) years in a underserved area or as a minority dentist or dental hygienist in Indiana for a yearly grant of thirty thousand dollars ($30,000) with the option by the dentist or dental hygienist to serve up to three (3) additional years for a yearly grant of thirty-five thousand dollars ($35,000); (B) provide an average of at least forty (40) hours of dentistry per week in underserved areas or as a minority dentist or dental hygienist in Indiana; (C) maintain a patient base that includes at least thirty percent (30%) as Medicaid patients; and (D) provide a sliding fee scale, as approved by the committee, for low income patients.
The agreement shall include a clause that if the dentist or dental hygienist does not comply with the requirements they will pay back to the committee seven thousand five hundred dollars ($7,500), plus interest, for each month that they do not serve or had left to serve under the terms of the agreement.

Maine

The Finance Authority of Maine awards up to 3 loans or loan repayment agreements annually up to an aggregate of 12. Under the program, loans may be awarded to Maine residents who have been accepted into dental school. If, upon completing dental education, the loan recipient elects to practice dentistry in an area determined to be underserved, the loan recipient may be forgiven a 25% portion of the loan per year after executing a loan repayment agreement.

Maryland

Maryland's new law provides up to $100,000 total loan assistance over a three-year period, during which a dentist accepts 30% of his/her caseload from the Medicaid-eligible population. Assistance is limited to 5 dentists per year for a total of 15 dentists over the three-year program.

Massachusetts

The Massachusetts Dental Society reports that as of 2009, there are two state programs that offer loan repayment or tuition reimbursement. However, that there is not enough funding in these programs to make a difference to many students. In fact, with one of these programs, dentists are forced to compete with physicians for limited financial resources.

The Massachusetts State Loan Repayment Program (MSLRP) offers loan repayment for dentists and hygienists who agree to practice in a community health center or a public licensed clinic for two years. The Commonwealth's $250,000 is matched by the federal government, resulting in a $500,000 program. The program is administered by the Massachusetts Department of Public Health (DPH) and is available to health professionals—including, but not limited to, dentists and hygienists—who work in designated Health Professional Shortage Areas (HPSAs).

The MDS reports that dental professionals are under-represented in the program because there are fewer community health centers in these shortage areas in Massachusetts, and rules that accompany federal matching funds preclude the DPH from structuring the program in a manner that would attract more dental professionals to more health centers.

Additionally, the state provides $1 million, administered by the University of Massachusetts, with 50 percent earmarked for loan repayment and tuition reimbursement. Of this amount, $120,000 funds a scholarship at each of the state's three dental schools for students agreeing to work in a community health center for two years, $380,000 goes to loan repayment for dentists already working in community health centers, and $500,000 is designated for community health center infrastructure.

Minnesota

Students accepted into the program serve at least three years during which at least 25 percent of the patient encounters are state public program enrollees or patients receiving sliding fee schedule discounts. The state pays $10,000 per year up to four years, not to exceed the lesser of $40,000 or the balance of the qualifying loans.

Missouri

Dentists and dental school students enrolled in their final year of course study may participate in the Health Professional Student Loan Repayment Program. The maximum amount of repayment assistance is not to exceed the maximum allowed under the National Health Services Corps Repayment Program. Program participants must agree to see all patients regardless of their ability to pay. Students breaching contracts will be responsible for damages incurred by the Department of Health and legal costs incurred in the collection of damages.

Nebraska

Pays educational expenses and repay loans for dental students who agree to practice in a designated health profession shortage area, within 3 months of graduation. The amount of financial assistance is limited $80,000 over the course of schooling. Each loan repayment recipient agrees to provide services for at least 3 years and accept Medicaid patients. Failure to complete the 3-year commitment, without good cause, results in repaying outstanding amount plus 25% of the amount of financial assistance received.

