38	Health & Social Services	Behavioral Health Administration				Eliminate MHTAAR for Clinical Position within Office of Integrated Housing project to comply with Trust request of January 2009. Reduces MHTAAR from $75.0 to 0.0.			(75.0)	MHTAAR	(75.0)
39	Health & Social Services	Svcs/Severely Emotionally Disturbed Youth				Reduce MHTAAR for Bring the Kids Home Transitional Aged Youth project to comply with Trust request of January 2009. Reduces MHTAAR from $300.0 to $200.0.			(100.0)	MHTAAR	(100.0)
40	Health & Social Services	Children's Medicaid Services				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(613.7)	613.7			0.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
41	Health & Social Services	Front Line Social Workers				Reverse fund change requested in original FY10 Governor's budget. Updated projections reflect this replacement can be postponed until FY2011.	(4,200.0)	4,200.0			0.0
42	Health & Social Services	Family Preservation				Reverse fund change requested in original FY10 Governor's budget. Updated projections reflect this replacement can be postponed until FY2011.	(900.0)	900.0			0.0
43	Health & Social Services	Foster Care Base Rate				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(243.6)	243.6			0.0
44	Health & Social Services	Subsidized Adoptions and Guardianship				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(780.0)	780.0			0.0
45	Health & Social Services	Adult Preventative Dental Medicaid				STRUCTURE CHANGE: Move Adult Preventative Dental Medicaid from a stand-alone RDU to the Health Care Services RDU to enhance managerial efficiency.					0.0
46	Health & Social Services	Adult Preventative Dental Medicaid				Additional funds needed for the reauthorization of the program. Cost estimates are based upon revised projections as of February 4, 2009. This will also be put forward in an amended fiscal note.	448.7	705.9			1,154.6
47	Health & Social Services	Adult Preventative Dental Medicaid				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(521.0)	521.0			0.0
48	Health & Social Services	Medicaid Services				Reduce funds based on reduction of RSA with Nursing due to recent determination of error in billing methodology. See related items in Nursing and Administrative Support Services. A corresponding FY09 supplemental was submitted.	(2,000.0)	(2,000.0)			(4,000.0)
49	Health & Social Services	Medicaid Services				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(34,724.2)	34,724.2			0.0
50	Health & Social Services	Health Planning and Infrastructure				Transfer Community Health Center authorization from Senior Community Based Grants to Health Planning and Infrastructure to group comparable grants.	350.0				350.0
51	Health & Social Services	Nursing				Transfer nursing grants for Maniilaq and Norton Sound from Community Health Grants to Nursing component to assist in better management of the grant funds.	1,192.7				1,192.7
52	Health & Social Services	Nursing				Increase general funds due to reduction of RSA with Medicaid Services due to recent determination of error in billing methodology related to Nursing. See related items in Medicaid Services and Administrative Support Services. A corresponding FY09 supplemental was submitted.	4,000.0		(4,000.0)	Interagency Rcpts	0.0
53	Health & Social Services	Community Health Grants				Transfer Nursing grants for Maniilaq and Norton Sound ($1,192.7) to Nursing component and Emergency Medical Services grants for Maniilaq and Y-K Health Corporation ($491.1) from Community Health Grants to Emergency Medical Services Grants to assist in better management of the grant funds.	(1,683.8)				(1,683.8)
54	Health & Social Services	Community Health Grants				STRUCTURE CHANGE: Transfer the balance of the component ($1,903.9) from Public Health RDU to the Health Care Services RDU to consolidate the management of provision of health care services in one division. The balance is comprised of the Community Health Aide Training and Supervision (CHATS) grants.					0.0
55	Health & Social Services	Emergency Medical Services Grants				Transfer Emergency Medical Services grant funding for Maniilaq and Y-K Health Corporation ($491.1) from Community Health Grants to Emergency Medical Services Grants component to assist in better management of the grant funds.	491.1				491.1
56	Health & Social Services	Senior and Disabilities Medicaid Services				Economic Stimulus - FMAP reduction. HSS calculated this amount based upon their understanding that the new FMAP will apply only to base Medicaid expenditures and not to any parts of the program that receive an enhanced Medicaid rate.	(27,241.2)	27,241.2			0.0
57	Health & Social Services	Senior and Disabilities Medicaid Services				Reduce authorization based on current Medicaid trends	(3,000.0)	(3,000.0)			(6,000.0)
58	Health & Social Services	Senior and Disabilities Services Administration				MH Trust: Brain Injury - 2045 Traumatic brain injury service coordination. The project is added as an amendment at the request of the Mental Health Trust.			150.0	MHTAAR	150.0
59	Health & Social Services	Senior and Disabilities Services Administration				Reduce MHTAAR for Rural Long-Term Care project to comply with Trust request of January 2009. Reduces MHTAAR from $200.0 to $135.0.			(65.0)	MHTAAR	(65.0)
60	Health & Social Services	Senior Community Based Grants				Transfer Community Health Center authorization from Senior Community Based Grants to Health Planning and Infrastructure to group comparable grants.	(350.0)				(350.0)
61	Health & Social Services	Administrative Support Services				Increase general funds due to reduction of RSA with Medicaid Services due to recent determination of error in billing methodology related to Nursing. See related item in Medicaid Services and Nursing. A corresponding FY09 supplemental was submitted.	800.0	(800.0)			0.0
62	Health & Social Services	Structure Change				STRUCTURE CHANGES: Requested by HSS to align boards with their respective divisions. There are four structure changes with no financial impact. Transfer AK Mental Health and Alcohol & Drug Abuse (combined) board from Boards and Commissions RDU to Behavioral Health RDU; Transfer the Commission on Aging and the Governor's Council on Disabilities and Special Education from Boards and Commissions RDU to Senior & Disabilities Services RDU; and Transfer Pioneers Homes Advisory Board from Boards and Commissions RDU to Alaska Pioneer Homes RDU					0.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
63	Health & Social Services	Governor's Council on Disabilities and Special Education				Reduce MHTAAR for "Grow Your Own" Recruitment Strategy for Youth project to comply with Trust request of January 2009. Reduces MHTAAR from $180.0 to $141.0.			(39.0)	MHTAAR	(39.0)
64	Health & Social Services	Governor's Council on Disabilities and Special Education				Eliminate MHTAAR to develop marketing strategies for beneficiary area service careers to comply with Trust request of January 2009. Reduces MHTAAR from $165.0 to 0.0.			(165.0)	MHTAAR	(165.0)
65	Labor	Worker's Compensation				Funding is needed for increased Anchorage office space lease costs for the fraud unit.			108.0	Workers Safety Account	108.0
66	Labor	Employment and Training Services				The Business Services component will transfer via RSA approximately $1.8 million per year to the Employment and Training Services component for Workforce Investment Act (WIA) Adult Services grants. Employment and Training Services needs additional Interagency Receipt authority for these funds. The program provides training and training related support services to job seekers needing to gain or upgrade their skills to qualify for self-sustaining employment.			1,400.0	Interagency Rcpts	1,400.0
67	Labor	Unemployment Insurance				UI is receiving an increase to their federal authorization based on contingingency they earn on their normal program operations. There is no guarantee that the these federal funds will remain at this level in the future, however other funds are expected to be available. This is not related to the Economic Stimulus bill but a regular increase based on operations.	(964.2)	1,886.6			922.4
68	Labor	AVTEC				Authority is needed to be able to collect tax credit receipts, as well as carry forward language so the funding does not lapse. As of January 1, 2009, a revision to AS 43.20.014 allows AVTEC to receive donations in return for tax credits. According to statute, use of funds is very specific and must be spent by the institution that receives the donation.			300.0	Statutory Designated Prgm. Rcpts	300.0
69	Law	Third Judicial District: Anchorage				Lease Costs Increase Based on further analysis of the information provided by the Department of Administration, Division of General Services, the increment for FY10 lease costs can be reduced. Lease costs are expected to increase in FY10. The largest factor is the expiration of Law's largest lease, the Whale and Brady Buildings in Anchorage. The lease expires 9/30/09 and the Division of General Services within the Department of Administration has executed a new lease. Law's current lease is approximately $2.50/square foot. The new lease is approximately $3.13 a square foot. Department of Law is requesting funding for only 3/4 year in FY10 and will need additional funds in FY11.	(58.8)				(58.8)
70	Law	Criminal Justice Litigation				Reduce MHTAAR for Deliver Training for Prosecutors project to comply with Trust request of January 2009. Reduces MHTAAR from $25.0 to $12.5.			(12.5)	MHTAAR	(12.5)
71	Law	Deputy Attorney General's Office				Lease Costs Increase Based on further analysis of the information provided by the Department of Administration, Division of General Services, the increment for FY10 lease costs can be reduced. Lease costs are expected to increase in FY10. The largest factor is the expiration of Law's largest lease, the Whale and Brady Buildings in Anchorage. The lease expires 9/30/09 and the Division of General Services within the Department of Administration has executed a new lease. Law's current lease is approximately $2.50/square foot. The new lease is approximately $3.13 a square foot. Department of Law is requesting funding for only 3/4 year in FY10 and will need additional funds in FY11.	(40.1)		(40.1)	Interagency Rcpts	(80.2)
72	Law	Commercial and Fair Business				Tobacco Education Cessation Arbitration Funding is requested to resolve a dispute between Alaska and the tobacco companies that signed the Master Settlement Agreement (MSA). This dispute is to be resolved by an arbitration panel and this arbitration is scheduled to commence on October 1, 2009. The Department of Law is requesting $165.0 to cover the significant preparation and other related costs associated with this arbitration.			165.0	Tobacco Use Education and Cessation Fund	165.0
73	Law	Oil, Gas and Mining				Trans Alaska Pipeline System (TAPS) Strategic Reconfiguration The Department of Law is requesting $1,900.0 to cover the significant preparation and other related costs associated with the TAPS Strategic Reconfiguration. The State is protesting imprudent capital expenditures on the TAPS Strategic Reconfiguration project that are included in rates from 2005 forward.	1,900.0				1,900.0
74	Law	Statehood Defense				Endangered Species Act Litigation Costs associated with assessing and protecting the State's interest related to actions taken by the federal government as they relate to the Endangered Species Act, including Polar Bears and Beluga Whales.	600.0				600.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
75	Law	BP Corrosion				BPXA Corrosion Litigation Law (DOL) requests an appropriation for FY10 in the amount of $3.5 million to continue the pursuit of claims for penalties and lost revenues for the 2006 Prudhoe Bay pipeline spills and production shutdowns. DOL believes that it is unlikely that an agreement could be reached to resolve the claims and anticipates filing a court case later this year or risk certain claims being time barred; hence this request for an appropriation to fund the anticipated litigation in FY10.	3,500.0				3,500.0
76	Military & Veterans Affairs	Air Guard Facilities Maintenance				Increase Federal Authority for Ongoing Maintenance Costs Additional federal authorization is available for ongoing maintenance costs at Air National Guard facilities.		300.0			300.0
77	Natural Resources	Oil & Gas Development	(3)			Transfer AGIA related funding and positions (PCNs 10-Z054, 10-Z055, 10-Z056) from the Oil & Gas Development component to a new State Coordinator - Gas Pipeline component.	(391.7)				(391.7)
78	Natural Resources	State Coordinator - Gas Pipeline				Create new component for Gas Pipeline Oversite					0.0
79	Natural Resources	State Coordinator - Gas Pipeline	2			Transfer AGIA related funding and positions from Governor's Office to new State Coordinator - Gas Pipeline component. (PCN 01-802X and PCN 01-919X) The transfer of PCN 01-802X is already in the supplemental budget bill and a supplemental amendment will be submitted to transfer the other position.	390.0				390.0
80	Natural Resources	State Coordinator - Gas Pipeline	3			Transfer AGIA related funding and positions (PCNs 10-Z054, 10-Z055, 10-Z056) from the Oil & Gas Development component to a new State Coordinator - Gas Pipeline component.	391.7				391.7
81	Natural Resources	Mental Health Trust Lands Administration	(2)			Delete Vacant PCNs 10-0131 and 10-0136. Based on the current status of funding available from the Mental Health Trust Authority, current economic conditions, and future business opportunities, these positions will not be needed. Current workload can be managed with existing staff.			(189.9)	MHTAAR	(189.9)
82	Public Safety	Special Projects				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	4.8				4.8
83	Public Safety	Special Projects	13			Fund the operations of the Bureau of Highway Patrol in Fairbanks, Mat-Su Valley and Kenai Peninsula regions. These funds add 10 troopers and 3 administrative staff to the seven positions (four state troopers and three administrative) that were added in FY2009 through an RSA. These funds are from the National Highway Traffic Safety Administration (NHTSA) through the Department of Transportation and Public Facilities, Highway Safety Office.			4,800.0	CIP Rcpts	4,800.0
84	Public Safety	Alaska State Troopers Director's Office				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	6.0				6.0
85	Public Safety	Alaska Bureau of Judicial Services				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	424.2				424.2
86	Public Safety	Prisoner Transportation				Increased transportation costs due to higher fuel and airline ticket costs.	400.0				400.0
87	Public Safety	Rural Trooper Housing				Central Regional Facilities Maintenance RSA with DOT/PF. Department wants to have maintenance done before things break instead of having to do emergency RSAs, hire private contractors or add the fixes to the deferred maintenance backlog. Also, department can get a cost break from DOT by having maintenance done when DOT is already traveling to the location to do work for other customers.	30.0				30.0
88	Public Safety	Narcotics Task Force				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	49.3				49.3
89	Public Safety	Alaska State Trooper Detachments				Increased trooper moves necessitated by having all trooper positions filled. Costs are based on 10 rural moves which have averaged $50,000/move and 10 road system moves that have averaged $30,000/move.	600.0				600.0
90	Public Safety	Alaska State Trooper Detachments				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	2,439.9				2,439.9
91	Public Safety	Alaska State Trooper Detachments				Increased vehicle costs corresponding to FY09 supplemental request.	139.8				139.8
92	Public Safety	Alaska State Trooper Detachments				Central Regional Facilities Maintenance RSA with DOT/PF. Department wants to have maintenance done before things break instead of having to do emergency RSAs, hire private contractors or add the fixes to the deferred maintenance backlog. Also, department can get a cost break from DOT by having maintenance done when DOT is already traveling to the location to do work for other customers.	42.0				42.0
93	Public Safety	Alaska Bureau of Investigation				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	268.8				268.8
94	Public Safety	Alaska Bureau of Alcohol and Drug Enforcement				Increased vehicle costs corresponding to FY09 supplemental request.	6.4				6.4
95	Public Safety	Alaska Bureau of Alcohol and Drug Enforcement				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	83.9				83.9
96	Public Safety	Alaska Wildlife Troopers				Central Regional Facilities Maintenance RSA with DOT/PF. Department wants to have maintenance done before things break instead of having to do emergency RSAs, hire private contractors or add the fixes to the deferred maintenance backlog. Also, department can get a cost break from DOT by having maintenance done when DOT is already traveling to the location to do work for other customers.	28.0				28.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
97	Public Safety	Alaska Wildlife Troopers				Increased trooper moves necessitated by having all trooper positions filled. Costs are based on 10 rural moves which have averaged $50,000/move and 10 road system moves that have averaged $30,000/move.	200.0				200.0
98	Public Safety	Alaska Wildlife Troopers				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	746.1				746.1
99	Public Safety	Alaska Wildlife Troopers Aircraft Section				Projected risk management cost increases. This corresponds to the FY09 supplemental request that was split between AWT Aircraft Section and AWT Marine Enforcement.	318.8				318.8
100	Public Safety	Alaska Wildlife Troopers Aircraft Section				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	43.7				43.7
101	Public Safety	Alaska Wildlife Troopers Marine Enforcement				Projected risk management cost increases. This corresponds to the FY09 supplemental request that was split between AWT Aircraft Section and AWT Marine Enforcement.	21.2				21.2
102	Public Safety	Alaska Wildlife Troopers Marine Enforcement				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	31.5				31.5
103	Public Safety	Alaska Wildlife Troopers Director's Office				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	9.3				9.3
104	Public Safety	Alaska Wildlife Troopers Investigations				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	22.1				22.1
105	Public Safety	VPSO Contracts				Annualize costs of 15 new VPSO's added in the FY09 budget by the legislature.	783.1				783.1
106	Public Safety	VPSO Contracts				Add 15 new VPSO positions per Task Force recommendation.	1,245.5				1,245.5
107	Public Safety	VPSO Contracts				Establish 3% COLA to match trooper COLA. Of this total amount $34.2 is attributable to the request for 15 new positions in FY10. There are VPSO vacancies currently, but the department expects these new positions and the vacancies will be filled.	205.2				205.2
108	Public Safety	VPSO Contracts				Establish annual merit increases per Task Force recommendation.	236.5				236.5
109	Public Safety	Training Academy				Full funding of commissioned officers with no vacancy. The department expects all trooper positions will be filled by July 1, 2009.	35.5				35.5
110	Revenue	ARM Board				Increase expenditure authorization of Benefit Systems Receipts due to costs allocable to the supplemental annuity plan (SBS) and deferred compensation plan (DCP) under Treasury's federally-approved cost allocation plan, which was approved retroactive to July 1, 2008.			900.0	Benefit Systems Recpts	900.0
111	Revenue	ARM Board				Add contractual funding to conduct an audit of the Alaska Retirement Management Board's performance consultant, as required under AS 37.10.220 (11).			150.0	PERS $102.5 TRS $46.6 JRS $0.8 Nat Guard $0.1	150.0
112	Revenue	ARM Board				Remove the one-time item for independent audit of the state's actuary, which was conducted in FY2009 in accordance with AS 37.10.220 (10).			(300.0)	PERS ($195.6) TRS ($100.3) JRS ($2.8) Nat Guard ($1.3)	(300.0)
113	Revenue	ARM Custody and Management Fees				Reduce contractual services due to lower fees billed by investment managers, whose fees are based on net asset values of invested assets. Lower net asset values and manager fees are reflective of the recent downturn in financial markets.			(8,546.7)	PERS ($5,842.9) TRS ($2,653.5) JRS ($44.6) Nat Guard ($5.7)	(8,546.7)
114	Revenue	APFC Custody and Management Fees				Reduce contractual services due to lower fees billed by investment managers, whose fees are based on net asset values of invested assets. Lower net asset values and manager fees are reflective of the recent downturn in financial markets.			(10,000.0)	Perm Fund Rcpts	(10,000.0)
115	Transportation	Statewide Information Systems				Maintenance Management System Operating Costs The Department of Transportation and Public Facilities is nearly finished deploying a Maintenance Management System (MMS) which was funded with federal receipts in the capital budget. Ongoing costs of the MMS are ineligible for federal funds. General funds are needed to continue operating, maintaining and enhancing the system. Beginning in FY09, salaries for the four existing analyst/programmers are no longer eligible for federal funding as the project has moved from implementation into the maintenance phase. These positions were short funded in FY09. This increment will allow the existing positions to be fully funded.	75.0				75.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
116	Transportation	Statewide Design and Engineering Services				Transfer out Janitorial, Electricity and Water/Sewer Funding to Central Region Facilities for the Statewide Materials Building Statewide Design and Engineering Services has been paying for electricity ($10.7), water/sewer ($1.8) and janitorial ($5.3) costs for the Statewide Materials building in Anchorage. Capital Improvement Project/Indirect Cost Allocation Plan (CIP/ICAP) Receipt funding for these costs is being transferred to the Central Region Facilities component which is responsible for ongoing services of this nature for Department of Transportation and Public Facilities' owned and occupied buildings.			(17.8)	CIP Rcpts	(17.8)
117	Transportation	State Equipment Fleet	1			Transfer PCN 25-1912, Mechanic, from Northern Region Highways and Aviation for Mechanic Support of State Equipment Through a Reimbusable Services Agreement (RSA) with State Equipment Fleet (SEF), this position has provided mechanic support on all state-owned equipment assigned to this maintenance station and at several surrounding villages since SEF does not have a mechanic at this station. Since the Air Force vacated their base at Galena and the Maintenance and Operations (M&O) workforce was reduced to provide maintenance at a lower level, one mechanic position was transferred to the Dalton Highway two years ago and there is no longer enough work at Galena for the one full time mechanic remaining at this station. This position will continue to provide operator support to Highways and Aviation, as necessary, in performing airport rescue and fire fighting duties, snow plowing, and other routine road and airport maintenance and SEF will be reimbursed for these services through payment on the monthly equipment billings.					0.0
118	Transportation	State Equipment Fleet				Increase Highway Working Capital Funds Authorization to Fund PCN 25-1912 State Equipment Fleet (SEF) requests an additional $98.6 Highway Working Capital Funds authorization to fund PCN 25-1912 which is being transferred in from Northern Region Highways and Aviation. Through a Reimbusable Services Agreement (RSA) with State Equipment Fleet (SEF), this position has provided mechanic support on all state-owned equipment assigned to this maintenance station and at several surrounding villages since SEF does not have a mechanic at this station. This position will continue to provide operator support to Highways and Aviation, as necessary, in performing airport rescue and fire fighting duties, snow plowing, and other routine road and airport maintenance and SEF will be reimbursed for these services through payment on the monthly equipment billings.			98.6	Highway Equipment Working Capital Fund	98.6
119	Transportation	Central Region Facilities				Transfer in Janitorial, Electricity and Water/Sewer Funding to Central Region Facilities for the Statewide Materials Building Statewide Design and Engineering Services has been paying for electricity ($10.7), water/sewer ($1.8) and janitorial ($5.3) costs for the Statewide Materials building in Anchorage. Capital Improvement Project/Indirect Cost Allocation Plan (CIP/ICAP) Receipt funding for these costs is being transferred to the Central Region Facilities component which is responsible for ongoing services of this nature for Department of Transportation and Public Facilities' owned and occupied buildings.			17.8	CIP Rcpts	17.8
120	Transportation	Central Region Highways and Aviation				National Pollutant Discharge Elimination System Compliance for Anchorage - Street Sweeping To meet Environmental Protection Agency air quality regulations and National Pollution Discharge Elimination Systems (NPDES) requirements, spring sweeping and storm drain cleaning is necessary to remove winter sand from the roads in the Anchorage area. The sweeping contract is due to be rebid in March 2009. According to the current contractor, the rate per mile is expected to increase from $390 to about $700 (a 79% increase). With 596.55 lane miles to be swept, the cost for one round of sweeping wil increase by $185.0. If we eliminate all secondary sweeping, the result is a net increase of $116.3.	116.3				116.3
121	Transportation	Northern Region Highways and Aviation				Parks Highway Maintenance Stations Winter Sand Stockpile All readily accessible sources and old reject stockpiles on the Parks Highway for Nenana, Healy, Cantwell and Antimony Creek (East Fork) maintenance stations have been depleted. Sand is needed for numerous hills and curves in this high snow and ice accumulation area of the Parks Highway and it is too expensive and time sensitive to be hauled in from distant storage sites. This $200.0 increment would allow the department to purchase approximately 10,000 tons of sand from a crushing contractor.	200.0				200.0

Governor's FY2010 Operating Budget Amendments

	A	B	C	D	E	F	G	H	I	J	K
1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
122	Transportation	Northern Region Highways and Aviation	(1)			Transfer PCN 25-1912, Mechanic, to State Equipment Fleet for Mechanic Support of State Equipment Through a Reimbusable Services Agreement (RSA) with State Equipment Fleet (SEF), this position has provided mechanic support on all state-owned equipment assigned to this maintenance station and at several surrounding villages since SEF does not have a mechanic at this station. Since the Air Force vacated their base at Galena and the Maintenance and Operations (M&O) workforce was reduced to provide maintenance at a lower level, one mechanic position was transferred to the Dalton Highway two years ago and there is no longer enough work at Galena for the one full time mechanic remaining at this station. This position will continue to provide operator support to Highways and Aviation, as necessary, in performing airport rescue and fire fighting duties, snow plowing, and other routine road and airport maintenance and SEF will be reimbursed for these services through payment on the monthly equipment billings.					0.0
123	Transportation	Northern Region Highways and Aviation				Transfer Personal Services Funding to Contractual for Operator Support and Equipment Costs PCN 25-1912, a WG53 Mechanic Auto Advance Journey is being transferred to the State Equipment Fleet (SEF) component to better provide for mechanic support in the Galena and surrounding airports. Thus personal services funding will not be needed in Northern Region Highways and Aviation (NR H&A) for this position, but funding will be needed in contractual services to pay SEF for equipment operator services as needed, and for added equipment costs at this remote site.					0.0
124	Transportation	Marine Vessel Operations				FY10 Bargaining Unit Contract Terms: Inlandboatmen's Union of the Pacific Costs associated with the bargaining unit contract terms applicable to this component: $2,238.8. This includes both wage and health insurance increases. Wage increase: effective July 1, 2009 the hourly rates in effect on June 30, 2009 for all job classifications will increase by 5 percent. Health Insurance: effective July 1, 2009, the State contribution will increase from $868 to $911 per eligible employee per month. Wage Increase: $2,101.6 Health Insurance: $ 218.5 Total: $2,320.1 (in addition, a language amendment is submitted to add the Inlandboatmen's Union of the Pacific to the bargaining units listed in sec. 21.)	2,320.1				2,320.1
125	University	Anchorage Campus				Reduce MHTAAR for Trust Training Cooperative project to comply with Trust request of January 2009. Reduces MHTAAR from $695.0 to $559.0.			(136.0)	MHTAAR	(136.0)
126	University	Anchorage Campus				Reduce MHTAAR for project to increase provider capacity to better serve cognitively impaired offenders to comply with Trust request of January 2009. Reduces MHTAAR from $100.0 to $80.0.			(20.0)	MHTAAR	(20.0)
127	University	Anchorage Campus				Reduce MHTAAR for Specialized Skills and Service Training on Serving Cognitively Impaired Offenders project to comply with Trust request of January 2009. Reduces MHTAAR from $60.0 to $55.0.			(5.0)	MHTAAR	(5.0)
128	University	Anchorage Campus				Reduce MHTAAR for Training and Technical Assistance for Providers project to comply with Trust request of January 2009. Reduces MHTAAR from $225.0 to $210.0.			(15.0)	MHTAAR	(15.0)
129	University	Anchorage Campus				Eliminate MHTAAR for PhD Student Internships on the Outcomes Identification and System Performance Project to comply with Trust request of January 2009. Reduces MHTAAR from $45.0 to $0.0.			(45.0)	MHTAAR	(45.0)
130	University	Anchorage Campus				New Facility Operating and Maintenance Costs - Integrated Science Building Funding will cover a portion of the operating and maintenance costs of the new Integrated Sciences Building (ISB) scheduled to open in the fall of 2009. This 120,000 square foot facility extends the research and teaching capacities within the sciences. The ISB science teaching laboratories and classrooms support professional programs including Nursing and other high demand areas as well as providing science general education and instructional space for majors in science degrees. Completion of the facility will approximately double the amount of space devoted to science instruction and research programs.	1,025.0				1,025.0

1	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
131	University	Fairbanks Campus				New Facility Operating and Maintenance Costs - State Virology Lab This request covers approximately 57% of UAF's portion of the maintenance requirement and anticipated new facility operating costs for the State Virology Lab. The facility is owned and primarily occupied by the State of Alaska Department of Health and Social Services (DH&SS), with a portion of the basement assigned to UAF. UAF will provide maintenance, operations and utilities for the facility and DH&SS will pay its pro-rata share of the costs for these services. This facility will foster opportunities for collaboration between State and UAF researchers regarding diagnostic activities related to animal and human health.	150.0				150.0
132	University	Fairbanks Campus				Reduce MHTAAR for AK Rural Behavioral Health Training Academy - Telebehavioral Health project to comply with Trust request of January 2009. Reduces MHTAAR from $87.5 to $25.0.			(62.5)	MHTAAR	(62.5)
133	University	Fairbanks Campus				Eliminate MHTAAR for PhD Student Internships on the Outcomes Identification and System Performance Project to comply with Trust request of January 2009. Reduces MHTAAR from $45.0 to $0.0.			(45.0)	MHTAAR	(45.0)
134	University	Multiple Campuses				Non-Personnel Services Fixed Costs - Facilities Maintenance and Repair UA's annual maintenance and repair is calculated at a minimum 1.5 percent of current building value. Each MAU is asked to annually increase its operating budget dedicated to facilities maintenance, often referred to as M&R, in order to keep pace with its ever increasing building maintenance needs. This request covers approximately 61% of the requirement. Starting in FY10, M&R is being budgeted at the allocation (campus level) instead of the MAU level. Statewide Services $ 18.4 Anchorage Campus 222.9 Kenai Peninsula College 26.2 Kodiak College 10.4 Mat-Su College 23.8 Prince William Sound CC 11.7 Fairbanks Campus 302.3 Bristol Bay Campus 14.6 Chukchi Campus 14.3 Interior-Aleutians Campus 17.2 Kuskokwim Campus 24.1 Northwest Campus 17.0 Tanana Valley Campus 44.5 Juneau Campus 50.9 Ketchikan Campus 11.0 Sitka Campus 15.7	825.0				825.0
135	Court System	Trial Courts				Reduce MHTAAR for Training for Therapeutic Court Clinical Staff project to comply with Trust request of January 2009. Reduces MHTAAR from $25.0 to $15.0.			(10.0)	MHTAAR	(10.0)
136	Court System	Trial Courts				Reduce MHTAAR for Fairbanks Juvenile Therapeutic Court project to comply with Trust request of January 2009. Reduces MHTAAR from $255.9 to $250.9.			(5.0)	MHTAAR	(5.0)
137	Court System	Trial Courts				Reduce MHTAAR for Access to Timely Neuropsychiatric Evaluations project to comply with Trust request of January 2009. Reduces MHTAAR from $25.0 to $5.0.			(20.0)	MHTAAR	(20.0)
138	Court System	Trial Courts				Change title of "Grant 1935.01 Juneau Mental Health Court" OTI to "Grant 1935.01 Mental Health Court Expansion to Targeted Community"			(204.4)	MHTAAR	(204.4)
139	Court System	Trial Courts				Change title of "Grant 1935.01 Juneau Mental Health Court" OTI to "Grant 1935.01 Mental Health Court Expansion to Targeted Community"			204.4	MHTAAR	204.4
140	Debt Service	Debt Retirement Fund				An additional $1,108,154 needed for Cordova which held their first bond issuance for schools and did not notify the department by October 15.	1,108.2				1,108.2
141	Debt Service	Debt Retirement Fund				Reduce the amount of General Fund required to capitalize the Debt Retirement Fund. The first bond sale is scheduled to take place the week of March 30. Therefore, the FY2010 debt service on the Series 2009A GO Bonds (Sec. 32(e)) can be reduced from $11,275.0 to $10,275.0.	(1,000.0)				(1,000.0)
142	Debt Service	Debt Retirement Fund				General Fund capitalization may be reduced for the amount of Series 2003A bonds paid from DEED GO Bond funded projects.	(207.3)				(207.3)
143	Fund Capitalization	Power Cost Equalization				Due to an expected decrease in interest revenue in the PCE Fund, less funding will be available for PCE grants. Additional GF is needed to fully fund the program.	888.0				888.0
144	Fund Capitalization	Permanent Fund Principal				Pursuant to sec. 18(d)(1), this represents the pro-rata allocation per AS 37.05.530(g)(2) of the NPRA funds received by the Department of Commerce, Community, and Economic Development that are not allocated to capital projects in the capital budget amendments.		65.9		NPRA Fund	65.9

Notes

A Unrestricted General Fund Revenues: FY2010 Unrestricted Revenues are based on an ANS West Coast oil price at $74.41 per barrel and .665 million barrels per day. The February 2009 Interim Forecast for Unrestricted Revenue for FY2010 Governor Amended is based on an ANS West Coast annual average oil price of $57.78 and estimated production of .659 million barrels per day.

B Corporate Dividends: Includes funds made available to the State by the boards of the Alaska Industrial Development and Export Authority (AIDEA), Alaska Housing Finance Corporation (AHFC) and Alaska Student Loan Corporation (ASLC). The AIDEA dividend is $23.8 million for FY2009 and $22.7 million for FY2010, though $22 million is appropriated in the Governor budget. The total AHFC transfer for dividend, capital projects, loan programs and debt service is $65.9 million for FY2009 and $68.7 million for FY2010. Since AHFC's debt payments for general government purpose bonds do not require appropriation, the net transfers appropriated here are $59.7 million for FY2009 and $62.5 million for FY2010. The ASLC Dividend is $4.1 million for FY2009; there is no ASLC Dividend for FY2010.

C Public Education Fund: Legislation in 2005 established the Public Education Fund (PEF). One of the effects of this legislation was to remove expenditures for K-12 Foundation Program and Pupil Transportation from operating formula programs (line 10), since expenditures from the fund do not require appropriation.

The FY2009 and FY2010 proposed Education K-12 Foundation Program and Pupil Transportation expenditures are shown as funds expended from the Public Education Fund on line 12.

Public Education Fund	Foundation	Pupil Transportation	Total
FY2009	944,776.2	58,516.6	1,003,292.8
FY2010	992,268.5	60,293.8	1,052,562.3
FY2011	1,049,674.8	62,239.9	1,111,914.7

The amount estimated for FY2011 is funded from the estimated balance of the Public Education Fund plus $9,565.4 from the FY2010 deposit of $1,062,127.7.

D Duplicated Authorizations: These appropriations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. The most significant examples of these type of expenditures include operating payments from Interagency Receipts, and debt payments from the Debt Retirement Fund.

E Debt Service / Debt Retirement Fund Capitalization: The Debt Service line (line 16) includes actual payment of debt obligations, primarily general obligation bonds, State debt reimbursement programs, certificates of participation (lease-financing), and International Airports revenue bonds. Some of these debt payments are made from the Debt Retirement Fund, which is capitalized from a variety of fund sources. The Debt Retirement Fund Capitalization line (line 17) identifies various funding sources used to pay debt from the Debt Retirement Fund.

F Other Fund Capitalization: Other Fund Capitalization includes capitalization of various State operating funds, such as the Fish and Game Fund, Power Cost Equalization and Rural Electric Capitalization Fund, and others.

G AHCC Receipts Funded Projects and Fund Capitalization: In FY2006, the Legislature appropriated $300 million to the Alaska Housing Finance Corporation (AHFC) for the purpose of funding capital projects in Sec. 14, Ch. 13, SLA 2006. The Legislature's intent also allowed AHFC to transfer those funds and the earnings to a subsidiary corporation, which AHFC did. Those funds currently total $339 million in the Alaska Housing Capital Corporation (AHCC) as of mid-November, 2008. The receipts of the AHCC are the source of funds used for certain capital projects.

H Alaska Capital Income Fund Capitalization: The Alaska Capital Income Fund is authorized by AS 37.05.565. The fund consists of income earned on money awarded as a result of the State vs. Amerada Hess royalty case, estimated to be $28-29 million per year, plus other appropriations. Those projects have been reduced in the FY2010 Governor's Amended columns per the Alaska Permanent Fund Corporation Fund Financial History & Projections as of December 31, 2008.

I PF Dividends / PFD Division Operations: Line 36 includes both the amounts for Permanent Fund Dividend (PFD) checks and other State operating costs of the PFD. In FY2009 the State will spend $20.7 million for Department of Revenue, Division of Permanent Fund Dividends operations ($7.1 million) and DHSS Public Assistance PFD Hold Harmless ($13.6 million). In FY2010 the amounts will be $21 million for Department of Revenue, Division of Permanent Fund Dividends operations ($7.4 million), and DHSS Public Assistance PFD Hold Harmless ($13.6 million).

The financial information for the FY2010 Amended columns is from the Alaska Permanent Fund Corporation Fund Financial History & Projections as of December 31, 2008. These financial statements are available on the Alaska Permanent Fund website: www.APFC.org .

J Balance to Constitutional Budget Reserve: The FY2010 Governor Amended column shows a negative amount based on the February 2009 Interim Forecast.

State of Alaska

Notes

A Unrestricted General Fund Revenues: FY2010 Unrestricted Revenues are based on an ANS West Coast oil price at $74.41 per barrel and .665 million barrels per day. The February 2009 Interim Forecast for Unrestricted Revenue for FY2010 Governor Amended is based on an ANS West Coast annual average oil price of $57.78 and estimated production of .659 million barrels per day.

B Corporate Dividends: Includes funds made available to the State by the boards of the Alaska Industrial Development and Export Authority (AIDEA), Alaska Housing Finance Corporation (AHFC) and Alaska Student Loan Corporation (ASLC). The AIDEA dividend is $23.8 million for FY2009 and $22.7 million for FY2010, though $22 million is appropriated in the Governor budget. The total AHFC transfer for dividend, capital projects, loan programs and debt service is $65.9 million for FY2009 and $68.7 million for FY2010. Since AHFC's debt payments for general government purpose bonds do not require appropriation, the net transfers appropriated here are $59.7 million for FY2009 and $62.5 million for FY2010. The ASLC Dividend is $4.1 million for FY2009; there is no ASLC Dividend for FY2010.

C Public Education Fund: Legislation in 2005 established the Public Education Fund (PEF). One of the effects of this legislation was to remove expenditures for K-12 Foundation Program and Pupil Transportation from operating formula programs (line 10), since expenditures from the fund do not require appropriation.

The FY2009 and FY2010 proposed Education K-12 Foundation Program and Pupil Transportation expenditures are shown as funds expended from the Public Education Fund on line 12.

Public Education Fund	Foundation	Pupil Transportation	Total
FY2009	944,776.2	58,516.6	1,003,292.8
FY2010	992,268.5	60,293.8	1,052,562.3
FY2011	1,049,674.8	62,239.9	1,111,914.7

The amount estimated for FY2011 is funded from the estimated balance of the Public Education Fund plus $9,565.4 from the FY2010 deposit of $1,062,127.7.

D Duplicated Authorizations: These appropriations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. The most significant examples of these type of expenditures include operating payments from Interagency Receipts, and debt payments from the Debt Retirement Fund.

E Debt Service / Debt Retirement Fund Capitalization: The Debt Service line (line 16) includes actual payment of debt obligations, primarily general obligation bonds, State debt reimbursement programs, certificates of participation (lease-financing), and International Airports revenue bonds. Some of these debt payments are made from the Debt Retirement Fund, which is capitalized from a variety of fund sources. The Debt Retirement Fund Capitalization line (line 17) identifies various funding sources used to pay debt from the Debt Retirement Fund.

F Other Fund Capitalization: Other Fund Capitalization includes capitalization of various State operating funds, such as the Fish and Game Fund, Power Cost Equalization and Rural Electric Capitalization Fund, and others.

G AHCC Receipts Funded Projects and Fund Capitalization: In FY2006, the Legislature appropriated $300 million to the Alaska Housing Finance Corporation (AHFC) for the purpose of funding capital projects in Sec. 14, Ch. 13, SLA 2006. The Legislature's intent also allowed AHFC to transfer those funds and the earnings to a subsidiary corporation, which AHFC did. Those funds currently total $339 million in the Alaska Housing Capital Corporation (AHCC) as of mid-November, 2008. The receipts of the AHCC are the source of funds used for certain capital projects.

H Alaska Capital Income Fund Capitalization: The Alaska Capital Income Fund is authorized by AS 37.05.565. The fund consists of income earned on money awarded as a result of the State vs. Amerada Hess royalty case, estimated to be $28-29 million per year, plus other appropriations. Those projects have been reduced in the FY2010 Governor's Amended columns per the Alaska Permanent Fund Corporation Fund Financial History & Projections as of December 31, 2008.

I PF Dividends / PFD Division Operations: Line 36 includes both the amounts for Permanent Fund Dividend (PFD) checks and other State operating costs of the PFD. In FY2009 the State will spend $20.7 million for Department of Revenue, Division of Permanent Fund Dividends operations ($7.1 million) and DHSS Public Assistance PFD Hold Harmless ($13.6 million). In FY2010 the amounts will be $21 million for Department of Revenue, Division of Permanent Fund Dividends operations ($7.4 million), and DHSS Public Assistance PFD Hold Harmless ($13.6 million).

The financial information for the FY2010 Amended columns is from the Alaska Permanent Fund Corporation Fund Financial History & Projections as of December 31, 2008. These financial statements are available on the Alaska Permanent Fund website: www.APFC.org .

J Balance to Constitutional Budget Reserve: The FY2010 Governor Amended column shows a negative amount based on the February 2009 Interim Forecast.

Revenue Releases FY10 Forecast Update

The Department of Revenue released the fiscal year 2010 interim revenue forecast today. This forecast is based upon a new oil price forecast for the July 2009 through June 2010 period that utilized the New York Mercantile Exchange (NYMEX) oil futures index, the federal Energy Information Agency (EIA) forecasts, the Department of Revenue's own low-price scenario from the Spring 2007 Revenue Sources Book, and the department's Fall 2008 modified-Delphi forecasting session results.

The resulting oil price forecast adjusted for ANS crude oil averages $57.78 for the FY 2010 period. Production levels for FY 2010 have also changed with this interim forecast to approximately 659,000 barrels a day, falling approximately 6,000 barrels a day from the Fall 2008 forecast for the same period.

Using these assumptions, unrestricted revenue for FY 2010 is projected to be $3.186 billion or $2.1 billion less than projected in the Fall 2008 forecast. Oil revenues provide 82% of the anticipated unrestricted revenue.

****

TITLE: **FEBRUARY 2009 INTERIM FY 2010 REVENUE FORECAST**

PREPARED BY: Department of Revenue, Tax Division

PURPOSE: To provide OMB an update to the Fall 2008 revenue forecast for FY 2010.
The official Spring 2009 forecast is scheduled to be released in April 2009.

DATA SOURCES: Department of Revenue, Tax and Treasury Divisions
Department of Administration, Division of Finance
Office of Management and Budget
Permanent Fund Corporation

ASSUMPTIONS: Forecast assumptions based on tax laws in place as of January 1, 2009.

For FY 2010 prices, we use a blend of the EIA's February 2009 forecast, the NYMEX as of February 6, 2009, the Fall 2007 Delphi Low Price Scenario, and the Fall 2008 Delphi median base price for a WTI annual average of $60.28.

ANS is forecasted to trade at a differential of $2.50 below WTI for FY 2010, resulting in an annual average forecast for ANS of $57.78.

FY 2010 total forecasted production volumes for ANS are 0.659 million barrels per day.

DISCLAIMER: This is not a confidential document.

The Department of Revenue uses an engineering consultant in conjunction with assistance from the Department of Natural Resources and the Alaska Oil & Gas Conservation Commission to derive its biannual production forecast.

The department may adjust its production expectations as we continue to examine reservoir performance, review the pace and scope of development of new fields, and re-evaluate downtime of fields on the North Slope.

All inputs may be revised before the final forecast.

PROFESSIONAL EXPERIENCE

Executive Director 2003 - Present
Office of Economic and Community Development, Municipality of Anchorage

For the past five years I have served as an executive to the Mayor, responsible for promoting public and private economic development projects for the Municipality of Anchorage. Highlights have included the new Dena'ina Civic and Convention Center schedule for completion September of 2008, the transfer of the Museum from a public to private non-profit entity, the Library Renewal Initiative, the reorganization of the Parks and Recreation Department and the creation of the Parks Foundation. I have oversight for the rewrite of the Municipality's land use codes to be completed in 2008, completion of the Downtown Comprehensive Plan and the revitalization of one of our most underserved neighborhoods, Mountain View. In addition to spearheading many projects for the city I am responsible for an array of department including: the Port of Anchorage, the Planning Department, Heritage Land Bank and Real Estate Services, the Libraries, Parks and Recreation, and the Department of Neighborhoods and the Anchorage Community Development Authority. Responsibilities also include formulating and approving budgets for each department, spearheading departmental reorganizations, long range transportation planning for Anchorage, multimillion dollar grant proposals, real estate, capital improvement project planning and local, state and federal budget request formulation.

Executive Director and CEO 1999 to 2003
Anchorage Neighborhood Housing Services /
Anchorage Mutual Housing Association

I served as the Chief Executive Officer for Anchorage Neighborhood Housing Services (ANHS) a non-profit community development corporation dedicated to promoting affordable housing and neighborhood revitalization. ANHS is affiliated with the National Neighborhood Reinvestment Corporation and is certified as a Community Financial Institution. From 1998-2003 ANHS loaned $18 million and leveraged $34 million in first mortgages. Of the 545 loans made to low to moderate income families, 91 of those borrowers have been persons who experience a disability. Also under my direction was the sister organization, Anchorage Mutual Housing Association, which owned and managed 1,150 units of affordable rental housing in twelve locations citywide. Total assets for both companies at the time was 62.2 million relations, legislative affairs, and the overall administration of the organization. Duties also include the oversight of Anchorage Mutual Housing Association.

Executive Director 1981 to 1999
The Arc of Anchorage, Anchorage, Alaska

For 18 years served as the Executive Director for The Arc of Anchorage. I was instrumental in building an organization with an initial grant of $180,000 to more than 12 million. Programs included an array of services for persons with developmental and other disabilities including a day activity center, residential care, case management, in-home family services, respite, and specialized services for persons who experience dual diagnosis and emotional disturbances. I also sought funding, purchased, renovated and/or constructed more than 60 housing units, single and multifamily, to ensure safe, affordable housing for those we served. I worked with the Governor's office and the legislature on many issues facing persons with disabilities throughout the State of Alaska. Responsibilities included assets management, program development, grant writing, public relations, fundraising, legislative affairs, and advocacy on behalf of person with developmental and other disabilities and their families.

State Executive Director. 1982 to 1996
The Arc of Alaska, Anchorage, Alaska

In a dual role along with being the Executive Director for The Arc of Anchorage, I also coordinated statewide efforts for The Arc of Alaska. I was responsible for coordinating with the national office, The Arc of the United States on national issues facing persons with developmental disabilities, as well as statewide efforts.

University Research Assistant. 1986
Department of Human Services, University of Northern Colorado

Project assistant for research assessing the long-term care needs of elderly developmentally disabled adults in the state of Colorado. Included surveying existing services for the developmentally disabled and elderly and determining feasibility of integrated programs.

EDUCATION

1986 **University of Northern Colorado, Greeley**
Master of Arts in Rehabilitation Counseling with an Emphasis in Vocational Evaluation

1976 **California State University, Fresno**
Bachelor of Science in Therapeutic Recreation

Work Experience Summary:

Throughout my twenty-year tenure with the Fairbanks Police Department, I have accepted position assignments and promotions encompassing increasing levels of instruction, management oversight, and program administration. Currently serving as the Chief of Police, I am responsible for all planning, budgeting, and daily operations of our fifty-one (51) member department, with an approved (2008) budget of $6.1 million. Extensive operational and administrative experience in the high-liability field of modern policing has resulted in my development of an extremely comprehensive administrative skill-set, with an emphasis on:

- Program and budget development/administration
- Proper employee training, with utilization of sound risk-management practices
- Federal and State of Alaska grant application and administration
- Knowledge of current "best practices" in human resource management
- De-escalation and conflict-resolution skills.
- Policy and procedure development and implementation.

In addition to internal department operations, the position of Police Chief requires extensive community involvement through participation on numerous task-forces, boards, and commissions. Outreach through local service groups and charity events, conflict-resolution with citizen's groups, and regular education/interaction with federal, state, and local political leaders is also required. Additionally, significant community interaction and education through speaking engagements, written editorials, formulation/publishing of departmental *Annual Reports,* draft and revision of an ongoing *Three Year Strategic Plan,* and routine media interaction are necessary to keep our populace engaged. This segment of my service, in particular, has enhanced what I believe to be a very strong communications skill-set, emphasizing:

- Exceptional written communication skills.
- Strong public-speaking skills, with the ability to assume leadership and facilitate discussion.
- Exceptional planning and research skills, preparing information for effective presentation. (See *FPD Reports* at http://www.ci.fairbanks.ak.us/departments/police/news.htm)

Education:

A.J. Dimond High School
Anchorage, AK
1979-1983

University of Alaska, Fairbanks
1983-1988
B.S. Degree: Wildlife Biology
Minor: Criminal Justice

F.B.I. National Academy
225th Session, April-June 2006
United States Department of Justice

University of Alaska, Fairbanks
2005-2008
M.A. Degree: Justice Administration

1216 **Law Enforcement Employment:**

City of Fairbanks Police Department, 911 Cushman Street, Fairbanks AK 99701

-Patrol Officer: March 1989- May 1995
-Field Training Officer: March 1993-May 1995
-F.P.D. Tactical Team: January 1990- April 1998
-Patrol Sergeant: May 1995- April 1998
-Investigations Supervisor: April 1998-February 2002
-Patrol Lieutenant: February 2002-2003
-Director, Alaska Police Corps: Feb 2003- May 2004
-Deputy Chief: June 2004- February 2005
-Police Chief: February 2005- Present

Current Boards & Commission Service:

- Governor's appointee, *Alaska Police Standards Council* (current service as Chair)
- Board member, *United Way of the Tanana Valley*
- Member, *Police Professional Advisory Committee*- Alaska Municipal League
- Member, *Fairbanks Local Emergency Planning Committee*
- Member, *Fairbanks Golden Heart Project* (Community chronic inebriate task force)
- Commissioner, *Alaska Law Enforcement Agency Accreditation Commission*
- Board Member (Ex-Officio), Fairbanks *Volunteers in Policing*

Instructional Capabilities:

Given my combination of education and professional experience, I am well qualified and prepared to instruct in any areas pertaining to organizational leadership, public agency administration, application of human-resource issues, and general criminal-justice and security practices. As an APSC Certified Police Instructor, I am comfortable with both classroom and dynamic/interactive presentations. I have published instructional articles in numerous law enforcement publications on topics pertaining to public safety and effective community education/interaction, to include: *Police Magazine, Law and Order, 911 Magazine,* and the *F.B.I. Law Enforcement Journal.* In 2008, I was invited to present an instructional symposium on effective community and media-relations strategies for the *International Association of Chiefs of Police* conference in San Diego, CA.

Professional and Service Associations:

- Alaska Peace Officers Association (Vice President, Farthest North Chapter)
- Alaska Association of Chiefs of Police (Executive Board Member)
- International Association of Chiefs of Police
- Rotary Club of Fairbanks

Courtesy Staff, Montgomery General Hospital, Olney, Maryland, 1962-64

Appointments

Chief of Medical Staff, Fairbanks Memorial Hospital, Fairbanks, Alaska, 1974-76 and 1984-85
Director, Respiratory Therapy, Fairbanks Memorial Hospital, 1982
Director, Coronary / Intensive Care Unit, Fairbanks Memorial Hospital, 1981-82
Chief of Medicine, Fairbanks Memorial Hospital, Fairbanks, Alaska, 1973-74 and 1981-82
Clinical Associate in Medical Science, University of Alaska Fairbanks

Gubernatorial Appointments

State Health Coordinating Council
Alternatives in Health Care Financing Task Force
Medical Care Advisory Council, Department of Health and Social Services
Former, Violent Crimes Compensation Committee

Borough Appointments

Northern Alaska Health Resources Agency

Boards & Professional Memberships

Alaska State Medical Association
American Medical Association
American Association of Military Surgeons
American College of Physicians
Medical Advisor, North Pole Fire & Rescue
Greater Fairbanks Community Hospital Foundation, 1967 to Present
President / Founder, Fairbanks Internal Medicine & Diagnostic Center, 1974-Present
Consultant, Medical, Division of Vocational Rehabilitation, State of Alaska, 1975-84 and 2002 to Present
Member, Local Operating Board, Fairbanks Memorial Hospital, 1985 to Present
Consultant, Division Vocational Rehabilitation, State of Alaska
Medical Expert, Hearings & Appeals, Social Security Administration
Board of Directors, First National Bank of Fairbanks, 1980-99
Former Chairman, Planning Committee, Fairbanks Memorial Hospital Foundation
Chairman, Ethics Committee, Fairbanks Memorial Hospital, 1986
Member, Finance Committee, Fairbanks Memorial Hospital, 1986
Committee Member, Trust Committee, Alaska Bancorporation, 1980-82
Director, Cardiopulmonary Rehabilitation Program, Fairbanks, 1976-1981
President, Rotary of Fairbanks, 1978
Former Examining Committee, Alaska Pacific Bancorporation, and First National Bank of Fairbanks
President, Physicians' Services, Inc. An IPA, 1977-82
Board Member, Alaska Industrial Medicine, 1977-82
President, Amalgamated Leasing Co., 1978-
Former Consultant, Institute of Arctic Biology, University of Alaska Fairbanks
Consultant, Surgeon General, US Army (MRDC), 1974-78

Awards, Decorations, and Honorary Appointments

Fellow, American College of Physicians, 1972-Present
Paul Harris Fellow, Rotary International
Rotarian of the Year Award, Fairbanks Rotary, 1980
Physician of the Year Award, Alaska State Medical Association, 1977
Alpha Omega Alpha National Honorary Medical Society, 1968-Present
Army Commendation Medal (3 Clusters)
Meritorious Service Medal, US Army
Legion of Merit, US Army
Mosby Scholarship Award for Scholastic Excellence, 1959

4/8/09 CONFIRMATION: RONALD BROWN, STATE ASSESS-MENT REVIEW BOARD

<target><bill></bill><subject>4-8-09 CONFIRMATION RONALD BROWN, STATE ASSESSMENT REVIEW BOARD</subject><comm>HFIN26</comm></target>

Brown
Assessment

STATE OF ALASKA
OFFICE OF THE GOVERNOR
P.O. Box 110001, Juneau, AK 99811-0001
Phone: (907) 465-3500 Fax: (907) 465-3532

BOARDS AND COMMISSIONS APPLICATION FORM

OFFICE OF THE GOVERNOR MAILROOM
JUN 16 2008

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: STATE ASSESSMENT REVIEW BOARD (SARB)
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: RONALD EDWARD BROWN

Mailing Address: 550 W 7TH AVE., STE. 1770 ANCHORAGE, AK 99501

Residence Address: 2304 JEFFERSON #1

City, State and Zip Code: ANCHORAGE AK 99517

Home or Message Telephone: _____ Business Telephone: (907) 269-4565

Fax Number: _____ Cell Phone: _____

Email address: ronald.brown@alaska.gov

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES X NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.) _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO X if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES X NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES _____ NO X

If "YES", explain:

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

A. LEVEL III ASSESSOR/APPRAISER - AK. ASSOC. OF ASSESSING OFFICERS 1/199
B. INSTRUCTOR COURSE 300 - "FUNDAMENTALS OF MASS APPRAISAL"
INTL. ASSOC. OF ASSESSING OFFICERS 9/2007

B. List both formal and informal education and training experiences: (Use additional paper if necessary).

SEE ATTACHED RESUME

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.

SEE ATTACHED RESUME

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).

SEE ATTACHED RESUME

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: _____ SEX: FEMALE _____ MALE _____

ETHNICITY:
Alaska Native ___ American Indian ___ Asian or Pacific Islander ___ Black ___ Hispanic ___ White ___

MILITARY SERVICE (if applicable, give dates): _____

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Signature (in ink): Ronald E. Brown Date: 6/9/2008

Please attach a current resume with your application.

If appointed, a press release will be issued announcing your appointment pending the completion of the appointment process with the Governor's office. Please supply our office with the following information that will be included in the press release.

(Name): DONALD E. BROWN, (Age): 48 of (Hometown): ROSEBURG, OREGON
is (Job title/Place of employment): ASST. STATE ASSESSOR.
(Name) holds (Listing of earned degrees like bachelor's, master's, ect.): BACHELOR OF SCIENCE - BUSINESS ADMIN. - OREGON STATE UNIV.
(Or list relevant experience to the position you are being appointed to)

Examples:

John A. Doe, 38 of Soldotna, is Director of T-Shirts & Co. Doe holds a bachelor's degree in business administration from X University and a master's degree in communications from X University.

John A. Doe, 38 of Palmer, is the owner and operator of Doe and Associates, Inc. Doe previously served as division manager at X, Inc. Doe is a certified personnel consultant.

RONALD EDWARD BROWN

ADDRESS:
2304 Jefferson #1
Anchorage, AK 99517
Ph. (907) 382-2733

WORK:
550 W. 7th Ave, Ste. 1770
Anchorage, AK 99501
Ph. (907) 269-4565

EDUCATION: Graduated from Roseburg Senior High School in Roseburg, Oregon in 1978. Graduated from Oregon State University with a Bachelor of Science Degree in Business Administration/Finance in 1983. :

WORK EXPERIENCE:

State of Alaska: Hired as the Assistant State Assessor in May of 2007. Constructed models for the valuation of real and personal property throughout Alaskan. Conducted training of local government staff on matters of valuation and taxation in the State of Alaska. Assisted the State Assessor in compiling data and reports on topics ranging from mining, general taxation in Alaska and alternative taxation methodology. Also wrote the training course "Predictive Modeling with Microsoft Excel" for the training of assessment modeling staff in Alaska.

Municipality of Anchorage: Hired as a Senior Appraiser in 1997. Promoted to Appraisal Analyst in 2000. Duties include appraisal of over 60,000 residential parcels and defense of assessed values to the Board of Equalization. Handling taxpayer concerns on property valuation issues via telephone and in-person. Collection of data and sales to for purposes of real property market valuation.

Kenai Peninsula Borough: Hired in September of 1995 to establish the Homer branch office of the Borough. Notable duties included appraisal of over 10,000 residential parcels, supervision and training of an administrative assistant, analysis of the local economy, sales values and defense of assessed values to the Board of Equalization.

Ketchikan Gateway Borough: Hired in August of 1991 as an Appraiser I, promoted to Appraiser II in September of 1994. Duties included residential inspections, ratio analysis, public relations with taxpayers and defense of assessed values to the Board of Equalization.

U. S. Navy: Operations Specialist – Second Class aboard the U.S.S. Jouett (CG-29). Duties included radar tracking and identification of air and surface contacts, maintenance of classified materials and radio communication. Served as Duty Master at Arms on-board ship. Honorably discharged on December 7, 1990 with the Good Conduct, Armed Forces Expeditionary, National Defense Service, Navy Expeditionary and Southwest Asia Service medals.

OTHER QUALIFICATIONS AND TRAINING:

IAAO Instructor Training Workshop – September 2007
IAAO Workshop on Fundamentals of Ratio Studies – November 1992
IAAO Income Approach to Valuation – September 1994
IAAO Introduction to the Cost Approach to Value - February 1992
IAAO Fundamentals of Real Property Appraisal - August 1998
IAAO Standards of Practice and Professional Ethics – September 1998
IAAO Site Analysis and Evaluation - October 1994
IAAO Fundamentals of Mass Appraisal - December 1999
IAAO Appraisal of Land - September 1999

Member of the International Association of Assessing Officers and the Alaska Association of Assessing Officers since 1991.

IAAO Instructor – Fundamentals of Mass Appraisal (Course 300)

Certified Level III Assessor/Appraiser with the Alaska Assoc. of Assessing Officers

Speaker at the 1994 Conference of the International Association of Assessing Officers in Seattle Washington, presenting a research paper, "Property Values and the Local Industrial Economy" © 1994 by the International Association of Assessing Officers.

Speaker at the 2005 Conference of the International Association of Assessing Officers in Anchorage, Alaska, presenting a research paper, "Cluster Land Modeling for Residential Properties in Anchorage" © 2005 by the International Association of Assessing Officers.

INTERESTS:

PROFESSIONAL: Economic and statistical forecasting techniques. Stocks, options and other financial instruments

PERSONAL: Fishing, Hunting, Investing, Reading and Cooking.

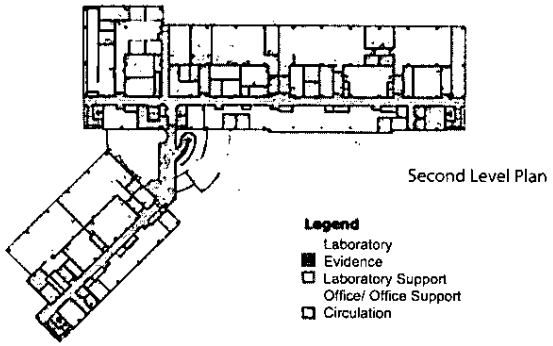
LIVINGSTON SLONE

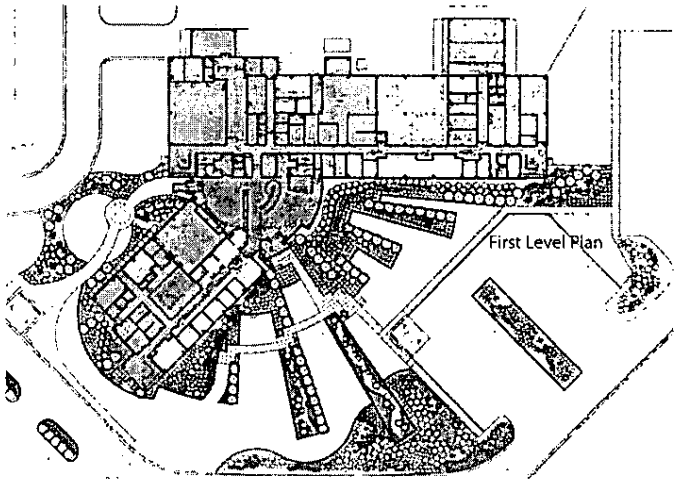
Why is the timing of funding urgent?

The new crime lab is in the design phase, with design completion scheduled for March, 2009. The site work design is completed and is "shovel-ready"; building construction could start summer of 2009 if funding is approved during the current 2009 Legislative session. Occupancy is scheduled for the Fall of 2011. Appropriated funding to date provided for design and site work, with a remaining $94M still needed to complete this project on time. Any delays in funding will add additional costs to the project. A one-year delay will add $7M to the project's cost.



Second Level Plan

The land for the new crime lab is owned by the Municipality of Anchorage. They are leasing the site to the Department of Public Safety for a 50 year/+- 25 lease term @ $1.00/per year. This represents a huge cost-savings.

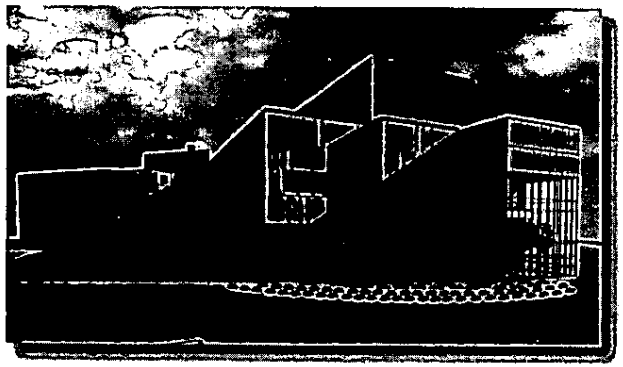


First Level Plan

SAFETY, SECURITY AND JUSTICE

"The bottom line is that average citizens are not concerned about forensic science until they, or someone they love, become the victim of a crime. As a result, crime laboratories do not receive the public attention and support that they deserve. This negligence results in low staffing, low salaries, outdated equipment, and eventually, high backlogs."
~ Crime Lab Report, 2008 (*www.crimelabreport.com*)

ALASKA STATE SCIENTIFIC CRIME DETECTION LABORATORY



NEW ALASKA STATE SCIENTIFIC CRIME DETECTION LABORATORY

How will the new Crime Lab affect livability in Alaska?

Department of Public Safety (DPS) personnel will be equipped to perform their services efficiently. Criminals will no longer be emboldened to repeat burglaries, rapes, and violent crimes without apprehension. The forcible rape rate in Alaska should decrease while the safety of our roads increases (toxicology tests will be performed here, in a timely manner). Home and vehicle break-ins should decrease as investigations of these crimes lead to more convictions. In addition to being and feeling safer, Alaskans will reap near term benefit from the economic stimulus of this large construction project.

Why do we need a new crime lab?

The existing Crime Lab was built in the early 1980's and is 19,200 SF, designed to accommodate up to 20 staff. Current staff is 39. Serving the entire State of Alaska, the lab is unable to keep pace with caseloads, emergent forensic technologies, and requisite staffing levels. These issues have a direct and measurable effect on Alaska's crime rate, livability and economy. Recent legislation adds to the caseload and storage issues of the lab: HB90 generates an additional 6,000 samples per year; The pending Innocence Project legislation will require retaining all biological evidence; Anonymous Reporting of Sexual Assaults requires storing sexual assault kits indefinitely. Alaska holds the unfortunate statistic of having the highest forcible rape rate in the U.S. Due to the current lab's storage and caseload issues, rape cases that do not have an immediately-identifiable suspect go to the bottom of the pile, adding to the probability that these cases remain unsolved.

Due to the lack of space needed to process crime scene evidence and a backlog of cases, law enforcement officers no longer collect burglary crime scene evidence. The lab's scientists have been forced to prioritize which cases to investigate and must limit this to serious violent crimes.

A study by the Urban Institute Justice Policy Center cited a 40% likelihood that burglaries and non-violent crimes are committed by someone who has already committed a violent crime or even murder, or an 80% chance that they will eventually commit a violent crime. 40% of these non-violent crime scenes could have evidence that would lead us to a match with evidence from a serious assault, rape or murder.

Although current lab staff are highly productive, the existing lab's limited space inhibits the scientific and technological growth required to keep pace with current caseloads. This results in unsolved crimes remaining unsolved due to case prioritization. New DNA forensic technologies are emerging, which would allow old, unsolved cases to be reworked. This technology could allow the investigation of 500-700 existing unsolved cases, but increases the caseload of the existing lab beyond current capacity. In addition to rape and burglary evidence not being submitted, over approximately 300 toxicology cases per year are not submitted to the lab for analysis (and possible later prosecution). Alaskan defense attorneys vigorously challenge the collection and processing of forensic evidence. All of these problems, unalleviated, will get worse with time. Funding is needed now to move this project forward and ensure safety, security and justice for all Alaskans.

How will the new crime lab improve Alaska's criminal justice system?

The new full-service lab will contain nine forensic sections including three new-to-Alaska sections: Toxicology, Question Documents and enhanced DNA Analysis. Unsubmitted evidence will be submitted and processed. The new lab will include training classrooms so that officers from around the State can learn cutting-edge crime scene evidence collection procedures. The facility will accommodate future changes in forensics, improve turnaround time on submitted cases, and allow room to grow as the state's population grows beyond the year 2020. The site will also allow for building expansion, without relocation, after the lab reaches its capacity.

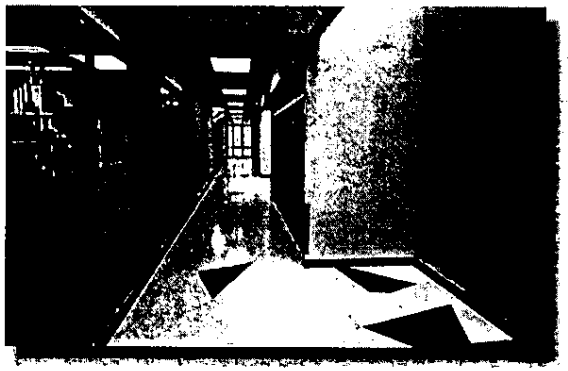
Size and Cost of the new lab

Our crime lab provides services to the entire state of Alaska. Labs in the lower 48 are often part of a multi-lab grouping that overlap service areas and share the workload, thereby able to function with individual smaller-sized labs. In order to provide Alaskans with a fully functioning, self-sufficient lab, we need space for services which are outsourced to the lower 48 or not done at all. The new lab will analyze question documents, trace and toxicology analysis, YSTR/DNA, and Mitochondrial DNA in-house. Trace and QD are currently sent to the FBI; turnaround can take years. Outsourced toxicology takes four months and requires experts from the outsourced labs to be flown to Alaska to testify in criminal trials, at a cost of approximately $2,000 per day. The crime lab's goal is to process 90% of crime scene evidence within 30 days. Outsourcing costs us money (financed through a limited scope, dwindling grant) and delays during which the guilty escape conviction and the innocent may languish in legal limbo.

A full-service lab requires discrete forensic lab spaces staffed with corresponding lab staff. Several of the labs within the new crime lab will be staffed part-time with cross-discipline-trained staff. For example: trace evidence, a new service in the new lab, requires a discrete lab space, but will be staffed with analysts from other sections, causing a zero net effect to actual projected staff count.

Climatic conditions in Alaska directly affect construction costs. More space is required to accommodate oversized HVAC and heating equipment, space for entry/exit vestibules, evidence drop-off sallyport, a vehicle examination sallyport, and additional exterior wall thickness.

Alaska is considered a "high-growth" service area, with projected *average* population growth to the year 2020 at 19%, well above the rate for similar population areas in the lower 48. Growth is anticipated to continue at 19% to the year 2020, without the gas pipeline. Add the pipeline, and growth will be well beyond the projected *average* 19%.



Crime Laboratory Expansion

FY2007 Request: **$4,800,000**
Reference No: **41600**

AP/AL: Appropriation
Category: Law and Justice
Location: Statewide

Project Type: Construction

Contact: Dan Spencer, Director, Administrative Services
Contact Phone: (907)465-5488

House District: Statewide
Estimated Project Dates: 07/01/2006 - 06/30/2010

Brief Summary and Statement of Need:
This project will provide funding for the design phase of a new 38,000 square foot Scientific Crime Detection Laboratory in Anchorage.

The current crime lab facility was constructed in 1986 to house the state's forensic laboratory functions that serve all law enforcement agencies in the state. The facility is no longer physically capable of housing the personnel and instrumentation necessary to meet the state's forensic analysis demands. This project is designed to address current and near-future space requirements while at the same time enhancing the lab's ability to contribute to the successful prosecution of criminals in Alaska.

Funding:	FY2007	FY2008	FY2009	FY2010	FY2011	FY2012	Total

Totals:	0	0

Additional Information / Prior Funding History:
None

Project Description/Justification:
This project will provide funding for the design phase of a new 38,000 square foot Scientific Crime Detection Laboratory in Anchorage.

The current crime lab facility was constructed in 1986 to house the state's forensic laboratory functions that serve all law enforcement agencies in the state. The facility is no longer physically capable of housing the personnel and instrumentation necessary to meet the state's forensic analysis demands.

The crime lab is responsible for the statewide breath and blood alcohol testing program which includes maintaining breath testing instruments from across the state and providing the materials and documentation for insuring instrument accuracy and reliability for legal evidence gathering purposes. The lab provides forensic analysis to all local, state, and federal law enforcement agencies in Alaska in the areas of latent fingerprints, firearms, trace evidence, and other criminalistics services, drug analysis, and DNA analysis. Additionally, the crime lab provides crime scene response and courtroom testimony.

Crime Laboratory Expansion

FY2007 Request: **$4,800,000**
Reference No: **41600**

All sections of the lab are experiencing ever increasing backlogs of requests for forensic exams. This is due in part to agencies increasing the number of police personnel and in part to the success of new technologies such as DNA. Both increase the demands on the lab.

This project is designed to address current and near-future space requirements while at the same time enhancing the lab's ability to contribute to the successful prosecution of criminals in Alaska.

Crime Lab Replacement **FY2009 Request: $100,000,000**
Reference No: 41600

AP/AL: Appropriation
Category: Law and Justice
Location: Statewide

Project Type: Construction

Contact: Dan Spencer, Director, Administrative Services
Contact Phone: (907)465-5488

House District: Statewide (HD 1-40)
Estimated Project Dates: 07/01/2008 - 06/30/2010

Brief Summary and Statement of Need:
This project would fund a new crime laboratory building.

Funding:	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	Total
G/O Bonds	$100,000,000						$100,000,000
Total:	$100,000,000	$0	$0	$0	$0	$0	$100,000,000

☐ State Match Required ☑ One-Time Project ☐ Phased - new ☐ Phased - underway ☐ On-Going
0% = Minimum State Match % Required ☐ Amendment ☐ Mental Health Bill

Operating & Maintenance Costs:

	Amount	Staff
Project Development:	0	0
Ongoing Operating:	0	0
One-Time Startup:	0	
Totals:	0	0

Additional Information / Prior Funding History:
Sec 1, Ch 82, SLA 2006, Page 81, Lines 15-16 $4,800,000 General Funds

Project Description/Justification:

The current crime lab facility was constructed in 1986 to house the state's forensic laboratory functions that serve all law enforcement agencies in the state. The facility is no longer physically capable of housing the personnel and instrumentation necessary to meet the state's forensic analysis demands.

The lab provides forensic analysis to all local, state, and federal law enforcement agencies in Alaska in the areas of latent fingerprints, firearms, trace evidence, and other criminalistics services, blood and breath alcohol analysis, drug analysis, and DNA analysis. Additionally, the crime lab provides crime scene response and courtroom testimony.

The advent of DNA analysis and its use in solving crimes has resulted in establishment of an entire new section, including personnel, instrumentation, and evidence analysis, whose space has to be fit into a facility that was already crowded at best. With new laws requiring large classes of convicted criminals to provide DNA samples, the expansion of interconnected DNA databases nationwide, and significant improvements in DNA technologies, this section will only continue to grow in both importance to the law enforcement community and in its physical space requirements.

Bringing this section into the lab has already forced other sections of the lab into spaces such as the garage and maintenance areas that were previously available for processing large items of evidence such as vehicles and for dealing with large quantities of evidence such as from a major crime scene.

All sections of the lab are experiencing ever increasing backlogs of requests for forensic exams. This is due in part to agencies increasing the number of police personnel and in part to the success of new technologies such as DNA and electronic fingerprint processing. Both increase the demands on the lab.

Crime Lab Replacement

FY2009 Request: $100,000,000
Reference No: 41600

In simple terms, we have outgrown the current facility. The existing space is 18,000 square feet and houses 42 full time employees. The building is at the limits of its ability to house staff and equipment. Without more space, the capacity of the laboratory to perform analyses and meet their desired end result of expanding their forensic databases, such as the Combined DNA Index System (CODIS) database, is limited.

The department has begun site selection and preliminary design work, using funding from a FY2007 capital appropriation. A site within the Municipality of Anchorage has been identified and the department is working with the Municipality to acquire a long-term lease.

HOUSE BILL NO. 313

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-FIFTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

Introduced: 1/16/08
Referred: State Affairs, Finance

A BILL

FOR AN ACT ENTITLED

"An Act providing for and relating to the issuance of general obligation bonds for the purpose of paying the cost of a scientific crime detection laboratory; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

GENERAL OBLIGATION BONDS. For the purpose of paying the cost of design and construction of a scientific crime detection laboratory, general obligation bonds of the state in the principal amount of not more than $100,000,000, if ratified by a majority of the qualified voters of the state who vote on the question, shall be issued and sold. The full faith, credit, and resources of the state are pledged to the payment of the principal of and interest and redemption premium, if any, on the bonds. The bonds shall be issued under the provisions of AS 37.15 as those provisions read at the time of issuance.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

SCIENTIFIC CRIME DETECTION LABORATORY PROJECT FUND. If the issuance of the bonds is ratified by a majority of the qualified voters of the state who vote on the question, a special fund of the state to be known as the "scientific crime detection laboratory project fund" shall be established, to which shall be credited the proceeds of the sale of the bonds described in sec. 1 of this Act except for the accrued interest and premiums.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

DEPARTMENT OF PUBLIC SAFETY. The amount of $100,000,000 of general obligation bond proceeds deposited to the scientific crime detection laboratory project fund and up to $6,000,000 in anticipated investment earnings in the scientific crime detection laboratory project fund is appropriated to the Department of Public Safety to be allocated to the design and construction of a scientific crime detection laboratory in Anchorage, Alaska.

* **Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

STATE BOND COMMITTEE. If the issuance of the bonds is ratified by a majority of the qualified voters of the state who vote on the question, the amount of $500,000 or as much of that amount as is found necessary is appropriated from the general fund of the state to the state bond committee to carry out the provisions of this Act and to pay expenses incident to the sale and issuance of the bonds authorized in this Act. The amounts expended from the appropriation authorized by this section shall be reimbursed to the general fund from the proceeds of the sale of the bonds authorized by this Act.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ADVANCE PLANNING. The amount withdrawn from the public facility planning fund (AS 35.10.135) for the purpose of advance planning for the capital improvements financed under this Act shall be reimbursed to the fund from the proceeds of the sale of bonds authorized by this Act.

* **Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LAPSE; REDEMPTION; REIMBURSEMENT. The unexpended and unobligated balance of the appropriation made in sec. 3 of this Act lapses under AS 37.25.020 and is appropriated to the state bond committee to redeem bonds sold under this Act. The amounts expended from the general fund to pay the principal, interest, and redemption premium on bonds issued under this Act shall be reimbursed to the general fund from the appropriation made under this section to the extent that the money is not needed to redeem the bonds.

* **Sec. 7.** The uncodified law of the State of Alaska is amended by adding a new section to read:

BALLOT QUESTION. The question whether the bonds authorized in this Act are to be issued shall be submitted to the qualified voters of the state at the next general election and shall read substantially as follows:

PROPOSITION

State General Obligation Scientific Crime Detection Laboratory Bonds $100,000,000

Shall the State of Alaska issue its general obligation bonds in the principal amount of not more than $100,000,000 for the purpose of paying the cost of design and construction of a scientific crime detection laboratory?

Bonds	Yes [ ]
Bonds	No [ ]

* **Sec. 8.** This Act takes effect immediately under AS 01.10.070(c).

State of Alaska
Department of
Public Safety

Sarah Palin, Governor
Walt Monegan, Commissioner

February 12, 2008

The Honorable Kevin Meyer, Co-Chair
House Finance Committee
State Capitol Building, Room 515
Juneau, Alaska 99801-1182

Dear Representative Meyer:

Following is the response to your request for information concerning costs associated with construction of the new Crime Laboratory in Anchorage.

Some of these figures are estimates of actual costs that may be different. The costs were determined by using other existing labs. These comparison labs are the Public Health Lab/Medical Examiners in Anchorage and the Virology Lab in Fairbanks.

We estimate that operational costs for the 83,000 square foot building will be $1.3 million. This figure reflects cost of utilities, cleaning services, and IT costs. The current operating cost for the existing lab is $236,000. The actual cost will be significantly changed based on the configuration of the final design.

The following is a breakdown provided by Department of Transportation and Public Facilities Engineer Matt Tanaka of the construction costs for the building as you requested. Again, the figures are estimates. The final determination will be based on the final design.

"Public Safety through Public Service"

PROJECT BUDGET

Design		
A/E Design		$7,319,707
Design Management, Administration		$492,740
CM/GC Contractor Pre-Construction Services		$329,820
Building Permit		$749,084
	Subtotal:	$8,891,000
Construction		
Construction Contract		$85,214,999
Wetlands Mitigation		$600,000
Construction Management, A/E Inspection,Testing, Startup		$6,880,679
Laboratory Equipment		$4,429,860
Artwork		$851,200
Laboratory Staff and Office Move		$80,000
Project Contingency		$3,327,095
Land Lease		$0
Cost of Bond Issuance		$525,580
	Subtotal:	$101,909,414
	Project Total:	$110,800,000
	Less Prior Appropriation:	($4,800,000)
	FUNDING REQUEST:	**$106,000,000**

I hope that this is the information that you requested. If I may be of further assistance, please do not hesitate to have one of your staff or yourself contact me directly.

Sincerely,

John D. Glass
Deputy Commissioner

Alaska Department of Public Safety
New Alaska Scientific Crime Detection Laboratory

March 12, 2009
Prepared by Neeser Construction Inc.

Overview- What are the Facts; What do They Mean

The purpose of this report, and attached compilation of detailed facts and figures is to;

- Illustrate the actual versus assumed comparable costs of a Crime Lab built in Bismarck North Dakota in 2007, to the new Alaska DPS Crime Lab to be built in Anchorage, AK in 2010/2011
- Describe why the North Dakota and Alaska projects are dissimilar and therefore not suited for a size/price comparison
- Explain why the Alaska lab is designed to be over 84,000 square feet in size, and the process undertaken to determine the appropriate size
- Substantiate the cost of the new Alaska DPS Crime Lab

This overview will respond to the above stated purposes in an abridged "snapshot" format so that the reader can get a complete and easy to understand presentation of the facts that can be quickly digested. Much of the volume behind this overview is detailed information supporting the statements made in this overview, and can be referenced at the readers discretion. There are a few Tabbed sections that are short and easy to read, and provide very important information that goes a necessary step beyond "snapshot". **We respectfully ask that you take the time to read through:**

- **Tab A; direct responses to questions from the Governors staff**
- **Tab B; a comprehensive comparison of the ND and AK projects.**
- **Tab D-d1; briefly explains the Space Needs Analysis method and basis.**

Quick Facts Check

- Forcible Rape; AK ranks 1st in the nation, ND is 26th
- Murder; AK ranks 13th in the nation, ND is 43rd
- Violent Crime; AK ranks 9th in the nation, ND is 49th
- Property Crimes; AK ranks 24th in the nation, ND is 49th

- The scope of the work in the ND construction contract budget is not equal to the scope of work in the AK construction contract budget
- The AK budget is a turnkey budget; the ND budget is for construction only
- Only 56% of the ND facility is constructed with typical density of spaces; 44% is only finished at the shell walls, with no interior partitioning
- The ND lab out sources 6 space and staff intensive forensic procedures that will be done in house in the AK lab

- The AK lab is comparable in size and SF per staff ratio to similar labs in: WA, IN, CA, VA, NY
- ND population will decline by 1.9% while AK population increases by 19.25% btw 2009 and 2020; crime rate mirrors population fluctuation; the AK lab will accommodate the projected growth
- Attempting to reduce facility size through re-design would have to begin with yet another (3rd) Space Needs Analysis, and if warranted, redesign, re-estimating along with another extended period of pre-construction reconciliation work; all of

which would be a duplication of good money already well spent. Millions of dollars and a lost construction season later, the outcome would almost assuredly result in a validation of the project sized as it is now designed

- It will cost as much to redesign and build the lab to a smaller size therefore it would be fiscally irresponsible to do so

Comparable Cost of the North Dakota and Alaska Crime Labs

The analysis in the table below is based on an "apples to apples" comparison considering only construction contract costs. It is presented this way since the cost information provided to us for the North Dakota project was limited to construction only, and was not as complete in the scope of work as the Alaska project.

Construction Costs Comparison ACL 2010 vs NDCL 2007	Multiplier	ND Adjusted	ACL Adjusted
PUBLISHED BASE BUDGET PER SF		$254	$888
Only 56% of the ND lab was built out; 44% had very little tenant improvements adjust for improved SF ($254+$72)		$326	
Escalation for 2007 to 2010 Construction ($326 x 1.36%) ***A**	1.36	$443	
RS Means Regional Cost Variation AK vs ND ($443 x 1.56%) ***B**	1.56	$692	
Contractors Contingency / Escalation ($692 x 1.07%) + $48 ***D**	1.07	$788	
Square Foot Price after Regional Adjustments		$788	
Additions to Bismarck site to bring to Alaska Standards:			
Extensive site development/wetlands mitigation		$48	
Primary Utilities Services to Site		$20	
Structural Upgrades to meet Zone 4 Seismic ***C**		$22	
		$876	$888
***A** Based on a recent design of a Crime Lab in N Dakota			
***B** Based on RS Means Building Const. Data 2009			
***C** Bismarck N.D. is in the minimum Seismic Zone			
***D** Bismarck N.D. was based on completed Construction costs			
Pre-construction Services , design, FFE , admin, etc (as noted elsewhere in this document)			$398
Total Budget			$1,288

The North Dakota and Alaska facilities/budgets are dissimilar and therefore not suited for a size/price comparison

Comparison of Services Covered in the Alaska Construction Budget versus the Services Covered in the North Dakota Construction Budget

Costs Covered within Published Budgets	Alaska Included?	North Dakota Included?
Design		
A/E Design	Yes	No
Design management and Administration (DOT)	Yes	No
CM/CG Contractor Pre-Construction Services	Yes	No
Building Permit	Yes	No
Construction		
Construction Contract	Yes	Yes
Wetlands Mitigation	Yes	No
Construction Management (DOT)	Yes	No
Special Inspections	Yes	No
Testing	Yes	No
Facility Start Up	Yes	No
Furniture, Fixtures, Equipment (Group II)	Yes	No
Laboratory Equipment (Group II)	Yes	No
Record Drawings	Yes	No
Artwork	Yes	No
Laboratory Staff and Office Move to New Lab	Yes	No
Legal Fees	Yes	No
Cost of Bond Issuance	Yes	No
DOT/PF Overhead	Yes	No

The $4.8mil cost for the North Dakota lab covers only the value of the construction contract. The 17 other services/tasks that are included in the Alaska budget are not accounted for in the North Dakota budget provided. However, almost all of those other services/tasks would have been necessary to achieve a completed, functional facility in North Dakota. **The costs for these services would have to be added to the (adjusted) North Dakota construction cost in order to reasonably compare the total North Dakota budget to the total Alaska budget.**

Comparison of North Dakota and Alaska: Crime Statistics, Population Growth Projections, and Staffing Comparisons

CRIME STATISTICS, NORTH DAKOTA AND ALASKA *(From the US Dept. of Justice, FBI, Criminal Justice Information Services Division, Crime Statistics for 2007, Universal Crime Reporting Statistics):*	
North Dakota	**Alaska**
State population: 639,715	State Population: 683,478
Violent crimes: 911	Violent crimes: 4,519
State ranking, violent crimes: 49	State ranking, violent crimes: 9
Violent crime rate per 100K inhabitants: 142.4	Violent crime rate per 100K inhabitants: 661.2
Murder rate per 100K inhabitants: 1.9	Murder rate per 100K inhabitants: 6.4
Forcible rapes per 100K inhabitants: 32.4	Forcible rapes per 100K inhabitants: 77.4
Aggravated assault per 100K inhabitants: 97.2	Aggravated assault per 100K inhabitants: 492.0
Robberies per 100K inhabitants: 10.9	Robberies per 100K inhabitants: 85.3
Property crime rate per 100K inhabitants: 1,889.6	Property crime rate per 100K inhabitants: 3,379.5
Burglary rate per 100K inhabitants: 338.3	Burglary rate per 100K inhabitants: 538.7
Larceny-theft rate per 100K inhabitants: 1,408.4	Larceny-theft rate per 100K inhabitants: 2,487.0
Motor vehicle theft per 100K inhabitants: 142.9	Motor vehicle theft per 100K inhabitants: 353.8
Note: All of the violent crimes in the above list (bold font), as stated in the Blood Alcohol section of this document, require greater forensic lab space, officer and lab scientist training, staffing requirements, and specimen storage space than non-violent crimes.	

STATE POPULATION GROWTH PROJECTIONS	
North Dakota	**Alaska**
Median population growth rate from 2009 to 2020: negative 1.9%. According to the North Dakota State Data Center at North Dakota State University (a branch of the US Census Bureau), North Dakota's " At 642,200 in 2000, North Dakota has shown a 5.7 percent decrease in population since its peak in 1930 at 680,845." The US Census Bureau projects a continuation of this trend, with a population decrease of 30, 057 by 2020.	Median population growth rate from 2009 through 2020: 19.25% (without gas pipeline; higher with pipeline). According to "Alaska Population Projections: 2007-2030", Alaska Department of Labor and Workforce Development, Research and Analysis Section, population growth projections for the beginning of 2011 (move-in date for new lab) through the end of 2020 show an increase of 1.7% - 1.75% per year, using the high range values.

STAFFING COMPARISONS	
North Dakota Lab	**Alaska Lab**
Current staff, according to an organization chart provided by Hope Olsen, Director of the ND lab: Total staff = 11, including the Lab Director. This represents 20 staff positions. 6 staff members are cross-trained to fill more than one position within the 5 forensic areas of this lab (firearms, DNA, arson, trace and drug chemistry). 5 staff members work only one function within the DNA section, and of these 5, 2 are listed as "temporary". The staff of the ND lab does not process these additional forensics, which will be fully processed in the Alaska lab: 1. Full latent print processing (ND only does partial) 2. Toxicology 3. Question Documents 4. Crime scene 5. Bio screening 6. Controlled substances	**Projected staff at move-in, 2011**: 45 (8 new + 37 current) needed to match projected workload to achieve 30-day forensics turn-around in accordance with current/future forensic and government standards and practices. **Projected staff through 2020:** 60 (15 new + 45 current) to meet projected population growth factors, technological advancements, crime trends, future/unmet needs, and further development of new lab sections (toxicology and QD/DE). These new sections will require 5 of the 15 new staff. High-growth lab sections are anticipated to be DNA, controlled substances and latent prints, adding the other 10 new staff at a rate of 1 new staff/year for 10 years. This equates to a 2%/year growth rate, consistent with AK statewide population growth. If the gas pipeline project becomes a reality, population and crime is projected to increase well beyond these figures.

The above section has a lot of information to absorb. There is additional interesting and important information on these topics under TAB B.

The short story bottom line regarding these crime statistics is;

1. Based upon FBI statistics the rate of crime in Alaska is much higher than the crime rate in North Dakota by no less than 1.6 times greater to more than 7.8 times greater, depending on the type of crime. The largest disparities are between the more serious and violent crimes.
2. Between now and 2020 the population of North Dakota is projected to decline by 1.9% while the population of Alaska is projected to grow by 19.25%. This correlates directly to the space and staffing requirement projections.
3. The North Dakota facility/staff does not process all the forensics that the Alaska facility will process. North Dakota outsources six of the more; space, staff, and technically intensive processes that will be done in-house at the Alaska facility.

Why is the Alaska lab designed to be 84,379 square feet in size?

1. In 2005 a study to expand the existing Crime lab was done. Subsequently, a competition for design services for a new lab was held. The Livingston Slone Inc (LSI) team won the competition. The contract requirements included having a forensic crime lab specialists on the design team, and to complete a space needs analysis. McClaren, Wilson & Lawrie (MW&L) fills that position on the LSI team. MW&L is recognized as the premier crime lab specialist firm in the U.S., having designed 90 different crime labs nationwide, and overseeing construction of 45 different crime labs nationwide.

2. A modern forensic lab must meet the test of time. In 2007 MW&L did an extensive Space Needs Assessment, as required by the design contract. The MWL program identifies every room, the space components within each room, the numbers of staff, future lab sections and staff, etc.

3. The resultant design square footage proves out against similar labs in Washington, Indiana, California, Virginia, and New York (to name a few). See table below:

Building Area to Staff Ratio Comparison			
Lab Type & Location	Gross Building Area (GSF)	Number of Staff (FTE)	GFS/FTE
[redacted]			
Average for WA, IN, CA, VA, NY	**70,213**	**62**	**1,169**

Both the Gross Building Area and the Gross Building Area to Number of Staff Ratio are more efficient than the referenced sample projects from other states.

The space needs for the Alaska crime lab have been rigorously analyzed and reported on by the most qualified crime lab program and design professionals to be found in the U.S. The depth of the study cannot easily be conveyed in a snapshot. Please see TAB D.d1 for a summary of the study, and d2 through d5 for a thorough review of how the space needs were arrived at, and the mathematical results that define the facility size.

Why does the new Alaska Crime Lab Cost So Much?

It only appears to be overly costly when compared to projects out of state that have very little in common with the Alaska Crime Lab. The cost question was asked using a facility in North Dakota as a comparison. Not with-standing the regional cost differences and escalation in costs from 2007 to 2010, the SF figure for ND represented only the construction contract value. The AK budget is all inclusive; from the 2005 and 2007 space needs through the cost of relocating the staff. Apples and Oranges is a closer comparison than this.

When compared to other complex labs built in Alaska in recent years, the cost is dead-on:

ELEMENT	CRIME LAB**	CRIME LAB***	VIROLOGY LAB	ENVIRONMENTAL HEALTH LAB
Admin as % of Lab Space	21%	16%	32%	27%
Project Cost per Square Feet	$1,258		$1,136	$949
Project Cost per Square Feet*	$1,050			
	Note: Admin = lab offices and admin areas			
	**includes break room, classroom			
	***not including break room, classroom			
	*Less Crime Lab Features, Sitework @ $11M			

Conclusions

- Comparing the North Dakota project to the Alaska project is no more valid than comparing apples to Oldsmobile's
- The Alaska Crime Lab is appropriately sized based on an exhaustive space needs study performed by the most knowledgeable forensic crime lab designer in the U.S. and is comparable to labs in WA, ID, CA, VA, and NY
- The cost per square foot is unquestionably in line with other labs recently constructed in Alaska

This facility should be constructed as designed without further delay

Alaska Department of Public Safety
New Alaska Scientific Crime Detection Laboratory

March 12, 2009

Prepared by Voeror Construction Inc.

March 02, 2009 Questions/concerns from Mr. Randy Ruaro; and responses thereto:

Concern Expressed: *"The design costs for the Alaska lab so far are substantially close to what taxpayers in North Dakota paid for an entirely new laboratory facility ($5.1 million / 19,000 square feet)."*

5.1M for 19,000 sf equates to $268/sf. For the Alaska lab we are spending $7M just for the site preparation work (excavation of peat, import of gravel, utilities). This alone equates to $83/sf and helps to explain why one cannot randomly compare cost statistics between projects in different areas.

Furthermore, another reason why such comparisons are invalid is that a close inspection of the published facts about Alaska and North Dakota shows the two states share little in common beyond similar population size and winter weather. Regarding design costs, case composition/numbers and lab size comparison of North Dakota to Alaska we offer the following.

The major disparity in the type of crime and the crime rates between the two states shows why the labs are not directly comparable. The data does show, however, that Alaska's crime problem is orders of magnitude more severe than North Dakota's, giving rise to significantly more caseload, and the need for a much larger lab.

A comparison of the two states based on crimes per 100,000 persons reveals the following stark differences. (Data taken from the FBI 2007 crime statistics for the fifty United States, District of Colombia and Puerto Rico - see the website at http://www.fbi.gov/ucr/cius2007/data/table_05.html).

Forcible Rape; AK ranks 1st in the nation, ND is 26th.
Murder; AK ranks 13th and ND is 43rd.
Violent Crime; AK ranks 9th and ND is 49th.
Property Crimes; AK ranks 24th while ND is 49th.

Over all Alaska reported 27,617 crimes in 2007 while ND reported 12,999 crimes in 2007. Alaska's violent crime rate is more than 4.6 times that of ND. There is no category where Alaska is less than 1.6 times and it goes as high as 7.8 times ND.

The statistics above show that public safety issues and crime data comparisons between the two states is the basis for determining the size, cost and staffing for each state's respective crime lab needs.

The costs of any services including design services are based on the scope of work required, level of effort needed to accomplish a given task and the local prevailing labor costs. The state negotiated an equitable contract with the design team that is fair to both parties and provides the required services for a reasonable price.

According to the State of ND published wage rate schedules labor cost for government projects are at best half of Alaska published rates and less in some cases. (For instance, the ND published rate for a carpenter is $15.54/hour while Anchorage is $33.30 W/O benefits.)

An interesting observation is that the new ND lab has a current staff of twelve and is 19,000 SF. When built in 1985 the AK crime lab had a staff of seven and was 18,000 SF.

Concern expressed: *"And the North Dakota lab processes twice as much (or more work) as the Alaska lab."*

Regarding the assertion that the ND lab produces twice the work of Alaska we offer the following information.

Specific 2008 ND-AK caseload comparison (these statistics were provided by the North Dakota Crime Lab's current Director, Hope Olsen, and the AK Crime Lab Manager, Orin Dym):

North Dakota Lab	Alaska Lab
Latent prints: ND doesn't engage in full latent print identification, partially processing 36 latent prints (developing only).	**Latent prints**: AK fully analyzed 1,000 latent prints, including developing, comparison, and AFIS searches.
Firearm/toolmark: Received 41 cases; 5 were from violent crimes	**Firearm/toolmark**: Received 130 cases, nearly all from violent crimes
DNA: Received 200 cases for DNA analysis	**DNA**: Received 450 cases for DNA analysis
CODIS: Received 4,200 database samples	**CODIS**: Received 10,000 database samples
Breath Alcohol: Performed 3,500 breath tests	**Breath Alcohol**: Performed 6,000 breath tests
Controlled Substances: Received 2,000 cases; 75% were Marijuana only (requiring less analysis time), while 500 were solid dosage drug cases.	**Controlled Substances**: Received 1,200 cases; 15% were Marijuana only, while 1,000 were solid dosage drug cases (requiring more analysis time).
Blood Alcohol: Received 3,800 cases.* *NOTE: The ND lab receives many more minor offense crimes (drugs/alcohol) which are processed via simpler and faster highly automated analysis than violent crimes, thereby requiring less lab staff and lab space.	**Blood Alcohol**: Received 600 cases.** **NOTE: The AK lab processes less BA cases but more violent crime cases. Violent crime case analysis (DNA, firearms, latent prints) are more labor and space intensive. The new AK lab can process 3,000 additional BA cases per year w/o additional space due to the highly automated analysis process.

As you can see above, caseload and case type are not directly comparable between the two labs. Alaska's greater number of more complex cases means that far more staff and lab space are needed than in ND. Given the variation in complexity it is impossible to draw a simple, direct correlation between the numbers of cases worked per staff by each lab.

Statement: *"We will continue to review and analyze the questions surrounding the sizing and costs of the proposed Alaska lab until we have reasonable responses."*

The North Dakota crime lab is not a full service lab: it contains only four of the nine forensic scientific sections of a full service lab, plus a breath alcohol lab. Upon a review of the floor plan for the ND lab, many lab areas are very compressed, done to meet a restricted construction budget. In terms of the planning window for the ND lab, it was designed for needs occurring only a few years beyond the 2002 -2003 programming effort, compared to the year 2020 for the Alaska lab. There is nearly two decades of time between the planning windows of these two projects, which translates to a **major** size and cost differential between the two, further explaining the small size of the ND lab. The ND lab, if programmed and designed today, at the same time as the Alaska lab, would be much larger and designed much differently.

In terms of planning and design, one sees that the ND plan does not contain a standalone latent prints/AFIS section, standalone trace evidence section, or standalone CODIS DNA lab section, but rather these functions are merged within other sections. The ND lab does not have a Bioscreening section, Questioned Documents / Digital Evidence section or significant Crime Scene support facilities beyond a small vehicle exam bay. (The latter being the same size as Alaska's current lab.) Also, evidence storage has been reduced to a single relatively small room, remote from the central evidence receiving area. The ND lab plan does not have a firing range or any kind of enclosed mechanical space for rooftop equipment. Another example of the compression we see in the ND lab is that there is a distinct lack of separation between public access to the classroom and evidence flow from the evidence receiving room, presenting a serious security concern, which may render its data subject to court challenge. To avoid these types of planning issues requires substantially *more space*. The trends in design of forensic labs nationwide is to have separate and distinct lab sections for each lab section, to avoid potential cross contamination issues between lab disciplines and afford greater quality control, a more specialized and controlled lab environment. Another trend is for forensic labs to have in-process evidence storage rooms in each section plus a large central evidence storage room to accommodate governmental mandates for longer and longer retention times for evidence, particularly violent crime evidence (a crime type nearly five times more prevalent in Alaska). Forensic labs are undergoing greater and greater scrutiny by defense attorneys and this will lead to increased demands on the nation's crime labs in the future. Crime Labs must be designed to produce court defensible data when subjected to higher court scrutiny. This all translates to more space to assure separation of work areas and scientific reliability.

By comparison, the new Alaska crime lab is a full service lab, housing eleven forensic scientific sections in distinct standalone laboratory sections (DNA/Forensic Biology, CODIS DNA, Bioscreening, Trace Evidence, Firearms / Toolmarks, Controlled Substances, Latent Prints/AFIS/impressions / Toxicology, Breath Alcohol, Crime Scene / Vehicle Exam, Questioned Documents / Digital Evidence). Each lab section has its own in-process evidence storage rooms and there is a central evidence storage room within the evidence receiving section designed for long term retention of evidence. The Alaska lab is designed with a firing range and rooftop enclosed mechanical rooms to protect sensitive mechanical equipment. The Alaska lab has been designed to design standards and forensic science standards, which are much different from those that existed when the ND lab was programmed in the early 2000's. Bottom line, it is more economic for Alaska to have a full service lab that is designed to stand the test of time and be able to meet future growth needs of this dynamic State, than to scrimp now, only to have a new lab that begins in obsolescence on opening day. The State of Alaska is unique, being a World transportation hub and energy hub. This places a whole different set of crime and socioeconomic parameters on Alaska as compared to North Dakota. Additionally, the Alaska

crime lab is more remote from other supporting (outsourced) labs, our geographic service area is by far the largest in America and Alaska's case load and case profiles demand full services.

The size of any crime lab is determined by the types of forensic science sections to be accommodated (DNA, Firearms, etc.) and staff size for each section. Consideration for potential growth, new processes and advancement in detection techniques needs to be accommodated as well.

The ND Lab was sized based on a six year old needs assessment/space program to accommodate current needs only. In a state with a negative population growth factor no consideration was made for future expansion or added services. In fact, at the beginning of the construction the firing range was deleted by change order thus reducing the capability of the lab firearms section.

The new Alaska Crime Lab was planned to accommodate future growth to the year 2020-a mere eight years after occupancy, with a provision for it to serve with space compression through 2030. This planning assumption is based on historical information, caseload projections, and median population growth according to official state demographic data. Throughout the design and planning stages of the project the staffing numbers were reexamined, discussed and revised by the Lab Manager and the design team to insure that we had not oversized or undersized the individual forensic sections. The staffing growth plan is described in detail in the attached document "ACL Planning for Staff Growth" which is an expanded version of Part 1 of the project's Space Needs Assessment submittal.

When planning a major new state facility it is fiscally prudent and responsible to plan to accommodate some growth and allow for some future compression. To that end the new Alaska Crime Lab is designed to accommodate additional staff beyond the planned 60 up to 65 staff without compression. Note that five lab workstations are used from the date of move-in by cross trained personnel until full time positions are necessitated by growth in caseloads. This takes the building beyond the 2020 planning window, through 2030 without further capital expenditure. Further, the building is designed to easily accommodate expanded services through compression without major remodeling. Specific lab sections have been designed so that two workstations can be converted to three workstations by removing two movable tables. Surface utility raceways allow for additional power and data connection to be added without any major disruption. This compression ability will allow the facility to grow and change, functioning efficiently past the 2020 without major expansion or construction.

March 12, 2009 Questions from Mr. Randy Ruaro; and responses thereto:

1 (a) How did we arrive at a determination that we need 86,000 square feet? (b) To answer this question I think we need the workload data and assumptions that DPS provided to Mr. Sloane and (c) a breakdown of the 86,000 square feet by the type of work and other areas included in the design. (d) For instance, if the design allocates 5,000 square feet to room to park the crime lab van that has been outside for the past 20 years we need to know why this is required and why it has to be 5,000 square feet. (e) If the design allocates 5,000 square feet of space to Orin Dym for a new office, we need to know why this is required/ (f) Couldn't the 18,000 feet being vacated as the current lab be used for administrative space or at least part of the administrative space) and why does it have to be 5,000 square feet. (g) If 20,000 square feet is allocated for room to perform latent finger print work, why does it have to be this big? How many cases per analyst does this assume? How does this compare to other labs? (h) How do other labs manage to perform 4 times more latent finger print work in an area 1/4th size allocated in the current design with ½ as many analysts/

Response:

1(a)&(c): Please note that the new lab is a 84,379 SF building with a roof top vertical equipment enclosure of 10,000 SF. Please see the facility space needs assessment dated October 2007 (Tab D) for a list of rooms and net area planned for each. Also refer to the Space needs assessment supplement for a more detailed discussion of the staffing for each lab section.

1 (b): Please refer to the ACL Space Needs Supplement for a complete discussion of the basis for staffing projections.

1(d): This area is actually 500 SF not 5000 SF and serves as a second vehicle inspection bay. The existing AK crime lab originally had two inspection bays until one was turned into the maintenance office and breathalyzer equipment fill station.

1(e): The Lab Director Office is 180 SF not 5000 SF. During the early design phase it was reduced from 250 SF at Orin's request. He felt he did not need a conference area in his office and he would utilize the admin conference room. Please see the facility space needs assessment dated October 2007 **(TAB D)** for a list of rooms and net area planned for each.

1(f): See Mr. Ruaro's question No. 3 below for answers to these two similar questions.

1(g): The current design has 4,250 SF for latent prints, AFIS, footwear impressions and tire impressions. The latent section was programmed for eight criminalists and two supervisors. Refer to the Final Space Program revised January 11, 2008, which shows 4,586 SF was programmed for the lab space.

1(h): This concern cannot be evaluated with the information furnished. What other lab does this refer too? Do they do impression and comparison work?

The Alaska Lab has been managed, designed by the same team as three recent State Labs: Public Health Lab, DEC Food Safety Lab and Virology Lab. The contractor for the new crime lab built the Public Health Lab. This team has unparallel Alaska Lab experience.

2 (a) How did we arrive at a square foot cost of $1,250 a square foot? (b) the next most expensive lab in the nation is Orange County at $500 a square foot.

Response:

2(a): It should be noted that the $1,250 figure is for the total cost of the facility from conceptual design through supply and placement of furnishings and equipment. **Actual construction cost, including a construction contingency of $2,697,271, and a materials and labor escalation budget of $2,103,871 is $74,941,642, or $871 per SF. Cost per SF without the contingencies is $813 per SF. Of this amount we are spending $83/SF ($7M) on site preparation work alone. So effectively the Alaska lab's construction cost is $730/sf.**

It should also be noted that the referenced $1,250 per square foot cost is quite close to the cost projection stated in the DPS Statewide Services Crime Lab Expansion Study; December 2005 (TAB E). The 2005 study estimated $1,210/SF was based on a 2008 construction start. The current all inclusive budget is based on a 2010 (vertical) construction start. The cost difference represents less than 2% per year. Our budget was developed not from the 2005 study but from our findings in the space needs assessment (TAB D) and the actual design.

To date we have employed three estimators: two from separate estimating companies, and one from the construction contractor. All three are in agreement. Our construction cost was determined using a professional construction cost estimator that specializes in Alaska projects; and independent estimates by the actual construction contractors. At three stages in the project's development we have had each of these estimators develop discrete, independent parallel construction cost estimates. At each of these estimate phases the design and construction team spent hundreds of man-hours reviewing the detail of the estimates. Then over a three day period at each stage with the full design team, construction team and DOT&PF representatives reconciled the material quantities, labor hours and rates and all other incidental costs between these two estimates. This exhaustive effort insured that the state was getting exactly what was designed for a price that was reasonable and appropriate. The process also served to insure that the project was on or under the projected budget.

2(b): Regarding the lab in Orange County; First, without a complete description of what costs were included (were design, permitting, project management by the State, and FF&E included?). Second, what services does the Orange County facility provide; is it full service as is the proposed Alaska facility? Third; when was it constructed, has the cost been prorated/escalated in time to mirror the construction schedule anticipated for the Alaska facility? Was a Means regional cost differential applied? In summary, the cost to build facilities in Alaska are real costs and are not fabricated. As such, there are thousands of buildings erected worldwide that, if investigated, will validate Alaska's construction costs because the Alaska Lab's costs are real. Therefore efforts to make judgments based upon comparisons with other buildings elsewhere are not of relevance or value.

3) Could the current design be reduced from to 68,000 (almost $20 million in cost per square foot) if the 18,000 square feet at the current lab continued to be used for latent finger prints and other functions?

Response:

1(f) above and 3): Re-design to a 68,000 sf size will not result in any savings and it will delay the lab's completion by 3 years. This is because escalation, redesign costs, and delays will offset any savings in construction of a smaller building. Aside from this fact, with regard to the dollar figures listed above in question 3, do not take into account the additional cost of the remodel construction work and other project costs so the $20mil "savings" value noted above is not factually supportable. And the $20mil figure as presented includes static costs that are not impacted by building size. If it were practical to drop 18,000SF from the project (which it is not) the only costs that would be impacted are construction costs. Irrespective of the fact that the $20mil figure does not include remodel costs for the existing lab, the differential is overstated by a minimum of $241 per SF.

Please note that remodeling of the existing building for reuse by the crime lab was evaluated by the current design team with DPS, DOT&PF and determined to be undesirable and not cost effective for several reasons. Note also that the 2005 study developed by a separate team of professional designers came to the same conclusion.

- The on-going forensic science activity cannot be stopped during a remodel so the new crime lab would have to be built and move-in completed prior to the start of work. Temporary work space would have to be rented or found in existing facilities for the services planned to be housed in the existing facility.
  - The costs of rental space and two moves plus the cost of remodel design and construction would be close to the cost of building new space in one building.
- Separating the Administration or other lab functions from the single building would create extra ordinary operating inefficiencies rendering this concept infeasible.
  - Would supervisors be in the lab or admin building?
  - Reception staff would be needed in each building.
  - Where would case files be housed?
  - Administrators would need to drive back and forth between the buildings several times a day to view operations.
  - If a lab section is separated you would need two evidence storage areas and additional staff to cover the satellite evidence operation?

The USKH study was commissioned specifically to investigate the feasibility of expanding the existing lab at the existing site. The state did not seek the services of a true expert in the field of forensic lab design for that effort, as it was merely a quick 4 week study of order of magnitude feasibility and it was not intended to be used for actual design. The architect that performed the study had designed research labs and police facilities but had designed only one crime lab.

When the study was underway it became evident that it was infeasible to expand the existing lab a temporary lab would need to be built first to enable the scientists to continue working during construction. Renovation of the old lab would likewise be expensive. The cost was astronomically high. So the consultant was asked to take a quick look at building a standalone

facility elsewhere. That option was determined to be the best course. However a full needs assessment study for a new lab was beyond the scope of the study. The study was used to justify the creation of a standalone lab project and to initiate funding requests to properly plan and design a new crime lab.

Further, the projections made by that quick study in 2005, by an inexperienced lab architect, that had little crime lab experience, were grossly under-projected. For instance, the study's 2020 staff projections were realized in 2007. **Our space needs today for the staff currently in place already exceeds what the study projected for 2020**. Obviously the space projections were incorrect.

Subsequently AK DOT/PF solicited the services of a laboratory architect, teamed with McClaren, Wilson & Lawrie, Inc (MW&L). MW&L is recognized by their peers, to be the premier crime lab architect in the country (90 crime labs designed, 45 built). In contrast, other crime lab architects around the country can claim to have designed a few crime labs, meaning that nobody comes close to having the same level of experience as the crime lab architect retained to plan and design the Alaska Lab.

Prepared by Neeser Construction Inc.

Cost Comparisons to Projects Outside of Alaska

To people that are not familiar with construction it may seem that a simple commodity comparison of costs for facilities outside of Alaska, that appear to provide the same services as similar facility in Alaska, would be a reliable way to assess the validity of a budget in Alaska (or vice versa). There are a number of reasons why this doesn't work; and it would be very unusual for a person outside of the industry to understand the various impacts that effect cost differentials without taking sufficient time to be well informed.

Here are some impact issues that have a huge effect on cost differentials that to the untrained person might seem insignificant. I will restrict this discussion to construction issues only;

The time at which a facility comes on line has no bearing on construction costs; the important factor is; when did construction start? Example: there was a request for comparative data on a state Crime Lab in Edmond Oklahoma. The questioner referred to it as being recently constructed which is true if you related it to the year completed/opening dates. This doesn't tell us a start date. It is safe to say that the Oklahoma project started no more recently than 2006; a 5 year start differential from the anticipated start of the ACL. Construction cost escalation of 5/6% per year, compounded yearly must be added to the Oklahoma start to normalize it and begin to make an accurate comparison.

Regional cost differentials are tracked, calculated, and published annually by RSMeans in the RSMeans Building Construction Cost Data Book. This is the **industry standard** for cost data research. Means has several uses, one being to be able to adjust for location using City Cost Indexes. The indexes are established against a national average (the average being 100) that has been determined through Means research. Here are the indexes published for Anchorage, AK and Oklahoma City, OK:

Anchorage	Labor: 131.4/100	Material: 114/100	Weighted Average: 124/100
OK City	Labor: 97.3/100	Material: 61.5/100	Weighted Average: 82/100
Differential	Labor: 1.35	Material: 1.85	Weighted Average: 1.51

When Oklahoma is adjusted by the 5 year spread in start dates, and then by the Means differential, Oklahoma City increases from $349 to $706.26 PSF, more than twice what the difference would appear to be to an untrained eye. Research indicates that the published OK City costs were "construction only". The Anchorage budget for "construction only", including the extraordinary sitework is $888 PSF. There are additional adjustments that should be made that will reduce the cost difference even further.

What the City Cost Index Does Not Indicate: As good as RSMeans is they recognize, and advise the user that, "The weighted average for each city is a total of the divisional components weighted to reflect typical usage, but it does not include the productivity variations between trades or cites. In addition, the CCI does not take into consideration factors such as the following: managerial efficiency, competitive conditions, automation*, restrictive union practices, unique local requirements, or regional variations due to specific building codes." **The highlighted issues are very important to consider, each one of them adds costs to work in Anchorage that cities like Oklahoma City do not contend with;** there is no avoiding winter work in Anchorage, weather dependent, productivity loss is between 25 and 40 percent in cold weather. Davis Bacon wages are established by union scale parity, this may not be restrictive but it

certainly escalates the cost of labor. Overtime work necessary to get a building closed in before winter, cost of tenting and heating (labor, materials, heating equipment, and heating fuel), cost of snow removal etc. 1. Anchorage is in the equivalent of a seismic zone 4, this equates to big costs; Oklahoma City is in the equivalent of a seismic zone 2, so there are no associated extra structural costs. 2. Anchorage is a subarctic region where minimum footing depths are 42" we are researching OK City but likely 24" depth. 3. Anchorage has a minimum snow load requirement of 50 pounds per SF; Oklahoma City has a snow load minimum of less than 10 pounds per SF. 4. Anchorage wind resistance requirement is 120# (45#), OK City wind resistance requirement is 95# (42#).

When you compound the escalation adjustment for construction start time lapse; Means regional adjustment, and the 4 highlighted special circumstances, the differential between Anchorage and Oklahoma City disappears, or more than likely begins to make our Anchorage project look more cost effective than the OK City project. There are more issues that add to the difference but this is not a 5 minute discussion. If someone could give 30 minutes of concentrated time to listen, it would make a big difference in their understanding of construction costs.

This narrative was begun to hopefully help the folks asking the questions to understand that they are asking questions that won't give them true comparisons; questions along the lines of; why does a 2x4 cost more in Alaska, why does a toilet cost more, a run of ductwork etc. These things mean nothing without understanding that these components don't define the differentials between Anchorage and any other place in the USA without applying the industry standard adjustments discussed above; as any competent estimator would.

*the first three considerations which CCI does not address were inconsequential to this discussion.

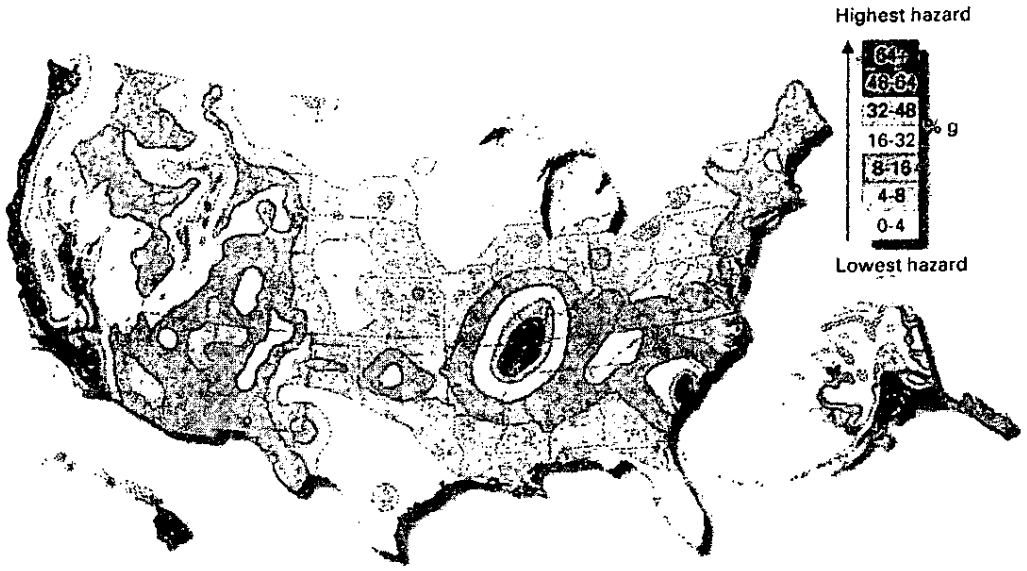
2008 United States National Seismic Hazard Maps

The U.S. Geological Survey's National Seismic Hazard Maps are the basis for seismic design provisions of building codes, insurance rate structures, earthquake loss studies, retrofit priorities, and land-use planning. Incorporating these hazard maps into designs of buildings, bridges, highways, and critical infrastructure allows these structures to withstand earthquake shaking without collapse. Properly engineered designs not only save lives, but also reduce disruption to critical activities following a damaging event. By estimating the likely shaking for a given area, the maps also help engineers avoid costs from over-design for unlikely levels of ground motion.



Colors on this map show the levels of horizontal shaking that have a 2-in-100 chance of being exceeded in a 50-year period. Shaking is expressed as a percentage of g (g is the acceleration of a falling object due to gravity).

The Update Process

The U.S. Geological Survey recently updated the National Seismic Hazard Maps by incorporating new seismic, geologic, and geodetic information on earthquake rates and associated ground shaking. These 2008 maps supersede versions released in 1996 and 2002. Updating the maps involved interactions with hundreds of scientists and engineers at regional and topical workshops. USGS also solicited advice from working groups, expert panels, State geological surveys, Federal agencies, and hazard experts from industry and academia. The Pacific Earthquake Engineering Research Center developed new crustal ground-motion models; the Working Group on California Earthquake Probabilities revised the California earthquake rate model; the Western States Seismic Policy Council submitted recommendations for the Intermountain West; and three expert panels were assembled to provide advice on best available science.

Changes to the Maps

The most significant changes to the 2008 maps fall into two categories, as follows:

1. Changes to earthquake source and occurrence rate models:
   - In California, the source model was updated to account for new scientific information on faults. For example, models for the southern San Andreas Fault System were modified to incorporate new geologic data. The source model was also modified to better match the historical rate of magnitude 6.5 to 7 earthquakes.
   - The Cascadia Subduction Zone lying offshore of northern California, Oregon, and Washington was modeled using a distribution of large earthquakes between magnitude 8 and 9. Additional weight was given to the possibility for a catastrophic magnitude 9 earthquake that ruptures, on average, every 500 years from northern California to Washington, compared to a model that allows for smaller ruptures.

U.S. Department of the Interior
U.S. Geological Survey

Printed on recycled paper

Fact Sheet 2008–3018
April 2008

- The Wasatch fault in Utah was modeled to include the possibility of rupture from magnitude 7.4 earthquakes on the fault.
- Fault steepness estimates were modified based on global observations of normal faults.
- Several new faults were included or revised in the Pacific Northwest, California, and the Intermountain West regions.
- The New Madrid Seismic Zone in the Central U.S. was revised to include updated fault geometry and earthquake information. In addition, the model was adjusted to include the possibility of several large earthquakes taking place within a few years or less, similar to the earthquake sequence of 1811–1812.
- Source models for the region near Charleston, S.C., have been modified to include offshore faults that are thought to be capable of generating earthquakes.
- A broader range of earthquake magnitudes was used for the Central and Eastern U.S.
- Earthquake catalogs and seismicity parameters were updated.

2. Changes to models of ground shaking (that show how ground motion decays with distance from an earthquake's source) for different parts of the U.S., based on new published studies:
   - New ground-motion prediction models developed by the Pacific Earthquake Engineering Research Center were adopted for crustal earthquakes beneath the Western U.S. These new models use shaking records from 173 global shallow crustal earthquakes to better constrain ground motion in western States.
   - Several new and updated ground-shaking models for earthquakes in the Central and Eastern U.S. were implemented in the maps. One of the new ground-shaking models accounts for the possibility that ground motion decays more rapidly from the earthquake source than was previously considered.
   - New ground-motion models were applied for earthquake sources along the Cascadia Subduction Zone.

Significance of Results

The new National Seismic Hazard Maps show, with some exceptions, similar or lower ground motion compared with the 2002 edition. For example, ground motion in the Central and Eastern U.S. has been generally lower by about 10–25 percent due to the modifications of the ground-motion models. Ground motion in the Western U.S. is as much as 30 percent lower for shaking caused by long-period (1-second) seismic waves, which affect taller multistory buildings, and ground motion is similar (within 10–20 percent) for shaking caused by short-period (0.2-second) waves, which affect structures of one or a few stories.

The new 2008 maps represent the best available science as determined by the USGS from an extensive information-gathering and review process. Changes will be made in future versions of the maps as new information on earthquake sources and resulting ground motion is gathered and processed.

Alaska Crime Lab Replacement Facility

Importance of commencing site work by March 10, 2009

The current FY2010 request for $94M assumes site work construction commencing before March 10, 2009. The project's site work must occur this winter while the site is frozen in order to economically excavate the peat moss. The cost of this early site work construction is currently funded. If the site work does not start before March 10, 2009 at the latest, the project will be impacted in the following ways:

Scenario: Full Funding Appropriated this Legislative Session (FY10)

FY10 CIP Amount: **$100.2M**
Start Construction: August 2, 2009
Move-in: June 2012 (delay of ½ year)

Comment – Original FY10 CIP request of $94M increased **by $6.2M** to accommodate higher costs from excavating in unfrozen wetlands, tenting and heating foundations in winter construction. Space needs to mitigate the backlog of crime evidence are not met for at least 3-1/2 years from now.

Scenario: Full Funding Appropriated next Legislative Session (FY11)

FY11 CIP Amount: **$105.4M**
Start Construction: August 2, 2010
Move-in: June 2013 (delay of 1-1/2 year)

Comment – Original FY10 CIP request of $94M increased by **$11.4M** to accommodate higher costs from excavating in unfrozen wetlands, tenting and heating foundations in winter construction, and one year of escalation. Space needs to mitigate the backlog of crime evidence are not met for at least 4-1/2 years from now.

Notes:
(1) Revenue assumptions are from the Spring 2004 Revenue Sources Book. FY04 is $31.13 per barrel and .985 million barrels per day. FY05 is $28.30 per barrel and .980 mbd.
(2) This includes increased revenue the executive branch expects to collect from increased fees and user costs that require no legislative action.
It also includes expected revenue generated from SB231, HB484 and SB1001 (tobacco bill passed during the special session).
(3) AHFC is providing $45 million in bond proceeds. ASLC is providing $75 million in bond proceeds as a return on invested capital.
(4) Corporate dividends include funds made available to the State by the boards of AHFC, AIDEA, and ASLC. Dividends retained by AHFC for debt service on state capital project bonds are subtracted.
(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.
(6) $354 million of FY04's inflation proofing of $524 was prefunded in FY03. The balance of $170.0 was funded with a supplemental but is being shown on this line.

Notes:

August 18, 2009

(1) The Spring 2009 oil forecast for FY09 is 0.689 mbd at $65.70 per barrel; the FY2010 forecast is 0.655 mbd at $58.29/bbl.

(2) Carryforward is money that was appropriated in a prior year that is made available for spending in FY09 via multiyear appropriations or reappropriations.

(3) Corporate dividends include funds made available to the State by the boards of AHFC, AIDEA, and ASLC. Dividends retained by AHFC for debt service on state capital project bonds are excluded from the stated amount. Net dividends for FY09 and FY2010, respectively, are AHFC-$59.7 million and $65.5, AIDEA-$23.8 million and $22.7 million, and ASLC-$4.1 million and $0.0 million.

(4) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided. Duplicated authorization also includes the expenditure of bond proceeds when debt service on bonds (which includes repayment of principal) will be reflected in future operating budgets.

(5) The amount required to fill an anticipated deficit in FY09 will be withdrawn from the Statutory Budget Reserve Account.

Guidelines for Repeals and Reappropriations

June 2009 (revised October 2009)

Issues:

1. When does a legislator or agency have "retention rights" to unexpended funds?
2. What is the best way to show reappropriation actions in bills and reports?
3. Which bills should contain reappropriations?

Reappropriating Operating Money for other Operating Purposes

Ordinarily, unspent operating appropriations lapse at the end of each fiscal year. The exception is multi-year appropriations, which offer a means to provide long-term money in cases where the need in a specific year for a specific purpose is unpredictable or when a project/purpose is long-term and there is a desire to ensure that funding is sufficient to complete a project. There are situations in which the legislature may wish to reappropriate operating money before it lapses.

Recommendations

1. Allow operating reappropriations as part of the *supplemental* process, but be careful to limit use of money to the current fiscal year. Advantages:
   - Reduces the net cost of supplemental bills.
   - Encourages agencies to save money in all programs in order to rescue programs that need additional funding.
2. Although intra-agency reappropriations are the focus, we pretty much have to accept that money may flow across all appropriation/agency lines.
3. The reappropriated amount should show in offsetting negative and positive transactions in the Supplemental column. Transactions may be numbers or language, but should state a specific amount.
4. Allow carry-forward when appropriate. Carry-forward is defined as money that is made available for the same purpose—not just the same program—in a subsequent fiscal year (a reappropriation may reprogram money).
   - Carry-forward should be addressed in the *operating* bill rather than in the supplemental bill. This ensures that finance committee members know about all funding made available to an agency for the upcoming fiscal year.
   - Carryforward language should specify "not to exceed" amounts, which will be used for budget transactions. The carryforward amount will show as a negative supplemental transaction and positive budget year transaction.
   - If the amount carried forward differs from the estimate, OMB should show the adjustment in the authorized column in December.
5. Continue use of multi-year appropriations when suitable.
6. Unused money that is not reappropriated does not need to be repealed—just let it lapse.

Reappropriating Capital Money for other Capital Projects

By tradition, available money from legislative adds is reappropriated within an election district with little scrutiny. This concept applies primarily to grants, but is sometimes extended to capital projects such as roads or schools.

The executive branch submits capital reappropriations as well, though the reason for reappropriation—as opposed to a request for new money—is less clear because there is little reason to protect "district money."

Recommendations:

1. Capital projects should appear in the *capital* bill and include normal back-up documents.
2. The tradition of reappropriating legislative adds within an election district should be retained. However, legislative reappropriations will show as offsetting negative and positive amounts in order to improve reporting capabilities.
3. The reappropriation process should not extend beyond legislative adds. All other extinguishable capital projects should be administratively terminated and the money returned to the original funding source. (OMB should provide a list of terminated projects. The legislature may wish to force termination of "old" projects.)
4. Money made available by project termination will appear as revenue in the fiscal summary but will not appear in the budget system.

Advantages of this approach include:

1. A cleaner, simpler capital bill—no need to reference administratively-terminated projects as the funding source for new projects.
2. Improved information because all projects will be added to the database. (Currently, there is no back-up for capital reappropriations.)
3. A fiscal gap calculation that adjusts for the termination of projects.
4. Enhanced scrutiny of projects—all projects compete equally instead of some skating by because they are reappropriations.

Reappropriating Operating Money for Capital Projects

A reappropriation of this type currently appears in budget reports as a supplemental operating reduction combined with a new capital appropriation. That is, the reappropriation shows as a "repeal and appropriate" and no change is recommended.

Recommendations:

1. The issue is tracking—reappropriation language should always include "not to exceed $xx..." and be specific about where money is from and where it is going.
2. Transactions moving operating money to capital projects should appear in the *capital* bill, preferably in a single section dedicated to this purpose.

Reappropriating Capital Money to the Operating Budget

These are rare, and the fact that they are used at all is probably due to a mistaken belief that the reappropriation will not appear in budget reports. They appear as a negative capital project and a positive operating appropriation.

Recommendations:

1. The issue is tracking—reappropriation language should always include "estimated to be $xx…".
2. Appropriations moving capital money to operating should appear in the *operating* budget so that subcommittees are aware of all funding made available to an agency.

Summary

Place in the Supplemental bill:

1. Operating reappropriations for the open fiscal year
   - Limited to the open fiscal year
   - Specific amount
   - Early effective date
   - Show as offsetting transactions

Place in the Operating bill:

1. Carryforward
   - Should be "not to exceed $x"
   - Amount may be revised in December
2. Capital to Operating
   - Should be "estimated amount of $x"
   - Amount may be revised in December

Place in the Capital bill:

1. Capital to Capital
   - Legislative Adds may be reappropriated—they appear as negative and positive projects (Executive branch reappropriations should be replaced with requests for new projects.)
2. Operating to Capital
   - Should state "not to exceed $x"
   - Should be specific on where money comes from and where it goes.

1		**Fund Code Reclassification Project--for FY2011 Budget**									
2											
3	Goal:		Improve budget reporting by properly classifying fund codes								
4											
5	Progress:		**Categorize fund codes into groups**--completed 9/16/09 as shown in this sheet, but will continue to be reviewed.								
6			**Match revenue stream with expenditure groups**--discussed with DOR, who will present the data both ways (not a big project)								
7			**Confirm groupings with OMB**--need to fit in their schedule								
8			**Implementation**--will the Gov incorporate in bill? We must do both ways and prepare duplicate fiscal summaries								
9			**Structure changes**--will the Gov incorporate in bill? We will proceed regardless, but in the Gov bill is preferable								
10			**Statutory changes**--few are required in advance, working on documentation of needs								
11			Implementation does not require OMB participation or any statutory changes, but OMB cooperation will smooth the process immensely and some statutes should be modified.								
12			Some changes--RSS and SDPR--can be delayed until subcommittee review.								
13											
14			2-Oct-09								
15		Fund Code	Fund Name	Current Group	Current 8-way Category	Proposed Subgroup		**Restricted/Unrestricted is the distinction used by DOR to differentiate GF revenue: advantages of retaining the name may outweigh the advantages of a change to designated. But designated is more descriptive of reality.**	Eliminate	Statute	Structure=x Subcom=s
16											
17		**Federal Receipts**						Criteria: source is federal			
18		**Existing Codes**									
19		1002	Federal Receipts	fed							
20		1013	Alcoholism and Drug Abuse Revolving Loan Fund	fed		RLF					
21		1014	Donated Commodity/Handling Fee Account	fed							
22		1016	CSSD Federal Incentive Payments	fed							
23		1033	Federal Surplus Property Revolving Fund	fed							
24		1043	Federal Impact Aid for K-12 Schools	fed							
25		1063	National Petroleum Reserve-Alaska Special Revenu	fed							
26		1133	CSSD Administrative Cost Reimbursement	fed							
27		1188	Federal Unrestricted Receipts	fed							
28		1190	Adak Airport Operations	fed							
29		1212	Federal Stimulus: ARRA 2009	fed							
30											
31		**Moved from Other to Federal**									
32		1185	Election Fund	other	Duplicated	transfer		Relatively little GF capitalization, but may have to retain dup because of mixed state and fed funds. GF unlikely--classify as fed xfer			x
33		1144	Clean Water Fund Bond Receipts	other				should be changed to federal, no state money goes in anymore			
34		1159	Drinking Water Fund Bond Receipts	other				should be changed to federal, no state money goes in anymore			
35		1075	Alaska Clean Water Fund	other	Duplicated	RLF		loan fund, only approps are for admin and to pay off the bonds. Show as xfer, so will need a fed to GF transfer if feds ever release the money to the state.			x
36		1100	Alaska Drinking Water Fund	other	Duplicated	RLF		loan fund, only approps are for admin and to pay off the bonds. Show as xfer, so will need a fed to GF transfer if feds ever release the money to the state.			x
37											
38		**Unrestricted General Fund**						Criteria: State revenue with no statutory designation			
39		**Existing Codes**									
40		1003	General Fund Match	GF							
41		1004	Unrestricted General Fund Receipts	GF							
42		1037	General Fund / Mental Health	GF							
43											
44		**Moved from Other to Unrestricted GF**									
45		1001	Constitutional Budget Reserve Fund	other		savings		separate fund within treasury (i.e., GF) Mgt fees should be paid with GF, not CBR			s
46		1053	Investment Loss Trust Fund	other				just revenue, need to approp to GF?	1		s
47		1104	Alaska Municipal Bond Bank Receipts	other				earnings of reserve accounts, so specific code for misc earnings			
48		1139	Alaska Housing Finance Corporation Dividend	other				**several options for treatment of dividends** **those options are separate from this project**			s
49		1140	Alaska Industrial Development and Export Authority	other							s
50		1150	Alaska Student Loan Corporation Dividend	other							s
51		1173		other				just earnings on money held for capital projects potential problem with earnings on nonGF and with restrictions on use for project or projects put GF in name			s
52		1197	Alaska Capital Income Fund	other	Duplicated	transfer		primary source is Am-Hess (from ERA, which is now gf), but may also get other money. Have to show in fund caps if remains dup better to show other fund sources as transfers			x

14			2-Oct-09								
15		Fund Code	Fund Name	Current Group	Current 8-way Category	Proposed Subgroup		Restricted/Unrestricted is the distinction used by DOR to differentiate GF revenue: advantages of retaining the name may outweigh the advantages of a change to designated. But designated is more descriptive of reality.	Eliminate	Statute	Structure=x Subcom=s
53											
54		**Designated General Fund**						Criteria: GF with a use designated by statute			
55		**Moved from Other to Designated GF**									
56		1021	Agricultural Revolving Loan Fund	other	loan	RLF		Single code for Revolving loan receipts would help prevent use outside the program. Surplus would come to GF as transfer. Does not appear to be used for purposes other than admin anymore ($2.5 m)		for all RLFs inconsistent treatment of earnings on balances and use for admin costs	x
57		1035	Veterans Revolving Loan Fund	other	loan	RLF		Categorized as designated GF because the outflows of the loan programs are specific. Could be undesignated GF because the legislature can appropriate balance for any purpose and balance returns to GF when RLF killed not used since 2005	1		x
58		1036	Commercial Fishing Loan Fund	other	loan	RLF		$1.3m used in F&G			x, s
59		1064	Housing Assistance Revolving Loan Fund	other	loan	RLF		no history of use since 1995	1		x
60		1065	Rural Electrification Revolving Loan Fund	other	loan	RLF		not used since 2008	1		x
61		1070	Fisheries Enhancement Revolving Loan Fund	other	loan	RLF		in use			x
62		1074	Bulk Fuel Revolving Loan Fund	other	loan	RLF		in use			x
63		1078	Senior Housing Revolving Loan Fund	other	loan	RLF		no history of use since 1995	1		x
64		1209	Alaska Capstone Avionics Revolving Loan Fund	other	loan	RLF		in use			x
65		1062	Power Project Fund	other	loan	RLF		in use			x
66		1170	Small Business Economic Development Revolving L	other	loan	RLF		in use			x
67		1079	Underground Storage Tank Revolving Loan Fund	other	Duplicated	RLF/nondup		should put O&H in xfers and the transfer to UST should also be a transfer no use since 2006	1		x
68		1208	Bulk Fuel Bridge Loan Fund	other	Duplicated	RLF/nondup		zero interest loans so dipping into balance if use alternative: pay admin costs with GF			x, s
69		1030	School Fund	other	Dedicated	Dedicated		grandfather, so leg has discretion			
70		1032	Fishermen's Fund	other	Dedicated	Dedicated		grandfather, so leg has discretion			
71		1066	Public School Trust Fund	other	Dedicated	Dedicated		grandfather, so leg has discretion			
72		1117	Vocational Rehabilitation Small Business Enterprise	other		dedicated		fed requirements here--34CFR395.8

eliminate risk associated with investing, nor does it prohibit Fund principal from declining when "risk of loss" turns real. The language is designed to protect principal from appropriation, not from investment losses.

Because future Fund earnings will not be affected by where losses are booked—all accounts within the Fund are pooled for investment purposes—it may appear that there is little reason to care where the losses are booked. The key is that corpus cannot be appropriated, while the ERA is available for appropriation. Reducing the amount of money in the ERA (by booking all realized losses to the ERA) infringes on the legislature's power of appropriation. It also may affect the ability to pay dividends and/or to inflation proof the Fund, but that topic is not discussed here.

Mike Barnhill, with the Department of Law, suggested several clarifying options open to legislators:

a. If the legislature does not take action to approve the Permanent Fund's proposed accounting treatment, the net annual realized losses would be booked proportionately to the accounts that were the source of the invested money. This is <u>not</u> what the Fund is doing; as noted above, the Fund booked all net realized losses to the ERA. This option would reduce the value of the permanent fund principal by approximately $2.5 billion. Tentatively, the Department of Law believes that future realized gains would have to be offset against this realized loss before any further deposits to the ERA could be made. I do not share the Department's opinion; absent an appropriation restoring principal, the principal simply retains the loss.

b. If a reduction of corpus is unpalatable to the legislature—knowing that booking losses to the ERA may affect the ability to pay dividends and/or to inflation proof the fund—then there are two options:

    1) Appropriate money from the ERA (or general fund) to principal in order to offset the realized losses. The appropriation may or may not apply to the AmHess portion of principal. The legislature may wish to consider whether such an appropriation should be accounted for differently than past "special appropriations," since the purpose of it is to restore a net realized loss, which has never before happened.

    2) Include language in an appropriation bill that acknowledges that booking all realized losses to the ERA is acceptable to the legislature. My view is that this is a weak option; appropriation language is preferable.

2. **Losses allocated outside the Permanent Fund.** The Fund booked $33 million of the FY09 realized loss to the Capital Income Fund (CIF), which is not a part of the Permanent Fund. Their decision was based on an appropriation of AmHess earnings to the CIF (sec. 9(d), Ch. 27, SLA 2008). An appropriation of earnings typically refers to positive amounts; negative earnings imply a zero transfer.

   After discussion, the Fund revised their projections to show a zero transfer in FY09, but proposes (and shows in their projections) that future AmHess earnings be unavailable for transfer to the CIF until the $33 million share of the realized loss has been replenished. Again, there are several options from which the legislature may choose (all refer to future earnings, acknowledging that the FY09 transfer to the CIF is zero):

   a. The FY09 loss would be booked to the AmHess principal, which will forever reduce the earnings potential of the account (and reduce the annual deposit to the CIF). FY2010 AmHess earnings will be deposited in the CIF, essentially recognizing that each annual appropriation of AmHess earnings is an independent act.

   b. Appropriate money from the ERA (or general fund) to AmHess principal in order to offset the realized losses. This option effectively assigns the realized loss to the ERA. This decision does not have to be consistent with the decision regarding the "regular" corpus, and it could have an impact on dividends.

   c. Revise FY2010 appropriation language (sec. 14(a), Ch. 15, SLA 2009)—and draft FY11 language—to reduce the transfer of AmHess earnings to the CIF until the $33 million FY09 realized loss is absorbed. This is the option now proposed by the Permanent Fund; it effectively transfers the realized loss to the CIF over time. The revised Permanent Fund projections incorporate this option despite the belief (of the Department of Law and the Legislative Finance Division) that it requires legislative action.

APFC Comments

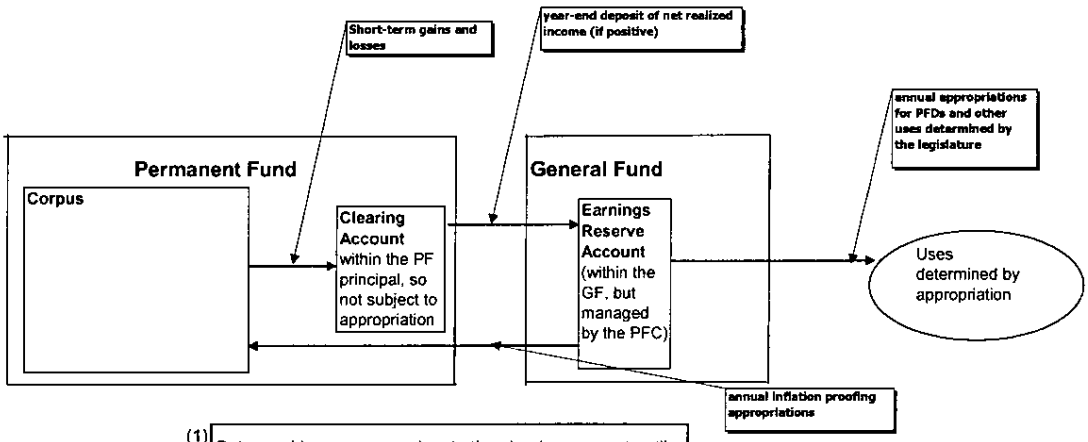
Fund staff believes that its accounting treatment on this issue is consistent with relevant statutes, statutory objectives, and Department of Law advice. In addition, while Fund staff acknowledges that the PF has never before closed a fiscal year with a net realized loss, PF "realized losses" have always (i.e., for over 25 years) been booked to the ERA (or to the AmHess subaccount of the ERA). Fund staff also indicated that they would present the issues discussed in this "heads up" differently. They would welcome an opportunity to be heard by the legislature.

What needs to be done?

Nothing soon. The Governor's budget may include language on this topic. If so, it should prompt discussion in the finance committees. That discussion may drift to cover the array of options and how they may affect future dividends, inflation proofing and deposits to the CIF. If the Governor's budget does not address the issue, the legislature can draft language corresponding to the choices presented above. Absent direction from the legislature or a legal opinion to the contrary, the PF Corporation has indicated that it will continue to book realized loses to the ERA. The legislature may also wish to consider revising statutes to clarify the definition and disposition of income and the placement of the ERA within the Permanent Fund versus the general fund.

I believe the flow chart below addresses many of the issues raised during our discussions. It would require some politically sensitive legal drafting and has not been endorsed by either OMB or the PF Corporation.

Suggested Statutory Revisions Affecting the Flow of Permanent Fund Income



(1)	Gains and losses accumulate in the clearing account until year-end
(2)	Because the clearing account is within the PF, 1) no appropriation to principal is required if losses are incurred and 2) the balance is not subject to appropriation. (The year end deposit to the ERA occurs without appropriation)
(3)	If the balance of the clearing account is positive at year-end, the balance is deposited in the ERA, which is a subaccount of the general fund that is managed by the PFC. (Optional--could be managed by DOR)
(4)	If the balance of the clearing account is not positive at year-end, there is no deposit to the ERA and the negative balance is carried forward to the following year, so there are no future deposits to the ERA until the loss is recovered.
(5)	The same concept applies to the Amerada-Hess portion of principal, except that year-end deposits go to the Capital Income Fund (within the general fund)
(6)	No change to inflation proofing or PFD formulas is required.

Another Reason for Concern: Access to the Constitutional Budget Reserve Fund

Section 43(c) of the FY2010 capital bill appropriates money from the Constitutional Budget Reserve Fund (CBRF) to the general fund. The amount of the appropriation is the amount available for appropriation in FY2010 less the amount appropriated in FY09, which is the amount accessible by simple majority vote as provided by Article IX, section 17(b) of the Alaska Constitution.

There are a number of legal and technical issues that make calculation of the amount of a simple majority draw under section 17(b) problematic. Those difficulties are not reviewed here, and the following discussion undoubtedly oversimplifies the situation.

The amount available for appropriation in FY2010 includes the sum of unrestricted GF revenue and the Earning Reserve Account (ERA) of the Permanent Fund. Projected FY2010 general fund revenue is about $2.7 billion less than FY09 appropriations. A revenue reduction alone does not permit simple majority access to the CBRF—recall that the ERA balance is considered available for appropriation. In the past, a large ERA balance typically precluded simple majority access to the CBRF.

Under the Permanent Fund's method of allocating FY09 realized losses, the projected cash balance of the ERA going into FY2010 is $2.5 billion less than it would be if the Permanent Fund's realized losses were attributed to principal rather than to the ERA. The FY09 year-end balance of the ERA was about $422 million—far too little to offset the decline in revenue—making a 17(b) draw a possibility.

Bottom line: using current revenue projections and the FY09 ERA balance (under the Fund's method of allocating losses), the appropriation from the CBRF to the general fund under 17(b) could be more than $2 billion, while attributing the FY09 losses to principal will reduce or eliminate the amount appropriated to the general fund under 17(b).

There is no guarantee that there will be a 17(b) draw if the Fund's allocation method is used. The amount accessible under 17(b) would decrease as the amount available for appropriation increases. This can occur through:

- GF revenue increases
- Other revenue increases
- ERA balance increases

Alaska Geographic Differential Study

2008

Prepared for:

State of Alaska, Department of Administration

Presented to:

House Finance Committee

Presented by:

McDowell Group, Inc.

November 5, 2009

McDowell GROUP

Background

- Most recent prior comprehensive statewide COL study was prepared in 1985
- **Teamed with ECONorthwest and GMA Research**
- **Research conducted during Fall of 2008**

McDowell GROUP

Methodology

- Household Consumption Survey
  - 2,547 households in 74 Alaska communities
- **Retail Price Survey**
  - **634 retail outlets in 58 communities**
- **Household market basket of 200 items**

McDowell GROUP

Methodology

- Modeling blended consumption and prices to create differentials
- **Cost differentials were calculated for 18 geographic "pools" and 12 individual communities**
- **Differentials also calculated for the original 19 election districts**

McDowell GROUP

Methodology

- 18 geographic "pools" are composed of communities with common demographic and geographic characteristics
- Modeling was done at the community level, so other groupings could be analyzed

McDowell GROUP

Methodology

- Anchorage is the base community: Differential of 1.00
- **All cost differentials were calculated relative to Anchorage**
- **Study measured *differences* in the cost of living**

McDowell GROUP

Results

Block No.	Sample Block (Pool)	2008 Differential

19	Wade Hampton	1.48	1.26	+0.22

McDowell GROUP

Recommendations

- Depart from the current plan that assigns pay differentials primarily by election district boundaries
- Define GDPs such that communities within each GDP have differentials that do not differ by a statistically significant amount

McDowell GROUP

Statistically-Based GDPs

2008 GDP #	Sample Blocks/Communities	Min. Diff.	Max. Diff.	Wght Ave.
1	Anchorage, Fairbanks, Delta/Tok, Glennallen, KPB, Mat-Su, Parks/Elliott/Steese, Small & Mid-size SE	.95	1.05	1.0
2	Cordova, Juneau, Kodiak, Sitka, Valdez	1.08	1.17	1.11
3	Dillingham, Nome, Roadless Interior	1.31	1.39	1.37
4	Barrow, Bethel, SW Small comm.	1.44	1.53	1.50
5	Kotzebue, Unalaska/Dutch Harbor	1.58	1.61	1.60

McDowell GROUP

Statistically-Based GDPs

- **Advantages**
  - Logical (grouping similar communities)
  - Easier to administer
  - Acknowledges uncertainty
- **Challenges**
  - No ideal number of GDPs
  - Establishes a range, not a single value

Section I: Executive Summary

Executive Summary

Introduction

In September 2008, the Alaska Department of Administration contracted with McDowell Group, an Alaska research firm, to conduct a comprehensive, statistically reliable study comparing the cost of living in Anchorage with other communities and regions throughout Alaska. The purpose of the study was to identify differences in the cost of living that could affect pay equity among state employees living in different areas of the state.

Prior to this study, the most recent statewide cost of living study in Alaska was conducted by McDowell Group in 1985. That study produced cost of living differentials for Alaska's 19 House election districts as they were defined at that time.

This report presents the results of the 2008 study and provides geographic cost of living differentials for a number of unique geographic differential "pools" (GDPs), including the same 19 districts examined in the 1985 study, 18 pools defined for purposes of this study, and 12 individual communities.

Methodology

The study involved two primary research tasks, a Household Consumption Survey (HCS) and a Retail Price Survey (RPS). The HCS provided data on the relative importance of various components of the household budget (housing, food, transportation, etc.) and how consumption varies from community to community. The RPS provided data on how the prices for items in the household budget differ between various communities and Anchorage. It is the blend of HCS and RPS data – the combination of consumption differences and price differences – that produces the geographic cost differential.

Household Consumption Survey

The HCS included 2,547 surveys with randomly selected households in 74 communities throughout Alaska. Sample "blocks" were defined for purposes of sample distribution and to ensure sufficient sample sizes in various regions and among communities with common demographic and geographic characteristics. The largest communities (Anchorage, Fairbanks and Juneau) and the most populous boroughs (Mat-Su and Kenai Peninsula) were each assigned their own sample blocks. Smaller communities that were similar in terms of location and/or size were grouped together, and household surveys were distributed within that sample block in proportion to each community's population.

Retail Price Survey

The RPS included 634 retail outlets in 58 communities throughout Alaska, plus numerous providers of various services, including health care, transportation, communications, insurance, and others. Each of the items in a household market basket of approximately 200 goods and services was priced in each community where the item was available.

Findings

Geographic cost of living differentials for various GDPs and communities are presented in the following tables. As the base community, Anchorage is assigned a cost differential of 1.00. Differentials for GDPs and other communities provide a measure of the cost of living relative to Anchorage. For example, Kodiak's differential of 1.12 means that the cost of living in Kodiak is about 12 percent higher than in Anchorage. Similarly, the Palmer/Wasilla differential of 0.95 means the cost of living there is about 5 percent lower than in Anchorage.

As described above, the HCS sample blocks were defined so that communities with common demographic and geographic characteristics were grouped together. In particular, sample blocks were chosen to avoid mixing dissimilar communities, especially small rural communities with larger urban areas.

Cost differentials for each of the 18 sample blocks are provided in the following table. Some sample block definitions are identical to the 1985 GDS districts (Juneau, Kodiak, and Mat-Su). Others are similar, such as Fairbanks. However, in the 1985 GDS, the Fairbanks GDP included several small outlying communities, including Fort Yukon, while the 2008 sample block definition includes only the Fairbanks North Star Borough. Communities included in each 2008 sample block are identified in the introduction, following this executive summary.

Table I-1: Geographic Cost Differentials, 2008 Sample Blocks

Sample Block #	Sample Block	2008 Differential
1	Anchorage	1.00
2	Fairbanks	1.03
3	Parks/Elliott/Steese Highways	1.00
4	Glennallen Region	0.97
5	Delta Junction/Tok Region	1.04
6	Roadless Interior	1.31
7	Juneau	1.11
8	Ketchikan/Sitka	1.09
9	Southeast Mid-Size Communities	1.05
10	Southeast Small Communities	1.02
11	Mat-Su	0.95
12	Kenai Peninsula	1.01
13	Prince William Sound	1.08
14	Kodiak	1.12
15	Arctic Region	1.48
16	Bethel/Dillingham	1.49
17	Aleutian Region	1.50
18	Southwest Small Communities	1.44

In addition to the 18 sample blocks identified above, differentials were also calculated for 12 individual communities. Each of these communities is included in one of the 18 sample blocks, but in combination with one or more other communities. HCS sample sizes in these communities were large enough to allow for meaningful community-level cost of living analysis.

Table I-2: Geographic Cost Differentials, 2008 Selected Communities

Community	2008 Differential
Barrow	1.50
Bethel	1.53
Cordova	1.13
Dillingham	1.37
Homer	1.01
Ketchikan	1.04
Kotzebue	1.61
Nome	1.39
Petersburg	1.05
Sitka	1.17
Unalaska/Dutch Harbor	1.58
Valdez	1.08

A comparison of cost differentials for 2008 and 1985 for the districts as they were defined in 1985 (which followed election district boundaries) is instructive. In general, the 2008 *Geographic Differential Study* indicates that since 1985, communities outside Alaska's Railbelt and off the Alaska road system have seen greater increases in living costs relative to Anchorage. The most remote districts have experienced the largest relative increases. The most populated areas outside of Anchorage, including Mat-Su, the Kenai/Soldotna area, and Fairbanks have differentials very similar to those identified in the 1985 study.

See table next page.

Table I-3: 2008 Geographic Cost Differentials, with 1985 Comparisons

1985 District #	1985 District Name	2008 Differential	1985 Differential	Change
1	Ketchikan/Prince of Wales	1.04	1.02	+0.02
2	Petersburg/Wrangell	1.04	0.98	+0.06
3	Sitka	1.17	1.01	+0.16
4	Juneau	1.11	1.03	+0.08
5	Icy Strait/Lynn Canal	1.06	1.05	+0.01
6	Cordova/Valdez	1.05	1.11	-0.06
7	Palmer/Wasilla	0.95	0.94	+0.01
8	Anchorage	1.00	1.00	0.00
9	Seward	1.03	1.00	+0.03
10	Kenai/Cook Inlet	1.01	1.01	0.00
11	Kodiak	1.12	1.06	+0.06
12	Aleutian Islands	1.49	1.26	+0.23
13	Bristol Bay	1.37	1.29	+0.08
14	Bethel	1.53	1.39	+0.14
15	Yukon/Kuskokwim	1.16	1.29	-0.13
16	Fairbanks/Fort Yukon	1.02	1.03	-0.01
17	Barrow/Kotzebue	1.55	1.45	+0.10
18	Nome	1.37	1.33	+0.04
19	Wade Hampton	1.48	1.26	+0.22

Recommendations

How the State of Alaska chooses to use the geographic cost of living differentials measured in this study is primarily a matter of policy. However, the study team offers the following recommendations:

- Depart from the current plan that groups communities and assigns pay differentials primarily according to election district boundaries. This study has shown that significant variation in the cost of living exists within election districts.
- Initiate a policy of regularly updating the geographic cost differentials. This study has shown that differentials do change over time (especially in remote areas). The State might also consider conducting a near-term update (within a year or two) depending on trends in fuel prices.
- Consider defining GDPs such that communities (or sample blocks) within each GDP have cost of living differentials that do not differ from each other by a statistically significant amount. An example of such GDPs is provided in the following table.

Table 1-4 shows the five groupings that result if all the community-level differentials calculated for the study are grouped together based on a statistical test for significant differences among those differentials. These are purely mathematical groupings that ignore geography. For example, all the communities and regions in GDP #1 have differentials calculated for this study at between 0.95 and 1.05. Statistically, the differentials in GDP #1 are not meaningfully different from each other due to the degree of uncertainty inherent in survey research. The differentials for GDP #1 are, however, statistically different from those in the other four GDPs shown.

Table I-4: Statistically-Based Geographic Cost Differential Pools

2008 GDP #	Sample Blocks and/or Communities	Minimum Differential	Maximum Differential
1	Anchorage, Delta Junction/Tok Region, Fairbanks, Glennallen Region, Kenai Peninsula, Ketchikan, Mat-Su, Parks/Elliott/Steese Highways, Southeast Mid-size Communities, Southeast Small Communities	.95	1.05
2	Cordova, Juneau, Kodiak, Sitka, Valdez	1.08	1.17
3	Dillingham, Nome, Roadless Interior	1.31	1.39
4	Barrow, Bethel, Aleutians (other than Unalaska/ Dutch Harbor), Southwest Small Communities	1.44	1.53
5	Kotzebue, Unalaska/Dutch Harbor	1.58	1.61

Note: There is no statistically meaningful difference in the measured cost of living differential among communities within each GDP.

Using GDPs that are defined in purely statistical terms has a number of attractions:

- The method is straightforward to explain.
- It acknowledges that there is uncertainty associated with calculating GDPs.
- It is easier to administer because of the small number of GDPs.

However, the challenge for the state is to determine how best to set actual pay differentials for each GDP. Grouping communities into statistically-based GDPs may result in pay differentials higher than warranted for some employees in any given pool and lower than warranted for others. Setting a pay differential for GDP 3 at 1.39, for example, would insure that no one in that group is potentially under-compensated, relative to their estimated cost of living differential, but it would certainly be the most costly approach in terms of total state payroll. Other options include using the mid-point between the minimum and maximum differential in each GDP or, more equitably, using the weighted average differential for each GDP (weighted by the number of state employees in each community within the GDP). The weighted average approach produces a differential of 1.11 for GDP 2, 1.37 for GDP 3, 1.50 for GDP 4 and 1.60 for GDP 5.

The cost and equity implications (in terms of state salaries) of the various options are important, but beyond the scope of this study.

Note on Seattle's Cost Differential

The 2008 Alaska GDS methodology did not include household surveying or retail price surveying in Seattle. This is due in part to the cost and complexity of surveying in a very large urban area, which would be vastly out of proportion to the number of Alaska state employees who reside in Seattle (five). Another reason is that

other data already exists for estimating cost of living differentials between Anchorage and Seattle. Available data and other analysis, described in detail in this report, indicate the cost of living in Seattle and Anchorage are now about equal, unlike 24 years ago when Anchorage was significantly more expensive than Seattle.

Section II: Introduction

Introduction

The challenge before the State of Alaska is how to equitably remunerate state employees living throughout Alaska in exchange for the services they provide. McDowell Group's 1985 ***Alaska Geographic Differential Study*** served as the benchmark for most state salary differential adjustments. However, changes in the economies of all of the state's regions in the past 23 years have rendered the objective data from the 1985 study obsolete.

Alaska is unique among the 50 states in its geographic, climatic, economic, social, cultural, and lifestyle diversity. State employees are located throughout Alaska, in major cities as well as remote villages. Many small communities have a limited selection of goods and services available to support households. Transportation linkages and market size efficiencies can dramatically affect the price of the same item in different locations, even in locations close to one another. Climate can dictate household purchasing patterns, with residents of different areas consuming different household market baskets. Income differences between the state's bustling urban economies and struggling rural regions also significantly influence the makeup of household budgets. For example, expenditures on food require a higher proportion of income in economically depressed regions, while spending on recreation and entertainment tends to be much lower. Alaskans (including state employees) simply do not – and in many cases cannot – live in Barrow, Klawock or even Cordova the same way Alaskans live in Anchorage.

The 1985 geographic differential pools (GDPs) were based on Alaska's 19 election districts. Current Senate districts (20), House districts (40), and Census Areas/Boroughs (27) are more commonly used divisions for analyzing the state. However, the major factors that determine differences in household costs – market size efficiencies, road access, shipping distance and method, competition, climate, economic conditions, for example – do not conveniently confine themselves to district boundaries.

In September 2008, the Alaska Department of Administration contracted with McDowell Group, an Alaska research firm, to conduct a comprehensive, statistically defensible cost of living analysis in Alaska. The purpose of the study was to compare the cost of living in regions and communities throughout Alaska to the cost of living in Anchorage, and from that analysis, calculate geographic cost differentials.

It is important to understand what this study does not do. For example, this study does not place an absolute measure on the cost of living in any particular place; it only measures the difference in the cost of living between Anchorage and other communities where state employees reside. Further, this study does not measure changes in the cost of living over time, i.e., inflation. There is only one reliable measure of inflation, and that is the Anchorage Consumer Price Index (CPI), which is updated semi-annually. Finally, the 2008 Alaska GDS does not determine if state employee pay levels are too high, too low, or on par with past pay levels. This study only indicates how pay levels should vary relative to Anchorage to account for differences in living costs experienced by state employees residing elsewhere in Alaska.

The 2008 Alaska Geographic Differential Study was conducted by McDowell Group in association with ECONorthwest (database management and statistical analysis) and GMA Research (urban telephone survey research).

Report Organization

The report includes seven major segments:

I. **Executive Summary**

II. **Introduction** (including a definition of terms and geographic definitions)

III. **Study Results by Sample Block and Community** (one-page summaries of expenditure weights and price differentials for each sample block and for selected communities)

IV. **Methods and Analysis** (an overview of study methods, detailed methods and results for each main household budget component for each sample block)

V. **Data Collection Methodology** (detailed discussion of the methodologies employed on the Household Consumption Survey and the Retail Price Survey)

VI. **Statistical Analysis** (discussion of the statistical reliability of the cost of living differentials measured in this study)

VII. **Appendix** (bibliography, survey instruments and related information).

Definitions

Geographic Differential Pools (GDPs): Collections of communities grouped together for purposes of administering geographic pay differentials. Historically, GDPs have been defined by election district boundaries, with minor variations.