Nevada

Under the Western Regional Higher Education Compact (agreement among 13 western states & NV), a dentist receives a support fee,

25% of which is a loan to be repaid by the dental graduate. Practicing in a medically underserved area of this state for at least 2 years results in a forgiveness of the loan balance (25% of the support fee). If a person returns to this state under the compact, but does not practice in a medically underserved area of this state for at least 2 years, the state assesses a default charge and interest. (Chapter 397 of NRS)

New Jersey

N.J.S.18A:71C-33 Primary care practitioner (includes dentists) loan redemption program. To be eligible a dentist must serve at least an initial two-year period at an approved site in full-time clinical practice in designated underserved areas and allow a patient who is unable to pay the usual and customary charge to pay at a reduced rate or receive care at no charge. Part-time practice maybe allowed based on special circumstances after the initial two years. The qualifying dentist shall be permitted a total redemption of eligible qualifying loan expenses for four years of service up to, but not to exceed, $120,000, or the maximum amount authorized by the federal government, whichever is greater, in State funds. A program participant who has previously entered into a contract for service and loan redemption may nullify the agreement by notifying the authority in writing and reassuming full responsibility for the remaining outstanding balance of the loan debt. A program participant seeking to nullify the contract before completing a second full year of service shall be required to pay 50% of the redeemed portion of indebtedness in not more than one year following nullification of the agreement. Enacted Nov. 20, 2009, SB 1220.

New Mexico (2 programs)

The HEALTH PROFESSIONALS LOAN REPAYMENT PROGRAM requires a two year service commitment in a health professional shortage area. Primary Care Physicians; Physician Assistants; Advanced Practice Nurses; **Dentists**, Podiatrists, Optometrists & Allied Health Care Providers may receive up to $35,000 annually.

Eligibility for the NEW MEXICO HEALTH SERVICE CORPS: a New Mexico resident enrolled or accepted by an accredited or approved educational program of study or be engaged in a residency training program or preceptorship that is within 24 months of completion of the program of study and becoming eligible to apply for a license or certificate in the profession of study. Primary Care Physicians, Family Nurse Practitioners, Physician Assistants, **Dentists**, Dental Hygienists, Emergency Medical Technician-Paramedics may earn up to a $40,000 stipend (2 awards of $20,000, less for non-physician). Requires a two year service commitment (1600 hours a year) in a designated health professional shortage area.

Western Interstate Commission on Higher Education (WICHE). Average $21,300 per year up to 4 years and must return to New Mexico.

North Carolina

Loan repayment assistance is provided for General Dentists and Dental Hygienists who accept positions in approved public health/safety net dental clinics. The state Loan Repayment Program offers 2-4 year repayment schedules for general dentists and dental hygienists in exchange for working full time at approved safety net dental sites. Principle plus interest maximums for dentists are $70,000 in exchange for a four year commitment; $30,000 for dental hygienists in exchange for a 3 year commitment. In addition, a 39% tax stipend is added to help offset the provider's increased tax liability.

North Dakota

The state annually selects up to three dentists who enter a four-year nonrenewable contract where education loans are repaid in exchange for the dentist(s) agreeing to practice in underserved communities identified by the state health council. The council establishes a priority ranking for participation in the program for the selected communities. Dentists are eligible to receive funds for the repayment of their education loans, which may not exceed eighty thousand dollars per applicant over a four-year period.

2007 S 2152 was enacted. Enacts provisions for a dentist to receive school loan repayments as an incentive to practice: the practice cannot be within a 15 mile radius of Bismarck, Fargo or Grand Forks (the largest cities in ND), the

dentist must receive medical assistant reimbursement for dental care of at least $20,000 or must practice at least 2 days a week at a public health clinic or at a nonprofit dental clinic that uses a sliding fee schedule to bill the nonprofit dental clinic's patients.

Ohio

The dentist loan repayment program provides loan repayment assistance in amounts of up to $25,000 for each of the first two years of service and up to $35,000 per year for the third and fourth years of service for new dentists who agree to practice at least 40 hours per week in a designated dental health professional shortage area and treat patients regardless of their ability to pay. The program will be funded with a $20 increase in dentists' licensing fees, government funding and private contributions.

Oklahoma

In 2006, the Oklahoma Legislature passed the Oklahoma Dental Loan Repayment Act (S.B. 1737), authorizing an additional $125,000 each year for five years to fund the Oklahoma Dental Loan Repayment Program. This program provides $25,000 per year, per dentist, for four dentists to practice in counties determined by the Oklahoma State Department of Health to be dental health professional shortage areas and one dentist to practice and teach at the OU College of Dentistry. The state currently has 42 counties designated as shortage areas through 2009. As part of their agreement, participating dentists must treat a minimum of 30% Medicaid patients. All participating dentists also must commit to practice in a shortage area for two years, with an option to renew for up to five years total.

Pennsylvania

A physician or dentist who agrees to treat patients eligible for medical assistance and Medicare in a designated medically underserved area as a primary health care practitioner for not less than three years is eligible to receive up to $64,000 in loan exonerations based on the following schedule: (i) Year one, 15%, (ii) Year two, 20%, (iii) Year three, 30%, (iv) Year four, 35%. Failure to begin or complete the obligations contracted for shall pay to the agency three times the amount of assistance received.

Rhode Island

Provides educational loan repayment for healthcare professionals committed to working in primary care health professional shortage areas or dental health professional shortage areas. Requires a two year commitment to provide full-time services at a site that has been approved for funding. Must charge for professional services at the usual and customary rates prevailing in the areas in which such services are provided. If a person is unable to pay such charge, they'll be charged a reduced rate or no fee. The professional also must serve full time (40 hours per week), with no more than 20% of the time devoted to administrative work and agree not to discriminate on the basis of the ability of the individual to pay for such care or on the basis that payment for such care will be made through Medicare or Medicaid. The professional must enter into an appropriate agreement with the State agency that administers Medicaid.

South Carolina

Each loan or scholarship lasts for a period of one year only. However, recipients who successfully complete the related year of study have first priority on unobligated funds for renewal of the loan or scholarship for the succeeding year. Each loan or scholarship has two parts: (1) Payment of tuition and other school related expenses up to a total of $5000 per year, and (2) an allowance of $100 per month for living expenses. Requires practice in a county with a dentist ratio of not more than one dentist for each four thousand people. For each year an applicant benefits from a loan or scholarship s/he is required to practice in the underserved county.

Applicants who receive a scholarship or loan for four years are only required to practice in a county for three years, at the end of which time the loan is considered paid in full.

South Dakota

Provides that up to 3 dentists are eligible to receive tuition reimbursement payments if the licensed to practice dentistry and (s)he agrees to practice general dentistry in an eligible community for a minimum period of three years. Section 1-16A-73.20

(C) American Dental Association

Texas

Texas makes annual repayment(s) within a time frame determined by the Board upon the dentist's completion of each twelve-month service period. Dentists must complete at least one year of dental practice in an area of the state that is underserved with respect to dental care. The commissioner of higher education may determine how much a dentist may receive in assistance grants for each of not more than five years. Amended in 2009.

Utah

Creates Utah Health Care Workforce offering loan repayment & scholarship grants for dentists, who locate or continue to practice in underserved areas. The Program will have an advisory committee one member of which will be a member of the Utah Dental Association.

Vermont

The loan repayment fund established under 18 V.S.A. Section 10a or for the Vermont student assistance corporation for loan forgiveness programs for health care providers through the dental hygienist incentive loan program and the dental student incentive loan program.

Virginia

The dental loan repayment program provides incentives to dental students agreeing to practice in underserved areas designated by the State Board of Health through criteria derived by comparing population data, dentist population and dental health professional shortage areas determined by the federal HHS department. Preference will be given to graduates of Virginia Commonwealth University's School of Dentistry. Scholarship recipients may receive a max of five scholarships. The award(s) equal one-year in-state tuition at Virginia Commonwealth University School of Dentistry for the year in which the loan was acquired.

Wisconsin

To benefit from loan assistance, the dentist must agree to provide dental services to at least 50 unduplicated medical assistance or badger care recipients, not to fall below a minimum of $8,000 in claims paid. In year two of the dentist's agreement, the dentist must see at least 70 unduplicated medical assistance or badger care recipients, not falling below $11,000 in claims paid. Year three, the dentist must provide dental services to at least 90 recipients, with a minimum claim amount of $15,000.