Household Consumption Survey (HCS): The HCS included 2,547 telephone surveys with randomly selected households located in 74 communities. The HCS collected data on household spending related to housing (including mortgage and rent payment, property taxes, insurance and all utilities), food, transportation, health care, and clothing. The survey was fielded during October and November 2008.

Retail Price Survey (RPS): The RPS included 634 retail outlets in 58 communities, plus numerous providers of various services, including health care, transportation, communications, insurance, and others. A market basket of approximately 200 goods and services was priced in each community where they were available. Data was collected in person and by telephone.

Expenditure Weights: A measure of the relative importance of various components of the household budget. The HCS and secondary data provided measures of the relative importance of various components of the household budget and how the importance of those components varies from community to community. The HCS provided measures of expenditure weights in 18 categories of household spending. Data from the Consumer Price Index was used to develop expenditure weights in four additional categories.

Price Differentials: The difference in prices between Anchorage and other communities in Alaska. Price differentials for specific items or services are calculated by dividing an item's average price in a particular community by the average price of the same item in Anchorage.

Sample Blocks: Sample blocks were defined for purposes of household survey sample distribution to ensure sufficient sample sizes in various regions and among communities with common demographic and geographic characteristics. The largest communities (Anchorage, Fairbanks and Juneau) and most populous boroughs (Matanuska-Susitna and Kenai Peninsula) formed their own sample blocks. Smaller communities, similar in terms of location or size, were grouped together into sample blocks, and household surveys were distributed within those blocks in proportion to each community's population. The communities included in each sample block are identified in the following table.

Table II-1: 2008 Geographical Differential Study Sample Blocks

Sample Block #	Sample Block Name	Sample Block Communities
1	Anchorage	Municipality of Anchorage
2	Fairbanks	Fairbanks North Star Borough
3	Parks/Elliott/Steese Highways	Healy, Cantwell, Central, Nenana, Manley Hot Springs, Talkeetna
4	Glennallen Region	Glennallen, Chitina, Paxson, Slana, Tazlina
5	Delta Junction/Tok Region	Delta Junction, Tok, Eagle, Northway
6	Roadless Interior	Galena, Fort Yukon, McGrath
7	Juneau	City and Borough of Juneau
8	Ketchikan/Sitka	Ketchikan Gateway Borough, City and Borough of Sitka
9	Southeast Mid-Size Communities	Craig, Haines, Klawock, Metlakatla, Petersburg, Wrangell
10	Southeast Small Communities	Hoonah, Skagway, Yakutat, Elfin Cove, Gustavus, Pelican, Tenakee Springs
11	Mat-Su	Matanuska-Susitna Borough (not including Talkeetna)
12	Kenai Peninsula	Kenai Peninsula Borough
13	Prince William Sound	Cordova, Valdez, Whittier
14	Kodiak	Community of Kodiak (does not include remote Borough communities)
15	Arctic Region	Barrow, Kotzebue, Nome, Teller
16	Bethel/Dillingham	Bethel, Dillingham
17	Aleutian Region	Adak, Cold Bay, King Cove, Sand Point, Unalaska/Dutch Harbor
18	Southwest Small Communities	Aniak, Anvik, Chignik, Emmonak, Goodnews Bay, Iliamna, King Salmon, Saint Mary's, Unalakleet

1985 GDS Districts: The 1985 Alaska Geographic Differential Study was required to consider the cost of living in each of Alaska's 19 official 1961 House Election Districts. Those districts and communities contained therein are defined in the following table. (Note: Not all communities located in each district are listed, only those where survey research was conducted in the 1985 study are shown.)

Table II-2: 1985 Geographical Differential Study Districts

District #	District Name	District Communities
1	Ketchikan/Prince of Wales	Ketchikan, Craig, Klawock
2	Petersburg/Wrangell	Petersburg, Wrangell, Kake
3	Sitka	Sitka, Angoon
4	Juneau	Juneau
5	Icy Strait/Lynn Canal	Yakutat, Haines, Hoonah, Skagway, Gustavus
6	Cordova/Valdez	Cordova, Valdez, Chitina, Glennallen, Tazlina, Gulkana, Slana
7	Palmer/Wasilla	Palmer, Wasilla, Big Lake, Willow, Talkeetna, Sutton
8	Anchorage	Anchorage
9	Seward	Seward, Moose Pass, Cooper Landing, Hope
10	Kenai/Cook Inlet	Homer, Kenai, Ninilchik, Soldotna, Sterling, Kasilof, Anchor Point, Halibut Cove, Seldovia
11	Kodiak	Kodiak, Karluk
12	Aleutian Islands	Unalaska, Sand Point, Cold Bay, St. Paul Island, Atka, Chignik
13	Bristol Bay	Naknek, King Salmon, Iliamna, Dillingham
14	Bethel	Bethel
15	Yukon/Kuskokwim	Aniak, Holy Cross, Grayling, McGrath, Healy, Cantwell, Galena, Manley Hot Springs, Rampart, Ruby, Nenana, Clear, Tanana, Nulato
16	Fairbanks/Fort Yukon	Fairbanks North Star Borough, Tok, Northway, Delta Junction/Ft. Greely, Fort Yukon, Eagle
17	Barrow/Kotzebue	Barrow, Kotzebue, Selawick, Noorvik, Ambler
18	Nome	Nome, Unalakleet, Gamble, Savoonga, Teller, Shishmaref
19	Wade Hampton	Mountain Village, St. Mary's

Section III: Results by Sample Block and Community

Sample Block and Community Selection

In order to determine how to distribute the overall HCS sample among all the communities that needed to be examined, communities with similar demographic and geographic characteristics were grouped together into sample blocks. Each sample block was allocated a sufficiently large sample size to allow the analysis to make meaningful comparisons between blocks. The largest communities (Anchorage, Fairbanks and Juneau) and the most populous boroughs (Mat-Su and Kenai Peninsula) formed their own sample blocks. Smaller communities that were similar in terms of location, access and/or size were grouped together. Combining smaller communities was necessary to insure statistically reliable survey sample sizes. Within each block, community-level samples were drawn so as to be proportional to community population.

Using sample blocks to determine sample distribution was deemed preferable to the 1985 method of sampling according to election districts because the blocks can be formulated to minimize grouping dissimilar communities, especially small rural communities with larger urban areas.

The Matanuska-Susitna Borough was treated as one sample block, with the exception of Talkeetna which was grouped with Parks/ Elliot /Steese Highways sample block. The most important reason for keeping Mat-Su largely intact as a sample block is the ease of access throughout the borough. In general, residents of any portion of the borough where state employees reside (other than Talkeetna) can work and shop in any other portion of the borough (or, for that matter, work and shop in Anchorage).

The Kenai Peninsula Borough was also treated as one sample block, recognizing that by calculating cost of living differentials by 1985 GDS districts would produce one differential for Seward alone and another differential for the remainder of the borough (collectively labeled "Kenai/Cook Inlet" in the 1985 study). A separate differential was originally calculated for Homer, but turned out to be essentially the same as the differential for the remainder of the Borough. Seldovia, which has air and water access only, might warrant its own differential. However, with only one state employee in the community in 2008, a separate analysis of the cost of living in that small community was not practical.

Though Southeast Alaska accounts for only about 10 percent of Alaska's population, the region was divided into four sample blocks due to its high level of socioeconomic and geographic diversity. Juneau, as the region's largest city and capital of Alaska, was its own sample block. Ketchikan and Sitka were grouped together because of their apparent similarities (though subsequent analysis indicted the two communities are dissimilar in terms of cost of living). Other communities in the region were divided among two sample blocks, with larger communities (Petersburg, Wrangell, Haines, etc.) in one and smaller communities (Hoonah, Yakutat, Skagway, etc.) in another. Four sample blocks in Southeast is warranted because the isolation of communities relative to one another (i.e., there is no road access between most communities), the existence of five borough governments in the region and two large census areas not within borough boundaries. The region also has highly variable local housing markets.

The Kodiak sample block includes only the community of Kodiak and therefore its differential does not necessarily represent remote communities within the borough.

The Prince William Sound sample block groups Valdez, Cordova and Whittier together. The study team recognized that Valdez, with highway access, and Cordova, with air and water access only, could have different cost of living differentials. However, survey sample sizes were sufficient to allow for analysis of each community alone.

Cost of living differentials were also calculated for 12 other individual communities. Each of these communities is included in one of the 18 sample blocks, but HCS sample sizes in these communities were large enough to allow for meaningful community-level cost of living analysis. Smaller communities were not analyzed in a similar fashion because small survey sample sizes would preclude meaningful estimates.

Sample Block and Community-Level Differentials

Geographic cost of living differentials for 2008 sample blocks and for larger communities are presented in the following table. The cost differential for Anchorage, the base community, is set at 1.00. Differentials for GPDs and other communities provide a measure of the cost of living relative to Anchorage. For example, Kodiak's differential of 1.12 means that the cost of living in Kodiak is about 12 percent higher than in Anchorage. Similarly, the Mat-Su differential of 0.95 means that the cost of living there is about 5 percent lower than in Anchorage.

Table III-1: Geographic Cost Differentials, 2008 Sample Blocks

Sample Block #	Sample Block	2008 Differential
1	Anchorage	1.00
2	Fairbanks	1.03
3	Parks/Elliott/Steese Highways	1.00
4	Glennallen Region	0.97
5	Delta Junction/Tok Region	1.04
6	Roadless Interior	1.31
7	Juneau	1.11
8	Ketchikan/Sitka	1.09
9	Southeast Mid-Size Communities	1.05
10	Southeast Small Communities	1.02
11	Mat-Su	0.95
12	Kenai Peninsula	1.01
13	Prince William Sound	1.08
14	Kodiak	1.12
15	Arctic Region	1.48
16	Bethel/Dillingham	1.49
17	Aleutian Region	1.50
18	Southwest Small Communities	1.44

In addition to the 18 sample blocks identified above, differentials also were calculated for 12 individual communities. These communities are included in one of the 18 sample blocks, but in combination with one or more other communities. HCS sample sizes in these communities were large enough (generally above 40 surveys) to allow for statistically meaningful community-level cost of living analysis.

This community-level analysis indicates that even among communities very similar in size, location, and access, there can be a difference in the cost of living. For example, Ketchikan and Sitka share many common geographic, economic, and demographic characteristics; combined, the Ketchikan/Sitka GDP has a cost differential of 1.08. However, analysis of Ketchikan and Sitka individually resulted in differentials of 1.03 and 1.16, respectively. The same situation is evident in the Prince William Sound sample block, where Valdez and Cordova have measurably different differentials.

Table III-2: Geographic Cost Differentials, 2008 Selected Communities

Community	2008 Differential
Barrow	1.50
Bethel	1.53
Cordova	1.13
Dillingham	1.37
Homer	1.01
Ketchikan	1.04
Kotzebue	1.61
Nome	1.39
Petersburg	1.05
Sitka	1.17
Unalaska/Dutch Harbor	1.58
Valdez	1.08

The following table compares cost differentials for 2008 and 1985 for the districts as they were defined in 1985 (along election district boundaries). This comparison indicates that, since 1985, communities outside Alaska's Railbelt and off the Alaska road system have seen greater increases in living costs relative to Anchorage. The most remote districts have experienced the largest relative increases. The most populated areas outside of Anchorage (Mat-Su, the Kenai/Soldotna area, and Fairbanks) have differentials very similar to those identified in the 1985 study. Increases in other areas, such as Juneau and Sitka, are the result of rising housing costs.

See table next page.

Table III-3: 2008 Geographic Cost Differentials, with 1985 Comparisons

1985 District Number	1985 District Name	2008 Differential	1985 Differential	Change
1	Ketchikan/Prince of Wales	1.04	1.02	+0.02
2	Petersburg/Wrangell	1.04	0.98	+0.06
3	Sitka	1.17	1.01	+0.16
4	Juneau	1.11	1.03	+0.08
5	Icy Strait/Lynn Canal	1.06	1.05	+0.01
6	Cordova/Valdez	1.05	1.11	-0.06
7	Palmer/Wasilla	0.95	0.94	+0.01
8	Anchorage	1.00	1.00	0.00
9	Seward	1.03	1.00	+0.03
10	Kenai/Cook Inlet	1.01	1.01	0.00
11	Kodiak	1.12	1.06	+0.06
12	Aleutian Islands	1.49	1.26	+0.23
13	Bristol Bay	1.37	1.29	+0.08
14	Bethel	1.53	1.39	+0.14
15	Yukon/Kuskokwim	1.16	1.29	-0.13
16	Fairbanks/Fort Yukon	1.02	1.03	-0.01
17	Barrow/Kotzebue	1.55	1.45	+0.10
18	Nome	1.37	1.33	+0.04
19	Wade Hampton	1.48	1.26	+0.22

Record-high fuel prices in 2008 may be responsible for some of the increase in the cost of living in Alaska's more remote areas, relative to Anchorage. Rising fuel prices affect urban and rural households, but not necessarily to the same degree. An increase in gas prices from $1.50 per gallon to $3 per gallon in Anchorage may translate into a price increase in Bethel from $3 per gallon to $6 per gallon. The increase in Bethel takes a much bigger bite out of the household budget than does the increase in Anchorage. Sharp increases in 2008 in home heating oil would have especially disproportionate effects on small, remote communities. The study team tested the sensitivity of geographic cost differentials to lower fuel prices by measuring the effect of a one-third reduction in household expenditures on home heating fuel and fuel for vehicles, coupled with a hypothetical reduction in the fuel price differential of about 20 percent. The results of this test suggest that for regions with the largest differentials, a substantial reduction in fuel prices could result in differentials of 0.02 to 0.05 lower than measured in this study. This finding should be interpreted with caution, however, as much more detailed analysis would be required to definitively determine the effect of fuel prices lower (or higher) than those prevalent at the time of this study.

Discussion of Statistical Considerations

While the geographic cost differentials presented in this report suggest a high level of precision, it is important to acknowledge the uncertainty associated with any analysis based on survey research. In fact, there is some degree of uncertainty around each of the cost differentials, depending on sample size and the magnitude of the differential. For example, for Juneau, with its relatively low cost of living differential (1.11) and large sample size (300 households), the approximate standard error is relatively small and, thus, the precision of the estimate is relatively high. The 95 percent confidence interval extends from approximately 1.08 up to 1.14. In contrast, the 95 percent confidence interval for the Aleutians differential (1.50) is

relatively wide, extending from approximately 1.42 up to 1.58. This is due to the larger cost of living differential and smaller sample size (77 households) for the Aleutians sample block.

In addition to the statistical uncertainty attributable to sample size and statistical random error, the HCS and RPS research methodology is subject to inherent uncertainty from sources such as the following:

- The ability of survey respondents to answer questions about spending and income accurately.
- The degree to which the choice of items and services in the market basket accurately reflects people's overall spending patterns.
- The accuracy with which price data from a given retail outlet within a community reflects the proportion of purchases people make at that particular outlet or at those specific prices.

Using telephone survey research to measure household spending patterns is a challenging task due to the complexity of the issue and recall limitations. Some respondents will overestimate their spending on food (for example), while some respondents will underestimate. With a large enough sample size, however, the average will be an accurate representation of household spending on food.

The most important consideration is to avoid any data collection bias that systematically influences survey respondents from a particular community to overstate or understate some aspect of their spending *relative to Anchorage survey respondents*. For example, an accurate measure of household spending on food in a particular community is important, but not as important as making sure that whatever measure of food spending is found accurately reflects the difference compared to Anchorage household spending on food. In other words, accurate absolute values are not as important as accurate relative values.

Finally, in reviewing the detailed data tables presented in this and following sections of the report, readers may occasionally note values that appear to be outliers or in some way counterintuitive. In all cases, data used for the analysis has been reviewed and determined to be the most representative available within the limitations of the methodology employed. The methodology systematically aggregates results from areas with small sample sizes in order to minimize statistical anomalies, but it cannot eliminate them altogether.

In summary, the highest degree of professional standards were applied at all stages of this project to ensure that the estimated cost of living differentials are unbiased measures of the true cost of living differentials experienced by communities throughout the state.

Sample Block and Community Cost of Living Profiles

Following this overview are one-page geographic cost of living profiles for each sample block and for selected communities. Each profile provides a description of the communities contained in each sample block (if more than one community), the population of each community, and the number of state employees residing in each community. The profiles provide expenditure weights and price differentials for each of the 22 household budget subcategories.

To calculate the cost of living differential for each sample block and community, expenditure weights for each subcategory are multiplied by the price differential for each subcategory to produce category cost differentials. These category cost differentials are then added to produce a single cost of living differential.

It is important to note that, unlike other categories, the housing category differential was not calculated from its subcategory (shelter and utilities) expenditure weights and price differentials. Therefore, weights and price

differentials for shelter and utilities reported in the following tables, while valid, cannot be used to calculate the overall housing category differential. This is because housing differentials were calculated as the ratio of total housing costs in the sample block to total housing costs in Anchorage. Differences in the price of rent, home heating oil, electricity, property taxes, insurance, etc., between sample blocks and Anchorage are reflected in that ratio. A detailed discussion of the housing cost methodology is provided in Section IV.

Anchorage

Sample block communities: Municipality of Anchorage

Description: Largest Alaska city and economy; most comprehensive availability of goods and services

2007 Population: 283,823

2008 State employee count: 5,940

Table III-4: Anchorage

Expenditure Category	Expenditure Weights	Price Differential	Cost of Living Differential
Housing	**0.33**	1.00	**0.33**
Shelter	0.27	1.00	
Utilities	0.06	1.00	
Food	**0.17**	**1.00**	**0.17**
Meats, poultry and fish	0.05	1.00	
Cereals and breads	0.02	1.00	
Dairy products	0.02	1.00	
Fruits and vegetables	0.03	1.00	
Other food items	0.03	1.00	
Food away from home	0.03	1.00	
Transportation	**0.15**	**1.00**	**0.15**
Fuel	0.05	1.00	
Car/truck ownership	0.03	1.00	
Other vehicle ownership	0.00	1.00	
Auto insurance	0.02	1.00	
Vehicle maintenance	0.02	1.00	
Interstate air travel	0.02	1.00	
In-state air/ferry travel	0.00	1.00	
Clothing	**0.02**	**1.00**	**0.02**
Medical	**0.05**	**1.00**	**0.05**
Medical services	0.02	1.00	
Medical insurance	0.03	1.00	
Other	**0.29**	**1.00**	**0.29**
Household furnishings/appliances	0.09	1.00	
Communication	0.04	1.00	
Recreation and education	0.09	1.00	
Personal care and other	0.06	1.00	
GEOGRAPHIC COST OF LIVING DIFFERENTIAL			**1.00**

Note: Columns may not add to totals/subtotals due to rounding. Expenditure weights reported as 0.00 indicate weights of less than 0.5 percent of the household budget, but not zero. The housing category differential is calculated by a procedure described in Section IV and is not the simple sum of subcategory products.

Fairbanks

Sample block communities: Fairbanks North Star Borough, including City of Fairbanks, North Pole, and surrounding area

Description: Alaska's second largest economy

2007 Population: 90,963

2008 State employee count: 1,615

Table III-5: Fairbanks

Expenditure Category	Expenditure Weights	Price Differential	Cost of Living Differential
Housing	**0.31**	**0.98**	**0.30**
Shelter	0.22	0.84

Seattle

The 2008 Alaska GDS methodology does not include household surveying or retail price surveying in Seattle. This is due in part to the cost and complexity of surveying in such a large urban area, which would be vastly out of proportion to the number of Alaska state employees who reside there (five). Another reason is that other data already exists for estimating cost of living differentials between Anchorage and Seattle. The ACCRA Cost of Living Index, though not reliable for measuring cost of living differences within Alaska, provides data useful for developing a Seattle differential.

ACCRA COLI data are sometimes supplemented by U.S. Housing and Urban Development Fair Market Rent (FMR) data, particularly when there is a need to extrapolate cost of living estimates beyond the urban centers covered in ACCRA. For example, the State of Washington Office of Financial Management employed this method in a recent study of Higher Education Per-Student Funding Comparisons (RCW 28B.15.068). Trial calculations by the Alaska GDS team comparing FMR and ACCRA results determined that ACCRA differentials are acceptable for comparing the Anchorage COLI with Seattle and Washington D.C.

Overview of the ACCRA Cost of Living Index

The Council for Community and Economic Research (C2ER), a nonprofit organization, develops the ACCRA COLI. ACCRA stands for American Chamber of Commerce Researchers Association, the organization that originated the survey. The index is used for many purposes, including as a guide for comparing managerial compensation among approximately 300 urban areas across the United States. The ACCRA COLI has been published continuously since 1968. C2ER sells the results of the ACCRA COLI in various formats to subscribers and individual purchasers.

Comparison of ACCRA and Alaska GDS

Market Basket

ACCRA's market basket is composed of 57 items representing six categories (groceries, housing, utilities, transportation, health care, and miscellaneous), compared to 200 items representing 22 categories in the Alaska GDS. As with the Alaska GDS, individual items in the ACCRA market basket are chosen to represent the collective prices of groups of goods and services. For example, the price of whole frying chicken is used to represent prices for all poultry products. If the price of whole fryers is 10 percent higher in one city than another, it is assumed that the price of all poultry products is also, on average, 10 percent higher.

Consumption Weights

For ACCRA, the consumption data used to weight each category in the composite index, as well as the consumption weights within each category, comes from the U.S. Bureau of Labor Statistics (BLS) 2006 Consumer Expenditure Survey. The consumption patterns used for ACCRA are those of the upper quintile of household income and of households where the reference person has a professional or managerial occupation.

For the Alaska GDS, consumption weights are developed from the Household Consumer Survey and represent the average consumption for all consumers in each community or sample block.

Data Collection

Consumer Expenditures

As noted, consumption data for ACCRA comes from a different source than for Alaska GDS. However, the two sources use similar approaches. The ACCRA source, the BLS Consumer Expenditure Survey, is widely vetted and generally regarded as methodologically sound. The Alaska GDS Household Consumption Survey methodology is modeled, to an extent, on the BLS method.

Retail Prices

There is a significant difference between Alaska GDS and ACCRA in the way retail pricing data is collected and reported. Alaska GDS data is collected by trained survey teams operating either by telephone or on location in the target communities. ACCRA price data is collected by local organizations in each of the 300 or so locations. The organizations volunteer for the task and multiple volunteers operate in each of the locations to amass the data. Data is collected quarterly and averaged; however, not all locations are able to provide data every quarter. Where quarterly data is missing, C2ER estimates prices as needed to develop average annual prices. ACCRA price data excludes taxes.

This C2ER process is not as standardized or controlled as the method used by Alaska GDS, and neither survey is based on random (statistical) sampling. Both the Alaska GDS and ACCRA obtain price data from "judgment" samples. For the Alaska GDS, the retail outlets surveyed are selected strategically to provide what the research team believes is a representation of the outlets where most people shop. C2ER depends on volunteer businesses to provide price information, and therefore has somewhat less control over sample selection. Neither method produces price estimates for which statistical confidence intervals may be calculated.

Composition and Weighting of the ACCRA Market Basket

Groceries

- Category weight: 12.49 percent
- Contains 26 items.

Housing

- Category weight: 29.84 percent
- Housing index is equal to the weighted average of the mortgage payment (81.95 percent), computed as the interest rate times the house purchase price, and the monthly apartment rent (18.05 percent).

- Apartment rent for childless professional and managerial couple – left to the discretion of the surveyor. Apartment sizes are determined to be between 850 and 1,050 square feet. ACCRA does not control for quality of the apartment (HUD, however, does control for quality).
- The price of a new house, 2,400 square feet, 3 to 4 bedrooms, 2 full bathrooms, and attached 2-car garage and several amenities.

- Walden (1998)[1] suggests comparing ACCRA apartment rents with HUD's Fair Market Rent (FMR). However, HUD's FMR are estimates rather than observed prices. The ACCRA data is still superior.

Utilities

- Category weight: 9.94 percent
- Based on the total cost (not per unit cost) of three items: electricity, other home energy, and telephone service.
- Energy consumption is based on a weather model and primary energy use in homes of the area.

Transportation

- Category weight: 10.73 percent
- Based on the cost of tire balancing and gasoline.

Health Care

- Category weight: 4.07 percent
- Includes: optometrist visit, doctor visit (AMA procedure 99213), dentist visit, prescription and non-prescription medications.

Miscellaneous

- Category weight: 32.93 percent
- Includes a wide variety of goods and services including eating out, personal care, apparel, household operations, reading, entertainment, and alcohol.

Approach and Results

To develop geographic differentials for Seattle, the study team relied on the most recent ACCRA data on average prices for all of the 57 items surveyed by C2ER as of the third quarter of 2008. The data includes the following federal Office of Management and Budget (OMB) designated areas: *Anchorage AK Metro* and *Seattle-Bellevue-Everett WA Metro Div.*

[1] Walden, M. (1998). Geographic Variation in Consumer Prices: Implications for Local Price Indices. The Journal of Consumer Affairs, Volume 32, Issue 2.

The ACCRA Index average between third quarter 2008 and third quarter 2007 for the areas above are provided in the following table.

Table III-34: ACCRA Seattle and Washington, D.C. Cost Differentials, by Component

Urban Area	Composite Index	Grocery Items	Housing	Utilities	Transportation	Health Care	Misc. Goods and Services
Anchorage	**126.5**	139.7	138.0	101.2	106.3	130.1	124.7
Seattle	**123.6**	116.5	152.7	86.9	109.7	120.9	115.9

Translating the ACCRA Index differentials into Alaska GDS differentials (with Anchorage as the reference location) results in composite differentials of 0.98 for Seattle.

Table III-35: Seattle and Washington, D.C. Cost Differentials

Urban Area	Composite Index (US Average)	Index with Anchorage Base
Anchorage	126.5	1.0
Seattle	123.6	0.98

Alternative Approaches

Runzheimer International produces Runzheimer's Plan of Living Cost Standards, a national cost of living index focused on lower income households. That index suggests that the standard of living that $32,000 would buy for a family of four in a "standard" U.S. city would cost $41,522 in Anchorage and $49,382 in Seattle. This suggests a Seattle differential relative to Anchorage of 1.19. This data may have limited application for this study, given its focus on low-income households.

Another approach to calculating a Seattle cost of living differential uses the differential for Seattle measured in the 1985 study and updates that value with the Consumer Price Index. The 1985 study measured a cost of living differential of 0.86 (relative to Anchorage's base value of 1.0). Since 1985, inflation has increased the cost of living in Seattle by a factor of 2.13 (or by 113 percent), based on the Consumer Price Index, and by a factor of 1.77 (77 percent) in Anchorage. Multiplying Seattle's 1985 differential of 0.86 by 2.13 results in an inflation-adjusted value of 1.83. Multiplying Anchorage's 1985 differential of 1.0 by 1.77 results in a value of 1.77, indicating a differential of 1.03 (1.83 divided by 1.77). This finding generally supports the differential developed using ACCRA data analysis, which indicates the cost of living in Seattle and Anchorage are now about equal, unlike 24 years ago when Anchorage was significantly more expensive than Seattle.

Section IV: Methods and Analysis

Introduction

Governments, businesses, and social scientists use estimates of consumer prices and cost of living in a wide variety of applications, including inequality studies, wage comparisons and poverty assessments. These estimates address two basic cost parameters: changes over time and differences from place to place. The federal Consumer Price Index (CPI), the most extensive price-measurement program in the U.S., is an estimate of inflation. It measures changes in the cost of a specified "market basket" of goods over time in 87 urban areas based on analysis of approximately 80,000 individual prices collected monthly from more than 21,000 retail outlets. One of the best-known geographic differential methodologies is the ACCRA (American Chamber of Commerce Researchers Association) Cost of Living Index. ACCRA measures differences in cost of living among roughly 400 urban and suburban areas throughout the U.S.

Because the CPI and geographic-differentials research help determine how billions of dollars in public and private services, salaries and other investments are allocated, the process of critiquing and refining these methodologies is ongoing. Alaska, however, remains something of a special case. Whereas many of methodological adjustments have been designed to address expanding consumer choices, much consumer behavior in Alaska is driven, instead, by an absence of choices. Things regarded as common necessities in parts of Alaska, a car for example, either can't be had or are of limited use in other communities. Such radical differences in local needs and options affect both the cost and quality of life.

This section of the report discusses some of the methodological considerations that have been addressed in the past few years in the consumer-price and cost of living literature and how they relate, or fail to relate, to Alaska.

Designing Consumer-Price and Cost of Living Studies

A consumer-price study measures changes in the prices of identical products over time or from place to place. A cost of living study is more complex. It measures changes in the cost of a defined standard of living over time or from place to place.[1] "Standard of living" means "identical utility" (in the economic sense) or, more generally, an identical level of well-being. This means that, while consumer price studies are concerned only with variations in the price of goods and services, cost of living studies include analysis of household consumption patterns as well as consumer prices. The CPI methodology, while not aspiring to measure true cost of living, combines methods to track pure price inflation with methods for consumption weighting to produce a more accurate estimate of the impact of inflation on real families.

Consumer-price and cost of living studies share a number of challenges, including the following:

- For various reasons, different stores in the same community may charge different prices for the same goods. Both consumer-price and cost of living studies must find ways of determining how much to weight prices from one store compared to prices from another.
- Changes in product design, technology and availability mean that the set of goods and services to be compared is not identical over time and often varies from place to place as well. In Alaska, for example, sales of new outboard motors have evolved over the past few years from predominantly two-stroke engines to predominantly four-stroke engines (with associated changes in price and performance).

Regional cost of living studies must confront special challenges, including the following:

- Consumer spending is affected not just by market prices and consumer preferences, but by non-market goods such as public infrastructure, climatic conditions, the crime rate, etc. For example, the outboard engines described above are virtual necessities in many parts of the state and virtually irrelevant in others. This variability affects both price and demand.
- Some sectors of consumer spending vary significantly from place to place, or are so complex that it becomes difficult to identify comparable products and prices. One example is medical care, where prices vary depending on what types of services and third-party payers are available.

In Alaska, differences in climate, transportation, service availability, and other factors can be so extreme as to make it virtually impossible to define key components of a standard of living in diverse communities. An example is housing. In most communities in rural Alaska, building and maintaining a house that is average for Anchorage would be prohibitively expensive for all but the wealthiest families. The Alaska GDS approach developed to address this and other challenges is described later in this section.

[1] Hoffmeister, Onno. "Cost of Living and Real Income Differentials in Russia's Provinces: Evidence from the Russia Longitudinal Monitoring Survey," Institute for Eastern European Studies, Berlin, 2003.

Developing Cost of Living Indexes

Like many economic measures, cost-of-living indexes must be interpreted within a set of assumptions that limits their application. If all consumers had the same preferences and income, price differentials would be wholly sufficient. Since preferences and income are affected by demographics, location, ethnicity, technology, access to information, and many other factors, even the most sophisticated cost of living methodologies, such as the CPI, fall short of pinpoint accuracy. Following is a brief discussion of how the field has tried to address three fundamental components of cost of living studies:

- Consumption weights
- Sampling
- Market basket

Consumption Weights

Price differentials, alone, can be a useful indicator of the cost of living. It is more accurate, however, to "weight" prices using information about consumption: what people actually buy. Consumption is affected by price, but also by need and preference. All three factors (price, need, and preference) vary from place to place and over time. Determining which goods, services, and prices are most relevant and important — and therefore deserve the most weight — is a key part of cost-of-living methodologies.

Two of the most common indexes for comparing cost of living are known as the Laspeyres Index and the Paasche Index. The two methods differ principally in what set of circumstances is used for the base calculation and what is used as the comparison. Each method leads to a slightly different mathematical result. A third method computes a geometric mean of the Laspeyres and Paasche Indexes. This is also known as the Fisher Ideal index.[2]

In practice, most cost of living studies use the Laspeyres Index because it relies on consumption patterns from the base region or base time period. Typically, base consumption patterns are known or represent the least cost to obtain. The Paasche Index requires consumption patterns from each new comparison region or time period, and the Fisher Index requires both. This means that, the Paasche and Fisher indexes require new consumption data for each new computation, while the Laspeyres Index may be computed for multiple time periods or locations using a single set of (base) consumption data.

Sampling

The ideal data for establishing geographic cost of living differentials would be a record of all household purchases (including all prices and all quantities) for all households in all regions of interest. It is clearly impractical to obtain data for all households, nor is it practical to obtain all prices and quantities. Cost of living indexes address these data shortcomings by sampling in a variety of ways, and an extensive body of literature has developed that evaluates the pros and cons of different methods.[3] All the sampling methods must address three basic parameters for both the base region and comparison region:

[2] Ibid. pages 23-24.

[3] Many of the basic issues involved in constructing and updating price indexes are summarized in the book, *At What Price*, by the National Research Council's Panel on Conceptual, Measurement, and Other Statistical Issues in Developing Cost-of-Living Indexes (2002, National Academy Press).

1. How does a representative household distribute its expenditures across all possible purchases?

2. What subset of items provides the best proxy for the range of actual items purchased?

3. What subset of local prices provides the best proxy for the range actual prices paid?

Typical methodologies include data collection from a sample of households (regarding purchases) and a sample of retail outlets (regarding prices and sales). In all cases, sampling plans must address the weighting considerations described above.

Market Basket

The concept of pricing comparable market baskets to measure price differences from time to time or place to place is deceptively simple. In practice, it is impossible to price a broad enough set of precisely the same items to obtain a wholly accurate comparison of overall living costs. Following is a brief discussion of some of the more material adjustments that may need to be considered in market basket methodologies.

SUBSTITUTION

Substitution refers to the fact that, over time or from place to place, consumers may purchase certain goods and services in lieu of others. For example, Delicious apples may substitute for Gala apples depending on season or location. This means that it is seldom possible to recreate in the comparison time period or region precisely the same market basket as was priced in the base. As a result, the BLS began using geometric instead of arithmetic averaging to combine individual prices in approximately 60 percent of the market basket strata used in the CPI.[4]

Substitution occurs over time, but is even more of a challenge from place to place. There are more substitution possibilities in urban areas than in rural areas.[5] Also, Curran et al (2006) argued that the set of choices available to different consumers is not the same. For example, wealthier households can afford to exercise greater choice not just because they can spend more, but because they are more mobile. Low-income households cannot respond as quickly to geographic price differences because they tend to have less money to cover moving costs, less information about work opportunities, less human capital (for example, less developed networks), and generally less capacity to explore options.

QUALITY

The effect of quality differences in similar goods and services is related to that of substitution. When two items are similar but one is of higher quality, the price premium for that quality reflects delivery of greater benefits to the consumer. If the benefits realized by the consumer are different, then the increase in price cannot, at least entirely, be attributed to inflation or an increased cost of living. Quality of life also increases as a result of the new benefits. For example, differences in the cost of cable television service may reflect increases in the amount of and quality of programming, high-definition picture, pay-per-view options, etc.

Choice of Retail Outlet

Cost-of-living methodologies must try to estimate the effects on pricing of the types of retail outlets where people actually shop. To the extent possible, sample prices should be weighted to reflect the proportion of consumers who shop at, for example, box stores (lower prices) versus full-service specialty stores (higher prices). Ideally, a COLI methodology should also account for the decline in "utility" (increase in cost of living) for consumers who prefer to shop in a full-service outlet, but who have found those stores driven out of business by the new outlets. However, the BLS has found the latter type of adjustment to be impractical and of minor impact.[6]

Aggregating Data from Individual Households

Every household faces a unique cost of living (and, arguably, a unique rate of inflation). That is, no two households make precisely the same set of purchases, and, in theory, one could create an individual cost of living index for each household.[7] To produce an aggregated index requires averaging across households, and this may be done either with a simple average (equal weight to each household) or a weighted average (with households that spend more given more weight. The former is known as a "democratic" index, the latter as "plutocratic."

The practical limitation to either democratic or plutocratic aggregation across all households is simply the task of collecting individual data from all households. Schultze and Mackie suggest that the BLS consider an intermediate approach for the CPI, namely aggregating sub-indexes for defined groups, such as the poor and the elderly. They also point out, however, that there is not yet conclusive evidence such groups experience significantly different inflation rates over extended time periods.

Housing

Housing is a heterogeneous good. That means there is no single measure that represents the quantity consumed. Instead, observed market prices more accurately represent expenditures on a bundle of diverse housing attributes such as age of structure, climate, location (for example, roaded vs. non-roaded, distance to markets, or distance to green space), quality (of windows, toilet, kitchen, water, laundry, etc.), size, cultural attributes (traditional vs. modern building methods), etc. Housing is also a matter of consumer choice and income. Ravallion and van de Walle use a hedonic rent model to deal with some of the problems posed by heterogeneity.[8] In practice, however, a hedonic housing-cost-index would be time-intensive, difficult to calculate, and expensive.

Unlike other consumer goods, housing is not traded spatially (cannot be moved from place to place), which can greatly amplify price differentials.

Medical Care

Schultze and Mackie describe the issues associated with developing the medical care component of the CPI as more difficult than those of any other component. Technological progress and institutional evolution result in changing quality of care. Further complexity is introduced by the fact that many factors besides type and

[6] Schultze and Mackie, op. cit. page 251.
[7] "The Boskin Commission Report: Toward a More Accurate Measure of the Cost of Living," Report to the Senate Finance Committee, 1996:5.
[8] Hedonic pricing varies according to the qualities or attributes associated with individual purchases.

quality of care determine an individual's health. This leads to the question whether cost-of-living measures should be associated with inputs (a prescription, a physician visit, or a day in the hospital) or outputs, namely changes in health. Other questions abound, for example how an index should treat a relatively inexpensive condition that many people face, such as conjunctivitis, versus a more rare, but much more expensive condition such as heart disease. Finally, the issues are compounded by the different ways in which consumers pay for medical care, including variations in insurance coverage and cost and who pays the premiums. Even for a study of the scale of the CPI, substantial uncertainty exists about the precision of current methods. However, recommendations in Schultze and Mackie for potential improvements would require extensive analysis of medical outcomes under multiple treatment scenarios.[9]

Differentials Research in Alaska

As noted above, computing regional cost of living differentials requires generalizing about a variety of communities using sample data from households and retail outlets. The Alaska GDS methodology includes many design elements to address the special challenges of conducting this research in Alaska to the extent practical. However, extraordinary time and resources would be needed to overcome all of them completely, for example:

- The challenge of obtaining price data on site in far-flung, isolated communities.
- The challenge of supplementing telephone survey data about household expenditures with more detailed information from, for example, expenditure diaries, and lengthy personal interviews. Both of these supplementary methods are employed in CPI research.
- The fact that many items considered essential in some communities are either not available or not needed in other communities, due to differences in geography and lifestyle.
- The large impact that transportation, shipping, climate, and other factors can have on prices and consumption in specific areas of the state. For example, recent research by the Institute for Social and Economic Research (ISER) demonstrated that shipping anomalies, storage capacity, and other factors can result in large differences in fuel costs between communities that are located relatively close to one another.

[9] Schultze and Mackie, op. cit. pages 188 – 190.

Alaska GDS 2008 Methodology

Introduction

The methodology employed in the study involved two primary research tasks, a Household Consumption Survey (HCS) and a Retail Price Survey (RPS). The HCS provided data on the relative importance (percentage) of various components of the household budget and how the importance of those components varies from community to community. (Household budget components include such broad categories as housing, food, transportation, etc., each of which is composed of several subcategories, and each subcategory is composed of numerous market basket items.) The RPS provided data on how prices for various items in the household budget differ between communities, or collections of communities, and Anchorage. It is the blend of HCS and RPS data that produces the geographic cost differential. This concept is illustrated in the following table.

Table IV-1: Simplified Geographic Cost Differential Model

	Household Expenditure Category Weight Community "A" (Data from HCS)	Price Differential Community "A" vs. Anchorage (Data from RPS)	Community "A" Cost of Living Differential Factor
Housing	35%	1.35	0.47
Food	20	1.45	0.29
Transportation	15	1.40	0.21
Clothes	5	1.20	0.06
All other	25	1.10	0.28
Total budget	100%		
Community "A" Cost of Living Differential			1.31

Household Consumption Survey

The HCS included 2,547 surveys with randomly selected households located in 74 communities throughout Alaska. Sample blocks were defined for purposes of sample distribution and to ensure sufficient sample sizes in various regions and among communities with common demographic and geographic characteristics. The largest communities (Anchorage, Fairbanks and Juneau) and most populous boroughs (Matanuska-Susitna and Kenai Peninsula) formed their own sample blocks. Smaller communities, similar in terms of location and/or size, were grouped together into sample blocks, and household surveys were distributed within those block in proportion to each community's population.

Alaska's largest population centers were allocated approximately 1,500 of the 2,547 surveys. Anchorage, Fairbanks and Juneau had sample sizes of 300 surveys each. Mat-Su, the Kenai Peninsula Borough, and the Ketchikan/Sitka areas each had 200 surveys. Of the 200 Mat-Su surveys, 13 Talkeetna surveys were allocated to a different sample block, resulting in an actual sample size of 187 for Mat-Su excluding Talkeetna.

Table IV-2: Household Consumption Survey Sample Sizes

Sample Block	Sample Size
1: Anchorage	300
2: Fairbanks	300

5: Delta Junction/Tok Region	76
6: Roadless Interior	51
7: Juneau	300
8: Ketchikan/Sitka	200
9: Southeast Mid-Size Communities	104
10: Southeast Small Communities	52
11: Mat-Su	187
12: Kenai Peninsula	200
13: Prince William Sound	100
14: Kodiak	104
15: Arctic Region	153
16: Bethel/Dillingham	151
17: Aleutian Region	77
18: Southwest Small Communities	77

The 50-question HCS collected data on household spending related to housing (including mortgage and rent payment, property taxes, insurance and all utilities), food, transportation, health care, and clothing. The survey also collected data on household size and income. The survey was fielded during October and November 2008.

HCS data management was handled in the statistical software package SPSS. An extensive data cleaning process removed outlier or other irregular values from the analysis. The data management process and SPSS syntax are described in detail in the Statistical Analysis section of this report.

Perhaps the most important data management tool employed was weighting the HCS data so that it represented the demographics of communities more accurately than through a strictly random sample telephone survey data collection effort. For example, telephone survey research is likely to produce disproportionate representation of older, higher income, home-owning households. Younger households are typically more active and therefore less likely to be at home when a surveyor calls. As another example of potential age bias, approximately 12 to 13 percent of Alaska households have only cell phone service, with no conventional land-line phone service. These households (typically urban) would not be captured in a random sample survey (because lists of cell phone numbers are not available for purposes of survey research). These cell-phone-only households are likely to be younger, less likely to own a home, and probably somewhat lower-income than their older neighbors.

To adjust for these potential biases in the survey data, community-level data was weighted using 2000 census information on the proportion of homeowners versus renters. For example, 77 percent of the Anchorage household survey sample were homeowners, while 23 percent were renters. However, the 2000 census found that 60 percent of the occupied housing units in Anchorage are owner-occupied and 40 percent

renter-occupied. (More recently, the 2006 American Community Survey found a 61 percent home ownership rate in Anchorage.) Therefore Anchorage survey data was weighted so that household spending patterns of owners and renters were accurately reflected in the analysis.

Retail Price Survey

The Retail Price Survey (RPS) included 634 retail outlets in 58 communities throughout Alaska, plus numerous providers of various services, including health care, transportation, communications, insurance, and others. A market basket of approximately 200 goods and services was priced in each community where they were available. Data was collected in person and by telephone in the communities listed in the following table.

Multiple retail outlets were surveyed for each category of retail items. Using groceries as an example, eight stores were surveyed in Anchorage, six in Juneau and six in Fairbanks. In other communities, depending on

the size of the community (and number of local retail outlets), as many as four grocery outlets were surveyed, though in the smallest communities, the survey was necessarily limited to one or two local stores.

All RPS pricing data was compiled and managed in Excel. This data also underwent an extensive cleaning process in which outlier values were removed prior to calculating average prices among specific items. Average prices for a particular item in each community were compared to the average price for the same item in Anchorage to produce a price differential. These individual item price differentials were then averaged with price differentials for other items in the same subcategory of items. For example, the price differential for hot dogs was averaged with the price differential for boneless chicken breasts and several other meat products to determine a subcategory "meats, poultry and fish" average-price differential.

When communities were grouped together to produce sample block or district differentials, all pricing data was weighted according to community population. Where applicable, sales taxes were applied to all retail items. Detailed information regarding the RPS methodology is provided in the Data Collection Methodology section.

Methods and Analysis by Budget Component

Housing

Calculation of housing cost differentials differs from other components of the household budget in that all supporting data was derived from the HCS. Extensive data related to housing costs was collected, including electric power costs, home heating oil costs, etc., but this information was used only as a tool to cross-reference the results of the HCS, which collected detailed housing cost data. In the HCS, households were asked:

- If they own or rent their home.
- The amount of their monthly mortgage or rental payment.
- If their mortgage payment includes property taxes and insurance, and if not, the amount of those annual payments.
- The size of their home, in terms of square feet and number of bedrooms.
- Total monthly or annual payments for electricity, heating oil, natural gas, propane, water, sewer, and garbage disposal.

With this information, sample block and community-level averages were calculated for monthly shelter costs, including mortgage (with property taxes and insurance, when applicable) and rent, and total monthly utilities costs. Community and sample block averages are weighted according to the percentage of owners and renters.

Average monthly shelter costs, monthly heat/utilities costs, and total monthly housing costs are provided in the following table for each sample block and for selected individual communities. Table IV-4 also provides the average total cost per square foot of living space for each sample block and community.

HCS sample sizes are also provided for each sample block and community. Readers should refer to the HCS methodology discussion in Section V for information on the margin of error associated with various sample sizes.

Table IV-4: Average Total Monthly Housing Costs and Average Monthly Cost Per Square Foot

	Sample Block/Community	HCS Sample Size	Shelter Cost	Heat/ Utilities Cost	Total Housing Cost
Sample Blocks					
1	Anchorage	300	$1,303	$242	$1,545

Communities					
	Barrow	66	$1,022	$295	$1,317
	Bethel	106	1,073	667	1,740
	Cordova	37	733	497	1,230
	Dillingham	45	805	646	1,450
	Homer	26	799	449	1,248
	Ketchikan	107	1,044	391	1,435
	Kotzebue	44	815	536	1,351
	Nome	48	1,049	550	1,599
	Petersburg	30	815	354	1,169
	Sitka	80	1,015	387	1,402
	Unalaska/Dutch Harbor	51	1,235	597	1,832
	Valdez	60	995	555	1,549

Total monthly housing costs were used to calculate the percentage of the total household budget that is spent on housing. To calculate the contribution of housing costs to the overall sample block/community geographic cost differential, housing's share of the total household budget was multiplied by the housing cost differential.

The housing cost differential was calculated as:

(Sample block or community monthly housing costs per square foot) /
(Anchorage monthly housing costs per square foot) =
Sample block or community housing cost differential

For example, the average per-square-foot cost of housing in Anchorage was measured at $1.09. The average cost in Juneau was $1.24. Dividing the Juneau average cost by the Anchorage average cost produced a cost differential of 1.14. The calculations are the same for an area with lower housing costs than Anchorage. For example, the average cost of housing in the Mat-Su Borough was measured at $0.86 per square foot. Dividing that figure by the Anchorage average cost produced a cost differential of 0.79.

Table IV-5: Average Monthly Housing Costs Per Square Foot and Housing Cost Differential

	Sample Block/Community	Ave. Housing Square Foot	Average Cost per Square Foot	Housing Cost Differential
Sample Blocks				
1	Anchorage	1,651	$1.09	1.00
2	Fairbanks	1,597	1.06	0.98
3	Parks/Elliott/Steese Highways	1,444	0.81	0.74
4	Glennallen Region	1,511	0.79	0.72
5	Delta Junction/Tok Region	1,614	0.99	0.91
6	Roadless Interior	1,102	0.88	0.81
7	Juneau	1,493	1.24	1.14
8	Ketchikan/Sitka	1,581	1.10	1.01
9	Southeast Mid-Size Communities	1,609	0.80	0.74
10	Southeast Small Communities	1,558	0.73	0.67
11	Mat-Su	1,726	0.86	0.79
12	Kenai Peninsula	1,561	0.85	0.78
13	Prince William Sound	1,725	0.98	0.90
14	Kodiak	1,594	1.12	1.03
15	Arctic Region	1,208	1.32	1.22
16	Bethel/Dillingham	1,276	1.68	1.54
17	Aleutian Region	1,296	1.54	1.42
18	Southwest Small Communities	1,327	0.82	0.75
Communities				
	Barrow	1,360	$1.17	1.08
	Bethel	1,242	1.88	1.73
	Cordova	1,741	0.87	0.80
	Dillingham	1,357	1.16	1.06
	Homer	1,673	0.86	0.79
	Ketchikan	1,639	0.97	0.89
	Kotzebue	1,053	1.55	1.42
	Nome	1,200	1.34	1.24
	Petersburg	1,673	0.80	0.74
	Sitka	1,496	1.27	1.17
	Unalaska/Dutch Harbor	1,182	1.80	1.65
	Valdez	1,738	1.06	0.97

Note: The average cost-per-square foot data presented in this table cannot be generated from other data provided in this and the preceding tables. In the housing cost differential model, all of the various calculations are performed separately for homeowners and renters until a weighted average cost per square foot is calculated.

A range of housing-related data was collected to support the analysis of housing cost differentials, including electric power rates, home heating fuel prices, and natural gas prices. This information is included in the appendices.

Food

Calculation of the food portion of geographic cost differentials involved collecting data on weekly or monthly household food expenditures in seven subcategories and retail price data for a market basket of 80 individual food items. These two sets of data were modeled to produce cost differentials in six food subcategories:

- Meats, poultry, and fish
- Cereals and breads
- Dairy products
- Fruits and vegetables
- Other food items
- Food away from home.

The HCS queried households on their weekly spending in the following food categories:

- Meats, poultry, and fish
- Cereals and breads
- Dairy products
- Fruits and vegetables
- Soups, frozen meals, and snacks
- Nonalcoholic beverages other than milk.

The HCS also collected data on households' monthly spending at restaurants and on take-out food. HCS data was not collected on household expenditures on alcohol or tobacco. The following table provides total monthly spending on food for each sample block and selected communities. Total monthly food costs range from a low of approximately $600 to a high of approximately $1,300. These costs reflect the price of food in each sample block or community, as well as average household incomes (higher-income households are likely to spend more on food than lower income households, all other factors being equal).

See table next page

	Valdez	832	128	960

The 80-item RPS food market basket was priced in 634 different retail outlets throughout the state, with a combination of in-person and telephone price data collection. A listing of items in the food market basket is provided in the Appendix. Prices were collected for a combination of specific brand items and for most popular items (as indicated by item placement and allocation of self-space). Prices were collected from two to as many as eight stores in each community, depending on the population of the community.

The following steps were taken to develop geographic price differentials for each of the six food subcategories:

- Collect price data from multiple stores for each of the 80 items in the market basket.
- Clean data to ensure comparability of prices for specific items. In some instances, price data for specific items was excluded from the analysis if the price was an obvious outlier (the price was far below or far above prices for the same item in other stores in that community). Sale prices were not included in the sample.
- Calculate a weighted average price for each item, with prices weighted according to the results of question 25 in the HCS, which asked respondents where they did a majority of their grocery shopping. This step was necessary to ensure that the price of an item at a small convenience store did not have the same affect on average pricing as does the price of the same item from a store where many more people shop and the item is sold in much greater quantities.
- Apply sales tax in locations where such taxes are levied. This increased the price of each item by the sales tax rate and produced the actual price paid by the consumer.
- Calculate price differentials for each item by dividing each item's weighted average price by the weighted average price of the same item in Anchorage.
- Calculate the average price differential for all items in each subcategory.
- Minimize the potential for an unrepresentative price or set of prices for a particular item to skew the overall differential for a food subcategory. This was accomplished by removing the highest and lowest average prices for specific food items from the calculation of the average price differential for each subcategory. In a majority of cases (but not all), the average differential without the high and low weighted average prices was nearly identical to the average differential including all items in the subcategory.

Summary data for food cost geographic differentials are presented in the following table. The table presents the total expenditure weight for the food portion of the household budget (ranging between 14 percent and 20 percent) and the overall average price differential for all food items (ranging from 1.00 to 1.84).

See table next page

	Petersburg	0.14	1.25
	Sitka	0.17	1.15
	Unalaska/Dutch Harbor	0.17	1.43
	Valdez	0.18	1.26

Transportation

The transportation category includes seven subcategories:

- Fuel for all vehicles
- Car/truck ownership
- All other vehicle ownership
- Auto insurance
- Vehicle maintenance
- Interstate air travel
- Instate air/ferry travel

In the HCS, households were asked for:

- Monthly spending on fuel for all vehicles
- Monthly payments for vehicles of all types (by type of vehicle)
- Total spending in the last 12 months on maintenance for all vehicles
- Total spending in the last 12 months on insurance for all vehicles
- Total spending in the last 12 months on plane tickets for destinations outside of Alaska, not including business travel
- Total spending in the last 12 months on plane tickets for destinations within Alaska, not including business travel. (Average total annual household spending on ferry travel was compiled directly from AMHS data.)

Total vehicle expense (including vehicle payments on loans, fuel, maintenance, and insurance) ranged from a low of $424 a month to a high of $959. A variety of factors influence vehicle-related spending, including the extent of road infrastructure in and around each community, cost of fuel, geographic setting (with boats more prevalent in some areas, and snowmachines and four-wheelers more prevalent in others), average household income (with higher income households likely to own more vehicles), and other factors. It is important to note that record high fuel prices in 2008 are reflected in this data and that differences in costs between urban and rural areas are likely exaggerated relative to previous years (or future years) when prices are more moderate.

See table next page

Annual household expenditures on air and ferry travel ranged from a low of about $800 to a high of nearly $6,000. Logically, households in hub communities spend less on in-state travel than remote communities. Again, households in communities with higher average incomes spend more on travel, especially out-of-state travel, than households with lower average incomes. Areas reporting very low in-state travel spending include communities on the Southcentral and Interior Alaska highway network. Households on the highway network

probably travel to hub communities more often than households off the highway network, but their travel costs are captured in the vehicle expense data presented above.

The RPS produced the following transportation-related price data, which was used to calculate cost differentials in each of the six transportation sub-categories:

- Regular unleaded gasoline and diesel fuel from service stations in 80 communities
- Purchase prices for a new truck, passenger car, snow machine, and four-wheeler
- Cost of an oil and filter change at a service station and the purchase price of motor oil, antifreeze, and a car battery

- Six-month premium for auto insurance (estimates from GEICO, Progressive and Allstate)
- Cost of a round-trip flight from each community to Seattle, including in-state air travel to a hub airport, if necessary
- Cost of a round-trip flight from each community to the nearest major hub (Anchorage, Fairbanks or Juneau). Price differentials for Juneau and Fairbanks were set at 1.0, equal to that of Anchorage.

Summary data for transportation cost geographic differentials are presented in the following table. The table presents the total expenditure weight for the transportation portion of the household budget (ranging between 12 percent and 24 percent) and the overall average price differential for all transportation goods and services (ranging from 1.00 to 2.35).

Clothing

The HCS collected data on average monthly household spending on clothing, and the percentage spent locally versus outside the local area (including Internet and catalogue purchases). Clothing expenditure data for sample blocks and selected communities is presented in the following table. Average annual expenditures on clothing ranged from approximately $700 to more than $2,000.

Table IV-11: Clothing Expenditures, Percent Local and Nonlocal

Sample Block/Community	Average Annual Expenditures	Percent Local Purchases	Percent Nonlocal Purchases
Sample Blocks			
1 Anchorage	$973	77%	23%

Valdez	1,128	22	78

The RPS included 23 clothing items. Not all items were available in all communities, but all items are available to all residents through mail order or Internet purchases. In cases where items were not available locally, a mail order or Internet price was identified and appropriate shipping costs applied to that price. Depending on the retailer, shipping costs ranged from free to 32 percent of the item's retail cost, with an average of about 10 percent on most items in most communities.

One outcome of this approach is that some mid-size communities, where all the items in the clothing market basket are available locally, are shown to have higher clothing cost differentials than more remote communities where some of the items are unavailable. This is because items may be available through mail order at a lower cost than prices in mid-size communities.

The challenge with developing price differentials for clothing is the tendency to buy clothing while traveling or via mail order/Internet, even among urban residents. Clothing prices for small communities on the highway system, in particular, have price differentials that match nearby hub communities because that is where most of the clothing shopping occurs. In any case, survey research suggests that clothing is a comparatively small part of the household budget (relative to housing, food and transportation) and therefore applying significantly higher (or lower) clothing price differentials would have negligible effects on a community's overall geographic cost differential.

See table next page

Medical

The HCS collected household medical-related expenditure data in two subcategories:

- Monthly spending on medical insurance, not including payments covered by employers
- Spending in the last 12 months on medical expenses not covered by insurance, not including travel costs.

Table IV-13 provides annual medical-related spending for each sample block and selected communities. Total reported spending ranges widely, from approximately $1,700 to nearly $5,700 annually. Access to

medical care, insurance coverage and household income are factors affecting medical-related household spending averages.

Table IV-13: Annual Medical Expenditures

	Petersburg	2,818	1,448	4,267
	Sitka	1,423	1,036	2,459
	Unalaska/Dutch Harbor	1,888	1,838	3,726
	Valdez	2,487	2,057	4,544

The medical-related RPS market basket was composed of 14 services and goods. Health care providers were asked for billing rates by service and billing code, including the following:

- Adult physical exam (age 18-39, age 40-64, age 65+)
- Well-child physical (age 0-11 months, age 1-4, age 5-11, age 12-17)
- Physician office visit

- Hospital, one-bed day (Medical/surgical)
- Dental exam
- Dental cleaning (adult, child), filling
- Eye exam
- Eyeglasses, lens/frame.

To calculate price differentials, prices were averaged in four categories: adult exams, well-child exams, other medical (physician office visit, hospital stay, eye), and dental care. Averages in these categories were divided by Anchorage prices in the same categories to produce differentials. From these differentials, an average medical differential was calculated, as was an average dental differential. These were then averaged (weighted 75 percent medical and 25 percent dental) to produce one overall medical services differential.

Data to support calculation of price differentials for health insurance was not collected, as geography generally is not a factor in the cost of insurance premiums. As such, all sample blocks were given an insurance cost differential of 1.00.

Table IV-14 provides expenditure weights and price differentials for each sample block and selected community. The price differential for the medical category is the average of the medical services differential and the medical insurance differential (1.00 for all sample blocks).

All Other Household Expenditure Components

The components of the household budget described above (including housing, food, transportation, clothing, and medical) account for about 65 to 75 percent of the average household budget. The remainder of the typical household budget is composed of a broad range of goods and services. For purposes of this study, these have been grouped into the following categories:

- **Household furnishings and appliances**: furniture, furnishings, large and small appliances, tools, and household supplies. The category also includes televisions and other video equipment, stereos and other audio equipment, computers and related equipment.

- **Communications**: telephones/cell phones and related services, Internet services, cable TV, postage and delivery services.
- **Recreation and education**: sporting goods, toys, reading materials (newspapers and magazines), photography. Also includes pet food and supplies, tuition and related fees, and child-care services.
- **Personal care and other**: personal-care products and services, laundry services, legal and financial services. Other includes tobacco and alcohol.

The HCS did not collect data relevant to these spending categories and limited RPS data was collected to support the analysis of cost differentials.

Weighting (to reflect relative importance in the household budget) of various components within this category was accomplished by weighting each component in the same proportion as those components occur in the Anchorage Consumer Price Index (CPI). For example, CPI data indicates that this category accounts for approximately 22 percent of the after-tax household budget in Anchorage. Within the category, about one-third (32 percent) of the budget is for household furnishings and appliances, 13 percent for communication, 33 percent for recreation and education, and 22 percent for personal care and other. Regardless of how much of a community's average household budget was captured by the HCS, the un-captured portion was distributed among the "all other" subcategories according to these percentages. Table IV-15 illustrates this methodology.

Table IV-15: Estimation of Expenditure Weights in Spending Categories not Measured in the HCS

(Hypothetical Sample Block where 30 percent of Household Budget was not captured in HCS)

	Relative Importance from CPI Anchorage Data	Relative Importance within "All Other" Category	"All Other" Subcategory Expenditure Weights for Sample Block
Household furnishings/ appliances	7%	32%	9.6%
Communication	3	13	4.0
Recreation/education	7	33	9.8
Personal care/other	5	22	6.7
Total all other	**21%**	**100%**	**30%**

For calculation of price differentials in the "all other" category, the RPS collected prices for 23 items in the household furnishings and appliances category, seven communications services, and nine personal care items. The RPS also collected prices for one brand of cigarettes, seven different drinks at a bar and six alcohol items for consumption at home.

The communication price differential was calculated as the average of the monthly cost of basic and preferred cable (or satellite), Internet dial-up, Internet-DSL, phone, long distance rate per minute (in-state), and monthly wireless. If a particular service was not available in a community, that service was not included in the average.

Calculating the price differential for the recreation/education category was a two-step process. First, a recreation price differential was calculated as the average (unweighted) of price differentials for food (to account for pet food), clothing (proxy for toys, reading material, small sporting goods) and appliances (proxy for larger sporting good items). The price differential for education was set at 1.00 for all sample blocks and

communities, as identifying a meaningful education market basket suitable for Alaska communities was considered by the study team to be impractical.

The second step in calculating the price differential for the recreation/education category was to calculate the average of the recreation component and the education component, with recreation weighted at two-thirds and education at one-third.

The price differential of the personal care/other subcategory is the weighted average of the personal care market basket in the RPS (excluding tobacco), tobacco, and alcohol, weighted personal care 60 percent, alcohol 25 percent, and tobacco 15 percent. In dry communities, alcohol was not included in the average.

Table IV-16 provides expenditure weights and price differentials for the "all other" category.

Note on Subsistence-Related Activity

Subsistence harvests are a critically important part of many households' budgets. Within the framework of this study, the cost of subsistence activity is captured in the categories of transportation (vehicles and fuel), furnishings and appliances (outdoor equipment and supplies), and recreation (which includes "sporting goods"). The HCS asked for the percentage of household food supply obtained from activities such as hunting, fishing, gardening or berry-picking. The results of that question for each sample block are provided in the following table.

While subsistence activity was not factored into the differentials for each GDP, it reinforces the wide variations in expenditures related to food, transportation and recreation activities.

Table IV-17: Importance of Hunting, Fishing, Gardening, and Gathering in Household Food Supply

Section V: Data Collection Methodology

Household Consumption Survey

Overview

The purpose of the Household Consumption Survey (HCS) was to identify proportional expenditure patterns for the major market basket components for each GDP. The survey data was then used as the basis for development of statistical weights for each major consumption category.

The 50-question HCS collected data on household spending related to housing (including all utilities), food, transportation, health care, and clothing. The survey also collected data on household size and income. The HCS included 2,547 surveys with randomly selected households located in 74 communities throughout Alaska.

Survey Content Development

The project team began by conducting a review of the survey instrument used in the 1985 study, as well as a detailed analysis of the application of the data. Survey completion time in 1985 ranged from approximately 25 minutes to an hour. This length was deemed far too long in the modern survey environment and would have resulted in a high number of initial refusals and mid-survey terminations.

The updated survey instrument retained essential questions regarding housing, household size, income, and estimated expenditures for major components of the household budget. After briefly introducing the study purpose, the surveyor asked to speak with the person most familiar with the household's spending. The initial questions in the survey addressed household size and expenditures for shelter, fuels and utilities. Shelter costs captured data on mortgage payments, property taxes and insurance, rental costs and condo fees. Respondents were asked to estimate living space size, which allowed the study team to calculate average cost per square foot for each location. Fuel consumption categories included oil, natural gas, propane, coal, kerosene, electricity, and firewood. Utility categories included water, sewer, and garbage services.

The major expenditure components of the survey were based on Consumer Price Index categories, including food and beverage, apparel, transportation, medical care, and other goods and services. In addition to estimating household expenditures in dollar amounts, respondents were asked to allocate their spending as a percentage of their income for four major categories. The percentages were used to corroborate findings from the previous questions.

The survey instrument was pretested in numerous rural and urban communities. Average completion time during the pretest phase was approximately 15 minutes. The State of Alaska had an opportunity to review and comment on the survey instrument before fielding. A copy of the final survey instrument is included in the Appendix.

Sample Distribution

The first step in devising the sample distribution was developing a community profile for each Alaska location with one or more state employees. Employment data for 2007 and 2008 was provided by the Department of Administration. Additional information in the community profiles included population, per capita income, median household income, number of households, household size, borough or census area, median home value, median mortgage payment, median rental payment, and percentage of adults in the labor force. The profiles also included information about the closest major hub community, distance to the hub, and if there was access by road, ferry, barge, or airplane. Finally, the project team classified each community in terms of the 1985 GDP pools and current House and Senate election districts. Numerous data sources were utilized including 2000 Census data, Alaska Department of Labor and Workforce Development data, and information from the Division of Elections.

Following a detailed analysis of the community profile data, a total of 18 sample blocks were defined for purposes of sample distribution. The sample blocks ensured sufficient sample sizes in various regions for statistical analysis, especially critical for communities with very small populations. The largest communities and most populous boroughs formed their own sample blocks. Small and mid-size communities were grouped with others that shared similar demographic and geographic characteristics. Within each sample block, household surveys were distributed in proportion to community population.

Together, Alaska's largest population centers were allocated 1,500 of the 2,547 surveys. Anchorage, Fairbanks and Juneau had sample sizes of 300 surveys each. Two hundred surveys were assigned to the sample blocks for the Mat-Su region, Kenai Peninsula Borough, and the combined Ketchikan/Sitka area. The rest of the surveys (1,047) were distributed among the remaining sample blocks on the basis of population and number of state employees.

The table below shows the number of completed surveys in each of the 18 sample blocks and the maximum margin of error associated with each sample. Due to the nature of response distribution in sample statistics, most survey responses are more accurate than the maximum margin of error suggests.

It is important to note that the telephone survey did not include every single Alaska location. Instead, the sample plan was developed to ensure that every Alaska location with a state employee was included in the HCS and RPS data collection efforts. As a result of this approach, the study population represented 92 percent of the statewide population. Surveying the remaining Alaska residents proportionally by population would have further minimized the sample sizes for communities with state employees, and resulted in extremely small sample sizes for any additional communities included in the study.

See table next page

Table V-1: Household Consumption Survey Sample Sizes and Associated Margins of Error

Sample Block	Sample Size	Maximum Margin of Error
1: Anchorage	300	±5.8%
2: Fairbanks	300	5.8
3: Parks/Elliott/Steese Highways	65	12.0
4: Glennallen Region	50	14.2
5: Delta Junction/Tok Region	76	11.5
6: Roadless Interior	51	13.5
7: Juneau	300	5.8
8: Ketchikan/Sitka	200	7.1
9: Southeast Mid-Size Communities	104	10.0
10: Southeast Small Communities	52	14.2
11: Mat-Su	187	7.2
12: Kenai Peninsula	200	7.1
13: Prince William Sound	100	10.0
14: Kodiak	104	10.0
15: Arctic Region	153	8.2
16: Bethel/Dillingham	151	8.2
17: Aleutian Region	77	11.5
18: Southwest Small Communities	77	11.5

While communities were clustered into the sample blocks to ensure that the HCS sample was large enough for statistical analysis, a unique identifying number was assigned to each community. Any data collected during the study was consistently assigned the appropriate community number (including HCS, RPS, and secondary data), preserving the project team's ability to analyze the study findings in any community combination.

Statistical Reliability

Statistical tolerances are based on the assumption that when a sample is drawn randomly from a sufficiently large population, survey responses will be distributed within a predictable range if the survey were to be replicated. The margin of error is a function of both sample size and the variability of responses. A sample size of 50 may have a margin of error as low as ±2.8 percent, or as high as ±14.2 percent, depending on the uniformity of responses to each survey question. The ranges associated with survey sample sizes in this study are provided in the following table.

Table V-2: Margin of Error Ranges

Sample Size	Margin Of Error Ranges
50	± 2.8 - 14.2%
75	2.3 - 11.5
100	2.0 - 10.0
150	1.6 - 8.2
200	1.4 - 7.1
250	1.2 - 6.3
300	1.1 - 5.8

Other factors that affect statistical reliability include the size of the population and "nonsampling" sources of error, such as biased wording of questions or inconsistent recording of responses. In general, samples drawn from very small populations have lower margin of error ranges. Careful sample control and fielding procedures were employed to minimize nonsampling errors.

Another factor that can affect the statistical reliability of household telephone surveys is the number of households that only utilize cell phones. Major Alaska phone service providers estimate that 12 to 13 percent of the population falls into this category. The project team compared the HCS data to census data and other secondary research and determined that no systemic bias resulted from calling households with traditional phone lines.

Fielding Protocols

A household telephone survey was utilized for this study, as it offered a superior degree of statistical reliability and efficiency when compared to alternative methods such as mail surveys, Internet-based surveys or personal intercept interviews.

McDowell Group collaborated with GMA Research of Bellevue, Wash. to field the survey. GMA Research conducted 1,500 surveys in the seven most-populated areas in the state: Municipality of Anchorage, Fairbanks North Star Borough, City and Borough of Juneau, Ketchikan Gateway Borough, City and Borough of Sitka, Mat-Su Borough, and Kenai Peninsula Borough. Telephone lists were purchased from Survey Sampling Inc., a source frequently used for this type of research. Telephone numbers were randomly selected, ensuring all households had an equal opportunity of being selected in the sample.

McDowell Group conducted the phone surveys in the remaining communities. Households were randomly selected from published phone directories. A minimum of three calls were made to each primary number over a period of several days before selection of a secondary number. The field staff adhered to strict protocols prescribing the method for selection of an alternative household if contact could not be established or a household declined to participate in the study.

In all communities, respondents were screened for the person that was most familiar with household spending. Surveys were conducted on weekday evenings and weekend days allowing for maximum participation.

McDowell Group developed fielding protocols, conducted survey pretests, and conducted all surveys in rural communities. To ensure consistency of training and protocol implementation, McDowell Group project

management was present when GMA Research survey staff was trained and commenced surveying. Field management staff from the two firms communicated daily throughout fielding, data entry and statistical analysis. Survey field managers and staff in both locations were briefed frequently to ensure data was captured consistently.

Phone Survey Disposition

The telephone surveys were conducted between October 10 and November 15, 2008. The average HCS length was approximately 13 minutes. The total number of completed surveys was 2,547. Total contacts and refusals were tracked separately by GMA Research and McDowell Group. Results for each survey fielding location are provided below.

Surveys for the larger, urban areas were conducted using Computer Assisted Telephone Interviews (CATI). More than 19,500 calls were made. Approximately 11 percent of those contacted declined to participate, either through an initial refusal or mid-survey termination. Of the remaining calls, nearly 16,000 resulted in no contact (such as message machine, no answer, out of service, or fax). A total of 1,500 household surveys in urban areas were completed. GMA did not retain data from surveys that were terminated before completion.

In small communities, a total of 6,206 calls were made. Approximately 18 percent of the households declined to participate. Of the remaining 5,060 calls, approximately 4,000 resulted in no contact (such as message machine, no answer, out of service, or fax). A total of 1,047 household surveys in rural communities were completed. In a few instances, McDowell Group included responses from nearly completed surveys in the final data set to add to the statistical reliability at the community and sample block level.

The call disposition is typical for telephone survey research. In the 1985 GDS, a total of 23,065 calls were completed; 18,834 of the calls resulted in no contact (no answer, busy, disconnected, fax, or a business listing).

Table V-3: HCS Phone Survey Disposition

Survey Fielding Location	Completed Calls
GMA Research/Urban Areas	
Total calls	19,532
Initial refusals/terminations	2,092
No contact	15,950
Completed interviews	1,500
McDowell Group/Small Communities	
Total calls	6,206
Initial refusals/terminations	1,146
No contact	4,013
Completed interviews	1,047

All HCS data was entered into a single database. HCS data management was handled in both Microsoft Excel and SPSS. An extensive data cleaning process removed outlier or other irregular values from the analysis.

Survey Distribution by Community

The table below provides detailed information at the community level for each sample block. The number of surveys allocated to each sample block was influenced by population and number of state employees. For sample blocks comprised of multiple communities, surveys were distributed proportionally according to community population.

Table V-4: Household Consumption Survey Sample Sizes, Population and State Employees

Sample Block and Community	Sample Size	2007 Population	State Employees
1: Anchorage	300	283,823	5,192
2: Fairbanks North Star Borough	300	90,963	1,581
3: Healy	22	1,027	9

Overview

The Retail Price Survey (RPS) included collection of retail price data for a market basket of approximately 200 goods and services throughout Alaska. McDowell Group priced an extensive list of consumer products for each of the communities listed in the table below. The first column indicates that data was collected personally by McDowell Group staff. The second column indicates that merchants assisted the study effort by providing price data by phone or fax. Additionally, price data was collected for numerous household services including energy and utility costs, health care, transportation, communications, and insurance for the 58 locations in the table, plus the additional 15 communities listed on the following page.

Elfin Cove	Slana
Goodnews Bay	Tazlina
Iliamna	

It is important to differentiate the RPS methodology (which produced a representative assortment of product and service prices available within each community) from the HCS methodology (which produced statistically reliable data regarding the community's typical consumption patterns). The project team's usage of the two methods together yields statistically defensible results, particularly when the data is aggregated into clusters of communities that share common geographic and socio-economic characteristics.

Selection of Market Basket Items

In 1985, the RPS included more than 300 items. After a thorough review and pretesting process, McDowell Group reduced the RPS to approximately 200 goods and services. The team began with examination of the 1985 survey instrument and associated economic analysis to understand the relative importance of each category and product in the economic model. The team also reviewed survey instruments, weighting factors, and secondary data from Bureau of Labor Statistics, Consumer Price Index, ACCRA Cost of Living Index, and other sources. Product and merchant lists from the State of Alaska WIC program also were reviewed.

To ensure that the market basket reflected current consumption habits, as well as the unique purchasing patterns of rural residents, McDowell Group secured the cooperation of two major Alaska retailers. Fred Meyer (retail stores located in major communities in the Interior, Southcentral, and Southeast regions of the state) and Alaska Commercial Co. (retail stores located in numerous remote, rural locations in northern and western Alaska) provided confidential sales volume data for top-selling products in each of the major market basket categories carried by their respective stores. McDowell Group also consulted secondary sources of data regarding Alaska resident consumer purchasing such as Motor Trends, Business Week and Consumer Reports. The market basket was further refined to reflect top-selling products, brands and sizes.

Field management staff conducted multiple pretests with the market basket in Juneau and Anchorage, making refinements based on product availability and prices in independently owned retailers as well as larger chains. During the pretesting phase, the RPS training instructions and protocols were updated from the previous study.

Food products dominated the items included in the market basket, as they typically represent a large portion of a household's expenses. Food categories included:

- Meats, poultry and fish
- Cereals and breads
- Dairy products
- Fruits and vegetables
- Other food items
- Food consumed away from home.

Additional market basket categories included:

- Housing
- Transportation
- Clothing
- Medical
- All other household expenditures.

Surveyors priced a list of products for each of the RPS categories. The market basket included a brief product description and unit size if applicable. In any instance that a specific brand was requested, the surveyor was also instructed to record the price for the most popular alternative item in that category (as indicated by item placement and allocation of shelf space). Similarly, if the specific size or number of units was not available, the surveyor was instructed to record the price and size/quantity for the closest alternative. A comparable price was computed as data was entered in the McDowell Group office. These fielding protocols for selecting alternative products allowed the field team to utilize the RPS market basket consistently in retail stores throughout the state. The RPS collected regular (full-price) retail prices, recognizing that sale prices or other temporary changes could affect the outcome of the study.

The State of Alaska reviewed the market basket before fielding commenced. A copy is included in the Appendix.

Selection of Communities Included in the RPS

McDowell Group developed a plan for RPS data collection based on community population, number of state employees, and other demographic and geographic information. Energy and service price data was collected for every community included in the study. Nearly 60 communities were selected for inclusion in pricing of approximately 175 consumer products.

Two methods were utilized to obtain prices: personal data collection and phone/fax requests for merchant or service provider assistance. In general, communities located along the road system, in Southeast, or having a population larger than 2,000 were surveyed in person. Small, remote communities (typically with populations between 100 and 500) were targeted for direct contact with merchants to request pricing assistance. Due to time and project cost constraints, several larger communities in the northern and western regions were grouped into the phone/fax category, including Barrow, Kotzebue, and Unalaska/Dutch Harbor. Alaska

Commercial Co. provided price data for 15 locations included in the study. Given their prominence in the northern and western regions of the state, their support was integral to the success of the phone/fax method.

Selection of Retail Outlets

The RPS methodology did not seek the lowest price, or the price in every possible outlet, but the price commonly paid by most households. To identify the retail outlets to be included in the RPS, field staff developed an initial inventory of all relevant retail locations for each community. The most popular retailers were identified through personal knowledge about the community, interviews with community leaders, and review of community directories and other listings.

Retail prices were collected from multiple locations wherever possible. In recognition of the large number of state employees — and the role that Anchorage, Fairbanks and Juneau have as regional retail and service hubs — more price data was collected for these three locations. In the baseline community of Anchorage, eight prices were collected for each product or service in the market basket whenever possible. In Fairbanks and Juneau, six prices were collected for each market basket item. In all other communities, the field staff collected four prices where possible. The field staff maintained detailed records of the 634 retail outlets included in the consumer product portion of the RPS.

Before fielding commenced, McDowell Group verified that regular prices are typically identical when a retailer has multiple outlets in a single location. This information allowed the RPS field staff to include a greater variety of retailers in the data collection efforts. Grocery prices were later weighted by store and community, to reflect consuming purchasing data collected in the HCS.

Methods of Collecting Price Data

Multiple methods of collecting data were warranted due to the widely dispersed locations of Alaska communities, the inclusion of both products and services in the market basket, and the extensive amount of information collected.

McDowell Group utilized existing survey staff located in Anchorage, Fairbanks, Juneau, and Ketchikan. These four teams personally completed the RPS consumer product pricing in the 33 largest and most accessible locations. Following pretesting efforts in Juneau and Anchorage, McDowell Group's statewide field manager conducted training for field staff in all field locations, ensuring consistency in data collection.

The majority of data collection for RPS in-person communities was completed over a four-week period. Pre-testing and training occurred in late October. Retailers were contacted between mid-November and mid-December for the remaining 25 communities. The market basket was modified to collect prices from a single retail location, and an introduction and instruction letter was developed for this purpose. Additionally, the market basket was streamlined to reflect the product categories in each participating store. Field staff completed reminder calls, emails and faxes as needed to encourage completion and return of the market basket. Some retailers with multiple locations opted to provide data through their central business office, while others responded individually.

Pricing Goods Purchased Outside the Community

Whenever possible, the market basket was populated with products available in each community, as this most accurately reflected the differential in the cost of living between a particular community and the base community of Anchorage. After the initial data collection process was completed, gaps in the market basket for each community were addressed. Alternative prices were imputed when the market basket was incomplete, or when the HCS clearly indicated that a significant portion of residents were bypassing local grocery stores for the majority of their food purchases.

The project team developed a statewide impute plan, identifying the nearest hub for each community for each major product and service categories: groceries and liquor, clothing and small appliances, large appliances, transportation and other services. (Prices were not imputed for restaurant, bar and entertainment categories.) It was possible for a single location to have different hub communities for different product categories. For example, residents in a small community might be able to purchase groceries in another nearby small community, but would likely have to obtain large appliances or automobiles from a major urban center.

Shipping costs depended on the product and the most common method of transferring products between the hub and specific communities. The study team conducted numerous interviews with retailers and freight providers, and examined shipping policies from a wide array of retailers, to identify the most commonly used transportation methods and associated prices.

Data from the HCS regarding grocery purchases revealed noticeable differences between communities on the road system and those whose access to a hub community was only by air or water. Many residents on the road system stated they did a majority of their grocery shopping in Anchorage, Fairbanks, or the Palmer/Wasilla area, depending on their proximity to each hub. This purchasing pattern data also helped to guide where prices would be imputed from for other products and services. The study team decided any product and service prices imputed into road-accessible communities would be done without adding additional shipping costs, as associated increases in transportation costs were already captured in the HCS consumption data.

Residents in communities located off the road system tended to purchase the majority of their food from local retailers. In the few instances that prices for individual items were imputed, it was done without adding freight costs. This approach was reinforced by the observation that food shopping in hub communities is commonly clustered with other travel motives and purchases. As with residents in road-accessible communities, transportation costs are more appropriately reflected in another portion of household spending than by adding the cost of an air or ferry ticket to a food product price.

The project team then examined typical shipping methods and associated costs for clothing and small appliance retailers that offered the items in the consumer market basket. Shipping costs typically ranged from free shipping to an additional 32 percent of the product cost, depending on the product type, weight, total value of goods purchased, delivery speed and shipping distance. The study team also recognized that many clothing and small household items are purchased when residents are traveling in urban centers, rather than being purchased and shipped individually. After consideration of the numerous factors that affect shipping

costs for clothing items, the project team elected to add 10 percent to clothing prices imputed from a hub community to those located off the road system.

To account for shipping costs for smaller household furnishings and appliances, the project team averaged shipping costs from several retailers that offered the specific market basket items. Prices were computed separately for each market basket item, as product prices and weights varied considerably. No shipping costs were added to computers, as many in-state and national retailers offer free shipping. A flat fee was added to the rifle cost when prices were imputed to account for the shipping and handling fees typically charged by merchants (possession of a Federal Firearms License is required).

Shipping options for large appliances and household items (such as mattresses and washing machines) were somewhat more limited due to their size and weight. Fortunately, it was only necessary to impute prices for a few Southeast communities and one community on the Yukon River. Typical shipping prices were determined from calls to transportation providers and retailers in the specific regions, and then added to the hub community prices.

The transportation items were addressed according to community geography and transportation linkages. Ferry prices, determined on the basis of vehicle length, were easily obtained for all communities accessible by either the Alaska Marine Highway or Inter-Island Ferry Authority. The ferry transportation cost was simply added to the vehicle price. Commercial barge and landing craft operators were interviewed to obtain representative prices from marine-accessible communities without ferry service. Air freight prices were obtained for several of the northern and interior locations.

Data Cleaning and Management

All RPS price data was compiled and managed in Excel. When applicable, prices were increased to account for local sales taxes, alcohol taxes, and tobacco taxes. The data also underwent an extensive cleaning process in which outlier values were removed prior to calculating average prices among specific items. Average prices for a particular item in each community were compared to the average price for the same item in Anchorage to produce a price differential. These individual item price differentials were then averaged with price differentials for other items in the same subcategory of items. For example, the price differential for hot dogs was averaged with the price differential for other meat products to determine a subcategory "Meat, poultry and fish" average-price differential. When communities were grouped together to produce sample block or district differentials, all pricing data was weighted according to community population. (This process is discussed in more detail in subsequent chapters.)

Section VI: Statistical Analysis

SPSS and Statistical Analysis

SPSS Analysis

The data gathered through the household survey was compiled into an Excel database. The data was then imported into SPSS (Statistical Package for the Social Sciences) to conduct data examination and cleansing processes and to maintain a high level of data integrity throughout the analysis. Each variable was analyzed for consistency and reasonableness and, where necessary, values were imputed for records that were either missing or well beyond the range of normal variation. The analysis processes followed for each variable are outlined below. By conducting the household analysis in SPSS, the study team was also able to merge community information and several identifiers that allowed aggregation of the household responses into various groupings for reporting. These groupings include:

- The 19 community groupings from the 1985 differential study conducted by McDowell Group.
- The 19 community groupings defined in the 1994 update.
- The 40 Alaska House districts.
- The 20 Alaska Senate districts.
- An 18-block grouping developed by the McDowell Group based on geographic and commuting factors in Alaska.

Data Examination and Cleansing

Two data examination processes were conducted in SPSS to ensure that the data input into the Excel database from the household survey forms were properly recorded. A simple random sample equaling approximately 1.0 percent of all surveys was drawn and the values recorded for each variable for each survey record were compared against the paper survey forms received from the contractor overseeing the household survey.[1] No errors were found in any of the randomly drawn survey records.

As a second check on the accuracy of the data, descriptive statistics for each numeric variable were calculated and all records with extreme values were compared to the survey forms. In total, approximately 40 survey records were checked against the physical survey forms and values were corrected for three records.

[1] It was assumed that the occurrence of an error in the recording of the survey data would be a rare event. Developing a statistically valid sample to test for the occurrence of a rare event is generally very expensive due to the large sample size required to develop high relative precision. In essence, nearly every record would require re-examination. The selection of approximately 1.0 percent of records for thorough comparison against the physical survey forms was intended to confirm that no *systematic* errors were made in compiling the data into Excel.

Examination of Individual Variables and Data Imputation

Income

Respondents to the household survey were asked for the household's total pre-tax income from all sources in 2007. Most households provided this information. Those who refused to answer the direct income question were asked the category that best describes their household's income. The midpoint of each of the associated category was used to impute income for the household. Household income was set to *missing* for those households that refused to provide income information.

Demographic Information

Four variables were created based on the demographic information provided by the respondents:

- Average age of adults living in the household
- Average age of children living in the household
- The count of adults living in the household
- The count of children living in the household.

Housing

On average, housing and related costs are the largest component of household expenses. Because of its relative importance in the household budget, particular attention was paid to housing in both the survey instrument and in the examination of responses to housing questions. This is summarized in the following steps:

1. Survey responses were segmented based on whether or not the household reported owning or renting their home.
2. For those households that reported owning their home, monthly mortgage payments reported to be more than four standard deviations greater than the median monthly mortgage amount were truncated at this amount.[2]
3. For those households that reported owning their home, annual property tax payments reported to be more than four standard deviations greater than the median annual property tax payments were truncated at this amount.[3]
4. For those households that reported owning their home, but did not report property tax or property insurance payment amounts, values were imputed based on the statistical relationship between monthly house payments and annual property tax and insurance payments.[4]

[2] The median, rather than the mean of the distribution of mortgage payment amounts was chosen because it is a better representation of the central tendency of the distribution. Under the assumption of a symmetric distribution, which mortgage payments are not, four standard deviations from the median would encompass more than 99 percent of all mortgage payments. By truncating extreme values at this level, we reduce the degree of influence that the very small portion of the population has on the mean and other parametric statistical estimates.

[3] Ibid.

[4] Statistical relationship based on those households that reported both mortgage payments and property tax or property insurance amounts.

5. For those households that described their home as a condo, but did not report monthly condo fee, values were imputed based on the statistical relationship between monthly mortgage payments and monthly condo fees.[5]

6. For those households that described their home as a mobile home, but did not report monthly space rental cost, values were imputed based on the statistical relationship between monthly mortgage payments and monthly rental cost.[6]

7. Housing shelter cost was computed for each record.

    a. **Homeowner Shelter Cost** = (monthly mortgage payment) + (annual property tax/12) + (annual property insurance/12) + (monthly condo fees) + (monthly mobile home space rent)

    b. **Renter Shelter Cost** = monthly rental cost

8. For all households, home sizes reported to be more than four standard deviations greater than the median home size were truncated at this point.[7] Calculations were done separately for owners and renters.

9. For all households missing home size, values were imputed as the average empirical home size for each of the geographic regions identified in 1985 and 2008. Separate calculations were made for owners and renters.

10. For all households, missing values for home energy consumption costs were imputed based on statistical models of energy costs regressed on home size and indicators for alternative fuel types (e.g. natural gas, electric, wood, etc.). Separate models were estimated for each fuel type.

11. Home energy consumption costs were examined for extreme outliers.

12. Total home energy consumption was calculated as the sum of energy costs across all fuel types consumed by the household.

13. Total home utilities costs were calculated for each household. Any household with total utility costs greater than four standard deviations from the mean were truncated at that value.

14. Total housing costs were computed for each household.

    a. **Homeowner Total Housing Cost** = Homeowner shelter cost + total heating cost + total utility cost

    b. **Renter Total Housing Cost** = Renter shelter cost + total heating cost + total utility cost

15. Per foot shelter costs and total housing costs were calculated for each household.

    a. **Per Foot Homeowner Shelter Cost** = Homeowner shelter cost / home size

    b. **Per Foot Renter Shelter Cost** = Renter shelter cost / home size

[5] Ibid.
[6] Ibid.
[7] Ibid.

c. **Per Foot Homeowner Total Housing Cost** = Homeowner total housing cost / home size

d. **Per Foot Renter Total Housing Cost** = Renter total housing cost / home size

Vehicles

1. For those households that reported owning a car, monthly car payments reported to be more than four standard deviations greater than the median monthly car payment amount were truncated at this amount.

2. Monthly payment amount for other vehicle types (e.g. snow machine, boat, etc.) were examined for extreme outliers; no values were truncated for these variables.

3. Any record monthly vehicle fuel cost (for all vehicles) reported to be more than four standard deviations greater than the median monthly fuel cost amount was truncated at this amount.

4. Any record with monthly vehicle maintenance cost (for all vehicles) reported to be more than four standard deviations greater than the median monthly vehicle maintenance cost amount was truncated at this amount.

5. Any record with monthly vehicle insurance cost (for all vehicles) reported to be more than four standard deviations greater than the median monthly vehicle insurance cost amount was truncated at this amount.

In-State and Out-of-State Plane Travel

1. Any record with in-state air travel cost reported to be more than four standard deviations greater than the median in-state air travel cost amount was truncated at this amount.

2. Any record with out-of-state air travel cost reported to be more than four standard deviations greater than the median out-of-state air travel cost amount was truncated at this amount.

Food

1. Any record with weekly spending on groceries reported to be more than four standard deviations greater than the median reported spending on groceries was truncated at this amount.

2. Any record with weekly [food item][8] spending amount reported to be more than four standard deviations greater than the median [food item] spending amount was truncated at this amount.

3. Food away from home was analyzed for extreme values. None were found.

Clothing

1. Average monthly spending on clothing was analyzed for extreme values. None were found.

[8] Food Item categories include: Meats, poultry, and fish; Cereals and bread; Dairy products; Fruits and vegetables; Soups, frozen meals, and snacks; Nonalcoholic beverages other than milk.

2. Local monthly spending on clothing was computed as average monthly spending on clothes multiplied by the reported percent purchased in local area.

3. Non-local monthly spending on clothing was computed as average monthly spending on clothes multiplied by the reported percent purchased non-locally.

Medical

1. Any record with monthly spending on medical insurance reported to be more than four standard deviations greater than the median monthly spending amount was truncated at this amount.

2. Any record with monthly spending on medical expenses reported to be more than four standard deviations greater than the median monthly spending amount was truncated at this amount.

Household Budget

Survey respondents were asked to estimate the percent of their total household income that was spent on the following four categories:

- Housing and utilities
- Groceries and dining out
- Transportation and travel
- All other expenses, including clothing, recreation, entertainment, medical, education, taxes, and savings.

When necessary, the survey administrator assisted the respondent to assure that the sum of the four percentages equaled 100 percent.

Federal Taxes

To derive disposable income (total income – taxes) for each household, it was necessary to approximate the household's federal tax obligation. This was done through the following five steps, based on the 1040 tax form.

Step 1: Filing status: *married* or *head of household.*

- If the household consisted of only one adult, then it was assumed that the appropriate tax status is *head of household.*
- If the household consisted of two or more adults, then it was assumed that the appropriate tax status is *married filing jointly.*

Step 2: Compute exemptions and deductions.

- Head of household: $11,500 + total child count * $3,500.
- Married filing jointly: $17,900 + (total child count + total adult count – 2) * $3,500.

Step 3: Compute adjusted gross income: Total Income – exemptions and deductions.

Step 4: Compute federal taxes.

a. Head of Household:

- If (0 < adj. gross inc. <= $11,450) fed tax = 0 + 0.10 * (adj. gross inc. – 0).

- If ($11,450 < adj. gross inc. <= $43,650) fed tax = 0 + 0.15 * (adj. gross inc. – $11,450).
- If ($43,650 < adj. gross inc. <= $112,650) fed tax = 0 + 0.25 * (adj. gross inc. – $43,650).
- If ($112,650 < adj. gross inc. <= $182,400) fed tax = 0 + 0.28 * (adj. gross inc. – $112,650).
- If ($182,400 < adj. gross inc. <= $357,700) fed tax = 0 + 0.33 * (adj. gross inc. – $182,400).
- If ($357,700 < adj. gross inc.) fed tax = 0 + 0.35 * (adj. gross inc. – $357,700).

b. Married filing jointly:

- If (0 < adj. gross inc. <= $16,050) fed tax = 0 + 0.10 * (adj. gross inc. – 0).
- If ($16,050 < adj. gross inc. <= $65,100) fed tax = 0 + 0.15 * (adj. gross inc. – $16,050).
- If ($65,100 < adj. gross inc. <= $131,450) fed tax = 0 + 0.25 * (adj. gross inc. – $65,100).
- If ($131,450 < adj. gross inc. <= $200,300) fed tax = 0 + 0.28 * (adj. gross inc. – $131,450).
- If ($200,300 < adj. gross inc. <= $357,700) fed tax = 0 + 0.33 * (adj. gross inc. – $200,300).
- If ($357,700 < adj. gross inc.) fed tax = 0 + 0.35 * (adj. gross inc. – $357,700).

Step 5: Compute after tax income = household income – federal tax.

Calculation of Spending as a Percent of Income

For each component of household spending, the study team calculated spending as a percent of after tax household income.[9]

Alternative Aggregations

Alternative aggregations of the household data were developed based on (1) community, (2) the 1985 GDP study, (3) the 1994 GDP study, (4) the 2009 Alaska House of Representative districts, (5) the 2009 Alaska Senate districts, and (6) an aggregation developed by the study team.

Development of Approximate Standard Errors

Typically, the estimation of cost of living and other indices based on survey data does not include the development of standard errors. The reason for this is that survey data are generally "complex" in that the surveyed households often do not perfectly represent the population of interest and, therefore, parameter estimates must be developed inclusive of some sort of weighting scheme. Methods that allow for the calculation of (near) exact standard errors do exist, but they are beyond the ability of typical statistical software packages (e.g. SPPS, SAS, Stata) and developing individual standard errors for each parameter of interest requires extensive analyst and computer time. This would certainly be the case for the Alaska GDS, which includes the surveying of more than 2,500 Alaska households across 74 communities regarding their income and spending patterns. It would be prohibitively expensive in terms of time and budget to attempt to calculate exact standard error of each of the many cost of living parameter estimates derived from the household and retail surveys.

[9] Note 1: Any household with spending less than 30 percent or greater than 120 percent of after tax income was set to *missing* for the purpose calculating spending as a percent of household income.
Note 2: If spending at the major household sector (e.g. housing, transportation, etc.) was missing for any record, the value was imputed based on the respondents stated spending on the particular sector as a percent of household income (if available).

Generalized Variance Function Method

Fortunately, there is an alternative to the development of exact standard errors. The generalized variance function (GVF) method is a procedure for estimating *approximate* standard errors for estimated means, proportions, ratios, indexes, and the difference between sample estimates. GVF estimates can be developed relatively quickly using standard statistical software (e.g. SPSS, SAS, Stata). Although the specification of the GVF function varies based the parameter of interest, available data, and the needs of the analyst, the following characteristics are typical parts of GVF procedure:

1. Reliance on the *central limit theorem*, which states that the means from sufficiently large samples repeatedly drawn from any distribution will be normally distributed.

2. Monte Carlo-styled resampling of the survey data to develop an empirical distribution for the particular parameter.

3. The estimation of a statistical function that relates the parameter of interest to its variance (or standard deviation).

4. The construction of a formula based on the parameter estimates in Step 3 that allows for the calculation of the approximate standard error (and by extension, confidence intervals).

Development of Generalized Variance Function and the "*A*" and "*B*" Parameters

An SPSS routine was written to perform the resampling routines, obtain the parameter estimates of interest, and estimate the statistical models. The generalized steps of the routine are as follows:

Step 1: Draw 300 samples of approximately 100 cases per sample. Each sample is drawn using a Bernouli random variable, with each of the approximately 2,500 records having an equal probability (1 chance in 25) of being selected in each of the 100 samples.

Step 2: Compute the mean and variance of each continuous variable for each of the 100 samples.

Step 3: (Natural) log-transform each of the mean and variance estimates.

Step 4: Estimate the following statistical regression model:

$$\ln\left(\hat{\sigma}_x^2\right) = \beta_o + \beta_1 \ln(\bar{x})$$

Where:

$\ln\left(\hat{\sigma}_x^2\right)$ is the vector of standard deviation estimates for the variable of interest "x" transformed by the natural log function.

$\ln(\bar{x})$ is the vector of mean estimates for the variable of interest "x" transformed by the natural log function.

Step 5: Save the Y-intercept and slope coefficient from each statistical model. These parameter estimates will be used as the "*A*" and "*B*" parameters for calculating the approximate standard error for each of the variables of interest.

Calculating an Approximate Standard Error using the *A* and *B* Coefficients

The *A* and *B* coefficients estimated in the SPSS routine are simply the y-intercept and slope coefficients from the simple statistical models relating the mean value of each parameter estimate to its standard deviation. Estimating the standard error and the lower and upper confidence bounds of any of the parameter estimates of interest is a straightforward 3-step process.

Step 1: Estimate the approximate variance of the parameter of interest:

$$\tilde{\sigma}_x^2 = e^{A*\ln(\bar{x})+B}$$

Where:

$\tilde{\sigma}_x^2$ is the approximate variance of the parameter of interest.

$e^{A*\ln(\bar{x})+B}$ is the A and B function raised to the exponential function e.[10]

Step 2: Compute the approximate standard error from the variance:

$$se_x = \sqrt{\tilde{\sigma}_x^2} \Big/ \sqrt{n}$$

Step 3: Compute the lower and upper 95 percent confidence bounds.[11]

$$\text{Lower Bound} = \bar{x} - 2 * se_x$$

$$\text{Upper Bound} = \bar{x} + 2 * se_x$$

The *A* & *B* Table, Sample Sizes, and an Example Calculation

The *A* and *B* coefficients necessary to calculate approximate standard errors and confidence intervals are shown in Table VI-1. The sample sizes for each of the regional aggregations and individual communities, which are also necessary for calculating an approximate standard error, are shown in Tables VI-2, VI-3, VI-4, and VI-5.

Presented below are two examples of how to use the *A* and *B* coefficients to calculate the approximate standard error and confidence intervals for a parameter of interest. Only one example is actually necessary to demonstrate the process; however, by presenting two examples, the impact of sample size on the size of the approximate standard errors is shown and, by extension, the precision of the confidence interval.

Juneau Cost of Living Differential

Based on the previously described analysis, the cost of living differential for Juneau is 1.11. To calculate the standard error on this estimate, the study team utilized the *A* coefficient of 2.236 and the *B* coefficient of -3.042 from row 30 of Table VI-1 and the sample size of 300 from row 7 of Table VI-2.

[10] Note the parameter of interest is log-transformed within the exponential function.

[11] Based on the assumption that two standard deviations on either side of the sample parameter estimate constitutes a 95 percent confidence interval. In fact, for very small sample sizes, the number of standard deviations increases.

Step 1: Estimate the approximate variance of the parameter of interest:

Step 2: Compute the approximate standard error from the variance:

$$se_x = \sqrt{\bar{\sigma}_x^2} \Big/ \sqrt{n} = se_{Juneau} = \sqrt{0.0603} \Big/ \sqrt{300} \approx 0.014$$

Step 3: Compute the lower and upper confidence bounds[12]

Lower Bound =

Upper Bound = 
Aleutians Cost of Living Differential

Based on our analysis, the cost of living differential for the Aleutians is 1.50. To calculate the standard error on this estimate, the study team utilized the *A* coefficient of 2.236 and the *B* coefficient of -3.042 from row 30 of Table VI-1, but the sample size for the Aleutians is only 77 (from row 17 of Table VI-2).

Step 1: Estimate the approximate variance of the parameter of interest:

$$\bar{\sigma}_x^2 = e^{A*\ln(\bar{x})+B} = \bar{\sigma}_{Aleutians}^2 = e^{2.236*\ln(1.50)-3.042} \approx 0.1182$$

Step 2: Compute the approximate standard error from the variance:

$$se_x = \sqrt{\bar{\sigma}_x^2} \Big/ \sqrt{n} = se_{Aleutians} = \sqrt{0.1182} \Big/ \sqrt{77} \approx 0.0392$$

Step 3: Compute the lower and upper 95% confidence bounds[13]

Lower Bound = 
Upper Bound = 
As the two examples demonstrate, not only can the cost of living differentials (or any other parameter) differ greatly across the state, so can the relative variance of the estimated distributions (i.e., all else being equal, there is greater variation associated with larger parameter values) and as sample size goes up, the standard error of the estimated parameter goes down. Because of this, for Juneau, with its low cost of living differential and large sample size (relative to the Aleutians), the approximate standard error is relatively small and the precision of the estimate is relatively high. The approximate 95 percent confidence interval for Juneau extends from 1.08 up to 1.14. Comparatively, the approximate 95 percent confidence interval for the Aleutians is relatively wide, extending from 1.42 up to 1.58. This is due to the larger cost of living differential and smaller sample size.

[12] Based on the assumption that two standard deviations on either side of the sample parameter estimate constitutes a 95 percent confidence interval.

[13] Based on the assumption that two standard deviations on either side of the sample parameter estimate constitutes a 95 percent confidence interval.

Table VI-1: *A* and *B* Coefficients for Computing Approximate Standard Errors and Confidence Intervals for Results from the 2008 Alaska Differential Study

Row	Parameter of Interest	*A*	*B*
1	Shelter Cost as a Percent of Income—Owner	0.897	-2.462
2	Shelter Cost as a Percent of Income—Renter	1.069	-2.986

The state could use the results of this study to set a unique differential for each individual community or regional block. However, such an approach may prove to be administratively inefficient, and could lead to a de facto assumption regarding the precision of the estimated differentials that does not exist – especially for small communities. Alternatively, a differential could be set that would apply to subsets of communities. There are numerous options for grouping communities based on such factors as geographic region, political boundaries, community size, or the size of the estimated differential. There are likely positive and negative aspects to each of these grouping methods.

Among the many alternatives for grouping communities is one based purely on the statistical similarity between pairs of estimated differentials. As noted earlier, each differential represents the mean value of the difference in the cost of living between the particular community and Anchorage. For each differential, an *approximate* standard error was estimated based on Monte Carlo simulation and the development of generalized variance functions. Using this information, along with the sample size for each regional block or individual community, the Fisher Least Significant Difference (FLSD) method was used to group communities and regional blocks based on individual pair-wise comparisons between the respective differentials.

The FLSD is a procedure for comparing the means of multiple (more than two) populations based on individual pair-wise comparisons. The two-step procedure begins with a standard one-way analysis of variance (ANOVA) test to determine if the differentials of all of the regional blocks and individual communities are jointly equal (null hypothesis), versus the alternative hypothesis that at least one differential is different from the others. If the null hypothesis is rejected, as it was in this analysis, then the second step of the FLSD procedure is taken. The second step consists of applications of two-sample *t*-tests between every pair of means.[14] Two differentials are placed in the same group if results of the *t*-test indicate there is not a statistically significant difference between the two differentials.[15]

Results of the FLSD Analysis

The results of the FLSD analysis indicate that the 18 regional blocks and 11 communities examined can be pooled into four groups (see VI-6). One community, Valdez, could be placed in either of two groupings.[16]

[14] The total number of two-sample combinations is equal to "24 choose 2" or $\left(\frac{24!}{2!(24-2)!}\right)$, which results in 276 combinations.

[15] For more information on the Fisher Least Significant Difference Method, please see: Koopmans, L.H., Introduction to Contemporary Statistical Methods, Second Edition, PWS Publishers, 1987.

[16] The estimated differential for Valdez, 1.08, is closer to the differentials of regional blocks and communities in Group 2. However, its relatively small sample size (60 observations) results in it also being part of Group 1, the "Anchorage" block.

Table VI-6: Community Groupings Based on FLSD Method

Alaska Geographic Differential Study

Household Consumption Survey

Phone Number: _____ **Refusals:** _____

Interviewer Name: _____ **Date:** _____

Hi, this is _____ with the McDowell Group, an Alaska research firm. We are conducting a study for the State of Alaska regarding the cost of living in different communities around the state. Your household has been randomly selected to participate in this important project.

May I speak with the person who is most familiar with your household spending? *(If phone is passed, repeat intro paragraph.)*

[When you get the right person] May I ask you a few questions about your household's spending on categories such as housing, utilities, transportation and groceries?

1. **How many people currently live in your household?** _____ ❒ DK/Ref.

2. **Can you please tell me their ages?** ❒ DK/Ref.
(Record up to 8 household members)

Respondent _____ e. _____
b. _____ f. _____
c. _____ g. _____
d. _____ h. _____
(use <1 for less than 1 year old)

3. **Do you own or rent your home?**
   - ❒ Own
   - ❒ Rent → **3a. How much is your households' monthly rent?** $_____ (skip to Q9)
     ❒ DK/Ref. (skip to Q9)
   - ❒ Neither (skip to Q11)
   - ❒ DK/Ref. (skip to Q11)

4. **How much is your monthly mortgage payment?** $_____ (go to Q 5)
   ❒ Zero/paid off (skip to Q6)
   ❒ DK/Ref. (skip to Q9)

5. **Do your monthly mortgage payments include:**
   - ❒ Property Tax ❒ Yes
     ❒ No→**Q6** How much is your **annual** property tax? $_____? ❒DK/Ref
   - ❒ Property Insurance ❒ Yes (skip to Q8)
     ❒ No→**Q7** How much is your **annual** property insurance? $_____? ❒DK/Ref
   - ❒ DK/Ref. (skip to Q8)

8. **Which of the following best describes your home?** (Read 1-3)

- ❒ House
- ❒ Condominium → **8a. How much is your monthly condo fee? $_____** ❒ DK/Ref.
- ❒ Mobile home → **8b. What is your monthly space rent? $_____** ❒ DK/Ref.
- ❒ Other _____ **8c. How much does your _____ cost per month? $_____** ❒ DK/Ref.
- ❒ DK/Ref.

9. **How many square feet of living space does your home have? Your best estimate is fine.**

_____ **sq. feet** ❒ DK/Ref.

10. **How many bedrooms does your home have?** _____ **bedrooms**
❒ DK/Ref.

11. Which of the following do you use in your home? (Read a-g)	**12. About how much did your household spend on _____ in the last 12 months?** (If zero, ask if included in rent)	13. (If DK for any source) **About how much did your household spend on _____ last month?** (amount/time period)
c. ❒ Electricity	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
a. ❒ Oil	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
b. ❒ Natural gas	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
d. ❒ Propane	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
e. ❒ Firewood or pellets	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
f. ❒ Coal	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.
g. ❒ Kerosene	❒ DK/Ref. $_____ ❒ Included in rent	$_____/_____ ❒ DK/Ref.

14. Does your household purchase any of the following services? (Read a-c)	15. About how much does your household spend on _____ each month? (If package, fill in d)
a. ❒ Water	❒ DK/Ref. $_____ ❒ Included in rent
b. ❒ Sewer	❒ DK/Ref. $_____ ❒ Included in rent
c. ❒ Garbage	❒ DK/Ref. $_____ ❒ Included in rent
d. ❒ Combo _____ (record W/S/G)	❒ DK/Ref. $_____ ❒ Included in rent
e. ❒ None (skip to Q 16)	

16. Does your household currently make any of the following types of vehicle payments? (Read a-e)	17. About how much does your household spend on _____ payments each month?
a. ❒ Car, truck , or motorcycle	$_____ ❒ DK/Ref.
b. ❒ Snow machine	$_____ ❒ DK/Ref.
c. ❒ Four wheeler	$_____ ❒ DK/Ref.
d. ❒ Boat	$_____ ❒ DK/Ref.
e. ❒ Airplane	$_____ ❒ DK/Ref.
f. ❒ Motor home	$_____ ❒ DK/Ref.
g.❒ None of the above (skip to Q 18)	

18. On average, about how much does your household spend <u>each month</u> on fuel for all vehicles?

$_____ ❒ DK/Ref.

19. About how much did your household spend in the last 12 months on maintenance for all vehicles?

$_____ ❒ DK/Ref.

20. About how much did your household spend in the last 12 months on insurance for all vehicles?

$_____ ❒ DK/Ref.

READ: Now I'd like to ask you about your household's spending on personal travel, food and clothing.

21. Can you estimate how much your household spent in the last 12 months on plane tickets for destinations <u>within</u> Alaska, not including business travel?

$_____ ❒ DK/Ref.

22. Can you estimate how much your household spent in the last 12 months on plane tickets for destinations <u>outside</u> of Alaska, not including business travel?

$_____ ❒ DK/Ref. (surveyor note: total round trip cost, from home community)

23. About how much does your household spend on groceries per week?

$_____ ❒ DK/Ref.

24. About how much does your household spend on each of the following types of groceries per week? Your best estimate will do. (Read a-f)	
a. Meats, poultry and fish	$_____ ❒ DK/Ref.
b. Cereals and breads	$_____ ❒ DK/Ref.
c. Dairy products	$_____ ❒ DK/Ref.
d. Fruits and vegetables	$_____ ❒ DK/Ref.
e. Soups, frozen meals, and snacks	$_____ ❒ DK/Ref.
f. Nonalcoholic beverages other than milk	$_____ ❒ DK/Ref.

25. Which store and community does your household buy most of its groceries from?

Store_____**Community** _____ **Code #**_____ ❒DK/Ref.

26. About how much did your household spend on restaurants and take-out <u>last month</u>?

$_____ ❒ DK/Ref.

27. What percentage of your household food supply is obtained from activities such as hunting, fishing, gardening, or picking berries? (Read list)

- ❒ None
- ❒ Less than 25%
- ❒ 25 to 50%
- ❒ 50 to 75%
- ❒ More than 75%
- ❒ DK/Ref.

28. On average, about how much does your household spend on clothing per month?

$_____ ❒ DK/Ref. ❒ Zero (skip to Q30)

29. **About what percentage of your household's clothing purchases are made from businesses in <u>your</u> community versus businesses <u>outside</u> your community?**

a._____**%** In community

b._____**%** Outside community (including Internet and catalogue purchases)

❒ DK/Ref.

30. **About how much does your household spend on medical insurance every month? Do not include payments covered by employers.**

$_____ ❒ DK/Ref.

31. **In the last 12 months, about how much did your household spend on medical <u>expenses</u> not covered by insurance? Do not include travel costs.**

$_____ ❒ DK/Ref.

READ: My last few questions are about overall household spending and income.

32. **Can you please tell me, what was your household's total pre-tax income from <u>ALL</u> sources for 2007? Please include wages, unemployment or other assistance payments, social security, investment income and perm fund dividends.**

$_____

❒DK/Ref. → **32a. Can you instead tell me which <u>category</u> best describes your household's total income?** (Read list)

❒Zero-$5,000	❒$35,000-$50,000	❒$125,000-$150,000
❒$5,000-$15,000	❒$50,000-$75,000	❒$150,000 or over
❒$15,000-$25,000	❒$75,000-$100,000	❒DK/Ref.
❒$25,000-$35,000	❒$100,000-$125,000	

READ: Next I'd like to ask you to estimate the percentage of your household spending for the categories we have talked about. The four categories are housing and utilities, groceries and dining out, transportation and travel, and all other expenses. All other expenses include items such as clothing, recreation, entertainment, medical, education, savings and taxes.

The four categories should add up to 100%. Your best estimate is fine.

33. About what percentage of your total household income is spent on _____?		**33a.** (If DK for any category) **About how much did your household spend on _____ in the last 12 months?** (amount/time period)
a. Housing and utilities	_____% ❒ DK/Ref.	$_____/_____ ❒ DK/Ref.
b. Groceries and dining out	_____% ❒ DK/Ref.	$_____/_____ ❒ DK/Ref.
c. Transportation and travel	_____% ❒ DK/Ref.	$_____/_____ ❒ DK/Ref.
d. All other expenses, including clothing, recreation, entertainment, medical, education, taxes and savings	_____% ❒ DK/Ref.	$_____/_____ ❒ DK/Ref.
	= 100%	

34. Is anyone in your household a State of Alaska employee?

- ❒ Yes
- ❒ No
- ❒ DK/Ref.

Thank you for participating in this important project!

TO BE FILLED OUT BY SURVEYOR (Do not read)

35. Gender

- ❒ Male
- ❒ Female
- ❒ Don't know

36. Community

_____ **Code #**_____

Retail Price Survey Instructions

Introduction

The purpose of the retail price survey is to identify the price of approximately 175 items which most Alaskan households buy. The retail price survey will be conducted in nearly 60 locations in Alaska. These prices will then be compared with Anchorage prices for the same items allowing the State of Alaska to identify the difference in cost of living in areas throughout our state. Your job is to personally go into selected business locations which sell the items to Alaskan households and then record the prices of those items.

Enclosed are three documents:

1. Retail Price Survey Instruction Sheet

   This document gives you some guidelines for how to select outlets, select items to price and specific questions to ask.

2. Interviewer's Retail Outlet Inventory

   This document is a checklist for you to record the names, locations, and telephone number of all the retail outlets which you will collect prices from. You can also record the date you survey each outlet.

3. Retail Price Survey Form

   This is the document you will use to record all of the prices which you collect for as many of the items as are available in each pricing location.

Retail Price Survey Instruction Sheet

Selecting Outlets

For most smaller pricing locations, outlets will be selected during the training session. We will rely on your personal knowledge of your communities. You may also use the local telephone book and other sources for each area. Four outlets in each category (grocery stores, service stations, etc.) are desired. If less than four exist in your pricing location, survey all those which do exist. If you find more than four exist, the most important ones to survey are the largest ones where the majority of people shop.

For smaller communities, there may be no outlets in some categories. Enter N/A in the first blank of that category.

During training you will fill out your Retail Outlet checklist as best you can, naming as many outlets as possible. After you arrive in the pricing location, take the time to look around and ask local sources to make certain you have listed all the important outlets that are possible. Remember to choose only four in each category. Avoid very small stores which do almost no business.

For Anchorage, eight outlets will be surveyed in each city, while in Fairbanks and Juneau six outlets in each category are desired. Outlets may be added in the Kenai/Soldotna and Palmer/Wasilla pricing locations if the rule of four outlets per category results in eliminating an excessive number of major stores.

If one store offers items in more than one category—like in many village stores and department stores—enter that store's name in each category. For example, AC Company stores offer groceries, clothing and boats. Enter "AC Store" in a blank under each category. This also happens with auto dealers. They sell cars and also repair them. It is fine to get prices for cars and for repairs from the same place, just as it is fine to get grocery, clothing and durable goods from the same store.

Pricing Rules

Specials in stores: If an item you are pricing is on special, use the regular price, not the special price.

When there are several choices for a grocery item: If the brand requested is not available, and there are still choices, select the most popular brand. This is normally the one at eye level and takes up the most shelf space. If the brand is available, get the brand price along with the most popular price.

When the item is not available: Select a similar item, if you can find one. For example, if you can't find Nabisco Saltine, select a box of plain crackers of the same weight. If you can't find a similar item, put N/A in the price blank of that store.

For autos, snow machines, four-wheelers: If model asked is not available, please pick the model that is closest to it. This normally means the model with the least amount of add-ons. For example, the Ford F-150 XL basic package does not include air conditioning or tinted rear-window. If the model asked is not available, please pick the closest brand. For example, if the Ford F-150 is not available, pick another American brand truck like the Chevrolet Silverado or the Dodge Ram. Always choose the base model and the basic package.

For furniture and appliances: The model listed is the basic model for each of the brands. However, there are more options for the basic models, so watch for extra costs, such as stainless steel and extra features. If the brand is not available, make an educated decision on the closest alternative.

For restaurants: Pick a basic restaurant popular in the community. Make sure it serves at least two of the three meal categories. This also means not picking eight Mexican restaurants, eight American burger joints or eight brand names such as Denny's. Pick places that would potentially serve several of the choices.

For bars: It is acceptable to pick bars that are also on your restaurant list. You do not have to go looking for the eight trendiest bars in each community. It is fine if you can eat and drink at the same location.

Market Basket Form for RPS

Item	Units	Store 1 Price (size if applicable)	Store 2 Price (size if applicable)	Store 3 Price (size if applicable)	Store 4 Price (size if applicable)
GROCERY STORE					
Cereals and bakery products

Geographic Differential Study
April 30, 2009

Background:
The executive workgroup created under A.O. No. 237 related to recruitment and retention recommended that a geographic differential study be completed to address compensation discrepancies in various regions of the state. The Legislature appropriated $400,000 to the Department of Administration in 2008 for completion of a study.

The department issued a request for proposals in August 2008 and awarded a contract to the McDowell Group in September. McDowell conducted its work during the fall and winter and submitted its report to the department in April 2009.

History:
The cost of living differential is established in AS 39.27.020 and is based on the 19 election districts in place in 1961. State statutes still reflect these original districts.

The state conducted studies in 1970, 1972, 1976, 1985 and 1995, although for a variety of reasons, most have not been implemented.

The most recent update of the differential adopted by the legislature was the study conducted in 1970.

The most extensive study (prior to the current one) was conducted in 1985, also by McDowell. It surveyed a total of 91 communities, 2,478 households, and 2,106 retail outlets.

The current study surveyed a total of 74 communities, 2,547 households, and 634 retail outlets, plus numerous providers of various services including health care, transportation, communication, insurance, and others. Modern day techniques using the internet and other sources of information improved the data gathering efforts and reliability of the current study.

Issues:
Six labor unions (General Government; Supervisory; Correctional Officers; Public Safety; Confidential; Labor, Trades & Crafts) have geographic differential provisions in their contracts. Non-covered employees (exempt and partially exempt) are covered by statutory provisions.

Differentials have been established either as a percentage over base or steps over base, resulting in different rates for different groups.

In several instances, there are up to four different rates for the same community, depending on bargaining unit.

The Labor, Trades & Crafts unit has a complex differential that makes meaningful comparisons with other units impossible.

Over time, arbitrators have made different awards for different units.

Department of Administration
State of Alaska

Sent via email

Dear Ms. Neal:

The purpose of this letter is to describe differences between the draft *2008 Alaska Geographic Differential Study*, dated March 2009, and the final report, with a cover date of April 30, 2009. This letter focuses on substantive changes to the report, rather than minor editorial changes. For the final report we made the following changes:

- Presented an example of statistically-based geographic cost differential pools, where all sample blocks/communities were grouped into one of five pools. This analysis was summarized in the executive summary, with the details of the analysis added to Section VI (Statistical Analysis).
- Removed all references to cost of living in Washington, D.C.
- Added a page of narrative at the beginning of Section III, describing the sample block and community selection process.
- Added Homer to the list of communities examined and presented individually, in detail.
- Incorporated the results of a minor SPSS programming correction. The correction resulted in generally minor changes to sample block differentials, with the exception of the Aleutians sample block, which decreased from 1.61 to 1.50.

Please call if you have any additional questions.

Sincerely,

Jim Calvin
McDowell Group Principal

Alaska Geographic Differential Study Timeline

2008

April	Legislature appropriated $400,000 effective July 1, 2008.
August 8	RFP issued.
August 18	RFP amendment issued.
August 29	Proposals due.
September 5	Notice of Intent to Award issued.
September 16	Contract awarded to McDowell Group.
September 17	Contract signed with McDowell Group.
October 15	Household consumption survey instrument and sample plan finalized. Retail price survey market basket and survey plan finalized.
October 15 – December 15	McDowell Group conducted surveys.

2009

January 31	Original due date.
February 27	Commissioner Kreitzer emailed all executive branch employees to explain delay in release of the report.
March 4	First draft of final report issued at the Study Group meeting.
	Feedback was provided to the McDowell Group that led to creation of the five geographic differential pools.
March 23	Second draft of final report delivered to the State.
April 6	Study Group met to review report.
April 27	Contract extended to April 30, 2010 to allow for presentation to the Legislature during the next session.
April 30	Final report issued.
May 1	Report published and posted to DOA website.

December 10, 2009

The Honorable Sean Parnell, Governor of Alaska
P.O. Box 110001
Juneau, Alaska 99811-0001

Dear Governor Parnell,

I am pleased to present to you the Department of Revenue's Fall 2009 *Revenue Sources Book* (RSB). The RSB is a compilation of revenues received in Fiscal Year 2009 and projections of revenues for FY 2010 through FY 2019, and is prepared for the purpose of informing you, the Alaska Legislature, and the public of Alaska's revenue outlook. The RSB represents a collaborative effort between the Department of Revenue Tax and Treasury divisions, the Permanent Fund Corporation, and the Office of Management and Budget.

Alaska's revenue is presented in four categories, unrestricted and restricted oil revenue, and unrestricted and restricted revenue from non-oil sources. Revenue from oil production continues to dominate the state's revenue picture, providing close to 89% of the general fund unrestricted revenue in FY09. We project that oil revenue will provide at least 87% of general fund unrestricted revenue throughout the forecast period, to FY 2019.

The amount of oil revenue received depends heavily on oil prices, and oil prices in FY 2009 were exceptionally volatile, climbing to $133 per barrel early in the fiscal year, and dropping to $38 per barrel five months later. Oil prices have stabilized significantly since the beginning of FY 2010, and we forecast continued stabilization for the remainder of the year, with FY 2010 prices averaging $66.93 per barrel. This is $8.64 above our previous FY 2010 forecast of $58.29, provided in Spring 2009. Our longer term oil price forecast is based upon an expectation of gradual economic recovery for the U.S. and other developed nations, and a corresponding gradual increase in demand for petroleum products. Under this scenario, we forecast oil prices increasing to $76.35 and $83.93 in FY 2011 and FY 2012, respectively.

Oil production on the North Slope continues to decline, with 3.3% less oil produced in FY 2009 than in FY 2008. Production in FY 2010 is expected to decline 4.8%, to 659,000 barrels per day, and a decline of another 5.4% is expected in FY 2011. We project some improvement

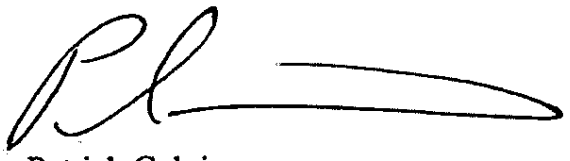
in production beginning in FY 2012, with new projects coming online. Our forecast calls for first oil production in the Nikaitchuq Unit in FY 2011 and in the Point Thomson Unit in FY 2014.

Total unrestricted revenue in FY 2009 was approximately $5.8 billion. For FY 2010 and FY 2011, we forecast total unrestricted revenue to be $4.8 billion, and $5.2 billion, respectively. Non-oil sources are projected to make up $610 million and $589 million of the FY 2010 and FY 2011 unrestricted totals.

Relatively high oil prices since 2005 have enabled the state to set aside some of the excess revenue in the state's Constitutional Budget Reserve Fund (CBRF). We devote this RSB's feature chapter to the establishment and history of the CBRF, its use over the years, its current balance, and its future. More about the CBRF—the state's "other" savings account—can be found in Chapter 3 of this publication.

We hope you find the information provided in the Fall 2009 *Revenue Sources Book* to be useful. Our next forecast for FY 2010 and FY 2011 will be published in the spring of 2010.

Sincerely,



Patrick Galvin
Commissioner

Revenue Sources Book

FALL 2009

1. **Introduction** 1

2. **Executive Summary** 3

3. **The Consitutional Budget Reserve Fund** 17

   A historical look at the Constitutional Budget Reserve Fund.

4. **Oil Revenue** 25

   In FY 2010, oil revenues are projected to contribute 87% of the state's General Purpose Unrestricted Revenue. Oil revenues will continue to play a key role in Alaska's future.

5. **Other Revenue (except Federal & Investment)** 45

   Revenue from non-oil sources includes non-oil taxes, charges for services, fines and forfeitures, licenses and permits, rents and royalties and other revenue sources.

6. **Federal Revenue** 59

   Federal funding accounted for $2.1 billion of the state's total revenue in FY 2009.

7. **Investment Revenue** 63

   Investment earnings come from the Alaska Permanent Fund, Constitutional Budget Reserve Fund, General Fund and other state investments.

8. **State Endowment Funds** 71

   Alaska has six endowment funds including the Alaska Permanent Fund, Mental Health Trust, Public School Trust, Alaska Children's Trust, Power Cost Equalization Endowment and the University of Alaska Endowment.

9. **Public Corporations & the University of Alaska** 75

   Seven public corporations and the University of Alaska are treated as separate component units of state government for financial reporting purposes.

10. **Appendices** 83

    The appendices provide 10 years of historical data and 10 years of forecast data on oil revenue, prices and production.

FALL 2009

1471

1. Introduction

General Discussion

The purpose of the Revenue Sources Book is to provide the governor, legislature and citizens of the state a summary of our past collections of state revenue and a forecast of future revenue. Revenues are categorized into four major components: oil revenue, income from sources other than oil, federal revenue and investment revenue.

Oil revenue continues to dominate the unrestricted revenue picture—and is projected to provide more than 87% of General Purpose Unrestricted Revenue through FY 2019. However, North Slope oil production is declining. In FY 2009, Alaska North Slope (ANS) output was 0.692 million barrels per day compared to a peak of 2.006 million barrels per day in FY 1988. While production declined by about 65% over that period, the market price of oil has more than tripled. For FY 2010, we project ANS oil production will decrease to 0.659 million barrels per day.

Before 2003, the Constitutional Budget Reserve Fund (CBRF) was used to balance the state's budget in 10 of the previous 15 years. Fiscal Year 2008 was a banner revenue year, in which surpluses exceeding $5 billion were deposited in the CBRF. Lower prices in the future, combined with the fall in North Slope crude oil volumes, could lead to future budget shortfalls and draws on the CBRF.

The oil and gas production tax known as Alaska's Clear and Equitable Share (ACES) was signed into law on December 19, 2007. This tax is designed to encourage investment in Alaska by the petroleum industry, while providing an open, transparent tax system in which both the industry and the people of the state can have confidence that the state is receiving a fair share of the revenue from Alaska's petroleum resources.

Alaska's total revenue picture also includes earnings from investments in the Permanent Fund and CBRF, federal revenue and other sources, such as taxes, charges for services, licenses, permits, and fines and forfeitures. The information in this book will provide greater insight into not only the sources of revenue that support the state today, but also into future revenue from potential new sources.

Please note that totals in some tables throughout this publication may not equal the sum of components due to rounding.

Unrestricted Revenue and Restricted Revenue

Throughout this forecast, we report two categories of revenue: General Purpose Unrestricted Revenue (frequently referred to as unrestricted revenue) and restricted revenue. These two types of revenue are based on the two components of the General Fund in the Alaska State Accounting System (AKSAS)—the unrestricted component and the restricted component—with certain adjustments.

General Purpose Unrestricted Revenue (GPUR)

General Purpose Unrestricted Revenue reflects revenue that is not restricted by the constitution, state or federal law, trust or debt restrictions, or customary practice. Most legislative and public debate centers on this category of revenue, and this is the amount generally used for budget planning purposes and designated in budget documents as General Fund revenue. In this forecast, General Purpose Unrestricted Revenue includes funds deposited into the unrestricted component of the General Fund, with certain adjustments:

- Reductions might include (a) revenue earmarked for specific programs, (b) pass-through revenue for qualified regional aquaculture and dive fishery associations and (c) revenue shared with municipal governments and organizations (e.g., fisheries taxes).
- Additions might include transfers from the unclaimed property trust to the state treasury.

The Department of Revenue uses a three-step process to make its final estimate of General Purpose Unrestricted Revenue.

Step 1. We estimate all revenue for the unrestricted component of the General Fund in AKSAS, as well as certain program receipts, by using our forecast models and obtaining estimates from other state agencies.

Step 2. We then consult the Governor's Office of Management and Budget and Legislative Finance for their input.

Step 3. Finally, following analysis, we adjust our initial projection to derive a forecast of total General Purpose Unrestricted Revenue.

Figure 2-5 on the next two pages sets out FY 2009 General Purpose Unrestricted Revenue and our forecast for FY 2010 and 2011.

Restricted Revenue

Restricted revenue represents any revenue that is not considered General Purpose Unrestricted Revenue. This includes revenue restricted by the constitution, state or federal law, trust or debt restrictions, or customary practice. Restricted revenue reported in this forecast includes money deposited into the restricted component of the General Fund with certain additions. Additions might include (a) receipts deposited in funds other than the General Fund and (b) receipts that are deposited into the unrestricted component of the General Fund but are restricted by statute or customarily appropriated for a particular purpose or program, such as sharing of fish tax revenue with municipalities.

Article IX, Section 15 of the Alaska constitution requires that at least 25% of all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the state be placed in the Permanent Fund. Until 2003, Alaska Statute 37.13.010 required the placement of 50% of royalties from certain leases into the permanent fund. House Bill 11, passed by the legislature in 2003, changed the law so that 25% from all leases would be placed into the Permanent Fund, contingent on the impact of this change to the Permanent Fund Dividend. On October 1, 2008, the impact of HB 11 on the Permanent Fund Dividend had exceeded the limitations provided in HB 11, and HB 11 was repealed. As of October 1, 2008, 50% of the royalties from applicable leases are paid to the Permanent Fund, while 25% from other leases are paid to the fund. This change is reflected in this revenue forecast as a decrease in unrestricted revenue and an increase in restricted revenue.

Crude Oil Price Forecast

Oil revenue is projected to provide more than 87% of forecasted General Purpose Unrestricted Revenue through FY 2019. Three elements are critical to the oil revenue forecast: price, volume, and to a lesser extent lease expenditures.

There is no price for Alaska crude oil on the New York Mercantile Exchange (NYMEX)[1] or other commodity exchanges. The price of Alaska North Slope (ANS) crude oil is calculated by subtracting a market differential from the price of West Texas Intermediate (WTI) quoted on the NYMEX. Four different reporting services estimate that market differential and report a daily spot price for ANS.

All of Alaska's oil production is delivered to refineries on the U.S. West Coast (including Alaska and Hawaii). Consequently, Alaska's royalty and production tax revenue depends in large part on the average market price of ANS crude oil at U.S. West Coast refining centers.

Figure 2-6 shows crude oil prices for FY 2009 and the Department of Revenue's forecast of prices for the 10-year period beginning with the current fiscal year FY 2010 and continuing through FY 2019. The oil price forecast is based on a subjective assessment of market dynamics and trend analysis by participants at a Department of Revenue price forecasting session and other commercial price forecasting sources.

Figure 2-6. Nominal WTI, ANS West Coast and ANS Wellhead, FY 2009 and Forecasted FY 2010-2019 ($ per barrel)

Fiscal Year	WTI	ANS West Coast	ANS Wellhead
2009	69.71	68.34	61.86
2010	68.71	66.93	61.03
2011	78.85	76.35	70.36
2012	86.43	83.93	77.78
2013	88.74	86.24	80.02
2014	91.11	88.61	82.27
2015	93.55	91.05	84.57
2016	96.05	93.55	86.89
2017	98.63	96.13	89.22
2018	101.27	98.77	91.54
2019	103.99	101.49	93.84

[1] The NYMEX futures market is one source for a WTI quote. Several reporting services also report a daily WTI price quote.

Figure 2-7 shows: (1) the monthly ANS West Coast market price from November 2004, through October 2009, (2) the 60-month moving average of the ANS West Coast market price for the same period and (3) estimated ANS futures price for December 2009 to December 2014.

The figure illustrates a number of issues with respect to oil prices:

- Month-to-month crude oil price volatility—monthly ANS West Coast prices during this time period ranged from $36.66 per barrel to $133.78 per barrel.
- The 60-month moving average is $68.44 per barrel and has more than doubled since 2004.
- Futures prices from November 2009 are dramatically lower than July 2008 record highs, but higher than the 60-month moving average.

We project that ANS oil prices will average $66.93 per barrel in FY 2010, $76.35 per barrel in FY 2011 and $83.93 per barrel in 2012 in nominal dollars. ANS oil prices are projected to increase at approximately 2.75% per year starting in FY 2013, based on inflation.

Figure 2-7. Monthly Nominal ANS West Coast and Futures Oil Prices ($ per barrel)

Crude Oil Production Forecast

Alaska North Slope crude oil production peaked at 2.006 million barrels per day in FY 1988 and has steadily declined since. We anticipate volumes will decline by 4.8% in FY 2010 to about 0.659 million barrels per day. For FY 2011, we project a 5.4% decrease in North Slope production. More discussion of the Fall 2009 oil production forecast can be found in Section 4. Oil Revenue. Also, a detailed field-by-field production forecast is included in the appendices of this forecast.

Crude Oil Expenditures Forecast

A third component of oil revenue forecasting is the expenditures forecast. Under the new ACES production tax, companies are allowed to deduct certain lease expenditures from the gross value of their production before applying the tax rate. Future tax collections, therefore, are dependent not only on the oil price and the level of production, but on the cost of that production. Costs of production may include fixed and variable operating expenses, such as labor costs and the expense to run a facility, and they may include costs to acquire production equipment or to drill a well—usually deemed to be capital expenses. A portion of capital expenses is also allowed as a credit against the ACES production tax.

Lease expenditures for the exploration for, and production of, crude oil have risen over the three-year period that they have been reported. In FY 2007, over $3.6 billion was spent producing and exploring for oil on the North Slope. In FY 2008, reported expenditures totaled $4.6 billion, and in FY 2009, reported expenditures totaled $4.9 billion. It is important to note that these are unaudited lease expenditures. We project spending in FY 2010 to moderate somewhat, partially due to cost reductions attributable to operational efficiencies and lower costs, with a total of $4.5 billion. For FY 2011, we expect capital spending to increase, with totals reaching $5 billion. These spending estimates are contingent on oil prices staying at current levels or increasing.

Long-Term Unrestricted Revenue Outlook

Using the price, volume and lease expenditure components developed for this fall forecast, Figure 2-9 summarizes the department's forecast of total General Purpose Unrestricted Revenue through FY 2019.

Figure 2-9. Total General Purpose Unrestricted Revenue, FY 2009 and Forecasted FY 2010-2019 ($ million)

Fiscal Year	Unrestricted Oil Revenue	Unrestricted Other Revenue (except Federal & Investment)	Unrestricted Investment Revenue	Total Unrestricted Revenue	Percent From Oil
2009	5,181.0	402.6	247.6	5,831.2	89%
2010	4,167.5	389.3	221.1	4,777.9	87%
2011	4,647.7	405.8	183.2	5,236.6	89%

Spending, Revenue Forecast and the Constitutional Budget Reserve Fund

As approved by voters in 1990, all receipts from mineral tax and royalty settlements are deposited into the Constitutional Budget Reserve Fund (CBRF). The state has deposited about $14.3 billion into the fund and generated another $1.9 billion in investment earnings. Through September 30, 2009, approximately $3.9 billion had been borrowed from the CBRF to balance the budget and another $4.1 billion had been spent through direct appropriations. During the years of FY 2007, 2008, and 2009, all borrowed funds were repaid from the General Fund into the CBRF. The net asset value in the CBRF as of September 30, 2009 was about $8.3 billion. Since the increase in oil prices beginning in 2003, no significant CBRF withdrawals were necessary to balance the state's budget, however given price volatility and the decline in expected oil volumes from the North Slope, the state may have to depend on the CBRF in the future.

Figure 2-10 is presented to help the reader understand the time period in which the CBRF could be depleted, based on the current revenue forecast and the assumption that all excess revenue would be deposited into the CBRF. This figure shows that, given the current revenue forecast and up to 10% in budget growth from FY 2010, the CBRF would not be depleted before 2020. If oil prices were to fall below our forecasted level and stay at that low level, we expect the CBRF to be depleted as early as July 2014, if the budget increases at a rate of 10% per year. If oil prices were to decline to an annual average of $50 per barrel, and the budget increases at 3% per year, the CBRF could be depleted by July 2017.

FALL 2009

3. The Constitutional Budget Reserve Fund: Its Purpose, History and Use

Boom and Bust History of Natural Resource Revenues

For all of recorded history, Alaska has been a resource extraction state. From sea otter fur to timber, to gold, and finally to oil and natural gas, Alaskans have relied on natural resources as the major economic driver in the state. Because of its economic dependence on natural resources, Alaska has had a long history of boom and bust cycles.

As early as 1778, Captain Cook observed that traders would likely find a lucrative market for sea otter pelts or "sea-beaver" as they were called at the time. In fact, Captain Cook went so far as to call the sea otter pelts "soft gold."[1] Fur from sea otters and seals did indeed become a major source of revenue for Alaskan traders. Yet less than fifty years after Captain Cook correctly predicted the value of the sea otter trade in Alaska, a "fur boom" ensued and sea otters were hunted to virtual extinction.[2] This pattern of discovery of a resource in commercial quantities, followed by a subsequent rush to harvest the resource and ultimately the depletion of the resource, sadly played out again and again in Alaska over the next hundred years. Gold caused the next natural major resource boom for Alaska only to crash in the early 1940s. Fishing, specifically salmon, was a leading source of revenue for the Alaskan economy during World War II.

Another significant source of revenue in Alaska is federal spending, especially military spending. During World War II, over a billion dollars in federal money flowed into the state over a relatively short period of time, leading some to refer to the period as a "defense rush." Yet Alaska experienced a painful contraction within a few years of the end of World War II.

While federal revenues were flowing into the state at a record pace, tax revenues from the two leading sources of government revenue, fishing and mining, were dropping. Revenues from fishing and mining dropped so dramatically in the 1940s that by 1948, alcohol taxes had overtaken fishing and mining to become Alaska's main source of revenue.[3] At the same time, spending for state services skyrocketed, leaving Alaska with a multi-million dollar budget shortfall in 1947.

1488

Over the years there were numerous discussions of the need to stabilize revenues and protect Alaska from the boom and bust cycles associated with reliance on natural resources, but there never seemed to be enough of a surplus or a willingness to save until oil was discovered in Alaska in world-class quantities.

The Permanent Fund

By the late 1970s, numerous groups and individuals had pointed out the need for Alaska to establish a savings fund to protect against swings in commodity prices for natural resources. As early as 1941, then Territorial Governor Ernest Gruening called for a budget stabilization fund to guard against the revenue volatility experienced by a natural resources dependent economy.[4]

Gruening's dream of an "Alaska fund" came true in the form of the Alaska Permanent Fund. While one purpose of the Permanent Fund was arguably to create a "rainy day account" for government spending when oil revenues dwindled, it has not been used for that purpose. Former Governor Jay Hammond is credited with the idea of generating public support for protecting the Alaska Permanent Fund by paying out dividends to Alaskans. The idea has been quite effective.

While legislators may appropriate money from the earnings of the Alaska Permanent Fund for government projects, the dividend program has made any dipping into the Alaska Permanent Fund for purposes other than dividends extremely controversial.

The 1980s Bust and Impetus for CBR

In the mid-1980s, roughly a decade after the Alaska Permanent Fund was established, Alaska experienced another severe resource bust as the price of oil dropped to roughly $10 per barrel, bringing widespread foreclosures and bankruptcies to Alaska.

The 1980s bust was the same painful story Alaskans weathered through for over a century: resources flowed in and government spending grew, resources played out or values dropped and suddenly Alaskans were faced with a tremendous shortfall. As the individual income tax and several other state taxes were repealed in 1979-1980 as a result of soaring oil revenues, taxes paid by Alaskan residents plummeted. As Stephen Jackstadt and Dwight Lee noted, "real taxes paid to the state by individual Alaskans after 1980 were only 14 to 16 percent of the real taxes they paid during fiscal year 1976."[5]

Revenues were declining and state spending was expanding. Over the seven years from 1981 to 1988, state spending increased almost 2,000% with state spending representing approximately $70,000 per Alaskan.[6]

Statutory Budget Reserve

In 1986 as the Alaskan economy cratered under the pressure of $10 per barrel oil, the legislature created another "rainy day" account: the Statutory Budget Reserve. The Statutory Budget Reserve was created to cover General Fund shortfalls using "excess revenues" from more profitable years.

The Alaska Legislature seeded the Statutory Budget Reserve with the balance of the remaining General Funds at the end of fiscal year 1991, $696.3 million.[7] By fiscal year 1994, the legislature had appropriated all of the money in the Statutory Budget Reserve leaving it with a zero balance. However, in 2008 the Legislature deposited approximately $1 billion in the Statutory Budget Reserve, which remains in the account today.

The Statutory Budget Reserve served its purpose for a short period of time before lying empty for over a decade. There was concern among some state legislators that the problem with the Statutory Budget Reserve was that funds were available through a simple majority vote. Some felt the Statutory Budget Reserve was doomed to fail because the money in the fund was simply too easy to spend.

Constitutional Budget Reserve History and Passage

The statutory reserve fund alone was not sufficient to protect Alaska from declining oil production and volatile prices. In the late 1980s, Alaskan legislators began discussing the idea of creating another budget reserve to be enshrined in the Alaska Constitution. The concept of the Constitutional Budget Reserve (CBR) as we know it today (an account containing oil and

gas settlements from which appropriations generally require a three-quarter majority vote) came about as the state was considering the possibility of a large windfall from an oil settlement. Currently, CBR funds consist of revenues from the settlement of litigation over mineral taxes and royalties and the interest earned on those funds.

The legislation that created the CBR was sponsored by Senator Jan Faiks. Senator Faiks was the Chair of the Senate Judiciary Committee at the time and had just finished two years as the first female president of the Alaska State Senate from 1987 to 1988. Although Senator Faiks was the prime sponsor of the bill that created the CBR, the legislature changed the bill, which was ultimately combined with elements of a House Finance bill shepherded by Representative Kay Brown.

Originally, Senator Faiks' bill contained a number of provisions related to budgeting, one of which was labeled the Budget Stabilization Fund. Several other major sections in Faiks' bill were removed through the committee process including a constitutional spending limit to accompany the budget stabilization fund.

Today, under most circumstances the legislature can appropriate funds from the CBR only with a three-quarters majority vote. However, it is possible to make appropriations from the CBR with a simple majority vote under certain circumstances as provided in section 17(b) of the Constitution, and the legislature did so in 2003. Withdrawals from the CBR are required to be repaid.

The CBR was established in 1991, and since that time more than a dozen pieces of legislation have been introduced that would amend or change the CBR. However, the only significant changes to the CBR have been the asset allocation and the establishment of the CBR sub-account, a separate fund invested and managed with a longer time horizon than the main fund.

The CBR has been used heavily since 1991 and its exhaustion date is regularly forecasted as part of the official fall revenue forecast each year. There have been warnings that the State of Alaska will face a "fiscal gap" when the CBR is exhausted.

CBR Legislative and Balance History

Mary Halloran of the Governor's Office of Management and Budget summed up the impetus for the legislation in her comments before the Senate Finance Committee, which ultimately authorized the Constitutional Budget Reserve: "In mentioning the outstanding oil and gas litigation, [Halloran] said that, though the timeline is uncertain, it looks like the State could have some 'windfalls' during the next five years. [Halloran] said the Legislature has taken some very strong steps over the last couple of years to try to stabilize the spending limit, but there are still a number of programs 'out of control.'"[8]

Former Senator Jan Faiks recalled the passage of Senate Joint Resolution 5 (SJR 5) and creation of the CBR reserve as a bipartisan effort: "The decision was contentious because hardly anyone wanted to change the terms and conditions of the original Permanent Fund without approval from the people. So most Senators... insisted on another statewide vote and I think most House members agreed; thus, it was a bipartisan decision to propose a constitutional amendment. The Governor [Cowper] gets credit for recognizing the state had a real financial problem and he wanted to find a permanent solution. We knew the current situation of relying on the ups and downs of oil revenues was not good for either state or local governments. A bipartisan solution had to be found."[9]

Originally, SJR 5 was an updated version of a bill that had passed the Senate nearly unanimously in 1987. The bill called for a 50-30-20 distribution of the income of the Permanent Fund. Fifty percent of the Permanent Fund's earnings would have gone to the payment of dividends, thirty percent to inflation proofing and twenty percent to a budget stabilization fund. The twenty percent of earnings in Senator Faiks' bill as originally introduced eventually became the CBR as we know it today. One major piece of Senator Faiks' bill that was removed in the process was an appropriation limit. Another was a sunset clause under which the constitutional amendment would have expired after five years.

Just getting the bill out of the Senate was a challenge, even for the former Senate President Faiks. After failing to pass once and being returned to the Rules Committee on a motion by Senator Arliss Sturgulewski, SJR 5 was reported out of the Rules Committee and brought to the Senate Floor under a supplemental calendar on April 18,

[9] Faiks, Jan. "CBR." Email to Department of Revenue. November 10, 2009.

1990. The bill passed the Senate by a vote of 15-5 with Senators John Binkley and Michael Szymanski switching their votes to support passage.

Meanwhile, in the State House of Representatives, a bill with similar intent was making progress. House Joint Resolution 66 (HJR 66), while nominally sponsored by the House Finance Committee, was heavily supported by Representative Kay Brown. In fact, the legislative record describes Representative Brown as the Prime Sponsor of HJR 66. Co-Chairman of the House Finance Committee Ron Larson explained that the bill, "...evolved from the House Finance Fiscal Policy Subcommittee, chaired by Representative Brown, and was modified by the House Judiciary Committee."[10] The two bills (SJR 5 and HJR 66) finally collided in May of 1990 in the House Finance Committee.

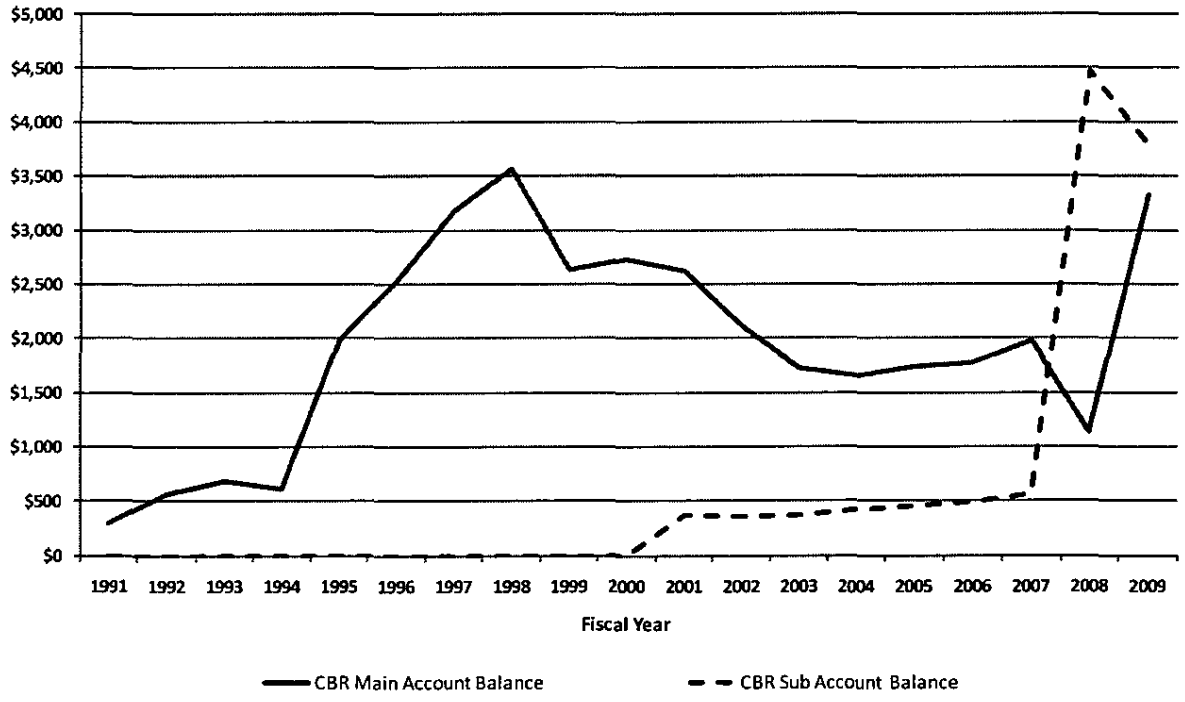
As is often the case with two pieces of similar legislation introduced separately in the House and Senate, the first bill to pass its respective house of origin typically becomes the "vehicle" or version to pass into law. In this case, SJR 5 by Senator Faiks had already passed the Senate and was assigned to the House Finance Committee for a hearing. HJR 66 never passed the House. However, the language from HJR 66 relating to the budget reserve, including the use of the term "budget reserve" rather than "budget stabilization fund" as it was referred to in SJR 5, was incorporated into SJR 5. Representative Brown testified before the House Finance Committee that the language in SJR 5 was nearly identical to the language in HJR 66 after the House Finance Committee had amended SJR 5.

In essence, SJR 5 was amended in the House to reflect the language of HJR 66. In the process, the spending limit in SJR 5 was eliminated. Numerous legislators and the Alaska Public Employees Association, a public employees union, opposed the constitutional spending limit.[11] Because the spending limit was deemed not politically viable, it was removed.

The Senate concurred with the House in a vote of 15-5 on May 8, 1990. The bill was sent to the governor on May 24, 1990, for signature. Governor Steve Cowper signed the bill almost exactly two months later on July 23, 1990.

Despite the passage of SJR 5 and the creation of the CBR, some question

Figure 3-1. Balance of the Constitutional Budget Reserve Main Account and Sub Account ($ million)



[10] Testimony of Ron Larson. 16th Alaska State Legislature, Senate Finance Committee. May 1, 1990. Transcribed by Alaska Legislative Records Dept.

remained about which funds were to be deposited into the CBR. Former Governor Cowper and a number of legislators sued then Governor Wally Hickel, Department of Revenue Commissioner Darrel Rexwinkle and the State of Alaska in 1993 to dispute the State's interpretation of "administrative proceeding." Former Governor Cowper and the legislators argued that the State had been improperly depositing funds received during the informal conference stage of dispute[12] into the General Fund when they should have been deposited into the CBR. The Alaska Superior Court ruled in favor of former Governor Cowper and required the state to properly fund the CBR, with interest and foregone earnings, by the end of the regular session of the 18th Alaska Legislature in 1994.[13]

In another instance, nearly a billion dollars in funds which should have been deposited in the CBR were spent instead. When oil companies ARCO, Unocal, BP Exploration and Chevron agreed to pay the state $1.7 billion to settle long-running disputes over payments of back taxes and royalties in 1992 and 1993, the governor and legislature appropriated over half the amount. By spending this settlement rather than saving it, the state was able to maintain overall spending and more than double capital spending, from $300 million to $616 million.[14]

Historically, funds from the CBR were usually appropriated for general purposes. However, the CBR has also been used to fund specific programs in a number of instances. For example, a 2004 legislative research report listed the following expenditures from the CBR for specific programs: expenditures for oil and gas litigation and state title to oil and gas lands, capitalization of the Alaska Mental Health Trust, Y2K assessment, compliance, and remediation, and establishment of the Power Cost Equalization endowment fund.[15]

Figure 3-1 illustrates the history of the balances in the Constitutional Budget Reserve and the sub-account of the CBR from the first deposit through fiscal year 2009. Figures 3-2 and 3-3 illustrate the balance of each the Constitutional Budget Reserve and the Constitutional Budget Reserve sub-account with contributions and withdrawals by year. Figure 3-4 presents this information in tabular form.

CBR as a Stabilization Fund or Alternative to Hedging

The CBR as it exists today functions as a budget stabilization fund in the same manner as funds in many other states and oil producing nations. Like many resource producing states, the State of Alaska is exposed to tremendous commodity price risk. This is a difficult position for a government as expenses typically cannot be scaled back as quickly as revenues fall.

As a result of commodity price exposure, a number of resource producing states and nations from Texas to Mexico have actively hedged oil prices. The State of Alaska has studied hedging oil prices on a number of occasions with the most detailed discussion occurring in 2002 under the direction of Department of Revenue Commissioner Wilson Condon. In its hedging report, the Department of Revenue raised some concerns with using the CBR to protect the State from commodity price volatility, but also recognized the role the CBR plays in smoothing state revenues. However, because the CBR already insulates the state from the volatility of commodity prices, the report concluded that hedging oil prices was not ideal until the CBR was depleted or nearly depleted.[16]

"Alaska has not yet needed to pay the costs or take the risks of hedging its future oil revenues because our cushion against fluctuating oil prices for the past decade has been the Constitutional Budget Reserve Fund (CBRF). The fund was established a decade ago for exactly that purpose — to fill the gap between a fluctuating revenue source and a constant need for public services," wrote the Department in 2002.[17]

Conclusion

Alaska's economy has always been at the mercy of commodity production and prices. After centuries of exhilarating resource booms followed all too regularly by severe busts, the State of Alaska created a budget stabilization fund in 1990: Alaska's Constitutional Budget Reserve. The CBR was created shortly after a time of economic crisis and with a view toward several large windfall settlements for the state.

Over nearly two decades, the CBR has almost single-handedly staved off massive budget shortfalls. In some years, withdrawals from the CBR reached a billion dollars in nominal terms. Yet the CBR remains vulnerable to prolonged overspending and the potential that oil prices may fall.

While the CBR is still vulnerable to overspending, and has at times appeared on the verge of exhaustion, the fund has acted as a buffer against commodity price volatility for almost two decades and can be expected to do so for the near future.

[1] Includes bonuses and interest

General Discussion

The state receives oil and gas revenue from four sources: oil and gas production tax, property tax, royalties and corporate income tax. The bulk of the revenue goes into the General Fund for general purpose spending. With the repeal of HB 11,[1] approximately 30% of oil and gas royalties goes into the principal of the Alaska Permanent Fund and 0.5% goes into the Public School Trust Fund. There also are two other funds that receive specific oil and gas revenues: the National Petroleum Reserve-Alaska (NPR-A) Fund,[2] which receives the state's share of all lease bonuses from sales in the NPR-A; and the Constitutional Budget Reserve Fund (CBRF), which receives settlements of tax and royalty disputes between the state and oil and gas producers.

Figure 4-2 shows the actual amount of each tax and royalty source in FY 2009 and the forecast for FY 2010 and FY 2011. As can be seen from the figure, royalties and production tax constitute the largest part–81% for FY 2010–of restricted and unrestricted oil revenue combined. Figure 4-3 shows the department's unrestricted oil revenue forecast from the current fiscal year through FY 2019 by revenue category.

This section begins with a discussion of production taxes and royalties, both of which are driven by price and volume. We then review the price forecasting methodology that underlies this report, and discuss the linkage between market prices and wellhead values. We also review our production forecast and close this section with a discussion of oil and gas property taxes, oil and gas corporate income taxes and the restricted portions of oil revenue.

[1] For more discussion on deposits to the Permanent Fund and HB 11, see the Executive Summary section.

[2] This fund implements a federal requirement that the state use its share of NPR-A oil revenue to satisfy the needs of local communities most affected by development in the NPR-A. For detailed information on this fund, see Section XII-P of Treasury's Investment Policies and Procedure Manual.

Crude Oil and Natural Gas Production Taxes

All oil and gas production in Alaska, except the federal and state royalty share and a small amount used in production operations, is subject to the state's production tax, and to the hazardous release surcharge, which is levied only on crude oil. Taxes and surcharges are estimated and collected on a monthly basis.

The Production Tax Known as "Alaska's Clear and Equitable Share" (ACES)

In November 2007, the Alaska Legislature passed the Alaska's Clear and Equitable Share plan (ACES), which made changes to the state's production tax system, retroactive to July 1, 2007. The previous production tax, known as the Petroleum Profits Tax (PPT), had been in place for one year prior to the passage of ACES. Both production tax systems are based on net profits of oil and gas production (see Figure 4-4). For more than 20 years prior to the enactment of the PPT, the state used a production tax system that was based on the gross value at the point of production as adjusted by the Economic Limit Factor (ELF).

The ACES tax calculation starts with the value at the point of production, and then subtracts upstream costs, including costs capitalized on company financial statements, from this value to arrive at the "production tax value." Each company that produces oil in Alaska has a production tax value based on this calculation, which is conceptually similar to a company's net profit. The production tax value is multiplied by the tax rate—25%—to arrive at the base tax. Should the production tax value exceed $30 per barrel of oil produced (or the equivalent in gas), the tax rate increases 0.4% for every dollar the per-barrel production tax value is over $30. For production tax values greater than $92.50, the progressivity factor changes to 0.1% for every additional dollar of profit on a barrel of oil. The maximum total tax rate is 75%.

Under ACES, a company's production tax liability is reduced to the extent that it invests in equipment, projects, or other items that are deemed "capital expenditures." Capital expenditures generally include costs related to the purchase of drilling rigs or other equipment, infrastructure, exploration, and facility expansion. Capital costs are eligible for a 20% credit against the company's ACES liability and the credits must be spread over two years. The 20% capital expenditure credit is intended to encourage investment in Alaska.

ACES also encourages investment in Alaska through three other tax credits. Companies producing less than 100,000 barrels of oil per day may be eligible for a tax credit of up to $12 million per year. Net losses are eligible for a 25% tax credit in the year following the loss. ACES also expanded the Exploration Incentive Credit, changing the credit rates from 20% and 40% to 30% and 40% of qualified exploration expenditures.

Figure 4-5 shows the credits that companies reported on their annual tax returns filed March 31, 2008 and March 31, 2009. Note that most of the credits were applied against tax liabilities; those that could not be immediately applied against a tax liability will be carried forward or sold to the state or another company.

Figure 4-4. ACES Tax Liability Calculation

ACES Tax Liability = [(Value – Costs) * Tax Rate] – Credits

The terms used in the equation are defined as follows:

Value = Volume of Oil & Gas Produced * Wellhead Value

Costs = Operating Expenditures + Capital Expenditures

Tax Rate = 25% + 0.4% for every $1 per barrel that this "net profit" exceeds $30 up to $92.50, then 0.1%

Credits = (20% * Capital Expenditures)(1) + (20% * Eligible Transition Expenditures)(2) + Base Allowance

(1) Spread over two years

(2) Limited to those credits earned while the PPT was in effect and could not be used

The oil and gas tax credit fund, authorized under AS 43.55.028, was created to fund the state's purchase of production tax credit certificates. In FY 2009, the fund paid out $193 million, and thus far in FY 2010, the fund has paid out $49 million to purchase credits. As of November 2009, the fund balance was $138.5 million.

Hazardous Release Surcharge

The Oil and Hazardous Substance Release Prevention and Response Fund was created by the legislature in 1986 to provide a "readily available funding source to investigate, contain, and clean up oil and hazardous releases." An amendment in 1994 divided the fund into two separate accounts comprised of: (1) the Response Account, which requires a surcharge on all oil production, except federal and state royalty barrels, that may be used to finance the state's response to an oil or hazardous substance release declared a disaster by the governor; and (2) the Prevention Account which is an additional surcharge on all oil production, except federal and state royalty barrels, that may be used for the clean up of oil and hazardous substance releases not declared a disaster by the governor. This account can also be used to fund oil and hazardous substance release prevention programs in Alaska.