Wyoming

Will pay the cost of dental education for up to 10 dental students per year in exchange for their agreeing to practice for up to 3 years on patients eligible for medical assistance or the child and parent health insurance program. If the student fails to fulfill the terms of the agreement then the costs of education are repayable to the state of Wyoming.

Subject: RE: Statistics on Pharmacist shortage- Alaska/HB235

Attn: House Education Committee Members
Thank you for allowing those of us on the call last Friday to testify in support of HB235. I was asked to submit statistics supporting the shortage of pharmacists in Alaska, which are attached and a comparison of in-state vs out-of-state tuition for WICHE schools of pharmacy. I will add that Alaska is the only WICHE state without a School of Pharmacy.
Respectfully,
Nancy O Davis

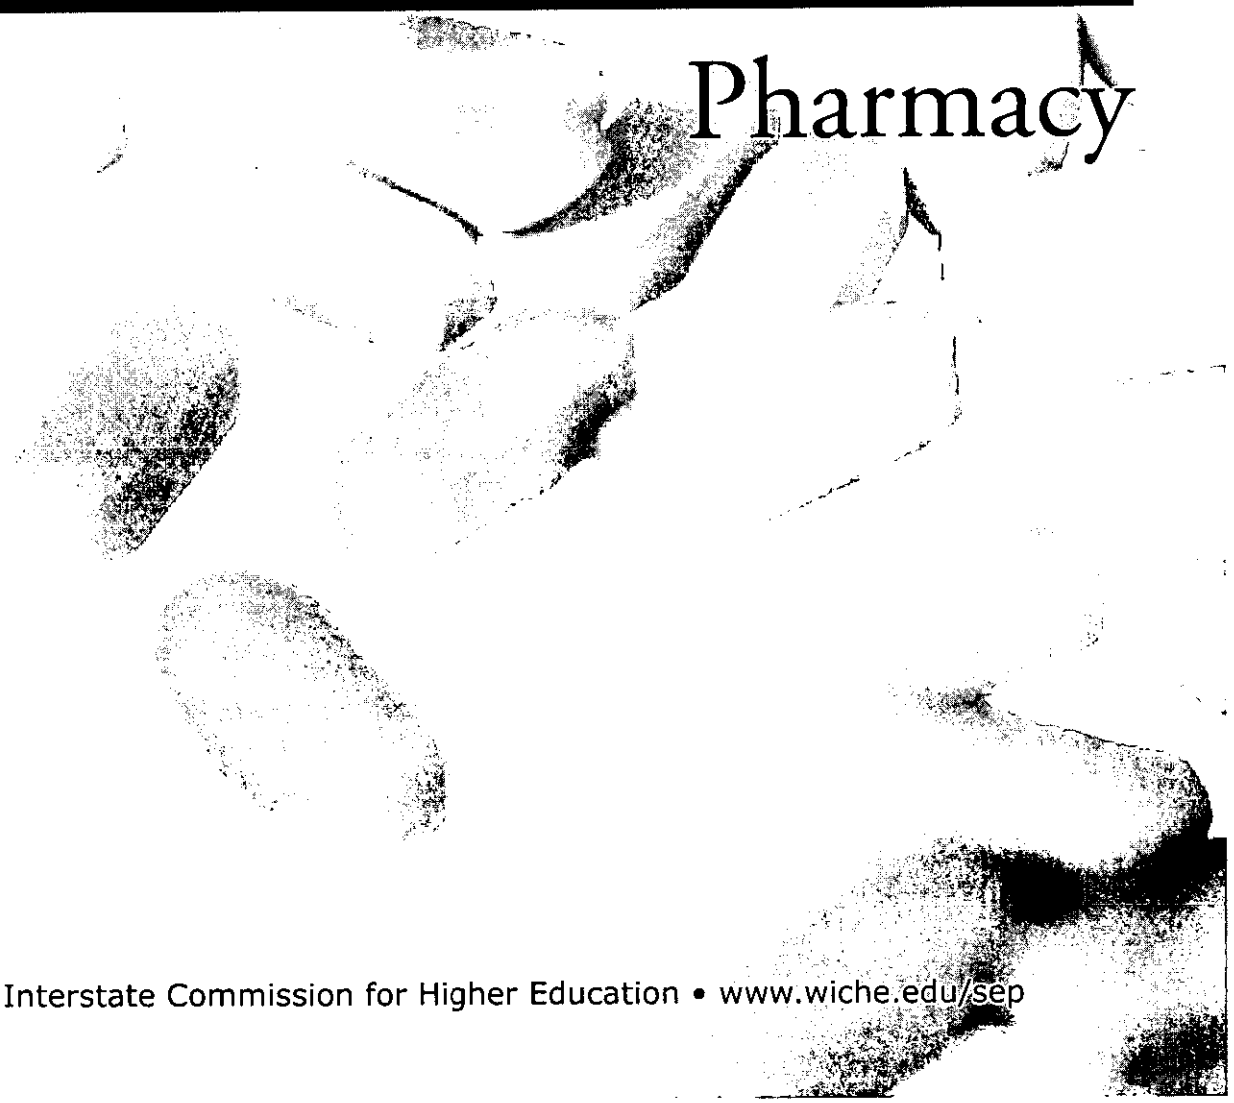
A Closer Look at Healthcare Workforce Needs in the West