The Response surcharge (AS 43.55.201) is $.01 per taxable barrel of oil and the Prevention surcharge (AS 43.55.300) is $.04 per taxable barrel of oil produced.

The Response surcharge is suspended when the balance of the Response account is equal to or exceeds $50 million. As of September 30, 2009, the cumulative balance of the account was $45.8 million. The Response Surcharge was re-imposed effective April 1, 2007, by the Department of Revenue.

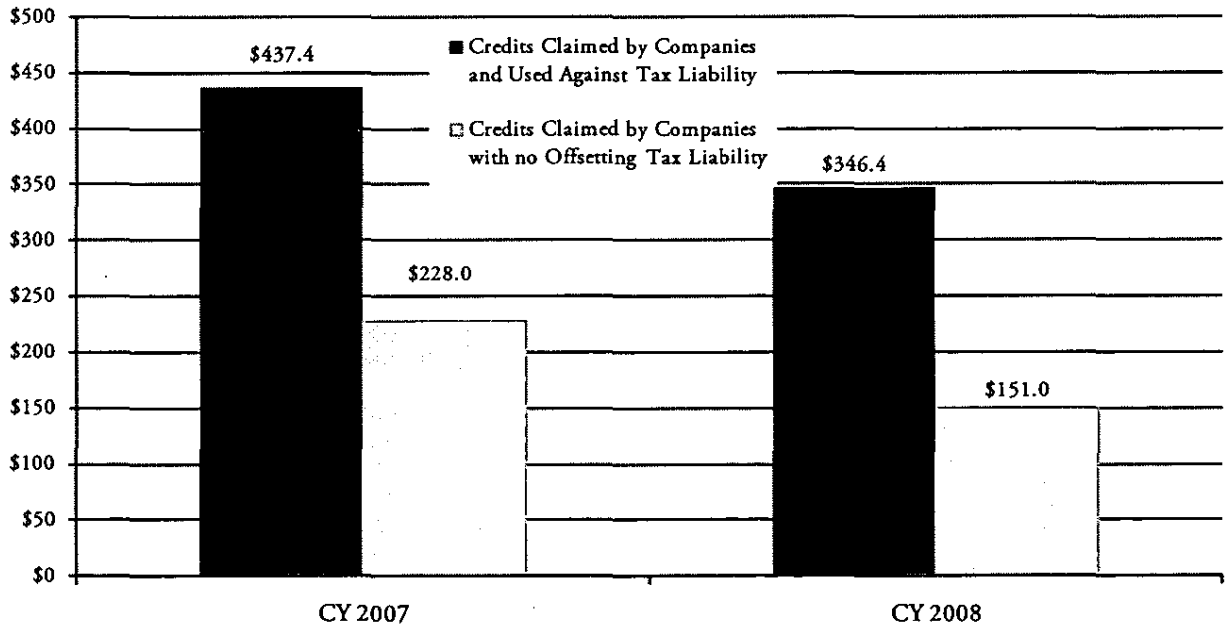
Oil Royalties

Almost all Alaska oil and gas production occurs on state lands leased for exploration and development. As the land owner, the state earns revenue from leasing as: (1) upfront bonuses, (2) annual rent and (3) a royalty interest in oil and gas production.

Typically the state issues leases based on a competitive bonus bid system. The state generally retains a royalty interest of at least 12.5%. The vast majority of current production is from leases that carry that rate. Some currently producing leases carry rates as high as 20%, and some leases also have a net profit-share production agreement.

State oil and gas leases provide that the state may take its oil royalty in barrels (in-kind) or as a percentage of the production value (in-value). In FY 2009, the state took approximately 56,000 barrels per day of North Slope

Figure 4-5. Production Tax Credits Reported, CY 2007 and CY 2008 ($ million)



production in-kind and sold it to Flint Hills Resources Alaska, LLC for their refinery at North Pole.

The royalty oil taken in-value is valued according to a formula using a market basket of spot crude oil prices closely approximating the ANS West Coast spot price of oil less a transportation allowance back to the lease. Royalties are based on a destination price—the higher of the actual sales price or the prevailing value.[3] Pipeline and marine transportation costs are deducted from the destination value to derive the taxable wellhead value of the oil or gas.

Crude Oil Prices, Lease Expenditures, Transportation Costs and Crude Oil Production: Forecasting Methodology & Assumptions

For many years, the level of revenues accruing to the state from oil production have been contingent primarily on oil prices and production volumes. With the implementation of the production tax on net profits, a third factor influences the level of revenues anticipated from oil production—costs related to exploring for, developing and producing oil, all or part of which are deductible and/or creditable under the production tax as "lease expenditures."

Estimating oil revenue for the state entails projecting four factors:

1. Crude oil prices
2. Lease expenditures
3. Transportation charges
4. Crude oil production

This section reviews each of these factors.

To forecast oil prices, the department conducts a day-long price forecasting session to review and discuss petroleum supply and demand price drivers. The session includes professionals from the Department of Revenue, Department of Natural Resources, Department of Labor, the Governor's Office of Management and Budget, the Division of Legislative Finance, the University of Alaska and industry experts.

To forecast crude oil production volumes, the Department of Revenue uses an engineering consultant in conjunction with assistance from the Department of Natural Resources and the Alaska Oil and Gas Conservation Commission. The statewide production volume forecast is summed from projections of oil and gas production by field.

To forecast lease expenditures, the department uses data from earlier filings for a base and projects short-term future expenditures from company documents. Mid and long-term expenditure forecasts take into account long-term development plans as detailed in company documents and are intended to coincide with our production forecast.

Transportation charges include tariffs on pipelines, marine transportation and other cost adjustments for moving crude oil to market. ACES allows "reasonable" costs to be subtracted as transportation charges.

Each of these forecasted items play an important role in determining the level of revenue anticipated from oil production. These four items are used as inputs into the department's revenue model.

More information about expenditures and tax calculations is provided later in this section.

1. Crude Oil Prices

Methodology for Forecasting Prices

The department compiles its oil price forecast from several sources, including a day-long price forecasting session with attendees from various agencies in the state government. Session attendees are asked for their projections for West Texas Intermediate (WTI) crude oil for three cases–a low case, a high case and a base case. The prices are forecast in real 2009 dollars. The Department of Revenue projects the differential between WTI and ANS and uses a projection of inflation to arrive at the nominal dollar forecast used in this publication. Among the other forecasting sources reviewed by the department are those prepared by the Energy Information Administration (EIA), the New York Mercantile Exchange (NYMEX), and industry analysts.

Oil prices were extremely volatile in FY 2009, due in large part to the economic crisis experienced in the U.S. and other developed nations. Although prices have stabilized thus far in FY 2010, there is still a significant amount of uncertainty about whether or not the economy is on a sustained path of recovery and if so, what impact that will have on oil demand and supply. In the 11 months since oil prices reached their recent low of $25 per barrel (December 2008), prices have rebounded to triple that amount, currently holding fairly steady in the $70 range for the past six months. Yet, many impacts of the recession continue to be felt, including high unemployment, shaky financial

[3] ANS West Coast prevailing value per 15 AAC 55.171 is the monthly average of daily spot market prices reported by Platt's Oilgram, Reuters and Dow Jones Energy reporting services. This price is published monthly on the Tax Division website at www.tax.state.ak.us.

markets and lower than normal consumer spending. Oil markets are intricately linked to the health of economies in the world and with so much potential for economic volatility still in the mix, it is difficult to predict with any accuracy the direction oil prices will go in the longer term.

Due to these uncertainties, we focused our oil price forecast on the near term, forecasting only out to 2012. Our forecast for the following seven years was held flat in real terms and escalated with inflation. The following observations and assumptions were considered in the preparation of our oil price forecast.

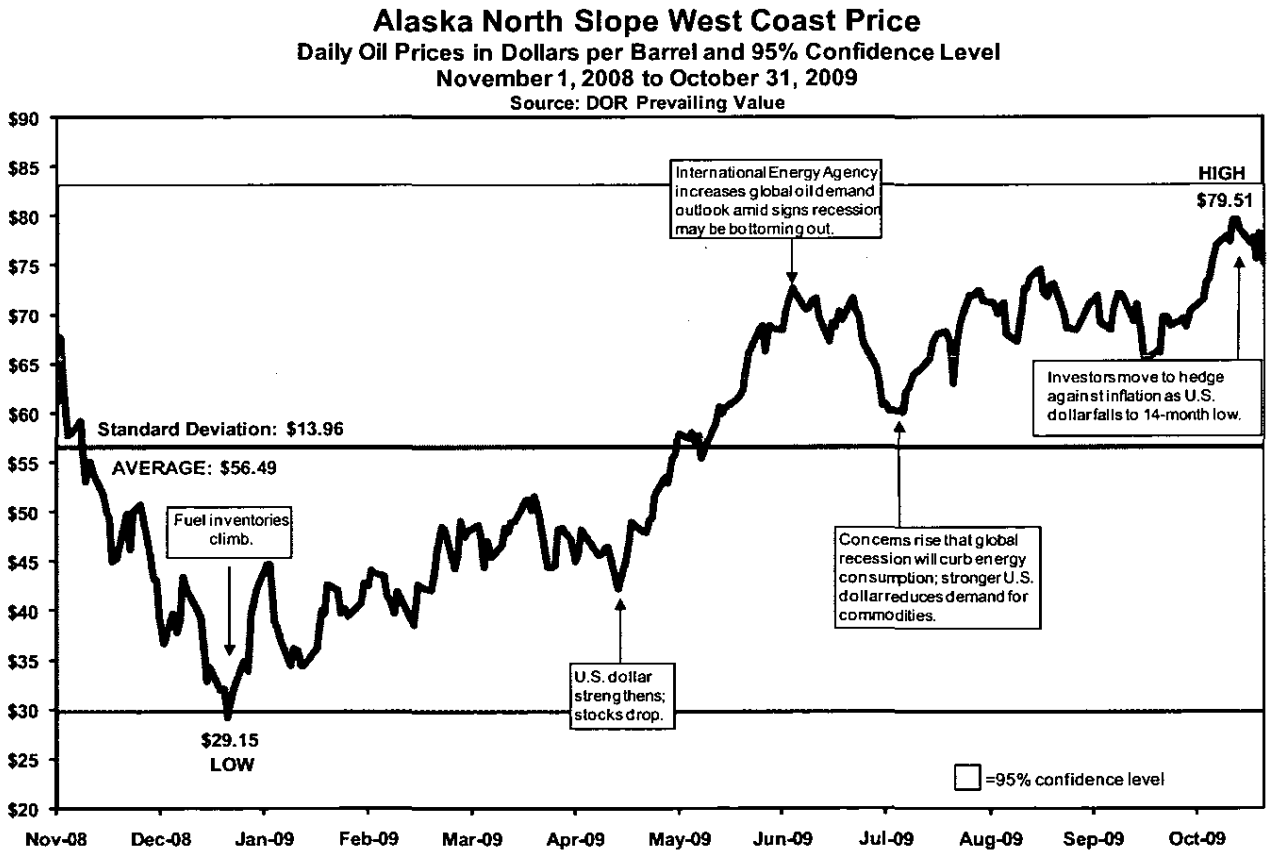
Factors that Influence Oil Prices

Many factors contribute to the pricing of oil on the world market. There are the fundamental economic factors of supply and demand, there are geopolitical events, there are inventory levels and weather-related events. There are other related issues, such as the impact of the financial sector, including commodities trading, and of facility constraints, including refinery capacity and configuration limitations. There is the influence of a strong oil market cartel—OPEC—which strives to keep oil prices within a pre-determined price band by increasing and decreasing supply. These are all factors that help determine the price of oil in the world market, and each of them must be considered in forecasting oil prices. At any given time, most of these factors are likely influencing the price of oil. Some of the factors push prices higher and some push them lower.

Oil Price Drivers

The most significant oil price driver for this forecast—both for high and low prices—is the health of the U.S. economy and other developed countries. Since the economy has been cited as the most commonly accepted reason for the crash in oil prices that occurred in late 2008, it should not be surprising that the economy is the most influential factor for oil price movements in the near term. The fact that the economy is the

Figure 4-6. ANS Crude Price Volatility



Note: 95% confidence level equals two standard deviations, or +/- $27.92 from the average of $56.49 per barrel

top reason for oil prices increasing, as well as for oil prices decreasing, reinforces the uncertainty that still exists in the future of the U.S. and other economies. While some notable economists have been quick to declare that the worst of the recession is past us and the economy is on an upward path, others warn of continued market volatility, as well as unemployment and inflation fears.

There have been several measures of positive economic growth in recent months that may help signal the end of the recession. In late October 2009, the Bureau of Economic Analysis (BEA) released an early report that the U.S. gross domestic product (GDP) had increased in the third quarter of 2009—the first such increase since the second quarter of 2008. Also according to the BEA, U.S. personal income was up in the second quarter of 2009, the first increase in a year. With regard to international trade, the BEA reported in the second quarter of 2009 that the deficit in international trade on goods and services declined to its lowest level since 2001. These are all positive economic signs that the worst of the recession could be over in the U.S.

Alternatively, should the U.S. economy slide back into negative growth again, the impact on oil prices could be severe. As the recession deepened in the fourth quarter of 2008, oil prices plunged from over $90 per barrel to about $25 per barrel, a 72% decrease. One year later, prices have rebounded as the economy appears to be recovering, but unemployment is the highest it has been in over 25 years. Prolonged unemployment could erode oil demand, sending prices downward again. Any economic impacts felt in the U.S. to some extent carry over to other parts of the world and could dampen oil demand there as well.

Along with the rebound in the economy has been an increase in commodities trading, particularly in oil futures. Oil is traded on the New York Mercantile Exchange (NYMEX) and the price of oil, at least in the near term, is significantly influenced by thousands of trades conducted daily on the commodity. Some economists opine that the huge number of commodity trades on oil could be contributing to the volatility of oil prices seen in recent years. These opinions have generated suggestions that the commodities markets should be more tightly controlled and regulated. It has yet to be determined what impact, if any, commodities trading has on long-term oil pricing. The influx of money into commodities, however, has been linked to the decreasing value of the U.S. dollar. The U.S. dollar has dropped in value by over 7% this year and by 37% since 2001 due to years of low interest rates and recent federal stimulus spending. The weakened U.S. dollar has also been linked to the price of another commodity, gold, which recently soared to over $1,100 per ounce. Futher weakening of the dollar is often cited as contributing to higher oil prices.

Other drivers of oil prices cited less frequently include decisions made by OPEC and whether members adhere to the quotas the organization sets. OPEC successfully cut production in the fourth quarter of 2008, hoping to reverse the downward trend in oil prices. Although the cuts had some impact, they did not have an immediate response in oil prices, due in part to the over-supply of oil in the market. The organization cut production again in the spring of 2009, with the goal of increasing oil prices. Since June 2009, prices appear to have stabilized in the $70 per barrel range. It is difficult to know how much influence OPEC's cuts have had on oil prices, but the organization does have the ability to control how much oil is in the market at any given time.

Disruptions in supply due to geopolitical events, weather-related events and infrastructure constraints played less of a role in this year's oil price forecast. The hurricane season failed to produce any real threatening storms that could shut in production in the Gulf of Mexico or elsewhere. Geopolitical events such as those seen in Nigeria and Iran and other oil-producing regions are still occurring, but appear to be taking a back seat to the economy's impact on oil prices. Recently, there have been no overwhelming infrastructure concerns, at least in the oil markets, to drive prices up or down.

Demand and Supply Projections

in the long run, oil prices are ultimately a function of two factors: the supply of oil and the demand for oil. While oil price forecasting necessarily considers the impact of such factors as financial speculation and weather events, the underlying fundamentals of supply and demand must also be examined.

In their November 2009 update, the EIA predicted that world oil demand will rebound in 2010 by over one million barrels per day, with most of the increase coming from developing countries. Economic growth in China and other Asian nations is expected to lead the rebound in oil consumption. The developed world, as represented by the nations in the Organization for Economic Cooperation and Development (OECD), is expected have essentially no change in consumption from 2009 to 2010. However, the U.S. is expected to reverse its downward trend in oil consumption that began in 2005.

On the supply side, OPEC production, which was 2.4 million barrels per day lower than 2008 over the first nine months of 2009, will gradually increase in 2010 as oil demand increases, according to the EIA. OPEC spare capacity is expected to remain above four million barrels per day, which represents significantly more excess capacity than the historical average. Most of this spare

capacity is located in Saudi Arabia. In contrast to OPEC, non-OPEC oil production was actually 500,000 barrels per day higher than 2008 over the first nine months of 2009, with most of the increase coming from Russia. Non-OPEC supply is expected to show an additional increase in 2010 of 250,000 barrels per day.

Although oil supply and demand are currently showing signs of stabilization, we know that oil prices will continue to move in cycles in the future as they have in the past. The EIA cited renewed economic growth as the driver of increased oil demand which in turn has helped prices to stabilize. Likewise, participants in the department's price forecasting session identified the state of the U.S. and world economy as the most important factor in determining oil prices. With OPEC showing a historically high level of quota discipline and holding enough spare capacity to help smooth out any supply disruptions, oil demand now appears to be the most important fundamental driver of oil prices. Demand, as we know, is a function of the economy: as the world economy goes, so too will oil prices. Our oil price forecast assumes that the world economy will be well on the way to recovery by late 2010.

Forecast for West Texas Intermediate and Alaska North Slope Crude Oil

We forecast the price for West Texas Intermediate (WTI) crude oil to average $68.71 for FY 2010, $78.85 for FY 2011, and $86.43 for FY 2012. Corresponding ANS prices are $66.93, $76.35, and $83.93 for the three years. We forecast a WTI-ANS differential of $2.50 per barrel, except in the case of FY 2010, which has some actual monthly differentials incorporated into the price. Beyond FY 2012, we project that oil prices will stay flat in real terms and increase in nominal terms by the projected 2.75% based on advice from Callan Associates on capital market inflation.

2. Lease Expenditures

The passage of PPT and now ACES requires the Department of Revenue to forecast lease expenditures, in addition to oil prices and production. Lease expenditures are defined in part as the upstream costs that are the direct costs of exploring for, developing, or producing oil or gas deposits. The production tax under PPT and now ACES allows the deduction of lease expenditures to arrive at a taxable base. The production tax system also allows a partial credit against the tax liability for certain lease expenditures known as qualified capital expenditures. For more information on how ACES production tax is calculated, see Figure 4-4.

Methodology

The Department of Revenue has received three annual filings of tax returns under a net profits production tax, under PPT in 2006, and under ACES in 2007 and 2008. Additionally, the department receives monthly information filings from oil and gas companies operating in the state that provide estimated monthly lease expenditures by property. Semi-annually, the department receives projections of lease expenditures by property for up to five years into the future. These reports have greatly enhanced the department's ability to prepare better revenue forecasts.

The department also uses several other means to forecast lease expenditures, including consulting other taxpayer-submitted information, such as plans of development, federal partnership returns, and other documentation. Production profiles are reviewed, as well as publicly available information on estimated costs to bring new fields online and projected start-up dates.

Forecast

In FY 2009, the following unaudited lease expenditures were reported on monthly information forms by companies producing or exploring for oil and/or gas on the North Slope: $2.1 billion in operating expenditures[4] and $2.2 billion in capital expenditures. For FY 2010, we forecast operating expenditures at $2 billion and capital expenditures at $2.5 billion. For FY 2011, we forecast operating expenditures at $2.1 billion and capital expenditures at $2.9 billion. The lower forecast for operating expenditures reflects lower costs of operation associated with lower oil prices, as well as efficiencies gained in companies streamlining their operations. Higher capital expenditure forecasts reflect continuing development in newer fields like Oooguruk, Nikaitchuq, and Point Thomson as well as projects aimed at enhanced oil recovery and the development of heavy oil.

3. Transportation Charges and Other Production Costs

Taxpayers subtract marine transportation costs, the Trans Alaska Pipeline System (TAPS) tariff, feeder pipeline tariffs and an adjustment for quality bank charges from the appropriate destination value. This netback calculation is shown in Figure 4-8 for FY 2009-2019.

Marine Transportation Costs

Crude oil delivered to Valdez through TAPS is shipped by tanker to refineries in Washington, California, Hawaii and the Kenai Peninsula. Most North Slope

[4] Includes the standard deduction for Prudhoe Bay and Kuparuk units per AS 43.55.165(j).

Figure 4-7. Basic Data Used for ANS Oil & Gas Production Taxes

	History FY 2009	Forecast FY 2010	Forecast FY 2011
State Production Tax Revenue from the North Slope			
Millions of Dollars	3,112.0	2,126.1	2,430.9
Key North Slope Assumptions			
Price of ANS WC in dollars per barrel	68.34	66.93	76.35
Transit Costs & Other in dollars per barrel	6.48	5.90	6.61
ANS Wellhead in dollars per barrel	61.86	61.03	69.74
Production in barrels per day	692,127	658,762	622,879
Royalty and federal barrels per day	93,664	85,564	80,255
Taxable barrels per day	598,463	573,198	542,624
Lease Expenditures in Millions of Dollars			
Operating Expenditures (Opex)	2,085	1,996	2,100
Capital Expenditures (Capex)	2,212	2,505	2,923
Total Expenditures	4,297	4,501	5,023
Implied North Slope Data			
Credits Used against Tax Liability in $millions	350.0	350.0	400.0
Credits for Potential Purchase in $millions	200.0	250.0	200.0
Lease Expenditures per barrel of oil produced			
Opex	8.3	8.3	9.2
Capex	8.8	10.4	12.9
Total Expenditures	17.0	18.7	22.1
Average Production Value per Barrel (Pre-Tax)	44.9	42.3	47.6
Production Tax Collected per Taxable Barrel	14.2	10.2	12.3

Notes

1 This table presents a grossly simplified snapshot of the production tax calculation on an average North Slope basis, and any use of this data should be viewed accordingly. Additionally, because production tax is calculated on a company basis, any simplification such as this distorts the actual value to companies. For example, a company's pre-tax production value per barrel could be significantly more or less than that shown in this table, depending on the "mix" of petroleum investments they have on the North Slope.

2 Lease expenditures for FY 2009 were prepared using unaudited company reported expenditure estimates.

3 Expenditure data for FY 2010 and FY 2011 are compiled from company submitted expenditure forecast estimates and other documentation as provided to the DOR.

4 CAPEX credits are spread out over two years as specified in the ACES production tax. In addition, the assumptions for the transitional credits and the $12 million credits for small Alaska producers are not included in the table.

5 Operating expenditures for Prudhoe Bay and Kuparuk units include the standard deduction provision per AS 43.55.165(j).

crude is delivered to Puget Sound, San Francisco and Los Angeles to meet the demand of Washington and California refineries. These voyages take about two weeks depending on loading and unloading time and potential delays.

The majority of crude oil delivered is by BP's "Alaska Class" and ConocoPhillips' "Endeavour Class" tankers, all of which are state-of-the-art double-hulled tankers. Double-hulled tankers have an inner hull containing the tanker's crude oil and a surrounding outer hull to offer additional protection against oil pollution. These tankers range from about 140 to 195 deadweight tons and can carry over a million barrels at full capacity.

Allowable costs for oil transported by a vessel not owned or effectively owned by the producer of the transported oil are the total costs under the charter or contract and other allowable costs borne by the producer.

For crude oil shipped on tankers that are owned or effectively not owned by the producer of the transported oil, which is typically the case, the bulk of allowable costs are the following:

- depreciation,
- return on investment,
- fuel for the vessel while in port and at sea,
- wages and benefits for the crew and captain,
- routine maintenance,
- tug and pilotage fees and
- drydocking costs.

We forecast a modest increase in tanker transportation costs per barrel that is considered necessary in order to maintain the integrity of the fleet.

Trans Alaska Pipeline System (TAPS) Tariff

The tariff model for TAPS is developed from the Federal Energy Regulatory Commission (FERC) Opinion 502 compliance filings. Opinion 502 requires the carriers to establish a uniform rate using the Order 154-B methodology of trended original cost (TOC). Treatment of dismantlement, removal and restoration (DR&R) expense is specified and the return on equity component is consistent with FERC's new policy for oil pipelines.

The forecasting model simulates what the tariff would be with a TOC cost-of-service model using information from Opinion 502 and projections of capital additions and operating costs. The cost-of-service components and the methodology are modeled to emulate the regulatory approach and outcome. We do not attempt to predict the outcome of pending litigation or estimate the level and timing of protested rates. Corrections between filed, charged and allowed rates are made through the refund process and are not part of the tariff forecast.

In the summer of 2009 both BP Pipelines Alaska (BPPA) and ExxonMobil filed new $4.01 interstate rates that were in effect subject to refund for short periods (BPPA July 1 to July 31st, and ExxonMobil May 1st to July 8th). The state protested those rates and therefore are subject to refund. ConocoPhillips also filed a $4.01 rate but then withdrew it. ExxonMobil, ConocoPhillips and BPPA then each filed a $4.10 rate, their current rates, that are subject to refund due to state protests. Unocal and Koch are still operating under their 2008 compliance rate tariffs.

A total revenue requirement (TRR) for operating and maintaining the pipeline while providing a reasonable rate of return for the investment in the pipeline. This TRR is then unitized by dividing by the total number of barrels of oil put through the pipeline.

To calculate the rate of return and depreciation components for the cost-of-service model, the beginning rate base is established and depreciated according to the FERC opinion, which extended the life of the line from 2011 to 2034. Carriers use 2034 as the end of the useful life of TAPS for setting depreciation rates, and FERC has rejected arguments to use a 2042 end-life for setting depreciation rates.

Additions to the rate base are made to account for future investments and capital expenditures for the Strategic Reconfiguration project.

Adjustments to the rate base use

- beginning rate base,
- trending,
- deferred return,
- new capital additions,
- depreciation,
- ending rate base.

The capital cost structure, cost of debt and real rate of return on equity are from the test period filing with FERC. Return on equity is consistent with the new FERC policy statement which allows Master Limited Partnerships to be included in rate of return proxy groups for determining rates for services. Property tax reflects the 2009 State Assessment Review Board (SARB) decision. Operating costs are function of the level of throughput and inflation. The deferred return and the Allowance for Funds Used During Construction (AFUDC) are amortized per the rate stipulated in the order. Other cost components are projected using relationships developed from historical data and statistical analysis.

1506

Components of the total revenue requirement include

- operating expenses,
- property tax,
- depreciation expense,
- interest expense,
- return on equity,
- amortization of AFUDC,
- amortization of deferred return,
- income tax allowance,
- non-transportation revenues.

The TRR for the pipeline is the sum of the components listed above. A dollar per barrel tariff is calculated by dividing the TRR by deliveries. This makes the tariff sensitive to the inherent uncertainties of forecasting production as well as the uncertainties in forecasting the cost-of-service components.

TAPS is an old pipeline with about 75 percent of the TRR attributable to operating expenses. As the relatively fixed operating expenses are spread over fewer barrels, the tariff increases rapidly. From about $5.60 per barrel in 2019 the tariff increases to over $15.00 by the 2034 end-life for setting depreciation rates.

Feeder Pipeline Tariffs and Other Adjustments

These costs include feeder pipeline charges, other cost adjustments to account for the different qualities of oil entering the pipelines, and market-location differentials for intrastate sales.

Transportation costs for feeder pipelines are incurred to move the crude oils from the various North Slope production fields to Pump Station No. 1 of TAPS. There are six feeder pipelines on the North Slope.

The tariff forecast for each pipeline is based on a cost-of-service model tailored to match the particular settlement agreement of each feeder pipeline. The tariff, under a cost-of-service ratemaking approach, includes certain costs incurred by the pipeline owner and a return on the rate base. These costs may include operating expenses, DR&R allowance, depreciation and other costs. The return on the rate base is the product of the rate base and a rate of return. The rate base is the value of the carrier property minus depreciation and other adjustments. The rate of return is an equity-and-debt-weighted return agreed upon in the settlement agreement. To forecast each pipeline's tariff per barrel, projected total costs and the return on the rate base are summed and divided over the projected total number of barrels throughput.

Wellhead Price

The combination of ANS wellhead value and production volumes forms the basis for both state production taxes and royalties. The wellhead value is calculated by subtracting the relevant marine transportation and pipeline tariff costs (as well as adjustments for North Slope feeder pipelines and pipeline quality bank) from the appropriate destination value. Figure 4-8 reflects this calculation for FY 2009-2019.

4. Crude Oil Production Methodology

In a hydrocarbon rich basin such as the North Slope of Alaska, any discussion regarding production forecasting methodology should begin with identifying those resources that are not included in our estimates. We do not include any estimates for undiscovered oil, including future potential from the Alaska National Wildlife Refuge (ANWR),

Figure 4-8. Fall 2009 Forecast Assumptions, FY 2009 and Forecasted FY 2010-2019 (nominal $ per barrel)

Fiscal Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

[1] Includes other adjustments such as quality bank charges, location differentials and company-amended information.

the National Petroleum Reserve-Alaska (NPR-A), the federal Outer Continental Shelf (OCS) or onshore lands within the state of Alaska. We exclude from our estimates production from most of the known heavy or viscous oil deposits; in fact we consider none of the approximately 20 billion barrels from the giant Ugnu deposit. We exclude 96% of the viscous/heavy oil from the large West Sak field, projecting roughly 400 million barrels recovery out of roughly 10 billion barrels in place. We also exclude 87% of the heavy oil at Schrader Bluff, projecting roughly 285 million barrels recovery out of over 2 billion barrels in place. Additionally, none of the known oil discoveries in the federal OCS, in fields such as Sivilluq, Kuvlum and Sandpiper, potentially totaling hundreds of millions of barrels of recoverable oil, are considered in the forecast. None of the known discoveries outside of the small NPR-A accumulations in the vicinity of the Alpine field are included. Finally, we limit any production attributed to a promising new enhanced oil recovery technology termed 'low salinity waterflood' to a portion of the Endicott field, where results from an ongoing pilot project are expected by year end. Laboratory tests using Endicott rock show low salinity waterflood can increase ultimate recovery by 10-15%, or approximately 150 million barrels. Successful slope-wide implementation of low salinity waterflood could result in incremental recovery measured in the billions of barrels. We also exclude any enhanced oil recovery from CO_2 injection, a long proven technology that complements low salinity waterflood and provides necessary disposition of an otherwise unwanted byproduct of gas conditioning associated with major gas sales from the North Slope. Carbon dioxide injection, presumed to occur only with major gas sales, could add hundreds of millions barrels of incremental recovery from the North Slope.

We exclude the aforementioned resources, both known and unknown, in order to avoid speculation and to reduce the uncertainty typically associated with the commercialization, timing and magnitude of resource development. Accordingly, we believe that our current estimates of ultimate recovery from the North Slope are conservative.

For the production forecasting process, we engage a certified petroleum engineering consultant who performs a bottom-up evaluation on each of the individual fields that yields a forecast of three types of oil production: (1) oil that is currently being produced, (2) oil production that we expect to realize from projects currently under development and (3) oil production that we expect to realize from projects under evaluation. A detailed description of each type of production is provided later in this section. The engineering consultant employs decline curve analysis, augmented by generally accepted engineering principles, discussions with field operators and public and private information, in order to assemble our long range production forecast.

Assumptions

We continue to make adjustments to our production expectations from the North Slope in this fall 2009 forecast. As always, we examined reservoir performance, reviewed the uncertainty associated with the pace and scope of development of new fields and new projects within existing fields and re-evaluated planned and unplanned downtime for all fields. Our review indicates that, with minor exceptions, and notwithstanding planned and unplanned surface disruptions, all reservoirs are performing at or above expectations. From FY 2009 through FY 2050, we expect to produce almost 5.3 billion barrels of liquid hydrocarbons.

In the next ten years, we anticipate new developments on state and federal lands, both of which benefit the state. Most of the opportunities to add production from state lands are from expanded heavy/viscous oil development (West Sak, Orion, Polaris, Schrader Bluff fields), continued satellite development at Alpine (Fiord, Fiord-West, Nanuq, Qannik, Alpine West fields), and new developments at Oooguruk and Nikaitchuq. Production from the Oooguruk field began during the summer of 2008 and is progressing as expected. The Nikaitchuq field was sanctioned in early 2008 and development is underway, with first oil anticipated at year-end 2010. Although we forecast expanded development at West Sak, we have slowed the pace of heavy oil development there to allow the operator to fully evaluate technical and commercial issues associated with the development. For similar reasons, heavy oil development at Orion and Polaris has been slowed. For the Milne Point Unit, which includes both the Kuparuk pool and the heavier Schrader Bluff pool, we have slowed the pace of development to allow for reprioritized spending on infrastructure renewal projects. We have delayed the development of Point Thomson satellites one year in keeping with our 10-year development lead time, which may be conservative. The development of Point Thomson is based on the most recent Plan of Development submitted by the operator. Our review of Alpine satellite field development yielded expanded development at Alpine West, the addition of satellite Fiord West, increased expectations from Fiord and reduced expectations from Nanuq. New satellite Qannik came on production during the summer of 2008 and is under continued development.

1508

Our forecast includes production from state lands as well as from federal lands. From a revenue standpoint, the State of Alaska benefits in at least five ways, albeit to a lesser degree, from new developments on federal lands: (1) shared royalties from federal OCS fields such as Liberty; (2) production taxes on federal oil produced onshore within Alaska (NPR-A); (3) increased property tax on any infrastructure on state lands required to produce and transport federal oil; (4) corporate income taxes; and (5) lower pipeline transportation tariffs, which increase wellhead prices. In addition, any oil processed through the Endicott facility (Liberty field) may increase net profits payments to the state. Federal oil produced within the State of Alaska can return up to 75% of the revenue generated by oil produced on state lands. Federal oil produced from non-state lands provides a revenue benefit limited to decreased transportation tariffs and increased property taxes.

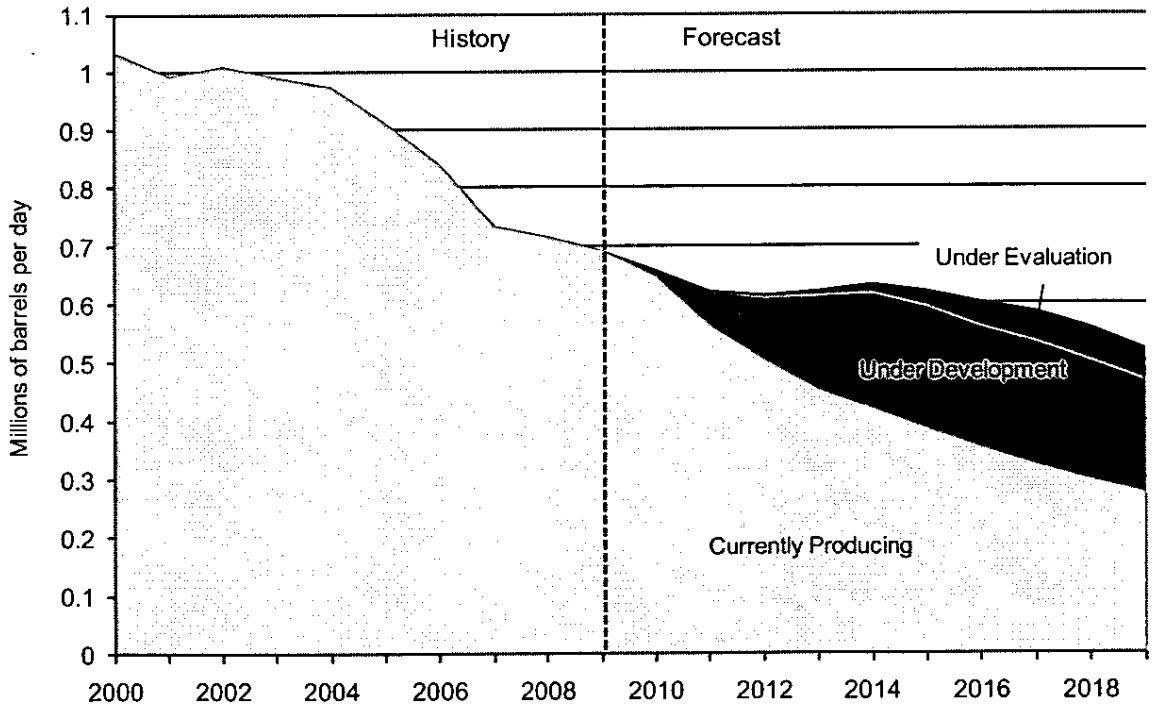
For the fall forecast we have reevaluated the scope and pace of development of projects within the federal NPR-A to better reflect the timing of competing projects at Alpine and to account for further delineation drilling and subsequent evaluation this winter. The end result is a slight delay in development at known accumulations Spark and Moose's Tooth. Liberty development is underway, with long lead items such as building the world's largest land drilling rig setting the pace. The rate profile we use for Liberty is adapted from the plan of development filed with the Minerals Management Service and should be considered a base case scenario with upside potential.

Although we anticipate new developments from state and federal lands over the next 10 years to contribute to overall production and partially mitigate base decline, we continue to make near-term adjustments to reflect ongoing infrastructure renewal projects. Much of the new production we forecast relies upon the continued use of aging wells, flowlines, production facilities and pipelines, as does at least 500,000 barrels per day of existing production.

Crude Oil Production Forecast

Our three categories of North Slope production are illustrated in Figures 4-9 and 4-10. We do this so that the reader will have an understanding of the uncertainty associated with the production forecast. We forecast production of only those fields that have already been discovered and at a minimum are being evaluated for development.

Figure 4-9. Alaska North Slope Production, FY 2000-2009 and Forecasted FY 2010-2019



Currently Producing

Production characterized as "currently producing" includes baseline production and presumes a continued level of expenditure sufficient to promote safe, environmentally sound operations. Such expenditures include the following: well diagnostic and remedial work, data acquisition and rate-enhancing expenditures such as perforating, acid stimulation, well workovers, fracture treatments, artificial lift optimization and production profile optimization. This category of production also presumes continued gas and water injection for pressure support. Based on historical forecasting performance, we assign a 98% confidence level for the current fiscal year and a 95% confidence level for the second fiscal year forward.

Currently Under Development

Production characterized as "currently under development" is based on new projects either currently funded or awaiting project sanctioning in the very near future. It includes projects that may be in the design/construction phase, as well as development drilling and enhanced oil recovery (miscible or immiscible injection) projects, currently funded or underway, but not included in the "currently producing" category. It also includes incremental oil expected from the long-term gas cap water injection project at Prudhoe Bay and Endicott which is planned for 2012. Examples of production currently under development include the Fiord, Nanuq, Alpine West, Fiord West and Qannik satellites at Alpine, the Borealis, Orion and Polaris satellites at Prudhoe Bay, development drilling at Tarn, Liberty, Oooguruk, and Nikaitchuq.

The timing of these projects are often influenced by budget cycles, working interest owner approval, available human resources, equipment procurement, and rig availability. Our subjective confidence for this category of production is 85% to 90%.

Currently Under Evaluation

Production characterized as "currently under evaluation" includes technically viable projects currently in the "pencil sharpening" stage where engineering, cost, risk and reward are all being actively evaluated. These projects are all currently unfunded by the operators but have a high chance of being brought to fruition. Examples include heavy oil development outside of the core or near core area at West Sak, longer term Orion drilling, half of all new Schrader Bluff drilling, long-term production from Point Thomson and associated satellites, and pools within the NPR-A.

Figure 4-10. Alaska North Slope Production, FY 2009 and Forecasted FY 2010-2019[1] (million barrels per day)

Fiscal Year	Currently Producing	Under Development	Under Evaluation	Total ANS
2009	0.692	0.000	0.000	0.692
2010	0.646	0.012	0.000	0.659
2011	0.562	0.060	0.000	0.623
2012	0.504	0.109	0.003	0.617
2013	0.452	0.165	0.007	0.624
2014	0.420	0.201	0.014	0.635
2015	0.385	0.213	0.025	0.623
2016	0.353	0.211	0.041	0.604
2017	0.324	0.214	0.051	0.588
2018	0.298	0.207	0.055	0.561
2019	0.276	0.196	0.052	0.524

[1] Some of the oil forecasted in the Under Development and Under Evaluation categories are from new projects in fields currently producing.

Confidence levels vary for this category of production. Production from the known NPR-A fields that are undergoing further delineation and likely will use the existing Alpine facility might have confidence levels approaching that of "production under development." High cost, scope challenged developments such as Point Thomson probably deserve lower confidence, not because of the lack of reserves, but because of the uncertainty in the timing of first production.

As Figure 4-11 shows, by FY 2014 more than one-third of our projected oil production will come from projects requiring significant new investment.

Undiscovered Potential

The long-term revenue outlook published in this book is associated with our forecast of production from oilfields that have already been discovered. However, it is important to discuss the potential for future production from resources currently undiscovered.

In April 2009, the U.S. Department of Energy released an addendum to their 2007 report entitled *Alaska North Slope Oil and Gas: A Promising Future or an Area in Decline?*[5] which assesses the potential for Alaska to remain a major producer of oil and gas under different development scenarios. The report summarizes near-term potential (2005-2015) and long-term potential (2015-2050) mostly under a major natural gas sales scenario. According to the report, the North Slope is a relatively young petroleum province from an exploration perspective, and may provide oil, and increasingly more important natural gas, for years to come.

The DOE report evaluates geologic and commercial viability of future oil and gas production from five areas or provinces: (1) the central Arctic area between the Colville and Canning Rivers (and adjacent state waters); (2) the 1002 area of ANWR; (3) NPR-A; (4) the Beaufort Sea OCS and (5) the Chukchi Sea OCS. Under the most optimistic scenario, DOE reported mean technically recoverable oil resources of 47.8 billion barrels and mean technically recoverable gas resources of 194.9 trillion cubic feet (TCF) from these five areas. Figure 4-12 shows the breakout by exploration area.

These figures represent the amount of hydrocarbon resources that are technically recoverable with today's technology assuming that all five areas are open to development; however, they say nothing about the economic recoverability. DOE also estimates economically recoverable reserves from these five areas using a range of oil and gas prices ($25 to $60 per barrel and $3.13 to $7.50 per thousand cubic feet of gas), and an 8:1 oil-to-gas price ratio. Using the high oil price case of $60 per barrel, total economically recoverable oil for the 2005-2050 time period is estimated at 31 billion barrels of oil and 135 TCF of gas. Figure 4-13 details the economic recoverable resources by area.

Figure 4-11. New Oil as a Percentage of Total Oil (million barrels per day)

Fiscal Year	Total New Oil	ANS Total	Percent New Oil
2010	0.012	0.659	1.9%
2011	0.061	0.623	9.7%
2012	0.113	0.617	18.3%
2013	0.172	0.624	27.6%
2014	0.215	0.635	33.9%
2015	0.238	0.623	38.2%
2016	0.252	0.604	41.6%
2017	0.265	0.588	45.0%
2018	0.262	0.561	46.8%
2019	0.248	0.524	47.3%

Petroleum Property Tax

An annual tax is levied each year on the full and true value of property taxable under AS 43.56. The tax on oil and gas property is the only statewide property tax. The valuation procedure for three distinct classes of property—exploration, production and pipeline transportation—is described here.

Exploration Property

Value is based on the estimated price that the property would bring in an open market under prevailing market conditions in a sale between a willing seller and a willing buyer, both conversant with the property and with prevailing general price levels.

The state petroleum property assessor gathers raw data for determining market value by reviewing the details of equipment sales in Alaska when available and reviewing trade journals. This data is then applied to the taxable property, taking into account age, capacity and physical and functional obsolescence.

Production Property

Value is determined on the basis of replacement cost new less depreciation, based on the economic life of the proven reserves.

The factor used in the depreciation calculation for the facility typically equals the years of remaining life divided by the total life.

Pipeline Transportation Property

The full and true value of taxable pipeline property is determined with due regard to the economic value of the property based on the estimated life of the proven reserves of gas or unrefined oil that will be transported by the pipeline. We rely upon several standard appraisal techniques to value Alaska pipelines. When market rents are available, we analyze the income method under which the value is the net present worth of all future income streams of the pipeline. We primarily rely on replacement cost new less depreciation, based on the economic life of the reserves that feed the pipeline. This is especially useful when rents are constrained by the regulatory process or when market rents cannot be obtained for use in the income method.

Figure 4-14 illustrates the property tax distribution between local communities and the state for FY 2009. The property value is assessed by the state. A local tax is levied on the state's assessed value for oil and gas property within a city or borough, and is subject to the local property tax limitations established in AS 29.45.080 and AS 29.45.100. The state's mill rate is effectively 20 mills minus the local rate.

Petroleum Corporate Income Tax

Alaska levies two types of corporate income tax. This section focuses on the oil and gas corporate income tax. Forecasts and discussion of the corporate income tax as applied to corporations other than oil and gas corporations can be found in the Other Revenue section of this forecast.

Figure 4-12. Technically Recoverable North Slope Oil and Gas Potential

Exploration Area	Mean Technically Recoverable Oil (BBO)	Mean Technically Recoverable Gas (TCF)
ANWR 1002 Area	10.3	3.8
Beaufort Sea OCS	6.9	32.1
Chukchi Sea OCS	15.5	60.1

Anchorage	4.7	3.7	1.1
Other Municipalities [2]	0.4	0.2	0.2
Total	**441.6**	**330.5**	**111.2**

[1] Amounts shown here do not include the supplemental property tax roll and as a result may not exactly match data presented elsewhere in this forecast.

[2] Includes Matanuska-Susitna Borough, Cordova and Whittier.

An oil and gas corporation's Alaska income tax liability depends on the relative size of its Alaska and worldwide activities and the corporation's total worldwide net earnings. The corporation's Alaska taxable income is derived by apportioning its worldwide taxable income to Alaska based on the average of three factors as they pertain to the corporation's Alaska operations: (1) tariffs and sales, (2) oil and gas production and (3) oil and gas property.

Historically, oil and gas corporate income tax revenue has varied greatly along with oil prices and oil industry profits. In FY 1982, revenue from this tax was $668.9 million. As recent as FY 1994, the oil and gas corporate income tax generated a mere $17.8 million. For the past several years, revenues from the oil and gas corporate income tax have benefited from high oil prices and oil industry profits, generating $492.2 million in FY 2009. This represents a decrease from the $605.8 million collected in FY 2008.

Our forecast of oil and gas corporate income tax collections uses an economic model based on the statistical relationships between historical tax payments, crude oil prices, North Slope oil production and refinery margins. We then adjust for refunds and carryforwards which cause actual collections to differ from estimated payments.

We forecast oil and gas corporate income tax collections of $470 million in FY 2010. We expect moderate increases in nominal oil prices to result in corresponding increases in oil and gas corporate income tax revenue.

Restricted Oil Revenue

According to Article IX, Section 15 of the Alaska Constitution, a minimum of 25% of all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the state must be deposited into the Alaska Permanent Fund. With the repeal of HB 11[1] approximately 30% of oil and gas royalties goes into the principal of the Alaska Permanent Fund and 0.5% goes into the Public School Trust Fund. In addition, AS 37.14.110 requires a contribution of 0.5% of all royalties and bonuses to the Public School Trust Fund. Settlements with, or judgments against, the oil industry involving tax and royalty disputes must be deposited in the Constitutional Budget Reserve Fund (CBRF).

The state is entitled to 50% of all bonuses, rents and royalties from oil development activity in the federal NPR-A, all of which flows into the NPR-A Special Revenue Fund. Revenue in the fund is available for appropriation in the form of grants to municipalities that demonstrate present or future impact from NPR-A oil development. Of the revenue not appropriated to the municipalities, 25% goes to the Permanent Fund, 0.5% goes to the Public School Trust Fund, and the rest may be appropriated to the Power Cost Equalization and Rural Electric Capitalization Fund. Any remaining revenue after these appropriations lapses into the General Fund.

Figure 4-15 reflects restricted oil and gas revenue.

General Discussion

This section includes income from sources other than oil, state investments and federal receipts including non-oil taxes, charges for services, fines and forfeitures, licenses and permits, rents and royalties and other revenue sources. These revenue sources are divided between unrestricted and restricted revenues; the amounts of each are reflected in Figures 5-2 through 5-8 throughout this chapter. Restricted revenue includes money deposited in funds other than the General Fund, as well as receipts that are restricted by statute or that the legislature customarily appropriates for a particular purpose or program, such as sharing of fish tax revenue with municipalities.

Taxes

Alcoholic Beverages Tax

Alcoholic beverage taxes are collected primarily from wholesalers and distributors of alcoholic beverages sold in Alaska. The per-gallon tax rates on alcoholic beverages are $1.07 for beer, $2.50 for wine and $12.80 for liquor. The tax on beer produced by qualifying small brewers is $0.35 per gallon. Revenue is deposited into the General Fund. Fifty percent of the revenue is deposited into a subfund of the General Fund, the Alcohol and Other Drug Abuse Treatment and Prevention Fund, and is treated as restricted in this forecast.

Over the past 10 years, alcohol consumption has grown at an average annual rate of 0.6% for beer, 4.2% for wine, and 3.3% for liquor. We forecast that consumption will continue to grow at these historical average rates.

Charitable Gaming

Under Alaska law, municipalities and qualified nonprofit organizations may conduct certain charitable gaming activities. The purpose of these activities is to derive public benefit in the form of money for the charities and revenues for the state. The Department of Revenue collects permit and license fees, a 1% net proceeds fee and a 3% pull-tab tax. We forecast that revenues from charitable gaming activity will decrease slightly in FY 2010 and remain flat in FY 2011.

Commercial Passenger Vessel Taxes

In August 2006, Alaska voters approved an initiative that imposed new taxes and fees associated with commercial passenger vessels:

- The Cruise Ship Passenger Fee is a tax of $46 on each passenger traveling on a commercial passenger vessel with 250 or more berths. Revenues are deposited into a subfund of the General Fund, the Commercial Vessel Passenger Tax Account. Five dollars of the tax is distributed to each of the first five ports of call, and an additional 25% of the tax is designated for other local governments impacted by the cruise ship industry via the Regional Cruise Ship Impact Fund. The entire passenger fee is considered restricted for purposes of this forecast. Based on company announcements, we forecast passenger counts, and therefore tax collections, to decline for both FY 2010 and FY 2011. There may be some growth in FY 2012.
- The Ocean Ranger Fee is an additional per-berth fee of $4 to operate the Ocean Ranger program, which provides for independent observers of engineering, sanitation and health practices. This fee is considered restricted and is included in the Charges for Services section of this forecast.
- The Large Passenger Vessel Gambling Tax is a tax of 33% on the adjusted gross income from gaming or gambling activities aboard large passenger vessels in the state. Revenue goes into a subfund the General Fund and is considered restricted for purposes of this forecast. We expect revenue to decline to $5.7 million in FY 2010 from $6.3 million in FY 2009.
- The Alaska corporate income tax now applies to large commercial passenger vessels. The effects of this provision are included in our forecast of corporate income taxes.
- There are new penalties for false reporting, violating environmental regulations and failing to make proper disclosures on promotions and shore side activity sales. Any revenue from these provisions is included in the Fines and Forfeitures section of this forecast.

Corporate Income Tax

Alaska levies two types of corporate income tax: one that applies to oil and gas corporations and one that applies to corporations other than oil and gas corporations. Forecasts and discussion of the corporate income tax as applied to oil and gas corporations can be found in the Oil Revenue section of this forecast.

Alaska levies the corporate income tax on net income of corporations that do business in the state and derive income from sources within Alaska. Corporate tax rates are graduated from 1% to 9.4% in $10,000 increments of Alaska taxable income; the maximum rate of 9.4% applies to taxable income over $90,000. S-Corporations and LLCs that file federally as partnerships are generally exempt from corporate income tax. Corporations compute their tax liability based on federal taxable income with Alaska adjustments. Corporations other than oil and gas corporations apportion their income to Alaska by using a three-factor apportionment based on sales, property and payroll. Alaska taxable income is determined by applying the apportionment factor to the corporation's modified federal taxable income.

We produce our forecast of non-petroleum corporate income tax collections by using two economic models: one for the largest sector in terms of collections (mining) and one for all other sectors.

The mining sector model is based on the statistical relationship between historical tax payments, corporate profits and zinc prices. Zinc prices are used because zinc accounts for over half of Alaska minerals production. The model for all sectors other than mining is based on the statistical relationship between historical tax payments, corporate profits and crude oil prices. Crude oil prices are used because the price of oil influences company profitability in many economic sectors in Alaska. After forecasting estimated payments, we then adjust for refunds, carry-forwards and other payments that cause actual collections to differ from estimated payments.

Over the past few years, income tax revenue from corporations other than oil and gas corporations has been above the historical average. In FY 2009, revenue was $120.9 million, the fourth consecutive year of collection over $100 million. Looking forward, collections will be lower because of the economic downturn as well as lower prices for Alaska's oil and minerals. The first half of FY 2010 appears weak and collections are expected to total $86.6 million for the year. In FY 2011 we expect that collections will be $89 million – about $32 million less than FY 2009.

Electric Cooperative and Telephone Cooperative Taxes

The electric cooperative tax is based on kilowatt hours furnished by qualified electric cooperatives recognized under Title 10 of the Alaska Statutes. The telephone cooperative tax is levied on gross revenue of qualified telephone cooperatives under Title 10. Revenue from cooperatives located in municipalities is treated as restricted revenue in this forecast because it is shared 100% with the municipalities. The small amount of revenue collected from cooperatives outside municipalities is retained by the state. We forecast that revenues from the electric and telephone cooperative taxes will grow according to the overall rate of inflation.

Estate Tax

The estate tax is levied on the transfer of an estate upon death. The Alaska estate tax is tied to the federal tax, with the amount of the state tax equaling the maximum state credit allowed on the estate's federal return. All revenue derived from estate taxes is deposited in the General Fund.

As a result of changes to the federal estate tax, the Alaska estate tax was phased out completely beginning January 1, 2005. The federal estate tax changes that caused the state tax to phase out are currently scheduled to sunset after December 31, 2010. Assuming the tax changes sunset as scheduled, Alaska will begin to receive revenue from the estate tax again in FY 2012.

Fisheries Business Tax

The fisheries business tax is levied on businesses that process fisheries resources in or export fisheries resources from Alaska. Although the tax usually is levied on the act of processing, the tax is often referred to as a "raw fish tax" because it is based on the value of the raw fishery resource. Tax rates vary from 1% to 5%, depending on whether a fishery resource is classified as "established" or "developing," and whether it was processed by a shore-based or floating processor. Revenue from the tax is deposited in the General Fund. Fifty percent of the revenue (before credits) is shared to qualified municipalities and is treated as restricted in this forecast.

We forecast fisheries business tax revenues based on estimated taxable values of the major fisheries in the state and historical effective tax rates. Fisheries business tax revenue retained by the state is reduced by a forecast of tax credits, including Salmon Product Development credits, which apply only to the state portion of the tax.

Fishery Resource Landing Tax

The fishery resource landing tax is levied on fishery resources processed outside of and first landed in Alaska, and is based on the unprocessed statewide average price of the resource. The tax is collected primarily from factory trawlers and floating processors that process fishery resources outside the state's 3-mile limit and bring their products into Alaska for shipment. The tax rates vary from 1% to 3%, based on whether the resource is classified as "established" or "developing." All revenue derived from the tax is deposited in the General Fund. Fifty percent of the revenue (before credits) is shared to qualified municipalities, and is treated as restricted in this forecast.

We forecast fisheries resource landing tax revenues based on estimated taxable values of the major fisheries in the state and historical effective tax rates. Fisheries resource landing tax revenue retained by the state is reduced by a forecast of tax credits which apply only to the state's share of the tax.

Insurance Premium Tax

Insurance companies in Alaska pay an insurance premium tax instead of corporate income tax, sales or other excise taxes. Revenue is deposited into the General Fund, and for most types of insurance, the tax is treated as unrestricted revenue. Insurance premium taxes on worker's compensation insurance are deposited into a subfund of the General Fund, the Workers Safety and Compensation Fund, and are reflected as restricted in this forecast. The restricted component also includes service fees paid into the Workers Safety and Compensation Fund by employers who are uninsured or self-insured.

We forecast insurance premium tax revenues based on estimates provided by the Department of Commerce, Community and Economic Development's Division of Insurance, which administers the insurance premium tax, and the Department of Labor and Workforce Development's Workers Compensation Division, which collects worker's compensation service fees.

Mining License Tax

The mining license tax is a tax ranging from 0% to 7% on the net income of all mining operations in the state. Except for sand and gravel operations, new mining operations are exempt from the mining license tax for a period of 3½ years after production begins.

Our forecast is produced using a bottom-up approach that estimates tax payments for each of the major mines in the state based on expected minerals prices and production.

Mining license tax revenues were $15.5 million in FY 2009, a dramatic decrease from $54.4 million in FY 2008. However, prices for many minerals have climbed recently. In particular, zinc prices have stabilized and are likely to increase as the global demand returns.

(Zinc prices are particularly important because zinc accounts for more than half of Alaska's non-petroleum mineral production).

Based on expectations of higher profits at Alaska's mines, we forecast mining license tax revenues will increase from what was collected in FY 2009. We foresee an increase to over $29 million in FY 2010 followed by collections of more than $28 million by FY 2011.

Motor Fuel Tax

The motor fuel tax is imposed on all motor fuel sold, transferred or used within Alaska. Per gallon rates are 8 cents for highway use, 5 cents for marine fuel, 4.7 cents for aviation gasoline, 3.2 cents for jet fuel, and 8 cents or 2 cents for gasohol, depending on the season, location and EPA mandate. Motor fuel taxes are collected primarily from wholesalers and distributors licensed as qualified dealers. Various uses of fuel are exempt from tax, including fuel used for heating or flights to or from a foreign country. Although the statutes state that the legislature may appropriate the revenue for specific purposes, including highway construction and maintenance and water and harbor facilities, all motor fuel tax receipts are paid into the general fund and are treated as unrestricted for purposes of this forecast. Sixty percent of the taxes attributed to aviation fuel sales at municipal airports are shared with the respective municipalities, and are treated as restricted for the purposes of this forecast.

A temporary suspension of the motor fuel tax took effect September 1, 2008 and ended August 31, 2009. Therefore, FY 2009 included only two months of motor fuel tax collections and FY 2010 will include ten months of collections.

We forecast motor fuel tax revenue based on Energy Information Agency projections for U.S. motor fuel consumption growth, with adjustments for the temporary tax suspension.

Tire Fee

The tire fee has two components. The first component is a tax of $2.50 on all new tires sold in Alaska for motor vehicles intended for highway use. The second component is an additional $5 fee per tire on all new tires with heavy studs sold in Alaska, and a $5 fee per tire on the installation of heavy studs on a previously un-studded tire.

We forecast tire fee revenue based on the expected number of vehicle registrations in the state.

Seafood Assessments and Taxes

The Department of Revenue administers five different programs that raise money through seafood assessments and taxes. The rates for these assessments and taxes are determined by a vote of the appropriate association within the seafood industry, by members of the Alaska Seafood Marketing Institute, or by the Department of Revenue.

The five programs are the following:

- The seafood marketing assessment, which applies to all seafood products made or first landed in Alaska and all unprocessed products exported from Alaska.
- The dive fishery management assessment, which is levied on the value of fishery resources taken using dive gear in a designated management area.
- The regional seafood development tax, which is levied on the value of fishery resources in a designated management area.
- The salmon enhancement tax, which is levied on salmon sold or exported from designated aquaculture regions.
- The cost recovery fisheries assessment, a new program authorized in 2006. This program allows hatcheries to establish a common property fishery and recoup costs through an assessment on fishery resources taken in the terminal harvest area. So far, no hatcheries have elected to use this program as a funding source.

Although revenue received under these assessments is deposited in the General Fund, funds are treated as restricted revenue in this forecast because they are set aside for the legislature to appropriate for the benefit of the seafood industry, either in marketing or in management and development of the industry.

We forecast revenue for seafood assessments and taxes based on the estimated taxable value of the relevant seafood income.

Tobacco Tax

The tobacco tax is levied on cigarettes and tobacco products sold, imported or transferred into Alaska. Tobacco taxes are collected primarily from licensed wholesalers and distributors. There are two components to the tobacco tax: the cigarette tax and the other tobacco products tax.

The tax rate on cigarettes has been $2.00 per pack since July 1, 2007. Of the cigarette tax, $0.76 per pack is deposited into the School Fund, and is considered restricted revenue. All cigarette and tobacco products license fees are also deposited in the School Fund. The remainder of the cigarette tax revenue is deposited into the General Fund. Of the General Fund portion, 8.9% is deposited into a subfund of the General Fund, the Tobacco Use Education and Cessation Fund, and is treated as restricted in this forecast.

We forecast cigarette tax revenue based on projected average consumption declines of 4% annually.

1520

The tax rate on other tobacco products, such as cigars and chewing tobacco, is 75% of the wholesale price and is deposited entirely in the General Fund.

We forecast that moderate increases in wholesale prices and consumption will result in other tobacco products tax revenue continuing to increase at the 10-year average rate of over 7% annually.

Our forecast for both cigarettes and other tobacco products includes an adjustment for the demand response to increased federal excise taxes on tobacco that took effect April 1, 2009.

Vehicle Rental Tax

The vehicle rental tax is a 10% tax on most passenger vehicle rentals of 90 days or less, and a 3% tax on rentals of recreational vehicles for 90 days or less.

Figure 5-3. Other Taxes, FY 2009 and Forecasted FY 2010-2011 ($ million)

[1] In addition to the worker's compensation insurance premiums for the Insurance Premium Tax, this amount also includes services fees from employers who are self-insured.

The vehicle rental tax provisions became effective January 1, 2004.

We forecast that vehicle rental tax revenue will remain essentially flat in FY 2010 due to the economic downturn then increase with the overall rate of inflation.

Charges for Services

The charges for services category includes fees and other program charges for state services. Revenues reported in this category do not include all charges for state services—just those that do not fit into other categories in this report.

Most of these receipts are considered restricted revenue because they are returned to the program where they were generated. The only unrestricted revenues listed in this category come from charges that do not have program receipt designations, or are not otherwise segregated and appropriated back to a program. Many of the charges for services are small amounts that we have grouped into the broad categories "General Government," "Natural Resources" and "Other." Our forecast for these categories is based on fiscal year-to-date collections and historical averages. The largest categories of charges for services are listed separately and are discussed below.

Marine Highway Fund

The Alaska Marine Highway Fund is a subfund of the General Fund and receives revenue from state ferry system operations. The legislature has discretion over how the revenue is allocated. Because revenue is customarily appropriated for Alaska Marine Highway operations, they are considered restricted for this forecast. We forecast Marine Highway Fund receipts based on revenue expectations in the Alaska Marine Highway System business plan.

Commercial Passenger Vessel Fees

Commercial passenger vessel fees paid into the Environmental Compliance Fund come from two sources: ocean ranger fees and environmental compliance fees. All fees paid into the fund are considered restricted for purposes of this forecast. We forecast receipts based on passenger count estimates that are consistent with our Commercial Passenger Vessel tax forecast.

The Ocean Ranger Fee is a per-berth fee of $4 that applies to commercial passenger vessels with 250 or more berths. The fee is levied to support the Ocean Ranger Program, which provides for independent observers of engineering, sanitation and health practices aboard the vessels. This fee was imposed as part of an initiative passed by voters in August 2006, and is covered in more detail in the Taxes section of this chapter.

Environmental compliance fees are levied on commercial passenger vessels with over 50 berths. Fees range from $75 to $3,750 per vessel based on the number of berths, and funds are used to support environmental compliance programs.

Program Receipts

Under AS 37.05.142 – 37.05.146, receipts from authorized state programs are accounted for separately and appropriated to administer the source program, implement laws related to the program, or cover costs associated with collecting the receipts. Some programs with program receipt authority are not included in our Charges for Services category because they are reported elsewhere in this forecast or because they do not generate revenue available for general appropriation.

We forecast program receipt revenues based on discussions with the Governor's Office of Management and Budget and analysis of the most recent budget expectations for these categories.

Program receipts listed in this section are

- Receipt supported services, which includes state services such as Pioneers homes and occupational licensing that are funded by program receipts. Some seafood assessments are included in this category.
- Statutorily designated program receipts, which include money received from sources other than the state or federal government and restricted by the terms of a gift, grant, bequest or contract.
- Regulatory Commission of Alaska (RCA) receipts, which are regulatory cost charges and user fees levied on utilities and pipelines to fund costs of regulation.
- Test fisheries receipts, generated by the Department of Fish and Game from selling fish caught during testing the commercial viability of fisheries.
- Timber sale receipts, which are used to fund the timber disposal program of the Department of Natural Resources.
- Oil and Gas Conservation Commission receipts, which are fees and charges for regulation of oil and gas wells and pipelines.
- Business license fees collected by the Department of Commerce, Community and Economic Development.

Tobacco Settlement (Tobacco Use Education & Cessation Fund)	7.5	6.9	6.7
Other	1.8	1.5	1.5
Total Restricted	**39.1**	**36.1**	**34.9**
Grand Total	**49.6**	**45.0**	**43.8**

Fines and Forfeitures

Fines and forfeitures include civil and criminal fines and forfeitures and money received by the state from the settlement of civil lawsuits. The largest single source of receipts under this category is the multi-state tobacco settlement. Other sources are forecast based on fiscal year-to-date collections and historical averages.

Tobacco Settlement

The tobacco Master Settlement Agreement was signed by 46 states (including Alaska) in November 1998 and dictates annual payments to each of the states. All tobacco settlement revenue is considered restricted for purposes of this forecast. Eighty percent of the settlement revenue is earmarked for the Northern Tobacco Securitization Corporation for payments on bonds that were sold based on the future revenue stream. The remaining 20% of the revenue is deposited into the Tobacco Use Education and Cessation Fund, a subfund of the General Fund.

Tobacco settlement payments are based on a complex formula that takes into account several factors including declines in cigarette consumption, inflation and certain adjustments for litigation expenses and market share losses related to the settlement. We forecast that cigarette consumption will decline at an annual rate of 4% and inflation will be 2.75%.

Licenses and Permits

Licenses and permits represent government revenue derived from charges for participating in activities regulated by the state. The majority of the receipts under this category are from motor vehicle registration and fishing and hunting license fees. Alcoholic beverage license fees are also forecast separately. There are several other small license and permit fees which are summarized in the Other Fees category.

Alcoholic Beverage Licenses

Alcoholic beverage licenses are required to manufacture or sell alcoholic beverages in Alaska. Licenses are issued by the Alcoholic Beverage Control Board and revenue is deposited into the General Fund. All of the revenue from biennial license fees collected within municipalities, excluding annual wholesale fees and biennial wholesale license fees, is shared with the municipalities and treated as restricted for purposes of this forecast. We forecast little change in revenue because alcoholic beverage license issuance is limited based on population.

Fishing and Hunting License Fees

Fishing and hunting licenses are issued by the Alaska Department of Fish and Game for participation in various fishing, hunting and related activities. The majority of these fees are appropriated to a special revenue fund called the Fish and Game Fund. Money in the fund may only be spent for fish and game management purposes. We forecast fishing and hunting license fee revenue based on expectations of the Alaska Department of Fish and Game.

Motor Vehicle Registration Fees

Motor vehicle registration fees are collected by the Division of Motor Vehicles within the Department of Administration. Most are considered unrestricted license and permit revenue; however, some registration fees are considered restricted receipt supported services and are reflected in the Charges for Services section of this forecast. We forecast motor vehicle registration fee revenue based on expectations of the Division of Motor Vehicles.

Rents and Royalties

Rents and royalties from sources other than oil and gas fall into two categories: mining rents and royalties and other non-petroleum rents and royalties.

All rents and royalties from oil and gas are reported in the Oil Revenue section of this forecast.

Mining Rents and Royalites

As with oil and gas production, the state earns revenue from other mineral production that occurs on state lands leased for exploration and development. As the landowner, the state earns revenue from leases as (1) upfront bonuses, (2) annual rent charges and (3) as a retained royalty interest in minerals production.

Until October 2008, only 25% of the rents and royalties were deposited in the Permanent Fund and 0.5% to the School Fund. With the repeal of House Bill 11 last year, the amount rose to 50% for leases issued after December 1979. The amound deposited into the School Fund remains unchanged. See the Executive Summary section for a more complete discussion of HB 11.

We forecast mining rents and royalties based on expected changes in minerals prices as well as mine-specific forecasts for large mines on state land.

Other Non-Petroleum Rents and Royalties

The state receives revenue from the leasing, rental and sale of state land. While all of these revenues are deposited into the General Fund, some are deposited in subfunds of the General Fund and are treated as restricted for purposes of this forecast. This category includes revenues from leasing, rental and sale of state land that do not fall into the oil and gas or mining royalties categories. We forecast other non-petroleum rents and royalties based on analysis of fiscal year-to-date and historical collections.

Other

This category includes unclaimed property transfers, transfers to the state from component organizations and miscellaneous revenues. Miscellaneous revenues, which include contributions to the state and other revenues, are projected based on analysis of fiscal year-to-date and historical collections. Unclaimed property and transfers from component organizations are discussed below.

Unclaimed Property

Alaska's Unclaimed Property statutes require businesses and corporations to report unclaimed intangible property to the state. Property is reportable if an owner cannot be located, the owner has not cashed a property check, or an account has not had any owner-initiated activity for at least three years. Unclaimed property may include checking accounts, customer deposits and over-payments, gift certificates, unpaid wages, and security related accounts. The state holds the property in trust until the owner or his or her legal heir claims it. Each year the unclaimed property trust account is evaluated and the excess of the working trust balance is transferred to the General Fund.

A $3.8 million transfer was processed during FY 2009. Transfers in FY 2010 and following years are expected to be $4.0 million per year. We forecast unclaimed property revenue based on estimates prepared by the Unclaimed Property Group of the Department of Revenue.

Total Restricted	**7.4**	**9.0**	**9.6**
Grand Total	**23.0**	**22.6**	**23.8**

Transfers from Component Organizations

Each year, the state receives money in the form of transfers from component organizations, such as the Alaska Housing Finance Corporation, frequently in the form of dividends. Component organizations are covered in more detail in the Public Corporations & the University of Alaska section of this forecast. Some component organizations do not make transfers to the state, and as a result not all component organizations are listed here.

Actual transfers for FY 2009 are reflected in draft tables from the Comprehensive Annual Financial Report. Forecasts for FY 2010 and FY 2011 transfers are based on discussions with the Governor's Office of Management and Budget and analysis of the most recent budget expectations for these categories.

Transfers from component organizations presented under this category may differ from those presented in the Public Corporations & University of Alaska section for two reasons: (1) amounts in this section account differently for funds paid over time for multi-year capital projects; and (2) amounts in this section include funds that are transferred to the state and then appropriated to the component unit for operations.

General Discussion

The federal government continues to play a significant role in Alaska's economy. In Federal Fiscal Year (FFY) 2008 the federal government spent $9.4 billion in total direct expenditures in Alaska.[1] The majority of that spending came from the activities of various federal agencies, including defense spending, procurement contracts, retirement and disability payments, wages, loans and grants. Another $1.3 billion was spent on other federal assistance, such as loan guarantees and insurance.

Alaska has historically ranked first in per capita federal spending, however, increased federal expenditures to Louisiana and Mississippi after Hurricane Katrina and Rita in FFY 2006 dropped Alaska to third place. In FFY 2007, Alaska moved up, ranking second only to Virginia. Maryland surpassed Alaska in per capita spending in FFY 2008 to put Alaska in third place out of all states again (see Figure 6-3). Historically, federal spending in Alaska has grown faster than total U.S. spending. However, for FFY 2007, federal direct expenditures in Alaska increased by only 1.4% from FFY 2006, while total U.S. federal expenditures increased by 4.4%. Federal spending grew at a slower rate in Alaska again in FFY 2008 with an increase of 0.5% in direct federal expenditures while overall federal spending increased 9.2%. In FFY 2005, the latest year for which data is available, Alaska received $1.84 for every dollar paid in federal taxes,.[2]

Among federal agencies, the Department of Defense spends the most in Alaska, followed by the Department of Health and Human Services. Together, these two departments account for 53% of all federal direct spending in the state. Not surprisingly, a large portion of federal money flows into Alaska through salaries of federal employees. However, 29% of all federal direct spending comes in the form of grants, mostly to state and municipal governments, and to nonprofit organizations.

In FY 2009, the State of Alaska received and spent nearly $2.1 billion in federal funds. This federal funding is generally restricted to specific uses such as road improvements, Medicaid payments and aid to schools. Potential changes to federal law, differing federal and state fiscal years and varying numbers of eligible Alaskans in certain

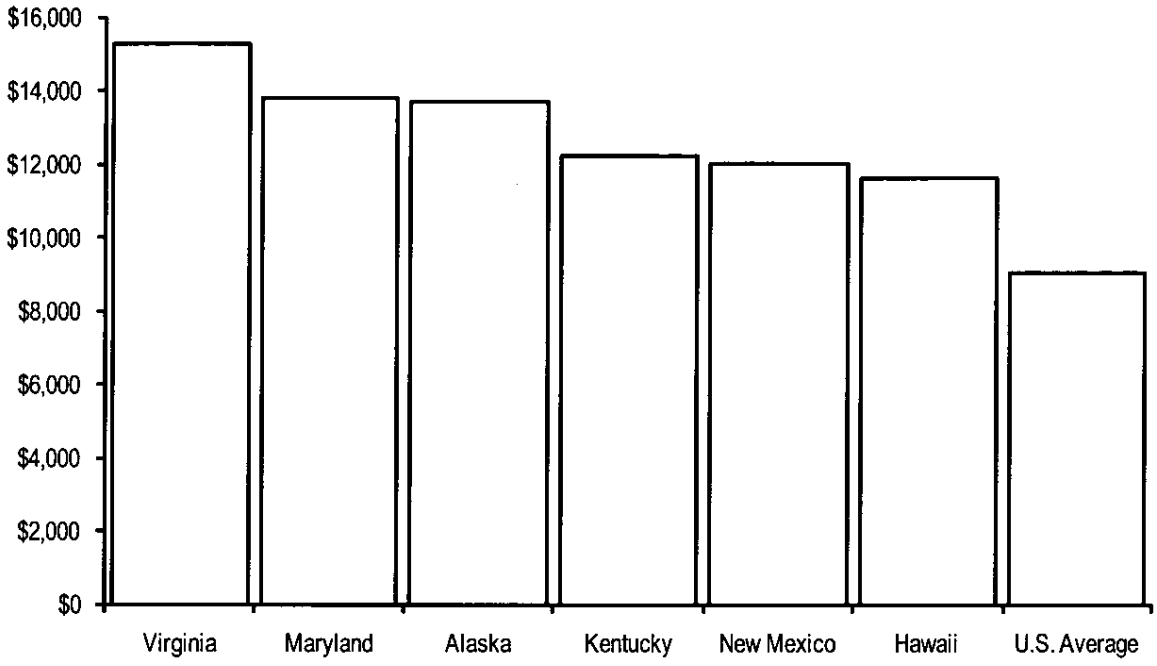
Figure 6-3. FFY 2008 Federal Spending per Capita, Top Six States



programs make forecasting federal revenue difficult. The estimates we present for FY 2010 and FY 2011 are from the Office of Management and Budget and are based on state agency projections of potential federal revenues.

In FY 2010, the budgeted amount of federal funds is $2.9 billion. In FY 2009, the American Recovery and Reinvestment Act of 2009 played a critical part in the overall level of federal funding in the state budget. Approximately $846.8 million or 24% of all federal funds, came as a result of ARRA. In FY 2010, the overall role of ARRA was significantly reduced, with a total of $174.6 million which represents 6% of all federal funds. Most federal funding requires state matching money. The budgeted state match and the top three budgeted categories for federal spending in Alaska for FY 2009 and FY 2010 are included in Figure 6-5.

It is important to note that the state routinely budgets for federal funds in excess of expected allotments. The legislature authorizes state agencies to receive and spend the maximum that federally funded programs might receive, while the actual appropriation amounts are generally less. In addition, some of the funding granted for multi-year capital projects is received and spent in years following the one in which the money is procured. All federal funds, whether spent in the operating or capital budget, are restricted by legislative appropriation to specific uses.

Figure 6-4. Total Federal Spending in Alaska, FFY 2008

By Distributing Agency

	$ Million	Percent
Defense	3,628.6	39%

[1] Governmental Accounting Standards Board (GASB) principles require the recognition of changes in the value of investments as income or losses at the end of each trading day, whether the investment is actually sold or not.

Investment Forecast

To forecast investment revenue for the current fiscal year—FY 2010—we combine actual performance through September 30, 2009, with a projection for the remainder of the year. Forecasts and estimated capital market median returns are based on information supplied by the state's investment consultant, Callan Associates Inc., and their 5-year capital market estimated returns.

Unrestricted Investment Revenue

Unrestricted investment revenue is earned on the General Fund non-segregated investments managed by the Treasury Division. Interest Paid by Others is interest received by the state other than on its investments. Oil and gas royalty interest, production tax interest, and corporate income tax interest are included in the Oil Revenue section of this forecast.

Restricted Investment Revenue

Restricted investment revenue consists of earnings from governmental funds, the Constitutional Budget Reserve Fund (CBRF), other Treasury-managed governmental funds and the Alaska Permanent Fund.

[1] The continued volatility in the world's financial markets makes focus on the "Expected Risk" column (far right in the table above) particularly appropriate. The numbers in the Expected Risk column represent a statistical measure called standard deviation, which is the most commonly used measure of risk in the investment world. The standard deviation is a measure of the dispersion of data around its mean. The analyst can use this measure of dispersion to provide a range of possible outcomes at any desired level of confidence. In the data in this table, the level of confidence is set at 67% or one standard deviation. A higher level of confidence would require a broader range. For example, Callan estimates an average annual return for the domestic broad market fixed-income asset class of 5.24% and an expected risk for that asset class of 5.0%. That means Callan is forecasting that two-thirds of the time the annual return for the domestic broad fixed-income asset class will fall between 0.24% (the median expected average annual return of 5.24% minus the expected risk of 5.0%) and 10.24% (the median expected return plus the expected risk). A prediction at 95% confidence would run from -4.76% to 15.24%, too broad a range to be useful. The probability that a particular asset class or portfolio will have a negative return over a given period of time is another way to reflect the riskiness of that asset class or portfolio.

[1] FY 2010 data projected using Callan 2009 capital market assumptions and May 2009 asset allocation resolution, resulting in an 7.70% median expected total return. Inflation based on actual through September 2009.

[2] FY 2011 projected using Callan 2009 capital market assumptions and May 2009 asset allocation resolution, resulting in an 8.28% expected total return, and 2.75% inflation.

[3] The permanent fund dividend payment is recorded as a liability at fiscal year end, and is paid out the following month.

[4] Beginning in FY 2009, and applied retroactively, Department of Law opinion required an allocation of unrealized gains and losses to the unreserved assets of the Fund.

8. State Endowment Funds

This section compares important attributes of six endowment funds. The University of Alaska endowment is included in this comparison because it is one of Alaska's public endowment funds that uses the annual distribution calculation method typical of the vast majority of endowments in the United States and Canada.[1]

The fiduciary for each of these endowment funds has the responsibility for establishing an asset-allocation policy for the fund. Figure 8-1 on the next page compares the asset-allocation policies for these endowments.

Under the standards adopted by the Governmental Accounting Standards Board (GASB), public funds calculate and report their income by recognizing changes in the value of securities as income, or losses, as they occur at the end of each trading day. They do this regardless of whether the securities are actually sold and the income, or losses, are taken or realized. All six of these endowments report annual income on this basis. However, as reflected in Figure 8-2 on the next page, four of them use other measures of annual income for determining their distributions. These include the Alaska Permanent Fund and the Mental Health Trust Fund, both administered by the Alaska Permanent Fund Corporation, the Public School Trust and the Alaska Children's Trust.

In determining the amount of income available for distribution each year for the two funds managed by the Alaska Permanent Fund Corporation, gains or losses on individual investments are not recognized until the investment is sold. For calculating distributable income for the Public School Trust and the Alaska Children's Trust, only interest earned and dividends received are treated as income. Gains and losses in the value of individual investments are never recognized as income. By law, those gains and losses remain with the principal of the fund. Figure 8-3 explains how distributable income for each of the endowments is determined.

[1] The predominant practice, making annual distributions of 4% to 5% of the market value of the endowment, developed following a 1968 Ford Foundation study. See The Ford Foundation Managing Educational Endowments (New York, New York; 1968).

Public School Trust	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid; gains and losses on value of securities are never income, they become part of principal
Alaska Children's Trust	GASB (recognize gains and losses based on change in market value)	Interest earnings + dividends paid; gains and losses on value of securities are never income, they become part of principal
Power Cost Equalization Endowment	GASB (recognize gains and losses based on change in market value)	GASB (recognize gains and losses based on change in market value)
University of Alaska Endowment	GASB (recognize gains and losses based on change in market value)	GASB (recognize gains and losses based on change in market value)

Figure 8-3. Distributable Income Determination—State Endowment Funds

Alaska Permanent Fund

The annual distribution for the Permanent Fund Dividend follows the formula in AS 37.13.140-.150, which specifies that 10.5% of the past five years' total realized income shall be paid out as dividends but also sets the limitation that the annual distribution may never exceed 50% of the balance in the fund's Realized Earning Account (REA). The 50% limitation has never been triggered.

Mental Health Trust

The Mental Health Trust Board adopted a policy, beginning in FY 2001, to distribute 3.5% a year of the market value of the fund's total assets. The distribution rate had been 3% for FY 1996-1998 and 3.25% for FY 1999-2000. Because of recent declines in market value, the board is exploring a redefinition of "principal" so that losses in market value would be proportionally allocated to the principal account and the earnings account rather than assigning the entire value of any losses to the earning account.

Public School Trust

The annual distribution is 4.75% of a five-year moving average of the fund's principal market value so long as that amount does not exceed the interest and dividend earnings available in the earnings account. The trust has accumulated a sizable earnings account balance, providing a cushion for the fund to maintain its annual distributions in a sustained bear market.

Alaska Children's Trust

The annual distribution is 4.75% of a five-year moving average of the fund principal's market value so long as that amount does not exceed the interest and dividend earnings available in the earnings account. The trust has accumulated a sizable earnings account balance, providing a cushion for the fund to maintain its annual distributions in a sustained bear market.

Power Cost Equalization Endowment

The annual distribution is 7% of the fund's market value. For the initial transition years, state statute specifies that the fund shall use the market value on February 1 for the subsequent fiscal year's distribution. Thereafter, the fund is to distribute each year 7% of the monthly average market value for a specified 36-month period.

University of Alaska Endowment

The annual distribution is 5% of a 5-year moving average of the market value of the fund.

Figure 8-4. Inflation-Proofing Procedures—State Endowment Funds

Alaska Permanent Fund

An annual appropriation is needed to inflation proof the principal of the Permanent Fund (but not the accumulated earnings) pursuant to AS 37.13.145. The legislative appropriation requires a transfer from the Realized Earnings Account to the fund's principal an amount equal to the calculated U.S. Consumer Price Index's effect on the value of the principal, comprised of oil and gas royalty contributions and legislative appropriations. The Alaska Permanent Fund Corporation's Trustees have proposed a constitutional amendment that would inflation proof the entire fund—the principal and accumulated earnings—by limiting the annual distribution of earnings to 5% of a five-year moving average of the market value of the fund.

Mental Health Trust

The Mental Health Trust Authority has adopted two policies to inflation proof the fund. First, it limits distributions to 3.5% of the fund's market value. (The authority's ultimate goal, after further building up the principal, is to distribute 5% of the fund's market value each year, which would still allow enough retained earnings to inflation proof the fund.) Second, the authority also has adopted a policy transferring money from the reserve account to the principal whenever the reserve exceeds four times the annual income distribution, to help build up the fund's principal.

Public School Trust

The asset-allocation policy is such that—when combined with the requirement that the fund's capital gains and losses remain part of the principal—the retained capital gains are adequate to inflation proof the fund.

Alaska Children's Trust

The asset-allocation policy is such that—when combined with the requirement that the fund's capital gains and losses remain part of the principal—the retained capital gains are adequate to inflation proof the fund.

Power Cost Equalization Endowment

The legislature, in selecting a 7% distribution policy, expressly elected not to inflation proof this fund, but rather to distribute all, or almost all, of its anticipated annual earnings.

University of Alaska Endowment

The university's distribution policy of 5% of the moving five-year average of the fund's market value should allow for retained earnings to inflation proof the fund.

9. Public Corporations & University of Alaska

Public Corporations

The state has established the following public corporations to carry out certain public policies:

- Alaska Housing Finance Corporation (AHFC)
- Alaska Industrial Development and Export Authority (AIDEA)
- Alaska Energy Authority (AEA)
- Alaska Student Loan Corporation (ASLC)
- Alaska Municipal Bond Bank Authority (AMBBA)
- Alaska Aerospace Development Corporation (AADC)
- Alaska Railroad Corporation (ARC)

These seven corporations and the University of Alaska are components of state government whose activities are accounted for in the state's Comprehensive Annual Financial Report separately from the activities of primary state government. Information in this section is provided by these corporations.

Four of these corporations pay some portion of their income as an annual "dividend" to the state. They include the Alaska Housing Finance Corporation, Alaska Industrial Development Authority, Alaska Student Loan Corporation and Alaska Municipal Bond Bank Authority.

The members of the AIDEA Board of Directors also serve as Board of Directors of AEA, though AIDEA and AEA continue to exist as separate legal entities. AEA has no employees, and AEA contracts to have AIDEA employees administer AEA programs. Other corporations have their own staffs and boards. While neither the sale of bonds nor the expenditure of bond proceeds by these corporations are subject to the state's Executive Budget Act, expenditures for the day-to-day administration of all of these corporations except the Alaska Railroad are subject to the Executive Budget Act.

The Alaska Commission on Postsecondary Education (ACPE) administers the ASLC programs. The ASLC has no employees, and the executive director of the ACPE serves as the executive officer of the ASLC.

The six figures that follow in this section summarize the activities of these corporations.

Figure 9-1. Public Corporations—Missions. What does the corporation do and how does it do it?

Alaska Housing Finance Corporation

Using proceeds from the sale of bonds backed by its corporate assets, AHFC purchases home mortgages from Alaska banks. Income from payments on these mortgages repays bond holders and adds to the corporation's income, thereby enabling the corporation, since FY 1991, to pay an annual dividend and/or return of capital to the state. In addition to ensuring that Alaskans, especially Alaskans of low and moderate income and those in remote and underdeveloped areas of the state, have adequate housing at reasonable cost, the corporation administers federally and state funded multi-residential, senior and low-income housing, residential energy and home weatherization programs. In recent years, the legislature has authorized AHFC to finance the construction of schools, University of Alaska housing and other capital projects identified by the legislature.

Alaska Industrial Development and Export Authority

By lending money, guaranteeing loans or becoming an owner, AIDEA makes financing available for industrial, export and other business enterprises in Alaska. The corporation earns money from interest on its loans, investments, leases and operations of its properties. The corporation has paid an annual dividend to the state since FY 1997.

Alaska Energy Authority

AEA provides loans to utilities, communities and individuals to pay for the purchase or upgrade of equipment and for bulk fuel purchases. Additionally, the agency administers the Power Cost Equalization program, subsidizing rural electric costs with the Power Cost Equalization Endowment. AEA also receives federal and state money to provide technical advice and assistance in energy planning, emergency response management, energy infrastructure construction and conservation in rural Alaska. AEA owns and, under contractual agreements, operates and maintains state-owned power projects, such as Bradley Lake and the Alaska Intertie.

Alaska Student Loan Corporation

The Alaska Student Loan Corporation uses proceeds from bond sales to finance education loans made by the Alaska Commission on Postsecondary Education. Loan repayments satisfy bond obligations and enhance the corporation's capital asset base. Alaska statutes authorize the board of directors to annually declare a return to the state of a portion of its net income. The board has declared return of capital payments for each year beginning in FY 2001 through FY 2007. Alaska statutes also authorize the corporation to issue bonds for the purpose of financing projects of the state. Those bonds in aggregate may not exceed $280 million.

Alaska Municipal Bond Bank Authority

The Bond Bank loans money to Alaska municipalities for capital improvement projects. The bank's larger capital base, its reserve funds and its credit rating enable it to sell bonds at lower interest rates than the municipalities could obtain on their own. The Bond Bank earns interest on the money it holds in reserve and has returned a dividend to the state every year since 1977.

Alaska Aerospace Development Corporation

The corporation operates and maintains a commercial spaceport in Kodiak, Alaska and provides commercial rocket vehicle launch support services. It promotes space-related business, research, education and economic growth in the State of Alaska.

Alaska Railroad Corporation

The corporation operates freight and passenger rail services between Seward and Fairbanks, including a spur line to Whittier. In addition, the corporation generates revenues from real estate it owns.

Figure 9-2. Public Corporations—State Capitalization. How did the state capitalize the corporation?

Alaska Housing Finance Corporation

The legislature appropriated $739.9 million in cash and $292.5 million in mortgages held by the General Fund to the corporation between 1976 and 1984. The payments on those mortgages and additional mortgages purchased with the cash have helped build the corporation's asset base and allow it to return some capital to the state each year. In 1993, AHFC received an additional $27.7 million in cash and $9.3 million in equity when the legislature merged the Alaska State Housing Authority with this corporation.

Alaska Industrial Development and Export Authority

Between 1981 and 1991, the State of Alaska transferred various loan portfolios worth $297.1 million and $69.2 million in cash to this corporation.

Alaska Energy Authority

The legislature established the AEA in 1976 to finance and operate power projects. This corporation has also administered rural energy programs at various times, including the present. As a result of legislatively mandated reorganizations, capital has moved into and out of the corporation. At the end of FY 2001, this corporation reported contributed capital of $963.5 million.

Alaska Student Loan Corporation

In FY 1988, the state transferred $260 million of existing student loans to this corporation. Additional appropriations of cash between FY 1988 and FY 1992 totaled $46.7 million.

Alaska Municipal Bond Bank Authority

Between 1976 and 1986, the legislature appropriated $18.6 million to the Bond Bank to be used for backing bond issues. In addition, the legislature gave the Bond Bank $2.5 million in 1981 to fund a direct loan by a municipality. The municipality repaid the loan and the Bond Bank retained the appropriation.

Alaska Aerospace Development Corporation

Since 1993, the state has contributed $10.9 million from the Science and Technology Endowment.

Alaska Railroad Corporation

The state bought the railroad from the federal government in 1985. The purchase price of $22.7 million was recorded as the state's capitalization.

Alaska Municipal Bond Bank Authority	27.6	0.8	1.5
Alaska Aerospace Development Corporation[2]	19.7	(5.0)	(3.9)
Alaska Railroad Corporation [3]	177.9	3.3	12.6

[1] The Alaska Industrial Development and Export Authority and Alaska Energy Authority report financial data on a fiscal year basis. Revenue, operating income and net income in the table are from audited June 30, 2009 financial statements.

[2] The Alaska Aerospace Development Corporation financial data include depreciation of $5.9 million and are based on audited June 30, 2009 financial statements.

[3] The Alaska Railroad reports financial data on a calendar year basis. Revenue and Operating Income shown in this table are for CY 2008.

Figure 9-5. Public Corporations—Dividends to the State. How, if at all, does the corporation pay dividends to the state?

Alaska Housing Finance Corporation

The Twenty-Third Legislature, in 2003, enacted SCSHB 256 (the "2003 Act") which added language to the Alaska Statutes to modify and incorporate the Transfer Plan. As approved and signed into law by the Governor, the Transfer Plan calls for annual transfers as follows: FY 2005, $103 million; FY 2006, $103 million; FY 2007, the lesser of 95% net income or $103 million; FY 2008, the lesser of 85% net income or $103 million; FY 2009 and thereafter, the lesser of 75% of the corporation's net income or $103 million.

Alaska Industrial Development and Export Authority

By statute, AIDEA must make available to the state each year not less than 25% and not more than 50% of its total net income for a base year, defined as the year two years prior to the dividend year. The dividend is further limited to no more than the total amount of its unrestricted net income in the base year (AS 44.88.088). Net income is defined in the statutes.

Alaska Energy Authority

AEA does not pay a dividend or return capital to the state on a regular basis. However, in FY 2000 this corporation returned $55.6 million of contributed capital to the Railbelt Energy Fund and the General Fund.

Alaska Student Loan Corporation

This corporation, at the discretion of its board of directors, may make available to the state a return of contributed capital or dividend for any base year in which the net income of the corporation is $2 million or more. A base year is defined as the year two years before the payment year. If the board authorizes a payment, it must be between 10% and 35% of net income for the base year (AS 14.42.295). The corporation may also issue bonds in an aggregate amount not to exceed $280 million, for the purpose of financing projects of the state as those projects may be identified by law (AS 14.42.220).

Alaska Municipal Bond Bank Authority

By statute, the Bond Bank annually returns earnings or income of its reserve fund, in excess of expenses, to the state.

Alaska Aerospace Development Corporation

AADC does not pay a dividend or return capital to the state.

Alaska Railroad Corporation

The corporation does not pay a cash dividend to the General Fund.

Figure 9-6. Public Corporations—Operating Expenses & Dividends ($ million)

	Expenses		Dividends	
	Actual FY 2009	Budget FY 2010	Actual FY 2009	Budget FY 2010
Alaska Housing Finance Corporation [1]	48.6	53.2	65.9	68.7
Alaska Industrial Development & Export Authority	9.3	8.9	23.8	22.7
Alaska Energy Authority [2]	42.6	36.5	na	na
Alaska Student Loan Corporation	11.6	12.2	9.1	0.0
Alaska Municipal Bond Bank Authority	0.6	0.7	0.8	0.3
Alaska Aerospace Development Corporation [3]	23.6	28.6	na	na
Alaska Railroad Corporation	na	na	na	na

[1] Because some of this money is earmarked for multi-year capital projects, actual cash transfers in any given year may vary.

[2] The Alaska Industrial Development and Export Authority and Alaska Energy Authority report financial data on a fiscal year basis. Actual operating expenses and dividends are for the fiscal year ended June 30, 2009

[3] The Alaska Aerospace Development Corporation financial data include depreciation of $5.9 million and are based on audited June 30, 2009 financial statements.

Revenue. A-1

Glossary of Terms

Constitutional Budget Reserve Fund (CBRF)

Created by voters in 1990, the Constitutional Budget Reserve Fund receives proceeds from settlements of oil, gas, and mining tax and royalty disputes. The legislature may, with a three-quarters majority vote in each chamber, withdraw money from the fund.

Federal Revenue

Revenue appropriated from the federal government to the state with restrictions on how the money can be used. Highway and airport construction funds, Medicaid and education funding cannot be used for other purposes. In addition to restricting how the money is spent, the federal government often requires states to put up matching funds to qualify for the federal funding.

General Fund Revenue

General Fund Revenue has different meanings in different contexts. In the state's official financial reports, General Fund Revenue is used to designate the sum of General Purpose Unrestricted Revenue, General Fund sub-account revenue, program receipts and federal dollars spent through the General Fund. In budget-writing context, General Fund revenue has a definition similar to General Purpose Unrestricted Revenue.

Permanent Fund GASB (or Market) Income

Under standards adopted by the Governmental Accounting Standards Board (GASB), the Permanent Fund's income—and that of any other government fund—is the difference between the purchase price of the investments and their market value at a given point in time, plus any dividends, interest or rent earned on those investments. Under GASB standards, the Permanent Fund does not have to sell the investment to count the gain or loss as it changes value. It is called "marking to market," that is, measuring the value of the fund's investments by the current market price. This can produce a much different picture than Permanent Fund statutory income, which does not reflect fluctuating investment values until the assets are sold.

Permanent Fund Statutory Income

Permanent Fund statutory income is the sum of realized gains and losses of all Permanent Fund investment transactions during the year, plus interest, dividends and rents earned by the fund. The Permanent Fund Dividend is based on statutory income. Though the legislature may appropriate the earnings for any purpose it chooses, the historical practice has been to restrict the use of realized income to dividends and inflation proofing, and then either leave the excess in the Realized Earnings Account or transfer it to the principal of the Permanent Fund.

Restricted Program Receipts

Revenue that is earmarked in state statute or by contract for specific purposes and is usually appropriated back to the program that generated the revenue. Examples include University of Alaska tuition payments, marine highway receipts, payments to various revolving loan funds and public corporation receipts. Some of this revenue is actually dedicated as a consequence of the provisions of Article 18, Section 11 of the Alaska Constitution. The remainder, while statutorily earmarked, may be appropriated to purposes other than those reflected in statute if the legislature so chooses.

Restricted Revenue

Restricted revenue represents revenue that is restricted by the constitution, state or federal law, trust or debt restrictions, or by customary practice. The legislature can at any time remove restrictions that are solely imposed by either Alaska statute or customary practice. Program receipts, revenues allocated to sub-accounts of the General Fund, and General Fund revenues customarily shared with other entities are all considered restricted revenues for the purposes of this report.

General Purpose Unrestricted Revenue

Revenue not restricted by the constitution, state or federal law, trust or debt restrictions or customary practice. Most legislative and public debate over the budget each year centers on this category of revenue. In deriving this figure from General Fund revenues, we have excluded General Fund sub-account revenue, as well as customarily restricted revenues such as shared taxes and marine highway receipts.

[1]Fiscal year averages incorporate actual prices for the first four months of FY 2010. .

*In addition to price and production, revenue estimates under ACES depend on levels of spending by petroleum producers and explorers. Spending plans may change as companies occasionally revise their investment strategies. The above estimates also do not consider how company investment decisions would change with a change in oil prices.

(1) General Purpose Unrestricted Revenue includes those revenues that are not restricted by statute or custom, as reported elsewhere in this publication. A summary of historical General Purpose Unrestricted Revenue can be found on the Tax Division's web site at: www.tax.alaska.gov/sourcesbook/GeneralFund-UnrestrictedRevenueHistory.pdf

(2) These categories are primarily composed of petroleum.

(3) Starting in FY 2001, interest earnings are included in oil and gas royalties and excluded from investment earnings.

(4) Includes non-petroleum rents and royalites.

(1) In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

(2) Data from Platt's Oilgram Price Report, Wood McKenzie and Alaska Department of Revenue's prevailing value and tax return data: Historical real and nominal crude oil and natural gas prices can be found on the Tax Division's web site at: www.tax.alaska.gov/sourcesbook/OilGasPrices.pdf.

(3) Adjustment to "nominal" dollars is required to prepare the crude oil and natural gas price forecasts. Callan Associates Inc.'s inflation rate of 2.75% was used for FY 2011 and beyond.

(4) Adjustment to "real 2010" dollars is useful to compare prices across time excluding inflation. These prices data are adjusted to real 2010 dollars based on inflation rates provided by the U.S. Department of Labor, Bureau of Labor Statistics. The data series used is the Consumer Price Index for all Urban Consumers (CPI-U) which can be found at: www.bls.gov/cpi/home.htm.

(1) In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

(2) A summary of historical crude oil production can be found on the Tax Division's web site at: www.tax.alaska.gov/sourcesbook/AlaskaProduction.pdf.

(3) Includes NGLs from Central Gas Facility shipped to TAPS.

[1] In FY 2008, the Department of Revenue made a change in the method by which it accounts for future revenues, as well as historical and future production and oil prices, from a cash basis to an accrual basis. This method change will better align fiscal year revenues with the state's financial reports and other publications. As a result, slight modifications have been made to historical production values and oil prices to accommodate this change.

[2] A summary of historical ELFs can be found on the Tax Division's web site at www.tax.alaska.gov/sourcesbook/ELFs.pdf.

Under the ELF production tax system, the tax rate for oil depended on the age of the field and the Economic Limit Factor (ELF). The ELF was calculated based on total daily oil production and average daily per well production from each producing field. The statutory production tax rate on oil was 12.25% of its value at the point of production for the first five years of field production and 15% thereafter. There was a minimum tax of 80 cents per taxable barrel. The effective tax rate was calculated by multiplying the statutory tax rate, even if it was the minimum 80 cents per barrel, times the ELF. The ELF formula resulted in lower effective tax rates for smaller, low-production fields and higher tax rates for larger, highly productive fields. There was a unique combination of total daily field production and average daily per well production.

In January 2005, the department aggregated seven fields in the Prudhoe Bay Unit. The decision to aggregate focused on, among other things, the increasing interdependence found in the engineering and operation of the fields.

Revenue Sources Book

Alaska Department of Revenue – Tax Division

FALL 2009

In accordance with AS 37.07.060 (b)(4), the Revenue Sources Book is compiled biannually by the Alaska Department of Revenue to assist the governor in formulating a proposed comprehensive financial plan for presentation to the Alaska State Legislature. Within the publication are shown prior year actuals, revised current year estimates and future year projections.

Anticipated state income is projected through the use of a number of data sources:

(1) Econometric models developed by the Department of Revenue to forecast unrestricted non-petroleum revenues;

(2) A petroleum revenue model created by the department's Tax Division;

(3) Estimates from individual state agencies.

We thank the various state agencies for their cooperation in computing anticipated revenues for publication in this Fall 2009 Revenue Sources Book.

The Department of Revenue complies with Title II of the Americans With Disabilities Act of 1990. This publication is available in alternative communication formats upon request. Please contact the division's representative at 907-465-3692 or 907-465-3678 (TDD) to make necessary arrangements.

This publication, required by law (AS 37.07.060), was printed in Juneau, Alaska at a cost of about $13 per copy.

Source: OMB

- FY09 represents actuals rather than forecast.
- FY10 surplus/shortfall calculation adds $22.1 in reappropriations and carry over to total available revenue.
- FY11 surplus calculation subtracts $400 from surplus for Governor's Performance Scholarship Fund and $13.1 deposit to Public Education Fund for FY12. CBR balance assumes that all available surplus is deposited to CBR main fund.

Appropriations projections do not represent a commitment by the Administration to propose spending at a particular level in FY11 or any future year. The 10 year forecast shows that unanticipated shortfalls during the period could be filled primarily through the use of reserve funds. However, other options could be used in whole, or in part. The plan will be revisited as conditions warrant.

Oil Production Forecast

ANS Production, History & Forecast

ANS production forecasts for 2015 from Fall Revenue Source Books - 2004 to 2009

The production trend is not good. Let's just pick 2015 production, as an illustration. Not only is the total dropping, but the important category of Under Evaluation is falling. So while projects have moved into Under Development from the 2007 to the 2009 forecast, the future looks thin, very thin.

Fall 2004 Forecast			
Currently Producing	Under Development	Under Evaluation	Total ANS
345,000	243,000	262,000	850,000

Fall 2007 Forecast			
Currently Producing	Under Development	Under Evaluation	Total ANS
428,000	107,000	149,000	684,000

Fall 2009 Forecast			
Currently Producing	Under Development	Under Evaluation	Total ANS
385,000	213,000	25,000	623,000

2018 Projections from Fall 2007 and 2009 Source Books

And here's another comparison between the Fall 2007 and Fall 2009 Forecast books, looking at production projections for 2018:

Fall 2007 Forecast			
Currently Producing	Under Development	Under Evaluation	Total ANS
373,000	86,000	221,000	680,000

Fall 2009 Forecast			
Currently Producing	Under Development	Under Evaluation	Total ANS
298,000	207,000	55,000	561,000

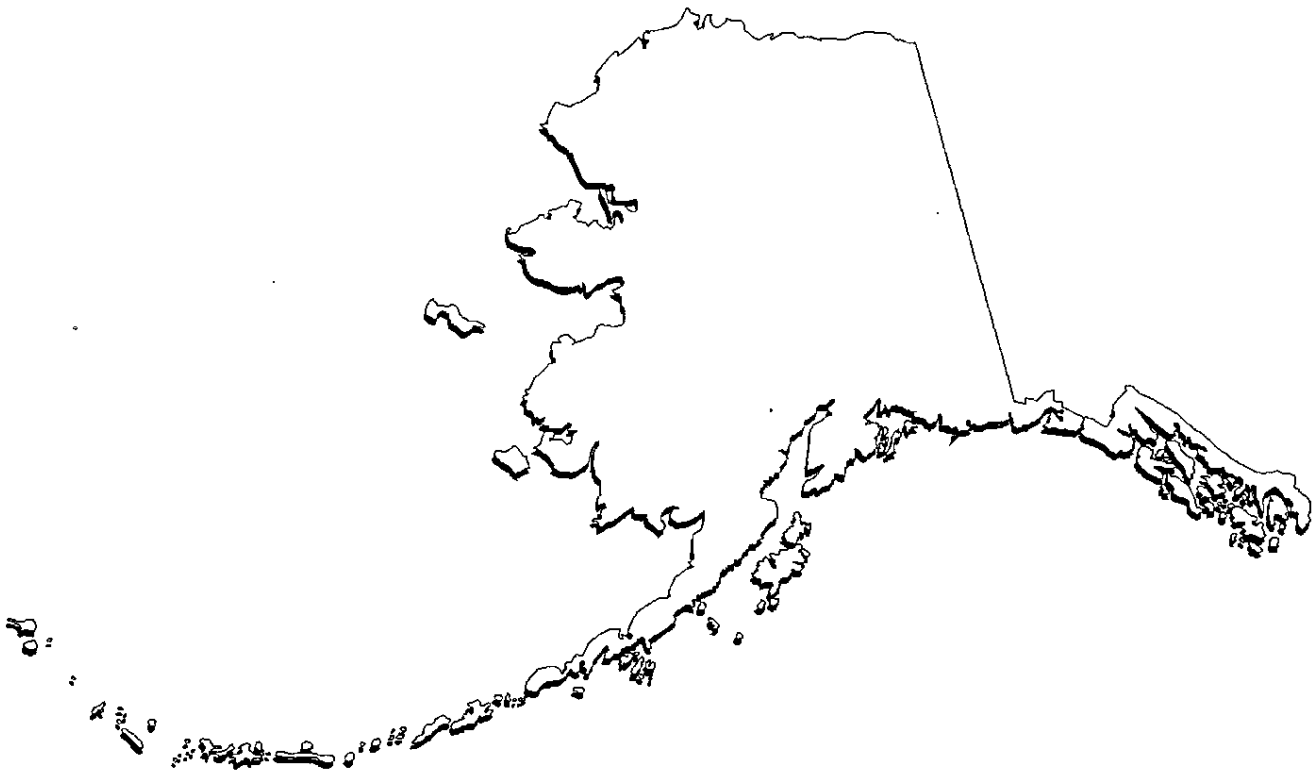
The Fiscal Year 2011 Budget:

Legislative Fiscal Analyst's Overview of the Governor's Request



Legislative Finance Division

http://www.legfin.state.ak.us/

1604

The Legislative Fiscal Analyst Office has a professional, non-partisan staff that provides general budget analysis for members of the legislature and specifically supports the Legislative Budget and Audit Committee and the House and Senate standing finance committees. Each fiscal analyst is assigned agency areas of responsibility. Duties of the office are to:

(1) analyze the budget and appropriation requests of each department, institution, bureau, board, commission or other agency of state government;
(2) analyze the revenue requirements of the state;
(3) provide the finance committees of the legislature with comprehensive budget review and fiscal analysis services;
(4) cooperate with the Office of Management and Budget in establishing a comprehensive system for state budgeting and financial management as set out in the Executive Budget Act (AS 37.07);
(5) complete studies and prepare reports, memoranda or other materials as directed by the Legislative Budget and Audit Committee;
(6) with the Governor's permission, designate the legislative fiscal analyst to serve ex officio on the Governor's budget review committee. [AS 24.20.231]

Legislative Finance Budget System. The system tracks budget transactions and provides comparative reports for committees and subcommittees. In addition, the system is used to produce the Governor's budget request books, the general appropriations bills, Conference Committee reports and a breakdown of the capital budget by House district.

Introduction

As required by law, the Governor released his FY11 budget proposal to the public and the legislature by December 15, 2009. The Legislative Finance Division prepared this Overview of the Governor's proposal and "subcommittee books" for each agency in accordance with AS 24.20.211-.231.

Alaska's Fiscal Situation

The short and sweet version of the story is that Alaska has more cash reserves than ever before—nearly $10 billion excluding the Permanent Fund Corpus and earnings reserves—and is projecting a seventh consecutive year of general fund surpluses. But nothing is short and sweet in the budget world, and there are concerns about long-term oil production declines, volatile oil prices, the pace of gasline development, and expenditure levels that may not be sustainable. As those who work with state budgets can attest, having money does not necessarily make the budget process easier.

Before consideration of transfers, the **anticipated surpluses for FY10 and FY11 are $1.45 billion and $330 million, respectively**. If the legislature approves transfers proposed by the Governor, the projected surpluses decline to $444 million for FY10 and $55 million for FY11.[1]

As always, projections involving oil prices are somewhat speculative. For this reason, Legislative Finance prefers sensitivity charts (like those on pages 6 and 7) to a revenue estimate based on a specific oil price. As the FY10 chart shows, if oil remains at the current year-to-date price of $73.42 per barrel through the end of the year, the FY10 surplus would grow to about $2.2 billion before transfers, and to about $1.1 billion after forward funding K-12 education.

In summary, Alaska is in a position to repay the remaining liability ($400 million) to the Constitutional Budget Reserve Fund (CBRF). That liability is the net amount borrowed from the fund since its inception in 1991. Repaying the liability to the CBRF would result in a major paradigm shift. General funds not appropriated by year-end would remain in the general fund and be available for appropriation—without a supermajority vote—in the following fiscal year. Alaska has not had a positive start-of-fiscal-year general fund balance in 20 years.

State senators and representatives typically begin a legislative session facing decisions about two fiscal years—the open fiscal year (FY10) and the budget year (FY11). In an unusual turn of events, the sharp declines in both oil prices and financial markets that occurred in FY09 remain relevant to current fiscal decisions. The fiscal summary prepared at the end of the 2009 session anticipated a deficit of nearly $800 million for FY09, after paying $745 million as a resource rebate and depositing $1 billion into the Constitutional Budget Reserve Fund. Actual revenue was within $40 million of projections and the amount appropriated was as projected, yet the FY09 comprehensive financial report shows a surplus of $200 million. Readers may wonder "So, how did a billion dollars appear from thin air, and how might that event affect the amount of money available for appropriation during the 2010 session?"

---

[1] The Governor proposes:

1. a $1.1 billion transfer from the general fund to the public education fund in FY10 (which would restore the fund balance to the level required to forward fund K-12 education in FY11);
2. a $400 million transfer from the general fund to a newly created performance scholarship fund in FY11;
3. transfers of $179 million from savings accounts in FY11; and
4. other more routine transfers of $40 million.

The money is available because of a miscommunication that caused revenue projections and financial statements to become unsynchronized beginning with FY08. Revenue projections cover the period from July through June, while financial statements designate accrued June revenue as money available in the following fiscal year.[2] June 2008 oil prices were extremely high, so adding June 2008 oil taxes to FY09 revenue while subtracting June 2009 taxes (so they could be added to FY10 revenue) caused the financial statement to show an unexpected billion dollars of available revenue in FY09. The extra money means that the Statutory Budget Reserve Fund was not needed to balance the budget in FY09 (so the balance remains at $1 billion) and the general fund liability to the CBRF was reduced by $200 million (and now stands at $400 million).

How does this impact extend to the current session? If the FY10 financial statements are synchronized with revenue forecasts, accrued revenue from June 2010 will not be designated for use in FY11. Effectively, synchronization could mean that FY10 would get a "thirteenth month" of revenue, adding $304 million to the projected $1.45 billion surplus. With the thirteenth month, the projected surplus is sufficient to forward fund K-12 education with $1.1 billion, repay the $400 million liability to the CBRF, and still have about $250 million to spend or save. If oil prices remain at the current level ($73.42/bbl) during the second half of FY10, revenue will be about $750 million more than the official projection.

The effects of the 2009 financial market decline also extend beyond FY09. The most significant issues include higher contributions to retirement plans—but that will come after FY11—and dealing with investment losses realized by the Permanent Fund in FY09. The latter issue is more complex than can be addressed in this overview, but readers who wish to prepare for legislative deliberation on the topic may want to review a paper on the subject (posted on the Legislative Finance Division website).

The Governor's Budget

The following discussion is based on the fiscal summary—Alaska's "budget on a page." Parenthetical references refer to line numbers on the summary on page 5. The summary incorporates the results of a project that moved about $750 million of "other funds" to the general fund category in order to provide clearer, more meaningful information on state spending and revenue. Please see page 9 for a discussion of the project.

The fiscal summary is broken into four sections. This review focuses on general funds, not because other funds are unimportant, but because the difference between general fund spending and general fund revenue defines the fiscal gap/surplus.

1. **Agency Operations (line 8)** refers to money appropriated/requested to operate all public agencies. It may be the best expression of public perception of "the budget" and includes money for K-12 education (line 11) and other formula programs like Medicaid (line 12) as well as all non-formula operating costs (line 10). The Governor's request is up $183 million (4.4%) from FY10. Roughly half of that amount is for K-12 education and Medicaid. Please see the discussion beginning on page 15 for more details on operating budget increases.

   There are no obvious places here for significant budget reductions. In fact, the legislature may find it difficult to remain below the Governor's request, particularly if a reduction in the Medicaid matching rate (lowered as part of the federal stimulus package) is not

[2] This discussion is oversimplified. While technical details might be of interest to Finance Committee members, detail would not facilitate understanding at the *Overview* level of discussion.

extended. Alaska's FY11 share of Medicaid payments will increase by $50 million or more if the rate returns to normal on December 31, 2010.

2. **Statewide Operations (line 17)** refers to appropriations that are typically not reviewed by operating budget subcommittees. The Governor's request is up $97 million (13.7%) from FY10. Most of these items—debt service, retirement system costs and petroleum tax credits—may be considered nondiscretionary.

   Although paying claims for tax credits is nondiscretionary, the estimate of required deposits to the tax credit fund (line 23) may be overstated. The appropriation for tax credits is merely an estimate that will be automatically reduced if claims for credits are lower than anticipated.

3. **Capital Appropriations (line 26)** include capital projects and a $150 million deposit to the Alaska Gasline Inducement Act (AGIA) reimbursement fund. The Governor's $549 million general fund request is $269 million (96%) more than the FY10 capital budget adopted by the legislature. Primary drivers of the increase are $150 million to the AGIA Reimbursement Fund and $100 million for state-wide deferred maintenance.

   The legislature typically adds a substantial amount to the Governor's capital request. After what some legislators consider as two lean years of capital spending, a larger capital spending plan by the legislature would be no surprise. Capital spending is also highly dependent on the fiscal situation—spending goes up when revenue is high. As the FY10 sensitivity chart on page 6 shows, if oil prices remain at the current level ($73.42/bbl) during the second half of FY10, revenue will exceed current appropriations by $2.2 billion. After forward funding K-12 education and repaying the $400 million liability to the CBRF, the remaining $1 billion surplus would be available for spending in FY11.

   An additional reason the final capital budget might be larger than the Governor's proposal becomes apparent when one compares the Governor's FY11 request to the FY10 final budget and to the FY10 Governor's request. Governor Palin's FY10 request contained several agency projects—the largest was a $76 million request for funds to replace payroll and accounting software—that were not approved and do not appear in the Governor's FY11 request. Many of the agency projects are still needed. For more details on the capital budget, please see the discussion beginning on page 55.

4. **Transfers (line 37)** is the portion of the fiscal summary that requires the most explanation. The transfers section records money that passes from one fund to another without leaving the treasury. Please see the budget clarity progress report reproduced on page 9 for a more detailed discussion.

   A negative number (such as the $1.057 billion in the FY10 GF column on line 39) indicates a transfer to the general fund. In this case, $1.057 billion is the estimated cost of K-12 education in FY10. That amount was removed from the Public Education Fund (PEF) and distributed to school districts, but the legislature did not approve an FY10 appropriation to the PEF, so there was a balance reduction of $1.057 billion.

   Similarly, the negative $2.1 million and negative $177 million shown in the FY11 GF column (lines 41 and 42) indicate the Governor's proposed withdrawals of $177 million from the Alaska Housing Capital Corporation account—a savings account the legislature created with a $300 million general fund deposit in FY07—and $2 million from the CBRF for management fees. The $179 million withdrawn from savings accounts also

appears on the lines where the money is spent ($150 million deposited in the AGIA Reimbursement Fund on line 29, $10 million for capital projects incorporated in line 28, and $19 million for agency operations incorporated in line 10).

A positive number indicates a net deposit to a fund. The Governor's proposals to deposit $14 million to the Public Education Fund and $400 million to a scholarship fund are shown on lines 39 and 40.[3] Transfers to (and from) accounts that are not considered savings accounts are shown on line 43.

As shown in the fiscal summary (line 36), the Governor's proposed budget spends $330 million less than the projected amount of revenue. Although transfers are not considered spending—because money is transferred *within* the treasury—they do require an appropriation and they "take money off the table." The Governor proposes both deposits to and withdrawals from savings accounts. The net deposit of $275 million (line 37) reduces the projected FY11 surplus to $55 million (line 45). Without the proposed withdrawals from savings (lines 41 and 42), the Governor's budget would show a deficit of $124 million.

Further Analysis

Although the fiscal summary provides a concise statement (and comparison) of projected revenue, appropriations and the size of the anticipated surplus or deficit, it has the limitation of being Alaska's budget-on-a-page. This *Overview* contains more detailed discussions of the proposed FY11 budget:

- Agency summaries (operating budget on pages 17 & 18 and capital budget beginning on page 55) provide a quick comparison of the Governor's proposed budget with FY10 spending.
- Greater detail is available in the discussions of the operating budget (and subtopics) and the agency write-ups beginning on page 73.

Subcommittee members will want to review the detailed agency books available in the Finance Committee rooms.

[3] Section 21(t) of the Governor's operating budget bill appropriates $1.131 billion from the general fund to the Public Education Fund (PEF) in FY11 for FY12 K-12 education costs. This amount is $14 million more than required to fund K-12 education in FY11, so the fiscal summary shows a $14 million deposit to savings.

Notes:

January 15, 2010

(1) Permanent Fund earnings are excluded from reported revenue because the entire balance of the earnings reserve account is available for appropriation. Permanent Fund earnings and balance information is reported on page 2 of the fiscal summary.

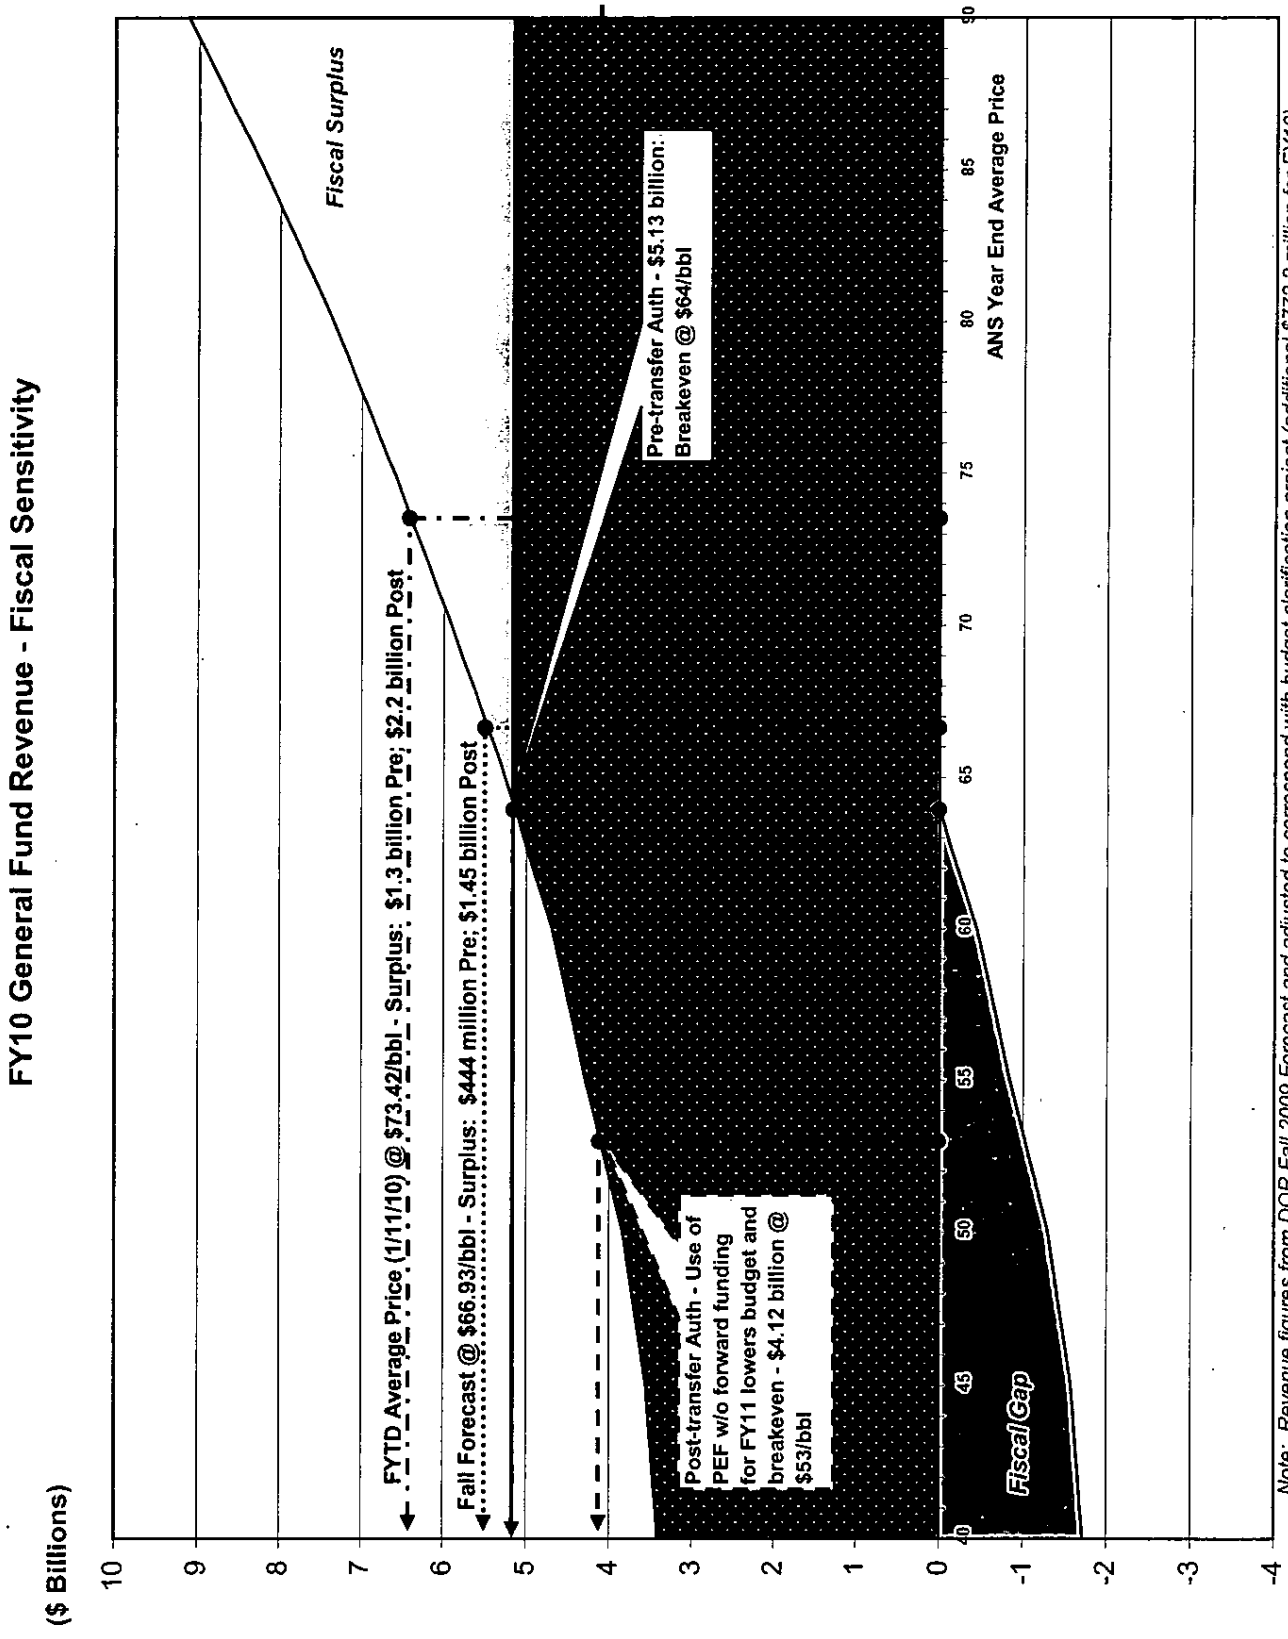
(2) The Fall 2009 oil forecast for FY10 is 0.668 mbd at $66.93 per barrel; the FY11 forecast is 0.631 mbd at $76.35/bbl. Source: Revenue Sources Book, Fall 2009.

(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY10 via multiyear appropriations or reappropriations. FY11 carryforward will be unknown until the close of FY10.

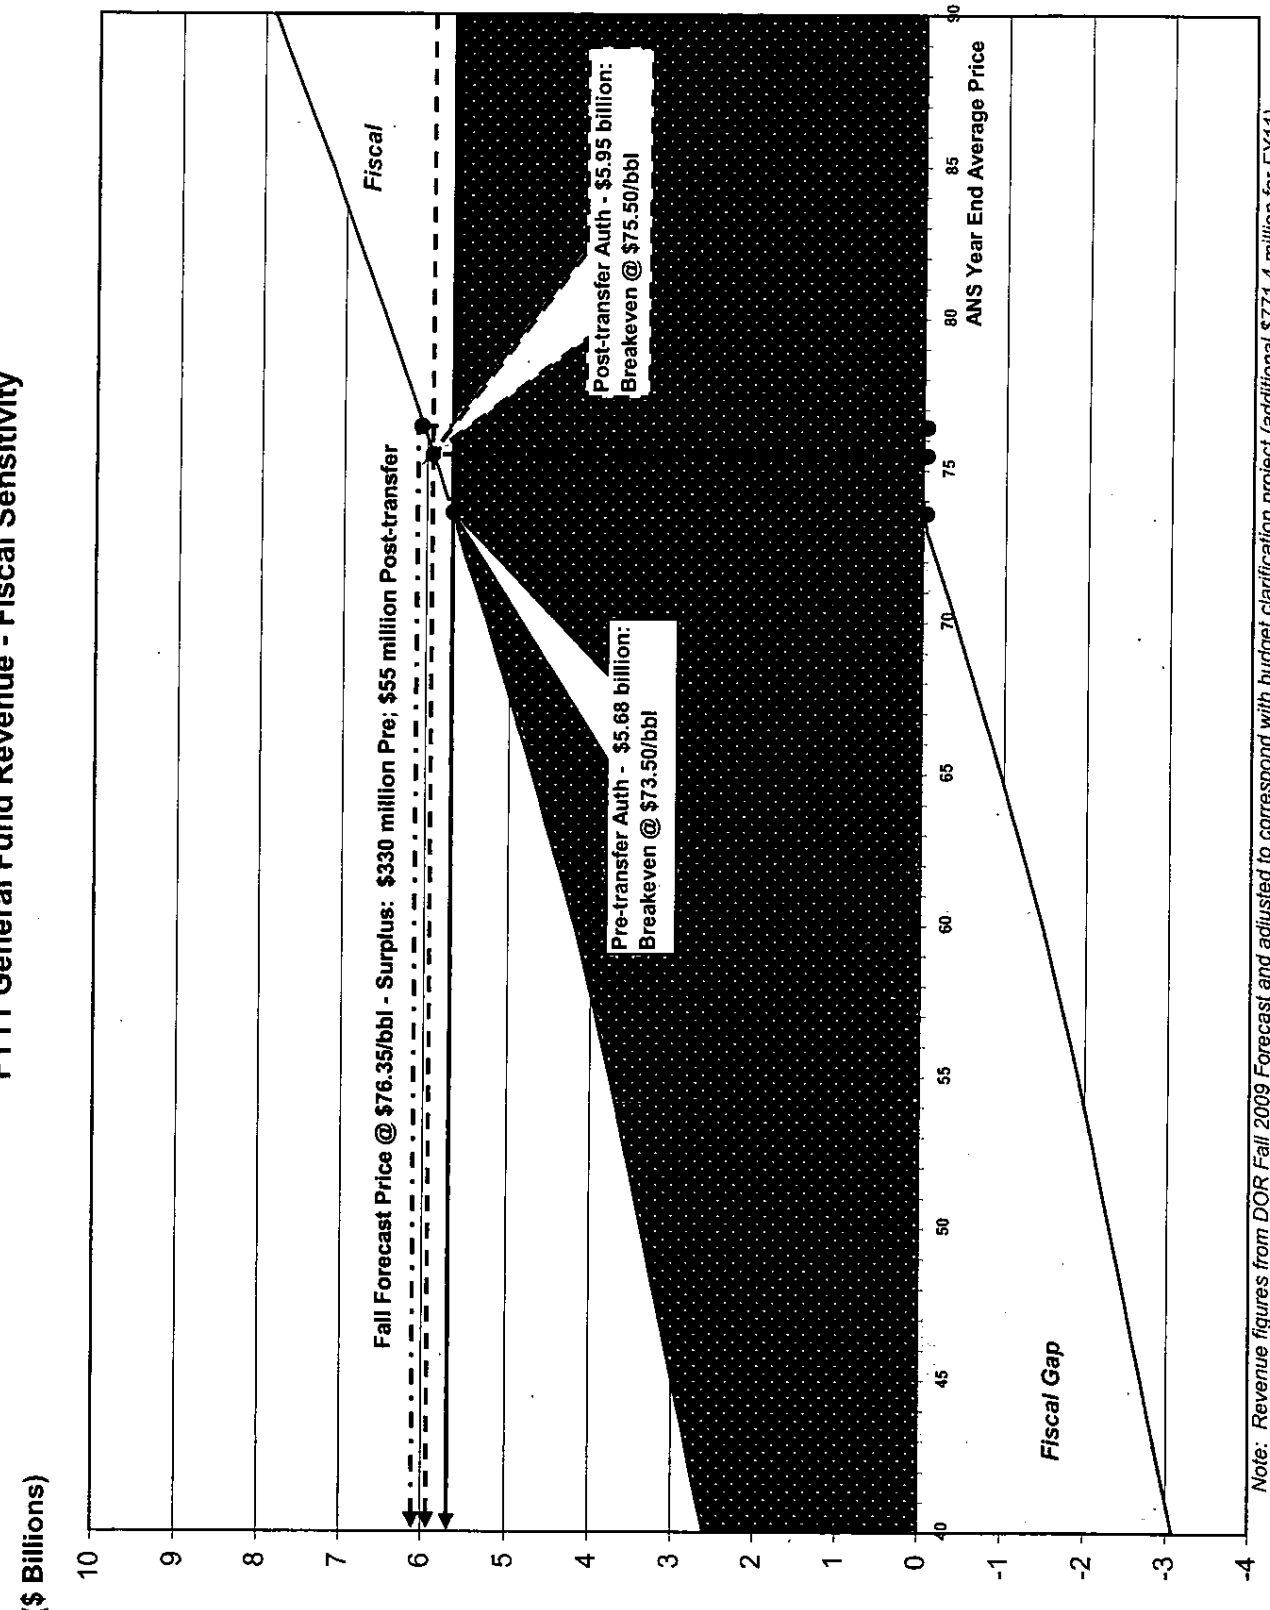
(4) In an effort to present the budget in a more meaningful and accurate way, many sources of funds were recategorized from "other" funds to general funds beginning in FY11. This summary presents both FY10 and FY11 budgets in the revised fund categories in order to make comparisons across years valid.

(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.

(6) From an accounting perspective, unduplicated authorization (line 26) is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $773.2 million for FY10). Figures include sources not directly affected by oil prices. Lease expenditures estimated at $16/bbl ($4.5 billion total).



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $771.4 million for FY11). Figures include sources not directly affected by oil prices. Lease expenditures estimated at $19/bbl ($5 billion total).

CBR information is from the Revenue Sources Book (Fall 2009)

Permanent Fund information is from APFC November 30, 2009 financial projections

The Legislative Finance Division has been working with the Finance Committee co-chairs and with OMB to implement significant budget presentation changes in the FY11 budget cycle. The following information reproduces the Legislative Finance Division's first progress report on the project. The report explains the budget presentation challenges being addressed and outlines the solutions being implemented to address these challenges. This report was provided to the Finance co-chairs and to OMB and, along with other progress reports, is posted on LFD's web site (http://www.legfin.state.ak.us/).

Budget Clarification Project

Progress Report 1

December 3, 2009

As part of a continuous process, Legislative Finance has been planning for and working on major improvements to the presentation of Alaska's budget for nearly a year. Because implementation of changes proposed for the FY11 budget is a complicated process, Legislative Finance intends to provide weekly progress reports to the Finance Co-Chairs and to OMB until roll-out is complete.

Background

The budget clarification project has three distinct parts, all of which are critical to presenting Alaska's budget in a simpler, clearer, more accurate and more meaningful way. The parts are:

1. Reappropriations,
2. Fund transfers and duplicated appropriations, and
3. Fund code recategorization.

Reappropriations

Unless problems arise, reappropriations will not be discussed in future progress reports. OMB does not intend to do anything contrary to the reappropriation guidelines dated October 2009. The guidelines can be summarized as follows:

1. Agencies will terminate capital projects administratively; there will be no reappropriations to new executive branch projects.[4] The legislature will then review all of the Governor's capital requests on equal footing. Money

[4] The Administration does not currently expect to terminate any capital projects or reappropriate any FY10 operating money to FY11. OMB says that 1) capital projects were scrubbed for potential reappropriation last year and 2) agencies have been told to request new operating money for FY11 rather than carry money forward from FY10.

associated with terminated projects will show as revenue in the year of project termination.

2. Legislative capital reappropriations will continue as in the past. Reappropriations can be included or excluded from election district reports, depending on the purpose of the report.
3. Operating carryforward reappropriations will appear in the operating bill so subcommittees can include them in their review of the FY11 operating budget.
4. Reappropriations affecting FY10 will appear in the supplemental bill.
5. All reappropriations will include estimates of amounts to be reappropriated and will be entered into the budget database.

Fiscal Summary Impact: None. Reappropriations are, and will remain, net zero transactions. This part of the project will improve information available to the public, but it does not affect the amount, fund classification, timing or agency assignment of any appropriation.

Fund Transfers and Duplicated Appropriations

Unless problems arise, fund transfers and duplicated appropriations will not be discussed in future progress reports. Legislative Finance and OMB have reached agreement on budget structure and classification of duplicated codes. OMB intends to use the new structure and codes in budget bills submitted for FY11. OMB also intends to simplify appropriation language in the bills to reflect the new structure. An explanation of changes follows:

Traditionally, capitalization (for example, appropriating general funds to the Railbelt Energy Fund) shows in the fund capitalization line of the fiscal summary. In order to avoid double counting, appropriations *from* a capitalized fund are classified as duplicated expenditures and are netted out of the fiscal summary. This treatment affects:

1. Classification—appropriations from a capitalized fund are always classified as "other funds" rather than matching the source of the original funding (because general and federal funds cannot be classified as duplicated). This may result in less scrutiny of appropriations from various funds.
2. Location—appropriations show on the fund capitalization line of the fiscal summary rather than in the agency that money is actually spent. For example, general funds moving through the Oil and Hazardous Waste Fund to the Department of Environmental Conservation do not appear in the fiscal summary as agency expenditures; they show as a fund capitalization. This treatment understates the amount of general funds used in agency operating budgets, which is the part of the budget that many people mean when they say "the budget."
3. Timing—appropriations to a fund are counted in the year the fund capitalization is made, while money in the fund may not be spent until years later.

Beginning with FY11, appropriations will be counted when money leaves the treasury rather than when it is transferred from one fund to another. Fund transfers will be recorded as transactions and included in reports, but will be excluded from the roll-up of totals. The new treatment of transfers and duplicated funds will:

1. Retain the original classification of funds, and show where and when money is actually spent as well as when it is deposited into a savings account or other fund.
2. Simplify and clarify budget bills by allowing direct appropriations for items like debt service.
3. Eliminate most duplicated fund codes.

Fiscal Summary Impact: The new approach provides a clearer, more accurate and more meaningful presentation of the budget. In the long-run, unduplicated appropriations will be no more, and no less, than under the current presentation.

However, there are some transitional issues in the short-run. Because money will be counted as it flows *out* of funds, while historically money was counted on its way *into* funds, historical data must be revised (to incorporate the new treatment of transfers and duplicated fund codes) in order to avoid double counting. That task may take significant effort. Fortunately, the budget process does not involve significant historical review, so efforts to "fix history" can be deferred until interim.[5]

For FY10, the new approach—counting money as it leaves the treasury—will give the appearance of about $33 million of additional general fund spending. This will occur because appropriations from the Railbelt Energy Fund and Capital Income Fund were formerly classified as duplicated "other" expenditures (because money was counted as it flowed into those funds in years past) and will now be counted as FY10 general fund expenditures. These expenditures will not increase the fiscal gap because the expenditures will be offset by transfers from capitalized funds to the general fund.

Fund Code Recategorization

The Governor's budget bills will *not* incorporate the new fund code categories. This does not indicate a lack of support for the proposed changes—OMB has been working jointly with Legislative Finance on this project for months—but rather a combination of technical and political issues. Those issues are:

1. OMB staff effort was focused on preparing FY11 budgets; resources available for fund recategorization were insufficient to ensure a smooth transition by December 15.
2. The power of appropriation is vested in the legislature. That power includes categorization of appropriations. OMB release of a budget in which fund

[5] Unfortunately, the effort to produce and analyze ten-year agency operating plans becomes complicated when historical, present and future appropriations are inconsistently presented. The complications need not delay consideration of the plans during the FY11 budget cycle, but it does mean that plans may require re-benchmarking in FY12.

sources were recategorized could be viewed as infringing on a legislative prerogative.

In summary, future progress reports will address the resolution of issues/problems associated with implementing the fund recategorization portion of the budget clarification project.

As with reappropriations and transfers/duplicated codes, the purpose of fund recategorization is to provide budget information in a more meaningful way. Of the three parts of the project, this portion is the most complex and has the largest impact on presentation of the budget.

Traditionally, appropriations have been tallied in three groups: general funds, federal funds and other funds. For years, some budget-watchers expressed concern about the proliferation of "other funds." The primary reason for concern seems to be the contradiction between statements and action—despite continued statements recognizing that "other funds" are truly state funds, the media and the legislature focus on general funds to the extent that appropriations of "other funds" are often referred to as "off-budget."

Of course, the "off-budget" label is a mischaracterization—other funds *are* included in the budget. But focusing on technicalities misses the salient points:

1. appropriations of other funds get less scrutiny than appropriations of general funds, despite the fact that many "other funds" are so indistinguishable from general funds that they have been referred to by names such as "spends like GF", "funny money" and "flexible funds" and
2. over use of "other funds" makes it more difficult to understand the budget and, perhaps more to the point, to make the best possible budget decisions.

As we worked with the Finance Committee Co-Chairs and OMB toward presenting the budget in a more meaningful way, it became obvious that traditional fund code categories—general, federal and other—were incapable of distinguishing degrees of discretion within the "other funds" category. The "other funds" category includes not only

- dedicated funds, trust funds, bonds and corporate receipts—that is, funds over which the legislature has limited discretion—but also
- numerous fund sources with an identified use—or, more accurately, a suggested use (given constitutional prohibition of dedicated revenue)—that does not limit the legislature's ability to appropriate the funds for another purpose.

Once degree of discretion was identified as the key to improving presentation of the budget, the obvious solution was to create a fourth fund category. Adding a new category for designated general funds (the existing general fund category is for *unrestricted* general funds) will signal the legislature that fund sources with designated, or suggested, uses are not outside the purview of the legislature.

Legislative Finance reviewed all fund codes, placing each in one of the four fund categories. Most, but not all, movement from one category to another was from "other" to

designated general funds. Work is not complete; there may be some reassignment of codes and there will be additional work required in budget subcommittees. Any changes will be discussed in future progress reports.

Fiscal Summary Impact: In simple terms, recategorization will move about $750 million from "other funds" to general funds.[6] Although recategorization provides an opportunity for people to make statements about budget growth, such statements would be a demonstration of ignorance.

One of the tasks associated with this project will be to educate people regarding the fact that recategorization—in fact, the entire budget clarification project—does not affect the level of spending, it just rolls up spending in a different way. The intent is that the new presentation results in better spending decisions and better understanding of the budget.

Open Issues

Resolved Issues

There are several topics under both the "open" and "resolved" headings. Discussion will be deferred to a second progress report.

[6] In addition, the Permanent Fund Earnings Reserve Account is classified as general funds. Dividends and inflation proofing will now show in one of the general fund categories. That change will have little apparent impact because Permanent Fund appropriations will continue to be shown in a separate portion of the fiscal summary.

THIS PAGE INTENTIONALLY LEFT BLANK

Operating Budget

The fiscal summary provides a "big picture" of the budget, including not only the operating budget, but also the capital budget, revenue, debt service, and transfers. This introduction to the operating budget focuses on how to put the Governor's operating request for individual agencies in perspective.[7]

Budget comparisons across fiscal years are always difficult—there are so many adjustments required to get an "apples-to-apples" comparison that a complete discussion would push the limits of the term "overview." With that caveat, the Governor's FY11 operating budget request could be considered, for the most part, a status quo budget. The $4.3 billion of general funds requested for agency operations is $228.3 million (or 5.6%) over the FY11 Adjusted base. These increases are primarily due to the following big ticket items (please see individual agency narratives for details):

- $56 million to pay for increases in the K-12 statutory formula;
- $36.2 million to address Medicaid growth;
- $42 million for increased fuel costs;
- $10 million in the Department of Law for in-state gas development and BP corrosion litigation;
- $10 million in the University to address increased costs;
- $7 million to pay for the Governor's Sexual Assault and Domestic Violence Prevention Initiative; and
- $6.5 million in the Governor's Office for In-State Natural Gas Pipeline Development.

The agency discussions in this overview serve as a starting point for subcommittee discussion, and subcommittee books provide more detailed information. Each subcommittee book compares the Governor's request to two scenarios: FY10 Management Plan and the FY11 Adjusted Base. The advantages and disadvantages of using each of the comparisons are discussed in the paragraphs that follow. The table below highlights items included throughout each stage of the budget.

	(GF Only)	Change	% Change
FY09 Conference Committee (GF Only)	**$4,079,986.9**		
FY09 Fiscal Notes	2,157.7		
CarryForward	12,989.7		
Special Appropriations	(11,174.2)		
Agency Transfers	-		
09 Contractual Salary Adjustments	(1,475.7)		
Misc Adjustments	12,845.4		
Vetoes	(912.7)		
FY10 Management Plan (GF only)	**$4,094,417.1**	$14,430.2	0.4%
One-time Items removed	(71,353.4)		
Transfers between Agencies (nets zero statewide)	-		
FY10 Contractual Salary and Health Increases	23,651.1		
Misc Adjustments	-		
FY11 Adjusted Base Budget (GF only)	**$4,046,714.8**	($47,702.3)	-1.2%
FY10 Governor's GF Increments/Decrements/Fund Changes	228,280.1		
FY10 Governor's Agency Request (GF only)	**$4,274,994.9**	$228,280.1	5.6%

[7] Although operating budget reports include "Statewide items" (such as Debt Service, Fund Capitalization, and Retirement funding), budgets for ongoing agency operations are what most people mean when they refer to "the operating budget." Because statewide items are discussed in other places in this *Overview*, these items have been excluded from the above discussion.

FY10 Management Plan to the Governor's request: $180.6 million. The Management Plan is the most accurate picture of the previous year's budget. It incorporates all appropriations that can be spent in FY10, including reappropriations and carryforward from multi-year appropriations, and reflects the latest estimates for open-ended language appropriations. Management Plan excludes supplemental appropriations (because they have not yet occurred) but any FY11 supplemental appropriations that may occur are also excluded, so there is no distortion from this source.

The Governor's FY11 budget, however, excludes reappropriations and carryforward from multi-year appropriations—they do not occur until year end—so comparing the FY10 Management Plan to the Governor's FY11 request tends to understate spending in FY11 relative to FY10. The amount carried forward to FY10 was about $13 million.

One-time items are a far larger source of distortion. For example, $9 million of fuel costs show in DOT&PF's Marine Vessel Operations management plan, but the FY11 budget shows the fuel trigger appropriation as a branch-wide appropriation, so the FY11 budget is $3.6 million (or 3 percent) below FY10 Management Plan. Distortion of this type is the reason for making comparisons from adjusted base. The base to Governor comparison more accurately shows a $1.5 million increase that is requested for more bandwidth for a new "Ship-to-Shore" system.

FY11 Adjusted Base to Governor's request: $228.3 million. The adjusted base attempts to reduce distortion in comparing agency budgets across fiscal years. It is the first FY11 budget scenario and can be described as the "cost of doing the same functions in FY11 as in FY10." The adjusted base is the starting point for subcommittee discussion of the Governor's request.

- It removes one-time appropriations, reappropriations, and carryforward of multi-year appropriations that were included in the FY10 Management Plan.
- It incorporates the FY11 nondiscretionary increases that the legislature may accept or reject on a statewide basis. If the legislature rejects these nondiscretionary increases, such as contractual salary increases, the costs of these increases will have to be absorbed by the agencies.

The FY11 Adjusted Base includes increases for the salary adjustments below:

- **Contractual Wage and Health Insurance Increases for Bargaining Units**—Negotiated agreements for covered employees for contractual salary increases (which vary by bargaining unit) and increased health insurance costs add $26.7 million statewide ($16.8 million UGF, $6.9 million DGF, $2.2 million Federal Receipts and $0.8 million in Other State Funds).

The **Governor's column** includes program increments and fund source changes that the legislature may wish to consider on an individual basis. Note that the concept of adjusted base is useful only for agency operating budgets. Savings deposits and statewide items—debt service, fund transfers, retirement contributions, etc.—are not budgeted on an incremental basis and are not reviewed by subcommittees.

The following summary tables make the comparisons discussed above. Note that Agency Summary reports include duplicated fund sources, while the fiscal summary removes these items from the operating portion of the budget. Also note that the adjusted base is set at the Governor's request for items other than agency operating budgets.

Please see the agency narratives for details on significant issues in each agency's budget.

In addition to summaries of agency budgets, the *Overview* contains discussions of the language sections, position changes and details of debt obligations.

Agency Summary - FY11 Operating Budget - Total Funds

Agency	09Actual	10CC	10Auth	10MgtPln	Adj Base	Gov	10MgtPln to Gov		Adj Base to Gov

Position Comparison

The Governor's FY11 operating budget request increases permanent full-time (PFT) positions by 34 from the FY10 Management Plan. Departments also added 50 PFTs during FY10 (to the number authorized by the legislature) so the total increase from the FY10 authorized level is 84. Overall, the Governor's FY11 statewide budget contains 24,585 total positions (full-time, part-time, and temporary).

AS 39.25 (State Personnel Act) establishes the system of personnel administration within the state and describes the Governor's authority to create and appoint positions within the executive branch. Positions (i.e. Position Control Numbers – PCNs) do not necessarily equate to the number of actual employees. More than one person can fill a single PCN, and many PCNs are vacant.

Permanent Full-time Positions Only

Language Sections of the Governor's FY2011 Operating Budget

Section Deleted; appeared in FY10 Operating Budget

LEGISLATIVE INTENT. (a) It is the intent of the legislature that the amounts appropriated by this Act are the full amounts that will be appropriated for those purposes for the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *In recent years the legislature has taken steps to reduce the need for routine supplemental appropriations. The intent of this section was to emphasize that supplemental operating appropriations are designed to be limited to needs that are truly unanticipated.*

(b) It is the intent of the legislature that money appropriated from the general fund be expended conservatively. If an appropriation includes the unexpended and unobligated balance of program receipts collected in a prior fiscal year, it is the intent of the legislature that the program receipts be expended, as allowed, before the expenditure of other money appropriated from the general fund. It is the intent of the legislature that the office of management and budget and the Department of Administration assist the legislature in carrying out this intent.

Legislative Fiscal Analyst Comment: *The legislature may wish to discuss the impact of this section, in terms of both general fund savings and accounting headaches. The legislature may wish to consider revising the language to allow a limited amount of carryforward of program receipts in those programs in which carryforward acts as a cushion against fluctuations in receipts.*

Section Deleted; appeared in FY10 Operating Budget

COSTS OF JOB RECLASSIFICATIONS. The money appropriated in this Act includes the amount necessary to pay the costs of personal services due to reclassification of job classes during the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *This section was added by the legislature several years ago in response to agency requests for supplemental appropriations to cover the costs of reclassification of selected job classes that the legislature was not informed of in advance. The section clarifies that the cost of reclassifying positions is to be absorbed in an agency's existing budget.*

Section Deleted; appeared in FY09 Operating Budget

PERSONAL SERVICES TRANSFERS. It is the intent of the legislature that agencies restrict transfers to and from the personal services line. It is the intent of the legislature that the office of management and budget submit a report to the legislature on January 15, 2011, that describes and justifies all transfers to and from the personal services line by executive branch agencies during the first half of the fiscal year ending June 30, 2011. It is the intent of the legislature that the office of management and budget submit a report to the legislature on August 1, 2011, that describes and justifies all transfers to and from the personal services line by executive branch agencies during the second half of the fiscal year ending June 30, 2011.

* **Sec. 4. ALASKA AEROSPACE CORPORATION.** Federal receipts and other corporate receipts of the Alaska Aerospace Corporation received during the fiscal year ending June 30, 2011, that are in excess of the amount appropriated in sec. 1 of this Act are appropriated to the Alaska Aerospace Corporation for operations during the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *This section is intended to maximize the Alaska Aerospace Corporation's (AAC) ability to attract launch activity by eliminating all questions regarding the corporation's ability to accept and spend receipts in a timely manner.*

Funding: The estimated impact of this section is zero. Historically, the appropriations to the corporation in section 1 have been sufficient to avoid application of this section.

*** Sec. 5. ALASKA HOUSING FINANCE CORPORATION.** (a) The board of directors of the Alaska Housing Finance Corporation anticipates that $42,549,257 of the adjusted net income from the second preceding fiscal year will be available in fiscal year 2011 for payment of debt service, appropriation in this Act, appropriation for capital projects, and transfer to the Alaska debt retirement fund (AS 37.15.011(a)).

Subsection a specifies the amount of corporate receipts that will be made available to the state as an FY11 dividend payment but does not appropriate the dividend.

Legislative Fiscal Analyst Comment: *The statutory dividend is the lesser of $103 million or 75% of the corporation's net income in the most recently completed fiscal year (AS 56.089(c)).*

(b) A portion of the amount set out in (a) of this section for the fiscal year ending June 30, 2011, will be retained by the Alaska Housing Finance Corporation for the following purposes in the following estimated amounts:

(1) $1,000,000 for debt service on University of Alaska, Anchorage, dormitory construction, authorized under ch. 26, SLA 1996;

(2) $2,592,558 for debt service on the bonds authorized under ch. 1, SSSLA 2002;

(3) $2,548,195 for debt service on the bonds authorized under sec. 4, ch. 120, SLA 2004.

Subsection b makes no appropriation; it informs the legislature that Alaska Housing Finance Corporation (AHFC) will retain $6,140,800 of the dividend to pay debt service on various AFHC-financed capital projects authorized by past legislatures. This leaves a net dividend of $36,408,500 ($26.1 million less than in FY10) for the legislature to spend as it wishes.

Legislative Fiscal Analyst Comment: *AHFC retains the amount required to make debt service payments on state-requested corporate debt in order to avoid higher interest rates that bonds with debt service subject to appropriation might command.*

(c) After deductions for the items set out in (b) of this section, $36,408,504 of the remainder of the amount set out in (a) of this section is available for appropriation for capital projects.

Subsection c informs the legislature that, after the amounts retained in subsection b, the remaining amount of the AHFC Dividend is available for other purposes.

Legislative Fiscal Analyst Comment: *Although corporate dividends are traditionally reserved for use in the capital budget, there is no requirement that this must occur—the legislature can appropriate corporate dividends for any purpose.*

Legislative Fiscal Analyst Recommendation: *Section c should state that the $36.4 million is available for "other purposes" rather than limiting*

permissible appropriations to capital projects. Limiting use of the dividend to capital projects conflicts with section d, which mentions other uses for dividends.

(d) After deductions for the items set out in (b) of this section and deductions for appropriations for operating and capital purposes are made, any remaining balance of the amount set out in (a) of this section for the fiscal year ending June 30, 2011, is appropriated to the Alaska debt retirement fund (AS 37.15.011(a)).

Subsection d appropriates the "unused" portion of the dividend to the Alaska Debt Retirement Fund (ADRF).

Legislative Fiscal Analyst Comment: *Appropriating any unused portion of the dividend to the ADRF was common in recent years. Because the Governor's bill incorporates a legislative request to fund debt service directly, the reference to the ADRF is unnecessary.*

Legislative Fiscal Analyst Recommendation: *Appropriate the "unused" balance of dividends to the Alaska Capital Income Fund (AS 37.05.565). This will ensure that all dividends are appropriated while furthering the tradition of making corporate dividends available for capital projects.*

(e) All unrestricted mortgage loan interest payments, mortgage loan commitment fees, and other unrestricted receipts received by or accrued to the Alaska Housing Finance Corporation during fiscal year 2011 and all income earned on assets of the corporation during that period are appropriated to the Alaska Housing Finance Corporation to hold as corporate receipts for the purposes described in AS 18.55 and AS 18.56. The corporation shall allocate its corporate receipts between the Alaska housing finance revolving fund (AS 18.56.082) and senior housing revolving fund (AS 18.56.710(a)) in accordance with procedures adopted by the board of directors.

Subsection e appropriates certain FY11 receipts of AHFC to the corporation and permits the corporation to allocate those receipts to the AHFC revolving loan fund and the senior housing revolving fund.

Funding: The corporate receipts used for purposes other than operating costs do not appear in the bill summary or in Legislative Finance reports. Corporate operating costs are appropriated in section 1.

(f) The sum of $800,000,000 is appropriated from the corporate receipts appropriated to the Alaska Housing Finance Corporation and allocated between the Alaska housing finance revolving fund (AS 18.56.082) and senior housing revolving fund (AS 18.56.710(a)) under (e) of this section to the Alaska Housing Finance Corporation for the fiscal year ending June 30, 2011, for housing loan programs not subsidized by the corporation.

(g) The sum of $30,000,000 is appropriated from the portion of the corporate receipts appropriated to the Alaska Housing Finance Corporation and allocated between the Alaska housing finance revolving fund (AS 18.56.082) and senior housing revolving fund (AS 18.56.710(a)) under (e) of this section that is derived from arbitrage earnings to the Alaska Housing Finance Corporation for the fiscal year ending June 30, 2011, for housing loan programs and projects subsidized by the corporation.

Subsections f and g appropriate bond proceeds and arbitrage earnings to the various housing programs.

Legislative Fiscal Analyst Comment: *The entire AHFC section was removed from the FY10 operating bill based upon a comment/recommendation that Legislative Finance found the section redundant. Legislative Finance later determined that parts of the section were informative, even if unnecessary, and asked OMB to restore them in FY11.*

Legislative Fiscal Analyst Recommendation: *Because AHFC has statutory authority to issue bonds and transfer arbitrage earnings to their loan programs, subsections (f) and (g) are neither informative nor necessary and can be removed.*

(h) The sum of $36,000,000 is appropriated from federal receipts to the Alaska Housing Finance Corporation for housing assistance payments under the Section 8 program for the fiscal year ending June 30, 2011.

Subsection h appropriates federal receipts received by the corporation for Section 8 housing assistance payments.

Legislative Fiscal Analyst Recommendation: *These "pass through" amounts have been excluded from Legislative Finance reports on the operating bill. That treatment may be incorrect, and the legislature may wish to discuss recording the appropriation in budget reports.*

*** Sec. 6. ALASKA PERMANENT FUND CORPORATION.** (a) The amount authorized under AS 37.13.145(b) for transfer by the Alaska Permanent Fund Corporation on June 30, 2011, is appropriated from the earnings reserve account (AS 37.13.145(a)) to the dividend fund (AS 43.23.045(a)) for the payment of permanent fund dividends, and for administrative and associated costs for the fiscal year ending June 30, 2011.

Subsection a appropriates funds from the earnings reserve account to the dividend fund for payment of dividends and administrative and associated costs. Earnings in FY11 (as calculated on the last day of the fiscal year) will be used to pay PFDs in October of 2011 and to pay administrative and associated costs throughout FY11.

Funding: The projected amount of dividend transfer for FY11 is $637 million including administrative and associated costs. Administrative and associated costs for FY11 are reflected in section 1 of the budget. They include the cost of operating the PFD Division, hold-harmless provisions that affect people served by the Department of Health & Social Services and "cost recovery" programs in various departments.

(b) After money is transferred to the dividend fund under (a) of this section, the amount calculated under AS 37.13.145(c) to offset the effect of inflation on the principal of the Alaska permanent fund during fiscal year 2011 is appropriated from the earnings reserve account (AS 37.13.145(a)) to the principal of the Alaska permanent fund.

Subsection b is an "inflation proofing" provision, which transfers money from the Earnings Reserve Account to principal.

Funding: The projected amount of inflation proofing for FY11 is $886 million.

(c) The amount required to be deposited under AS 37.13.010(a)(1) and (2) during fiscal year 2011 is appropriated to the principal of the Alaska permanent fund in satisfaction of that requirement.

Subsection c appropriates 25% of mineral lease rentals, royalties, royalty sales, etc. to the principal of the Permanent Fund as required by constitution or statute.

Funding: These deposits to the Permanent Fund do not appear in the bill summary or in Legislative Finance reports because the deposits are constitutionally dedicated rather than appropriated. The Permanent Fund projects that dedicated deposits will be $673 million during FY11.

*** Sec. 7. ALASKA INDUSTRIAL DEVELOPMENT AND EXPORT AUTHORITY.** (a) The sum of $23,423,000 has been declared available by the Alaska Industrial Development and Export Authority board of directors for appropriation as the fiscal year 2011 dividend from the unrestricted balance in the Alaska Industrial Development and Export Authority revolving fund (AS 44.88.060).

Subsection a informs the legislature that the anticipated annual Alaska Industrial Development and Export Authority (AIDEA) corporate dividend to the state will be $23.4 million (the FY10 dividend was $22.72 million). By statute (AS 44.88.088) the dividend made available should not be less than 25 percent and not more than 50 percent of the base year statutory net income. This year's dividend is near the maximum available by law.

(b) After deductions for appropriations made for operating and capital purposes are made, any remaining balance of the amount set out in (a) of this section for the fiscal year ending June 30, 2011, is appropriated to the Alaska debt retirement fund (AS 37.15.011(a)).

Subsection b appropriates the "unused" portion of the dividend to the Alaska Debt Retirement Fund.