Pharmacy



Western Interstate Commission for Higher Education • www.wiche.edu/sep

Pharmacy Workforce Needs

National Trends

Pharmacy, with more than 230,000 practitioners today, is the third-largest health profession in the United States after nurses (2.4 million) and physicians (830,000).

Projected Shortages and Causes

Research on the national pharmacist workforce points to a continuing shortage of pharmacists, related to growth in medication use, the aging of the baby boomer generation, and the emergence of more clinical activities within pharmacies. Surveys that track shortage levels showed that there was a slow downward trend in the severity of shortages up until fall 2005, followed by higher shortage levels during the past year. Changes in shortage levels appear to parallel growth in prescription medication usage.

Expanding Career Options

Increasing numbers of pharmacists are working in nontraditional positions. For example, career options have emerged with medication-use programs within managed care organizations and health plans; Medicare's adoption of a prescription drug benefit; Medicaid programs' prescription-drug benefit; and any healthcare provision that includes a formulary for medications and outcomes analysis for medication use.

Within traditional pharmacy practice, clinical activities have expanded, with the universal adoption of the doctor of pharmacy (PharmD) degree as the entry-level educational requirement for pharmacy practice. The growth of postgraduate pharmacy residencies has also had an effect. The PharmD degree includes additional biomedical and clinical training that enables pharmacists to assume more clinical and management responsibilities. Younger pharmacists are trained in providing educational and monitoring services for chronic diseases, administering immunizations, and offering medication management services for Medicare patients.

In institutions pharmacists are being added to transplant units, critical-care units, emergency departments, oncology services, and other areas where intensive medication-therapy management is enhanced by pharmacy expertise. To fill these roles, pharmacists require advanced training, which is generally acquired through formal postgraduate professional education in pharmacy residencies.

The number of accredited pharmacy residencies nationally has expanded from about 1,000 annually 10 years ago to over 1,500 annually; and specialized residencies (a second year with a focus in a specific area, such as critical care) have increased concomitantly. The Board of Pharmaceutical Specialties (BPS) offers certification examinations in five practice areas, and board-certified pharmacists are increasing in each of these areas: pharmacotherapy (3,191), oncology (557), nutrition (348), psychiatric pharmacy (463), and nuclear pharmacy (495) (*www.bpsweb.org*).

Factors Driving Workforce Demand

Growing Part-time and Female Workforce

The Bureau of Health Professions' pharmacist supply model estimates that 3,911 pharmacists will retire in 2007. This number will gradually increase to 4,562 in 2020. Recent studies have shown that since 2000, pharmacists are remaining in the workforce longer, and more are working part-time. Retiring pharmacists are predominantly male; this is significant because male pharmacists have traditionally worked more than female pharmacists.

The increasing female pharmacist workforce is an important supply issue because women pharmacists have consistently worked fewer hours than their male counterparts. Recent surveys show women pharmacists working 0.81 FTE on average, compared to male pharmacists at 0.91 FTE (*Mott et al., National Pharmacist Workforce Data, 2004*). The current pharmacy-student population is about two-thirds female. Supply models estimate that part-time participation will reduce the workforce "headcount" by about 15 percent (*Knapp and Cultice, 2007, in press*).

Recent Increases in Prescription Volume

The demand for pharmacists is closely tied to the number of retail prescriptions (*Walton et al., 2004*). Prescription volume continues to grow each year, but the growth rate has varied greatly in the last 10 years, as shown in the table below. The growth rate hit its highest level in 1999 and fell steadily to about two percent in 2004. Growth increased again in 2005 and 2006.

	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006
	4.5	4.2774	7.1244	9.1092	5.8367	5.0262	4.2871	2.4538	1.9907	2.8	5
	2221	2316	2481	2707	2865	3009	3138	3215	3279	3370.8	3539.4

Source: Knapp and Cultice, "New Pharmacist Supply Projections: Lower Separation Rates and Increased Graduates Boost Supply Estimates," *Journal of the American Pharmacist Association*, 2007, in press.

Beyond Prescriptions

When we think of pharmacists, dispensing medications comes to mind. However, their expanded role now includes many other tasks, like managing medication therapy related to Medicare Part D. Many immunization programs are now administered through community pharmacies. Pharmacists are also active in chronic disease medication-management programs and elsewhere, as noted above.

Aging Baby Boomers

Counterbalancing the increased supply of pharmacists is the aging baby boomer generation, which will increase the

demand for pharmacy services. For example, people under 65 annually consume 10.1 prescriptions on average, while those 65 years and over consume 23.5 prescriptions on average *(Agency for Healthcare Research and Quality (AHRQ), derived from Medical Expenditure Panel Survey Data, 1997-2000)*. The oldest baby boomers have not yet reached 65 years, where medication consumption increases significantly.

Filling the Gaps: Technicians

There are approximately 250,000 certified pharmacist technicians in the United States. These allied health professionals play an important role in increasing productivity in pharmacies. A 2004 state-level study showed that technicians generally complement pharmacists rather than substitute for them; there are more technicians where there are more pharmacists.

Growth of the Biotech Industries

The number of pharmacists working in drug development is relatively small. Pharmacists sometimes play roles in clinical trials, but not often. The principal relationship between the biotech industry and the pharmacist workforce is that pharmacists are clinically involved in the use of expensive and potentially dangerous biotech drugs in hospitals and elsewhere. Oral dosage forms of biotech drugs, such as oral oncology medications and transplant maintenance medications, are now readily available. The biotech industry acknowledges the significant role that community pharmacies and pharmacists play in helping patients use these medications effectively.

Technology's Effects on Pharmacy Demand

Pharmacists play a significant role in medication error reduction. New technologies such as electronic prescription generation and transmission increase pharmacist productivity and reduce medication errors. Generally, where technology is introduced on a large scale — for example, in the Veterans Affairs system and in Kaiser Permanente — pharmacists have been redeployed to clinical roles in chronic disease clinics, where their activities have been shown to be cost effective.

Regional Occupational Outlook for Pharmacists in the WICHE States

Region	Population 2005	ADI* Feb. 2007
United States	**296,410,404**	**4.13**
WICHE States	**69,703,732**	**4.34**
Alaska	663,661	4.00
Arizona	5,939,292	4.17
California	36,132,147	4.60
Colorado	4,665,177	3.71
Hawaii	1,275,194	4.00

Washington	6,287,759	4.00
Wyoming	509,294	3.33

*Aggregate Demand Index (ADI)

Demand for Pharmacists in the West

The preceding table presents Aggregate Demand Index (ADI) data for WICHE states as compared to national averages. The ADI is a monthly, national survey of the unmet demand for pharmacists by the Pharmacy Manpower Project Inc. The survey is conducted by having panelists, selected by their direct involvement in hiring pharmacists, submit monthly ratings for each state where they hire pharmacists, based on this five-point scale:

- **5** = High demand; difficult to fill open positions.
- **4** = Moderate demand; some difficulty filling open positions.
- **3** = Demand is in balance with supply.
- **2** = Demand is less than the pharmacist supply available.
- **1** = Demand is much less than the pharmacist supply available.