Legislative Fiscal Analyst Comment: *Appropriating any unused portion of the dividend to the ADRF was common in recent years. Because the Governor's bill incorporates a legislative request to fund debt service directly, the reference to the ADRF is unnecessary.*

Legislative Fiscal Analyst Recommendation: *Appropriate the "unused" balance of dividends to the Alaska Capital Income Fund (AS 37.05.565). This will ensure that all dividends are appropriated while furthering the tradition of making corporate dividends available for capital projects.*

*** Sec. 8. DEPARTMENT OF ADMINISTRATION.** The amount necessary to fund the uses of the state insurance catastrophe reserve account described in AS 37.05.289(a) is appropriated from that account to the Department of Administration for those uses during the fiscal year ending June 30, 2011.

Section 8 references the statute that allows up to $5 million to be swept from lapsing general fund appropriations for the catastrophe reserve account. It appropriates funds from the catastrophe reserve account to the Department of Administration to obtain insurance, establish reserves for the self-insurance program, and to satisfy claims or judgments arising under the program.

Legislative Fiscal Analyst Comment: *This section re-emphasizes the state's authority to expend funds from the state insurance catastrophe reserve account described in AS 37.05.289(a). The language may not be necessary, but it does no harm.*

The catastrophe reserve account sweeps lapsing general fund appropriations annually to maintain a balance not to exceed $5 million. If these funds were not available, two

opportunities would remain for meeting catastrophic situations: 1) supplemental appropriations by the legislature; and 2) judgment legislation. Delays that could occur with legislative remedies would cause difficulty in situations that require immediate action.

Funding: This provision has no FY11 fiscal impact; it allows money appropriated elsewhere to be transferred and spent but does not increase total appropriations.

* **Sec. 9. DEPARTMENT OF COMMERCE, COMMUNITY, AND ECONOMIC DEVELOPMENT.** (a) The unexpended and unobligated balance of federal money apportioned to the state as national forest income that the Department of Commerce, Community, and Economic Development determines would lapse into the unrestricted portion of the general fund June 30, 2011, under AS 41.15.180(j) is appropriated as follows:

1. up to $170,000 is appropriated to the Department of Transportation and Public Facilities, commissioner's office, for road maintenance in the unorganized borough, for the fiscal year ending June 30, 2011;
2. the balance remaining after the appropriation made by (1) of this subsection is appropriated to home rule cities, first class cities, second class cities, a municipality organized under federal law, or regional educational attendance areas entitled to payment from the national forest income for the fiscal year ending June 30, 2011, to be allocated among the recipients of national forest income according to their pro rata share of the total amount distributed under AS 41.15.180(c) and (d) for the fiscal year ending June 30, 2011.

Subsection 1 appropriates $170,000 of National Forest Receipts to DOT&PF for road maintenance in the unorganized borough.

Subsection 2 appropriates any remaining balance to be paid as grants to local governments in the unorganized borough.

Legislative Fiscal Analyst Comment: *National Forest receipts consist of national forest income received by DCCED for the portion of national forests located within the unorganized borough. By law, 75 percent of the income is allocated to public schools and 25 percent for maintenance of public roads in the unorganized borough.*

AS 41.15.180(j) states that the amount in the national forest receipts fund remaining at the end of the fiscal year lapses into the general fund and shall be used for school and road maintenance in the affected areas of the unorganized borough for which direct distribution has not been made. The amount appropriated in subsection 1 ($170.0) has not changed for several years.

Subsection 2 appears to change the intended purpose of lapsing receipts. Under AS 41.15.180(j) lapsing money must be spent in areas that do not receive money under AS 41.15.180(c) and (d). Subsection 2 takes money that would otherwise be spent in unorganized areas and appropriates it to local governments.

(b) An amount equal to the salmon enhancement tax collected under AS 43.76.010 - 43.76.028 in calendar year 2009 and deposited in the general fund under AS 43.76.025(c) is appropriated from the general fund to the Department of Commerce, Community, and Economic Development for payment in fiscal year 2011 to qualified regional associations operating within a region designated under AS 16.10.375.

Funding: These "pass through" amounts are excluded from Legislative Finance reports on the operating bill.

(c) An amount equal to the seafood development tax collected under AS 43.76.350 - 43.76.399 in calendar year 2009 and deposited in the general fund under AS 43.76.380(d) is appropriated from the general fund to the Department of Commerce, Community, and Economic Development for payment in fiscal year 2011 to qualified regional seafood development associations.

Funding: These "pass through" amounts are excluded from Legislative Finance reports on the operating bill.

(d) The sum of $23,673,600 is appropriated from the power cost equalization endowment fund (AS 42.45.070) to the Department of Commerce, Community, and Economic Development, Alaska Energy Authority, power cost equalization allocation, for the fiscal year ending June 30, 2011.

Subsection d appropriates seven percent of the Power Cost Equalization Endowment to Alaska Energy Authority (AEA) for the Power Cost Equalization (PCE) program. As in the past, this is the maximum withdrawal that can occur under the statutory formula (AS 42.45.070-085). The amount is an increase of $2,780,900 over FY10.

(e) If the amount appropriated in (d) of this section is not sufficient to pay power cost equalization program costs without proration, the amount necessary to pay power cost equalization program costs without proration, estimated to be $12,626,400 is appropriated from the general fund to the Department of Commerce, Community, and Economic Development, Alaska Energy Authority, power cost equalization allocation, for the fiscal year ending June 30, 2011.

Subsection e is an open-ended general fund appropriation to AEA for the PCE program. Combined with the appropriation in subsection d, this appropriation will provide the amount required to fund the statutory formula for the PCE program.

Funding: The estimated impact of this section is $12,626,400—which is $4,140,900 less than the estimated UGF appropriation in FY10. The UGF reduction is due to two factors:

- the amount available from the PCE Endowment increased by $2.78 million; and
- AEA revised its expenditure projections downward by $1.34 million due to projected reductions in cost of fuel, number of eligible grantees, and power consumption.

(f) If the amount necessary to make national forest receipts payments under AS 41.15.180 exceeds the amount appropriated in sec. 1 of this Act, the amount necessary to make national forest receipt payments is appropriated from federal receipts received for that purpose to the Department of Commerce, Community, and Economic Development, revenue sharing, national forest receipts allocation, for the fiscal year ending June 30, 2011.

Subsection f is intended to ensure that all federal funding received for the National Forest Receipts program is expeditiously disbursed to communities.

Legislative Fiscal Analyst Recommendation: *To improve clarity, the legislature may want to place this subsection under subsection 9(a), where other National Forest Receipts appropriations occur.*

Funding: The estimated impact of this section is zero. The $17.1 million appropriated in section 1 for this program should be sufficient.

(g) If the amount necessary to make payment in lieu of taxes payments under 3 AAC 152 exceeds the amount appropriated in sec. 1 of this Act, the amount necessary to make payment in lieu of taxes payments is appropriated from federal receipts received for that purpose to the Department of Commerce, Community, and Economic Development, revenue sharing, payment in lieu of taxes allocation, for the fiscal year ending June 30, 2011.

Subsection g is intended to ensure that PILT payments are expeditiously disbursed to communities. Payments in Lieu of Taxes (PILT) are federal payments to local governments that help offset losses in property taxes due to nontaxable federal lands within their boundaries.

Funding: The estimated impact of this section is zero. The $10.1 million appropriated in section 1 for this program should be sufficient.

*** Sec. 10. DEPARTMENT OF HEALTH AND SOCIAL SERVICES.** The sum of $1,200,000 is appropriated from the general fund to the Department of Health and Social Services, office of children's services, for the purpose of paying judgments and settlements against the state for the fiscal year ending June 30, 2011.

Section 10 appropriates funding for the FY11 settlement costs of a lawsuit filed by four Alaska Native tribes. The Curyung, Ekwok, Kwinhagak, and Chevak tribes alleged that the state violated the federal Indian Child Welfare Act (ICWA) when it (1) failed to notify the tribe when it took custody of a young tribal member; and (2) failed to meet placement preferences under ICWA; and (3) failed to provide proper and timely notice of placement changes for children (who are tribal members) that were taken from their parents due to abuse or neglect.

Legislative Fiscal Analyst Comment: *A settlement has been reached between the tribal organizations and the state. The settlement mandates that the state pay $1.2 million in FY10-FY12. An FY09 supplemental appropriation of $1.3 million GF to the Department of Law paid the FY10 settlement amount. The legislature can also expect a request of $1.2 million GF from the Department of Health and Social Services in the FY12 budget for the final settlement amount. Procedural changes within OCS, relating to the handling of tribal children, were among other agreed upon issues.*

*** Sec. 11. DEPARTMENT OF LABOR AND WORKFORCE DEVELOPMENT.** (a) If the amount necessary to pay benefit payments from the fishermen's fund (AS 23.35.060) exceeds the amounts appropriated in sec. 1 of this Act, the additional amount necessary to pay those benefit payments is appropriated from that fund to the Department of Labor and Workforce Development, fishermen's fund allocation, for the fiscal year ending June 30, 2011.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

(b) If the amount necessary to pay benefit payments from the second injury fund (AS 23.30.040(a)) exceeds the amount appropriated in sec. 1 of this Act, the additional amount necessary to make those benefit payments is appropriated from the second injury fund to the Department of Labor and Workforce Development, second injury fund allocation, for the fiscal year ending June 30, 2011.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

(c) If the amount necessary to pay benefit payments from the workers' compensation benefits guaranty fund (AS 23.30.082) exceeds the amount appropriated in sec. 1 of this Act, the additional amount necessary to pay those benefit payments is appropriated from that fund to the Department of Labor and Workforce Development, workers' compensation benefits guaranty fund allocation, for the fiscal year ending June 30, 2011.

This section allows benefit payments to exceed the amount appropriated in section 1, ensuring that expenditure authorization will be sufficient to pay benefits required by law.

Funding: The estimated impact of this section is zero.

(d) If the amount of designated program receipts received under AS 43.20.014(a)(3) and deposited in the vocational education account (AS 37.10.200) during the fiscal year ending June 30, 2011, exceeds the amount appropriated in sec. 1 of this Act for purposes described in AS 37.10.200, the additional designated program receipts are appropriated to the Department of Labor and Workforce Development, Alaska Vocational Technical Center, Alaska Vocational Technical Center allocation, for the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: AS 43.20.014(a)(3) reads:

> **Income tax education credit.** (a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted ... (3) by a state-operated vocational technical education and training school.

There are six problems with the Governor's language:

- *The contributions are not program receipts as the Department of Revenue defines them;*
- *contributions under AS 43.20.014 do not go into the vocational education account; they go directly to a school;*
- *the recipient of the contributions (AVTEC) is not named;*
- *receipts should not be limited to the purposes of the vocational education account, which appears to be unrelated to these tax credits;*
- *the tax credits apply to several types of taxes; and*
- *the money could lapse if its use is limited to FY11.*

Legislative Fiscal Analyst Recommendation: *Subsection d should be modified to resolve these problems.*

If the amount of contributions received by the Alaska Vocational Technical Center under AS 43.20.014(a)(3), AS 21.89.070, AS 21.89.075, AS 43.20.014, AS 43.55.019, AS 43.56.018, AS 43.65.018, AS 43.75.018, and AS 43.77.045 during the fiscal year ending June 30, 2011, exceeds the amount appropriated in sec. 1 of this Act, the additional contributions are appropriated to the Department of Labor and Workforce Development, Alaska Vocational Technical Center, Alaska Vocational Technical Center allocation. (Add non-lapse provision to section 31.)

*** Sec. 12. DEPARTMENT OF MILITARY AND VETERANS' AFFAIRS.** Five percent of the market value of the average ending balances in the Alaska veterans' memorial endowment fund (AS 37.14.700) for the fiscal years ending June 30, 2008, June 30, 2009, and June 30, 2010, is appropriated from the Alaska veterans' memorial endowment fund to the Department of

Military and Veterans' Affairs for the purposes specified in AS 37.14.730(b) for the fiscal year ending June 30, 2011.

Funding: Endowment payout is expected to be about $12,800. Proceeds may be used for maintenance, repair and construction of monuments to the military.

*** Sec. 13. DEPARTMENT OF NATURAL RESOURCES.** (a) Federal receipts received for fire suppression during the fiscal year ending June 30, 2011, are appropriated to the Department of Natural Resources for fire suppression activities for the fiscal year ending June 30, 2011.

Subsection a appropriates an open-ended amount of federal receipts received for fire suppression to the Department of Natural Resources.

Funding: A $2 million federal receipts estimate for fire suppression has been used for several years.

NEW SUBSECTION:

(b) The sum of $1,000,000 is appropriated from federal receipts to the Department of Natural Resources, RS 2477/Navigability Assertions and Litigation Support allocation, for the United States Department of the Interior, Bureau of Land Management navigable water identification project, for the fiscal years ending June 30, 2011, and June 30, 2012.

Subsection b will provide two-year authorization for receipt of federal grant funds (no match is required) to produce navigability reports of watersheds and waterbodies in Alaska for the Department of the Interior, Bureau of Land Management (BLM). According to the Department, the reports will provide information essential to public land managers, and can also be used to support state applications for federal Recordable Disclaimer's of Interest (RDIs), which recognize state ownership of lands beneath waters that were navigable at the time of statehood. The funds will pay for research services provided by the State Historical Preservation Office and the Alaska Department of Fish and Game, through reimbursable services agreements with the Division of Mining, Land and Water.

Legislative Fiscal Analyst Comment: *Although the Department does not currently anticipate requesting UGF to replace federal funding, future decisions regarding funding continued research to support the RDIs will be necessary if the federal funds do not continue.*

Funding: According to the Department, up to $1 million may be available for two years (ending 6/30/12).

*** Sec. 14. DEPARTMENT OF PUBLIC SAFETY.** (a) The sum of $1,393,200 is appropriated from the general fund to the Department of Public Safety, division of Alaska state troopers, narcotics task force, for drug and alcohol enforcement efforts during the fiscal year ending June 30, 2011.

Subsection a appropriates $1.4 million in general funds for drug and alcohol enforcement efforts.

(b) If the amount of federal receipts received by the Department of Public Safety from the justice assistance grant program during the fiscal year ending June 30, 2011, for drug and alcohol enforcement efforts exceeds $1,289,100, the appropriation in (a) of this section is reduced by the amount by which the federal receipts exceed $1,289,100.

Subsection b is contingency language that requires a dollar-for-dollar reduction of the previous subsection's general fund appropriation if DPS receives over $1.3 million in federal grants for drug and alcohol enforcement efforts.

Legislative Fiscal Analyst Comment: *The FY10 operating budget included similar language. DPS received $1,476,855 of federal funds in FY10 for this purpose resulting in a reduction of $187,775 of general funds in the FY10 budget.*

Funding: Because the amount of federal funds for FY11 is unknown, Legislative Finance is estimating the cost of the section to be the full $1.4 million in general funds.

(c) The sum of $1,270,000 is appropriated from the general fund to the Department of Public Safety, division of Alaska state troopers, special projects, for rural alcohol interdiction efforts for the fiscal year ending June 30, 2011.

Subsection c appropriates $1.3 million in general funds for rural alcohol interdiction efforts.

(d) If federal receipts are received by the Department of Public Safety for the rural alcohol interdiction program during the fiscal year ending June 30, 2011, the appropriation in (c) of this section is reduced by the amount of the federal receipts.

Subsection d is contingency language that requires a dollar-for-dollar reduction of the previous subsection's general funds.

Legislative Fiscal Analyst Comment: *The FY10 operating budget included similar language. DPS received $200,000 of federal funds for this purpose resulting in an equal reduction of general funds.*

Funding: Because the amount of federal funds for FY11 is unknown, Legislative Finance is estimating the cost of the section to be the full $1.3 million in general funds.

*** Sec. 15. DEPARTMENT OF REVENUE.** (a) The minimum amount of program receipts received for the fiscal year ending June 30, 2011, by the child support services agency that is required to secure the federal funding appropriated from those program receipts for the child support enforcement program in sec. 1 of this Act is appropriated to the Department of Revenue, child support services agency, for the fiscal year ending June 30, 2011.

Subsection a permits an unspecified amount of program receipts collected by the Child Support Services Division (CSSD) to be spent to capture the federal receipts appropriated in section 1.

Legislative Fiscal Analyst Comment: *This section may be no longer relevant. In prior years, it was utilized as a mechanism to ensure required match for federal receipts. The last few years, however, have seen a decline in Temporary Assistance for Needy Families (TANF) cases, which has resulted in a significant decline in receipts to the agency. The receipts were backfilled in FY10 with American Recovery and Reinvestment Act of 2009 (ARRA) stimulus dollars and general funds. When the ARRA funding expires, general funds will likely be needed as replacement.*

Funding: The estimated impact of this section is zero.

(b) Program receipts collected as cost recovery for paternity testing administered by the child support services agency, as required under AS 25.27.040 and 25.27.165, and as collected under AS 25.20.050(f), are appropriated to the Department of Revenue, child support services agency, for the fiscal year ending June 30, 2011.

Subsection b appropriates (to CSSD) receipts collected to recover the costs of paternity testing.

Funding: The Department estimates that paternity testing will generate $46,000 in program receipts.

*** Sec. 16. OFFICE OF THE GOVERNOR.** (a) If the 2011 fiscal year-to-date average price of Alaska North Slope crude oil exceeds $35 a barrel on August 1, 2010, the amount of money corresponding to the 2011 fiscal year-to-date average price, rounded to the nearest dollar, as set out in the table in (c) of this section is appropriated from the general fund to the office of the governor for distribution to state agencies to offset increased fuel and utility costs.

(b) If the 2011 fiscal year-to-date average price of Alaska North Slope crude oil exceeds $35 a barrel on December 1, 2010, the amount of money corresponding to the 2011 fiscal year-to-date average price, rounded to the nearest dollar, as set out in the table in (c) of this section is appropriated from the general fund to the office of the governor for distribution to state agencies to offset increased fuel and utility costs.

(c) The following table shall be used in determining the amount of the appropriations in (a) and (b) of this section:

2011 FISCAL YEAR-TO-DATE AVERAGE PRICE OF ALASKA NORTH SLOPE CRUDE OIL	AMOUNT
$90 or more	$27,500,000
89	27,000,000
88	26,500,000
87	26,000,000
86	25,500,000
85	25,000,000
84	24,500,000
83	24,000,000
82	23,500,000
81	23,000,000
80	22,500,000
79	22,000,000
78	21,500,000
77	21,000,000
76	20,500,000
75	20,000,000
74	19,500,000
73	19,000,000

37	1,000,000
36	500,000
35	0

(d) It is the intent of the legislature that a payment under (a) or (b) of this section be used to offset the effects of higher fuel and utility costs for the fiscal year ending June 30, 2011.

(e) The governor shall allocate amounts appropriated in (a) and (b) of this section as follows:

(1) to the Department of Transportation and Public Facilities, 65 percent of the total plus or minus 10 percent;

(2) to the University of Alaska, eight percent of the total plus or minus three percent;

(3) to the Department of Health and Social Services and the Department of Corrections, not more than five percent each of the total amount appropriated;

(4) to any other state agency, not more than four percent of the total amount appropriated;

(5) the aggregate amount allocated may not exceed 100 percent of the appropriation.

Subsections a and b appropriate up to $55 million, depending on the year-to-date average price of crude oil: up to $27.5 million on August 1, 2010 and $27.5 million on December 1, 2010. This funding is to be distributed to agencies to offset increased fuel and utility costs.

Subsection c indicates, based on the price of oil, how much funding is appropriated in subsection a.

Subsection d states legislative intent that the funding is to offset fuel and utility cost increases.

Subsection e provides guidelines for allocating the money among agencies.

Funding: OMB included a $42 million appropriation for fuel in its budget transmittal, which corresponds to the forecast oil price of $77/bbl.

Legislative Fiscal Analyst Comment: *Similar trigger mechanisms in recent operating bills appear to have functioned as designed—providing funding for fuel without permitting high fuel costs to become part of the base budget—and the legislature may wish to continue the concept.*

Legislative Fiscal Analyst Recommendation: *Although the trigger concept has worked as designed, it may be time to recognize that the chart is outdated. The legislature may want to cut the table off at $60/bbl, add $25 million to base budgets of Departments, and reduce the trigger amounts accordingly.*

NEW SUBSECTION:

(f) The sum of $6,500,000 is appropriated from receipts of the Alaska Housing Capital Corporation created under AS 18.56.086 to the office of the governor for the development of an in-state natural gas pipeline.

Subsection f appropriates funds to continue work related to the development of an in-state natural gas pipeline. The increment addresses several projects:

- $2.25 million for completion of the pipeline right-of-way permitting effort;
- $500.0 for completion of the cost-of-service cost estimate for the stand alone pipeline project;
- $3.5 million to gather detailed engineering data which will become the basis for the future detailed engineering design of the project; and
- $250.0 for preparation for the sale of the in-state pipeline asset to a future pipeline company.

Legislative Fiscal Analyst Comment: *Arguably, these requests might be more appropriately placed in the Department of Natural Resources. However, moving them from the Governor's Office is unlikely to change what is done or the cost of doing it.*

The money appropriated in subsection f is from the Alaska Housing Capital Corporation, which is a subsidiary of the Alaska Housing Finance Corporation created in FY07 solely to hold a $300 million deposit of general funds. To those who believe the money was set aside to pay for development of a gasline, the fund source will appear logical. Others may object to the fund source on the grounds that the money was set aside specifically to fund future capital projects, with no mention of gasline development. The operating appropriations in subsection (f) violate the stated purpose of the original appropriation, which is limited to capital projects. Regardless of where the money appears in the budget, the total of $177 million the Governor proposes to spend from this fund must be classified as withdrawals from savings. Without this use of savings, the Governor's FY11 budget would produce a deficit of about $125 million.

Legislative Fiscal Analyst Recommendation: *Subsection (f) might be better placed in section 19, with other appropriations for gasline development.*

* **Sec. 17. UNIVERSITY OF ALASKA.** The amount of the fees collected under AS 28.10.421(d) during the fiscal year ending June 30, 2010, for the issuance of special request university plates, less the cost of issuing the license plates, is appropriated from the general fund to the University of Alaska for support of alumni programs at the campuses of the university for the fiscal year ending June 30, 2011.

Funding: The University expects to receive about $2,000 under this section.

* **Sec. 18. BOND CLAIMS.** The amount received in settlement of a claim against a bond guaranteeing the reclamation of state, federal, or private land, including the plugging or repair of a well, is appropriated to the agency secured by the bond for the fiscal year ending June 30, 2011, for the purpose of reclaiming the state, federal, or private land affected by a use covered by the bond.

This section is standard language that appropriates claims against bonds for land reclamation to the agencies that will direct the reclamation.

Funding: The Department of Natural Resources estimates the impact of this section to be $50,000: $25,000 for reclamation of land use permits & leases on state lands in the Claims, Permits and Leases allocation; and $25,000 for reclamation bonds associated with timber sales on state lands in the Forest Management & Development allocation.

*** Sec. 19. GAS PIPELINE DEVELOPMENT.** The following amounts are appropriated to the named department and components from receipts of the Alaska Housing Capital Corporation created under AS 18.56.086 in the amounts stated for work associated with development of a natural gas pipeline for the fiscal year ending June 30, 2011:

DEPARTMENT AND COMPONENT	APPROPRIATION AMOUNT
(1) Administration	
Alaska Oil and Gas Conservation Commission	1,150,900
(2) Law	
Oil, gas, and mining	2,500,000
(3) Natural Resources	
Gas pipeline implementation	4,217,500
(4) Revenue	
Tax Division	1,100,000
Natural gas commercialization	1,550,000

Legislative Fiscal Analyst Comment: *In FY09, the legislature consolidated oil and gas development funding requests in the Office of the Governor, with direction to distribute the one-time funding of $7.3 million GF to the Departments of Labor and Workforce Development, Natural Resources, Law, and Revenue as needed for work associated with the Natural Gas Pipeline. Consolidation was intended to increase flexibility while easing the process of tracking statewide gasline appropriations. Although the Governor's Office distributed money at the beginning of the fiscal year (rather than on an as-needed basis as the legislature intended), the wisdom of a consolidated appropriation was demonstrated when the Department of Law transferred $550.0 to the Department of Revenue.*

Legislative Fiscal Analyst Recommendation: *Consolidate gasline appropriations (including those in section 16(f)). Make a single appropriation to the Office of the Governor, with direction to distribute the money to the Departments/allocations and for the purposes listed. Include the estimated allocations to various Departments as information.*

*** Sec. 20. FEDERAL AND OTHER PROGRAM RECEIPTS.** (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as described in AS 44.21.045(b), Exxon Valdez oil spill trust receipts described in AS 37.05.146(b)(4), receipts of the Alaska Housing Finance Corporation, receipts of the Alaska marine highway system fund described in AS 19.65.060(a), receipts of the University of Alaska as described in AS 37.05.146(b)(2), and receipts of the Alaska Fire Standards Council described in AS 37.05.146(b)(5) that are received during the fiscal year ending June 30, 2011, and that exceed the amounts appropriated by this Act, are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) that are received during the fiscal year ending June 30, 2011, exceed the amounts

appropriated by this Act, the appropriations from state funds for the affected program shall be reduced by the excess if the reductions are consistent with applicable federal statutes.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) that are received during the fiscal year ending June 30, 2011, fall short of the amounts appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

Subsection a provides open-ended appropriations of the types of receipts listed. Although the appropriations are conditioned on review by the Legislative Budget and Audit Committee, the Governor can increase authorization for listed fund sources without the approval of the Committee.

Subsection b is standard language that permits state authorization to be reduced if unanticipated money is received for projects funded by general funds. There is no formal process for tracking potential reductions.

Subsection c is standard language that automatically limits authorization of federal and other receipts to the amount actually received.

Funding: Although requests for approval to spend additional receipts will almost certainly be received, there is no way to determine where the increases will be, how much they will be, or what fund sources would be appropriate. Legislative Finance reports place no dollar value on appropriations made in this section.

*** Sec. 21. FUND TRANSFERS. (a)** The federal funds received by the state under 42 U.S.C. 6506a(l) or former 42 U.S.C. 6508 not appropriated for grants under AS 37.05.530(d) are appropriated as follows:

(1) to the principal of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska) and the public school trust fund (AS 37.14.110(a)), according to AS 37.05.530(g)(1) and (2); and

(2) to the principal of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), the public school trust fund (AS 37.14.110(a)), and the power cost equalization and rural electric capitalization fund (AS 42.45.100(a)), according to AS 37.05.530(g)(3).

Subsection a appropriates the lapsing balance of NPR-A grants (per AS 37.05.530(g)). No lapsing balance is anticipated.

Funding: The estimated fiscal impact of this section is zero.

(b) The following amounts of revenue collected during the fiscal year ending June 30, 2011, are appropriated to the fish and game fund (AS 16.05.100):

(1) receipts from the sale of crewmember fishing licenses (AS 16.05.480(a)) that are not deposited into the fishermen's fund under AS 23.35.060;

(2) range fees collected at shooting ranges operated by the Department of Fish and Game (AS 16.05.050(a)(15));

(3) fees collected at boating and angling access sites described in AS 16.05.050(a)(6) and managed by the Department of Natural Resources, division of parks and outdoor recreation, under a cooperative agreement;

(4) receipts from the sale of waterfowl conservation stamp limited edition prints (AS 16.05.826(a));

(5) fees collected for sanctuary access permits (AS 16.05.050(a)(15)).

Subsection b appropriates revenue generated by the named licenses and fees into the Fish and Game Fund. Appropriations from this revenue source use the Fish and Game Nondedicated Receipts fund code (1194) to differentiate these appropriations (which are essentially GF/PR appropriations) from the dedicated portion of the Fish and Game Fund.

Legislative Fiscal Analyst Comment: *Beginning in FY11, use of the listed receipts by the Department will appear as designated general fund (DGF) expenditures. Depositing these receipts into the F&G Fund in past budgets occurred because the receipts then appeared as "other funds" when they were spent. Now that this funding will be counted as DGF expenditures, it may be time to appropriate the funding directly to allocations that use the funding.*

Legislative Fiscal Analyst Recommendation: *Consider deleting subsection (b) and appropriating the receipts directly (as GF/Program Receipts) to the allocations that use the funding.*

Funding: The estimated fiscal impact of this subsection is $2.3 million.

(c) The following amounts are appropriated to the oil and hazardous substance release prevention account (AS 46.08.010(a)(1)) in the oil and hazardous substance release prevention and response fund (AS 46.08.010(a)) from the sources indicated:

(1) the balance of the oil and hazardous substance release prevention mitigation account (AS 46.08.020(b)) in the general fund on July 1, 2010, not otherwise appropriated by this Act;

(2) the amount collected for the fiscal year ending June 30, 2010, estimated to be $8,300,000 from the surcharge levied under AS 43.55.300.

Subsection c is standard language appropriating (to the Oil and Hazardous Substance Release Prevention Account) the balance of the Release Prevention Mitigation Account and the FY10 collections from the 4 cent per barrel surcharge on oil produced in the state. Amendments effective April 1, 2006 changed the per barrel surcharge from $0.03 to $0.04.

(d) The following amounts are appropriated to the oil and hazardous substance release response account (AS 46.08.010(a)(2)) in the oil and hazardous substance release prevention and response fund (AS 46.08.010) from the following sources:

(1) the balance of the oil and hazardous substance release response mitigation account (AS 46.08.025(b)) in the general fund on July 1, 2010, not otherwise appropriated by this Act;

(2) the amount collected for the fiscal year ending June 30, 2010, from the surcharge levied under AS 43.55.201.

Subsection d is standard language appropriating (to the Oil and Hazardous Substance Release Response Account) the balance of the Release Response Mitigation Account and the FY10 collections from the $0.01 cent per barrel surcharge on oil produced in the state. Amendments effective April 1, 2006 changed the per barrel surcharge from $0.02 to $0.01.

Legislative Fiscal Analyst Comment: *Based on the current balance and annual collections of $2.3 million from the one cent surcharge, the surcharge may be in effect for a few more years.*

Funding: Based on a five-year average, the projected balance of the response mitigation account that will be transferred under this section is approximately $600,000. The surcharge collected under paragraph (2) became effective when the balance of the Response Account dropped below $50 million. The drop in the balance is due to a Department of Law request for $8.8 million to investigate two oil spills which occurred in 2006 from transit pipelines operated by BP in Prudhoe Bay oil field.

(e) The portions of the fees listed in this subsection that are collected during the fiscal year ending June 30, 2011, are appropriated to the Alaska children's trust (AS 37.14.200(a)):

(1) fees collected under AS 18.50.225, less the cost of supplies, for the issuance of birth certificates;

(2) fees collected under AS 18.50.272, less the cost of supplies, for the issuance of heirloom marriage certificates;

(3) fees collected under AS 28.10.421(d) for the issuance of special request Alaska children's trust license plates, less the cost of issuing the license plates.

Subsection e appropriates (to the Alaska Children's Trust) net receipts collected during FY10 from sales of heirloom birth certificates, heirloom marriage certificates and Trust license plates.

The Alaska Children's Trust was created by Chapter 19, SLA 88. The legislature appropriated $6 million from the investment loss trust fund to the principal of the trust in Chapter 123, SLA 96. The trust was established to provide a continuing source of revenue for grants to community-based programs for the prevention of child abuse and neglect.

Funding: OMB projects $35.0 net proceeds from the sale of certificates/plates.

(f) The loan origination fees collected by the Alaska Commission on Postsecondary Education for the fiscal year ending June 30, 2011, are appropriated to the origination fee account (AS 14.43.120(u)) within the education loan fund (AS 14.42.210(a)) of the Alaska Student Loan Corporation for the purposes specified in AS 14.43.120(u).

Subsection f appropriates origination fees charged on student loans to the origination fee account within the student loan fund. The fees are intended to offset loan losses due to death, disability, bankruptcy and default.

Funding: The amount of the loan origination fee is capped by regulation at 5% and set annually by the corporation. For FY11, the Alaska Commission on Postsecondary Education has indicated that the maximum fee of 5% will be set. It is currently set at 5% and will remain so until further action is taken by the Board. Because the appropriation earmarks money within a fund, there is no impact on state expenditures.

(g) The amount of federal receipts received for disaster relief during the fiscal year ending June 30, 2011, is appropriated to the disaster relief fund (AS 26.23.300(a)).

Subsection g is standard language appropriating federal receipts for disaster relief to the Disaster Relief Fund. The Governor needs no specific appropriations to spend money in the Disaster Relief Fund; money can be spent upon declaration of a disaster.

Funding: A $9 million estimate for federal disaster relief receipts has been used for several years.

(h) The sum of $7,500,000 is appropriated from the general fund to the disaster relief fund (AS 26.23.300(a)).

Subsection h capitalizes the Disaster Relief Fund with $7.5 million of general funds (an amount equal to the FY10 capitalization).

(i) The balance of the mine reclamation trust fund income account (AS 37.14.800(a)) on June 30, 2010, and money deposited in that account during the fiscal year ending June 30, 2011, is appropriated to the mine reclamation trust fund operating account (AS 37.14.800(a)) for the fiscal year ending June 30, 2011. The amount necessary for the purposes specified in AS 37.14.820 for the fiscal year ending June 30, 2011, is appropriated from the mine reclamation trust fund operating account (AS 37.14.800(a)) to the Department of Natural Resources.

Subsection i authorizes an internal transfer of funds from the income account to the operating account, where it is available to DNR to spend without further appropriation.

Funding: The agency estimates the amount needed for mine reclamation expenditures is about $50,000 and is spent in the Claims, Permits and Leases allocation for reclamation of land use permits and leases on state lands.

(j) The sum of $15,660,000 is appropriated to the Alaska clean water fund (AS 46.03.032(a)) for the Alaska clean water loan program from the following sources:

Alaska clean water fund revenue bond receipts	$2,700,000
Federal receipts	12,960,000

(k) The sum of $13,092,200 is appropriated to the Alaska drinking water fund (AS 46.03.036(a)) for the Alaska drinking water loan program from the following sources:

Alaska drinking water fund revenue bond receipts	$2,963,000
Federal receipts	10,129,200

Subsections j and k provide money to develop sewer and water systems in Alaska communities through revolving loan programs. The state typically issues short-term bonds that are repaid with earnings from the loan programs, and uses the bond proceeds to match federal money.

(l) The amount of municipal bond bank receipts determined under AS 44.85.270(h) to be available for transfer by the Alaska Municipal Bond Bank Authority for the fiscal year ending June 30, 2010, is appropriated to the Alaska municipal bond bank authority reserve fund (AS 44.85.270(a)).

Subsection l appropriates earnings of the Bond Bank to its earnings reserve fund.

Funding: Earnings for FY09 were $819,843. Expectations for FY10 and FY11 have declined due to the low short-term interest rate environment, in which the assets are invested.

(m) An amount equal to the bulk fuel revolving loan fund fees established under AS 42.45.250(j) and collected under AS 42.45.250(k) from July 1, 2009, through June 30, 2010, estimated to be $45,000, are appropriated from the general fund to the bulk fuel revolving loan fund (AS 42.45.250(a)).

Subsection q appropriates to the bulk fuel revolving loan fund an amount of general funds equal to the loan fund fees collected in FY10.

(n) The sum of $7,000,000 is appropriated from the Alaska sport fishing enterprise account (AS 16.05.130(e)) in the fish and game fund (AS 16.05.100) to the Alaska fish and game revenue bond redemption fund (AS 37.15.770).

Subsection n transfers the amount collected under the surcharge on sport fish licenses (created by SB 147 (Ch 94, SLA 2005)) from the sport fish enterprise account, where the revenue is deposited, to the bond redemption fund. The transfer is for payment of debt service on bonds authorized for hatchery construction. As both funds are subfunds of the Fish and Game Fund, this section has no fiscal impact; it is an attempt to preempt legal issues associated with the fisheries revenue bonds.

(o) An amount equal to the federal receipts deposited in the Alaska sport fishing enterprise account (AS 16.05.130(e)), not to exceed $1,644,800, as reimbursement for the federally allowable portion of the principal balance payment on the sport fishing revenue bonds series 2006 is appropriated from the Alaska sport fishing enterprise account (AS 16.05.130(e)) to the fish and game fund (AS 16.05.100).

Subsection o clarifies that the Department chooses to use $1.6 million of current federal funding as reimbursement. They may use federal operating receipts as reimbursement for a portion of debt service payments on the "Sportfish Bonds" issued in 2006 (see Section 23(u)).

Legislative Fiscal Analyst Comment: *The Department's action increases flexibility in the use of existing federal receipts by placing federal money in the sport fishing enterprise account. Once there, the money can be used for sport fishing facilities intended to directly benefit license purchasers.*

Funding: The section simply transfers funds between accounts within the Fish and Game Fund; there is no direct fiscal impact.

(p) The amount received under AS 18.67.162 as program receipts, including donations and recoveries of or reimbursement for awards made from the fund, during the fiscal year ending June 30, 2011, is appropriated to the crime victim compensation fund (AS 18.67.162).

Subsection p capitalizes the Crime Victim Compensation Fund with "money from donations, recoveries of or reimbursements for awards made from the fund, income from the fund, and other program receipts."

Legislative Fiscal Analyst Comment: *Chapter 112, SLA 2008 (HB 414) added language to the effect that money appropriated to the fund "may include donations, recoveries of or reimbursements for awards made by the fund, income from the fund, and other program receipts."*

(q) If the balance of the oil and gas tax credit fund (AS 43.55.028) is insufficient to purchase transferable tax credit certificates issued under AS 43.55.023 and production tax credit certificates issued under AS 43.55.025 that are presented for purchase, the amount by which the tax credit certificates presented for purchase exceeds the balance of the fund is appropriated from the general fund to the oil and gas tax credit fund (AS 43.55.028).

Subsection q is an open-ended appropriation of general funds to the oil and gas tax credit fund. The section ensures that the fund balance is sufficient to purchase claims for tax credits as provided for in statute.

Legislative Fiscal Analyst Comment: *The history of this fund indicates that OMB's $180 million estimated deposit under this section may be overstated. Through a series of requests, adjustments and supplemental appropriations, the fund was capitalized with $250 million in FY08 and $400 million in FY09. The Governor requested a $300 million*

deposit for FY10, and then reduced the request by $100 million. At the request of the legislature, the Department of Revenue provided a history of claims for credits. The data prompted the legislature to transfer $450 million from the fund to the general fund, which was expected to leave a balance sufficient to pay claims in FY10 (based on claim history). To ensure a sufficient fund balance, the legislature added open-ended language similar to section q. The Governor vetoed $35 million of the transfer, and then estimated that $180 million would be transferred under the open-ended appropriation.

Funding: The projected value of this appropriation is $180 million—the same amount the Department of Revenue estimated for a similar provision in the FY10 budget.

(r) An amount equal to 20 percent of the revenue collected under AS 43.55.011(g), not to exceed $60,000,000, is appropriated from the general fund to the community revenue sharing fund (AS 29.60.850(a)).

Subsection r appropriates 20% of receipts from the progressive portion of the oil and gas production tax, to a limit of $60 million, for revenue sharing.

Legislative Fiscal Analyst Comment: *The revenue sharing fund was established with an FY08 supplemental appropriation of $180 million. Each year since then, $60 million (1/3 of the prior year balance, per AS 29.60.850) has been distributed to communities. Each year, the amount distributed was replaced by $60 million of revenue from the progressive portion of the oil and gas production tax. The FY11 distribution to communities will be $60 million (1/3 of the balance).*

As long as oil prices are high enough to generate more than $60 million from the progressive production tax, the cycle of $60 million annual deposits/distribution will continue. At prices less than about $60/barrel, the progressive tax generates no revenue and annual distributions will decline.

Funding: The full $60 million potential amount of the appropriation is included in all Legislative Finance and OMB reports.

NEW SUBSECTION

(s) If the Alaska Municipal Bond Bank Authority must draw on the Alaska municipal bond bank authority reserve fund (AS 44.85.270(a)), 2005 general bond resolution reserve, because of a default by a borrower, an amount equal to the amount drawn from the reserve is appropriated from the general fund to the Alaska municipal bond bank authority reserve fund (AS 44.85.270(a)).

Subsection s provides a state moral obligation pledge should the need arise. The intent of this section is to increase the credit rating of the Bond Bank and lower the cost of borrowing money.

Funding: The fiscal impact of this section is estimated to be zero. The Bond Bank has been entirely self sufficient throughout its 35 year history.

(t) The sum of $1,130,982,400 is appropriated from the general fund to the public education fund (AS 14.17.300).

Subsection t appropriates $1.13 billion to the Public Education Fund (PEF).

Legislative Fiscal Analyst Comment: *Under the concept of forward funding, the amount appropriated in a given year is the amount projected to be needed in the following year. FY10 budget bills contained appropriations of $1.1 billion from the Constitutional Budget Reserve Fund (CBRF) to cover education costs in FY11, but the supermajority*

votes required to transfer funds from the CBRF failed. The supermajority vote failure does not affect K-12 funding in FY10 (because the PEF contained sufficient money to fund the formula in FY10), but it left the PEF without the $1.1 billion expected to be required for K-12 education in FY11. A return to forward funding would require an appropriation of FY11 costs in addition to the FY12 costs that are included in the Governor's operating bill. The Governor has indicated that he intends to request the $1.1 billion for FY11 in a supplemental bill.

*** Sec. 22. RETAINED FEES AND BANKCARD SERVICE FEES.** (a) The amount retained to compensate the collector or trustee of fees, licenses, taxes, or other money belonging to the state during the fiscal year ending June 30, 2011, is appropriated for that purpose to the agency authorized by law to generate the revenue. In this subsection, "collector or trustee" includes vendors retained by the state on a contingency fee basis.

Subsection a allows the state to compensate vendors that collect fees on behalf of the state. The provision originally addressed Fish and Game fishing, hunting and trapping license sales in which the vendor retained a portion of the sale. It also applies to several programs in the Department of Administration, Department of Natural Resources and Trial Courts.

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

(b) The amount retained to compensate the provider of bankcard or credit card services to the state during the fiscal year ending June 30, 2011, is appropriated for that purpose to each agency of the executive, legislative, and judicial branches that accepts payment by bankcard or credit card for licenses, permits, goods, and services provided by that agency on behalf of the state, from the funds and accounts in which the payments received by the state are deposited.

Subsection b allows credit card service providers to retain fees charged for using a credit card.

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

(c) The amount retained to compensate the provider of bankcard or credit card services to the state during the fiscal year ending June 30, 2011, is appropriated for that purpose to the Department of Law for accepting payment of restitution in accordance with AS 12.55.051 by bankcard or credit card, from the funds and accounts in which the restitution payments received by the Department of Law are deposited.

Subsection c allows credit card service providers to retain fees charged for using a credit card for *payment of restitution*.

Funding: These fees do not appear in the bill summary or in Legislative Finance reports on the grounds that the state has no effective control over the money.

*** Sec. 23. RETIREMENT SYSTEM FUNDING.** (a) The sum of $190,850,258 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the teachers' retirement system as an additional state contribution under AS 14.25.085 for the fiscal year ending June 30, 2011.

(b) The sum of $165,841,171 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the public employees' retirement system as an additional state contribution under AS 39.35.280 for the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *During recent years, Alaska's retirement systems accrued a multi-billion dollar unfunded liability due to a combination of investment losses, escalating health care costs, modification of actuarial assumptions and capped contribution rates. Beginning in FY08, the state began making direct contributions to retirement systems in order to stabilize employer contribution rates while repaying that unfunded liability. FY11 actuarial rates for both TRS and PERS are little changed from FY10. The appropriations in subsections (a) and (b) are the amounts the state's actuaries determined to be required.*

(c) The sum of $84,175 is appropriated from the general fund to the Department of Military and Veterans' Affairs for deposit in the defined benefit plan account in the Alaska National Guard and Alaska Naval Militia retirement system for the purpose of funding the Alaska National Guard and Alaska Naval Militia retirement system under AS 26.05.226 for the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *A $10 million FY08 supplemental appropriation to the retirement fund was intended to payoff the unfunded liability of the system. According to the December 2009 valuation, the system has an estimated unfunded liability of $85,063.*

(d) The sum of $788,937 is appropriated from the general fund to the Department of Administration for deposit in the defined benefit plan account in the judicial retirement system for the purpose of funding the judicial retirement system under AS 22.25.046 for the fiscal year ending June 30, 2011.

Legislative Fiscal Analyst Comment: *A $49 million FY08 supplemental appropriation to the retirement fund was designed to payoff the unfunded liability of the system. According to the December 2009 valuation, large investment losses in FY09 reduced the market value of system assets by about $28 million, which resulted in a re-opening of the unfunded liability gap. Unfunded liability is now estimated to be $30.5 million. The appropriation in subsection (d) responds to the unfunded liability by increasing annual contributions.*

Legislative Fiscal Analyst Recommendation: *The legislature may wish to consider an appropriation of $30.5 million to pay off the entire unfunded liability. Given a contribution rate of 26%, plus a past service rate bringing the total employer contribution rate to 43% of annual judicial salaries, the legislature may wish to review the structure of the retirement system.*

* **Sec. 24. SALARY AND BENEFIT ADJUSTMENTS.** (a) The operating budget appropriations made in sec. 1 of this Act include amounts for salary and benefit adjustments for public officials, officers, and employees of the executive branch, Alaska Court System employees, employees of the legislature, and legislators and to implement the terms for the fiscal year ending June 30, 2011, of the following ongoing collective bargaining agreements:

(1) Alaska Vocational Technical Center Teachers' Association - National Education Association, representing the employees of the Alaska Vocational Technical Center;

(2) Public Safety Employees Association, representing the regularly commissioned public safety officers unit;

(3) Inlandboatmen's Union of the Pacific, for the unlicensed marine unit;

(4) International Organization of Masters, Mates, and Pilots, for the masters, mates, and pilots unit;

(5) Marine Engineers' Beneficial Association.

(b) The operating budget appropriations made to the University of Alaska in this Act include amounts for salary and benefit adjustments for the fiscal year ending June 30, 2011, for university employees who are not members of a collective bargaining unit and for implementing the monetary terms of the collective bargaining agreements including the terms of the agreement providing for the health benefit plan for university employees represented by the following entities:

(1) Alaska Higher Education Crafts and Trades Employees;

(2) University of Alaska Federation of Teachers;

(3) United Academics;

(4) United Academics-Adjuncts.

(c) If a collective bargaining agreement listed in (b) of this section is not ratified by the membership of the respective collecting bargaining unit, the appropriations made by this Act that are applicable to that collective bargaining unit's agreement are reduced proportionately by the amount for that collective bargaining agreement, and the corresponding funding source amounts are reduced accordingly.

Section 24 appropriates no money; it specifies that various contractual salary adjustments are funded with money appropriated in section 1.

* **Sec. 25. SHARED TAXES AND FEES.** (a) The amount necessary to refund to local governments their share of taxes and fees collected in the listed fiscal years under the following programs is appropriated to the Department of Revenue from the general fund for payment to local governments in fiscal year 2011:

REVENUE SOURCE	FISCAL YEAR COLLECTED
Fisheries business tax (AS 43.75)	2010
Fishery resource landing tax (AS 43.77)	2010
Aviation fuel tax (AS 43.40.010)	2011
Electric and telephone cooperative tax (AS 10.25.570)	2011
Liquor license fee (AS 04.11)	2011

Subsection a ensures that the Department of Revenue has the authorization to disburse taxes and fees collected for local governments to those entities.

Legislative Fiscal Analyst Comment: *The section does not reference compensating municipalities for lost aviation fuel tax receipts during a state-wide suspension of the motor fuel tax. The Governor recently submitted legislation to suspend the motor fuel tax.*

Legislative Fiscal Analyst Recommendation: *If the motor fuel tax is suspended, the legislature may wish to consider inserting a reference to shared aviation fuel tax receipts in order to compensate municipalities for lost tax revenue.*

Funding: These "pass through" taxes are excluded from Legislative Finance reports on the operating bill.

NEW SUBSECTION:

(b) The amount necessary to pay the first five ports of call their share of the tax collected under AS 43.52.220 in calendar year 2010 according to AS 43.52.230(b) is appropriated from the commercial vessel passenger tax account (AS 43.52.230(a)) to the Department of Revenue for payment to the port of call during the fiscal year ending June 30, 2011.

Subsection b appropriates $5 of the $50 Commercial Passenger Vessel "Head" Tax to the first five ports of call.

Funding: Revenue to the ports totaled $9.9 million for FY09. Expected revenue for FY10 and FY11 is $9 and $8.5 million, respectively. These "pass through" taxes are excluded from Legislative Finance reports on the operating bill.

(c) It is the intent of the legislature that the payments to local governments set out in (a) and (b) of this section may be assigned by a local government to another state agency.

Subsection c is intended to allow a municipality to assign a payment under subsection (a) to a state agency. For example, the City of Homer might receive Fisheries Business tax payments under subsection (a), but owe the Department of Administration contributions for PERS. Homer could assign the payment to DOA, thus avoiding cash flow from the state to the city and back to the state.

*** Sec. 26. STATE DEBT AND OTHER OBLIGATIONS.** (a) The amount required to pay interest on any revenue anticipation notes issued by the commissioner of revenue under AS 43.08 during the fiscal year ending June 30, 2011, is appropriated from the general fund to the Department of Revenue for payment of the interest on those notes.

Subsection a appropriates general funds to pay interest on any revenue anticipation notes that may be issued during the year.

Legislative Fiscal Analyst Comment: *No notes are expected to be issued.*

(b) The amount required to be paid by the state for principal and interest on all issued and outstanding state-guaranteed bonds is appropriated from the general fund to the Alaska Housing Finance Corporation for payment of principal and interest on those bonds for the fiscal year ending June 30, 2011.

Subsection b appropriates general funds to pay principal and interest on state-guaranteed bonds (veterans mortgage bonds) if the revenue stream from the mortgage loans is insufficient to make those payments. The only purpose of the state general obligation pledge is to gain tax-exempt status for the bonds. Because the bonds are general obligations of the state, they must be authorized by law, ratified by the voters, and approved by the State Bond Committee.

Funding: The revenue stream from mortgage loans is expected to be sufficient to cover bond payments, so the expected fiscal impact of this subsection is zero. However, a potential general fund obligation exists.

(c) The sum of $7,066,800 is appropriated to the state bond committee from the investment earnings on the bond proceeds deposited in the capital project funds for the series 2003A general obligation bonds for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2003A, for the fiscal year ending June 30, 2011.

(d) The sum of $42,300 is appropriated to the state bond committee from State of Alaska general obligation bonds, series 2003A bond issue premium, interest earnings, and accrued interest held in the debt service fund of the series 2003A bonds for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2003A, for the fiscal year ending June 30, 2011.

(e) The amount necessary for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2003A for the fiscal year ending June 30, 2011, after the payments in (c) and (d) of this section, estimated to be $23,090,800, is appropriated to the state bond committee from the general fund for that purpose.

Subsections c, d and e appropriate $30.2 million to pay debt service on series 2003A general obligation bonds. The bonds were authorized by the voters in 2002 for construction of schools and university facilities.

(f) The sum of $374,800 is appropriated to the state bond committee from the investment earnings on the bond proceeds deposited in the capital project fund for state guaranteed transportation revenue anticipation bonds, series 2003B, for payment of debt service, accrued interest, and trustee fees on outstanding state-guaranteed transportation revenue anticipation bonds, series 2003B, for the fiscal year ending June 30, 2011.

(g) The amount necessary for payment of debt service, accrued interest, and trustee fees on outstanding state-guaranteed transportation revenue anticipation bonds, series 2003B, for the fiscal year ending June 30, 2011, after the payment in (f) of this section, estimated to be $12,353,300, is appropriated to the state bond committee from federal receipts for that purpose.

Subsections f and g appropriate $12.7 million to pay debt service on series 2003B general obligation bonds. The bonds were authorized by the voters in 2002 for road and harbor construction.

Legislative Fiscal Analyst Comment: *Although these bonds were issued with a general obligation pledge by the state, they are more appropriately referred to as GARVEE bonds. The majority of the debt service is paid using eligible federal-aid highway formula funding coupled with a state matching component.*

(h) The sum of $1,902,400 is appropriated to the state bond committee from the investment earnings on the bond proceeds deposited in the capital project funds for the series 2009A general obligation bonds for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2009A, for the fiscal year ending June 30, 2011.

(i) The sum of $2,278,900 is appropriated to the state bond committee from State of Alaska general obligation bonds, series 2009A bond issue premium, interest earnings, and accrued interest held in the debt service fund of the series 2009A bonds for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2009A, for the fiscal year ending June 30, 2011.

(j) The amount necessary for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2009A for the fiscal year ending June 30, 2011, after the payments made in (h) and (i) of this section, estimated to be $6,650,800, is appropriated to the state bond committee from the general fund for that purpose.

Subsections h, i and j appropriate $10.8 million to pay debt service on series 2009A general obligation bonds. The bonds were authorized by the voters in 2008 for road construction.

(k) The sum of $1,039,000 is appropriated to the state bond committee from the Alaska debt retirement fund (AS 37.15.011(a)) for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2010A, for the fiscal year ending June 30, 2011.

(l) The sum of $34,000 is appropriated to the state bond committee from investment loss trust fund (AS 37.14.300(a)) for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2010A, for the fiscal year ending June 30, 2011.

(m) The amount necessary for payment of debt service, accrued interest, and trustee fees on outstanding State of Alaska general obligation bonds, series 2010A for the fiscal year ending June 30, 2011, after the payments made in (k) and (l) of this section, estimated to be $3,927,000, is appropriated to the state bond committee from the general fund for that purpose.

Subsections k, l and m appropriate $5.0 million to pay debt service on series 2010A general obligation bonds. The bonds were authorized by the voters in 2008 for road construction.

(n) The sum of $50,047,900 is appropriated to the state bond committee for payment of debt service and trustee fees on outstanding international airports revenue bonds for the fiscal year ending June 30, 2011, from the following sources in the amounts stated:

SOURCE	AMOUNT
International Airports Revenue Fund (AS 37.15.430(a))	$46,847,900
Passenger facility charge	3,200,000

Subsection n appropriates funding for payment of debt service and fees on outstanding international airport revenue bonds.

(o) The sum of $2,710,000 is appropriated from interest earnings of the Alaska clean water fund (AS 46.03.032(a)) to the Alaska clean water fund revenue bond redemption fund (AS 37.15.565(a)) for payment of principal and interest, redemption premium, and trustee fees, if any, on bonds issued by the state bond committee under AS 37.15.560 during the fiscal year ending June 30, 2011.

(p) The sum of $2,973,200 is appropriated from interest earnings of the Alaska drinking water fund (AS 46.03.036(a)) to the Alaska drinking water fund revenue bond redemption fund (AS 37.15.565(a)) for payment of principal and interest, redemption premium, and trustee fees, if any, on bonds issued by the state bond committee under AS 37.15.560 during the fiscal year ending June 30, 2011.

Subsections o and p appropriate the interest earnings of the clean water and drinking water funds to their respective bond redemption funds. Both funds are capitalized annually with federal receipts for drinking and clean water bond receipts (see sections 21(j) and (k)). The federal receipts require a state match. Federal rules permit interest earnings of the loan funds to be used to pay debt service as well as making loans. This section takes advantage of the ability to use the funds to pay debt service. Issuing short-term bonds (secured by the assets of the loan fund) allows the "restricted" earnings of the funds to be used to pay off the bonds. Essentially, the earnings of the funds are used as match.

(q) The amount necessary for payment of lease payments and trustee fees relating to certificates of participation issued for real property for the fiscal year ending June 30, 2011,

estimated to be $12,326,200, is appropriated to the state bond committee from the general fund for that purpose.

Subsection q appropriates money to make payments on:

- the Virology Lab - $2.2 million;
- the Alaska Psychiatric Institute - $1.6 million;
- the Seafood/Food Safety Lab - $1.3 million;
- the Series 2005 Refunding - $2.8 million;
- the new Public Safety Crime Lab - $1.6 million; and
- the new UAF Life Sciences Classroom and Lab Facility - $2.7 million

Legislative Fiscal Analyst Comment: *The crime lab and UAF Life Sciences building are proposed in the Governor's capital budget. Separate legislation is required for authorization of the COPs and should be expected.*

Legislative Fiscal Analyst Recommendation: *This section should be amended if COPs for the crime lab and life sciences building are not approved.*

(r) The sum of $3,467,100 is appropriated from the general fund to the Department of Administration for the fiscal year ending June 30, 2011, for payment of obligations to the Alaska Housing Finance Corporation for the Robert B. Atwood Building in Anchorage.

Subsection r appropriates $3.5 million for obligations associated with the Atwood Building. AHFC purchased the Robert B. Atwood Building for approximately $39 million in cash and then issued revenue bonds secured by the building itself and lease payments from the state. The state will own the building at the end of the lease.

(s) The sum of $22,924,500 is appropriated from the general fund to the Department of Administration for the fiscal year ending June 30, 2011, for payment of obligations and fees for the following facilities:

FACILITY	ALLOCATION
(1) Anchorage Jail	$5,108,000
(2) Goose Creek Correctional Center	17,816,500

Subsection s appropriates funds to pay lease costs for the Anchorage Jail and the Goose Creek Correctional Center. Anchorage issued municipal bonds to pay for the construction of the Anchorage Jail, which the state leases. The Mat-Su Borough issued bonds for the Goose Creek Correctional Center.

Legislative Fiscal Analyst Comment: *In common language, the contracts with the Municipality of Anchorage and the Mat-Su Borough are leases, but terms of the contracts are such that Governmental Accounting Standards Board's (GASB) rule #34 classifies them as capital leases. This means that a default on lease payments could affect the state's credit rating. Because of the potential impact on credit rating, the obligations are categorized as debt.*

Chapter 160, SLA 2004 (SB 65) authorized lease-purchase agreements for the Spring Creek Correctional Center (SCCC) expansion, the Yukon-Kuskokwim Correctional Center (YKCC) expansion, and the Goose Creek Correctional Center construction. The

25-year lease of the Goose Creek Correctional Center is capped in statute at $11,600 per bed, and annual debt service is limited to $17.8 million. Because the Department of Corrections reports the SCCC and the YKCC projects are on hold, appropriations for those facilities are not required.

(t) The sum of $3,303,500 is appropriated from the general fund to the Department of Administration for payment of obligations to the Alaska Housing Finance Corporation for the Linny Pacillo Parking Garage in Anchorage, for the fiscal year ending June 30, 2011.

Subsection t appropriates $3.3 million for obligations associated with the Linny Pacillo parking garage. The obligation is a lease purchase similar to the obligation for the Robert B. Atwood Building.

(u) The sum of $106,258,500 is appropriated to the Department of Education and Early Development for state aid for costs of school construction under AS 14.11.100 from the following sources:

General fund	$85,058,500
School Fund (AS 43.50.140)	21,200,000

Subsection u appropriates funds for municipal school debt reimbursement. AS 14.11.100 authorizes the state to reimburse municipalities for selected bonds issued for school construction (from 60-90% of principal and interest depending on the authorization). The amount of this appropriation is the projected need for full reimbursement.

(v) The sum of $5,707,302 is appropriated from the general fund to the following agencies for the fiscal year ending June 30, 2011, for payment of debt service on outstanding debt authorized by AS 14.40.257, AS 29.60.700, and AS 42.45.065, respectively, for the following projects:

AGENCY AND PROJECT	APPROPRIATION AMOUNT
(1) University of Alaska	$1,409,822
Anchorage Community and Technical College Center	
Juneau Readiness Center/UAS Joint Facility	
(2) Department of Transportation and Public Facilities	
(A) Nome (port facility addition and renovation)	127,000
(B) Matanuska-Susitna Borough (deep water port and road upgrade)	752,450
(C) Aleutians East Borough/False Pass (small boat harbor)	101,840
(D) Lake and Peninsula Borough/Chignik (dock project)	119,844
(E) City of Fairbanks (fire headquarters station replacement)	869,765

(F) City of Valdez (harbor renovations)	222,868
(G) Aleutians East Borough/Akutan (small boat harbor)	465,868
(H) Fairbanks North Star Borough (Eielson AFB Schools, major maintenance and upgrades)	342,990
(3) Alaska Energy Authority	
(A) Kodiak Electric Association (Nyman combined cycle cogeneration plant)	943,676
(B) Copper Valley Electric Association (cogeneration projects)	351,179

Subsection v appropriates $5.7 million to various state agencies for reimbursement to municipalities and public entities for debt service on projects authorized in Ch. 115, SLA 2002 (HB 528). This level of reimbursement is about $200,000 higher than that enacted for FY10. The level of reimbursement is subject to appropriation.

(w) The sum of $7,500,000 is appropriated from the Alaska fish and game revenue bond redemption fund (AS 37.15.770) to the state bond committee for payment of debt service, accrued interest, and trustee fees on outstanding sport fish hatchery revenue bonds. It is the intent of the legislature that the sum of $2,200,000 of the appropriation made by this subsection be used for early redemption of the bonds.

Subsection w appropriates the majority of the surcharge levied on sport fish licenses authorized under Ch 94, SLA 2005—and transferred to the bond redemption fund in Section 21(n) of this bill—for payment of debt service on bonds issued for sport fish hatchery development. The appropriation exceeds the debt service due on the bonds allowing the bonds to be paid off ahead of schedule.

NEW SECTION

*** Sec. 27. GOVERNOR'S PERFORMANCE SCHOLARSHIP FUND; CONTINGENCY.** (a) The sum of $400,000,000 is appropriated from the general fund to the governor's performance scholarship fund for the fiscal year ending June 30, 2011.

(b) The appropriation made by (a) of this section is contingent on passage by the Twenty-Sixth Alaska State Legislature and enactment into law of a bill establishing the Governor's performance scholarship fund.

Section 27 appropriates $400 million of general funds for the Governor's Performance Scholarship program. Preliminary information released indicates that this funding will be invested and the Fund's interest and earnings will pay for the scholarships.

Legislative Fiscal Analyst Recommendation: *Because this funding is directly linked to legislation the Governor intends to propose, this funding should be requested in a fiscal note.*

*** Sec. 28. BUDGET RESERVE FUND.** If the unrestricted state revenue available for appropriation in fiscal year 2011 is insufficient to cover general fund appropriations made for

fiscal year 2011, the amount necessary to balance revenue and general fund appropriations is appropriated to the general fund from the budget reserve fund (AS 37.05.540(a)).

Section 28 allows the state to cover any shortfall in unrestricted revenues with transfers from the Statutory Budget Reserve Fund (SBR) to the general fund. In FY08, the legislature appropriated $1 billion of general funds to the SBR (Sec. 21(c), Ch. 11, SLA 2008). Unless money is appropriated from the fund during FY10, the entire amount deposited in the SBR will remain available in FY11. Unlike the Constitutional Budget Reserve Fund (CBRF), the SBR can be accessed with a simple majority vote.

* **Sec. 29. CONSTITUTIONAL BUDGET RESERVE FUND.** (a) Deposits in the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) for fiscal year 2010 that are made from subfunds and accounts other than the operating general fund (state accounting system fund number 11100) by operation of art. IX, sec. 17(d), Constitution of the State of Alaska, to repay appropriations from the budget reserve fund are appropriated from the budget reserve fund to the subfunds and accounts from which those funds were transferred.

Subsection a is "sweep reversal language." As long as there is an outstanding liability to the CBRF, the Constitution requires that year-end general fund balances be used to repay past withdrawals from the CBRF. This provision reverses that required sweep; all money in general fund subaccounts are returned to the accounts (on July 1) from which they were swept (on June 30).

Legislative Fiscal Analyst Comment: *There is a strong possibility that the general fund liability to the CBRF will be eliminated during FY10. If the CBRF is fully repaid, no sweep will occur at the end of FY10 and subsection (a) will not apply.*

Legislative Fiscal Analyst Recommendation: *The language in subsection (a) does no harm and should be retained, especially if the CBRF is not fully repaid during FY10.*

(b) Unrestricted interest earned on investment of the general fund balances for the fiscal year ending June 30, 2011, is appropriated to the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska). The appropriation made by this subsection is intended to compensate the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) for any lost earnings caused by use of the fund's balance to permit expenditure of operating and capital appropriations in the fiscal year ending June 30, 2011, in anticipation of receiving unrestricted general fund revenue. The amount appropriated by this subsection may not exceed an amount equal to the earnings lost by the budget reserve fund as the result of the use of money from the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) to permit expenditure of operating and capital appropriations in the fiscal year ending June 30, 2011, in anticipation of receiving unrestricted general fund revenue.

Subsection b appropriates general fund earnings to the CBRF as compensation for earnings lost by the CBRF as a result of draws to meet the Treasury's cash flow requirements.

(c) The sum of $2,060,000 is appropriated from the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska) to the Department of Revenue, treasury division, for operating costs related to management of the budget reserve fund for the fiscal year ending June 30, 2011.

Subsection c appropriates $2.1 million from the CBRF to the Department of Revenue, Treasury Division, for investment management fees for FY11.

Legislative Fiscal Analyst Comment: *There is a possibility that the general fund liability to the CBRF will be eliminated during FY10. Appropriating management fees from the CBRF requires a supermajority vote and creates a general fund liability to the CBRF. That liability, in turn, would activate an FY11 year-end sweep of general funds into the CBRF, which would require a supermajority vote to reverse in FY12.*

Legislative Fiscal Analyst Recommendation: *Appropriate general funds to pay management fees attributable to the CBRF.*

(d) The appropriations made by (a) and (c) of this section are made under art. IX, sec. 17(c), Constitution of the State of Alaska.

Subsection d stipulates that appropriations made from the CBRF must be approved by at least three-quarters of the members of each house of the legislature.

Legislative Fiscal Analyst Comment: *If general funds are appropriated for management fees, the reference to subsection (c) will not be relevant.*

*** Sec. 30. LAPSE EXTENSION OF APPROPRIATIONS.** (a) The appropriation made in sec. 19(a) of ch. 30, SLA 2007, lapses June 30, 2011.

Subsection a extends the lapse date for an FY07 supplemental appropriation from June 30, 2010 to June 30, 2011. The Department of Public Safety (DPS) received an appropriation for $5 million in federal receipts for domestic violence and sexual assault prevention programs in the areas of prosecution, law enforcement, judicial services, and victim services. The funding came from a Stop Grant provided through a U.S. Department of Justice, Violence Against Women Act (VAWA).

Legislative Fiscal Analyst Recommendation: *The Department is also requesting a one-time increment for $697.4 in section 1 for this purpose. The section 1 increment is unnecessary if the lapse date is extended, so the increment request should be removed from the DPS budget. The lapse extension is the better option; it ensures that the entire amount of remaining funding will be available in FY11 and does not duplicate authorization.*

(b) The appropriations made in secs. 1 and 14 of ch. 17, SLA 2009, lapse June 30, 2011.

Most appropriations associated with the American Recovery and Reinvestment Act of 2009 (ARRA) were appropriated in Chapter 17, SLA 2009. This section extends the lapse date from June 30, 2010 to June 30, 2011 for operating appropriations in section 1 and for $20.7 million appropriated for distribution to communities eligible to receive revenue sharing funds (section 14).

Legislative Fiscal Analyst Comment: *Section 1 of the Governor's FY11 operating budget request includes $81.6 million of ARRA funding that is expected to be unexpended at the end of FY10.*

Legislative Fiscal Analyst Recommendation: *The section 1 increments for ARRA funding in FY11 are unnecessary if the lapse date is extended, so the increment requests should be removed from Department budgets. The lapse*

extension is the better option, it ensures that the entire amount of remaining funding will be available in FY11 and results in more accurate accounting of ARRA funds.

* **Sec. 31. NONLAPSE OF APPROPRIATIONS.** The appropriations made by secs. 6, 21, and 23 of this Act are for the capitalization of funds and do not lapse.

* **Sec. 32. RETROACTIVITY**. Those portions of the appropriations made in sec. 1 of this Act that appropriate either the unexpended and unobligated balance of specific fiscal year 2010 program receipts or the unexpended and unobligated balance on June 30, 2010, of a specified account are retroactive to June 30, 2010, solely for the purpose of carrying forward a prior fiscal year balance.

Section 32 ensures that unexpended receipts and balances carry forward into FY11 before they lapse.

* **Sec. 33.** Sections 30 and 32 of this Act take effect June 30, 2010.

* **Sec. 34.** Except as provided in sec. 33 of this Act, this Act takes effect July 1, 2010.

Debt Summary Table

(thousands)

	FY02	FY03	FY04	FY05	FY06	FY07	FY08	FY09	FY10	FY11 Gov	FY10 to FY11	Comments

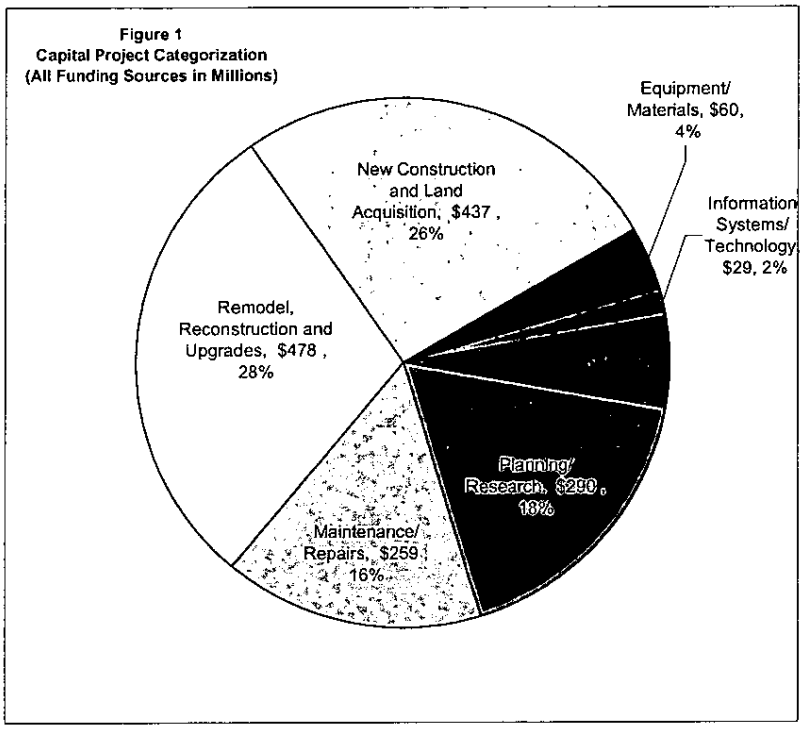
Capital Budget

The Governor has proposed capital projects of $1.644 billion for FY11. The budget includes $548.5 million in general funds, $256.5 million of other state funds and $839.3 million in federal funds. Compared to the budget for FY10[8], it is $268.5 million greater in general funds, $169.7 million greater in other state funds, and down $299.2 million in federal funds for a $139 million net increase. The pie chart below provides a categorical breakdown of the proposed capital spending plan.[9]



Construction

Construction projects—both new and remodel—comprise 54% of the Governor's proposed capital budget. New construction involves adding infrastructure to the state's capital stock, and includes both new roads and new square footage. Reconstruction involves modifying or changing existing roads or space.

The Surface Transportation Program and the Airport Improvement Program within DOT&PF (along with associated state match) make up the majority ($478 million) of the construction budget. Other significant construction programs include the Village Safe Water Program and the Municipal Water Sewer Matching Grants Program in the Department of Environmental Conservation. These programs account for $60.9 million of the Governor's request. Large, stand-alone *state funded* construction projects include:

- $108.6 million – UAF Life Sciences Classroom and Lab Facility;

[8] The FY10 Budget figures includes RPL's through the 12/16/2009 meeting.
[9] Please see page 61 of this section for the project categorization methodology.

- $75.8 million – Public Safety Crime Lab Replacement;
- $21.3 million – Service High School Renovation;
- $10 million – Port of Anchorage Expansion;
- $9.9 million – Johnson Youth Center Renovation and Remodel;
- $9.7 million – AHFC San Roberto Redevelopment;
- $8 million – Roads to Resources: Foothills West (75 mile road Dalton Hwy to Umiat); and
- $6 million – Interior Alaska Veteran's Cemetery Design and Construction.

Maintenance/Repairs

This category includes deferred, scheduled and preventative maintenance or repair projects for agency facilities, state parks, harbors, highways, bridges, rural airports, aircraft and vessels. The category accounts for 16% of the total capital budget.

In January of 2007, Legislative Finance compiled a list that showed a deferred maintenance back-log of $954 million. Three years later, the back-log totals approximately $1.8 billion (an 89% increase). The Governor has announced a plan to reduce the back-log by spending $100 million each year for the next five years. The Governor's bill contains a separate section for the $100 million in FY11. The current back-log, as reported by each agency[10], is as follows:

Deferred Maintenance by Agency (millions)	
Administration	**80.8**
Corrections	**103.0**
Court System	**14.9**
Education & Early Development	**15.0**
Environmental Conservation	**0.5**
Fish and Game	**2.3**
Health & Social Services	**19.5**
Labor & Workforce Development	**58.2**
Military & Veterans Affairs	**32.4**
Natural Resources	**67.6**
Public Safety	**2.7**
Transportation & Public Facilities	**427.1**
Airports	54.1
Harbors	19.1
Facilities	24.7
Highways	305.9
AMHS Vessels/Terminals	23.3
University of Alaska	**967.3**
Total	**$1,791.3**

[10] Deferred maintenance estimates are provided by individual agencies to the Office of Management and Budget. Estimates are preliminary and may have a significant margin of error.

Planning/Research

Another 18% of the budget falls into the planning and research category. In addition to projects, the Governor proposed a $150 million deposit to the Alaska Gasline Inducement Act (AGIA) Reimbursement Fund. Under AGIA, the state will provide matching contributions in the form of reimbursements to the licensee (TransCanada) in an amount not to exceed $500 million of the qualified expenditures incurred in development of a natural gas pipeline. This particular funding will reimburse TransCanada for planning expenses through FY11.

Other significant planning appropriations include the federal highway and airport pre-construction appropriations. At $50 million and $18 million, respectively, these highway and airport projects fund the preliminary design, engineering, environmental analysis, right-of-way and utility work for the federal Airport Improvement Program and Surface Transportation Program.

Information Systems/Technology

Information technology projects make up 2% of the budget. Spread throughout state agencies, projects include network upgrades/replacements, security projects, document imaging projects, database development and various communication projects. Also included are several Intelligent Transportation Systems (ITS) projects within DOT&PF. These projects utilize special funding from the Federal Highway Administration for improving transportation safety and efficiency. Examples include variable speed limit signs, traffic monitoring and incident detection systems, and weather and pavement sensors.

Two large projects—the DOR Tax Management System and the DOA Payroll and Accounting System Replacement—are conspicuously absent. Last session $23.4 million and $76.5 million, respectively, was requested for these two projects. See individual agency analysis for further information.

Equipment/Materials

This category, totaling 4% of the request ($60 million), contains recurring projects for State Equipment Fleet replacement ($15 million), materials stockpiling (Dalton Highway - $5 million), various rural and international airport snow removal and safety equipment ($15 million), and other agency equipment and materials.

Other

The "other" category, at 6% of the budget, is comprised of projects that do not fit well in any of the other project categories. The category includes projects that provide economic assistance, training, safety grants/programs, and similar miscellaneous items. This category has often contained appropriations that may be more appropriately placed in an agency operating budget. The legislature has taken steps during the last few years to place operating items in the operating budgets. This budget appears much improved in this regard.

Notable projects in the Other category include:

- $9.5 million – State Homeland Security Grants;
- $10 million – AHFC Homeless Assistance Program; and
- $12.2 million – DOT&PF Statewide Safety Program.

Funding

Unrestricted General Funds (UGF) - $497.1 million

Unrestricted General Funds are up $255.3 million over the FY10 capital budget. Primary drivers of the increase are $150 million to the AGIA Reimbursement Fund and $100 million for statewide deferred maintenance.

The Governor proposes withdrawing money from the Alaska Housing Capital Corporation savings account. The legislature placed $300 million of general funds in this sub-corporation of AHFC in FY07 with the intent that the money be used for future capital projects. The Governor utilizes $160 of the $356 million available.[11]

General Fund Match totals $62.2 million, up $21.5 million from the FY10 budget.. For FY10, the legislature reduced the two large match appropriations in DOT&PF (Federal Aid Highway and Aviation Match) by over 20% (a total of $15.4 million). The impact of this reduction is not yet known, but the intent was to reduce excess authority in a pot of money over which the agency has considerable discretion.

The Governor's budget includes the top eight projects from the school Major Maintenance Priority List for a total of $24.8 million. The Service High School Renovation project ($21.3 million) consumes the majority of this funding. The full list contains 123 projects for a total state cost of $274.7 million. The legislature typically adds to the Governor's request for school funding.

The Governor's budget does not address the 35 projects (with a total state cost of $411.6 million) on the School Construction Priority List. These are large projects—the state share of the top five projects is $200 million.

Atypical of a Governor's request, this budget includes some Grants to Municipalities and Grants to Named Recipients. These items are usually added by the legislature. The largest of these grants include:

- $10 million: Port of Anchorage Expansion;
- $4 million: Newtok Traditional Council – Evacuation Shelter and Access Road;
- $3 million: Covenant House Alaska – Facility Construction; and
- $1.5 million: Alaska Community Foundation – Jesse Lee Home Restoration.

Designated General Funds (DGF) - $51.4 million

Appropriations of Designated General Funds are $13.3 million greater in FY11; primarily the result of University Receipts, which were not in the FY10 capital budget. The Governor's general fund budget may be understated by $25 million. The Governor proposes transferring $25 million from the general fund into the Renewable Energy Grant Fund for renewable energy grants, but does not appropriate money from the fund for grants. The Governor's intentions for renewable energy projects are unclear.

Other State Funds - $256.5 million

[11] The Governor proposes spending an additional $17 million from the fund for operating purposes.

Proposed appropriations of Other State Funds are $169.7 million greater for FY11. This is almost entirely driven by the use of Certificates of Participation (COPs) for the UAF Life Sciences Classroom/Lab Facility ($88 million) and the new Public Safety Crime Lab ($76 million).

As a form of debt, COPs have caused controversy in the past. Legislative approval is now required before they can be issued to fund capital projects.

Federal Funds

Federal receipt authority is down $299.2 million. Much of this can be attributed to the economic stimulus funding included in the FY10 budget, but absent in the FY11 budget. Stimulus RPL's have been prevalent in FY10. The current breakdown of capital project stimulus by agency is as follows:

Capital Budget Total Stimulus by Agency (thousands)

Agency	Capital Bill SB 75	Non-DOT Stimulus Bill HB199	FY09 Capital RPLS	FY10 Capital RPLS	Total Stimulus Funding
Commerce, Community & Econ Dev	-	4,642.5	-	-	4,642.5
Environmental Conservation	-	70,637.0	-	-	70,637.0
Office of the Governor	-	1,000.0	-	-	1,000.0
Health & Social Services	23,947.5	-	-	-	23,947.5
Labor & Workforce Development	-	3,000.0	-	-	3,000.0
Natural Resources	-	1,500.0	4,030.0	5,211.0	10,741.0
Revenue	-	96,264.9	-	658.0	96,922.9
Transportation & Public Facilities	264,026.2	-	-	-	264,026.2
University of Alaska	-	117,000.0	32,929.9	25,896.0	175,825.9
Total	**287,973.7**	**294,044.4**	**36,959.9**	**31,765.0**	**650,743.0**

Note - Although there were significant RPLs for DOT&PF capital projects, the net result is zero additions of stimulus funding. Additional projects have been added due to a favorable bidding environment and some project delays, but no additional funding has been received.

Other reductions in Federal Receipt Authority appear in the DOT&PF Airport Improvement Program and the DEC Village Safe Water Program.

The Airport Improvement program is down $80.6 million. Revenue to the state is not expected to decline, but excess legislative authority in prior years has reduced the need for authorization in FY11.

The Village Safe Water Program has been reduced $13.6 million (26%) to $38.5 million (for a program total of $48.5 million, with associated state match). Rural water and sewer funding is continuing to decline while the state-wide sanitation need continues to grow. A recent DEC publication estimates the current need at over $700 million, with FY11 funding from the USDA, state and other sources totaling approximately $78 million.

Other Issues

Ding! Ding! Round 2!?

The possibility of a second round of federal economic stimulus has DOT&PF in rigorous preparation mode. A stimulus bill passed the House of Representatives and is expected before the Senate the week of January 18.

As currently constructed, funding to Alaska will be on a similar level to last year—in the range of $250 million. The project eligibility criteria are identical: "shovel ready" including all federal planning requirements. However, the timing deadlines are more expedited. The previous authorization required that 50% of the funding be *obligated* within 90 days. The new authorization requires 50% of funding be placed *under contract* within 90 days. The remaining 50% must be under contract within one year.

Congressional intent is to get money on the street quickly. Projects are not getting underway—and jobs are not being created—as fast as they would have liked. Congress is hoping that added pressure to get the projects under contract, or lose the funding to other states, will improve results.

Identifying eligible projects was a significant problem in the first round of stimulus funding. DOT&PF and the legislature had to work hard to fully utilize funding, especially because a very favorable bidding environment effectively made money available late in the process and because of federal restrictions regarding population and economic conditions.

In preparation for round 2, DOT&PF is working on a STIP amendment listing state highway projects that could meet the "50% within 90 days" deadline. These projects are being fast-tracked through all federal requirements in the hope of using as much funding as possible. Additionally, DOT&PF has mailed a letter to all communities and tribal governments requesting lists of potential 2nd round projects. The idea is to first tackle projects over which the state has the most control, and then work toward community additions in another STIP amendment that addresses the "remaining 50% in one year" deadline.

The new STIP amendment is posted and open for public comment through February 1st.

Legislative authority for these projects is a DOT&PF concern. Utilizing the FY10 Legislative Budget and Audit (RPL) process does not appear to be an option—the language of the capital appropriation bill specifically identified the 2009 American Recovery and Reinvestment Act as a fund source. The new stimulus money will be from a different congressional act, potentially eliminating that avenue as a fast-track method of project approval. The best available option may be fast-tracking a stand-alone appropriation bill.

Federal Highway Trust Fund

In the summer of 2008, the Congressional Budget Office projected a Federal Highway Trust Fund shortfall of $3.3 billion for Federal Fiscal Year 2009 (FFY09). This shortfall was addressed by Congress, albeit temporarily, by an $8 billion infusion from the general treasury in September 2008. Current projections have the Trust Fund entering another critical stage before the end of FFY09, with $15 billion needed to ensure solvency through FFY10. These infusions fix immediate shortfalls in funding, but do not address the structural problem with regard to the Trust Fund. Congress will need to address the funding mechanism of the fund on a long-term basis in the transportation authorization bill to follow SAFETEA-LU.

Alaska is considered a "donee" state in regard to the Highway Trust Fund. We receive far beyond our share of revenue from the fund than we put into the fund. In the future, as the fund revenue stream is restructured, the impacts to Alaska may be severe.

What else is Missing?

Significant FY10 Governor priorities not included by the legislature in the FY10 budget and missing from the FY11 request include:

- $76.5 million - DOA Payroll and Accounting System (previously mentioned);
- $26.3 million - Dalton Highway: MP 9-11;

- $15.3 million - UAF Energy Technology Building; and
- $6 million ($12 million initially) - AVTEC Heavy Equipment and Diesel Shop.

Project Categorization Methodology

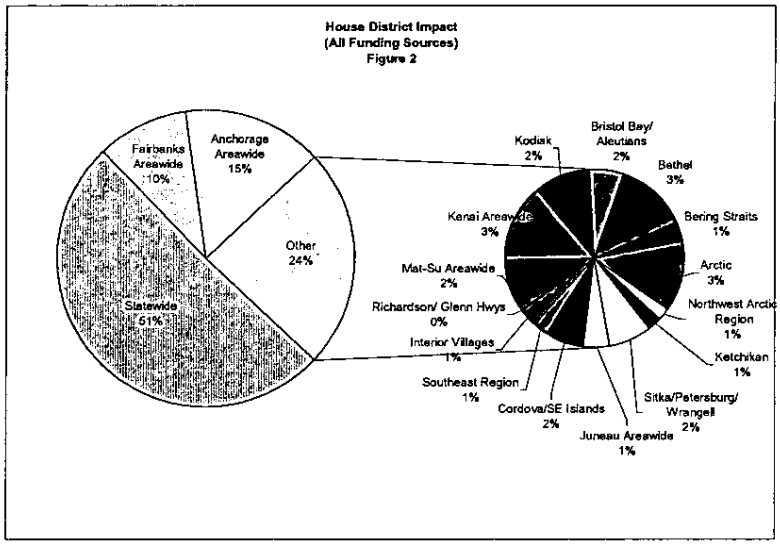
The pie chart beginning of this section and the spreadsheets accompanying each agency narrative categorize the capital budget by project groups. The groupings are a mutually exclusive set. This allows Legislative Finance to prepare a Project Group Summary report that reflects the entire capital budget without duplication. As with any task of categorization, subjectivity exists.

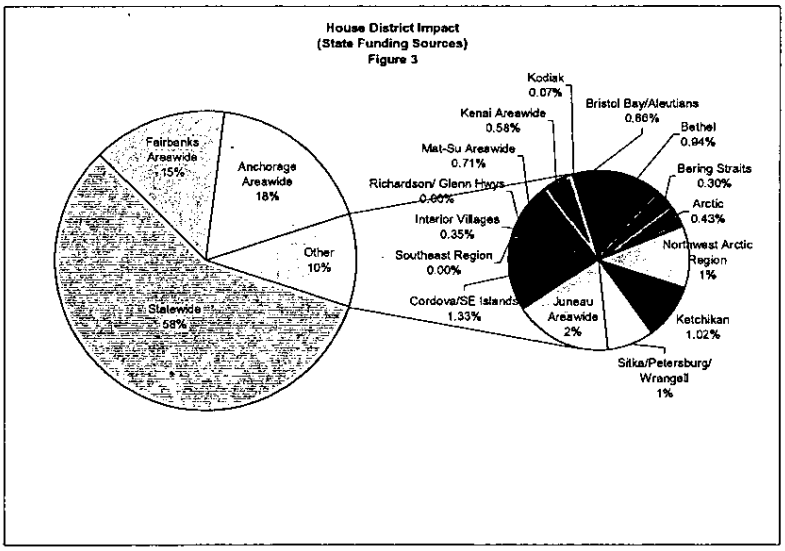
The rules used to define the projects in each group are provided in the table below.

Project Group	Description
Planning and Research	Projects involving planning, design, engineering, research, or studies
Maintenance and Repairs	Projects involving the repair of deteriorated conditions, restoration to previous condition, and preventative maintenance
Remodel, Reconstruction and Upgrades	Projects modifying or rebuilding existing space; includes complete replacement and upgrades
New Construction and Land Acquisition	Projects involving the addition of new space; including extensions and expansions
Information Systems and Technology	Projects related to information technology regardless of whether they are in a planning phase or construction (programming) phase - segregated due to their unique nature
Other	Projects that do not fit elsewhere

Distribution by House District

The pie charts below (Figures 2 & 3) detail the proportional breakdown of the Governor's capital request by house district on an "impact" basis.[12] Figure 2 contains all funding sources, while Figure 3 is state funds only. As can be seen, the majority of projects are assigned to the "Statewide" House District. Projects falling under this assignment are generally broad appropriations that span multiple regions of the state. The types of projects included are large deferred maintenance projects, information technology projects, and federal grant programs. The Capital Budget Summary table on page 63 breaks out the funding sources by fund group (General funds (UGF & DGF), Other State, and Federal funds) for each house district. Project detail reports by House District (along with project back-up) can be found on the Legislative Finance website.





[12] Legislative Finance assigns two house districts to each project: 1) by the house districts impacted by a project, and 2) by the geographic location of a project.

Capital Budget Summary

(thousands)	Agency Comparison - All Funds (Includes MH)			FY11 Governor by House District				
Agency	FY10 Budget (1)	FY11 Governor (12/15/2009)	Change FY10-FY11	House District	HD #	General Funds	Other State Funds	Federal Funds

Notes:

1) The FY10 Budget figure includes RPL's through the 12/16/2009 meeting.
2) Fund Capitalization refers to funding appropriated to a program not requiring further appropriation for expenditure (e.g.- Harbor Facility Grant Fund, AGIA Reimbursement Fund).
3) "Money on the Street" is the total amount of funding for capital projects, net of fund transfers. Duplicated fund sources are not removed. Doing so would underestimate the actual amount of funding going toward capital projects. This is the opposite of operating budget duplicate funds, whereby the duplicate fund sources would double the actual money paying for services.
4) Fund Transfers are appropriations that move money from one "fund" to another "fund," not actually placing any new capital projects "on the street."

Language Sections of the Governor's FY2011 Capital Budget

*** Sec. 7. FEDERAL AND OTHER PROGRAM RECEIPTS.** (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as defined in AS 44.21.045(b), receipts of the University of Alaska as described in AS 37.05.146(b)(2), receipts of commercial fisheries test fishing operations under AS 37.05.146(c)(21), corporate receipts of the Alaska Housing Finance Corporation, corporate receipts of the Alaska Aerospace Corporation, Exxon Valdez oil spill trust receipts as defined in AS 37.05.146(b)(4), and receipts of the Alaska Fire Standards Council under AS 37.05.146(b)(5), that exceed the amounts appropriated by this Act are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

Subsection a lists types of unanticipated additional receipts that are appropriated subject to review by the Legislative Budget and Audit (LB&A) Committee. This standard language permits requests for additional capital authorization to be submitted to the LB&A committee for approval. Similar language in the operating budget applies only to operating authorization. The operating language excludes test fisheries receipts and corporate receipts of the Alaska Aerospace Development Corporation.

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) exceed the estimates appropriated by this Act, the appropriations from state funds for the affected program may be reduced by the excess if the reductions are consistent with applicable federal statutes.

Subsection b permits state authorization to be reduced if unanticipated money is received for projects funded by state funds. There is no formal process for tracking potential reductions.

(c) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) fall short of the estimates appropriated by this Act, the affected appropriation is reduced by the amount of the shortfall in receipts.

Subsection c automatically limits authorization of federal and other receipts to the amount actually received. The language applies to all appropriations in the Act, not merely to appropriations subject to LB&A review.

*** Sec. 8. FUND TRANSFERS.** (a) The income earned during fiscal year 2011 on revenue from the sources set out in AS 37.13.145(d) is appropriated to the Alaska capital income fund (AS 37.05.565).

Subsection a appropriates the FY11 earnings associated with the State vs. Amerada Hess settlement (held within the Permanent Fund) to the Alaska Capital Income Fund. This fund was established in FY05 and is customarily appropriated for capital projects.

Legislative Fiscal Analyst Comment: *Capitalization of the fund is preferable to direct appropriations from the Permanent Fund Earnings Reserve Account. Because the precise amount of earnings is unknown, the amount available for appropriation is unknown. Putting the money in a non-lapsing fund ensures that all available earnings are appropriated while reducing the danger of appropriating more money than is available.*

Funding: The Amerada Hess settlement portion of the Permanent Fund is "fenced off" from the rest of the Permanent Fund principal. The earnings on this $425 million portion have historically been projected at $28 million per year based on the expected rate of return on Permanent Fund investments. Actual earnings (in millions) from FY05-09 are: FY05 - $27, FY06 - $37, FY07 - $42, FY08 - $33, and FY09 - $0. Current projections for FY10 and FY11 are $0 and $3 million

respectively. The low earnings projections for FY10 and FY11 are the result of the way the Permanent Fund accounts for investment losses experienced in FY09. These figures will increase if the legislature disagrees with the accounting choices made by the Permanent Fund. For details, see a discussion paper on this topic posted to the Legislative Finance website.

(b) The following amounts are appropriated to the election fund required by the federal Help America Vote Act:

(1) interest earned on amounts in the election fund required by the federal Help America Vote Act;

(2) the sum of $1,075,000 from federal receipts;

(3) the sum of $56,500 from the general fund.

Subsection b capitalizes the Election Fund with federal Help America Vote Act (HAVA) funds, the earnings of the Election Fund, and general funds for state match.

(c) The sum of $25,000,000 is appropriated from the general fund to the renewable energy grant fund (AS 42.45.045(a)).

Subsection c transfers general funds to the renewable energy grant fund for energy grant appropriations.

Funding: To date, $125 million has been appropriated to and from the fund for projects.

(d) The sum of $150,000,000 is appropriated from receipts of the Alaska Housing Capital Corporation created under AS 18.56.086 to the Alaska Gasline Inducement Act reimbursement fund (AS 43.90.400(a)) for the natural gas pipeline project construction inducement under AS 43.90.110(a)(1).

Subsection d capitalizes the AGIA Reimbursement Fund with $150 million from the savings account created within the Alaska Housing Finance Corporation. Under AGIA the state will provide matching contributions in the form of reimbursements (not to exceed $500 million) to the licensee (TransCanada) of qualified expenditures incurred in development of a natural gas pipeline. No appropriation is required to disburse money from the fund.

Legislative Fiscal Analyst Comment: *The appropriation may be $20 million more than is necessary for FY11. However, given the uncertainty of project expenditures, a little surplus in the fund may be prudent. On the other hand, a shortfall could be filled with a supplemental appropriation.*

Funding: $45 million has been appropriated to the fund with no reimbursements paid to date. Expected reimbursements through FY11 amount to approximately $175 million (as outlined in the 10/31/2009 pipeline project report http://gov.state.ak.us/agia). Placing $150 million in the fund will provide a balance of $195 million, before reimbursements.

(e) The sum of $7,000,000 is appropriated from the dividend paid to the state by the Alaska Industrial Development and Export Authority under AS 44.88.088 for the fiscal year 2011 to the power project fund (AS 42.45.010).

Subsection e transfers $7 million to the power project fund for additional power project loans. Demand for loans has increased significantly in association with $125 million of Renewable Energy Grants made available by the state. Many of the grants require

matching funds that the grantees do not have on hand. The power project fund can provide an avenue to borrow funding for this purpose.

Funding: As of 12/31/2009, the fund had an available loan balance of $4.1 million. Current loan applications total $9.5 million. $7 million would provide the fund more than sufficient capital if all the loan applications were to be processed.

*** Sec. 9. INSURANCE CLAIMS.** The amounts to be received in settlement of insurance claims for losses and the amounts to be received as recovery for losses are appropriated from the general fund to the

(1) state insurance catastrophe reserve account (AS 37.05.289(a)); or

(2) appropriate state agency to mitigate the loss.

Section 9 allows an agency to receive insurance claim settlement payments directly from a third party. Without this provision, settlements would remain in the general fund and would not be available to offset an agency's loss without a specific appropriation.

*** Sec. 10. NATIONAL PETROLEUM RESERVE - ALASKA IMPACT GRANT PROGRAM.** The amount received by the National Petroleum Reserve - Alaska special revenue fund (AS 37.05.530(a)) under 42 U.S.C. 6506a(l) or former 42 U.S.C. 6508 by August 31, 2010, estimated to be $14,882,800, is appropriated from that fund to the Department of Commerce, Community, and Economic Development for capital project grants under the National Petroleum Reserve - Alaska impact grant program.

Section 10 appropriates the entire amount received (estimated at $14.9 million for FY11) from the revenue shared by the federal government from sales, rentals, bonuses, and royalties on leases issued within the NPR-A to the NPR-A Impact Grant Program. Grants are awarded to municipalities impacted by oil and gas development in the NPR-A. AS 37.05.530(g) states that receipts not appropriated as grants are to be distributed as follows: 25% to Permanent Fund Principal, ½% to the Public School Trust Fund, and any remaining amount to the Power Cost Equalization and Rural Electric Capitalization Fund.

Legislative Fiscal Analyst Comment: *Recent capital bills contained a list of grantees and the projects to be funded. Providing this information allows it to be entered into the budget system so that it is available for future queries regarding grants.*

Legislative Fiscal Analyst Recommendation: *Grantees and a short description of projects should appear in the bill.*

Legislative Fiscal Analyst Recommendation: *Remaining balances should be appropriated to a fund other than the Power Cost Equalization and Rural Electric Capitalization Fund, which is no longer used because the Power Cost Equalization program is funded with an open-ended appropriation of general funds.*

*** Sec. 11. DEPARTMENT OF REVENUE; CONTINGENCY.** (a) The amount necessary for issuance costs relating to certificates of participation issued for real property for the University of Alaska, Fairbanks campus, Life Sciences Classroom and Laboratory facility, estimated to be $900,000, is appropriated to the state bond committee from the proceeds of the issuance of a certificate of participation for that purpose, for the fiscal year ending June 30, 2011.

(b) The appropriation made by (a) of this section is contingent on passage by the Twenty-Sixth Alaska State Legislature and enactment into law of a bill authorizing the issuance of a certificate of participation for real property for the University of Alaska, Fairbanks campus, Life Sciences Classroom and Laboratory facility.

Legislative Fiscal Analyst Recommendation: *The legislature may wish to move this section to the operating budget so it is grouped with other appropriations associated with certificates of participation.*

* **Sec. 12. LAPSE.** (a) The appropriations made by secs. 8 and 9(1) of this Act are for the capitalization of funds and do not lapse.

(b) The appropriations made by secs. 10 and 11 of this Act are for capital projects and lapse under AS 37.25.020.

Under AS 37.25.020, a capital appropriation is for the life of the project. In addition, an Attorney General's Opinion states that exclusion of a capital appropriation from a capital lapse provision (such as subsection (b)) does not prevent the appropriation from lapsing under AS 37.25.020 as long as the appropriation is "clearly a capital improvement."

Legislative Fiscal Analyst Comment: *The belief that capital appropriations have a five-year lapse is a common misunderstanding. Capital projects are initially booked in the state accounting system for five years, but are administratively extended if the funding is still needed.*

The statutes governing Grants to Municipalities, AS 37.05.315, include a provision that if substantial and ongoing work has not begun within five years of the appropriation, the funding shall lapse.

Legislative Fiscal Analyst Recommendation: *The legislature may wish to consider adding a similar provision to AS 37.25.020 in order to prevent capital projects from remaining on the books for extended periods with little to no activity.*

(c) A grant awarded in sec. 1 of this Act to a named recipient under AS 37.05.316 is for a capital project, unless specifically identified in this Act as an operating grant, and lapses under AS 37.25.020 unless otherwise stated or designated for a fiscal year.

Legislative Fiscal Analyst Comment: *This subsection is included to clarify that all grants under AS 37.05.316 are to be considered capital projects and are to lapse like other capital projects. There has been confusion in the past when some grants were booked as operating grants with a one-year lapse. This language clarifies legislative intent.*

* Sec. 13. This Act takes effect July 1, 2010.

THIS PAGE INTENTIONALLY LEFT BLANK

Comprehensive Integrated Mental Health Program

The Alaska Mental Health Trust Authority (Authority) administers the Mental Health Trust established in perpetuity. The Authority has a fiduciary responsibility to enhance and protect the Trust and to provide leadership in advocacy, planning, implementation, and funding of a comprehensive integrated mental health program (CIMHP) to improve the lives and circumstances of its beneficiaries. **The Trust's beneficiaries include:**

- People with mental illness;
- People with developmental disabilities;
- People with chronic alcoholism; and
- People with Alzheimer's disease and related dementia.

The Trust

The Mental Health Lands Trust Settlement reconstituted the Trust established by the Alaska Mental Health Enabling Act of 1956 with trust land totaling approximately 930,000 acres. **The settlement required the state to:**

- provide a cash payment of $200 million into a newly created mental health trust fund;
- establish a Trust Authority;
- return the principal of the trust fund to the Authority; and
- perpetually use the income of the trust to pay for trust administration costs and ensure improvements and continuation of the integrated, comprehensive mental health program.

Chapter 6, SLA 1994 appropriated $200 million to the mental health trust fund from the following sources:

Mental health trust income account	$33,000.0
DNR mental health trust income in the general fund	$11,700.0
Proceeds from sale of DNR land sale contract portfolio	$25,000.0
Budget reserve fund	$130,300.0

This appropriation was finalized after the superior court of the State of Alaska made its final determination that the state had satisfied its obligation to reconstitute the Mental Health Trust.

Management of the Trust: The Permanent Fund Corporation and the Alaska Department of Revenue Treasury Division manages the trust principal, the Mental Health Trust Lands Office (Dept. of Natural Resources) manages the land and non-cash assets, and the Mental Health Trust Authority (Dept. of Revenue) and its Board make recommendations for program funding.

Mental Health Funding: The Trust Authority sources of income for annual spending include:

- a percentage (currently 4.25%) of the total cash asset value of the Trust Fund Corpus (Principal);
- lapsed funds from the prior year;
- income from the Trust's account in the treasury; and

- income from rents, fees, purchase contract interest, and 15% of timber sales from the Trust Land Management.

The Mental Health Budget Process

Separate Appropriation Bill: AS 37.14.001 establishes the responsibilities and authority for management of the Mental Health Trust. The statute requires the Governor to submit a separate appropriation bill limited to appropriations for the state's integrated comprehensive mental health program. If appropriations in the bill submitted by the Governor or the bill approved by the legislature differ from those proposed by the Authority, the bills must be accompanied by a report explaining the reasons for the differences from the Trust's recommendations.

Mental Health Trust Authority Authorized Receipts: The Mental Health Trust generates revenue from the investment earnings on the $200 million trust, land sale/lease proceeds, and land use royalties. Mental Health Trust income, identified in the appropriation bill as MHTAAR or Mental Health Trust Authority Authorized Receipts, provides approximately $10 million per year for CIMHP funded programs and mental health trust administrative costs.

A unique provision of the settlement grants the Authority the power to spend mental health trust income without legislative approval. This provision does not, however, remove the legislature from spending decisions. The Trust's spending plans typically allocate substantial money to state agencies, which cannot spend the money without legislative authorization.

This approach to budgeting requires extensive cooperation between the Authority and the agencies that receive MHTAAR. The Authority considers requests from relevant agencies and beneficiary boards, and then submits a list of approved projects and funding proposals to the Governor. Although the budget is developed cooperatively, the Governor's request may make changes in MHTAAR funding without the approval of the Authority. Similarly, the legislature typically works with the Authority on any revisions to the Authority's plan.

Zero-Based Budgeting: The Trust continues zero-based budgeting of MHTAAR in FY11, meaning that all MHTAAR in state agencies was removed from the FY11 adjusted base budget. This approach emphasizes that MHTAAR funding is not based on prior year appropriations, but is an independent decision made by the Authority each year. The approach has the advantage (from the Authority's perspective) of specifying the purpose of all MHTAAR that appears in the budget. Under incremental budgeting, the purpose of continuing funding was not stated in budget transactions.

Other Funds Appropriated in the Mental Health Budget: Other state funds and federal funding are typically included in the CIMHP. These might include general funds, AHFC Dividend funds, and Alcohol and Other Drug Abuse Treatment & Prevention Funds. The Authority does not exercise as much control over this portion of the Mental Health budget. Although the Authority is typically consulted about expenditure of non-MHTAAR for mental health purposes, the Authority cannot dictate where other funds may or may not be used. Allocation of state and federal funding for mental health purposes is similar to the process that applies to the regular operating and capital budgets; state agency operating requests show changes to appropriations made the previous fiscal year. Capital requests are typically independent of prior year appropriations.

The FY11 Mental Health Budget

The Trustees approved the following five focus areas for the FY11 budget cycle:

- Bring The Kids Home;
- Affordable, Appropriate Housing for Trust Beneficiaries;

- Disability Justice for Trust Beneficiaries;
- Trust Beneficiary Projects Initiative; and
- Workforce Development

OPERATING

Mental Health Trust recommendations typically address only *increments* to the budget. The Trust's recommendations do not address FY10 GF/MH funding that remains in the base for FY11. The net requested increase in operating funding from FY10 to FY11 is approximately $8.8 million.

Statewide Total Appropriations for Mental Health Programs						
	FY07	FY08	FY09	FY10	FY11 Trust Request	FY11 Gov
State Funds	127,712.4	131,568.6	159,818.2	171,200.9	15,340.0	180,595.1
MHTAAR	11,446.4	12,308.7	13,714.2	12,636.5	12,091.2	12,087.5
Subtotal Operating	**139,158.8**	**143,877.3**	**173,532.4**	**183,837.4**	**27,431.2**	**192,682.6**
Change from previous year		4,718.5	29,655.1	10,305.0		8,845.2
State Funds	12,200.0	13,600.0	7,550.0	4,984.2	12,975.0	11,150.0
MHTAAR	2,650.0	2,500.0	3,500.0	1,650.0	2,050.0	2,050.0
Subtotal Capital	**14,850.0**	**16,100.0**	**11,050.0**	**6,634.2**	**15,025.0**	**13,200.0**
Change from previous year		1,250.0	-5,050.0	-4,415.8		6,565.8
Grand Total	**$154,008.8**	**$159,977.3**	**$184,582.4**	**$190,471.6**		**$205,882.6**

The Trust recommendations included additional state operating funds of $15.3 million in FY11. Budget requests approved by the Trust but not included in the Governor's FY11 budget request include:

- Department of Health and Social Services (DHSS): $2.3 million in Senior and Disabilities Services for:
  - traumatic brain injury services coordination;
  - emergency intervention services;
  - tele-care/smart home technology projects;
  - Alzheimer's disease and related dementia grants; and
  - establishment of a crisis response stabilization program and grant funding for clients that are developmentally disabled.
- DHSS: $1.3 million in Rural Services and Suicide Prevention for implementation of childhood and adolescent prevention grants and funding to supplement the Alaska Native Tribal Health Consortium's efforts in Crisis Intervention Stress Management training and Applied Suicide Intervention Skills training in Barrow and Dillingham.

- DHSS: $1.2 million in rate increases for Behavioral Rehabilitation crisis stabilization services providers.

The FY11 Trust-recommended appropriation of Trust Receipts (MHTAAR) totals $12.1 million. The Trust recommendations include $3.7 more for FY11 health insurance increases than are included in the Governor's FY11 budget.

CAPITAL

The Governor's FY11 capital budget request of $15.1 million for Mental Health programs is $175.0 more than the Trust's recommendations of $15.0 million. The Trust's recommendations include $2.1 million MHTAAR, $6.0 million GF/MH, and $7.0 million AHFC Dividends.

The $175.0 difference between the Trust recommendations and the Governor's budget request is the result of several actions:

- Trust projects that were not submitted to the legislature by the Governor:
  - $1.2 million in funding to aid in the construction of the new Bethel Sobering Center, grants for assistive technology projects, and essential equipment purchases for Trust beneficiaries.
- Trust project that received partial funding in the Governor's budget:
  - The Governor's budget includes $500.0 (of the $2.5 million recommended) for deferred maintenance of non-profit service providers and beneficiaries' facilities.
- Trust project to which the Governor added funding:
  - The Governor added $3.4 million to support temporary emergency housing service providers.

Some of the significant projects contained in both the Trust's recommendations and the Governor's Mental Health budget are listed below (funding levels shown are from the Governor's budget):

- MH AHFC Beneficiary and Special Needs Housing (ED 99) $1.8 million
- MH Home Modification and Upgrades to Retain Housing (ED 99) $1.1 million
- MH Coordinated Transportation and Vehicles (ED 99) $1.1 million
- MH Housing, Pre-Development, Anchorage Assets Building $500.0

Department of Administration

The mission of the Department of Administration (DOA) is to provide consistent and efficient support services to state agencies so that they may better serve Alaskans. DOA establishes policies and coordinates services among departments and provides statewide leadership and policy direction in the following areas:

- finance and accounting;
- payroll;
- information technology;
- human resources;
- labor relations;
- procurement, including final administrative decisions on statewide procurement appeals;
- facility leasing and management;
- risk management; and
- employee and retiree benefits programs for state and local governments.

Direct public services are provided through the Division of Motor Vehicles which collects revenues from vehicle titling and registration and driver licensing; by legal and advocacy services through the Public Defender Agency and the Office of Public Advocacy; and through the Office of Administrative Hearings which provides for adjudication services in a broad range of administrative appeals and alternative dispute resolution processes. The Department also oversees administrative functions of four independent boards and commissions (the Alaska Public Broadcasting Commission, the Alaska Public Offices Commission, the Alaska Oil and Gas Conservation Commission, and the Violent Crimes Compensation Board).

SIGNIFICANT ISSUES

The FY11 Department of Administration general fund operating budget submitted by the Governor is $1,412.1 above the FY11 Adjusted Base [$1,783.0 Unrestricted General Funds (UGF)/a reduction of $370.9 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. Alaska Oil and Gas Conservation Commission (AOGCC): $1,150.9 Alaska Housing Capital Corporation (AHCC) (UGF). The AOGCC is tasked with independent evaluation of depletion plans for reservoirs prior to the start of major gas sales from the North Slope of Alaska. The Commission is required to rule upon offtake rates, timing, and depletion plans for the fields being developed before gas sales are approved. Although the AOGCC has completed a portion of the significant reservoir evaluation studies that are necessary to accomplish these tasks, an increment of $1,150,900 is requested in the Governor's budget to complete the work.

Legislative Fiscal Analyst Comment: The AOGCC typically uses regulatory fees to pay for Commission activities. However, the depletion studies are required in advance of gas

sales, so general funds have been used to pay for the studies since FY06. This request is part of the Governor's $10.5 million appropriation to a variety of agencies for gas pipeline development.

2. **Elected Public Officers Retirement System (EPORS) Benefits: $600.0 UGF.** EPORS currently has 39 members (24 retirees and 15 surviving dependents) who receive benefits. Costs have increased due to mandatory benefit increases based upon the salaries of the positions from which members retired and the projected rise in the cost of health insurance (also a member benefit).

3. **Violent Crimes Compensation Board (VCCB): $297.9 PFD Criminal Receipts (DGF).** The Violent Crimes Compensation Board was established to help mitigate financial losses that are the direct result of violent crimes that occur against Alaskans and visitors to Alaska. In addition, the Board helps to foster victim advocacy services and promotes victim recovery. Assistance is generally in the form of payment for services, reimbursement of certain losses, and financial help to ensure the safety of Alaskan victims. Due to statewide outreach programs, the number of applicants has increased over the years, a trend that is expected to continue.

4. **Motor Vehicles: (-$668.8 Receipt Supported Services) (DGF).** The Department anticipates a reduction of $668,800 in the Anchorage Bensen Office lease that is scheduled for renewal in FY11. Terms of the initial lease included the cost of the customization (build out) of the space to meet Division of Motor Vehicles' needs. Those terms provided that, in the case of a renewal, a lesser amount would be charged.

5. **Salary Fund Source Changes: $32.1 UGF.** The Governor's budget proposes using general funds to replace a portion of other funding sources that could be used to pay for contractual health insurance increases for noncovered employees. Although the overall amount is small, seven different allocations are affected for a total of $32,100 UGF (the switch occurs from Interagency Receipts ($27,900) and the Information Services Fund ($4,200)). As an alternative to these fund source changes, DOA could either 1) charge agencies for services and let any necessary fund source changes occur in the agencies or 2) absorb these personal services costs within the individual allocation vacancy factors.

ORGANIZATIONAL CHANGES

In FY11, the following structural changes are reflected in the Governor's Department of Administration budget:

- The State Travel Office allocation within Centralized Administrative Services is re-named E-Travel. This program has been established as the managed travel program serving the State of Alaska Executive Branch, including employees, members of boards and commissions, inmates, witnesses, and other individuals that travel on official state business; and
- The Enterprise Technology Services appropriation, which had consisted of a single allocation, has split into three allocations for management and tracking purposes:
  - State of Alaska Telecommunications System;
  - Alaska Land Mobile Radio; and

- Enterprise Technology Services.

CAPITAL REQUEST

The Governor's FY11 Department of Administration capital budget totals $25.3 million. Included in the general fund category is $7.9 million UGF and $8.5 million Receipt Supported Services (RSS) (Designated GF), divided into the following projects:

- $600,000 UGF – Alaska Public Offices Commission (APOC) Electronic Filing System to complete the APOC Web Based Electronic Filing System;
- $8,500,000 RSS (DGF) – Alaska License and Vehicle Information System to replace the Division of Motor Vehicles information network. The system is thirty-plus years old and is becoming increasingly difficult to support and maintain;
- $50,000 UGF – Alaska Rural Communications Service (ARCS) Digital Conversion Planning to meet FCC mandated standards for all low power television services and expand public service to residents in bush Alaska; and
- $7,250,000 UGF – Statewide Deferred Maintenance Projects managed by the Department of Administration for Public Building Fund and non-Public Building Fund facilities as well as projects for the State of Alaska Telecommunication System infrastructure.

The capital request presented by the Governor also includes $8.9 million in non-GF projects. The most significant of those non-GF projects is $3.7 million (Information Services Fund) for Enterprise Technology Services infrastructure upgrades and support. This project contributes to the Division's core service of providing business management and information technology support to all state agencies and to citizens accessing state services.

Legislative Fiscal Analyst Comment: *A large project—replacement of the state's payroll and accounting software—is significant in its absence. In FY10, the Department requested (but did not receive) $76 million to work toward replacing legacy administrative systems, primarily the statewide accounting system (AKSAS) and payroll system (AKPAY). The continued operation of these systems is threatened by their age and the antiquated software languages in which they are written. The legislature previously appropriated $41 million for this massive project, which is projected to take at least six more years to complete and to require many more millions of dollars.*

Legislative Fiscal Analyst Comment: *As in previous years, direct appropriations for costs associated with public employees' retirement systems are segregated from the Department's budget in order to avoid overstating the Department of Administration's budget. A total of $357.6 million in direct appropriations for retirement include:*

*(a) **$190,850.3 GF for the teachers' retirement system** defined benefit plan account;*

*(b) **$165,841.2 GF for the public employees' retirement system** defined benefit plan account;*

*(c) **$84.2 GF for the Department of Military and Veterans' Affairs AK National Guard and Alaska Naval Militia** defined benefit plan account; and*

*(d) **$788.9 GF for the judicial retirement system** defined benefit plan account.*

Department of Commerce, Community, and Economic Development

The Department of Commerce, Community, and Economic Development (DCCED) provides a wide range of development services to private businesses, aids in protecting the public by regulating certain industries, and provides services to communities. The Department:

- provides general assistance and access to capital markets for businesses;
- coordinates numerous state grant and loan programs;
- manages programs aimed at key economic sectors such as electric power generation, tourism, aerospace, mining, and fishing;
- participates in the marketing of Alaskan products and visitor attractions;
- regulates banking, securities and corporations, insurance, occupations and public utilities;
- provides services to local governments and unincorporated communities in the form of grants and direct technical assistance; and
- administers programs offering assistance in the areas of government and financial management, utilities, planning, and energy management.

SIGNIFICANT ISSUES

The FY11 Department of Commerce, Community, and Economic Development general fund operating budget submitted by the Governor is $437.2 above the FY11 Adjusted Base [$2,640.1 *reduction* of Unrestricted General Funds (UGF)/$3,077.3 increase of Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Alaska Seafood Marketing Institute (ASMI) Campaign: $1 million UGF.** ASMI's $1 million UGF increment request increases ASMI's total GF budget to $3.7 million (an increase of 37.5% over FY10). Of the $3.7 million total, ASMI plans to spend $2.2 million to access the Federal Market Access Program's (MAP) formula funding (a 2:1 match) that must be spent on International marketing. Another $1.5 million will be used in the domestic market for core program activities and promotions. More specifically, ASMI argues that the funding is needed for the following:

   - **To mount a major sustainability campaign in Europe** to combat the perception that Alaska Seafood is not sustainable unless it has a Marine Stewardship Council (MSC) endorsement;
   - **To maintain its purchasing power.** The weaker U.S. dollar has reduced ASMI's purchasing power abroad;
   - **To access more federal funds for International marketing.** Because the ability to raise matching funds counts for 40% of the Federal Market Access Program's funding formula, Alaska has been less successful than other states at accessing the full amount that could be available to it;

- **To offset the anticipated loss of revenue from industry funds.** ASMI expects a drop of $1-2 million in industry funds (based on ex-vessel prices) in FY10 and FY11. They plan to replace lost industry funds with UGF and use the funds in the domestic market; and
- **To take advantage of currently existing opportunities to capture more of the domestic market** due to reduced Chilean imports resulting from farm disease.

2. **Power Cost Equalization (PCE): $1.36 million UGF decrement.** Although language in the operating budget bill appropriates general funds in the amount necessary to pay for the PCE program, the Department revised its expenditure projections downward due to the lower cost of fuel, fewer eligible grantees, and lower consumption projections.

   In addition, the amount available from the PCE Endowment for FY11 is calculated to be $23,834.4 (less $160.8 for the Department of Revenue management fees), which is an increase of $2,780.9 over the amount budgeted in FY10. Funds from the Endowment replace UGF.

3. **Community and Regional Affairs: $440.9 million UGF.**

   - **Local Government Assistance: $343.9 GF.** This request funds three positions to provide technical assistance to at-risk communities with populations between 25 and 2500. Currently, three staff cover 386 communities. According to the Department, of these 386 communities, 40% (or 153) are not meeting federally required management sustainability indicators. Non-compliance renders the communities ineligible for state financial assistance and places state and federal infrastructure investment at risk.
   - **Assistance with Alaska Native Claims Settlement Act (ANCSA) 14(c) actions: $97.0 GF.** This funding will support a position to provide communities with land management, site control verification, planning assistance services and management of ANCSA 14(c) actions.

     When ANCSA was passed in 1971, 95 unincorporated communities had a land conveyance obligation to the State under section 14(c)(3). Over 50 communities still have not completed the conveyance of land to the village corporation to be held in trust for a future municipality.

     Site control and land status verifications are needed to ensure clear title on village corporation land. Lack of this verification can result in legal issues and can hold up capital grants disbursement. Other departments and entities depend upon the Department's verification actions to allow for the disbursement of capital grants and to avoid legal complications resulting from unresolved land status issues.

4. **Banking and Securities: $164.0 DGF.** An increment of $164.0 is requested to pay travel costs to conduct eight safety and soundness examinations and approximately 68 compliance examinations on a 12-18 month cycle. In addition, this funding will pay travel costs of recently hired examiners to receive specialized training in areas such as: Capital Adequacy, Asset Quality, Management Ability, Earnings Adequacy, Liquidity Management, Sensitivity to Market Risk, Operations, Internal Controls and Audit, and a Compliance Review. *This is an increase of 84.3% in the travel line from FY10.*

5. **Insurance Operations: $200.0 DGF.** By statute, Insurance must notify up to 37,000 licensees whenever there is change in rules, regulations or policy that may impact

licensees. Print, mail and legal costs have increased by $300.0 in two years. This increment is requested to help offset these rising costs.

6. **Federal Program Funding for National Forest Receipts: $1.4 million Federal Receipts.** The Department anticipates receiving and distributing (to local governments) $17.1 million in National Forest Receipts. This is an increase of $1.4 million over FY10.

ORGANIZATIONAL CHANGES

There are no significant organizational changes.

CAPITAL REQUEST

DCCED's total capital budget is nearly $96.1 million—$37.4 million of which is federal money. The budget consists of a diverse mix of grants and capital projects, most of which are more clearly described as *passing through DCCED* rather than *going to DCCED*. The pass-through projects include rural power and transportation systems, community economic assistance, port expansion and cruise ship industry enhancements. Projects requested by DCCED include:

- $609,000 of RSS for a Banking and Securities Imaging project; and
- $326,000 of RSS to replace and consolidate many of Division of Community and Regional Affairs' (DCRA) computer applications.

Legislative Fiscal Analyst Comment: Because DCRA does not generate receipts that can be used to pay for various software applications, this funding source is invalid. If the project is approved, the funding source should be replaced with general funds.

Department of Corrections

The mission of the Department of Corrections (DOC) is to provide secure confinement, reformative programs, and a process of supervised community reintegration to enhance the safety of Alaskan communities. The Department:

- provides secure confinement;
- provides reformative programs; and
- provides supervised re-entry.

SIGNIFICANT ISSUES

The FY11 Department of Corrections general fund operating budget as submitted by the Governor is $2,600.8 above the FY11 Adjusted Base [$3,452.3 Unrestricted General Funds (UGF)/a reduction of $851.5 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. Although Alaska's **prison population** had a small and anomalous decline in 2008, the long-term upward trend in population continues to increase departmental costs. The population typically exceeds 100% of approved institutional emergency capacity. With increased law enforcement by local and state agencies, the Department has no expectation of a long-term decline in the offender population. The Department addresses the prison population issue with the following increments:

a) **Wildwood Correctional Center: $1,250.8 GF ($1,242.8 UGF, $8.0 RSS (DGF)).** In FY09, the Wildwood Correctional Center received an increment of $1.115 million to convert and operate two existing buildings that could house 80 offenders. However, due to delays from unforeseen construction problems (primarily asbestos abatement), the legislature reduced the operating funding request in FY10.

With construction now completed, this increment provides the full funding needed to cover FY11 operating costs.

b) **Community Residential Centers (CRC): $900.0 UGF.** This increment includes:

- **$500.0 UGF** to fully fund the addition of 43 regular beds for which the Department began contracting in FY09. This request, combined with the $719.2 UGF increase the Department received in FY10, will meet the full costs associated with these additional beds and reduce the Department's number of "hard bed" placements.
- **$400.0 UGF** for an annual 2% Consumer Price Index (CPI) rate increase included in the professional services contracts with five of the six department CRC providers.

c) **Community Jails: $300.0 UGF.** The City of Kodiak is in the process of opening a new facility to house the City's police department and jail. Due to the staggered completion dates of these two units, the Department is requesting one-time funding to keep the old facility operational until the new jail comes on line in early FY11.

d) **Offender Habilitation Programs: $150.0 UGF**. During FY08, the Department of Corrections began a construction apprenticeship program in conjunction with the Department of Labor at the Palmer Correctional Center (PCC). This request will allow the program to expand to other institutions, primarily the Pt. Mackenzie Work Farm and the Wildwood Correctional Center.

2. **Fund Change/Inmate Health Care: $859.5 UGF from PFD Criminal Funds (DGF).** Permanent Fund Dividend (PFD) Criminal Funds are available for appropriation due to the number of convicted felons and third time misdemeanants who are ineligible to receive a PFD. Because available funding depends on the amount of PFDs and the number of affected inmates, the amount of PFD Criminal funds is volatile. For FY11, the Department of Revenue calculated the amount available for appropriation to be $1.7 million less than in FY10.

   The requested fund change replaces the Department's portion of that reduction with UGF (as anticipated by the Legislative Finance Division) in order to maintain services.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Agency's $6.9 million UGF capital budget is comprised primarily of a $6.5 million proposal for deferred maintenance projects. The majority of the 117 state-owned buildings the Department is charged with maintaining are over 20 years old, and 20% are over 30 years old. This appropriation will fund the most urgent safety, environmental, utility infrastructure, security and projects in the Department.

The Department's other two capital projects include:

- Anchorage Correctional Complex Renovation and Remodeling: **$350.0 UGF**
- Community Jails Repairs, Renovations, and Equipment: **$100.0 UGF**

Department of Education and Early Development

The Department of Education and Early Development (DEED) is committed to ensuring quality standards-based instruction to improve academic achievement for all students. The Department is responsible for funding and regulating the state's K-12 schools as well as administering school debt reimbursement and grants for school construction/major maintenance. Core services include the following:

- provide and evaluate a Comprehensive Student and School Standards, Assessment and Accountability System for all students and schools in Alaska that is based on student, school, educator, and culturally responsive standards and state and federal requirements;
- provide and support standards-based professional development and mentoring for Alaska's educators to ensure high quality and student achievement;
- provide a statewide program to ensure all students have the foundational skills required for a successful transition to college and/or the workforce after high school;
- secure and award state, federal, and private educational funding to school districts and other educational organizations to result in higher student achievement; and
- provide high quality data to school districts and stakeholders through the use of the Alaska Statewide Longitudinal Data System.

The Department also houses Commissions and Boards (including the Professional Teaching Practices Commission, the Alaska State Council on the Arts and the Alaska Postsecondary Education Commission) and is responsible for Mt. Edgecumbe Boarding School, EED State Facilities Maintenance, and Alaska Library and Museums.

SIGNIFICANT ISSUES

The FY11 Department of Education and Early Development general fund operating budget submitted by the Governor is $58,440.8 above the FY11 Adjusted Base [$60,639.5 Unrestricted General Funds (UGF)/a reduction of $2,198.7 Designated General Funds (DGF)]. This General Funds (GF) change is due primarily to statutory adjustments to the Foundation Program, but also incorporates six increments and two decrements.

Significant issues are highlighted in the notes below and correspond to the numbers in the last column of the preceding spreadsheet.

1. K-12 Education Formula Funding. Because education funding changes are likely to come through legislation rather than subcommittee action, the discussion here is brief and general. The statutory formula requires $1,065,847.4 of UGF for the Foundation Program and $63,839.2 for Pupil Transportation. Total funding for K-12 Support programs is increasing by $58.2 million over FY10.

Two years ago, the legislature adopted a three-year education plan presented by an Education Task Force. The recommendations (adopted in HB 273 (Ch. 9, SLA 2008)):

- increased the Base Student Allocation (BSA) by $100/student/year for FY09, FY10, and FY11;

- increased the geographic differential paid to school districts with high operating costs; and
- increased the amount paid to school districts for approximately 2,000 intensive-needs students who experience health conditions and disabilities requiring daily monitoring and assistance with their school day activities.

FY11 is the final year of a three-year phase-in of significantly higher payments to school districts. In FY11, the Base Student Allocation is $5,680.

Section 21(t) of the Governor's operating budget bill appropriates $1.131 billion from the general fund to the Public Education Fund (PEF). That amount is the projected need for K-12 formula funding for the Foundation Program and Pupil Transportation for FY12, and is about $14.4 million more than the projected need for FY11.

Legislative Fiscal Analyst Comment: *Under the concept of forward funding, the amount appropriated in a given year is the amount projected to be needed in the following year. FY10 budget bills contained appropriations of $1.1 billion from the Constitutional Budget Reserve Fund (CBRF) to cover education costs in FY11, but the supermajority votes required to transfer funds from the CBRF failed. The supermajority vote failure does not affect K-12 funding in FY10 (because the PEF contained sufficient money to fund the formula in FY10), but it left the PEF without the $1.1 billion expected to be required for K-12 education in FY11. A return to forward funding would require an appropriation of FY11 costs in addition to the FY12 costs that are included in the Governor's operating bill. The Governor has indicated that he intends to request the $1.1 billion for FY11 in a supplemental bill.*

2. **Age-4 Pre-Kindergarten Program: $2,000.0 UGF.** This request is for the second year of program implementation for an Alaska pre-kindergarten program. According to the Department, this preschool program provides a voluntary, comprehensive, half-day for four-year olds and early five-year olds based on the standards set forth in the Alaska Early Learning Guidelines. Participating school districts are funded through a competitive grant process. It is anticipated that the preschools will serve 500 children statewide and that, eventually, this project will provide the framework and guidance for the creation of local programs in a variety of urban, rural, and remote sites.

Legislative Fiscal Analyst Comment: *In FY10, the legislature approved $2 million as one-time funding for an Age 4 Pre-K Pilot Program. For FY11, the Department requests that this amount be added to its base budget.*

3. **WWAMI Medical Education Contract Increase: $310.0 UGF.** This increment is required for implementation of the expanded program under Alaska's contract with the University of Washington School of Medicine (UWSM). In the spring of 2007, the Alaska WWAMI program expanded class size from 10 to 20 incoming students per year (Ch. 5, SLA07, AS 14.42.030(d)). The basis for the funding structure is determined by a partnership contract between the UWSM, the University of Alaska, and the State of Alaska. Students attend a year of training at the Anchorage campus of the University of Alaska before attending the UWSM in Seattle, Washington. The Postsecondary Education Commission acts as the state's fiscal agent and administers WWAMI participants' services agreements/loans. Funds are used for education and administrative costs for second, third and fourth year students, which average over $40,000 per student per year. In addition, the program provides support for clinical sites in Alaska. WWAMI program administration and community clinical unit costs run about

$300,000 per year. Since the inception of the program in 1971, approximately 400 students have been enrolled in this program, which to date has a 95% graduation rate.

4. **Executive Administration Specialists for Math, Science, and Reading: $291.7 UGF.** The Executive Administration allocation includes a request for additional funds ($291.7 UGF) aimed at improving school district support services. According to the Department, three permanent, full-time positions (Education Specialist II (Range 21)) will be added as content specialists for math, science, and reading. Each content specialist will work with school districts to help them align their curriculum to Alaska Grade Level Expectations in reading, math, and science. They will also serve as a resource for the State System of Support team and their Technical Assistance Coaches. These specialists will collect, report, and analyze student performance data, serve on advisory committees, search for potential grants, and review methodology for increasing student achievement.

5. **Early Learning Coordination: $200.0 UGF.** This one-time increment continues funding for a grant to Best Beginnings, a public-private partnership that works to mobilize people and resources to ensure that Alaska children begin school ready to succeed. These funds are intended to support early literacy and the Imagination Library in providing matching grants to local communities to purchase children's books.

6. **Special Schools – Additional Transportation Services School for the Deaf: $180.0 UGF.** Under agreements with the Department of Education and Early Development, the Anchorage School District has operated the Alaska School for the Deaf for many years. The program is operated in three different schools in the Anchorage area—Russian Jack Elementary, Hanshew Middle School, and East High School. Additional funding is needed in FY11 to provide transportation services from Mat-Su to the program schools.

7. **Student and School Achievement Technical and Vocational Education Program Funding (TVEP): $38.3 TVEP Receipts (DGF).** The increase in TVEP funding matches revenue projections for FY11. This increment request supports a grant to the Galena School District estimated at $416,200 for FY11. Funding is used to build up a prepared resident workforce through early career education. By integrating both vocational and traditional academic education, students are prepared for development of occupational skills in areas such as automotive, food services, child care, and cosmetology.

8. **Alaska Challenge Youth Academy (ACYA) – Formula Decrease: ($602.3) UGF.** The academy is operated by the Department of Military and Veterans Affairs (DMVA) and is funded through a Reimbursable Services Agreement with DEED in accordance with AS 14.30.740. The total FY11 general fund budget for the ACYA will be $5,826,800. This amount reflects a decrease in FY11 of $602,292 and is calculated using the student base allocation amount of $5,680. Given the fact that the Department of Military and Veterans Affairs federal grant is more than was initially anticipated, the department reduced its request for state aid.

Legislative Fiscal Analyst Comment: *The legislature may wish to revisit this formula program. The current statutory program support formula provides seven times the base student allocation for ACYA residential students plus a smaller non-resident amount. The legislature may wish to consider a direct appropriation to DMVA, as DEED has no*

legal responsibility for the ACYA and, therefore, should not act as a pass-through agency.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

In addition to school district major maintenance grants totaling $24.8 million, the Department of Education and Early Development's FY11 capital budget includes $1.7 million UGF for continued work on deferred maintenance and construction projects from the overall Mt. Edgecumbe High School capital project plan. Specific projects are determined by an annual review including verification that the school is performing maintenance and operation tasks in accordance with the requirements of AS 14.11.011.

Legislative Fiscal Analyst Comment: *The school debt reimbursement program is shown in a separate section of this overview that addresses debt obligations (see table on page 54).*

Department of Environmental Conservation

The Department of Environmental Conservation (DEC) is responsible for protecting human health and the environment. This agency provides the following core services:

- develop and enforce standards for protection of the environment;
- provide controls and enforcement for the prevention and abatement of pollution to the environment; and
- provide controls and enforcement to protect citizens from unsafe sanitary practices.

SIGNIFICANT ISSUES

The FY11 Department of Environmental Conservation general fund operating budget submitted by the Governor is $901.0 GF above the FY11 Adjusted Base [$748.0 Unrestricted General Funds (UGF)/$153.0 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Environmental Protection Agency (EPA) Drinking Water Rule Implementation: $300.0 General Fund Match (UGF)/ $300.0 Federal Receipts.** The Alaska Drinking Water program is requesting funding for the adoption and implementation of three EPA rules (finalized in 2006) which the State must adopt by the end of 2010. If these rules are not adopted, the EPA will revoke approvals already given and withdraw primacy. Five new permanent full-time positions are needed to conduct the implementation, monitoring, reporting, and enforcement work associated with these rules as well as the 1,600 sanitary surveys that must be completed on a three-year cycle.

2. **Public Health Equipment Maintenance and Service Contract Shortfalls: $260.0 General Fund (UGF).** The Environmental Health Laboratory provides testing for a variety of environmental, animal, food, and water sources. Maintenance contracts for annual equipment calibration for federal certification and licensing have increased by $260.0. The Department indicates that laboratory services could cease if equipment were to break down without a maintenance contract in place.

3. **EPA and State Coordination of Outer Continental Shelf (OCS) Air Quality Permits: $150.0 General Fund (UGF).** Funds will allow the Department to add one new permanent full-time position to work with the Environmental Protection Agency in processing up to three unique and complex OCS air quality permits anticipated during FY11. OCS federal permitting requires continual coordination between the EPA, the Department and industry representatives. Approval of this increment will provide funds needed for state compliance.

4. **Toxicology Specialty Contracting: $153.0 Receipt Supported Services (DGF).** This increment funds professional services contracts with toxicologists to evaluate environmental fate and transport and drift prevention and to study issues raised by the EPA and the public during evaluations of pesticide spray proposals. The funding for this increment will come from registration fees assessed by

the Department on pesticide manufacturers outside of Alaska so their products can be sold in Alaska.

5. **Remote Maintenance Worker Program: $112.5 Federal Receipts/ $37.5 General Fund Match (UGF).** The Department is requesting general funds to match federal funds available to the Remote Maintenance Worker program. Grant funds will be distributed to seven regional health corporations that provide Remote Maintenance Workers (RMWs) to supply operations and maintenance support and emergency response services for public water and sewer systems. It has been demonstrated that the routine and regular on-site presence of the RMWs prevents catastrophic failures and helps sustain the water and wastewater infrastructure in rural Alaska.

ORGANIZATIONAL CHANGES

In FY11, the only structural change in the Department of Environmental Conservation is an allocation name change from Information and Administrative Services to Administrative Services within the Administration appropriation.

CAPITAL REQUEST

The agency's $75.3 million capital budget, of which $35.9 is GF, includes the following:

- $48.5 million for Village Safe Water and Wastewater Infrastructure Projects;
- $23.2 million for Municipal Water, Sewage, and Solid Waste Facilities Grants;
- $3 million for Statewide Contaminated Sites Cleanup;
- $450.0 for Environmental Monitoring and Assessment of Surface Waters (EMAP); and
- $200.0 for Environmental Health Lab Deferred Maintenance.

Department of Fish and Game

The Department of Fish and Game (ADF&G) is charged with protecting and improving the fish, game, and aquatic plant resources of the state, and managing their use and development in the best interests of the economy and the people of the state, consistent with the sustained yield principle.

Core Services:

- Provide opportunity to utilize fish and wildlife resources;
- Ensure sustainable and harvestable surplus of fish and wildlife resources;
- Provide information to all customers;
- Involve the public in management of fish and wildlife resources; and
- Protect the state's sovereignty to manage fish and wildlife resources.

Goals:

- Optimize habitats and economic benefits from fish and wildlife resources;
- Optimize public participation in fish and wildlife pursuits; and
- Increase public knowledge and confidence about management of fish and wildlife.

SIGNIFICANT ISSUES

The FY11 Department of Fish & Game general fund operating budget submitted by the Governor is $67,628.2. This is $816.6 above the FY11 Adjusted Base. The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Wildlife Conservation: $3.5 million Federal Funds. An increment of $3.5 million is requested to expand field research and wildlife population surveys and to replace funding from two FY07 and FY08 general fund capital appropriations that have been used to fund operating projects for the division. The capital appropriations totaled $3.6 million and will be 85% expended by the end of FY10. According to the Department, the increased effort by regional biologists over the past two years can be maintained in FY11 if this increment is approved.

__Legislative Fiscal Analyst Comment:__ Federal excise taxes on firearms and ammunition are distributed annually to states for propagation and management of wildlife. Because national sales of firearms and ammunition increased dramatically during the past twelve months, the Department has received anecdotal information regarding potential receipt of an additional $5 to $7 million from the federal Pittman-Robertson Wildlife Restoration Trust Fund during the next two years (FY11 and FY12). More conservative estimates of future apportionments from the Trust Fund published by the U.S. Fish & Wildlife Service in January 2009 are depicted in the table below.

Until FY06, Wildlife Conservation was funded primarily from federal funds and the Fish & Game Fund. Increased program emphasis on intensive management field work to address declining moose and caribou populations along with declining Fish & Game Fund revenue from non-resident licenses and tags resulted in requests for GF. Since

FY06, general funds have increased from $1.3 million (4% of the budget) to $6.2 million (15% of the budget).

Based on published revenue estimates, the increment requested by the Department may be unsustainable unless the sale of ammo and firearms stays at an elevated level. If sales return to historical levels, another funding source may be needed to maintain expanded services requested in the Governor's budget, or services may have to be curtailed.

Alaska's Pittman/Robertson Fund (PR) Fund Apportionment (1) & (2)	Authorized	Gov's Req	Projected (3)			
	SFY10	SFY11	SFY12	SFY13	SFY14	SFY15
Current Year Pittman Robertson Revenue	14,243.0	15,279.6	14,427.8	13,617.6	12,807.5	11,997.3
PR funding remaining from previous year	1,975.8	4,646.5	4,853.8	4,209.3	2,754.6	489.8
Total Available PR Revenue	16,218.8	19,926.1	19,281.6	17,826.9	15,562.1	12,487.1
Projected Expenditures	11,572.3	15,072.3	15,072.3	15,072.3	15,072.3	15,072.3
Revenue less Expenditures (4)	**4,646.5**	**4,853.8**	**4,209.3**	**2,754.6**	**489.8**	**(2,585.2)**

(1) ADF&G uses the prior year FFY apportionment for the following state fiscal year.
(2) Projected apportionments based on USFWS table for SFY11-13. Amount for apportionments times 4.2%. Example; 363,800 x 5% from FFY10, planned for ADF&G use in FY11.
(3) Projected expenditure authorization for FY11 based on Governor's FY11 Budget Request. SFY 12 & 13 projected at FY11 level.
(4) Numbers noted as "Revenue less Expenditures" continue to be available to ADF&G as each apportionment has two years to be obligated.

2. **Wildlife Conservation: $486.6 (UGF).** Wildlife conservation is requesting two UGF increments for the following items:

- **Intensive Predator Management: $250.0 UGF.** This increment will fund focused predator management for three game management units (GMU) identified by the Board of Game under the Intensive Management statute. Costs of recent field operations for predator control were between $100.0 and $125.0 for a two to three week effort. Three operations are planned for FY11, each necessitating helicopter support costs between $50.0 and $100.0.
- **Endangered Species Act Listings Coordination: $236.6 UGF.** This increment allows the state to become more involved in aspects of the federal Endangered Species Act (ESA) process. Once a decision is made to list a species, the ESA specifies that critical habitat must be designated. Making a designation requires balancing biologic needs associated with species recovery against economic issues. A recovery plan must be prepared that specifies recovery objectives and research needs.

3. **Commercial Fisheries, Westward Region Fisheries Mgmt.: $130.0 (UGF).** The Department is requesting replacement of federal receipts that are no longer available for the Yukon River Chinook stock ID project. The project applies genetic stock identification to Chinook salmon fishery harvests by collecting and analyzing fish from commercial, subsistence, and test fisheries throughout the mainstream Yukon River. Samples from lower river commercial and/or test fisheries will be analyzed in-season.

The primary application of this information is to determine the proportion of Canadian-origin Chinook salmon in fishery harvests in the U.S. waters of the Yukon River, which has ramifications for the management of fisheries both in the U.S. and Canada; there are treaty-defined goals for passage of Chinook salmon into Canada. Further, knowing the abundance of Canadian-origin Chinook salmon in-season can improve management decisions made during the fishing season. These data are also used to construct brood tables and make run size projections.

Other Item of Interest: Use of Loan Funds. The Department of Commerce, Community, and Economic Development remains concerned about the long-term health of the Commercial Fisheries Revolving Loan Fund (CFRLF), which the Department of Fish and Game has used as a funding source for several years. Because loan interest rates are linked to the prime rate, and prime rate has fallen to an all-time low, fund income is in decline. Continuing to withdraw money from the loan fund for purposes not related to lending will eventually limit the ability to make loans. Subcommittees may wish to replace $1.3 million of CFRLF receipts used by the Department of Fish and Game with unrestricted general funds. However, it should be noted that the CFRLF has received $3.1 million in direct payments from assignments of Exxon Valdez Oil Spill (EVOS) settlements and another $2.7 million is expected this fiscal year.

Legislative Fiscal Analyst Comment: Beginning in FY11, use of CFRLF receipts by the Department will appear as general fund expenditures. The receipts were added to past budgets precisely because they used to appear as "other funds." Perhaps now that CFRLF receipts will be counted as GF expenditures, a fund source change to unrestricted general funds will be easier to accomplish. If the CFRLF has a surplus balance now or in the future, the fund should simply transfer money to the general fund rather than have receipts appropriated for uses other than those specified by statute.

ORGANIZATIONAL CHANGES

The Division of Commercial Fisheries has been consolidated into a single appropriation called Commercial Fisheries. This means that SE Region, Central Region, Alaska Yukon Kuskokwim (AYK) Region, Westward Region, Headquarters and the Special Projects allocations will no longer be separately identified in the budget. According to the Department, this change will significantly streamline administrative functions.

CAPITAL REQUEST

The Department of Fish and Game requested twelve capital projects totaling about $31.3 million ($4.3 million UGF; $1.4 million Other Funds, and $25.7 million of Fed Rcpts). The major projects are highlighted below:

- **Pacific Coastal Salmon Recovery Fund: $15.0 million Fed Rcpts.** The Alaska portion of the Pacific Coastal Salmon Recovery Fund (PCSRF) federal appropriation is estimated to be $15.0 million. Funding comes to the state through a Memorandum of Understanding in which the U.S. Department of Commerce designates the Alaska Department of Fish and Game as the program manager. This program seeks to manage salmon populations for sustainability.
- **Statewide Employee Housing Infrastructure Needs/Upgrades: $850.0 UGF.** This funding is requested for specific housing projects to address the Department's most critical employee housing needs. Depending on the location and local conditions, the Department will either construct and purchase pre-fabricated housing units, or purchase and modify existing structures in various communities.
- **Sport Fish Recreational Boating Access: $775.0 F&G Funds, $2.325 million Fed Rcpts.** This annual request authorizes the Division of Sport Fish to continue to construct and upgrade boating and sport fish access facilities statewide from funds comprised of 75% federal assistance and 25% Fish and Game Fund state match.

Projects include boat launches, mooring floats, parking lots, restrooms, fish cleaning facilities, and other facilities for recreational boaters.

- **Facilities, Vessels, and Aircraft Maintenance, Repair and Upgrades: $700.0 UGF.** This request provides funding for repair, maintenance and renovation of Department facilities statewide and vessel and aircraft repair and maintenance. This is an annual ongoing request.
- **Statewide Storage/Shop Facilities Upgrades: $700.0 UGF.** This request provides funding to upgrade/replace many of the Department's old and deteriorating enclosed secure storage and similar facilities with new code compliant and low maintenance types of structures.
- **Endangered Species Act Listed Marine Mammals Research: $150.0 UGF/Match; $450.0 Fed Rcpts.** This project leverages federal grant opportunities to conduct research that will expand the state's knowledge base of the Endangered Species Act (ESA) listed marine mammals in Alaska to ensure appropriate implementation of the ESA with minimal burden on resource development activities.
- **Genetic Analysis: $750.0 UGF.** This project funds continued studies using genetic stock identification to identify the stock composition of Western Alaska chum and sockeye salmon fisheries. This is the second half of a request for $1.5 million submitted in FY10 and the Department contends that this funding is necessary to complete the project's objectives.
- **Kodiak Warehouse/Compound Upgrades: $450.0 UGF.** This request funds improvements to the design of the Department's Kodiak warehouse. It will allow upgraded siding, garage doors, windows and other improvements.

The remainder of ADF&G's request includes seven projects totaling $791.0 in the areas of software development, salmon assessment, and interagency cooperation resources.

Office of the Governor

The Governor's Office is responsible for the operation of the executive branch of Alaska State government, with fiscal and policy duties conferred by the Alaska Constitution and statutes. The Governor also oversees the Alaska State Commission for Human Rights, Redistricting Planning, the Office of Management and Budget, and the Division of Elections.

SIGNIFICANT ISSUES

The FY11 Office of the Governor general fund operating budget is $10,345.0 above the FY11 Adjusted Base (all in Unrestricted General Funds (UGF)). This change is due to three Division of Elections' increments and one language section for In-State Natural Gas Pipeline Development. Significant issues are highlighted in the notes below and correspond to the numbers in the last column of the preceding spreadsheet.

1. **Resource Marketing and Development In-State Natural Gas Pipeline Development: $6.5 million AHCC (UGF).** The Governor requested an increment to continue work related to the development of an in-state natural gas pipeline. The increment addresses several projects:

   - $2.25 million for completion of the pipeline right-of-way permitting effort;
   - $500.0 for completion of the cost-of-service cost estimate for the stand alone pipeline project;
   - $3.5 million to gather detailed engineering data which will become the basis for the future detailed engineering design of the project; and
   - $250.0 for preparation for the sale of the In-State pipeline asset to a future pipeline company.

   Legislative Fiscal Analyst Comment: *Arguably, these requests might be more appropriately placed in the Department of Natural Resources. However, moving them from the Governor's Office is unlikely to change what is done or the cost of doing it.*

2. **Elections: $3,845.0 (UGF).** The Governor requested the following three increments:

   - $3,693.8 to conduct the statewide primary and general elections (includes the addition of 29 temporary positions);
   - $77.2 for purchase of redistricting equipment to enable staff training prior to the FY12 redistricting plan implementation; and
   - $61.0 for increased annual costs of Regional Educational Attendance Area (REAA) and Coastal Resource Service Area (CRSA) elections (primarily due to increased postage rates and printing costs). A $13.0 increase for annual optical scan maintenance is included in the transaction.

   Legislative Fiscal Analyst Comment: *The requests associated with primary and general elections are about 7% higher than a similar request for FY09 elections. This amount is consistent with salary and other cost increases since FY09.*

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Governor's Office FY11 capital budget contains two projects related to the Division of Elections.

- $1,131,500 (Election Fund)–Elections Reform under the Federal Help America Vote Act (HAVA). The funds will be used to improve the administration of elections. Funding includes $56.5 of general fund match.
- $123,800 (GF)–Division of Elections Technology Refresh. This project funds replacement of personal computers and software updates. Project backup indicates the intent to schedule a similar project every four years, concurrent with each gubernatorial term of office.

Department of Health and Social Services

The Department of Health and Social Services (DHSS) promotes and protects the health and well-being of Alaskans through the following core services:

- provide the highest quality of life in a safe home environment for older Alaskans and veterans;
- manage an integrated and comprehensive behavioral health system based on sound policy, effective practices, and open partnerships;
- promote safe children and strong families;
- manage health care coverage for Alaskans in need;
- hold juvenile offenders accountable for their behavior, promote the safety and restoration of victims and communities, and assist offenders and their families in developing skills to prevent crime;
- provide self-sufficiency and basic living expenses to Alaskans in need;
- protect and promote the health of Alaskans;
- promote the independence of Alaskan seniors and persons with physical and developmental disabilities; and
- provide quality administrative services in support of the department's mission.

SIGNIFICANT ISSUES

The FY11 Department of Health and Social Services' general fund operating budget submitted by the Governor is $54,449.0 above the FY11 Adjusted Base [$53,776.5 Unrestricted General Funds (UGF)/$672.5 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

The largest general fund increases in this year's budget are for:

- Medicaid growth—$36.2 million;
- Behavioral Health Grants for alcohol, substance abuse, and mental health treatment—$2.3 million; and
- Family Preservation for settlement of a lawsuit (Curyung and Ekwok tribes vs. State) and foster parent training—$1.4 million GF.

A few general fund increases are attributable to decreases in federal and interagency receipts (resulting in the need for general funds to replace lost funding in order to maintain service levels):

- Front Line Social Workers—the FY11 cost is $1.9 million in GF; and
- Information Technology—the FY11 cost is $975.0 in GF.

1. Medicaid Growth: $36.2 million UGF. Medicaid growth-related increases appear in the Behavioral Health (BH), Adult Preventative Dental Medicaid Services, Health Care Services (HCS), and Senior/Disabilities Medicaid appropriations. The Department states that Medicaid cost increases are based on historical trends in spending,

population, utilization, provider reimbursement rates, and federal financial participation. The Department's Medicaid growth funding requests are included in the following allocations:

Legislative Fiscal Analyst Comment: *Based on the FY11 increment for the Medicaid Program, the legislature should not be surprised to see a supplemental funding request for Medicaid growth in FY10!*

- **Behavioral Health/Medicaid, $5.4 million UGF:** This increment request is intended to maintain behavioral health services for those persons with serious behavioral health problems. The three types of services provided by BH/Medicaid are inpatient psychiatric hospitals, residential psychiatric treatment, and outpatient behavioral health services. Behavioral health services play a major role in the Bring-the-Kids-Home initiative.

  Approximately 12,000 clients (9% of all enrollees in Alaska's Medicaid program) receive Medicaid services for serious behavioral health issues.

- **Health Care Services/Adult Preventative Dental Medicaid, $256.4 UGF:** The funding request is for maintaining restorative and preventative dental services for Medicaid clients. The program provides most routine restorative dental services including exams, cleanings, tooth restoration or extraction, and upper or lower full dentures. Approximately 7,336 adult clients received preventative and restorative dental services in FY09 through this program.

- **Health Care Services/Medicaid, $17,330.2 UGF:** To maintain the current level of Medicaid core services, the Department is requesting funding to pay for a projected cost increase of 2.1% in FY11. HCS/Medicaid Services can be grouped into the following areas:

  - Direct Services are provided to the client and processed through the Medicaid Management Information System (MMIS). The diverse mix of services includes inpatient and outpatient hospital, physician, health and surgical clinic, prescription drugs, adult dental services, durable medical equipment, and prosthetic devices, among others;
  - Non-MMIS services payments for insurance premiums (Medicare), contracts for Medicaid operations, and supplemental payments to hospitals for uninsured and uncompensated care (Disproportionate Share Hospital Program or DSH); and
  - Medicaid Financing Services for activities to maximize federal funding.

  The Health Care Services' Medicaid allocation provided benefits for approximately 122,926 clients (6,374 more than FY08) at an annual cost of $4,665 per person in FY09 (latest data).

  In FY09 the percentage of Medicaid benefits went to the following groups in the following percentages: 44.0% to children, 24.8% to disabled adults, 21.4% to adults, 5.8% to disabled children, and 4.0% to the elderly.

  The State Children's Health Insurance Program (SCHIP), operated through Denali KidCare, is also included in the Health Care Services/Medicaid allocation. This program provides health insurance coverage to uninsured children whose families earn too much to qualify for Medicaid, but not enough to afford private coverage.

- **Senior and Disabilities Services/Medicaid, $13,183.7 UGF:** The budget request is to maintain the current level of institutional and home and community-based services for older Alaskans, children who are developmentally disabled, and adults with disabilities. Some clients receive care through one of the state's four Medicaid Waiver programs that allow clients to be served in non-institutional, home and community based settings rather than in institutions. Eligible clients receive services including nursing facility services, personal care services, home and community based waiver services.

  The Senior and Disability Services Medicaid allocation provided benefits for approximately 7,600 clients (200 more than in FY08) at an annual cost of $41,800 per person in FY09 ($2,600 more than FY08). In FY09, benefits went to the following categories: 54.4% to disabled adults, 41.0% to elderly adults, 4.0% to disabled children, and the remaining 0.6% of benefits were allocated between adults and children. Home and community based settings delay entry into an institution and typically save the state money.

Anticipated FMAP Fund Source Change Reversals—$35-75 million UGF—were NOT Included in the Governor's Budget Request. Federal reimbursement rates for Medicaid are set by the Centers for Medicare and Medicaid and are outside the control of state governments. A state's Federal Medical Assistance Percentage (FMAP) rate is based on the state's national rank of per capita personal income, with a minimum rate of 50%. The amount of federal funds each state receives for its Medicaid program depends on a complex array of reimbursement rates, some of which change each October 1st with the start of a new federal fiscal year.

The federal Stimulus Bill signed in February 2009 authorized a temporary increase in Federal Medical Assistance Percentage (FMAP) matching funds. Alaska's FMAP rate increased from 50.53% to 61.12% (including an unemployment rate bonus) for the period from October 1, 2008 through December 31, 2010. The rate change affected three-quarters of state FY09, all of FY10 and the first two quarters of state FY11. Unless an extension is approved, the general FMAP rate will drop to 50% for the second half of state FY11.

Legislative Fiscal Analyst Comment: The temporary increase in the FMAP rate will save the state about $25 million per calendar quarter. If the American Recovery and Reinvestment Act of 2009 (ARRA) is not extended beyond 12/31/10, a drop to 50% for the second half of FY11 would cost Alaska $50 million or more in general funds. The legislature should not be surprised to see an amendment of $50 million or more for FY11. Subcommittees may wish to discuss Medicaid expenditure projections with the Department.

2. Adult Preventative Dental Medicaid Services: $2.6 million UGF. This increment is a technical correction to the Governor's budget. A one-time funding request of $2.6 million GF was approved by the legislature in the FY10 budget. Because the Department did not remove the one-time funding from the base budget, the Governor did not submit an FY11 increment. Legislative Finance removed the funding from the base, and then added an increment of $2.6 million GF in order to match the Governor's FY11 request.

Legislative Fiscal Analyst Comment: The program was originally scheduled to sunset on June 30, 2009. Legislation was approved in last year's session extending the program

indefinitely. If approved, the $2.6 million FY11 GF increment will become part of the base budget.

3. **Behavioral Health Grants: $2.3 million UGF.** The funding is intended to treat alcohol, substance abuse and co-occurring disorders (i.e., clients with mental health and substance abuse issues). The specific budget requests are as follows:

- **Specialized Treatment Unit, $1.2 million UGF:** By statute (AS 47.37.180-205), clients can be involuntarily committed for detoxification and residential substance abuse treatment services. This funding request provides continuation funding for treatment options for chronic inebriates. One-time funding was provided for a FY10 pilot program for a Secured Treatment Unit at the Salvation Army Clitheroe Center in Anchorage. These clients are typically the most difficult to serve and use a disproportionate amount of costly resources (emergency room visits, Alaska Psychiatric Institute and state correctional institutions) as compared to other client groups or populations.

- **Detox and Treatment Capacity Alternatives to Protective Custody Holds, $518.3 UGF:** This funding will continue efforts to develop community detoxification capacity and treatment alternatives in Bethel, and avoids the high costs incurred by State correctional institutions for Title 47 substance abuse protective custody holds.

- **Substance Abuse Treatment for Pregnant Women, $500.0 UGF:** This funding is intended to expand statewide residential treatment capacity for pregnant women, alleviate travel to Anchorage and Fairbanks, encourage expansion of family-based treatment models where children can reside at the facility with the mother, and will allow for expanded intensive after care treatment.

- **Therapeutic Court – Palmer Mental Health Court, $75.0 UGF:** This funding is requested to maintain co-occurring disorder treatment services for participants at the Palmer Mental Health Court. Treatment will address underlying mental health and substance abuse issues that contributed to their contact with the criminal justice system.

4. **Front Line Social Workers: $1.9 million UGF.** To maintain service levels in FY11, the Department is requesting replacement of unrealizable federal funds and interagency receipts with general funds. The specific budget requests are to:

- **Replace Disproportionate Levels of Federal Authorization, $900.0 UGF:** This funding is requested to revise an FY06 Front Line Social Work Expansion and Title IV-E Foster Care increment. The Department indicates that federal receipts routinely fall short of the original, anticipated funding ratio. The impact was not immediately visible due to high position vacancy rates over the years.

- **Replace Unrealizable Medicaid School Based Claims, $955.3 UGF:** In August of 2008, the Centers for Medicare and Medicaid Services (CMS) conducted an audit of the Medicaid School Based Administrative (MSBA) claims. This audit resulted in the denial of CMS reimbursement claims because it was determined that the Department did not adequately follow the approved plan. Because the CMS will not be reimbursing the MSBA claims, a fund source change is requested to maintain services. The GF requested will remain in the base budget in future years.

Legislative Fiscal Analyst Comment: The legislature approved $2.1 million in GF to replace lost I/A receipts in last year's supplemental bill in several allocations for this

purpose. The subcommittee may wish to ask the Department about corrective action that will make the state eligible for federal reimbursement again.

5. **Information Technology (IT): $1.5 million UGF.** The Governor requested two fund source changes and increases for software maintenance and rising centralized IT services costs. The specific budget requests are highlighted below.

- **Replace Unrealizable Federal Receipts, $750.0 GF:** The Department is requesting funding to replace unrealizable federal receipts that were transferred to this allocation and indicates that without the funding, shortfalls will occur in the personal services line.

  Legislative Fiscal Analyst Comment: *The subcommittee may wish to discuss why uncollectible federal authorization was transferred to this allocation.*

- **Replace Unrealizable Interagency Receipts, $225.0 GF:** This request will replace (with UGF) unrealizable I/A receipts transferred from Health Care Services. The Department indicates that a cost allocation plan analysis found that Health Care Services was not charged correctly and continuation of the practice will result in audit findings.

  Legislative Fiscal Analyst Comment: *The subcommittee may wish to discuss why uncollectible inter-agency receipt authority was transferred to this allocation.*

- **Software Maintenance and Centralized IT Cost Increases, $500.0 GF:** This funding is requested for increased software maintenance and system costs for the Juvenile Offender Management Information System, the Public Assistance Eligibility Information System, and Microsoft Enterprise Licensing (server licenses and MS Office).

6. **Family Preservation: $1.35 million UGF.** The increment requests are for legal settlement costs associated with a lawsuit filed against the state, and to improve the recruitment and retention of foster parents. The specific budget requests are:

- **Judgments and Settlements, $1.2 million UGF.** The Department is seeking funding for the FY11 settlement costs of a lawsuit filed by four Alaska Native tribes. The Curyung, Ekwok, Kwinhagak, and Chevak tribes alleged that the state violated provisions of the federal Indian Child Welfare Act (ICWA) when it (1) failed to notify the tribe when it took custody of a young tribal member; and (2) failed to meet placement preferences under ICWA; and (3) failed to provide proper and timely notice of placement changes for children (who are tribal members) that were taken from their parents due to abuse or neglect.

  Legislative Fiscal Analyst Comment: *A settlement has been reached between the tribal organizations and the state. The settlement mandates that the state pay $1.2 million in FY10-FY12. An FY09 supplemental appropriation of $1.3 million GF to the Department of Law paid the FY10 settlement amount. The legislature can also expect a request of $1.2 million GF from the Department of Health and Social Services in the FY12 budget for the final settlement amount. Procedural changes within OCS, relating to the handling of tribal children, were among other agreed upon issues.*

- **Foster Parent and Parent Recruitment Training and Support, $150.0 GF.** This funding is requested to recruit and screen potential foster parents and to provide training and technical assistance to assist in the retention of foster parents.

7. **Services for Severely Emotionally Disturbed Youth: $1.1 million UGF.** This funding request would provide services, including assessments, psychotherapy, chemotherapy, case management, and rehabilitation to severely emotionally disturbed youth (SED), their families, and for youth who are at risk of becoming severely emotionally disturbed. Specific budget requests are highlighted below.

   - **Community Health Center Outpatient, Emergency Residential Services and Training, $500.0 UGF.** This request will provide funding to community health centers for innovative programs and training. The intent is to reduce the need to send youth experiencing serious emotional disturbances to more costly residential care facilities. Special populations, including children with co-occurring disabilities or extreme presentations will be targeted.

   - **Bring The Kids Home – Individualized Services, $300.0 UGF.** This funding is requested for the continued support and care of youth who experience serious emotional disturbances, but who are not qualified for Medicaid or who need services not eligible for Medicaid reimbursement. Program objectives include avoiding more costly residential treatment settings through effective interventions within the family/home.

   - **Expansion of School-Based Services Capacity, $200.0 UGF.** The Governor's request will provide funding for two initiatives. The first will track youths returning to school from residential psychiatric treatment centers and coordinate their transition to ensure educational success. The second will support evidence-based practice (Positive Behavioral Support) through pilot projects in the Ketchikan, Juneau, Sitka, and Dillingham school districts.

   - **Transitional Aged Youth, $100.0 UGF.** This funding is aimed at coordinating and sustaining community-based capacity for transitional aged youth into adulthood to ensure future productive work or educational activities. Targeted youth include those who are vulnerable to future needs for mental health, substance abuse, early pregnancy, or hospital based services, and those who have high potential for interaction with the criminal justice system.

8. **Nursing: $1.0 million UGF.** Funding is designed to maintain and stabilize the costs of public health nursing grantee services. Public health nurses deliver essential clinical and community-based services to prevent and protect against infectious and chronic diseases.

   - **Maintain and Stabilize Public Health Nursing Grantees, $1.0 million UGF.** This budget proposal would increase funding for four public health grant recipients (Municipality of Anchorage, Norton Sound Health Corporation, North Slope Borough, and the Maniilaq Association). The Department indicates that the three northern region grantees serve approximately 23,439 people living in 31 villages. The Municipality of Anchorage serves approximately 42% of the state population.

     The rising costs of salaries, travel, and overhead have adversely affected the number of nurses employed by the four public health grantees. The number of public health grantee nurses has decreased from 48 in 2003 to 29 in 2010, according to the Department.

9. **Senior Benefits Payment Program: $850.0 UGF.** The senior benefit payment program provides a cash benefit to seniors (based upon income levels up to a maximum of 175% of the federal poverty level).

This request for funding is based on a projected 4% caseload increase in FY11. The Department indicates that over 7,000 seniors have been successfully transitioned from the previous state SeniorCare program, which expired in June of 2007, to the new Senior Benefits program. In FY09, program caseloads reached a high of 9,886 seniors, with the increase attributable to outreach efforts that made seniors more aware of the program, according to the Department.

In the FY 10 Governor's request, the Department recommended a $500.0 reduction in Senior Benefits because enrollment and expenditures for the new program were lower than initially projected. The FY10 decrement was increased by an additional $221.9 during the 2009 legislative budget deliberations for a total of $721.9, with recognition that funding may need to be restored to meet future caseload needs. In FY11, the Department projects that program enrollment will reach 10,448. This projected estimate falls in line with the caseload estimate that was projected when the new program was established in June 2007.

Legislative Fiscal Analyst Comment: *The current senior benefit payment program is due to sunset on June 30, 2011. The subcommittee may wish to discuss what the future holds for Alaska's senior benefit payment program.*

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL BUDGET

DHSS has proposed a total capital budget of $19.0 million, which is comprised of $18.6 million UGF, $20.0 in federal receipts, and $300.0 in MHTAAR funding. All of the Department's capital budget requests involve deferred maintenance, renovations, repairs, and remodels of facilities. The diverse mix of projects include the Johnson Youth Center and grantee facilities, renovations of housing for persons with special needs, updating the Anchorage Assets building in preparation for transfer to the non-profit Assets, Statewide Pioneer Homes upgrades, and maintenance of 44 state-owned facilities including health centers, youth facilities, behavioral health facilities, and the Pioneer Homes.

Highlights of the Department's capital budget are described below:

- **Johnson Youth Center Renovation and Remodel — Safety and Security Needs, Phase 1 of 3, $9.9 million UGF.** The Department is re-submitting a capital budget request (that was not approved last year) to renovate and remodel the Juneau Youth facility. The Johnson Youth Center is located in Juneau and is the state's fourth oldest Center. According to a Department 2007 assessment study, threats to safety and security in this facility are a result of aging infrastructure, overcrowding, and a population with a high incidence of behavioral health issues. The original structure was designed to be a women's prison and is 30 years old and, according to the Department, needs safety and security issues addressed in order to expect positive results from the youth and staff. Examples of deficiencies include antiquated door locking systems, non-compliant cells,

unsafe utilization of existing space, and design flaws that prevent secure supervision of the residents.

- **Pioneer Homes Deferred Maintenance, Renovation, Repair and Equipment — $4.0 million GF.** This request addresses ongoing and deferred maintenance needs of the six state-owned and operated Pioneer Homes in Ketchikan, Sitka, Juneau, Anchorage, Palmer, and Fairbanks. The homes have a combined capacity of over 600 residents.

  A 2008 audit of Department-owned buildings identified $8.3 million in priority deferred maintenance needs. A priority listing has been created using ratings of urgency, fire life safety, security, building integrity, and mission efficiency. As the Department noted, once the deferred maintenance issues are resolved, ongoing annual investments would be needed to address the normal repairs and maintenance needs or the deferred maintenance backlog will continue to grow.

Department of Labor and Workforce Development

The Department of Labor and Workforce Development (DOLWD) is responsible for providing safe and legal working conditions and advancing employment opportunities. It has also been charged with developing a statewide training program for an Alaskan workforce capable of managing, constructing, operating, and maintaining a gasline. To accomplish these goals the Department provides the following core services:

- employment assistance;
- training and education;
- workforce and economic development;
- injured worker and unemployment compensation;
- statutory and regulatory assistance and enforcement; and
- assistance to people with disabilities to obtain and maintain employment.

SIGNIFICANT ISSUES

The FY11 Department of Labor and Workforce Development's general fund operating budget submitted by the Governor is $4,996.5 above the FY11 Adjusted Base [$3,339.2 Unrestricted General Funds (UGF)/$1,657.3 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Workforce Development Employment and Training: Replace $948.3 of UGF with Federal Reed Act Funding.** Labor's budget request replaces $948.3 of UGF with Federal Reed Act funding. Labor is requesting that $717.5 of the "freed up" general funds be spent in other allocations *(see table below)* and requests a decrement of $230.8 in this allocation.

Budget Request Associated with Reed Act Funding Increment Employment and Training Services Allocation			
	UGF	Fed	Total Change
Federal Reed Act Increment		948.3	948.3
General Fund Decrement	-230.8		-230.8
UGF Transfers to Other Allocations			
Workforce Investment Board	-85.0		-85.0
Labor Market Information	-47.5		-47.5
Business Services	-585.0		-585.0
Total Transfers	-717.5		-717.5
Total Budget Request	-948.3	948.3	0.0

Legislative Fiscal Analyst Comment: *According to the Department, this fully expends available federal Reed Act funding, which will need to be replaced in FY12 in order to maintain services.*

2. Workforce Development Business Services: $585.0 UGF; $1,089.9 State Training and Employment Program (STEP) Funds (DGF).

The following two increments are requested in Business Services:

- **$585.0 of UGF is requested to support part of the Department's Gasline Training Program.** The increment is intended to provide:
  - training for at least 70 apprentices at Regional Training Centers and rural campuses for registered apprenticeships in gasline related occupations ($180.1);
  - funding for cooperative training agreements with business and industry for registered apprentices and on-the-job training for approximately 125 workers ($321.7); and
  - funding for Division of Business Partnership's staff assigned to assist in development of this project ($83.2).

Legislative Fiscal Analyst Comment: *In FY10, the legislature approved one-time funding for this item. This request would make funding for the gasline training program part of the base budget.*

- **The $1,089.9 of STEP Funds (DGF) requested for workforce training will fully obligate available STEP funds.** The funds will support grants for workforce training to advance the Department's overall goal of maximizing the number of Alaskans employed in skilled occupations. The Department projects that this increase will provide training opportunities to an additional 325 Alaskans.

Legislative Fiscal Analyst Comment: *Estimated annual STEP revenue is $6.5 million. If this increment is approved, expenditure authorization will be about $10 million, which will reduce the STEP fund balance to zero. STEP funds available in FY12 are expected to be about $3.5 million less than the amount requested in FY11. According to the Department, spending the balance of the fund will* ***not*** *create a need for replacement funding; training opportunities will be reduced.*

Legislative Fiscal Analyst Comment: *Based on projections received from the Department, it appears that several of Labor's funds are being expended at an unsustainable rate (i.e., annual expenditures exceed estimated revenue). The legislature may want to explore the ramifications of continuing this trend. For more details, please see the following table.*

Department of Labor and Workforce Development
Fund Balances

		FY10				FY11*			
Fund	FY09 Year End Balance	Revenue	Expenditures	FY10 Projected Year-End Balance	Change in Year-End Balance (10 to 09)	Revenue	Expenditures	FY11 Projected Year-End Balance	Change in Year-End Balance (11 to 10)

Randolph Sheppard Small Business Fund	222.2	74.0	125.0	171.2	(51.0)	74.0	125.0	120.2	(51.0)

*FY11 projections provided by the Department of Labor and Workforce Development.

3. **Construction Academy Training: $3,500.0 UGF.** The Alaska Construction Academy received funding in the capital budget in FY07 and FY08, and in FY09 and FY10 funding was moved to the operating budget and appropriated as one-time items. This request will provide on-going funding for this program in the Department's base budget. The Department states that an aging workforce and lack of available training opportunities for young Alaskans leave the construction, mining, transportation, and energy industries with a significant shortage of skilled workers. It contends that the shortage can be remedied in part through continuation of this program.

ORGANIZATIONAL CHANGES

There are no significant organizational changes requested.

CAPITAL REQUEST

The Department of Labor and Workforce Development's capital budget totals $6,051.7, of which $4,739.0 is UGF. These projects are:

- **Alternative Energy Training Facility Expansion: $1,139.0 UGF.** Expand the Industrial Electricity training facility to add wind turbine and hydro training programs.
- **Fairbanks Pipeline Training Center Utilities and Equipment Purchase: $2 million UGF.** This request will fund the extension of sewer and water utilities to the central facility site, a heat recovery and ventilation system for the welding shop and welding and pipeline related equipment: This will make the Center fully operational for year-round training.

- **Medium/Heavy Duty Truck and Culinary Equipment: $1 million Fed Receipts; $500.0 UGF.** This funding will be used to purchase heavy duty truck equipment for the Truck Technician program (Alaska Vocational Technical Center's (AVTEC) newest program) and culinary training equipment for the culinary program.
- **Culinary Video Teleconferencing Equipment: $312.7 Fed Receipts; $100.0 UGF.** Provides video teleconferencing equipment in the new Culinary Academy facility so that AVTEC can create a distance delivered training program for rural Alaska high school students to receive training and education in the culinary industry.
- **AVTEC Deferred Maintenance: $1 million UGF.** This request is to pay for deferred maintenance needs at 16 state-owned and one leased building in Seward.

Department of Law

The mission of the Alaska Department of Law is to prosecute crime and provide legal services to state government for the protection and benefit of Alaska's citizens. The Department represents the state in:

- protecting the safety and physical and financial well-being of Alaskans;
- fostering the conditions for economic opportunity and responsible development and use of our natural resources;
- protecting the fiscal integrity of the state; and
- promoting and defending good governance.

The Criminal Division protects the public by prosecuting all violations of state criminal law committed by adults and juveniles, and by placing them under appropriate controls. The Civil Division serves the interest of Alaska's citizens by providing legal counsel to the executive branch in all civil actions. The Administrative Services Division provides the core administrative services that are essential to the day-to-day operation and to managing the resources of the Department.

SIGNIFICANT ISSUES

The FY11 Department of Law general fund operating budget as submitted by the Governor is $13,719.0 above the FY11 Adjusted Base [$13,707.0 Unrestricted General Funds (UGF)/$12.0 Designated General Funds (DGF)]. Of the $13.7 million increase, $10.0 million is for continuing Oil and Gas issues. In FY10, $9.6 million was appropriated for these same issues. The FY11 Adjusted Base was also reduced $3.5 million due to a one-time appropriation in FY10 for BP Corrosion litigation (the same amount the Department received in FY09 for this purpose). The FY11 request for BP Corrosion is $4.0 million. Other UGF increments replacing funding available to the Department in FY10 include $2.3 million for expiring federal grants and $1.0 million for Endangered Species Act matters. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Oil, Gas and Mining: $6 million UGF.** The Department is requesting funds in order to continue its role in the Governor's top priority project (the construction of a gas pipeline and bringing natural gas to market). Additionally, the Department has a number of major oil and gas projects underway that will continue to require outside counsel and experts beyond the funding included in the Department's base budget.

   - **$3.5 Million UGF** added to the base budget for ongoing non-gas pipeline and oil matters including Pt. Thomson Litigation, proceedings before the Federal Energy Regulatory Commission, TransAlaska Pipeline Service (TAPS) tariff issues, and TAPS property tax matters.
   - **$2.5 Million AHCC Receipts (UGF)** one-time increment to assist the Department in the preparation of legislation and implementation of a comprehensive plan to commercialize North Slope gas.

   In FY10, the Department received a total of $6.1 million UGF one-time funding for Oil & Gas related matters, an amount approximating the amount received in FY09. Please see the following table:

Table 1. Oil & Gas Related Funding FY09-FY11

Department of Law Oil & Gas Related Funding Base and Non-Base FY09-FY11	FY09 Budget		FY10 Budget		FY11 Request	
	BASE	NON-BASE	BASE	NON-BASE	BASE	NON-BASE
Gas Pipeline and Other Oil & Gas Projects/Oil and Non-Gas Pipeline Matters Including Pt. Thomson Litigation, FERC on TAPS Tariffs		$3.0 million UGF		$5.1 million UGF	*FY10 non-base items are combined into a single request*	
TAPS Strategic Reconfiguration Oil and Gas Outside Counsel and Experts		*Transfer through Governor's Office*		$1.0 million UGF	$3.5 million UGF	
Oil and Gas Development - Preparation of Legislation and Implementation of a Comprehensive Plan to Commercialize North Slope Gas		$3.5 million UGF				$2.5 million AHCC

Legislative Fiscal Analyst Comment: *Subcommittees may wish to ask the following questions of the Department:*

- *How are one-time increments allocated between gasline and non-gasline work?*
- *When does the agency anticipate resolution of the litigation issues mentioned in this request (i.e. Pt. Thomson)?*

Legislative Fiscal Analyst Comment: *The subcommittee may wish to consider appropriating the $3.5 million UGF increment as one-time funding. This approach is consistent with the funding method used for the BP Corrosion litigation and promotes annual legislative review of what may be varying external costs.*

2. **BP Corrosion: $4 million UGF (one-time funding).** The Department is requesting $4.0 million of UGF ($500.0 more than the FY09 and FY10 appropriations of $3.5 million) to continue the pending litigation seeking penalties and lost revenues for the 2006 Prudhoe Bay pipeline spills and production shutdowns. The state filed its complaint in Superior Court on March 31, 2009, seeking recovery of lost revenues for 2006-08 due to curtailments of oil production stemming from BP Exploration's (Alaska, BPXA) negligent corrosion practices.

   According to the Department, FY11 is a critical year for the litigation. The jury trial is scheduled for September 2011, with the bulk of the discovery and post discovery pre-trial work occurring in FY11.

3. **Replace One-Time Earmarks for Sexual Assault/Domestic Violence Grants: $2,307.0 UGF from Federal Receipts.** Beginning in FY06, the Department received three multi-year federal grants, totaling $8,288.3, for sexual assault and domestic violence prevention programs, and for a rural prosecution unit. These grants will expire between June 30, 2010 and December 31, 2010. In FY09,

$2.3 million related to these grants was expended. Because these federal funds will not be available in FY11, the Department is requesting that unrestricted general funds be appropriated to replace lost federal one-time grants. The request is for the UGF to be built into their base in order to continue funding the 16 full-time and six part-time positions now associated with these grants.

Table 2. FY11 Sexual Assault and Domestic Violence Funding Request (Federal Receipts replaced with UGF)

	Alaska Domestic Violence & Sexual Assault Prosecution Program	Rural Prosecution Unit Grant	Alaska Statewide Sexual Assault Unit Grant
2nd Judicial District	$90.0	$90.1	
3rd Judicial District – Anchorage			$335.6
3rd Judicial District – Outside Anchorage			$454.6
4th Judicial District	$285.0		$11.1
Criminal Appeals/Special Litigation	$271.6	$769.0	
Subtotal FY11 Request	$646.6	$859.1	$801.3
			OVERALL TOTAL: $2,307.0

Legislative Fiscal Analyst Comment: The Department indicated it is hoping to replace some of these funds with federal funds (yet to be identified). The subcommittee may wish to inquire on the status of efforts to supplant these funds with new federal funds.

4. **Sexual Assault Coordinator: $200.0 UGF.** In early December of 2009, the Governor announced his initiative to "eliminate the epidemic of sexual assault and domestic violence within a decade." The Governor's comprehensive approach includes concentrated coordination between the Department of Public Safety and the Department of Law in an effort to pervasively prevent and stigmatize these types of crimes. This new position will coordinate state, federal, tribal and non-profit program efforts addressing domestic violence and sexual assault prevention.

5. **Kenai Child Protection Caseload Attorney: $200.0 UGF.** Currently, the Department's one Assistant Attorney General in Kenai carries a caseload of 170 children (federal guidelines suggest a caseload of no more than 100 per attorney). In addition, there are up to 40 children's cases in Homer, which would logically be serviced out of Kenai, but are now handled out of Anchorage as a stopgap measure. The Department requests this new position to alleviate the caseload burden in Kenai and Homer.

6. **Endangered Species Issues: $1 million UGF.** Over the next three years, the Department anticipates a significant increase in legal work involving issues under the

Endangered Species Act (ESA). The state is currently challenging the Polar Bear and Beluga Whale listings as threatened species. Because endangered species listings can have severe impacts on the economy of the area where they are found, the Agency addresses these issues with the following two increments:

- **$200.0 UGF** - Assistant Attorney General for Endangered Species Issues
- **$800.0 UGF** - Endangered Species Act Outside Counsel

Legislative Fiscal Analyst Comment: *The subcommittee may wish to consider the increments as one-time funding. This approach is consistent with the funding method used for the BP Corrosion litigation and promotes annual legislative review of what may be varying external costs.*

ORGANIZATIONAL CHANGES

The following FY11 changes in the Department's organizational structure occur in the Civil Division:

- Split the Human Services and Child Protection allocation into the following allocations:
  - Child Protection Allocation
  - Human Services Allocation
- Merge the Statehood Defense allocation with the Natural Resources allocation.
- Transfer BP Corrosion appropriation into its own allocation.

Department of Military and Veterans Affairs

The mission of the Department of Military and Veterans Affairs (DMVA) is to provide military forces to accomplish military missions in the state and around the world; provide homeland security and defense; emergency response; veterans' services; and youth military style training and education. The Department accomplishes this mission by providing core services for the following:

- Alaska National Guard Joint Forces Headquarters;
- National Guard Support;
- Homeland Security and Emergency Services Management & Coordination;
- Alaska Statewide Emergency Communications (IT);
- Veterans' Services;
- Alaska Military Youth Academy;
- Administrative Services Support; and
- Special Operations.

SIGNIFICANT ISSUES

The FY11 Department of Military and Veterans Affairs general fund operating budget as submitted by the Governor is $334.3 above the FY11 Adjusted Base (all Unrestricted General Funds (UGF)). Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. Air Guard Facilities Maintenance: $240.0 GF Match (UGF). This increment would align the Department's budget with the Alaska Air National Guard's (AANG) Financial Plan. The Air and Army Guard both receive federal money for operations from the National Guard Bureau (NGB), which is the federal pass-through agency in the Department of Defense (DoD) that provides continuity and cohesiveness between the active duty military and all 54 state and territory national guards.

The Alaska Air National Guard federal employees complete an operations plan and a budget, called the financial plan (FINPLAN), for NGB consideration in March of each year. The FINPLAN, which is derived from formula-based calculations as well as estimates, goes to NGB for review and approval. NGB then allocates money to states before the beginning of the federal fiscal year. The federal allocation is typically about 90% of what was submitted in the FINPLAN. There is then a second round of allocations in mid-federal fiscal year (FFY). The Alaska Air National Guard submits requests to NGB for additional funding, and NGB distributes available federal funding to states based on numerous factors.

Historically, the State of Alaska has budgeted to the original allocation. As a result, the state match for any additional federal funding received was not specifically in the budget. The partnership between the state and the federal government hinges upon a budget match agreement, which averages 25% state funding to 75% federal funding. During the past two years, the gap between available and required GF matching funds in the Air Guard component has become increasingly apparent. The current available match is

about 19% of total authority. This increment would bring the ratio to about 23%—close to where the ratio was in FY06—and would be sufficient to match about $720.0 in federal receipts.

According to the Department, the timing of this request is critical. In accordance with the federal Base Realignment and Closure Commission law passed in 2005, the NGB is making a push to move assets from states that have multiple wings—Alaska has two wings—to states that are without. This push leaves Alaska vulnerable to losing a wing, and the risk increases if Alaska does not appropriate sufficient matching funds. Loss of a wing would mean about 500 full-time Alaska Air National Guard jobs lost, about 500 additional drill status guard member jobs lost, and millions of dollars in federal contracts lost each year. In addition, loss of a wing would reduce AANG's ability to support the active duty military as well as the ability to respond to natural disasters and search and rescue situations.

2. **Bethel Armory Lease Costs: $88.9 UGF.** In cooperation with the Federal Government, the Department is constructing a new armory ($5.2 million State funds and $15.3 million Federal funds) adjacent to the existing but aging hangar facility. Although lease costs will be periodically re-evaluated based on fair market value, the current annual land lease costs are $0.34/sq. foot @ 261,360 square feet.

3. **Alaska Military Youth Academy (AMYA) Formula: -$602.3 I/A Receipts.** By statute, the Academy is funded through a Reimbursable Services Agreement with the Department of Education and Early Development (DEED) in accordance with AS 14.30.740 (The statutory base student allocation funding is $5,680 per student in FY10). Based on the attendance at the Academy on October 1, 2009, the amount of state aid needed will decline in FY11. The total FY11 general fund budget for the AMYA will be $5,826,800 (a decrease of $602,292).

Legislative Fiscal Analyst Comment: The legislature may wish to revisit this formula program. The current statutory program support formula provides seven times the base student allocation for AMYA residential students plus a smaller non-resident amount. The legislature may wish to consider a direct appropriation to DMVA, as DEED has no legal responsibility for the AMYA and, therefore, should not act as a pass-through agency.

4. **Emergency Management Performance Grant: $1.2 Million Federal Receipts.** The Emergency Management Performance Grant Program (EMPG) is a vital part of the Division of Homeland Security and Emergency Management's preparedness mission and directly supports the state's emergency management community. The Department requests an additional $1.2 million in federal authority to meet the anticipated FFY10 need.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The agency's capital budget of $34.5 million includes $28.2 million Federal Receipts and $6.3 million Unrestricted General Funds. The larger projects include:

- **State Homeland Security Grant Program: $9.5 million Federal Receipts.** The 100% federally funded State Homeland Security grant program is annually awarded by the U.S. Department of Homeland Security. Programs include homeland security planning, equipment, training, and exercises to support local first responders, private sector critical infrastructure and state preparedness. This funding has been requested to assist in life-safety citizen preparedness.
- **Armory Facilities Deferred Maintenance: $8.4 million ($6.3 million Federal Receipts/$2.1 million GF Match).** The Department's Facility Management Office mission is to provide, maintain and operate safe, secure, high quality facilities and training areas for the Alaska National Guard on a cost effective basis which meet or exceed mission requirements, environmental compliance standards and energy efficiencies. The armories located at Jewel Lake, Fort Richardson, Sitka and Kenai top the list on the Department's deferred maintenance priority schedule.
- **Army Guard Facilities Project: $9.2 million ($7.3 million Federal Receipts/$1.9 million GF Match).** With 237 Alaska Army National Guard buildings at 96 various locations with an average age of approximately 30 years, deferred maintenance, renewal and replacement are a high priority. Alaska National Guard preventative maintenance is performed on a schedule, yet building components have a limited life requiring eventual renewal and replacement. The funding schedule for this requested project is:

Funding ($ millions)	FY11	FY12	FY13	FY14	FY15	*TOTAL*
Federal Receipts	$7.3	$8.9	$5.0	$5.0	$5.0	$31.2
GF Match	$1.9	$2.7	$1.0	$1.0	$1.0	$6.7
TOTAL	**$9.2**	**$11.6**	**$6.0**	**$6.0**	**$6.0**	**$37.9**

- **Interior Alaska Veterans Cemetery Design and Planning: $6.0 million ($5 million Federal Receipts/$250.0 GF, $750.0 GF Match).** The purpose of this project is to design and construct a dedicated state Veterans' cemetery in or near Fairbanks on donated land. The Department hopes to leverage future federal funds to offset operating costs, which are projected at $250.0 GF annually.
- **Military Youth Academy Deferred Maintenance: $1.0 million GF.** The Alaska Military Youth Academy (AMYA) operates at Camp Carroll on Fort Richardson. The campus currently has 23 buildings totaling 61,805 sq ft. with an average building age of 35+ years. Inadequacies include basic life-safety issues, outdated and inefficient heating/ventilation systems, restrooms, showers, and laundry facilities. This request will fund the modification of the Academy's ChalleNGe facilities to improve safety and living conditions (in compliance with ADA regulations), as well as improve technical training and educational training platforms.

Department of Natural Resources

The Department of Natural Resources (DNR) develops, conserves, and maximizes the use of Alaska's natural resources on state-owned land consistent with public interest by providing the following core services:

- provide opportunities to utilize state land and water resources;
- acquire and provide hydrologic, geologic, geographic, historical site, and other land record and natural resource information;
- acquire land;
- make land available for sale to the public, and transfer land to municipalities;
- preserve and enhance the value of state land and water resources and Alaska's coastal areas;
- mitigate potential disasters and hazards; and
- comply with federal regulations and programs related to natural resources.

SIGNIFICANT ISSUES

The FY11 Department of Natural Resources' general fund operating budget submitted by the Governor is $7,095.1 above the FY11 Adjusted Base [$6,552.1 Unrestricted General Funds (UGF)/$543.0 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. Resource Development Initiatives and Projects – $5.8 million AHCC Receipts (UGF). The Department is requesting funding to keep pace with Alaska's natural resource development. The largest project is the planning, development, and construction of the Alaska Natural Gas Pipeline. The agency indicates that oil, gas, and mining resource development activity within the state has increased the Department's oversight responsibilities and workload. Additional details on these items follow.

a) **Gas Pipeline Implementation Office, One-Time Funding of $4.2 million AHCC Receipts (UGF).** The Governor is requesting one-time funding for costs associated with implementing and fulfilling the responsibilities of the Alaska Gas Inducement Act (AGIA), and to ensure that the state and the licensee (TransCanada Alaska) comply with the terms of the AGIA agreement. The proposal includes the following three increments:

- **$1.4 million UGF to hire additional professional and support staff**. Pipeline engineering staff will evaluate the technical design, cost estimates, and construction schedule of the proposed 1,715 mile pipeline (750 miles within Alaska) to facilitate the complex permitting process. Habitat Biologist staff will analyze the impact of the project on Fish and Wildlife and coordinate those efforts with Alaska's Fish and Game and the US Fish and Wildlife agencies.
- **$2.3 million UGF to retain specialized consultants and experts**. Consultants will assist in pipeline engineering, practices, and analysis. Advice will be

obtained on tariffs, cost overruns, royalty valuation methodologies, enforcement remedies, and off-ramp options for the state and licensee.

- **$477.5 UGF for local, national and federal outreach efforts**. Local outreach efforts will keep local communities informed of current gasline activities that impact the areas along the gasline route.

  Funding for the federal and national outreach efforts will be used to raise awareness and educate the public and Congress on the national importance and impact of an Alaska gas pipeline.

b) **Oil & Gas Development, $1.3 million UGF**. This request is comprised of $1.1 million for on-going oil and gas development workload increases and $200.0 for outside legal counsel and consultants to assist with arbitration of oil and gas royalty issues.

- The Department contends that the **$1.1 million UGF funds existing staff** that are critical to the division's ability to work on oil and gas exploration and development issues. Without these staff, timely completion of tasks may be jeopardized.

Legislative Finance Analyst Comment: One-time funding has been added on an annual basis (since FY05) to the Department's budget to address the increased oil and gas workload. The temporary funding was intended to reflect the temporary nature of the gasline workload. This request adds funding to the base budget.

- **$200.0 UGF is requested to fund reopener arbitrations** as the state proceeds with renegotiations and arbitration of royalty issues. These "reopeners" offer the state and its lessees the opportunity to resolve disputes over royalty value, keep royalty settlement agreements up-to-date, and avoid costly and time-consuming litigations.

Legislative Finance Analyst Comment: One-time funding has been added on an annual basis (since FY09) to the Department's budget to address the cost of outside legal counsel and experts. This request will add $200.0 GF to the base budget. Subcommittees may wish to discuss how much of the Department's requests are for temporary workload and how much are continuing workload. This request is not related to gasline work.

c) **Claims, Permits & Leases, $250.0 UGF**. The Division is seeking base funding to increase their capacity (2 PFT staff and funding) to address an anticipated increase in this year's permit requests and a backlog of permit requests from previous years. Upcoming projects include: one new large mine scheduled to begin permitting in FY10, two other large mine projects in earlier stages of review, natural gas pipeline projects, potential railroad extensions, and several alternative energy projects.

2. **Geological Development – Alaska Volcano Observatory, $300.0 UGF.** GF is requested to partially replace lost federal earmarks from the Federal Aviation Administration (FAA). Funding is for the maintenance and upgrading of equipment. The Department indicates that this will allow the Alaska Volcano Observatory (AVO) to continue monitoring and mitigating the effects of the most critical volcanoes in the Cook Inlet area.

Historically, an annual federal earmark from the FAA in the amount of $5 million supplemented the monitoring and alert capabilities of the AVO. However, that federal earmark is no longer available.

The AVO is a federally funded cooperative program carried out by the US Geological Survey (USGS), University of Fairbanks, and DNR's Geological Development Office. The observatory prevents aircraft equipment failures and saves lives through alerting and monitoring the volcanic activity in the Aleutian and Cook Inlet areas. The general funds would remain in the base budget in future years.

Legislative Fiscal Analyst Comment: *American Recovery and Reinvestment Act of 2009 (ARRA) capital funding of $1.5 million was approved by the Legislative Budget &Audit Committee on December 16, 2009 to assist in continuing the current levels of operation. This temporary funding is available from December 1, 2009 through September 15, 2011. The subcommittee may wish to pursue federal funding on the basis that the monitoring and alerting cover national and international air corridors.*

3. **Information Resource Management – Statewide Parcel Database, $250.0 Receipt Supported Services (DGF).** This budget proposal would continue the creation of a statewide parcel database. A previous capital project provided the funding for the foundation of a database. The goal is to have a single source of detailed ownership, interest, and boundary information for all state lands and provide quick and easy access of land ownership for land managers, developers, first responders, and the public. The funding, along with $50.0 in federal receipts from the US Bureau of Land Management, would remain in the base budget in future years.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL BUDGET

DNR has requested a total capital budget of $29.8 million ($16.8 million GF, $11.5 million Federal, and $1.5 million Other Funds). The budget consists of a diverse mix of projects from deferred maintenance for State Parks and the Plant Material Center in Palmer to snowmobile trail development and in-state natural gas assessments, among others. A few highlights from the Department's capital budget are described below:

- **Deferred Maintenance, $4.0 million UGF.** This proposal is for deferred maintenance, equipment replacement, and emergency repairs at State Parks, the Plant Material Center in Palmer, and the Mt. McKinley Meat Plant. State Parks is requesting $3.5 million to address the most pressing problems in the park system, and to improve safety and accessibility for park visitors. $330.0 is for paving and drainage improvements to eliminate annual flooding and replace outdated farm machinery at the Plant Material Center. $190.0 will address equipment upgrades to increase efficiency, address safety concerns and reduce operating costs at the Mt. McKinley Meat Plant.

- **Land Sales – New Subdivision Development, $3.6 million Land Sales Receipts (DGF).** The funding request would authorize DNR to propose, design, and develop new subdivisions. Capital expenditures include road building and access improvements, surveys, appraisals, wetlands delineations, topographical and archaeological surveys, field inspections, and rights-of-way brushing. Alaska's Constitution and AS 38.04 and AS 38.05 require the state to make some of this land available for settlement purposes. DNR intends to offer new parcels of land for sale in FY14, FY15, and FY16.

Department of Public Safety

The mission of the Department of Public Safety (DPS) is to ensure public safety and enforce fish and wildlife laws. The Department's core services include the following items:

- perform criminal and traffic law enforcement and investigations;
- manage and perform search and rescue operations for lost and missing persons;
- provide wildlife law enforcement and investigations;
- provide support to rural law enforcement entities;
- provide security to the Alaska Court System, transport inmates to and from court and between correctional institutions, and perform extradition of wanted persons to and from the state;
- provide criminal laboratory and forensic services, administer the statewide breath alcohol program, maintain Alaska's DNA identification system, and provide expert testimony in court proceedings;
- maintain accurate and complete Alaska criminal records and information for use by law enforcement agencies in Alaska and elsewhere;
- manage building and fire codes (development, adoption, interpretation, and review), conduct building plan reviews of commercial buildings and 4-plex and larger housing units, conduct fire and life safety inspections of priority facilities; and
- enforce alcoholic beverage laws.

SIGNIFICANT ISSUES

The FY11 Department of Public Safety general fund operating budget as submitted by the Governor is $3,390.2 above the FY11 Adjusted Base [$4,043.7 Unrestricted General Funds (UGF)/a reduction of $653.5 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Sexual Assault and Domestic Violence Prevention: $1.9 million ($1.2 million UGF, $700.0 Federal Receipts).** In early December of 2009, the Governor announced his initiative to "eliminate the epidemic of sexual assault and domestic violence within a decade." The Governor's comprehensive approach includes concentrated coordination between the Department of Public Safety and the Department of Law in an effort to pervasively prevent and stigmatize these types of crimes. Major DPS increments for this initiative are highlighted below.

   a. **Domestic Violence and Sexual Assault Related Investigations, Training, and Exams: $725.0 UGF:**

   Alaska State Troopers (AST) Appropriation/AST Detachment Allocation

   - **$500.0 UGF** for three new Anchorage-based State Trooper/Investigator positions, whose primary focus will be follow-up investigations specific to sexual assault and sexual abuse of minors. Follow-up activities include locating and

interviewing witnesses, investigating "prior bad acts" committed by the offender, determining if there are any additional victims, and following up on other actions recommended by the prosecutor.

- **$75.0 UGF** to provide training for Village Public Safety Officers, Village Tribal Police Officers, and other first responders such as Behavioral Health Aides and Village Health Aides. By increasing understanding and recognition of these crimes, the Department hopes to improve first responder skills specific to this discipline.
- **$150.0 UGF** to assist local governments with paying for the costs of forensic sexual assault exams in emergency circumstances. According to the Department, without financial support, these necessary exams would not take place and vital evidence would be lost. Assistance will include the collection of evidence, documentation of injuries, and transportation to exam locations for victims in communities without access to services.

Council on Domestic Violence and Sexual Assault (CDVSA) Appropriation/CDVSA Allocation

b. **Increased Support for Domestic Violence Shelters: $381.9 UGF.** This increment represents a nearly 4% increase in funding that will go directly to shelters to offset rising utility, fuel, food, insurance, building maintenance, and personal service costs. Additionally, costs have risen as crisis centers have experienced an increase in demand for services. The Department states that this funding is needed to maintain current levels of service.

c. **Council on Domestic Violence and Sexual Assault: $697.4 Federal Receipts (one-time funding).** Beginning in FY08, the Department received a $5 million, three-year federal grant for domestic violence and sexual assault prevention programs. The Department estimates that $697.4 will be unspent by June 30, 2010. The Department is requesting an extension of both the federal grant and state appropriation lapse dates to make these funds available in FY11 for prosecution, law enforcement, and judicial services. The grant is expected to be fully expended in FY11.

Statewide Support Appropriation/Laboratory Services Allocation

d. **DNA Forensic Scientist Position: $92.8 UGF.** This increment replaces pass-through federal funds from CDVSA (that are expiring in FY10) for a position dedicated to the analysis of sexual assault cases where a suspect has not been identified. The position processes about 60 cases per year statewide. According to the Department, the position will be eliminated if replacement funds are not forthcoming.

e. **Pediatric Sexual Assault Evidence Collection Kits: $12.3 UGF.** The Department is requesting additional funds to develop and distribute pediatric evidence collection kits. Currently, adult and adolescent kits are adapted for use in pediatric exams.

2. **Village Public Safety Officers (VPSO): $1.5 Million UGF.** The Department has dramatically increased its rural law enforcement recruiting efforts during the past few years. Increased funding is requested as follows:

a. **$1.2 Million UGF.** This increment adds grant funding for fifteen new VPSOs and is consistent with the VPSO Senate Task Force's recommendation to add 15 new officers each year for a total of five years. This third year request brings the total of

new VPSOs to 45. At present, 69 of the 71 authorized VPSO positions are filled and the Governor has indicated a desire to add 15 positions every year for the next ten years; and

b. **VPSO Cost of Living Increase: $223.8 UGF.** This request provides partial funding for a three percent cost of living adjustment as well as annual merit increases for existing VPSOs. The cost of living adjustment is designed to match the Public Safety Employee Association's (PSEA) pay schedule.

3. **Fund Change/AST Special Projects: $656.5 UGF from CIP Receipts.** A federal grant for the Illegal Drug and Alcohol Use program expired on September 30, 2009. The seven positions associated with this funding are located in Anchorage and Soldotna and primarily focus their efforts on:

- the detection and investigation of clandestine methamphetamine laboratories;
- the transportation, importation, distribution and sale of all illegal drugs;
- the sale of alcohol in local option communities throughout the State of Alaska; and
- follow up investigations on cold case homicides.

Legislative Fiscal Analyst Comment: The Department received capital funding for the (Statewide) Illegal Drug and Alcohol Use Program for three straight years beginning in FY03 ($2 million Federal Receipts each year). Based on the backup provided, the positions associated with this program were considered "long-term non-permanent" and the funding was deemed to be one-time without a state match requirement. The grant expired in the first quarter of FY10. The Department has requested an extension of the grant, but has received no indication from the U.S. Department of Justice as to whether the extension will be approved. If not, the Department anticipates requesting a supplemental appropriation for FY10.

4. **Fund Change/CDVSA: $651.4 UGF from PFD Criminal Funds (DGF).** Permanent Fund Dividend (PFD) Criminal Funds are available for appropriation due to the number of convicted felons and third time misdemeanants who are ineligible to receive a PFD. Because available funding depends on the amount of PFDs and the number of affected inmates, the amount of PFD Criminal funds is volatile. For FY11, the Department of Revenue calculated the amount available for appropriation to be $1.7 million less than in FY10.

The requested fund change replaces the Department's portion of that reduction with UGF in order to maintain services.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

The Governor's total capital budget is $81.9 million ($4.7 million UGF/$75.7 million Other/$1.5 million Federal) for the Department of Public Safety. Some of the larger projects are:

- Crime Lab Replacement: **$75.7 million Certificates of Participation**

- Marine Fisheries Patrol Improvements: **$1.5 million Federal Receipts**
- Statewide Facilities Maintenance, Repairs, and Improvements: **$1.35 million UGF**
- Alaska Public Safety Information Network (APSIN) Redesign: **$1.0 million UGF**
- Aircraft and Vessel Repair and Maintenance: **$850.0 UGF**
- Alaska State Trooper Law Enforcement Equipment Replacement: **$500.0 UGF**
- Alaska Wildlife Trooper Law Enforcement Equipment Replacement: **$500.0 UGF**

Department of Revenue

The Department of Revenue's responsibilities include:

- administration and enforcement of Alaska's tax laws;
- management of the treasury;
- administration of the Permanent Fund Dividend Program;
- collection and distribution of child support; and
- administrative support to the following independent boards and corporations:
  - Alaska Permanent Fund Corporation;
  - Alaska Housing Finance Corporation;
  - Alaska Municipal Bond Bank Authority;
  - Alaska Natural Gas Development Authority;
  - Alaska Retirement Management Board; and
  - the Alaska Mental Health Trust Authority.

SIGNIFICANT ISSUES

The FY11 Department of Revenue (DOR) general fund operating budget submitted by the Governor is $2,517.7 above the FY11 Adjusted Base [$3,535.8 Unrestricted General Funds (UGF) and a reduction of $1,018.1 Designated General Funds (DGF)].

The following notes correspond to the numbers in the last column of the preceding spreadsheet:

1. Gas Pipeline Development: $2.65 million UGF. The Governor's bill includes a language section totaling just over $10.5 million for gas pipeline development. Itemized in this section is $2.65 million to the Department of Revenue for the following:

a. $1.5 million – Continued contractual assistance in the analysis and implementation of a natural gas pipeline. The Department received $1.221 million in FY09 for contract assistance. The Department requested $771.0 for FY10. The funding was ultimately denied by the legislature. Just before the FY09 books closed, $550.0 was transferred through the Governor's Office to DOR in order allow DOR to extend a contract into FY10.

Legislative Fiscal Analyst Comment: *It is difficult to determine gas pipeline funding needs statewide, let alone for individual agencies. Centralizing gasline funding in the Governor's Office provides centralized control and flexibility as circumstances change. Although the Governor's Office distributed money at the beginning of the fiscal year (rather than on an as-needed basis, as the legislature intended), the redistribution of funding among agencies demonstrates that centralizing funding may be a good option.*

b. $800.0 - Four exempt oil and gas Commercial Analyst positions in the Tax Division; starting salary of $144,000 ($200,000 with benefits). These exempt positions are intended to attract employees with industry experience and expertise to

strengthen the state's position on oil and gas issues. This is similar to the approach used for the Audit Master positions created by Alaska Gasline Inducement Act (AGIA).

Legislative Fiscal Analyst Comment: *Due to its less competitive pay package, the Department has had difficulty attracting talent from the oil and gas industry. The Chief Economist position in the Tax Division has remained unfilled for the last two years. Even with more competitive salaries, the Audit Master positions have been difficult to fill. One of the four positions is still unfilled. Recruitment difficulty was anticipated by prior legislatures and increment requests were reduced. If these positions are determined to be warranted, subcommittees may want to consider funding this request in a similar manner—using a phased approach recognizing that all positions are unlikely to be filled on the first day of the fiscal year.*

c. **$300.0 AGIA Information Reporting System**. This new system (to be built in-house with contractual assistance) will be used initially to track and report on AGIA reimbursements. As the project progresses, the system would be used to hold the pipeline builder accountable for project timelines, costs, and other details required under AGIA.

Legislative Fiscal Analyst Comment: *This request may be better placed in the capital budget. The Department has several information technology capital requests to which this could be added.*

d. **$50.0 AGIA Fund Audit.** AS 43.90.400(c) requires that regulations address periodic audits of the AGIA Reimbursement Fund. The new regulations [15 AAC 90.020(c)] establish that audits be performed not less than annually. The Department is requesting $50.0 for a contractor to conduct this audit.

Legislative Fiscal Analyst Comment: *As with much of AGIA, this function is the responsibility of the Commissioners of both Revenue and Natural Resources. The audit function, however, does correspond with the duties of DOR. Subcommittees may want to determine if this requirement could be performed in-house with currently available resources. If not, an annual one-time increment may be necessary for the limited years in which reimbursements are expected to occur.*

2. Constitutional Budget Reserve (CBR) Fund Management Fees: $387.0 (UGF). As the general fund liability to the CBR has been repaid (see following table), assets under management (and associated management fees) have increased. This increment request will fund the full $2.06 million cost of managing the CBR.

Legislative Fiscal Analyst Comment: *The general fund surpluses of recent years have provided the legislature with funding to pay down the liability to the CBR. For the first time since its inception, the CBR was fully repaid—at least momentarily—at the end of FY09 when a portion of the statutory budget reserve (SBR) fund was swept into the CBR. However, a liability was again created when the FY10 reverse sweep restored $401.6 million to the SBR.*

Legislative Finance Recommendation: *The legislature may wish to consider paying the investment management fees from the general fund. The state's CBR liability may soon be fully repaid. Paying management fees from the general fund would eliminate the need for a supermajority vote to pay management fees.*

GF Liability to the CBR	FY07	FY08	FY09	FY10
Prior Year End Liability	5,091,129,825	4,781,779,253	150,093,111	-
GF Reverse Sweep	156,696,777	416,165,110	1,466,159,407	401,617,000
Year Beginning Liability	**5,247,826,602**	**5,197,944,363**	**1,616,252,518**	**401,617,000**
Special Appropriations to Fund	(50,000,000)	(3,000,000,000)	(1,000,000,000)	-
CBR management fees	117,761	466,868	1,239,870	-
GF Sweep	(416,165,110)	(2,048,318,120)	(617,492,388)	-
Year End Liability	**4,781,779,253**	**150,093,111**	-	?
GF Surplus	-	**582,158,713**	**215,875,388**	

3. **Child Support Services Division (CSSD) Fund Source Change: $400.0 UGF/ -$1,118.1 DGF (Net -$718.1 GF).** The Governor's FY10 original budget request included a $1.9 million fund source change from Receipt Supported Services (RSS) to GF/Match for two reasons: declining Temporary Assistance for Needy Families (TANF) cases resulted in insufficient funding to match federal receipts, and the federal government is no longer allowing the use of Federal Incentive Payments as state match. However, the ARRA bill provided temporary funding for CSSD and temporarily allowed the Federal Incentive Payments to be used as state match. The end result was that CSSD received $1.331 million of Stimulus funds, along with $400.0 of GF Match in HB 199 (Ch. 17, SLA09).

   When the ARRA funding expires on September 30, 2010, this funding will no longer be available and the Federal Incentive Payments cannot be used as state match.

   Legislative Fiscal Analyst Comment: *The Stimulus dollars are set to lapse September 30, 2010. The Governor's budget does not adjust for the loss of ability to use federal incentive payments as match. Legislative Finance Division (LFD) removed the federal funding from the base budget and added it back as part of the Governor's FY11 request. An adjustment may need to be made in subcommittee and an amendment should be expected.*

4. **Mental Health Trust Zero-based Budgeting: $2,758.3 MH Trust Receipts.** The Alaska Mental Health Trust Authority continues to use zero-based budgeting for all of their programs. The goal of the Trust is to be able to identify how Trust funding is being allocated on a year-by-year basis.

   Legislative Fiscal Analyst Comment: *This concept may work well for Trust program funding; however, the benefits appear limited for the Trust's administrative budget. The FY11 request is $108.3 larger than FY10, but the reason for the increase is not entirely clear.*

   Legislative Fiscal Analyst Recommendation: *Return to incremental budgeting for Trust administrative components (including the Trust Land Office in Department of Natural Resources).*

5. **Permanent Fund Corporation (APFC) Investment Systems and Technology: $518.0 APFC Receipts.** Contractual fees for existing investment information and analytic systems are increasing by $117.0. New contract services of $321.0 are requested for expanded and additional risk management analysis systems. Also, $80.0 is requested for a network security audit, firewall security upgrades and fixed income trade system enhancements.

Legislative Fiscal Analyst Comment: *The costs for the network audit and firewall security upgrades appear to be one time in nature. It may be prudent to change the Increment to an Increment-OTI transaction.*

6. **Permanent Fund Corporation Vacancy Factor Adjustment: $318.2 APFC Receipts.** The corporation is requesting a reduction to their personal services vacancy factor from 5.7% to 0.86%. The Office of Management and Budget's (OMB) vacancy factor guidelines for a staff of 37 are between 3% and 6%. OMB does make the lower limit optional, however. APFC currently has 33 of its 35 full-time positions filled and will be recruiting to fill the others in the near future. One position was unsuccessfully filled in the fall of 2009.

Legislative Fiscal Analyst Comment: *It is unclear whether a vacancy factor reduction of this magnitude is warranted. Turnover for FY09 was 9.3% while the average for FY06-09 is 12.6%. While turnover does not precisely equate to vacancy, it does imply that vacancies are likely to occur. Subcommittees may wish to review personal services expenditure plans before approving this increment.*

7. **APFC Investment Management Fees: $-14.24 million APFC Receipts.** The market collapse in the latter half of 2008 and beginning of 2009 eliminated substantial wealth from the Permanent Fund. Ending FY08, right before the crash, the Permanent Fund's total market value stood at $36.5 billion. At the bottom of the crash in February of 2009, the fund value was $26.7 billion, rebounding to finish the fiscal year at $29.9 billion. Although there was substantial loss recovery, and more is projected for FY10, the amount budgeted for management fees in FY10 is in excess of what is likely to be needed in FY11.

Legislative Fiscal Analyst Comment: *The FY08 peak market value required a $6 million supplemental appropriation for management fees. That same session, $18.6 million was added to the FY09 budget in anticipation of continued market growth. The FY10 budget was then reduced $10 million because of the crash. The proposed reduction for FY11 seems warranted, but perhaps is too large. A $6.5 million decrement would put them more in line with the ratio of fees to market value of FY08. Unless management fees have declined, subcommittees may want to reduce the decrement. See table below.*

Permanent Fund (millions)

FY	Yr end Market Value	Management Fee Budget	Change in Budget	Action	Ratio Mgmt Fees/ Market Value
2008 Base		73.8			
2008	36,534.0	79.8	6.0	Supplemental	0.218%
2009	29,916.0	92.4	18.6	Increment	0.309%
2010	32,165.0	82.4	(10.0)	Decrement	0.256%
2011	34,800.0	68.2	(14.2)	Decrement	0.196%
Target ?	34,800.0	75.9	(6.5)	Decrement	0.218%

ORGANIZATIONAL CHANGES

A new component titled Natural Gas Commercialization has been created within the agency. The funding is separated from other gas-line funding proposed for the Tax Division.

CAPITAL REQUEST

The Alaska Housing Finance Corporation (AHFC) capital budget makes up the majority of DOR's annual request (97% of the budget for FY11). AHFC has over $68 million budgeted for their housing programs, including $19.7 million of federal receipts and $30 million of the $42.5 million AHFC dividend to the state. A few of the larger projects are:

- the Supplemental Housing Development Program: $8 million AHFC Dividend;
- the Senior Citizen's Housing Development Program: $4.5 million AHFC Dividend;
- the Homeless Assistance Program: $10 million ($3.35 million AHFC Dividend, $3 million Alaska Industrial Development and Export Authority (AIDEA) Dividend, $500.0 GF, $1.15 Mental Health Trust Authority Receipts (MHTAAR) and $2 million Federal);
- the San Roberto Redevelopment: $9.7 million ($2.2 million AHFC Dividend, $7.5 million AHFC Bonds); and
- the Teacher, Health, Public Safety Professionals, and Village Public Safety Officer (VPSO) Housing Loan Program: $6 million AHFC Dividend.

The remainder of DOR's request is comprised of various small information technology projects totaling approximately $1.5 million. Most notable, however, is a $300.0 UGF request to create a plan for a Tax Revenue Management System, currently estimated to cost $35 million (with annual license and maintenance fees of $2 million).

Legislative Fiscal Analyst Comment: *Last session DOR requested $23.4 million to be combined with $3.9 million received in FY09 for a new Tax Revenue Management System. The funding was ultimately denied. During the interim, the Enterprise Investment Board (the information technology oversight board within the Department of Administration) directed DOR to compile a comprehensive plan outlining in detail the functions of the new system. This $300.0 would be utilized for this plan.*

The $3.9 million received in FY09 was broken down into three appropriations - $830.0 for a Corporate/ Motor Fuel Tax System; $460.0 for a Mining Tax System; and $2.62 million for an Oil and Gas Production Tax System. None of this funding has been expended to date. Repealing these appropriations in anticipation of an integrated tax system appropriation for FY12 may be prudent.

Department of Transportation and Public Facilities

The Department of Transportation and Public Facilities (DOT&PF) is responsible for planning, research, design, construction, operation, maintenance, and protection of all state transportation systems and many public facilities. This includes approximately 260 state-owned airports and seaplane bases, 5,600 miles of state roads, 700 buildings ranging from maintenance shops to state office complexes, and 25 ports and harbors. In addition, the Department owns and operates the Alaska Marine Highway System (AMHS). The Department also owns and operates the State Equipment Fleet, which provides full maintenance support and replacement activities for all departments and state agencies, including 7,967 light and heavy duty vehicles and attachments.

SIGNIFICANT ISSUES

The FY11 Department of Transportation and Public Facilities (DOT&PF) general fund operating budget submitted by the Governor is $4,765.2 above the FY11 Adjusted Base [$2,788.0 Unrestricted General Funds (UGF)/$1,977.2 Designated General Funds (DGF)].

Legislative Fiscal Analyst Comment: Last session, the legislature expanded the DOT&PF highway, rural airport and facility maintenance and operations budget by $12.7 million UGF. The intent was to mitigate accumulating inflationary pressures ($2.7 million) and expand service levels ($10 million). The legislature may want to ascertain how this funding has been utilized to improve services in FY10 and what the Department's expectations are for FY11 before adding expenditure authorization.

Significant issues are highlighted in the notes below and correspond to the numbers in the last column of the preceding spreadsheet.

1. Fuel/Utility "Trigger" Appropriation (DOT&PF Maximum $41.25 million UGF). The last three budget cycles have seen unprecedented commodity price volatility. FY08 was a year of high energy prices. World-wide economic conditions during FY09 relieved energy cost pressure statewide, and FY10 began with Alaska North Slope (ANS) crude trading near $70/barrel (nearly 180% greater than the December 2008 low of $25.81/bbl). As of this writing, ANS Crude is trading near $80/bbl and trending higher.

The oil price "trigger" appropriation created by the legislature has performed as intended in this environment. By making fuel appropriations one-time items, and backing them out of base budgets each year, the legislature has avoided building a budget base that may contain unnecessary funding.

As in FY10, disbursements of "fuel trigger" funding would occur at the beginning of August and December. Disbursements would be based on the average price per barrel of ANS Crude to date on the first day of the aforementioned months. For example, prices averaging $76 (the Department of Revenue's Fall Forecast price for FY11) on August 1st would result in disbursement of **$20.5 million, of which DOT&PF would receive 65% plus or minus 10%** (as decided by the Governor's Office). As is expected, DOT&PF has utilized the majority of past disbursements to purchase fuel for the Alaska Marine Highway System.

DOT&PF received $33 million under the "trigger" appropriation in FY09 (their maximum allocation of the $44 million triggered). Due to the crash in the price of oil, and subsequent reduction in the price of fuel, $9.2 million (of the $33 million DOT&PF

received) was available for reprogramming during the FY09 supplemental process. The funding was appropriated to the Alaska Marine Highway Fund for future needs. In FY10, the Department received $11.25 million in August, and $13.5 million in December 2009.

Legislative Fiscal Analyst Comment: *Given the current price of oil, none of the FY10 distribution is expected to be available at year end. The agency could require a supplemental appropriation for FY10 if the price trend continues.*

At some point, it may be advisable to accept that the world energy market has changed permanently. The current Department of Revenue oil price forecast has prices trending upward for the next decade ranging from $80 to over $100/bbl. It may be prudent to adjust agency base budgets, reducing the amount to be distributed via the trigger.

2. **Environmental Protection Agency (EPA) Water Quality Permit Compliance: $1.87 million UGF.** The EPA National Pollutant Discharge Elimination System Program (NPDES) requires the Department to obtain a permit for municipal storm water conveyance systems. The NPDES requires compliance to a strict set of standards regarding maintaining water quality. The recently renewed permit, effective February 1, 2010, mandates additional drain inventory and cleaning and increased street sweeping (from once a year to three times). Funding for two new positions is requested to manage and oversee compliance for the program.

   The Department's capital request includes $1 million UGF for creation of a geographic information system that maps the entire storm drainage system in the Anchorage region. Another $1.041 million UGF is included in the capital budget in response to an NPDES mandate to map all sand storage sites within the Municipality of Anchorage.

   Legislative Fiscal Analyst Comment: *The full impact of the more stringent permit requirements on DOT&PF is not yet known. Subcommittees may wish to ask the agency for a complete multi-year impact analysis on both their operating and capital budgets. Also, given the February 1 effective date, the FY10 budget may need adjustment in order to comply with permit requirements.*

3. **AMHS Satellite Communications Contract: $1 million UGF.** The Alaska Marine Highway System has recently closed a Request for Proposal (RFP) to supply the fleet with satellite communications. A vendor is expected to be selected in mid January of 2010. The funding being utilized for the hardware and installation will be supplied from the Federal Highway Administration through various AMHS and Intelligent Transportation System (ITS) capital appropriations. The agency is requesting an increment to purchase the operating bandwidth for the communication system to commence operations.

   Legislative Fiscal Analyst Comment: *This increment request is an engineering estimate, as a vendor has not yet been awarded a contract. Refinements to the request can occur in subcommittee.*

4. **AMHS Bellingham Terminal Lease Increase: $500.0 DGF.** The lease for the Bellingham Terminal has recently been renegotiated. The building lease will increase $483.4 along with operating and maintenance increases of an additional $148.0. Contracted terminal services (ticketing, reservations, etc.), however, decreased $134.0 for a net increase of approximately $500.0.

5. **Northern Region ADA Compliance, Positions, and Building Costs: $547.0 UGF.** The Federal Highway Administration has notified the agency that they are potentially in violation of the Americans with Disabilities Act (ADA) with regard to sidewalk and bike path maintenance in the Northern Region. Additional funding ($305.0) is requested in the Highways and Aviation allocation to create a Sidewalk/Wheel Chair Ramp Repair Program. The funding will be utilized to replace frost heaved sections of bike path and repair or install necessary wheel chair ramps. Included in the Facilities allocation is an increment for two maintenance specialist positions and the operating costs for two new buildings that came online in 2009 ($242.0).

Legislative Fiscal Analyst Comment: As noted above, considerable funding was added to the three regional Highways, Aviation and Facilities allocations last session for inflationary costs and service expansion. Northern Region Highways and Aviation received $5.4 million and Northern Region Facilities received $826.6. Subcommittees may wish to review how this funding is being utilized before increasing expenditure authority.

6. **Harbor Program Administration: $275.0 UGF.** The budget for administration of the Harbor Program is being moved from the capital budget to the operating budget. An annual general fund appropriation has been included in the capital budget for some time. Prior year amounts are: FY10 – $200.0, FY09 - $400.0, FY08 - $200.0, FY07 - $600.0, FY06 - $100.0.

Legislative Fiscal Analyst Comment: DOT&PF has requested this ongoing program be moved in order to conform with recent legislative policy regarding clearer differentiation between capital and operating budget items. This action would not only clarify the capital and operating budgets, but provide DOT&PF with a consistent annual budget.

7. **State Equipment Fleet (SEF) Commodities, Fuel, and Services: $2.7 million (Other).** Additional expenditure authority is requested from the Highway Equipment Working Capital Fund (HEWCF[12]) in order to match budgetary authority with anticipated costs. As the cost of maintaining and replacing the fleet's assets increases, so do the rates the State Equipment Fleet must charge to agencies that rent the equipment. Pressures driving the budget increase include the cost of motor fuel (purchased through the SEF credit card system), the cost of travel to perform remote maintenance, shipping costs and inflationary effects on other commodities.

ORGANIZATIONAL CHANGES

There are no significant changes.

[12] The HEWCF is an internal service fund of the state (like the Information Services Fund or Public Building Fund) used to aggregate operating and replacement costs of the State's equipment fleet. Revenue of the fund is derived from the leasing of state equipment to state agencies.

CAPITAL REQUEST

The DOT&PF capital budget comprises the majority of the statewide capital budget each year. Typical programs include the Surface Transportation Program (receipts from the Federal Highway Administration) and the Airport Improvement Program (receipts from the Federal Aviation Administration). Both programs require state match components that are usually budgeted separately to allow for agency flexibility. The budget also typically has appropriations from the general fund for facility, harbor, airport, highway and Alaska Marine Highway vessel/terminal deferred maintenance, and for the stockpiling of materials for construction. The Governor's proposal contains elements of all of the above. See the capital budget section on page 55 for further details.

University of Alaska

The major goals of the University are to inspire learning, and to advance and disseminate knowledge through teaching, research, and public service, emphasizing the North and its diverse peoples by fostering and promoting the following:

- a high quality postsecondary educational system;
- appropriate vocational education development and training;
- advancement and extension of knowledge, learning, and culture; and
- the University as the state's primary research facility with focus on the application of new knowledge and emerging technologies to meet the needs of the state.

SIGNIFICANT ISSUES

The FY11 University of Alaska (UA) general fund operating budget submitted by the Governor is $13,161.4 above the FY11 Adjusted Base [$5,294.7 Unrestricted General Funds (UGF)/ $7,866.7 Designated General Funds (DGF)]. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. Non-Personal Services Fixed Cost Increases: $8.75 million ($2,168.4 UGF/ $4,520.0 DGF/ $1,172.8 Other/ $892.0 Federal Receipts). This increment is intended to cover:

a. facilities maintenance and repair costs (calculated at a minimum 1.5% of current building value to keep pace with ever increasing building maintenance needs) and other increases in non-discretionary costs (estimated at 1.5% of contractual services and commodities); and

b. statewide network infrastructure/connectivity funding which is necessary to fully utilize the high-speed network connectivity currently provided by the GCI broadband capacity gift circuit between the University of Alaska and the national research/educational network Internet2. This request also provides expansion of the available bandwidth to UA Community Campuses and rural locations, improving the availability and speed of telecommunications services.

2. Utility Cost Increases: $2.6 million ($1,484.3 UGF/ $1,100.0 DGF). This increment covers the projected FY11 utility and fuel oil cost increases, estimated at ten percent over FY10.

__Legislative Fiscal Analyst Comment:__ As in FY10, the Governor included a contingent appropriation in the operating budget to offset increased fuel and utility costs of agencies. The University contends that the fuel trigger provides insufficient funding because it does not cover the total cost of fuel/utility increases since FY07. The University indicates that a supplemental request for fuel/utility costs may be submitted for FY10.

3. New Facility Operating and Maintenance Costs: $692.0 (all UGF). Additional funding in this area would cover:

a. the Integrated Science Building (ISB) ($429.0 UGF) at the University of Alaska Anchorage campus. The request adds to the $2,094.3 ($1,025.0 UGF/$1,069.3 DGF) received as base funding for ISB operating and maintenance costs in FY10; and

b. the State Virology Lab ($263.0 UGF) at the University of Alaska Fairbanks (UAF) campus. This increment will provide UAF's portion of annual base funding for maintenance and operations of the new lab that is owned and primarily occupied by the State of Alaska Department of Health and Social Services. In FY10, one-time funding of $150.0 UGF (which was to cover approximately 57% of UAF's portion of the cost) was approved. The one-time appropriation was removed from the FY11 Adjusted Base.

4. **Energy Priority Program: $3.6 million ($950.0 UGF/ $1,768.4 DGF/ $900.0 Federal Receipts).** Fairbanks Organized Research and the Cooperative Extension Service each request increments of approximately $1.8 million to work with the Alaska Center for Energy and Power (ACEP) and other University researchers to bring applicable energy research information to communities throughout the state. A liaison will work with communities, inform ACEP of energy-related problems and local resources, and transmit information from ACEP to communities. The increment will also allow for the development of energy-related extension materials for use statewide. The same amounts of one-time funding were appropriated for these purposes in FY10; this request would make the funding part of the University's base budget.

5. **Technical Vocational Education Program (TVEP) Receipts distribution: $478.3 (all DGF).** According to Chapter 47, SLA 2008 (HB 2), 50% of TVEP funding is allocated to the University. Available TVEP funding is projected to be $5.2 million for FY11 (approximately a 10% increase over FY10). (The estimated statewide total net available TVEP funding for FY11 is $10.9 million, an increase of $956.8 over FY10.) University funding is statutorily allocated to Statewide Programs—45% ($430.5 increment in FY11) and the University of Alaska Southeast—5% ($47.8 increment in FY11). TVEP funding has been instrumental in the University's ability to meet Alaska's workforce training and educational needs and continues to be the key source of funds for that purpose.

Legislative Fiscal Analyst Comment: *In FY09, the University transferred TVEP funds from the University of Alaska Southeast through a Reimbursable Services Agreement (RSA), and indicated they were likely to do so in FY10. Legislative Finance believes the transfers violate rules regarding transfers across appropriation lines and are counter to legislative intent.*

Legislative Fiscal Analyst Recommendation: *If the University of Alaska Southeast appropriation cannot use the TVEP allocation, the money should lapse or the law should be modified.*

The Governor's University of Alaska FY11 budget adds no new positions. The total count is 4,916 (4,694 PFT and 222 PPT) positions.

Legislative Fiscal Analyst Comment: *The Governor's budget is less than the Board of Regents request by $17.9 million (all GF). In past years, narratives discussed differences between the Regent's request and the Governor's request. In response to legislative direction that the Governor's request will serve as the starting point of budget deliberations, the Regent's request is not discussed here.*

ORGANIZATIONAL CHANGES

The single appropriation structure under which the University had been organized for many years was replaced by the legislature with a multiple appropriation structure in FY09. The legislature determined that seven appropriations would allow more oversight and control from a legislative perspective. The Governor's FY11 budget has maintained the same structure that is in place for FY10.

CAPITAL REQUEST

There are two general fund projects in the University's FY11 capital budget:

- $37.5 million GF to maintain existing facilities (renewal and renovation annual requirement); and
- $1.4 million GF for a feasibility study for community campuses. This evaluation would use the academic and campus master plans to identify academic and support infrastructure facilities needed and then test the ability of current campus facilities to meet those needs. These campuses are located throughout Alaska from Ketchikan to Kotzebue.

The largest item in the University's capital request—$108.6 million for the UAF Life Sciences Classroom and Lab Facility—is funded with a combination of Certificates of Participation and University Receipts. The facility–which has been a University priority project for several years—would provide classrooms, research lab space and offices for life sciences programs.

Alaska Court System

The Alaska Court System constitutes the Judicial Branch of the state's government. Alaska has a unified, centrally administered, and completely state-funded judicial system. The mission of the Alaska Court System is to provide, expeditiously and with integrity, an accessible and impartial forum for the just resolution of all cases that come before it, and to decide such cases in accordance with the law.

There are four levels of courts in the Alaska Court System, each with different powers, duties and responsibilities. The four levels of courts are the Supreme Court, the Court of Appeals, the Superior Court, and the District Court. The Supreme Court and the Superior Court were established in the Alaska Constitution. The District Court was established by state statute in 1959. The Court of Appeals was established by state statute in 1980. Jurisdiction and other areas of the judicial responsibility for each level of court are set out in Title 22 of the Alaska Statutes.

The Alaska Court System's budget is presented in three appropriation requests - the Alaska Court System, the Commission on Judicial Conduct, and the Judicial Council.

SIGNIFICANT ISSUES

The FY11 Alaska Court System's general fund operating budget is $5,352.4 Unrestricted General Funds (UGF) above the FY11 Adjusted Base. Significant issues are highlighted in the notes below and correspond to the numbers in the last column on the preceding spreadsheet.

1. **Improve Public Service: $4.25 million UGF.** The Court System has been experiencing difficulty in recruiting and retaining qualified staff to manage the Agency's increased caseloads throughout the state. To address this problem, the Agency has requested twenty-six additional full-time positions in the FY11 budget. Increments to address caseloads include:

   - **$2,007.0 UGF:** Add clerical and administrative support positions in communities with the largest need;

     Legislative Fiscal Analyst Comment: *In FY10, the legislature approved 50% ($1 Million UGF) of the Court's $2.1 Million UGF request to increase court positions statewide.*

   - **$1,483.2 UGF:** Apply changes to the geographical differential as recommended by a recent salary study commissioned by the Department of Administration and to progress towards parity of the court system's salary structure with that of the General Government and Supervisory Bargaining Unions. The differential currently paid to court employees (AS 39.27.02) has not been changed in over 25 years;

     Legislative Fiscal Analyst Comment: *The geographic differential recommendations have not been adopted and do not yet apply to other state employees.*

   - **$174.7 UGF:** Increase hourly pay for Pro Tem Judges and Justices from $30/hour to $75/hour. Courts contends that this rate is comparable to the hourly rate of court appointed attorneys. Pro tem appointments are made to cover judicial vacancies;

     Legislative Fiscal Analyst Comment: *In FY10, the Court System requested a smaller increment for this purpose ($147.4 UGF), which the legislature denied. This FY11*

request reflects an increase in the Judicial Retirement System (JRS) contribution rate.

- **$574.3 UGF:** Eliminate vacancy factors that currently exacerbate the number of backlogged caseloads by forcing delays in filling judgeships; and

  Legislative Fiscal Analyst Comment: *In FY10, the legislature approved 39% ($250.0 UGF) of the Court's $639.4 UGF request to eliminate vacancy factors.*

- **$10.0 UGF:** Reduce personal services underfunding in the office of Judicial Conduct.

  Legislative Fiscal Analyst Comment: *In FY10, the legislature fully funded the Court System's $3.6 UGF request for personal services underfunding in the office of Judicial Conduct.*

2. **Operating Expenses: $803.2 UGF.** Operating costs are increasing for the Court System in the areas of lease costs, building maintenance, utilities, service contracts, equipment, and travel. Increments for these purposes include:

   - **$278.8 UGF:** This increment would cover annual building maintenance costs if the Courts were to assume ownership of the Nome court facility from the Federal Government. This increment will not be needed if funding for a new State Office Building in Nome is approved. In 2009, the legislature appropriated $1.9 million UGF to the Department of Transportation and Public Facilities (DOT&PF) for land purchase and project design. The Governor did not include the Court's request (submitted through DOT&PF on behalf of the Court System and other agencies for $33 million UGF) to construct a new facility in the FY11 capital budget. If the Governor does not submit a budget amendment for facility construction, the Court System will seek additional funding to address numerous building maintenance issues surrounding the existing Nome court facility;

   - **$250.0 UGF:** Update operating systems and replace outdated equipment with a planned, cycled approach;

     Legislative Fiscal Analyst Comment: *The Court System requested a similar increment in FY10; half ($125.0 UGF) was approved.*

   - **$99.2 UGF:** Increase lease space in both Galena and Chevak. Any trial requiring a jury in the Chevak area must presently be conducted in Bethel due to inadequate space in the current building. Additionally, the Agency requests an increment for new space in Galena indicating that its trial facility is too small and becoming increasingly difficult to maintain;

   - **$98.0 UGF:** Increase for instate/long distance phone expenses. In past years the Court System used prepaid phone cards extensively to save on toll costs for instate/long-distance services. Because the current carrier will no longer provide these services at rates formerly offered, the Court System will use a combination of local carriers and a teleconferencing service provided through Intercall, Inc.;

   - **$67.8 UGF:** Replacement of aging workstations and furniture; and

     Legislative Fiscal Analyst Comment: *In FY10, the legislature approved 42% ($50.0 UGF) of the Court's $117.8 UGF request for replacement of aging equipment and furniture.*

- **$9.4 UGF:** Additional travel expenses for the Juneau-based Chief Justice to participate in interagency meetings, court functions, and official events, many of which occur in Anchorage.

3. **Transcript Costs for Criminal Proceedings: $125.0 UGF.** The demand for transcripts has increased in step with an increase in criminal caseloads. Coupled with this increased demand, fewer contractors are willing to accept work from the court because the payment rates are below market standards. The Court System is currently paying a per page rate of $2.65 - $3.05, while federal courts are paying a per page rate of $3.65 - $4.85.

Legislative Fiscal Analyst Comment: The Court System's request for a similar increment in FY10 was denied.

4. **Custody Mediation Program: $125.0 UGF.** Over a recent 18-month period, mediation referrals increased sharply resulting in a 250 percent increase in costs—an amount not sustainable by the federal grant that funds this program. The Court System seeks funding to augment federal funds and to expand this program. According to Courts, this program is successful and assists parents in developing workable custody agreements while supporting domestic violence prevention.

5. **Mental Health Programs: $955.3 MHTAAR and $845.6 GF/MH.** FY11 will be the third year of zero-based budgeting for Mental Health Trust Authority Authorized Receipts (MHTAAR) funding – meaning that all MHTAAR funding in state agencies is removed from the adjusted base and reconsidered by the Mental Health Trust Authority each fiscal year.

   For FY11, The Mental Health Trust Authority is recommending $955.3 ($20.0 less than FY10 Authorized) in MHTAAR funding for the MH Trust Disability Justice Initiative. The majority of the funding is for:

   - preventative treatment for youth intended to avoid future expensive treatment services associated with the adult correctional and judicial systems; and
   - developing court-ordered treatment plans that address client's treatment needs and are monitored by the court, thus reducing risk of future contacts with the criminal justice system.

   The majority of the $845.6 GF/MH funding will support Disability Justice Initiative programs to ensure continued access to treatment services for existing and new therapeutic courts participants.

ORGANIZATIONAL CHANGES

There are no significant changes requested.

CAPITAL REQUEST

As a separate branch of state government, the Alaska Court System has the constitutional authority to submit its operating budget request directly to the legislature. As a courtesy, the Court System sends its operating budget to the Governor for forwarding to the legislature. This allows the operating budgets for all three branches to be introduced in the same budget bill.

The Alaska Court System also has the constitutional authority to submit its capital budget request directly to the legislature, and it does so each year. This budget is submitted in the form of budget documents rather than in the form of legislation. Because the Court System does not have the power to introduce bills, governors have traditionally included some or all of the Court System's capital budget request in the Governor's capital budget bill.

For FY11, the Court System is presenting a capital request of $41.1 million UGF to the legislature. The Governor included $2.5 million UGF (all for deferred maintenance projects) in his capital budget bill. The list of all the Court System's capital projects is listed below:

Priority	Project	Amount *(in thousands)*
1)	Anchorage Campus Project Renovation	$18,148.1
2)	Nome Courthouse Deferred Maintenance, Code Upgrades, and Remodel	$3,830.9
3)	Court Information Technology Enhancements	$1,943.8
4)	Law Library Integrated Services Software	$150.0
5)	Court Security Projects	$978.8
6)	Building Equipment & Systems Replacement (to Extend Life of Facilities)	$1,000.1
7)	Statewide Remodel Projects	$1,690.0
8)	Replace Worn Furnishings and Repair Specialized Finishes in Public Use Spaces	$650.0
9)	Deferred Maintenance Projects	$11,826.7
10)	Statewide Building Code and Energy Upgrade for Court Buildings	$745.0
11)	Vehicles and Forklift Replacement	$95.0
	TOTAL	**$41,058.4**

Alaska Legislature

The Alaska State Legislature sets policy through the adoption of laws and has the power of appropriation as provided in the Alaska Constitution and in state statute. The legislature includes the following appropriations and allocations:

- Legislative Budget and Audit Committee
  - Legislative Audit
  - Legislative Finance
  - Committee Expenses
  - Legislature State Facilities Rent
- Legislative Council
  - Legislative Salaries and Allowances
  - Administrative Services
  - Session Expenses
  - Council and Subcommittees
  - Legal and Research Services
  - Select Committee on Ethics
  - Office of Victims Rights
  - Office of the Ombudsman
- Legislative Operating Budget

SIGNIFICANT ISSUES

The budget submitted to the Governor is traditionally a preliminary draft that has not been formally reviewed by legislative leadership. The FY11 submittal is essentially identical to the FY10 budget, with the exception of salary adjustments and a fund change (see #1 below). The notes below correspond to the numbers in the last column on the preceding spreadsheet.

1. A fund change replaces $60.5 of Permanent Fund Dividend (PFD) Criminal funds with unrestricted general funds.

Legislative Fiscal Analyst Comment: The amount of PFD Criminal funds available varies with the amount of the Permanent Fund dividend and the number of felons incarcerated. Because recent investment losses reduced PFDs, there is a corresponding decrease in available PFD Criminal funds. The result is that Unrestricted General Funds (UGF) is requested to replace PFD Criminal funds.

2. Because the Governor traditionally does not alter the budget submitted by the legislature, two one-time appropriations from FY10 remain in the FY11 budget—$45.8 UGF for the Legislative Outdoor Heritage Council and $1.5 million UGF for an Endangered Species Act/Effects of Climate Change.

Legislative Fiscal Analyst Comment: *In keeping with a legislative decision to minimize carryforward, the legislature may wish to delete these FY10 one-items from the FY11 budget.*

There are no capital projects or organizational changes requested.

January 15, 2010

Notes:

(1) Permanent Fund earnings are excluded from reported revenue because the entire balance of the earnings reserve account is available for appropriation. Permanent Fund earnings and balance information is reported on page 2 of the fiscal summary.

(2) The Fall 2009 oil forecast for FY10 is 0.668 mbd at $66.93 per barrel; the FY11 forecast is 0.631 mbd at $76.35/bbl. Source: Revenue Sources Book, Fall 2009.

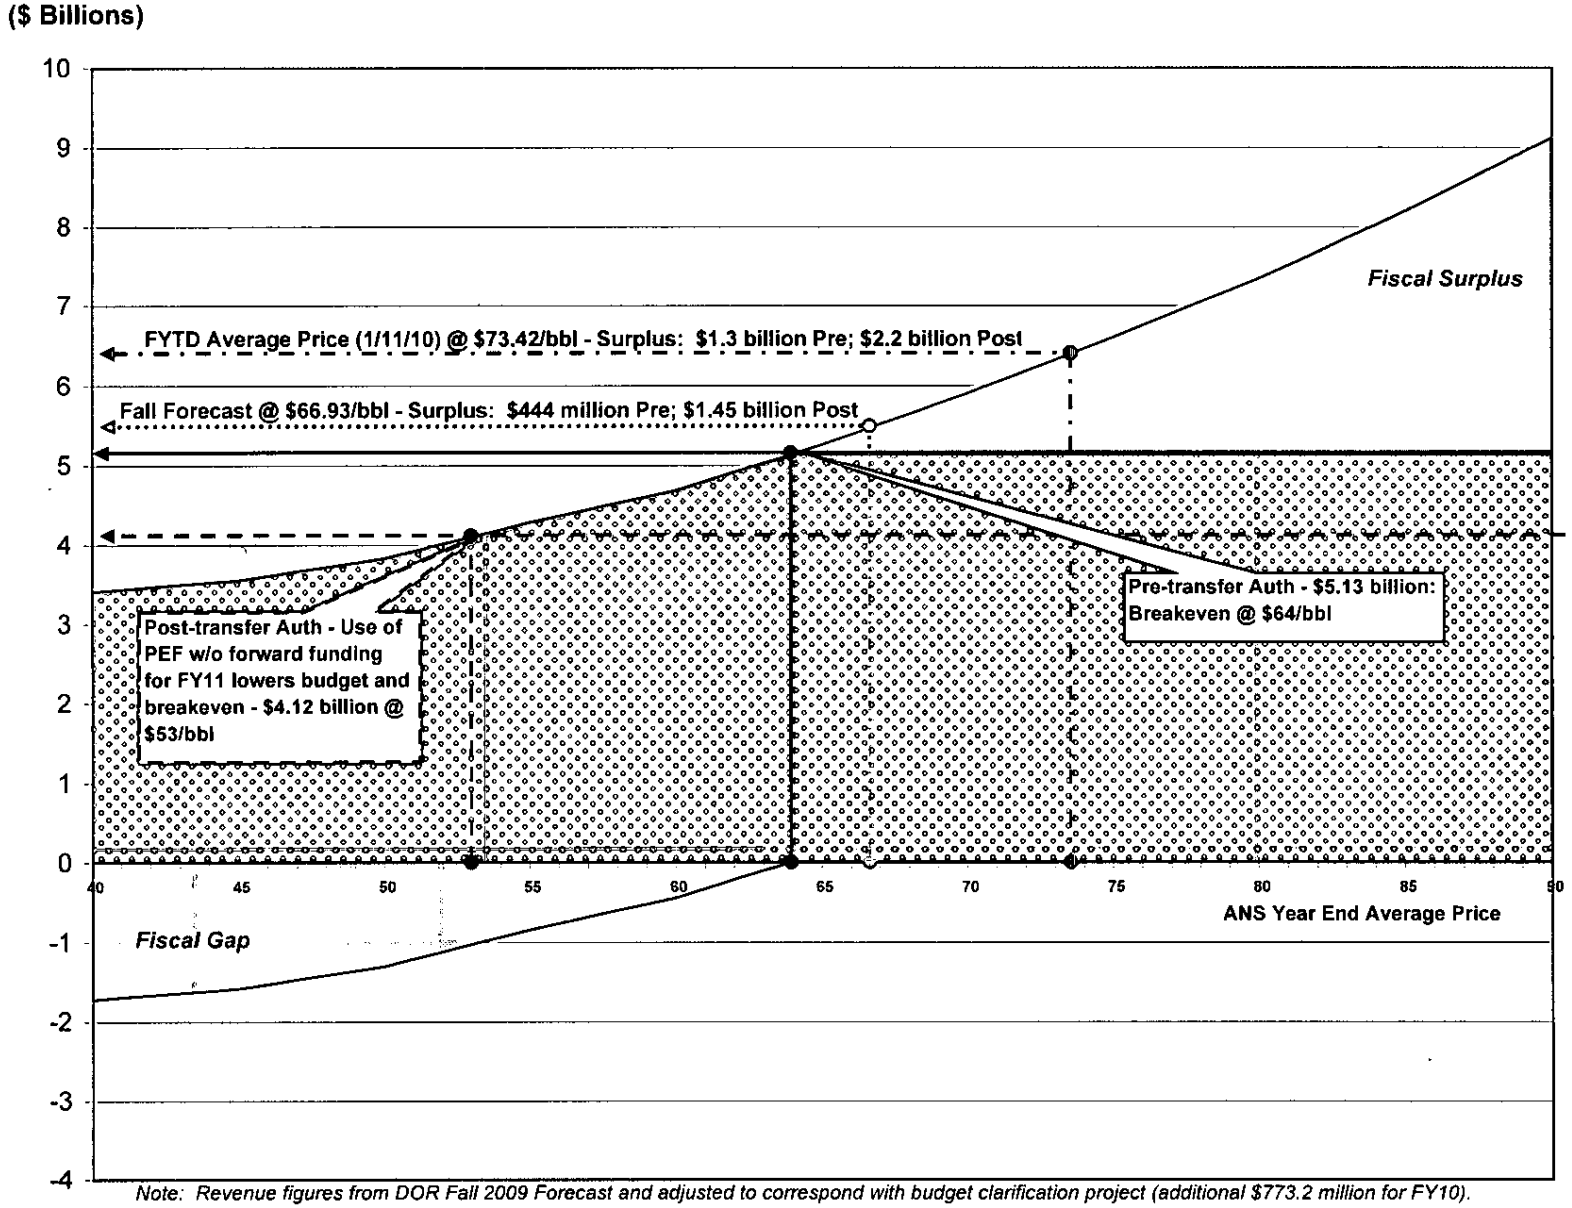
(3) Carryforward is money that was appropriated in a prior year that is made available for spending in FY10 via multiyear appropriations or reappropriations. FY11 carryforward will be unknown until the close of FY10.

(4) In an effort to present the budget in a more meaningful and accurate way, many sources of funds were recategorized from "other" funds to general funds beginning in FY11. This summary presents both FY10 and FY11 budgets in the revised fund categories in order to make comparisons across years valid.

(5) Duplicated authorizations are in the budget twice, such as when funds flow in and out of a holding account or one agency pays another for services provided.

(6) From an accounting perspective, unduplicated authorization (line 26) is the best measure of capital spending. However, adding duplicated fund sources provides a valuable measure of "money on the street" because it includes projects funded with bond proceeds and other duplicated fund sources.

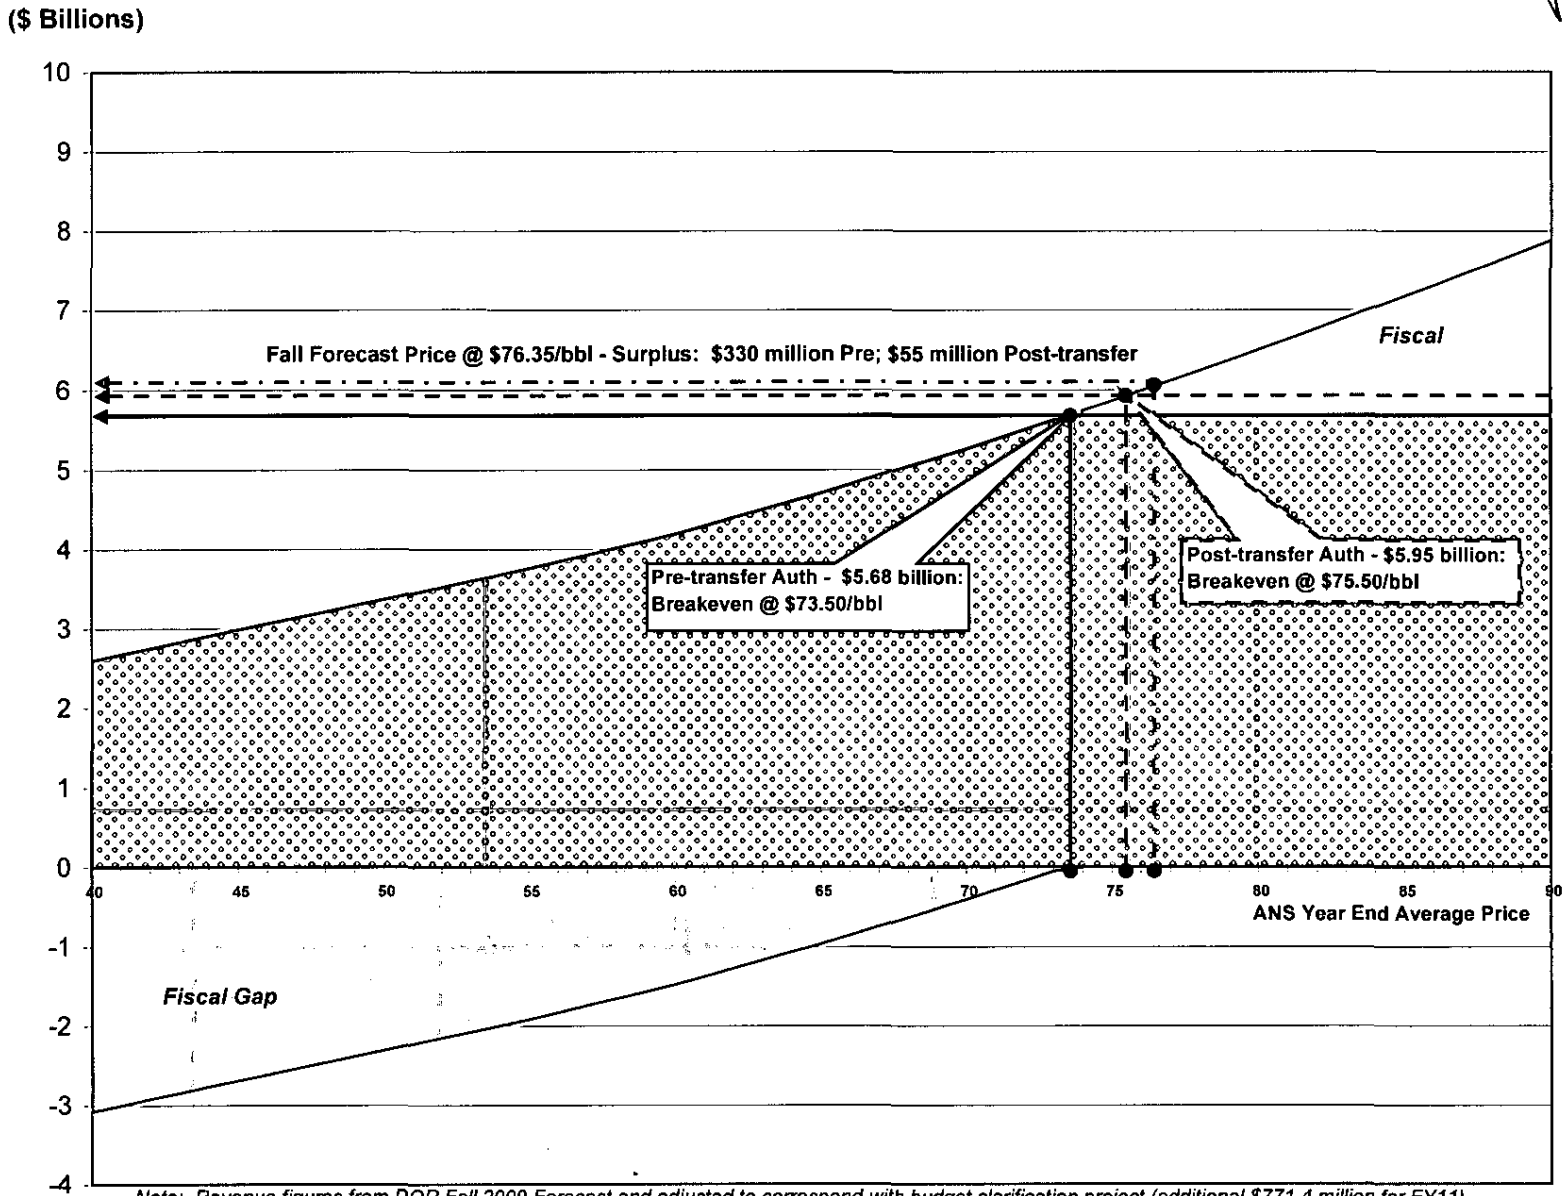
FY10 General Fund Revenue - Fiscal Sensitivity



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $773.2 million for FY10). Figures include sources not directly affected by oil prices. Lease expenditures estimated at $16/bbl ($4.5 billion total).

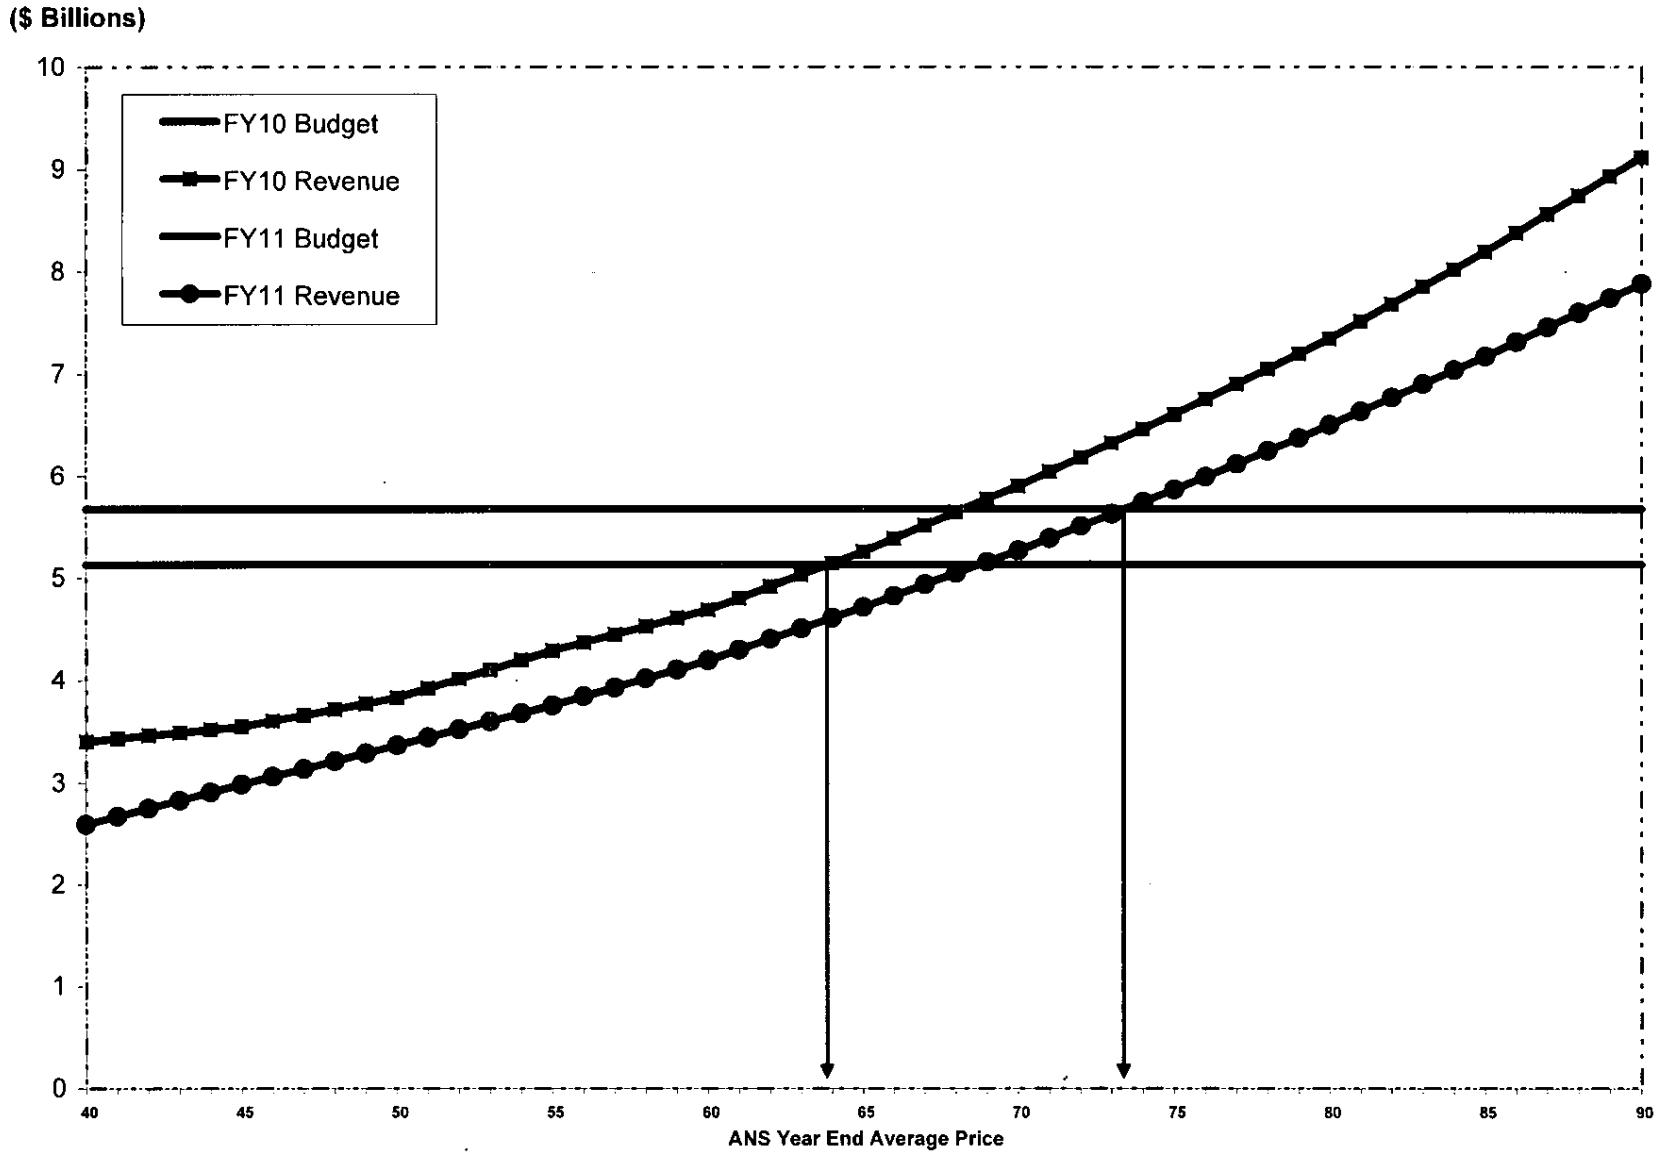
P 7

FY2011 General Fund Revenue - Fiscal Sensitivity



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project (additional $771.4 million for FY11). Figures include sources not directly affected by oil prices. Revenue lease expenditures estimated at $19/bbl ($5 billion total).

FY10/11 General Fund - Fiscal Sensitivity Overlay



Note: Revenue figures from DOR Fall 2009 Forecast and adjusted to correspond with budget clarification project. Figures include sources not directly affected by oil prices. Budget Authorization corresponds with "Pre-transfer" authorization on Fiscal Summary.

10-Year Revenue and Spending

Assumes Fall 2009 Revenue and 3% budget escalation from FY11

Source: OMB

- FY09 represents actuals rather than forecast.
- FY10 surplus/shortfall calculation adds $22.1 in reappropriations and carry over to total available revenue.
- FY11 surplus calculation subtracts $400 from surplus for Governor's Performance Scholarship Fund and $13.1 deposit to Public Education Fund for FY12. CBR balance assumes that all available surplus is deposited to CBR main fund.

Appropriations projections do not represent a commitment by the Administration to propose spending at a particular level in FY11 or any future year. The 10 year forecast shows that unanticipated shortfalls during the period could be filled primarily through the use of reserve funds. However, other options could be used in whole, or in part. The plan will be revisited as conditions warrant.

Budget Guidance

The mission

The FY2011 budget supports Governor Parnell's number one mission:

"Position Alaska's economy for growth and Alaska's families for opportunity."

Budget Guidelines

How do we get there?

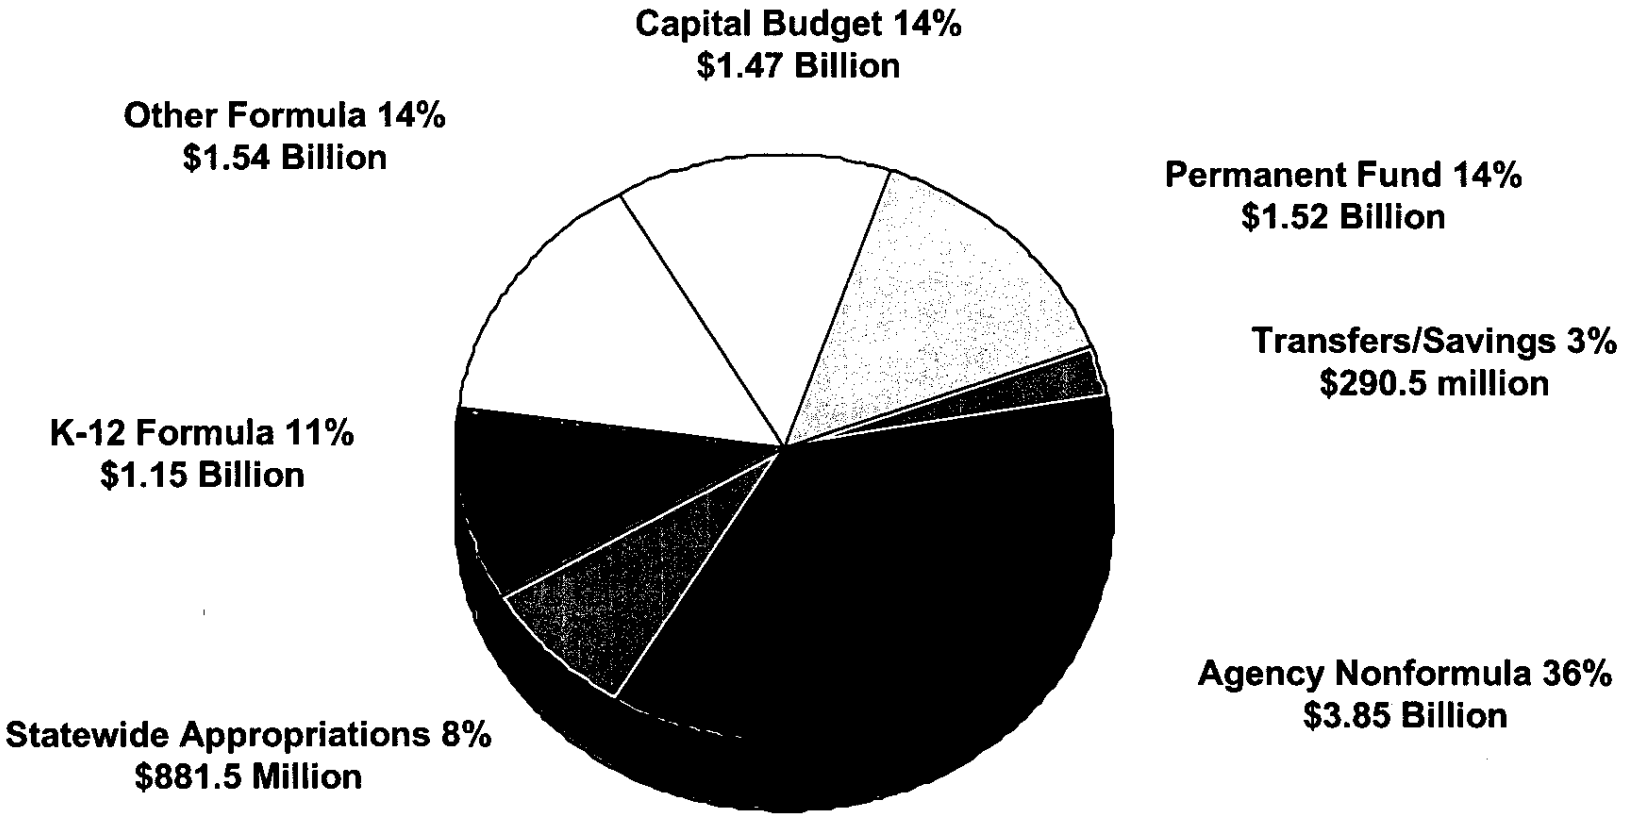
- Focus on the priorities mandated by Alaska's constitution- Education, Public Safety, Transportation and Resource Development
- Maintain budget discipline by limiting agency growth
- Focus on results for Alaskans
- Take a long-term view

FY2011 Budget Summary

FY2011 Fiscal Summary	Recast General Funds	Recast Other Funds	Recast Federal Funds	Total
Oil Price $76.35				
Unrestricted GF	$5,236.6			$5,236.6
Other Revenue moved to GF	$759.6			$759.6
Corporate Dividends	$59.5			$59.5
Federal and Other State Funds		$501.3	$2,780.6	$3,281.9
Total Revenue	**$6,055.7**	**$501.3**	**$2,780.6**	**$9,337.6**
Expenditures				
Agency Operations	$4,327.0	$385.5	$1,885.6	$6,598.1
Statewide	$802.1	$52.4	$27.0	$881.5
Total Operating	**$5,129.1**	**$437.9**	**$1,912.6**	**$7,479.6**
Capital	$580.5	$54.7	$839.3	$1,474.5
Transfers/Savings	$253.0	$8.7	$28.8	$290.5
Total FY2011 Authorization excludes Permanent Fund	**$5,962.6**	**$501.3**	**$2,780.7**	**$9,244.6**
Balance	**$93.1**			**$93.1**
Permanent Fund	$1,523.0			$1,523.0
Total FY2011 Authorization with Permanent Fund	**$7,485.6**	**$501.3**	**$2,780.7**	**$10,767.6**

FY2011 Expenditures by Category

Proposed Spending Plan



Total Funds = $10,767.5 million

FY2011 Budget Priorities

Highlights of the FY2011 spending/savings proposal

- Education
  - Fully funds K-12 education funding formula- $56 million increase
  - Deposit $400 million into savings to fund the Governor's Performance Scholarship
  - Forward fund FY2011 and FY2012 K-12 - $1.1 billion each fiscal year
- Public Safety
  - $75 million for statewide Crime Lab
  - $7 million for 10-year DVSA plan, including 15 new VPSOs
- Resource and Economic Development
  - $177 million for natural gas development
  - Deferred maintenance- $100 million first installment of a 5-year plan
  - University of Alaska Life Sciences Building $109.5 million
  - Transportation infrastructure
- Energy
  - Traditional efforts; AEA energy projects, power projects
  - Renewable Energy Fund $25 million
  - Assistance (PCE & LIHEAP) $53 million
  - Conservation efforts

Revenue Forecast Revised Upward

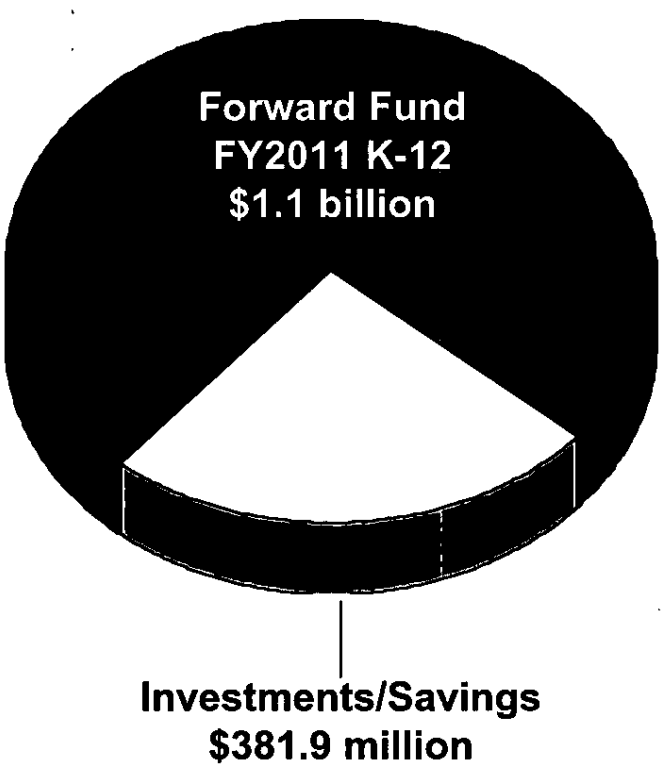
Revised Revenue Forecast Creates Opportunity

	Forecast version		
FY2010	Spring 2009	Fall 2009	Difference
ANS West Coast Oil Price (Per Barrel)	$58.29	$66.93	$8.64
Production (mmbbl./day)	0.655	0.659	.004
FY2010 GF Unrestricted Revenue ($millions)	$3,210.7	$4,777.0	$1,566.3
FY2011			
ANS West Coast Oil Price (Per Barrel)	$67.67	$76.35	$8.68
Production (mmbbl./day)	0.634	0.623	-0.011
FY2011 GF Unrestricted Revenue ($millions)	$3,876.0	$5,236.6	$1,360.6

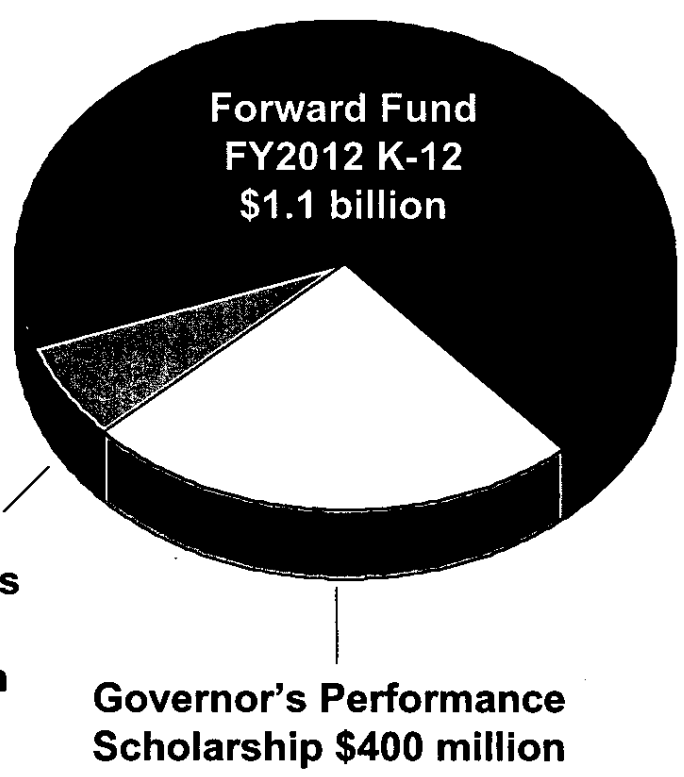
Save/Invest the Projected Surplus

Proposal forward funds K-12 education and saves for Alaska's future

FY2010 Surplus



FY2011 Surplus



FY2011 Results-Based Budgeting

Utilizing the state's performance framework to measure results for Alaskans

- Agency Missions
  - Consistent with statutory authority
- Core Services
  - Activities to accomplish the mission
  - End Results – planned goals and achievements
  - Strategies and Targets – planned actions and targets to measure success
  - Status and Analysis of Results – How are we doing and what does the data show?
- System Changes
  - Align agency and state priorities
  - Identify department priority programs and key performance indicators
  - Distribution of current budget capacity (FY2010) by priorities
  - Key performance indicators to reflect progress toward desired results
  - Link proposed budget changes with desired results System Changes
- Legislative Review
  - Part of the annual review and approval of the budget
  - Process outlined in AS 37.07.014
  - Promote results-based government and method to measure results for each agency

Long-Range Fiscal Plan

Resource Development, Spending Discipline, and Saving for the Future

- Combination of resource development, spending discipline, and use of reserves
  - Current long-range forecast results in a sustained budget through FY2020
  - Reserve accounts continue to grow

- Guiding Principles
  - Responsibly develop Alaska's natural resources – oil, gas, and other natural resources such as mineral, mining, fishing, tourism
  - Restrain spending – focus on essential services, results for Alaskans, promote economic growth and fiscal stability
  - Save for the future – build reserves, forward fund when appropriate, preserve and grow the permanent fund

- Assumptions
  - 3% annual growth rate in beginning in FY2012
  - Inflation at 2.75%
  - Population Growth at 1% annually
  - Requires state service delivery to become more efficient over the 10-year period

- Major Challenges
  - Formula program increases – Education and Medicaid
  - Infrastructure development
  - Unfunded Liability of Retirement Systems

FY2011 Fund Code Project

Transition to new fund categories will take time and patience

- **FY2011 Revenues and Expenditures**
  - Aligned with Legislative Finance on the numbers

- **FY2010 Expenditures**
  - Three Areas of Differences
  - Governor includes $2 million additional estimate for fuel trigger
  - Governor includes $15.9 million for DOTPF economic stimulus RPL's
  - Governor includes deposit/transfer of $1.116 billion to the Public Education Fund

- **Fund Transfer Differences**
  - Renewable Energy Fund $25 million
  - Power Project Fund $7 million
  - Agency Operations – Law, Natural Resources, Revenue – PFD funds

Department of Environmental Conservation
Operating Budget Presentation to House Finance Committee – Jan. 25, 2010

MISSION

Protect human health and the environment.

CORE SERVICES

- Develop and enforce standards for protection of the environment.
- Provide controls and enforcement for the prevention and abatement of pollution to the environment.
- Provide controls and enforcement to protect citizens from unsafe sanitary practices.

Total Operating Budget Distribution

PRIORITY PROGRAMS	GF	FED	OTHER	TOTAL	PFT	PPT	NP	% Total GF
FY 2010 Current Capacity (Mgmt Plan)	18,994.3	21,497.6	33,516.9	74,008.8	532	2	7	25.7%
FY 2011 Governor's Transactions	720.6	659.5	157.8	1,537.9	6	0	0	
Total FY 2011 Governor's Budget	**19,714.9**	**22,157.1**	**33,674.7**	**75,546.7**	**538**	**2**	**7**	26.1%

FY 2011 SIGNIFICANT CHANGES IN OPERATING CAPACITY

- Department-wide Health Insurance Increase: $10.9 GF, $7.0 Fed, $5.5 Other

- Building Maintenance & Operations (BMO):
  - Reduce uncollectible RSS authority: ($0.7) RSS

    Significant Changes in Results Expected: None.

- Environmental Health
  - Adoption and implementation of EPA drinking water rules. $300.0 GFM, $300.0 Fed, +5 PFT

    Significant Changes in Results Expected: Human health will be better protected with the adoption of three EPA rules required to be adopted by States in 2010 to continue primacy. These rules affect Disinfectants, Enhanced Surface Water Treatment and Ground Water. The increment will improve our ability to make sure the population served by public water system is in compliant with health-based standards. Additional staffing will help us with the adoption, implementation, monitoring, reporting and enforcement required by these rules, ensuring that drinking water is safe.

- Deletion of one vacant Office Assistant position, PCN 18-7352: (-1) PFT
  Significant Changes in Results Expected: None.

- Fund essential public health equipment maintenance and service contract shortfalls in the State Environmental Health Lab: $260.0 GF.
  Significant Changes in Results Expected: The Lab was able to perform 116,223 tests on Shellfish PSP, Food & Water, Fish, Environment, Dairy Products and Animal Samples in FY09. Without an increment to cover increased maintenance and service contracts necessary after warranties on equipment have expired, the lab will lose testing certifications and be unable to perform many types of tests, having a negative impact on human health and the environment.

- Additional contractual authority for toxicology support in the area of solid waste: $153.0 RSS.
  Significant Changes in Results Expected: Toxicology, fate and transport and drift prevention specialist contracts will help the program more thoroughly evaluate all of the issues raised by the public when evaluating pesticide spray proposals. In FY09, a total of 76 pesticide-related violations were identified, 3% of which were repeat violators. Specialist support will help us more thoroughly review requests and concerns and better protect human health.

- Air Quality
  - Outer Continental Shelf (OCS) federal permitting support. $150.0 GF, +1 PFT
    Significant Changes in Results Expected: This increment would benefit Alaskans and the environment by ensuring that the program has the necessary resources to implement new greenhouse gas regulations and assist in meeting emission reduction goals which help protect human health and the environment. It would benefit industry by providing access to training and technical assisting in tracking and reporting emissions and through the development of consistent, efficient carbon control programs that provide economic and environmental stability. (This investment would allow the state to further its objectives to address climate change and efficiently move forward the construction of a natural gas pipeline.) MH

- Water Quality
  - Federal resources for the Public Water Systems Operator Certification Training program: $240.0 Fed, +1 PFT.
    Significant Changes in Results Expected: In FY09, 31.3% of regulated water supply systems were out of compliance with operator certification requirements. Many communities are unable to afford training for their local operators, negatively impacting them and the compliance rate of their water

and sewer facility. Training will improve compliance rates and better protect human health.

- Federal resources for the Remote Maintenance Worker program: $37.5 GFM, $112.5 Fed

  Significant Changes in Results Expected: This In FY09, 68.7% of regulated systems were in compliance with water supply system operator certification requirements, an increase of 10% since FY 2006. In order to provide Operations and Maintenance support and emergency response services to public water and sewer systems, grant funds are distributed to seven regional health corporations who, in turn, provide Remote Maintenance Workers (RMW) who provide these services. This program is heavily reliant on travel, which has seen dramatic cost increases over the past two years. It has been demonstrated that the routine and regular on-site presence of the RMWs prevents catastrophic failures and helps sustain the water and wastewater infrastructure in rural Alaska. The assistance provided by RMWs increases the exam success rate among rural operators, which in turn, improves compliance with the operator certification requirements, which in turn increases our protection of human health.

↑ = Improving
→ = Maintaining
↓ = Worsening

DEPARTMENT RESULTS – CURRENT CAPACITY

Protecting Human Health

↓ In FY 2009, over 1.2 million pounds of dairy, seafood and retail foods were detained, more than a million pound increase from FY 2008.

- ↓ In FY 2009, 30% of permitted retail food establishments were inspected.
- ↓ In FY 2009, 34% of food establishments and 13% of seafood processors that were inspected and permitted were issued a Notice of Violation (NOV).
- ↑ 116,233 tests were performed by the Environmental Health Laboratory in FY 2009, an increase from the prior year with a significant increase to the number of environmental tests conducted.
- ↑ Approximately 79% of inspected permitted retail food establishments were found during inspection to have staff meeting food safety training and certification requirements.

→ The number of days the air is unhealthy for sensitive groups remains less than two weeks a year.

↑ During FFY 2008, 94% of the population served by public water systems was served by those in compliance with health-based standards.

- ↑ The operator certification program has seen a 12% increase in three years for the number of regulated systems that comply with water supply system operator certification requirements.

↑ The Village Safe Water Program has seen an annual average increase of 2.5% for serviceable rural Alaska homes served by safe and sustainable sanitation facilities over the past nine years, over 90% being served by the end of FY 2009.

- ↓ Due to the increasing cost of addressing rural sanitation health related deficiencies (such as homes without running water and flush toilets, untreated drinking water, or leaking water and sewer mains) and an ongoing decline of federal funding available to address these deficiencies, there has been a continuous decrease in health related deficiencies met each year.
- ↑ The operator certification program has seen a 12% increase in three years for the number of regulated systems that comply with water supply system operator certification requirements.

Protecting the Environment

→ 63% of the State's polluted land and waterbodies have been restored for public use as of the end of FY 2009, a 4.4% increase from FY 2007.

- ↑ Over 99% of new oil and hazardous substance spills in FY 2009 were cleaned up or are in monitoring status.
- ↑ In FY 2009, 50% of polluted waterbodies had active stewardship, protection and restoration activities, an 11% increase from the previous year.

↓ While 100% of Class I and Class II municipal solid waste facilities within Alaska have the required authorization from the State to operate, only 27% of Class III facilities have been authorized, showing a significant area of need.

↑ Less than 4% of the total volume of oil spilled in FY 2009 was from regulated facilities and vessels with approved contingency plans.

WHAT THE 4¢ SURCHARGE PAYS FOR

OIL AND HAZARDOUS SUBSTANCE, SPILL PREVENTION AND RESPONSE

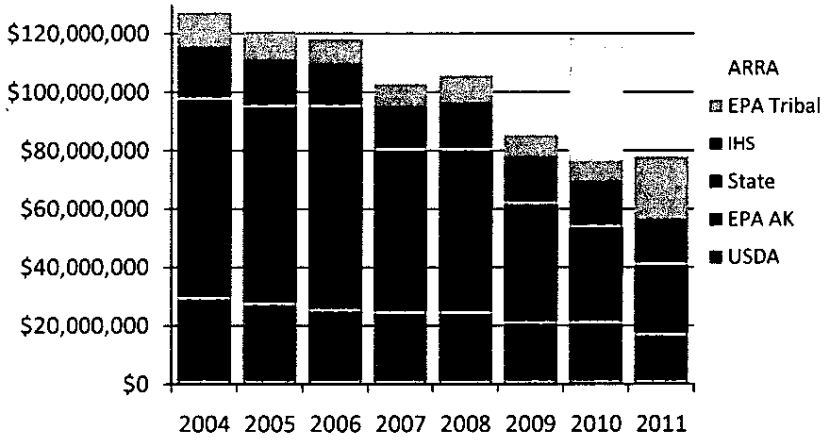
- Standards and regulation to protect the environment from releases or oil or hazardous substances.
- Establishment and maintenance of a spill response capability.
- Investigation, evaluation, containment, and/or cleanup of a release or threatened release of oil or hazardous substances.
- Restoration of the environment.
- Review of oil discharge prevention and contingency plans.
- Training, response exercises, inspections, and tests.
- Verification of proof of financial responsibility.
- Recovery of state costs.

IS IT ENOUGH?

- Revenues continue to decrease as production decreases.
- Despite the change in surcharge amounts, expenditures continue to exceed projected revenues.
- Without additional revenues, the fund will be depleted in FY2014, which assumes no additional capital appropriations for clean-up costs.

Rural Alaska Water and Sewer
The Cost of Addressing Needs is Escalating While Funding Declines

Funding for Rural Alaskia Sanitation Projects SFY 2004 - 2011



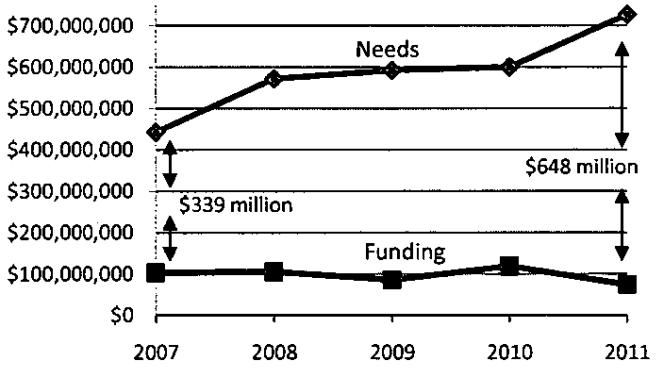
Funding from all sources (national tribal allocations, Alaska specific appropriations, and required State match) for rural Alaska sanitation projects has declined by over $49 million, or 39% between State Fiscal Years 2004-2011. Alaska specific appropriations and required State match (shaded purple in the graph below) have plummeted by $57 million or 58%.

Although the American Recovery and Reinvestment Act (ARRA) provided a one-time boost to rural sanitation projects in SFY 2010, the Federal 2010 (SFY 2011) budget represents the lowest funding levels for rural Alaska water and sewer projects in over 10 years – a $41 million decrease from last year's appropriations.

SFY	USDA-AK	EPA AK	State	IHS	EPA Tribal	ARRA	Total
2004	$30,000,000	$43,000,000	$24,333,331	$18,210,163	$11,598,171		$127,141,665
2005	$28,000,000	$43,000,000	$23,666,664	$16,617,560	$9,466,700		$120,750,924
2006	$26,000,000	$45,000,000	$23,666,664	$15,280,000	$8,207,000		$118,153,664
2007	$25,000,000	$35,000,000	$19,999,998	$15,411,000	$7,436,100		$102,847,098
2008	$25,000,000	$35,000,000	$19,999,998	$16,543,204	$9,055,500		$105,598,702
2009	$21,515,000	$24,610,000	$15,374,998	$16,726,000	$7,020,900		$85,246,898
2010	$21,667,000	$18,500,000	$13,388,999	$16,036,000	$6,888,052	$42,257,600	$118,737,651
2011	$17,500,000	$13,000,000	$10,166,666	$16,000,000	$21,195,000		$77,861,666

Recent appropriations for the EPA and USDA Alaska specific programs are highlighted in yellow above.

Critical Needs* -vs- Available Funding



While funding has decreased significantly, the cost of addressing critical rural Alaska sanitation needs (such as homes without running water and flush toilets or inadequately treated drinking water) has increased dramatically. This increase is due to a number of factors including inflation, population changes, aging facilities, and more stringent regulations.

The disparity between available funding and the cost of addressing rural Alaska sanitation needs is approximately $648 million – a 91% increase over SFY 2007. If current funding and cost trends do not change, this gap will continue to widen.

DEC Water, Wastewater and Solid Waste Grant Programs

- Facility Programs of DEC's Division of Water work with communities to develop and maintain sustainable water, sewer, and solid waste services in full regulatory compliance.

- There are two types of grant programs managed by DEC for sanitation projects. The Village Safe Water program offers 100% grant funding for smaller, rural communities and the Municipal Matching Grants program offers 60%-85% grant funding for larger communities.

Village Safe Water (VSW) Program

- VSW Funding comes from a combination of federal grants and state appropriations. The two primary federal funding sources (which have provided approximately $40.0 million in FY2010) are the U.S. Department of Agriculture and the Environmental Protection Agency. The funding trend from these sources has been declining in the past four years. Funding through these agencies requires a 25% State match. In addition, the Denali Commission and the Indian Health Service have provided a recent average of $10 million a year in 100% federal grants for projects through VSW.

- Communities apply each year for proposed sanitation project funding. Applications are scored, based heavily on the proposed project's ability to address critical public health needs, as well as the communities' demonstrated capacity to operate and maintain the facilities. Capital funding is requested for the highest ranking projects.

- Per a federal funding requirement established in 2004, the VSW CIP priority list is divided into two types of projects – those that can be completed in a single year and those that will take multiple years to complete.

- Projects that are estimated to take one year to complete receive full funding in a single fiscal year.

- The Multi-Year Priority List contains large, high scoring projects; however projects on the list are not prioritized. This allows the flexibility that is required in scheduling funding for multi-year projects. An unanticipated delay in one project will not hold up funding for a different project that is ready to go.

Updated January 2010

Funding for the construction phases of Multi-Year Priority List projects is granted based upon completion of design packages and chronological approval, available funding, and sufficient drawdown of existing project funds. In other words, this is a "first ready, first funded" list and new funds are not made available to a project until prior project grant funds for the project are exhausted. There are several projects on the Multi-Year list that are ready to proceed but have had to be postponed due to insufficient federal and state funds.

- In some cases, funding is transferred by VSW through the Indian Health Service to the Alaska Native Tribal Health Consortium, who in turn assists communities in design and construct of sanitation projects.

Municipal Matching Grants Program

- The Alaska Municipal Matching Grants program provides partial funding from General Fund appropriations and engineering support for drinking water, sewer, solid waste and non-point source pollution projects, such as water quality enhancement and waterbody restoration and recovery.

- These state grants primarily assist the larger communities and boroughs in the State.

- Each year, communities submit sanitation grant questionnaires which are scored weighing primarily the extent to which proposed projects address critical public health and environmental needs. Grants are awarded to the highest ranking projects as funding allows.

- Two years ago the Legislature amended the Municipal Matching Grants enabling statute to change the State/Local funding ratio of eligible project costs. The State share of project costs for grants awarded under the program are now:

    - 85 percent of eligible costs for a municipality with a population of 1,000 persons or less.

    - 70 percent of eligible costs for a municipality with a population of 1,001 to 10,000 persons.

    - 60 percent of eligible costs for a municipality with a population of greater than 10,000 persons.

    - The communities can borrow low interest (1.5%) loans from the Alaska Clean Water and Alaska Drinking Water funds managed by the Department to cover their portion of the match.

RURAL ALASKA SANITATION:
Status of Efforts – January 2010

Long Term Progress

As recently as 30 years ago, fewer than 25% of rural Alaska households had running water and flush toilets. In 1996 when the State first began its statewide rural sanitation survey, 55% of rural homes had piped or covered haul service. Today, approximately 75% of rural homes have indoor plumbing. (This estimate omits regional hubs such as Kotzebue and Bethel, as these larger communities tend to skew the analysis.) The progress made in improving rural sanitation conditions is significant, with an average of 1.5% of rural homes receiving first time service per year.

Recent Progress

Because of high levels of federal funding since 2000, work on several community systems was initiated and is now nearing completion. Prior to hooking up homes for the first time, significant design and construction work must take place on core facilities such as water source development, water treatment and storage, and sewage treatment and disposal. The following first-time running water and sewer systems have been under construction for several years, and are currently scheduled to have a total of approximately 1,400 homes connected between 2009 and 2011:

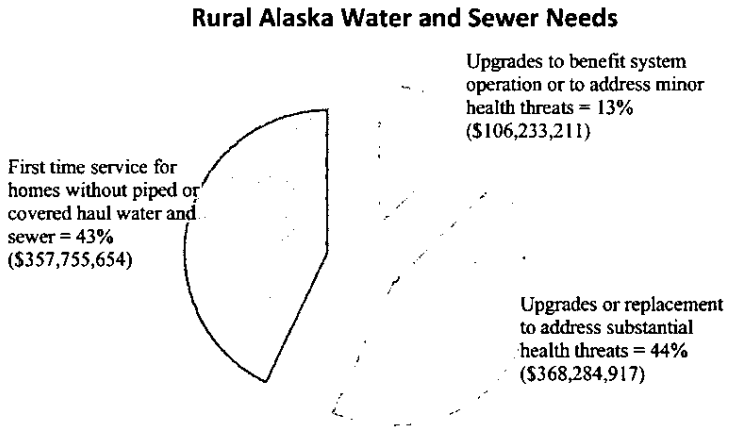
- Akiachak
- Akiak
- Buckland
- Chuathbaluk
- Fort Yukon
- Goodnews Bay
- Hooper Bay
- Hughes
- Kasigluk
- Kongiganak
- Nunam Iqua
- Quinhagak

State and federal funding invested to date in providing these sixteen villages with running and water and sewer is well over $100 million. Recent decreases in funding levels have slowed progress. Without significant future investments, completion of these and other projects will be deferred.

Remaining Needs

While considerable progress has been made, much remains to be done. One in four rural households still lack running water and a flush toilet and must utilize pit privies or honey buckets and self haul water.

Although the percentage of rural households with piped or covered haul service is the measure by which progress has long been assessed, as the adjacent pie chart shows, it only takes into account part of the picture. An equal amount of assistance is needed to upgrade or replace systems that are posing a substantial health threat. Note: The first time service category and the upgrades to address substantial health risks category are often combined and referred to as "critical needs". Upgrades to benefit system operation or to address minor health threats are not considered critical and are mostly dismissed as secondary.



Motion

I move that Finance Committee Co-chair Mike Hawker, be authorized to enter into a contract extending Janet Clarke's professional services contract for one year in an amount not to exceed $25,000.

Department of Environmental Conservation Ten Year Expenditure Plan

The mission of the Department of Environmental Conservation is to protect human health and the environment.

The department develops and enforces standards for protection of the environment, provides controls and enforcement for the prevention and abatement of pollution to the environment and provides controls and enforcement to protect citizens from unsafe sanitary practices.

The department includes five divisions: Air Quality, Environmental Health, Water Quality, Spill Prevention and Response, and Administrative Services.

The following document discusses the assumptions used for the individual divisions and programs within the department to provide estimates of budget growth over the next ten years. Projecting budget growth ten years into the future is very challenging. It is important to acknowledge that many forces and influences beyond the control of the planners working on this ten year projection will come into play long before the ten year period has run its course. As a result, the assumptions and numbers that make up the plan will continue to be revised and refined as needs change and new information becomes available.

BASELINE ASSUMPTIONS

- Non-formula programs were not adjusted for inflation.
- Known significant increases in lease costs will be funded in FY12.
- Adoption of additional federal rules for public water systems from amendments to the Safe Drinking Water Act will occur and be funded in FY13 ($500.0 GF and $500.0 Fed).
- Mining is projected to increase 10% annually due to increasing metal prices and applications for mining permits will continue to increase. This is reflected as a 10% increase each year in I/A authority through FY20.
- Deferred maintenance for the State Lab will be funded in FY12 and FY13.
- The Federal appropriations for rural sanitation CIP projects will continue to decline until zeroing out in FY14. This decrease in funding is shown in the Baseline scenario under the Capital section. General Funds are included in the New Initiatives section to offset this decline in funding and maintain the Water Facilities program at its current funding level.
- Assumes continuation funding for contaminated sites cleanup, oil and hazardous substance first responder equipment and the Municipal Matching Grants Program.
- American Recovery and Reinvestment Act (ARRA) funding is included in the FY10 Baseline Capital budget and is not expected to continue in future years.

BASELINE RESULTS

Total Costs

- Because of the ARRA capital funding received in FY10, it is more accurate to track total cost (operating + capital) increases and decreases from FY11 to FY20. The total Baseline costs decrease by 31%, largely due to the significant decline in Federal funding. However, when the total baseline appropriation is combined with Capital New Initiatives, total funding increases by 18% over these 9 years. This is referenced on the attached "Environmental Conservation – All Funds" chart.

Operating Costs

Formula Programs – *DEC has none*

Non-formula Programs – *includes all RDUs and Components*

- Non-formula program costs increase by 5% over 10 years.

Capital Costs

- Capital Appropriations in the Baseline Budget shows a decline 66% from FY11 to FY20 due to the significant decline in Federal funding to the Water program.

GASLINE ASSUMPTIONS

- Assumes AGIA startup in FY17. This includes AGIA only, and does not include affiliated projects (Bullet line or Alaska Natural Gas Development Authority).
- Assumes the following activities will be needed from DEC:
    - Air permits, monitoring and pre-construction review efforts. Food Safety & Sanitation, Drinking Water and Solid Waste permitting activity for pipeline camps during construction phase from FY15 to FY18. Construction of water and wastewater systems in temporary construction camps would take place in FY15.

NEW INITIATIVES ASSUMPTIONS

- State statute providing $3,400.0 to support food safety inspections throughout the state will be approved in FY12.
- Increased funding needed for increased monitoring of air quality with additional federal regulation implementation and adoption related to climate change and other environmental monitoring efforts.
- Assumes the State Lab will receive funding in FY12 for a Lab Operations Plan.
- Federal appropriations for rural sanitation CIP projects will decline and will be completely expended and unavailable by FY14, as noted in the Baseline section.
- Assumes contaminated site cleanup of the Aniak Middle School/White Alice Communication System will be funded in FY12.

ALASKA DEPARTMENT OF FISH AND GAME
FY11 GOVERNOR'S OPERATING BUDGET REQUEST OVERVIEW

MISSION

To protect, maintain, and improve the fish, game, and aquatic plant resources of the state, and manage their use and development in the best interest of the economy and the well-being of the people of the state, consistent with the sustained yield principle.

CORE SERVICES

1. *Harvest Management*: provide opportunity to utilize fish and wildlife resources
2. *Stock Assessment*: ensure sustainability and harvestable surplus of fish and wildlife resources
3. *Customer Service*: provide information to all customers
4. *Public Involvement*: involve the public in management of fish and wildlife resources
5. *State Sovereignty*: protect the state's sovereignty to manage fish and wildlife resources
6. *Habitat Protection*: protect important fish and wildlife habitat during permit and project review

Ambitions within core services:

1. *Harvest management*: provide opportunities to utilize fish and wildlife resources
   - Expand existing and develop new programs to increase harvest opportunities (e.g., abundance-based management initiatives)
   - Protect and improve access to fishing and hunting opportunities and resources
   - Optimize participation in hunting and fishing activities
   - Improve harvest monitoring and assessment

2. *Stock assessment*: ensure sustainability and harvestable surplus of fish and wildlife resources
   - Improve existing fish and wildlife stock assessment capabilities
   - Expand stock assessments
   - Invest in new technologies (investing in new technologies applies to several of the core services.)
   - Anticipate changing conditions (e.g., climate change, invasive species)

3. *Customer service*: provide accurate and meaningful information to all customers
   - Enhance public communications materials and delivery (e.g., web capacity, multimedia, technical and lay reports)
   - Increase publication in peer-reviewed scientific literature
   - Improve management and scientific reporting
   - Improve licensing and permitting services (including unique identifier for each user)
   - Better coordinate and improve education and viewing programs throughout department and better integrate CF and Subsistence into education programs.

4. *Public involvement*: involve the public in management of fish and wildlife resources
   - Improve BOF/BOG and other regulatory processes (e.g., Federal Subsistence Board, North Pacific Fishery Management Council)
   - Effectively involve (optimize) public in specific decision making processes (legislative, EVOS, task forces and advisory groups)
   - Evaluate further and enhanced opportunities for public involvement

5. *State sovereignty*: protect the state's sovereignty to manage fish and wildlife resources
   - Reassess strategies for state/federal agreements and initiatives
   - Evaluate and improve effectiveness in interacting with other government agencies and forums (e.g., ESA, Magnuson-Stevens Act, NPFMC, Pacific Salmon Treaty, Migratory Bird Treaty Act, ANILCA, FSB)
   - Strengthen state's role in dual management for subsistence
   - Strengthen state's interests in partnerships with other governmental agencies.

6. *Habitat protection*: protect important fish and wildlife habitat during permit and project review
   - Strengthen department involvement in resource development and land use project reviews
   - Improve technical capabilities (e.g., geographical information systems, GIS) to inform environmental reviews of development projects
   - Maintain, restore and improve habitats in the face of other resource development and land use

Workforce development: support professional staff to deliver other core services – Although not a core service this area is critical to the department
   - Re-establish ADF&G as premier employer among nation's fish and wildlife agencies (e.g., compensation, benefits, training, workload management, motivation, initiative, recognition)
   - Improve and increase employee training opportunities
   - Enhance and improve administrative support
   - Stabilize and increase funding for divisional programs and employee development

ALASKA DEPARTMENT OF FISH & GAME RESULTS
CURRENT CAPACITY

- ⬆ Target exceeded.
- ➡ Target met.
- ⬇ Target not met.

Priority Programs - Key Performance Indicators

Harvest Management

- ⬆ Over $1.9 billion value of commercial harvests and mariculture production of fish, shellfish, and aquatic plants - continuing a solid six year upward trend.
- ➡ The estimated total sportfishing trip-related expenditures for 2007, from the "Economic Significance of Sportfishing in Alaska" study, was $567.2 million. This estimate provides baseline information. A trend will be established when the survey is repeated in five years.
- ➡ In 2008, 486,000 anglers purchased fishing licenses, which is 8% over the target of 450,000. Licensed and unlicensed (less than 16 years of age, permanent ID holders) anglers spent an estimated 2,311,000 days fishing, which is 8% under the target of 2,500,000.
- ⬆ In the most recent year available (2008), 144,897 hunting and trapping licenses were sold, a 7% increase from 2007, above the three-year running average (138,716).
- ➡ Amounts necessary for subsistence were met in 60% of the subsistence fisheries, 10% below the 70% target for 2007.

Stock Assessment

- ➡ The annual percentage of salmon reproductive goals achieved in monitored systems is within 10% of the goal.
- ➡ Based on preliminary results of the 2008 Statewide Harvest Survey, sport fish harvest/catch thresholds were met for six resident species categories, four anadromous salmon categories, and four bottomfish/shellfish categories in 2008, just short of the 16 of 21 thresholds met target.
- ⬇ During FY09, the Division of Wildlife Conservation completed 78% of planned wildlife surveys (174 of 223) in which weather or aircraft availability was not a factor, which is below the target of 90%.

Customer Service

- ↑ There were 29,723 participants in angling-skills-oriented programs in FY 2009 which far exceeds the target of 5,000 participants.
- ↑ The Division of Wildlife Conservation's total number of presentations, including wildlife-related forums, lectures, brochures, newspaper articles, radio/TV programs, web pages, and other publications given or produced increased from 342 in FY08 to 450 in FY09.
- ↑ In FY09, the Division of Subsistence completed and released 25 new technical research reports and updates related to harvest information, considerably higher than the annual average of 8.25 between 1997-2008, and the 2004-2008 average of 14.8.
- ↓ There were eight Division of Sport Fish communication plans implemented in FY09, missing the target to implement 15.

Public Involvement

- ↑ In FY09, 67% of Boards of Fisheries and Game meeting participant survey respondents reported expectations were met or exceeded for overall experience with the board process, 57% for materials available prior to board meetings, and 86% for materials available during meetings, exceeding the target.
- → 100% compliance for posting all materials for Boards of Fisheries and Game meetings since this target was initiated in 2007.

State Sovereignty

- → In FY09, ADF&G participated in multiple steps involving ten federal land management plans, two state land plans, one municipal plan, one state refuge plan, nine federal access management plans, two treaty meetings, and three federal policies involving state authorities.
- → In FY09, ADF&G participated in five steps involving national legislation.
- → In FY09, ADF&G supported Department of Law in addressing two existing, two new, and several potential lawsuits.
- → In FY09, ADF&G participated in steps associated with five Endangered Species Act decisions, five ANILCA training sessions, one Migratory Bird regulations, and 15 federal subsistence decisions.

Habitat Protection

- → In FY09, 99.7% of all developers were in compliance with issued Fish Habitat and Special Area permits, just short of the performance target.

IMPACT OF GOVERNOR'S TRANSACTIONS ON RESULTS

Harvest Management: provide opportunity to utilize fish and wildlife resources

- Division of Wildlife Conservation General Funds for Intensive Management Field Operations will maintain the ability to respond and address prime predator management field work within identified Game Management Units, resulting in an incremental increase of ungulates for harvest.

Stock Assessment: ensure sustainability and harvestable surplus of fish and wildlife resources

- Division of Commercial Fisheries:
    - General funds for the Arctic/Yukon/Kuskokwim (AYK) region will fund genetic analysis of Yukon River Chinook salmon, improving the inseason estimates of Canadian origin Chinook, providing possibly increased opportunities for the harvest of Yukon River Chinook salmon by Alaskan subsistence and commercial fishermen. The stock assessment is also important for meeting the obligations of an international treaty.

- Division of Wildlife Conservation:
    - Federal Receipts for Wildlife Population & Habitat Assessment will maintain the ability to evaluate the harvest of wildlife. Field work capacity performed by staff supported by capital (one-time) appropriations during the period, FY08-10;
    - General Funds for endangered species coordination allows the state to become more involved in additional aspects of the federal Endangered Species Act (ESA) process to insure its proper implementation;

Customer Service: provide information to all customers

- Division of Subsistence's Index Community Approach to Estimate and Monitor Subsistence Harvests of Fish and Wildlife in Alaska will enable a more current and thus more accurate understanding of fish & wildlife uses throughout the state, because it would support long-term community rotation surveys in representative communities. This program will provide and improve the accuracy of annual estimates of statewide subsistence harvests and trends, improving the boards of fisheries and game ability to better evaluate the opportunity provided by subsistence regulations to meet the amounts reasonably necessary for subsistence. Restrictions on other harvest opportunities, such as commercial and sport fishing and general hunting, could be avoided.

All Core Service Areas (Commissioner's Office and Administrative Services):

- Non-general funds provide funding for the new assistant commissioner, facilities maintenance, and indirect funds for department projects.

1/26/10 OVERVIEW: ENDANGERED SPECIES ACT

From Rep. Fairclough

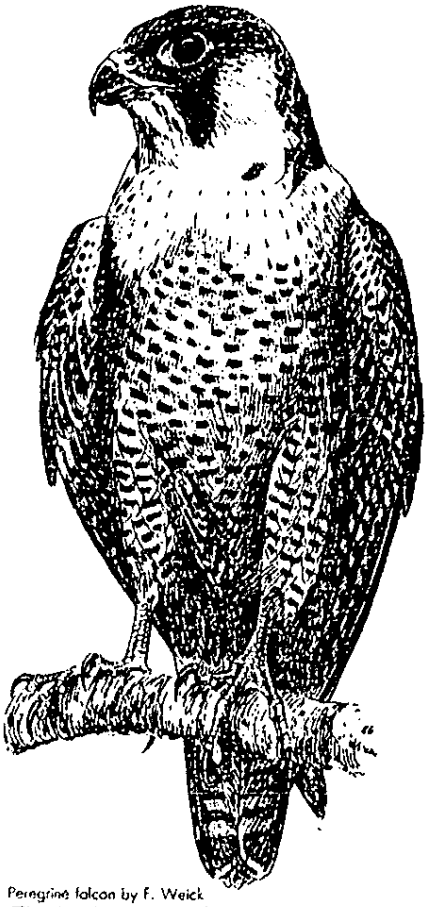
ENDANGERED SPECIES!

CAN WE AFFORD THEM?

In recent months numerous articles have been published that praise the Endangered Species Act. This is no coincidence, but rather a careful orchestration aimed at the current proceedings in Congress on the reauthorization of this law. Most of these articles address only one side of this extremely complex matter, leaving the average reader with a wrong impression based on partial information. And that, of course, is how public opinion is manipulated. A short synopsis of the history of this federal law is in order to understand the points raised here.

HISTORY OF THE ENDANGERED SPECIES ACT

Prior to 1966, when the original Endangered Species Act (ESA) was signed into law by President Johnson, only a few laws affected species on the federal level, such as the Lacey Act of 1900 and the Migratory Bird Treaty Act of 1918. Most such laws affected the states' rights to wildlife management. During the 1960s, when many consequential federal environmental laws came into existence, the principles of protecting specific species were implemented. The original Endangered Species Act of 1966 was the first major action to preserve endangered species on a national level. Several congressional actions followed: The Endangered Species Conservation Act of 1969 added to the species list and broadened federal involvement in wildlife protection. The main impact was not domestic, but international. The Endangered Species Act of 1973 was the most consequential of all. Coupled with the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), which made the United States a signatory partner of this international agreement in 1973, it provides comprehensive protection to all endangered and threatened plants and animals.



Peregrine falcon by F. Weick

The Alaska construction industry pays $25 million yearly for the peregrine falcon program.

Subsequently there were amendments which had more specific consequences:

- ☐ The amendments of 1978 added consideration of critical habitat to the Act.
- ☐ The amendments of 1979 directed the federal government to ensure that its actions are not likely to jeopardize the existence of any species.
- ☐ The amendments of 1982 eliminated all economic considerations from the species listing process.
- ☐ The amendments of 1988 created a mechanism to monitor species which were candidates for listing.

The listing was updated in 1991, adding still more species and habitats to the list of protected areas. In addition to these legislative actions, a multitude of court cases mandated directives and regulations. The most consequential and noteworthy was the *Hill* decision by the U.S. Supreme Court in 1978, which shut down the Tellico Dam project in Tennessee because of the endangered snail darter fish. Basically it states that cost and economic consequences are of no concern when the welfare of endangered species is at risk. The court made it clear that conservation is not to be sacrificed for any other cause, and viewed the value of endangered species as "incalculable."

There are many examples of extreme costs associated with the effects of the ESA after the snail darter case. The question of ecology vs. economy was most highly publicized in the case of the spotted owl in the Pacific Northwest. This issue, which came to light in 1988, is one that virtually all Americans have heard of by now.

There is no question that the ESA and its amendments have had great political implications and have cost American tax-

1830

Copy on file

payers, businesses, and individuals billions of dollars in implementation and enforcement. These costs are rarely discussed in the media, so let me tell you a bit about what it costs to Alaska.

ENDANGERED SPECIES IN ALASKA

Compared with other areas, Alaska has only a few species listed as "endangered" or "threatened," and thus few species have cost the state money for ESA compliance. Some of these species live in remote areas with little human contact, like the short-tailed albatross, which breeds on a remote island off Japan and visits Alaskan waters in the North Pacific; and the Aleutian Canada goose (which is not a separate species, but rather a geographic form of the abundant Canada goose), which breeds on some of the remote Aleutian islands. Another species, the Eskimo curlew, was last seen in Alaska more than 100 years ago and is nearly extinct, with only a few remaining in Canada.

Recently the spectacled eider has been added. It has distribution along the western and northern coasts. The effects of its listing are not yet clear. The only plant protected, the shield fern, is limited to a few spots in the Aleutians.

The bald eagle is protected both by the ESA and the Bald Eagle Protection Act of 1940, amended in 1959. Since 1962, it also has been protected by the Migratory Bird Act. Three separate American laws, plus CITES, protect this species. It is our national emblem and most Americans are very supportive of its special status. There is no doubt that protection of this species has had an economic impact. Because its distribution is limited, however, only a few activities in a few isolated areas have been affected, primarily logging and mining.

The best-known case is the peregrine falcon, which lives throughout Alaska and is represented by three subspecies: *Falco Peregrinus Pealei* in the Aleutians, *Falco Peregrinus Tundrius* in the tundra areas of western and northern Alaska, and *Falco Peregrinus Anatum* in the interior and rest of Alaska. The peregrine falcon and its various forms have a worldwide distribution. This species showed an alarming decline in the late 1950s and 1960s. It was ultimately discovered that the widespread use of pesticides, especially DDT, poisoned the prey birds and in turn affected the falcons' ability to reproduce. The decline was steep and dramatic. In the late '60s and early '70s, the use of these chemicals was banned in most industrial nations. The results were positive and breeding populations recovered quite well, in many cases to original levels. Many authors give credit for this recovery to the effects of the ESA. Most bird-of-prey specialists, however, cite the control of pesticides as the reason.

Author Henry Springer is executive director of the AGC of Alaska.

SPECIES PROTECTION IS MISSING WHERE IT'S MOST NEEDED: THE THIRD WORLD

Peregrines are migratory birds. Some Alaskan peregrines winter in South America. A food supply uncontaminated by pesticides is just as important in the winter as it is during the summer breeding season. To compound the problem, many of the Alaskan prey birds also winter in tropical countries and may be exposed to poisoning. Significantly, some seed-eating prey birds may absorb quantities of pesticides and store them, in concentrated form, in their fat deposits. As a result, peregrines could be ingesting the poison in a concentrated dosage. This points to one of the great dilemmas in the whole question of protecting endangered species.

The greatest needs for protection and action are not in North America, but in most of the Third World. The number of species increases significantly toward the temperate and tropical areas. Another factor that complicates effective measures: most species in northern and southern climates have a wide distribution, while species in the tropics have very limited distribution and often occupy tiny niches. This makes them extremely vulnerable to any change in their habitat. It is, however, exactly these areas that are economically poor. The precious local resources are used and misused at an alarming rate. Effective protection cannot be enacted without a global approach. This takes money. Much is spent in the United States and abroad—but not where it is needed the most.

ALASKA CONSTRUCTION INDUSTRY PAYS $25 MILLION YEARLY FOR THE PEREGRINE FALCON PROGRAM

Even discounting the actual federal and state money spent to enforce the ESA, the costs associated with the peregrine falcon are staggering. Exact figures are difficult to compile because cost accounting is not done for individual species. A few examples, however, will illustrate the implications:

In the taiga (scattered tree growth) areas of Alaska—about three-fifths of the state—peregrines nest primarily on rock outcrops found along the river systems. They also use riparian (river bank) areas for their social activities and hunting. Riparian habitats produce the highest percentage of biomass for prey animals, nearly all of them birds. Alaska's Department of Highways lost most of its sources of gravel and other material because the environmental impact statements showed a conflict with provisions of the ESA. The average yearly construction expenditure for heavy construction for both public and private works is in excess of $600 million. About 40 percent is used in areas influenced by the presence of peregrine falcons. Considering that the increased cost of procuring material from alternate and upland sources amounts to about 5 percent of the contract work, the cost to the construction industry to comply with the provisions of the ESA for this species alone amounts to about $12 million per year.

In addition, preconstruction costs associated with public hearings, research and the preparation of environmental im-

(continued)

1831

ENDANGERED SPECIES *(continued from page 17)*

pact statements have risen steadily and can be estimated at 1 to 3 percent of total project costs, depending on the type and size of the project. The total preconstruction cost per year in Alaska is in excess of $100 million, adding another $2 million to the associated cost. The various operating budgets contain funding for research, management and enforcement of such agencies as the U.S. Fish and Wildlife Service, Bureau of Land Management, Alaska Department of Fish and Game and the University of Alaska. These will add another half-million dollars.

During the construction of the Alyeska pipeline, expenditure of more than $10 million could be directly attributed to the problems associated with peregrine falcons, including realignment of roads and of the pipeline, plan changes, restriction of activities in some areas and prohibition to operate within certain time frames in others, especially during the critical summer months.

These restrictions continue, because the law demands it.

Government officials and bureaucrats are often blamed for these restrictions. That is not fair! Granted, in some cases they make one-sided decisions, but it is clear that Congress did not provide any mechanism by which to consider cost factors. Congress made it clear that it is not the species alone that is to be protected, but any factor contributing to its welfare as well. This includes numerous human influences and habitat alterations.

But back to the Alaska peregrines. Disregarding the demands of the ESA and disregarding cost as a factor, what would have happened to this species without the ESA? Of course it is speculative, but there is no doubt about the following facts:

1. The peregrine population declined because of the use of pesticides and in some populations because of mercury. It recovered when use of these chemicals was prohibited.

2. There are many remote areas in Alaska with suitable habitat that is little influenced by human activity. About two-thirds to three-quarters of Alaska's breeding population is included.

3. Many other species compete with peregrines for suitable nesting sites. These include gyrfalcons, rough-legged hawks, golden eagles and ravens. The peregrine, as a migratory bird, arrives late, and very often the best sites are already occupied by these species. The non-migratory birds arrive earlier, are larger and more aggressive, and usually prevail. In some areas, especially around rural settlements, ravens have increased dramatically, and they definitely affect the breeding efforts of peregrines. Peregrines are pushed to secondary, less favorable sites and I believe this has a more negative impact on the breeding success than most human activities.

I believe the peregrine population in Alaska would be at about the present level even without the ESA. Granted, some birds along the traveled river and road systems would be affected, but they are affected now to the same degree.

THE $35,000 BIRDS

We as humans have an obligation to address conservation in a prudent manner, and I believe that we have to use financial resources to do this. However, I also feel that the expenditures related to the ESA in Alaska are excessive and that the money could be put to better use. None of Alaska's species is in serious trouble and all are afforded sufficient protection under other state and federal laws. Of the 500 to 600 pairs of peregrines in Alaska, perhaps 200 may be directly affected to some degree by human activity. That results in a cost of about $35,000 per bird per year. During the Middle Ages, when the peregrine falcon was a favored hunting bird of nobility, good birds were worth their weight in gold. In today's market that would amount to $15,000 per bird. The price has gone up! Oil companies and other large corporations do not worry much about the cost as a factor, because they recover all expenses through tariffs and sales of their products. Most people do not realize the effects and the resulting cost to everyone. But the bottom line is that *everyone* pays.

CRITICAL POINTS FOR REAUTHORIZATION OF THE ENDANGERED SPECIES ACT

The Endangered Species Act is up for re-authorization before Congress. The stakes are high. The political differences between the executive and legislative branches of the federal government, and the composition of Congress make the outcome uncertain. However, changes are probable. It is to be hoped that a reasonable balance can be achieved and cooler heads prevail. I believe that the following factors should be addressed:

1. Economic factors must play a role in the listing and decision-making process.

2. The scientific problem of legally defining what constitutes a "species" must be clearly addressed. This is one of the major flaws in the ESA's present form. The inclusion of "bio-diversity" since the Rio Summit makes it even more pressing. There have been about 1 million species identified, of which about 75 percent are insects. Very little is known about most of them. Congress needs to set some limits on how far down the list we can reasonably go.

3. Congress must consider the problem of "local" distribution within the United States versus total distribution beyond our boundaries. Some species are rare in the United States, but common elsewhere. It does not make sense to spend a disproportionate amount of money when it is urgently needed for more critical cases.

4. Congress must address the question of compensation for reduced value of private property and the social effects and consequences.

5. Our role in global affairs needs to be clearly defined. Some of our present forms of "eco-imperialism" are uncalled for and in many cases work against serious conservation efforts by other countries. Examples include efforts to save elephants, argali sheep and many other African and Asian species.

BACK TO THE ORIGINAL QUESTION: ENDANGERED SPECIES—CAN WE AFFORD THEM?

This is a decision we must make, first as individuals and then as a nation. But you cannot make a rational decision until you have all the facts before you. It is unfortunate that various groups on both sides of the issue polarize it according to their own philosophies. One-sided articles appear in the press. This article may seem one-sided, but it covers factors rarely mentioned.

The Endangered Species Act has many merits, but in its present form it is not affordable—not by us and certainly not by the nations who need it most: those of the Third World. We *must* think globally when it comes to preservation efforts, ecology and affordability.

Congress needs to hear from all of us. It's up to you.

*—**By Henry Springer**, executive director, AGC of Alaska. Reprinted from* The Alaska Contractor, *Fall 1995.*

National Marine Fisheries Service

4 D Rules and Comments from members of the CRWC.

- Federal Register 12/30/99 4 D Rules

- 4DRules Comments

Some one liners of the 4 D Rules

The 4D rules are an ESA mechanism for protecting threatened as opposed to endangered species. They propose a means by which states,tribes, government entities, developers,private citizens & others can obtain assurances that activities they authorize or conduct are permissible under the Act. There are 3 proposed rules and only the one covering steelhead concerns us.

The Steelhead 4 D rule would apply the "Take" prohibitions to all of our actions. 13 entities on the west coast that have what is described as a "Limit" will not be subject to the take prohibitions. As of September 1998 there were 243 incidental take permits & 200 Habitat Conservation Plans (HPC's) in various stages of development. MPWMD, Cal-Am and certain other CV stakeholders are already negotiating their own section 10 take permits and/or HPC's If this matter is of concern to those above surely it follows that we should be also concerned!

For threatened species there are nine "Take" prohibitions. Take is defined as harass, harm,pursue, hunt,shoot,wound ,kill, trap, capture, or collect or attempt any such conduct: What leads to "Take". Destroying or altering the habitat of listed salmonids. Removing large woody debris I.e.. moving fallen trees . riparian canopy, dredging, discharge fill material (dumping), draining, ditching, road construction, bridges, culverts and so on & so on. Violating fed or state clean water act discharge permits, applying pesticides. Diverting water through an unscreened or inadequately screened diversions when juvenile salmonids are present. Physically disturbing or blocking the streambed where spawners or redds are present. Blocking fish passages thru fills, dams or impassable culverts. You get the picture!!

If you will recall we talked about the "hammer" that was bringing us together. This is it! The 4 D rules committee having read through these Federal Register 28+ pages of rules concluded:

There is little that one can challenge NMFS on as it relates to the above but there is plenty of opportunity to educate all stakeholders and particularly riparian property owners of the need to

be aware of the prohibitions. CDFG has a considerable amount of control over the state of play with their Fishery Management Evaluation Plan (FMEP).

Public opinion at the hearing on Feb. 2 was that NMFS & US Wildlife were not doing enough to protect the threatened species. Few spoke about the financial burden on property owners & users. NMFS appears prepared to negotiate HCP's and Section 10 take authorities which will permit some take but within the overall umbrella of a watershed group and its peer pressure on those who might become involved in a prohibition. These section 10 permits do not authorize " kill" but permit restoration work, fish rescues & other work within strict controls & limits.

In my opinion the CRWC needs to consider whatever comments may dissuade NMFS from taking a hands off posture as a result of public outcry that not enough is being done to protect the threatened species.

1. Recognize the need to make the permit application process easier. They say it may take 3 + years to get a HPC in place.

2. To recognize in a speedy manner any grassroots efforts to police ourselves.

3. Recognize that not one size fits all. Acknowledged the validity of the Regulatory Flexibility Act, arrange for a Initial Regulatory Flexibility Analysis that would provide financial relief in implementing the provisions of the ESA 4D rules if there is undue hardship.

4. NMFS says as there is no need for record keeping there is no need for regulatory relief.

5. Anyone who is undertaking work instream would in my opinion be wise to record all events & action (photograph records). Any temporary stream diversion would require rescue of juveniles to a safe location while work is in process. This applies I would think to Redlegged frogs.

6. Although MPWMD may be in a position to advise owners on streambank restoration and any other in stream work grant money is available to help. It can be obtained more easily through a properly structured watershed council that has a HPC in place.

7. Not only comments to NMFS from the council but from individuals too.

8. There is the technical aspect of control of events to be commented on also. Carmel river & tributaries can & will dry up through drought years. This also occurs when overpumping and diversions occur. There is nothing in the 4D rules that takes natural occurrences into consideration, such as escarpments falling into the river and causing diversions changes in water courses, flood etc. The rules talk about what constitutes a take. No clarity on the cause. How does one establish the status quo without mapping & photography of the sites. These are the primary concerns I have. Kallie, seems to imply that we are dealing with a benevolent caretaker. All I can say is that if I was a property owner I would be concerned at the open endedness of these rules and would seek clarification of my concerns to be incorporated in the final rules.