Ratings are aggregated, and a population-weighted average is determined for the month; they are also available at the regional, divisional, and state levels.

Demand data show that the Western region consistently has the highest level of unmet pharmacist demand. At the division level, the Pacific division has frequently had the highest ADI ratings, while the Mountain division has generally been closer to national averages. These findings are consistent across several national surveys and support attention to producing more pharmacists in the West just to meet current population demands.

For the future, baby boomers retiring in the next three decades are likely to move to Western states in disproportionate numbers. This trend will likely increase the population of many Western states beyond national averages for growth and will increase the need for pharmacists and other health care professionals. Most Western schools of pharmacy have high percentages of in-state students already (see the table on p. 4) so expansion and stimulating in-migration of pharmacists from other states are important options for increasing the workforce.

Expansion of Pharmacy Education

In the last decade new pharmacy programs, expansion of existing programs, and development of distance-learning campuses have increased the number of pharmacy seats across the nation. The Accreditation Council for Pharmacy Education reports that the expansion of existing programs is generating even more new pharmacists than new schools and colleges are *(Knapp and Cultice, 2007, paper in press)*.

Part of the educational expansion effort results from the recognition that pharmacists in rural areas will be retiring in the next 10 to 15 years without a significant prospect of their being replaced.

During the early 2000s, a plan to include pharmacy students in the National Health Service Corps to assist in loan repayment was introduced but not funded. A difficulty in implementing pharmacy programs for medically underserved areas is that there are no measures of pharmacist service levels, like those that exist for medicine and dentistry.

Schools in Western states that have large rural areas generally have very high percentages of in-state students who are more likely to remain in their home state to practice. Expansion of programs in these states and establishing new campuses in rural areas are strategies that several states have adopted to maintain pharmacy services in rural areas.

Five new pharmacy schools have opened in the West in just the last four years. Three of them graduated their first classes in 2006: the University of Southern Nevada, a private institution, now fully accredited; Loma Linda University School of Pharmacy; a private institution that is not yet fully accredited but holds candidate status; and the University of California, San Diego, a public institution that also holds candidate status.

Two new programs in the West are scheduled to receive full accreditation by fall 2009. Touro University's College of Pharmacy (California campus) admitted its first class in fall 2005 and is a traditional four-year program. Pacific University's School of Pharmacy (Oregon) admitted its first class in fall 2006 for its three-year intensive program.

Two pharmacy schools are in the planning phase: the University of Hawaii Hilo's College of Pharmacy plans to admit its first class in fall 2007. The University of Nevada Reno and the University of Nevada Las Vegas have planned a pharmacy school as part of Nevada's proposed health sciences center. Unfortunately, approval of state funding for the initiative has proved illusive over the past few legislative sessions.

There is a strong interest in the field of pharmacy, and there has been a steady increase in the number of applications over the past five years. According to the American Association of Colleges of Pharmacy, the applications to pharmacy schools increased 53.9 percent to 72,799 in 2003-04 from 47,306 in 2002-03. Nationally, schools of pharmacy reported receiving 7.4 applications per entering student in fall 2005, a slight increase from 7.0 from the previous year. Graduates are courted before they have their diplomas in hand, with starting salaries in the $80,000 range.

WICHE's Professional Student Exchange Program (PSEP) allows students from states that do not have a public school of pharmacy to pay reduced tuition to a cooperating institution in the West. Sending states determine the number of new students to be supported each year. In 2006-07, 40 students from Alaska, Hawaii, and Nevada attended 16 cooperating pharmacy schools.