9. I do not accept the notion that we should be unconcerned because of governments inability or failure to enforce the laws. We have come together because of our appreciation of the Carmel Watershed and our desire to preserve or restore the river & habitat. We must believe

that it is our intention to do all we can to achieve this. Obtaining clarity of the ground rules by commenting on some or all of the above is just plain good business sense.

10. There are real differences of opinion on the meaning of "restore & restoration". Bearing in mind that NMFS & USWL think in terms of restore it might have made more sense to ask them for their definition. The Webster Encyclopedic Unabridged Dictionary of the English Language (I hasten to add a US publication), among other definitions shows "to bring back to a state of health, soundness or vigor".

SUMMARY OF ESA STATUS REGARDING ARCTIC SPECIES

ENDANGERED SPECIES:

- **Eskimo Curlew** – Listed March 11, 1967. Medium-sized shorebird. Last sighting off the coast of Texas in 1962.
- **Bowhead Whale** – Listed June 2, 1970. NOAA found in favor of designating critical habitat for the Bering Sea Stock of Bowhead Whales on May 22, 2001. No critical habitat has yet been designated.

THREATENED SPECIES:

- **Spectacled Eider** – Listed May 10, 1993. Large sea ducks that spend most of their life at sea. Critical habitat was issued on Feb. 06, 2001 and includes approximately 39,000 square miles.
- **Steller's Eiders** – Listed June 11, 1997. Small, marine duck. Although difficult to determine, USFWS has stated that population has been in relative decline. 2,839 square miles of land has been listed as critical habitat as of February 2, 2001.
    - Both are also protected under the MBTA. USFWS issued regulations designed to limit the harvest of both species in 2009, which include some restrictions on times of hunting.
- **Polar Bear** – Listed May 15, 2008. USFWS issued 4(d) special rule allowing for subsistence take, oil & gas activities, deterrence, and self defense. Multiple lawsuits have been brought and are pending in the D.C. Federal District Court. 200,000 square miles have been proposed for critical habitat designation and a final rule is expected by June 30, 2010. USFWS will develop guidelines for deterrence by March 31, 2010. The Borough previously filed comments on Dec. 28, 2009 protesting lack of consultation.
    - In its prior comments, the Borough indicated that it opposed listing of the polar bear due to insufficient data indicating the stock was actually declining (some reports point to the contrary). At the time of the comments, the Borough believed adequate protection measures were already in place and that listing would be premature based on existing data.

SPECIES UNDER CONSIDERATION:

- **Ice Seals** (including Bearded, Ringed, and Spotted) – Petition to list filed by Center for Biological Diversity on May 28, 2008. NMFS concluded, after conducting a status review, that listing of the species may be warranted. A proposed rule should have been issued by May 2009 but was never issued. The Center for Biological Diversity issued a notice of intent to sue. All three species are currently managed under the MMPA allowing for subsistence take, deterrence, and self defense.
    - For Bearded and Ringed Seals, NMFS will determine if listing is warranted by Nov. 1, 2010.
    - Spotted Seals in the Yellow Sea have been proposed to be listed by NMFS as a DPS.
- **Ribbon Seal** – Center for Biological Diversity filed a petition to list the species on Dec. 27, 2007. Determination that listing was not warranted issued on Dec. 30, 2008. Lawsuit has been brought challenging this decision. Currently managed under MMPA allowing subsistence take, deterrence, and self defense.
- **Pacific Walrus** – On Feb. 7, 2008, the Center for Biological Diversity filed a petition to list the walrus under the ESA. USFWS announced on Sept. 10, 2009 that listing may be warranted and is currently conducting a status review. A decision should be announced by Sept. 10, 2010.

submitted by: North Slope Borough

Currently managed under the MMPA allowing subsistence take, deterrence, and self defense. Some non-lethal, incidental take is permitted for oil and gas activities.

- **Kittlitz's Murrelet** – Small bird found in the waters off the shore of Alaska. Listed as a candidate species on May 4, 2004 under the ESA. Because it is a candidate species, ESA's protections do not currently apply. AK Dept. of Fish and Game declined to list it as a state endangered or threatened species on April 7, 2009. These birds are not currently included as a species subject to subsistence harvest under the MBTA.
- **Yellow-Billed Loon** – Center for Biological Diversity filed a petition on March 30, 2004 to list the yellow-billed loon as threatened or endangered. On March 25, 2009, the USFWS concluded that listing the yellow-billed loon under the ESA is warranted but precluded by other higher priority listing actions and therefore, USFWS classified them as a candidate species under the ESA. Currently protected under the MBTA and no subsistence harvest is permitted. But, up to 20 loons per year taken inadvertently is acceptable.
- **Caribou** – International Fund for Animal Welfare filed a petition with USFWS on Sept. 15, 2009 to list two subspecies under the ESA. The two subspecies are only found in Canada, so USFWS will consider whether to list them as a foreign species. USFWS is required to determine whether listing may be warranted 90 days after receipt of the petition.

1-26-10

Testimony to the House Finance Committee
Taqulik Hepa, Director
Department of Wildlife Management
North Slope Borough
January 26, 2010

Thank you, Mr. Chairman and members of the Committee. I appreciate this opportunity to speak to you today on behalf of the North Slope Borough and Mayor Edward Itta. I would like to share our views on the listing of the polar bear and other species under the terms of the Endangered Species Act and its effects on our local government, our communities and our subsistence hunting practices.

The borough has been involved in the management of polar bears on a daily basis since 1988, when Alaskan and Canadian subsistence users established the Inuvialuit-Inupiat Polar Bear Management Agreement. Since then, Native hunters have managed the aboriginal harvest of polar bears along the Arctic coast based on annual quotas recommended by polar bear scientists and the traditional knowledge of experienced Inuit hunters.

This co-management program has emphasized protection of denning bears, females and cubs, and it relies on continuous harvest monitoring. As a result, the polar bear take has remained below established quota levels on average for the past 20 years. The North Slope Borough has embraced this conservation effort and continues to do so, because we care about the polar bear as a resident Arctic species and we consider it essential to the cultural and nutritional wellbeing of our people.

But hunting is not the primary interaction we have with polar bears. As the human population increases on the North Slope and polar bears spend more time onshore because of receding sea ice, the borough has found it necessary to establish a polar bear deterrence program for the protection of both bears and people. With authorization from the U.S. Fish & Wildlife Service, our Department of Wildlife Management operates polar bear patrols to prevent human/bear encounters in the coastal communities of Kaktovik, Nuiqsut, Barrow, Wainwright, Point Lay and Point Hope. These patrols require staff, vehicles and deterrence equipment, and the borough has always been expected to cover the costs, despite the federal responsibility for polar bear protection.

(contracts 1991)

So my first point is that if the federal government is concerned about polar bears, they should talk to us. North Slope people have a subsistence interest in the conservation of polar bears; we have centuries of traditional knowledge about the habits and health of the polar bear population; and the North Slope Borough has done more in recent decades to protect the species than any other governmental entity. We know how to manage the interaction of polar bears and people to limit harm to the bears while protecting the safety of a growing North Slope population. And I guess we're wondering why that doesn't seem to count for anything when it comes to setting policy on polar bears.

The North Slope Borough is very troubled about the expanding application of the Endangered Species Act as a way to protect polar bears and other listed species. The blunt force approach of the ESA is likely to have severe implications on our residents and communities – in terms of our continuing efforts to manage wildlife, our subsistence hunting practices (including such basic activities as coastal travel by snow machine or boat), and even routine infrastructure development.

Our concern is not only based on the sweeping nature of the ESA, but also on our recent experience with the U.S. Fish & Wildlife Service. In late 2008 in an effort to conserve Stellars Eiders, the North Slope Borough hammered out a MOA with the Service setting local conservation measures in place. Our hope was that the Service would focus on the biological needs of the species, outreach, and educational efforts. Unfortunately, the result was a season of intensive law enforcement activity. This is this punitive approach to wildlife management that first comes to mind as we consider the possibilities for an ESA management plan.

We don't know what specific restrictions the Feds will come up with. But having designated 200,000 square miles of critical habitat that includes our hunting grounds and travel routes and surrounds some of our communities, any restrictions are likely to compromise our freedom of movement through the area or our ability to improve our communities. For example, it is not hard to imagine that prohibited activities could include construction of the new runway that the village

of Kaktovik so desperately needs. If a polar bear den is identified near the community, the village may not be able to move their runway to higher ground in order to avoid being routinely swamped by storm surges, as it has been in recent years. That's just one example of a very justifiable public need that stands a good chance of getting derailed in the wake of this listing and the enormous critical habitat designation.

If polar bears were going to be hugely benefited by these restrictions on our daily lives, we could at least understand it. But the federal action on polar bears is based on rapid disappearance of the sea ice the bears depend on as a feeding platform. Unfortunately, there is nothing we can do on the North Slope to counteract that problem. Restricting our activity in a 200,000-square-mile area will not help the polar bear at all. It will only make life more difficult for people, local governments and commercial concerns.

If the federal government really wants to protect the polar bear, it needs to address the issues of ocean warming and climate change. Nothing will be accomplished by restricting the ability of our communities to go about normal daily life. We are clearly not the cause of any serious threat to these species, and yet we could face civil and criminal liability under the ESA for any harm to a single polar bear, even though we are not having any effect on climate change or sea ice. This is not right.

In 2007, the North Slope Borough filed comments opposed to the listing of the Polar Bear under the ESA. We did so because – although we are

very concerned about sea ice retreat – we didn't think there was enough data on polar bears to justify a listing, and we don't think the ESA is the right tool to deal with climate change issues.

As we noted in our 2007 comments, we have observed the effects of the warming Arctic for many years. Sea ice is forming later in the fall, it is not as thick as it used to be, and it thaws earlier in the spring. Violent storms are now more frequent and more intense and they're happening both earlier and later in the year. So we are experiencing the effects of climate change. But as we wrote in our comments to Secretary Kempthorne, "the causes of a changing northern climate lie outside our region, and we firmly believe that any action to counter the warming trend must focus on those causes at their sources."

Unfortunately, it looks like the polar bear listing is going to be the wave of the future. For the first time in history, there is now the likelihood of a large number of other North Slope species being listed. The federal government has already listed at least 5 species on or near the North Slope and is considering at least 7 more. Based on our long experience with bowhead whales, cooperative management agreements for polar bears, and work with bird species such as spectacled and Steller's eiders, we believe most species can be managed best under the Marine Mammal Protection Act, the Migratory Bird Treaty Act, and – for the polar bear – our international conservation agreements. There are also state and federal wildlife laws and other international treaties that can be used as additional tools. We don't need ESA listings to create the best

possible conservation programs along the Arctic coast. And as I said before, no management plan in the Arctic is going to get at the source of receding sea ice, which is the specific problem.

We are also concerned that management under the ESA is driven by litigation, and ESA litigation is targeted at the federal government, ignoring any local consequences. Any person can bring litigation under the "citizen suit" provisions of the ESA, and local communities are little more than collateral damage in these actions. Our ability to participate in traditional activities gets thrown under the bus in the wake of broad federal actions resulting from this kind of litigation. It is not only unfair, it's completely unreasonable.

We are exploring ways to limit the risks to our communities. The Polar Bear Special Rule under section 4d of the ESA gives the federal government an opportunity to shield us from some liability. This special rule protects against liability for incidental takes authorized by the Marine Mammal Protection Act, and for self-defense and deterrence. We are worried, though, that litigations - to which we are not a party - in federal court could strike down the 4d Rule and the protection it provides.

Finally, I want to reiterate that in considering actions under the ESA, the Federal Government hasn't recognized the value of local and traditional knowledge. We know species such as polar bear and arctic seals better than anyone. We pay close attention to these animals and interact with

them almost daily. They are part of our culture, our food supply, and our way of life. We have worked with federal agencies on many Arctic species, and we've had notable successes, including the Alaska Eskimo Whaling Commission managing the endangered bowhead whale and the Alaska Nanuuq Commission managing polar bears.

Even so, our knowledge is often ignored in federal planning, and it was not fully considered in formal consultation before the polar bear listing. Mayor Itta testified at hearings, wrote letters, and spoke to Administration officials. Yet it's fair to say that the final analysis did not consider the experience and knowledge of the people most familiar with the species. So we don't believe there has been an adequate weighing of local and traditional knowledge in the early ESA decisions.

The North Slope Borough is glad to know that you are reviewing new and potential listings under the ESA, and we are grateful for the chance to speak on our behalf. There's no question in our minds that the ESA tackles complex problems with a giant hammer aimed in the wrong direction. It creates tremendous uncertainty for people in our isolated communities, and it may well lead to legal liability even though we are causing no harm to the species. There has to be a better way, and we are eager to work with you toward a more sensible solution.

BUILDING ALASKA'S FUTURE

ALASKA EDUCATION PLAN

ONE STUDENT AT A TIME

Message from the Commissioner

Thank you for taking an interest in the Alaska Education Plan for our K–12 public schools. The plan—created by Alaskans from all walks of life—supports the role of families, communities and local cultures in the schools.

The Alaska Education Plan values knowledge and skills, but student success is measured by more than grades and test scores. The plan's goals and graduation outcomes are well-founded in community values. Those values include providing students the opportunity to explore their interests and develop their dreams.

Please consider the plan an invitation to work together to achieve Alaska's vision for our children's education. I hope you will help make this plan a reality in your family, schools, and community. I also hope you will choose to play a role in the continuing review and revision of the plan so that it meets the changing needs of our students.

The Alaska Education Plan embodies one vision for all students. You will not see separate goals for different types of students. The plan's goals apply equally to all students, whatever their cultural background, whether they are rural or urban, special education or regular education, or interested in college or the work place after high school.

In this way, the plan offers a coherent approach in which all of us work toward common goals. This approach allows for the most cost-effective and efficient uses of our resources. Most importantly, we are equally accountable for each student.

We have called the Alaska Education Plan a roadmap. The journey will take time and hard work. Many people and entities must go on the trip, including state agencies of education, labor and social services; universities; advocates and practitioners of early education; businesses; lawmakers; regional and village corporations and nonprofits; and, of course, educators and families.

Our task is made lighter by knowing how valuable our children are to Alaska and the nation.

One final note: Before this plan was created, we surveyed thousands of Alaskans about their hopes and expectations for public education. Now that we are circulating the plan, we are still interested in your comments and participation.

Please comment or inform us of your willingness to participate by contacting Information Officer Eric Fry at eric.fry@alaska.gov, or Alaska Department of Education & Early Development, attn: Eric Fry, 801 West 10th St., Suite 200, P.O. Box 110500, Juneau AK 99811-0500.

Sincerely,

Larry LeDoux
Alaska Commissioner of Education

INTRODUCTION

Welcome to the Alaska Education Plan.

Created by Alaskans from many walks of life, it is the state's blueprint for public education. The plan provides the basis for accountability to the public.

The plan answers these fundamental questions: What is Alaska's vision for our schools and students? What are our goals? What attributes and skills do we want high school graduates to possess? What actions will allow us to meet these goals and make this vision a reality?

In short, the vision and goals in the Alaska Education Plan are our destination. The actions are the roadmap. Knowing where we want to go, we can determine if our expenditures of money and effort are efficiently and effectively getting us there.

The public, having a clear vision for our schools and students, can measure performance against these goals. The plan, which will periodically be reviewed and revised, encourages Alaskans to participate in the goal-setting process and own the results.

The Alaska Statewide Education Summit, held in November 2008 in Anchorage, initiated the effort to develop the Alaska Education Plan. Nearly 450 participants discussed education topics ranging from preschool to postsecondary, technology to finances, community partnerships to culture.

Two principles guided the summit's structure: focused conversations among those who gather in a common cause will produce a shared vision, and collective wisdom is generated when groups gather in discussion.

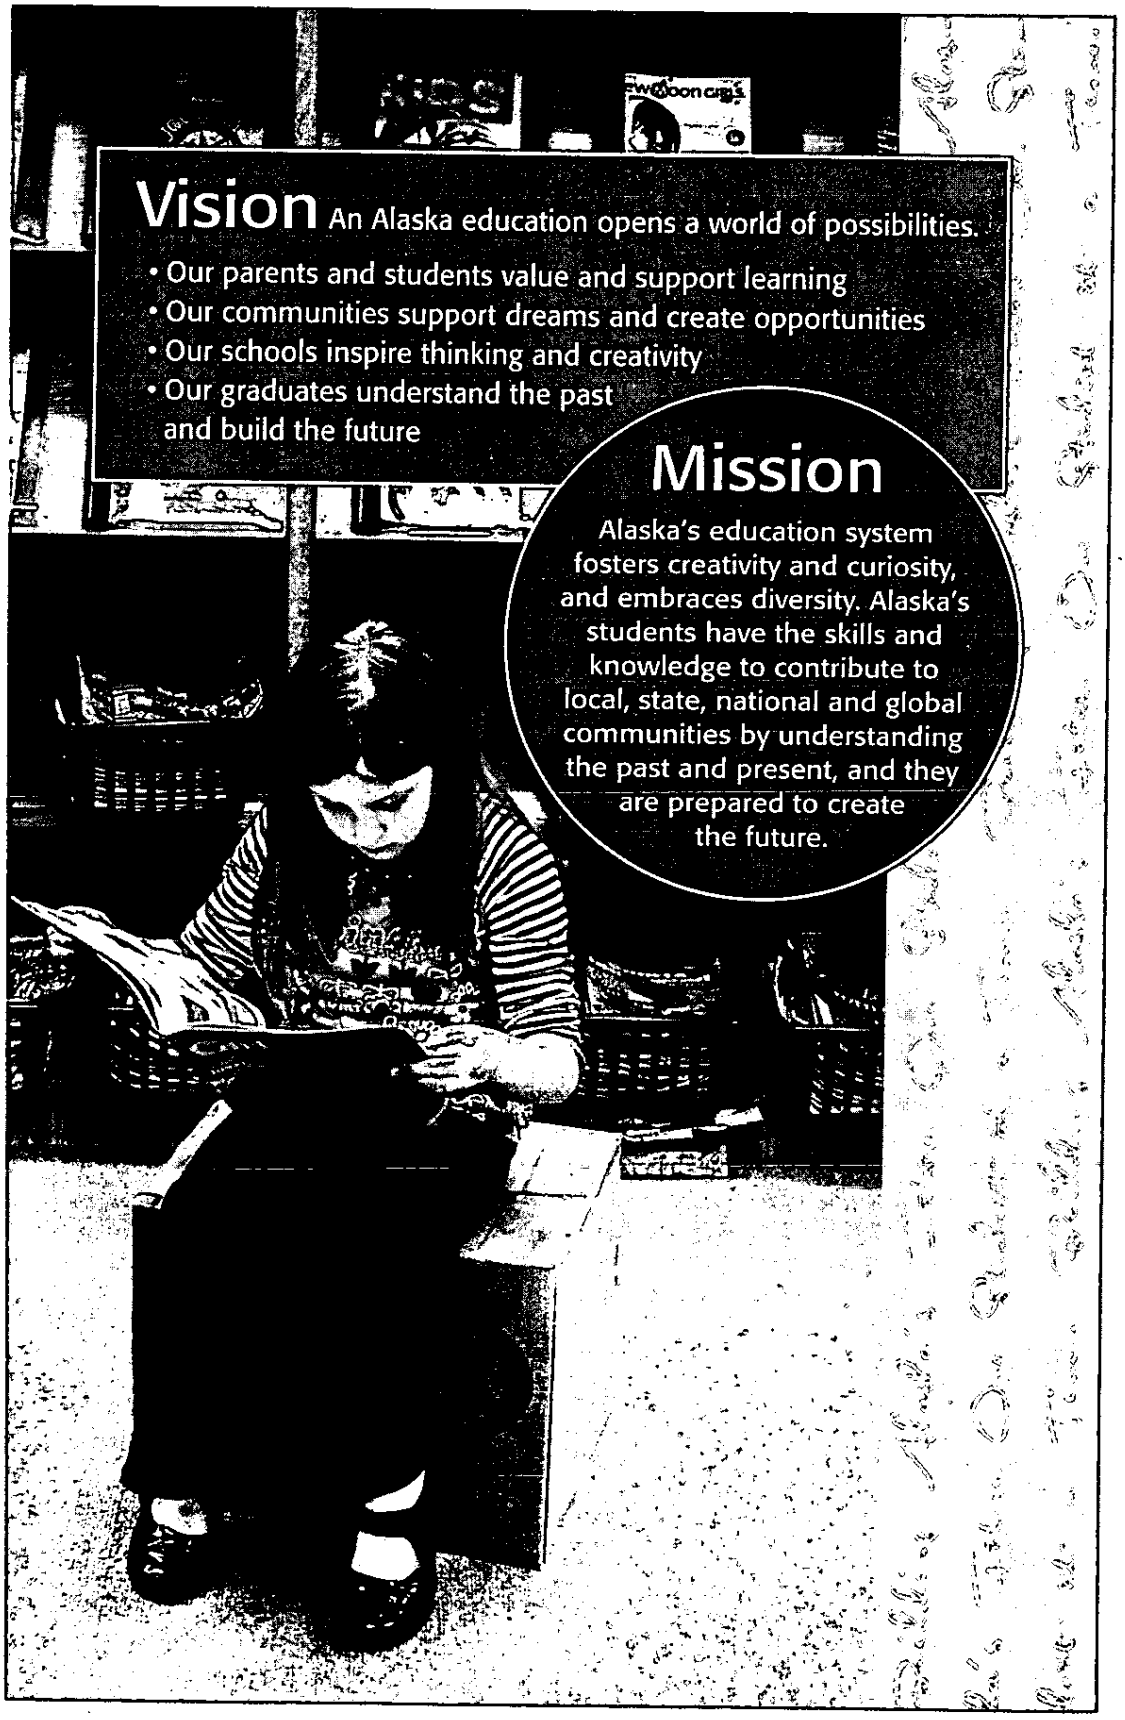
Participants met in eight groups, each group discussing a separate topic in education. Each group identified challenges, opportunities, goals and actions for its topic. A ninth group crafted vision and mission statements and graduation outcomes—a list of the

desired skills and attributes that Alaska high school graduates should possess as a result of their public education.

The Alaska Education Plan organizes the results from all eight groups at the summit into three topics, in order to provide greater focus. They are World-Class Schools; Community, Culture, and Family; and Student Health and Safety. Other topics discussed at the summit—such as finance, technology, early education, and partnerships—have been integrated throughout the three remaining topics.

Each topic in the plan includes a rationale for action, a goal, and broadly stated actions for each goal. Groups of Alaskans will continue to meet in 2009 to develop a detailed, prioritized action plan for each goal. The State Board of Education & Early Development approved the plan on March 19, 2009.

The Alaska Education Plan, related background documents, and its ongoing progress are featured on the web site of the Alaska Department of Education & Early Development at eed.state.ak.us/.



Vision An Alaska education opens a world of possibilities.
• Our parents and students value and support learning
• Our communities support dreams and create opportunities
• Our schools inspire thinking and creativity
• Our graduates understand the past and build the future
Mission
Alaska's education system fosters creativity and curiosity, and embraces diversity. Alaska's students have the skills and knowledge to contribute to local, state, national and global communities by understanding the past and present, and they are prepared to create the future.

World-Class Students Graduation Outcomes

Possess a broad knowledge base

- Know and be able to discuss the critical bodies of knowledge in art, science, literature/language arts, history, geography, and health in addition to being skilled in reading, writing, and mathematics
- Apply content knowledge in meaningful and practical ways
- Use prior knowledge to acquire new knowledge, develop new skills, and expand understanding
- Understand issues from a variety of cultural perspectives
- Demonstrate proficiency in a second language

Communicate effectively

- Express ideas clearly, both verbally and in writing
- Communicate through listening and discussion with others
- Read, understand, and respond to written information
- Understand and respond to verbal information

Use technology skills

- Use a broad range of technologies to pursue interests, investigate and solve problems, and communicate and share ideas
- Be personally accountable for the ethical use of technology
- Use the Internet to explore questions; collect, critically evaluate, and select information sources; synthesize conclusions; and communicate the results

Think logically and critically

- Solve problems using questioning, reasoning, and analysis
- Acquire and manage information to understand and solve problems
- Understand and apply decision-making processes in a variety of settings
- Be able to select, analyze, and use information for specific purposes
- Explore, consider, and evaluate divergent viewpoints and ideas

Be healthy

- Apply the knowledge, habits, and attitudes that promote physical and mental health
- Participate in collaborative and responsible relationships
- Make informed and safe choices
- Set and achieve personal goals
- Connect with family and culture values

Recognize, value and use creativity

- Appreciate artistic expression
- Demonstrate creative thinking
- Show self-expression
- Honor traditional art forms

Be a responsible and ethical citizen and community member

- Understand and participate in the democratic process
- Demonstrate respect for people and cultures
- Demonstrate respect for the environment and evaluate the use of resources
- Take responsibility for personal actions and understand the impact those actions have on others
- Demonstrate an ability to approach problems from a global perspective
- Be an effective and responsible decision-maker who contributes to and volunteers in the community
- Adapt to a diverse and changing world

Be an enthusiastic learner

- Make a commitment to create quality work and strive for excellence
- Use a variety of learning strategies, personal skills, and time management skills to enhance learning
- Reflect on and evaluate learning for self-improvement
- Understand the relevance of learning a broad range of skills

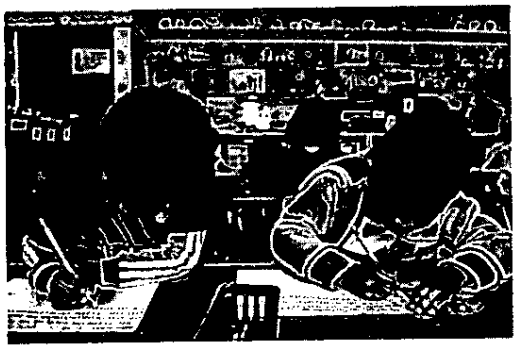
World-Class Schools

RATIONALE FOR ACTION

World-class schools are the ultimate goal for Alaska's public education system. All the other goals feed into this. These schools will nurture the students described in this plan's graduation objectives as world-class students.

There are many success stories in Alaska's schools, ranging from caring teachers helping struggling students, to the graduates who fill our work places, to creative programs by school districts to teach students independent living skills and the skills for jobs or postsecondary (after high school) education.

And yet there are many gaps in the education of Alaska's children. There are great differences in the academic preparation of children entering kindergarten. As they grow older, roughly a quarter of students are less than proficient in one or more of the fundamental skills of reading, writing and math. Several categories of students are less likely to do well in school—ethnic minorities, students with disabilities, students from low-income families, and students who are learning English.



At least a third of Alaska students will leave school without a diploma. About 40 percent of recent Alaska high school graduates who attend the University of Alaska need remedial courses. Some Alaska high school graduates have completed their public education yet do not have a direction in life and are not prepared for a career, while well-paying, interesting jobs go unfilled. Additionally, some gifted and talented students are not challenged sufficiently by their school work.

World-class schools will have the support of families and communities. World-class schools will honor local cultures and integrate them into instruction.

World-class schools will have strong academic standards and high expectations for all students, yet these schools will support the varied needs and interests of each student, in academics, the arts and extracurricu-

lar activities. World-class schools will have the flexibility to provide alternative pathways to student success. They will offer career and technical courses, preparation and guidance.

World-class schools will attract, prepare and retain quality teachers and administrators. World-class schools will have appropriate facilities and technology. They will build partnerships with entities outside of the schools.

GOAL **All students will graduate prepared for careers or postsecondary training and education.**

ACTIONS

1. Ensure that families, if they desire, can access in their community affordable, high-quality early care and learning programs for children from birth to age 5.
2. Define an education system, aligned from preschool to postsecondary, that ensures all students are prepared to transition to the next level of education, career, or life path of their choice.
3. Review the state's academic standards to determine alignment with world-class 21st century skills and Alaska's graduation outcomes.
4. Establish partnerships that enhance readiness for postsecondary education, career preparation, and life.
5. Develop a staff development infrastructure that is collaborative, need-based, research-proven, and provides opportunities for continuous growth for new and experienced teachers.
6. Ensure that public and private postsecondary institutions, business and industry, tribal organizations, and state agencies work collaboratively to develop and maintain a coherent educational plan designed to achieve Alaska's high education expectations.
7. Collaborate with Alaska's postsecondary institutions to ensure that education-related degree programs and staff development programs reflect research, best practices, Alaska's diverse cultures, and alignment to academic standards, and are sufficient in scale and scope to meet the public school work force needs.

8. Empower students by providing a learning environment that personalizes their education and engages them as active partners in their own learning through technology.
9. Ensure that teachers have the training to effectively use technology to support instruction.
10. Establish and maintain a statewide public telecommunications network that provides the opportunity for instruction, communication and distance education.
11. Ensure that the state foundation funding program is comprehensible to the public, sufficient to meet world-class performance expectations, responsive to the changing needs of Alaska's work force, and predictable enough to facilitate effective planning.
12. Provide consistent funding for school construction and major maintenance projects.
13. Engage with the community and local organizations to identify local work force skills needed for economic development.
14. Attract and retain quality teachers and administrators; provide quality professional development.
15. Teach work ethic and employability skills.

Community, Culture and Family

RATIONALE FOR ACTION

Family engagement has emerged as a central focus in Alaska education. Viewing parents as the first and best teachers of their children goes beyond their role in early education. Engagement means involving families in every aspect of educational planning, implementation, and evaluation throughout their children's education.

Engagement means more than inviting parents to attend school functions or parent conferences or to join the PTA. Parent involvement must be more than asking parents to approve decisions about the school or their children that have already been made. Schools that make adjustments for parents with busy schedules, different backgrounds, and varying comfort levels with schools will enjoy more parental involvement. Relevant parent engagement is recognizing that the school serves the interests of parents.

When parents join with other community members and the school to determine behavioral expectations or learning goals for their children, they become partners in their children's education. Student achievement data can demonstrate how well a student is progressing toward the state's grade-level expectations, but only parent and student feedback can reveal how positive the learning climate is and how well the school is serving the community's valued interests.

Schools that support and celebrate school choice and family engagement must be committed to sharing information about program options, assessment data, and other information that is critical to evaluating what is best for children. Choice without knowledge has no meaning.

GOAL **Schools will form strong partnerships with families and communities, and will respect and embrace local cultures.**

ACTIONS

1. Develop and implement strategies that encourage Alaskans to value and support education and lifelong learning.
2. Formulate a shared vision of community-based education that respects culture, school governance, and community ownership.
3. Implement a system of data collection and reporting of prekindergarten-postsecondary programming so parents, communities, and policy makers can make informed decisions.
4. Increase diversity in the teaching profession.
5. Apply Alaska's Standards for Culturally Responsive Schools.
6. Provide new and experienced educators with sufficient training and ongoing support to integrate and instruct within the context of a community's indigenous cultures.
7. Ensure that schools' instruction, organization, and operational procedures reflect and respond to student, family, and community values and needs.
8. Support opportunities for school choice, education alternatives, and distance-delivery options that are high quality, standards-based, and flexible to meet the individual needs of a child or family.
9. Provide support and resources for parents who choose to home school their children.
10. Create a sustainable infrastructure committed to developing and maintaining partnerships that enhance student success.
11. Develop and implement strategies to improve student attendance.

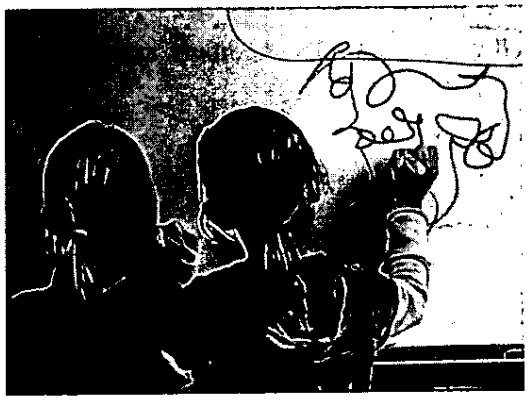
Student Health and Safety

RATIONALE FOR ACTION

Creating healthy, safe schools requires healthy families and communities. Children who have a strong connection to family values, customs, and beliefs develop the confidence to reach for a star and the talent to grab one.

If children cannot rely on positive connections at home, they will settle for any substitute that satisfies this longing, including gang affiliation, harmful relationships, violence, and drug and alcohol abuse.

Schools must be proactive, focusing on the prevention of unsafe and unhealthy practices. Several ingredients are necessary to create a safe and healthy school environment. Schools will form partnerships with community entities to achieve these goals.



Schools must take rigorous action to ensure that schools are free from violence, drugs, disruptive behavior, and harassment. Schools must provide support and intervention services for parents and students, a broad range of activities, rigorous academic and vocational programs, and learning alternatives that meet the interests and learning needs of every child and family.

School staff must receive training and support to enforce school expectations. Students, parents, educators, and community members must teach and model a consistent set of values as the basis for every activity, program, lesson or expectation.

Schools should be models of healthy nutrition and physical activity, teaching students good habits. Approximately one in 10 Alaska children is obese. At least half of Alaska's children do not meet recommended levels of physical activity.

GOAL **Students will have access to safe schools, where they develop healthy and safe practices for life.**

ACTIONS

1. Develop a comprehensive health and safety plan that uses the expertise of parents, communities, tribal organizations, social and civic organizations, state agencies, and school districts.
2. Implement health and wellness programs that improve students' sense of well-being and address substance abuse, suicide, sex education, bullying, Internet safety, mental and physical health, and personal safety.
3. Implement nutrition and physical education programs to ensure that students develop patterns of lifelong healthy behaviors.
4. Ensure that students, staff and community members are provided safe and secure schools.

Publication Notice: This informational booklet was published by the Alaska Department of Education & Early Development. It was produced at a cost of 42¢ per copy in Juneau, Alaska. Publication date: August 2009.

HB 280
Cook Inlet Recovery Act
Overview

Prepared by Representative Mike Hawker's Office

Gas Storage

- Incentives include:
  - Land lease and fee exemption for 10 years
  - NEW income tax credit
    - Credit is based on volume, certified by AOGCC: $1.50/ 1,000 cubic feet of working storage capacity
    - Maximum credit is $30 million per facility
    - Transferable and can be sold back to the state
  - Expedited/Priority processing of applications by DNR, when reasonably possible
- Incentives apply to gas storage facility that meets minimum capacity and delivery requirements, certified by AOGCC:
  - Minimum Working Storage Capacity: 500 million cf
  - Minimum Daily Delivery Capacity: 10 million cf
- Incentives are available for gas storage facilities that commence operations between December 31, 2010 and January 1, 2016
- All financial benefits and the names of those receiving the benefits are public information
- All financial benefits must be passed on to utilities, which then pass on to consumers
- All financial benefits stop when a project ceases operation
- CIRA also clarifies RCA's role in regulating gas storage facilities

Gas Exploration in Cook Inlet

- Changes to existing credits:
  - Allows 100% of credits earned by explorers in the Cook Inlet to be used elsewhere in the state; current statute requires these credits to be applied only to taxes paid on Cook Inlet production
  - Allows the full amount of the credit to be used in the year issued; current statute allows only half of the credit to be used in one year
  - Provides a 40% credit for exploration within Cook Inlet: current statute contains a variable (30% or 40%) credit based on the proximity of the exploration to an existing well
  - Allows credits to be transferred and used immediately

HB 280
Cook Inlet Recovery Act
Overview

Prepared by Representative Mike Hawker's Office

Definitions

Gas storage facility: A depleted or nearly depleted reservoir, aboveground tank, pipeline or other structure used to store natural gas produced offsite and delivered to the storage facility to hold until needed. The owner of the gas — a utility, for example — would inject gas into the facility and would pay the facility operator for storage service.

Working gas storage capacity: The maximum amount of natural gas the storage facility could safely hold for its storage customers.

Cushion gas (also known as pad gas): The volume of gas that must be maintained in the storage facility to provide adequate pressure for operations. The storage operator, not the storage customers, would own the cushion gas.

Native gas: In the case of a nearly depleted reservoir, native gas is the natural gas that exists in the reservoir at the time it is developed for use as a storage facility. Native gas is used as cushion gas to maintain pressurization. If all of the non-native working gas that was injected for storage is withdrawn and native gas is eventually produced, state tax and royalty would be assessed.

Non-native working gas: Natural gas that is produced from another reservoir and delivered to the storage facility and held until needed. For example, a utility could purchase gas from a Cook Inlet producer and have it delivered to the storage facility for safekeeping until the utility needs the gas to meet customer demand. At that point, the utility would instruct the gas storage operator to deliver the quantity of gas required. The utility, not the storage operator, would own the gas in storage. State tax and royalty would be assessed on the non-native working gas when it is first produced and sold to the utility; no additional taxes or royalties would be due when it is withdrawn from storage for delivery to the utility.

Department of Labor and Workforce Development Ten Year Expenditure Projection

The mission of the Department of Labor and Workforce Development is to provide safe and legal working conditions and to advance opportunities for employment.

The department has three priority programs, they are:

Protect Workers

Statutory and Regulatory Assistance and Enforcement to protect Alaska's workers. This includes the department's wage and child labor law enforcement, workplace safety compliance and enforcement, mechanical device inspection, and overseeing State of Alaska Americans with Disabilities Act compliance.

Workforce Development

Workforce Development to support Alaska hire and economic development. This includes the department's employment services, adult basic education, business partnerships, career and technical education and training, and vocational rehabilitation services.

Income Replacement

Income replacement for injured, unemployed and permanently disabled workers. This includes the department's Workers' Compensation, Unemployment Insurance and Disability Determination programs.

The following document provides an estimate of budget change over the next ten years. Projecting budgets ten years into the future, particularly for the very different and distinct programs and funding sources of the Department of Labor and Workforce Development, is very challenging. Just the uncertainty involved in projecting federal grant revenues, which directly support over half of the department's budget, makes it difficult to look a year or two into the future, let alone ten. As a result, the assumptions and numbers that make up the plan will continue to change as new information becomes available.

Following the ten year projection is a detailed listing of the various assumptions which were used to estimate future funding levels.

Initiatives of the
Alaska Department of Education & Early Development

The following initiatives are designed to meet the three main goals of the Alaska Education Plan: All students will graduate prepared for careers or postsecondary training and education. Schools will form strong partnerships with families and communities, and will respect and embrace local cultures. Students will have access to safe schools, where they develop healthy and safe practices for life.

State System of Support: EED's State System of Support helps struggling districts build their capacity to improve student achievement. The system brings training, written and online materials, and technical assistance in assessment, curriculum, instruction, leadership, school environment, and professional development.

Alaska Virtual School: A group of K-20 Alaska educators are designing an Alaska virtual school program. Students anywhere in Alaska will have access via technology to high-quality courses taught by Alaska highly qualified, effective teachers. A virtual school could help small schools meet the curricular needs of the Governor's Performance Scholarship and provide rural students with advanced and other specialized courses. Ideally, all students in Alaska will be able to individualize their education with flexible scheduling and access to additional virtual courses and learning opportunities.

Teacher quality: Educators from school districts, the university and EED are developing regulations to improve teacher quality in Alaska, to include: a stronger link between the needs of districts and teacher preparation programs; improving standards for teachers and methods of evaluating teachers; more paths to certification; tying certificate renewals to student achievement; improving our mentoring program for new teachers.

Early learning coordination: The new Alaska Early Childhood Advisory Council will coordinate state systems to provide efficient, effective and accessible services for young children so that all of our children are ready to begin school. The council will foster collaboration between public and private entities. It will tie together family supports for children's physical health, mental health and education.

Health and safety: EED expects to complete a health and safety action plan by June 2010. It adheres to an evidenced-based, nationally endorsed coordinated model for school environment, health education, physical education, school meals and child nutrition, health services, counseling, psychological and mental health services, staff wellness, and parent and community partnerships. The educator-created Alaska Physical Education Standards are already in draft form.

Alternative Schools Healthy School Initiative: EED launched the five-year initiative in fall 2008. The goal is to reduce student risk behaviors associated with disease, premature death, social challenges, and poor academic outcomes. Targeting alternative schools is an efficient way to help Alaska's most at-risk students.

Standards review: EED and Alaska educators will meet in February to review the national K-12 standards in reading and math (referred to as the common core standards) being promoted by the U.S. Department of Education. We will compare the national standards with our own grade-level expectations and performance standards to determine the degree of alignment. EED will use the information to consider whether the national standards would prepare students for college and careers.

Graduation: EED hosts a graduation working group of educators, policy makers, community advocates, cultural leaders, industry leaders and parents. They are developing strategies to keep students in school and to eliminate barriers to graduation. They have identified practices in schools that may discourage students from graduating. They will recommend how schools can identify students who are at risk of leaving school.

Partnerships: Alyse Galvin, EED's first partnership liaison, is working to connect community organizations, families, educators and students. She will soon start up the Families in Education 101 web site. Among the new partnerships is a group of four school districts, businesses, nonprofit organizations, parents, educators and agencies to serve the emotional and social needs of middle school students. Ms. Galvin is developing tools for schools to learn how to be welcoming to families and community members.

Career and technical education: Helen Mehrkens, EED's first career and technical administrator in 20 years, is working with DOL&WD to build an action plan to revitalize career and technical education, open the shops in Alaska's high schools, and integrate CTE into the regular high schools. EED and DOL&WD are working with the Alaska Workforce Investment Board to coordinate the development of career education and to support the Alaska Gasline Inducement Act training program.

Alaska Career Ready: Next school year, we will implement Alaska Career Ready, in which students in grades 6 and 8 take assessments in three skills that employers say are important: reading for information, locating information in visual formats, and applied math. Students in grade 11 will be assessed in those subjects and be able to earn a nationally recognized certificate. Students will have online access to free courses in the assessed subjects and to career information.

Rural education: Phyllis Carlson, the state's first Director of Rural Education, is focusing on assisting EED's interventions in long-struggling districts and schools; creating EED's first Native Leadership Council; and further implementing the state's cultural standards, which were adopted years ago but never acted upon.

Web site redesign: We will rebuild the EED web site so that it readily and engagingly serves the needs of parents, educators and all of EED's customers.

Race to the Top: We are weighing whether to apply for Round Two of the federal grants known as Race to the Top. The application, due June 1, requires a comprehensive plan for education reform created in partnership with participating school districts. Whether we win a grant or not, the plan will guide our reform efforts.

Department of Education & Early Development
10 Year Fiscal Plan Assumptions: FY2011 – FY2020

BASELINE BUDGET GROWTH (SCENARIO) 1

- Foundation Program Projections: Foundation Program projections reflect the following increases per Fiscal Note 2 (HB273) adjusted for updated student counts- FY11 $57,712.3, FY12 $12,901.0, FY13 $12,075.0. Additionally, the projections include the Charter and Alternative School funding increase approved in FY10. A long-range projection for the Foundation Program is difficult to determine as any increases/decreases are based on legislative appropriation. The trend over the last 3 years includes an increase of $100 to the Base Student Allocation (BSA); however, this is due to the fiscal note detailed above. The department has projected a $100 increase to the BSA FY14 through FY2020 based on this trend. This equates to an approximate increase of $25.0 million annually.

  As a primary assumption for this formula program it must be noted the division of School Finance has been tracking a steady decline in student population which is in contrast to the Department of Labor and Workforce Development Alaska Population Projections document. It is also assumed that legislation would be required to increase the Base Student Allocation (BSA) to hold harmless the districts with severely declining student populations FY14 through FY20. Since many factors impact the state aid calculation, such as enrollment and required local effort, the trends would indicate a need to project declining entitlement payments. Using a historical perspective, state aid can remain relatively flat over multiple years during times of decreasing state revenue. On the optimistic side, the program should be sufficiently funded primarily due to the fact a tremendous amount of work has been accomplished through the efforts of the Education Funding Task Force and the implementation of their recommendations with the support of the Governor and the legislature to build an equitable formula.

  Also included is a removal of a FY10 one-time-item that was appropriated for the department's Age 4 Pre-K Program as part of Education Reform. This project is further addressed in the New Initiatives (Except Gasline) section.

- Foundation Program - Public School Trust Funds from tobacco taxes fluctuates annually and will reduce or increase the amount of general fund required to fully fund the Foundation program. The published annual report from the Department of Revenue (available online) shows a slight decrease from FY09 to FY10. The FY11 projection also is estimated to be a decrease from FY10. Funding will remain flat in this projection since no long term trends are available.

- Pupil Transportation reflects an increase of $2,689.5 in FY11 based on the Anchorage CPI increases estimated at 2.90% (DLWD). The projection for Pupil Transportation from FY12 through FY20 reflects an average annual increase of 2.75% based on the annual inflation assumption as reported by the Alaska Permanent Fund.

Department of Education & Early Development
10 Year Fiscal Plan Assumptions: FY2011 – FY2020

- Boarding Home Grants and Youth in Detention reflect no increments in a fiscally conservative environment (Special Education Service Agency has minor fluctuations in population. Annual projections are based on the student count and the FY11 number reflects a decrease of -$4.5 from FY10.).

- Special Schools will require a FY10 supplemental increase of $180.0 GF to adjust for the additional public transportation services for the Anchorage School for the Deaf. This amount will be in the FY11 base budget.

- Alaska Challenge Youth Academy includes a decrement of -$602.3 GF in FY11 based on their student count. A long-range projection for ACYA is difficult to determine as any increases/decreases are based on legislative appropriation. The trend over the last 3 years includes an increase of $100 to the Base Student Allocation (BSA); however, this is due to the fiscal note detailed above under the Foundation Program. The department has projected a $100 increase to the BSA FY12 through FY2020 based on this trend. This equates to an approximate increase of $150.0 annually.

  Formula generated increases were rejected by the Alaska State Legislature in FY08 as excessive. Legislation would be required to remove the link to formula funding and create a GF base budget in DMVA for annual appropriations.

- Executive Administration includes a FY11 increment of $291.7 GF justified as follows: During the FY09 legislative session, the legislature passed SB285 (Ch.70) adding AS 14.07.032 and amending AS 14.07.020(a) and AS 14.07.03, which provides the Department of Education & Early Development with the clear, legal authority to improve instructional practices in school districts. The funding in this increment will be directed toward district/school improvement in the areas of math, science, and reading content specialists. The department fully anticipates a critical need for additional contracted staff to address the increasing need to provide professional and technical assistance to school districts. Flat funding is projected from FY12 through FY20 in the base budget. General funds are critical and required to implement and support this state mandate.

- Administrative Services includes an increase of $93.0 in I/A authorization to support a new position within the component. The position will provide a full-time PCN devoted to department procurement which will provide department-wide efficiencies and allow other critical resources to be reallocated.

- School Finance and Facilities contains an increment of 3% GF for school bus inspections contract which will be solicited competitively for a new contract to begin in FY11. This amount ($8.0) is included in the base budget beginning in FY12 as a fixed cost.

Department of Education & Early Development
10 Year Fiscal Plan Assumptions: FY2011 – FY2020

- Student & School Achievement, Assessments section projects a fixed cost annual increase of $350.0 GF for the Alaska Comprehensive Statewide Student Assessment contract. The Standards Based Assessments and the High School Graduation Qualifying Examination are trending with a 3.5% to 4.0% annual increase just to maintain the current level of services. This amount has been included in the baseline budget growth projections beginning in FY12 through FY16. In FY17 a new contractual period will begin. A conservative estimated increase of $475.0 GF has been added to the base budget in FY17-FY20. It is very likely that the actual contractual costs will exceed the estimate; however, the department has no documentation to support future increases. The conservative estimate is based on the department receiving the same level of services and without any major enhancements to the state assessment system.

  Adjustments based on the Mental Health Trust recommendations for Autism Resources and Rural Secondary Transitions, and for the Technical Vocational Educational Program funding (TVEP) are also included in the base. The TVEP funding distribution to Galena for FY11 projects an increase of $38.3.

  The Work Ready/College Ready program has only been implemented in a handful of school districts. Continued support for these state services is projected for full implementation through FY20. Full implementation is estimated to cost $351.6 in GF. This projection is included in the FY12 base budget.

- Early Learning Coordination will reflect the removal of a FY10 one-time-item (OTI) of $200.0 GF, and a matching GF OTI increment in FY11 for a grant to Best Beginnings.

- Alaska State Council on the Arts includes an increment of $70.0 in federal authority to receive and expend additional National Endowment of the Arts grant funding.

- Mt. Edgecumbe High School projects a fixed cost annual increase of $175.0 GF for contractual services in FY12. The Dormitory Management Services, Food Management Services and Janitorial Services will all be competitively solicited for contracts beginning in FY11. Until the bids are received, the department does not yet have any documentation to support a FY11 increment request; however, the FY12 fixed cost increment is based on a conservative estimate of a 6% increase over the next 5 years.

  A full-time Music teacher is included in the FY11 MEHS budget and projected through FY20 resulting in an increase of $54.6 in I/A authorization.

A FY10 one-time-item will be removed for the 2009 August fuel/utility costs: $57.2 GF. In FY10 and prior years there has been legislation that allows the Office of the Governor to provide a distribution to state agencies to off-set fuel/utility costs, with the amount distributed depending on the cost of oil per barrel. The department anticipates another such distribution in FY10 in a similar amount, or more, than the August 2009 distribution and had included $57.2 in the FY10 budget, but not the succeeding years (FY11-FY20) as the department has no indication that such legislation will be passed in future years.

- State Facilities Rent includes an additional $70.0 GF in the FY12 base budget to provide funding for an increase in the Alaska State Council on the Arts lease. The agency has competitively solicited new workspace and the increase is based on the successful bid cost allocations received by the Division of General Services. The increase in not included in the FY11 Governor's budget as the bid costs had not yet been calculated at the time of the department's budget submission; however, the department will be requesting the leasing facility increase in the FY11 Governor's amended budget.

- New developments regarding federal grants are currently being pursued by the Division of Libraries, Archives and Museums. The divisions are close to exceeding their federal receipt authority. It has been the practice of the department to seek approval for an increase in federal receipts through the LB&A process; however, the time may come when it may prove to be more efficient to increase the division's federal receipt authority during the budget cycle to establish an appropriate federal receipt base to accommodate future additional grants. This situation has not been projected for this exercise, though should developments mandate such actions, projections for additional federal receipt authority will be included in future releases of this document.

- Alaska Commission on Post Secondary Education – Western Interstate Commission for Higher Education (WICHE) program assumes contractual increases based on current trends at 4% annually in the base beginning in FY12 through FY20.

- Washington, Wyoming, Alaska, Montana and Idaho (WWAMI) Program – University of Washington School of Medicine. Fiscal note for additional students provides an increase of $310.0 GF for FY11 and the program projects an annual increase of 3.4% through FY20 based on the number of students participating. FY11 is the final year of the fiscal note for the program expansion costs. The FY11 $310.0 includes both the fiscal note and 3.4% increases.

Capital

- Mt. Edgecumbe High School - $1,700 GF Deferred Maintenance is included in the FY11 Governor's capital budget request for projects on the priority list developed from the six-year CIP master plan. $5,000.0 has been included annually through FY20

in efforts to complete a majority of the projects in the current six-year CIP master plan. The CIP master plan is scheduled for an update in FY14.

- School Construction/Major Maintenance - Assumes Debt Reimbursement does not sunset and is re-authorized. FY12 through FY20 consists of SC/MM at $150,000.0 annually in the base numbers. The FY11 Governor's capital budget contains $24,770.7 for major maintenance projects on the November 5th release of the state Capital Improvement Projects status list.

NEW INITIATIVES (Except Gasline)

Describe department assumptions for new initiatives (except gasline) appropriations estimates below;

- Foundation Program includes $2,000.0 for the Age 4 Pre-K Program as part of Education Reform that began in FY10 with a $2,000.0 annual increase through FY15 and flat funding projected from FY16 out to FY20 set at $10,000.0 annually. The annual increases will serve an additional 350 children per year under the pilot program and would reach a service level of 1,750 children in FY15 according to this scenario.

- Governor's Performance Scholarship program (GPS): $400,000.0 (5%) from the Constitutional Budget Reserve Fund will be used to produce earnings that will fund the scholarships. The scholarships will be merit-based. To qualify, students will have to take four years of math, language arts and science, in addition to three years of social studies. Also, the higher the GPA of a student, the higher the scholarship award will be. Students must have a 2.5 GPA in order to be eligible for scholarship funds. The GPS program will address the need for Alaska to have highly qualified, highly educated workers and will promote economic growth and opportunity for Alaska families. This funding is introduced in the FY11 budget to create an endowment that is estimated to generate approximately $20,000.0 annually through FY20.

Initiatives of the
Alaska Department of Education & Early Development

The following initiatives are designed to meet the three main goals of the Alaska Education Plan: All students will graduate prepared for careers or postsecondary training and education. Schools will form strong partnerships with families and communities, and will respect and embrace local cultures. Students will have access to safe schools, where they develop healthy and safe practices for life.

State System of Support: EED's State System of Support helps struggling districts build their capacity to improve student achievement. The system brings training, written and online materials, and technical assistance in assessment, curriculum, instruction, leadership, school environment, and professional development.

Alaska Virtual School: A group of K-20 Alaska educators are designing an Alaska virtual school program. Students anywhere in Alaska will have access via technology to high-quality courses taught by Alaska highly qualified, effective teachers. A virtual school could help small schools meet the curricular needs of the Governor's Performance Scholarship and provide rural students with advanced and other specialized courses. Ideally, all students in Alaska will be able to individualize their education with flexible scheduling and access to additional virtual courses and learning opportunities.

Teacher quality: Educators from school districts, the university and EED are developing regulations to improve teacher quality in Alaska, to include: a stronger link between the needs of districts and teacher preparation programs; improving standards for teachers and methods of evaluating teachers; more paths to certification; tying certificate renewals to student achievement; improving our mentoring program for new teachers.

Early learning coordination: The new Alaska Early Childhood Advisory Council will coordinate state systems to provide efficient, effective and accessible services for young children so that all of our children are ready to begin school. The council will foster collaboration between public and private entities. It will tie together family supports for children's physical health, mental health and education.

Health and safety: EED expects to complete a health and safety action plan by June 2010. It adheres to an evidenced-based, nationally endorsed coordinated model for school environment, health education, physical education, school meals and child nutrition, health services, counseling, psychological and mental health services, staff wellness, and parent and community partnerships. The educator-created Alaska Physical Education Standards are already in draft form.

Alternative Schools Healthy School Initiative: EED launched the five-year initiative in fall 2008. The goal is to reduce student risk behaviors associated with disease, premature death, social challenges, and poor academic outcomes. Targeting alternative schools is an efficient way to help Alaska's most at-risk students.

Standards review: EED and Alaska educators will meet in February to review the national K-12 standards in reading and math (referred to as the common core standards) being promoted by the U.S. Department of Education. We will compare the national standards with our own grade-level expectations and performance standards to determine the degree of alignment. EED will use the information to consider whether the national standards would prepare students for college and careers.

Graduation: EED hosts a graduation working group of educators, policy makers, community advocates, cultural leaders, industry leaders and parents. They are developing strategies to keep students in school and to eliminate barriers to graduation. They have identified practices in schools that may discourage students from graduating. They will recommend how schools can identify students who are at risk of leaving school.

Partnerships: Alyse Galvin, EED's first partnership liaison, is working to connect community organizations, families, educators and students. She will soon start up the Families in Education 101 web site. Among the new partnerships is a group of four school districts, businesses, nonprofit organizations, parents, educators and agencies to serve the emotional and social needs of middle school students. Ms. Galvin is developing tools for schools to learn how to be welcoming to families and community members.

Career and technical education: Helen Mehrkens, EED's first career and technical administrator in 20 years, is working with DOL&WD to build an action plan to revitalize career and technical education, open the shops in Alaska's high schools, and integrate CTE into the regular high schools. EED and DOL&WD are working with the Alaska Workforce Investment Board to coordinate the development of career education and to support the Alaska Gasline Inducement Act training program.

Alaska Career Ready: Next school year, we will implement Alaska Career Ready, in which students in grades 6 and 8 take assessments in three skills that employers say are important: reading for information, locating information in visual formats, and applied math. Students in grade 11 will be assessed in those subjects and be able to earn a nationally recognized certificate. Students will have online access to free courses in the assessed subjects and to career information.

Rural education: Phyllis Carlson, the state's first Director of Rural Education, is focusing on assisting EED's interventions in long-struggling districts and schools; creating EED's first Native Leadership Council; and further implementing the state's cultural standards, which were adopted years ago but never acted upon.

Web site redesign: We will rebuild the EED web site so that it readily and engagingly serves the needs of parents, educators and all of EED's customers.

Race to the Top: We are weighing whether to apply for Round Two of the federal grants known as Race to the Top. The application, due June 1, requires a comprehensive plan for education reform created in partnership with participating school districts. Whether we win a grant or not, the plan will guide our reform efforts.

1. One-time Items Include: FY07 $2,640.0 for Utility Increases; FY08 $2,640.0 & $2,317.9 Utility Increases; FY09 $4,840.0 (Actual) for Utility Increases, $234.4 for Workforce Development Stipend (ACCFT); and FY10 $150.0 for UAF Virology Facility Operating Costs, $500.0 for Fairbanks Organized Research Alaska Center for Energy and Power Leadership, $450.0 for Cooperative Extension Service - Energy Outreach.

2. The $550.0 funded with Business License Revenue in FY09 was moved to General Funds in FY10.

3. Commencing in FY03, in accordance with GASB 34, the university is required to report student tuition and fee revenue and auxiliary receipts net of allowances and discounts, with corresponding offsets in scholarships. Without the adjustment for this accounting change, student tuition and fees at UA would be: FY07 $91,466.1; FY08 $99,916.0; FY09 $107,369.7 an increment of 120.5 percent above FY99. For more details please visit the Statewide Planning and Budget website at: http://www.alaska.edu/swbir/budget/publications/TuitionDescription/tuitionallowance.pdf

4. Other Appropriations Include: FY99 $594.9 for Y2K assessment and remediation, and $46.5 reappropriation for library books; FY07 $2.0 License Plate Revenue, and $4.0 for ETS Chargebacks; FY08 $1.5 License Plate Revenue; FY09 $1.8 (Actual) and $2.0 (Budget) License Plate Revenue, and $4,840.0 (Budget) One-Time Funding for Utility Increases; FY10 $2.0 (Budget) License Plate Revenue, and $1,650.0 & $1,980.0 (Budget) One-Time Funding for Utility Increases; and FY11 $2.0 (Budget) License Plate Revenue.

Governor's Proposed FY11 Operating Budget
University of Alaska
(in thousands)

The Governor's Proposed FY11 Operating Budget for the University of Alaska totals $847.9 million, an increase of 3.7 percent from FY10. Of the $847.9 million budget, $339.1 million is state funding and $508.7 million is authority for university generated revenue. The state appropriation increase is $12.0 million, a 3.7 percent increase from $327.1 million in FY10.

The Governor's Proposed FY11 Operating Budget for the University of Alaska includes $10.3 million to support UA's compensation increases and other adjusted base requirements and aligns with the UA Board of Regents' most pressing priorities. The FY10 one-time funded programs for Alaska Center for Energy and Power and Energy Outreach through Cooperative Extension Service are also included in the Governor's Proposed Budget. UA's budget includes 3.1 percent dedicated to maintaining the responsive programs and services already established.

(2) $150.0 one-time funding in FY10

University of Alaska
FY11 Operating Budget Request Items

Adjusted Base Requirements
(GF: $10,269.7, NGF: $13,670.4, Total: $23,940.1)
The Governor's Proposed FY11 Operating Budget for the University of Alaska includes $10.3 million of UA's requested $11.7 million in state appropriations to support UA's adjusted base increment requirements. The adjusted base requirements include employee compensation increases and non-personnel related increases.

Compensation Increases
(GF: $5,925.0, NGF: $5,985.6, Total: $11,910.6)

- Compensation Increases
  The requested amount covers the negotiated contract agreements and benefits costs for AHECTE, UNAC faculty, UNAD, and the policy mandated salary increase and benefit costs for UA employees not represented by a union. The request applies the savings from a reduction in staff benefit rates from FY09 to FY10. Funding to increase student wages, which have not been increased since 2003, is also being requested.

  The UAFT collective bargaining agreement expires on 6/30/10 with contract negotiations beginning in late October 2009. In the absence of a ratified contract containing a salary increase for unit members for FY11, no increase is being requested for the UAFT bargaining unit at this time. Once the labor contract is finalized, the University will submit a supplemental or amended request for the funding as needed.

  Employer contributions for health are expected to remain the same as FY10. FY11 retirement rates are also expected to be the same as FY10; for PERS, 22.00%; TRS, 12.56%; and ORP1, 12.56%.

Non-Personnel Services Fixed Cost Increases
(GF: $2,168.4, NGF: $6,584.8, Total: $8,753.2)

- Facilities Maintenance and Repair Requirement
  UA's annual maintenance and repair is calculated at a minimum 1.5 percent of current building value. Each MAU is asked to annually increase its operating budget dedicated to facilities maintenance, often referred to as M&R, in order to keep pace with its ever increasing building maintenance needs.

- SW Network Infrastructure/Connectivity
  This funding is necessary to fully utilize the high-speed network connectivity currently provided by the GCI broadband capacity gift circuit between the University of Alaska and the national research/educational network Internet2. This connectivity provides researchers greater network resources to collaborate with colleges both inside and outside of Alaska and serves as an incentive to bring new research into the state.

  This request also provides expansion of the available bandwidth to UA Community Campuses and rural locations, enabling contemporary technologies and increased service delivery of both existing and future network based applications, VoIP, and other converged applications. Specifically, this will improve the availability and speed of implementation for telecommunications services.

- Other Fixed Cost Increases
  The requested University generated funds will be used toward non-discretionary cost increases estimated at 1.5%, in contractual services and commodities.

Utility Cost Increases
(GF: $1,484.3, NGF: $1,100.0, Total: $2,584.3)

- Utility Cost Increases
  This request covers the projected FY11 utility and fuel oil cost increases, estimated at a 10 percent increase over FY10. FY07-FY10 increases will be offset through a utility fuel trigger mechanism and if necessary, a request for supplemental funding will be submitted.

New Facility Operating and Maintenance Costs
(GF: $692.0, NGF: $0.0, Total: $692.0)

- Integrated Sciences Building (ISB) (UAA)
  The FY11 request provides funding for the maintenance and operating costs for the new facility. This request was partially funded in FY10.

- State Virology Lab (UAF Portion)
  This request covers the maintenance requirement and anticipated new facility operating costs. This request received partial one-time funding in FY10.

Priority Program Enhancement and Growth-Energy
(GF: $950.0, NGF: $2,668.4, Total: $3,618.4)
Energy funding will address solutions to the state's most pressing energy issues, including outreach through the Alaska Cooperative Extension Service and will provide a sustainable funding source for the Alaska Center for Energy and Power (ACEP) to continue critical energy research and testing and development of economic opportunities for the State, its residents, and its industries.

- UAF Alaska Center for Energy and Power Leadership
  (GF: $500.0, NGF: $1,318.4, Total: $1,818.4)
  Alaska's world class energy resources, including oil, gas, and coal are the source of much of the state's wealth. Alaska has unique challenges and opportunities associated with developing its energy resources, and the university seeks to fulfill the need for basic and applied energy research at a critical time in Alaska's history. Alaska's rural communities have reached a crisis level in the escalating cost of energy. Along the Railbelt, traditional fossil fuel-based resources used for power generation, such as Cook Inlet natural gas, are in decline. Yet the state consumes 40 percent more fuel per capita than any other state, and more than three times the national per-capita average. New energy research and testing is needed over the short and long term to lower the cost of energy throughout Alaska and develop economic opportunities for the State, its residents, and its industries. This increment is to sustain and build upon the initial investment of the Institute of Northern Engineering in the Alaska Center for Energy and Power (ACEP). Funding for the ACEP Director is needed for the sustainability of the energy program, and to set the course for future energy research both at ACEP and across the university system. Funds are also requested to support faculty leaders in critical areas such as geothermal technologies and exploration, renewable power (e.g., wind, solar, bio, and hydrokinetic), and alternative fuels. Support staff positions will manage grants and contracts and supervise the acquisition,

maintenance, and operation of energy research equipment. This request received one-time funding in FY10.

- UAF Cooperative Extension Service - Energy Outreach
  (GF: $450.0, NGF: $1,350.0, Total: $1,800.0)
  Cooperative Extension will work with the Alaska Center for Energy and Power (ACEP) and other University researchers to bring applicable energy research information to communities throughout the State. Alaska's rural communities have reached a crisis level in the escalating cost of energy. Along the Railbelt, traditional fossil fuel based resources used for power generation, such as Cook Inlet natural gas, are in decline. Yet the state consumes 40 percent more fuel per capita than any other state, and more than three times the national per-capita average. New energy research and testing, to be conducted through the Alaska Center for Energy and Power, is needed for the short and long term to lower the cost of energy throughout Alaska and develop economic opportunities for the State, its residents, and its industries. The university and collaborating organizations also conduct research on renewable energy sources and on building construction and renovation techniques that conserve energy. The Cooperative Extension Service is the University unit that disseminates research information in an understandable and usable form to Alaskans in both urban and rural settings. This request received one-time funding in FY10.

FY11 Adjustments
(GF: $783.3, NGF: $1,693.2, Total: $2,476.5)
These adjustments include requests outside of the University of Alaska's normal budgeting process or transfers from other state agencies.

- Technical Vocational Education Program
  (TVEP: $478.3, NGF: $0.0, Total: $478.3)
  This is the anticipated increase in UA's Technical Vocational Education Program (TVEP) funding in FY11. This funding, commonly referred to as workforce development, is focused on priority workforce development areas established by the Alaska Workforce Investment Board (AWIB).

- Mental Health Trust and MHTAAR
  (GFMHT: $0.0, NGF: $1,693.2, Total: $1,693.2)
  Funding will be directed toward further enhancement of the Behavioral Health Initiatives Partnership (BHIP) between the University of Alaska, the State of Alaska Department of Health and Social Services and the Alaska Mental Health Trust Authority.

- Department of Health and Social Services Transfer
  (GFMHT: $305.0, NGF: $0.0, Total: $305.0)
  In FY2008, the Division of Behavioral Health received $105.0 GFMHT for the Bring the Kids Home (BTKH) Residential Aide Training program and $200.0 GFMHT for the BTKH Training Academy. This change transfers the GFMHT funding for these programs from the Division of Behavioral Health to the University of Alaska, who presents the academy.

Governor's Proposed FY11 Capital Budget
University of Alaska
(in thousands)

The Governor's Proposed FY11 Capital Budget includes $162.5 million to address the UA Board of Regents' priorities: Annual Requirement for Maintenance and Reducing Deferred Maintenance, UAF Life Sciences Classroom and Lab Facility, Community Campus Feasibility Study, and University Receipt Authority.

The Annual Requirement for Maintenance and Reducing Deferred Maintenance of $37.5 million from state funds represents approximately 2 percent of UA's facilities adjusted value. Major renewal projects covered in this request include the Science Building Renewal in Anchorage, critical restroom renovations in the Skarland Hall and critical electrical utility repairs in Fairbanks, as well as campus entry and road improvements to Auke Lake Way in Juneau. UA is responsible for approximately 37.5% of the total gross square footage of state facilities.

UAF Life Sciences Classroom and Lab Facility will provide critical instructional classrooms and research lab space for life science programs, one of the most popular programs for degree-seeking students. UAF's biology program is one of the most productive arctic research programs in the circumpolar north. Facilities for UAF's life science programs, however, are insufficient and outdated. Labs in the Bunnell building from the 1960's and Irving building do not meet current needs. This project includes approximately 97,700 square feet, approximately 40,000 square feet of academic and classroom space and 57,700 square feet of research space. Once completed, space in Bunnell and Irving would become available for renovation and reassignment to other programs. Funding will complete design, construction and build-out of the facility and the necessary utilities.

A Community Campus Feasibility Study will enable the university to evaluate each community campus, using the academic and campus master plans to identify academic priorities and support infrastructure needs, then test the ability of the current campus facilities to meet those needs. Any gap between need and existing facilities will be identified, then as appropriate, projects will be developed for inclusion in the University's Capital Improvement Plan.

	State Approp.	Receipt Auth.	Total

Maintaining Existing Facilities

UA's FY11 Annual Requirement for Maintenance and Reducing Deferred Maintenance of $37.5 million from state funds represents approximately 2 percent of UA's facilities adjusted value. An investment of $37.5 million each year for the next 5 years will enable UA to begin reducing the deferred maintenance and renewal backlog. The highest priority projects are listed below by MAU.

UAA Main Campus - Renewal and Renovation (R&R)

- **UAA Physical Science Building Renewal**
  FY11 (GF: $10,200.0, Total: $10,200.0)
  The renewal for this building includes HVAC and lighting replacement, building automation controls upgrade, fire notification system replacement, HAZMAT removal, plumbing and fixtures replacement, roof repairs, and building envelope upgrades to improve energy efficiency. The work also includes lab and classroom work to support the redefined function. Consultants reviewed the building and the backfill program plan and developed a renovation plan for the building. Funding received in FY10 was used to fund the design a portion of this project.

- **UAA Beatrice McDonald Building Renewal**
  FY11 (GF: $10,300.0, Total: $10,300.0)
  These labs will need refitting to meet program requirements. Work scope includes HAZMAT abatement, building structure upgrades, roofing repairs, architectural finishes and furnishings, mechanical system upgrade and replacements, boiler replacements, building automation upgrades, and fire alarm system replacement. Electrical service upgrades, lighting upgrades, power distribution, and specialty work will be required for the new labs. Consultants have reviewed the building and the backfill program plan and have developed a renovation plan for the building.

- **UAA Engineering Building Renewal**
  FY11 (GF: $3,500.0, Total: $3,500.0)
  This project includes HVAC system repairs; building automation upgrades, elevator code, safety and energy upgrades; conversion to energy efficient lighting; electrical service upgrades to the building; select plumbing and fixture replacements; fire panel and field device replacements; select replacement of wall and floor coverings. These renovations will provide renewed infrastructure and space for office, classrooms, and instructional labs for the portions of the Engineering Building vacated by science programs.

UAA Community Campuses - Renewal and Renovation (R&R)

- **UAA Community Campus Fire Systems Upgrade**
  FY11 (GF: $1,000.0, Total: $1,000.0)
  This project replaces components of existing fire detection and alarm systems with more modern, functional equipment. This upgrade will also allow a review of occupancy levels and classification of the buildings. The new systems allow sensitivity adjustments of individual devices from the control panel, reducing the incidences of nuisance alarms and will reduce maintenance time locating a single malfunctioning sensor. These upgrades are needed at the following campuses: Kenai Peninsula, Prince William Sound, and Kodiak.

- **UAA KPC Kenai River Campus Water Connection to City of Soldotna Water System**
  FY11 (GF: $600.0, Total: $600.0)
  This project will allow for completion of the on-property water utility connections between the City of Soldotna water utility and college buildings. Connecting to the water line, modifications to interior plumbing, and abandonment of the existing water system and water well will be accomplished with these funds.

- **UAA PWSCC Wellness Center/Student Life Renewal**
  FY11 (GF: $3,600.0, Total: $3,600.0)
  This project will allow for upgrades to the electrical and mechanical systems, repair of water damaged interior finishes, abatement of asbestos materials and mold, and reconfiguration of the space to make it more efficient.

UAF Main Campus - Renewal and Renovation (R&R)

- **Skarland Hall Critical Restroom Renovation**
  FY11 (GF: $3,902.3, Total: $3,902.3)
  The preliminary scope of the project is to gut the shower rooms on all three residence floors of Skarland Hall. The project may also involve demolition of the toilet area of the restrooms, depending on the extent of damage and the final configuration of the build-back to accommodate ADA and current codes. Once the damaged infrastructure is identified and removed, the restrooms will be reconstructed. During construction, the dorm will be completely shut down to student use.

- **UAF Critical Electrical Distribution (High Voltage)**
  FY11 (GF: $10,000.0, Total: $10,000.0)
  FY12-FY16 (GF: $21,000.0, Total: $21,000.0)
  The existing electrical distribution system at UAF is nearly 50 years old. With the completion of several new facilities, the antiquated equipment could be stretched beyond its capabilities and begin to fail. To ensure campus power is not shutdown, major upgrades must be made to replace the ancient switchboard and cabling to bring the campus distribution back into code compliance.

- **UAF Atkinson Heating Plant Critical Utilities Revitalization**
  FY11 (GF: $20,500.0, Total: $20,500.0)
  FY12-FY16 (GF: $18,000.0, Total: $18,000.0)
  The UAF heating plant is a co-generation facility that provides electrical power, domestic and firefighting water, and steam for heating buildings. The plant is over 40 years old and many components have exceeded their useful life. This project will address revitalization of the highest priority deficiencies of utilities on the UAF main campus. The heating plant renewal items will include the steam, electrical and water systems. The items were identified in the 2006 Utility Development Plan as needing "immediate action". Avoiding a major utility failure is the primary objective of this project.

- **UAF Fairbanks Campus Main Waste Line Repairs**
  FY11 (GF: $3,250.0, Total: $3,250.0)
  FY12-FY16 (GF: $4,000.0, Total: $4,000.0)
  Much of the sanitary and storm sewer main piping on campus is original woodstave or clay piping dating back nearly 60 years. These mains, though not at full capacity, have far exceeded their useable life. Campus growth and an ever-changing regulatory environment require the modification and upgrade of the waste water handling infrastructure. Based on the June 1, 2005 U.S. Environmental Protection Agency MS-4 permit regarding storm water discharge, UAF will be required to install storm water collection infrastructure for buildings and streets by 2010. This requirement also includes modifications to the sanitary waste lines to ensure complete separation of the two systems. The project will replace several thousand feet of waste line main piping with new modern materials with a life that exceeds 60 years. Funding received in FY10 ($1,000.0) was used to partially fund this project.

- **UAF TVCC Space Revitalization Phase 4**
  FY11 (GF: $5,000.0, Total: $5,000.0)
  FY12-FY16 (GF: $14,300.0, Total: $14,300.0)
  The UAF Tanana Valley Campus Center is in critical need of continuing major upgrades to ensure the reliable and efficient delivery of TVC programs focused on key Alaskan industries. The facility was designed and constructed in 1962-63. Since taking ownership in 2003, the University has completed two State-funded projects and two additional projects funded by the Denali Commission in 2009. The state funded the exterior envelope, which is Phase 3, and was completed in 2009. FY11 funding will complete the fourth floor revitalization for Allied Health programs and upgrade antiquated elevator lift systems and cars. The UAF Tanana Valley Campus facility is in need of continuing major revitalization of interior spaces, exterior grounds, and parking. These needs are reflected in the continued phasing for construction in subsequent years.

- **UAF Atkinson Heating Plant Boiler and Turbine Replacement**
  FY11 (GF: $5,000.0, Total: $5,000.0)
  FY12-FY16 (GF: $140,000.0, Total: $140,000.0)
  The 2006 Utilities Development Plan identified the preferred option for providing current and future energy (electric and building heat) as replacing and expanding the current coal fired combined heat and power (CHP) plant. New efficient coal boilers represent the lowest life cycle cost as well as the lowest carbon footprint of the options explored. The existing steam turbine has reached the end of its useful life and needs to be replaced prior to experiencing failure, funding received in FY10 was put toward this project.

- **UAF Elvey Electrical Renewal**
  FY11 (GF: $2,250.0, Total: $2,250.0)
  Constructed in 1970, the Elvey Building is home to the UAF Geophysical Institute. The institute is a major center for many state emergency preparedness programs, such as the Alaska Volcano Observatory and the Alaska Earthquake Information Center. These two programs track and disseminate information pertinent to the health and welfare of every Alaskan. Other organizations located in the Elvey Building include NASA, the U.S. Department of Defense, U.S. Geological Survey, and portions of the International Arctic Research Center. Since constructed, the facility and its key infrastructure components have passed their 30 year life expectancy and major renewal of the facility must occur. The main electrical switch for the building no longer functions. The single transformer supplying the building is past the end of its life. The transformer is located inside the building and should it fail, building operations will cease until repairs can be made.

- **UAF Arctic Health Research Building (AHRB) Deferred Renewal - Phase 3 of Multiple Phases**
  FY11 (GF: $16,000.0, Total: $16,000.0)
  FY12-FY16 (GF: $42,650.0, Total: $42,650.0)
  Built over 40 years ago, AHRB has an ever increasing list of deferred renewal projects that are now affecting critical research and teaching in the building. Major renewal and renovation work must occur now to keep the building available for occupancy and full use. Phase 1, funded in FY07, completed a revitalization of the eastern wing of the building in January 2008. Phase 2 work renovated portions of the building that were vacated in 2009 by the State of Alaska Public Health Lab and the recently vacated animal holding quarters. Phase 3 will renovate the south wing and some additional virology space to include offices, labs, and mechanical spaces. Renewal of the entire building is key to teaching the next generation of resource managers and agricultural scientists. Fisheries teaching and research performed in the south wing of the building is specifically connected to Alaskan coastal and Bering Sea regions and provides managers and fishermen significant information about the health and population of many harvested species. Other labs in this wing provide teaching space for large animal species such as reindeer and caribou.

UAF Community Campuses - Renewal and Renovation (R&R)

- **UAF Kuskokwim Campus Facility Critical Deferred and Voc-Tech Renewal – Phase 2 of 4**
  FY11 (GF: $3,000.0, Total: $3,000.0)
  FY12-FY16 (GF: $12,900.0, Total: $12,900.0)
  In 2004, UAF completed a Facilities Audit of the Kuskokwim Campus facilities. The audit found most of the facilities at Bethel required extensive revitalization and code work to allow current and future academic programs to maintain and grow. In FY08, funding received allowed for some major renovations and code upgrades for the vocational lab facility including necessary roof repairs, structural upgrades, heating system improvements and exterior rehabilitation. This funding also provided build-out within the existing structure of a classroom and lab to accommodate allied health and nursing programs. Work for phase 2 of this project will include additional major renovations and code upgrades to over 50,000 square feet of space. The FY11 project will fund renovations in the main campus and out year funding will address remaining projects for facilities.

UAS Main Campus - Renewal and Renovation (R&R)

- **UAS Auke Lake Way Campus Entry Improvements & Road Realignment**
  FY11 (GF: $4,160.0, Total: $4,160.0)
  This project will widen Auke Lake Way at Mendenhall Loop Road intersection, construct new sidewalks, landscape surrounding areas, realign pedestrian paths, improve bus stop area, improve lighting, and install new campus signage. Landscape elements will use indigenous materials. This intersection will change from a 3-way to a 4-way intersection with the construction of the new access road to the new Juneau Recreation Facility. This project will transform a portion of Auke Lake Drive from a through street to a pedestrian circulation area connecting the primary academic core facilities to each other, to the main campus parking lots, and to the campus network of pedestrian trails. This central campus circulation spine will be accessible to emergency, service, and delivery vehicles. The work will reconstruct pedestrian circulation, site lighting, and landscaping and provide more easily accessible paths from the main parking areas to the core campus buildings. The work involves creating new pedestrian paths, installing new site lighting, signage, landscaping, planting, and drainage modifications. This project was a prominent recommendation of the 2002 UAS campus master plan.

UAS Community Campus - Renewal and Renovation (R&R)

- **UAS Sitka Hangar Code Corrections**
  FY11 (GF: $3,540.0, Total: $3,540.0)
  The project will construct fire separation walls to provide areas for construction technology. Additional mechanical ventilation and fire suppression systems will be installed in the renovated areas. Electrical distribution will be expanded to provide proper service to each program area.

Statewide - Renewal and Renovation (R&R)

- **Statewide Butrovich Building Repairs**
  FY11 ($599.4, Total: $599.4)
  FY12-FY16 (GF: $3,000.0, Total: $3,000.0)
  The Butrovich building is in need of many repairs. Several projects include repairing the retaining wall, refurbishing the front canopy, and roof replacement. The Butrovich building is also in need of implementing lighting controls and lighting improvements for both interior and exterior lights to conserve energy. However, the unusual design of the buildings makes a lighting control solution challenging. A viable solution would be a LED retrofit of some or all of the applicable lighting systems. Lighting control systems have evolved since the building was constructed. In the open office areas, the current control system is such that large areas are lit if the area is minimally occupied. Modern control systems allow more discreet control, increasing energy savings and enhancing users environment.

- **Statewide OIT Butrovich Computer Facility Backup Power**
  FY11 (GF: $2,000.0, Total: $2,000.0)
  This project will provide self-contained backup power for the UA Butrovich Computer Facility. This system will provide a total 1,250 kW of uninterruptible power to the computers, communications systems, and computer facility equipment in the event of a utility power loss. Backup power will ensure the continued operation of the computer facility and allow for extended operation without a catastrophic loss of hardware, software or data.

New Construction

- **UAF Life Sciences Classroom and Lab Facility**
  FY11 (GF: $87,975.0, NGF: $20,625.0, Total: $108,600.0)
  UAF's Life Sciences Classroom and Lab Facility will provide critical instructional classrooms and research lab space for life science programs, one of the most popular programs for degree-seeking students. UAF's biology program is one of the most productive arctic university research programs in the circumpolar north. The programs include research in infectious diseases, virology, microbiology, toxicology, cellular mechanisms of disease, food safety, and physiology; and academic programs such as biological sciences, biology, botany, wildlife biology, wildlife management, zoology, biological chemistry, and molecular biology. Facilities for life science programs are cramped and outdated. Facilities in the Bunnell and Irving buildings do not meet current needs. Alaska is located in a unique setting that magnifies the benefits of integrating teaching with research. The particular location of UAF allows for life science programs that are unlike those of any other campus in the United States. The climate, animals, and indigenous peoples provide key elements of a worldwide effort to discover new solutions to new and old problems. Life sciences faculty train biologists for several state and federal agencies, which undertake studies necessary for oil, gas, and mineral development. UAF Life Sciences researchers also conduct on-going studies on the changing wildlife, forests, tundra and waters as the climate changes. Constructing the

Life Sciences facility strengthens UAF's solid research reputation. This project includes approximately 40,000 square feet of academic and classroom space and 57,700 square feet of research space. Once completed, space in other buildings will become available for renovation and reassignment. Funding will complete design, construction and build-out of the facility and the necessary utilities.

- **Community Campus Feasibility Study**
  FY11 (GF: $1,400.0, Total: $1,400.0)
  This funding will enable the university to evaluate each community campus, using the academic and campus master plans to identify academic and support infrastructure facilities needed, then testing the ability of current campus facilities to meet those needs. Any gap between need and existing facilities will be identified, then as appropriate, projects will be developed for inclusion in the University's Capital Improvement Plan. UA's community campuses have submitted several requests for new construction, expansion and remodel projects. Given the high cost of construction, maintenance and utilities, and the changing demographics at many of these campuses a more thorough analysis of the facility needs is warranted. UA's community campuses are located throughout Alaska from Ketchikan to Kotzebue.

- **University Receipt Authority**
  FY11 (NGF: $15,000.0, Total: $15,000.0)
  This request is an estimation of potential University receipt authority needed for FY11-FY16 projects at the main and community campuses. Prior university receipt authority has been used for projects such as the UAF Critical Electrical Distribution (FY09: $98.5), UAF Patty Center Ice Locker Rooms (FY05: $775.0), UAF Elvey Cooling System (FY05: $816.3) and UAS Gitkov Space Remodel (FY05: $904.1).

University *of* Alaska

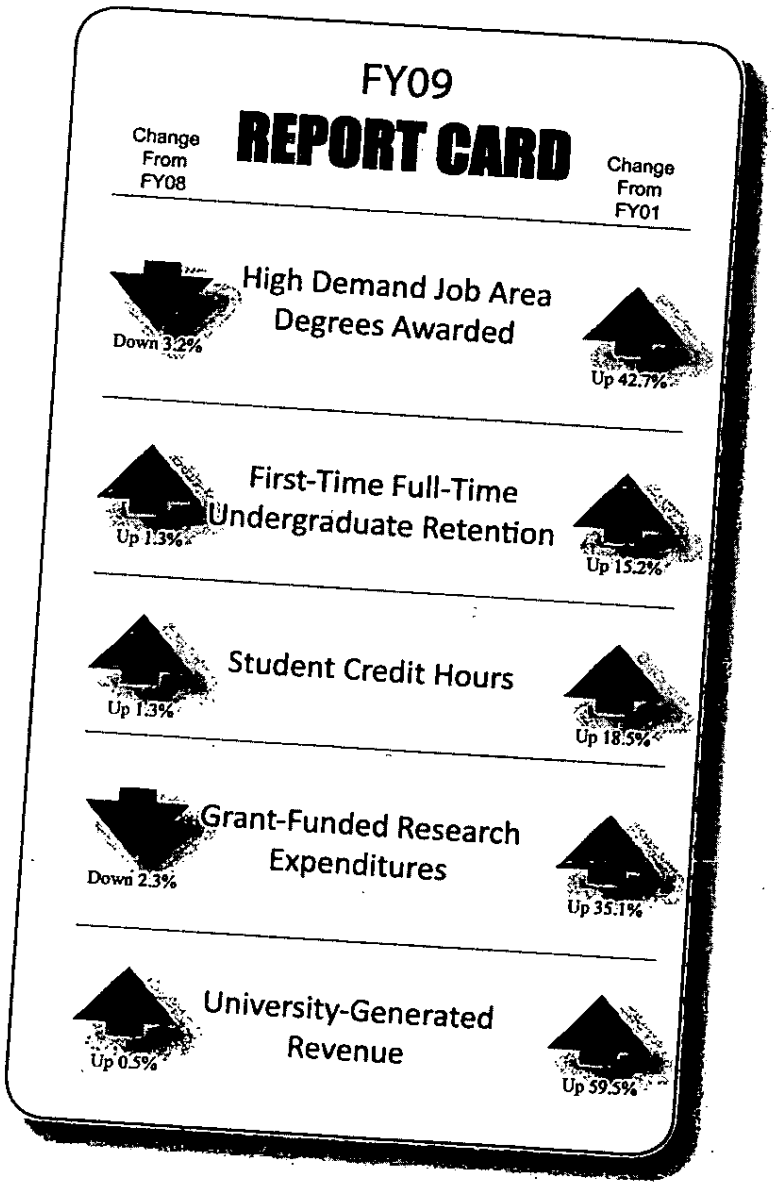
The University of Alaska's performance evaluation system[1] is a mechanism to recognize progress toward meeting key Board of Regents' strategic goals, as well as resource alignment. This system has been incrementally integrated into UA's budget process since inception in FY04 and is a driving factor in the operating and capital request recommendations.

The report card to the right shows short- and long-term performance changes for UA's common system-wide measures. These measures are necessary, but not sufficient, to describe the breadth and depth of UA activity.

From FY01 to FY08, UA has made significant strides across the board in improving performance on all measures. From FY08 to FY09 UA had increases in First-Time Full-Time Undergraduate Retention, Student Credit Hours, and University-Generated Revenue, while having decreased performance levels in High Demand Job Area Degrees Awarded and Grant-Funded Research Expenditures.

Overall, the University's long-term progress is the result of several funding mechanisms including: program funds from the State in FY01, FY02, FY07, FY09, and FY10; annual investment of significant one-time funds; and annual internal reallocations in support of Board of Regents' priorities.

The performance and accountability system in place at the University of Alaska has its roots in Senate Bill 281, a performance measures reporting bill entitled *Missions and Measures*, passed in 2000. This effort transitioned to the State of Alaska's *Performance*[2] program in use today. *Performance* is the tool the state uses to set goals, measure progress, and be accountable to Alaskans for getting results that matter.



1 For more details on UA's performance and accountability efforts, see: www.alaska.edu/swbir/performance/

2 For details on the State's performance and accountability requirements, see: gov.state.ak.us/omb/results/

UNIVERSITY of ALASKA
Many Traditions One Alaska

UA Performance Results

The performance evaluation system at the University of Alaska has its roots in Senate Bill 281, a performance measures reporting bill entitled Missions and Measures, passed in 2000. Senate Bill 281 required the University of Alaska to annually measure and report on its success. This mirrored a national rise in performance reporting; today only two states have no performance reporting programs.[1] Across the country, more than 80 percent of state budget offices and 70 percent of all city/county departments are using performance measures.[2] Today, the State of Alaska requires that all agencies participate in a performance evaluation process.

UA's performance evaluation and accountability system is a mechanism to recognize resource alignment with key strategic goals and is a major influence in the budget process.[3] This system has been incrementally integrated into UA's budget process since inception in FY04 and is a driving factor in the operating and capital request recommendations. Seven performance measures are currently tied to performance funding, including: the number of awards in programs responding to state high demand occupations, student retention, student credit hour enrollment, grant-funded research expenditures, university generated revenue, strategic enrollment management planning and academic program outcomes assessment. Each MAU also began reporting on the new performance measure of non-credit instructional activity in their FY09 performance reports.

As part of the annual budget request cycle, each MAU submits an in-depth assessment of recent performance, in light of mission, strategies, and established expectations.[4] In addition, each MAU proposes and/or updates targets and goals for the upcoming five year period. Throughout the year MAUs monitor the impact of implemented strategies and operating condition changes on performance and adjust strategies as needed to meet, or understand differences from, targets.[4]

In FY10, each MAU will determine the distribution of its FY10 performance funding pool in support of performance-related strategies. One percent of general funds is the expected funding pool size, although annual circumstances will dictate the amount chosen by the MAU for internal reallocation. These performance funds are allocated to appropriate strategic investments and reported as part of the overall performance and accountability process.

An overview of performance goals, based on full funding of the Board of Regents' FY11 budget request, through FY15 is provided in the following table (Table 1). Note that targets have been reset based on actual FY10 funding, FY11 increment requests, and recent analysis of UA's internal and external environment. Performance highlights as well as an analysis of funding impacts and future considerations in regards to each measure are also provided.

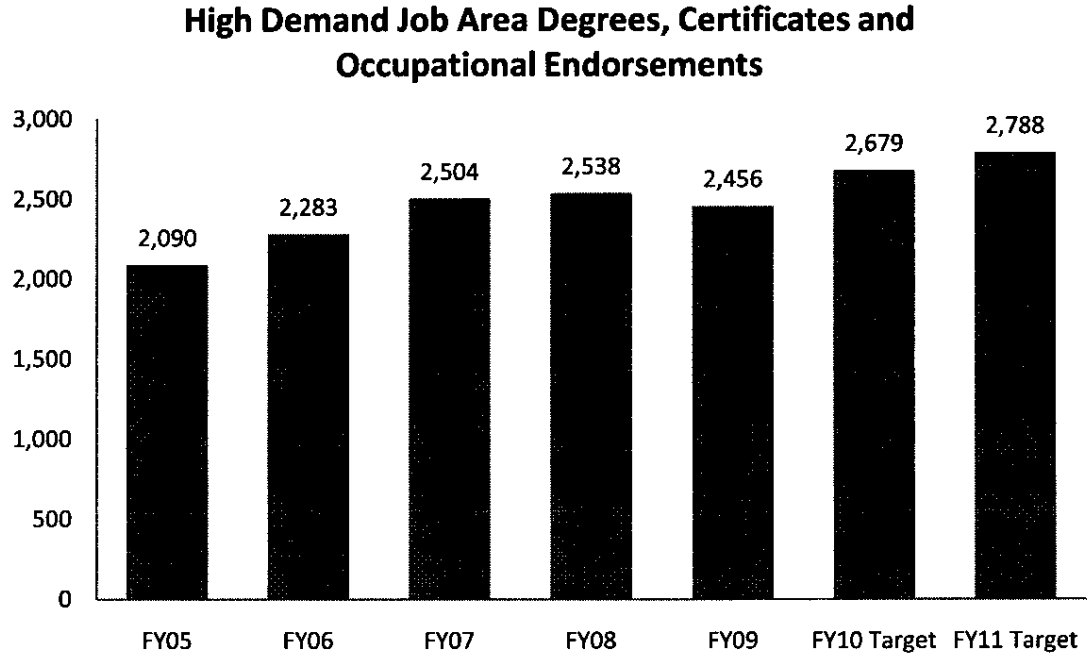
High Demand Job Area Degrees, Certificates and Occupational Endorsements

Target: A target of 2,788 degrees and certificates awarded in high demand job area programs in FY11.

Status: The University of Alaska awarded 366 (18 percent) more degrees in high demand job area (HDJA) programs in FY09 than FY05 for a total of 2,456 HDJA awards. Although short of the FY09 target of 2,671 awards, the current number of enrolled majors supports future targets.



Analysis of results and challenges:
UA experienced a 3 percent decrease (82 awards) in HDJA program awards from FY08 to FY09. However, performance increases of 9 percent are anticipated in FY10 and up to 4 percent in FY11 as current headcount figures in HDJA programs support future growth. UA has experienced ongoing growth in enrollment of HDJA program majors, up 530 (5 percent) from FY08 to FY09 and preliminary FY10 figures showing an increase of nearly 300 majors (3 percent) over FY09 levels.

The target for FY11 awards is based on investments that have already been made in HDJA programs as well as the number of majors currently enrolled. Maintenance of, and increases beyond this level of HDJA degrees awarded, will require continued and consistent state investment in these program areas.

It is important to note that the HDJA program listing was last updated August 2009, to reflect the most recent State of Alaska Department of Labor and Workforce Development occupational forecast[1]. Past performance has been normalized for these programs, which added 2 awards in FY07 and 13 awards in FY08. HDJA programs include: nursing, allied health, behavioral health, engineering, welding, computer networking, construction management and technology, information technology, business, accounting, logistics, and many others aligned with the Department of Labor and Workforce Development workforce projections.

[1] Department of Labor and Workforce Development, *Alaska Occupational Forecast to 2016*, http://labor.alaska.gov/research/iodata/occproj.htm. Published January 2009.

1933

The projections of future employment growth in specific Alaskan industries bode well for graduates of UA's HDJA programs. Industries with the highest projected growth include health care, social assistance, utilities, professional, scientific and technical services, and mining[2]. Of the 15 fastest growing occupations in the state, two-thirds are directly related to providing health care services.

Historically at UA, more students choose to enroll in HDJA programs over programs in other areas of study. The BOR has supported this by focusing resources on HDJA programs in order to best align UA degree programs offered with state priorities. However, there are higher costs associated with most HDJA programs due to: a need for competitive wages to recruit faculty; smaller class sizes because of strict accreditation limits and lab constraints; and needs for costly equipment.

Educating majors in HDJA programs is a responsibility that all UA campuses contribute to. Overall, more than half of all students who receive a HDJA degree or certificate utilize coursework from more than one campus.

MAU Performance Highlights

UAA awarded 1,568 HDJA degrees, certificates and endorsements in FY09, an increase of 1.3 percent from FY08, although below the target of 1,646 awards. Strategies in support of future growth in HDJA awards at UAA focus on increasing awards in the areas of health as well as engineering and related programs.

UAF conferred 652 degrees, certificates and endorsements in HDJA programs in FY09, decreasing 11 percent from FY08 performance, and falling below the FY09 target of 760 awards. UAF projects a rebound on this measure in FY10 and FY11 as major enrollment in HDJA programs remains strong. UAF strategies in support of performance on this measure are focused on increasing major enrollment in HDJA programs.

UAS granted 236 degrees, certificates and endorsements in HDJA programs in FY09, roughly a 9 percent decrease from FY08 and landing below the target level of 265 awards. Future HDJA award growth strategies at UAS include: developing more HDJA programs; increasing access to HDJA program courses through alternative delivery formats; continued program initiatives that increase recruitment, retention and targeted major enrollment in HDJA programs.

Funding Impact

There is a delay between investments made in a program and degree production. This delay is due to a lag between enrollment growth and degree production, because it typically takes a minimum of one to four years to complete most programs.

Without continued, consistent state operating and capital investment to support new and expanded HDJA programs, degree production in these areas will plateau as capacity for existing programs is reached. In fact, without investment in preparatory programs for basic math and science skills, giving students the academic foundation to be successful in HDJA programs, the number of annual graduates may eventually decline as the number of Alaska high school graduates decreases over the next decade[3].

[2] *Alaska's 10-Year Occupational Forecast*, Alaska Economic Trends, January 2009, http://labor.alaska.gov/research/trends/jan09occ.pdf

[3] *Knocking at the College Door: Projections of High School Graduates by State and Race/Ethnicity, 1992 – 2022*, WICHE, March 2008, http://www.wiche.edu/info/publications/knocking_complete_book.pdf

HDJA program investments attract students to expanded program offerings and increase retention, improving performance. Another key to attracting and retaining students is UA's status as a research university. To continue to attract and retain these students it is important for UA to maintain relevant research in areas aligned with high demand fields. Capital investments to meet increasing capacity and equipment demands provide students with quality learning experiences and improve recruitment and retention to graduation.

Past State-Funded Program Increments

UA received program increments in FY07 totaling $4.2 million in general funds for Preparing Alaskans for Jobs and for Continuing Programs in State Needs. Also dedicated in support of these increments was $3.7 million in student tuition and fees and other revenue sources. The Preparing Alaskans for Jobs program increment supported expansion of engineering programs such as the Alaska Native Science and Engineering Program (ANSEP), programs in construction and mining technology, and vocational education. The Continuing Programs in State Needs increment supported teacher and early childhood education programs, distance delivery of high demand job area programs, nursing, behavioral health, and allied health programs. Also funded in FY07 was the Integrated Science building (ISB), which opened in Fall 2009, providing accommodation for some growth at the Anchorage campus.

In FY09, the state invested $5.5 million of general funds in the Preparing Alaskans for Jobs. Also dedicated in support of this program increment was $2.6 million in student tuition and fees and other non-state revenue sources. The Preparing Alaskans for Jobs program increment supported the high demand program areas of health, engineering, and fisheries. In FY09, the state also funded the $46 million UAA Health Sciences building, which will provide space for students pursuing degrees in nursing and health sciences fields, as well as program faculty and staff. The unfunded FY09 request increment in the area of student success ($1.6 million) would have supported planned growth in HDJA awards by improving retention and degree completion.

In FY10, the state invested $922,000 of general funds for a range of health related programs, including the Psychology Clinic Services at the Fairbanks and Anchorage campuses, a faculty position in Medical Assisting for the Tanana Valley Campus, program expansion for Anchorage campus and health outreach. Also dedicated in support of these increments was $150,000 in student tuition and fees and other university generated revenue sources.

UA also receives annual Technical Vocational Education Program (TVEP) funding, which is temporary funding specific to workforce development programs. This funding source has been particularly valuable for program start-up funding, bridge funding and helping to meet some of the equipment and lab needs necessary to meet industry standards. Since 2001 key areas supported include nursing and allied health, construction and mining training, process technology, information and network technology, and early childhood education. UA has consistently used TVEP funding to start and maintain programs to meet immediate needs, then, after evaluation, if employer and student demand is projected to maintain for several years, general funds are requested and the program is transitioned to this long term funding source. UA also received $1.9 million in priority programs funding to include Health academic programs ($922.0).

Internal Reallocations

In only four years since FY00, (FY01, FY02, FY07 and FY09) have legislative appropriations of state funding covered the level necessary to fund salary, benefit and fixed cost increases, and allow for state funded program growth. However, the Board of Regents' (BOR) recognized the need for priority program growth and through maximizing external revenue, internal efficiencies, and reallocations have distributed funding towards priority programs every year.

In FY10, the funding UA received from state appropriations was $6.4 million less than UA's compensation and fixed cost increment request. UA also received $1.9 million in priority programs funding to include Health academic programs ($922.0).

FY11 Operating Request

To simply maintain existing performance levels, the fixed costs items in the BOR approved FY11 operating request are required, including: Compensation Increases; and Non-Discretionary Fixed Cost Increases.

The BOR approved FY11 operating budget includes program increment requests totaling $5.2 million in general funds and dedication of an additional $2.8 million in non-state revenue sources supporting key High Demand Job Area (HDJA) programs including Teacher Education, Health/Biomedical, Workforce Programs, and Engineering. The Board of Regents' FY11 operating budget also includes program increments of $1.3 million in general funds and $1.9 million in non-state revenue to support Climate and Energy programs.

The BOR approved program increment requests that would most directly impact retention and graduation rates for HDJA programs are: Science, Technology, Engineering and Math (STEM) preparatory support for students, including $1.4 million in general fund and an additional $552,000 dedicated from tuition and other university revenue sources; and Student Success Initiatives, including $2.1 million in general fund and dedication of an additional $407,000 in university generated revenue.

FY11 Capital Request

To sustain performance, it is necessary to assure funding for the Board of Regents' top capital budget priority, Annual Requirement for Maintenance & Reducing Deferred Maintenance.

Projects included in the BOR approved FY11 capital request that would satisfy increasing capacity demands include: the UAF Life Sciences Classroom & Lab Facility; and Planning and Design for constructing UA Engineering facilities. Further Reduction of Deferred Maintenance and Renewal Backlog are also priorities for FY11.

Looking to the Future

Future growth in HDJA awards will be reliant on: consistent state investment in HDJA programs; a continued commitment to capital renewal and renovation; and capital investments in facilities to support HDJA program enrollment growth. To remain competitive and retain students it is important to keep UA infrastructure competitive.

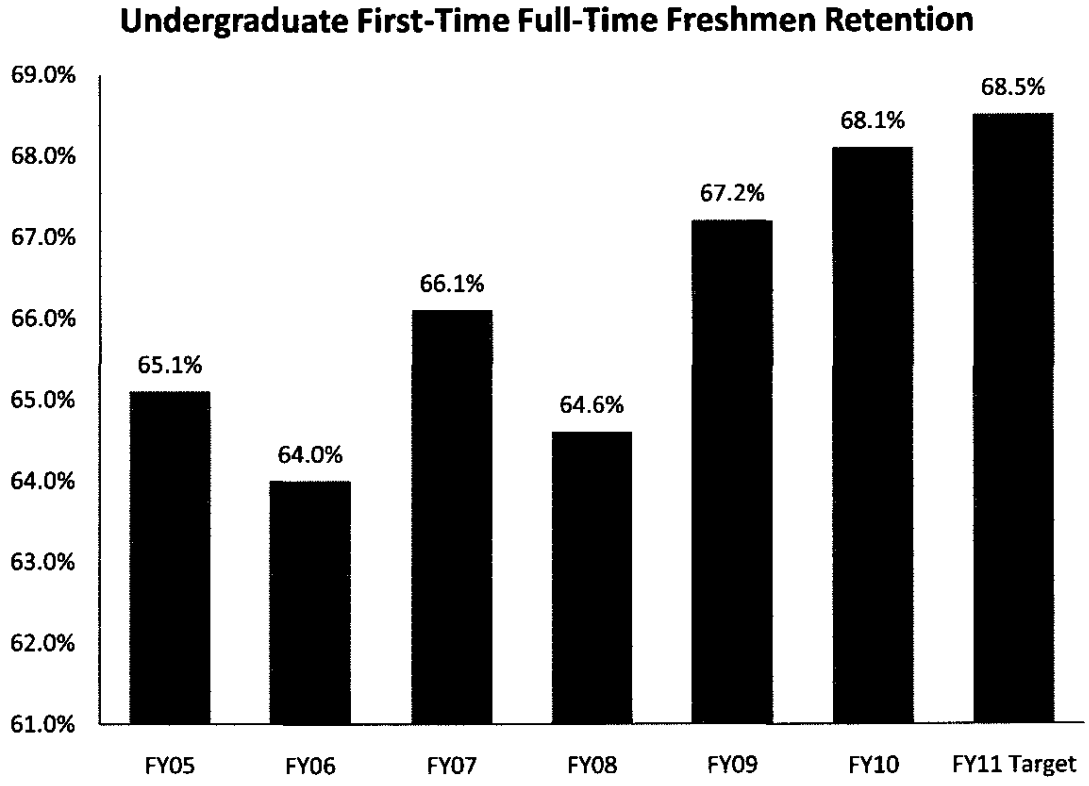
An additional consideration is the need for roughly half of incoming Alaskan first-time freshmen to successfully complete preparatory coursework in math and/or English in addition to the standard course requirements of each academic program. This, coupled with the projected decline in the number of Alaskan high school graduates, may result in the university being challenged to maintain current performance levels over the next decade.

Another key to attracting and retaining students is UA's status as a research university. Operating investments in research help UA remain competitive in generating Federal Receipts and other non-state research revenue. Even with operating budget investments, the University of Alaska is struggling with space constraints.

Undergraduate Retention

Target: A target 68.5 percent retention rate for first-time full-time students in undergraduate degree and certificate programs in FY11.

Status: The University of Alaska undergraduate retention rate reached an all time high at 68.1 percent in FY10 increasing by 1.3 percentage points from the FY09 performance level and exceeding the FY09 target of 68.0 percent.



Analysis of results and challenges:
FY10 performance supports the fact that undergraduate retention rates fluctuate from year to year, but overall retention rates are trending upwards. The target for FY11 is based on investments that have already been made to improve retention and full funding of the Governor's proposed FY11 operating and capital requests. Future year growth will require continued consistent state investment in student success efforts and high demand job program areas.

Retention rate is defined as the percentage of full-time, first-time degree-seeking undergraduate students in a given fall semester that return to any UA campus the following fall.

MAU Performance Highlights

UAA had an undergraduate first-time full-time first year retention rate of 70.2 percent in FY10 representing the highest retention rate UAA has ever had and exceeding the target of 68.0 percent set for FY10.

UAF had a retention rate of 66.7 percent in FY10, which was an increase from the FY09 performance level of 66.5 percent, but was below the target set for FY10 of 67.0 percent.

UAS had a retention rate of 57.5 percent in FY10. This was a 7 percent (4 percentage point) increase from the FY09 performance level of 53.7 percent, and was well above the target set for FY10 of 55.0 percent.

Funding Impact

Investments that most directly impact undergraduate retention rates are in the areas of Science, Engineering, Math and Technology (STEM) preparatory support, and Student Success Initiatives. Also key to attracting and retaining students is the quality of the programs being offered. In addition, UA's status as a research university helps attract and retain high caliber students. To continue to attract and retain these students it is important for UA to maintain relevant research

Past State-Funded Program Increments

In FY07, UA received an increment for Continuing Programs in State Needs totaling $2.2 million in general funds and $1.4 million in student tuition and fees and other non-state revenue sources. Within this increment was a portion for meeting student demand ($295,000 GF; and $280,000 NGF). Also within this increment was funding for high demand programs and distance education support for high demand programs.

In FY09, the state invested $5.5 million of general funds for the Preparing Alaskans for Jobs increment. Also dedicated in support of this program increment was $2.6 million in student tuition and fees and other non-state revenue sources. The Preparing Alaskans for Jobs program increment supported the high demand program areas of health, engineering, and fisheries. It is important to note that there were some program specific student success initiatives funded within the engineering and health increments.

In FY09, the state also funded the $46 million UAA Health Sciences building, which provides space for students pursuing degrees in nursing and health sciences fields, as well as program faculty and staff. This added space should improve the student experience in these areas and positively impact performance on undergraduate retention rates.

UA also receives annual Technical Vocational Education Program (TVEP) funding, which is temporary funding specific to workforce development programs. This funding source has been particularly valuable for program start-up funding, bridge funding and in helping to meet some of the equipment and lab needs necessary to meet industry standards. Since 2001 key areas supported include nursing and allied health, construction and mining training, process technology, information and network technology, and early childhood education. UA has consistently used TVEP funding to start and maintain programs to meet immediate needs, then, after evaluation, if employer and student demand is projected to maintain for several years, general funds are requested and the program is transitioned to this long term funding source.

Internal Reallocations

In only four years since FY00, (FY01, FY02, FY07 and FY09) have legislative appropriations of state funding covered the level necessary to fund salary, benefit and fixed cost increases, and allow for state

funded program growth. However, the Board of Regents' (BOR) recognized the need for priority program growth and through maximizing external revenue, internal efficiencies, and reallocations have distributed funding towards priority programs every year.

In FY10, the funding UA received from state appropriations was $6.4 million less than UA's compensation and fixed cost increment request. UA also received $1.9 million in priority programs funding to include Health academic programs ($922.0).

FY11 Operating Request

To simply maintain existing performance levels, the fixed costs items in the BOR approved FY11 operating request are required, including: Compensation Increases; and Non-Discretionary Fixed Cost Increases.

The BOR approved program increment requests that would most directly impact retention rates are: Science, Technology, Engineering and Math (STEM) preparatory support for students, including $1.4 million in general fund and an additional $552,000 dedicated from tuition and other university revenue sources; and Student Success Initiatives, including $2.1 million in general fund and dedication of an additional $407,000 in university generated revenue.

FY11 Capital Request

To sustain performance, it is necessary to assure funding for the Board of Regents' top capital budget priority, Annual Requirement for Maintenance & Reducing Deferred Maintenance.

Projects included in the BOR approved FY11 capital request that would satisfy increasing capacity demands include: the UAF Life Sciences Classroom & Lab Facility; and Planning and Design for constructing UA Engineering facilities. Further Reduction of Deferred Maintenance and Renewal Backlog are also priorities for FY11.

Looking to the Future

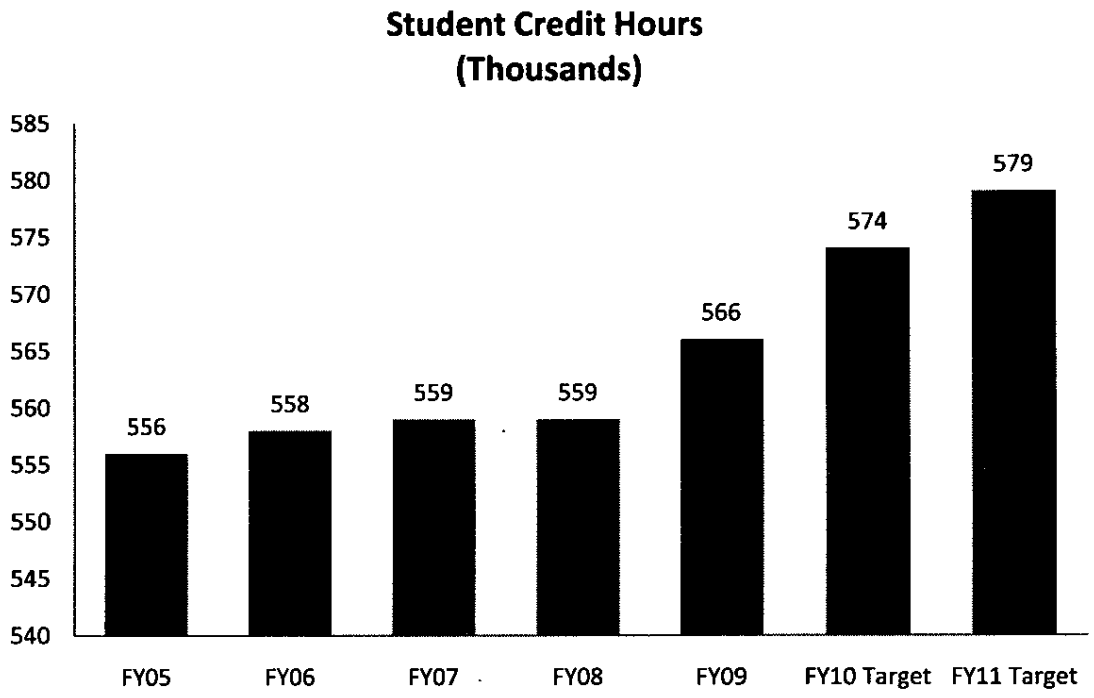
Operating increments in student achievement will help students succeed with increased investment in proven strategies such as learning communities and freshman seminars. Also STEM investments would help increase the preparation of incoming students; and the successful completion of educational goals.

Across the nation and here in Alaska the issue of college and career readiness has become a focal point for higher education. The job landscape has changed such that individuals must be able to succeed at some form of post-secondary education in order to succeed and advance economically. UA will continue to work collaboratively with K-12, employers and others to address these issues in the short- and long-term.

Student Credit Hours

Target: A target of a 579,000 Student Credit Hours (SCH) attempted in FY11.

Status: FY09 student credit hours (SCH) delivered by the University of Alaska was an all time high of 566,000 SCH; however, this performance was below the FY09 target of 567,000 SCH.



Analysis of results and challenges:
UA delivered an all time high of 566,000 SCH in FY09, with each MAU showing increased performance, although landing below the system level target performance of 567,000 SCH for FY09. The FY11 target for this metric is based on full funding of the Governor's proposed FY11 operating and capital requests. For growth, investments in Science, Technology, Engineering and Math (STEM) related programs, Student Success Initiatives, and high demand program areas will be necessary to mitigate the projected declines in high school graduation rates.

MAU Performance Highlights
UAA delivered 344,000 SCH in FY09, which was a 1 percent increase from FY 08 and met the target performance level set for FY09 of 344,000.

UAF increased SCH delivered in FY09 from FY08 by 1 percent, for a total in FY09 of 174,000 SCH delivered, although below the target set for FY09 of 175,000.

UAS had a 3 percent increase in FY09 compared to FY08, for a total in FY09 of 49,000 SCH delivered, and exceeded the target set for FY09 of 48,000.

Funding Impact

Program increments improve SCH by attracting students to expanded program offerings and increasing retention. Increased retention improves SCH because new students are in addition to retained students rather than in place of non-retained students. Program requests that most directly impact retention are in the STEM programs category and the Student Success Initiatives category.

Past State-Funded Program Increments

UA received program increments in FY07 totaling $4.2 million in general funds for Preparing Alaskans for Jobs and for Continuing Programs in State Needs. Also dedicated in support of these increments was $3.7 million in student tuition and fees and other revenue sources. The Preparing Alaskans for Jobs program increment supported expansion of engineering programs such as the Alaska Native Science and Engineering Program (ANSEP), programs in construction and mining technology, and vocational education. The Continuing Programs in State Needs increment supported teacher and early childhood education programs, distance delivery of high demand job area programs, nursing, behavioral health, and allied health programs.

In FY09, the state invested $5.5 million of general funds in the Preparing Alaskans for Jobs. Associated with this program increment was another $2.6 million in student tuition and fees and other non-state revenue sources. The Preparing Alaskans for Jobs program increment supported the high demand program areas: health; engineering; and fisheries. The total state funding for this increment was $300,000 short of the original BOR request for this increment. This funding will positively impact SCH production, by improving recruitment.

In FY09, the state also funded the $46 million UAA Health Sciences building, which will provide space for students pursuing degrees in nursing and health sciences fields, as well as program faculty and staff.

UA also receives annual Technical Vocational Education Program (TVEP) funding, which is temporary funding specific to workforce development programs. This funding source has been particularly valuable for program start-up funding, bridge funding and in helping to meet some of the equipment and lab needs necessary to meet industry standards. Since 2001 key areas supported include nursing and allied health, construction and mining training, process technology, information and network technology, and early childhood education. UA has consistently used TVEP funding to start and maintain programs to meet immediate needs, then, after evaluation, if employer and student demand is projected to maintain for several years, general funds are requested and the program is transitioned to this long term funding source.

Internal Reallocations

In only four years since FY00, (FY01, FY02, FY07 and FY09) have legislative appropriations of state funding covered the level necessary to fund salary, benefit and fixed cost increases, and allow for state funded program growth. However, the Board of Regents' (BOR) recognized the need for priority program growth and through maximizing external revenue, internal efficiencies, and reallocations have distributed funding towards priority programs every year.

In FY10, the funding UA received from state appropriations was $6.4 million less than UA's compensation and fixed cost increment request. UA also received $1.9 million in priority programs funding to include Health academic programs ($922.0).

FY11 Operating Request

To simply maintain existing performance levels, the fixed costs items in the BOR approved FY11 operating request are required, including: Compensation Increases; and Non-Discretionary Fixed Cost Increases.

The BOR approved FY11 operating budget includes program increment requests totaling $5.2 million in general funds and dedication of an additional $2.8 million in non-state revenue sources supporting key High Demand Job Area (HDJA) programs including Teacher Education, Health/Biomedical, Workforce Programs, and Engineering. The Board of Regents' FY11 operating budget also includes program increments of $1.3 million in general funds and $1.9 million in non-state revenue to support Climate and Energy programs.

The BOR approved program increment requests that would most directly impact retention and graduation rates for HDJA programs are: Science, Technology, Engineering and Math (STEM) preparatory support for students, including $1.4 million in general fund and an additional $552,000 dedicated from tuition and other university revenue sources; and Student Success Initiatives, including $2.1 million in general fund and dedication of an additional $407,000 in university generated revenue. These programs are not included in the Governor's FY11 operating budget, but will be reevaluated as part of UA's FY12 operating budget request.

FY11 Capital Request

To sustain performance, it is necessary to assure funding for the Board of Regents' top capital budget priority, Annual Requirement for Maintenance & Reducing Deferred Maintenance.

Projects included in the BOR approved FY11 capital request that would satisfy increasing capacity demands include: the UAF Life Sciences Classroom & Lab Facility; and Planning and Design for constructing UA Engineering facilities. Further Reduction of Deferred Maintenance and Renewal Backlog are also priorities for FY11.

Looking to the Future

Left unmitigated the predicted declines in high school graduation rates could cause declines in future SCH production. Proposed FY11 increments for the STEM category would help increase the preparation of incoming students; and the successful completion of educational goals. It would also support improvement in the "college going rate" of Alaska high school graduates. Alaska has one of the lowest college going rates in the nation for recent high school graduates. Improvements in these areas would increase overall student enrollment.

Across the nation and here in Alaska the issue of college and career readiness has become a focal point for higher education. The job landscape has changed such that individuals must be able to succeed at some form of post-secondary education in order to succeed and advance economically. UA will continue to work collaboratively with K-12, employers and others to address these issues in the short- and long-term.

Another key to achieving increased recruitment and retention is the quality of the programs being offered. HDJA program increments in the areas of Teacher Education, Health, Workforce programs and Engineering help attract and retain students in new and expanded program offerings. Capital projects to meet increasing capacity demands and provide students with quality learning are: UAF Life Sciences Classroom & Lab Facility; and Planning & Design for Construction of UA Engineering facilities.

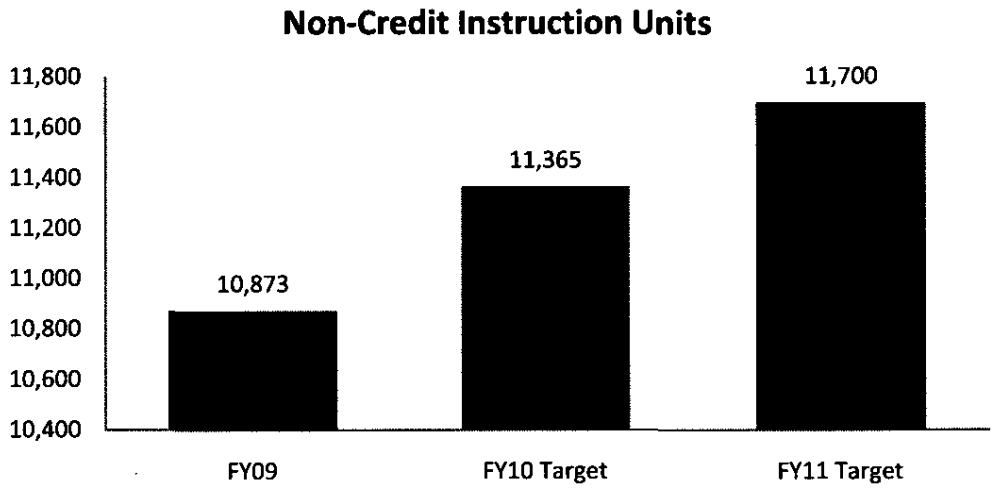
UA's status as a research university helps attract and retain high caliber students. Operating investments in research help UA become more competitive in generating Federal Receipts and other non-state research revenue. Even with operating budget investments, the University of Alaska is struggling with space constraints. Future growth in research is not possible without additional space.

The University, as the primary provider of community college and university higher education mission for the state, serves both traditional and non-traditional aged students. Student credit hour increases are just one indicator that the University of Alaska is providing critical workforce training and educational opportunities that meet the needs of the citizens of Alaska. An increase in credit hours contributes to the university's overall revenue base, which in turn helps fund programs, salary, fixed cost increases, and base investments necessary to reach the enrollment target. Efforts to increase the number of credit hours enrolled positively influences headcounts of full time, part time, non-credit, and vocational education students.

Non-Credit Instruction

Target: A target of 11,700 Non-Credit Instructional Productivity Units (NCUs) attempted in FY11.

Status: This metric is newly devised and the FY09 performance level of 10,873 units is a base year to determine future targets and growth.



Analysis of results and challenges:
The university adopted this performance measure in 2007, with FY09 being the first year for which baseline MAU performance would be reported, and each MAU has indicated additional data refinements are in progress during FY10. A system wide performance measure for this area was added to recognize and facilitate strategic management of non-credit instructional activity, particularly at the community campuses.

The underlying definition for this performance measure is that one NCU is equivalent to delivery of 10 non-credit student contact hours.

MAU Performance Highlights
UAA produced over 60 percent (6,537 units) of the NCU offered by UA in FY09. Of this NCU production at UAA in FY09, Prince William Sound Community College contributed over 52 percent (3,405 units), Kenai Peninsula College added 20 percent (1,308 units) and Matanuska-Susitna College produced 10 percent (665 units). UAA considers Non-Credit Instruction to be indicator of instructional activity and not a performance measure and therefore does not set targets and goals for this activity.

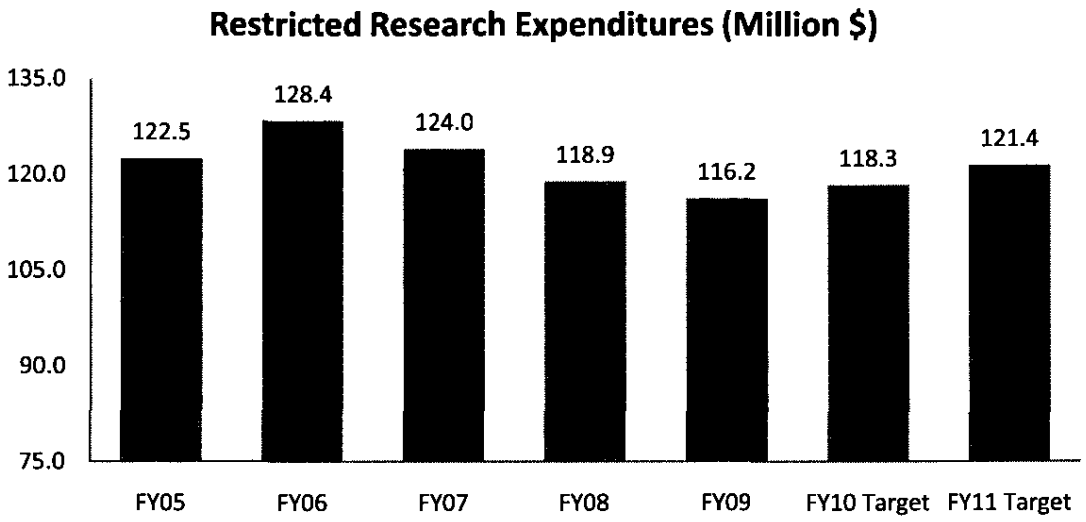
UAF produced 2,732 NCU in FY09, which was roughly 25 percent of the UA System total NCU offered. Almost 35 percent of UAF's NCU production (951 units), and the Kuskokwim campus, which offered nearly all of UAF's NCU production in FY09 (904 units).

UAS produced almost 15 percent of the NCU offered by the UA System in FY09 (1,604 units). The two major sources at UAS of NCU productivity were the Sitka campus producing almost 60 percent (952 units) and the Ketchikan campus producing the other 40 percent (652 units).

Restricted Research Expenditures

Target: A target of $121.4 million in grant funded expenditures in FY11.

Status: University restricted research expenditures totaled $116 million in FY09, landing $2.7 million (2 percent) down from FY08 performance levels. The target for FY09 was to maintain FY08 performance levels.



Analysis of results and challenges:
In FY09, restricted research expenditures decreased by 2 percent (2.7 million) from the FY08 performance level. The FY09 target for restricted research expenditures was to remain flat or minimal increase from the FY08 performance level. A number of factors, most notably facility constraints, contributed to a drop in performance during FY09 and, left unmitigated, will diminish expected future growth on this performance measure. The target for FY11 is based on full funding of the Governor's proposed FY11 operating and capital requests.

Past growth in research that UAF experienced came on the heels of major investments in research space made by UAF and funded by revenue bonds. That research space is filled to capacity and the older facilities are in need of upgrades to remain competitive. Future growth in research and indirect cost recovery is not possible without additional space. Expected gains in climate change and energy related research revenue will be offset from declines in other areas that will have space and general funding reallocated from them.

These factors, coupled with the more competitive federal funding environment for research, make state investment a requirement for further progress on this performance measure. Research at the University of Alaska is responsible for 2,400 jobs in Alaska, a $92 million payroll, and $125 million in purchased goods each year[4].

[4] Goldsmith, S., March 2007 ISER publication, *University of Alaska Research: An Economic Enterprise*, http://www.alaska.edu/swbir/ir/sponsored-research/UAResearch2007.pdf

1945

MAU Performance Highlights

UAA generated $8.1 million in FY09, which was near 8 percent ($660,000) decrease from the FY08 performance level, and below the anticipated target for FY09 of $8.8 million.

UAF generated $106.5 million in FY09, which was a $1.5 million (1 percent) decrease from the FY08 performance level and below the target for FY09 by $2.1 million.

UAS generated $1.5 million in FY09, equivalent to a 28 percent decrease ($570,000) from the FY08 performance, but this performance level exceeded the projected target for FY09 by $500,000.

Funding Impact

Operating investments in research help UA become more competitive in generating Federal Receipts and other non-state research revenue. Even with operating budget investments, the University of Alaska is struggling with space constraints. Future growth in research is not possible without additional space.

Past State-Funded Program Increments

In FY07, UA received a legislative appropriation in state funding of $1 million toward the requested $4 million Competitive University Research Investment increment. This provided direct support for UA's joint psychology PhD and bio-medical research development, and Geographic Information Network of Alaska (GINA).

In FY07, additional, temporary funding from sources such as BP/ConocoPhillips was used toward research activities related to the International Polar Year (IPY). One such IPY related research investment made was hiring 13 post-doctoral researchers in key Alaska related research areas; and the Scenarios Network for Alaska Planning (SNAP) to develop global warming scenarios. This IPY research investment has produced a significant amount of research funding, but gains in this area have been more than offset by losses in other areas.

In FY10, one-time funding of $950,000 was allocated to support Alaska Cooperative Extension and the Alaska Center for Energy and Power (ACEP).

Internal Reallocations

In only four years since FY00, (FY01, FY02, FY07 and FY09) have legislative appropriations of state funding covered the level necessary to fund salary, benefit and fixed cost increases, and allow for state funded program growth. However, the Board of Regents' (BOR) recognized the need for priority program growth and through maximizing external revenue, internal efficiencies, and reallocations have distributed funding towards priority programs every year.

In FY10, the funding UA received from state appropriations was $6.4 million less than UA's compensation and fixed cost increment request.

Over the last decade, UA has received incremental state funding for research in FY07 and FY10, and the funding received was a fraction of the amount requested. All research investments beyond this came through internal reallocation or non-state revenue sources.

FY11 Operating Request

To simply maintain existing performance levels, the fixed costs items in the BOR approved FY11 operating request are required, including: Compensation Increases; and Non-Discretionary Fixed Cost Increases.

The BOR approved program increment requests that would most directly impact grant-funded research expenditures are: Science, Technology, Engineering and Math (STEM) preparatory support for students, including $1.4 million in general fund and an additional $552,000 dedicated from tuition and other university revenue sources; and Student Success Initiatives, including $2.1 million in general fund and dedication of an additional $407,000 in university generated revenue.

The Board of Regents' FY11 operating budget had also included program increments of $1.3 million in general funds and $1.9 million in non-state revenue to support Climate and Energy programs.

FY11 Capital Request

To sustain performance, it is necessary to assure funding for the Board of Regents' top capital budget priority, Annual Requirement for Maintenance & Reducing Deferred Maintenance.

Projects included in the BOR approved FY11 capital request that would satisfy increasing capacity demands include: the UAF Life Sciences Classroom & Lab Facility; and Planning and Design for constructing UA Engineering facilities. Further Reduction of Deferred Maintenance and Renewal Backlog are also priorities for FY11.

Looking to the Future

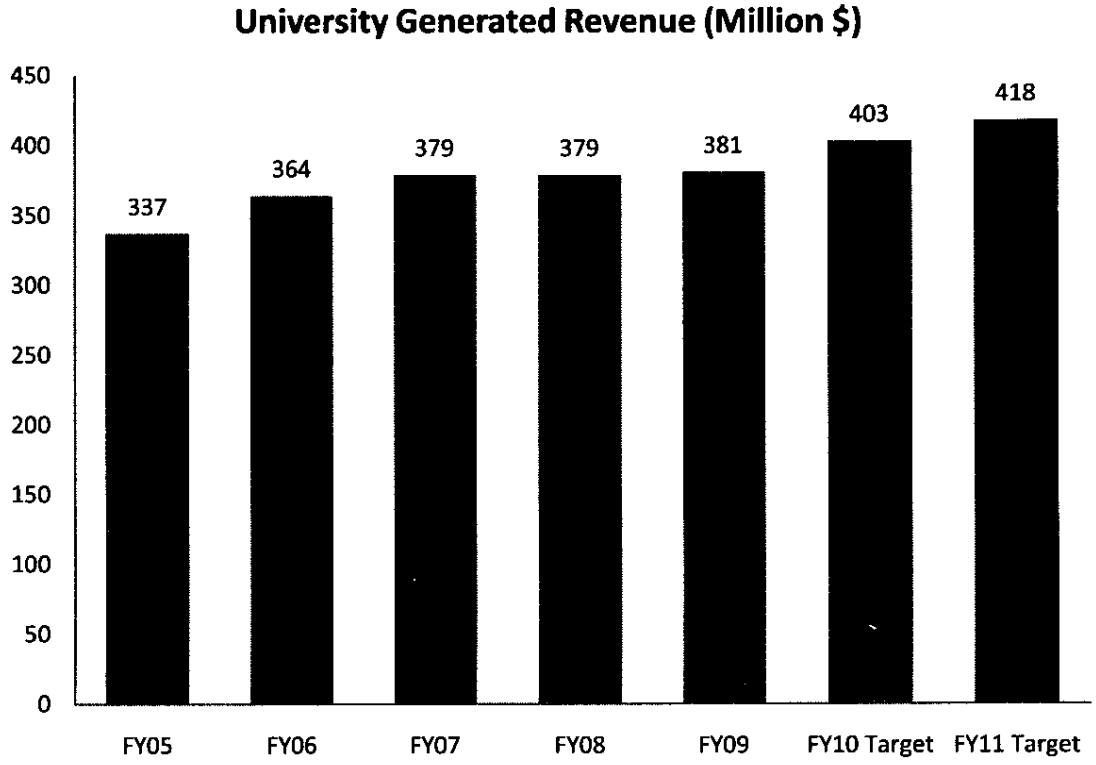
Operating investments in research help UA remain competitive in generating Federal Receipts and other non-state research revenue. Even with operating budget investments, the University of Alaska is struggling with space constraints. Future growth in research is not possible without additional space requested for UAF Life Sciences Classroom & Lab Facility and engineering facility planning.

Research at the University of Alaska is a critical component in the delivery of programs and services that are of value now and to the future of Alaska. UA success in achieving its goals and objectives depends upon consistent external and internal research funding. In addressing these funding realities, UA aggressively seeks new opportunities with federal, state and private agencies to ensure continuing capability of research programs in areas aligning UA, MAU, and campus research priorities.

University Generated Revenue

Target: A target of $418 million in university and federal receipts in FY11.

Status: FY09 University of Alaska revenue generated from non-state funds was $381 million, representing a slight increase from the FY08 level of $379 million; this performance was below the established target set for FY09.



Analysis of results and challenges:
University generated revenue (UGR) reached $381 million in FY09, an increase of $2 million (0.5 percent) over the FY08 performance level of $379 million. This fell short of the FY09 target increase of $15 million (3.8 percent) from the observed FY08 level.

The primary factor impacting FY09 performance on this measure was investment losses caused by the global economic crisis. Due to the adverse investment conditions in FY09, investment losses totaled $8 million, of which $3.9 million was absorbed at the Statewide MAU and the remaining $4.1 million by the three academic MAUs. During the FY09, adjustments were made to conservatively invest the portfolio to maintain liquidity and reduce risks. This revised strategy has lowered the risks, however will also result in decreases to the ultimate revenue yield.

The FY10 and FY11 forecasted targets of 5.8 percent and 3.5 percent increases respectively, are the minimum needed in order to meet anticipated fixed cost increases while maintaining current performance levels. Future growth in university generated revenue is expected to be moderate due to modest increases in tuition revenue mitigated by the current financial market crisis, a more competitive federal funding environment, as well as challenges with other major external, temporary funding sources.

MAU Performance Highlights

UAA generated $132 million in university generated revenue in FY09, which was a 4 percent, or $5 million increase from FY08, although below the FY09 target of $135 million. Strategies for future growth at UAA in university generated revenue include: increasing total and international student enrollment, which generates more student tuition and fees, including revenue from the non-resident tuition surcharge.

UAF generated $212 million in university generated revenue in FY09, which was a $1 million increase for FY08, but below the FY09 target of $216 million. UAF is anticipating some growth in research revenues in FY10 and FY11, growth in student tuition and fees and philanthropic giving in those future years, and minimal annual increases in University Receipts to forecast FY10 and FY11 targets for university generated revenue.

UAS generated $19 million in university generated revenue in FY09, which was a $1 million decrease from FY08 and was also below the FY09 target of $20 million. FY10 and FY11 future growth and targets are based on increased enrollment figures and subsequent increases in tuition and fees and increased revenues in housing.

Funding Impact

University generated revenue comes from a variety of sources the largest being Federal Receipts, Student Tuition and Fees and other University Receipts, respectively. Therefore, investments that impact UA's ability to generate revenue from each of these sources significantly impact this measure.

Operating increments that improve recruitment and retention improve student tuition and fee generation. Operating investments in research help UA become more competitive in generating Federal Receipts and also improve recruitment and retention by helping UA maintain its status as a research university.

Past State-Funded Program Increments

UA received program increments in FY07 totaling $4.2 million in general funds for Preparing Alaskans for Jobs and for Continuing Programs in State Needs. Also dedicated in support of these increments was $3.7 million in student tuition and fees and other revenue sources. The Preparing Alaskans for Jobs program increment supported expansion of engineering programs such as the Alaska Native Science and Engineering Program (ANSEP), programs in construction and mining technology, and vocational education. The Continuing Programs in State Needs increment supported teacher and early childhood education programs, distance delivery of high demand job area programs, nursing, behavioral health, and allied health programs.

In FY07, UA received a legislative appropriation in state funding of $1 million toward the requested $4 million Competitive University Research Investment increment. This provided direct support for UA's joint psychology PhD and bio-medical research development, and Geographic Information Network of Alaska (GINA).

In FY09, the state invested $5.5 million of general funds in the Preparing Alaskans for Jobs. Associated with this program increment was another $2.6 million in student tuition and fees and other non-state revenue sources. The Preparing Alaskans for Jobs program increment supported the high demand program areas of health, engineering, and fisheries.

In FY09, the state also funded the $46 million UAA Health Sciences building, which provides space for students pursuing degrees in nursing and health sciences fields, as well as program faculty and staff.

UA also receives annual Technical Vocational Education Program (TVEP) funding, which is temporary funding specific to workforce development programs. This funding source has been particularly valuable for program start-up funding, bridge funding and in helping to meet some of the equipment and lab needs necessary to meet industry standards. Since 2001 key areas supported include nursing and allied health, construction and mining training, process technology, information and network technology, and early childhood education. UA has consistently used TVEP funding to start and maintain programs to meet immediate needs, then, after evaluation, if employer and student demand is projected to maintain for several years, general funds are requested and the program is transitioned to this long term funding source.

Internal Reallocations

In only four years since FY00, (FY01, FY02, FY07 and FY09) have legislative appropriations of state funding covered the level necessary to fund salary, benefit and fixed cost increases, and allow for state funded program growth. However, the Board of Regents' (BOR) recognized the need for priority program growth and through maximizing external revenue, internal efficiencies, and reallocations have distributed funding towards priority programs every year.

In FY07, temporary funding from sources such as BP/ConocoPhillips was used toward research activities related to the International Polar Year (IPY). One such IPY related research investment made was hiring 13 post-doctoral researchers in key Alaska related research areas; and the Scenarios Network for Alaska Planning (SNAP) to develop global warming scenarios. This IPY research investment has produced a significant amount of research funding, but gains in this area have been more than offset by losses in other areas.

In FY10, the funding UA received from state appropriations was $6.4 million less than UA's compensation and fixed cost increment request.

FY11 Operating Request

To simply maintain existing performance levels, the fixed costs items in the BOR approved FY11 operating request are required, including: Compensation Increases; and Non-Discretionary Fixed Cost Increases.

The BOR approved FY11 operating budget includes program increment requests totaling $5.2 million in general funds and dedication of an additional $2.8 million in non-state revenue sources supporting key High Demand Job Area (HDJA) programs including Teacher Education, Health/Biomedical, Workforce Programs, and Engineering.

The BOR approved program increment requests that would most directly impact retention and therefore university generated revenue are: Science, Technology, Engineering and Math (STEM) preparatory support for students, including $1.4 million in general fund and an additional $552,000 dedicated from tuition and other university revenue sources; and Student Success Initiatives, including $2.1 million in general fund and dedication of an additional $407,000 in university generated revenue.

FY11 Capital Request

To sustain performance, it is necessary to assure funding for the Board of Regents' top capital budget priority, Annual Requirement for Maintenance & Reducing Deferred Maintenance.

Projects included in the BOR approved FY11 capital request that would satisfy increasing capacity demands include: the UAF Life Sciences Classroom & Lab Facility; and Planning and Design for constructing UA Engineering facilities. Further Reduction of Deferred Maintenance and Renewal Backlog are also priorities for FY11.

Looking to the Future

Left unmitigated the predicted declines in high school graduation rates could cause declines in future SCH production. Proposed FY11 increments for the STEM category would help increase the preparation of incoming students; and the successful completion of educational goals. It would also support improvement in the "college going rate" of Alaska high school graduates. Alaska has one of the lowest college going rates in the nation for recent high school graduates. Improvements in these areas would increase overall student enrollment.

Across the nation and here in Alaska the issue of college and career readiness has become a focal point for higher education. The job landscape has changed such that individuals must be able to succeed at some form of post-secondary education in order to succeed and advance economically. UA will continue to work collaboratively with K-12, employers and others to address these issues in the short- and long-term.

Another key to achieving increased recruitment and retention, resulting in increased tuition and fees revenue, is the quality of the programs being offered. HDJA program increments in the areas of Teacher Education, Health, Workforce programs and Engineering help attract and retain students in new and expanded program offerings. Capital projects to meet increasing capacity demands and provide students with quality learning are: UAF Life Sciences Classroom & Lab Facility; and Planning & Design for Construction of UA Engineering facilities.

UA's status as a research university helps attract and retain high caliber students. Operating investments in research help UA become more competitive in generating Federal Receipts and other non-state research revenue. Even with operating budget investments, the University of Alaska is struggling with space constraints. Future growth in research is not possible without additional space.

The University, as the primary provider of community college and university higher education mission for the state, serves both traditional and non-traditional aged students. Student credit hour increases are just one indicator that the University of Alaska is providing critical workforce training and educational opportunities that meet the needs of the citizens of Alaska. An increase in credit hours contributes to the university's overall revenue base, which in turn helps fund programs, salary, fixed cost increases, and base investments necessary to reach the enrollment target. Efforts to increase the number of credit hours enrolled positively influences headcounts of full time, part time, non-credit, and vocational education students.

University-generated revenue includes the following revenue categories: University Receipts, Interest Income, Auxiliary Receipts, Gross Tuition/Fees, and Indirect Cost Recovery, Federal Receipts, CIP Receipts, and State Inter-Agency Receipts. University generated revenue does not include UA Intra-Agency Receipts, which are duplicated.

References

Revenue Descriptions

State appropriated funds:

General Fund (1004): Monies received from the general operating fund of the state used to finance the general operations of the university.

General Fund Match (1003): Monies received from the general operating fund of the state specifically authorized for funding matching requirements of restricted funds and are reserved for these purposes exclusively.

GF/Mental Health (1037): GF/Mental Health revenues help fund the Masters of Social Work program at UAA as well as other programs approved by the Mental Health Trust. These programs provide specialized curriculum for working with the beneficiary groups of the Mental Health Trust Authority and Alaska Native populations, providing an in-state avenue for social workers in Alaska to earn a Master's Degree. These degrees are required for licensing for many federal and state positions, including clinical social workers. Licensed clinical social workers are the primary providers of mental health services in much of Alaska, particularly communities served by and dependent upon community mental health centers.

Science & Technology (1025): Alaska Science & Technology funds were first appropriated directly to the university in FY93 as a replacement for general funds for agricultural, forestry and other land resource programs. They were the primary source of unrestricted revenue for these programs and provided match for federal and other restricted grants. This fund source was changed to Alaska Science and Technology Endowment Funding (1176) in FY03 and eliminated in FY04.

Statutory Designated Program Receipts (1108): Statutory Designated Program Receipts include UA Alumni License Plate Funds.

Technical and Vocational Education (1151): Since 2001 Senate Bill 137 (established in 2000 by SB289), has provided Technical Vocational Education Program (TVEP) funding to be used for workforce development (WFD) programs at UA.

Business License and Corporate Filing Fees and Taxes (1175): Used in FY09 as the funding source for UAA's Small Business Development Center (previously funded through the capital budget). This fund source was changed to General Fund (1004) in FY10.

University Receipts:

Interest Income (1010): Interest Income includes revenue generated from short-term investments of grant receipts and auxiliary enterprise receipts.

Auxiliary Receipts (1015): Auxiliary Receipts include all revenues associated with self-support activities such as the bookstore, food service and housing operations.

Student Tuition/Fees (1038): Student Tuition/Fees includes revenues generated from tuition charged to students for instructional programs as well as fees charged in support of specific activities such as material, lab, activity and health center fees.

Revenue Descriptions (continued)

Indirect Cost Recovery (1039): Indirect Cost Recovery (ICR) revenues are generated from federal and other restricted grants, and are used to help offset administrative and support costs that cannot be efficiently tracked directly to grant programs. ICR rates vary according to rates audited and approved by the university's cognizant federal oversight agency.

University Receipts (1048): University Receipts include restricted revenues received from corporate sources, private donations, and local governments, as well as revenues received from publication sales, non-credit self-support programs, recreational facility use fees, and other miscellaneous sources. As of FY03, University Receipts does not include current State Intra-Agency Receipts (1007), those funds are now reported as State Intra-Agency Receipts (1007), while funds previously reported using code 1007 are now under a new code (1174) as UA Intra-Agency Receipts.

Other Funds:

Federal Receipts (1002): Federal Receipts include all revenues received from the federal government. These include restricted federal grants from such agencies as the National Science Foundation, U.S. Small Business Administration, U.S. Dept. of Defense and other federal agencies, as well as federal funding for student financial aid and work-study programs.

Federal Receipts-ARRA (1212): Federal Receipts received from federal agencies related to the American Recovery and Reinvestment Act of 2009 (ARRA). These include restricted federal grants from such agencies as the National Science Foundation, Department of Health and Human Services National Institutes of Health, and other federal agencies, as well as additional federal funding for student financial aid and work-study programs. Except for Pell Grants and Federal Work Study Grants, which are part of the Operating Budget, authority for ARRA receipts are contained in the Capital Budget.

State Inter-Agency Receipts (1007): State Inter-Agency Receipts includes contractual obligations between state agencies. University account code 9330 only, which prior to FY03 was included in state code 1048. Prior to FY03 state code 1007 was UA Intra-Agency Receipts. UA account codes that went to state code 1007 prior to FY03 now are captured in state code 1174. In FY10, ARRA funds became available from the Federal Government and may be passed through to the University of Alaska on an RSA. These funds would be identified by University account code 9332, but will roll up to State Inter-Agency Receipts on all state reports.

MHTAAR (1092): Mental Health Trust Authority Authorized Receipts

CIP Receipts (1061): Capital improvement project (CIP) receipts are generated by chargeback to capital improvement projects to support CIP personal service administrative costs.

UA Intra-Agency Receipts (1174): Previously this fund source was UA Intra-Agency Receipts (1007). UA Intra-Agency Receipts include all internal charges for services provided by central service departments to other university departments. This includes services such as physical plant work orders, printing, and computer repairs, and certain administrative functions such as risk management and labor relations.

Revenue Descriptions (continued)

Fund Types:

Unrestricted Funds: Unrestricted funds are those current funds which are available for use within the current operating period, i.e., fiscal year, for which there is no apparent use restriction.

Auxiliary Funds: Auxiliary funds are unrestricted current funds of enterprises which furnish services directly or indirectly to students, faculty or staff and which charge fees directly relating to, but not necessarily equal to, the costs of the services. Bookstores and housing systems are examples of enterprises which generally meet the accounting criteria for classification as auxiliary enterprises.

Designated Funds: Designated funds are unrestricted current funds which have internal restrictions but which do not meet the accounting guidelines for restricted funds. Funds for UA Scholars is an example of designated funds.

Restricted Funds: Restricted funds are current funds received by the university but their use is limited to specific projects or purposes by grantors, donors or other external sources.

NCHEMS Descriptions

The University of Alaska classifies all expenditures into standardized categories that are nationally recognized and are generally utilized by most institutions of higher education. These categories, which were first developed by the National Center for Higher Education Management Systems (NCHEMS), are described below:

Instruction and Student Related:

Academic Support: The academic support category includes expenditures related to academic administration and governance to the institution's academic programs; academic program advising; course and curriculum planning, research, development and evaluation, including faculty development; and academic computing, including regional academic mainframes and the student micro-computer labs.

Instruction: The instruction service category includes expenditures for all activities, which are part of the system's instruction programs. Instructional services include all credit and non-credit courses for academic and vocational instruction.

Intercollegiate Athletics: Intercollegiate athletic sports are organized in association with the NCAA or NAIA. The intercollegiate athletics category includes expenditures for the necessary support staff associated with the athletic programs.

Library Services: The library services category includes expenditures for services, which directly support the collection, cataloging, storage and distribution of published materials -- periodical, subscription and book holdings, microfiche and other reference technology aids and inter-library bibliographic access through networks such as Online Computer Library Center (OCLC) and Alaska Library Network.

1955

NCHEMS Descriptions (continued)

Scholarships: The scholarships category includes scholarships and fellowships in the form of grants to students, as well as trainee stipends, prizes, and student awards.

Student Services: The student services category includes expenditures related to admissions, the registrar and those activities whose primary purpose is to contribute to the students' emotional and physical well-being and to their intellectual, cultural, and social development outside the context of the formal instruction program. Student services include social recreational, and cultural activities; counseling services which include personal, career guidance and placement, and vocational testing; student health medical services; financial aid management and student employment; student admissions, registration and student records administration; and student recruitment marketing and counseling.

Infrastructure:

Institutional Support: The institutional support category includes expenditures related to executive services including the office of the President, chancellors' offices, and other institutional support functions including business offices, accounting, budget development, EEO/AA, educational properties management, facilities planning and construction, finance, human resources, information services, institutional research, internal audit, investment properties management, legal counsel, payroll, procurement, records, risk and hazardous materials management, systems maintenance, university relations and support for the assemblies and the Board of Regents.

Debt Service: The debt service category includes expenditures for the repayment of debt obligations.

Physical Plant: The physical plant category includes expenditures related to plant administrative services; building maintenance services including routine and preventative repair and maintenance of buildings and structures; remodeling and renovation projects; custodial services including janitorial and elevator operations; landscaping and grounds maintenance services; utilities services including electricity, heating fuel, garbage and sewage disposal; and specialized safety and code compliance management services including campus security and hazardous materials management. Also included are expenditures for fire protection, property insurance and similar items.

Other:

Public Service: The public service category includes expenditures for activities whose primary purpose is to make available to the public the various unique resources and capabilities of the university in response to a specific community need or problem. The major public service units are the Cooperative Extension Service, KUAC Radio and TV, small business development programs and other community service programs produced in cooperation with community organizations and local governments.

Research: The research category includes expenditures for activities directly related to scientific and academic research. The majority of the research is funded by non-general funds.

NCHEMS Descriptions (continued)

Auxiliary Services: The auxiliary services category includes expenditures for conveniences and services needed by students to maintain an on-campus, resident student body. These services include resident student housing, food service dining halls, retail stores' operations such as the bookstore and vending machines, and specialized services such as child care.

Unallocated Authority: The unallocated authority category is not part of the standardized NCHEMS categories used by other institutions of higher education. It is a special category created by the University of Alaska to hold additional budget authority separate from other NCHEMS until such a time as it is needed.

1. One-time Items Include: FY09 $4,840.0 for Utility Increases, $234.4 for Workforce Development Stipend (ACCFT); and FY10 $150.0 for UAF Virology Facility Operating Costs, $500.0 for Fairbanks Organized Research Alaska Center for Energy and Power Leadership, $450.0 for Cooperative Extension Service - Energy Outreach.

2. The $550.0 funded with Business License Revenue in FY09 was moved to General Funds in FY10.

3. ICR and CIP include the impact for stimulus funding for grants, but Federal Receipts do not as these will be realized through the capital budget.

4. Other Appropriations Include: FY09 $1.8 License Plate Revenue, FY10 $2.0 License Plate Revenue, and $1,650.0 & $1,980.0 (Budget) One-Time Funding for Utility Increases; and FY11 $2.0 License Plate Revenue.

Note: * 2009 student headcount is preliminary. Reporting level headcount is unduplicated. Academic Organization (AO) headcount totals add up to more than MAU totals and MAU headcounts add up to more than the system total. This occurs because it is common for students to be concurrently enrolled at multiple AOs and/or multiple MAUs in the same semester. Therefore, some students would be double counted if headcounts were summed across AOs and MAUs. Headcount includes students who audit credit courses.

University of Alaska
Major Renewal and Renovation
Background Information

The University of Alaska has 6.7 million square feet of facilities in over 400 buildings throughout the state. This inventory has an asset value of $1.8 billion with an even larger replacement value of over $2.5 billion. Every year UA spends up to $28 million from its operating budget for preventive and routine maintenance on those facilities and support infrastructure. This kind of maintenance, known as Maintenance and Repair (M&R), is routine maintenance work required to preserve the functionality of a building. This is an operating budget requirement and a high priority for UA. M&R includes work required to preserve the functionality of a building, road, or utility system; such as regular painting, carpet repair, roof repairs, pavement crack sealing, routine changing of air filters, repair of leaking pipes, etc.

Annual expenditures for M&R are calculated at a minimum of 1.5 percent of current building value. The annual operating budget expenditures made to keep buildings functional are often referred to as M&O (maintenance and operations). This term is not synonymous with M&R which does not include operational service and utility costs. The Board of Regents and President have ensured that UA stays current with M&R expenditures, in part by separating operations and utility budget categories from maintenance. As costs for utilities and operations services, such as janitorial and snow removal rise, this separation ensures the increase is not funded at the expense of maintenance.

Another category of maintenance that is not funded through the operating budget is Renewal and Renovation (R&R). Funding applied to UA's R&R is only available when the legislature specifically appropriates money for it in the capital budget. R&R is best described as regularly scheduled major maintenance that extends the useful life of a facility. R&R is usually associated with such things as roof replacement, major replacement of flooring materials, replacement of major mechanical and electrical equipment including boilers and fire alarm panels and bringing fire and sprinkler systems up to code, etc.

When funding for R&R is received, the amount distributed to each campus is established by a formula based on the age and size of the facility. As buildings age, a higher expenditure is required to keep the occupied space fully functional. More than half of UA's buildings are over 30 years of age and many of their utility systems and roads also need significant annual investment.

When R&R is not funded, a backlog of projects is created. The existing backlog, i.e., the "deferred" R&R, is known as Deferred Maintenance and Renewal. Consistent annual funding is necessary to properly fund R&R and the legislature funds an average of about $16 million, the backlog has grown dramatically. UA now has an accumulated backlog or deferred maintenance need of more than $800 million.

It isn't realistic to presume that the deferred maintenance will be fully funded in any one year, but the lack of adequate R&R funding has created a deferred maintenance problem that must be systematically reduced.

Moreover, it is important for the state to create a mechanism to regularly fund R&R in order to avoid inappropriately large backlogs in the future.

SPACE LEASE NOTICE TO LEGISLATORS

In accordance with Alaska Statute 36.30.080 (c), notice is hereby given to the Alaska State Legislature that the University of Alaska either intends to enter into, or has previously entered into, the space leases listed below with annual rents to be paid by the University of Alaska that will exceed $500,000 and/or total lease payments that will exceed $2,500,000 for the full term of the lease, including any renewal options that are defined in the lease. The Current Annual Lease Payment listed below reflects the current lease rate. An estimate of the total lease payments has been included under Estimated Total Lease Payments w/ Renewals. The Estimated Total Lease Payments, including all renewals, is based on an estimate rather than a known fixed rate. The actual lease rates over the life of the leases are based on either 1) the fair market value at the time of any renewals, or 2) the current lease rate, plus a Consumer Price Index cost of living increase.

	Location	City	Current Sq Ft	Current Annual Lease Payment	Current Expiration Date	Expiration Date with all Renewals	Estimated Total Lease Payments w/ Renewals
1.	1815 Bragaw	Anchorage	25,346	$499,992	12/31/2012	12/30/2017	$5,001,290
2.	2175 University Ave. S.	Fairbanks	12,151	$240,621	06/01/2012	05/31/2017	$2,694,116
3.	590 University Ave.	Fairbanks	8,718	$163,193	02/28/2011	02/28/2011	$3,378,593
4.	514 2nd Avenue	Fairbanks	21,561	$129,981	06/30/2011	06/30/2026	$4,522,184

1. **1815 Bragaw, Anchorage.** This lease was executed on July 10, 2007, in compliance with A.S. 36.30.080 (c), for a term of five years. Effective January 1, 2008, the lease was modified to include an additional five-year option to renew, resulting in total lease payments that exceed $2,500,000 for the full term of the lease.

2. **2175 University Avenue S., Fairbanks.** Two separate leases for this property were entered into at different times (June 1, 2007 and October 1, 2007), by separate branches of the University, the result being that the total lease payment amounts stipulated in A.S. 36.30.080 (c) were unintentionally exceeded. The University has a right of first refusal to lease any space that may become available in this building. It may lease additional space in this building, if needed, and if funds are available within the department's budget.

3. **590 University Avenue, Fairbanks.** This lease was initially entered into by the University on September 1, 1994, for a term of five years, with two one-year options to renew. The original lease did not exceed the dollar amounts under AS. 36.30.080. However, the lease has been modified a total of nine times over the last fourteen years to adjust the space square footage and to extend the term of the lease in accordance with A.S. 36.30.083, the result being that the total lease payment amounts stipulated in A.S. 36.30.080 (c) have been exceeded. The University may lease additional space in this building, if needed, and if funds are available within the department's budget.

4. **514 2nd Avenue, Fairbanks.** This lease was initially entered into by the University on July 1, 1991, for a term of twenty years, with three five-year options to renew at 75% of fair market value, resulting in total lease payments that exceed $2,500,000 for the full term of the lease.

The intended effect of appropriating funds adequate to pay the above leases is to approve the University's actions in entering into or renewing the leases under Alaska Statute 36.30.080 (c) (1).

The University of Alaska is an EEO/AA employer and educational institution.

This publication was prepared by the University of Alaska Statewide Planning & Budget Office and was printed in Fairbanks, Alaska at a cost of $5.27 per copy.

Strategic Plan to End the Epidemic of Sexual Assault and Domestic Violence

PURPOSE

Within a decade, end the epidemic of sexual assault and domestic violence and make Alaska the national leader in fighting these scourges

STRATEGIC OBJECTIVES

1. Break the cycle of abuse using a comprehensive public education and prevention campaign to promote a culture of respect that does not tolerate violence against women and children.

2. Deter, segregate, and treat sex offenders so they pose no risk of harm to women and children.

3. Establish a law enforcement presence in every community that desires one to improve public safety.

4. Increase victim service so more have a safe place to go and the services they need to heal.

5. Coordinate and streamline efforts among all stakeholders to more effectively combat violence against women and children.

GUIDING PRINCIPLES

- A culture of responsibility – the answers and resources cannot come from government alone
- Community ownership over solutions
- Partnership between NGOs and state, local, federal, and tribal organizations
- Culturally tailored programs
- Youth leadership in developing and executing programs
- Support only programs with proven effectiveness
- Use metrics to measure success

copy on file

1984

SUPPORTING GOALS

- Heighten public awareness of the problem
- Make violence against women and children culturally unacceptable
- Evaluate, develop, and implement prevention programs and continue to support programs with proven effectiveness
- Enact legislation that will enhance public safety
- Increase the proportion of incidents reported and suspects arrested, prosecuted, and punished
- Lower recidivism levels
- Make law enforcement more responsive through training
- Ensure shelter beds or safe houses are available to every woman and child in need
- Link victims to medical care, legal services, and opportunities to establish independence from abusive relationships

CRIME STATISTICS

- The Alaska per capita rape rate is the worst in the nation -- two and half times the national average. *Source: Alaska Network on Domestic Violence and Sexual Assault, 2006 Annual Report: Working in Alaska Communities for Safety, Justice, Advocacy and Education (2006).*
- Rape is a greater percentage of all violent crimes reported in Alaska than it is nationally, at 12% of all violent crime in Alaska compared to 6% of violent crime in the United States. *Source: Alaska Senate Judiciary Committee's Report and Recommendations: Reducing Sexual Assault in Alaska (2009).*
- The Alaska per capita child sexual assault rate is also the worst in the nation -- almost six times the national average. *Source: Alaska Network on Domestic Violence and Sexual Assault, 2006 Annual Report: Working in Alaska Communities for Safety, Justice, Advocacy and Education (2006).*
- Outside of Anchorage, 55% of sexual assault victims are under the age of 15; 30% are between 13 and 15 years old and 25% of victims are between 6 and 12 years old. *Source: Studies by Alaska State Troopers and Anchorage Police Department, compiled by UAA Justice Center (2009).*

€ MaisyGrace 07

- Alaska has the highest rate per capita of men murdering women. *Source: Alaska Network on Domestic Violence and Sexual Assault, 2006 Annual Report: Working in Alaska Communities for Safety, Justice, Advocacy and Education (2006).*

- In nearly one-quarter of sexual assault cases the victim was incapacitated due to alcohol or drug use. *Source: Alaska Sexual Assault Nurse Examiner Study, Reprinted in Andre Rosay, Sexual Assault in Alaska: Slide Show Presentation to Alaska State Legislature Senate Judiciary Committee (August 2009), available at http://justice.uaa.alaska.edu/vaw/2009-08.jc-vaw-sexualassault.pdf.*

- Two-thirds of domestic violence victims reported that alcohol had been a factor. *Source: U.S. Department of Justice, Bureau of Justice Statistics, Crime Characteristics: Summary Findings (2009), available at http://www.ojp.usdoj.gov/bjs/cvict_c.htm.*

- Boys who witness domestic violence are twice as likely to abuse their own partners and children when they become adults. *Source: Strauss, Gelles, and Smith, Physical Violence in American Families: Risk Factors and Adaptations to Violence in 8,145 Families (1990).*

- Villages with law enforcement presence have a 40% lower rate of serious injury caused by an assault compared to villages without local law enforcement. *Source: Wood and Gruenwald, Local Alcohol Prohibition, Police Presence and Serious Injury in Isolated Alaska Native Villages (2006).*

IMPLEMENTATION

I. BREAK THE CYCLE OF ABUSE USING A COMPREHENSIVE EDUCATION AND PREVENTION CAMPAIGN TO PROMOTE A CULTURE OF RESPECT THAT DOES NOT TOLERATE VIOLENCE AGAINST WOMEN AND CHILDREN

A. Statewide Education Efforts

Rationale: All members of society must consider violence against women and children unacceptable, and all must believe it is something that can be stopped. Schools, media, and high-profile public engagements can be used to transmit the message that sexual assault and domestic violence are intolerable in our society and that every individual and group must identify its role in combating these problems.

1. Develop, coordinate, and broadcast public service announcements. For example, the Governor, DPS, LAW, and CDVSA have coordinated with the Alaska Network on Domestic Violence and Sexual Assault to launch the "Real Alaskan Men Choose Respect Campaign."

2. Cabinet members engage in public outreach to raise awareness and change attitudes about sexual assault and domestic violence. For example, the Governor held a major press event to highlight the epidemic. The Attorney General has discussed the epidemic in speeches and has been interviewed by reporters and talk show hosts. Commissioner Masters frequently speaks throughout the state about the Governor's initiative and the epidemic.

3. Develop partnerships with Native organizations to work together on prevention solutions. An excellent example is CDVSA's Tribal and State forums, which seek to devise programs and strategies to break the cycle of violence.

B. Locally-Targeted Education Efforts

Rationale: There is a growing realization that to reduce violence against women and children we need to prevent violence before it occurs rather than intervening after lives are shattered. To do this we must develop a prevention strategy seeking to bring about change in individuals, relationships, communities, and society. Cultural change is most effective from the ground up and requires a coordinated effort among local communities, nonprofits, and government.

1. Work with tribal, non-profit and religious organizations to raise awareness of the problem, especially among youth, and stigmatize violence against women and children. Under the legislature's guidance, CDVSA is in the process of developing and implementing a plan to "promote education and programs to prevent future incidents of domestic violence and sexual assault." And, as discussed in more detail below, the Governor's budget requests the creation of a DV/SA coordinator. Part of the coordinator's portfolio will be to take a leading role in these outreach efforts.

2. Cultivate youth leaders through schools and community groups and incorporate youth leaders in developing primary prevention strategies. For example, CDVSA partners with the Alaska Network on Domestic Violence and Sexual Assault on developing prevention programs for schools and youth.

II. DETER, SEGREGATE, AND TREAT OFFENDERS SO THEY POSE NO RISK OF HARM TO WOMEN AND CHILDREN

A. Enact Legislative Changes To Protect Alaskans

Rationale: Alaska needs tough laws in the nation to send a message that violence against women and children will not be tolerated and to ensure that offenders no longer pose a risk to others, either because they are behind bars or because they have been rehabilitated. Although the Alaska legislature has already enacted stringent laws, more can be done to punish offenders and protect victims.

1. Toughen penalties for crimes of sexual assault by making it an aggravating factor if the defendant sexually assaulted the victim while knowing the person was vulnerable due to use of alcohol or drugs. More specifically, the Governor has sponsored SB 222 and HB 298 to make it an aggravating factor if the defendant was convicted of any crime and the defendant knew that the victim was vulnerable due to use of alcohol or drugs.

2. Expand laws to protect children from online sexual predators. The Governor has sponsored SB 222 and HB 298, which prohibit suspended imposition of sentences for people convicted of human trafficking, possession or distribution of child pornography, and distribution of indecent materials to minors; these bills make it against the law not just to possess child pornography but also to access it on a computer with the intention of viewing it; and they empower courts to prohibit sex offenders, in cases involving children, from using a computer or communicating with children under 16 years old.

3. Enhance protection and processing of DNA and other forensic evidence to ensure the actual perpetrator is held accountable. To help accomplish this goal, the Governor has sponsored HB 317 and SB 241 would adopt standards for evidence retention and post-conviction DNA testing. The Senate Judiciary Committee Report found that proper examination of DNR evidence is critical to sexual assault prosecutions and that the backlog in getting the evidence processed is causing significant delays in prosecuting cases.

4. Close loopholes that allow convicted sex offenders from other states to escape registering in Alaska (if they are registered as sex offenders in other states, they must register here, even if the sex crime they were convicted of does not have an exact equivalent in Alaska). SB 222 and HB 298 accomplish this goal.

5. Modify the bail statutes to protect the victims of the crime and the general public. The Governor will soon introduce a Bail Bill that seeks to accomplish this goal. Under this bill, a person charged with serious crimes, like a sexual assault felony or a defendant charged with domestic violence who has been convicted of domestic violence within the five preceding years, would have burden of proof to establish that his or her release would not be dangerous to the victim or the public, and would assure the person's appearance in certain cases. Currently, the State has the burden to make this showing.

B. Improve Prosecution

Rationale: Bringing offenders to justice deters future violent acts and sends a strong message that violence against women and children is unacceptable. While most prosecutions result in guilty pleas or convictions, increasing the rates at which incidents are reported and referred for prosecution will help us hold more offenders accountable. Creating a law enforcement presence in every community will also deter violence, increase reporting rates, and improve evidence collection necessary for more and more successful prosecutions.

1. The Governor's budget requests $75 million for a new crime lab to help us process the evidence needed to win convictions in sexual assault cases and $92.8K for a forensic scientist at the crime lab

2. Department of Law has issued specific SA/DV prosecution policies and guidelines for sexual assault and domestic violence cases

3. Prosecutors are being trained in tough plea negotiations and the Governor's budget seeks an additional $75K for additional training.

4. The Department of Law has hired a cybercrimes prosecutor to prosecute child pornography.

5. DPS has reorganized its Computer and Financial Crimes Unit so that investigators can focus solely on computer crimes against children.

6. The Governor's budget requests $2.3 million in General Funds to make permanent 17 prosecutor and victim-witness paralegal positions at the Department of Law, which were previously funded on an interim basis through federal grants.

7. The Governor's budget requests $656,000 in General Funds to make permanent DPS's cold case unit, which had been funded by federal grant money.

8. To ensure forensic evidence is gathered the Governor's budget requests $12.3K for 350 pediatric sexual assault kits and $150K for SART exams. The Senate Judiciary Committee report found that when victims receive a medical forensic exam, it more than doubled the likelihood that the case was accepted for prosecution.

C. Reduce Recidivism Rates

Rationale: The majority of batterers return to their families, and the cycle of violence continues unbroken. It is in the state's interest to reduce recidivism. Otherwise, victims will continue to be harmed and offenders will continue to be arrested and imprisoned at the state's expense. Programs to reduce recidivism will help heal families and save the state money in the long run.

1. DOC is working collaboratively with DPS's VPSO program to provide effective supervision for probationers and parolees in rural communities.

2. The Criminal Justice Working Group is reviewing ways to improve DOC's prisoner re-entry programs, including after-care programs for substance abuse treatment, halfway house beds, mental health clinicians in correctional facilities, re-entry case workers, and coordination among stakeholders.

3. The Criminal Justice Working Group is reviewing reforms to the probation system to reduce recidivism rates by imposing swift punishments for probation violations. According to the Senate Judiciary Committee Report, nationally 45% of prisoners serving time for rape or sexual assault committed their crime while on probation or parole.

III. Establish a Law Enforcement Presence in Every Community that Desires One

A. Add 150 More VPSO Positions Over the Next Ten Years

Establishing a law enforcement presence in every village that desires one will prevent offenses from happening and facilitate investigation and prosecution for the offenses that do occur. UAA Justice Center studies show that in villages where a VPSO was available, rates of serious assault declined 40% and a case was over three times more likely to be prosecuted. But increasing the number of VPSO positions alone will not suffice. Local communities must collaborate by identifying qualified candidates, providing VPSO facilities, and supporting VPSOs' efforts.

1. The Governor's budget requests adding 15 VPSOs per year (at cost of $1.26 million annually) for 10 years so that every community of a certain size that desires a VPSO shall have one if the community puts forward a qualified individual. The Governor's budget also requests a merit increases (at a cost of $129.9K) for VPSOs and an increase in the VPSO COLA (at a cost of $93.9K). The Senate Judiciary Committee Report also recommends that the State hire more VPSOs because the Committee found that it will likely increase prosecution and conviction and because law enforcement presence has been shown to lower the rates of serious assault.

2. To secure housing for VPSOs, the Governor's budget requests $1 million for VPSO housing grants and loans in AHFC programs.

B. Hire Additional Investigators for Sexual Assault Investigations

Rationale: Maintaining VPSOs in rural communities will increase safety and ensure incidents of violence are investigated promptly. However, in many cases additional resources will be required to investigate, collect evidence, and prepare cases for referral to prosecutors. By hiring troopers specifically trained to investigate sexual assault and domestic violence incidents, we will maximize the number of incidents that result in convictions, ultimately deterring future offenders.

1. The Governor's budget requests three additional Trooper DV/SA investigators at a cost of $500K.

2. Use AARA (JAG stimulus) to hire 8 DV/SA investigators. Three of the investigators will be hired by municipal governments to work AST multijurisdictional task forces.

IV. Ensure Victims Have a Safe Place to Go and the Services They Need to Heal

A. Increase Availability of Civil Legal Services for Victims

Rationale: A study conducted by economists found that increased provision of legal services for victims of domestic violence contributes to the decline of domestic violence rates. Civil legal services offer victims help with practical matters – like protective orders, custody disputes, and child support – that give victims options and increase their safety over the long term.

1. The Governor's budget requests an additional CINA attorney (at a cost of $200K) to remove children from violent homes.

2. Strengthen domestic violence pro bono representation by increasing number and skill of volunteer attorneys and expand number of victim advocates. To accomplish this goal, LAW has held over a dozen meetings with legal service providers, victim advocates, and the court system to find ways to increase legal representation for victims. LAW will continue to work closely with all stakeholders to make sure victims seeking protective orders are represented.

3. Obtain commitments from leading Alaska law firms to devote a certain number of hours every month to pro bono legal work on behalf of victims of domestic violence and sexual assault. The Attorney General has begun an outreach effort to the legal community to meet this goal.

B. Increase Shelter Capacity to Meet Needs of Battered Women

Rationale: The ability to leave a dangerous situation and have a safe place to stay will reduce the number of violent incidents. Further, counseling services provided by shelters inform victims of their rights and options to escape abusive relationships. Increasing facilities and training staff will enhance shelters' ability to provide these crucial functions.

1. Provide an additional $381,000 to increase the capacity of shelters – increasing the number of beds, training, and services available to victims, so that they can escape abusive situations.

V. Coordinate and Streamline Efforts Among Stakeholders

A. Create a Domestic Violence and Sexual Assault Coordinator To Establish Partnership Among Agencies and Federal, Tribal, and Non-Profit Stakeholders on Efforts To Combat DV/SA

Rationale: Efforts to address the problems of domestic violence and sexual assault exist, but more can be done to coordinate between government agencies, tribes, NGOs, and other stakeholders to improve and streamline these efforts. A coordinator would be the necessary link between these stakeholders, would identify and cultivate new resources, and would keep sustained focus on the issue.

1. The Governor's budget requests $200K to create a new coordinator position that will oversee this comprehensive plan to end the epidemic of DV/SA. More specifically, the coordinator will establish partnership and form work groups with NGOs, tribal entities, and federal agencies to maximize effectiveness and minimize duplication in efforts to combat domestic violence and sexual assault.

2. The coordinator will consult with stakeholders to develop and implement additional programs to carry out the Governor's initiative.

3. The coordinator will improve the state's existing programs and efforts as they relate to domestic violence and sexual assault, including prosecution, corrections, provision of services to victims, and education.

4. The coordinator will work with CDVSA, DPS, and the UAA Justice Center (or other research organizations) in establishing studies and research necessary for baseline data to measure success and fully understand the extent of victimization in Alaska. This action is consistent with the Senate Judiciary Committee's recommendation set out in its recent Report and Recommendations.

Addendum: Budget

The budget pieces of the plan at this point in time include all the efforts that were in the base budget for FY 10, i.e., funding for DPS, LAW, CDVSA, sex offender treatment in DOC and in DHSS for juveniles, etc. **PLUS** new increments of:

- $200k Child Protection Attorney in Kenai
- $2.2 million Prosecutors and staff who work primarily on sexual assault and domestic violence cases. Making these positions permanent and funding them with state dollars. We cannot afford to lose these resources.
- $200k SA / DV Coordinator
- $656.5k Cold case unit – Critical unit to solving homicides, many of which involve domestic violence and sexual assault. We cannot afford to lose these resources.
- $150k Sexual assault exam costs
- $75k SA / DV Prevention training
- $500k 3 SA / DV investigators at DPS
- $381.9k Shelters
- $651.4k Replace reduced PFD felon funds for CDVSA
- $12.3k 350 pediatric sexual assault kits
- $92.8k Forensic scientist at the crime lab
- $129.9k Merit increases for VPSO positions
- $93.9k VPSO COLA
- $1.261.5 15 new VPSO's
- $75 million Crime Lab
- $1.0 million VPSO housing loans and grants
- $86k New and improved crime lab equipment

Addendum: Recent Actions Taken To End the DV/SA Epidemic

- CDVSA has devised a strategic plan to develop prevention programs
- The Network, in collaboration with the State, has launched a PSA campaign
- To devise metrics that will measure the initiatives outcomes, cabinet members have met with the United Way and the Mental Health Trust; LAW is working on forming a committee to monitor the initiatives impact on DV and SA rates
- DPS has received ARRA funding for five investigators in ABI and three municipal investigators for multi-jurisdictional task force and is in the process of hiring
- LAW has hired a new cybercrime prosecutor
- DPS has reorganized its Computer and Financial Crimes Unit so that investigators can focus solely on computer crimes against children
- The Criminal Justice Working Group is reviewing ways to reduce recidivism through improved prisoner re-entry services and by imposing swift and consistent penalties for probation violations
- The Attorney General has discussed the DV/SA epidemic at speeches, has conducted several radio interviews, and has been interviewed by editorial boards and reporters
- CDVSA has acquired $290K in the FY10 budget for research and studies; the Governor's requested budget seeks $290K for CDVSA's operating budget to continue funding for research and studies
- The Attorney General and Commissioner Masters have met with DOJ officials to raise awareness and secure funding for programs

Addendum: Proposed Legislation

I. Changes In Crimes and Sentences Involving Sexual Assault and Domestic Violence

- This bill would make 5 important changes to our current laws:

1. Prohibit suspended imposition of sentences for people convicted of human trafficking, possession or distribution of child pornography, and distribution of indecent materials to minors.

2. Make it against the law not just to possess child pornography but also to access it on a computer with the intention of viewing it.

3. Courts could prohibit sex offenders, in cases involving children, from using a computer or communicating with children under 16 years old.

4. Sentences for sex offenses could be increased through new "aggravating factors," including the defendant's knowledge that the victim had consumed drugs or alcohol, or a previous dating relationship with the victim.

5. Anyone required to register as a sex offender in another state would have to register in Alaska.

II. A Revision of Bail Laws

- A comprehensive review of our bail statutes has not occurred since the 1960s; reorganization and updating of this law is overdue.

- Although the substantive provisions are generally similar to current law, there are some differences.

- Under this bill, a person charged with serious crimes, like a sexual assault felony or a defendant charged with domestic violence who has been convicted of domestic violence within the five preceding years, would have burden of proof to establish that his or her release would not be dangerous to the victim or the public, and would assure the person's appearance in certain cases.

- Currently, the State has the burden to make this showing

- The bill also provides that once convicted of sex-related felonies, perpetrators could not be released pending sentencing or an appeal.

III. Specific Procedures for Post-Conviction DNA Testing

- This bill is prompted by the State's victory in the *Osborne* case.
- The bill adopts new requirements for preservation of evidence and biological material in certain cases by all law enforcement agencies in the state.
- It also adopts a procedure for a person convicted of a felony against a person to apply for post-conviction DNA testing.
- More specifically, the bill requires municipal police departments, courts and state agencies to retain DNA evidence for post-conviction testing and cold case prosecution.

IV. The Alaska Scientific Crime Detection Laboratory in Anchorage

- The state would issue $75 million in certificates of participation for the lab in order to effectively conduct examinations of evidence and expedite the processing of a large backlog of evidence in criminal cases. Using certificates of participation spreads the cost out over time so that both this generation of Alaskans and the next will help pay for this important facility and reap its benefits.
- Over 50% of submitted cases to the Crime Lab are DV/SA related
- The new lab will DPS to bring in cutting edge technologies and DNA techniques

STATE OF ALASKA

SEAN PARNELL, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES & DEPARTMENT OF REVENUE

ALASKA GASLINE INDUCEMENT ACT

January 29, 2010

To: All Members of the Alaska State Legislature

Included with this letter is a report from the Department of Revenue (DOR) and Department of Natural Resources (DNR), submitted in accordance with reporting requirements under the Alaska Gasline Inducement Act ("AGIA").

AS 43.90.400(d) of AGIA requires the DOR and DNR Commissioners to submit a report to the legislature within the first 10 days of each regular session on the status of reimbursements from the AGIA reimbursement fund. This report must include a list of all disbursements made from the AGIA fund during the preceding fiscal year, a written justification for each disbursement and the projected amount of money that will be required for future disbursements during each of the next three fiscal years.

While this report is focused on information specific to AGIA fund disbursements, additional information related to the AGIA-licensed project is provided in administration's Alaska Pipeline Project Reports. These reports, along with other helpful resources are available on the AGIA website, at http://www.state.ak.us/agia.

We hope you find this information useful. If we can be of further assistance, please do not hesitate to contact us directly.

Sincerely,

Pat Galvin, Commissioner
Department of Revenue

Tom Irwin, Commissioner
Department of Natural Resources

Attachment: AGIA Fund Disbursement Report, January 29, 2010

AGIA Fund Disbursement Report
Department of Revenue and Department of Natural Resources
January 29, 2010

This report was produced by the Department of Revenue (DOR) and Department of Natural Resources (DNR) pursuant to reporting requirements under the Alaska Gasline Inducement Act ("AGIA" or "the Act").

AS 43.90.400(d) of AGIA requires the Department of Revenue (DOR) and Department of Natural Resources (DNR) Commissioners to submit a report to the legislature within the first 10 days of each regular session on the status of reimbursements from the AGIA reimbursement fund. This report must include a list of all disbursements made from the AGIA fund during the preceding fiscal year, a written justification for each disbursement and the projected amount of money that will be required for future disbursements during each of the next three fiscal years.

The information included in this report is focused on reimbursements issued from the AGIA Fund through December 2009, to the state's AGIA Licensee, TransCanada Alaska Company, LLC and Foothills Pipe Lines Ltd (referred to here as "TC Alaska"). For purposes of confidentiality, disbursements are summarized at the cost category level.

Reimbursement Process

Under the terms of the AGIA license, the state's licensee, TC Alaska, is entitled to receive certain benefits from the state in exchange for upholding specific commitments related to the project schedule, tariff and future expansions. These benefits include, among other things, matching reimbursement for up to $500 million of qualified project expenditures.

Qualified expenditures include those which are determined to be directly and reasonably related to advancing the project, with the exception of overhead, lobbying and litigation costs, civil or criminal penalties or fines, or any expenditures for assets or work product acquired or developed by the licensee before the license was issued.[1]

In order to ensure compliance with these and other regulatory requirements, expenditure information must be submitted by the Licensee for review by the state.

Due to the anticipated high volume and complexity of the licensee's submissions, the Department of Revenue undertook development of an electronic information management system, beginning in early 2009, which would allow individual expenditures to be tracked, monitored and reviewed throughout the various stages of the reimbursement process. The project was separated into two phases, with the first focusing on the design of the reimbursement process and workflow. The second phase focused on detailed technical design and construction of the electronic system, known as the AGIA Information Reimbursement System (AIRS).

[1] "Qualified Expenditures" are defined in AS 43.90.110(c) and 15 AAC 90.030

The first of these phases was largely completed in July 2009, with the assistance of a department contractor, PangoMedia, Inc. The resulting process includes a thorough and multi-stage review by staff within the department, and by state contractors working more directly with the Alaska Pipeline Project team.

Expenditure information is submitted by the licensee on a monthly basis, while formal Requests for Reimbursement are filed quarterly. This frequent exchange of information allows the department to review expenditures in a more consistent and timely manner, rather than trying to process a large volume of information at the end of each quarter.

Concurrent with this process design effort, the department has worked closely with TC Alaska to design technical reporting standards which enable submissions to be accepted electronically into state systems. While these standards will meet the needs of the future AIRS system, they have also allowed the department to implement a temporary information receiving method using DOR's existing Online Taxpayer Information System (OTIS). This temporary system was finalized and tested in November 2009, with TC Alaska successfully submitting its initial reimbursement request on November 21.

AGIA Fund Disbursements

TC Alaska's first Request for Reimbursement was filed in late November 2009 for work conducted during the first quarter (1Q) of 2009. The request was for work totaling $2,463,999, with the state's share amounting $1,231,000. After reviewing the request, the department issued an initial payment on December 21, 2009 for $1,095,786, with $272,427 of the total expenditures being set aside pending additional clarification and review.

Additional detail regarding TC Alaska's project expenditures and reimbursements to date is provided in Financial Accounting Reports section of this report. (See Pages 5-13)

Requested Reimbursement

Definition of the reimbursement process was completed in July 2009 with technical submission requirements completed in September 2009. The implementation of the submission requirements by TC Alaska took more time than anticipated and has slowed the reimbursement process to date. However, with many of these issues now being resolved, processing of future reimbursement requests is expected to occur much more quickly. While TC Alaska has only received reimbursement for $1.1 million of qualified expenditures to date, reimbursement for work occurring throughout the remainder of the 2009 calendar year is expected to be substantially higher.

Earlier this month, TC Alaska submitted expenditure information for work conducted and paid during 2Q 2009. The department anticipates receiving a reimbursement request for this work by January 31, 2010. Review of the submission is expected to be complete within the subsequent 30 days, and payment issued on or before February 28, 2010.

The department expects to receive the 3Q 2009 and 4Q 2009 monthly submissions, as well as the related reimbursement requests, shortly after processing 2Q, with review and payment by the end of March and April 2010 respectively.

Estimated Project Spending

The figures in **Table 1** are based on TC Alaska's 1Q 2010 Budget Report, provided to the department in mid-January. They show the projected amount of money required for reimbursement during each fiscal year until the Licensee is scheduled to obtain a FERC Certificate. The Governor's proposed budget for FY2011 will be amended to request an amount sufficient to meet this projected reimbursement schedule. It is important to note that the rate of spending could vary as the project moves forward. For example, if the Alaska Pipeline Project and shippers execute precedent agreements for sufficient volumes to Alberta or Valdez post the upcoming Open Season, the project may decide to substantially accelerate or increase the rate of spending based on the degree to which project uncertainties and conditions precedent can be resolved.

Table 1[2]

Estimated Project Spending Through FERC Certification (Thousands $)								
Fiscal Year	**Pre-License**	**2009**	**2010**	**2011**	**2012**	**2013**	**2014**	**TOTAL**
Total Annual	$2,527	$17,812	$126,498	$139,517	$137,128	$137,128	$137,128	
TC Alaska/EM	$2,527	$11,431	$68,833	$18,573	$13,713	$13,713	$68,950	
State of Alaska	$0	$6,381	$57,666	$120,944	$123,415	$123,415	$68,178	
Total Cumulative	$2,527	$20,339	$146,837	$286,354	$423,482	$560,610	$697,738	**$697,738**
TC Alaska/EM	$2,527	$13,958	$82,791	$101,363	$115,076	$128,789	$197,738	**$197,738**
State of Alaska	$0	$6,381	$64,047	$184,991	$308,406	$431,821	$500,000	**$500,000**

[2] Numbers are based on TC Alaska's Q1 2010 Budget Report. The report was prepared in Canadian Dollars and converted to US dollars @ 1.15 FX rate (based on Dollar @ December 2008); comparative spending after, 2010 reflects a change in the state's matching contribution from 50/50 to 90/10 following the Open Season in July 31.

Annual Audit

The AGIA statute also requires periodic audit of the Licensee. The department has contracted with Martindale Consultants Inc. to conduct the first annual audit. Initial meetings with the audit firm took place in November 2009 and coordination with TC Alaska is forthcoming. The audit will most likely begin after the first quarter of 2010. Specifically, the audit will review expenditures made by TC Alaska for which the licensee received payments of state matching funds to ensure that the expenditures were eligible under AGIA and applicable regulations. The audit will cover the 2009 calendar year plus the relevant portion of December 2008.

The contractor will prepare an audit plan, assign deadlines for each audit step subject to department approval, review TC Alaska's accounting records and reimbursement requests for compliance with AGIA's reimbursement provisions, conduct appropriate audit test, and complete an audit report including findings and claims. The contractor will also be required to assist the department in resolving audit claims. We anticipate all phases of the audit will consume roughly 320 hours which includes roughly 160 field hours at the Licensee's place of business in Calgary Canada. As part of the audit, the contractor will also be required to meet with personnel at the Department of Revenue's offices and at the Licensee's office in Calgary.

2015

1-29-10

FY11 Budget Overview

Presentation to the House Finance Committee
January 29, 2010
Alaska Department of Revenue

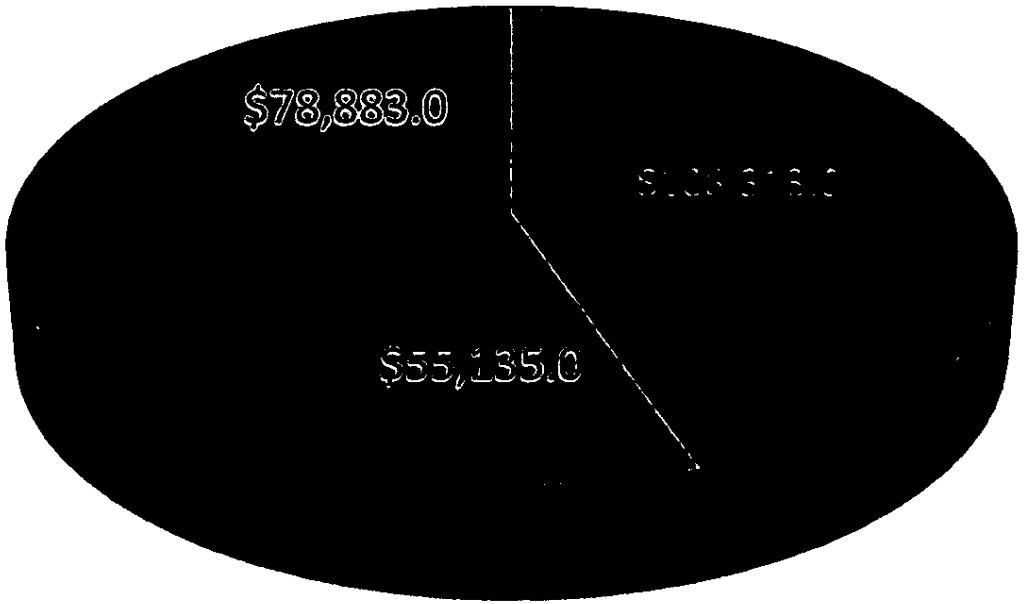
2016

Oil and Gas Requests

- AGIA Information Reporting System (Tax Division)
  - $300,000
- Petroleum Commercial Analyst Positions for Gasline and Production Tax Analysis (Tax Division)
  - $800,000
- Audit of AGIA Reimbursement Fund (Nat Gas Com)
  - $50,000
- Fiscal Systems Analysis to Support Negotiations of Gasline Fiscal Terms (Nat Gas Com)
  - $1,500,000

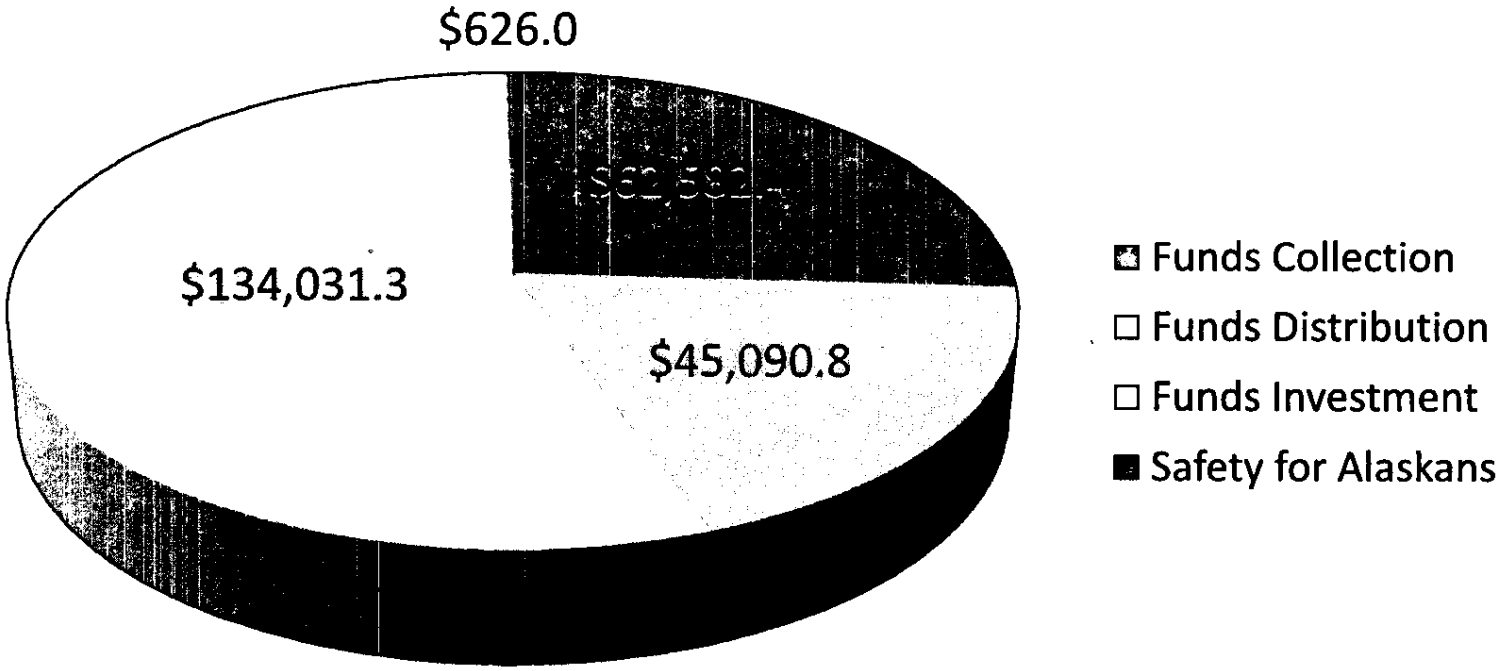
Core and Corporations

"who we are"



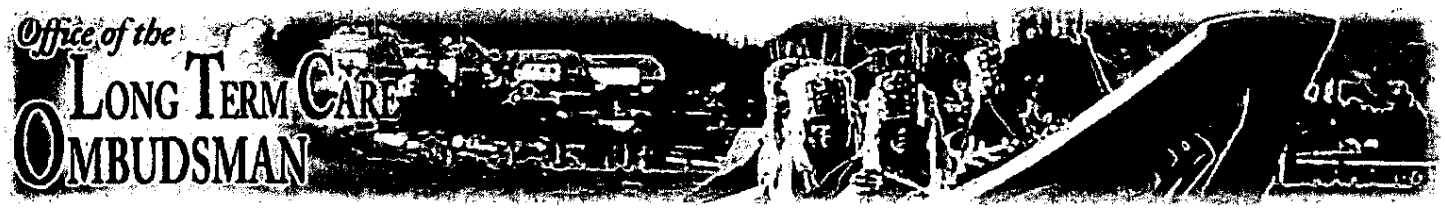
Priority Programs

"what we do"



Long Term Care Ombudsman

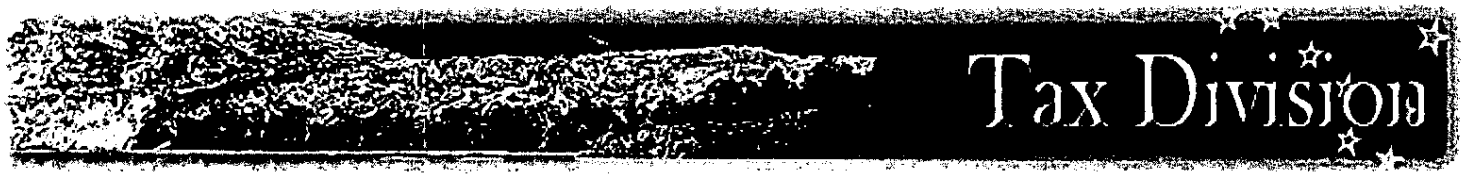
- Population aged 65+ in Alaska has grown 34% between July 1, 2001 and July 1, 2008. They predict tripling the size of this age group over the next 25 years.
- During FY09, the overall number of complaints were 337 compared to 162 in FY08. (108% increase)
- Currently 15 nursing homes with 708 beds and more than 250 assisted living homes with 2,013 beds that are serviced by the LTCO investigators.
  - $91,500 GF request



Tax Division

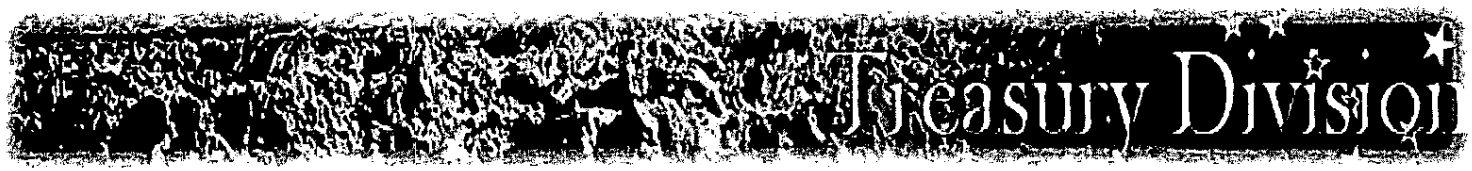
- Along with oil and gas production tax, the division is responsible for the administration of 21 other tax types and the regulation of charitable gaming.

- Fall 2009 Revenue Source Book
- Annual Tax Report as of June 30, 2009



Treasury Division

- Investment of the retirement accounts and the State's treasury including the General Fund, sub-accounts of the GF, CBR, and SBR.
  - $387,000 increment for management fees of the CBR
- ARM Board
- Unclaimed Property



Permanent Fund Dividend Division

- Significant change in operations to be able to expedite service to Alaskans with call center routing and redistributing staff efforts with the public need.
- Significant change in distribution practices by reducing printing and postage costs due to increased online filing.
- IT application development
  - $100,000 increment for Dot.Net training

Child Support Services Division

- Alaska CSSD is the honored recipient of the "PAC-10 Challenge Preventing Arrears Cup for 2009."
  - The Division was selected for the award based on having the most effective arrears management in Region X.
- Fund source change to balance the agency's budget with the ARRA funding changes that occurred during the past year.
  - Additional adjustments will be forthcoming in the FY10 supplemental and FY11 amended budget request

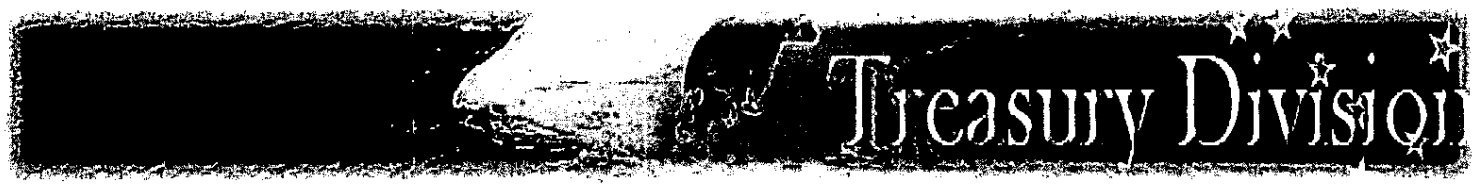
Commissioner's Office

- Oversight of Administrative Services, ANGDA and Natural Gas Commercialization
  - No budget changes to Commissioner's Office and Administrative Services
  - Anticipate IT support related increment in the FY10 supplemental and FY11 amended request
- AGIA Project Report- October 31, 2010
- ACES Status Report- January 14, 2010

2025

AK Municipal Bond Bank Authority

- Legislation introduced regarding bonding and debt issuances
  - HB 299 / SB 226 Certificates of Participation for the crime lab and the University life sciences building
- Reviewing legislation for:
  - Recovery Zone Bond Authorization
  - AMBBA Authorization adjustments



10

2026

Alaska Housing Finance Corporation

- Slight increases in their operating budget to account for ARRA funding and fixed costs increases
- Presenting to the budget subcommittee on Monday, Feb 1
- Legislation Introduced:
  - HB291 / SB217 Revenue Bonds for Veterans
  - HB296 / SB223 Energy Efficiency Bonds and Loan Program with AIDEA

Alaska Housing
FINANCE CORPORATION

10
11

2027

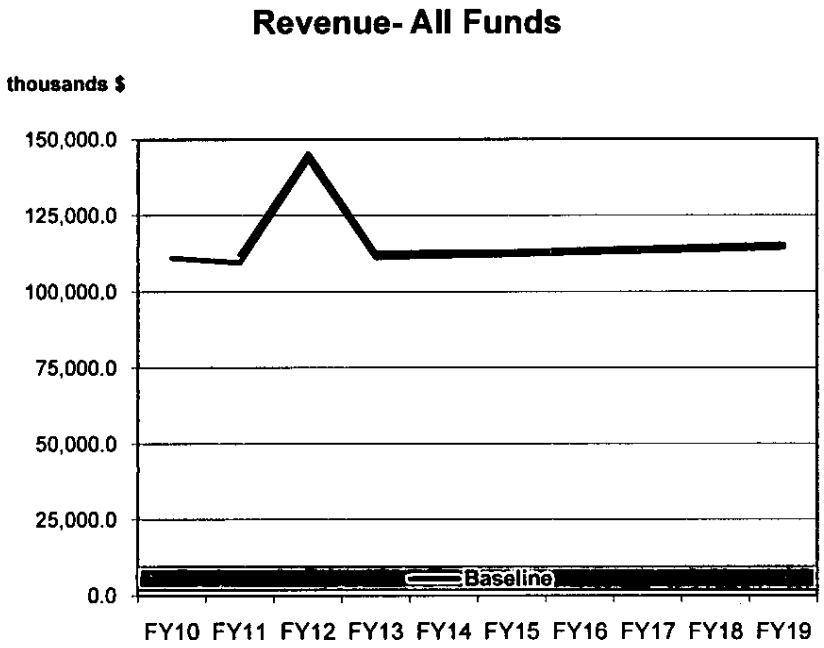
Alaska Permanent Fund Corporation

- Variety of increments including
  - Board meeting travel
  - Contractual increases
  - State support chargeback increases
  - Investment analysis system increases
  - Network security
  - Funding to lower the vacancy factor
- Presenting to the budget subcommittee on Monday, Feb 15

11, 12

2028

10 Year Plan



- The overall budget growth is determined by:
  - The growth of fund balances assuming an increase of 7% per year
  - Fixed cost increases to select operating costs of approximately 11% per year
  - One time increase of System Management fees increases once the integrated Tax MIS is developed
  - We do not anticipate the need for other program growth unless new/changed legislation impacts the department's current capacity

2029

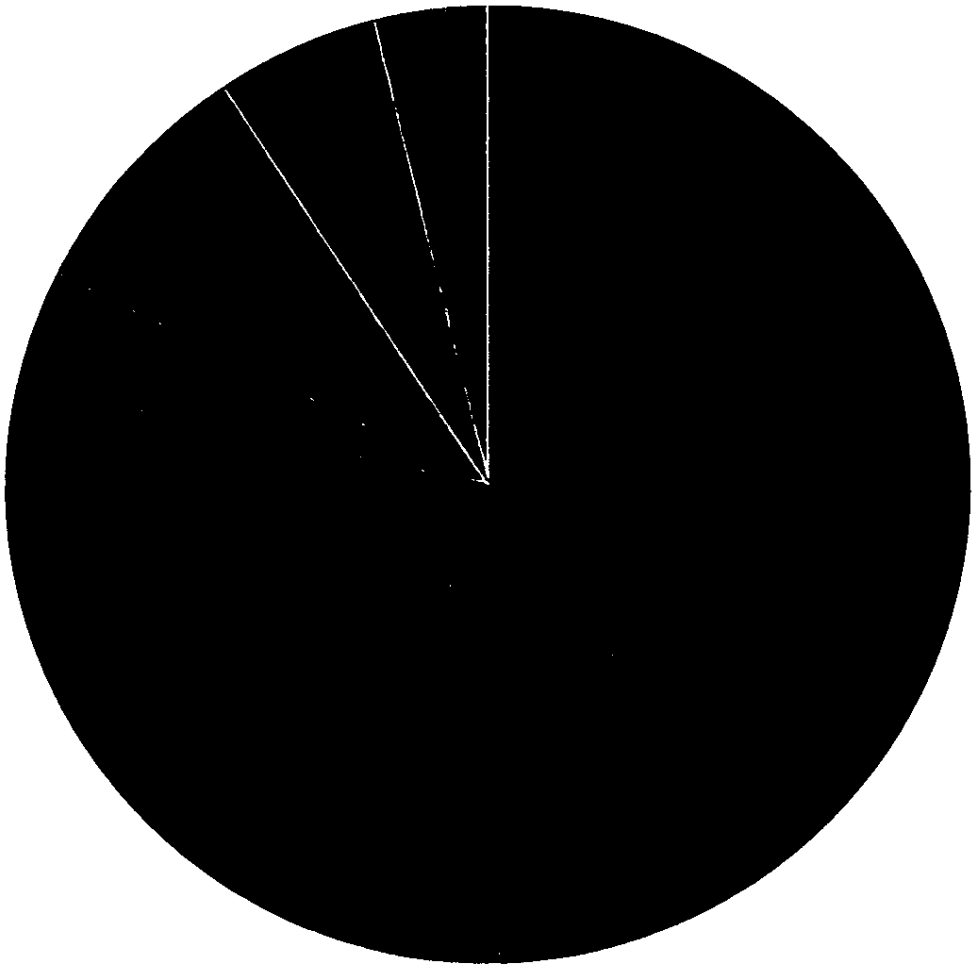
DNR FY10 Operating Budget By Priority Program



(in thousands)

- Natural Resource Development - $58,295.7 (40.1%)
- Natural Resource Information - $13,797.7 (9.5%)
- State Land Transfers & Access - $9,303.3 (6.4%)
- Wildland Fire Management - $32,522.8 (22.4%)
- Conservation & Protection - $5,644.2 (3.9%)
- State Parks Management - $12,209.0 (8.4%)
- Agricultural Industry Support - $7,897.2 (5.4%)
- Public Information & Recorder - $5,586.9 (3.8%)

Total FY10 Operating Budget - $145,256.8

Current Status

FY10 Budget

Adjusted Base $133 million

Management Plan $145 million

Difference: One-time items, multi-year operating appropriations and Mental Health Trust Land Office budget (zero-based)

Funding sources:

53% general fund

11% federal

36% other (CIP, interagency receipts, receipt-support services, SDPR, land disposal income fund, and others)

Positions

1,101 Permanent and Non-Permanent Budgeted Positions

Average vacancy 11.5% (130 positions)

RECENT HIGHLIGHTS

- Managed state land that generated more than 70% of the state's general fund revenue – about $5.7 billion in FY09
- First drilling activity at the Pt. Thomson field on the North Slope since 1983
- ExxonMobil joined TransCanada to progress the Alaska Pipeline Project (AGIA)
- Advanced large development projects throughout Alaska
- Acquired 8.3 million acres of new state land over the last four years
- Limited 93% of fires in Critical and Full state managed areas to 10 acres or less in the ninth largest fire season on record (518 fires on over 2.9 million acres)
- Secured and winterized abandoned oil and gas production facilities on state lease land, preserving the value of the facilities for eventual buyer
- Awarded contracts to replace 36 dilapidated outhouse facilities in state park facilities
- Competed for and received $10.7 million in ARRA funds (federal stimulus)

FY11 PRIORITIES INCLUDE:

Alaska Pipeline Project (AGIA)

Improved service delivery

Navigability reports to assert state ownership and management rights

Maintain facilities and equipment

Continually improve use of technology resources

DNR'S 10-YEAR PLAN

Gasline – DNR Costs

DNR's budget for the Alaska Pipeline Project (AGIA) will peak in FY11 and FY12, as project approaches construction phase

DNR Core Services – General Fund increases, FY11-FY20

✓Promote increasing development of state oil and gas resources

✓Increase staffing and technology resources to provide reasonable levels of service to industry, the public and other agencies

✓ Address $150 million in deferred maintenance, facility replacement, and equipment replacement and upgrades

Chart 2

(excluding gasline)

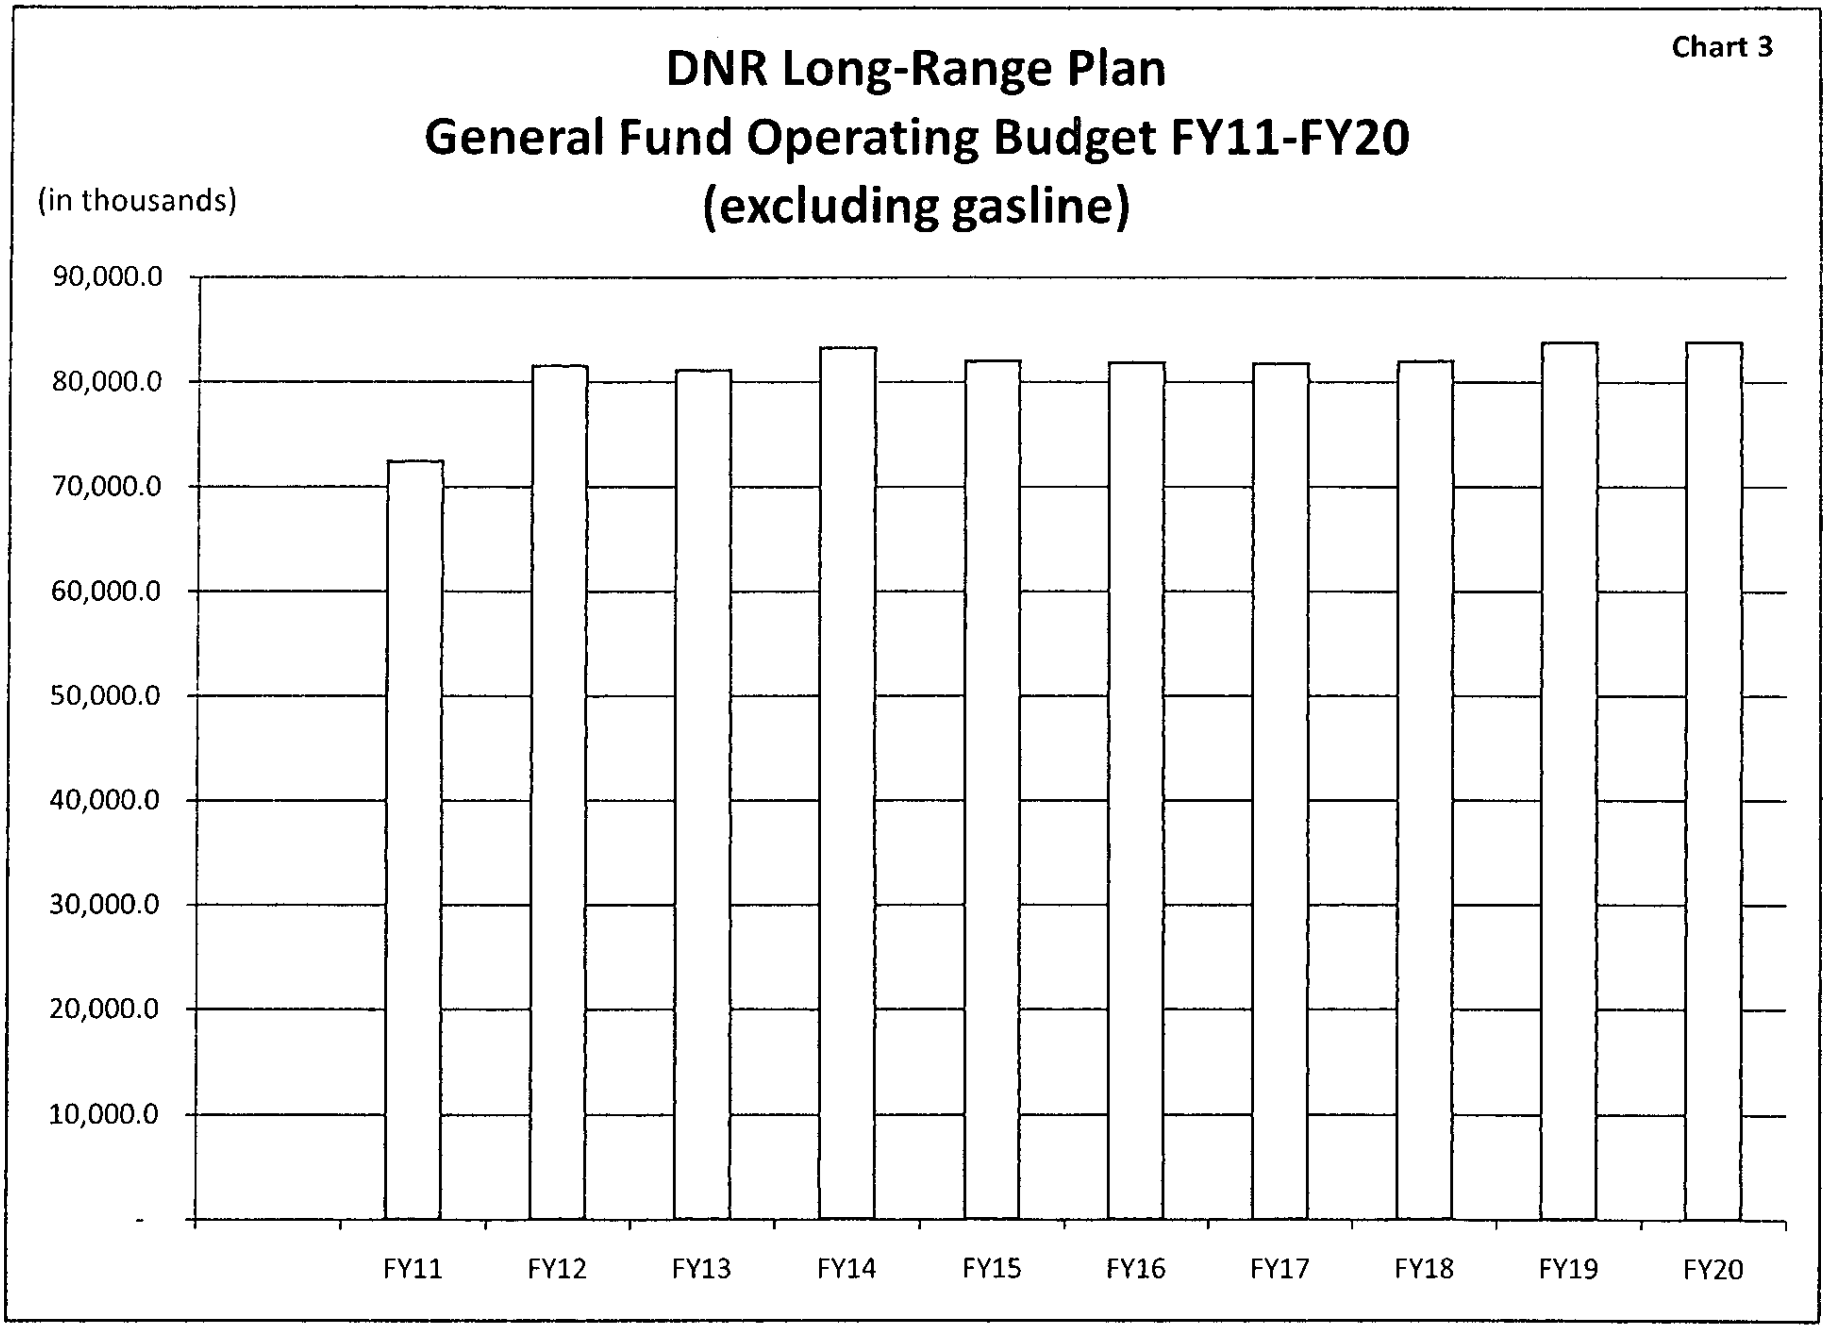

Chart 4

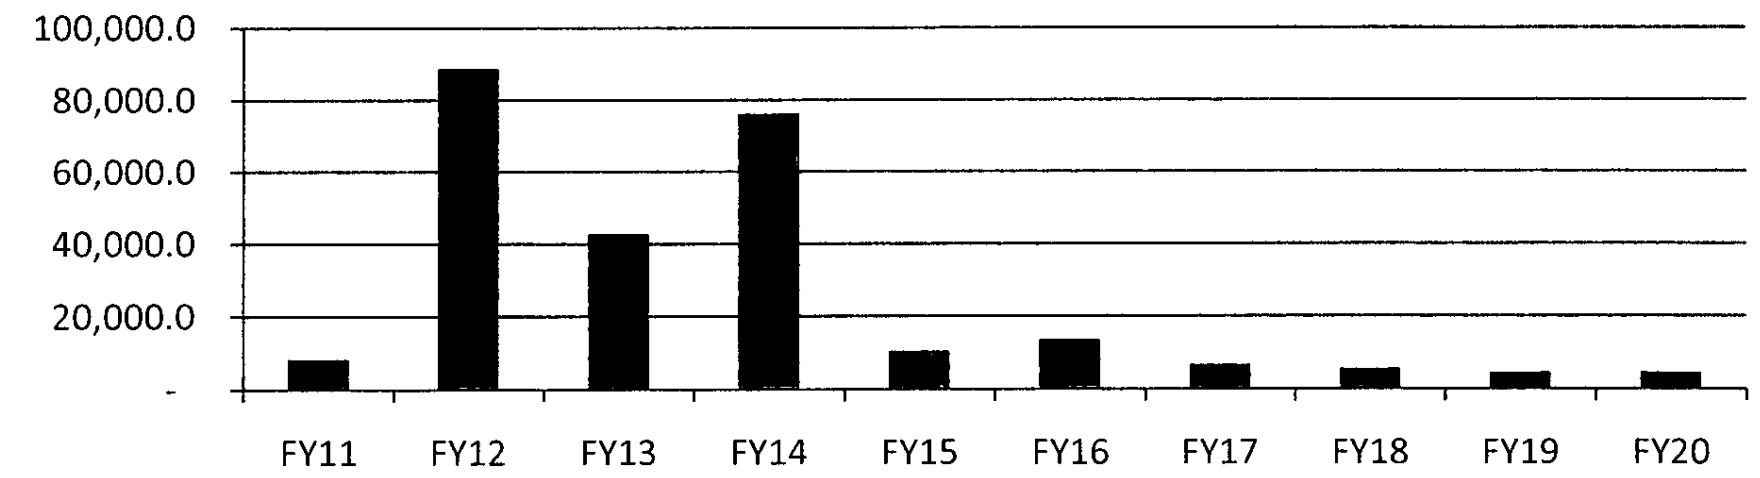
DNR Long-Range Plan
General Fund Capital Projects FY11-FY20
(excludes gasline)



*** Sec. 19. GAS PIPELINE DEVELOPMENT.** The following amounts are appropriated to the named department and components from receipts of the Alaska Housing Capital Corporation created under AS 18.56.086 in the amounts stated for work associated with development of a natural gas pipeline for the fiscal year ending June 30, 2011:

DEPARTMENT AND COMPONENT	APPROPRIATION AMOUNT
(1) Administration	
Alaska Oil and Gas Conservation Commission	1,150,900
(2) Law	
Oil, gas, and mining	2,500,000
(3) Natural Resources	
Gas pipeline implementation	4,217,500
(4) Revenue	
Tax Division	1,100,000
Natural gas commercialization	1,550,000

Legislative Fiscal Analyst Comment: *In FY09, the legislature consolidated oil and gas development funding requests in the Office of the Governor, with direction to distribute the one-time funding of $7.3 million GF to the Departments of Labor and Workforce Development, Natural Resources, Law, and Revenue as needed for work associated with the Natural Gas Pipeline. Consolidation was intended to increase flexibility while easing the process of tracking statewide gasline appropriations. Although the Governor's Office distributed money at the beginning of the fiscal year (rather than on an as-needed basis as the legislature intended), the wisdom of a consolidated appropriation was demonstrated when the Department of Law transferred $550.0 to the Department of Revenue.*

Legislative Fiscal Analyst Recommendation: *Consolidate gasline appropriations (including those in section 16(f)). Make a single appropriation to the Office of the Governor, with direction to distribute the money to the Departments/allocations and for the purposes listed. Include the estimated allocations to various Departments as information.*

*** Sec. 20. FEDERAL AND OTHER PROGRAM RECEIPTS.** (a) Federal receipts, designated program receipts as defined in AS 37.05.146(b)(3), information services fund program receipts as described in AS 44.21.045(b), Exxon Valdez oil spill trust receipts described in AS 37.05.146(b)(4), receipts of the Alaska Housing Finance Corporation, receipts of the Alaska marine highway system fund described in AS 19.65.060(a), receipts of the University of Alaska as described in AS 37.05.146(b)(2), and receipts of the Alaska Fire Standards Council described in AS 37.05.146(b)(5) that are received during the fiscal year ending June 30, 2011, and that exceed the amounts appropriated by this Act, are appropriated conditioned on compliance with the program review provisions of AS 37.07.080(h).

(b) If federal or other program receipts as defined in AS 37.05.146 and in AS 44.21.045(b) that are received during the fiscal year ending June 30, 2011, exceed the amounts

Contract for Budget Support Services

Department of Health and Social Services

Introduction to the Department

The Department of Health and Social Services (DHSS) was originally established in 1919 as the Alaska Territorial Health Department. With the formal proclamation of statehood on January 3, 1959, the department's responsibilities were expanded to include the protection and promotion of public health and welfare. These core duties are reflected in the mission of the department – to promote and protect the health and well-being of Alaskans – and are outlined in Article 7, Sections 4 and 5 of the Constitution of the State of Alaska.

Mission

To promote and protect the health and well-being of all for a strong Alaska.

Core Services

- Provide elderly pioneers and veterans quality assisted living in a safe home environment.
- Provide an integrated behavioral health system.
- Promote safer children, stronger families.
- Manage health care coverage for Alaskans in need.
- Address juvenile crime by promoting accountability, public safety and skill development.
- Provide self-sufficiency and basic living expenses to Alaskans in need.
- Protect and promote the health of Alaskans.
- Promote independence of Alaska Seniors and people with physical and developmental disabilities.
- Provide quality administrative services in support of the department's mission.

Core Values

The Department of Health and Social Services has five adopted core values as guiding principles in the delivery of services:

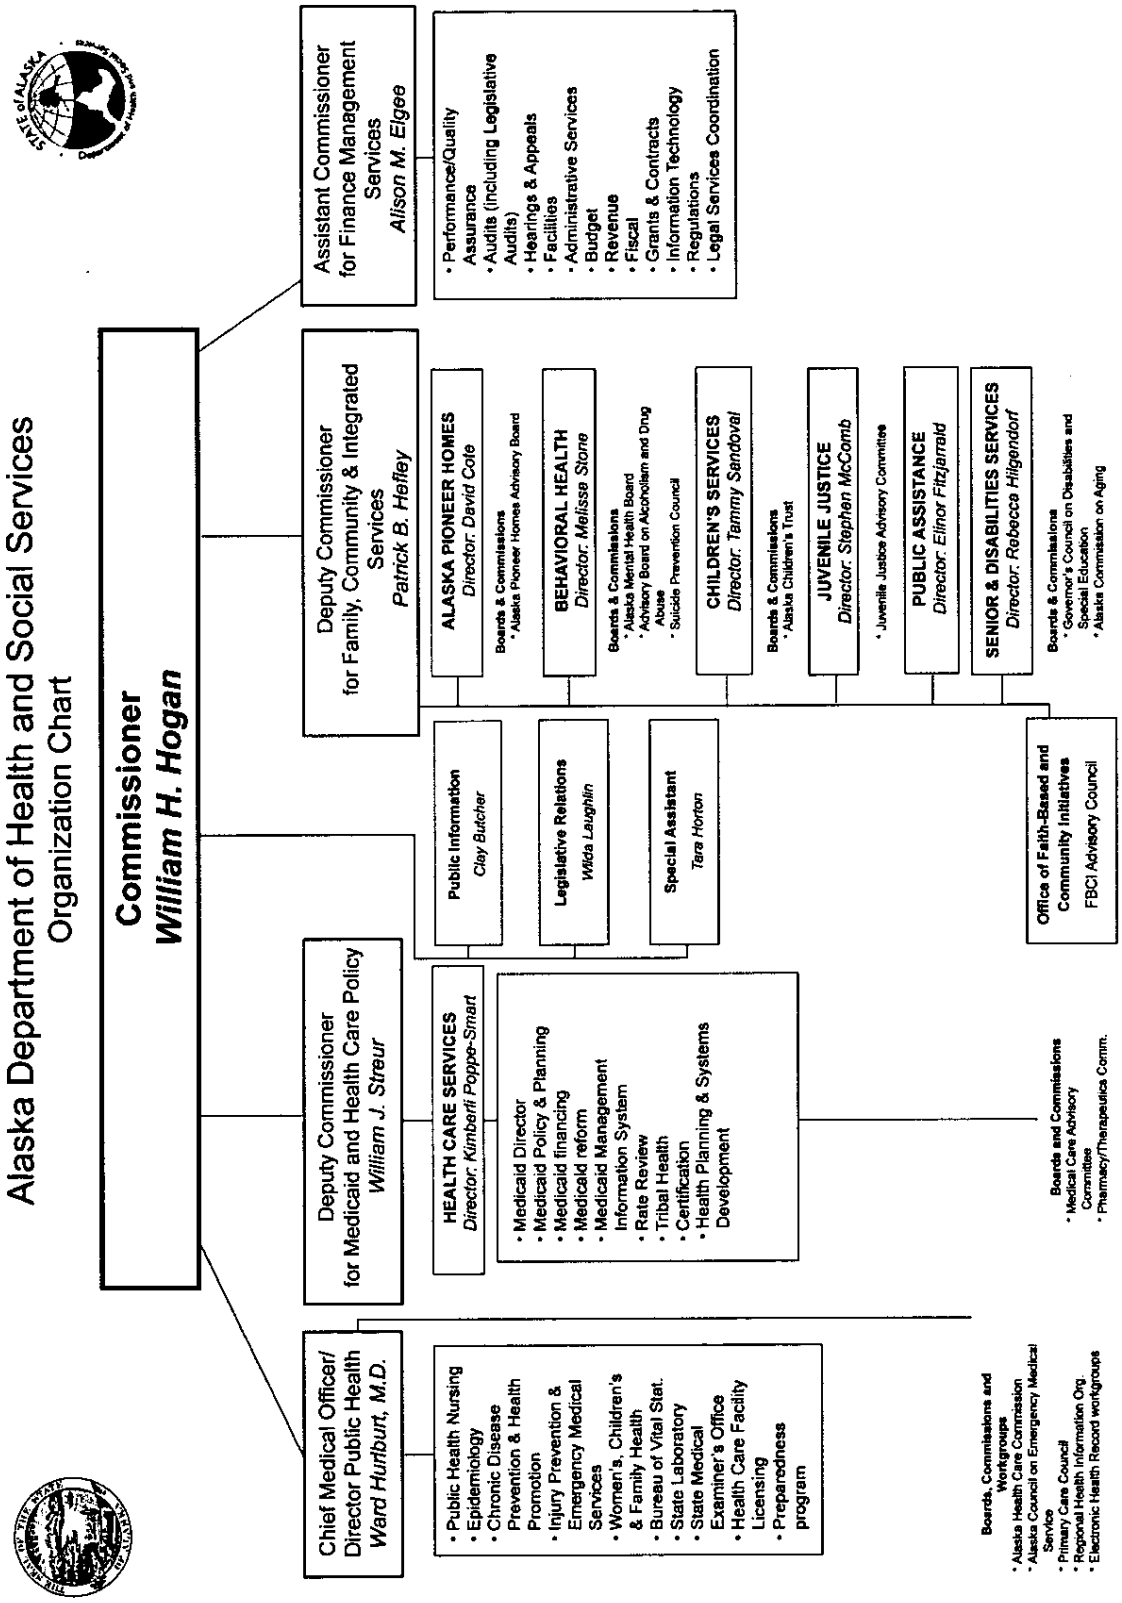
- Collaboration
- Accountability
- Respect
- Empowerment
- Safety

Department Priorities

Vulnerable Populations:	Increase the percentage of at risk individuals who are able to live safely in their homes in Alaska.
Substance Abuse:	Decrease the negative impacts of alcohol and substance abuse in Alaska.
Long-Term Care:	Increase the percentage of adults 65 and older living independently in Alaska.
Health and Wellness:	Improve the health status of Alaskans.
Health Care Reform:	Improve access to quality health care in Alaska.

Executive Management Organization

There have been minimal organization changes during FY10 and/or proposed for FY11.



Alaska Department of Health and Social Services

2010 PRIORITIES

The overriding theme for future direction for the Alaska Department of Health and Social Services is ***helping individuals and families create safe, healthy and productive communities.***

Substance Abuse

Substance abuse affects every family and community in Alaska. It is a contributing factor in suicides, crime, unemployment, domestic violence, child abuse, school dropouts, juvenile delinquency, etc. We need to prevent, intervene early, treat and help people recover from substance abuse through public/ private partnerships and long-term strategies.

Major strategies include:

- **Prevention:** Implement Prevention of Underage Drinking Initiative; target substance abuse and suicide prevention programs to those communities most in need.
- **Early Intervention:** Integrate primary care with behavioral health (mental health and substance abuse); screen all youth in the juvenile justice system for substance abuse.
- **Treatment:** Develop and implement family-based treatment services (based on the California SHIELDS for FAMILIES project); submit substance abuse Medicaid Waiver targeting adults; implement involuntary treatment and secure detoxification services.
- **Recovery:** Support array of recovery services using performance-based standards and funding. Continue to integrate mental health and substance abuse services into a behavioral health system.

Health and Wellness

Many Alaskans lead less happy and less productive lives, and many die prematurely each year, because of disability and death caused by tobacco, alcohol abuse, injuries, obesity, diabetes, cancer, heart disease, and sexually transmitted diseases. The economic impact of chronic disease alone in Alaska is staggering: an estimated $600 million is spent annually on direct medical services and $1.9 billion in lost productivity. Most of this is attributable to personal choice involving diet, physical activity and tobacco use — and is preventable. We can do a better job of screening, diagnosing and treating these conditions.

Major strategies include:

- **Prevention:** Implement evidence-based, population-based health promotion efforts. Increase primary prevention approaches, including those targeting increased self responsibility, improved policies and environmental supports that encourages healthy choices. Educate about and improve methods for screening, diagnosis, and early treatment of conditions and behaviors most detrimental to the physical and mental health of Alaskans. Implement Early Childhood Comprehensive System recommendations (including a focus on early childhood mental health).
- **Access:** Grow the health care workforce and expand the number of Alaskans with health insurance.
- **Trauma system:** Develop a statewide trauma system.
- **Emergency Response Planning and Preparedness:** Work with communities to prevent health emergencies and prepare for pandemics and natural disasters.
- **Environmental Health Impacts:** Assess, guide and mitigate environmental impacts on health in Alaska. Develop expertise in performing health impact assessments.

Health Care Reform

Alaska's health care system continues to be fragmented and uncoordinated and doesn't produce the kinds of outcomes we expect. By strategically focusing on care management, reforming Medicaid, creating a Health Care Commission and growing our health care workforce, we can transform our health care system.

Major strategies include:

- **Care Management**: Improve care coordination; implement disease management program for chronic diseases and explore use of primary care case management strategy for most disabled populations; complete planning for the Bring the Kids Home Initiative.
- **Medicaid Reform:** Develop legislative and systemic recommendations for reforming Medicaid aimed at improving Medicaid sustainability.
- **Health Care Commission:** Establish commission in statute and implement recommendations found in the Commission's report to the Governor and Legislature on January 15, 2010.
- **Health Care Workforce:** Partner with the federal government and other states to increase training capacity and expand training programs for health care professions.

Continued ...

2045

Alaska Department of Health and Social Services

2010 PRIORITIES

Long-Term Care

Seniors represent the fastest growing population in Alaska and it is our responsibility to determine what kinds of services we want for our aging parents (and grandparents) in order to keep them at home in their own communities. We need to develop a long-term care plan, improve services to those with Alzheimer's Disease and related disorders, and promote the expansion of aging and disability resource centers.

Major strategies include:

- **Long-Term Care Plan:** Develop an immediate and sustainable long-term care plan. DHSS has contracted with HCBS Strategies to develop this plan, which includes:
  - support for family caregivers;
  - improved service arrays and definitions of future roles of residential settings, e.g., the Pioneer Homes and nursing homes;
  - development of the workforce to meet long-term care needs; and
  - interdisciplinary departmental planning to provide quality assurance, provider training, audit and compliance coordination.
- **Long-Term Care and Services for Alaska Natives:** Work with the Alaska Native Tribal Health Consortium to identify and implement long-term care services.
- **Alzheimer Disease and Related Disorders Waiver:** Submit Waiver.
- **Aging and Disability Resource Centers:** Promote expansion of these centers.

Vulnerable Alaskans

We need to ensure that both kids and communities are safe, that developmentally disabled kids and adults have access to quality services and supports, and that individuals and families get the kind of financial and vocational supports they need to be contributing members of society. By focusing on family-centered services and through the use of performance-based standards and funding, we can better meet the needs of our most vulnerable citizens and their families.

Major strategies include:

- **Families First Initiative:** Expand this project, which is designed to help families leave the public assistance rolls and find employment.
- **Performance-Based Standards:** Implement use of performance-based standards and funding for grantees.
- **Licensing, Certification and Training Standards:** Ensure providers comply with these standards.
- **Social Service Workforce:** Recruit and retain a qualified social services workforce using evidence-based practices to design and implement a department-wide approach.

Alaska Department of Health and Social Services

STRATEGIC PLAN • EFFECTIVE FY10

Vision: *All individuals and families are healthy, safe & productive.*

Mission: *To promote and protect the health & well-being of all for a strong Alaska.*

Substance Abuse

GOAL Decrease the negative impacts of alcohol and drug use in Alaska.

OUTCOMES

1. Reduce incidence of Fetal Alcohol Spectrum Disorder (FASD).
2. Reduce substance abuse related accidents.
3. Reduce substance abuse related violence and crime.
4. Reduce substance abuse related suicides.

Health & Wellness

GOAL Improve the health status of Alaskans.

OUTCOMES

1. Reduce tobacco use in Alaska.
2. Reduce the rate of obesity in Alaska.
3. Improve the oral health of Alaskans.
4. Reduce unintended injuries in Alaska.
5. Expand preventative health interventions.

Health Care Reform

GOAL Improve access to quality health care in Alaska.

OUTCOMES

1. Expand Alaska's health care workforce.
2. Improve coordination and integration of behavioral health and primary care services.
3. Expand health care financing options.

Long Term Care

GOAL Increase the percentage of adults 65 and older living independently in Alaska.

OUTCOMES

1. Increase public awareness of long term care services.
2. Increase access to long term care services.
3. Expand "in home" support services and programs.

Vulnerable Populations

GOAL Increase the percentage of at-risk individuals who are able to live safely in their home in Alaska.

OUTCOMES

1. Reduce the percentage of children and adults removed from their homes as a result of abuse or neglect.
2. Reduce the percentage of youth who are incarcerated in juvenile detention facilities.
3. Reduce the number of youth with Severe Emotional Disturbance (SED) in in-state and out-of-state Residential Psychiatric Treatment Centers (RPTC).
4. Increase the number of individuals and families reaching self-sufficiency through employment.
5. Improve the provision of safety-net program services.

Values

- COLLABORATION
  we recognize collaboration is essential when seeking innovative cost effective services
- ACCOUNTABILITY
  we commit to programmatic and fiscal accountability
- RESPECT
  we respect and uphold the choice, dignity and confidentiality of all people
- EMPOWERMENT
  we believe in empowering citizens to make healthy choices
- SAFETY
  we promote the health and safety of all Alaskans

UPDATED December 2009

Department of Health and Social Services (DHSS) Ten Year Expenditure Projection

The mission of the Department of Health and Social Services is to promote and protect the health and well-being of all for a strong Alaska.

The department's priorities are:

- **Vulnerable Populations:** Increase the percentage of at risk individuals who are able to live safely in their homes in Alaska.
- **Substance Abuse:** Decrease the negative impacts of alcohol and substance abuse in Alaska.
- **Long-Term Care:** Increase the percentage of adults 65 and older living independently in Alaska.
- **Health and Wellness:** Improve the health status of Alaskans.
- **Health Care Reform:** Improve access to quality health care in Alaska.

Core services include:

- Provide elderly pioneers and veterans quality assisted living in a safe home environment.
- Provide an integrated behavioral health system.
- Promote safer children, stronger families.
- Manage health care coverage for Alaskans in need.
- Address juvenile crime by promoting accountability, public safety and skill development.
- Provide self-sufficiency and basic living expenses to Alaskans in need.
- Protect and promote the health of Alaskans.
- Promote independence of Alaska Seniors and people with physical and developmental disabilities.
- Provide quality administrative services in support of the department's mission.

The following document provides an estimate of budget change over the next ten years. Projecting budgets ten years into the future is challenging due to factors such as:

- 67% of department expenditures are for formula based programs for which demand rises and falls based on uncontrollable external factors.
- 53% of department revenues are derived from federal sources.
- Medicaid (56% of DHSS budget) may be significantly impacted by the U.S. national health care initiative and by changes in federal funding from the federal economic stimulus bill (ARRA).

As a result, the assumptions and numbers that make up the plan will continue to change as new information becomes available.

Following the ten year projection is a detailed listing of the various assumptions which were used to estimate future funding levels.

UNKNOWNS

- Impact of the U.S. national health care initiative
- Federal funds – e.g. duration of U.S. economic stimulus funding vs. return to long-term trends such as erosion in funding, cost shifting, unfunded mandates
- Tighter federal and state budgets
- Increasing scrutiny and accountability, especially for Medicaid
- Broad economic problems – e.g. financial markets, energy costs, mortgage defaults, medical inflation
- Environmental problems – e.g. climatic/demographic changes, aging infrastructure, infectious disease outbreak
- Paradigm shifts in program operations – e.g. fewer medical professionals, IT efficiencies, cross- dept working groups

ASSUMPTIONS

Baseline

OMB –

- Non-formula program costs reflect FY10 level of service
- When adjusting for inflation, use 2.75% or a broadly recognized source appropriate for that type of expense
- When adjusted for population, use AKDOL&WD's mid-case population scenario

DHSS –

- Medicaid service costs were estimated using the MESA forecasting model - adjusted for the American Reconstruction & Recovery Act
- Medicaid School Based Claims are reduced in FY12 to reflect projected collection levels
- Catastrophic and Chronic Illness costs are adjusted based on medical inflation projections from CMS
- Alaska Temporary Assistance costs are adjusted for inflation and growth in the population 20-34 years of age
- Adult Public Assistance costs are adjusted for inflation and growth in the population 65+ years of age
- All other formula and non-formula programs are inflation adjusted based on OMB's rate of 2.75%/year

Gasline Scenario

- No gas line alternative was prepared due to the difficulty in quantifying social impacts
- TAPS experience leads DHSS to expect an INCREASED need for department services due to higher alcohol and drug abuse, as well as in-migration of job seekers from other states impacting public assistance rolls

New Initiative Scenario

- Medicaid costs increase due to U.S. national health care initiatives, but are partially offset by cost savings resulting from implementation of a new health information exchange
- Capital & operating costs have been included for the following projects 1) AK Pioneer Homes - 100 Level 3 beds & 20 psychiatric beds; 2) Alaska Recovery Center; 3) Bethel Youth Facility expansion; 4) Health Information Technology

Department of Health and Social Services

Executive Summary

Introduction to the Department

The Department of Health and Social Services (DHSS) was originally established in 1919 as the Alaska Territorial Health Department. With the formal proclamation of statehood on January 3, 1959, the department's responsibilities were expanded to include the protection and promotion of public health and welfare. These core duties are reflected in the mission of the department – to promote and protect the health and well-being of Alaskans – and are outlined in Article 7, Sections 4 and 5 of the Constitution of the State of Alaska.

Mission

To promote and protect the health and well-being of all for a strong Alaska.

Core Services

- Provide elderly pioneers and veterans quality assisted living in a safe home environment.
- Provide an integrated behavioral health system.
- Promote safer children, stronger families.
- Manage health care coverage for Alaskans in need.
- Address juvenile crime by promoting accountability, public safety and skill development.
- Provide self-sufficiency and basic living expenses to Alaskans in need.
- Protect and promote the health of Alaskans.
- Promote independence of Alaska Seniors and people with physical and developmental disabilities.
- Provide quality administrative services in support of the department's mission.

Core Values

The Department of Health and Social Services has five adopted core values as guiding principles in the delivery of services:

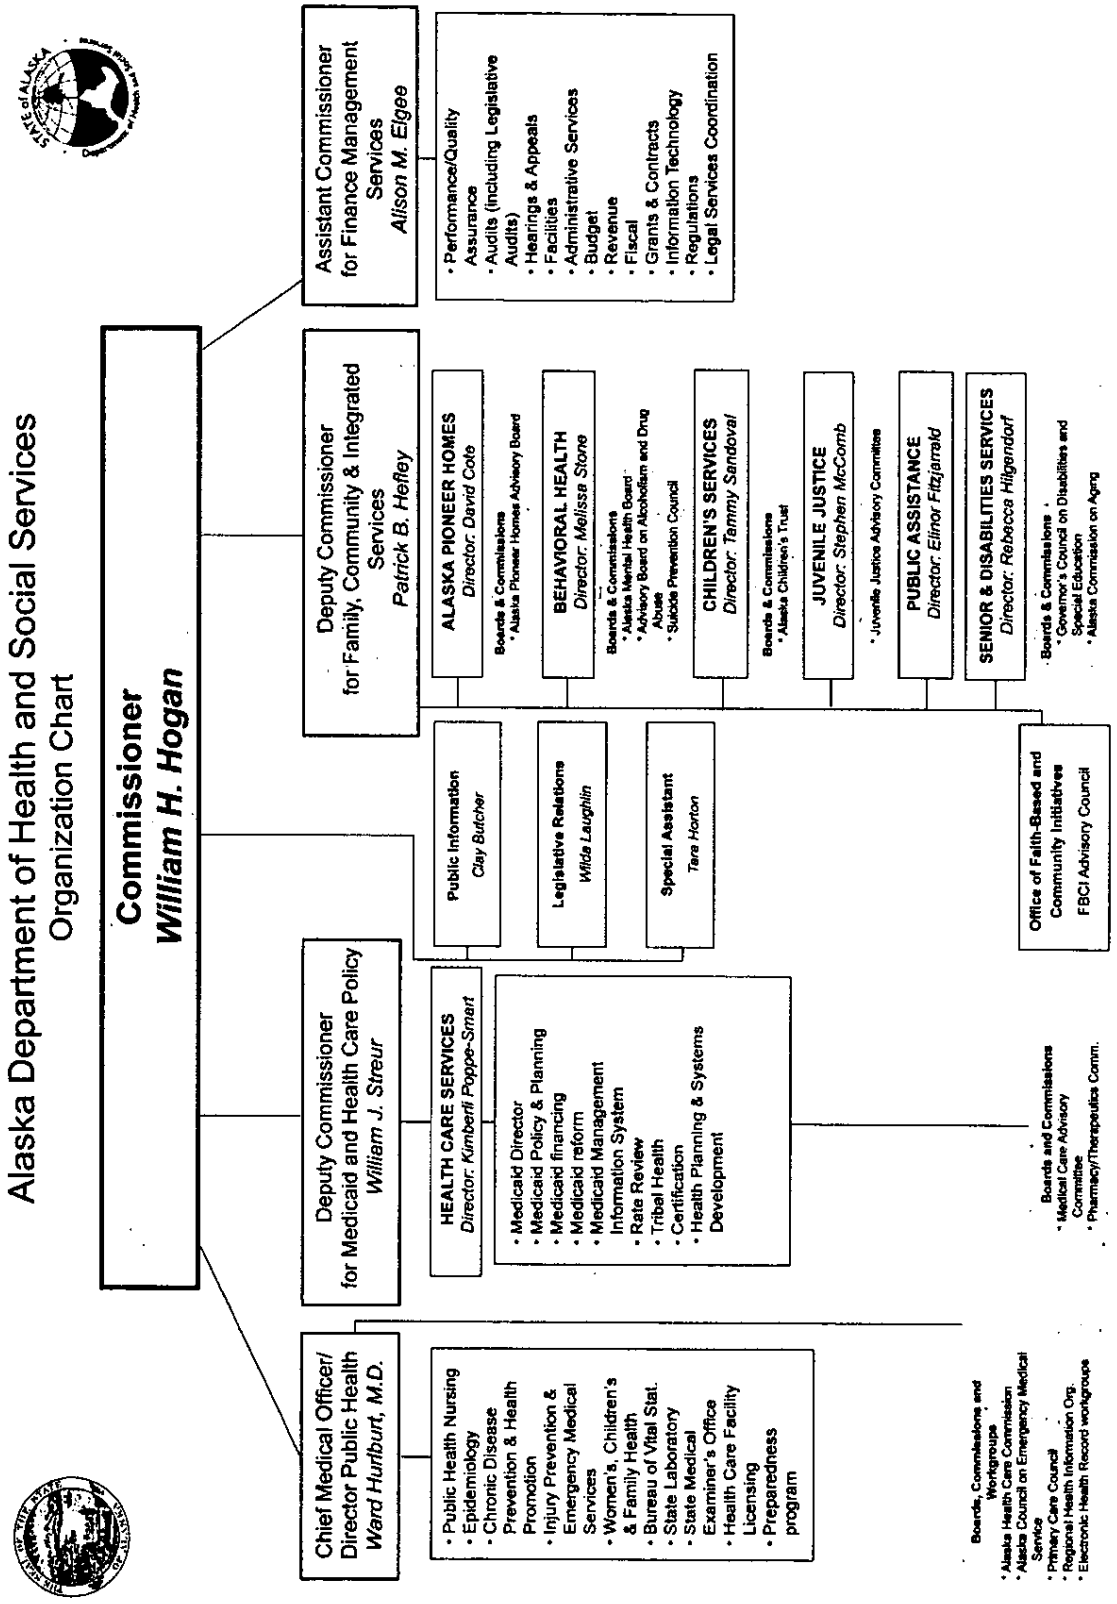
- Collaboration
- Accountability
- Respect
- Empowerment
- Safety

Department Priorities

Vulnerable Populations:	Increase the percentage of at risk individuals who are able to live safely in their homes in Alaska.
Substance Abuse:	Decrease the negative impacts of alcohol and substance abuse in Alaska.
Long-Term Care:	Increase the percentage of adults 65 and older living independently in Alaska.
Health and Wellness:	Improve the health status of Alaskans.
Health Care Reform:	Improve access to quality health care in Alaska.

Executive Management Organization

There have been minimal organization changes during FY10 and/or proposed for FY11.



Major Accomplishments in 2009

VULNERABLE POPULATIONS

- The Office of Children's Services (OCS) continued work toward a statewide Family-to-Family (F2F) program. F2F has been very successful in Anchorage in working toward change in the child welfare system through support and resources provided to families, building community partnership, and team decision making that includes not just foster parents and caseworkers but families and community members. The Anne E. Casey Foundation reports that in Alaska, 70% of the children who receive team decision making services are able to stay in their own homes or in a relative's home rather than a foster home. Over the course of the next few years, OCS plans to expand F2F services statewide with expansion to Fairbanks already started.
- A significant accomplishment in Juvenile Justice (DJJ) in 2009 was the development and implementation of a new version of JOMIS, the juvenile offender management information system.
- Rapid development and implementation of the new Alaska Heating Assistance Program (AKHAP) that serves households with incomes between 150% and 225% of the federal poverty guidelines for Alaska.
- The Bring the Kids Home initiative continues to be successful in reducing the number of distinct out-of-state residential psychiatric treatment center (RPTC) recipients served and increasing the number of distinct RPTC recipients who received services in state. Preliminary data indicates that from FY08 to FY09, there was a decrease of about 33.5% in the number of distinct out-of-state RPTC recipients served and an increase of about 2.4% in the number of distinct RPTC recipients who received services in state. Access to in-state non-residential services at lower levels of care has increased significantly.
- During FY09, the Division of Senior and Disabilities Services provided home and community-based services to 7,923 individuals and their families. By providing these services in the community setting, the division was able to delay the entry of these individuals into institutions, thereby reducing costs to the state.
- Worked with AMHTA to plan and implement strategies for the five focus areas (Bring the Kids Home, Housing, Justice, Trust Beneficiary Projects, and Workforce Development).

SUBSTANCE ABUSE

- In 2008, Behavior Health introduced the use of performance based funding. Performance measures hold providers in the state behavioral health system accountable. Further, it is an objective process to determine funding levels for grantees that will reflect an assessment of program and agency performance, utilization, client and community outcomes. Performance was a consideration in grant awards for FY10.

LONG-TERM CARE

- Served 577 Alaska Seniors and Veterans in the Pioneers Homes.
- In FY09 Senior and Disabilities Services (SDS) provided services to approximately 7,600 Medicaid beneficiaries at an average annual cost per person that approached $41,800. Almost 55% of the benefit payments were for disabled adults, about 41% for the elderly, and 4% were disabled children.
- Also, SDS served more than 17,193 seniors (age 60+) through Senior and Disabilities Services programs including direct service grants (17,472), general relief (577), Personal Care Attendant Services (3,552) and Medicaid programs (4,371).

HEALTH AND WELLNESS

- In FY09, the Adult Preventative Dentistry Program was reactivated and 7,336 individual recipients over the age of 21 received services.

HEALTH CARE REFORM

- Work continues with tribal health organizations to improve tribal opportunities to maximize Medicaid revenue, reimbursed at 100% by the federal government.

Key Department Challenges

The Department of Health and Social Services continues to make progress on the following overall strategies:

- Work toward more integration of services;
- Maximize resources for effective service delivery;
- Promote rural infrastructure development and standardization of regional structure;
- Promote accountability at all levels of the organization; and
- Use technology in strategic ways to accomplish the department's goals.

Some of the challenges facing priority programs are listed below. Some challenges facing the department affect more than one priority program.

VULNERABLE POPULATIONS

- Development of in-state residential and community-based treatment options for children and youth with an emphasis on minimizing the number and duration of out-of-state placements through the Bring the Kids Home project. Challenges include revision of the system of care while continuing to provide services.
- Improvements to child abuse prevention and protection efforts, particularly with Alaska Native partner agencies.
- Continued challenge in providing needed level of staffing to meet rapidly changing number of Alaskans needing assistance or asking about assistance programs, due to the economic environment.
- Continued fine-tuning of statutory and regulatory requirements relating to employment of persons with criminal histories.
- Identification and resolution of issues relating to the recruitment and retention of qualified employees to allow the department to fulfill its ongoing mission in a time of national and state workforce shortages.

SUBSTANCE ABUSE

- Working toward the appropriate capacity levels, especially for secure detoxification.
- Continued fine-tuning of statutory and regulatory requirements relating to employment of persons with criminal histories.
- Identification and resolution of issues relating to the recruitment and retention of qualified employees to allow the department to fulfill its ongoing mission in a time of national and state workforce shortages.

LONG-TERM CARE

- Hiring and training staff to complete initial and annual Medicaid Waiver and Personal Care Attendants (PCA) assessments and service plans in order to avoid another backlog, remain in compliance with federal requirements, and complete goals identified in the Corrective Action Plan.
- Continued fine-tuning of statutory and regulatory requirements relating to employment of persons with criminal histories.
- Identification and resolution of issues relating to the recruitment and retention of qualified employees to allow the department to fulfill its ongoing mission in a time of national and state workforce shortages.

HEALTH AND WELLNESS

- Preparation and planning with federal, state, and community partners for a potential influenza pandemic.
- Promotion of services that focus on enhancing health and well-being and preventing illness through development of a comprehensive state policy that includes reduction of alcohol and substance abuse.

HEALTH CARE REFORM

Our efforts in this area will depend largely on the results of health care legislation at the national level. However, the department will face the following challenges regardless of those results:

- Development and implementation of a department-wide Quality Management Program incorporating the elements of Program Integrity (fraud detection and audit, with particular emphasis on the Payment Error Rate Measurement project), Quality Assurance (internal controls), and Quality Enhancement (corrective action).
- Identification and implementation of potential solutions to the lack of access to affordable quality health care for Alaskans.
- Identification and implementation of appropriate increases to reimbursement rates for health and social service providers based on results and verifiable costs of service provision.

Medicaid challenges include:

- Development of the Medicaid Management Information System to more effectively use new technology to manage health care in Alaska.
- Development of new comprehensive Medicaid regulations which clarify coverage and payment rules for the program and provide for greater accountability for both the department and health care providers.
- Accurately projecting Medicaid expenses in an environment of rapidly increasing costs and economic uncertainty.

Position Information

The department has over 3,600 positions budgeted under the following three types of work:

Direct Field Workers

113	Public Health Nurses
290	Social Workers & Children's Service Specialists
313	Eligibility Determination Staff
289	Youth Detention/Treatment Workers
90	Juvenile Probation Officers
256	API Staff
652	Pioneer Homes Staff
2,003	**TOTAL**

Program Support Services

115	Behavioral Health Programs
150	Senior and Disability Programs
413	Public Health Programs
210	Children's Services
123	Juvenile Programs
10	Facilities Management
372	Benefit Payments/Systems
1,393	**TOTAL**

Administrative/Management Support

130	Information Technology
141	All Other Centralized Admin/Mgmt
271	**TOTAL**

3,667 FY11 GRAND TOTAL

The DHSS FY11 Governor's Request includes 3,667 positions. The details of their budgeted status and geographical location are as follows in the chart below. Select types of employees (i.e. public health nurses, social workers) may be budgeted in one location but provide continual itinerant services to numerous surrounding smaller rural communities.

FY11 Position Summary by Location

Explanation of FY11 Operating Budget Requests

The Department of Health and Social Services faced tremendous challenges in the last few years to provide a balance between reducing the reliance on state general funds and providing services to vulnerable populations.

Proposed Budget for FY11 Compared to FY10

	FY10 Management Plan	FY11 Governor's Request
General Fund	**$ 832.5 million**	**$ 882.8 million**
Federal Funds	**1,081.5 million**	**1,109.8 million**
Other Funds	**160.8 million**	**154.8 million**
Total	**$ 2,074.8 million**	**$ 2,147.3 million**
Increased Federal Revenue		**28.3 million**
Increased General Fund		**50.3 million**

The proposed budget for FY11 increases general funds by $50,250.9. Significant changes in GF are due to: Medicaid program growth of approximately $36,400.0, increased resources addressing the department's priorities of Vulnerable Alaskans $7,100.0, Substance Abuse $2,800.0, Long-Term Care $800.0, Health & Wellness $1,900.0, and Health Care Reform $500.0.

To assist in understanding the DHSS budget, we have highlighted budget items addressing the five department initiatives. A complete list of budget items for each division is found in its section of the overview.

Vulnerable Alaskans

The state needs to ensure that both children and communities are safe, that developmentally disabled children and adults have access to quality services and supports, and that individuals and families get the kind of financial and vocational supports they need to be contributing members of society. By focusing on family-centered services and through the use of performance-based standards and funding, Alaska can better meet the needs of the most vulnerable citizens and their families.

The following table compares FY10 Management Plan program capacity for Vulnerable Alaskans to that requested for FY11:

	FY10 Management Plan	FY11 Governor's Request	FY11 Governor less FY10 Management Plan
General Fund	$ 403,710.5	$ 416,980.6	$ 13,270.1
Federal Funds	313,875.8	312,573.6	(1,302.2)
Other Funds	73,779.3	74,942.3	1,163.0
Total	**$ 791,365.6**	**$ 804,496.5**	**$ 13,130.9**

Budget requests include:

- Phase 1 of State Medical Examiner's Office reforms - $300.0 GF
- Restoring funding to meet Senior Benefits enrollment and payment projections - $850.0 GF
- Increasing Adult Public Assistance funding due to anticipated enrollment growth - $150.0 GF
- Psychiatric Residency Training at API - $300.0 GF
- Designated Evaluation and Treatment program expansion - $300.0 MHTAAR
- Bring the Kids Home expansion including individualized services, foster parent and parent recruitment training and support, transitional aged youth, expansion of school-based services capacity via grants, and community behavioral health centers outpatient and emergency residential services and training- $1,250.0 GF/MH
- Decreasing unrealizable federal funds (Children's Services Management, Delinquency Prevention) – ($1,250.0) federal
- Replacing unrealizable federal funds with general funds (Front Line Social Workers, Medicaid School Based Admin Claims) - $1,600.0 GF, (1,600.0) federal
- Replacing unrealizable interagency receipts for Medicaid School Based Claims (Children's Services Management, Front Line Social Workers) - $1,120.3 GF, ($1,120.3) Interagency Receipts

Substance Abuse

Substance abuse affects every family and community in Alaska. It is a contributing factor in suicides, crime, unemployment, domestic violence, child abuse, school dropouts, juvenile delinquency, etc. The state needs to prevent, intervene early, and treat and help people recover from substance abuse through public/private partnerships and long-term strategies.

The following table compares FY10 Management Plan program capacity for Substance Abuse to that requested for FY11:

	FY10 Management Plan	FY11 Governor's Request	FY11 Governor less FY10 Management Plan
General Fund	$ 19,909.3	$ 22,732.6	$ 2,823.3
Federal Funds	9,955.3	9,731.8	(223.5)
Other Funds	20,298.1	19,903.2	(394.9)
Total	**$ 50,162.7**	**$ 52,367.6**	**$ 2,204.9**

Budget requests include:

- Specialized Treatment Unit at Clitheroe - $1,200.0 GF
- Detox and treatment capacity as alternatives to protective custody holds - $518.3
- Increased access to Fetal Alcohol Spectrum Disorders (FASD) treatment services in rural Alaska - $228.6 GF/MH
- Increased substance abuse treatment services for pregnant women - $500.0 GF/MH

- Disability justice focus group recommendations including pre-development for sleep off alternatives in targeted communities, Alcohol Safety Action Program (ASAP) therapeutic case management and monitoring treatment, and maintaining treatment capacity for therapeutic court participants with co-occurring disorders - $75.0 GF/MH, 238.0 MHTAAR

Long-Term Care

Seniors represent the fastest growing population in Alaska and it is Alaska's responsibility to determine what kinds of services are wanted for aging parents (and grandparents) to keep them at home in their own communities. The state needs to develop a comprehensive long-term care plan, improve services to those with Alzheimer's disease and related disorders, and promote the expansion of aging and disability resource centers.

The following table compares FY10 Management Plan program capacity for Long-Term Care to that requested for FY11:

	FY10 Management Plan	FY11 Governor's Request	FY11 Governor less FY10 Management Plan
General Fund	$ 170,785.2	$ 184,768.3	$ 13,983.1
Federal Funds	230,990.7	244,587.2	13,596.5
Other Funds	31,526.7	31,439.0	(87.7)
Total	**$ 433,302.6**	**$ 460,794.5**	**$ 27,491.9**

Budget requests include:

- Increased funds for home and community based waiver compliance (split between Long-Term Care and Vulnerable Alaskans) - $500.0 GF Match, $500.0 federal
- Increased capacity for Health Facilities Survey (split between Long-Term Care and Health and Wellness) - $75.0 GF Match, $112.5 federal
- Funds to maintain, improve and design new financial and payment rate systems (split between Long-Term Care and Health and Wellness) - $187.5 GF Match, $187.5 federal
- Funds for traumatic brain injury service coordination (split between Long-Term Care and Vulnerable Alaskans) - $200.0 GF/MH, $150.0 MHTAAR

Health and Wellness

Many Alaskans lead less happy and less productive lives, and many die prematurely each year, because of disability and death caused by tobacco, alcohol abuse, injuries, obesity, diabetes, cancer, heart disease, and sexually transmitted diseases. The economic impact of chronic disease alone in Alaska is staggering: an estimated $600 million is spent annually on direct medical services and $1.9 billion in lost productivity. Most of this is attributable to personal choice involving diet, physical activity and tobacco use - and is preventable. The state and service providers can do a better job of screening, diagnosing and treating these conditions.

The following table compares FY10 Management Plan program capacity for Health and Wellness to that requested for FY11:

	FY10 Management Plan	FY11 Governor's Request	FY11 Governor less FY10 Management Plan
General Fund	$ 234,115.2	$ 253,794.9	$ 19,679.7
Federal Funds	522,589.4	540,313.0	17,723.6
Other Funds	34,523.1	27,823.5	(6,699.6)
Total	**$ 791,227.7**	**$ 821,931.4**	**$ 30,703.7**

Budget requests include:

- Maintaining local control of essential public health services by stabilizing funding to public health nursing grantees - $1,000.0 GF
- Increased receipts for the electronic health record system and the Medicaid management information system projects - $1,257.7 CIP Receipts
- Funds to stabilize the Health Facilities Survey budget (split between Long-Term Care and Health and Wellness) - $260.0 GF

Health Care Reform

Alaska's health care system continues to be fragmented and uncoordinated and doesn't produce expected outcomes. By strategically focusing on care management, reforming Medicaid, creating a Health Care Commission and growing the health care workforce, Alaska's health care system can be transformed.

The following table compares FY10 Management Plan program capacity for Health Care Reform to that requested for FY11:

	FY10 Management Plan	FY11 Governor's Request	FY11 Governor less FY10 Management Plan
General Fund	$ 3,392.8	$ 3,887.5	$ 494.7
Federal Funds	4,071.5	2,588.8	(1,482.7)
Other Funds	657.4	652.2	(5.2)
Total	**$ 8,121.7**	**$ 7,128.5**	**$ (993.2)**

Budget related requests include:

- Continuation funding for the comprehensive integrated mental health plan and the loan repayment program - $317.0 MHTAAR
- Decreased federal receipt authority from expired federal grants - ($1,000.0) federal
- Replacing unrealizable federal receipts for core services - $475.1 GF, ($475.1) federal

Expenditure Category Comparisons

For purposes of historical comparisons we have broken out expenditures into five categories of funding:

Formula Programs
This category includes all programs with specific eligibility standards which guarantee a specific level of benefits for any qualified recipient.

Grants
This category includes the components with major grants to other organizations or major contracts for service delivery, such as Residential Child Care, Energy Assistance Program, Community Health Grants, and various treatment programs.

Program Services
This category includes both administration and delivery of direct services, such as public health nursing and social services, and the program management of entitlements and grants.

Administration
This category includes departmental administrative oversight and support programs, including the Commissioner's Office, and Administrative Services.

Facilities
The department manages and operates 24-hour facilities and institutions. These include youth correctional facilities, the Alaska Psychiatric Institute, and Pioneer Homes.

Budget Charts and Graphs

Medicaid is the largest formula program in the department, totaling about 84% of the total formula program category in the proposed FY11 budget.

Formula programs in the Department of Health and Social Services are:

- Behavioral Health Medicaid Services;
- Children's Medicaid Services;
- Foster Care Base Rate;
- Foster Care Augmented Rate;
- Foster Care Special Need;
- Subsidized Adoptions & Guardianship;
- Adult Preventative Dental Medicaid Services;
- HCS Medicaid Services;
- Catastrophic and Chronic Illness Assistance;
- Alaska Temporary Assistance Program;
- Adult Public Assistance;
- Child Care Benefits;
- General Relief Assistance;
- Tribal Assistance Program;
- Senior Benefits Payment Program;
- Permanent Fund Dividend Hold Harmless; and
- Senior and Disabilities Medicaid Services.

Medicaid

Introduction

This section provides a department-wide review of the Medicaid program. Additional detailed descriptions of programs and budget changes, as well as more in-depth statistical analyses, are found in later chapters of the Budget Overview covering the four divisions that oversee direct service delivery: Behavioral Health, Children's Services, Health Care Services (including Adult Preventative Dental Medicaid), and Senior and Disabilities Services.

Program Overview

Medicaid is an entitlement program created in 1965 by the federal government, but administered by the state, to provide payment for medical services for low-income citizens. People qualify for Medicaid by meeting federal income and asset standards and by fitting into specified eligibility categories. It covers aged, blind, or disabled persons and single parent families. In addition, Medicaid expanded coverage in 1998 through the Children's Health Insurance Program (CHIP) to children and pregnant women whose income is too high to qualify for regular Medicaid, but too low to afford private health insurance. CHIP enrollment is administered through the Denali KidCare office.

Four main divisions manage benefits: Health Care Services, Behavioral Health Services, Senior and Disabilities Services, and Office of Children's Services. Medicaid administrative activities support the service delivery of every division within the Department of Health and Social Services, as well as six other departments within the state government (Departments of Administration, Corrections, Education and Early Development, Law, Labor and Workforce Development, and the Court System).

Medicaid Benefit Programs by Results Delivery Unit

Behavioral Health	Mental health, substance abuse, residential psychiatric treatment centers, and inpatient psychiatric facilities
Children's Services	Behavioral rehabilitation
Health Care Services	Hospitals, physician services, pharmacy, transportation, dental, vision, physical/occupational/speech therapy, chiropractic, medical equipment, home health, hospice, laboratory, X-ray, state-only Medicaid, premium assistance, third-party recoveries, supplemental hospital payments, Medicaid administrative management, and routine restorative dental services including exams, cleanings, tooth restoration or extraction, and upper or lower full dentures
Senior and Disabilities Services	Nursing homes, personal care, and four home and community based waiver programs

2078

Funding Overview

As a joint federal-state program, the federal and state governments share the cost of Medicaid. Federal financial participation rates are set at the federal level, and are largely outside of state control. The State's portion of Medicaid Service costs differs according to the recipient's Medicaid eligibility group, category of Medicaid service, provider of Medicaid-related service, and Native/non-Native status. For most Medicaid eligibility groups and services, the portion of state Medicaid benefits paid by the federal government is called the Federal Medical Assistance Percentage, or FMAP.

The FMAP is based on a three-year average of per capita personal income, ranked among states. While each state has its own FMAP, it can be no lower than 50%. Although the majority of benefits are reimbursed at the regular FMAP rate, certain subgroups have higher reimbursement rates (e.g., qualified Indian Health Services claims are reimbursed 100%). Where possible, the state contains costs by taking advantage of higher reimbursement rates.

Federal Medical Assistance Percentages for Claim Payments

	Federal Fiscal Year Statutory Rate		State Fiscal Year Average Rate	
Year	Regular FMAP	Enhanced FMAP	Regular FMAP	Enhanced FMAP
Before 1998	50.00	n/a	50.00	n/a

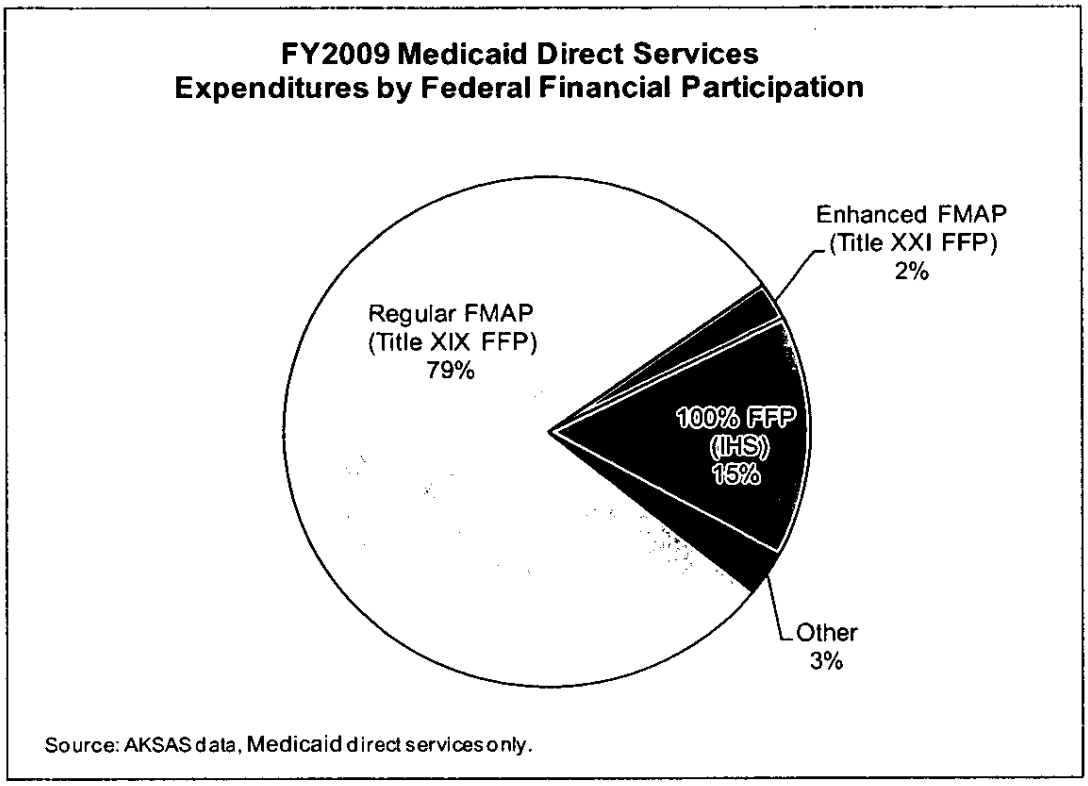
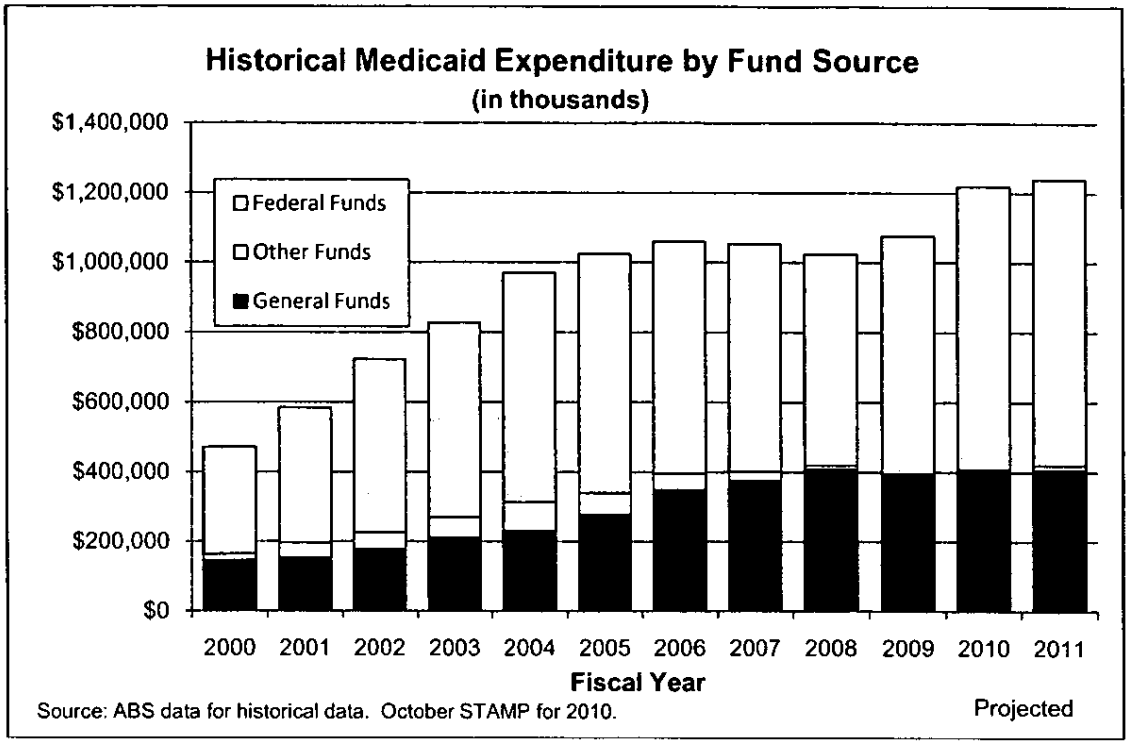
2011 Q2-Q4	50.00	65.00		

Source: Medicaid Budget Group and Centers for Medicare and Medicaid Services.
The FMAP prior to 1998 w as 50%. The enhanced FMAP started in 1998.



The department has successfully minimized the need for additional state general funds while still meeting its mission. Although costs have grown yearly federal dollars have covered the majority of the increases. The department accomplished this by taking full advantage of enhanced match rates and federal refinancing programs. Due to additional FMAP support provided through ARRA funding, state matching funds required in 2009 for the entire Medicaid program dropped to 36%, from 40% in FY08. State funding is projected to be about 33% of the total program costs in both 2010 and 2011.



One of the refinancing measures the Department has implemented is to increase the proportion of Medicaid services eligible for Indian Health Service 100% federal reimbursement. For every dollar shifted to the tribal system from regular FMAP in FFY09, the State saved 40 cents in state matching funds. The department continues to work with tribal health corporations to maximize the benefits of this refinancing program.

Cost containment is an important method of holding down increases in Medicaid expenditures. Strategies to control costs have been successful as demonstrated by the slowing rate of growth in Alaska's Medicaid costs. Growth has been controlled through 2009—mitigating increases in population and payment rates. This trend is not expected to continue in 2010 and 2011 due to enrollment and utilization increases driven by the current general economic climate, as well as provider service rate increases.

Annual Statistical Summary of Medicaid Services Provided in FY09

The statistics summarized in this section are for the entire Medicaid program. There are additional detailed Medicaid statistics in the division sections for Health Care Services, Behavioral Health Services, and Senior and Disabilities Services.

In FY09, one in five Alaskans was enrolled in the state's Medicaid program. After slowing for several years, the annual change in enrollment (enrollment growth) increased by 2% in FY09. The number of persons receiving Medicaid benefits (beneficiaries) also increased in FY09, by over five percent.

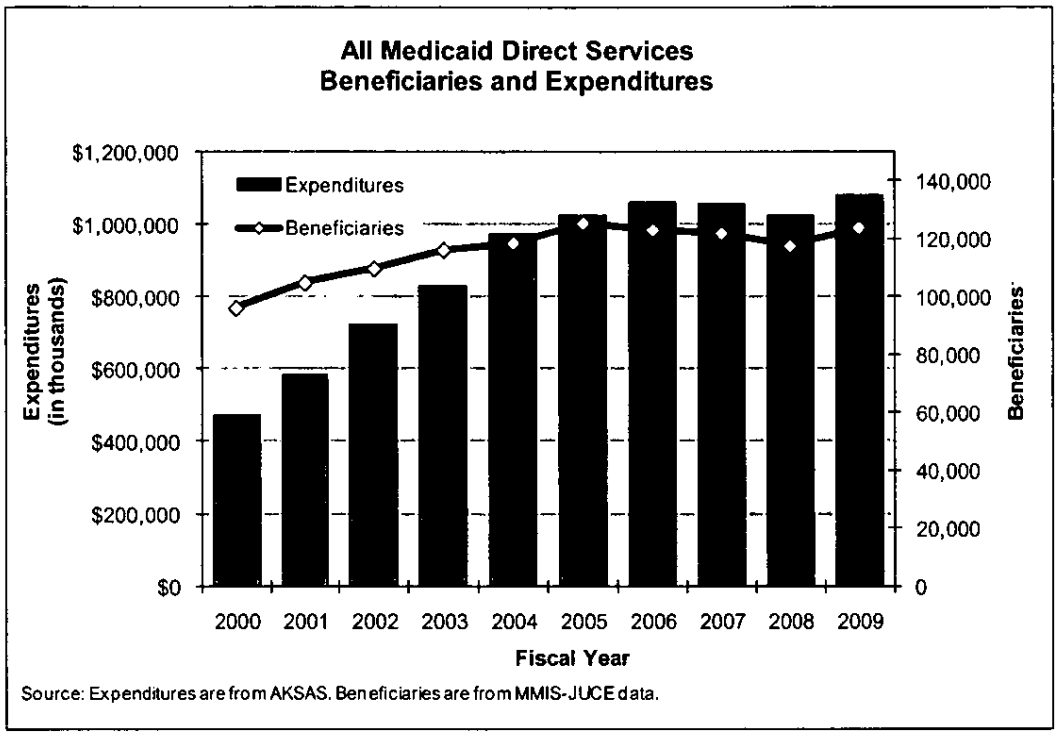
The majority, but not all, of enrollees receive benefits in a fiscal year. The ratio of enrollees to beneficiaries is called the participation rate. The participation rate has increased steadily from 87% in FY00 to 97% in FY09. The participation rate for FY09 is up by 3% from the 94% participation rate in FY08.

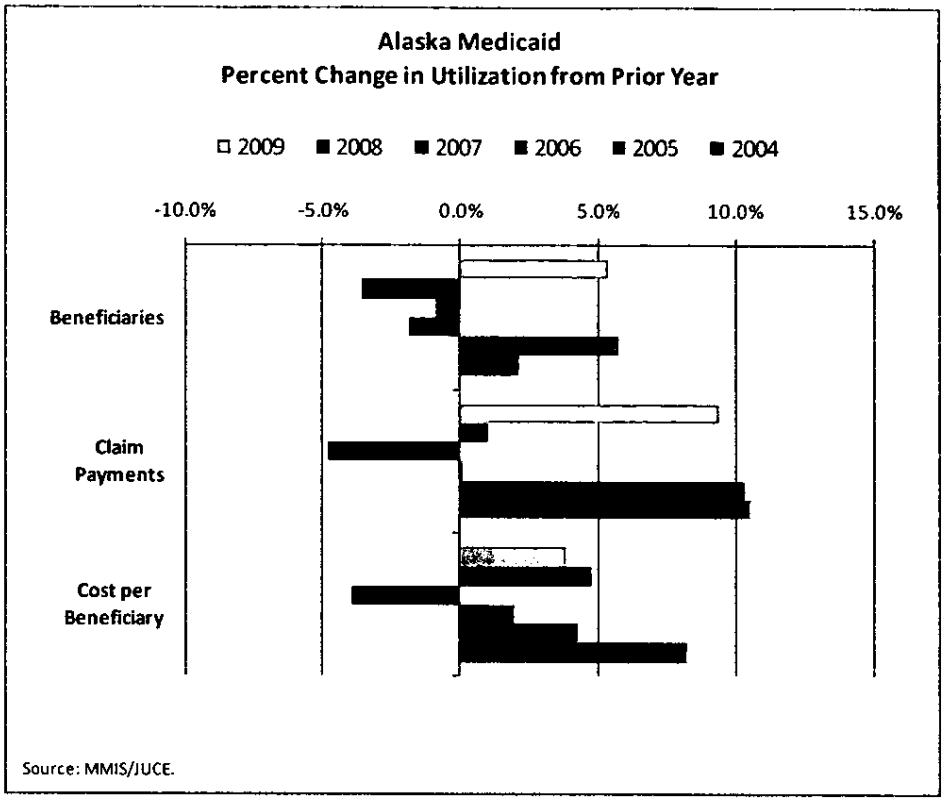
Participation in Medicaid

Fiscal Year	Alaska Population	Medicaid Enrollment	Medicaid Beneficiaries	Percent of Population Enrolled in Medicaid	Percent of Enrollees Receiving Benefits
2000	627,533	110,219	96,033	18%	87%
2001	632,091	116,226	104,730	18%	90%
2002	640,522	121,582	109,571	19%	90%
2003	647,773	126,632	116,008	20%	92%
2004	657,314	129,528	118,466	20%	91%
2005	664,060	131,136	125,318	20%	96%
2006	670,958	131,996	122,978	20%	93%
2007	676,987	128,295	121,864	19%	95%
2008	679,720	125,138	117,472	18%	94%
2009 *	691,354	127,944	123,791	19%	97%

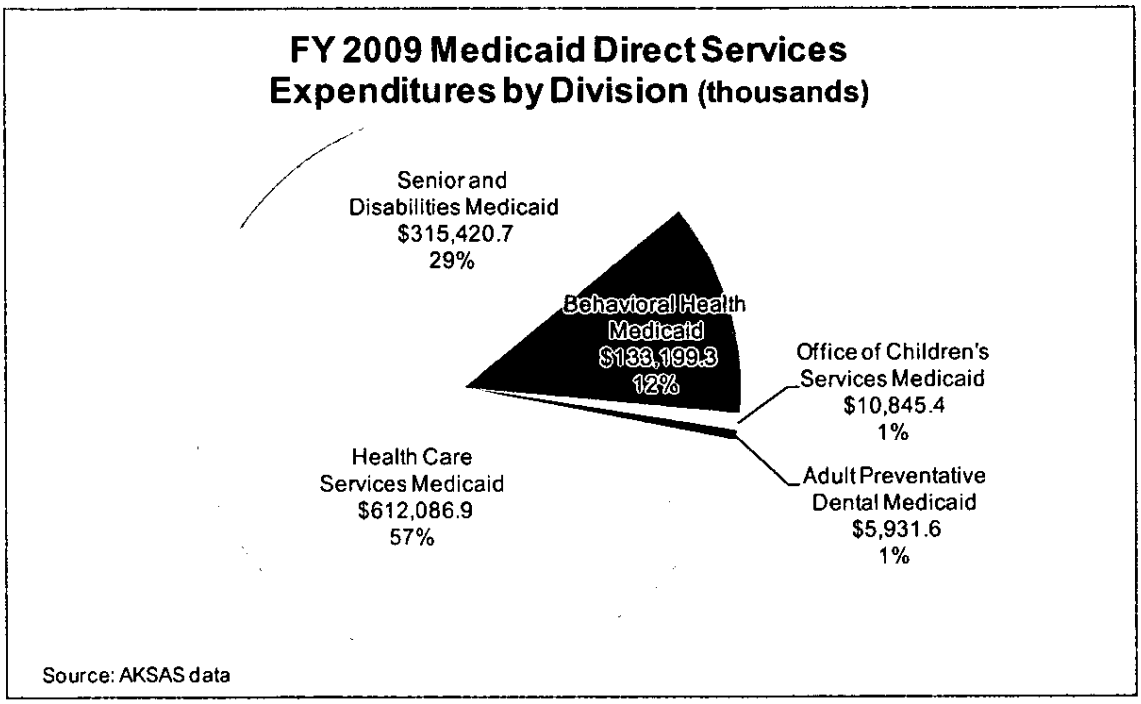
Source: Medicaid Budget Group (MMIS/JUCE) and AK Dept. of Labor and Workforce Development.
*Population is projected.
Enrollment and beneficiaries are unduplicated counts of individuals in each fiscal year.

The total cost of Medicaid direct and indirect services grew by 5% between FY08 and FY09. Costs for direct services (claims paid in FY09) increased by about 9% and the cost of direct services per beneficiary increased by almost 4%. The increase in expenditures from FY08 to FY09 was largely the result of increased enrollment due to the general economic climate and rate increases for some Medicaid services.





The majority of Medicaid expenditures are paid through the Medicaid Services component in the Division of Health Care Services, which funded 57% of the total costs for Medicaid direct services in FY09. The Senior and Disabilities Medicaid Services component provided long-term and home-based care services that accounted for 29% of total Medicaid direct services costs. The remaining 14% of expenditures were paid through the Behavioral Health Medicaid Services budget component (12%), Children's Medicaid Services budget component (1%) and Adult Preventive Dental Medicaid budget component (1%) in the Division of Behavioral Health, Office of Children's Services, and Division of Health Care Services, respectively.



FY 2009 Medicaid Direct Services Expenditures by Division (thousands)
Senior and Disabilities Medicaid $315,420.7 29%
Behavioral Health Medicaid $138,199.3 12%
Office of Children's Services Medicaid $10,845.4 1%
Adult Preventative Dental Medicaid $5,931.6 1%
Health Care Services Medicaid $612,086.9 57%
Source: AKSAS data

Medicaid Direct Services Expenditures by Division, FY09
(in thousands)

Total Medicaid Direct Services	$1,077,483.2
Health Care Services Medicaid	$ 612,086.9

General Mental Health Services	$ 72,038.8
Office of Children's Services Medicaid	$ 10,845.4
Behavioral Rehabilitation Services	$ 8,088.8
Behavioral Rehabilitation Services - BTKH	$ 2,756.6

Source: Medicaid Budget Group using AKSAS and ABS data.

Many beneficiaries receive services which are budgeted in more than one component since individuals, once enrolled, can receive any services for which they are eligible. For example, a beneficiary receiving mental health counseling paid from Behavioral Health Medicaid Services' budget can also get a flu shot paid from Health Care Services' Medicaid budget.

99% of all persons with paid claims for Medicaid services during FY09 received some benefits funded through Health Care Services Medicaid,
10% received benefits through Behavioral Health Medicaid Services,
6% received benefits provided by Senior and Disabilities Medicaid Services,
1% received benefits provided by Office of Children's Services Medicaid, and
1% received benefits provided by Adult Preventative Dental Medicaid.

Payment amounts are net of all claims paid during the fiscal year. Because amounts do not reflect payments for Medicaid services made outside of the Medicaid Management Information System (MMIS) such as lump sum payments, recoveries, or accounting adjustments, dollar amounts may not tie exactly to amounts in the state accounting system.

Enrollment: Number of persons eligibile for Medicaid and enrolled for at least 1 month during state fiscal year 2009. Counts are unduplicated on the Medicaid recipient identifier at the department and group level (gender, race, age,and benefit group categories). Some duplications may occur between subgroup counts. For example, an infant with a September birthdate would count in the under 1 age subgroup based on enrollment activity between July and September but would also be counted in the 1 through 12 age subgroup based on enrollment activity between October and June.

Recipients: Number of persons having Medicaid claims paid or adjusted during state fiscal year 2009 (service may have been incurred in a prior year). Grouping is based on status on the date when benefit (service) was provided. Counts are unduplicated on the Medicaid recipient identifier at the department and group level (gender, race, age, and benefit group categories). Some duplications may occur between subgroup counts. For example, if a 12 year old child with a September birthdate obtained vision services in August, they would be included in the 1 through 12 age group fiscal year count if that claim was processed for payment anytime before June 30, 2009. If they obtained dental services again in December 2008, they would also be included in the 13 through 18 age subgroup count if the claim was paid anytime before June 30, 2009.

Participation: The cost per recipient (the cost per peson actually accessing care) and the cost per enrollee differ due to the percentage of persons eligible and enrolled during the year that also accessed benefits (participation). Participation is typically over 90%. Because claims data is summarized here based on the claims processing cycle rather than on the claim date of service, the recipient count includes some persons that were enrolled and

Explanation of FY11 Medicaid Operating Budget Requests

For FY11, the department request for Medicaid services includes a $34.7 million increase in General Funds, a $32.8 million increase in Federal funds, and a $3.9 million decrease in Other Funds. Enhanced federal participation authorized through the ARRA legislation is projected to continue at current levels through FY11.

		FY10 Mgmt Plan	FY11 Proposed	10 to 11 Change
Total All Medicaid Services	General Funds	$371,805.2	$406,500.0	$34,694.8

	General Funds	Federal Funds	Other Funds	Total
Total All Change Records for Medicaid Services	**$34,694.8**	**$32,811.6**	**($3,902.5)**	**$63,603.9**

Transfers to Other Components and Reduction of Excess Authority (OCS, HCS)

($3,742.5) ($2,748.4) ($4,000.0) ($10,490.9)

The department can adjust its authorization this year to reflect the current state of the Medicaid program and the services provided. This includes a decrease in interagency receipts authority related to the discontinued ProShare program, the transfer of GF and Federal funds to Public Health Nursing for Medicaid administrative claiming, the removal of excess federal authority from OCS, and the transfer of non-Medicaid eligible costs to Residential Child Care.

Medicaid Growth (DBH, HCS, SDS)

$36,203.5 $35,407.5 $0.0 $71,611.0

One in five Alaskans is enrolled in Medicaid in any given year. In an average week, 25,500 Alaskans receive some level of medical care that costs the Medicaid program $17-25 million in benefit payments made to 2,100 health care providers. The Medicaid budget is based on the projections of the number of eligible Alaskans who will access Medicaid funded services, the estimates of the quantity of services that may be used, and the anticipated changes in the costs of those services.

Enhance Medicaid Dental Prevention Benefits (HCS)

$200.0 $0.0 $0.0 $200.0

This increment will support the department's continuing efforts to provide dental care for non-Medicaid covered services. These services include: dentures, crowns, cleanings, routine dental exams, and other preventive services. Outreach to the dental provider community, as well as an increase in dental reimbursement rates in both FY09 and FY10, has resulted in increased participation by dental providers. In addition, both overall costs and the total number of individuals served have increased. The number of beneficiaries utilizing dental services saw an increase during FY09 of 9.3%, and the annual average cost per beneficiary rose by 17.5%.

Improve Medicaid Tobacco Cessation Services (HCS)

$0.0 $152.5 $97.5 $250.0

This increment will be used to modify the Medicaid tobacco cessation service coverage so that Medicaid-covered services are more effectively coordinated with the efforts of the Tobacco Quit Line, the American Lung Association, and tribal efforts. This funding will also be used to assist public education and to partner with other advocacy groups to deter young kids from starting to smoke or chew tobacco products. While quantifiable and standardized measures are still in the discussion phase and have to be agreed upon, they could include reduced Medicaid payments addressing secondary conditions associated with smoking as well as the reduced effects of maternal smoking on newborns.

Transfer General Fund from Alaska Pioneer Homes for Medicaid Match Payment (SDS)

$2,033.8 $0.0 $0.0 $2,033.8

The division currently receives GF match related to Residential Assisted Living Medicaid Waiver receipts as inter-agency receipts through reimbursable service agreements with the Alaska Pioneers Home division. Transferring the GF match to the Senior and Disabilities Medicaid Services component will increase efficiency and reduce paperwork by placing the general fund in the budget of the division responsible for making the match payment.

Priority Programs - Key Performance Indicators

(Additional performance information is available on the web at http://omb.alaska.gov/results.)

Vulnerable Populations

- ⬇ Preliminary data for 2008 indicates an Alaska suicide death rate of 24.6 suicides for all ages per 100,000 population. This rate is more than double the stated target of 10.6.
- ⬇ The target to decrease the rate of substantiated allegations of child maltreatment in Alaska was not met in FY09, as there was a 1.6% increase in the rate of maltreatment per 1,000 children from FY08 to FY09.

Substance Abuse

Substance abuse affects every family and community in Alaska. Through public/private partnerships and departmental strategies DHSS will help to prevent, intervene, treat and assist recovery from substance abuse among Alaskans. Key indicators are being developed.

Long-Term Care

- ⬆ In FY09, the medication error rate decreased to .13% comparing favorably with the target medication error rate of less than one percent.
- ➡ In FY09, the rate of Pioneer Homes resident falls resulting in a major injury (sentinel event injury rate) was 2.7%, exceeding the 2% target rate, but in line with past performance on this measure.

Health and Wellness

- ➡ In 2007, 70% of two year olds were fully immunized, which was below the 80% target rate, but slightly above the 67% in FY06. Alaska ranked 45th in the country for fully immunized two year olds.
- ➡ In 2007, 90% of persons with tuberculosis (TB) completed adequate treatment; this was in line with prior year performance. This was below the target rate of 95% primarily due to some difficult cases.
- ⬇ The 2007 death rate caused by unintentional injuries was 57.3 per 100,000 population, above the 50/100,000 target and representing a nearly 10% increase from the 2006 rate. The rate dropped by 12% from 2002 to 2006.
- ➡ The adult obesity rate was 27.9% in 2008, below the 28.2% in 2007. However, this was higher than the 26.6% national average and did not meet the 18% target rate.
- ➡ The post-neonatal death rate for 2008 was 3.0 per 1,000 live births, above the target of 2.3 per 1,000 live births, but below the rate of 3.3 per 1,000 in 2007.
- ⬆ There has been a 51% decline in youth smoking over 12 years, bringing the 2007 prevalence rate of 18% within 1 percentage point of the 17% target.

Health Care Reform

- ⬆ From FY08 to FY09 the Division of Health Care Services realized an increase in GF recovery of 14%, exceeding the 2% target increase.
- ⬆ Indian Health Services (IHS) Medicaid participation increased by 9% in expenditures from FY08 to FY09. This exceeded the 5% target increase.

Bring the Kids Home (BTKH)

What is Bring the Kids Home (BTKH)? From 1998-2004, out-of-state placements of children with severe emotional disturbances in residential psychiatric treatment centers (RPTC) grew by nearly 800% with no expectation that this trend would change without intervention. The Alaska Mental Health Trust Authority and DHSS organized a stakeholder group to plan, fund, implement and monitor the BTKH initiative. The goal was to develop an in-state system to serve children as close to home as possible and with the family guiding care. Significant progress has been made and FY10 was selected as the target date to end the BTKH initiative, assuming sufficient resources and adequate progress.

How much Progress Has Been Made? Use of out-of-state RPTCs has decreased greatly: admissions are down by 85.4% from 752 to 110 from the high year, FY04. Total yearly recipients are down by 57.6% from 749 to 318.

Use of in-state RPTC has increased: in-state recipients represented only 22.4% of the total RPTC population during FY04 (216 youth) but were 54.3% for FY09 (378 youth). There has been a steady decline in recidivism to RPTC: the recidivism rate dropped from 20% in FY04 to 4% in FY09.

Medicaid expenditures for out-of-state RPTC decreased by 51.3% between FY06 and FY09 ($40 M to $19.48 M). In-state RPTC Medicaid expenditures increased by 739% from FY98 to FY09 ($2.82 M - $20.87M).

What is Working? General funds, MHTAAR and Medicaid have been invested into in-state care. RPTC beds increased from 123 to 186 and lower level beds (residential treatment and therapeutic group/foster homes) went from 530 to 776. These new beds serve youth diverted from out-of-state.

Community behavioral health start-up grants have expanded non-residential services. Examples include sub-acute crisis stabilization, school supports, best practices for children with co-occurring disorders, and expanding mental health Medicaid access to new communities and new providers.

In addition, resource facilitation mechanisms have been established: State staff identify in-state resources and negotiate system gaps while contractors provide gate keeping, peer navigation and coordination. These services help to divert and step children down from residential and RPTC care.

An Individualized Service Agreement (ISA) flexible funding pool was established to pay for services to stabilize a child in the community which are not available through Medicaid, insurance, grants, etc. As ISA use has expanded, RPTC placements have dramatically decreased.

What are the Remaining Priorities? The state needs a system that can serve children with behavioral health problems and their families in communities across Alaska. In order to achieve this, we are *expanding successful strategies* statewide, *addressing funding gaps* and *shifting funding* to programs that reach children and families earlier and prevent severe disturbances.

Expanding Successful Strategies:
BTKH community behavioral health grants are developing in-state capacity to serve children with intensive needs and their families. During FY09 BTKH grantees accepted 41 children from out-of-state RPTC, diverted 129 from out-of-state RPTC and accepted 219 from more restrictive in-state care. However, some communities/regions have not applied for or received BTKH grants yet and have limited behavioral health capacity (Nome, Barrow, Valdez, Petersburg, Wrangell, Aleutians, Pribilofs, etc). Also, some BTKH projects are in a pilot phase and need to be expanded (family therapy, wraparound, etc).

During FY10, DHSS developed training modules and technical assistance targeting behavioral health services to increase revenues and reverse the trend of low billing and reimbursement: between FFY07 and FFY08 tribal Medicaid payments for mental health and substance abuse services decreased by 10.27%. Expansion of tribal behavioral health services will allow increased access to culturally competent care while capturing 100% federal match for services through tribal health organizations. The FY11 budget contains increments for this effort.

Another priority is to improve DHSS capacity to provide technical assistance and training. FY10 MHTAAR funds supported DBH to provide training to providers to expand family therapy services and to improve outcomes. The FY11 budget maintains the MHTAAR funding level for this effort.

Addressing funding gaps:
While ISAs are an effective strategy to divert youth from residential care, 27 eligible providers are not yet using ISA. Also, youth with a primary substance use disorder do not yet have access to ISA. For FY09 less than 1% of ISA recipients were subsequently admitted to an RPTC (5 out of 506). Additional funding is included in the FY11 budget to expand ISA use.

Youth with behavioral disorders transitioning to adulthood encounter service gaps and show poor outcomes: involvement with justice systems, mental health and substance abuse problems, unplanned pregnancy and homelessness. Covenant House Alaska reports that, of 627 youth who completed a FY09 intake assessment, 80% were mental health beneficiaries (501 youth). Within their Crisis Center, 34% of the youth reported a history of residential mental health treatment (65 youth). The FY11 budget contains increments for this effort.

Peer navigation services are limited in Anchorage, Mat-Su, Fairbanks, Juneau and Kotzebue, and are very sparse elsewhere. Peer navigation provides support, parenting classes, and resource facilitation. For FY08 and FY09, over 90% of the youth served who were at risk of out-of-home placement were able to remain in their own communities. Peer navigation can only be partially funded via Medicaid. The FY11 budget maintains the MHTAAR funding level for this effort.

Shifting funding to intervene earlier:
Alaskan stakeholders have identified service gaps for young children with behavioral health problems and their families: few clinicians are qualified to work with young children and early learning settings often expel children with behavioral challenges. The "Adverse Childhood Experiences Study" (which can be found at www.cdc.gov/NCCDPHP/ACE/index.htm) found that children exposed to traumatic experiences were more likely to engage in substance abuse, promiscuity, and suicide attempts and to experience mental illness, heart disease, cancer, and stroke.

Three BTKH projects are aimed at reducing traumatic experiences and intervening earlier. One project provides mental health consultation for young children in early care settings. A second provides a mental health clinician to work with professionals serving young children. Each will reduce the number and impact of traumatic events that impact children's development. A new FY11 project will provide foster parent and parent training and intensive family preservation. Intervening earlier can reduce the need to take children into custody and thus reduce trauma and costs. All three of these projects need FY11 funding to expand beyond the pilot phase and impact families statewide.

BTKH graphs are included in the chapter for the Division of Behavioral Health.

Families First

Families First is a service delivery strategy to increase collaborative services for families who are accessing services from multiple Health and Social Services providers. Families First facilitators are located in Kenai, Sitka, Anchorage, Wasilla, Nome and Fairbanks. These staff are responsible for coordination of efforts within their regions. DHSS offices of Public Assistance, Children's Services, Behavioral Health and Juvenile Justice are partners in Families First and share an abundance of families concurrently accessing many or all of our services. By working as a team, these partners give families a better opportunity to achieve their goal of becoming self-sufficient.

DHSS developed the Families First service delivery strategy to provide collaborative, community-based services, supports, and resources to families to help them become self-sufficient. Employment is the focus of this family-centered approach, and it relies on the creative and efficient use of family, community, and multi-agency resources. In addition to promoting the best possible outcomes for families, these services create opportunities for service providers to work together and work efficiently by making the best use of private and public resources. Many families who will benefit from this approach have complexities in their lives that make it difficult for them to compete in a labor market driven work search.

This approach focuses on solutions to help families be successful. Families frequently find themselves being "shuffled" among and between multiple government, private and non-profit community agencies. Families often report that they have difficulties meeting the expectations of multiple agencies from whom they receive services. This puts families in a difficult situation, because when they can't meet the expectations of an agency, they could very well lose their assistance.

Addressing this problem shines the light on a key aspect of Families First: teams made up of staff from multiple agencies gather in a collaborative meeting with the family to get a holistic view of their needs. The team approach includes learning about the family's daily lives to learn their needs, complexities, strengths and skills. The family is involved in all conversations and decision making. An important facet of this approach is that families engage in this process more strongly when their voice is heard and respected. Gathering this initial information is an important part of creating a family profile, which helps lay the ground work for delivering services and is the beginning of a plan for self-sufficiency.

National studies show that implementing wrap-around services has increased positive outcomes for families. By developing collaborative interdisciplinary service teams to help families identify critical issues and to create plans or strategies to mitigate challenges, families are able to make incremental advances towards self-sufficiency and improved family stability.

The Office of Children's Services' Family-to-Family program exemplifies this course of action as a core program component as the family and natural supports along with agency staff are involved in placement decisions for their children. The use of a coordinated team approach will establish reasonable performance expectations for families.

The primary purpose of Families First is to help families become self-sufficient. DHSS Families First uses "customized employment," a proven employment model for people with significant

disabilities. Customized employment is a blend of services designed to increase employment options for individuals with significant barriers to employment. The process discovers the strengths, skills, needs and interests of the job seeker. The team works with the job seeker to identify potential work sites. The team's Job Developer works with the management at the identified work site to determine if there are unmet needs to which the job seeker can contribute for a mutually beneficial outcome. The parties work together to negotiate a new job description. The goal of this "customization" is a meaningful employment relationship where both parties get their needs met. The model has been successfully implemented in Alaska by the Department of Labor and Workforce Development as part of a national initiative to promote employment for people with disabilities.

Alaska is moving forward to expand the Families First approach, and is hosting Families First trainings across the state for government, non-profit and community partners starting January 2010.

FY11 Capital Project Requests

Capital		FY11 Capital Funding Request (In thousands)			
DHSS Initiatives/ Divisions	***Project Titles***	***GF***	***Fed***	***Other***	***Total***
Vulnerable Alaskans

STATE OF ALASKA

Sean Parnell, GOVERNOR

DEPARTMENT OF LAW

ADMINISTRATIVE SERVICES DIVISION

P.O. BOX 110300
ASSEMBLY BLDG., SUITE 205
JUNEAU, ALASKA 99811-0300
PHONE: (907)465-3673
FAX: (907)465-5419

I. DEPARTMENT OVERVIEW

- DOL employees 283 lawyers and 278 support staff
- Total budget: FY11 - $86.9 million; FY10 - 85.4 million
- GF budget: FY11 - $57.3 million; FY10 - $56.3 million
- DOL offices: Anchorage, Barrow, Bethel, Dillingham, Fairbanks, Juneau, Kenai, Ketchikan, Kodiak, Kotzebue, Nome, Palmer, and Sitka.

II. DEPARTMENT'S CORE SERVICES

A. Protecting the Safety and Physical and Financial Well Being of Alaskans

B. Fostering the Conditions for Economic Opportunity and Responsible Development and Use of Our Natural Resources

C. Protecting the Fiscal Integrity of the State

D. Promoting and Defending Good Governance

III. BUDGET ALLOCATION OF DEPARTMENT'S CORE SERVICES

	GF	FED	OTH	TOTAL	% GF
Protecting Alaskans	36,666.2	1,496.1	10,603.4	48,765.7	64.0%
Fostering Economic Opportunity and Resource Development	3,868.3	33.1	3,274.6	7,176.0	6.7%
Protecting Fiscal Integrity	12,907.5	33.1	9,843.7	22,784.3	22.5%
Promoting Good Governance	3,887.6	33.1	4,271.7	8,192.4	6.8%
FY2011 GOV. BUDGET	**57,329.6**	**1,595.4**	**27,993.4**	**86,918.4**	**100.0%**

IV. RETURN ON INVESTMENT

- Department's ROI based on entire budget: 6 to 1.
- Department's ROI based on general fund: 10 to 1.
- Civil Division sections that generate revenue ROI: 35 to 1.

V. LITIGATION UPDATE

- Mercer
- Cruise Ship
- Carlson
- BP Corrosion

2103

I. DEPARTMENT OF LAW'S MISSION

The mission of the Alaska Department of Law is to protect Alaska's citizens and provide ethical, effective legal services to state government for the benefit of Alaskans.

II. DEPARTMENT OVERVIEW

- DOL employs 283 lawyers and 278 support staff
- Total budget: FY11 - $86.9 million; FY10 - 85.4 million
- GF budget: FY11 - $57.3 million; FY10 - $56.3 million
- DOL offices: Anchorage, Barrow, Bethel, Dillingham, Fairbanks, Juneau, Kenai, Ketchikan, Kodiak, Kotzebue, Nome, Palmer, and Sitka.

III. DEPARTMENT'S CORE SERVICES

A. Protecting the Safety and Physical and Financial Well Being of Alaskans
B. Fostering the Conditions for Economic Opportunity and Responsible Development and Use of Our Natural Resources
C. Protecting the Fiscal Integrity of the State
D. Promoting and Defending Good Governance

IV. BUDGET ALLOCATION OF DEPARTMENT'S CORE SERVICES

Operating Budget

TOTAL OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	$56,275.3	$3,881.3	$25,201.0	$85,357.6	553	7	0
FY2011 GOVERNOR'S TRANSACTIONS	$1,054.3	($2,285.9)	$2,792.4	$1,560.8	2	-1	0
TOTAL FY2011 GOVERNOR'S BUDGET	**$57,329.6**	**$1,595.4**	**$27,993.4**	**$86,918.4**	**555**	**6**	**0**

V. SELECTED OVERVIEW OF DEPARTMENT'S CORE SERVICES PERFORMANCE

A. Protecting the Safety and Physical and Financial Well Being of Alaskans

2104

copy on file

The Department protects Alaskans' safety and their physical and financial well being by prosecuting criminals, protecting children, and enforcing consumer protection laws; providing legal services to state agencies protecting public health; and prosecuting occupational license cases and state environmental laws.

Protecting Alaskans' Priority Program Budget

TOTAL OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	$33,762.5	$3,782.0	$10,358.1	$47,902.6	374	6	0
FY2011 GOVERNOR'S TRANSACTIONS	$2,903.8	($2,285.9)	$245.3	$863.2	3	-1	0
TOTAL FY2011 GOVERNOR'S BUDGET	**$36,666.3**	**$1,496.1**	**$10,603.4**	**$48,765.8**	**376**	**5**	**0**

Results of Current Capacity

- ↑ 43% of crimes of sexual abuse of children were resolved with a felony conviction, as compared to 41% the previous year.
- ↑ In FY 2009, the amount ($2.7 million) in total restitution collections increased over 35% compared to the amount collected in FY 2008.
- ↑ The number of consumer protection investigations and prosecutions increased 41% in FY 2009 over the prior fiscal year, resulting in civil penalties, attorney's fees and costs in the amount of $2.3 million.
- → 11% of violent felony crimes accepted for prosecution were resolved with a conviction that was not reduced to a lower level felony, remaining unchanged from the previous year.
- ↑ The number of paralegal assistants who have been provided yearly training in general victim-related issues grew to 33 in FY 2009, an increase of 3 over the prior year and continuing a positive trend.

Detailed Results of Current Capacity

1. Criminal Prosecutions

   - *Total number of prosecutions and convictions* (year to date):

     Felony cases accepted for prosecution: 5,365

     Felony cases resulting in felony offense convictions: 1,866

     Felony cases resulting in misdemeanor offense convictions: 1,709

Misdemeanor cases accepted for prosecution:	20,992
Misdemeanor convictions:	14,709

- *Appeals.* DOL represented the state in 468 criminal appeals.

2. Child Protection and Child Support

- *Child Protection.* The value of the services provided by the Department in protecting Alaska's children cannot be measured in dollars, but rather quantified only through numbers of children placed into better home situations. The Department participated in 2,526 matters where the welfare of a child was at issue. The Alaska Supreme Court issued decisions in 19 appeals involving termination of parental rights. The court affirmed trial courts' decisions terminating parental rights in all 19 cases. In support of this work the Department expended $5,236,121.

- *Child Support.* The child support unit in the Department is vital to the successful collection of child support in Alaska and helps Alaskan families. Overall, the child support unit handled over 1,600 child support cases.

3. Consumer Protection

- *Consumer Protection.* As a result of our participation in multistate consumer protection efforts or from consumer protection matters initiated locally, we received civil penalties, attorney's fees and costs in the amount of $2.3 million at a cost of approximately $1 million.

- *RAPA.* The Department's work in regulatory affairs benefits the state's citizens by ensuring that matters involving regulated utilities before the Regulatory Commission of Alaska, such as rate changes or changes in service, take the public interest into account. The approximate value to ratepayers of quantifiable instances of advocacy by the Public Advocate is $ 4.026 million. To achieve this result the Department spent about $1.5 million.

4. Environmental Protection

- *Environmental Penalties.* The Department collected $2.28 million in penalties related to violations of state environmental laws. We also obtained cleanup agreements with polluters with an estimated value of

$4.88 million. To obtain these benefits for the state, the Department expended $1.7 million.

- *Note*: the monetary value, which is significantly lower than past years, is an anomaly. The Department was forced to divert resources away from the environmental section to address the large number of public records requests. The state generally receives between $5 - $10 million in fines and clean-up agreements.

5. Strengthen Social Safety Net

- *Serving the Vulnerable.* The Department spends considerable time ensuring that the state's social safety net remains secure. For example, the Department handled over 100 guardianships and approximately 250 mental commitments statewide. The Department also advised agencies in approximately 260 cases related to assisted living homes, foster homes, and residential childcare facilities.

6. Regulation of Business

- *Licensing cases.* The Department provides legal services to various state agencies that directly protect public health, safety, and the environment by prosecuting licensing and discipline cases for many of the occupational license professions.

FY2011 Change in Capacity

1. Fund Source Change for Sexual Assault Grants

- In the next twelve months, the three federal grants that employ approximately 17 prosecutors and staff are expiring. Twelve of these positions are exclusively devoted to prosecuting sexual assault or domestic violence while the remainder prosecute primarily sexual assault and domestic violence crimes. Substituting a new funding source will allow the department to continue to fund additional attorneys and paralegals in Bethel, Barrow and Anchorage to aid in the prosecution of domestic violence as well as adult and child sexual assault cases.

2. Coordinator to Address Sexual Assault

- The Governor's Sexual Assault and Domestic Violence 10 Year Plan requests the creation of a coordinator position to oversee and implement this initiative. The coordinator's exclusive charge will be

finding ways to end the state's sexual assault and domestic violence epidemic. To achieve this goal, the coordinator will focus on prevention, education, law enforcement, public safety, victim services and offender treatment.

3. Kenai Child Protection Attorney

- The one AAG now located in Kenai currently carries a caseload of 170 children. In addition there are up to 40 children's cases in Homer that should logically be handled from Kenai, but are now handled out of Anchorage as a stopgap measure.

B. Fostering the Conditions for Economic Opportunity and Responsible Development and Use of Our Natural Resources

The Department fosters the conditions for economic opportunity and responsible development of the State's natural resources by defending agency actions that are designed to facilitate economic development and by intervening in lawsuits where natural resource activities are threatened.

Economic Opportunity Priority Program Budget

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	$3,807.1	$33.1	$3,398.0	$7,238.2	43	0	0
FY2011 GOVERNOR'S TRANSACTIONS	$61.2	0	($123.3)	($62.1)	0	0	0
TOTAL FY2011 GOVERNOR'S BUDGET	**$3,868.3**	**$33.1**	**$3,274.7**	**$7,176.1**	**43**	**0**	**0**

Results of Current Capacity

- ⬆ The Department successfully defended the permits for the operation of the Kensington Mine before the U.S. Supreme Court, preserving hundreds of jobs.
- ⬆ The State participated in 100% of cases involving mineral development and exploration permitting decisions in 2009, compared to participation only on the Kensington Mine and Cook Inlet coal prospect cases in the previous year.

Detailed Results of Current Capacity

1. Creating Economic Opportunities Through the Law

- *AGIA*. The Department is a key player on the gasline team.
- *OCS*. The Department is fully engaged in all aspects of the state's OCS strategy – legislation, public advocacy, and engagement with the federal government.
- *Point Thomson*. DNR's decision to default the Point Thomson's unit has forced Exxon to commit to a $1.2 billion development plan. Prior to the litigation, Exxon refused to commit to any development. The state also collected $21 million in penalties and forced Exxon to relinquish 8 leases
- *ESA*. The Department has challenged the listing of the Polar Bear as a threatened species, and is reviewing the Beluga listing. The Department anticipates a large influx in ESA cases since many species may be listed in the near future. Endangered species listings can have severe impacts on the economy of the area where they are found.
- *DOT*. Transportation and infrastructure is a key to economic development in Alaska. The Department's work on transportation issues serves as everyday invisible grease on the wheels of Alaska's infrastructure. Alaska's airports, highways, ferries, and public buildings make commerce and safe movement of Alaskans possible.

2. Supporting Alaskan Businesses and Economic Development

- *Kensington*. The Department's intervention and appeal work played a key role in defeating legal challenges to federal permits for the Kensington Mine project.
- *OCS Exploration.* In *Native Village of Point Hope et. al v. MMS et. al.,* environmental groups sought to enjoin Shell and BP's OCS seismic surveys. The State intervened and played a key role in defeating plaintiffs' request for injunctive relief.
- *Commercial Fishing*. In the *Village of Kasaan v. Alaska Board of Fisheries* case, we successfully defended against a TRO that would have shut down commercial Dungeness crab fishing in the Ketchikan area, resulting in lost commercial fishing opportunity worth at least $100,000 to $200,000.

- *Timber Sales.* We are participating in negotiations to settle an appeal of the Logjam timber sale in the Tongass brought by environmentalists. If successful at resolving the matter favorable, we will have helped save 55 jobs at Viking Lumber.

FY2011 Change in Capacity

1. Endangered Species Act

- The Department anticipates legal work involving issues under ESA to significantly increase over the next three years. The most cost-effective way to respond to this need is to obtain an additional Assistant Attorney General. We have challenged the listing of the Polar Bear as a threatened species and are reviewing the Beluga listing. We also anticipate a large influx in ESA cases since many species may be listed in the near future. Endangered species listing can have severe impacts on the economy of the area where they are found.

- Additional resources are necessary so the Department can increase the State's involvement in federal notice-and-comment rulemaking, which enables the state to potentially influence listing petitions, the designation of critical habitat, and creation of habitat conservation plans, and recovery plans.

C. Protecting the Fiscal Integrity of the State

The Department protects the fiscal integrity of the State by ensuring payments of taxes and royalties, recovering monies owed to the state, protecting the State's investments and defending against monetary claims filed against the state.

Fiscal Protection Priority Program Budget

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	$14,835.4	$33.1	$7,221.6	$22,090.1	90	1	0
FY2011 GOVERNOR'S TRANSACTIONS	($1,927.8)	0	$2,622.1	$694.3	-1	0	0
TOTAL FY2011 GOVERNOR'S BUDGET	**$12,907.6**	**$33.1**	**$9,843.7**	**$22,784.4**	**89**	**1**	**0**

Results of Current Capacity

- The State prevailed at the Federal Energy Regulatory Commission hearing on the TAPS tariff. The case is presently on appeal before the U.S. Court of Appeals for the D.C. Circuit.
- Settlements and awards from cases related to oil and gas taxes and royalties generated $530.0 million for the State.

1. Ensuring Payment of Taxes and Royalties

   - *Oil & Gas.* The Department handles a variety of cases relating to the obligations of oil and gas entities in the state to pay taxes and royalties. Settlements or awards from these cases generated for the state more than $530 million. To obtain these monies the state expended only $11 million (including the cost of both in-house and outside counsel).

2. Recovery of Monies Owed to the State

   - *BP Corrosion.* The department assisted DEC in the investigation of the 2006 BP pipeline spills and shutdowns due to corrosion. The department filed a lawsuit against BPXA in March 2009 seeking recovery of penalties and lost tax and royalty revenue potentially in excess of $1 billion.

   - *Collections.* The state benefits from the Department's collections unit and gets a hefty return on its investment. The unit collected over $14 million. Of that amount, about $11-$12 million resulted from garnishment of the debtor's PFD — funds that most likely would not have been recovered but for the effort of the collections unit. The collections unit does all of this with only eight employees at a cost to the state of $687,716.

   - *Medicaid.* The Department also has a significant role in ensuring that limited monies available for Medicaid programs are properly spent. The Department recovered over $1 million for Medicaid subrogation and estate and trust recovery claims. This work is handled by one attorney at a cost to the state of $176,749

3. Protecting State Investments and Accounts

   - *Mercer.* The Department investigated and worked with outside counsel to file and litigate a large actuarial malpractice case seeking recovery

of $2.8 billion in damages to the state pension system for an actuary's negligence and fraud.

- *Permanent Fund.* The Department provides critical legal oversight and advice to the Permanent Fund Corporation.

4. Defending Monetary Claims Against the State

- *Tort Defense.* Because the Division of Risk Management is self-insured, the Department vigorously defends the state in tort actions. The cost to the state for all of the work of the section handling these types of cases is only $3.1 million.

D. Promoting and Defending Good Governance

The department promotes and defends good governance in areas including Indian law, ethics law, elections law, public records requests and legislation.

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	$3,870.3	$33.1	$4,223.3	$8,126.7	46	0	0
FY2011 GOVERNOR'S TRANSACTIONS	$17.3	0	$48.4	$65.7	0	0	0
TOTAL FY2011 GOVERNOR'S BUDGET	**$3,887.6**	**$33.1**	**$4,271.7**	**$8,192.4**	**46**	**0**	**0**

Results of Current Capacity

- ⬆ The ethics attorney conducted ten ethics trainings in FY 2009 compared to none in FY 2008, and six in FY 2007.
- ⬆ None of the ballot initiatives certified by the Lieutenant Governor on recommendation of the Department of Law were challenged in FY 2009. In FY 2008, the State faced three challenges to ballot initiatives certified on recommendation of the Department, and defeated each challenge.

Detailed Results of Current Capacity

1. Ethics

- The Attorney General has responsibility to provide advice to the ethics supervisors for the Office of the Governor, the 14 principal state agencies, the University of Alaska, the 11 public corporations and the

more than 75 statutory boards and commissions. In FY09, the Opinions, Appeals and Ethics Section of the Department of Law issued 17 written advisory opinions and addressed several hundred oral and email requests for advice from the ethics supervisors, current and former state officers, as well as citizens of Alaska and the media. To foster a better understanding of the executive branch code of ethics, the state ethics attorney conducted 10 training sessions for the Office of the Governor and some state agencies and boards. The Attorney General also investigates ethics complaints, not involving the governor, lieutenant governor or attorney general.

2. Indian Law and Rural Issues

- Indian law attorneys provided substantive legal advice to almost all sections in the criminal and civil divisions of the Department of Law throughout the reporting period. State agencies, with assistance of Indian law attorneys, are litigating the issue of tribal initiating jurisdiction in child protection cases before the Alaska Supreme Court and the 9th Circuit Court of Appeals, and they are monitoring cases involving similar issues in the Fairbanks Superior Court. Indian law attorneys are negotiating with tribal entities on memoranda of understanding where litigation can hopefully be avoided, in the areas of child protection, transportation, and child support enforcement. Indian law attorneys are advising the Alaska Governor's office on the state's interest in federal legislation impacting tribal jurisdiction. Indian law attorneys are assisting the criminal division in providing advice about the appropriate role of state agencies in enforcement of tribal domestic violence protective orders. Law attorneys are providing staff support to the Attorney General in his role as chair of the Rural Action Subcabinet and in his role as co-chair of the Alaska Rural Justice and Law Enforcement Commission.

3. Elections and Initiatives

- Initiative petitions timely submitted in a general election year require legal advice and oversight by the AGO for the Division of Elections as to the certification process, including anticipated litigation. In a general election year, there is a heightened need for legal advice to the Division of Elections re: issues related to candidate qualification,

voter registration, question and absentee ballots, election monitoring, election contests and related litigation.

4. Legislation

- The department works with all the other departments of the executive branch on legislation and issues pending before the Alaska Legislature. Each bill that is introduced is assigned to an attorney who is responsible for handling any hearing, performing any research, and drafting any amendments necessary. The department also prepares legislation requested by the Governor, including both operating and capital budget bills.

5. Public Records

- The Department assists state agencies in responding to complex records requests made under the Alaska Public Records Act. The Department works with the agencies to ensure the following: the requests are clear; responsive records are preserved; adequate searches are undertaken; all responsive records are reviewed for privileged and confidential information; records containing information protected from disclosure are logged; the state is reimbursed for the costs of searching for and copying the requested records; and the deadlines for responding to the records requests are met.

  In FY 2009, the Department billed thousands of hours—totaling hundreds of thousands of dollars in personnel costs—to work on matters relating to the Public Records Act. The vast majority of these hours were spent reviewing requested records for privileged and confidential information. The state cannot recover the personnel costs of conducting such reviews from the persons who made the requests without an amendment to the Public Records Act.

VI. RESULTS FOR ALASKANS AND RATES OF RETURN ON INVESTMENT

A. Many Departmental Services Cannot Be Monetized

- The value provided to the state of the foregoing services delivered by the Department cannot be monetized: for example, prosecuting sex offenders;

terminating an abusive father's parental rights; defending state sovereignty from federal intrusion; defending the state for tort claims; or negotiating contracts for the Department of Transportation and Public Facilities.

B. Monetized Services Demonstrate Significant Benefits to Alaskans

- In those areas where we can monetize achievements, the Department provides a significant return on investment.

  Department's ROI based on entire budget: 6 to 1.

  Department's ROI based on the portion of its budget funded by general fund monies: 10 to 1.

  Department's ROI based on Civil Division Sections which generate revenue: 35 to 1.

Total FY2011 Court System Operating Budget Increments	**6,372,700**
FY2011 Budget Request *(755 PFTs, 46 PPTs & 17 NPPs)*	**$97,077,800**

(The total change from FY2010 Final Budget to the FY2011 Budget Request is $8,133,300, which represents a 9.1% increase over the FY2010 Final Budget. Funding requested for the No Dark Courtrooms and the Geographic Differential for Non-Judicial Employees totals $2,848,900 or 44.7% of the requested FY2011 Operating Increments.)

Increments Summary *(organized by budget request unit)*

Appellate Courts

Court of Appeals Staff Attorney - from PPT to PFT **$20,900**

The court of appeals' caseload is becoming more complex and is requiring more assistance from central staff attorneys, who are experienced attorneys and permanent employees. Several years ago, by eliminating an administrative assistant position, the court of appeals was able to hire a part-time central staff attorney to help self-represented defendants, assist with law clerk training, and supervise the review of incoming briefs for compliance with the appellate rules. The appellate courts are seeking the additional funding needed to increase this part-time position to full-time.

Workstations, Office Equipment, and Replacement Furniture **$67,800**

The appellate courts have 56 permanent, full-time employees. Prior to FY10, the appellate courts received an annual operating appropriation of $9,200 for equipment and furniture, an average of $167 per position. In FY10, the court system requested an additional $117,800 per year for replacement computers, printers, workstations and office furniture. The legislature approved an additional $50,000 per year. This request is for the balance of the funding needed to insure the appellate courts have an on-going source of funding to replace outdated equipment and worn-out furnishings.

Travel for Juneau-Based Chief Justice **$9,400**

The geographic distribution of the supreme court results in additional travel expenses, particularly when one of these justices serves as chief justice. With this position comes the responsibility to participate in interagency meetings, court functions, and official events, many of which occur in Anchorage.

Copy on file

Alaska Court System
FY2011 Operating Budget Request

Administration

New positions **$526,400**

Human Resources Generalist, 12A, permanent, full-time ***$69,900***

As a result of increased caseloads and new court initiatives, the legislature has approved additional staffing for the trial courts. An increase in the number of positions directly affects staff workload in the areas of payroll and leave processing, recruitment, classification, evaluation tracking, and direct assistance to employees. The human resources department finds it increasingly difficult to meet recurring payroll deadlines and provide responsive customer service. When this department has a vacancy or an employee is on leave for more than a day or two, the department is forced to reassign staff, delay important quality control steps, and reduce staff availability to provide core services and assistance to court personnel.

Senior Accounting Clerk, 12A, permanent, full-time ***$69,900***

Fiscal operations requires an additional accounting position to handle the increased demands for management of accounting records associated with grants, reimbursable services agreements, contracts and general audit requirements. The fiscal operations department is minimally staffed within the accounting area. Efforts to improve efficiencies or save money in other areas of court system operations have resulted in increased administrative work for the accounting staff. Examples of the increased work include efforts by the travel clerk to ensure travelers are securing good fares for their travel as well as assisting travelers with finding inexpensive accommodations. Additionally, as the court receives federal pass-through funding from executive branch agencies, increased work is generated because reporting requirements for sub-recipients are extensive. Finally, the court system requires additional resources to assist with audit functions within the trial court accounting operations.

Records Technician, 10A, permanent, full-time ***$64,400***

Fiscal operations requires an additional records technician for the department to maintain continuous case file document scanning and to respond timely to the public's requests for records that are only available on microfilm, which is cumbersome to access. This position will assist with the court system's imaging project, which is an effort to scan and digitize court records for improved access by court staff, other governmental entities such as the Child Support Services Division, and the public at large. With additional staffing, the records management division will be able to expedite the scanning and digitizing of court documents for more efficient and timely access.

Alaska Court System
FY2011 Operating Budget Request
Administration (continued)

New positions (continued)

Contracts & Leasing Manager, 20A, permanent, full-time ***$108,700***

The court system operates 44 court facilities, most of which are leased from private landlords or other government entities. The court system has never had a permanent, full-time contracts and leasing manager, relying instead on a series of temporary, project-funded employees to perform this work. A contracts and leasing manager would work with court staff to identify space needs and technical requirements for new leases and service contracts and negotiate and manage leases and contracts for building services, such as janitorial, snow removal, and landscaping. In addition to monitoring contract compliance and fielding occupant concerns, this position will also manage small construction projects related to tenant improvements and maintenance work.

Integrated Justice Tech Support Manager, 22A, permanent, full-time ***$119,000***

Timely access to accurate information is critical to the effective operation of criminal justice agencies. The court system works with twenty other agencies through the Multi-Agency Justice Integration Consortium (MAJIC) to ensure that information sharing standards and best practices endorsed by that group are followed. An Integrated Justice Technical Support Manager is needed to implement and manage programming for information exchanges between different criminal justice data systems and databases; assist MAJIC agencies with technical design and development issues related to integrated justice projects; evaluate and make recommendations involving proposals and data exchange technologies and tools; provide quality control for MAJIC-endorsed data exchange projects; train MAJIC agency staff and contractors in relevant technologies; and assist in strategic planning for integrated justice. This position also assists with the initiatives of the Criminal Justice Working Group.

Security Analyst, 18A, permanent, full-time ***$94,500***

The court system requires a security analyst to organize and manage security projects and processes at court facilities throughout the state. The security needs of the court system are great and require a single point of contact to insure issues are being addressed systematically. This position will coordinate and oversee the installation of security systems, including access control, video surveillance, emergency communications, and badging systems. This position will coordinate with the Bureau of Judicial Services within the Department of Public Safety, local court management, and vendors and contractors to implement security controls and systems. This position will work with contractors to address statewide physical security policies and procedures as they relate to construction projects. This position will be responsible for security management and public relations, building security, information technology security, and emergency preparedness and planning.

Alaska Court System
FY2011 Operating Budget Request

Trial Courts

New positions **$1,459,700**

No Dark Courtrooms ***$1,365,700***

In the Alaska Court System's FY 2009 and FY 2010 budget requests, funding was sought for a new court initiative to improve courtroom operations around the state. The 2008 legislature appropriated funds for approximately one-fourth of the funding request and the 2009 legislature appropriated funding for another portion of the project, with the understanding that the court would seek further funding during the 2010 legislative session.

Past appropriations have supported projects in Palmer, Anchorage and Fairbanks resulting in courtroom efficiency through streamlining proceedings. In these locations, a second in-court clerk is now present during high volume proceedings so that case paperwork can be distributed to parties while in the courtroom, and data essential to public safety concerns can be immediately recorded in the court's electronic systems for dissemination throughout the justice system. Judgments, bail conditions, and court orders are available to defendants and attorneys without delay, promoting compliance and eliminating the need for subsequent paper processing and mailing. These improvements are not only a benefit to the court, but also to other justice agencies and ultimately the Department of Public Safety.

The court system was also able to add new court clerk positions in Kenai, Bethel, and Nome to address serious courtroom understaffing. The new positions help to ensure that no court proceedings are postponed or canceled due to the unavailability of court support staff, and reduce some of the pressure associated with inadequate staffing. The court system also added general clerical positions in Juneau, Naknek, Kotzebue, and Anchorage and was able to increase the hours of a position in Bethel.

For FY11, the court system is requesting the remaining positions needed to complete this initiative. The funding for the eighteen remaining positions will be used to hire additional range 10 clerical positions, range 12 courtroom personnel, and range 14 supervisory positions. The new courtroom positions will ensure that an adequate number of in-courts are available for court proceedings and also improve the court system's ability to train in-court staff. Given the complexity of the job, it currently takes approximately one year for an in-court clerk to be fully trained. The additional range 10 clerical positions will allow understaffed courts to keep up with data entry and distribution of orders and other documents.

Alaska Court System
FY2011 Operating Budget Request

Trial Courts (continued)

New positions (continued)

First District

Deputy Clerk II, Craig, 10A, permanent, full-time ***$28,000***

The Craig court is currently staffed with a magistrate III, a clerk of court, a full-time clerk and a part-time clerk. This request is to make the part-time clerk full-time to assist with the management of felonies and other superior court case filings now that the Craig court is a superior court filing site. The superior court judge based in Sitka regularly travels to Craig. The additional clerk hours will be used to support the additional work created by the superior court case activity.

Magistrate Trainer, Anchorage, 23A, permanent, part-time ***$66,000***

The third district has 20 magistrates and masters. Six deputy magistrates are regularly assigned weekend duty. The recent addition of an active, dedicated statewide magistrate trainer has been very beneficial, however, more magistrate training resources are justified for a district the size of the third. Because the majority of the district's magistrates and masters are law-trained judicial officers who rarely perform clerical duties, this training is not an appropriate responsibility for the district's Rural Court Training Assistant.

Facility operations, maintenance and leasehold improvements **$378,000**

Second District

Nome Court Facility ***$278,800***

The Nome court facility is owned by the federal government, which has advised the court system of its intent to remove this property from its inventory. Although current tenants are eligible to take over ownership of the property, so far the court system is the only entity that has expressed any interest. The building has been offered to the court system at no cost; however, the building is over 50 years old and has significant structural and system deficiencies. Ideally, the Nome court will be included in the plan to construct a Nome State Office Building. However, if that project does not materialize, then the best long term option for the court would be to take over ownership of the federal building it currently occupies.

There are several other tenants in addition to the court system. However, even when fully leased, the building operates at a loss due to high service and utility costs. At the end of the two years, depending on market conditions, it may be possible to increase the rental rate for other tenants. However, at least until then, additional funding is needed because the cost of utilities and maintenance, janitorial, parking lot sweeping, snowplowing, and elevator service contracts exceed the amount currently budgeted to be paid to the federal government in rent.

Again, this increment is needed only if a Nome State Office Building does not materialize and the court has to take over ownership of the Nome federal building.

Facility operations, maintenance and leasehold improvements (cont.)

Fourth District

Galena and Chevak Leased Space Increases ***$99,200***

Galena and Chevak could function as district court trial sites with increased space, thus better supporting the court's faimess and access goals. Trials in the busy Chevak area are presently conducted in Bethel due to inadequate space at this facility. The Galena court facility is small and the building is very old and becoming increasingly difficult to maintain, so the court seeks newer and larger space. Space for each court would be increased to 1200SF, at a cost of $4/SF in Chevak and $5/SF in Galena.

Court-wide Budget Requests

Elimination of Vacancy Savings Requirement for Judicial Positions — $574,300

Based on its size, the court system falls within OMB staffing guidelines for managing its personal services budget within a 4% - 7% vacancy factor. The court system has been managing with a 6% - 7% vacancy factor by holding vacated positions open for a 30-day period. To prevent further case backlogs, the court system has asked retiring judges to give sufficient notice to permit selection and appointment of their replacements before leaving their positions. To attain 0% vacancy of judicial positions, the court system needs to increase personal services budgets of the appellate and trial courts. Towards this effort, the court system received $250,000 in FY09 and FY10.

Geographic Differential for Non-Judicial Employees — $1,483,200

The Department of Administration has received a consultant's recommendation for changes to the geographic differential applied to salaries throughout the state. The differential currently paid to court employees is established by Alaska Statute 39.27.02 and was last changed over 25 years ago.

Differentials currently paid in several rural court locations under the statute are less than the differentials paid to employees under either the SU or GGU contracts. The court system's increment reflects the cost of adopting the recommended geographic differentials for locations favorably impacted by the change. Employees working in locations negatively impacted by the changed geographic differentials would remain on the existing pay schedules. As these employees are replaced, newly hired staff would be placed on the new schedules with the reduced geographic differential.

Transcripts Costs for Criminal Proceedings — $125,000

The court system prepares transcripts of criminal proceedings when the defense is provided at public expense. With the increased criminal caseloads, the demand for transcripts has dramatically increased. Coupled with this increased demand, fewer contractors are willing to accept work from the court because the payment rates are far below market standards. The court system is currently paying a per page rate of $2.65 - $3.05. The federal courts are paying a per page rate of $3.65 - $4.85.

Alaska Court System
FY2011 Operating Budget Request

Court-wide Budget Requests (continued)

Telephone and Teleconferencing Services — $98,000

In past years the court system used prepaid phone cards extensively to save on toll costs for long-distance phone calls. These cards were particularly useful for instate calls as local carriers charged from $0.115 to $0.18 per minute. With a prepaid phone card, the court system was paying $0.0283 or less than three cents per minute for calls made with a Sprint prepaid calling card. Effective October 2008, Sprint sold its interest in prepaid calling cards to a carrier that was unable to provide the instate calling services at the rates formerly offered by Sprint and did not have the facilities to insure that calls made to remote locations would be of sufficient quality to conduct court business. The court system pursued other prepaid calling card vendors, but none could provide a reliable service at less cost than amounts charged by the local carriers, two of which have agreed to charge $0.10 per minute for instate calls. The court system is requesting $42,000 to pay for these increased telephony costs.

The court system regularly conducts hearings telephonically. By court rule, parties convenienced by holding a hearing telephonically must pay the cost of the hearing. The court pays the telephone cost if the judge is able to avoid traveling to the hearing (cost savings measure). For other situations, the defendant, public defender, plaintiff or prosecution would be responsible for the cost of the call. Frequently the payer is another state agency. In the past, the in-court clerk would collect calling cards from the payers and place the calls. This was time-consuming and caused delays in court proceedings. To address the efficiency issue in high-volume proceedings with multiple parties in attendance, the court piloted a project wherein the court system used a teleconferencing service to coordinate the calls. Using the service resolved many issues and placed the burden of calling into the hearing on the parties rather than on the in-court clerk who frequently had to track down parties who may be at home, on their cell phone, at their office, etc. The vendor is extremely reliable and charges $0.059 per minute for each caller. The court system is requesting $56,000 in additional funding to expand the pilot project to include all telephonic proceedings and to pay the long-distance charges for telephonic proceedings that would generally be borne by another state agency.

Pro Tem Pay Increase — $174,700

Retired judicial officers are essential resources for the court. They are used for court coverage during judicial vacancies, to perform settlement conferences and cover proceedings when sitting judges are unavailable, and for special projects. In single judge locations, pro tem coverage is especially critical as no other judicial resource is available. Since 1997, pro tem judges have been paid a daily rate based on a $30 hourly rate. The court system requests the daily rate pay basis be increased to $75 per hour, which is comparable to the hourly rate for court-appointed attorneys and attorneys appointed by the Office of Public Advocacy (OPA).

Alaska Court System
FY2011 Operating Budget Request

Court-wide Budget Requests (continued)

Life-Cycle Replacement of Computer Systems **$250,000**

Automation of its case management system requires the court to regularly update its operating systems to be compatible with software versions and licensing requirements. Rapid advancements in computer technology require the court system to continually evaluate and improve its base of technological equipment. In the past, the court has received sporadic grant and capital funding to replace equipment and operating systems. To ensure a planned, life-cycle approach to replacement of these systems, a sustained source of funding must be incorporated into the court's base operating budget. Experts recommend replacement cycles of three years for PCs and four years for printers. The court plans to keep its equipment in place for an additional year beyond the recommended guidelines, but requires a sustained funding source to facilitate this cycled approach.

Language Interpreter Center **$25,000**

The Alaska Court System is involved in a multi-agency collaboration to establish the Language Interpreter Center (LIC). The LIC has three goals: train interpreters on skills and ethics; train professionals on the roles and responsibilities of working with interpreters; and provide a referral service for government agencies, nonprofits, and businesses in need of qualified interpreters.

The court system is required to provide language interpreters for certain criminal proceedings. A recent interpretation of federal law suggests that parties, victims, and witnesses with limited English proficiency may be entitled to court-paid interpreter services for any type of court case. Prior to the development of the LIC, training and certification of interpreters was not available anywhere in Alaska. To support the on-going efforts of the LIC and to ensure that a pool of certified language interpreters is available to the court system, contractual funding is needed to pay for interpreter services and training.

Increase Funding for Family Law Self-Help Center (FLSHC) **$100,000**

The FLSHC assists pro se litigants (litigants without lawyers) throughout the state. Assistance is provided primarily over the phone and via the internet through the court's website for cases such as divorce, dissolution, child support and other family-related law. This operation is currently supported by federal funds that available to the Child Support Services Division, which has budgeted an additional $100,000 for pass-through to the court system. This will be accomplished through an interagency agreement.

Alaska Court System
FY2011 Operating Budget Request

Court-wide Budget Requests (continued)

Custody Mediation Program **$125,000**

Mediation offers parents an opportunity to create co-parenting plans for their children in a non-adversarial, confidential, informal setting with a trained and experienced neutral mediator. This request is an outgrowth of the success of the mediation services provided through the court system's Child Custody and Visitation Mediation Program (CCVMP) for over 10 years. Over a recent 18-month period, referrals to mediation increased sharply, resulting in a 250 percent increase in costs, an amount not sustainable by the federal grant that funds this program. The legislative intent of this recurring $100,000 federal grant is to promote access of non-custodial parents to their children, and recent interpretation of allowable services under the grant suggests grant-funded mediation should be reserved for post-decree modifications of custody orders. While an important point for mediation, it does not offer the preventive impact of early intervention.

The court system seeks to leverage grant funds to provide an important continuum of mediation services to parents and maximize court resources. The focus of state funding will be to assist parents in conflict over physical and legal custody issues regarding their children and the initial court filing, prior to a decree. Mediation early in domestic relations cases helps parents resolve their conflicts, establish cooperative co-parenting, and reduce the negative impacts of on-going custody disputes on their children.

Mediation is not appropriate in every case and this project will develop referral protocols, including screening for domestic violence for the more than 3,000 annual filings, about 54 percent of which are pre-decree, involving custody disputes in domestic relations cases. The pool of private contract mediators will be expanded and given specialized training. The program will evaluate its outcomes, including the impact of early mediation on later litigation and expects to find that successful mediation of the initial co-parenting plan results in a significant decrease in later contested motions for modifications.

Mental Health Trust Authority Project Funds (MHTAAR) **$955,300**

The therapeutic courts are requesting Mental Health Trust Authority funds for the following projects: Treatment Funding for Therapeutic Court Participants $500,000; Fairbanks Juvenile Therapeutic Court $245,900; Mental Health Court Expansion - Targeted Communities $204,400; and Access to Timely Neuropsychiatric Evaluations $5,000.

Total Operating Budget Increments **$6,372,700**

Alaska Court System Ten Year Expenditure Projection

The Alaska Court System is the primary entity in the Judicial Branch of state government. Its main purpose is to handle criminal and civil cases. The court system does not initiate this caseload; its work is generated entirely by the individuals, organizations, businesses, governmental agencies, and other entities that file cases.

Because the court system's workload is created entirely by others, it is difficult to predict how this workload might change in the future, other than to note that increases in population have historically meant more cases. The workload is also greatly impacted by the laws that are enacted by the legislature each session. The court system cannot predict future statutory changes that will impact the caseload.

FY11 Funding Levels – Amounts included for FY11 reflect the court system's FY11 operating and capital budget request.

FY11 Strategic Initiatives – In FY10, the court system requested and received partial funding for the second phase of a significant court initiative called "No Dark Courtrooms". This initiative improves courtroom operations around the state. In its FY11 operating budget, the court system is requesting the balance of the funding required ($1,365,700) to completely implement this project. This initiative has a far-reaching impact on the justice agencies serving the state. Improvements made under the first two phases of the project have included expedited dissemination of data such as criminal judgments, bail, and conditions of release that are essential to public safety, as well as the distribution of documents such as copies of orders and notices of next hearing dates while the parties are in the courtroom.

Another initiative included in the FY11 planning document is the addition of one superior court judge and related staff in FY11 with a second added in FY13. Long-term trends in the court system's caseload support adding the superior court judges in Anchorage. Additional superior court judges can only be added through legislation so the judge required in FY11 does not appear in the court system's FY11 operating budget request.

FY12 – FY19 – Lacking information about future changes in the law and other factors that may increase the number of case filings (such as the state of the economy or the number of municipal law enforcement officers), the funding requirements for FY12 – FY19 assume no significantly changed workload. For future years, the court system has applied the 2.75% inflation factor suggested by OMB for projecting operating funding required for the future periods. Capital funding required for FY12 – FY13 is based on capital projects currently identified in the court system's capital budget request. The annual capital project funding requirement for FY14 – FY20 is projected to be $6 million.

Impact of Gasline Project on Court Operations – The court system is unable to determine the increased costs that will result from the development of the gasline with the information it has available. During the 1970s, the criminal and civil caseload of the court system was impacted by the construction of the Trans Alaska Pipeline System (TAPS). This increased workload was the inevitable result of oil field

construction projects that employed over 30,000 persons. The surge in workers resulted in significantly higher caseloads and court costs in Interior Alaska, with lesser impacts in other parts of the state. While the scope of the gasline project will not be as great as the TAPS project, we do not have enough information to project increased costs at this time. More accurate cost information will be available as this project progresses.

1. We have a relatively small budget (adjusted base this year is about $91 million); about 1% of the total state budget. Smaller than many departments.

HOW WE PREPARE OUR BUDGET – similar to the multi-step process the Exec goes through: local court→ACA→Admin→supreme court. However, we don't prepare a political budget. Basically it is what we can absorb in a fiscal year that would let us operate at peak efficiency. We don't expect it to be fully funded, and we work closely with the chairman and Leg Finance to decide what is most needed, taking into account the money that is actually available.

Like the legislature, we are not covered by the Executive Budget Act. The governor does not have the authority under the constitution to prepare our budget for submission to the legislature. His authority is limited to vetoes on the way out of the legislature. We had a problem last year, same problem as with Hickel 1, Hammond, Hickel 2, Murkowski. Tried to reduce our budget on the way in. This year they just passed it through.

2. CHALLENGES We have several big challenges:

A. We told you last year that we had just received word that ASEA and APEA were going to try to unionize us. IBEW in the mid-90's (didn't get pay raise), expensive, decrease of managerial prerogative at a time of declining revenue. They are continuing these efforts and have had a number of informational meetings around the state. The very low geographic differential paid to many court employees compared to the union rate is the major selling point. I'll get back to that in a moment.

B. Escalating costs. One way we address these with a 30 day hiring freeze. We rarely have a supplemental; we typically do a good job of living within limits you set. That being said, we have a small one this year which actually is a request that you let us keep $35,000 that we got in a legal settlement that we turned over to the general fund. Phone cards: by using phone cards, we've been saving over $40,000 year. That has ended.``

C. Criminal caseload increases (more arrests even though the crime rate is down).

D. We don't control our own workload. We have to take every case that comes through the door. Most have to be handled within certain timeframes.

3. INITIATIVES two big ones that were in the FY09 and FY10 budgets and were partially funded in both.

A. No Dark Courtrooms. Put more clerks in courtrooms. In FY 09, funded 8 positions, and in FY10 funded 6 plus 2 upgrades.

Busy in courtroom (reporter, stenographer, bailiff) more complex than past, not enough to have court in some locations, not enough to do stuff on the bench.

(FY09 projects in Anch, Fairbanks, Palmer, and fixed understaffing in Nome, Kenai, Bethel; in FY10 Anch, Juneau, Seward, Naknek, Kotzebue, Bethel.

B. reduce judicial underfunding

We run about a 6 - 7% underfunding in personnel services. We really should be about 3%. We make it work with clerical staff with hiring freeze. More problematic with judges. Making effort to fill judgeships immediately. Our goal is 0% underfunding for judicial positions; 250,000 last year and 250,000 year before. 575,000 to get to 0%.

C. New superior court judge in Anchorage for civil cases. Anchorage is one of the busiest courts in the state; statistically could justify 3 new judges in superior court, 1 in district court. $440,000 court system cost plus other agencies.

D. Nome building

The Nome court is in the federal building, which is being surplused. No place else to go in Nome. We have right of first refusal, and have said we will take it if the legislature funds it (279,000 operating increase, FY11 3.8 million capital, FY12 4.8 million). If it is given to someone else, we would have 2 years to find new space. DOT has designed a Nome State Office Building which is not in the capital budget.

E. geographic differential

$1.4 million to implement McDowell Study w/grandfathering. We are currently covered by statute but can change geo dif through budget process.

2/3/10

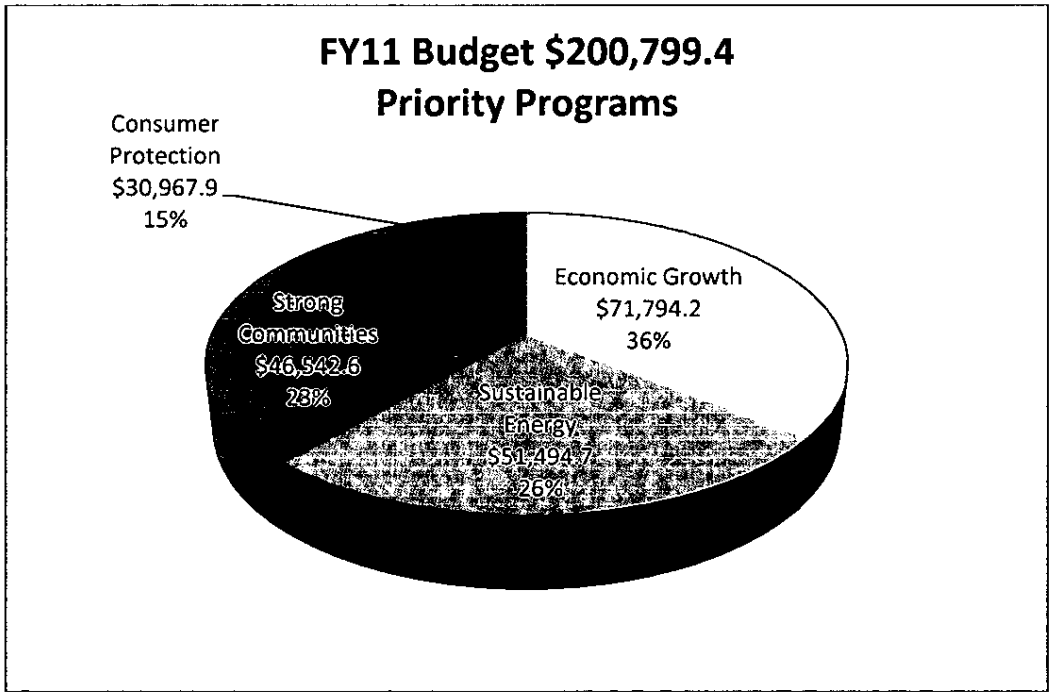
DEPARTMENT OF COMMERCE, COMMUNITY AND ECONOMIC DEVELOPMENT
Department Overview
February 2010

- **The FY11 Governor's Operating Budget is $200.8 million, a 3% increase over FY10.**
  16% GF 33% Federal 51% Other

- The mission of the Department of Commerce, Community, and Economic Development is to promote a healthy economy, strong communities, and protect consumers in Alaska.

- The department works to achieve this mission through the efforts of nine core agencies and five corporate agencies that provide a wide range of services, including:
  - Access to capital markets for businesses
  - State grants and loans
  - Programs aimed at key economic sectors such as electric power generation, tourism, mining, fishing, and aerospace
  - Marketing of Alaska products and visitor attractions
  - Regulation of banking, securities and corporations, insurance, occupations and public utilities
  - Assistance to local governments and unincorporated communities in the form of grants, technical assistance, financial and utility management, planning and energy management

- We currently have 529 full time positions in eleven locations.



PRIORITIES

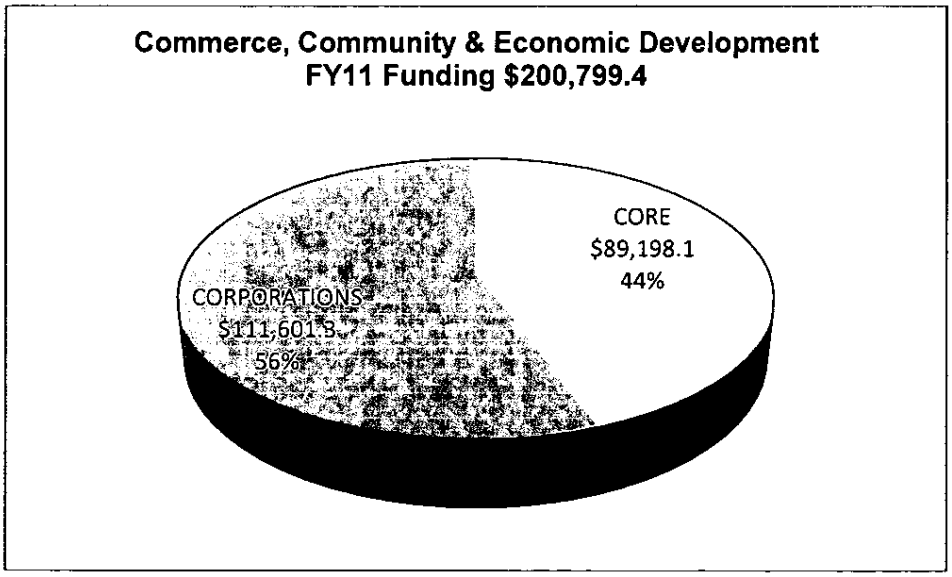
- The department is committed to the priority of economic growth to provide full employment of Alaskans. Successful development will require that a foundation of sustainable energy for Alaskans and businesses be in place. Significant department resources are dedicated to both of these priorities, including 62% of the total budget and:
  - **85% of the GF budget is for economic growth & energy ($28 million)**

- At the same time that we pursue energy solutions and economic growth, we need to strengthen our communities so they will be able to benefit from and take advantage of the future opportunities. We need to protect our communities and the state/federal investment in rural infrastructure. About 23% of the total budget is committed to this priority, this includes $30 million in pass thru dollars and:
  - **14% of the GF budget is for strong communities ($4.6 million)**

- Another area of primary concern to the department is a stable business climate and consumer protection through the regulation and enforcement of insurance, banking, corporations, business and professional licenses, and utilities. This priority is funded primarily by fees and it accounts for about 15% of the total budget.

CHALLENGES

- Briefly touched on above is the diversity of agencies and functions that fall under the department's purview. The corporate agencies, although aligned with the department's mission, operate more independently than core state agencies. In this department, the corporate agencies account for 56% of the total budget and close to 40% of the positions.
  - **87% of the requested FY11 budget change is Corporations related**



- With the global economic downturn, many of the challenges identified in prior years continue to pose difficulties in the department's effort to achieve its' mission, including:
    - Sustainability of communities due to increased operating costs, staff turnover, and potential for reduced federal funding
    - Lack of infrastructure and the high cost of doing business in rural Alaska
    - Ability to attract and evaluate diverse economic development projects
    - High energy cost that impacts tourism, local communities and economic development efforts

ACCOMPLISHMENTS

- Re-established the Alaska Film Office

- Helped nine new tourism businesses get started through the Tourism Mentorship program

- Administered over 1,400 grants with a value in excess of $766 million

- Community & Regional Affairs presented 39 trainings throughout the state on bookkeeping, land planning, utility management, and tax assessment.

- As one of two lead states, Alaska demonstrated that state regulation of insurance is the ideal model by which the industry should be regulated. Alaska's actions resulted in a substantial settlement that brought reform to a nationwide company, and increased protection to policy holders.

- Insurance also entered into a settlement that put an end to a company's practice of selling benefit policies that failed to contain the benefits mandated by Alaska law, requiring restitution to 145 consumers

- AEA completed five bulk fuel system upgrades and six rural power system upgrades and implemented the Renewable Energy Fund legislation. As of January 2010, 75% of renewable energy projects were under way with $69 million in grants issued and $19 million in grant payments made.

- AIDEA :
    - Completed installation of a second ship lift and grounding grid for the Ketchikan Shipyard. This helps to expand the shipyard's capacity to build and repair marine craft on a year round basis
    - Completed the first phase of upgrades to the Skagway Ore Terminal
    - Completed the Strategic Management Plan

- Aerospace executed the first year of a new contract with the Missile Defense Agency, with two rocket launches scheduled in FY10.

- ASMI – Alaska seafood has become one of the top three food brands on the menus of the top 500 U.S. restaurant chains.

SERVICE DELIVERY FOCUS FOR FY 11

- The next year will be one of increased scrutiny and focus on the economic development function within the department core agencies and in the coordination with corporate agencies. Curtis Thayer, the department's new Deputy Commissioner, is charged with overseeing this initiative and is available to provide more information on that effort.

- There is a growing need for assistance in our most at risk communities, and we are developing strategies to respond to this situation. In FY 11, the Division of Community & Regional Affairs plans to:
    - Increase the effort to strengthen a community's capacity to provide essential services through local government assistance
    - Administer $ 24 million in federal Coastal Impact Assessment funds
    - Provide communities with increased assistance on ANCSA 14 (c) (3) land management, site control and land status verifications that are needed to ensure clear title on village corporation land.

- On the regulatory front, we need to ensure that adequate resources are applied to performing the basic core services that protect consumers and assure financial solvency of entities – particularly in a period of economic downturn. Our budget request includes small increments to continue these services for both the Banking and Insurance divisions.

- ASMI requests $1 million for a major sustainability campaign in Europe and to maintain its purchasing power abroad. In addition, ASMI plans to take advantage of an existing opportunity to capture more of the domestic market due to reduced Chilean imports resulting from farm diseases.

CONCLUSION

In conclusion, the state and the department have many challenges to address on the path to economic growth and sustainable communities. We look forward to a continued discussion on how to keep the forward momentum, and on the role of the department's core and corporate agencies in this statewide effort. The department's FY11 budget request reflects a commitment to continue the services of our priority programs for economic development, energy, strong communities, and consumer protection.

Thank you for your time today, and I'll now ask our Administrative Director to present the Operating Budget Overview.

2/3/10

Remarks by Curtis Thayer, Deputy Commissioner, DCCED
February 2010

Good morning & thank you for this opportunity. Today, I want to share how Governor Parnell and the Department of CCED are working to change the direction of state government and positioning Alaska for economic growth.

Governor Parnell believes the role of state government is to create an environment that is conducive for private sector investment and sustainability. He understands the state plays a critical role in developing Alaska's economic foundations. Our focus, as mentioned by Commissier Notti, will be:

- Enhancing transportation systems
- Improving workforce development and training at all levels
- Developing Alaska's energy and other resources
- Removing barriers that inhibit opportunity and growth.

To assist in this important effort, the Governor has added several new advisors tasked with resource and economic development. Gene Therriault is focused exclusively on development of Alaska's energy resources. Susan Bell joined the Governor's Office in October, bringing a private-sector perspective and experience in economic and community development.

And I was hired as Deputy Commissioner of DCCED. Building on my own private-sector experience, I am responsible for the economic

development aspects of the department and for increasing coordination with other economic development organizations inside and outside of state government. I directly supervise:

- Office of Economic Development.
- Division of Investments and the many small business loan programs they administer.
- Divisions concerning banking, licensing, and insurance.

Facilitating economic development requires aggressive outreach and a steady commitment to forging meaningful, productive public-private partnerships. The Office of Economic Development will foster economic development by administering programs and providing data and services that encourage private-sector investment in Alaska.

This is about growing our economy. By aggressively reasserting the state's role in creating a business-friendly climate conducive to responsible, sustainable development, we can raise real income and improve the quality of life for all Alaskans. Economic development is neither a destination, nor a checklist of activities. It is an ongoing process requiring constant adjustment and quick responses in an environment that is never static. DCCED's mission statement highlights two key objectives – building a healthy economy and strong communities. However, the resources dedicated in pursuit of the first half of the mission consist of 16 employees with a budget of $3,271,200, of which $338,000 is from the General Fund.

The Office of Economic Development will work with each industry sector to create short-term action plans that will be tied to DCCED and Administration objectives. It is imperative that OED develops these business plans in order to make decisions about priorities, allocating and managing limited funding and human resources, and measuring results

from year to year. A business plan will help communicate a realistic role for OED to the public and set practical expectations about what government can do to facilitate economic development and create the conditions for meaningful growth.

At present, there is insufficient coordination among key organizations. As a result, unnecessary competition for resources ensues, often along with duplication of services and/or underutilization of staff skills. The Office of Economic Development should enable the state to act as a facilitator and clearinghouse for information and economic development services. Even if we could just coordinate the resources within state government, we could claim a measure of success where previous Administrations have tried, but fallen short. I want to send a strong message of the Administration's intent to work closely with the Legislature and private sector toward common goals.

While I am in here today and during the session, I hope to hear from you about ideas, concerns, and suggestions for how the Governor and DCCED can help you achieve our goals.

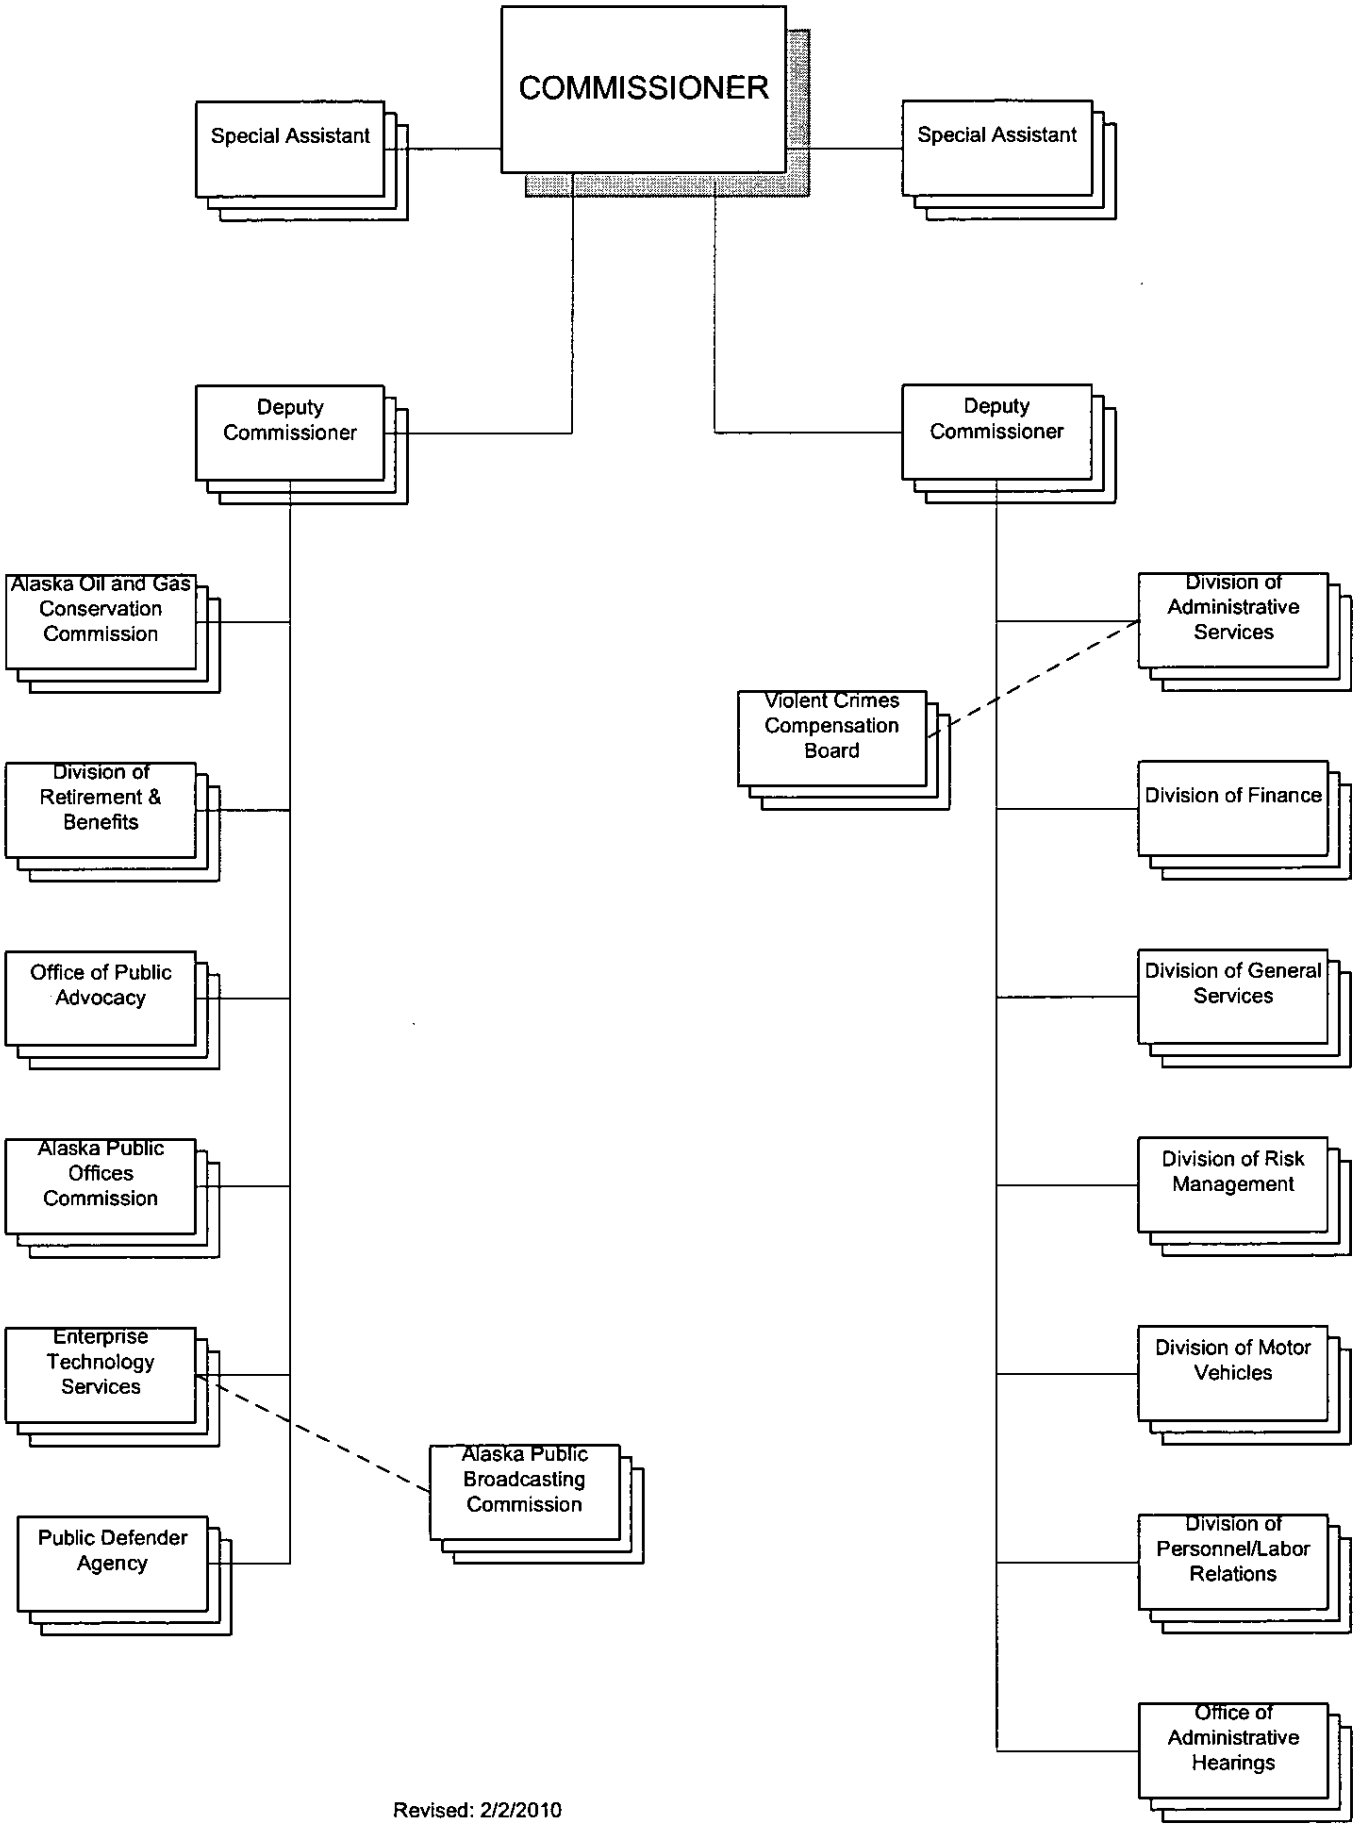
DEPARTMENT OF ADMINISTRATION



Revised: 2/2/2010

Department of Administration – House Finance Committee Overview
Wednesday, February 3, 2010

Budget Report and Program Update

Office of Administrative Hearings – No Substantive Budget Items
Program Update

The Office of Administrative Hearings (OAH) has increased the use of alternative dispute resolution (ADR), especially mediation, to resolve cases of all types. A mediated resolution is a quicker, more cost-effective resolution and, importantly, gives the parties a greater sense of self-determination in the outcome. OAH has also made good progress on the project to make electronically available a database of decisions from administrative adjudications. More than one thousand decisions have been posted to OAH's webpage in a keyword searchable form, together with links to other agencies' webposted decisions or decision indexes.

Division of Finance – No Substantive Budget Items
Program Update

Electronic Payments – Electronic payments legislation (AS 37.25.050) became effective January 1, 2006. Since this law passed, the Division of Finance has focused a variety of efforts on increasing the number of electronic payments, in alignment with the primary strategy in the department's FY 11 IT plan: Increase number of EDI (electronic data interchange vendors), which allows for automating processes, and facilitates the alignment of information technology with business objectives. During FY 2009, 702 vendors were newly enabled to accept electronic payments; between July 1 and December 31, 2009, an additional 2,110 were added, many of whom are foster parents.

Payroll - Acquired personnel with highly specialized expertise to support our aging payroll system. In addition, accomplished three major initiatives:

1) May 2009 - Rekeyed the entry screens for timesheets and leave slips to eliminate the need for Social Security Numbers, fixing a long-standing vulnerability for this confidential information. This effort was part of the department's overall effort to improve security over personal information following passage of the Personal Information Protection Act (HB 65) last year.
2) July 2009 – Created Employee Documents Online, a secure website for employees to access personal and other information specific to themselves. Employee pay stubs were posted to this website beginning in July, and we discontinued printing paper advices in August. This saves the State over $130,000 in paper stock and postage; and these savings are shared by all State agencies through reductions in mailroom costs chargeback.
3) July 2009 – Initiated the ASSET (Alaska Statewide System for Employee Time) project to implement a web-based time and attendance system to capture labor hours and leave for payroll processing. This system will replace paper timesheets and leave slips with automation that allows employees to enter their own information, enables electronic signatures, and consistently enforces our business

rules with edits. The system will interface directly with the existing statewide systems, as well as those that eventually replace them.

E-Travel – Newly created budget component. All funding transferred from State Travel Office.
During 2009 the department made substantial improvements to the State's managed travel program. A competitive procurement resulted in a new travel management contract with USTravel, which features an online booking tool implemented in November. Under the new E-Travel program, travelers and their travel planners can research options in live inventory and create itineraries based on their selections. The first month of operation had an astounding adoption rate for the tool, with 50% of bookings purchased without travel agent assistance, for which the State pays a lower fee. Some of the features of the new E-Travel Online tool include: accessed with the State's enterprise password, unused ticket tracking, templates for reoccurring trips, copy function for booking the same itinerary for multiple travelers, edits and custom text for the State's preferred vendor contracts (like Alaska Airlines and Budget Car Rental), and a dashboard with "how to" information and links to State travel policy and procedures.

The budget does include an increment request of $600.0 I/A to bring the budget into alignment with prior years and the projected level of expenditure for FY2011.

Division of Personnel and Labor Relations (DOP/LR) – No Substantive Budget Items
Accomplishments:

- Implemented pay increments for GGU, SU and CEA January, 2009
- Geographic Differential Survey completed April, 2009
- Human Resources Structure Review completed September, 2009
- Salary Survey completed December, 2009
- Successful negotiations with IBU, MMP, MEBA

Division of General Services
Budget Changes:
The Leases budget has an Interagency Receipt increment of $3,117.9. This amount is the difference between FY2010 I/A authorization and the projected total of lease costs for FY2011.

The Facilities budget has a Public Building Fund increment of $2,000.0. This is the amount projected to be necessary to add to FY2010 authorization to operate and maintain the eleven facilities in the PBF group. They are the Robert B. Atwood building, the Fairbanks Regional Office Building, the Juneau State Office Building, the Dimond Court House, the Linny Pacillo Parking Garage, the Palmer State Office Building, the Alaska

Office Building, the Douglas Island Building, the Court Plaza, the Juneau Public Safety Building, and the Juneau Community Building.

The Central Mail budget has an Interagency Receipt increment of 300.0 to bring the CMS budget into alignment with prior year expenditures and to provide some ability to absorb postage rate increases.

Division of General Services Program Updates:

LEASING/FACILITIES

Substantial construction at the Palmer State Office Building is well underway, remains on schedule, and will result in collocated state agencies serving Mat-Su citizens that will ultimately reduce agency occupancy costs.

Numerous energy efficient improvements to state-owned buildings have been finished or are currently underway, such as new energy efficient boilers in the Atwood, Dimond Courthouse and the Juneau Community Building, all of which will appreciably reduce energy consumption and result in cost savings for the public building fund.

PURCHASING

During FY09, DGS purchasing saved an estimated $34 million through the administration of over 150 contractual agreements. Many of the contracts are available to political subdivisions. For the period, state agencies saved an estimated $26.1 million while political subdivisions saved $8 million.

DGS Purchasing offered 34 separate procurement training courses to over 650 state employees.

Five DGS purchasing staff members received certification from the National Institute of Governmental Purchasing as Certified Professional Public Buyers (CPPB). DGS was awarded the Universal Public Purchasing Certification Council Agency Certification Award. This award is presented to agencies as formal recognition of the agencies commitment to the value of certification in the public sector. Qualification for the award requires that a majority of an agencies staff be certified at the CPPB level.

PROPERTY

DGS successfully re-negotiated an agreement between the Federal General Services Administration and the Small Business Administration. This resulted in Alaskan 8 (a) companies, also known as disadvantaged companies, to acquire federal surplus property at a fraction of the cost of new equipment.

CENTRAL MAIL

Efficiencies gained through replacement of aging equipment will ultimately result in cost/labor savings due to increased speed in processing outgoing mail and eventual automation of return receipt processes.

Division of Retirement & Benefits
Budget Changes:
The Elected Public Officers Retirement System (EPORS) budget has a GF increment request of $600.0. This figure is based on projections of EPORS costs in FY2011.

The Group Health component has a $3.0 million decrement to bring the budget into alignment with projected spending for FY2011.

Division of Retirement and Benefits (DRB) Program Updates:
- Transitioned to a new 3rd Party Administrator for Health Insurance.
- Conducted three comprehensive benefits fairs around the state.
- Designed and implemented myRnB, a single-sign-on solution for authentication of DRB application-users that requires a myAlaska user-created username and password.
- Migrated Employer Access, the information portal for DRB employers, to utilize the myRnB login. This eliminated the use of SSN as username and brought this application into compliance with the Alaska Personal Information Protection Act (HB 65).
- Migrated Member Services, the information portal for DRB members, to utilize the myRnB login. This eliminated the use of a social security number as username and brought this application into compliance with HB 65.

Enterprise Technology Services (ETS)
Budget Reorganization:
The FY2011 budget separates the State of Alaska Telecommunications System (SATS) and the Alaska Land Mobile Radio (ALMR) from the (ETS) budget component, and puts the two programs into individual budget components. This was done in order to be enable to look at and discuss the budgets of SATS and ALMR in some more detail and clarity than was possible when the three were combined. No increases, other than a small salary and health insurance adjustment for ETS, are requested for these components.

ETS Program Updates:
Over the last year, ETS has made significant improvements in the following areas:

- Deployed technical upgrades that resulted in doubling or tripling of Wide Area Network (WAN) bandwidth in multiple areas (Juneau, Anchorage, Fairbanks, Ketchikan, Sitka, the Kenai, the Mat-su, Bethel and Westward, among them);
- Completed technical deployment of a land-based microwave connection from Bethel out to Emmonak, Aniak, and St. Mary's, bringing these areas into the State of Alaska (SOA) WAN;
- Performed two (2) Initial Program Loads (IPLs) on the SOA Mainframe with just four (4) hours' downtime for the entire year, two (2) hours of which were unplanned downtimes;
- Moved mainframe customers from a non-secure to a secure TN3270 server as well as from a non-secure to a secure FTP server successfully;

- Deployed an IBM Bladecenter in the Juneau Data Center (JDC) with a fully redundant Storage Area Network (SAN) that supports more efficient management and retrieval of email;
- Completed power, cooling, and cabling upgrades for the JDC as well as relocated the Network Operations Center (NOC) in the ETS Juneau office.

Alaska Public Broadcasting Commission
Budget Changes:
The Public Broadcasting Radio component has a decrement of 250.0 GF for FY2011. This reflects the removal of a one-time increment added in FY2010.

AIRRES Grant
No Budget Changes.

Division of Risk Management - No Substantive Budget Items
Program Update
A formal RFP for broker services resulted in fee reduction and increased insurance protections – i.e. marine liability increased from $50 to $500 million for state fleet – including pollution.

Upgraded risk management information system (RMIS) to initiate optical character scanning (OCS) of all medical billing statements to capture individual procedure coding (CPT etc) to better able future analysis of medical cost trends in workers' compensation claims.

Starting March 1, 2010 RM will be required to report certain qualifying claims to the Federal Center for Medicare/Medicaid Services (CMS) offices. CMS regulations apply to self-insurance plans as well as insurance companies. CMS requires their interests be protected prior to any settlement of the medical portion of a claim for qualified individuals. Penalties for noncompliance are $1,000 per claim, per day. RM is working with the software database vendor in order to be able to meet the deadline.

Alaska Oil & Gas Conservation Commission (AOGCC)
Budget Changes:
$1,150.9, which is the amount equal to the projected unexpended balance of prior year funding for gas line evaluation work, is requested for FY2011 to enable the AOGCC to complete their gas line work.

AOGCC Program Update:
The AOGCC covered a very wide range of issues in 2009, the 50th anniversary of its existence. The history of the agency, including a discussion of its many accomplishments through the years, can be found in the recent publication "AOGCC, 50 Years of Service to Alaska", available on request from the AOGCC.

Within the past year some of the more important AOGCC projects included:

- Assisted in progressing Point Thomson Unit development by approving two permits to drill, providing field inspection oversight for those two presently drilling wells, and continuing to work on a major reservoir study of the field.
- Assisted the DNR in approving permit to drill and conducting field inspections for the Naknek Electric Association geothermal well helping to develop a potential new renewable energy source for Alaska.
- Adopted and began enforcing new regulations for suspended wells, clarifying and tightening requirements for long-term shut-in and suspended wells, which should help protect the State from increasing expensive orphan well liability.
- Worked with operators and DNR to ensure that multiphase metering systems would maintain sufficient accuracy for custody transfer allowing Alaskans to receive their fair share of oil and gas revenues.
- Successfully managed the Class II Underground Injection Program for the EPA which protects Alaska's underground sources of drinking water. EPA audit of our performance was extremely complimentary.
- Filled two engineering vacancies, thus improving our efficiency and effectiveness at reviewing permits to drill, sundry workover permits, and various orders. This will enable profitable projects to be started sooner.
- Hired a summer engineering intern from UAF, giving an Alaska college student (and a possible future oil and gas engineer Alaska) exposure to Alaska's oil and gas regulations and a valuable summer experience for his resume. With an aging work force young petroleum engineers are rare and needed in the State.
- Continued to provide significant support for DNR's effort to establish a modern new Alaska Geologic Materials Center. The new center will allow better access to resource scientists in their search for new economic hydrocarbon and mineral deposits.
- Provided technical support to Governor's Task Force on Climate Change and identified options for minimizing emissions of methane and other greenhouse gasses associated with oil and gas production in Alaska.
- Supported DEC and PSIO in conducting an Alaska oil and gas infrastructure risk assessment and regulatory gap analysis thus helping to reduce risk to the environment from oil spills.
- Continued to expand the AOGCC's computerized well and production data base which will enable faster and more efficient access by oil and gas operators interested in investing in Alaska.

Office of Public Advocacy (OPA) – No Substantive Budget Items

OPA Program Updates:
Court Appointed Special Advocate Program
OPA's Court Appointed Special Advocate program recruits, trains, and supervises community volunteers to serve as Guardians ad Litem for abused and neglected children in the state's protective custody. The work of this volunteer core supports and supplements the work of OPA's professional GALs and allows OPA to make more efficient use of its child advocacy resources.

Last year OPA added a part-time CASA coordinator in the Mat-Su Valley to expand the CASA program to help offset the work of the professional GALs due to the growing CINA caseload. As a result, the Mat-Su Valley CASA Program underwent a dramatic expansion throughout FY 09 and the first half of FY 10. Since the beginning of FY 09 the program increased its number of trained volunteer guardians ad litem by 114% and increased the number of children being served by volunteer GALs by 104%. The program now has 30 active volunteers serving 53 abused and neglected children.

OPA Public Guardian Services
In FY 2009, OPA experienced a 13.6% increase in the number of public guardian clients. To slow the growth of OPA's public guardian caseload, the agency has developed a new Family Guardian Program.

For years, the agency has provided a monthly class to teach community members how to file guardianship petitions on behalf of their loved ones. In FY2010 OPA began providing a new set of training programs aimed at teaching friends and family how to become successful guardians or conservators for their incapacitated loved ones. The classes include sections on the court process, applying for benefits, finding housing, and the guardian's authority over the ward. By providing this training, we hope to enable many more private citizens to serve as guardians and conservators so that fewer people will have to turn to the state to provide this service. Accordingly, we hope to slow the growth of the OPA public guardian caseload and to assist families and friends with maintaining greater involvement in the care of their loved ones.

OPA Office of Elder Fraud and Assistance
During FY 2009, OPA's Office of Elder Fraud and Assistance recovered (through settlement or court order) $462,253.30 in assets for Alaskan elders who were the victims of fraud or financial exploitation.

So far during FY2010, Elder Fraud has recovered $1,558,795.10 in assets for defrauded elders.

Public Defender Agency (PD) – No Substantive Budget Items
PD Program Updates:
Paralegal Program: The Agency implemented its paralegal program in Anchorage, Palmer, Kenai, Juneau, and Bethel. Paralegals manage discovery and perform conflict analysis. This program has allowed the Agency to complete certain required tasks using lower cost paralegals, rather than high cost attorneys. This program has also increased the Agency's ability to absorb case loads by increasing available time for Attorneys to prepare and resolve cases.

Resource Management: Case Management System. The Agency has completed the implementation of a case management system. The Agency has generated reports for FY2009 and completed an audit of each office. These reports have generated a more detailed picture of case workload and case management.

Regional Restructuring: The Agency has grouped its smaller offices into regional units. This has allowed the Agency to increase the oversight and management of smaller offices by placing multiple offices under one supervisor. This also allows the Agency to allocate or reallocate resource more efficiently by viewing the region as a single entity for caseload and staffing level evaluations.

Resource Reallocation: The Agency has used the detailed data from the new case management system in conjunction with the increased capacity and oversight from the regional management structure to reallocate resources. Two positions were moved in FY10 to Fairbanks—one from Barrow and one from Anchorage—to accommodate the caseload increases in the Fairbanks office. This will assist the Agency in absorbing caseload increases.

Violent Crimes Compensation Board
Budget Changes:
Additional federal receipt authorization in the amount of $150.0 is requested to enable the Violent Crimes Compensation Board to use anticipated increased federal grant funds to pay claim awards. Also requested is an increment of $297.9 of PFD criminal funds to pay awards for claims received during FY2011.

Program Update:
The Violent Crimes Compensation Board dealt with an increased number of claims in FY09 and paid out a record $1.7million in awards to innocent victims of crime.

This year the Board has instigated a number of efficiency measures: first, it purchased laptop computers for the three Board members. This has drastically reduced the time and cost involved in preparing for Board meetings, as instead of photocopying, and subsequently shredding, claim files, documentation is now scanned and delivered to Board members securely via thumb drives. Board members are pleased with this new system which is working effectively.

Second, instead of two staff members routinely travelling to Anchorage for Board meetings, only the Administrator attends, thus reducing travel expenses. In the Fall of 2009, the Board approved and produced a new informational poster that has been distributed throughout the state to hospitals, physicians, law enforcement and victim service agencies. This will help make VCCB program services known to crime victims.

Finally, the VCCB recently purchased a license for on-line conferencing software which will enable staff to deliver interactive training seminars via the web to victim advocates and service providers. This should prove a much cheaper alternative to travelling around the state to deliver training, and is more effective than teleconference calls.

Alaska Public Offices Commission – No Substantive Budget Items
Program Update and Recent Accomplishments:
- The Lobbyist Module of the Insight computer filing project is deployed.
- Over 1,600 financial disclosure statements received annually in March.

- Over 2,500 filings from lobbyists and employers of lobbyists are received annually.
- Eight in-person Ethics and Compliance training sessions were completed for lobbyists and employers of lobbyists.
- Over 3,500 campaign disclosure filings from 340 candidates and 140 groups for multiple elections and reporting deadlines were received.
- Increased effort in public outreach and education.

Division of Motor Vehicles
Budget Changes:
Federal authorization in the amount of $500.0 is requested to receive and expend funds made available by The Federal Motor Carrier Safety Administration (FMCSA) to improve DMV's Commercial Driver's License (CDL) program. These improvements will address the issues of compliance from the April 2008 FMCSA audit, and recommendations from the American Association of Vehicle Administrators, CDL Best Practices manual, and changes outlined in the Federal Register Vol. 71, No. 84.

Bensen Lease Cost Reduction - $668.8 Reduction
The initial lease terms included the cost of the customization (build-out) of the space to meet DMV's needs. Those terms provide that in the case of a renewal, a lesser amount will be charged. The DMV currently anticipates renewing the lease in FY2011.

DMV Program Update:
- DMV wait times improved from 66.3% of customers being served in less than 20 minutes in FY2008 to 71.3% in FY2009.
- To detect and prevent fraudulent activities, DMV implemented a secure web-based application for examiners to schedule and record results of commercial driver license road skills tests.
- DMV designed and implemented a system called STAR (Skills Test, Appointment and Reporting) that allows individuals to schedule over the internet a road test at any DMV office or third party tester. Currently, customers must come into a DMV location to schedule and pay for the test. With the new system, a customer can schedule a test at any location up to 60 days prior to the test, reschedule if necessary, make payment, and receive a reminder email notification. This program is undergoing final testing, and is scheduled to be rolled out no later than mid-February.
- In coordination with Alaska and Federal DOTs, DMV implemented the Performance and Registration Information Systems Management program. The goal of the program is to use state commercial vehicle registration sanctions as an incentive to improve motor carrier safety.
- The year registration tabs are now being color coded to make it easier for law enforcement to determine whether vehicle registration is current. We are currently issuing red tabs for registrations expiring in 2012.
- DMV implemented a program to extend vehicle registration periods for military personnel returning from deployment in Iraq and Afghanistan.

- The obsolete digital driver license printers were replaced with a newer version that includes a security feature that prevents their use in the event of theft.
- The Soldotna office moved next door to a space that is better suited to serving customers.

PRIORITY PROGRAM OVERVIEW
Department of Administration
FY2011 OPERATING BUDGET

DEPARTMENT MISSION: The mission of the Department of Administration is to provide consistent and efficient support services to state agencies so that they may better serve Alaskans.

DEPARTMENT CORE SERVICES:
The Department of Administration provides business management and information technology support for state agencies; collection of motor vehicles revenues from vehicle titling and registration and driver licensing; and provides legal and advocacy services through the Public Defender Agency and the Office of Public Advocacy.

TOTAL OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	75,048.1	4,420.8	216,744.7	296,213.6	1,070	20	34
FY2011 GOVERNOR'S TRANSACTIONS	-936.1	-987.2	4020.3	2097.0	-1	-2	-2
TOTAL FY2011 GOVERNOR'S BUDGET	**74,112**	**3,433.6**	**220,765**	**298,310.6**	**1,069**	**18**	**32**

PRIORITY PROGRAMS

Enterprise Support Services - Includes resources for all of the core government support services provided to state agencies by the Department of Administration. These services include procurement, information technology, accounting, human resources, labor relations, retirement and benefit management, and facilities management.

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	25,230.2	3,574.2	191,610.8	220,415.2	582	7	16
FY2011 GOVERNOR'S TRANSACTIONS	450.8	-1,487.8	3,235.7	2,198.7	-3	0	-1
TOTAL FY2011 GOVERNOR'S BUDGET	**25,681.0**	**2,086.4**	**194,846.5**	**222,613.9**	**579**	**7**	**15**

Results of Current Capacity

⬆ The amount of total Electronic Data Interchange (EDI) payments has increased steadily from $2.5 billion in FY2006 to $4.5 billion in FY2009.

⬆ The number of Electronic Data Interchange (EDI) vendors has increased steadily from 548 in FY2004 to 3802 in FY2009. Between July and October 2009, 1,985 additional vendors have been made EDI-capable, many of whom are foster parents.

➡ Payroll transactions have been processed without penalty pay since FY2004.

➡ The percent up-time for the state's mainframe computer system has remained constant at 99.8% over the past three years.

Accomplishments

E-Travel

The Department of Administration has established E-Travel as the managed travel program serving the State of Alaska Executive Branch, including employees, members of boards and commissions, inmates, witnesses, and other individuals that travel on official State business. E-Travel is comprised of:

1. Travel policies contained in AAM 60
2. E-Travel Online, which is the online booking tool RESX configured for State of Alaska travel policies
3. Travel management contractor, which is currently USTravel
4. Other contracts with vendors in the travel industry including airlines, hotels, and rental car agencies

5. E-Travel Management Team (ETMT), which includes the State Travel Manager and Assistant, as well as others from the Division of Finance that support this program
6. Travel coordinators, travel administrators, and travel planners within each department
7. Employees and others traveling on official State business

The department also maintained contracts with Alaska Airlines, Northwest Airlines, and rural air carriers within Alaska, which generate most of the calculated travel related savings. In addition, the department obtained a new contract with Delta Airlines with favorable fares as well.

Human Resources
Enhancements were made to Workplace Alaska, the enterprise-wide on-line recruitment system. The enhancements were focused on increasing the size of applicant pools and simplifying the application process. These are part of significant efforts to improve the recruiting process for both job applicants and hiring managers.

The department completed the Geographic Differential Study and salary survey. These are important steps in determining the validity of salary adjustments based on physical location, and compared to other entities.

Significant Changes in Results Expected :

The Commissioner's Office of the Department of Administration continues to drive improvements in the way the State manages its human resources and information technology as well as just recently revamping entirely the management of State travel. The department is working to improve efficiency in all areas of state government, thereby constraining the growth of government, and will continue to work to that end.

Legal, Advocacy, and Regulatory Services - Includes resources for criminal defense, motor vehicle and driver licensing and registration, oil and gas conservation regulation, and public official and lobbyist disclosure.

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	30,597.9	155.5	22,277.0	53,030.4	391	11	13
FY2011 GOVERNOR'S TRANSACTIONS	-1,235.4	500.0	484.4	-251.0	2	-2	-1
TOTAL FY2011 GOVERNOR'S BUDGET	**29,362.5**	**655.5**	**22,761.4**	**52,779.4**	**393**	**9**	**12**

Results of Current Capacity

⬆ The percentage of customers who were served at the Division of Motor Vehicles in less than 20 minutes has steadily increased from approximately 59% in FY2007 to approximately 71% in FY2009.

⬆ To ensure Alaska's underground fresh water is protected the Alaska Oil and Gas Conservation Commission (AOGCC) continues to increase the percentage of mechanical integrity tests performed on existing Class II wells that it witnesses. The percentage of tests witnessed increased from 75% of all tests in FY2007 to 89% of all tests in FY2009. By witnessing the tests the AOGCC can ensure the tests are done correctly and that any problems that may arise are resolved.

➡ To ensure the safe, efficient recovery of Alaska's oil and gas resources and prevent the waste of those resources the Alaska Oil and Gas Conservation Commission (AOGCC) has continued to witness over 40% of oil rig safety valve systems tests. By witnessing the tests the AOGCC can ensure the tests are done correctly and that any problems that may arise are resolved.

Accomplishments

The department's No. 2 Priority Program is **Legal and Regulatory Services**. The following accomplishments were of particular significance:

Division of Motor Vehicles (DMV)
The DMV implemented a program to extend vehicle registration periods for military personnel returning from deployment in Iraq and Afghanistan. The DMV also implemented an Ignition Interlock Device program based on statutory changes, which is designed to reduce the incidence of driving under the influence.

Public Defender Agency (PD)
The PD implemented a new case management system that will enable the department to generate performance measure results and to provide more reliable and detailed information for supporting efficiency and cost-saving strategies. The Agency is auditing the system and expects to generate performance measure results based upon FY2010 data.

Office of Public Advocacy (OPA)
The Office of Public Advocacy opened the Office of Elder Fraud and Assistance in late 2006 to recover resources for elderly Alaskans who have been the victims of fraud or financial exploitation. Since opening its doors, the section has received judgments or settlements on behalf of elderly Alaskans in excess of $2 million. Currently, the section is taking action on behalf of Alaskan Elders to recover approximately $6.8 million. The section's staff continues to provide outreach and training to professionals and lay people concerned with protecting elders from financial abuse.

Alaska Oil and Gas Conservation Commission (AOGCC)
Continued converting AOGCC's public well history files and oil and gas information into digital form and maximizing the amount of public information available through the Internet. This has streamlined our internal handling of data and is reshaping our permitting processes.

Family Support - Includes resources for child in need of aid and pubic guardian services as well as crime victim compensation.

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	14,500.8	691.1	2,459.6	17,651.5	95	2	5
FY2011 GOVERNOR'S TRANSACTIONS	98.3	.6	300.1	399.0	0	0	0
TOTAL FY2011 GOVERNOR'S BUDGET	**14,599.1**	**691.7**	**2,759.7**	**18,050.5**	**95**	**2**	**5**

Results of Current Capacity

⬆ The percentage of children in child in need of aid cases that met with a guardian ad litem within five working days has increased from 51% in FY2007 to 72% in FY2009.

⬇ The percentage of Office of Public Advocacy (OPA) Public Guardian clients not receiving financial benefits to which they are entitled increased in FY2009 as compared to FY2008 by approximately 5%. The increase is attributable to increased caseloads and staff shortages in some areas of the state. OPA is adding one staff position in FY2010 to improve this level of performance.

Accomplishments

The Office of Public Advocacy developed and began the roll out of our expanded Family Guardian Program that provides training to the public regarding how to provide guardianship services to an incapacitated adult. This program includes sessions on the court process, applying for benefits, finding housing, and the guardian's authority over a ward.

The Alaska CASA program received federal grants for expansion in the Mat-Su Valley. As a result of these expansion grants, the CASA program was able to double the number of Mat-Su Valley volunteers in a single year and more than double the number of children being served by volunteers in the Mat-Su Valley.

Public Information and Education - Includes resources for public broadcasting in Alaska. Performance indicators for this program have not yet been developed.

OPERATING BUDGET DISTRIBUTION	GF	FED	OTH	TOTAL	PFT	PPT	NP
FY2010 CURRENT CAPACITY (Management Plan)	4,719.2	0.0	397.3	5,116.5	2	0	0
FY2011 GOVERNOR'S TRANSACTIONS	-249.8	0.0	0.1	-249.7	0	0	0
TOTAL FY2011 GOVERNOR'S BUDGET	**4,469.4**	**0**	**397.4**	**4,866.8**	**2**	**0**	**0**

There are no key indicators for this program.

Administrative Order No. 237
Executive Working Group
Status Report of Recommendations

The Executive Working Group on Recruitment and Retention sent out a list of action items in the November 2007 report to the Governor. These items and their current status are listed below.

Action Items - Near Term

Action Item	Status	Details
Labor Contracts: PSEA, AVTECTA, IBU, MM&P and MEBA, ASEA-GGU, APEA-SU, APEA-CEA	**Completed**	Salary adjustments resulting from HB 417 and labor negotiations have had a cumulative impact of $150 million over three years (FY08-$56.4 million, FY09-$50.6 million, FY10-$46.0 million).
ASEA-GGU, APEA-SU, APEA-CEA	**In Progress**	Contracts expire 6/30/2010
LTC, TEAME, ACOA	**In Progress**	Contracts expired 6/30/2009
Longevity Step Repeal and replacement with fair alternative	**Completed**	HB 417 repealed longevity steps and implemented pay increments for non-covered employees. PSEA negotiated similar provisions and Letters of Agreement were signed with GGU, CEA and SU effective January 1, 2009. Cost to implement estimated at $2.3 million in FY09 and $1.5 million in FY10.
Flexibility for Deputy Commissioner Pay	**Completed**	HB 417 provides for appointment within range 28.
Deputy Director Pay Increase	**Completed**	Division Operations Manager, range 24 Deputy Director, range 25 (partially exempt only)
Training/Certification/ Education Survey Status	**No Action**	Will be put into New Work Plan
HR Integration Study	**Completed**	Recommendations are under consideration.
Streamline Intern Process	**Completed**	Levels were consolidated and flex staffing was implemented. Intern openings are now advertised through Workplace Alaska. This allows all interested parties to view/post internships in one central location.
Market-Based Pay	**Discontinued**	To provide a more holistic approach a salary survey was completed December 2009.
Healthy Living Habits	**In Progress**	HealthTracks, wellness program for AlaskaCare employee health plan, was implemented January 1, 2009. Sponsored a State Employee health fair, Friday, March 17, 2009. Conducted "Take the Stairs" campaign during fall 2009. HIP subcommittee is discussing and considering "Be the Biggest Loser" and "Know Your Numbers" campaign for 2010.

Administrative Order No. 237
Executive Working Group
Status Report of Recommendations

Action Items - Within Two Years		
Action Item	**Status**	**Details**
Geographic Differential Study	**Completed**	The Study was completed April, 2009. The budget impact will be presented to the Legislature.
Tuition Reimbursement & Student Loan Forgiveness	**In Progress**	Many departments currently reimburse employees for tuition for job-related classes. Departments will be advised of available options. Review of Student Loan Forgiveness will be put into New Work Plan.
Knowledge Transfer Plans	**In Progress**	DOPLR has a presentation available to assist agencies in the development of these plans.
Flexible Work Schedules (Alternate Workweeks)	**In Progress**	The number of agreements Statewide has increased from 1,508 in 2007 to 1,955 in 2010. Effort is continuing to inform departments of available options.
Revamp Classification Process and Review of Resources	**In Progress**	Classification studies are being limited to those in class series which have experienced significant change in duties. A parallel process to address salaries will be explored in conjunction with comprehensive salary survey.
Classification System Review	**In Progress**	When appropriate, job classifications are being consolidated and single position job classifications are being eliminated.

Action Items-Within Three Years		
Action Item	**Status**	**Details**
Salary Survey	**Completed**	Survey was completed December 2009.
Workplace Alaska Portal Replacement	**In Progress**	Development of system requirements underway.
Legislation for 40 hour Workweek	**No Action**	Consideration will be given to implement for select groups of employees.

Ongoing Efforts		
Action Item	**Status**	**Details**
Less Restrictive Minimum Qualifications	**In Progress**	121 job class specifications involving over 3,586 State jobs have been reviewed and updated to ensure MQs reflect current job requirements.
Broader Use of Flexibly Classed Positions	**Completed**	The use of flexibly classed positions has been broadened for use within any series so long as the work exists at the requested levels.
Administrative Clerk Study	**Completed**	This comprehensive study of 1,150 clerical positions was completed on June 30, 2009.
Revamp Employee Evaluation Process	**Completed**	The evaluation process was streamlined to ensure that employees are evaluated in a meaningful and timely manner.

Alaska oil income called stable after a year of ups and downs

(Galvin) predicted $4.8 billion in unrestricted revenue, the money pool that generates most of the legislative and public debate. That's $1 billion less, however, than was generated in the last fiscal year and less than half of the record $10 billion in the previous year.

Oil dominates revenue sources, but production on Alaska's North Slope is still declining. Production fell more than 3 percent last fiscal year, and **another decline of nearly 5 percent** is expected in the current fiscal year, according to the forecast. Daily oil production is expected to average 659,000 barrels, compared with a record of more than 2 million barrels a day in 1988. Daily production is expected to dip to 623,000 barrels in 2011

Trust Fund Payout 4.25%	$17,739,095
Prior Year Lapse	$ 3,931,279
Land Office Income	$ 1,800,000
Interest	$ 1,400,000
Total Projected	$24,870,374

The Trust
The Alaska Mental Health Trust Authority

Joint FY2011 Legislative Priorities

- Increase adult dental Medicaid reimbursement cap
- Establish regular and periodic schedule of rate reviews for home and community-based services
- Support 10-year plan to reduce homelessness
- Fund community-coordinated transportation systems

Advisory Board on Alcoholism and Drug Abuse

abada amhb

Alaska Mental Health Board

Governor's Council on Disabilities and Special Education

Alaskan Seniors Living Longer Growing Stronger

from the Alaska Commission on Aging

Priorities shared by The Trust and its beneficiary advisory boards: Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, Governor's Council on Disabilities and Special Education, and Alaska Commission on Aging

The Trust
The Alaska Mental Health Trust Authority

Formula for Success

- **Identify a problem or community need**
- **Collaborate with governmental agencies, advisory groups, non profits, service providers, philanthropic organizations and private sector**
- **Develop strategic, sharply focused solutions**
- **Make lasting system improvements for Trust beneficiaries**

Committed Partners + Strategic Thinking = Results for Trust Beneficiaries

The TRUST
The Alaska Mental Health Trust Authority

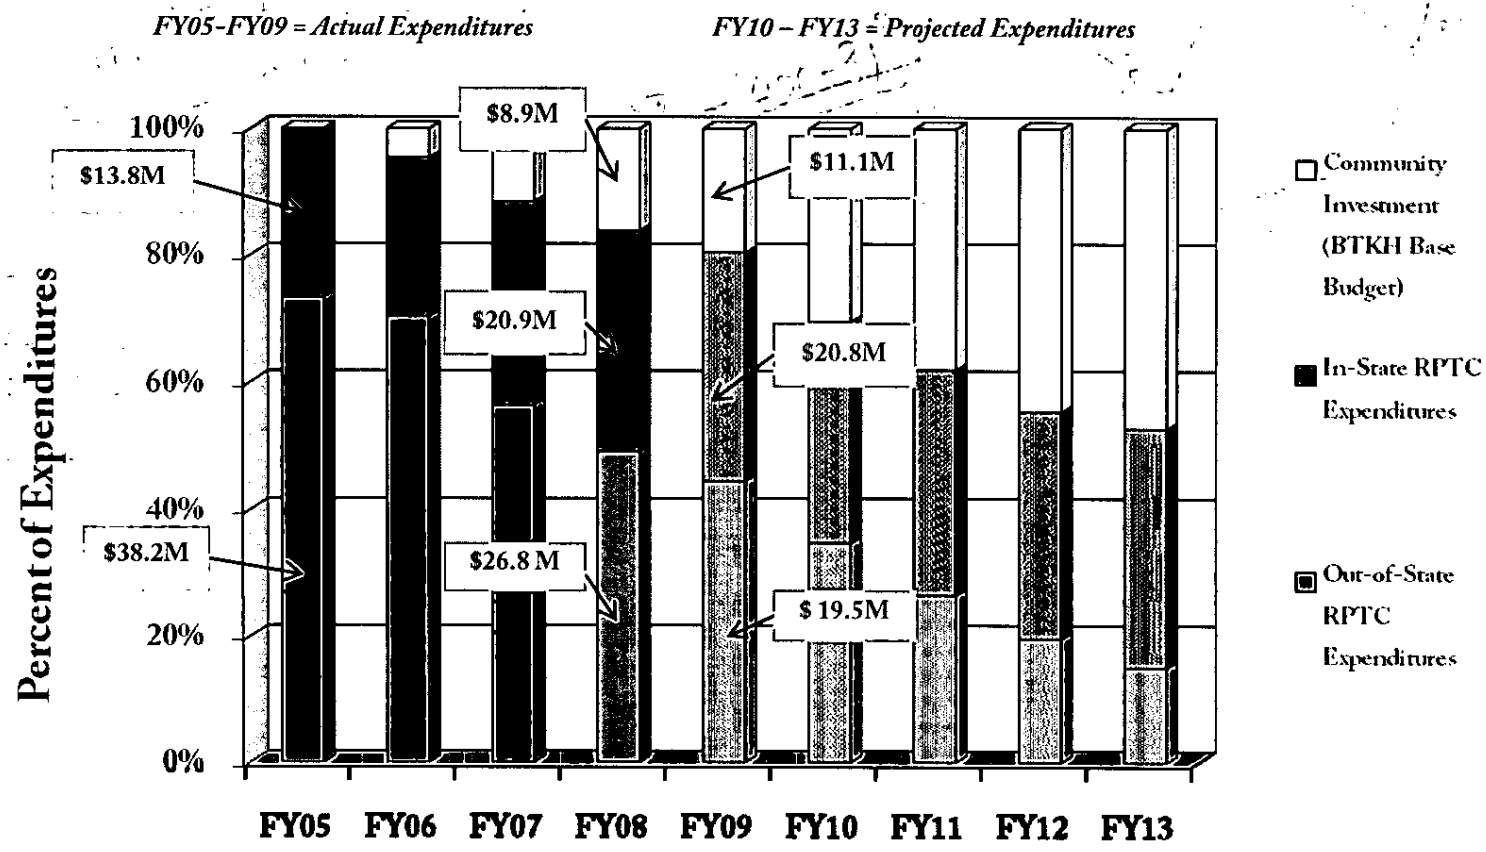
Five Program Focus Areas

- **Bring the Kids Home**
  - reforming Alaska's mental health care for children and adolescents so they are diagnosed earlier and are treated as close to home as possible
- **Disability Justice**
  - reducing the involvement and recidivism of Trust beneficiaries in the criminal justice system
- **Workforce Development**
  - creating an available and competent workforce for Trust beneficiaries and service providers
- **Affordable, Appropriate Housing**
  - increasing a continuum of housing options for Trust beneficiaries
- **Beneficiary Projects Initiative**
  - supporting grassroots, peer-to-peer programs for Trust beneficiaries

Bring the Kids Home

- **Problem or community need**
  - FY06: 743 Alaskan children with severe emotional disturbances received service in out-of-state residential psychiatric treatment centers
    - separated from families, communities
    - length of stay varies from several months to multiple years
  - FY06: $40 million for out-of-state Medicaid care
- **Committed partners**
  - DHSS, Denali Commission, Trust partner boards, Alaska Native health providers, other service providers, parents, advocacy groups, AHFC
- **Strategic thinking**
  - Each child treated at appropriate level of care as close to home as possible
    - Build appropriate treatment facilities in Alaska
    - Increase capacity/core competence for outpatient services
    - Provide family supports
    - Involve parents and youth in the solutions

Projected BTKH Reinvestment



$52,115.3* $56,895.5* $65,192.8* $56,648.6* $51,400.0* **** Total per year cost in thousands of dollars***

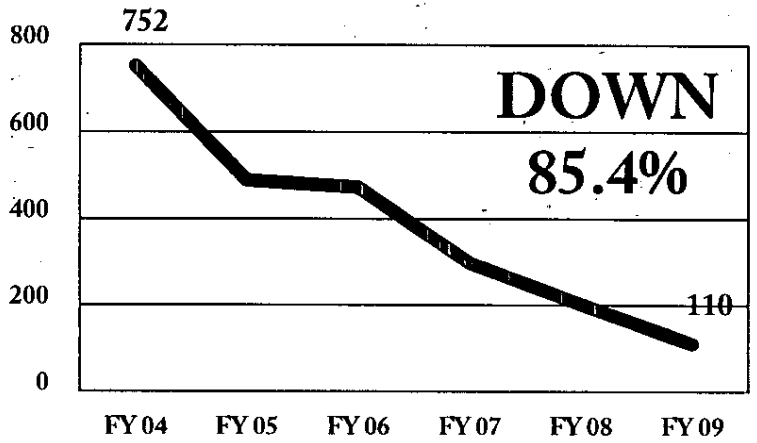
Data for FY05-09 are from Division of Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 & FY09 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY09 and paid in the first quarter of FY10.

The TRUST
The Alaska Mental Health Trust Authority

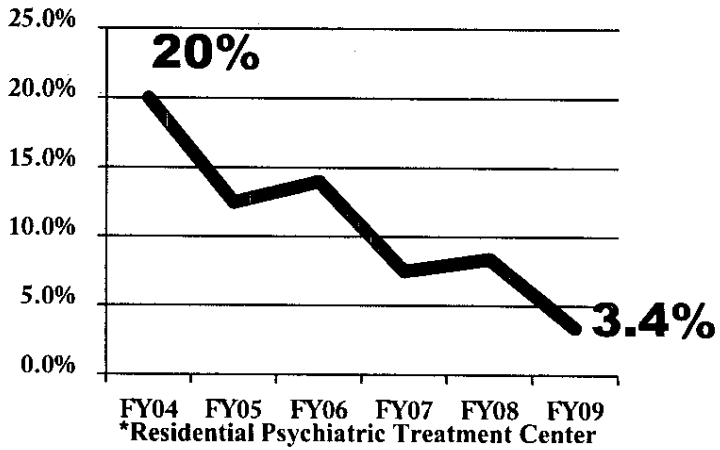
Results for Beneficiaries

Returning youth home & ensuring quality

Out of State Admits



RPTC* Recidivism Rate



- **HOME-BASED services continue to increase during FY09**
  - 500+ youth (300+ in FY08) received INDIVIDUALIZED SERVICES
  - 900+ youth (500+ in FY08) received services via new COMMUNITY behavioral health capacity

The Trust
The Alaska Mental Health Trust Authority

Ahead in FY2011

	MHTAAR	GF/MH	Gov GF/MH
Transition into BTKH base budget			
• Individualized services		$ 600.0	$ 300.0
• Behavioral health technical assistance	$ 100.0	$ 100.0	$ 0.0
Build capacity within BTKH base funding			
• Community BH capacity development	$ 450.0	$ 700.0	$ 500.0
• Crisis bed stabilization	$ 150.0	$ 400.0	$ 0.0
• Tribal/rural system development	$ 200.0	$ 200.0	$ 200.0
• Transitional-aged youth	$ 100.0	$ 100.0	$ 100.0

• Peer navigation	$ 175.0	$ 275.0	$ 0.0
• Child psychiatrist	$ 50.0	$ 50.0	$ 0.0

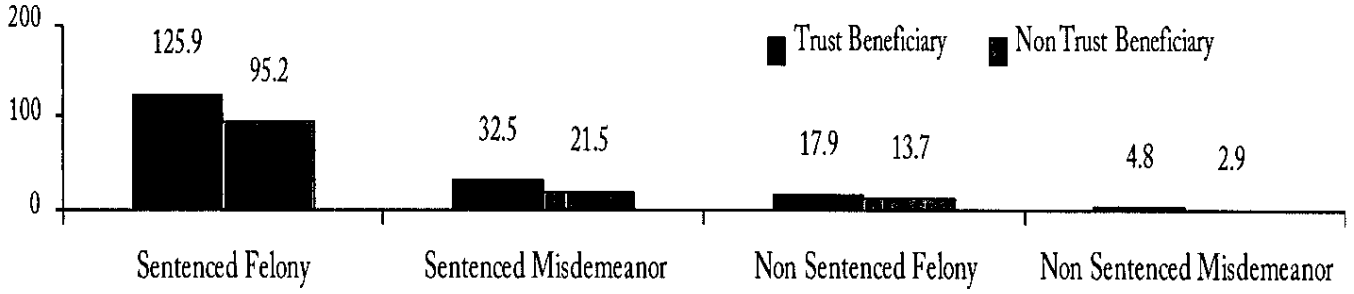
Funding in thousands of dollars

The Trust
The Alaska Mental Health Trust Authority

Disability Justice

- **Problem/Community Need**
  - **42% of those incarcerated in DOC are Trust beneficiaries**
    - **incarcerated beneficiaries**
      - **have more difficulty adjusting to incarceration**
      - **are more likely to be victimized by other prisoners**
      - **spend a disproportionate amount of time in custody**
    - **hundreds of beneficiaries are incarcerated for "safety" because services not available**

Comparison of Days Spent in Correctional Facilities



The TRUST
The Alaska Mental Health Trust Authority

Strategic Thinking

- **Partnerships with local governments, Alaska Native tribal entities, the Alaska Court System, the Departments of Administration, Corrections, Health and Social Services, Law and Public Safety, and community behavioral health treatment providers are focused on effective strategies to:**
  1. **prevent and reduce inappropriate or avoidable arrest, prosecution, incarceration, and criminal recidivism Trust beneficiaries;**
  2. **increase criminal justice system's ability to accommodate, support, protect, and provide treatment for victims and offenders who are Trust beneficiaries;**
  3. **reduce the use of jails and prisons for providing protective custody of Trust beneficiaries under Title 47 of Alaska's Statutes; and,**
  4. **improve community reintegration planning from the Department of Corrections back into Alaskan communities.**

Outcome Driven Results

- **Therapeutic Courts**
  - Combined institutional savings generated by *Anchorage Mental Health Court* almost two and one-half times program annual operational costs ($293,000)
  - Diverting participants into *Anchorage and Palmer Mental Health Courts* poses less risk to public safety than traditional adjudication
  - *Anchorage and Palmer Mental Health Court* participants less likely to engage in new criminal conduct after exiting program than equivalent group of people experiencing mental illness and also involved in criminal justice system.
- **Adult Guardianship Mediation project**
  - Participants reached agreement on some or all of the issues in 87% of cases mediated
  - As many as 90 contested hearings over pilot period were avoided, reducing number of superior court cases and associated costs required to determine guardianship appointments.

Workforce Development

- **Problem or community need**
  - shortage of health care workers in Alaska at a near-crisis level
  - health services industry fastest growing sector of Alaska's economy, more than 7% of workforce
  - burgeoning demand for increased health services for the state's steadily growing and aging population, some are Trust beneficiaries
  - need to increase pool of qualified employees in Alaska who serve Trust beneficiaries and keep adequately trained
- **Committed partnerships**
  - more than 20 partners -- service providers, Dept. of Health and Social Services, Dept. Labor and Workforce Development, Alaska Workforce Investment Board, non-profit and faith-based organizations, University of Alaska system
- **Strategic thinking**
  - key focus areas
    - Recruitment and retention
    - Wages and benefits
    - Training and education

Results for Beneficiaries

- 1,060 professionals/providers across Alaska received training on behavioral health related topics through Trust Training Cooperative
- 575 participants trained through Gerontology Training Series & Geriatric Education and Training Mini Grants by Trust Training Cooperative on issues regarding Alzheimer's disease and related dementia
- 2,096 students in 117 Alaska communities received behavioral health training through University of Alaska, a 35% increase in enrollment in beneficiary related degree programs
- 550 professionals across Alaska received training through Training and Technical Assistance for Providers program, increasing number of professionals trained to respond to disability related abuse cases

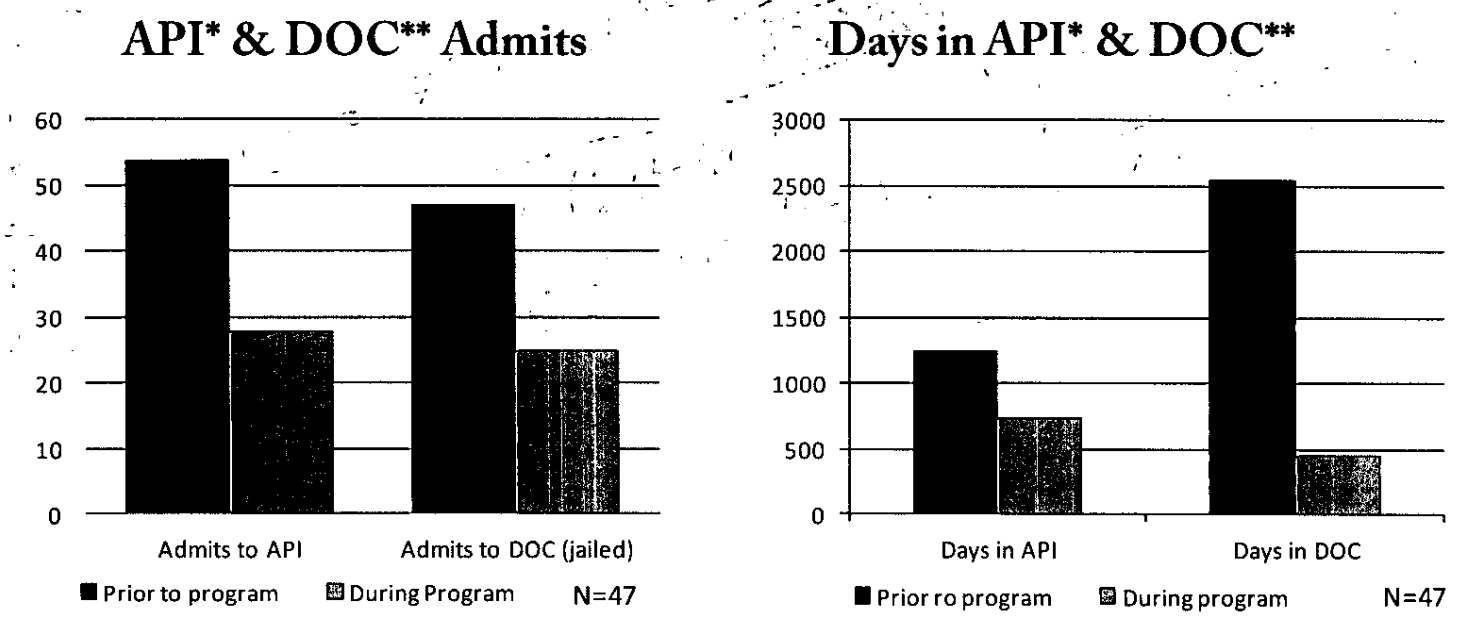
Affordable, Appropriate Housing

- **Problem and community need**
  - 4,623 Alaskans homeless in HUD point-in-time survey January 2009 [1]
    - 1,507 people in families with children (494 households)
    - 697 persons met the definition of "chronic homeless"
    - 161 beds in the housing inventory target "chronic homeless"
    - Department of Corrections reports approx 8,000 people discharged each year with no identified housing arrangement [2]
- **Committed partners**
    - Alaska Council on the Homeless: Alaska Housing Finance Corporation, DHSS, DOC, DOL, Public Safety, Veterans
    - Housing development organizations and social service agencies
- **Strategic thinking**
    - Adapting programs for sustainability - replicating housing trust strategies in Alaska (Special Needs Housing and HAP)
    - Replicating *housing first* in numerous settings

1. http://www.ahfc.state.ak.us/iceimages/grants/hmls2009w_ak_all.pdf
2. Department of Corrections and HUD point-in-time survey report (2007); AHFC and DOC estimates.

Results for Beneficiaries

Bridge Home program outcomes



*API = Alaska Psychiatric Institute **DOC = Department of Corrections

- Outcomes one year prior to participation and one year during participation
- Rates of incarceration continued to drop for post program participants

The TRUST
The Alaska Mental Health Trust Authority

Ahead in FY 2011

- **Policy - Governor's Council on the Homeless**
  - interagency collaboration
  - 10-year homeless plan and budget recommendations
- **Budget - $10 million in Governor's capital budget to begin implementing 10-year plan**
  - The Trust, AHFC, GF/MH and other sources
  - Units requested through Special Needs Housing grant program increased 52% in response to new program configuration
- **Housing First implementation projects**
  - Trust/DHSS Bridge Home pilot project expansion to serve most challenging of individuals cycling through API and DOC.
  - Replication of *housing first* to serve beneficiaries who are homeless with alcohol addiction
    - Replicating programs that have successfully housed this population: Seattle's Downtown Emergency Services Center: 1811 Eastlake (JAMA outcome study 2009)
    - Engagement happens over time while maintaining housing rather than requiring program criteria in advance of housing
    - Resulted in cost reductions in Seattle of $4 million (56% in Medicaid reductions, sobering center down 87%, homeless shelter use down 92%) in a12 mo period
    - Drinking down 30% due to engagement and assistance with goal setting/compliance while stable in housing

REVIEWING 2009 results

TRUSTEES RESPOND TO ECONOMY

The economic downturn that hammered the U.S. in 2009 also had a profound impact on the assets of the Alaska Mental Health Trust Authority, dealing the Trust Fund the worst investment year since the corporation was established in 1995. Yet, despite the loss of more than $90 million, The Trust weathered the economic storm better than many other philanthropic organizations, some of which were forced to sharply curtail their grantmaking during the year.

The Board of Trustees responded quickly to the financial shortfall by decreasing proposed spending by $2.45 million and reallocating $2.1 million from unspent grant funds in prior years to make up a budget deficit of approximately $4.6 million. The total budget during FY2009 was approximately $24 million to support programs for Trust beneficiaries, who include people with mental illness, chronic alcoholism, developmental disabilities and Alzheimer's disease and related dementia.

We attribute our ability to successfully weather the economic storms of 2009 to the flexibility of our asset management philosophy and practices, which are focused on protecting The Trust's cash and non-cash assets while maximizing spending to improve the lives of Trust beneficiaries. The Trustees have adopted an asset management policy statement (AMPS) that helps Trustees effectively supervise, monitor and evaluate the investment and management of The Trust's cash and non-cash assets for future growth. The AMPS allows the board to respond rapidly to financial changes when necessary, but keeps the focus on long-term solvency through the use of an income reserve account, which allows for disbursements during market downturns.

As a result of our prudent asset management system, despite the huge market losses in FY2009, at the close of the year we were able to fund a payout for FY2010, confirming the validity of our financial model. And, because the market has shown improvement in FY2010, we are expecting the FY2011 payout to be similar to FY2010 funding. Details of our financial performance are included later in this report.

HOW TRUST FUNDS ARE SPENT

Equally, if not more important, is how the Trustees spend available income on behalf of the beneficiaries. The Trust occupies a unique place in Alaska state government. While we are a state corporation, we operate much like a private foundation, using our resources to fund projects and activities that promote system change and improvement in Alaska's mental health continuum of care. We do this through capacity building, demonstration projects, funding partnerships, technical assistance, and other activities that will improve the lives and circumstances of Trust beneficiaries.

A majority of The Trust's annual budget provides ongoing support for the state's mental health program and funds projects in five focus areas that address issues with significant impact on Trust beneficiaries. These focus areas include reforming the Alaska mental health system of care for children; increasing the availability of a continuum of housing options for Trust beneficiaries to reduce homelessness; reducing the involvement and recidivism of Trust beneficiaries in the criminal justice system; supporting grassroots, consumer-driven programs; and creating an available and competent workforce for Trust beneficiary service providers. Each focus area is described in detail later in this report along with the successes we have achieved by working with our many partners throughout the state.

OUR PARTNERS

In many instances, we directly engage beneficiaries and family members for guidance and feedback in the work we do. We also depend on input regarding funding and policy recommendations from the advisory boards that serve as a link between The Trust and individual beneficiaries, their families, caregivers and legal guardians. These boards are the Advisory Board on Alcoholism and Drug Abuse, Alaska Mental Health Board, Governor's Council on Disabilities and Special Education, and Alaska Commission on Aging. In addition, we rely on participation and collaboration from a number of other state agencies, advisory groups, tribal entities, service providers, community partners and stakeholders to help reform and improve the systems that serve Trust beneficiaries.

The Trustees and Trust staff are committed to working with Governor Parnell, the Legislature and all our partners on behalf of Trust beneficiaries to make the systemic changes needed for long-term improvements in Alaska's mental health program.

Jeffrey L. Jessee
Chief Executive Officer

William Doolittle, M.D.
Chair, Board of Trustees

GROWING our workforce

Alaska is experiencing a workforce crisis in the sectors that serve people with mental illness, developmental disabilities, chronic alcoholism, and Alzheimer's disease and related dementia. The main issues impacting this segment of the workforce are wages and benefits, recruitment and retention, and training and education. Challenges are found in paraprofessional and professional fields and across the multitude of settings in which they work, such as individual homes, hospitals, community-based residential group homes, public schools, nursing homes and the community at large in rural and urban settings.

In 2004, in response to this crisis, The Trust, the University of Alaska System and the Alaska Department of Health and Social Services formed the Behavioral Health Initiative Project (BHIP) to address workforce issues affecting services to Trust beneficiaries. Then, in FY 2007, The Trust expanded the partnership by creating the Trust Workforce Development Focus Area. Its goal is to ensure service providers across the state have access to a capable, culturally competent workforce to serve Trust beneficiaries, their families and communities. Other partners who joined the focus area include The Trust's beneficiary advisory boards, Alaska Department of Labor and Workforce Development, Alaska Native Tribal Health Consortium, Alaska Behavioral Health Association, Alaska Association on Developmental Disabilities and AgeNet.

TRAINING OPPORTUNITIES

During FY2009, approximately 2,100 individuals from entry-level personnel to paraprofessionals and professionals from 112 Alaska communities participated in academic, non-academic and outreach educational programs to develop or enhance their skills to work in jobs that serve Trust beneficiaries.

MARKETING CAMPAIGN

Marketing efforts in FY2009 focused on getting youth, Alaskan Natives, military veterans, and "empty nesters" to work part time or full time in the health and social services field. The campaign consisted of three print ads and two television spots that ran in media outlets across the state with the slogan "Life Experience Counts." The campaign featured the personal stories of an empty nester, an Alaska Native elder and five military veterans who used their various experiences as building blocks for jobs that serve people with mental illness, developmental disabilities, alcoholism, or Alzheimer's disease and related dementia.

STUDENT LOAN REPAYMENT

With funding from The Trust, Alaska is recruiting workers into jobs in behavioral health, primary care and dental services, all of which have been identified in a statewide job vacancy study as having high vacancy rates. In exchange for working in Alaska for two years, professionals who graduated from an accredited college or university with a master's degree or higher are eligible for loan repayment. A total of $1.2 million is available for loans, including $400,000 from The Trust, and a $600,000 grant from the federal Health Resources and Services Administration. The loans will be administered by the Department of Health and Social Services, which is scheduled to begin awarding loans in mid FY2010. See http://hss.state.ak.us/dhCS/healthplanning/primarycare/loans/aslrp.htm for details.

A 2009 study shows many jobs for clinicians and therapists go unfilled in Alaska, especially in rural areas.

Students participating in classes provided by the University of Alaska Anchorage School of Social Work.

2009 Vacancy Rates by Occupational Group and Labor Region

Sample = 764

Occupational Group	Anchorage/Mat-Su	Gulf Coast	Interior	North	Southeast	Southwest
Physicians	8.3%	14.0%	11.1%	68.2%	6.3%	24.8%
Other Clinicians/Therapists	7.5%	20.5%	7.7%	39.3%	16.7%	32.8%
Behavioral Health	8.2%	6.2%	12.7%	14.5%	12.2%	18.6%
Allied Health	3.5%	8.7%	5.0%	20.7%	9.2%	7.8%
Community/Wellness	8.2%	9.1%	23.5%	7.0%	9.3%	7.9%

The 2009 Alaska Health Workforce Vacancy Study was conducted by the Alaska Center for Rural Health - Alaska's AHEC and the Institute for Social and Economic Research. It was funded by the Alaska Mental Health Trust Authority, Alaskan's for Access to Health Care, University of Alaska Fairbanks, Tanana Valley campus Telemedicine Program, and University of Alaska Anchorage Community and Technical College and the School of Nursing.

BUILDING housing opportunities

The Affordable Appropriate Housing Focus Area is working to reduce the rates of homelessness and displacement of Trust beneficiaries. The Trust and its more than 150 partners, including state agencies, non-profit service organizations and housing advocates, have adopted the theme "Opportunity Begins with a Home." During 2009, The Trust and its partners concentrated on simplifying, streamlining and coordinating the state's housing and social support programs and increasing the assistance available for housing providers serving individuals with a disability, chronic addiction or mental illness.

Retooling these programs allows for adequate supportive services and rental subsidies so Trust beneficiaries and other vulnerable Alaskans can afford housing that provides a safe, healthy environment. With implementation of these strategies in the core housing programs at Alaska Housing Finance Corporation (AHFC) and in the Department of Health and Social Services, Alaska is poised to make a real impact on the growing number of homeless families and adults with disabling conditions.

HOMELESS ASSISTANCE INCREASED

The Trust, AHFC, the Alaska Council on the Homeless, housing providers and advocates gained legislative support in 2009 for an additional $2.5 million to retool AHFC's ongoing Homeless Assistance Program to better serve the state's most challenging populations. The Trust committed $1 million to the program. With state and federal funding, the overall funds available for homeless assistance in FY2009 totaled more than $8 million and assisted more than 13,000 Alaskans.

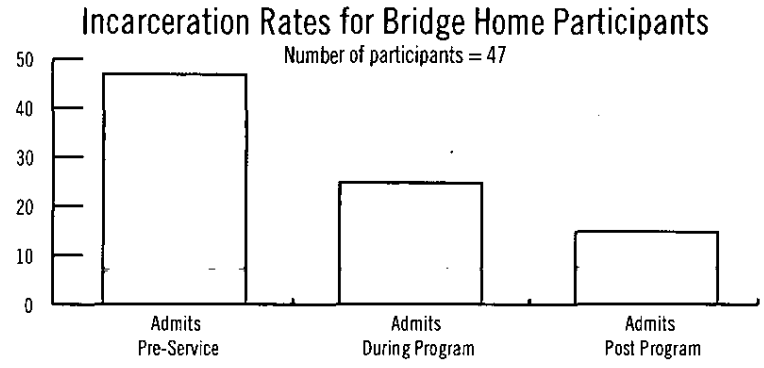
SPECIAL NEEDS HOUSING IMPROVED

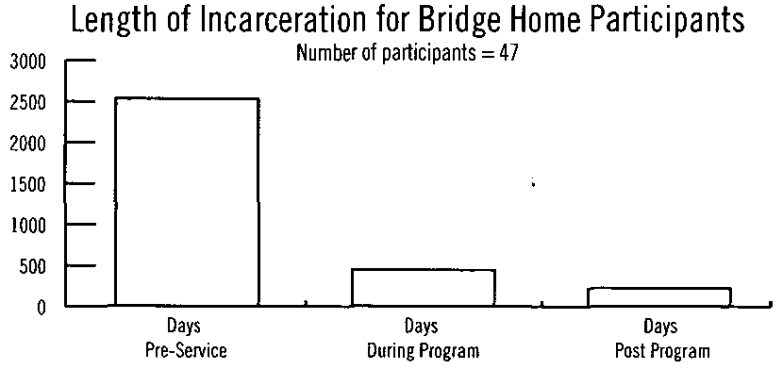
The Special Needs Housing Grant program administered by AHFC assisted approximately 250 Trust beneficiaries with intensive needs in FY2009. During the year, the program offered the following components necessary for project sustainability:

- **A three-year renewal** cycle to allow housing providers more planning time and the ability to create infrastructure for future supported housing projects.
- **Financial assistance** in the construction or remodeling of 53 units.
- **Operations assistance** to 50 units to help with recurring expenses (rent, utilities and building operation), bringing the rent for each unit to an affordable level while maintaining the safety of the residents.
- **Social services assistance** for 230 units to ensure there are social services available to assist residents with financial issues, social-skill building, problem solving and crisis management, thereby preventing evictions and promoting stability and safety for residents.

BRIDGE HOME CONTINUED SUCCESSES

One of The Trust's main projects in the housing focus area is the Bridge Home program, which is aimed at stabilizing Trust beneficiaries who have been cycling through the Department of Corrections, Alaska Psychiatric Institute, emergency facilities and other higher cost services by creating a safe, affordable housing environment with support services.
In an FY2009 analysis of 47 program participants, admissions and lengths of stay to Alaska Psychiatric Institute and the Department of Corrections were reduced (see charts below for details).





SEEKING justice for beneficiaries

Trust beneficiaries have an increased risk of involvement with the criminal justice system both as defendants and as victims because of their disabilities. Each year hundreds of beneficiaries are incarcerated, though they have committed no crime, because adequate service alternatives are not available to provide for their safety and treatment. Many more are arrested, prosecuted and incarcerated for minor offenses that result from their mental disabilities rather than criminal intent. The Disability Justice Focus Area is working to reduce the involvement and recidivism of Trust beneficiaries in the criminal justice system while increasing the system's ability to effectively accommodate victims and offenders who are Trust beneficiaries.

FAIRBANKS JUVENILE TREATMENT COURT

Alaska's first juvenile therapeutic court accepted its first participant in September 2008, and by the close of FY2009 there were 11 participants and one program graduate. The Fairbanks Juvenile Treatment Court (FJTC) is a voluntary therapeutic court, targeting juvenile offenders whose mental illness likely contributed to the commission of their offense. The core belief of the FJTC team is youth who are challenged with mental illness and substance abuse issues that receive appropriate diagnosis and treatment early in their juvenile justice experience have a far greater chance of avoiding further criminal activities. The Trust-funded FJTC is a collaborative partnership between the Alaska Court System, the Department of Law, the Public Defender Agency, Department of Health and Social Services, and tribal and private human services agencies. Long-term goals for the program are to reduce inappropriate incarceration of juvenile Trust beneficiaries and promote their well-being; relieve the burden on the Division of Juvenile Justice presented by juveniles who are Trust beneficiaries; and reduce repeated criminal activity among juvenile Trust beneficiary offenders.

Members of the Fairbanks Juvenile Treatment Court team.

A new detox treatment center opened in 2009 on Trust land in Fairbanks.

OFFENDER RE-ENTRY PILOT

FY2009 marked the second year the Department of Corrections (DOC) operated a re-entry pilot project focused on Trust beneficiaries. The project is being piloted in Anchorage, Fairbanks, Juneau and the Mat-Su Valley. It is patterned after the evidence-based practice Assess, Plan, Identify, and Coordinate (APIC). The goals of the project are to ensure continuity of care for Trust beneficiaries transitioning from the correctional system to the community, maintaining public safety, and reducing recidivism. The partnerships established between DOC and local treatment providers as a result of this project have proven to be the key to successful transition of beneficiaries back into their communities.

Although the project has yet to be formally evaluated, preliminary FY2009 data indicates 100 percent of the participants were connected to a community treatment provider upon release from a DOC institution and 88 percent had an intake assessment within ten days of release; 67 percent of the participants were released to supervised or supported housing; and, of the 56 participants who completed APIC by March 2009, 68 percent had not been re-incarcerated as of November 2009.

ADULT GUARDIANSHIP/MEDIATION

Beginning in FY2006, The Trust partnered with the Alaska Court System in a 4-year pilot project to provide mediation in adult guardianship and conservatorship cases. The goal of the Adult Guardianship Mediation Program was to use mediation to preserve the autonomy and dignity of these adults, while assisting and enabling family to resolve problems, which if left unresolved could result in the affected adult's loss of independence and rights, institutionalization, or financial exploitation, neglect or abuse.

Program participants reached agreement on some or all of the issues in 87 percent of the cases mediated and 91 percent were satisfied with the agreements. As a result of mediation, the court system avoided as many as 90 contested hearings over the pilot period, reducing the number of superior court cases and associated costs required to determine guardianship appointments. The success of this program led the legislature in 2009 to appropriate funding in the FY2010 budget to continue the program, transitioning it from Trust funding to the State's general fund/mental health budget.

ENGAGING beneficiaries

In FY2009, The Trust authorized $3.8 million for the Beneficiary Projects Initiative Focus Area, which supports and funds grassroots, beneficiary-driven, peer-to-peer programs. It also includes a grants program that improves the lives of Trust beneficiaries with support for individual services, one-time projects and adult dental care. Since its inception in 2005, this focus area has supported development and stabilization of more than 20 consumer-operated programs that allow beneficiaries to actively engage in their recovery and long-term wellbeing.

PEER SUPPORT TRAINING

Peer-to-peer support is a common element across most consumer-run organizations. Often those involved are entry-level workers who require training and education to successfully fulfill this job. To assist providers in training this workforce, The Trust funded a consumer focused education conference in May 2009, which drew more than 275 attendees.

TECHNICAL ASSISTANCE

In 2009, The Trust funded 12 consumer organizations that provided a broad range of peer support, services and training to Trust beneficiaries. To ensure these programs provide safe, stable and effective services, The Trust funds a technical assistance program that offers guidance and training related to organizational development, non-profit management and consumer-operated programs. During FY2009, 12 grantees and five new and developing consumer organizations from across the state received a range of assistance. With technical assistance support, 66 percent of the grantees diversified their funding, receiving additional support through competitive state grants, federal funding and donor contributions.

MINI GRANTS

The Trust annually funds three mini-grant programs, which award up to $2,500 to individual beneficiaries for treatment, equipment or services that directly improve their quality of life and increase independent functioning. In 2009, The Trust awarded $742,272 in mini grants to 647 Trust beneficiaries.

Individuals experiencing mental illness, chronic alcoholism and traumatic brain injury received 42 percent of the grants. People with Alzheimer's disease and related dementia received 27 percent of the grants, which were administered by the Alzheimer's Disease Resource Agency of Alaska. Individuals with developmental disabilities received 31 percent of the funds, which were administered by the Department of Health and Social Services Division of Senior and Disability Services.

SMALL PROJECTS

In FY2009, The Trust awarded 32 small project grants totaling $238,451 to various organizations serving Trust beneficiaries. These grants provide organizations with up to $10,000 to create innovative new programs, substantially improve or supplement existing activities, or significantly increase the quality of ongoing projects.

ADULT DENTAL

In FY2009, The Trust completed a 3-year commitment of $4.2 million in matching funds for the Adult Dental Medicaid Program, which provided preventive and restorative dental services for adult Medicaid recipients. The program was reauthorized as a permanent program by the 2009 legislature and the total cost of the program was transitioned from Trust funding to the Department of Health and Social Services general fund/mental health budget for FY2010.

Juneau's Polaris House became the first organization in Alaska to receive clubhouse certification.

Participants in the Alaska Women's Recovery Project.

FY2009 Mini-Grants by Beneficiary Type

Beneficiary Group	Amount Awarded	Number of Beneficiaries
Alzheimer's Disease and Related Dementia	$194,486	174
Developmental Disabilities	$157,079	202
Mental Illness	$298,695	200
Chronic Alcoholism	$ 92,012	71
Total	**$742,272**	**647**

CARING for Alaska's youth

Bring the Kids Home began in 2005 as an initiative to return children with severe emotional disturbances from out-of-state residential facilities to treatment in Alaska and to keep additional children from moving into out-of-state care. The Bring the Kids Home Focus Area is reforming Alaska's mental health care system for children and adolescents. Current priorities include increasing community-based services, providing early detection and intervention, and coordinating with families and schools to promote healthy learning environments.

Funded by The Trust and the Department of Health and Social Services, this initiative is a good example of how The Trust uses its resources to affect systemic change on behalf of Trust beneficiaries. In addition to improving children's recovery at the lowest level of appropriate care, the State expects to benefit from this initiative by gaining better control of the future cost for children's mental health care.

OUT-OF-STATE PLACEMENTS REDUCED

The number of children admitted into out-of-state psychiatric treatment facilities dropped 46 percent, from 202 in FY2008 to 110 in FY2009. That is an overall 78 percent decline from the 489 kids who were admitted into out-of-state residential programs when the initiative began in 2005.

IN-STATE RESIDENTIAL INCREASED

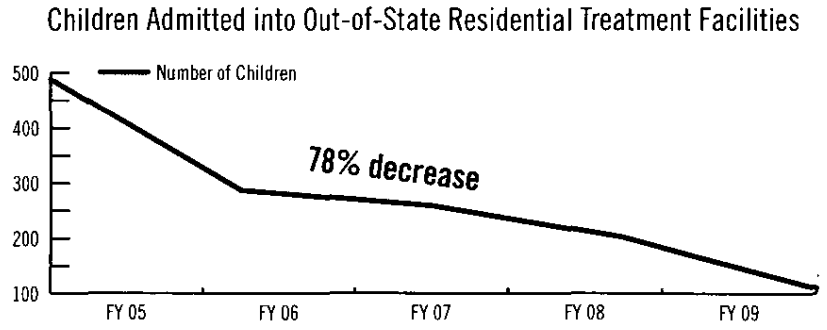
In order for children in out-of-state treatment facilities to come home, there must be treatment available in Alaska. The number of residential beds in Alaska increased from 899 beds in FY2008 to 962 beds in FY2009, an increase of 7 percent. That is an overall increase of 32 percent over the 653 beds in 2005. The emphasis of this effort is increasing capacity at lower, less costly levels of care than psychiatric treatment facilities.

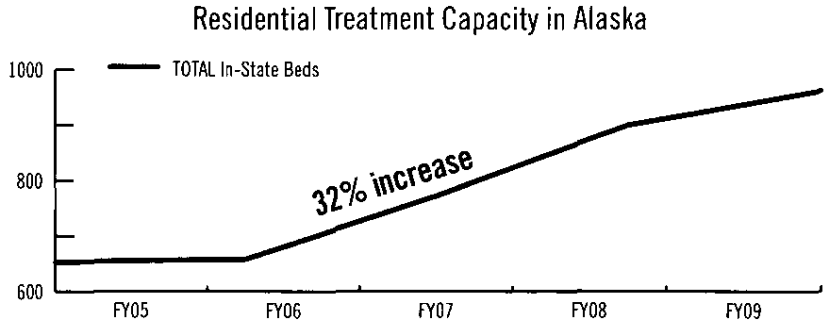
IN-STATE SERVICES INCREASED

An important aspect of the initiative has been to increase home and community-based services so that youth can receive services in or near their home communities. Use of home and community-based services increased 82 percent from 519 youth in FY2008 to 944 youth in FY2009. In addition, 129 of the youth who received services in FY2009 were diverted from out-of-state residential care. Treating youth at or near their home communities allows for earlier interventions and more family involvement. Often it results in more success with troubled youth in a less costly manner, replacing expensive residential treatment.

Family Centered Services of Alaska completed a new therapeutic family home in Fairbanks called "Spirit Court."

A new five-bed group home opened in Dillingham.





MANAGING Trust non-cash assets

The Trust Land Office (TLO) is a 14-person unit in the Department of Natural Resources that manages approximately one million acres of land and other non-cash assets throughout Alaska on behalf of the beneficiaries of the Alaska Mental Health Trust. Gross revenue in FY2009 totaled about $5.6 million, of which about $2.8 million was Spendable Income and about $2.8 million was Principal.

Revenue-generating uses of Trust land include land leasing and sales; commercial timber sales; mineral exploration and production; coal, oil and gas exploration and development; sand, gravel and rock sales; and other general land uses. Rents, fees and 15 percent of timber revenue from Trust land uses are considered "Spendable Income' and are available to The Trust for use in the following fiscal year. Land Sale revenue, hydrocarbon and mineral royalties, and 85 percent of timber revenue are considered "Principal" and are deposited in The Trust corpus, which is held and managed by the Alaska Permanent Fund Corporation.

HIGHLIGHTS OF 2009

- Received a royalty of $832,676 from Fairbanks Gold Mining Inc. for 2009 production from its mine on Trust land north of Fairbanks.
- Initiated due diligence on proposed construction of a 144,000-square-foot office building in Juneau on Trust property known as The Subport. If the project goes forward, the Department of Administration has proposed relocating state employees from five agencies into the new building.
- Developed the first "in-house" Internet-based land sale Web site to showcase The Trust's 2009 annual land sale. In the first week $500,000 of real estate was sold.
- Granted the Municipality of Anchorage two public-use easements in the University-Medical District as part of the 40th Avenue Extension Project and Transit and Pedestrian Improvements and received $652,000 in land use fees.
- Focused on the cleanup of Trust lands in southeast, northern and southcentral Alaska, resolving trespass issues, and conducted remedial reclamation and removed abandoned vehicles and trash.
- The Trust has leased essentially all of its Livengood mineral interest to International Tower Hill Mines, Ltd. (ITHM) and anticipates receiving royalty income from future operation of a mine. ITHM has actively explored for gold at Livengood since 2003 and the project has progressed to one of the larger exploration projects in Alaska.
- Representatives from The Trust, Alaska Department of Administration and U.S. Bureau of Land Management signed the Mental Health Land Entitlement closeout agreement in May 2009. The agreement identifies specific land that will satisfy the Land Entitlement Act as provided by Congress in 1956 to the Territory of Alaska.

FUTURE FOCUS

The TLO will continue developing long-term plans for its natural resource portfolio and will work with local communities and individuals to increase public awareness of Trust lands and our mission. Key projects will include:

- Ongoing due diligence and funding request to facilitate construction of a proposed office building in Juneau;
- Seeking new business opportunities in timber product manufacturing;
- Continuing pursuit of new mining, coal, and oil and gas projects on Trust lands;
- Exploring commercial and residential real estate development projects in Ketchikan, Eagle River, Anchorage and other communities.

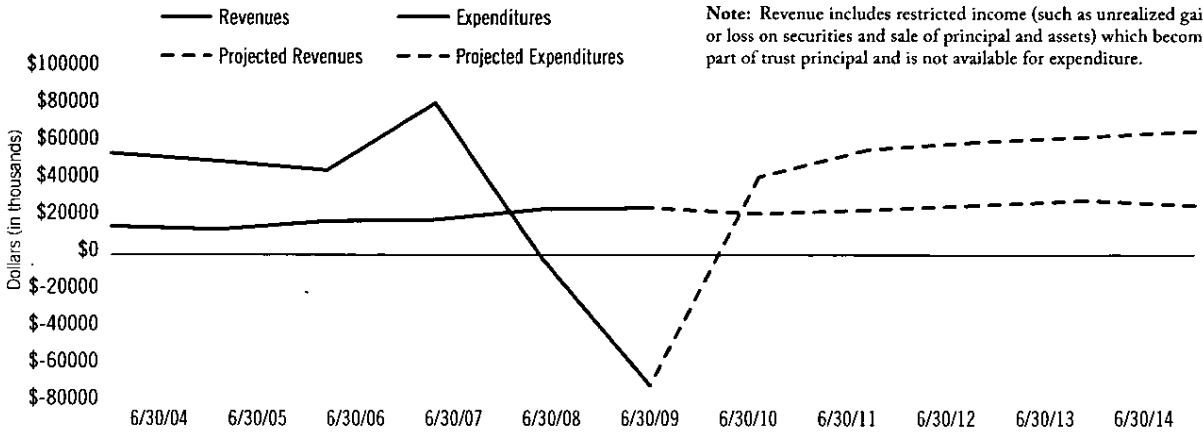
Steve Peavey of Meyers Chuck provides TLO Resource Manager Don Koenigs water transport to Trust land on Meyers Island.

Accompanied by several Trustees, Jeff Jessee, CEO for The Trust, signs documents to make final land selection and close out the 1956 Land Entitlement Act.

Growth rings on harvested trees on Trust land near Tolstoi Bay, show rapid growth due to the premium site conditions on Price of Wales Island in Southeast Alaska.

WEATHERING the economic storm

Revenues and Expenditures



The slowdown in the economy in FY2008 turned into a full-blown recession in FY2009, resulting in the largest annual decline in net assets in The Trust's history. The loss from Alaska Permanent Fund Corp. (APFC) investments was $73,443,000 for FY2009 compared to a loss of $14,683,000 for FY2008.

The Budget Reserve is set at 400 percent of the annual payout to allow for disbursements during market declines. The Budget Reserve investment is split between the Alaska Permanent Fund and the Treasury Division of the Alaska Department of Revenue. The Treasury Division Budget Reserve investments were also impacted by the economic downturns. The loss on this portion of the Budget Reserve was $4,733,371 in FY2009, compared to a loss of $1,914,206 in FY2008.

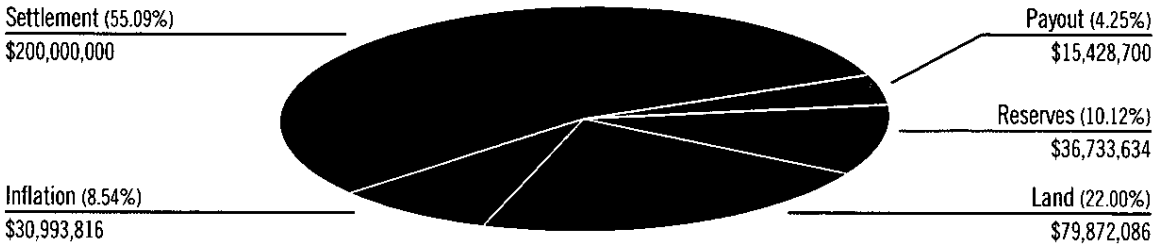
The Trust's payout rate, which is used to calculate the disbursement (or payout) for the annual Trust budget, remained at 4.25 percent. This rate is applied to the balance in the Trust Fund (Principal and Budget Reserve) at the end of a fiscal year to calculate the payout for the subsequent year. Despite huge market losses in FY2009, we are able to fund a payout for FY2010, confirming the validity of our financial model. We are expecting FY2011 funding to be less than FY2009 but similar to FY2010 funding.

Beginning with FY2011, the payout will be calculated on a four-year-average balance, which will smooth out volatility in the payout amount from year to year. The amount available to fund our budget will be proportionately decreased, but will be impacted less by any one year's income.

The following financial performance from FY2009 is available for funding in FY2010:

- Disbursement (payout) rate of 4.25 percent, for a payout of $15,428,700;
- Resource management revenue allocated as income was $2,164,028;
- Interest on the Income Account at Treasury Division was $1,183,429;
- Lapsed funds from prior fiscal years were $4,049,000;
- Reallocation of prior year Authority Grants was $2,100,500;
- Total funding available for FY2010 is $24,925,657. This is a 11 percent decrease from FY2009.

Trust Cash Assets at End of FY2009



2223

BUDGETING for FY2011

Each year the Board of Trustees makes recommendations to the governor and the Legislature regarding expenditure of Trust funds and other state dollars to help pay for Alaska's Comprehensive Integrated Mental Health Program. These recommendations comprise the Mental Health Budget Bill. During the 2010 legislative session, The Trust will seek approval of our FY2011 operating and capital budgets.

Most of The Trust's annual operating and capital funds are spent on programs recommended by The Trust's five focus area workgroups and on programs initiated by The Trust's advisors through an annual request process. Additionally, about $1 million of The Trust's operating budget is available annually for grants to non-profit groups, providers, tribal entities, governmental agencies and other organizations that directly serve Trust beneficiaries.

Following are some highlights of the projects and programs planned for the next fiscal year in each focus area.

WORKFORCE DEVELOPMENT

- Partnering with several state agencies and boards to create a five-year state plan for health workforce;
- Implementing the state's first doctoral-level psychology internship program;
- Working with the state and other partners to support an expanded loan repayment and incentives program;
- Pursuing funding for Alaska's first psychiatric residency program to address a statewide workforce crisis in this discipline.

DISABILITY JUSTICE

- Partnering with the Bethel community and several state agencies to develop and implement a community public safety and treatment response for individuals requiring protective custody because of intoxication or incapacitation due to drugs or alcohol;
- Expanding therapeutic courts to additional Alaska communities;
- Partnering again with the Anchorage and Fairbanks police departments to continue providing training to law enforcement across the state on disorders experienced by Trust beneficiaries and appropriate intervention techniques.

APPROPRIATE AFFORDABLE HOUSING

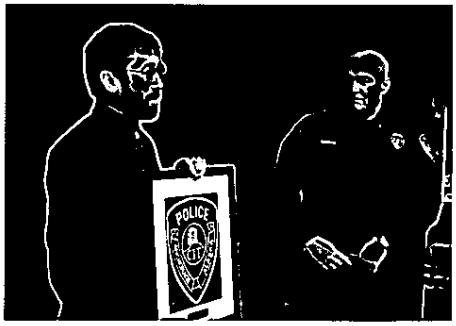
- Partnering again with the Alaska Council on the Homeless and Alaska Housing Finance Corporation to gather baseline data regarding homelessness and housing and implement the first strategies in the Statewide 10 Year Plan to Reduce Homelessness;
- Seeking $4 million in state funding to continue support for improved housing programs.

BRING THE KIDS HOME

- Expanding the capacity to work with youth and families at home to avoid residential treatment;
- Focusing on youth who are transitioning from children's services to the adult service system in a way that accommodates their special needs;
- Enhancing school-based services to support mental wellness and support youth working on recovery while remaining in school.

BENEFICIARY PROJECTS INITIATIVE

- Articulating the role and place of consumer organizations within Alaska's continuum of care for Trust beneficiaries with input from key stakeholders, Trust advisory groups and partner agencies;
- Facilitating the 2011 Alaska Behavioral Health Consumer Recovery Conference for Trust beneficiaries, family members and peer providers.



Jeff Jessee and former Anchorage Chief of Police Rob Huen at a Crisis Intervention Team (CIT) training.

The Trust supported a new 30-bed domestic violence crisis shelter that opened in Bethel in December 2009.

The Trust and its partners are collaborating on a recruitment program to attract workers into the behavioral health field, which experiences high vacancy rates across the state.

FINDING a home changes lives

Early in FY2010, The Trust and its housing partners, including a special task force named by Anchorage Mayor Dan Sullivan, began seeking solutions to reduce homelessness. The goal is to find solutions that could be put into place relatively quickly and that would make a significant difference, especially among chronically homeless, alcohol-dependent individuals. The approach The Trust and its partners want to emulate is described as "housing first" or "low barrier" housing and has been successfully implemented in two Washington state projects. This simple, intuitive approach involves first stabilizing someone in housing, then coordinating the person's social service needs and treatment.

In South King County, Washington, a "housing first" program at Sound Mental Health reported a 68 percent housing retention rate among its residents in a 1-year period, with 90 percent of the individuals connecting to behavioral health services such as substance abuse treatment, mental health counseling and personal skill development. During this period, residents experienced a 67 percent increase in income and 76 percent reduction in jail bookings.

In Seattle, Washington, the city's "housing first" program reported more than a 50 percent reduction in the community's cost of care for chronically homeless individuals after the first six months. The residents also reduced their alcohol consumption over time in this study, even though there was no requirement that residents limit their drinking to reside in the housing units.

Several organizations in Alaska already operate housing programs using the "housing first" model, including Rural Alaska Community Action Program, Inc. (RurAL CAP), a private, statewide, nonprofit organization that assists low-income Alaskans. The Trust, RurAL CAP and Alaska Housing Finance Corporation teamed up in mid-FY2010 to produce a public information media campaign aimed at educating the public about the need for supportive housing programs and the "housing first" concept. The campaign appeared on six TV stations around the state, including the statewide satellite system ARCS, and in nine rural and urban newspapers. The ads feature a case manager from RurAL CAP and a program graduate who since completing the program has found a stable home and steady job, and has remained sober for nine years.

AN OVERVIEW OF The Trust

The TRUST

The Alaska Mental Health Trust Authority

A Catalyst For Change And Improvement

The Trust is a perpetual endowment that uses its resources to ensure Alaska has a comprehensive integrated mental health program to serve Trust beneficiaries.

TRUST FUNDING

The Trustees adopt operating and capital budgets in two-year cycles, but by state statute must submit annual recommendations to the governor and legislature regarding expenditures of Trust income and other state funds to support the state's Comprehensive Integrated Mental Health Program. These expenditures comprise the Mental Health Budget Bill and must be approved by the legislature.

Trustees also set aside a portion of The Trust's annual budget for authority grants, which are grants administered directly by The Trust. Authority grants are available for partnerships, small projects and mini-grant programs for behavioral health conditions, developmental disabilities and Alzheimer's disease and related dementia. These grants are awarded at the discretion of the Board of Trustees or Trust staff and are available to non-profit organizations, service providers, tribal entities, governmental agencies and other groups that serve Trust beneficiaries. Individuals, by regulation, are not eligible to receive grants from The Trust.

For more information, see Grant Opportunities at www.mhtrust.org or call the Grant Administrator at 907-269-7999.

TRUST FOCUS AREAS

The Trust, with input from its many stakeholders, selects several programmatic areas on which to focus planning, development and funding that will have broad and long-term impacts on the systems that serve beneficiaries. Workgroups with representatives from beneficiary-related advisory boards, state agencies and service providers develop strategic plans and funding proposals in each focus area for approval by the Board of Trustees at its annual budget meeting in September. The approved proposals, along with other Trust funding priorities, form the basis for recommendations for funding as part of the state's Comprehensive Integrated Mental Health Program.

Currently The Trust is focusing on five program areas that address issues with significant impact on beneficiaries:

1. Bring the Kids Home – reforming Alaska's mental health care for children and adolescents so they are diagnosed earlier and are treated closer to home;
2. Affordable Appropriate Housing – increasing a continuum of housing options for Trust beneficiaries;
3. Disability Justice – reducing the involvement and recidivism of beneficiaries in the criminal justice system;
4. Beneficiary Projects Initiative – supporting grassroots, peer-to-peer programs for Trust beneficiaries;
5. Workforce Development – creating an available and competent workforce for beneficiary service providers.

The Trust is working with stakeholders around the state to reform Alaska's mental health system of care for children and adolescents.

The Trust is a key player in Alaska's efforts to develop and retain a capable, competent workforce for providers who serve Trust beneficiaries.

THE TRUST

The Alaska Mental Health Trust Authority is a state corporation that administers the Mental Health Trust. The Trust is a perpetual endowment that operates much like a private foundation, using its resources to ensure that Alaska has a comprehensive integrated mental health program for Trust beneficiaries. The mission of The Trust is to act as a catalyst for change and improvement in the systems that serve Trust beneficiaries.

BENEFICIARY GROUPS

Trust beneficiaries include the following individuals:

- people with mental illness,
- people with developmental disabilities,
- people with chronic alcoholism and
- people with Alzheimer's disease and related dementia.

ADVISORS

Trustees and Trust staff work closely with four advocacy boards that represent Trust beneficiaries:

- Advisory Board on Alcoholism and Drug Abuse,
- Alaska Mental Health Board,
- Governor's Council on Disabilities and Special Education and
- Alaska Commission on Aging.

The Alaska commissioners of Health and Social Services, Natural Resources, Revenue and Corrections are also advisors to The Trust, providing input about issues within their departments that relate to Trust beneficiaries.

COMPREHENSIVE INTEGRATED MENTAL HEALTH PROGRAM

The Trust acts as a catalyst for change and improvement in the systems that serve the beneficiaries. Trustees and Trust staff provide leadership in advocacy, planning, implementing and funding of the state's Comprehensive Integrated

Mental Health Program. The Trust and the Alaska Department of Health and Social Services jointly convene other state agencies, beneficiary advisory groups and key stakeholders to develop and revise a Comprehensive Integrated Mental Health Plan for delivering services to Trust beneficiaries. The plan is a tool that focuses the funds and programs of the state, The Trust and its partners. It is reviewed and updated in five-year increments to ensure the plan is addressing the needs of Trust beneficiaries.

The plan looks at the current status of Trust beneficiaries and seeks to make long-term changes in four areas: health, safety, quality of life and economic security. The plan also examines current service delivery systems and any service gaps that may exist. Finally, the plan is useful in indicating avenues for future program efforts.

HISTORY

Prior to statehood, there were limited services available in the Territory of Alaska for individuals who experienced mental illness or developmental disabilities. Instead, these individuals were sent by the federal government to live in an institution in Oregon. During Alaska's transition to a state, Congress passed the Alaska Mental Health Enabling Act of 1956 to help bring these individuals home. The act transferred the responsibility for providing mental health services from the federal government to the Territory of Alaska and, ultimately, the State of Alaska by creating the Alaska Mental Health Trust. To fund The Trust, the state selected one million prime acres of land that would be managed to generate income to pay for a comprehensive integrated mental health program.

Though the Alaska Legislature held a fiduciary responsibility to manage the land on behalf of Alaskans with mental disabilities, it did not do so. Instead, by 1982, only about 35 percent of the land remained in state ownership when Vern Weiss filed a lawsuit on behalf of his son, who required mental health services that were not available in Alaska. Other beneficiary groups joined Weiss v. State of Alaska in a class action suit. The case was ruled on in 1984 by the State Supreme Court, which ordered that the original trust be restored. Ten years later, in 1994, a final settlement reconstructed The Trust with 500,000 acres of original Trust land, 500,000 acres of replacement land and $200 million.

GOVERNANCE

The 1994 Trust settlement established a seven-member, independent Board of Trustees to manage the Trust fund. Trustees are appointed by the governor and confirmed by the Legislature for five-year, staggered terms. Trustees are officers of the corporation and have a fiduciary responsibility to enhance and protect The Trust's financial assets.

TRUST ASSETS

The Trust employs the expertise of several organizations to manage its cash and non-cash assets. The Alaska Permanent Fund Corporation and the Alaska Department of Revenue Treasury Division manage The Trust's cash assets. The Trust contracts with the Trust Land Office within the Alaska Department of Natural Resources to manage its land and other non-cash assets, such as buildings, timber, minerals, and coal, oil and gas developments.

The Trust contracts with the Trust Land Office to manage its cash and non-cash assets, such as buildings, timber, minerals, and coal, oil and gas developments.

Alaska continues to Bring The Kids Home

It's true:

- Most of the children ARE home (or at least, back in Alaska)
- We have most of the residential resources that we need
- Successful strategies are in place
- We hope to "end" BTKH by FY2013

We invite Legislators, Legislative Staff, and the Public to two events to find out more and get an update!

What still needs to be done?

- **What:** Buffet lunch, courtesy of the Alaska Mental Health Trust Authority
- **Where**: Cathedral of the Nativity of the Blessed Virgin Mary, 416 Fifth St., Juneau
- **When**: Tuesday, Feb. 16, lunch served 11:45; presentations 12–1 p.m.

Meet youth, parents, providers, state staff and other Bring The Kids Home stakeholders

- **What:** Social: snacks, courtesy of the Alaska Mental Health Trust Authority
- **Where:** Pizzeria Roma, 2 Marine Way, #104 (in Merchants Wharf Mall)
- **When:** Tuesday, Feb. 16, 5–7 p.m.

For more information about Bring The Kids Home, the next quarterly meeting is Feb. 16–17 at the Cathedral of the Nativity of the Blessed Virgin Mary, 416 Fifth St., Juneau. There will be a discussion of BTKH outcomes, projects, plans and budget increments. To review a draft of the agenda, please go to: http://www.mhtrust.org/calendar/index.cfm?fa=ShowEvent&Classid=75&event_id=615. For background documents and reports, go to: *http://www.hss.state.ak.us/commissioner/btkh/reports.htm*.

For the People

Governor Sean Parnell
Commander in Chief

Warm Welcome Home to Alaska. Governor Sean Parnell shakes hands with Alaska Army National Guard Specialist Christopher Wainwright, 1/207th Aviation, as the Soldiers returned to Alaska at Elmendorf Air Force Base in November. Parnell thanked the Guard members for their service during their one-year deployment to Kosovo.
Photo: Courtesy of the Office of Governor Sean Parnell

The holiday season is the perfect time to reflect on what we have to be thankful for and to bestow our gratitude on the many people we call upon to keep us safe at home and abroad. The Alaska Department of Military & Veterans Affairs is essential to our safety and security.

It was an honor to welcome home members of the Alaska Army National Guard in November. I am proud of their accomplishments in maintaining a stable environment in Kosovo during their one-year deployment. This was the second deployment of Alaskans to Kosovo, where our National Guard members provided the security and training necessary for the region to achieve safety, freedom and stability. It was a great moment, shaking the hands of those fine Soldiers as they set foot back in Alaska, and one I will not forget.

We also welcomed home another group of aviators from the Alaska Army National Guard's 1/207th Aviation, just in time for them to ring in the new year with their friends and family. These Soldiers spent nine months in Iraq transporting high-priority equipment and personnel. Their training and professionalism led to a highly successful mission, and their efforts will help Iraqis in their efforts to create a year filled with renewed hope and peace.

As we endure winter weather in Alaska, I am grateful for our state emergency management personnel who constantly monitor conditions across the state. Our EMS personnel are prepared to assist our fellow Alaskans in the event of a winter storm disaster. With our new state-of-the-art mobile emergency operation center, we have interoperable communication capabilities during disasters, supplying a more streamlined response. These technological tools allow us to act quickly and effectively in critical situations, even in the most remote of Alaska communities.

I, like all Alaskans, am thankful for the commitment and sacrificial service of our Guard members and civilian employees, who keep our state and nation safe. As we gather with family and friends this new year, let us give our heartfelt appreciation to those serving our country and to their families. Through the very good work of the Alaska Department of Military & Veterans Affairs, and because of the selflessness of our men and women in uniform, I know 2010 will be a positive, safer year for all Alaskans. Sandy and I extend warm wishes for the new year to each of you.

Sean Parnell
Governor

Exceptional Service to Alaska

The Department of Military & Veterans Affairs continues to provide Alaskans with exceptional service, and the start of the new year is an excellent opportunity to reflect on our significant accomplishments while cherishing time with our families.

Strong families are a key component to a successful organization, and for the Department of Military & Veterans Affairs, we work hard to assist all of our families, especially when our Soldiers and Airmen are deployed in support of overseas contingency operations.

Efforts by the Alaska National Guard Family Programs office, working with the Alaska Friends of the Guard and Reserve, led to two donations totaling $15,000. These significant contributions made by TriWest and Best Buy aid in supporting our Guard families here in Alaska that need it most. Family Programs also held several family activities at the National Guard Armory on Fort Richardson, adding to the holiday season of giving back to our Guard families.

The Alaska Army National Guard triumphantly returned home to Alaska from both Kosovo and Iraq in November and December after exceptional deployments.

The Soldiers of the 1st Battalion, 207th Aviation Regiment spent a year away from their families supporting a peacekeeping and peace enforcement mission to ensure stability in Kosovo. Our Guardsmen performed exceptionally well and were recognized for their efforts by U.S., NATO and coalition leaders. I was very happy to welcome them home, alongside Gov. Sean Parnell, when they returned to Alaska in time to spend Thanksgiving with their families. And how can we thank the Air Guard enough for their "just in time" delivery of F Company on New Year's Eve?

The Alaska Air National Guard operation tempo has been extremely busy here at home and in support to coalition forces in Afghanistan. From September through January, the 176th Wing deployed more than 200 Guardsmen in stages, rotating in and out of the theater of operations while providing C-130 airlift, ferrying people, equipment and supplies throughout the region.

The Division of Homeland Security & Emergency Management recognizes the challenges we face here in Alaska and works hard to provide a secure, safe Alaska every day. This fall, utilizing a one-time grant, emergency management personnel contracted a mobile emergency operation vehicle. This capability is vital to restoring communication with the State Emergency Coordination Center and first responders during disasters. With colder months ahead, this mobile operation center will be tested with community partners and could help save lives.

The Alaska Military Youth Academy began another class this fall, enrolling 192 cadets and continues to excel as number one in the nation in contacting and recruiting high school dropouts. Its success in teaching the youth of Alaska life-coping skills and service to their community, and by providing an opportunity for them to complete their high school education, has resulted in nearly 2,800 graduates throughout the last 15 years.

All of these accomplishments are due to the great service and sacrifice of our department members. As we start 2010, I want to thank all of our Alaska National Guardsmen, their families and civilian employees. Please do not forget the loved ones serving far from home and away from their families. I thank you for what you do and the great sacrifices you make. ■

Service and Smiles. Brigadier General Thomas H. Katkus, right, adjutant general of the Alaska National Guard, shakes hands with Roger Nassuk Sr., a resident of Koyuk, during Operation Santa Claus in November. Nassuk retired from the Alaska Army National as a sergeant first class after 32 years of service. For more on Operation Santa Claus, turn to page 10. You need to know... diabetes is preventable!

Stay healthy to avoid risks
- Take a walk or be active each day
- Talk to a health care provider about a healthy weight for you

Make healthy food choices
- Lower fat intake — grill foods instead of frying
- Snack wisely with fruits and vegetables
- Serve smaller portions of food
- Lose weight if needed

Family and friends can help
- Make a plan for better health
- Get support from family and friends
- Get started today

How can I tell if I have diabetes?
Look for — increased thirst, hunger, fatigue, unexplained weight loss and blurred vision

Dispatches from the Front...

Wounded Warrior Honored

By Captain Amy B. Slinker, 134th Public Affairs Detachment

FAIRBANKS, Alaska ... A former Alaska Army National Guardsman was honored and welcomed home in Fairbanks in November by family, friends and comrades at a luncheon held at Pike's Waterfront Lodge.

Specialist Jeremy Pierce, a recipient of the Bronze Star with valor and Purple Heart, was recognized along with past and present members of the Alaska National Guard at a brunch provided by Jay Ramras, owner of Pike's.

More than 250 people attended the program, including Fairbanks community members, Fairbanks-based Soldiers and Guardsmen who traveled from Anchorage, Barrow and the Kenai Peninsula. Many of the Soldiers were members of the 1/297th Cavalry who served with Pierce during his first deployment to Iraq with the Alaska Army National Guard.

"It's a great honor to be standing in front of these guys," Pierce said. "When you are clapping for me, know there are many people here who put their lives on the line."

The homecoming was Pierce's first trip back to Alaska after sustaining combat injuries while deployed to Iraq in August 2009 with the Oregon National Guard. He lost part of his left leg and part of a finger on his left hand. Pierce's hard work from physical therapy at Walter Reed Army Medical Center in Washington, D.C., was apparent, as he was able to proudly walk around the room greeting guests.

Brigadier General Thomas H. Katkus, adjutant general of the Alaska National Guard, presented Pierce with a solid silver coin for outstanding service to the United States and the state of Alaska. Imprinted on one side of the coin is the Alaska state seal, with the Alaska National Guard Joint Forces Headquarters seal on the other side.

Honoring Heroism. Sergeant Henry Monk, left, and Specialist Jeremy Pierce reunite during a November luncheon at Pike's Waterfront Lodge in Fairbanks. Monk and Pierce previously served together in the Alaska Army National Guard. Pierce was honored at the luncheon for his service and sacrifice as a National Guardsman. While deployed to Iraq with the Oregon National Guard, Pierce was wounded in combat and lost part of his left leg. Monk, a Fairbanks resident, is currently serving in the 1/297th Cavalry, Alaska Army National Guard. Photo: Specialist Jill King, 134th Public Affairs Detachment

"We not only honor Jeremy, but we honor all of the men and women who are serving every day," said Alaska State Representative Nancy Dahlstrom, co-chair of the Armed Services Committee and leader of the luncheon program. "This is just a small token of the appreciation that we have for you and what you do." ■

Military Appreciation at the Rink. Lieutenant General Dana Atkins, left, commander of Alaskan Command, presents Brigadier General J. Randy Banez, assistant adjutant general – Alaska Army National Guard and Space and Missile Defense, with an Alaska Aces jersey in December during intermission of an Alaska Aces Military Appreciation game at the Sullivan Arena in Anchorage. More than 5,400 fans filled the stands to cheer on their team and show their support for all branches of the military. Photo: Mary M. Ball, U.S. Army Alaska Public Affairs

Where in the World

Soldier Excels in Singing Competition

By Sergeant Karina Turner
DMVA Public Affairs

CAMP DENALI, Alaska ... One Alaska Army National Guard Soldier from Eagle River got the opportunity of a lifetime while deployed this fall on a peace-keeping mission to Kosovo.

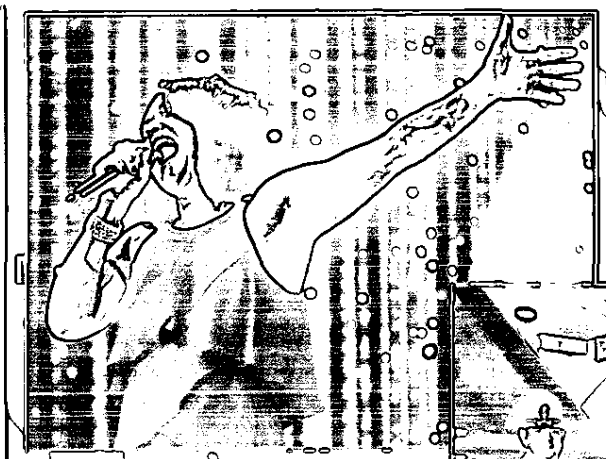
In hopes of keeping busy during the yearlong deployment, First Lieutenant Sarah Payeur, Headquarters Company Joint Operations Center liaison, 1/207th Aviation, Alaska Army National Guard, entered Operation Rising Star while deployed to Camp Bondsteel, Kosovo.

"Originally the Morale Welfare and Recreation director asked me to be a judge for Operation Rising Star, which is a singing competition similar to American Idol," Payeur said. "I told her I was really interested in competing though; I have a degree in theater, so for me, it was really just getting back in touch with my roots a little bit. It was something to take my mind off of being deployed and being away from my family."

"I was very happy to hear that First Lieutenant Payeur was selected to represent 1/207th Aviation in Camp Bondsteel during Operation Rising Star," said Lieutenant Colonel Jeffery Roach, 1/207th Aviation commander. "She put in a tremendous amount of work in preparing for the competition, and her participation was a real morale booster for the aviation battalion."

After juggling five weeks of competition and her unit's mission of providing aviation support with UH-60 Black Hawk helicopters to U.S. and coalition forces, Payeur proved to be unstoppable. She beat out all five of her Camp Bondsteel competitors and won the opportunity to compete worldwide in Washington, D.C.

"I didn't think I would win; I really just wanted to reconnect with something that I loved," Payeur said.



Rising Star. First Lieutenant Sarah Payeur, Joint Operations Center liaison for the Alaska Army National Guard's 1/207th Aviation while deployed to Camp Bondsteel, Kosovo, sings "Life is a Cabaret" during Round 1 of the 2009 Operation Rising Star finals competition in November. Photo Tim Hipps, Family and Morale Welfare and Recreation Command Public Affairs

Black Hawk Pit Stop. At the Alaska Army National Guard hangar in Nome, Governor Sean Parnell takes a moment to meet with a crew from 1/207th Aviation while he was in town in November. From left to right: Alaska State Trooper Sergeant Andrew Merrell, Governor Sean Parnell, Chief Warrant Officer Dave Stettenbenz, Chief Warrant Officer Two Matt Felter and Sergeant Nick Mikos. Photo Courtesy Office of Governor Sean Parnell

"We are all very proud of First Lieutenant Payeur's accomplishment," said Brigadier General Thomas H. Katkus, adjutant general of the Alaska National Guard. "Through her perseverance, she has brought great credit to her unit and the Alaska Army National Guard, and she is someone that can be an inspiration to us all in pursuing our goals, whatever they may be."

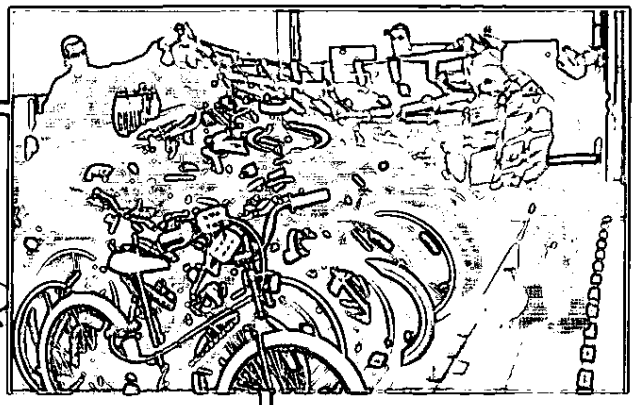
Payeur had a solid fan base of family and friends back home, as well as of Soldiers from 1/207th Aviation.

"Every Saturday, for five weeks in a row, they came out to support me," Payeur said of her comrades. "The aviation unit was really encouraging; they support everyone in what they want to do, whether it's a softball tournament or basketball game, there is usually a big turn out and show of support. Hopefully, it gave them a break from what they were doing and helped their morale."

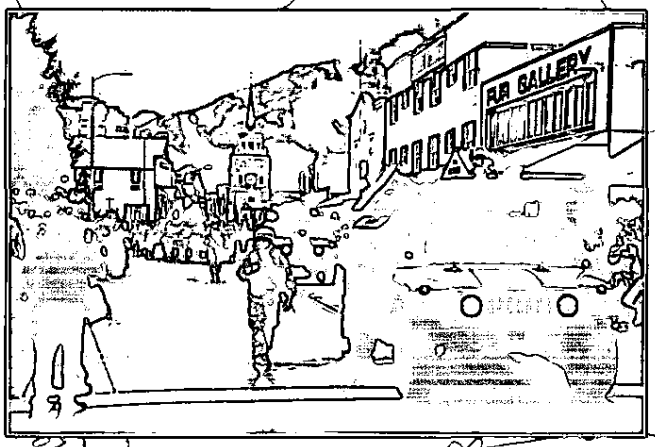
After winning the Camp Bondsteel competition, Payeur was one of 12 selected to compete worldwide in the Washington, D.C., finals, where she competed against other military members and dependents.

"I didn't make it past the first round in the D.C. competition, but I got a lot of good feedback from the judges, and it was the chance of a lifetime that I'm happy to have experienced," Payeur said. "I'm really

Universal Medicine. Alaska Air National Guard Senior Airman Amanda Crowson, aerospace medical technician, 168th Refueling Wing, takes care of a patient while deployed to Southwest Asia. She is part of the 386th Expeditionary Medical Group and provides emergency medical services, sick call assessments and immunizations. "I love being able to get our personnel back on their feet and back to work to keep the mission going," said Crowson on her first deployment experience. Photo Courtesy of U.S. Air Force



Bikes to Bagram. Left to right: Alaska Air Guardsmen Staff Sergeant Woody Miller, Senior Airman John Darnall, Senior Airman Ryan Pierce and Technical Sergeant Summer Rehak, all from the 176th Logistics Readiness Squadron, pull a top net over a pallet of refurbished bicycles in December. The bikes were airlifted by the Alaska Air National Guard's 144th Airlift Squadron to Afghanistan to be given to disadvantaged children. Photo: Technical Sergeant Shannon Olesco, 176th Wing Public Affairs



Alaska Day. Members of the Alaska Army National Guard march through downtown Sitka during the Alaska Day celebration in October. More than 150 Soldiers took part in the four-day event, which commemorates Alaska's purchase from the Russians. The Soldiers were welcomed by the community and took part in many of the events offered during the celebration.

Homecoming Hugs. Major Mike Cummings hugs his son, Gavin, after returning home from a deployment to Afghanistan with the Alaska Air National Guard. Cummings, a C-130 pilot with the 144th Airlift Squadron, was one of 33 Guardsmen who returned in December from a tour in support of Operation Enduring Freedom.
Photo: Major Guy Hayes, DMVA Public Affairs

appreciative to have had the entire aviation unit behind me. When you are deployed, your unit becomes like your second family; you depend on each other for everything."

Payeur's unit returned to Alaska from Kosovo in November after successfully supporting more than 1,100 missions while deployed. Although her run for the Operation Rising Star title ended early, she hasn't given up on her love of music.

"I would probably compete again if there was another opportunity, but the caveat to that is I wouldn't want it to create a hardship for my kids," Payeur said. "So for now, I'm just going to start writing music again." □

Air Guard Brings Bikes to Afghanistan

By DMVA Public Affairs

KULIS AIR NATIONAL GUARD BASE, Alaska ... More than 20 disadvantaged children in Afghanistan have received new bikes this winter thanks to a group of Anchorage volunteers and an assist from the Alaska Air National Guard.

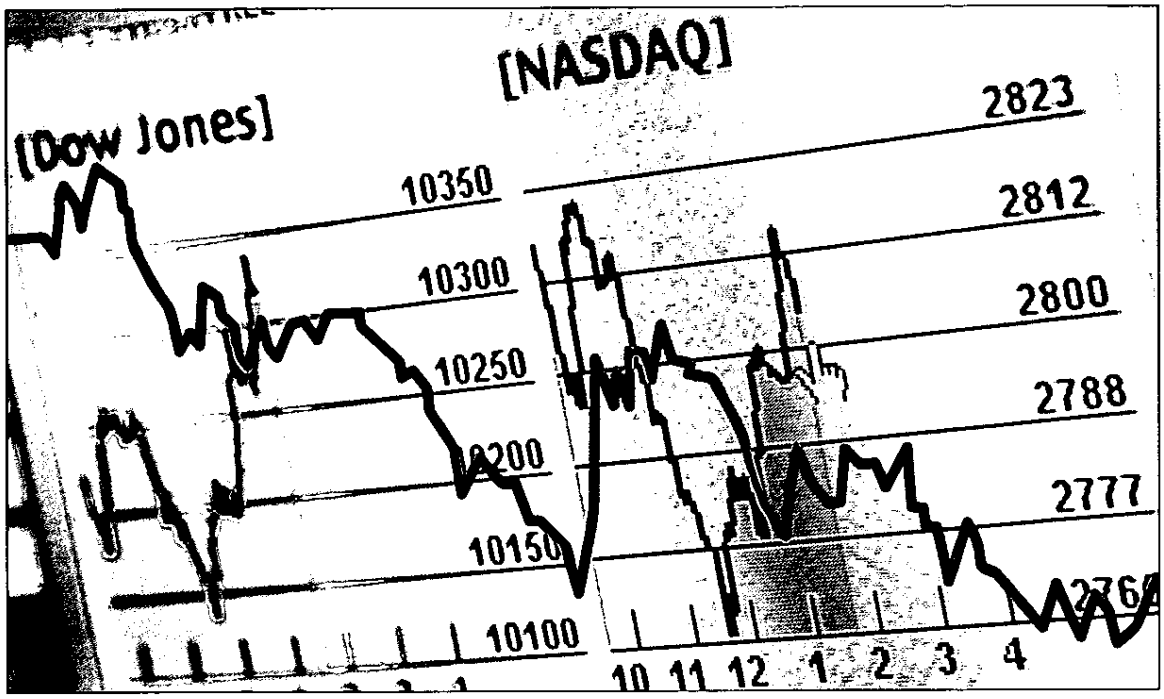
The bicycles, together with parts and tools, were donated by the Anchorage Community YMCA, The Bicycle Shop, Paramount Cycles, Chain Reactions and REI, Inc. They were then refurbished by Off the Chain, a nonprofit, all-volunteer bicycle collective in Anchorage. Their services are aimed at providing mobility to those whose only transportation options are bikes and who cannot afford maintenance elsewhere.

A group of Off the Chain volunteers came up with the idea of giving bicycles to underprivileged Afghan children. The big obstacle was getting them there. Organizers approached Lieutenant Colonel David Glick, a pilot with the Alaska Air National Guard's 144th Airlift Squadron because the squadron routinely flies personnel, equipment and supplies into the remote, war-torn country as part of a rotating deployment the unit fulfills.

Chris Himes, a long-term Off the Chain volunteer, said "I can't imagine any other way it could have happened. It's a perfect confluence of interests and abilities – the Air Guard being on the way anyway and being able to distribute the bikes, which we would never be able to do."

In December, a group of Air Guard members arrived at Off the Chain with a flatbed truck to pick up the bikes. Three days later, Guard members at Kulis Air National Guard Base, deploying to Afghanistan in support of Operation Enduring Freedom, loaded them onto a C-130 tactical airlift plane for the three-day flight. Once in Afghanistan, the bikes were handed over to a local U.S. military unit at Bagram Airfield for distribution to Afghan children.

"With our Guardsmen rotating in and out of Afghanistan throughout the holiday season, it was the perfect opportunity to support a worthy cause and provide a little cheer for Afghan youth," said Brigadier General Thomas H. Katkus, adjutant general of the Alaska National Guard. □



When financial markets are volatile... you can depend on MBA.

In times of economic uncertainty, your family can depend upon the stability of their MBA-sponsored group term life insurance to pay the lump sum or periodic payment benefit of the life insurance you purchased. Your loved ones will not be dependent upon the ups and downs of the financial markets to secure their future.

The premiums for MBA Term 90 are competitive. The coverage stays with you when you leave the military, and you do not have to convert to other coverage. MBA Term 90 is an ideal supplement to SGLI coverage.

Your spouse is eligible for full membership and may apply for up to $250,000 of coverage, and dependent children may receive up to $12,500 of coverage at no additional cost.

Since March 2003, MBA-sponsored group life insurance has paid over $23 million in claims to families of members lost in military hostilities in Iraq and Afghanistan. This money helped the families of our members continue their lives during a difficult period.

When you purchase coverage, you join a community of people who share your interests. We regularly offer new benefits to increase the value of your MBA membership. In uncertain times, protect your family with reliable insurance coverage. Become a member today! Visit our website:
