Enrique Martinez-Vidal
Vice President, Academy Health
Washington, D.C.

Keynote Speaker January, 28, 2008
What You Need to Know: Health Reform for Alaska

Enrique Martinez-Vidal is a Vice President at AcademyHealth and the Director of the Robert Wood Johnson Foundation's State Coverage Initiatives (SCI) program which works with state policy leaders to develop strategies to improve insurance coverage and foster broad health care reform. Enrique joined AcademyHealth in February 2005 as the deputy director of SCI.

He is currently the project director for the State Quality Improvement Institute, a project of the Commonwealth Fund to assist states that are ready to make substantial commitments to quality improvement and to facilitate development of concrete action plans for further progress. He also has worked on various projects under a contract with the federal Agency for Healthcare Research and Quality (AHRQ) including the oversight of a state-level environmental scan of quality initiatives to help determine how a partnership could be developed between AHRQ and states regarding quality improvement; and a pilot project that presented AHRQ's State Snapshots to four states in an effort to create an ongoing dialogue about how these reports can be used for state-level quality improvement.

Previously Mr. Martinez-Vidal was the deputy director for performance and benefits at the Maryland Health Care Commission, an independent state agency. There he was responsible for the oversight of Maryland's small group insurance market reforms; the annual evaluation of Maryland's mandated health insurance benefits; the collection and public dissemination of quality and performance information for hospitals, nursing homes and health plans; providing primary assistance on all legislative issues; and working on numerous other projects related to the affordability of health care, quality improvement, and patient safety.

Mr. Martinez-Vidal was formerly a policy analyst with the Maryland Department of Legislative Services for five years. During that time he staffed the House Economic Matters Committee and was involved with a number of health-care related issues. He has a B.A. in political science and international studies from Dickinson College and a master's degree in public policy from Georgetown University.

State Ranking on Quality Dimension

SOURCE: Commonwealth Fund State Scorecard on Health System Performance, 2007

Drivers of State Health Reform Efforts

- Uninsured still high
- Employer-sponsored insurance down
- Costs/premiums increasingly unaffordable – Individ; Families; Govt
- Coverage needed for effective and efficient health care system
- Lack of national consensus – future?
- Greater political will at state level

Key Policy and Design Issues

- Different Populations Require Different Solutions
- Subsidies and Financing: Who will pay? Who will benefit?
- Should Health Insurance Coverage Be Required?
- What is Affordable Coverage?
- What is the Most Appropriate Benefit Design?
- Do Insurance Markets Need to be Reformed/Reorganized?
- Best Mechanisms for Cost Containment/Systems Improvement

“One size fits all” approach won’t work

- Those with few resources to bring to private insurance market
 - Ceiling = eligibility for public programs
 - Children: 100-300% FPL
 - SCHIP Parents/Childless Adults: Vary from 12-275% FPL
- Those with some resources but cannot bear the full cost of insurance premiums
 - Subsidies and other methods to reduce premiums
- Those who have sufficient incomes to participate in market on their own
 - Encourage voluntary participation or mandate coverage

No Free Solutions: Who Will Pay? Who Will Benefit?

- Shared responsibility – Who will help cover the costs?
 - Individuals; Employers; Federal government; State government; Health plans/insurers; Providers
- Enough money in current system?
 - If yes, then – Redistribution (Who will pay? Who will get paid?)
 - If not, then need new forms of revenue: Sin taxes; Provider taxes; Payroll taxes; Lease the lottery; Slots revenues; Gross Receipts Tax

Should Health Insurance Coverage Be Required?

- Unenforceable? Impingement on individual freedom?
- Does your state have money for subsidies to help lower-income uninsured (or an exemption process)?

What is Affordable Coverage?

- Related to overall benefit design
- Related to subsidies being considered
- Could be related to individual mandate
- General agreement that levels of both premium and out-of-pocket costs should somehow be related to income and ability to pay

Benefit Design

- Services included/excluded; cost-sharing; structure of access to providers
- Not just cost of coverage but value of the benefit plan – what set of services are purchased for specific amount of money
- Before – limit benefits; raise cost-sharing; limit networks (value issue)
- Levers within benefit design:
 - reduce premiums
 - encourage efficient/appropriate consumer behavior
 - change carrier and provider behavior
- Evidence-based benefit design? MN
- Consumer-driven health plans? IN
- First-dollar benefits? TN
- Direct consumer behavior change? RI

Don't Forget the Delivery System

- Prevention/primary care/wellness
- Chronic care management and coordination
- Public health initiatives
- Value-based purchasing/payment reforms
- Medical error reduction
- Health-acquired infection reduction/patient safety
- Price and quality transparency
- Health information technology and exchange
- Administrative and regulatory efficiencies

What is a Medical Home?

The Joint Principles of the Patient-Centered Medical Home, developed by the leading physician groups

- **Personal Relationship**
- **Team Approach**
- **Comprehensive**
- **Coordination**
- **Quality and Safety**
- **Expanded Access**
- **Payment for Added Value**

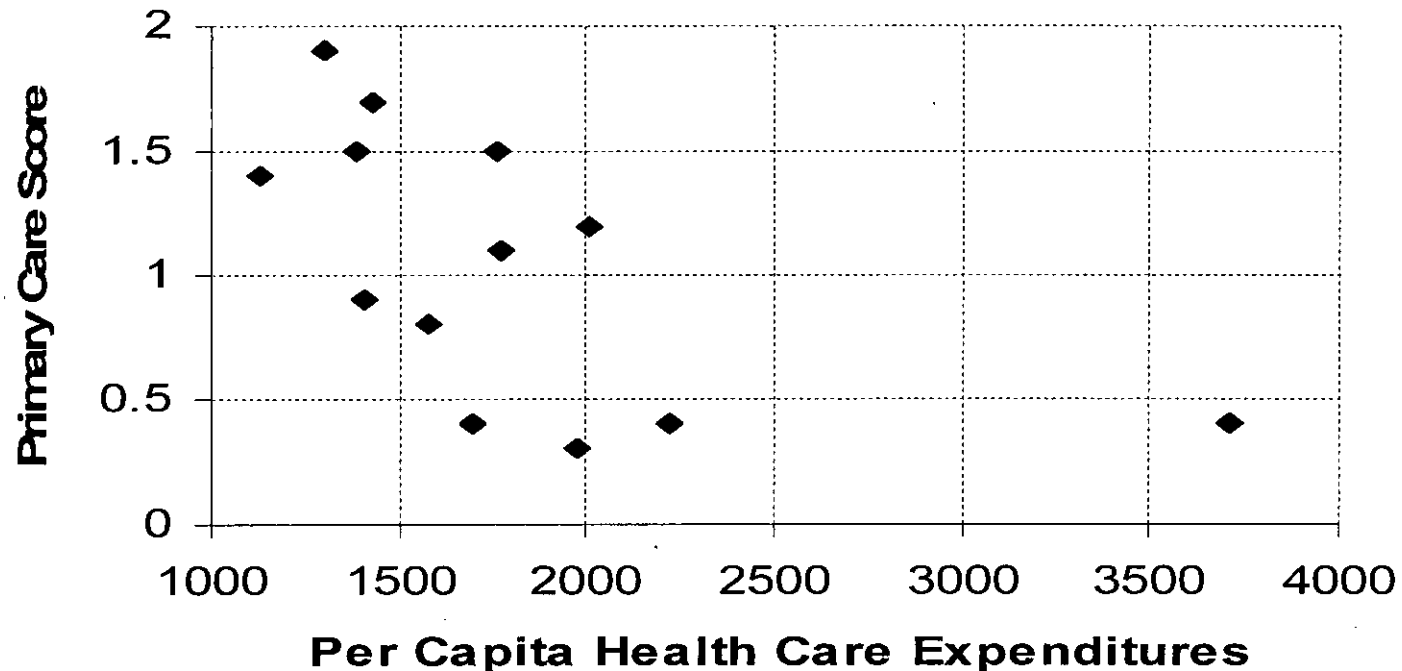

Other “Medical Home” Definitions

- NCQA – Has a 3-level standard being used or adopted by several states
 - Based on the Joint Principles
 - Utilized in Vermont, Rhode Island Medicaid and elsewhere
- Health Disparities Collaboratives, the “Wagner Model” or chronic disease management programs
 - A system change model that emphasizes:
 - Using best practice standards of care for specific chronic diseases
 - Use of quantitative process and outcome measures
 - Team approach to care
 - Patient education and self-management
 - Implemented in Community Health Centers around the country
 - Implemented in Washington, Rhode Island, Pennsylvania, and elsewhere
- Primary Care Case Management (PCCM)

High Access to Primary Care Correlates with Low Health Care Spending

Source: Based on The Commonwealth Fund 2006 International Health Policy Survey of Primary Care Physicians in Seven Countries

State Coverage Initiatives

Robert Wood Johnson Foundation

State Medical Home Programs

- 31 states have implemented programs to advance Medical Homes in Medicaid
- States working across payers on Medical Homes Programs include Colorado, Louisiana, Maine, New Hampshire, Pennsylvania, Rhode Island, and Vermont
- States with model Medical Homes programs include Vermont, North Carolina, Rhode Island and Pennsylvania

Comprehensive Efforts

Enacted

Maine ('03)

Massachusetts ('06)

Vermont ('06)

Significant Proposals

California – failed

Kansas – some pieces

New Mexico – very small pieces

Pennsylvania – in process

Strategies for Comprehensive Reform

	Maine	Massachusetts	Vermont
Individual Mandate	No	Yes	No <i>Will consider if coverage targets not met</i>
Purchasing Mechanism	DirigoChoice	Health Insurance Connector	Catamount Health
Subsidies for Low-Income	Up to 300% FPL	Up to 300% FPL	Up to 300% FPL
Public Program Expansion	Parents <200% FPL Childless Adults <125% FPL	Adults <100% FPL Children <300% FPL	<i>Builds upon previous expansions</i> Children <300% Parents <185% Childless Adults <150% FPL
Employer Requirements	<i>Voluntary</i> <i>Participating employers must pay 60% of premium</i>	\$295/employee fee for non-offering. Must offer §125 Plan	\$365/FTE fee for non-offering

Massachusetts Pillars of the Reform

- Employer Responsibilities
 - Section 125 Plan Requirement
 - Offer Coverage or Be Assessed

- Personal Responsibility/Individual Mandate

- Expansion of Publicly-subsidized Programs

- Major Changes to Insurance Market
 - Merged Small Group and Individual Markets
 - Raising age of dependents – up to 25
 - Connector

Current State of the Commonwealth

- More than 439,000 newly-insured between June 2006 and March 31, 2008
- 191,000 more in private coverage (no public \$\$) – more than 40% of all newly covered have no subsidies
- Employer-sponsored insurance remains predominant source of coverage (82% of non-elderly): no crowd-out
- Non-group premiums are down over 40% and membership has grown over 50%
- Approximately 1-2% of the MA population or 60,000 persons may be exempted from the mandate

Vermont - Blueprint Components

Public Policy	<ul style="list-style-type: none"> ▪ Blueprint legislation and funding ▪ Executive Director at Governor's Office level ▪ Integration with Public Health Disease Prevention Programs
Community	<ul style="list-style-type: none"> ▪ Community Grants ▪ Environmental and Policy Strategies, Smart Planning ▪ 211 as statewide resource tool
Self-Management	<ul style="list-style-type: none"> ▪ Healthier Living Workshop—All conditions <ul style="list-style-type: none"> - Over 40 statewide; 500+ enrolled - +60% reduction in MD and ED visits post at one year ▪ Patient portal planned
Information Systems	<ul style="list-style-type: none"> ▪ Statewide RHIO, Health IT Plan ▪ Web-based chronic care information systems ▪ EMR
Physician Practices	<ul style="list-style-type: none"> ▪ Consensus treatment standards—7+ Diseases ▪ Clinical Microsystems support in practices –training, coaching, peer support ▪ 75% participation in 6 Communities (HSAs) □ 200 practices
Health Systems	<ul style="list-style-type: none"> ▪ Required coordination across all payers in 3 pilots in 2008 ▪ Contract with National Payment Reform Consultant

California Proposed Reforms

- **Shared Responsibility**
 - Individual mandate
 - Guaranteed issue
 - Financing: Government, Hospitals, Employers, Individuals

- **Prevention/Health Promotion/Wellness**
 - Tied to preventive health practices
 - Reducing medical errors (e-prescribing)
 - Obesity prevention
 - Tobacco cessation efforts
 - Health Care Cost and Quality Commission

- **Affordability & Cost Containment**
 - Subsidies for low-income adults and children
 - Section 125 plans/HSAs
 - Emphasis on HIT
 - Increase Medi-Cal reimbursement rates ('hidden tax')

Kansas – Summary of 2008 Legislative Action

Transforming Medical Care	Improving Public Health	Expanding Affordable Insurance
<ul style="list-style-type: none"> • Transparency project: Health care cost and quality (Kansas Health Online) • Health literacy • Medical home definition • Medicaid provider reimbursement • Community Health Record (HIE) • Insurance Form Standardization 	<ul style="list-style-type: none"> → Increase tobacco user fee → Statewide smoking ban → Partner with community organizations → Education Commissioner → Collect fitness data in schools → Promote healthy foods in schools → Promote fitness in schools → Wellness for small businesses → Healthier food for state employees → Dental care for pregnant women → Tobacco cessation in Medicaid (for pregnant women only) → Expand cancer screening 	<ul style="list-style-type: none"> → Aggressive outreach & enrollment of eligible children (target pop: 20,000) → Premium Assistance for low income adults without children (target population: 39,000) → Small Business Initiatives (target population: 15,000 young adults and 12,000 employees of small businesses)

Green – Passed with Funding, if Needed; Yellow – Passed with No Funding; Red – Did Not Pass

State Coverage Initiatives

Robert Wood Johnson Foundation

Health Solutions New Mexico Plan

What was Proposed:

- Insurance Reforms
- Phased-In Health Coverage Participation Reqmt
- Electronic Claims and Records
- Health Coverage Authority
- Evaluation

What Happened:

- Funding for eligible but not enrolled: \$22.5 m.
- Treat developmentally disabled children: \$10 m.

Pennsylvania Proposed Reforms:

Prescription for Pennsylvania

Rx for Affordability

*Cover All Pennsylvanians
(now Access to Basic Care)*

*Coverage for College
Students and Young Adults*

Community Benefit
Requirements

Uniform Admission Criteria

Fair Billing and Collection
Practices

Capital Expenditures

*Small Group Insurance
Reform*

Health Information Exchange
– Exec Order

Rx for Access

Health Care Workforce

**Removing Practice
Barriers – Scope of
Practice**

Cost-Effective Sites

Co-Occurring Disorders

Governor may consider
individual mandate if number
of uninsured does not
decline over next few years

Rx for Quality

**Hospital-Acquired
Infections**

Director & Director of Policy GOHCR. Alliance for
Health Reform Briefing, October 26, 2007

Substantial Reforms

Enacted

Indiana - 2007

Iowa - 2008

Maryland - 2007

Minnesota - 2008

New Jersey - 2008

Washington - 2007

Wisconsin - 2007

State Coverage Initiatives

Robert Wood Johnson Foundation

Indiana: Healthy Indiana Plan (HB 1678)

- Increases tobacco taxes by \$0.44 per pack; \$0.33 will be used for:
 - Covering adults up to 200% FPL + Immunization programs

- The remaining \$0.11 will be distributed as follows:
 - Three cents will increase physician/dentist Medicaid reimbursement rates;
 - Three cents will provide a tax credit to employers that establish Section 125 plans - for employers not offering a fully insured health plan that satisfies Section 125 of the IRS code, the state will provide the lesser of \$50 per employee or \$2,500 for 2 years if the employer establishes Section 125 plan; and
 - The remaining 5 cents will be used to increase tobacco prevention and cessation programs and for other health programs.

- **A key aspect of HIP is that it utilizes the HSA model combined with comprehensive insurance coverage above the deductible. Individuals will annually receive \$500 of pre-deductible, free preventive care and have a \$1,100 deductible.**

Iowa Reforms

- Coverage for children up to 300% of FPL (with a sliding scale premium between 200-300% FPL) + one-year continuous eligibility
- Directs an advisory group to develop a plan for full health coverage in five years
- A Medicaid buy-in option for those with disabilities
- A Medical Homes Initiative
- Healthy Communities Initiative, Quality improvement council, transparency, electronic health plan to be developed

Maryland Working Families and Small Business Health Coverage Act

- Provides subsidies to small employers (2-9 employees) and employees of small employers if the employer:
 - has not offered a health benefit plan within the prior 12 months;
 - meets certain low-wage requirements to be established through regulation;
 - establishes a Section 125 payroll deduction plan to allow for pre-tax premium contributions; and
 - agrees to offer a wellness benefit that is designed to prevent disease, reduce poor clinical outcomes, and promote health behaviors and lifestyle choices.
- Expands Medicaid eligibility up to 116% FPL for parents/caretaker relatives.
- Phase-in over four years of Medicaid eligibility up to 116% FPL for childless adults—enrollment may be capped and benefits may be limited based on available funding.
- Financing: combination of general funds, hospital uncompensated care savings, a one-time surplus from high risk pool, and federal funds.

Minnesota – Coverage and Cost

- **Childless Adults to 250%**
- **Section 125 Plans**
- **“Essential Benefit Set”**
- **Easier enrollment and more seamless transitions**
- **Directs development of proposal to promote access to affordable employer-sponsored health care through tax credits and deductions**

Children	275% FPL
Pregnant Women	275% FPL
Childless Adults	175% FPL
SSI Disabled	100% FPL

Minnesota Payment Reform and Quality Improvement

- Establishes a single statewide transparent system for quality-based incentive payments
 - Public reporting on risk-adjusted quality measures
- Establishes new payment system based on “baskets” of care and then allows consumers to compare prices across providers
- Establishes standards for state certification of health care homes (to receive care coordination payments)
- Administrative Efficiency
 - Requirement that all EHRs [Electronic Health Records] be consistent with federal interoperability standards and that all prescriptions are ordered electronically by 2011
 - Uniform methods of claims process
- Public health programs to reduce obesity and cut tobacco use

New Jersey: Phases of Reform

Phase I

- Familycare Buy-in
 - Passed Into Law – 12/1/07
- “Kids First” Mandate
- Familycare Expansion
- Market Reform
 - Signed by Governor 7/8/8
 - Implementation 9/1/08

Phase II

- Creation of Garden State AllCare
- Individual Mandate
- Sliding Scale Subsidies
- Section 125 Mandate
- Charity care/related hospital subsidies redirected over time to premium assistance
- Collaborative Care System Creation/Medical Homes

Washington State Reforms

- Provides access to coverage for all children by 2010 (SB 5093)
- Intensive education/outreach/admin simplification to enroll the currently eligible
- Expands SCHIP to children up to 300% FPL (now 250%) in 2009
- Children above 300% FPL – full cost buy-in
- Creates Washington Health Insurance Partnership (Connector) (SB 1569)
 - Targets small employers w/low-income workers
 - Sliding scale premium subsidies for those <200% FPL
- Provides high quality, affordable health care based on recommendations of the Blue Ribbon Commission in Health Care Costs and Access (SB 5930)
 - Reimbursement Changes
 - Chronic Care Projects/Medical Homes
 - Washington State Quality Forum
 - Health Information Technology
 - Appropriate Care Settings
 - Wellness Programs

Wisconsin Reforms

- **BadgerCare Plus: Merge Family Medicaid, BadgerCare (SCHIP - covers children and parents to 185 percent FPL), and Healthy Start:**
 - Cover all children (families above 200% FPL can purchase basic health coverage for their children for \$10 to \$68.53 per child per month, depending on income)
 - Provide coverage/enhanced benefits for pregnant women up to 300% FPL
 - Simplify the program
 - Promote prevention and healthy behaviors (member agreements; incentives for MCOs; incentives for individuals; health literacy/education)
 - Financed through increase by \$1 per pack cigarette tax

- **New Policy Goals (2008+)**
 - Ensure 98% of Wisconsin's population has access to health insurance by expanding to childless adults through **BadgerConnect**, a new online gateway to health care
 - One-stop shop for health care access for low-income families
 - Increase business participation and health insurance portability
 - Use evidence-based medicine to design benefits and control costs

Wisconsin's BadgerCare Plus: Streamlining and Outreach

- Simplified & standardized eligibility rules
 - For example, the state reduced the number of earned income disregards and increased the income limit
 - The goal was to make the program easy to understand for both enrollees and staff
- Invested in outreach & focused on the community level
 - 42 agencies within the state received \$25,000 to build the infrastructure needed to help people apply for the program
 - Statewide ad campaign—called the children's coverage expansion an "all kids" program

Wisconsin's BadgerCare Plus: Streamlining and Outreach

- Made online application process easier & more accessible
 - Supported and promoted online applications
 - Simplified the online application and trained community workers around the state to use it
 - During the first few months of the program, online applications increased from about 25 to 50 percent of total applications
- Invested in more staff
 - Increased size of staff statewide, especially in Milwaukee
 - Developed a new processing center in Milwaukee to approve applications and send cards to enrollees within one week

1449

Substantial Reforms

States with Recommendations for 2009 Session

Connecticut

Kansas

Ohio

Oklahoma

Oregon

Utah

State Coverage Initiatives

Robert Wood Johnson Foundation

HealthFirst Connecticut Authority Recommendations

- Expanded Medicaid/SCHIP eligibility for all residents with family incomes below 300 percent FPL, with sliding scale cost-sharing and premium assistance for those with ESI.
- Access to a restructured Charter Oak program - currently allows families to buy health insurance regardless of their health status at premiums tied to income.
- A Connecticut Health Partnership, using the state employee health benefit plan as a base, will be available to all residents and employers in order to improve employer offer rates and employee take-up rates, and to offer coverage to those in the non-group market.
- Multiple recommendations for containing costs and improving quality.
- Data collection and analysis to drive policy development, implementation, and evaluation.
- Public entity assigned or developed to oversee the proposed reforms and better coordinate state spending on health care.

Kansas 2009 Health Reform Priorities – Kansas Health Policy Authority

- Statewide Clean Indoor Air
- Increased Tobacco User Fees
- Increased Access to Affordable Health Care and Health & Wellness
 - Medicaid Expansion to Parents up to 100% FPL
 - Convene panel to develop proposals to assist small employers and young adults afford health insurance
 - Tobacco Cessation for Medicaid
 - Expand Cancer Screening for Low-Income and Uninsured
 - HIT - Statewide Community Health Record
 - Workplace Wellness Grants for Small Businesses
 - Expand Kansas Coordinated School Health Program

Ohio State Coverage Initiatives Recommendations

- Requiring employers to establish §125 Plans
- Reinsurance for individuals and small businesses
- Extend group coverage to dependents up to age 29
- Premium assistance for low income workers
- Enrolling more Ohioans in Medicaid and expanding Ohio's Medicaid to high income levels
- Allowing non-Medicaid eligible adults to enroll in Medicaid managed care plans
- Reforms to the individual health insurance market (GI; Mandate; Subsidies; Admin Efficiencies)
- Connector

Blueprint for Oklahoma – Draft Report

- Maximizing enrollment in public programs for those eligible but not yet subscribed
- Developing an affordable basic health benefits plan
- Generating sufficient public revenue
- Encouraging the take-up of private coverage

Oregon Health Fund Board Report

- Improve access for children and low-income
- Cost containment and quality improvement mechanisms
- Purchasing strategies and insurance market reforms
- Encourage new models of care delivery
- Ensure health equity for all
- Train new health care workers
- Federal-state relationship

Utah Legislative Health System Reform Task Force Legislation

- Insurance market reforms:
 - Creates new basic benefit plan called the Utah NetCare Basic Health Care Plan
 - Allows mandate-free benefit plans to be offered in certain circumstances
 - Establishes Internet portal for the purchase of these new plans
 - Sole proprietors included in the small group market pool
 - Establishes a reinsurance pool
- Streamlines and standardizes various aspects of provider, insurer, and consumer interactions and communications.
- Framework for demonstration projects for delivery and payment systems reforms.
- Requires certain contractors who do business with the state to offer health insurance to their qualified employees.

Incremental Approaches

Cover All Children

Purchasing Pools/Mechanisms

Increasing Dependent Coverage

New Benefit Design

Reinsurance

Creative Uses of Medicaid
(public/private)

State Coverage Initiatives

Robert Wood Johnson Foundation

Rhode Island ('07): HealthPact

- Includes coverage for physician visits, hospitalization, preventive services, and prescription drugs
- Design is intended to give incentives to enrollees to be more actively engaged in managing their own health care
- Proposes to achieve significant cost savings through financial incentives for enrollees who improve and maintain their health through **five key wellness initiatives**
- For enrollees who choose to participate in the wellness programs, it is proposed that deductibles, co-pays and co-insurance will be reduced to amounts normally seen in plans with much higher premiums

Cover Tennessee ('07)

- Affordable healthcare coverage
 - Premiums shared equally by employer, individual and state
 - Individual's monthly premium share ranges between \$37 and \$109
 - Premiums vary depending on age, tobacco use, and obesity
 - No deductibles; reasonable co-pays
 - Maximum Benefit amount: \$25,000
- Portable – Individual Product
 - Owned by the individual
 - Individual can keep coverage even if they leave an employer
 - Provides continued coverage during brief periods of unemployment
- Basic – Provides most services most people need

States & the Health Workforce

States & the Health Workforce

- States have strong influence over the development and practice of the health workforce.
 - Education, financing and regulation
- State action is critical for current shortages & for the future.
- States are faced with current or imminent health workforce shortages due to multiple factors:
 - Aging population
 - Changing educational & practice environments
 - Limited pipeline of people entering health professions

State Action on Workforce Issues

- Data collection and analysis: State nursing centers, centers for health workforce studies, university centers
- Pipeline development: Health career websites, K-12 outreach programs, scholarships/loan repayment programs
- Retention (geared towards nurses): Career ladder programs, abolish mandatory overtime, pass minimum staffing ratios
- Licensure and Credentialing: Scope of practice changes, Nurse Licensure Compact (currently 23 states)
- Educational capacity building: Faculty scholarships and loan repayments, increasing educational capacity, innovation in educational delivery

Massachusetts (Enacted 8/08)

- Passed comprehensive plan to strengthen primary care infrastructure
 - Creates new Health Care Workforce Center within the Department of Public Health
 - State authority to establish a medical home demonstration project
 - Directs MassHealth Payment Policy Advisory Board to study methods to improve payments or bonuses for primary care providers
- For health care professionals who practice in underserved areas:
 - Loan forgiveness program
 - Affordable housing pilot
- Requires health insurers to recognize and reimburse nurse practitioners as primary care providers

Oregon (11/08 Recommendations)

- Released blueprint for comprehensive health care system reform - one key “building block” is to train a new health care workforce.
- Action steps include:
 - Collecting data through the licensure process to provide an on-going database about current workforce and analyze future workforce needs
 - Implementing strategies to train, attract and retain an appropriate supply of primary care providers in all areas of Oregon
 - Develop direct reimbursement and a certification system for Community Health Workers

Pennsylvania (Enacted 2008)

- Passed a series of measures over the last few years to expand the scope of practice for physician assistants, nurse practitioners, clinical nurse specialists, nurse midwives and dental hygienists
- Generally, the laws allow fewer doctors to oversee these health care providers and expand the types of settings where they can provide health care services

Iowa (Enacted 5/08)

- Requires that the Department of Public Health expand efforts to guarantee a stable & well-qualified workforce
- Creates a Direct Care Worker Advisory Council to continue work on education and certification issues
- Instructs the Department of Human Services (DHS) to maintain an ongoing report that measures direct care worker turnover in nursing facilities
- Directs DHS to design a premium assistance demonstration project to provide health coverage for up to 150 direct care workers and their dependents

Vermont (Enacted 2006)

Workforce measures to increase provider availability:

- Loan repayment program for health care providers & educators
 - Available to primary care doctors, nurses, dentists, and nurse educators/faculty
 - Must agree to serve patients enrolled in Medicare, Medicaid, or other state health benefit plans
- Loan forgiveness program for nurses and dental hygienists
- Tele-psychiatry pilot to fill the state's gap in available child psychiatrists
- Provider reimbursement surveys
 - Examine the adequacy of reimbursement rates and understand impact of rates on recruitment and retention of health care professionals
- Conduct Nurse Authority Study
 - Establish a work group to study and make recommendations on whether an advanced practice nurse need not be required to work in a collaborative practice with a physician

State Quality Reporting Activities

Using Performance Measurement to Improve Quality

- Public Reporting
 - Health Plans
 - Hospitals
 - Nursing Homes
 - Ambulatory Settings

- Purchasing to Improve Quality
 - Value-based purchasing/payment reform
 - Tiered networks
 - To drive delivery system reform

- To Drive Consumer Choice and Internal Quality Improvement

Public Reporting on Health Plan Performance

- Measures
 - HEDIS: Clinical Measures (Administrative/Medical Records)
 - CAHPS: Patient Satisfaction (Survey)
 - Complaints
 - NCQA Accreditation

- **26 States have public reports using HEDIS, CAHPS or both**

- Some Medicaid Programs publicly report as well

Public Reporting on Hospital Performance

- Descriptive Measures: Administrative
 - Volume/Utilization/LOS/Readmission
 - Number of beds; Services available; Financials; etc
- Process Measures: Clinical (CMS/JCAHO)
 - Heart Attack/Congestive Heart Failure/Pneumonia/SIP
- Outcome Measures: Clinical
 - Mortality (CABG/PCI) – risk adjustment
- Patient Satisfaction: Survey
- **15 States publicly report one or more of these measures**

Public Reporting on Nursing Homes

- Structural/Descriptive Measures: Administrative
 - Number of Beds
 - Staffing Info: Number of Nurses; Turnover; Wages
 - Financial/Cost
- Quality Measures: Clinical (CMS)
 - Quality Measures
 - Deficiency/Complaints
- Patient/Family Satisfaction
- **States generally publicly report deficiency/complaint information**

Public Reporting of Healthcare-Acquired Infections (HAI)

- Public Disclosure:
 - 2003: IL (reworked in 2005)
 - 2004: FL, MO, PA
 - 2005: NY, VA
 - 2006: CO, CT, MD, NH, OH, OK, SC, TN, VT
 - 2007: DE, MN, NJ, TX, WA
 - 2008: CA, MA, OR, RI, WV
- Study Bills: TX (2005/public disclosure in 2007), GA (2006), AK (2006 - resolution)
- Pilot Project: NM (2007)
- Confidential Reporting: NE, NV (2005)

Report Card Authors Face Numerous Choices

Choice	Approach	Issues
Source of data	Claims	Easy and cheap to obtain, but less accurate
	Chart review	More accurate, but expensive
	Surveys	Consumers like, but expensive
Level of reporting	Hospital Level	Facility information, not care by specific practitioner
	Large groups of physicians	Heterogeneous, more valid statistically, less useful to patients
	Individual physician	Numbers of procedures too small, hard to do risk adjustment, most useful to patients
Display of data	Stars or bar graphs	Intuitive and familiar to consumers but can be misleading
	Statistical ranges	Closer to "truth," but more difficult to explain

Common Principles in Performance Reporting

- Steering committee of interested parties
- Pilot first then full implementation
- Reduce duplication of effort by carriers, facilities, and practitioners
- Continuous revision and improvement as measurement techniques advance
- Focus on the Positive
- Web-based application

State Health Policy Commissions and Authorities

Delaware Health Care Commission - 1990

- Independent public body reporting to the Governor and the Delaware General Assembly
- Policy-setting body rather than a service-delivery body
- **Mission:** To promote accessible, affordable, quality health care for all Delawareans.
 - **Access-** Promote access to health care for all Delawareans.
 - **Cost-** Promote a regulatory and financial framework to manage the affordability of health care.
 - **Quality-** Promote a comprehensive health care system assuring quality care for all Delawareans.
- Uninsured Action Plan
- Information & Technology
- Health Professional Workforce Development
- Research & Policy Development
- Specific Health Care Issues & Affiliated Groups

Delaware Health Care Commission

- Chair is Lt Gov
- Four government officials (ex officio)
 - Secretary of Finance
 - Secretary of Health & Social Services
 - Secretary of Children, Youth & Their Families
 - Insurance Commissioner
- Six private citizens appointed either by the Governor, the Speaker of the House or the President Pro Tempore of the Senate
 - Dean, College of Health and Public Policy, Delaware State Univ.
 - Senior VP for Government Relations, DE Chamber of Commerce
 - Chair, Dept of Family & Comm Med, Christiana Care Health Services
 - President, Maritime Exchange for the Delaware River and Bay
 - Two others

Maryland Health Care Commission

- Develop State Health Plan/administer Certificate of Need program
- Oversee certain aspects of small group market reforms
- Develop and publish consumer guides for health plans, hospitals, nursing homes and ambulatory surgical centers
- Establish and develop a medical care data base on health care services rendered by health care practitioners
- Establish standards for the operation and licensing of medical care electronic claims clearinghouses
- Determine the cost of mandated health insurance services
- Promote the availability of information to consumers on charges by practitioners and reimbursements from payors
- Oversee and administer the Maryland Trauma Physician Services Fund
- Other policy studies as requested: patient safety, affordability, etc

Maryland Health Care Commission

- 15 members appointed by Gov with advise/consent of Senate
 - Nine must be individuals with no connection to the management or policy of a health care provider or payor
 - Remaining six members:
 - Two physicians
 - Two payors
 - One nursing home administrator
 - One non-physician health care practitioner
- Also geographic representation requirements
- To the extent practicable, assure geographic balance and promote racial, ethnic, and gender diversity in the Commission's membership

Kansas Health Policy Authority - 2005

- Responsible for coordinating a statewide health policy agenda that incorporates effective purchasing and administration with health promotion strategies.
- All health insurance purchasing by the State is now combined under KPHA, including publicly funded programs (Medicaid, State Children's Health Insurance Program, and Medikan) and the State Employee Health Benefits Plan.
- Responsible for compiling and distributing uniform health care data in order to provide health care consumers, payers, providers and policy makers with information regarding trends in the use and cost of health care for improved decision making.
- 2007 Legislation: Directed KHPA to develop health reform options in collaboration with Kansas stakeholders.

Kansas Health Policy Authority

- Nine voting health care, business, and community leaders appointed by the Governor and the Legislature
 - President, Chief Executive Officer and General Counsel for Medicalodges, Inc.
 - Associate Professor, Dept of Public Administration, University of Kansas
 - Senior Vice President, Human Resources at EMBARQ Corporation
 - Chairman of the Board, Midway Wholesale of Topeka
 - Professor of Management Practice, Harvard Business School.
 - Retired Co-President and CEO, Center for Health and Wellness
 - Pediatrician
 - CEO of Pratt Regional Medical Center
 - Retired, Midwest Consortium Administrator, Centers for Medicare and Medicaid (CMS), HHS
- Ex-Officio Members
 - Dept of Health & Environment (Sec & Dir of Health); Dept of Social & Rehabilitation Services; Dept of Administration; Dept on Aging; Insurance Department; Department of Education; KHPA Executive Director

State Coverage Initiatives

Robert Wood Johnson Foundation

Connecticut Office of Health Care Access

- Headed by a Commissioner who is appointed by the Governor
- Mission: To ensure that the citizens of Connecticut have access to a quality health care delivery system:
 - By advising policy makers of health care issues
 - By informing the public and the industry of statewide and national trends
 - By designing and directing health care system development
- **Certificate of Need & Compliance Unit:**
- **Research & Planning Unit:**

Oregon Health Policy Commission - 2003

- **Mission:** To develop and promote policy recommendations to the Governor, the Legislature, and the Oregon Health Policy and Research (OHPR) that improve the health of all Oregonians by ensuring access to essential health care and support services, increasing quality and improving outcomes for individuals and society, controlling costs, and encouraging healthy lifestyles.

Oregon Health Policy Commission

- Ten voting members appointed by the Governor.
 - Exec VP, Corp Services & Chief Legal Officer, The Regence Group
 - Chair, AterWynne LLP (Strategic Legal Advisors)
 - Director, Integrated Clinical Services, Multnomah County Health Dept
 - Senior Consultant, Watson Wyatt Worldwide
 - President, SEIU Local 49
 - Health Care Consultant
 - Director, Oregon Ctr for Health Professions, Oregon Inst of Technology
 - CEO, The Lussier Center (Management Consulting Services)
 - Chairman, Triquint Semiconductor
 - Vice President and Chief Quality Officer, Samaritan Health Services
- Four legislators (one representing each legislative caucus) serve as non-voting advisory members to the Commission

Lessons Learned in State Reform Efforts

Lessons Learned in State Reform Efforts #1

- Successful comprehensive reforms are built on previous efforts, financing mechanisms
- Need ingredients: leadership, opportunity, readiness to act, persistence
- No free solutions
- Successful efforts to enact reforms often need shared financial responsibility
- State expansions in coverage often rely on private insurers to deliver care
- Voluntary strategies will not result in universal coverage
 - some states are beginning to recognize the need for mandatory participation

Lessons Learned in State Reform Efforts #2

- Hard to get agreement on what is covered (benefit design/affordability)
- Little success so far in addressing underlying cost of health care but a new focus on chronic care management/preventive care holds potential
- Address access, systems improvement, cost containment simultaneously—concern about long-term sustainability of coverage programs and improved population health
- New state reforms can be fairly judged only after several years, allowing a realistic length of time to work through implementation challenges.
- Comprehensive reforms need sequencing
 - Sequential = incremental with a vision

States Can Advance Reform Initiatives But Need Federal Support

- States face growing pressures for reform
 - Uninsurance continues to rise as employer sponsored coverage declines
 - Cost increases threaten state budgets and capacity to sustain Medicaid/SCHIP
- States play critical role in moving the conversations about coverage expansions
 - Testing new ideas (politically and practically)
 - Creating momentum for national policy solution
- States cannot achieve universal coverage without a federal framework and funding
 - Significant variation across states in resources, capacity, and landscape—including uninsured rates, available state funds to invest in coverage, insurance market structures, and other important factors

NCSL Health Committee Roster

[Committee Officers & NCSL Staff](#) // [Committee Members](#) // [Committee Jurisdiction](#)

Committee Description

This committee has jurisdiction over state and federal health programs, legislation, regulations and policies. The committee educates Congress and federal agencies about state concerns regarding developments in federal health initiatives and programs and grants to states. In addition, it serves as a forum for legislators and legislative staff to learn about and share information regarding health programs and health policy initiatives in other states. Recently, the committee has addressed the following issues:

- Medicare prescription drug coverage
- Medicaid
- Health care cost containment
- Health care access
- Public health and prevention

NCSL Health Committee

Chair: Senator Judy Lee, North Dakota

Vice Chair: Senator Ronnie W. Cromer, South Carolina

Vice Chair: Senator Bettye Davis, Alaska

Vice Chair: Representative Keith J. Gillespie, Pennsylvania

Vice Chair: Senator Lisa T. Marrache, Maine

Vice Chair: Senator Patrick Alan Nunnelee, Mississippi

Vice Chair: Senator William R. Purcell, North Carolina

Immediate Past Chair: Assemblyman Herb C. Conaway Jr., New Jersey

Staff Chair: Raul E. Burciaga, New Mexico

Staff Vice Chair: Mark D. Andrews, Utah

Alaska Scorecard, December 2008 | www.hhs.state.ak.us/aph/healthpolicy/scorecard/

Formula for Success

- **Identify a problem or community need**
- **Collaborate with governmental agencies, advisory groups, non profits, service providers, philanthropic organizations and private sector**
- **Develop strategic, sharply focused solutions**
- **Make lasting system improvements for Trust beneficiaries**

committed partners + strategic thinking = results for Trust beneficiaries

Five Focus Areas

- **Bring the Kids Home**
- **Affordable, Appropriate Housing**
- **Disability Justice**
- **Workforce Development**
- **Beneficiary Projects Initiative**

Workforce Development

- **Problem or community need**
 - shortage of health care workers in Alaska at a near-crisis level
 - health services industry fastest growing sector of Alaska's economy, more than 7% of workforce
 - burgeoning demand for increased health services for the state's steadily growing and aging population, some are Trust beneficiaries
 - need to increase pool of qualified employees in Alaska who serve Trust beneficiaries and keep adequately trained
- **Committed partnerships**
 - more than 20 partners -
 - New joint position between Trust, University and DHSS to coordinate workforce development efforts within the focus area (housed in DHSS Commissioner's office – Kathy Craft
 - service providers, Dept. of Health and Social Services, University of Alaska system, Dept. Labor and Workforce Development, non-profit and faith-based organizations,
- **Strategic thinking**
 - key focus area strategies around:
 - recruitment,
 - retention
 - training

Training

- **Trust Training Cooperative**
- **Geriatric Training – Alzheimer's (ADRD)**
- **Credentialing and Quality Standards**
- **Children's Mental Health Certification**
- **Autism Workforce Development Capacity Building**
- **Brain Injury training for professionals**
- **Peer Support Workers**
- **Disability Justice training for professionals**

Recruitment & Retention

- **Alaska Alliance for Direct Service Careers (AADSC)**
- **Wages and Benefits**
- **“Grow Your Own”**
- **Marketing Strategies**
- **Cash Stipends/Loan Repayment Program**
- **Alaska Psychiatric Residency study**

Administration/Other

- **Behavioral Health Alliance**
- **Workforce Development Statewide Policy Meeting**
- **Workforce Development Manager**
- **Vacancy Study**

FY 2008 Results Highlights

- 990 professionals/providers across Alaska received training and education on behavioral health related topics through the Trust Training Cooperative
- 1,194 providers trained by the Geriatric Education and Training Center on issues regarding Alzheimer's and related disorders
- 1,550 people received behavioral health training through the University of Alaska, a 13% increase in enrollment in beneficiary related degree programs
- 958 professionals across the state received training through the Training and Technical Assistance for Providers program, increasing the number of professionals trained to respond to cases of disability related abuses

Ahead in FY2010

- **Support student loan repayment strategies for health professionals**
- **Support increments for University of Alaska health programs**
- **Researching a psychiatric residency program in Alaska**
- **Finalizing plans for a PhD psychologist internship program in Alaska**

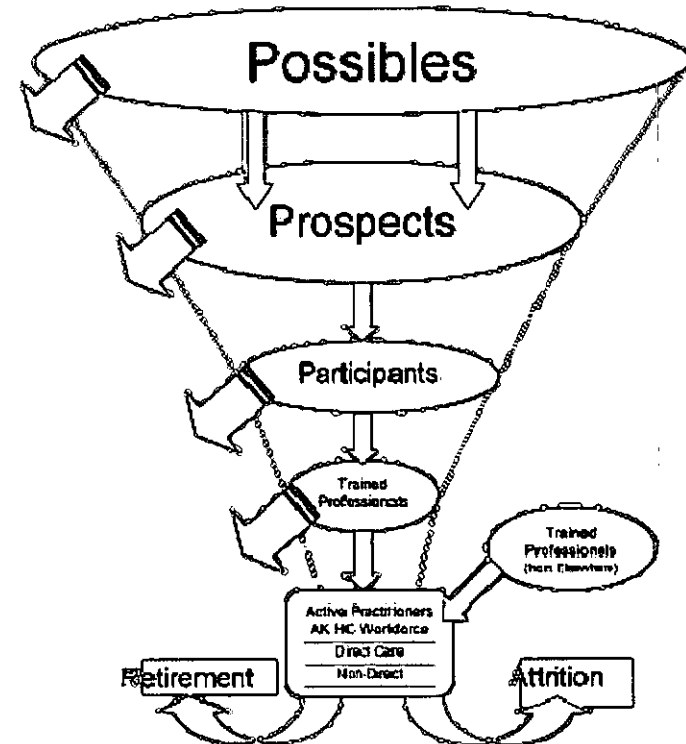

Alaska's Health Care Workforce: Shortage & Solutions

Interagency Presentation — Jan. 29, 2009
House HSS Committee, Alaska State Legislature

Trust Workforce Development Focus Area

Delisa Culpepper, Chief Operating Officer
Alaska Mental Health Trust Authority

Presented by:
Evangelyn Dotomain,
President/CEO
Alaska Native Health Board

Tribal Workforce Development Update

Topics of Discussion

- Tribal Health System Overview
- Levels of Tribal Health Service Delivery
- Needs in Tribal Health Care
- Tribal Health Care Vacancy Rates
- Tribal Health Care Facts & Actions
- What is Needed?

Tribal Health Overview

- Alaska Native Health Board (ANHB) is a 24 member tribal health advocacy organization established in 1968.
 - Regional Tribal Health Organizations
 - Village Tribal Organizations
- We advocate for approximately 130,000 Alaska Natives/American Indians, or 20% of the state population.
- Tribal health consists of :
 - 7 tribally operated hospitals
 - 21 tribally operated health centers in Alaska
 - 161 tribally operated village clinics
 - Over 530 Community Health Aides or Practitioners
- The primary source of funding for this system is derived from the Indian Health Service.

Tribal Health Overview

- **Socio-economic Status**
 - Remote Communities with little economic base
 - High unemployment rates
 - Low income levels
- **Health Care Issues: A Perfect Storm**
 - Travel farther than others to receive health care services
 - With money they don't have
 - Usually much sicker and with more
 - medical issues than the average
 - person by the time they receive
 - care at a health facility
 - Fewer medical resources available
 - Higher costs than other facilities
 - in the United States

Tribal Health Overview

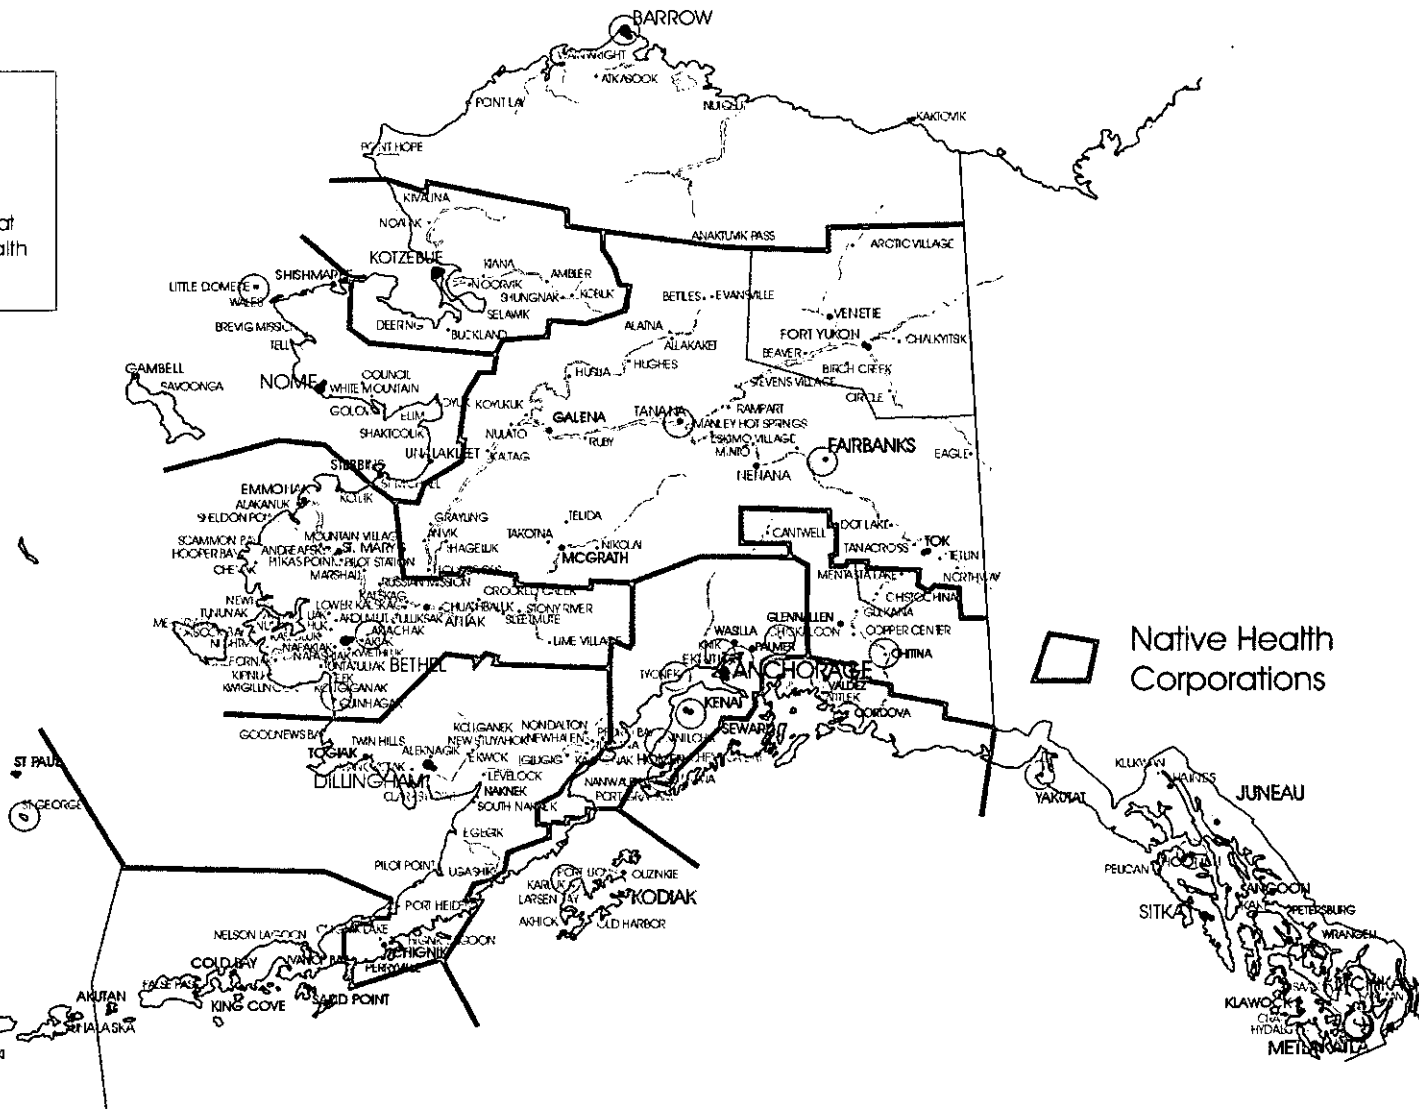

- Tribally delivered health care has improved health for Alaska Natives
- Disease rates have dropped dramatically due to:
 - Improved access to health care
 - Increase in basic public health measures
 - Childhood and Other Vaccines
 - Sanitation and Water Facilities
- However, there are challenges
 - Chronic under-funding
 - Staffing shortages
 - Increasing health care costs
 - Growing Alaska Native population
- Coupled with inadequate funding for Indian Health Service (IHS) for many years — Increases have not kept up with yearly inflation rates or medical cost inflation

THE ALASKA NATIVE HEALTH CARE SYSTEM

Location Names and Service Level

- HOSPITALS
 - MD HEALTH CENTERS
 - PAVNP HEALTH CENTERS
 - PHN HEALTH CENTERS
 - CHA CLINICS
- Bold Face Names Indicate that a higher level of Contract Health Care is available in that town.

Tribal Health Needs

- Village Health Care:
- Primarily provided by Community Health Aides/Practitioners
- Few training sites and limited training slots result in a backlog of those needing training.
- Limited numbers of EMS providers and VPSOs results in high levels of burn-out among Community Health Aides / Practitioners as first responders and limited training time.
- The lack of resources and personnel currently available for rural Elder care means that many geriatric patients receive little or insufficient care.

Tribal Health Needs

- Behavioral Health
- The need for increased behavioral health services in Alaska is well documented.
 - Alcohol and Substance Abuse
 - Mental Illness
 - Domestic Violence and Child Abuse
- Alcohol and drug abuse account for a substantial number of deaths and approximately 50% of all emergency room visits within Alaska.
- In many regions, behavioral health providers are either in short supply or are less than optimally trained for their duties (or both).

Tribal Health Among Alaska's 100 Largest Employers

	<u>Employees</u>	<u>Ranking</u>
Alaska Native Tribal Health Consortium/ Alaska Native Medical Center	1855	11
<i>Yukon Kuskokwin Health Corporation</i>	<i>1292</i>	<i>15</i>
Southcentral Foundation	1250	16
<i>SE Alaska Regional Health Consortium</i>	<i>826</i>	<i>28</i>
Maniilaq Association	555	44
<i>Tanana Chiefs Conference</i>	<i>485</i>	<i>56</i>
Norton Sound Health Corporation	478	59
<i>Bristol Bay Area Health Corporation</i>	<i>355</i>	<i>70</i>

2007 Alaska Economic Trends

Tribal Vacancy Rates

Contributing Factors:

- Remote locations
- Cost of living
- Lack of housing
- Difficulty maintaining competitive salaries due to limited funding
- Fewer graduating Family Practice Physicians
- IHS loan repayment issues
- National Health Service Corp (NHSC) Loan repayment issues

Physicians	27%
Dentists	42%
Pharmacy	30%
Nurses	15%

Table 3. Statewide Vacancy Rates

Occupational Groups	Statewide Estimates			Tribal Vacancy
	Positions	Vacancies	Vacancy Rate	
All Occupations	34738	3529	10.2%	16.5%
Physicians	1931	226	11.7%	27.1%
Professional Nurses	7139	696	9.8%	15.5%
CNA/LPN/PCA/HHA	1762	111	6.3%	14.3%
Dentist/Pharmacists/ Therapists	2281	404	17.7%	42.9%
Behavioral Health	7450	1033	13.9%	14.5%
Allied Health	5523	434	7.9%	17.1%
Public Health/Nutrition	189	ND	ND	15.2%
Managers	2947	160	5.4%	7.6%
Health Information/ Reimbursement	4451	253	5.7%	11.3%

Basic Tribal Recruitment Facts

- Providers are getting more expensive and wanting to work less
- **\$31,000** = Tribal Health Care Cost to Recruit a Primary Care Provider
- **2 years** = Average length of employment stay of a Medical Licensed Professionals (MLP) or a Physician in rural clinic
- **6 months** = Average time to fill MLP vacancy
- **14 months** = Average time to fill a Physician vacancy
- **1 month** = Average notice given to leave rural site
- **150%** = Cost of Locums' coverage compared to direct hire

Tribal Health Care Fact

- Alaska Native/American Indian people deserve a high quality health care experience.
- With limited resources, it is getting more difficult to provide this deserved high quality care.

Tribal Health Actions

- Getting more efficient and effective with recruitment efforts
- Increase education and outreach to encourage more Alaska Natives to pursue health careers
- Increase incentives to stay in rural areas
- Continue to explore and adopt technologies to improve access to care in a cost effective manner (example: telemedicine)

What is needed?

- Provide Healthcare Professionals incentives to work at rural sites
- Provide State funded student loan reimbursement
- Increase support for health care professional education
- Support expansion of the number of primary care providers and services in Alaskan communities
- Increased funding for the Community Health Aide/Practitioner Program to increase the number of CHA/Ps and their training opportunities
- Support training for Elder caregivers
- Support for more EMS providers and VPSOs in villages
- Establish a Behavioral Health Aide Program through a statewide training system and certification process

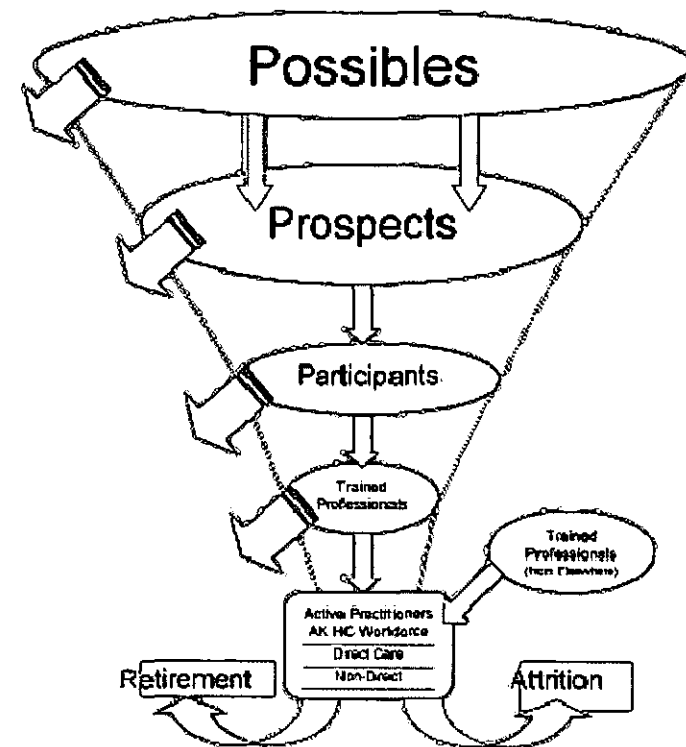

Alaska's Health Care Workforce: Shortage & Solutions

Interagency Presentation — Jan. 29, 2009

House HSS Committee, Alaska State Legislature

Economic Impact of One Rural Physician on a Local Economy...

23 ← Jobs

\$ 899,000 ← Wages, Salaries & Benefits

\$1,533,000 ← Total Revenue

Gerald Doeksen (OK State Univ) "Making the Link to Economic Impact & Workforce Development" (at: Rural Health Workforce Trends Conference, Phoenix, AZ; Mar 4-6, 2008)

Physician Shortages in Alaska

- **Alaska Physician Supply Task Force (2006)**
 - 1,347 physicians in AK
 - 2.05 per 1,000 population
 - Below national ratio of 2.38
 - Ratio of 2.62 needed
 - Shortage greatest in internal medicine, medical subspecialties, and psychiatry
 - More mid-level providers also needed
- **Job vacancy rate (2007 survey): 12%**

Gain in Alaskan Physicians

Static Doctor to Population Ratio vs. Desired Growth Scenario

- Alaska should have physician-to-population ratio 110% of national average
- Current (2006) shortage: 375 physicians
 - Each year, gain of 78, loss of 40
 - Need increase annual gain from 38 to 59
 - Loss may accelerate

Challenges to Adequate Physician Supply in Alaska

- Aging of population
- Shortage of primary care physicians
- Educational debt
 - 23% of 2008 US medical school graduates carrying >\$200,000 educational debt (*N Engl J Med*, Dec 18, 2008)
- Challenges of practice in Alaska, particularly in rural areas
- Alaska is in competition with other states for recruitment and retention of physicians
 - HRSA: 20 states reporting “scarcities” of physicians

Strategies That Can Enhance Physician Supply in Alaska

- **Initiatives to increase interest in medical careers**
- **WWAMI Medical School**
 - In 2005, 29 of 73 Alaskan applicants were admitted into medical school
- **Loan repayment programs:** Indian Health Service and National Health Service Corps loan repayment programs
- **Utilization of mid-level providers**
- **Residency programs:** Alaska Family Medicine Residency-- 70% of graduates practice in Alaska
 - 43% of physicians in Alaska are in primary care specialties, compared with 34% nationally

Alaska's Healthcare Workforce:
View from the Safety Net
Marilyn Kasmar, Executive Director
Alaska Primary Care Association

The CHC Model

- Serves all of community residents, without regard for ability to pay or insurance status
- Targeting low income and medically underserved communities
- Local, not-for-profit community managed health care organization

CHC Model: The Safety Net

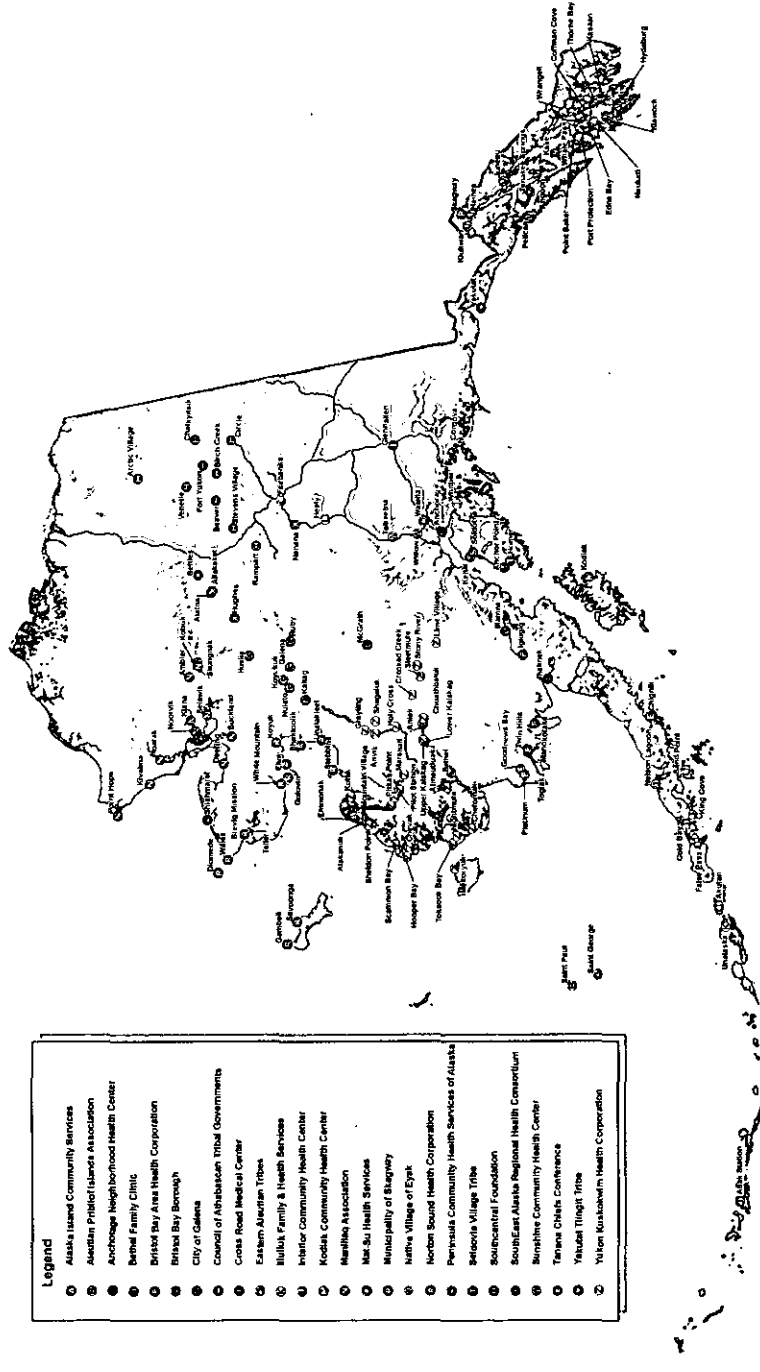

- Provides comprehensive, primary & preventive care
- “Primary Care” => medical, dental & behavioral health
- Sliding fee scale promotes patient accountability
- CHCs reduce use of costly Emergency Room visits

Community Health Centers Alaska — 2009

- Network of 26 CHC Organizations
- 141 Delivery Sites
- Serving 81,000 Alaskans
- Tribal & Non-Tribal Models

Alaska's Community Health Centers

Alaska
Primary Care
Association

Many Alaska CHC Patients are Poor

□ 100% and Below FPL

□ 151-200% FPL

□ 101-150% FPL

□ Over 200% FPL

Many Alaska CHC Patients are Uninsured

Geographic Disparities in Health Insurance Coverage

The Aging of Alaska's Population Will Continue to Create a Strong Demand for Health Care Services

Growth in Health Center Dental & Mental Health Care, 2000-2005

Note: Mental health does not include substance abuse.

Alaska
Primary Care
Association

Healthcare Workforce Shortage: Giant Problem for Alaska's CHCs

- Large
- Unrelenting
- Getting worse
- Disruptive
- Expensive
- Difficult for CHCs to recruit & to retain
- Even more difficult for rural & remote sites

Alaska
Primary Care
Association

The Shortage Problem — in the Nation

- Only 9% of physicians practice in rural areas
 - But 20% of the population lives there
- Of 150,000 general dentists in practicing in US
 - But only 14% practice in rural areas
- CHC patients grew 57% from 2000 to 2006

Alaska
Primary Care
Association

What are Factors that are Driving this Shortage?

- “States, and especially safety net providers, are facing intense workforce pressures because of
- structural issues related to clinician training,
- difficulty in recruiting and retaining providers to work in health centers, and
- the impending leadership cliff...”

Snyder, Andrew. (2008). Safety Net Workforce in the Context of Health Reform. State Health Policy Briefing (pg. 9)

Alaska
Primary Care
Association

The Shortage Problem — in Alaska Primary Care Occupations

Occupation	Full Sample (n=476)	Statewide Estimate
Family Physician	18.3%	15.8%
General Internist		
Family Nurse Practitioner	23.2%	19.5%
Physician Assistant		

- Long mean vacancy length (7-15 months)
- Higher in rural areas
- Vacancy rate:
 - In rural areas for PAs was 26.8% & for FNPs was 36.4%!

Dentist Vacancy Rates at Health Centers (2004)

Source: Roger Rosenblatt, Holly Andrilla, Thomas Curtin, and Gary Hart. "Shortage of Medical Personnel at Community Health Centers," *Journal of the American Medical Association* 295, No. 9 (2006): 1042-10491.

“Good health care, of course, doesn’t start and stop here in the health center. It’s a community affair.”

- Dr. Tom Hunt, Anchorage Neighborhood Health Center

Alaska
Primary Care
Association

Will the Shortage Get Better, or Worse?

- “The deficit of health professionals in medically underserved areas will most likely worsen, given the dwindling interest in primary care among medical students.”

Access Transformed: Building a Primary Care Workforce for the 21st Century. National Association of Community Health Centers (Aug 2008, pg. 12)

Alaska
Primary Care
Association

A Problem that Must Be Resolved

- We continue to routinely lose candidates
- Every week — and often immediately
- Because... Alaska does not have a State Loan Repayment Option
- Increasingly, it is the candidate's "first question"

Alaska
Primary Care
Association

What Does National Expert Opinion Say?

- “Recruitment & retention of health care professionals has been a major problem for CHCs since their inception.”
- “Federal programs such as the National Health Service Corps, augmented by state loan repayment ... remain important sources of CHC clinical personnel, and ... they remain important recruitment tools.”

Rosenblatt, et al. (2006). Shortages of Medical Personnel at Community Health Centers: Implications for Planned Expansion , JAMA, 295(9), pg 1042.

Alaska's Health Care Workforce: Shortage & Solutions

Interagency Presentation — Jan. 29, 2009
House HSS Committee, Alaska State Legislature

Alaska's Healthcare Workforce: View from the Safety Net

Marilyn Kasmar, Executive Director
Alaska Primary Care Association

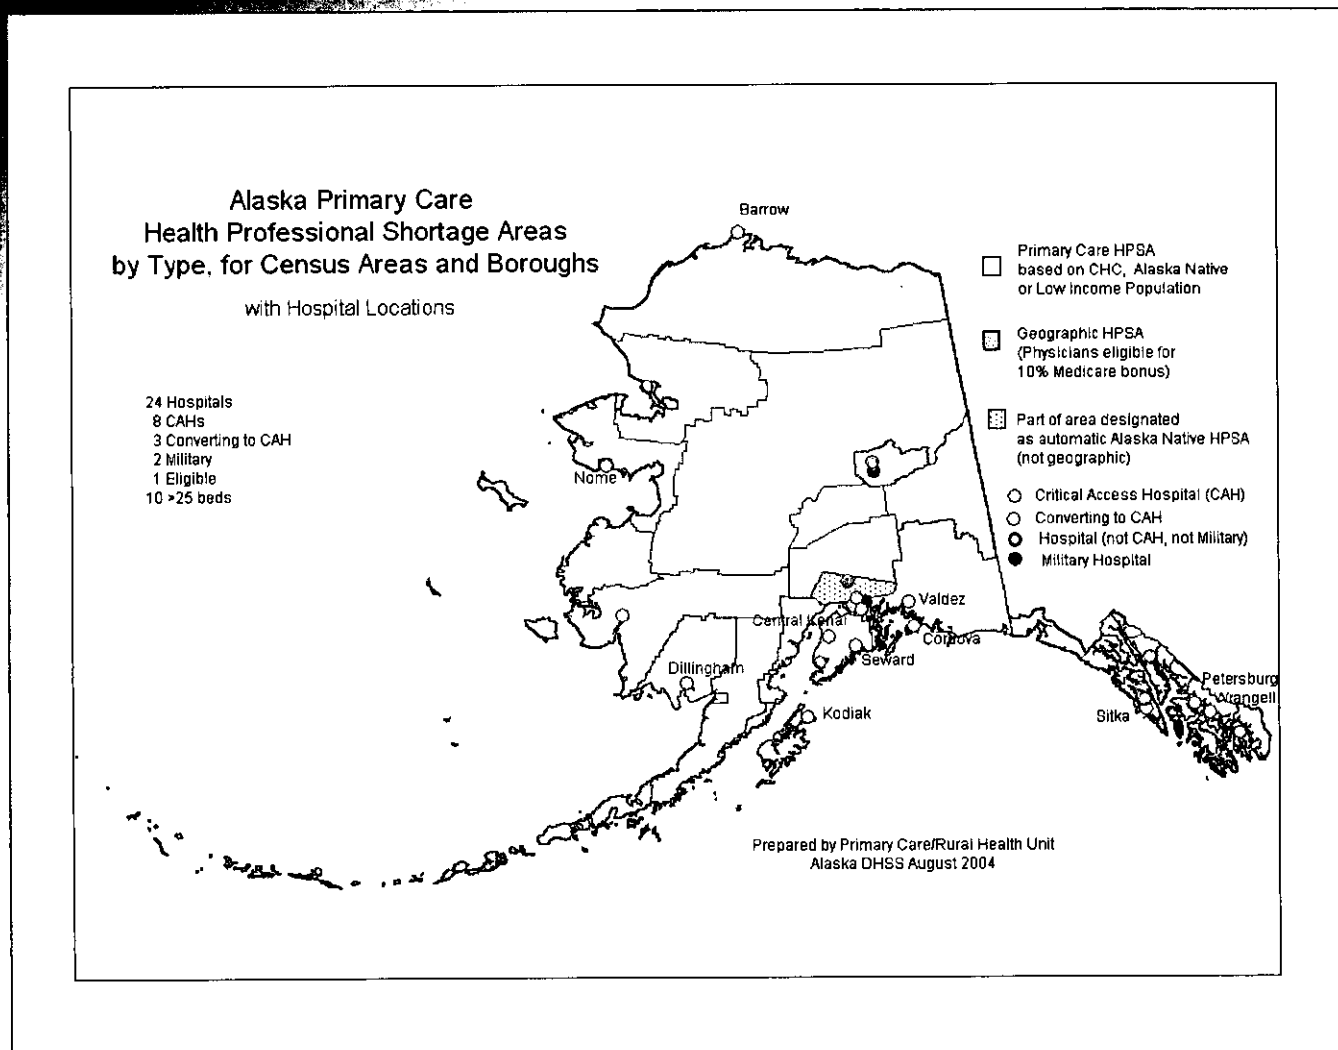

Alaska's Healthcare Workforce:

Rod Betit, CEO

Alaska State Hospital & Nursing Home Association

Hospital and Nursing Facilities

Big Employers

- Providence Health System- Alaska's largest employer since 2001
- Five of top 20 employers are healthcare
- 24 of top 100 employers are health and social services
- Health topped \$5 billion in 2005, 1/3 the value of North Slope oil exports that year

1-3 Data from Alaska Dept of Labor and Workforce Development, Research & Analysis Section
4 Data from Institute for Social and Economic Research, UAA

Industry Perspective

- Itinerant providers mean dollars lost to employers, and resources not invested in local economies. In 2005, we know:
 - 80 hospitals/THOs/Mental Health Centers spent over \$11M in recruitment, \$13M in Itinerants (\$24M total), 16 occupations
 - FMH spent over \$640K in recruitment, and \$920K in Itinerants
 - FMH has saved at least \$1.5M in nurse recruiting since local training started

Nurse Overtime Survey Results

- Temp Nursing Hours Needed to Fill Vacancy:
 - 2006 → 94,166 hours
 - 2007 → 99,748 hours
- Opinion of Facility Administrators (2008)
 - Has gotten “better” → 5
 - Has gotten “worse” → 10

Cromer Report

- The Public's Expectation:
 - Hospitals are supposed to deal with this
 - Real residents want basic services locally
 - Basic services = better distribution of employment

Access to Care: Community Innovations

- This request for workforce improvement is not being done in a vacuum
- Rather – innovations are occurring in several communities – Examples include:
 - Kenai / Soldotna
 - Ketchikan
 - Anchorage

Approaches of Other States To Health Workforce Shortages and Mal-distribution

- Increase number/size of training programs
- Recruit/develop local youth
- Job enhancements
 - salary, benefits, hours
- Malpractice insurance cost relief
- Teamwork, work smarter
- Recruitment and retention enticements
 - pay educational costs in exchange for service

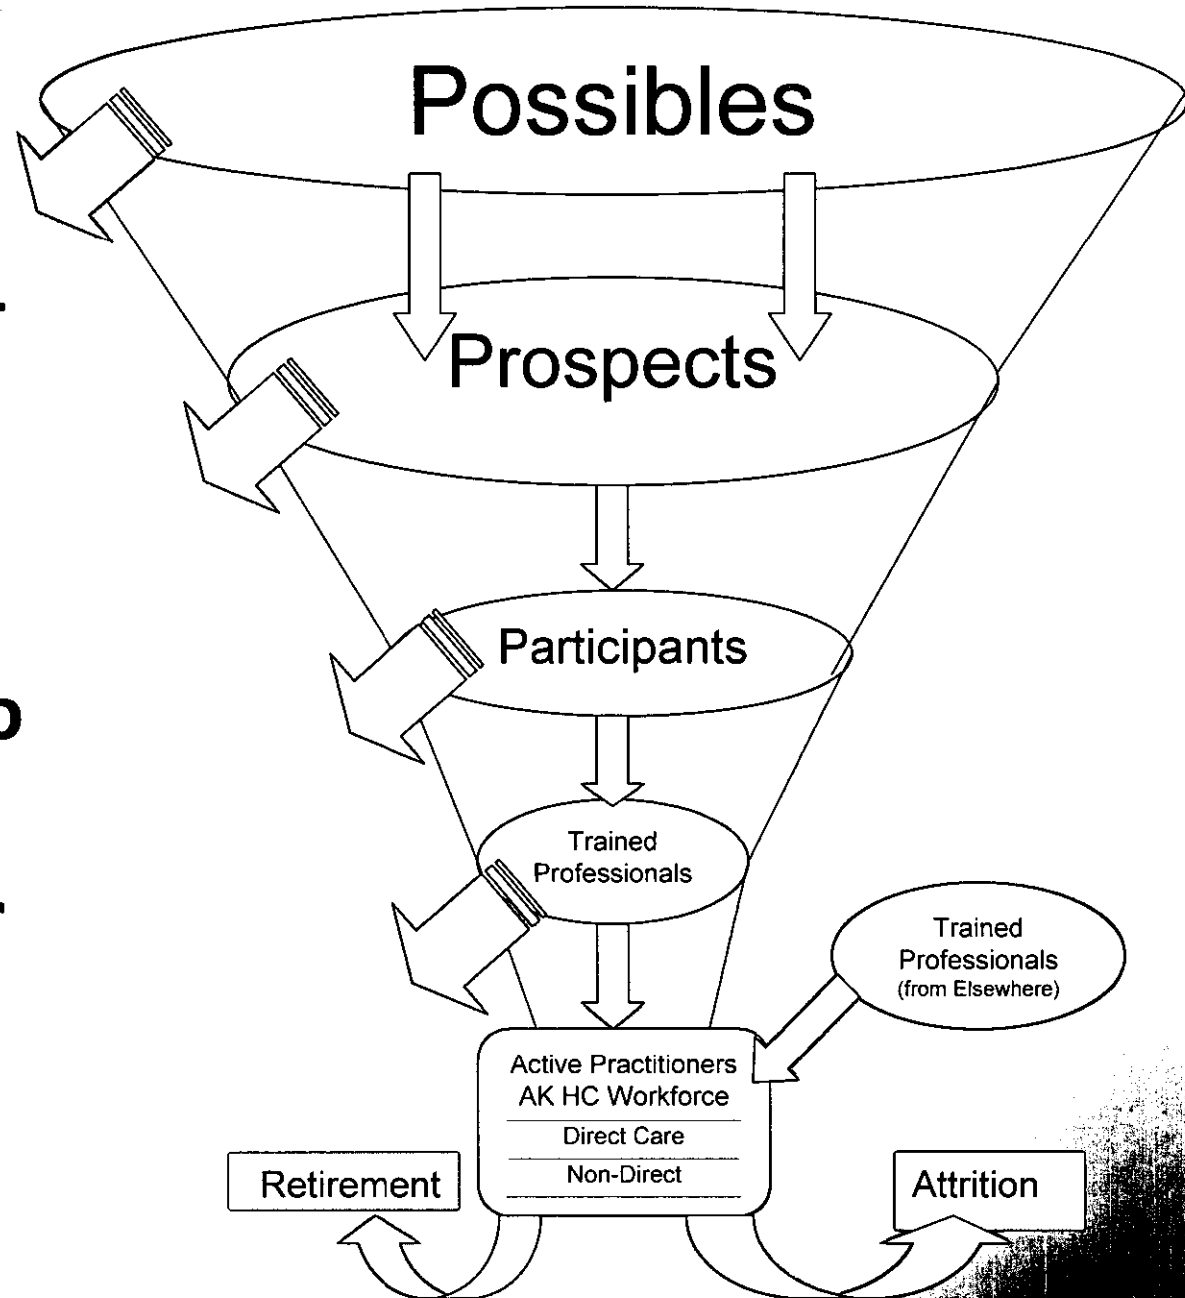

Health Care Professions Loan Repayment & Incentive Program

A Needed Innovation for Alaska

“Support-for-Service Programs”

For those who are farther along in their careers

Support-for-Service Programs

- **Strategy** - Most states have installed “Support-for-Service Programs”, at the state-level
- **Funding** - Four variations on SFSP funding:
 - State-sponsored
 - Blended state-federal (e.g. SLRP’s)
 - Federal-sponsored (e.g. I.H.S., &, NIH)
 - Local contributions to above
- **Outcomes** - SFSP’s – in general – have good outcomes, but there are important program differences -> across types

Support-for-Service Program

- Will remain necessary — regardless of training productivity
- WWAMI has doubled, and, Nursing Program has expanded greatly — but Agencies are still pulling practitioners from elsewhere

SFSP's... Experience of Other States

- Review of 44 states
- Total of 81 state-level SFSP's for HC professions
- Fully 21 states have two or more SFSP's (47%)
- State-level support-for-service programs are a key part of successful recruitment & retention

- Several Strategies: Programs that integrate several strategies have had greater success than have those programs which have relied on single approach

Examples of Other States with Support-for-Service Programs

Arkansas (3)	New Mexico (5)
Iowa (2)	North Carolina (4)
Maine (2)	Oklahoma (3)
Minnesota (7)	Tennessee (2)
Mississippi (2)	Washington (2)
Montana (3)	Wisconsin (2)

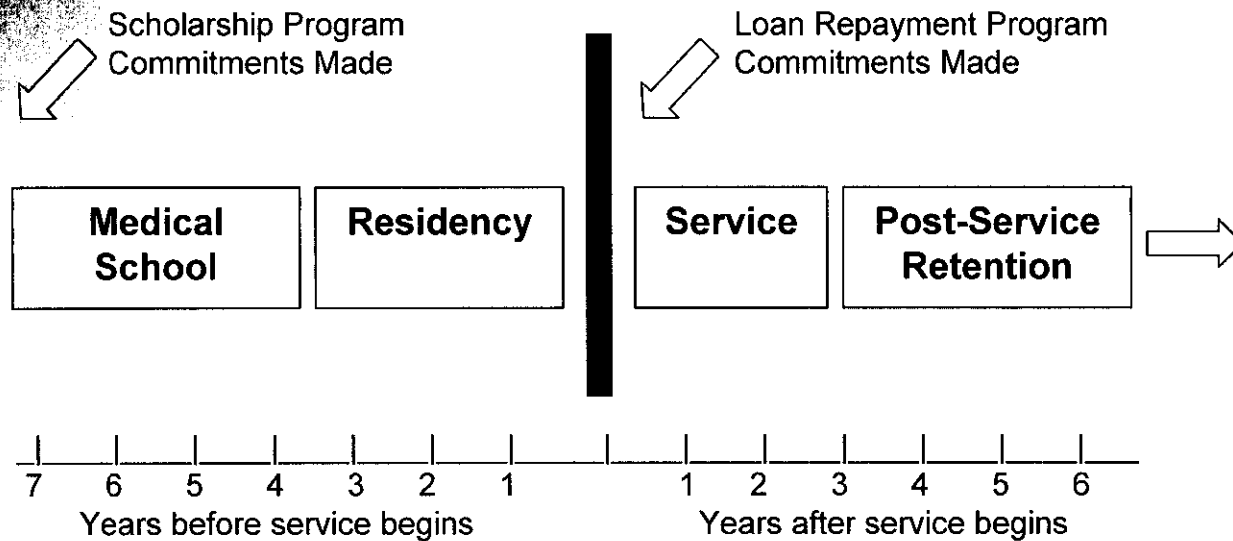

Consequences of Educational Debt

- Like carrying a mortgage on a second home
- Pushes practitioners into more lucrative jobs and specialties
- Discourages poorer students from health careers
- But also - provides a lever to influence practitioners, via loan repayment enticements

SFSP Options...

SFSP -> Timeline Example

- Physicians' training years, commitment-signing, service period, & post-service retention (Pathman, 2006)

Loan Repayment Programs

- Most all other states have these
- They work
- Many states include several professions
- National Health Service Corps → moved to Loan Repayment
- Health Care Professions Loan Repayment & Incentive Program discussed in depth on HPSD site:
www.hss.state.ak.us/dph/healthplanning

Direct Incentive Programs

- Funding is provided to practitioners who agree to work in needy settings — whether or not they have education loans to be repaid
- There is no reason to believe that only young practitioners with debt are suited to work in rural areas and/or with underserved populations

Health Care Professions Loan Repayment & Incentive Program — Interagency Planning Group

- Representatives from:
 - Alaska State Hospital & Nursing Home Assoc
 - Alaska Primary Care Association
 - Alaska Native Health Board
 - Alaska Dental Society
 - Alaska Mental Health Trust Authority
 - Alaska Commission on Post-Secondary Education
 - Health Planning & Systems Development (DHSS)
 - Alaska State Medical Association
 - Alaska Pharmacists Association
 - Alaska Native Tribal Health Consortium
 - Alaska Geriatric Education Center (UAA)

The “Big Ten” Occupations

Tier-1

- Dentists
- Pharmacists
- Physicians

Tier-2

- Dental Hygienists
- Nurses (RN)
- Nurse Practitioners
- Physician Assistants
- Physical Therapists
- Psychologists
- Social Workers

Health Care Professions Repayment & Incentive Program

- Program Elements

- Oversight Entity
- Fiscal Agent
- Practitioner Eligibility
- Site Eligibility
- Payment Details
- Program Evaluation
- Resources & Funding

Alaska Purchase

From Wikipedia, the free encyclopedia
(Redirected from Alaska purchase)

The **Alaska Purchase** (otherwise known as **Seward's Folly** or **Seward's Icebox**) by the United States from the Russian Empire occurred in 1867 at the behest of Secretary of State William Seward. The territory purchased was 586,412 square miles (1,518,800 km²) of the modern state of Alaska.

Check used to pay for Alaska, worth \$7.2 million

Background

Russia was in a difficult financial position and feared losing Russian America without compensation in some future conflict, especially to their rivals the British whom they had fought a decade earlier in the Crimean War. While Alaska attracted little interest at the time, the population of nearby British Columbia started to increase rapidly after hostilities ended. The Russians therefore started to believe that in any future conflict with Britain, their hard-to-defend region might become a prime target, and would easily be captured. Therefore Tsar Alexander II decided to sell the territory. Perhaps in hopes of starting a bidding war both the British and the Americans were approached, however the British expressed little interest in *paying* for Alaska.

The Tsar then instructed Russian minister to the United States, Louis Baydalal, to enter into negotiations with Seward in the beginning of March 1867. The negotiations concluded after an all-night session with the signing of the treaty at 4 o'clock in the morning of March 30, 1867^[1] with the purchase price set at \$7,200,000 (about 1.9¢ per acre), equivalent to approximately \$104,000,000 in modern terms.^[2] [Note, however, that \$7,200,000 represented a much more significant portion of federal revenue in 1868, the year the purchase was made, than would an equivalent in today's dollars: the country was less wealthy, and national government taxed that wealth at much lower rates.] American public opinion was generally positive, but some newspaper writers and editors had negative feelings about the purchase of land. Notably, one of those men was Horace Greeley of the *New York Tribune*, for example:

Already, so it was said, we were burdened with territory we had no population to fill. The Indians within the present boundaries of the republic strained our power to govern aboriginal peoples. Could it be that we would now, with open eyes, seek to add to our difficulties by increasing the number of such peoples under our national care? The purchase price was small; the annual charges for administration, civil and

military, would be yet greater, and continuing. The territory included in the proposed cession was not contiguous to the national domain. It lay away at an inconvenient and a dangerous distance. The treaty had been secretly prepared, and signed and foisted upon the country at one o'clock in the morning. It was a dark deed done in the night.... The *New York World* said that it was a "sucked orange." It contained nothing of value but furbearing animals, and these had been hunted until they were nearly extinct. Except for the Aleutian Islands and a narrow strip of land extending along the southern coast the country would be not worth taking as a gift.... Unless gold were found in the country much time would elapse before it would be blessed with Hoe printing presses, Methodist chapels and a metropolitan police. It was "a frozen wilderness."^[3]

While criticized by some at the time the financial value of the Alaska purchase turned out to be many times greater than what the United States had paid for it. The land turned out to be resource rich and also provided the US a great advantage in the Cold War.

The viewpoint from Washington

The purchase was at the time derided as *Seward's folly*, *Seward's icebox*, and Andrew Johnson's *polar bear garden*, because it was believed foolhardy to spend so much money on the remote region.^[4]

The treaty was promoted by Secretary of State William H. Seward, who had long favored expansion, and by the chairman of the Senate Committee on Foreign Relations, Charles Sumner. They argued that the nation's strategic interests favored the treaty. Russia had been a valuable ally of the Union position during the U.S. Civil War, while Britain had been a nearly open enemy. It seemed wise to help Russia while discomfoting the British. Furthermore there was the matter of adjacent territory belonging to Britain (and now part of Canada). Nearly surrounded by the United States they were of little strategic value to Britain and might someday be purchased. The purchase, editorialized the *New York Herald*, was a "hint" from the Tsar to England and France that they had "no business on this continent." "It was in short a flank movement" upon Canada said the influential *New York Tribune*. Soon the world would see in the northwest "a hostile cockney with a watchful Yankee on each side of him," and John Bull would be led to understand that his only course was a sale of his interests there to Brother Jonathan.

On March 3 Sumner made a major speech advocating the treaty, and covering in depth the history, the climate, the natural configuration, the population, the resources—the forests, mines, furs, fisheries—of Alaska. A good scholar, he cited the testimony of geographers and navigators: Alexander von Humboldt, Joseph Billings, Yuri Lisiansky, Fyodor Petrovich Litke, Otto von Kotzebue, Portlock, James Cook, John Meares, Ferdinand von Wrangel. When he had finished, he observed that he had "done little more than hold the scales." If these had inclined on either side, he continued, it was "because reason or testimony on that side was the weightier." Soon, said Sumner, "A practical race of intrepid navigators will swarm the coast ready for any enterprise of business or patriotism. Commerce will find new arms; the

The signing of the Alaska Treaty of Cession on March 30, 1867. L-R: Robert S. Chew, William H. Seward, William Hunter, Mr. Bodisco, Eduard de Stoeckl, Charles

country new defenders; the national flag new hands to bear it aloft." Bestow American republicanism upon the territory, he urged, "and you will bestow what is better than all you can receive, whether quintals of fish, sands of gold, choicest fur or most beautiful ivory." "Our city," exclaimed Sumner, "can be nothing less than the North American continent with the gates on all the surrounding seas." He argued the treaty was "a visible step" in this direction. By its terms we should "dismiss one more monarch from this continent." One by one they had retired—" first France; then Spain; then France again, and now Russia, all giving way to that absorbing unity which is declared in the national motto — E pluribus unum."^[5]

Sumner and Frederick W. Seward.

Seward's Day, in honor of William H. Seward, is a holiday in Alaska on the last Monday of March which celebrates the United States' purchase of Alaska from Russia. Seward's Day is also an alcohol-free day in many cities such as Ketchikan, one of the major cities of the Alaska Panhandle — though the one-day alcohol ban is not observed in all cities.

Ratification and enactment

The United States Senate ratified the treaty on April 9, 1867, by a vote of 37 to 2. However, the appropriation of money needed to purchase Alaska was delayed by more than a year due to opposition in the House of Representatives. The House finally approved the appropriation in July 1868, by a vote of 113 to 48.^[6]

Sumner reported Russian estimates that Alaska contained about 2,500 Russians and those of mixed race, and 8,000 aborigines, in all about 10,000 people under the direct government of the Russian fur company, and possibly 50,000 Eskimos and Native Americans living outside its jurisdiction. The Russians were settled at 23 trading posts, placed conveniently on the islands and coasts. At smaller stations only four or five Russians were stationed to collect furs from the Indians for storage and shipment when the company's boats arrived to take it away. There were two larger towns, New Archangel, now named Sitka, which had been established in 1804 to handle the valuable trade in the skins of the sea otter. It contained 116 small log cabins with 968 residents. The second town was St. Paul in the Pribilof Islands, with 100 homes and 283 people. It was the center of the fur seal industry.

Russian ratification of the Alaska purchase, June 20, 1867.

An Aleut name, "Alaska" was chosen by the Americans. The transfer ceremony took place in Sitka on October 18, 1867. Russian and American soldiers paraded in front of the governor's house; the Russian flag was lowered and the American flag raised amid peals of artillery. Captain Alexis Pestchouroff said, "General Rousseau, by authority from His Majesty, the Emperor of Russia, I transfer to the United States the territory of Alaska." General Lovell Rousseau accepted the territory. A number of forts, blockhouses and timber buildings were made over to the Americans. The troops occupied the barracks; General Jefferson C. Davis established his residence in the governor's house, and most of the Russian citizens went home, leaving a few traders and priests who chose to remain.

Alaska Day celebrates the formal transfer of Alaska from Russia to the United States, which took place on October 18, 1867. Currently, Alaska celebrates the purchase on Seward's Day, the last Monday of

March.

(*October 18, 1867, was by the Gregorian calendar and a clock time 9:01:20 behind Greenwich, which came into effect the following day in Alaska to replace the Julian calendar and a clock time 14:58:40 *ahead* of Greenwich. For the Russians, the handover was on October 7, 1867.)

Alaska purchase as a propaganda subject

The transfer of the Territory of Alaska in 1867 to the United States of America by Tsarist Russia, a transaction historically purported as an intrinsically legal sale, was claimed to be only a lease by Professor Igor Panarin, former KGB analyst^[7], in an interview with *Izvestia* published on Monday, November 24, 2008. However, there is no mention of a time period nor a lease in the original treaty document in which Russia ceded the territory to the United States.^[8]

Strategies to Reduce and Prevent Suicide in Alaska

1

A Presentation to the House Health & Social Services
Committee

Melissa Stone, Director
DHSS, Division of Behavioral Health

February 3, 2009

Background of Suicide Prevention in Alaska

2

- Alaska has a history of high rates of suicide
- In 1987 Senate Resolution No. 19 established a Senate Special Committee on Suicide Prevention.
- Through these efforts, \$600,000 was appropriated for community-based suicide prevention projects (CBSPP).
- The CBSPP focused primarily on rural and remote community-based programs.

Background of Suicide Prevention in Alaska

3

- In FY2006 the CBSPP grant program was integrated into the DBH Comprehensive Prevention & Early Intervention grant programs—with substance abuse prevention, fetal alcohol prevention, youth development & resiliency, connectedness and early mental health.
- This integration was taken to strengthen all behavioral health prevention by promoting comprehensive programming—not separate silos.

Current Suicide Prevention Funding

4

- In FY2009 16 community-based programs are funded with blended suicide prevention funds.
- FY2009 general fund dollars for suicide prevention grant programs is \$715,820 (an increase of 20% since 1989).
- Average grant award is \$44,738 per agency: the largest award is \$140,000 to our statewide 24-hour CareLine/Crisis line and the smallest award being \$8,325 to the City of Nulato.

Current Suicide Prevention Funding

5

- In addition DBH received a one-time FY09 general fund allocation of \$200,000 to begin planning a coordinated statewide strategy to reduce suicide across all age groups.
- Planning grants to regions with rates of suicide exceeding the state rate of 22 per 100,000 are being awarded—Nome, NW Arctic, Yukon Kuskokwim, Bristol Bay.

DBH Long-term Outcomes

6

- All Alaskan communities, families and individuals free from the harmful effects of substance use, dependency and addiction.
- Alaska children, youth and adults are mentally healthy and living successfully.
- All community members' are connected, resilient and have basic life skills.

What the Data Tell Us...

12

**Suicide Methods in Alaska
1998-2007**

What the Data Tell Us...

13

- Alaska continues to rank in the top five states for highest rate of suicide across populations.
- According to a recent report from the AK Bureau of Vital Statistics, Alaska's suicide age-adjusted average rate is 21.2 per 100,000 population.
- This equates to 683 suicides between 2003 and 2007.
- In 2008 suicide accounted for two-thirds (68.6%) of all violent deaths in Alaska.

What the Data Tell Us...

14

- The Alaska Youth Risk Behavior Survey (YRBS) shows an increase in the rate of “suicide attempts” among youth grades 9 through 12 from 7.05% in 1995 to 8.05% in 2003, and 10.7% in 2007.
- 2007 YRBS data also indicate a higher rate of suicide attempts among females (12.7%) in comparison to males (8.3%). Males complete more often, but females attempt more often.
- Alaska Native/American Indians have the highest rate of suicide at 47.2 per 100,000.

What the Data Tell Us...

15

- Persons aged 15-24 and 25-29 had the highest rates of suicide (37.6 and 33.6 per 100,000 respectively).
- Between 2003 and 2005 the Anchorage/Mat-Su area had a total of 190 suicides, equaling a rate of 18.3 per 100,000 (low rate/high number).
- In those same years, the Northwest Arctic Borough had a total of 15 suicides, equaling a rate of 43.3 per 100,000 (high rate/lower number).

Current and Recent Activities

Planning & Partnerships

16

- In 2007 the Alaska Injury Prevention Center released the *Alaska Suicide Follow Back Study*.
- The study reviewed what specific factors in Alaska influence suicide by interviewing family and friends of decedents. Results show strong correlations between suicide and:
 - Post traumatic stress disorder
 - Abused as children
 - Substance use problems
 - Problems with law enforcement
 - Loss of job

Current and Recent Activities

Prevention & Early Intervention

17

- In FY2009 16 communities applied for and received grant funds to address suicide prevention and early intervention. A total of \$715,120 were distributed to the following communities:

Wrangell

Haines

Juneau

Kenai

Mat-Su

Mountain Village

Nulato

Petersburg

Nenana

Shaktoolik

Sitka

Fairbanks

Valdez

Nunam Iqua

Current and Recent Activities

Federal Garrett Lee Smith Youth Suicide Grant

18

- In October 2008, DHSS received federal Garrett Lee Smith Youth Suicide Prevention grant award.
- Three-year, \$1.5 million award -- \$500,000 per year.
- 85% of grant funds will be distributed to fund 3-5 Regional Suicide Prevention Teams.
- Focus on Alaska youth ages 10-24 with an emphasis on Alaska Native male teens, pre-teen females, military veterans and youth experiencing mental health disorders/self-destructive behaviors.

Current and Recent Activities

Outreach & Community Engagement

19

- FY2009 one-time increment of \$200,000 assisting 5 regional/sub-regional areas to develop a strategy and implementation plan for suicide prevention in their region.
- Plan development will include town hall meetings, focus groups, key informant interviews and community readiness assessments to identify regional, cultural or other factors unique to their region.

Current and Recent Activities

Planning & Partnerships

20

- July 1, 2008 the Statewide Suicide Prevention Council moved from the DHSS Office of the Commissioner to Behavioral Health—to better align the work of the Council and Behavioral Health.
- In partnership with the Alaska Mental Health Trust and the Suicide Prevention Council, participate in the *You Know Me* campaign to reduce the stigma associated with mental illness and suicide.
- Working in partnership with the Alaska Native Tribal Health Consortium, the YK Community Suicide Prevention Coalition and the Maniilaq *Project Life* (federally funded).

Current and Recent Activities

Outreach & Training

21

- *Suicide Prevention Gatekeeper Training*—a gatekeeper is anyone within a community who can act when someone is contemplating suicide.
- 39 individuals have been trained as “*Gatekeeper trainers*,” able to provide training across Alaska.
- Establishing statewide training in Mental Health First Aide, a first responder training for paraprofessionals and community members to be aware of early signs of poor mental health.

Current and Recent Activities

Outreach & Community Engagement

22

- The Division of Behavioral Health has a strong network of 105 community agencies providing mental health and substance abuse prevention, early intervention, treatment and recovery services through 164 grant programs.
- In addition, we are working in partnership with other community support organizations including faith-based organizations, churches, youth organizations, schools and businesses.

Next Steps

23

- Continue working toward *local solutions for local challenges*—partnering with communities and regional suicide prevention coalitions.
- Focus on 4 intermediate outcomes identified for the Alaska suicide prevention initiative:
 - *Reduce the number of attempted and completed suicides;*
 - *Remove the stigmas associated with depression, mental illness, substance use disorders and suicidal tendencies.*
 - *Increase local responsibility and community action to implement suicide prevention strategies; and*
 - *Increase availability and accessibility of early mental health services.*

- **The Division of Behavioral Health is committed to:**
 - working to reduce the impact of suicide in Alaska;
 - better understand the underlying factors and influences contributing to suicide;
 - assist communities in developing solutions at the community level, with community ownership;
 - develop a cross-disciplinary, research-based approach to reducing the number of suicides in Alaska; and
 - ensuring that Alaska's children, youth and adults are mentally healthy, substance free, connected, resilient and living successfully.

Mission and Mandate

MISSION

The Alaska Citizen Review Panel (CRP) is committed to reviewing and evaluating the practices and procedures of the Office of Children's Services (OCS) and in making recommendations relative to its findings to insure the safety and the well-being of the children of Alaska.

The CRP will achieve this commitment by examining the policies and procedures of the Office of Children's Services and collaborating agencies; examining, where appropriate, specific cases; evaluating the extent to which agencies are carrying out their child protection responsibilities; and preparing and making available to the public an annual report.

MANDATE FOR THE GROUP

The Citizens' Review Panel (CRP) is federally mandated through the Child Abuse Prevention and Treatment Act (CAPTA); Keeping Children and Families Safe Act of 2003. The CRP is also mandated through Alaska statute Sec. 47.14.205.

"By allowing the Panels to have complete access to child protection cases, by requiring Panels to publicize their findings, and by requiring states to respond to criticisms and recommendations of the Panels, the Committee intends to subject states to public criticism and political repercussion if they fail to protect children." (United States Congress, House Report 104-081, 1995, p.1)

DUTIES ASSIGNED TO THE GROUP

Summary of duties The CRP shall examine the policies, procedures, and practices of State and local agencies and where appropriate, specific cases, to evaluate the extent to which State and local child protection system agencies are effectively discharging their child protection responsibilities.

CRP duties

- Evaluate OCS compliance with federal and state laws, examine policies and procedures for consistent statewide implementation, review cases with fatalities or near fatalities. The CRP shall evaluate the extent to which OCS is effectively discharging its child protection responsibilities under:
 1. the State Plan submitted to the U.S. Department of Health and Human Services under 42 U.S.C. 5106a(b);
 2. Child Protection Standards under federal and state laws; and
 3. any other criteria that the CRP considers important to ensuring the protection of children, including the level and efficiency of coordination of foster care and adoption programs in the state and a review of child fatalities and near fatalities.

In carrying out the responsibilities listed above, the CRP shall examine the policies, procedures, and practices of OCS, and, where appropriate, evaluate specific cases of child abuse or neglect.
- Maintain confidentiality. A person attending a CRP meeting or a CRP member or CRP staff may not make any disclosure related to information obtained during a review by the CRP. A violation is subject to a civil penalty of up to \$2,500 for each violation.
- Conduct public outreach. The CRP shall conduct public outreach and gather public comment on current OCS procedures and practices involving children and family services.
- Produce an annual report. The CRP shall prepare and make available to the governor, the legislature, and the public an annual report containing a summary of its activities and recommendations for the improvement of child protection services in the state.
- Meet at least every three months. The CRP is required by law to meet every three months. Additional meetings and/or teleconferences are scheduled as needed.

DUTIES ASSIGNED TO OCS RELATED TO THE CRP

HSS support. The Commissioner shall, by regulation, establish policies and procedures necessary to carrying out the duties of the CRP.

- Cooperation with state panel. OCS shall provide the panel access to information on child abuse or neglect cases that is necessary for the CRP to carry out its duties.
- Report response. Not later than six months after the date on which the report is released, OCS shall submit a written response that describes whether or how OCS will incorporate the recommendations of the CRP (where appropriate) to make *measurable* progress in improving the child protection system.

Membership and Staff Support

Required membership The panel shall be composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect.

Current membership

Fred Van Wallinga, Chair, Willow
Carol Olson, Vice Chair, Anchorage
Pamela Dupras, Kodiak
Dana W. Hallett, Soldotna
Arthur S. Hansen, Fairbanks
Susan Heuer, Anchorage
Esperanza Redelfs, Ketchikan
Ralph Taylor, Nome

Desired membership The CRP would like to meet its requirement to be broadly representative of the state by widening the geographic and racial and ethnic diversity of the membership. The group is working to recruit new members from underrepresented areas of the state as well as a greater diversity of child-centered expertise and background.

OCS liaison Tammy Sandoval, Director, is the current liaison between OCS and the CRP. Richard Nault, Deputy Director, was the liaison for much of the previous year.

Staff support Staff support is provided by Sylvan Robb and Nancy Lowe of Information Insights.

 St. Paul, Minnesota: Fred Van Wallinga and Carol Olson attended the National Citizen Review Panel conference

Annual activities

Although the CRP was formed in May 2002, the core of its current membership has been in place for roughly four years. The group meets approximately every other month, with every third meeting being a teleconference. Panel membership has remained steady this year with eight members, although there were extended absences during the year. One member missed a portion of the year for health reasons and another member missed nearly the entire year due to a military deployment.

The CRP continued to focus this year on the two areas on which it had previously focused. The first was facilitating an improved relationship between OCS and tribal agencies. The second was facilitating an improved relationship between OCS and foster parents. A large part of this effort continued to be the process of educating people about the existence and role of the CRP. To this end, the group continued to maintain a public website at www.crpalaska.org to provide information on Alaska's CRP, as well as citizen review panels in general. The group also distributed its brochures at conferences and made presentations using an existing Power Point presentation to educate more people about the CRP and its mission.

As more people become aware of our existence we receive more calls from dissatisfied citizens. As in the past, we inform people that we do not typically intervene in individual cases, but encourage people to avail themselves of either the OCS grievance process or to open a case with the Ombudsman's Office. When we are aware of cases, we do try to monitor complaints with an eye out for patterns of problems.

Our unofficial theme for this year was data collection. We distributed a survey at the Alaska Native Indian Child Welfare Conference put on by the Bureau of Indian Affairs. We received feedback from over 100 mainly Alaska Native ICWA workers who were attending the conference. Respondents were asked which Native corporation region they were from. There were representatives from all regions except Koniak. Calista had the most representatives among survey respondents with 30%. Calista was followed by 16% from Doyon, 14% from Bristol Bay and 11% from Bering Straits. The other regions each had a handful of respondents.

Respondents were asked if there was good collaboration between OCS and tribal entities in their community. Half of respondents (50%) reported good collaboration, while just under one-quarter (24%) reported that there was not good collaboration. Eight percent of

respondents selected yes and no. Just under one fifth of respondents (18%) selected 'don't know' in response to this question.

Respondents were asked how they would rate the effectiveness of child protection in their community. An equal percentage of respondents selected 'very effective' or 'somewhat effective' and 'very ineffective' or 'somewhat ineffective' with 28% and 27% respectively. Nearly half of respondents (45%) reported that child protection in their community was 'neither effective nor ineffective.'

Respondents were asked to rate the effectiveness of foster care in their community. 'Very effective' or 'somewhat effective' were selected by 27% of respondents. More than forty percent (44%) of respondents report that foster care in their community was either 'very ineffective' or 'somewhat ineffective.' Twenty-nine percent of respondents reported foster care in their community was 'neither effective not ineffective.'

Respondents were asked if had anything else to add and 58% of respondents made an additional comment. Among those comments, 40% of them mentioned foster parent issues. Among the 40% who mentioned foster parent issues, 38% mentioned a lack of Native foster parent homes available and the need for tribes being able to license homes. The other 63% of the foster parent comments mentioned lack of support financially and that becoming a foster parent was cumbersome and standards were too strict.

Based on some of the results from the above survey, we were motivated to try and survey foster parents directly. We continue to work on piloting a survey with current and recent foster parents. Our efforts have been hampered by the lack of a strong foster parent group with whom we can work.

We also collected a great deal of regional data in-person through site visits to 20 communities. We interviewed local OCS staff and staff from the following types of partnering agencies about what is working and what needs improvement in their relationship with OCS and how we can help facilitate those efforts.

- Coast Guard personnel
- Counseling center staff
- District attorneys
- Foster parents
- Health aides & public health nurses
- ICWA workers
- Local police departments
- OCS staff
- School principals, nurses & counselors
- State troopers
- Tribal representatives
- WIC workers

We also learned a great deal from other people in these same job types when we heard from them at several conferences we attended. We attended the "Pathways to Hope" conference on Alaska Native Child Sexual Abuse. Members also attended the Alaska Native Indian Child Welfare Summit conference. Attendance at these conferences provides extremely valuable networking opportunities, especially to hear from rural residents from many communities. Additionally, they are an excellent way to continue to make people aware of our existence.

We had additional training opportunities this year. Several members attended the National Citizen Review Panel Conference in Minnesota. Attendance at the national conference allows us to learn of any legislative changes that impact citizen review panels and to network with members from other states to exchange ideas. We also received a full day tutorial on the OCS budget from the primary person responsible for the budget. After hearing many comments about worker training from interviewees, we had a teleconference with those responsible for providing training for new OCS employees.

This year, for the first time, we asked OCS staff to conduct a case review in a response to reports we had received about a particular community. We were very pleased with the responsiveness and with the resolution of that situation.

The primary issue we threw ourselves into this year was a recommendation for and strong advocacy of the creation of a fifth OCS region for the state to be headquartered in Bethel. We communicated extensively with Bethel residents involved in the child protection system and presented this recommendation to the House Health, Education, and Social Services Committee. While our request was not immediately acted upon, we continue to feel this is a vital step to enable OCS to provide quality, culturally appropriate services to this region of the state.

Recommendations

Recommendation 1. Create a fifth region headquartered in Bethel

Population and Land Area

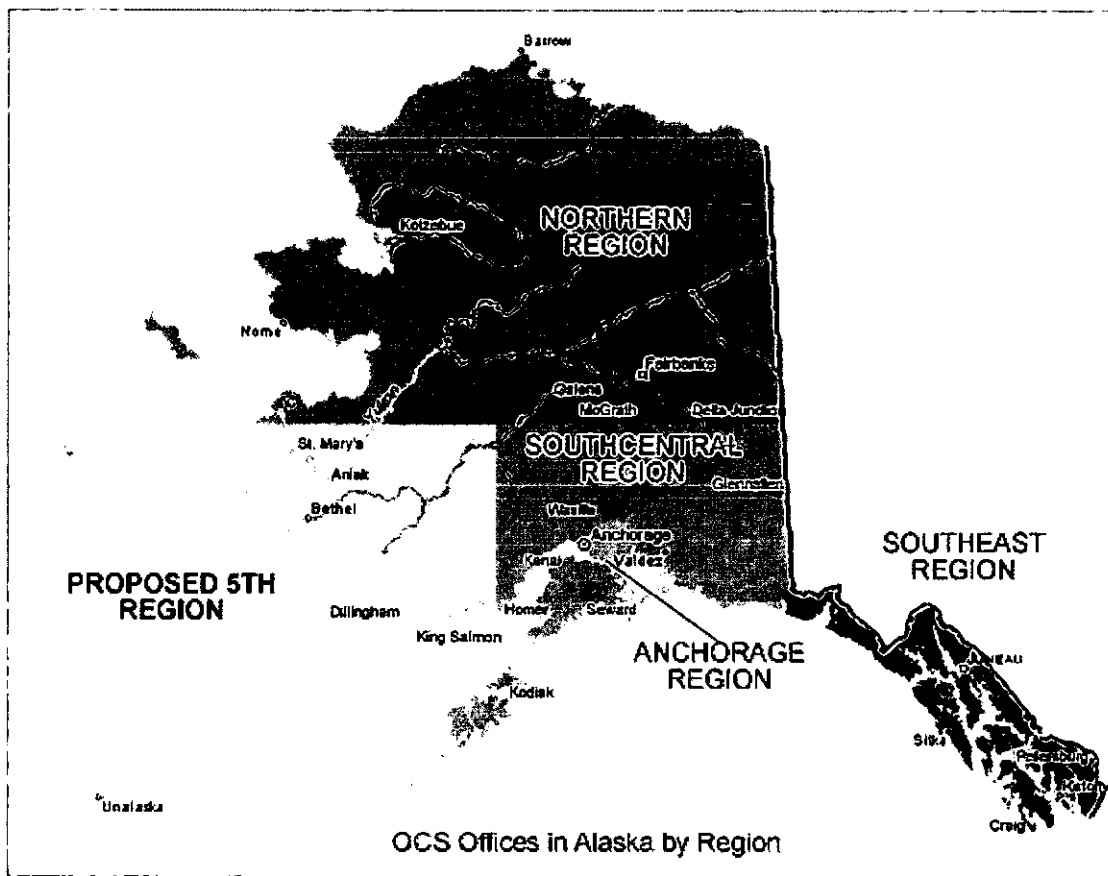

Currently OCS serves the state through four regions: Southeast, Anchorage, the Northern region (which includes the area north of St. Mary's) and the Southcentral region (which is the remainder of the state). The map below shows the existing regions.

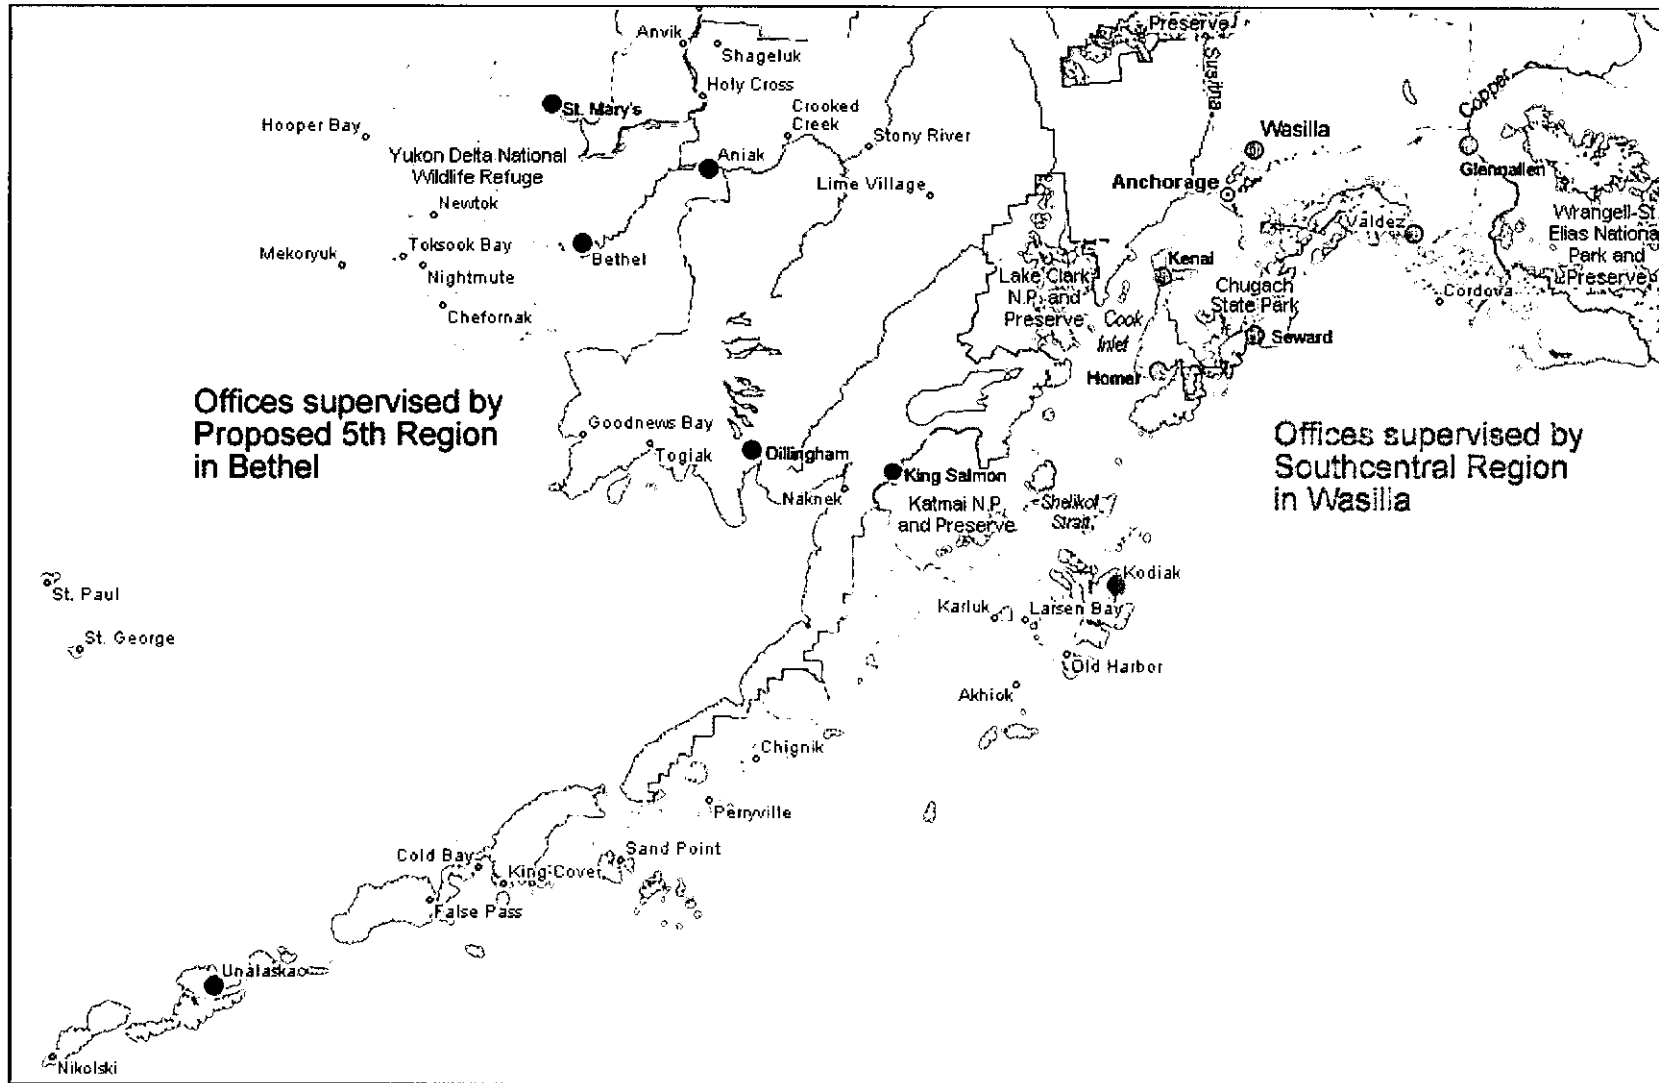

Currently there is one office in the Anchorage region, five offices in the Southeast region, seven offices in the Northern region and 13 offices in the Southcentral region. The existing Southcentral region has 12 field offices which is twice as the region with the next largest number of field offices—six in the Northern region—and three times as many field offices as Southeast (which has four field offices). The following map shows the dozen field offices in the Southcentral region and the regional headquarters in Wasilla.

We propose that in order to better serve the sizable and culturally distinct area of Southwest Alaska, OCS create a fifth region to be headquartered in Bethel. This region would be broken out from the existing Southcentral region (SCRO). It would include the six existing OCS offices in Aniak, Bethel, Dillingham, King Salmon, St. Mary's, and Unalaska. The existing Southcentral region includes 37% of Alaska's land area and 30% of its population. The first map that follows shows the entire state with the proposed five regions. The second map that follows highlights which of the field offices would remain in the Southcentral office and which would become part of the proposed Southwest region.

The table below lists all the boroughs and census areas included in the existing Southcentral region. Those areas above the heavy line are those that would remain in the Southcentral region after the proposed Southwest region is created. Those below the heavy line are the areas that would be in the proposed Southwest region. The existing boundary between the Northern region and SCRO is a straight line east-west across the state, so it does not follow borough or census area boundaries. We have estimated the percentage of the census areas in the proposed Southwest region for those census areas bisected by the boundary.

Borough or Census Area	Population (2006 Census Bureau est.)	% Population Under 5 Years Old	% Population Under 18 Years Old	Land Area (sq. miles)
Kenai Peninsula Borough	52,304	5.8	24.7	16,013
Kodiak Island Borough	13,072	7.7	30.0	6,560
Matanuska-Susitna Borough	80,480	6.4	26.2	24,682
Valdez-Cordova Census Area	9,872	6.2	24.7	34,319
Aleutians East Borough	2,647	3.5	12.1	6,988
Aleutians West Census Area	5,239	3.2	12.8	4,397
Bethel Census Area	17,147	11.2	37.1	40,633
Bristol Bay Borough	1,042	6.5	27.0	505
Dillingham Census Area	4,970	8.7	33.6	18,675
Lake and Peninsula Borough	1,548	8.1	31.2	23,782
Wade Hampton Census Area	6,443*	13.7	42.4	14,614*
Yukon-Koyukuk Census Area	877**	6.5	27.9	21,885**
Total current SCRO	201,745	7.0	27.3	213,053
Total proposed Southwest region	39,913	10.6	36.7	131,479
Total remaining SCRO	155,728	6.3	25.9	81,574
Alaska	670,053	7.4	27.1	571,951

* Estimate 85% of Wade Hampton Census Area in proposed Southwest region, figure is 85% of total.

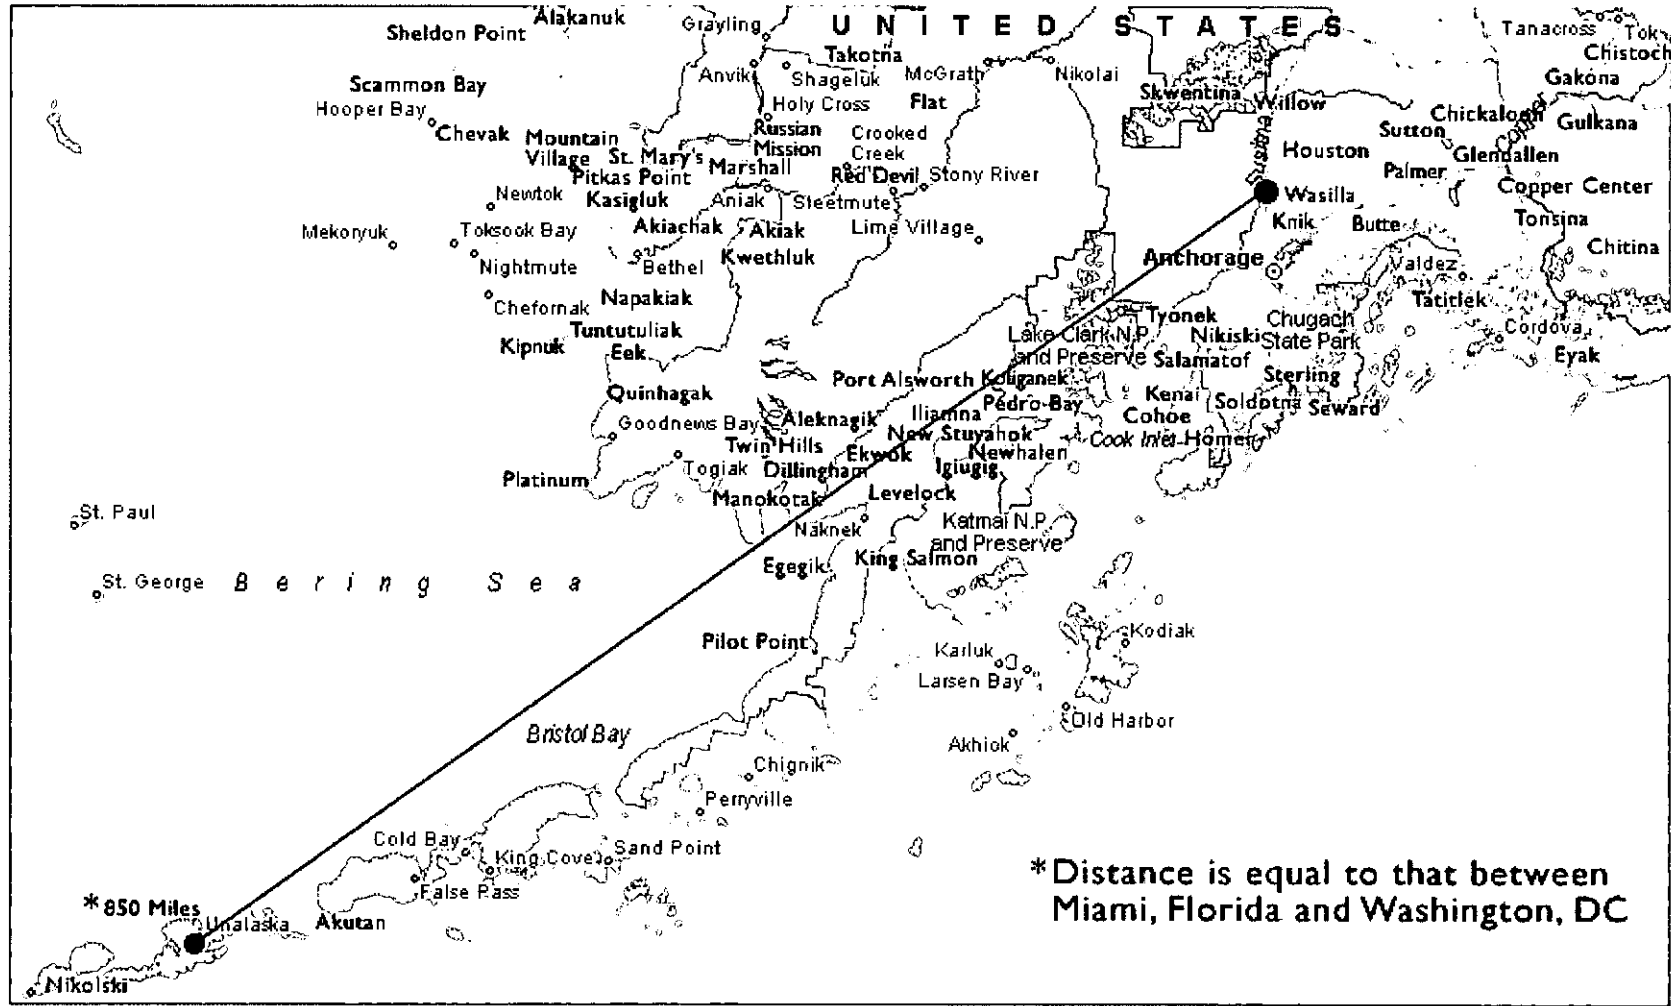

** Estimate 15% of Yukon-Koyukuk Census Area in proposed Southwest region, figure is 15% of total.

The proposed Southwest region would have 6% of Alaska's population, although it would contain 8% of Alaska's children under 18 years old. While the population in the proposed new region is not sizable, 37% of that population is children. The proposed Southwest region would also include 23% of Alaska's land area. This would leave the remaining SCRO with 23% of Alaska's population, 22% of Alaska's children under 18 years old and 14% of Alaska's land area.

The proposed Southwest region has a large number of communities. There are at least 73 communities that would be served by the new region. All of those communities are substantially closer to Bethel than to Wasilla in many ways. The communities are geographically closer, culturally closer and much closer in lifestyle being all off-road small, rural communities.

Currently the distance between Wasilla, where SCRO is headquartered, and Unalaska is equal to the distance between Miami and Washington, D.C.; it is 850 miles. It is 510 miles from Unalaska to Bethel, the proposed headquarters of the Southwest region. Bethel is two-fifths of the way closer to Unalaska than Wasilla is from Unalaska.

Caseloads

In terms of caseload for out-of-home cases the proposed Southwest region would not be the smallest region as shown in the table below. Data in the table cover September 2007 through February 2008.

Region	Total Cases	% of State Caseload	Average Cases Per Month	Highest Monthly Caseload
Anchorage	3,313	42.6	552	557
Northern	1,277	16.4	213	223
Southeast	788	10.1	131	137
Southcentral (existing)	2,397	30.8	400	416
State Total	7,775	100	1,296	1,321
<i>Proposed Southwest</i>	<i>861</i>	<i>11.1</i>	<i>144</i>	<i>146</i>

Data shown below are for opened investigations and also cover the same time period.

Region	Total Cases	% of State Caseload	Average Cases Per Month	Highest Monthly Caseload
Anchorage	1,112	38.1	185	220
Northern	535	18.3	89	109
Southeast	381	13.0	64	74
Southcentral (existing)	893	31.0	149	191
State Total	2,921	100	487	530
<i>Proposed Southwest</i>	<i>270</i>	<i>9.2</i>	<i>45</i>	<i>57</i>

Among in-home cases for that same time period, the Southcentral region had the highest number of cases with 88 of 205 in the entire state. That's 43% of all in-home cases in Alaska. The field office breakdown of these cases was not available, but it can only help the Southcentral region to halve the number of field offices it serves. When investigations and in-home cases are taken together, Southcentral again has the highest number of cases among the regions. Workers in Southcentral have the most cases per worker for these kinds of cases.

Great Need—Troubled Region

As reported in the Anchorage Daily News article, *Slowly, Western Alaska starts to break silence on sexual abuse, Children are often victims of relatives* by Alex DeMarban of the Tundra Drums, Bethel has more sexual assaults than Anchorage in absolute numbers (not per capita). This article was published on January 22, 2008. A portion of the article is excerpted below.

EPICENTER: BETHEL

New statistics from the Alaska State Troopers suggest that Western Alaska leads the state in cases of sexual abuse of a minor -- often when girls are raped or molested by intoxicated adult male relatives and acquaintances -- and cases of sexual assaults against women.

A soon-to-be released study of 989 such cases investigated statewide by troopers in 2003 and 2004 shows that the greatest number -- 476 cases, or 48 percent -- occurred in Western Alaska, said Katie TePas, a troopers program coordinator.

The region is immense -- containing more than one-third of the state's land mass -- and stretches from Kotzebue in the north to Kodiak in the south and out the Aleutian Chain past Unalaska. It's served by 13 trooper posts in what's known as the C Detachment.

But the population is small, represented by dozens of villages -- many with fewer than 500 people -- and a handful of hub communities, such as Kodiak, Bethel or Nome, each with fewer than 6,000 people.

In the vastly more populated regions along the road system -- including Anchorage, Fairbanks and the Matanuska-Susitna Borough -- troopers investigated fewer such cases during the two-year period. Combined, trooper posts in those areas investigated 299 of the studied cases, or 30.2 percent of the total during the two-year period.

Ground zero is the Bethel region, where troopers investigated 17 percent of the cases, more than any other post in the state, TePas said.

"We have an epidemic," she said. "It's a statewide epidemic, but the epicenter, our data shows, is the Bethel region."

CHILDREN MOST VULNERABLE

TePas presented the numbers at a summit on Alaska Native child sexual abuse in Anchorage earlier this month.

The results are highlights from an 102-page study done by the Justice Center at the University of Alaska Anchorage, she said.

Only trooper cases that entered the justice system during the two-year period and reached a conclusion -- cases that did and did not result in a conviction -- are included in the study, TePas said.

The early figures paint a disturbing picture of rapes and other sexual violence against adults and children in Western Alaska, where the population is largely Alaska Native and villages are often loose extensions of family.

In all the 989 cases, family members and friends sexually abuse or assault each other in more than 90 percent of the incidents, she said.

They're especially hurting children. The most common charge during the two years was second-degree sexual abuse of a minor, a class B felony that generally means the rape or other molestation of someone 16 years old or younger, often by an adult.

Almost one-fourth of the child victims were from ages 13 to 15, she said. Nearly the same number were from ages 6 to 12.

Strangers were the perpetrators in less than 1 percent of the cases involving children, TePas said.

Precedent in Other Agencies

There are other state agencies that have more than four regions. The best example is that the Alaska State Troopers divide the state into five detachments (A-E) headquartered in Anchorage, Fairbanks, Ketchikan, Palmer and Soldotna. They have posts in 36 communities. The Troopers are the best agency for OCS to compare itself to because both agencies share a need to be able to respond quickly in emergency situations. Safety requires proximity. Additionally, knowing the community can provide a great benefit in allowing workers to diffuse situations and find the most appropriate outcome. Workers in both agencies need to be culturally competent and familiar with the local services. While the Troopers' detachment C does not mirror exactly the proposed Southwest region, the areas are very similar. This arrangement works well for the Troopers and would work well for OCS. With the Troopers being a primary partner for OCS, it makes good sense to have this region to strengthen the partnership between these agencies.

Community Support

Prior to our testimony before the House Health, Education, and Social Services we received letters from residents and agencies in the Bethel area in support of keeping the Supervisor 5 position in Bethel and for the creation of a new region. We received 15 letters of support which may be viewed in their entirety on our website. Below are excerpts from a few of those letters. We wanted to allow people from the area to speak about the situation.

“...the Native – and dominant – culture in Bethel is radically different than the culture in Wasilla, or in any other region of Alaska. That means that people think about things differently here, and the people here face

very different challenges and expect things to be done in different ways..."

---Lauri Owen, Bethel

"The Bethel OCS office needs the Social Worker V position filled and ideally should be the headquarters of their own region. This would increase the ability and opportunity for local staff to work with the strengths and support identified in each of the 57 villages and 7 different school districts that make up the Yukon Kuskokwim region.

OCS, formerly [*sic*] DFYS, has evolved over the years to be known in a better light than just some agency that "takes your kids away". The region is slowly healing from the negative cultural intervention history in general: forced boarding schools, deadly influenzas that devastated entire communities, priests sexually abusing children, etc. More local hire and higher education and more communication and trust has empowered the people of this region to self determine a better destiny for the next generation. Bethel OCS needs more staff and leadership support to be a proactive part of this. The safety of Alaskan's children is the number one priority; this agency saves lives.

The OCS staff in Alaska are very dedicated people but it is the ones directly in Bethel and the villages that have the greatest insight on this regions strengths and needs."

---Susan Taylor, Bethel

"It cannot be argued that safety is one of the most important issues facing Alaska children and families today, as we look at the distressing numbers of families involved in child protection services. Expedient responses from all members of the protective teams are essential and indeed life-saving for some."

---Alaska Native Indian Child Welfare Association Board of Directors

"Bethel is a unique community that has very high needs for a strong, consistent, locally based child protection work force.

On a recent visit to Bethel I had the opportunity to speak at length with several social workers at OCS about the challenges the community faces with high rates of child neglect and abuse. Bethel is also challenged by some of Alaska's highest rates of traumatic brain injury and substance abuse. Front line child protection workers need direct available supervision in order to effectively do their demanding daily work. Removing the supervisor from this office will only serve to weaken the child protection services provided in this high needs regional hub.

Currently, social workers in the Bethel OCS office travel to more remote villages than any other region in Alaska. Supervisors must be knowledgeable about the culture and values of the communities in which they serve. Supervisors are responsible for infusing their staff with the importance of culturally relevant family interventions.”

---Summer LeFebvre, MSW

“The work that the Office of Children’s Services does can significantly impact the numbers of youth entering BYF as well as the severity of their social-emotional dysfunction and criminal offending. OCS can intervene early in instances of child neglect and abuse, and their involvement can reduce the numbers of youth being detained at BYF. One disturbing development is that we are seeing younger offenders as well as more assaults and sexual offenses. In addition, the severity of personality, behavioral, and emotional impairments is on the rise. The numbers of youth in the BYF that have mental health diagnoses is well over 75%.

It is my professional opinion that to have the Director of OCS held by someone *not* living in our community will only increase the trends mentioned above. The complexities of making child protection decisions is a difficult one at best. The person in that top position needs to have knowledge and respect for the cultures out here as well as the many challenges and difficulties of living in rural Alaska.”

---Dr. Valerie Warren, Bethel

Conclusion

There are many strong reasons for creating this new region.

- The area is 23% of Alaska. If it were a state, it would be the fifth largest state just behind Montana, but ahead of New Mexico.
- The area is entirely off the road system, complicating travel and creating different circumstances than on-road communities face.
- The area has a higher percentage of the population who are children than the state overall.
- The area will have a larger out-of-home caseload than existing regions.
- The area has a great need having the highest rates of sexual assault.
- The area is culturally distinct due to the large, strong Yup’ik population.
- The Alaska State Troopers, who also provide public safety, serve the state through five regions.
- The community supports the effort.
- The OCS offices and staff are already in place. Only four new positions need to be added.

In addition to serving this culturally distinct area that comprises nearly one quarter of Alaska much better, removing responsibility for this area would allow the currently over-stretched SCRO to provide better services to all those children and families remaining in its area. SCRO has many challenges and would greatly benefit from having less on its plate. There are so many good reasons to do this. We have yet to find anyone who does not support the idea.

Recommendation 2. Implement workload study recommendations

In May 2006 OCS received the final report on a statewide workload study conducted by Hornby Zeller Associates, an Outside consulting firm. The study involved a great deal of work examining workers' caseloads and how their time was spent. The study also included four recommendations; the full text of the recommendations is included below. Hornby Zeller Associates' full report on the statewide workload study may be viewed at our website, www.crp.alaska.org.

From Hornby Zeller Associates *Statewide Workload Study*, May 2006.

In response to this study OCS should make a plan for filling existing vacancies and monitoring workloads over time in an effort to increase staff resources as the agency can absorb them. Some aspects of the plan should be:

1. Fill the positions that are authorized but vacant, shifting the bulk of those positions to Anchorage.
2. OCS should recalculate the staffing needs by office every month for a year and plot the results by counting cases and applying the weights each month to identify patterns of under- and over-burden among the offices. These data will provide a reliable direction for shifting current staff to better meet the caseload burden where it is shown to exist over time and for targeting new positions that may be authorized on the weight of this study's results.
3. Once the vacancies are filled, OCS should make an effort to attain additional positions at whatever speed they can be absorbed from both a political and an agency standpoint using the evidence contained in this study. Part of that evidence is the very basic standard used in the study to determine if a case is handled appropriately and the amount of time it takes to handle it appropriately. Those standards are spelled out in Appendix D for each case type.
4. To produce the most equitable distribution of workload for current staff and cases on an ongoing basis, OCS could also provide supervisors making assignments a workload monitoring program through ORCA, as described in Appendix F. These procedures should help supervisors achieve the proper allocation of cases to existing workers based on the case weights or workload standards established by this study.

In the two years since this study was received by OCS, we believe staff have been working to address this problem. However, the situation is still quite grave in many locations. Appendix A of this report is a letter from a guardian ad litem working on the Kenai Peninsula who documents and eloquently makes the case for more workers. As she notes, the Child Welfare League of America recommends caseloads of between 12 and 15 children for social workers doing child protection work. In January 2008 the Kenai permanency social workers were averaging 22.4 families and 38 children. Workers in this one office have caseloads nearly triple the recommended size and are working extraordinary hours trying to make sure no children fall through the cracks. However, inevitably children fall through the cracks and become headline news when a preventable tragedy occurs. A less dramatic, but very harmful outcome is that workers leave when they reach their breaking point.

OCS needs to implement these recommendations immediately. Caseloads must come down so social workers can do social work. During a site visit in Southeast a social worker told us she objected to having her job titled Social Worker since she never got to do social work. She described her job as filling out forms and trying to keep her head above water.

We do want to recognize that the Director of OCS, Tammy Sandoval, is working on these priorities. The Governor approved several OCS increment requests in the fiscal year 2009 operating budget including \$860,900 of funding to comply with the OCS Workload Study. This funding adds seven new caseworker positions and three new support staff positions to the OCS team. Every additional employee is a step in the right direction toward reasonable caseloads and workers with time to do social work.

Recommendation 3. Fix the telephone system

Currently the telephone in a number of small offices is not answered if staff are out of the office. Thus someone calling the Glennallen or Delta Junction office, for example, either get voicemail or are told to hang up and contact another office (e.g., in Glennallen callers are given the number of the Wasilla office while in Delta Junction callers are given the number for the Fairbanks office). The phone system needs to be upgraded in these locations so that the phone transfers automatically to the other office (e.g., Wasilla or Fairbanks). We understand that this may be problematic in very small communities operating with local telephone carriers, however, it should be possible in more places than not. This feature is certainly available and in use in some parts of the state already. If a call to the Director's line is not answered by her in Anchorage the phone is then answered by someone in the main OCS office in Juneau.

The goal is that the main telephone number of every OCS office should be answered by a live person during business hours. People should not have to hang up and place a long distance call if they want to speak with someone. A complaint we have heard from a variety of partners in many locations is that OCS is hard to contact. It should not be

difficult to reach OCS. Some people might be calling to report abuse after having talked themselves into making the call. If told to hang up and call another number, they may feel like they tried and let it go.

Recommendation 4. Publicize and staff the toll free number

The toll free number to report child abuse (1-800-478-4444) is poorly publicized and not well staffed. Several members of the Citizen Review Panel were not even aware of its existence, including a member who is a Guardian Ad Litem. The number is not even prominent on the OCS homepage. OCS should partner with the Alaska Children's Trust to increase publicity for this number. While a large portion of the general public is not likely to have the number memorized, a large portion should know that the number exists. This seems certain to result in increased reporting and yield better protection for children. An advertising campaign that emphasizes that the number is available statewide, 24 hours a day and that callers may be anonymous would help a great deal. Additionally, the advertising should stress that people don't have to *know* whether a child is being abused or neglected. If they have concerns, they should call and professionals will investigate the situation. The ads should stress that it is everyone's business to report suspected abuse.

A good model for the number might be the Alaska Tobacco Control Alliance's Quit Line. The Quit Line phone number is well publicized through television and radio public service announcements and print ads. The Quit Line number is on the front of the Fairbanks ACS Telephone Directory. In reviewing the Information Pages at the front of the Fairbanks ACS Telephone directory, the first page has emergency numbers that includes 911 and the poison control number in large print. In smaller print are numbers for a variety of services including the domestic violence hotline, but nothing for OCS. Further into the Information Pages are two pages of Community Service Numbers. The Family/Youth Services Category of these pages includes listings for 16 agencies, including two 800 numbers (the runaway hotline and the Alaska Center for Resource Families). The only listing for OCS is for the old "Division of Family and Youth Services." When attempting to look up any phone number for OCS, the only listing found was in the Government Listings. There is nothing listed under State of Alaska, Alaska, Department of Health and Social Services, Health and Social Services, Office of Children's Services, or Children's Services. There is a listing in the white pages for Child Abuse Information and Referral that lists the number for the Resource Center for Parents and Children. It should be easier to find a number to call. The number should also be much more prominent on the OCS homepage. It would be nice if the number were listed on the homepage of the Department of Health and Social Services.

Currently staff at the Anchorage office answer the 800 number. If staff are busy, callers are transferred to an auto-attend system and a recording provides the hours of the Anchorage office while they hold. This may confuse callers who thought they had called a hotline. When the phone is answered during business hours, the staffer does not know

that the caller has contacted the hotline. Callers are then transferred to someone in investigations. During several test calls, we were not told that we were being transferred to "John Doe who investigates these cases" and that he would take our information. Additionally, if the individual is not at his/her desk the call goes to 'John Doe's' voicemail. Thus anyone who wishes to make an anonymous report must either continue to call back until the call is answered or leave a message that is not likely to contain all the necessary information, or will not be anonymous.

When the 800 number is called after business hours or on a holiday, a recording answers with the message, "If a child is in danger right now, hang up and call 911." The message then goes on to say, "Your call will be answered in the order in which it was received by a message secretary." This line should be staffed 24 hours a day with someone trained to take a caller's information and to ask the necessary questions.

Recommendation 5. Collocation of OCS Workers

In several locations around the state, OCS workers are collocated with partnering agencies. We have yet to hear anything but positive comments about these situations. Having an OCS worker located in a law enforcement office or at a child advocacy center or school allows OCS workers to collaborate more fully with these partners. OCS workers can be more responsive and develop the strong relationships that will sustain these partnerships through challenging times.

We understand that collocation is not practical in all circumstances; other agencies may not have room to spare. Additionally, we know that OCS has long-term leases in many locations. As these leases end and OCS is revisiting office space, we strongly encourage OCS to pursue collocation wherever feasible. We feel collocation should be a very high priority for OCS offices that have just a single staff person assigned to them. Enabling a lone staffer in an outpost to have the support of the "colleagues" who would be gained through collocation would enable OCS to better retain workers in these especially challenging locations. The OCS office in Glennallen would be an excellent place to start this collocation effort. The Glennallen region is in the process of starting a child advocacy center and it would be ideal for the OCS worker to be located in the CAC facility.

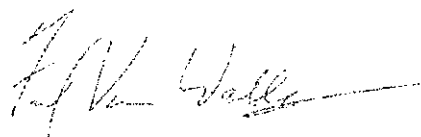

Recommendation 6. Support for Front Line Workers

In the course of talking to many front line OCS workers around the state, we have found workers to be stressed to the point of disability. Many workers are at their breaking point with demanding caseloads and insufficient support services in their areas to offer their clients. Very few OCS offices have enough staff either due to existing positions being vacant or funding that is inadequate to hire the necessary number of workers. Consequently, some workers are stressed to the point of having post traumatic stress disorder. Other workers are losing sleep and are very anxious about the welfare of their clients. Counseling and stress management classes should be available to all workers.

Commendations

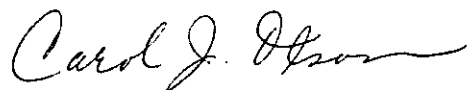

We commend those individuals who courageously spoke up for children when there were potentially negative personal consequences.

March 17, 2008

Ms. Tammy Sandoval
Division of Health & Social Services
Office of Children's Services
323 East 4th Avenue; McKay Annex
Anchorage, AK 99501

Ms. Sandoval,

I am a Kenai contract guardian ad litem with the Office of Public Advocacy. We have met on at least two occasions in Anchorage; once for Dianne Olsen's retirement party when we both spoke and again at the last CASA/GAL Conference this past fall. We may have also spoken together at the ICWA training last October. At any rate, I hope that you remember meeting me.

I am writing to you not only as a children's advocate but also in my broader obligation as a social worker to work for change as delineated in the National Association of Social Workers, Code of Ethics. I believe I have a responsibility to my social work colleagues, the families and children we serve, and to advocate for resource allocation when necessary. It is in the spirit mutual concern and sharing common goals as social workers that I am approaching you.

On the occasions that I have had the opportunity to speak with you, I have shared my sincere appreciation for the supervisors and line staff social workers in our Kenai OCS office. I have been a social worker for 20 and guardian ad litem for 10 years. Over this period of time I have experienced many changes in the law, procedures, and personnel in the Department of Law and the Office of Children's Services. Over this same period of time it has been my observation that the quality of social work being performed in the Kenai office has steadily improved. The caliber of social work in the Kenai office is overall excellent in both the intake/investigations and permanency units.

My concern and the purpose of this letter is to bring your attention to the extreme shortage of personnel in the Kenai office which is compromising the ability of the social workers to adequately manage their caseloads. The Kenai caseload numbers have grown to the breaking point and have become intolerable.

I am not as familiar with the intake/investigations unit caseload or staffing needs as I am with the permanency unit due to my duties as a GAL. However, I have observed that all of the intake/investigations social workers are always working at an exhausting pace. I am aware that the intake/investigations unit has been working hard to implement the new "Intake Assessment" model which has placed a significant increase in the demands on their time. These types of changes, while having overall benefit to casework, can become hidden variables that further stretch overworked social workers that are difficult to measure.

At this time, there is "real" social work taking place in the intake/investigations unit with the result that the situations that are more amenable to change never reach the petition/custody stage and only the more complex cases reach the permanency unit. The cases that are transferred into the permanency unit are more complex and the families are much more entrenched in the behaviors that harm their children. The social workers in the permanency unit in Kenai have become completely overwhelmed with the numbers and needs of the families they are serving. The most recent numbers I have obtained from Ms. Abigale Henderson demonstrate what I have been hearing for some time; our social workers in Kenai have caseloads in numbers three times those recommended by the Child Welfare League of America as caseload/workload standards. My research through the NASW web site brought to light information that not only are caseloads high but that "workloads" are even higher due to the growing complexity of the cases. CWLA recommends caseloads of between 12 and 15 children (I have also read 12-14 children) and our Kenai permanency social workers are averaging 22.4 families and 38 children (using figures from January 2008 only).

While every office experiences turnover from time to time, we have been fortunate to have been able to maintain a stable social work staff. This is rapidly changing as the well-trained, committed, and excellent social workers remaining begin to buckle under the extreme burden of so many cases, vacant positions, and the ever increasing number of mandated tasks and procedures that are implemented both internally and most recently externally from the Kenai Court System.

Kenai is at the breaking point. If more positions are not allocated to this office we will begin experiencing more turnover, which will compound every challenge placed upon the remaining social workers leading to the spiral of increasingly compromised casework. There comes a time when no amount of organizational or time management skill can compensate for an unmanageable workload. The dedicated social workers in Kenai have resorted to working late hours, weekends, and holidays in their efforts to address the

demands of their work. Most of them look forward to a holiday as an opportunity to have a “quieter” time to work. The late evenings, weekends, and holiday work schedule has become the norm rather than the exception. We will not be able to retain seasoned social workers or attract new qualified social workers as long as this office remains severely understaffed.

I have been reviewing literature about the impact of social worker turnover on outcomes in child protection. Of interest is an article that can be reviewed at <http://www.uky.edu/SocialWork/cswe/documents/turnoverstudy.pdf> The study looked at the correlation between continuity in the social work relationship and permanency. In this study, the researchers determined that foster children with only one social worker were returned to their family 75% of the time but that this number dropped to about 18% when there were two workers and then to almost zero when there were 6 or 7 workers. I am sure that you are also painfully aware of numerous studies demonstrating the deleterious effects of social worker turnover on outcomes.

There are real overt and covert risks inherent to the conditions that currently exist in the Kenai OCS office. Everyone there is doing all that they can to meet the needs of the families but even with their “regular” extended hours, they are unable to keep up. More positions are needed to maintain even minimally acceptable casework; the current situation is an accident waiting to happen. It is my ethical responsibility as a social worker to advocate for our families and my colleagues; dedicated social workers who are not able to fulfill their obligations and responsibilities due to severe understaffing in their office. We all are responsible for advocating within and outside our agencies for adequate resources to meet clients’ needs. I urge you to please allocate several new social worker positions to the Kenai OCS office as soon as possible.

Thank you for your time and thoughtful consideration of my request.

Sincerely,

Kate Tea, LCSW, GAL
Licensed Clinical Social Worker, #196
Certified Chemical Dependency Counselor, Level II

Office of Children's Services *Stronger Families, Safer Children*

Manager's Training Outline 2008

According to Team Leadership in the First Ninety Days by Maynard Brusman - *the first weeks are crucial for learning and evaluating. Leaders must maintain the right balance of confidence and humility, while asking probing questions and actively listening. They need a firm support network in place; they must learn everything they can about the organization, its strategies, and customers. Leaders must dedicate a large percentage of learning time to getting to know existing team members in the shortest possible time-frame. Transition from the outside and you face the task of identifying and placing the right people into the right positions, which is a much greater challenge.*

Accordingly, within 90 days of employment new manager will meet with each member of Statewide Management Team for orientation to each domain within the Office of Children's Services. Statewide Management Team members will provide an overview regarding the following:

Director

- DHSS Leadership
- Mission
- Vision
- Values
- 5 Goals
- Prevention
- Quality Assurance
- Citizen Review Panel

Deputy Director

- Role of Deputy Director
- Role of manager in utilizing available human, financial and tangible resources to accomplish OCS' mission
- Philosophy of residential care
- Psych nurses
- Solution focused problem solving
- How this position fits into the OCS manager structure
- DHSS Joint Management Team
- Bring the Kids Home

Appendix C

Administrative Manager

- Organization Structures
 - State, Department, Division, Region, Field
 - Authorities and delegations
 - Budget/Funds
 - When, Where, and How We are Funded
 - Applicable Rules that Follow the Funding
 - Regional Allocations
- Personnel P&P
 - Roles & Responsibility
 - Workplace Alaska & the Hiring Process
 - Use of Non Perms
 - Alternate Work Weeks
 - Reclassifications
 - Disciplinary Actions - Authorization Levels
- Travel Do's and Don'ts/Credit Card Use
- ORCA and Finance - Provider Payments
 - Policy, Procedure, Regulations
 - QA Purpose and Process
 - Matrix Expenditures
 - Audit Exceptions
 - Why ORCA Entries Dictate Allowable Expenditures
 - Your Responsibility/ Accountability for Expenditures Approvals
- Manager's Responsibilities re: Revenue
 - IV-E and the Penetration Rate
 - RMTS
 - Other Revenue Sources

Program Administrator

- Policy
- Child & Family Services Review
- Child & Family Services Plan
- Annual Services Progress Report
- Title IV-E State Plan
- Tribal Title IV-E
- Service Array Section (Programs)
- Resource Family Section (Foster Care & Adoption)
- State office and field offices - one agency

Appendix C

Child Welfare Administrator

- Standardizing Safety Decision Making Practice
Tying safety decision making to division goals
- Family to Family Initiative
- Partnership w/Casey Family Programs & Annie E. Casey Foundation
- Training Academy
- Tips/Lessons learned for management

ORCA Administrator

- ORCA - System of Record
- ORCA as Supervision tool
- ORCA enhancements/improvements
- ORCA Help
- Future of ORCA
- Reports
- ORCA Demonstration

Community Relations/Legislative Liaison

- Legislative Session
- Constituent Relations
- Media responses
- PIT work
- OCS website
- Retention & Recruitment efforts
- The ACT
- The CJA

If the manager comes to OCS with no previous child protective services experience, the manager will make every attempt to attend TONE within their first 60 days of employment.

If the manager comes to OCS with no previous State of Alaska experience, the manager will make every attempt possible to attend the Division of Personnel - Supervisory Training within 120 days of employment.

Appendix B

OCS WORKFORCE GOALS & STRATEGIES

GOAL STRATEGY ACTIVITY	START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS
GOAL #1 - ORGICULTURE / VALUES: Improve public, partner, stakeholder and staff understanding of OCS' mission, vision, values and desired outcomes.					
Strategy A	Increase Public Education Efforts				
Activity 1	Social Norms Marketing Campaign	9/30/2008	3/31/09	25%	Mike R&R Workgroup Developing proposal; schedule meeting with Jeff Linkenback; pursue with Nat'l Alliance/ACT
Strategy B	Develop a comprehensive and consistently implemented New Staff Orientation Plan				
Activity 1	Develop and implement new employee orientation training program.	10/24/08	1/31/2009	25%	Travis; R&R Workgroup Travis presented Anch New EE Orientation program implementation to Mgrs during Mgmt Team Mtg in November
Activity 2	Create a Development Plan for New Staff Mgrs & CSMs.	8/20/08	9/9/2008	100%	SLT Distributed to current CSMs and Staff Managers as an FYI
Strategy C	Communication Plan				
Activity 1	Create a "Communications Guidelines" document for staff use.	6/18/08	9/22/2008	100%	SLT Distributed to Statewide Mgmt Team with directive to discuss / distribute to staff.
Strategy D	Appreciative Inquiry				
Activity 1	Deliver Intro to Appreciative Inquiry presentation	10/6/08	12/31/2008	20%	SLT Senior Leadership Team reviewing

Appendix B

GOAL STRATEGY ACTIVITY	START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS	
GOAL #2 - TRAINING: Provide comprehensive and on-going, culturally-competent and current best practices training.						
Strategy A	Incorporate Mission, Vision and Values into Supervisor's Curriculum					
Activity 1	Train on the importance of supervisory role in supporting MVV among their staff	9/1/2008	11/18/2008	95%	Jay C	In process
Strategy B	Cadre of Supervisors / Facilitators (based on need)					
Activity 1	Canvass supervisors who have completed Supervisor Training to select those who are willing to provide ongoing training for OCS employees.	4/1/2009	7/1/2009	0%	Jay C	Work not yet started
Strategy C	Review Curriculum and Decide Implementation Plan					
Activity 1	Develop proposal				Jay C	
Strategy D	Become a "Learning System Rather Than a Training System"					
Activity 1	Develop proposal				Jay C	
GOAL #3 - RECRUITMENT: Expand the OCS recruitment message, target those applicants most fit for child welfare duty and utilize their talents whenever and wherever possible.						
Strategy A	RJP					
Activity 1	Produce an OCS-featured Realistic Job Profile DVD to be incorporated into OCS hiring procedures.	11/1/07	1/31/2009	50%	Mike; David	Urban taping and staff interviews complete; David Caldwell has yet to interview rural staff and capture 'B Roll'
Strategy B	High School / College Interns					
Activity 1	Implement State of Alaska's Intern Program into OCS offices				Maritt	

Appendix B

GOAL STRATEGY ACTIVITY		START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS
Strategy C	Double Fills					
Activity 1						
Strategy D	On-Calls					
Activity 1						
Strategy E	5 Step Interviewing Process					
Activity 1						
Strategy F	Job Fairs					
Activity 1						
GOAL #4 - RETENTION (cont.): Create a work environment that includes the types of relationships, support, opportunities for growth, workload expectations and compensation that employees do not want to leave.						
Strategy A	AWW Agreements*					
Activity 1						
Strategy B	Telecommuting Agreements*					
Activity 1						
Strategy C	Job Share Agreements*					
Activity 1						

Appendix B

GOAL STRATEGY ACTIVITY		START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS
Strategy D	Lunch and Learns					
Activity 1						
Strategy E	On-going Training					
Activity 1						
Strategy F	Team Building					
Activity 1						
Strategy G	Continue Implementing Workload Study Results					
Activity 1						
Strategy H	Student Loan Forgiveness					
Activity 1	Add OCS caseworkers to any 2009 legislation related to a loan forgiveness program	10/3/08	4/20/2009	10%	Mike	Mike networking with DHSS staff on the DHSS leg proposal
Strategy I	Recognition Program					
Activity 1	Implement and use latest departmental program for all OCS staff	10/1/08		20%	Everyone	DHSS Recognition Program being reviewed by DOA as of 11/10/08
Activity 2	Welcome and congratulate new employees at completion of TONE with OCS t-shirts	10/13/08			Jay C	Funding to come from the contract amount in the FYSTA budget?

Appendix B

GOAL STRATEGY ACTIVITY	START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS	
GOAL #5 - Stipend Program: Create a new employee stipend program that effectively attracts staff, educationally nurtures staff and successfully binds the employee/employer agreement.						
Strategy A	Evaluation of Current Stipend Program					
Activity 1	Contractor Don Schmid will review effectiveness of stipend program for past 3 years.	9/1/08	11/1/2008	90%	Contractor Schmid	D. Schmid has given preliminary findings to N. Rolfzen, T. Sandoval & C. Lawton
Strategy B	Implement Recommendations from Evaluation					
Activity 1	Begin to implement recommendations to revise stipend program beginning 2009	11/1/08	4/1/2009	30%	Christy Lawton	
GOAL #6 - Human Resources: Utilize all tools, knowledge and assistance that is available within the Dept. of Administration, Division of Personnel, and effective in meeting staff recruitment and retention goals.						
Strategy A	Data to Manage / Decisions					
Activity 1						
Strategy B	Competencies for Positions					
Activity 1						
Strategy C	Performance to Appraisals Re: Competencies					
Activity 1						

Appendix B

GOAL STRATEGY ACTIVITY		START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS
Strategy D	Knowledge Transfer Plans					
Activity 1	Develop Knowledge of Transfer Plans per Admin. Order 237 deadline				Maritt	Maritt to provide 'Getting Started' presentation to Mgrs TBA
Strategy E	Performance Coaching					
Activity 1	Expand recent DOP-delivered trainings received in Anchorage & Wasilla to entire agency	11/13/08			Mike	Travis presented to Mgrs at statewide Mgmt Team Mtg in Anchorage in November on 11/13
Strategy F	Union Meetings					
Activity 1	Schedule meetings with Union Reps to help reframe their paradigm of OCS workload	9/23/08	50%		Mike Maritt Tammy	Set meeting with ASEA Business Rep Toya Winton to discuss OCS caseload count and '08 Staff Survey results
GOAL #7 - UAA / UAF: Collaborate with the University system to expand and prepare an applicant pool that is fit for child welfare work in Alaska and exceeds the staffing needs of the OCS program.						
Strategy A	Kentucky's Public Child Welfare Certificate Program					
Activity 1						
GOAL #8 - Other: These must be categorized as 'Other', or miscellaneous goals at this time.						
Strategy A	Review Work Group Membership					
Activity 1	Reestablish membership of the R&R workgroup	11/13/08	12/15/2008	75%	Mike	Mike obtained CSM participation during statewide Mgmt Team Mtg in Anchorage in November; CSMs to appoint others from Region

Appendix B

	GOAL STRATEGY ACTIVITY	START	FINISH	% COMPLETE	STAFF RESPONSIBLE	COMMENTS / PROGRESS
Strategy B	Break Out into Subcommittees					
Activity 1	Direct tasks of R&R workgroup to smaller subcommittees when appropriate				Mike	
Strategy C	"Training" Becomes "Learning"					
Activity 1						

The Office of Children's Services (OCS) wishes to thank the Alaska Citizen Review Panel (CRP) for its work in the past year to ensure the safety and well being of the children of Alaska. We know that we cannot do the work necessary to prevent and reduce child maltreatment without the assistance of all of our community partners. We appreciate the CRP for their diligence in examining policies and procedures and practices that then inform recommendations toward systems improvement of the OCS.

It has been another industrious year for OCS. We continued to work diligently on improving and standardizing practice across the state related to child safety decision making and we were able to roll out *Family to Family* from Anchorage to Fairbanks. We were able to increase new worker training from 2 weeks to 4 weeks to better prepare staff to do child protective services. We were able to implement a competency-based curriculum for supervisors to strengthen their ability to better support their staff. We strengthened partnerships with other divisions within the Department of Health and Social Services to provide a better service delivery system to families that come to the Department's attention through several different doors – Public Assistance, Behavioral Health and Juvenile Justice. We spent more time and effort on the prevention of child maltreatment to combat child abuse and the need for intervention from protective services.

The biggest event to happen within OCS in the past year was the Federal Child and Family Review (CFSR) in September. A great deal of time and effort went into the planning and preparation for the CFRS. That work began with the completion of a Statewide Assessment. A copy of the document can be viewed at - <http://hss.state.ak.us/ocs/Publications/CFSRstateAssessment.pdf>. The final CFRS report has not yet been received from the Administration for Children and Families, but strategic planning for the Performance Improvement Plan has begun.

Again this year, OCS concentrated a lot of effort on Continuous Quality Improvement, including conducting statewide case reviews, quality assurance of our safety assessment implementation and the annual stakeholder surveys. The survey results can be viewed at <http://hss.state.ak.us/ocs/QualityImprovement/QualityImprovement.htm>. The stakeholder surveys also included our annual staff survey. The staff survey produced a 77% response rate this year and a wealth of insightful comments. This year's staff survey truly indicates that OCS staff is committed to the organization's success and invested in improving service delivery to children and families!

The revision of Policy and Procedures (P/P) is a continual process within the OCS. Last year the format of our P/P was revised to become more user-friendly. This year the focus was on revisions to update P/P. A copy of all the revisions is included in Appendix A.

The following are the responses to the specific recommendations made in the CRP 2008 Annual Report:

Recommendation 1 - Create a fifth region headquartered in Bethel.

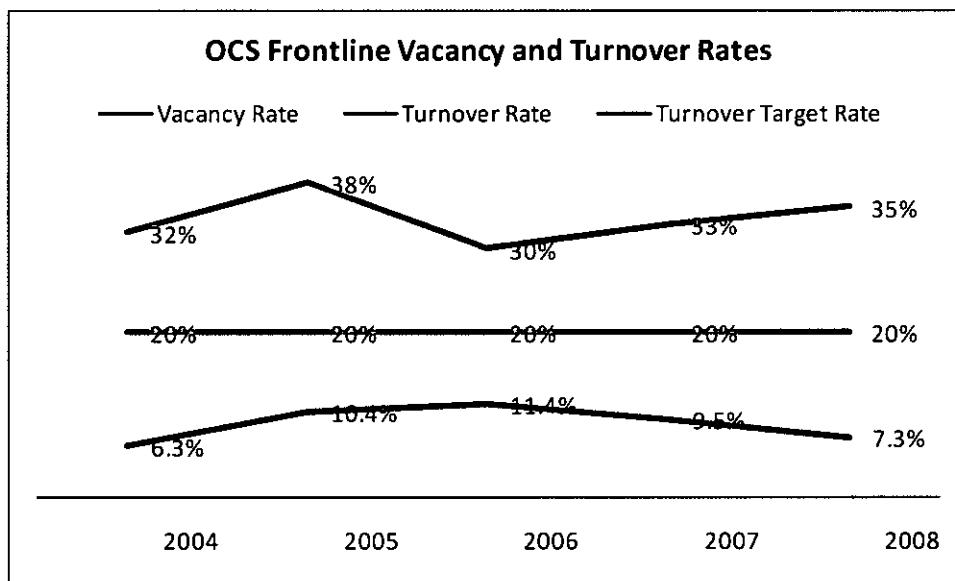

The Governor's Proposed FY2010 Budget was released on December 15, 2008, and does not include a request for funding a 5th region within OCS. OCS has made some changes that are proving to be of assistance though. There is a new Staff Manager in Bethel and a new dynamic South Central Regional (SCRO) Children's Services Manager (CSM) with several years of child protective services expertise. Additionally, an experienced supervisor transferred from Wasilla to Bethel to fill a vacancy. Teamwork within the region is more apparent than ever before and issues are being dealt with as a region, rather than Bethel standing alone as it has at times in the past. The SCRO CSM is soliciting assistance from his co-managers around the state to stand in and help with the work until vacancies can be filled.

In an effort to draw more attention and gain more information, Bethel was selected as a site to be reviewed in the Federal CFSR in September 2008. While the final report has not yet been issued, regional management has begun to follow up on areas in need of most attention. The focus has been on recruitment and hiring of new staff to fill vacancies; strengthening partnerships with tribal organizations; strengthening community partnerships; creating new ways to increase and improve communication between ICWA workers and OCS staff; and planning for cultural awareness training in January of 2009. Additionally, regional management is working with OCS licensing staff to develop a plan to fully train and license foster families in the Bethel region.

Recommendation 2 - Implement workload study recommendations.

The Governor has included 5 new positions for OCS in the proposed FY 2010 budget. Pending approval from the Legislature, the final phase of the recommendations from the Hornsby Zeller Associates workload study report of 2006 will be complete.

Child Protective Services is an emotionally demanding vocation. Across the nation, compassion, fatigue and vicarious trauma lead to high turnover and vacancy rates among caseworkers. In Alaska, fifty percent of the OCS front-line caseworkers have been employed with the agency for less than two years, and 20 percent have less than one year of experience. While vacancy rates have improved since 2006, turnover rates continue to slowly increase.

To institutionalize a mindful and daily focus on workforce development, the OCS formed an internal work group in the fall of 2007 to focus on retention and recruitment strategies. Workforce Goals and Strategies were developed and put into a written work plan that is constantly being revised and added to as the work evolves. (See Appendix B). The workgroup includes a representative from the University of Alaska Family and Youth Services Training Academy, the Division of Personnel, several OCS staff at all levels within the division, and a member from the Annie E. Casey Foundation that is providing technical

assistance. In addition, an executive steering committee was created in August of 2008 to provide guidance and oversight of the workgroup. Two of the members have also joined a DHSS Workforce Development Team created by Commissioner Hogan in November 2008.

The OCS internal work group has begun development of a realistic job profile DVD, intended to minimize turnover through recruitment processes that better inform applicants. A candidate for hire is sent a DVD and asked to sign a simple attestation form which states 1) they have watched the video; and 2) they *still* want to be interviewed and considered for the OCS frontline position. While this is a relatively new technique, states that have already implemented such a process are seeing an increase of new employees that truly have the competencies and the heart to do child protective services work, and a decrease of early resignations/dismissals. The OCS is also adapting its website to include virtual, realistic job profiles of current OCS employees to help job applicants understand what the job entails *before* applying for positions with the division.

A new employee exit survey was created and protocol implemented to help determine why so many workers leave service. Employee incentive techniques are being explored and alternative work weeks are being encouraged. Other strategies related to salaries, student loan forgiveness programs, and telecommuting agreements are also being explored.

The OCS is focusing on several other strategies to increase staff retention. Some of those strategies include increasing new employee training from 2 to 4 weeks to better prepare and equip new front-line workers with the skills and tools they need to do their complicated and demanding jobs. A supervisory competencies curriculum was developed and has begun to be delivered to child protective services supervisory staff. The curriculum has received rave reviews from those in attendance. The Anchorage Field Office has developed and implemented an extensive new employee orientation to supplement new worker training. This new employee orientation model has been shared with the regional managers and is expected to be adapted and implemented in the other regions as well. Due to the number of new field managers coming on board in the past year, an Orientation and Development Plan for New Managers was also developed and implemented. (See Appendix C).

The OCS used its Title IV-E contractor to thoroughly evaluate our current student stipend program with the Universities as the program has not lived up to its expectations for the retention of staff that have been paid to receive an advanced degree. That evaluation has been completed. Based on the contractor's recommendations, revisions and development of policy and procedures is underway so that a stronger and more successful stipend program is in place by the fall of 2009.

The OCS Management Information System, ORCA, is producing more management reports than ever before. One of those reports includes case load data by case worker, office and region. Assignment of new positions and reallocation of existing positions is based on that data and watching the trends of new reports and case assignments each month. Managerial reports have recently been shared with all managers in face-to-face statewide meetings. Managers have been trained how to access and interpret the reports. These ORCA reports have just recently been made available to all staff - not just managers - to encourage all staff to monitor data around the state. OCS has observed that our caseloads have come down over the past year and are far more manageable than in recent years.

The OCS has formed a stronger working relationship with the Division of Personnel (DOP) and has requested Performance Coaching training in field offices. The DOP will accompany OCS to meet with staff and union representatives in an effort to discuss and resolve work load issues. Once the DHSS Employee Recognition Program is approved by the Department of Administration, OCS will adopt and

implement those policy and procedures in their entirety. Retention and recruitment of OCS staff is a systemic challenge. Many of the options determined viable are unattainable by OCS alone and must be supported at the state level.

Recommendation 3 - Fix the telephone system.

In planning for FY09, OCS had put in a capital request specifically to repair/replace antiquated phone systems in field offices. We were allocated \$136,000 to do so and began the repairs in July 2008, once the funding was received. To date, the necessary repairs and/or upgrades have been completed in Barrow, St. Mary's and Aniak. In various stages of being repair and/or upgrade are Kotzebue, Ketchikan, King Salmon, Glennallen, Kodiak, Wasilla, Bethel, Dillingham, Kenai, Seward and Unalaska.

Telephone systems functionality solves many of the issues. However, as is noted in your report, adequate staffing of OCS phones is also a concern. While the preference is that a live voice always responds to the public's calls, protocols about how that happens in each field office, including the small communities with one/two person offices, will be finalized and in place by February 1, 2009.

Recommendation 4 - Publicize and staff the toll free number.

As recommended, the toll free number to report child abuse and neglect has been more prominently displayed on the OCS website. It will also be posted to the DHSS website on a rotating basis with other DHSS divisional information. Additionally, the toll free number has been added to the home page of the Alaska Children's Trust website. To capitalize on cost-free advertising and better inform the public, the OCS shares the toll-free reporting number (as well as the Children's Trust Parent line) with the media whenever the OCS responds to media inquiries about child abuse and child neglect issues.

Currently, the toll free reporting line operates out of Anchorage and was set up to handle primarily Anchorage business. However, if the Anchorage Intake Unit receives a call from another part of the state during business hours, they are able to take the call and transfer the information to the correct field office. After business hours, the calls to the toll-free line are transferred to an answering service. It is agreed that there needs to be continued improvements to all aspects of intake and efforts will continue in the coming year.

In the past year, the entire intake process has been evaluated and is currently under reconstruction. The National Resource Center for Child Protective Services was enlisted to provide technical assistance on this topic. They have evaluated all business processes related to receiving and screening reports of maltreatment. Focus groups were held with staff; intakes were reviewed across the state; and intake workers were shadowed to learn more about our intake processes. We learned that intake has not received the attention and focus it so richly deserves as a separate area in need of expertise. Results from the program evaluation were shared in a face-to-face managers' meeting and planning began to make short term and long term improvements. It was decided that intake policy and procedures needed a major overhaul. Revisions are currently in final draft and will be released as soon as possible in the new year.

Longer term improvements include completely revamping how intake is conducted in the state. OCS staff prefer we move to either a statewide or regional hotline system, whereby all calls would be handled by designated intake staff who specialize in doing the work full time. Case carrying workers would not be expected to perform intake in their individual offices, but rather could concentrate exclusively on their investigative and ongoing work. Ideally, the statewide intake system would be

manned 24 hours a day/7 days a week. However, it will take many more resources, i.e., staff, space and increased information technology, than OCS currently has available.

Recommendation 5 - Collocation of OCS Workers

The OCS wholeheartedly agrees with this recommendation. Collocation is achieved whenever and wherever possible with a variety of different partners, including Child Advocacy Centers, Tribal Agencies, Law Enforcement, Mental Health, Infant Learning Program and others around the state. Whenever there is an opportunity to collocate with our community partners, the opportunity is explored and if feasible, is approved.

Recommendation 6 - Support for Front Line Workers

OCS Administrators and Managers concur that there can never be enough support given to front-line workers. As stated above, in the response regarding the work load study, there has much effort toward the retention and recruitment of staff in the past year.

New efforts to respond to this recommendation include training all managers on the services provided by the Employee Assistance Program (EAP), including the individual counseling and critical stress debriefings that are available to all state employees. The managers were asked to provide the latest information learned about the EAP with all staff in their regions. In response to tragedies involving both clients and a co-worker, OCS made several requests for EAP critical stress debriefings this past year.

In 2008, the Director began attending the last day of new worker training to welcome new staff, share the agency's vision and mission and answer questions. A large part of the Director's welcome to new staff is focused on encouraging them to engage in self care so that they stay mentally fit and capable of performing this demanding work.

The recently (November 2008) unveiled Supervisory Competencies Curriculum training being offered to all social worker supervisors through the Family & Youth Services Training Academy is a very directed effort to ensure that front-line staff are receiving better support through better supervision.

OCS managers and supervisors are increasingly cognizant of the complex personal and familial responsibilities that young workers juggle in today's world. Through our annual staff surveys and employee exit surveys, OCS staff is reporting how much they value the opportunity to work for an employer that offers flexible work schedules.

As stated above, vacancy rates are decreasing. With the number of new staff being added in the past several years, caseload sizes have gone down. Managers have more management reports available to them than ever before with which to equalize caseloads and watch trends within their regions.

In summary, the OCS continues to strive toward improving in its organizational development, better equip its staff with the skills and resources needed for the job, implement best practice standards and streamline processes whenever possible. Retention and recruitment of quality staff remains a top priority. 2008 has been an exceptional year of positive institutional changes, but systems reform will continue within OCS during 2009 and each year thereafter. Alaska's children and their families deserve nothing less.

CPS Manual Revisions Finalized in 2008

2.1.2 Protective Services Alerts.

The title of the section has been changed from "Out of Town Inquiries" to "Protective Services Alerts", and this section now addresses solely the procedures for responding to Protective Services Alerts (PSA) received from other states.

2.2.5 Conducting an Investigation; Assessing for Child Safety

The section has been revised to reflect the safety assessment methodology that is now used by OCS.

2.7 Placement Preferences.

The following requirements have been added:

- When an adult family member or family friend has requested placement of a child in their home, the worker will make every effort to make a placement decision within 45 days of the request.
- If the placement request is denied, the worker will notify the family member or family friend of the denial within five business days following the denial, using a form specified in the policy.
- The worker will document all potential placement resources, consideration of placement resources, and decisions regarding placement in relative/placement search case note in ORCA.

3.5.5 Background Checks for Placement Resources and Interstate Requests for Child Protection Records.

This is a new section that includes the policy and procedures on fingerprinting requirements that were previously located in section 6.8.4. In addition, the revisions address requirements in recent federal legislation (the Adam Walsh Child Protection and Safety Act). The following revisions have been made:

- The requirements has been added that:
 - Child protection records (ORCA and Prober), the Juvenile Offender Management Information System (JOMIS), and the Sex Offender Registry must be checked for each household member 16 or older in the home of an unlicensed placement resource (unlicensed relative and prospective adoptive parents or guardians).
 - If the prospective adoptive parents or any other adult in the home have lived in another state in the preceding five years, OCS must request information from the child abuse and neglect registry from each state of residence during the five-year period.
 - New fingerprint based criminal background checks are required for individuals who previously completed fingerprint based criminal background checks as unlicensed relatives or foster parents and now are applying to become adoptive parents or guardians.
 - OCS is required to respond to requests from other states for child abuse and neglect registry checks.
- It is clarified that:
 - The worker will contact the Resource Family Section in State Office if an individual who is required to be fingerprinted is unable to provide fingerprints due to a medical or physical condition that is documented by a licensed physician.
 - The federal criminal background check requirement for prospective adoptive parents is not met if a name-based criminal background check is completed on a prospective adoptive parent due to rejected fingerprint cards and the cards were rejected solely

Appendix A

because the fingerprint impressions were of low quality due to lack of technological capacity or use of improper technique.

- If a variance is granted to a prospective adoptive parent who has been convicted of certain felonies, a Title IV-E subsidy cannot be approved for a child placed in that home.
- The OCS APSIN Unit handles requests from other states for child abuse and neglect registry.
- Procedures addressing rejected fingerprint cards have been added.
- The section has been updated to reflect ORCA procedures.

3.6.1 Placement Preparation.

It is clarified that issues to be discussed with the care provider prior to placement include:

- The child's mental health needs and ongoing services and supports needed to meet the needs;
- The child's educational needs, including special education services and supports,
- That the child should be maintained in their current school, whenever possible; and
- If known, the child's tribal heritage and tribal resources that may be able to assist the care provider with continuing the child's connection to their culture.

3.7 Change or Termination of Placement/Trial Home Visit/Return Home.

- The section has been reorganized, and updated to reflect ORCA procedures.
- The following requirement has been added:
 - For non-emergency transfers, the worker will provide advance notice to the child, the child's parents or Indian custodian or guardian, the child's foster parents or out-of-home caregiver, GAL, attorney, and tribe by sending a form specified in the policy and will make every effort to provide notification at least ten days prior to the intended transfer.
 - For emergency transfers, the worker will make every effort to notify the parties no later than five working days following the transfer by sending a form specified in the policy.
- It is clarified that when special planning is needed for a developmentally disabled child who is about to be released from custody, the planning will be initiated at least six months prior to the release or as soon as it is known that the child will be released from custody.

3.14.1 Life Skills Assessment.

- The section has been revised to reflect changes in the Ansell Casey Life Skills Assessment (ACLSA).
- It is clarified that OCS' policy requires that all children in custody age sixteen or older who are placed out-of-home complete an ACLSA at least annually, starting at the latest at age sixteen.
- It is also clarified that youth or caregivers who have questions about the ACLSA or need hard copy forms may contact either the Alaska Center for Resource Families or the Regional Independent Living Specialist.

3.14.2 Resources for Youth in Custody and Youth No Longer in Custody

The section has been re-titled and divided into two subsections: **3.14.2.1 Transitioning out of Custody** and **3.14.2.2 Resources for Former Foster Youth**.

3.14.2.1 Transitioning out of Custody: This section addresses resources available to youth in custody who are preparing to transition out of custody.

- It is clarified that OCS's policy requires that an Exit Plan be developed for every 16-year-old in custody. The plan becomes part of the case plan and both the youth's worker and the Regional Independent Living Specialist are involved in developing the plan. An Exit

Appendix A

Plan outline has been added to the CPS Forms subdirectory of the Statewide Forms Directory.

- For every youth in custody who is approaching the age of majority the worker will assess the youth's ability to live self-sufficiently. If, after the worker has discussed the issue with the youth's GAL or CASA and/or the Office of Public Advocacy, it is decided that a conservator should be appointed, the worker will ask the GAL to initiate a conservatorship proceeding.

3.14.2.2 Resources for Former Foster Youth: This section addresses resources available to youth who have left OCS custody. It is clarified that workers who are contacted by former foster youths about independent living services or funds will refer the youth to either the Independent Living Program Coordinator in State Office or to a Regional Independent Living Specialist.

5.2.3.B Receipt and Acceptance of Completed Home Study.

This is a new section that addresses acceptance of an ICPC home study and the required time lines. It is clarified that if OCS determines that a home study received from another state is insufficient for making a placement decision for a child, OCS must notify the other state within fourteen days of receiving the home study.

5.3.1 Completing the Interstate Compact (ICPC) Home Study.

This section addresses requirements in recent federal legislation (the Safe and Timely Interstate Placement of Children Act), and merges former sections 5.3.1 Time Frames for Completing the Study and 5.3.2 Completing the Home Study. The following revisions have been made:

- The requirement has been added that when another state requests a home study, OCS must respond to the request within 60 days of when the request is received by submitting a report on the result of the home study to the requesting state.
- It is clarified that:
 - The assigned worker will submit a report on the result of the home study before or on the due date regardless of whether it includes a placement recommendation. If a placement recommendation cannot be made by the due date, the worker will list the reason why in the report.
 - If a request for an adoptive home study is referred to an adoptive home study contractor the OCS worker is responsible for ensuring that the report on the result of the home study is received by the Alaska Deputy Compact Administrator by the due date.
 - Supervisors will assign the home study to an OCS worker within three business days of receiving the request packet.
 - Definitions of "home study" and "report on the result of a home study" have been added.

5.3.2 Completing the Home Study.

This section has been deleted.

6.2.1.3 Federal Support – IV-E and Medicaid

The section has been updated to reflect current procedures and current federal rules, definitions and clarifications have been added, and the specific information about the eligibility requirements for Title IV-E adoption subsidies has been moved from section 6.2.2.6.A to this section.

- Changes in the eligibility requirements for Title IV-E Foster include the requirement that the child must now be AFDC eligible
 - in the home from which removed
 - in the month court proceedings are initiated to remove the child from home.

As a result, Parent's Self-Declaration of Income and Resources forms (06-9794) must be

Appendix A

completed for all children who are removed from home. The form has been revised to reflect the change in eligibility requirements and the CPS Forms subdirectory of the Statewide Forms directory has been updated with the revised form.

- For eligibility for IV-E Adoption Assistance it is no longer required that the child is eligible for AFDC in the month that the adoption petition is filed.
- The following definitions have been added:
 - The AFDC definition of “specified relative”.
 - “Date the child is considered to have entered foster care” – this date determines, for Title IV-E eligibility, the due date of the first annual finding that reasonable efforts have been made to implement the permanency plan.
- The policy on minor parent and baby in placement has been updated to reflect the current federal rules.
- The procedures for IV-E eligibility reviews have been revised to reflect that while the requirement remains that Medicaid eligibility be reviewed every six months, redeterminations of Title IV-E Foster Care eligibility are now completed by the Eligibility Technician at least every twelve months and more frequently when something occurs that effects a child’s eligibility.
- The section has been updated to reflect ORCA procedures.

6.2.2.6.B Guardianship Subsidies

- The definition for “hard to place/special needs child” has been added.
- The section has been expanded to include the policy and procedures for subsidy negotiations.
- Information has been added about the approval process for guardianship subsidies for children under age ten.
- The section has been updated to reflect ORCA procedures.

6.2.2.11 Request for Independent Living Individual Funds for Youth in Custody and Youth No Longer in Custody

- The section has been updated to reflect current procedures:
 - A youth may initiate a request for independent living funds by either completing a request for funds application or by speaking with their caseworker and/or the Regional Independent Living Specialist to determine that a need for funds exists.
 - The application form and instructions for education and training vouchers can be obtained through the Regional Independent Living Specialist.
- It is clarified that for education and training voucher funds a youth can access a maximum of \$5,000 per academic years for a total of eight semesters, and youth may access funds up to age twenty-three if they started their post-secondary education by age twenty-one.

6.3.1 Medical, Dental, Vision, and Mental Health Care

- The requirement has been added that when a child is released from custody due to reaching the age of majority or being emancipated, the assigned worker will ensure that the child’s medical and mental health record is supplied to the child at no cost.
- Examples are provided for what specific kinds of information must be given to the out-of-home care provider.
- It is clarified that:
 - The assigned worker is responsible for ensuring that the child’s medical and mental health records in the case file are kept up-to-date, including records provided by the care provider.
 - Minors have the right to consent to diagnosis, prevention, or treatment of pregnancy, and therefore consent by the child’s parents, OCS, or the out-of-home provider is not required in order for a child in custody to obtain birth control or having an abortion.

Appendix A

6.5.9 Education

- Information has been added about the procedures for appointment of surrogate parents, and their role.
- The requirement has been added that when a child leaves foster care due to reaching the age of majority or being emancipated, the worker will ensure that a copy of the child's education record is supplied to the child at no cost.
- It is clarified that the worker is responsible for ensuring that a child's educational record is reviewed and updated at the time of each out-of-home placement of the child, and that a copy of the record is provided to the foster parent.

6.6.1 Intrastate Case Transfers.

The following revisions have been made:

- It is clarified that transfer between regions will occur only when the judicial venue has changed.
- Procedures for changing judicial venue have been added.
- Time lines have been added for:
 - the receiving supervisor to assign the case; and
 - the assigned worker and the receiving worker to discuss the case.
- The requirement has been added that when a case is transferred to another region the transferring worker will notify the Regional Eligibility Technician of the case transfer to ensure that the Title IV-E and Medicaid case is transferred to the other region.
- The section has been updated to reflect ORCA procedures.

6.6.2 Out-of-Town Requests (OTR).

The section has been reorganized, and the following revisions have been made:

- Timelines for responding to requests have been added.
- The unlicensed relative study outline has been revised to reflect the outline in section 3.5.2 Assessment of Unlicensed Relative Homes (Non-Emergency Placements), and the outline has been added to the statewide forms directory.
- The procedures for background checks for unlicensed relative homes have been updated to reflect current procedures.
- Procedures have been added for responding to requests from non-OCS offices.
- The policy and procedures for changing venue have been moved to section 6.6.1.
- The procedures for placement in a residential facility in another region have been deleted, since a secondary worker is not requested for such placements.

6.8.4 Inquiries to Alaska Public Safety Information Network (APSIN).

This section previously addressed both APSIN checks and fingerprinting. It has been split into two sections, and the APSIN check policy and procedures remains in 6.8.4 and the fingerprinting policy and procedures has been moved to new section 3.5.5. The following revisions have been made to the APSIN check policy and procedures:

- The phone and fax numbers for the Alaska State Troopers has been updated.
- The section has been updated to reflect ORCA procedures.

OCS Forms Changes Finalized in 2008

Revised Forms

- **06-9013 Foster Home Visit Worksheet:** an applicant certification and signature section has been added to ensure compliance with the requirement that licenses are based on a license application.
- **06-9013 Foster Home Visit Worksheet:** The names of children in custody placed in the home have been replaced with the initials of the children.
- **06-9045 Plan for Care:** revised to address requirements in the amended licensing regulations. In addition, questions have been added to address how the foster parent will support the religious, ethnic, cultural heritage and language of foster child's family and how the foster parent will assist a foster child with different practices than the foster family's to attend their own religious or cultural events. The questions were previously located on form 06-9389 Background Information Foster Parent.
- **06-9049 Foster Group Home Report of Inspection:** The form has been revised to reflect the amended licensing regulations.
- **06-9050 Foster Homes with Employees or Volunteers - Report of Inspection:** revised to reflect amendments of the licensing regulations.
- **06-9162 Application for Foster Care License:** revised to address requirements in the amended licensing regulations. In addition, a question has been added that addresses the foster parent's role in supporting and helping to implement the foster child's case plan. The question was previously located on form 06-9389 Background Information Foster Parent.
- **06-9178 Compliance Review:** This form replaces form D084-LIC-07 Compliance Review: Foster Home, and it has been revised to address requirements in the amended licensing statutes and regulations, changes in policy, and ORCA requirements. An additional page has been added to be used for documenting quality assurance findings, actions needed, and follow-up.
- **06-9336 General Variance Application:** The form has been updated to reflect that OCS now only licenses foster homes, foster group homes, and child placement agencies; and the title of the form has been changed from "Variance Application" to "General Variance Application" to avoid confusion, since there now is a separate variance process for the criminal check requirements (based on 7 AAC 10.930-945) with a separate variance application form.
- **06-9350 Notice of Denial of Licensure (Provisional):** a "certification of service" section has been added.
- **06-9351 Notice of Denial of Licensure (Biennial):** a "certification of service" section has been added.
- **06-9352 Notice of Denial of Licensure (Biennial Renewal):** a "certification of service" section has been added.
- **06-9353 Notice of Violation:** a "certification of service" section has been added.
- **06-9354 Initial Notice of Immediate Revocation/Suspension:** a "certification of service" section has been added.
- **06-9355 Warning Notice:** a "certification of service" section has been added.
- **06-9356 Report of Investigation:** a "certification of service" section has been added.
- **06-9357 Request for Hearing:** revised to include the applicant or licensee's address, phone and fax numbers, and e-mail address.
- **06-9371 Foster Care Report of Inspection:** This form was formerly titled "Foster Homes Standard by Standard Evaluation" and it has been revised to reflect the amended licensing statutes and regulations.
- **06-9372 Emergency Shelter Care Health Review:** The revisions consist of minor formatting changes, including the addition of "yes" and "no" checkboxes.

Appendix A

- **06-9389 Background Information Foster Parent:** "Yes" and "no" checkboxes have been added to some of the questions, and some of the questions have been moved to forms 06-9045 and 06-9162.
- **06-9437 Clearance Form:** revised to delete page 2 which contained outdated information about the background check requirements and to add a space for recording Sex Offender Registry History check.
- **06-9437 Clearance Form:** Information about the background check requirements has been added as pages 2 and 3 of the form.
- **06-9712 APSIN Request Form:** The statute citations on the form have been updated.
- **06-9730 Financial Summary Sheet:** This form was originally used only for adoptive applicants, and it has been revised to be used also for foster care licensing.
- **06-9731 Health History:** This form was previously used only for adoptive and guardianship applicants, and it has been revised to be used also for foster care licensing.
- **06-9748 Out-of-Town Request:** revisions include updates to address implementation of ORCA.
- **06-9772 Medical Health Information:** This form was previously used only for adoptive and guardianship applicants, and it has been revised to be used also for foster care licensing. The form is used when the completed Health History or information obtained during the home study process indicates that an applicant has health problems that may affect his/her ability to parent a child.
- **06-9773 Mental Health Information:** This form was previously used only for adoptive and guardianship applicants, and it has been revised to be used also for foster care licensing. The form is used when the completed Health History or information obtained during the home study process indicates that an applicant has mental health problems that may affect his/her ability to parent a child.
- **D084-LIC-17 Employment Application - Foster Home/Foster Group Home:** The title of the form has been changed to reflect that it now applies only to foster homes and foster group homes (it previously applied also to residential child care facilities and maternity homes). In addition, the number of required references has been changed to reflect the requirements in the current licensing regulations.

Added Forms

- **06-9163 Family Characteristics:** completed by foster care applicants and adoptive applicants.
- **06-9179 Referral for Training:** used by OCS staff to refer care providers to the Alaska Center for Resource Families for training.
- **06-9180 Medical, Dental, and Medication Record, and Medication Log:** used by the care provider.
- **06-9181 Fire Drill Log:** This new form replaces form D084-LIC-06 Fire Drill Report and is intended to be used to document fire drills required for foster homes and foster group homes.
- **06-9337 Window Variance Worksheet:** used by licensing workers when a window variance is requested.
- **06-9358 Report of Inspection:** used to document the results of an inspection of a facility.
- **06-9359 Allegation of Compliance:** used by a foster care licensee to notify OCS of completion of a plan of correction.
- **06-9385 Request to Review Licensing Record Log:** used to record requests to review licensing files.
- **06-9386 Provider Emergency Response Information Form:** addresses the requirement in the amended licensing regulations that foster homes must have disaster preparedness and emergency evacuation plans.

Appendix A

- **06-9761 Notice of Emergency Transfer:** used to notify the child, the child's parents or Indian custodian or guardian, attorney, and tribe of an emergency transfer of a child to another placement.
- **06-9762 Notice of Non-Emergency Transfer:** used to notify the child, the child's parents or Indian custodian or guardian, attorney, and tribe of a non-emergency transfer of a child to another placement.
- **06-9763 Notice of Denial of Placement:** used to notify an adult family member or family friend that their request for placement of a child in their home has been denied.
- **06-9798 Child Abuse and Neglect Information Request:** used for requesting information from another state's child abuse and neglect registry about prospective foster or adoptive parents and other adults living in the home, when any of those individuals have lived in another state in the preceding five years.
- **06-9799 Authorization for Release of Information from Child Abuse and Neglect Registry:** used to authorize release of information from another state's child abuse and neglect registry. The form is completed by prospective foster or adoptive parents and other adults living in the home, when any of those individuals have lived in another state in the preceding five years.
- **Unlicensed Relative Study Outline:** (from CPS Manual section 6.6.2) lists issues that must be addressed in an unlicensed relative study.
- **Request for a Superior Court Review Hearing of Placement Denial:** used by adult family member or family friend to request a review hearing when a request for placement of a child in their home has been denied.
- **D084 Orientation Brochures:** These brochures provide information about orientation for licensing and include addresses for the seven OCS field offices that have licensing workers. There are seven different versions of the brochure and the only difference between the seven versions is the contact information regarding orientation.
- **D084-LIC-10 Well Child Exam/Immunization Recommended Schedule:** This document is intended to provide information to care providers.

Deleted Forms

- **06-9444 Second-Hand Smoke Reduction in Foster Home:** The form has been deleted because the content of the form has been incorporated into form 06-9045 Plan for Care.

A presentation by the Department of Health and Social Services
and the Alaska Mental Health Trust Authority

Statutory Requirements (AS 47.30.660)

- Department of Health and Social Services must “prepare, and periodically revise and amend a plan for an integrated comprehensive mental health program”
 - in conjunction with The Trust and
 - coordinated with federal, state, regional, local, and private entities involved in mental health services

Comp Plan Leadership Team and Data and Planning Group

- Representatives from:
 - Department of Health and Social Services & its divisions
 - Alaska Mental Health Trust Authority (The Trust)
 - Department of Corrections
 - Governor's Council on Disabilities and Special Education
 - Alaska Commission on Aging
 - Alaska Mental Health Board
 - Advisory Board on Alcoholism and Drug Abuse
 - The Alaska Brain Injury Network

Comprehensive Integrated Mental Health Plan: What is it?

- On-line tool for legislature, executive branch, stakeholders, and partners
- A source of information about the issues impacting all Trust beneficiary populations

Populations Addressed in the Plan

- Comp Plan target population —
Alaska Mental Health Trust beneficiaries
 - People with Alcoholism
 - People with Mental illness
 - People with Developmental disabilities
 - People with Alzheimer's Disease
 - People with Brain Injury
- <http://hss.state.ak.us/dph/healthplanning/movingforward/>

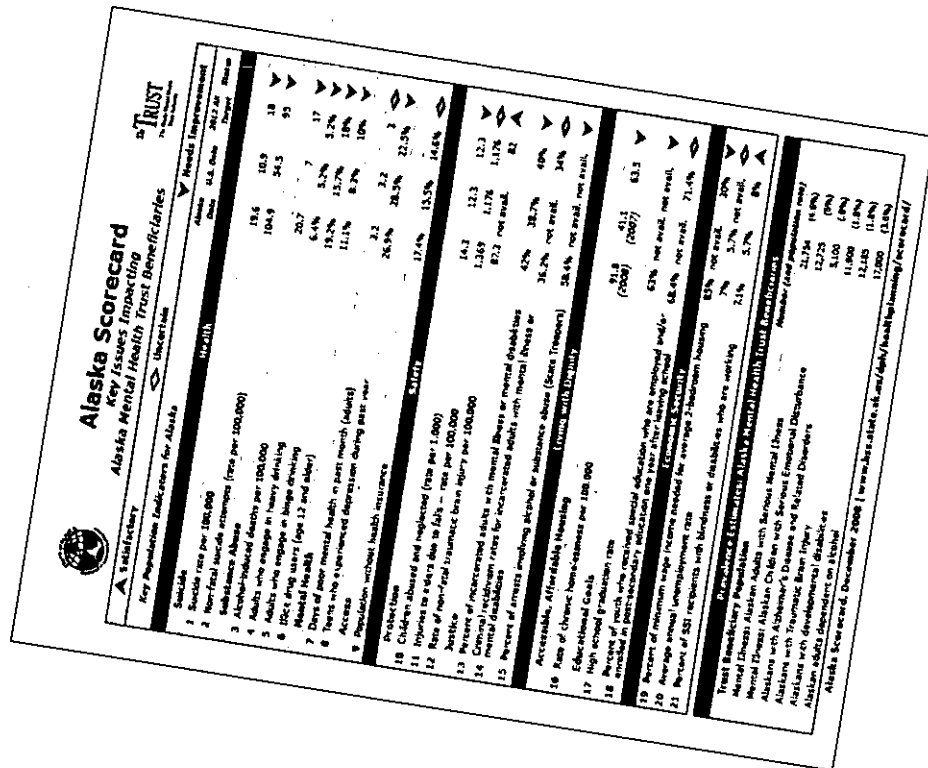

What is in the Comp Plan?

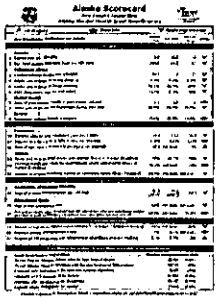

- Prevalence data
- Information about:
 - Substance abuse
 - Suicide
 - Mental Health
 - Safety and Injuries Justice
 - Housing
 - Education
 - Economic Security
- Current system of care
- Initiatives and emerging issues

Category	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Alaska Scorecard

Alaska Scorecard: Key Issues Impacting Trust Beneficiaries

- Provides a snapshot of key issues impacting Trust beneficiaries
- Comparisons to U.S. data
- Targets for 2012

Alaska Scorecard	
Population	650,000
Unemployment Rate	7.5%
Median Household Income	\$28,000
Life Expectancy	77 years
Healthcare Expenditure	\$1,200 per person
Healthcare Access	95%
Healthcare Quality	85%
Healthcare Equity	75%
Healthcare Innovation	65%
Healthcare Sustainability	55%
Healthcare Resilience	45%
Healthcare Leadership	35%
Healthcare Collaboration	25%
Healthcare Transparency	15%
Healthcare Accountability	5%

- <http://hss.state.ak.us/dph/healthplanning/scorecard>

The Comp Plan and Scorecard Guide Policy

- Provide direction for policy and planning efforts
 - Examples:
 - Budget recommendations to The Trust by advisory boards
 - Trust budget recommendations for Mental Health Budget bill
 - New initiatives and focus areas

Comp Plan and Scorecard Serve as Road Maps

- Where we've been
- Where we need to go
- How we plan to get there
- Where we may want to go in the future

FAQ ALASKA - Frequently Asked Questions About Alaska

Question :

When did Alaskan Native people become U.S. citizens?

ANSWER :

- The Alaska Territorial Legislature offered Alaskan citizenship to Native people with a 1915 enabling act, but U.S. citizenship was extended to Alaskan Native peoples in 1924 by the U.S. Congress.

TATIVE
MEDICINE**

USPM

***Prevention - a Concept for State Medicaid
Programs***

Frederic S. Goldstein

President

U.S. Preventive Medicine

02/17/09

USPM

Agenda

- ◆ USPM Background
- ◆ The Current Health Care System
- ◆ How Prevention Works
- ◆ Ideas for Alaska

USPM

USPM Background

- ◆ Extensive experience in Health Plans, Hospitals, Chronic Care Management, Medicaid and Commercial

- ◆ Over 10 years of Medicaid Care Management experience
 - ◆ Rural States
 - ◆ Diverse populations
 - ◆ Experience with NA/AI and IHS

- ◆ National and International Services

CREATING NEW PARADIGM

- ◆ Prevention is our only business
- ◆ From the top down, we have all lost family members too soon...we “walk the talk”
- ◆ Every USPM employee is on a mission to create real change in the healthcare system and to help individuals’ improve their long-term health

WHY PREVENTION?

U.S. Preventive Medicine believes the answer is:

- ◆ A systematic approach that identifies those at risk now or in the future based on key clinical indicators
- ◆ Intervention with effective programs of education, behavior modification and care management
- ◆ Periodic measurement of clinical results to improve outcomes and reduce overall health care costs

Gov. Tommy Thompson joins as National Policy Advisor

**“THE PREVENTION PLAN
COULD BE THE BIGGEST
INNOVATION IN
HEALTH CARE IN THE
LAST 30 YEARS.”**

Gov. Tommy Thompson
Former Secretary of the U.S. Department of
Health and Human Services
National Policy Advisor, U.S. Preventive Medicine

INTRODUCING AN EXCITING NEW PRESCRIPTION FOR WELLNESS.

The Prevention Plan™ is a revolutionary new health care concept for employers. Using robust technology and thorough lab work, The Prevention Plan™ identifies the top five risks for an employee and then provides a customized, step-by-step plan to help them lower their personal risks. It's private, secure and completely portable.

The Prevention Plan™ is supported with RN coaching, web tutorials, reminders and reward programs designed to change behavior to improve health. Your prescription for a healthier and more productive work force has arrived. Prevention is powerful medicine, and it's backed by U.S. Preventive Medicine® - the world leader in prevention.

Call 856-713-1180 or visit ThePreventionPlan.com to learn more.

U.S. PREVENTIVE
MEDICINE®
more good years.

Health Cost Background

Chronic diseases are the #1 cause of death and disability in the U.S.

133 million Americans, representing 45% of the total population, have at least one chronic disease

Chronic diseases kill more than 1.7 million Americans per year, and are responsible for 7 of 10 deaths in the U.S.

Patients with chronic diseases account for 75% of the nation's health care spending

During 2005, the U.S. spent almost \$2 trillion on health care

Of every dollar spent...

...75 cents went towards treating patients with one or more chronic diseases

In public programs, treatment of chronic diseases constitute an even higher portion of spending:

More than 96 cents in Medicare... ...and 83 cents in Medicaid

"The United States cannot effectively address escalating health care costs without addressing the problem of chronic diseases."

-- Centers for Disease Control and Prevention

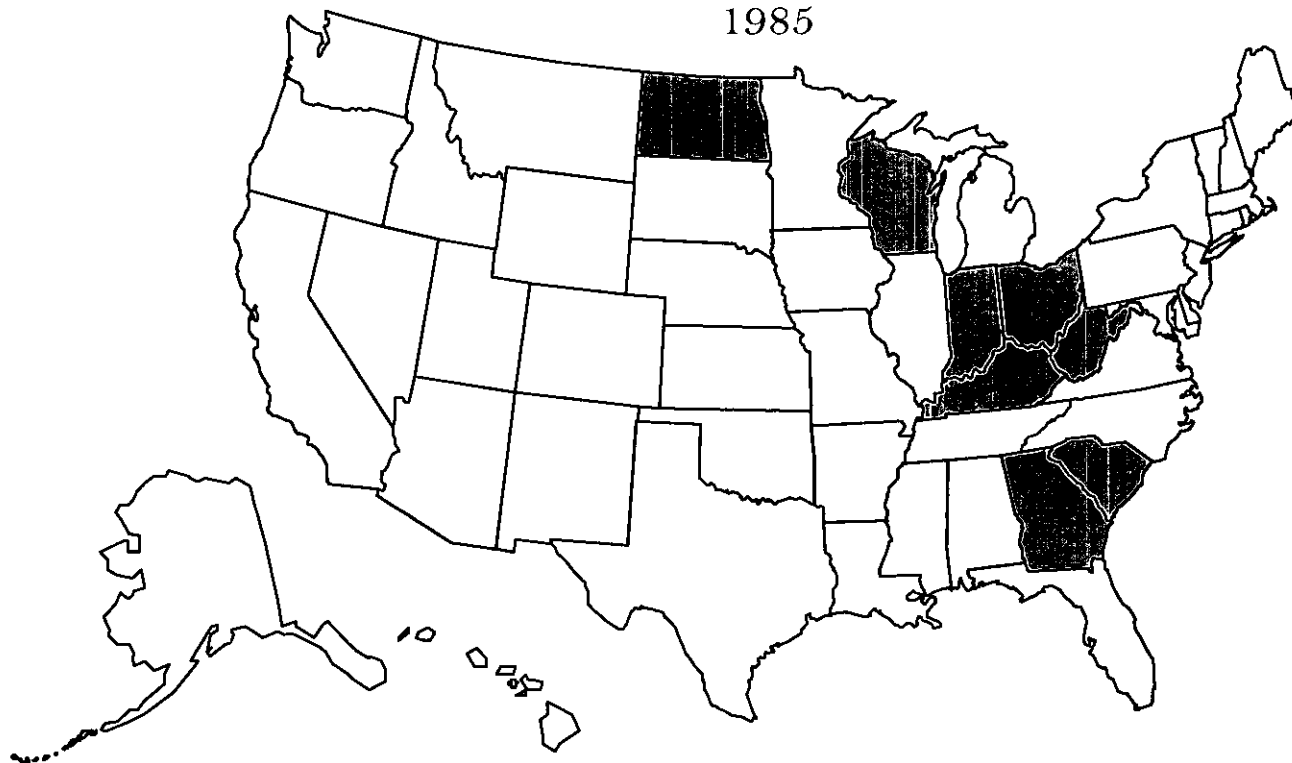

Two-thirds of the increase in health care spending is due to increased prevalence of treated chronic disease

The doubling of obesity between 1987 and today accounts for nearly 30% of the rise in health care spending

Percent of U.S. Adults Who are Obese*

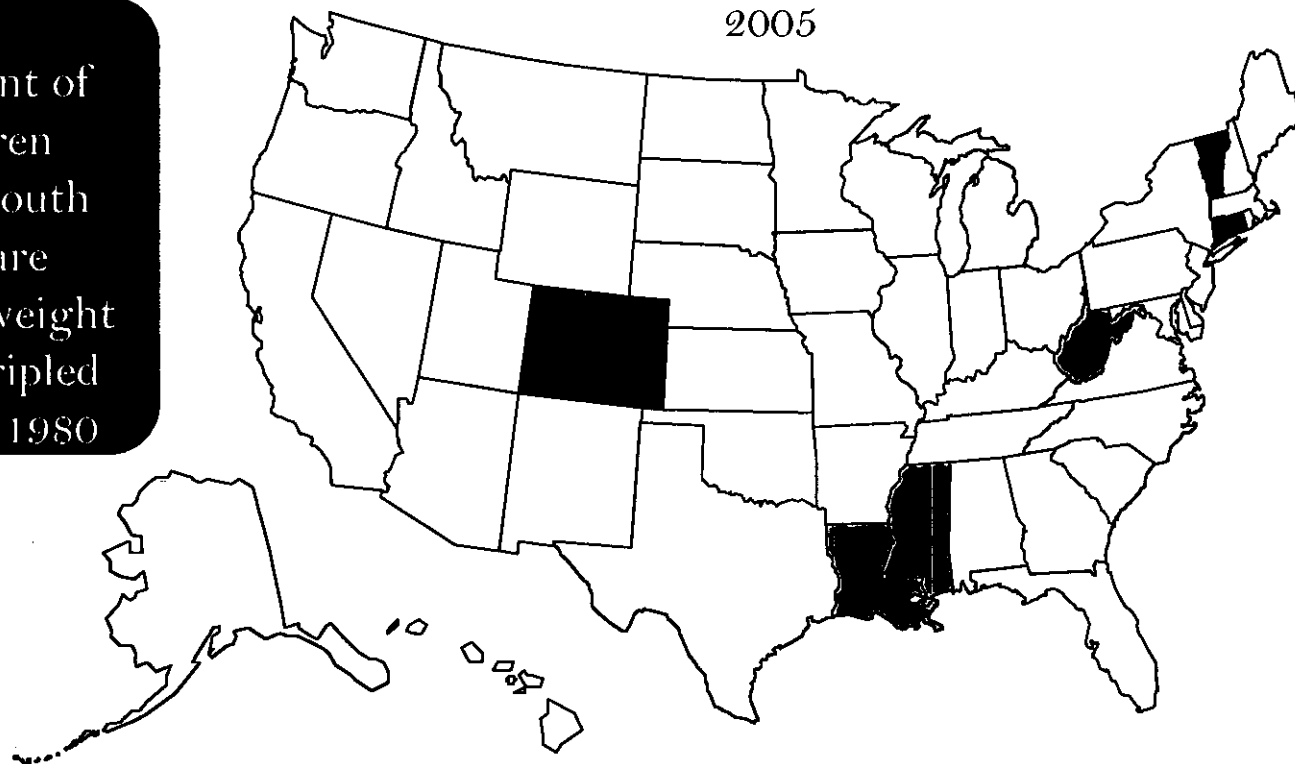

1985

*Data for 1985 based on self-reported weight for 6' 1" person

The doubling of obesity between 1987 and today accounts for nearly 30% of the rise in health care spending

Percent of U.S. Adults Who are Obese* 2005

The percent of children and youth who are overweight has tripled since 1980

If the prevalence of obesity was the same today as 1987, health care spending in the US would be 10 percent lower per person—about \$200 billion less

* Data from the Behavioral Risk Factor Surveillance System, CDC

The vast majority of cases of chronic disease could be better prevented or managed

The Centers for Disease Control and Prevention (CDC) estimates...

- 80% of heart disease and stroke
- 80% of type 2 diabetes
- 40% of cancer

...could be prevented if only Americans were to do three things:

- ✓ Stop smoking
- ✓ Start eating healthy
- ✓ Get in shape

Management of chronic disease could also be significantly improved: Chronically ill patients receive only 56% of the clinically recommended preventive health care services

HEALTHCARE 1.0 and 2.0

Business as usual *doesn't* work and Current solutions are *ineffective:*

- ◆ System set up to treat illness instead of prevent it
- ◆ Fragmented and superficial programs don't engage eligible population: 7-12% is the norm
- ◆ Unsuccessful in changing behavior
- ◆ No meaningful incentive for individuals to participate

WHAT CAN WE DO ABOUT IT

One solution in sight:

Milken Institute study finds

- ◆ Prevention
- ◆ Early detection
- ◆ Chronic condition management

could save U.S. \$1 trillion annually...

"An Unhealthy America" 2007 study
 Nonprofit, nonpartisan economic think tank

Reforming the Medicaid Program

- ◆ Alaska is unique
- ◆ What has Alaska said they were looking towards
- ◆ Why Reform versus expansion
- ◆ Implementing a Prevention Based Model

ALASKA IS UNIQUE

Alaska's Unique Features

- ♦ Rural to the extreme which is affected by infrastructure (roads, facilities, etc.)
- ♦ Diverse population, AN/AI
- ♦ Issues must be overcome through innovative uses of people, systems and technology.

STATE PRIORITIES

Alaska Dept. of Health and Social Services – 2009 Priorities

- “• **Care Management: Improve care coordination; implement** disease management program for chronic diseases and explore use of primary care case management strategy for most disabled populations; complete planning for the Bring the Kids Home Initiative.
- **Medicaid Reform: Develop legislative and systemic** recommendations for reforming Medicaid aimed at improving Medicaid sustainability.”

Alaska Health Care Strategies Planning Council

Making Alaskans the healthiest people in the nation...

Goal Five – Prevention and Personal responsibility

The Council believes that government has an obligation to “jump start” healthy choices through incentives, and in addition build the necessary incentive structures for the future.

Reform Versus Expansion

- ◆ The current system is flawed it's a sick care system. Why expand what is not working well?

- ◆ To maximize value, must change incentives for all players

- ◆ Through appropriate reform, one can find savings to expand eligibility (Medicaid funds in Stimulus bill?)
 - ◆ How? Bend the trend on the health status of the Medicaid beneficiaries

MEDICAID

Some Issues to Understand

- ◆ Beneficiaries don't have the knowledge to manage their care
- ◆ Providers don't have the time, expertise, or systems
- ◆ Some states have tried pieces of the concept
- ◆ At the end of the day its about one person changing their behavior.

Recommendations

- ◆ Comprehensive Prevention Approach - 1^o, 2^o, 3^o
- ◆ Shared accountability – Incentives and Sticks
 - ◆ Providers
 - ◆ Beneficiaries
 - ◆ Vendors
- ◆ Reform the payment system to providers

MEDICAID

Shared accountability – Incentives and Sticks

- ◆ Providers
- ◆ Beneficiaries
- ◆ Vendors

Reform the payment system to providers

- ◆ Pay for Preventive Services
- ◆ Incent outcomes
- ◆ Pay for data systems (Look to Stimulus package with funding for Heath IT.)

Specific Areas to Consider

♦ **Care Management for Persons with Severe and Persistent Mental Illness –**

♦ This could address Target #3: Reduce 30-day readmission rate for Alaska Psychiatric Institute (API) to 10 percent, which was at 13.5% in 2007

♦ **Implement a comprehensive prevention program to address**

♦ Target #1: 80 percent of all 2-year-olds are fully immunized, which was at 67.3% in 2007.

♦ **Implement a High Risk Maternity Care Management program**

♦ Target #2: Reduce post-neonatal death rate to 2.7 per 1,000 live births by 2010.

Targets from FY 2009 DHSS
Overview

Examples of Success in Medicaid

- ◆ Program examples
- ◆ Some state ideas

MEDICAID RESULTS

High Risk Maternity

- ◆ Preterm babies cost an average of \$32,000 in Medical costs during their first year. (March of Dimes). Medicaid tends to have a higher proportion of pre-term births.
- ◆ USPM high risk mothers experienced a 9.4% preterm delivery rate versus a 14.8% county average. Program cost \$350,000, Estimated gross savings >\$900,000.
- ◆ Another State program experienced a 14.0% preterm delivery rate versus a 20% county average.

MEDICAID RESULTS

Clinical Improvements

- ◆ Mental Illness costs disproportionately fall within Medicaid, particularly for those living with Severe and Persistent Mental Illness.
- ◆ USPM members in a program for Persons with Schizophrenia experienced a 54% reduction in per member per month costs for ER visits.
- ◆ In the same program medication adherence to appropriate antipsychotics improved with fill rates going from 22.9 days per month in year 1 to 27.9 days per month in year 2. (30 days would be 100% adherence to filling medications)

MEDICAID RESULTS

Program outcomes for persons with adult and pediatric asthma, CAD, COPD, diabetes, heart failure, adult and pediatric sickle cell, and adult depression, schizophrenia, schizoaffective and bipolar disorder

Outcome Metric	Aggregate Eligible Population 1 year prior 7/1/05-6/30/06	Cohort 1 year prior 7/01/05-6/30/06	Cohort Year 1 (Enrolled > 6mos) 7/1/06-6/30/07
Average PMPM total medical & pharmacy costs	\$953 PMPM	\$1,191 PMPM	\$892 PMPM
Hospital Admissions per thousand per yr (Adm./K/Yr)	244 Adm./K/Yr	467 Adm./K/Yr	365 Adm./K/Yr
Bed Days per thousand per yr (BD/K/Yr)	4,025 BD/K/Yr	2,955 BD/K/Yr	2,180 BD/K/Yr
ER visits per thousand per yr (ER/K/Yr)	914 Visits/K/Yr	1273 Visits/K/Yr	1007 Visits/K/Yr

MEDICAID RESULTS

Clinical Improvements

- ◆ Chronic Care costs for heart failure, COPD and diabetes are high and these conditions require extensive self management skills

Outcome Metric	Aggregate Eligible Population 2 year prior 8/01/05-7/31/07	Cohort 2 year prior 8/01/05-7/31/07	Cohort Year 1 (Enrolled > 6mos) 8/1/07-7/31/08
Average PMPM total medical & pharmacy costs	\$2,034 PMPM	\$3,252 PMPM	\$2,737 PMPM
Average PMPM inpatient costs	\$872 PMPM	\$1,087 PMPM	\$699 PMPM
Bed Days per thousand per yr (BD/K/Yr)	8,746 BD/K/Yr	12,310 BD/K/Yr	8,291 BD/K/Yr

QUALITY IMPROVEMENTS

Quality Improvements

Quality Measure	At Assessment	At 6 Months
Foot Exams (diabetes)	12%	65%
A1c tests (diabetes)	47%	100%
Monitor blood pressure (hypertension)	14%	32%
Asthma Action Plan	26%	93%

Other State Ideas:

Incentives:

- ♦ a number of States are exploring putting more control into the hands of the beneficiaries with incentives that they can earn by doing the right thing.

Telemonitoring:

- ♦ In home monitoring devices for high cost clients, data managed daily.

E prescribing:

- ♦ Better control of prescriptions, reduces inappropriate utilization, improves safety.

IN CLOSING

What the State says

By improving the place of prevention and personal responsibility in the health and health care decision-making rubric of Alaskans, costs of health care could be lower than they otherwise would be. With concentration on a wellness model of health care, as well as state support for the Community Health Center system and a robust public nursing program, the current access problems could be significantly reduced.

Alaska Health Care Strategies Planning
Council, December 23, 2007

Comprehensive Prevention Approach - 1^o, 2^o, 3^o

- ♦ Baseline assessment of all beneficiaries
- ♦ Shared clinical information system, statewide
- ♦ Comprehensive support/advocacy/coaching for beneficiaries across the continuum
- ♦ Individualized plan for each beneficiary

2/24/09

**TELE-
MEDICINE**

SEARHC

Southeast Alaska Regional Health Consortium - TeleBehavioral Health Program

February 24, 2008

Coordinator:
Rand West, Psy.D.

What is TeleBehavioral Health?

TeleBehavioral Health provides Psychiatric, Mental Health, and Substance Abuse Treatment services to remote villages using telephones, televisions and computers to talk face to face with a health provider who is at a distance.

- It is not an internet connection.
- It is not a satellite or broadcast service.
- It is a video signal sent over a dedicated phone line.
- It is confidential and secure.

Mission

Expand psychiatric and behavioral health services and related activities via live videoconferencing to remote villages to provide high-quality behavioral health care.

Vision

A virtual community mental health collaborative that is decentralized and distributed.

Each site has equal opportunity to contribute to other sites needs, working together as a team to meet behavioral health needs.

Videconferencing Components

- ◆ Cameras
- ◆ Video displays
- ◆ Microphones
- ◆ Speakers

1. Main camera

- ◆ This captures the live movement at one end so it may be sent to the other end points
- ◆ Many sizes, shapes and brands of cameras - use ones certified on ND State Network

2. The Video display

Television and computer monitors are most often used to display the video.

3. Audio Components

Audio components include microphones and speakers.

4. Add-on components

- ◆ Document camera
- ◆ VCR
- ◆ Specialty cameras
- ◆ DVD players
- ◆ Electronic whiteboards

Why TeleBehavioral Health ?

- ◆ Remote / Rural Areas - Year Round Access Prohibitive.
- ◆ Limited access to Psychiatry
- ◆ Under-served and undiagnosed populations in rural / remote areas.
- ◆ Itinerant Professional Services - Cost vs. Benefit.
- ◆ Rural mental health center staffing issues - Under-staffing, recruitment & retention.

TeleBehavioral Health Services

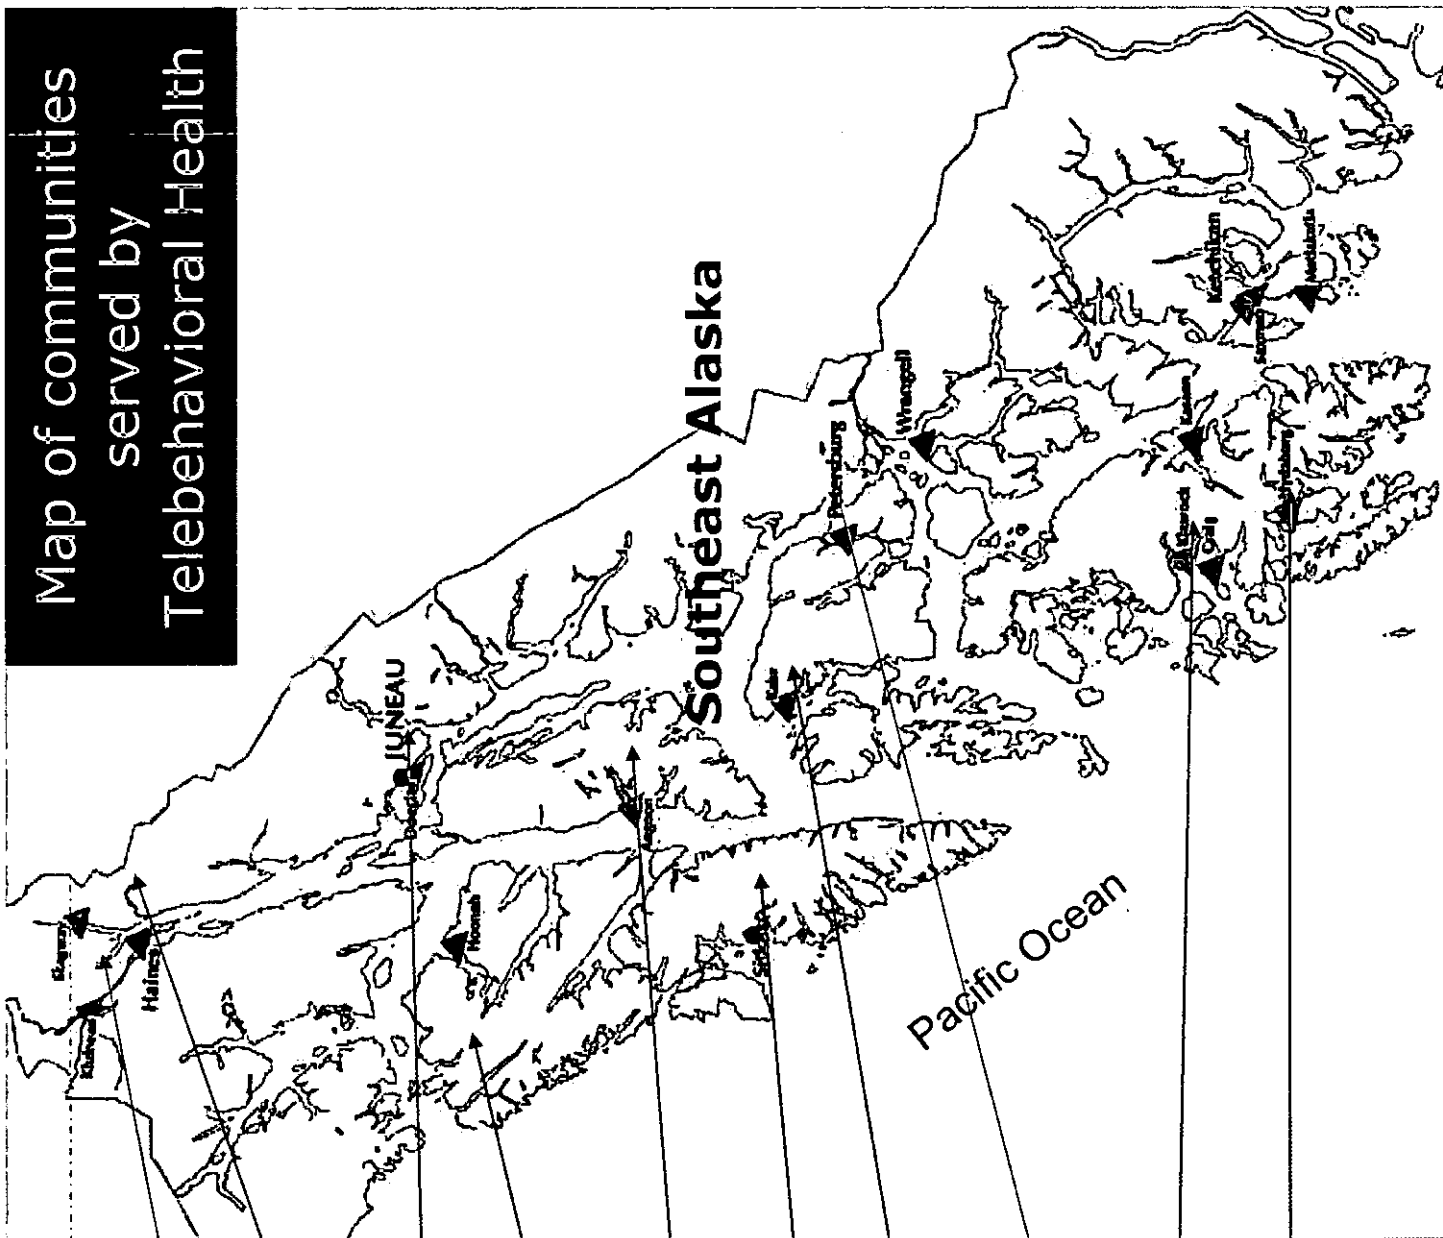

- ✓ Psychiatric Services
- ✓ Psychotropic medication refills
- ✓ Psychiatric consultation with licensed local clinicians
- ✓ Mental Health Assessment/Evaluation and Triage
- ✓ Mental Health and Substance abuse consultation

TeleBehavioral Health Services

Cont.

- ✓ Psychotherapy and Counseling
- ✓ Prevention services
- ✓ Treatment team review/treatment planning
- ✓ Clinical Supervision and Consultation
- ✓ Behavioral Health Education and Training via distance learning
- ✓ Behavioral Health Administration

Map of communities served by
Telebehavioral Health

Jan'04 to Dec'05 TeleBehavioral Health Encounters

- # of Scheduled Appointments = 813
- # of Appointments Patients Kept = 538
- # of person/hours of training = 1530

Telebehavioral Health Program

- ◆ Designed to Empower the remote community:
 - Provide Needed Behavioral Health Services To Residents
 - Enhance Remote Provider's Skills
 - Hub Primarily Is A Resource Center
 - Hub May Provide Specialty Service If Needed

Telebehavioral Health Program

- ◆ Goals:
 - ◆ Increase access to Behavioral Health Services
 - ◆ Increase HRSA Community Expertise
 - ◆ Empower Local Providers
 - ◆ Decrease Costs

Empower Village Provider's By:

- ◆ Trainings
- ◆ Peer Review
- ◆ Clinical Supervision
- ◆ Consultation

Educational Programming to Village Providers

- ◆ Consultation
- ◆ Grand Rounds
- ◆ Case Conference
- ◆ Monthly Seminars
- ◆ Special programming

A VIRTUAL COMMUNITY MENTAL HEALTH COLLABORATIVE!

“DECENTRALIZED & DISTRIBUTED”

TeleBehavioral Health Program

Additional Goals

- ◆ More and better behavioral health services
- ◆ Determine best practices for Behavioral Health video conferencing
- ◆ Integrate drug, alcohol and mental health services
- ◆ Prevention Mental Health

Best Practices in Video-conferencing

- ◆ Learn the system - feel comfortable
- ◆ Maintain eye contact
- ◆ Maintain appropriate on-camera position
- ◆ Move and gesture slowly
- ◆ Speak in a strong, clear voice
- ◆ Keep noises to a minimum
- ◆ Select clothing appropriately
- ◆ Prepare!

Prepare for the Worst Case Scenario

- ◆ Find out who handles difficult technical problems and how to contact him/her.
- ◆ Designate a remote facilitator.
- ◆ Develop a contingency plan for the remote site and share it with the remote facilitator.

AFHCAN Pathfinder Telehealth & Telemedicine Information

■ Glossaries

Telemedicine Glossary by ATSP -

<http://www.atsp.org/telemedicine/glossary.asp>

emerging arena of health care. This glossary contains definitions for more than 200 words and phrases.

Telehealth and e-health glossary <http://telehealth.net/glossary.html>

Glossary compiled by Marlene M. Maheu, Ph.D. and Ace Allen, M.D. 3/20/2001

■ Associations & Networking Sites

American Telemedicine Association - <http://www.atmeda.org/>

ATA promotes professional, ethical and equitable improvement in health care delivery through the application of telecommunications technology, promoting telemedical research and education, assisting in the development of telemedical policy and standards, providing educational materials to public and professional organizations, etc.

Association of Telehealth Service Providers <http://www.atsp.org/>

The Association of Telehealth Service Providers is an international membership-based organization dedicated to improving health care through growth of the telehealth industry

International Association for Telemedicine <http://www.isft.org>

The ISfT exists to facilitate the International dissemination of knowledge and experience on Telemedicine and e-Health and to provide access to recognized experts in the field worldwide.

TelehealthNet <http://telehealth.net/>

TelehealthNet is a networking site for organizations, associations, professionals and vendors. It is designed to help you share resources and partner in developing telehealthcare solutions to healthcare problems

■ RESOURCES

Department of Veterans Affairs: Telemedicine Initiatives by

State - <http://www.va.gov/telemed/> From this page users can link to a particular State to learn more about the progress of the VA's Telemedicine Initiatives within that State.

Distance Learning and Telemedicine Program - <http://www.usda.gov/rus/telecom/dlt/dlt.htm>

This is the homepage of the USDA's Rural Development and Rural Utilities Service. Includes links to current Distance Learning and Telemedicine awards, press releases, grant funding information, program highlights and overview, success stories, regulations and application guides, and contacts for additional information.

AFHCAN Pathfinder
Telehealth & Telemedicine Information

Federal Telemedicine Update - : <http://www.federaltelemedicine.com/>

Provides reports on expenditures by the Federal Government, which will spend close to one billion dollars this year on research, activities and grants related to telemedicine, telehealth and informatics.

HealthWeb: Telemedicine - <http://www.lib.uiowa.edu/hw/telemed/>

This web site provides links to telemedicine projects worldwide; foundations, associations, professional organizations and learned societies pertaining to telemedicine; telemedicine documents, journals, newsletters; electronic publications; and other similar items of interest.

Lights, Camera, Telemedicine -

http://www.fda.gov/fdac/features/1997/497_tele.html

This article discusses the use of interactive videoconferencing - telemedicine -- by physicians practicing in rural and other remote areas. Telemedicine involves the use of computers and telecommunications equipment to provide health care over long distances.

National Library of Medicine's Telemedicine Projects -

<http://www.nlm.nih.gov/research/telfront.html>

This site contains details of NLM's programs and projects designed to evaluate the impact of telemedicine on health care. Including, the confidentiality of health data transmitted via electronic networks; and the better practice of medicine by physicians using advanced computing and networking capabilities.

NLM National Telemedicine Initiative -

<http://www.nlm.nih.gov/research/telemedinit.html>

The National Library of Medicine, National Institutes of Health supports several telemedicine projects which are intended to serve as models for: evaluating the impact of telemedicine on cost, quality, and access to health care; assessing various approaches to ensuring the confidentiality of health data transmitted via electronic networks; and testing emerging health data standards. This web site provides details related to these projects as well as information about other related programs.

Office for the Advancement of Telehealth <http://telehealth.hrsa.gov>

HRSA has established the Office for the Advancement of Telehealth (OAT) to serve as a leader in telehealth, a focal point for HRSA's telehealth activities and as a catalyst for the wider adoption of advanced technologies in the provision of health care services and education.

Telemedicine Information Exchange - <http://tie.telemed.org/>

An international, quality resource for information about telemedicine and telemedicine-related activities. Resources available include: searchable bibliographic databases of over 4,000 citations; 200 telemedicine programs worldwide; funding sources for telemedicine activity; a database of citations specific to legal issues related to telemedicine; and a "forum" -- experts on various subjects answer questions on telemedicine. This

AFHCAN Pathfinder Telehealth & Telemedicine Information

project is supported by the National Library of Medicine, National Institutes of Health.

Telemedicine Report to Congress -

<http://www.ntia.doc.gov/reports/telemed/index.htm>

This is the on-line table of contents of the Telemedicine Report to the U.S. Congress. Users can link to the history, structure, and overview of the Joint Working Group on Telemedicine; evaluation of Telemedicine projects, legal issues, payment issues, safety and standards, telecommunications infrastructure, privacy, security, and confidentiality.

Telemedicine Resources - <http://icsl.ee.washington.edu/~clau/tmresources.html>

Offers links to sites in the categories of general telemedicine, compression and teleconferencing standards, networking, and medical imaging.

■ Telemedicine Journals & Libraries

Telemedicine Journal and e-Health: <http://www.liebertpub.com/tmj/default1.asp>

A peer-reviewed journal covering all aspects of clinical telemedicine practice, technical advances, enabling technologies, education, health policy and regulation and biomedical and health services research dealing with clinical effectiveness, efficacy and safety of telemedicine and its effects on quality, cost and accessibility of care. Indexed in *Index Medicus*, *MEDLINE*, *Current Contents/Clinical Medicine*, *EMBASE*, *Excerpta Medica*, *Research Alert*, *SciSearch/Science Citation Index-Expanded*, *Science Citation Index*, *PsycINFO*. The official journal of the American Telemedicine Association.

Journal of Telemedicine and Telecare: <http://www.coh.uq.edu.au/jtt/index.html> The Journal of Telemedicine and Telecare is an international, peer-reviewed academic journal which publishes original contributions relating to all aspects of telemedicine and telecare. The JTT is indexed in *Index Medicus/MEDLINE*, *Science Citation Index®*, *SciSearch®*, *Research Alert®* and *Current Contents®/Clinical Medicine*. The JTT is the official journal of the: Finnish Society of Telemedicine, Hong Kong Telemedicine Association, and Telemedicine and eHealth Forum of the Royal Society of Medicine.

Telemedicine Telejournal - <http://www.atsp.org/telejournal/homepage.asp>

ATSP is the sponsoring agency. Presents audio recordings of the Telemedicine TeleJournal. These monthly teleconferences are available to anyone interested in the field of telehealth. Presenters are volunteers from a variety of organizations who share their experiences in this new field. A formal presentation is followed by a question-and-answer period, during which listeners may ask questions of the speakers.

Telemedicine Today <http://www.telemedtoday.com>

Telemedicine Today is the leading news and information source for the telemedicine industry, with a readership that includes telemedicine practitioners, physicians, hospital administrators, healthcare information specialists, vendors, consultants, policy makers, and others interested in this dynamic field. The magazine's coverage includes clinical applications, networking, business models, legal and regulatory updates, telemedicine program profiles, and industry news.

Student Comments about AFHCAN Training

The following quotes are from student evaluations from a recent Train-the-Trainer Workshop.

By far, one of the most organized, thoroughly presented, and fun training classes I have attended. The performance-based approach was right on the mark. You have armed me with all the tools I need to go forward and develop a training program.

Very user-friendly material. Easy to understand.

Strategic planning was one of the most useful segments. This lets us start applying the application to our organizations.

Great job. Excellent instructors all the way around! Liked the hands on, especially the troubleshooting.

Very easy to understand for folks with limited computer skills.

AFHCAN is located on third floor of the new Corporate Office Building (COB) of ANTHC. The COB is located on the Alaska Native Medical Center campus, and includes a number of fully-equipped conference rooms. Our classes always involve hands-on training. The AFHCAN training room includes AFHCAN Carts, desktop computers loaded with AFHCAN software, video teleconferencing capability, and a wall-mounted PC. This allows us to emulate a realistic clinical workflow where cases are sent involving multiple providers and specialties.

Total Training and Support Solutions

Let AFHCAN training put you on the fast track to success in using AFHCAN products

AFHCAN

Access Without Limits

TRAINING

New User Training

8 hours

- Teaches a clinical user how to use the AFHCAN Software and the AFHCAN Cart
- Includes coverage of digital camera, otoscope, dental camera, tympanometer, spirometer, and other peripherals
- Assumes no background knowledge

Training Refresher

4 hours

- Introduces the latest hardware and software features
- Provides a quick review of the basics
- Builds on existing knowledge by delving into the fine points of operation
- Assumes some prior training or experience using the AFHCAN Cart and Software

Desktop User

1 hour

- Provides an overview of the software for practitioners who use the AFHCAN software to receive cases for consultation
- Assumes no prior knowledge

Non-Clinical Orientation

1 hour

- Provides an overview of the functions and features of the AFHCAN Cart and Software
- Excellent for anyone who desires a general understanding of the AFHCAN system
- Assumes no prior knowledge

System Administrator

4 hours

- Course covers administrator responsibilities including:
 - Installing AFHCAN Software
 - Adding, editing, or deactivating providers and groups
 - Naming conventions for groups, sites, etc.
 - Understanding the basics of AFHCAN networks
 - Basic troubleshooting
- Tailored for technical staff

Train-the-Trainer Workshop

4 days

- Workshop includes:
 - The New User Training Course
 - Creating a strategic training plan
 - Communicating the value of training to executive staff
 - Assessing telehealth clinical flow for optimal productivity
 - Adult learning tips and tricks
- Tailored for trainers and training managers

Cart Hardware Upgrade Procedure

16 hours

- Trains a technical person to upgrade an existing AFHCAN Cart to the current hardware baseline
- Assumes a basic familiarity with standard hand tools and safety practices

Certification

The Train-the-Trainer course and Cart Hardware Upgrade courses include a Certificate of Completion effective for one year from the date of issue. Certification ensures staff members are authorized to perform certain tasks stipulated in Service Level Agreements.

AFHCAN Support Services

AFHCAN provides Customer Support / Help Desk Services to answer questions and resolve both clinical and technical issues. Telephone, email, and on-site technical support services are available for the installation and use of AFHCAN Products.

Support is available from 8 a.m. to 5 p.m., Monday through Friday, Alaska time. After hours emergency support is available for an additional fee.

On-site support is also available for difficult hardware or software problems. Technical support staff is available to travel to your place of business. Contact AFHCAN for additional details.

"Security at AFHCAN is not just a firewall; it is a process from the design stage through the final implementation and management of the AFHCAN solution."

"Security is built into the software and not added as an afterthought."

"AFHCAN takes extraordinary effort to make sure that servers are hardened and firewalls are configured to provide maximum security."

Statements from a final security review of AFHCAN by a Certified Information Security Auditor (NSA).

The AFHCAN Software will be available in multiple languages in late 2006.

35-002-0, Rev A

**President's Award
American Telemedicine Association (2004)**
Established to recognize a project that has made a substantial contribution toward the advancement of telemedicine.

**Most Innovative New Technology Device
for Diagnostics (2004)**

Presented by The Emerging Technologies and Healthcare Innovations Congress (TETHIC) to a novel diagnostic technology that improves precision, accessibility, turnaround time, or access to diagnosis.

AFHCAN Software
An Enterprise-Wide Telehealth Solution

Add
Comment

Print

AFHCAN
Access Without Limits

A Simple Interface With Powerful Capability

The heart of the AFHCAN store-and-forward telehealth system is the AFHCAN Software. Designed by health care professionals, the system has proven effective in many clinical scenarios.

Access to biomedical peripherals is as easy as 1 – 2 – 3. Users may login, then easily use the peripherals for a patient exam.

- Touchscreen Compatible
- Color coded for easy navigation
- Three (3) clicks to access peripherals once logged in
- Minimal user training required

Integrates With Biomedical Peripherals

Biomedical peripherals offered that are integrated into the AFHCAN Software and may be used to develop a complete telehealth case include:

- | | |
|--------------------|-------------------------------------|
| ■ Audiometer | ■ Spirometer |
| ■ Dental Camera | ■ Stethoscope* |
| ■ Digital Camera | ■ Tympanometer |
| ■ ECG (12-Lead) | ■ Video Otoscope |
| ■ Holter Recorder* | ■ Vital Signs Monitor |
| ■ Scanner | ■ Other scopes (i.e. video sources) |

* Available late 2006

Fits Within Existing Clinical Workflow

The AFHCAN Software supports existing referral patterns and serves as a platform for new clinical relationships. The software enables and facilitates healthcare delivery without generating new business rules. Features accommodate workflow!

- Cases can be sent to an individual or a group (Department)
- Consultants can be advertised locally or shared enterprise-wide
- Cases can be Sent, Archived, Discarded, or placed on Hold
- Trust Relationships can be established between one or many organizations
- Clinicians have options to use drop down menus or free text
- Clinicians have option to receive email notification
- Case Summary, Images and Billing Forms can all be printed

Reliable and Robust for lower Total Cost of Ownership (TCO)

AFHCAN Software supports secure client-to-server and server-to-server connectivity over a wide range of telecommunications infrastructure. This technology typically requires no changes in organizational firewalls, while providing high performance and reliability. AFHCAN has successfully transmitted telehealth data over satellite links on days when storms prevented the transmission of telephony, fax, email, video and browsing.

- Flexible – Self tuning optimizes connectivity over Satellite links, Satellite phones, dedicated lines, POTS or Internet.
- Reliable – Small data packets with retransmission capability to overcome poor connectivity
- Efficient – Users can also create cases when completely disconnected from the server!
- Firewall Friendly and Secure – Appears as browsing (HTTP over port 80) with 3DES encrypted data. Also supports encrypted TCP/IP and SSL options.

Enterprise-Wide Features

The "Enterprise Solution" allows autonomous health care organizations to share multimedia telehealth data in a controlled, secure and robust manner consistent with HIPAA Privacy and Security Requirements. "Server-to-Server" technology allows multiple servers connected to a wide-area network or the Internet to exchange telehealth cases – with Administrative-level security and access controls in place.

Secure - from Design to Deployment

The AFHCAN Software and all preloaded clients and servers are configured and validated for maximum security and functional capability. Continuous, ongoing testing at AFHCAN is used to validate the software design and deployment configuration, and to determine which future software enhancements are needed to maintain secure system (patches, fixes, Service Packs). AFHCAN relies on industry-standards such as PKI (Public Key Infrastructure) and digital certificates from Verisign to provide secure communication and code security.

- Supports automatic downloads of authenticated code updates to servers and clients
- Data transmission is encrypted for the "end site" (3DES/SHA1)
- Data is signed by the originating site for non-repudiation purposes and data validation
- External "Hardware Security Modules" store and protect digital certificates outside the Operating System
- Customer controls all server-to-server trust relationships between organizations
- Remote monitoring and alarming built in for proactive management
- Servers are "hardened" to ensure secure deployment
- Role-based Security for users and application administrators
- Fully auditable - tracks all user activities.

Evaluation

AFHCAN software supports organizational needs for evaluation and utilization reporting requirements. The software provides the capability to pose evaluation questions to users with each telemedicine case, and servers provide reports on response summaries and utilization information.

1. Begin at the login page to start using the software.

2. The user has four choices. Selecting "Create a New Case" provides access to all the biomedical devices.

3. The user may select any peripheral at this point. For example, selecting Video Otoscope starts the next screen.

4. The live image from the Video Otoscope is large enough to view and share with the patient. Controls are easily identified on the right side of the screen.

Continuing Education Units

Alaska Native Medical Center is accredited as a sponsor and provider of Continuing Medical Education credits (CME's) for physicians by the Alaska State Medical Association. Alaska Native Medical Center designates this continuing education activity as meeting the criteria for 9.0 hours of AMA PRA Category 1 Credit™. Each physician should claim only credit commensurate with the extent of participation in the activity.

Alaska Native Medical Center is an Approved Provider of continuing education by the Alaska Nurses Association, an accredited approver by the American Nurses Association Credentialing Center's Commission on Accreditation. Provider Number AP-06-002. Alaska Native Medical Center designates this continuing education activity as meeting the criteria for 9.0 Continuing Nursing Education (CE) credits.

AFHCAN is located on the third floor of the Consortium Office Building (COB) of ANTHC. The COB is located on the Alaska Native Medical Center campus, and includes a number of fully-equipped conference rooms. In addition to our Computer Based Training, our instructor-led classes involve hands-on training. The AFHCAN training room includes AFHCAN Carts, desktop computers loaded with AFHCAN software, videoteleconferencing capability, and a wall-mounted PC. This allows us to emulate a realistic clinical workflow where cases are sent involving multiple providers and specialties.

Computer Based Training Software

*Computer assisted learning is a
powerful alternative to traditional
education approaches*

AFHCAN

Telehealth Solutions

Benefits

- The AFHCAN CBT Modules actively engage students in the learning process by having them create a test case at the end of every module to demonstrate required skills
- Studies show that students typically retain twice as much information from a CBT course that covers the same material as an instructor-led course. This is due to the intense interaction inherent in the CBT format, the ability to move through the material at the student's own pace and the ability to review material as many times as required
- Students earn Continuing Medical Education (CME) credit for each module by completing the test case and forwarding it to the AFHCAN Telehealth Coordinators
- AFHCAN CBT includes a glossary of relevant terms and short video clips to demonstrate key processes
- Search tools have been built into the program to serve as fast and efficient reference sources
- With CBT each student tailors AFHCAN training to meet their specific needs
- Supervisors can provide the same quality training to shift workers without having to rearrange schedules
- Health care providers can access the CBT during patient care to verify their learned skills

Students can choose to follow the module by listening to the Video professor or using the dialogue box. Either option can be stopped so that learners can take notes, then resume where they left off.

Students can follow the table of contents for a complete version of the module or choose the section that they desire to listen to. This allows the students to concentrate on smaller parts of the module at their own pace.

Convenience

The ability to take the course as time permits, instead of arranging the student's activities around a class schedule, is a major advantage.

- AFHCAN's computer-based training (CBT) is an educational tool designed to give new users a solid introduction to using the AFHCAN Cart. The training covers the same material as our New User Training Course
- The CBT features a multi-media approach to learning that is compatible with a wide range of learning styles
- The user interface puts students in control of their learning by allowing them to select topics of interest and progress through the material at their own pace
- Supervisors now have the flexibility to train new employees quickly and efficiently in as little as an hour a day on various modules
- Students can refresh their skills when needed, instead of when a trainer is available

Cost Effective

Computer based training avoids the expense and loss of work involved in traveling to a central location for training and is cost effective too!

- 24-hour per day/364-day a year trainer often costing less than having an on-site trainer
- The annual fee includes updates and training on new products
- CBT is a cost effective way to get on-demand refresher training as often as you need it

For more information please contact us:
 Phone: 907-729-2285
 Toll Free: 888-449-4435
 Fax: 907-729-2269

OTHER PLATFORMS

Wall Mount System - Video Capture

Save on valuable space using a wall mounted system with adjustable height, integrated CPU, touchscreen monitor and video capture card. Acquire images from endoscopy and other video equipment with simultaneous display on high-resolution monitors.

Portable "Briefcase" Telehealth Unit

This unit has a keyboard and tablet PC with touchscreen. Integrates digital camera, ECG, Spirometer, and videoconferencing. Also, has video and USB interface capability to external devices.

35-004-0

AFHCAN and the Alaska Native Tribal Health Consortium

The Alaska Federal Health Care Access Network (AFHCAN) began as a project of the Alaska Federal Health Care Partnership (AFHCP) in 1998 to improve health care for federal beneficiaries in Alaska using telemedicine technology. During the early years of the project there was overwhelming response for creating a store-and-forward telemedicine system in Alaska. The Alaska Native Tribal Health Consortium (ANTHC) is the managing partner of AFHCAN. ANTHC is a tribal organization, as defined in 25 U.S.C. 450 (b) (c).

The AFHCAN Telehealth Platforms and Peripherals

AFHCAN

Access Without Limits

Audiometer plus Tympanometer
The Earscan by Micro Audiometrics provides threshold screening audiometry plus fast and normal speed tympanometry.

Digital Camera
The latest technology in high resolution digital camera and docking station are integrated seamlessly.

Dental Camera
The Evolution M series by Digital Doc is a small dental camera with superior optics, auto focus and excellent color reproduction.

Vital Signs Monitor
The measurement of vital signs plays a fundamental role in medical evaluation and typically includes: blood pressure, pulse, pulse oximetry (O2 saturation), respiratory rate and temperature

ECG (12-Lead)
The IQMark Digital ECG by Midmark Diagnostics is a highly advanced interpretative 12-lead ECG system.

DENTAL EXAMS
 EAR EXAMS
 VITAL SIGNS
 BLOOD PRESSURE
 ECG
 VIDEO OTOSCOPE
 WOUND MANAGEMENT
 DENTAL CAMERA

Expansion Capability
Support for TWAIN-compliant devices (e.g. film scanners), digital cameras, and external video devices using composite or s-video auxiliary inputs.

Scanners
Paper and film scanners are accessed through a simple, one touch user interface.

Video Oscope
Integrated camera and light source to provide high resolution, wide angle views for ENT specialties.

Spirometer
The Midmark Diagnostics IQMark Spirometer is an extremely easy to use diagnostic tool and is completely integrated with the AFHCAN software.

Videoconferencing Add-On
This solution incorporates a high resolution pan-tilt-zoom camera with a software client that support IP-based videoconferencing with the latest H.264 compression for superior image quality.

THE AFHCAN CART

The AFHCAN Cart is a mobile workstation with integrated biomedical peripherals, wireless network capability, and power management hardware that allows health care professionals to:

- Capture patient information using electronic forms and integrated biomedical peripherals.
- Capture information from external imaging devices such as microscopes, ultrasound and surgical scopes.
- Forward the information to another professional or group of professionals at a distant location for review and consultation.

The AFHCAN Cart is small enough to fit through a door, has large rubber wheels to negotiate uneven floor surfaces, has a low center of gravity to minimize instability, and is designed to meet the ergonomic needs of a wide variety of users. The AFHCAN Cart is designed for patient safety with low EMI and an isolated power system.

Videoconference Training for End-Users

AFHCAN training provides significant return on your technology investment and company's bottom line by increasing the skills and knowledge of end-users.

AFHCAN training courses are designed to empower end-users with the practical skills to successfully use videoconferencing equipment for educational, administrative and clinical sessions.

With hands-on exercises and practice opportunities that mirror real life scenarios, AFHCAN training courses benefit the entire workforce.

Training is available onsite or in our Anchorage training facility. Please contact us at (907) 729-4708 or (907) 729-2285 to discuss scheduling options and pricing.

AFHCAN videoconference rooms are all designed differently, with equipment from leading vendors. This gives participants an opportunity to use a variety of equipment and allows us to provide training sessions that involve multiple "sites".

The AFHCAN training room includes AFHCAN carts, desktop computers with AFHCAN software installed, a wall-mounted PC and videoconferencing capability.

The AFHCAN conference room has videoconference capability and is used for small and large group sessions.

The small videoconference room is designed for one-on-one administrative, educational or patient sessions.

AFHCAN is located on the third floor of the Consortium Office Building (COB) of ANTHC. The COB is located on the Alaska Native Medical Center campus.

Videoconference Training

Learn how to get optimal usage of your videoconference equipment

AFHCAN

Telehealth Solutions

Learn How to Videoconference

AFHCAN videoconference training modules are highly interactive. All modules include hands-on practice opportunities with a variety of video equipment.

Module 1: Basics—An Introduction to Videoconferencing equipment

Participants will:

- Gain a basic understanding of components; camera, codec, remote control, and monitor
- Test equipment functionality
- Store and delete presets
- Initiate and terminate point-to-point and multi-point sessions

Module 2: Cameras & Connections

Participants will:

- Use a document camera to project quality images into a videoconference session using printed materials, 3-D objects and an SD card
- Set up and connect to a document camera
- Connect a laptop computer

Module 3: Room Design & Framing Subjects

Participants will:

- Understand elements of room design
- Understand appropriate room arrangement for one-on-one, small and large group sessions
- Practice videoconference etiquette & “tele-presence” for one-on-one, small and large group sessions

Module 4: Troubleshooting

- Participants will learn various troubleshooting techniques for audio/video peripherals, the videoconference unit, TV/LCD panel, and network cables

Module 5: PowerPoint for Videoconferencing

Participants will:

- Learn best practice techniques for creating PowerPoint presentations
- Create or convert a PowerPoint presentation that meets best practice guidelines

Module 6: Orienting Patients

Participants will:

- Plan & prepare for a provider-patient videoconference
- Facilitate a clinical VTC session
- Learn steps to ensure patient privacy, confidentiality & safety

Module 7: Consulting via Videoconference; Best Practices for Providers

Participants will:

- Learn & practice proper “tele-presence” and videoconference etiquette
- Conduct a patient-provider videoconference session
- Discuss document management workflow between referring and consulting sites
- Learn steps to ensure patient privacy and confidentiality

"Access for ENT services has improved dramatically in regions using telemedicine. In some of these regions, wait times for ENT services have decreased from six months to essentially no delay for care."

John Kokesh, MD
Chief of Otolaryngology,
Alaska Native Medical Center

Irene McGlashan at the Oonahaska Wellness Center in Dutch Harbor, Alaska transmits an electrocardiogram (ECG) to a referral physician in Anchorage.

Dutch Harbor is located on Unalaska, a remote island in the Aleutian Chain, 800 air miles from Anchorage.

AFHCAN and the Alaska Native Tribal Health Consortium

The Alaska Federal Health Care Access Network (AFHCAN) began as a project of the Alaska Federal Health Care Partnership (AFHCP) in 1998 to improve health care for federal beneficiaries in Alaska using telemedicine technology. During the early years of the project there was overwhelming response for creating a store-and-forward telemedicine system in Alaska. The Alaska Native Tribal Health Consortium (ANTHC) is the managing partner of AFHCAN. ANTHC is a tribal organization, as defined in 25 U.S.C. 450 (b) (c).

Access to health care professionals
regardless of where you are...
Telehealth solutions brought to you by AFHCAN

AFHCAN

Access Without Limits

Whole Product Solution

The AFHCAN telehealth platform is a secure and proven "store and forward" technology that increases the quality and accessibility of health care at the point of patient contact. The AFHCAN system provides an innovative approach to ease of use, mobility, support for widely varying clinical workflows, and a robust communication platform. AFHCAN offers a whole product solution that includes:

- Store and Forward Telehealth Software
- Automatic Software Updates
- Application Hosting Services with Third Party ASP's
- AFHCAN Telehealth Cart and other Platforms
- Integrated Biomedical Peripherals
- Clinical Workflow Assessments
- Certified Training for Administrators, Users, and Support Staff
- Service Level Agreements (SLAs)
- Help Desk / Customer Support
- Remote Monitoring

AFHCAN Software

The heart of the AFHCAN store-and-forward telehealth system is the AFHCAN Software designed to support existing clinical relationships between organizations. Our goal is not to require new business rules, but to enable and facilitate healthcare delivery. The "Enterprise Solution" allows autonomous health care organizations to share multimedia telehealth data in a controlled, secure and robust manner consistent with HIPAA Privacy and Security Requirements.

1. Begin at the login page to start using the software

2. The user then has four choices. Selecting "Create a New Case" provides access to integrated biomedical peripherals.

3. The user may select any peripheral at this point. For example, selecting Video Otoscope starts the next screen.

4. The live image from the Video Otoscope is large enough to view and share with the patient. Controls are easily identified on the right side of the screen.

AFHCAN Support Services

Telephone Support

AFHCAN provides telephone support to answer questions and resolve both clinical and technical issues.

Training

Our goal is to provide training opportunities for health care professionals, administrators, and technical staff to expand the skills and knowledge needed to enhance the quality of health care in their communities. We also provide train-the-trainer classes to develop on-site training staff. Training is offered in Anchorage Alaska or at an organization's site.

Software Update Packages

One of the benefits of the AFHCAN Software is that software upgrades are distributed automatically. New features and functionality can be added without the need for user intervention or an expensive IT service call.

Dispatched Technical Support

For complex hardware or software problems, technical support staff is available for hire to perform on-site work.

AFHCAN Cart

The AFHCAN Cart is a mobile workstation with integrated biomedical peripherals, wireless network capability, and power management hardware that allows health care professionals to:

- Capture patient information using electronic forms and integrated biomedical peripherals.
- Capture information from external imaging devices such as microscopes, ultrasound and surgical scopes.
- Forward the information to another professional or group of professionals at a distant location for review and consultation.

The AFHCAN Cart is small enough to fit through a door, has large rubber wheels to negotiate uneven floor surfaces, has a low center of gravity to minimize instability, and is designed to meet the ergonomic needs of a wide variety of users. The AFHCAN Cart is designed for patient safety with low EMI and an isolated power system.

Other hardware platforms include wall mounted systems and light weight portable systems.

Biomedical Peripherals

Biomedical peripherals that are integrated with the AFHCAN Software and may be used to develop a complete telehealth case include:

- Audiometer
- Tympanometer
- Dental Camera
- Digital Camera
- ECG (12-Lead)
- Holter Recorder*
- Scanner
- Spirometer
- Stethoscope*
- Video Otoscope
- Vital Signs Monitor

* Available late 2006

INVESTIGATIVE REPORT

Ombudsman Complaint A2008-0581
Finding of Record and Closure
March 9, 2009

This investigative report has been edited to remove all confidential information and information that would identify the complainants in accordance with AS 24.55.160.

SUMMARY OF THE COMPLAINT

On April 10, 2008, an Anchorage resident complained to the Office of the Ombudsman that an Office of Children's Services (OCS) caseworker interviewed his children on school grounds in the absence of a school official in violation of Alaska Statute.

The ombudsman opened an investigation into the following allegation stated in terms that conform with AS 24.55.150.

Allegation One: OCS interviewed the complainant's children on school grounds arbitrarily without a school official present.

During the course of this investigation the ombudsman added the following allegation:

Allegation Two: OCS unreasonably conducted interviews of the subjects of reports of harm in a manner inconsistent with Alaska Statute 47.17.027 and on occasion in a manner that thwarted the intent of AS 47.17.027.

Ombudsman Linda Lord-Jenkins gave written notice of investigation to OCS Director Tammy Sandoval on July 10, 2008, in accordance with AS 24.55.140. Assistant Ombudsman Kate Shantz investigated this allegation.

BACKGROUND

In April 2008 a mandatory reporter submitted a report of harm concerning the complainant's children to OCS. On April 9, 2008, OCS Children's Services Specialist II Lori Fitzpatrick interviewed the complainant's children, at their school.

Prior to interviewing the children, Ms. Fitzpatrick presented the school with a form letter used by OCS employees to inform the school that a report of harm had been received and that an interview on school grounds was necessary. OCS caseworkers indicate on these forms whether a school official is to be present at the interview. Ms. Fitzpatrick specified that a school official was not to be present. Ms. Fitzpatrick then interviewed both children separately, without a school official present.

After conducting the interview, Ms. Fitzpatrick notified the complainant, per OCS policy, that she had interviewed his children. According to Ms. Fitzpatrick, The father/complainant was uncooperative and would not participate in an interview. The investigation concluded with a finding of unsubstantiated neglect. OCS closed the case and notified the parents via letter.

INVESTIGATION

AS 47.17.027(a)(3) requires that a school official be present during an interview of a child on school grounds. It states, in relevant part:

AS 47.17.027 Duties of school officials.

(a) If the department or a law enforcement agency provides written certification to the child's school officials that (1) there is reasonable cause to suspect that the child has been abused or neglected by a person responsible for the child's welfare or as a result of conditions created by a person responsible for the child's welfare; (2) an interview at school is a necessary part of an investigation to determine whether the child has been abused or neglected; and (3) the interview at school is in the best interests of the child, school officials shall permit the child to be interviewed at school by the department or a law enforcement agency before notification of, or receiving permission from, the child's parent, guardian, or custodian. A school official shall be present during an interview at the school unless the child objects or the department or law enforcement agency determines that the presence of the school official will interfere with the investigation. The interview shall be conducted as required under AS 47.17.033. Immediately after conducting an interview authorized under this section, and after informing the child of the intention to notify the child's parent, guardian, or custodian, the department or agency shall make every reasonable effort to notify the child's parent, guardian, or custodian that the interview occurred unless it appears to the department or agency that notifying the child's parent, guardian, or custodian would endanger the child. [Emphasis Added]

(b) A school official who, with criminal negligence, discloses information learned during an interview conducted under (a) of this section is guilty of a class B misdemeanor.

This statute was passed in 1990 as part of a comprehensive bill addressing child neglect and abuse reporting and investigation. The bill also implemented training requirements for those school district personnel required by law to report suspected cases of abuse or neglect.

As originally introduced, AS 47.17.027 simply required that school districts *allow* OCS (known as the Division of Family & Youth Services at the time the statute was enacted)

[Ombudsman emphasis] or law enforcement to conduct interviews of children on school grounds without prior notification of, or permission from, the child's parents.

A subsequent version of the bill provided that school officials "may" be present during an interview. The final version, passed by the Legislature and signed into law, dropped the discretionary "may" and inserted the mandatory "shall."

A review of the committee minutes pertaining to the bill indicate that this provision was intended to allow OCS access to children for the purpose of conducting an interview where the suspected perpetrator of the abuse or neglect is a person responsible for the child's welfare. It also provides protection to schools that allow the interview without first notifying, or getting permission from, the parent.

Several proponents of the provision testified about the necessity of allowing interviews on school grounds because it is a neutral, safe environment free from potential coercion by the alleged perpetrators. The earlier, discretionary version of the provision appears to have been prompted by a suggestion by Bob Weinstein, then-Superintendent of the South Island School District and chair of the Professional Teaching Practices Commission. Mr. Weinstein also testified that, in his view, it was important for school officials to be present during interviews to protect the rights of the children being interviewed; to ensure that interviews are terminated if the child decides that he or she no longer wishes to participate, for example.

Drafters changed the "may" to "shall" in response to discussion held between interested parties during a subcommittee meeting on this bill. The assistant attorney general who drafted the change later testified that it was intended to reflect "that the intent in most situations was to have the school officials be present." (see April 19, 1990 House Health, Education and Social Services Standing Committee minutes).

OCS Policy and Procedure 2.2.5 addresses how OCS employees are to conduct an investigation and assess a child for safety. The relevant portions state:

The worker will make diligent efforts to contact the child at home, school, childcare, or any other place where the worker believes the child may be found.
(OCS Policy 2.2.5.f.1.C)

After a worker interviews a child, the worker will make every reasonable effort to immediately notify the child's parents, guardian, or custodian that the interview occurred unless the worker believes that notifying the parents, guardian, or custodian would endanger the child or compromise the CPS or criminal investigation. (OCS Policy 2.2.5.f.1.D)

All children will be interviewed separately and away from the alleged perpetrator and/or any other adult that could compromise the investigation process. (OCS Policy 2.2.5.f.1.G)

The OCS manual does not specifically address conducting interviews on school grounds. However, the above-referenced policy does address how its employees are to interact with other third parties, such as tribes, military personnel, law enforcement, and the Department of Law. School personnel are mentioned as sources of collateral information only.

OCS' Standardized Form Letters, presented to school administration staff prior to the interview, provide the statutory authority for OCS to conduct interviews on school grounds. The letter also indicates whether a school official is to be present during the interview. As part of the ombudsman investigation, the investigator contacted 28 OCS caseworkers from all regions of the state and from different offices in those regions. The investigator determined that over the years caseworkers in different offices, apparently on their own volition, have started using several variations of the letter. Some of the variations are quoted below:

In the opinion of OCS, the presence of the District/School representative WILL/WILL NOT (circle one) be detrimental to the interview.

A school official shall or shall not be present during the interview. [AK. Statute Sec. 47.17.027. (a) (3)].

If a school official cannot be present during the interview, it is because the child objects or DHSS determines that the presence of the school official will interfere with the investigation.

A school official shall or shall not be present during the interview. [AK. Statute Sec. 47.17.027 (a) (3)].

If a school official cannot be present during the interview, it is because:

the child objects.

OR

DHSS determines that the presence of the school official will interfere with the investigation.

Lori Fitzpatrick, Children's Services Specialist II, OCS

On May 19, 2008, the ombudsman investigator interviewed Ms. Fitzpatrick about her investigation into the reports of harm OCS received regarding the complainant's children. She acknowledged she didn't allow school officials to be present while she interviewed the children. When asked why she excluded a school official from the interviews, Ms. Fitzpatrick initially said that the children had agreed to speak with her. After the ombudsman investigator explained that, under the statute, the children's consent to be interviewed was not an acceptable reason to exclude a school official from the interview, Ms. Fitzpatrick presented an alternate explanation. She said that, in her experience, children don't open up during interviews when school officials are present. She opined that their reluctance may stem from fear that the school official will relay the information disclosed during the interview to their parents.

In a follow-up interview on August 8, 2008, Ms. Fitzpatrick stated that she did not keep a copy of the letter she presented to the school for the OCS file and again reiterated that she believed she got better answers when officials are not present. Ms. Fitzpatrick's supervisor, Lori Kennell, was present during this interview. Ms. Kennell stated that most caseworkers indicate on the form that a school official is not to be present. She also stated that this topic had been discussed at a recent staff meeting in Anchorage (after the ombudsman served notice of investigation). Caseworkers are now being encouraged to have an official present during interviews that take place at school.

Dr. Eileen Lally, Director, & Jay C. Bush, Program Manager, Family & Youth Services Training Academy (Academy)

The Academy provides ongoing training and education for OCS employees in the areas of child protection services and permanency planning. The Academy conducts a two-week Training and Orientation for New Employees (TONE) course, which all new OCS social-workers and children's services specialists are required to complete. This course addresses the investigation portion of a child protection case.

Dr. Lally and Mr. Bush said that FYSTA training focuses on how the OCS employee engages with people, not the procedural aspects of conducting an investigation. They stated that OCS's regional managers are to instruct employees on the procedures used when conducting interviews at schools. They also said that it would be difficult to address the procedural aspects of conducting an interview on school grounds because each school district operates differently.

Ombudsman's Statewide Survey of OCS Employees

The ombudsman investigator surveyed a random selection of OCS employees from each region of the state on the procedures they use when conducting interviews on school grounds. The survey was intended to determine whether OCS employees were aware of the statutory duty imposed on school officials by AS 47.17.027 and whether they are sufficiently trained to conduct interviews on school grounds.

The investigator surveyed 28 employees in July and August 2008. Both supervisory and subordinate employees were interviewed.

The ombudsman investigator interviewed the Children's Services Manager for each OCS regional office: Southeastern, Anchorage, Southcentral, and Northern. The investigator also surveyed staff from offices within each region: Juneau, Ketchikan, Sitka, Bethel, Kenai, Mat-Su, Valdez, Kotzebue, Nome, Fairbanks, and each of the Anchorage investigations units.

Each participant was asked the same questions regarding conducting interviews on school grounds. The questions are listed below, followed by a summary of the participants' responses.

1. How, procedurally, do you conduct interviews on school grounds?

Participants generally reported using similar procedures when conducting interviews on school grounds. Caseworkers bring their state-issued identification and the form letter explaining OCS's

authority to conduct the interview. They generally present the letter to an administrator at the front desk, who then gathers the child and finds an appropriate space for the interview. Some participants reported that they ask the child if he or she wants a third party, such as the school nurse or counselor, present during the interview.

Several supervisors expressed the opinion that caseworkers in rural areas may not use the form letter at all. The supervisors believed that this may be due to the fact that employees located in the villages may be more familiar with the school staff than those caseworkers located in urban areas of the state.

Survey respondents indicated that their training was limited to the procedures listed above. Participants also reported that, during the school year, the majority of interviews take place on school grounds.

The ombudsman investigator scheduled interviews with eight members of the Anchorage investigations units, as well as the office's Children's Services Manager, over the course of approximately two weeks. The first five respondents reported that the decision to exclude a school official was left to the discretion of the employee. The last four participants indicated that school interviews had been a topic during a recent staff meeting and that Anchorage employees are now being encouraged to have a school official present during interviews. This apparent change in policy may or may not be attributable to the notice of this investigation issued by the ombudsman's office.

2. Have you ever determined that a school official's presence would interfere with the interview?

Responses to this question varied widely. Both of the Bethel respondents said they always indicate that a school official's presence would interfere and, in fact, the form letter that each submitted to the ombudsman investigator had been permanently modified to that effect. Other respondents stated that they generally indicated "shall not be present" on the form letter because the OCS manual instructs investigators to interview children alone.

Several respondents indicated that they rarely excluded school officials.

The most common reasons given for excluding an official was because that official was known to interfere, by asking leading questions or visibly reacting during disclosures of abuse. Another reason given for excluding school staff was because the topic of the interview was unusually sensitive, such as alleged sexual abuse.

Many of the respondents indicated that having a school official present can be helpful when conducting an interview, especially if the official is familiar to the child and can help the child feel at ease. Several participants indicated that they simply leave the choice to the child; if the child wants an official there then the official will be included.

The majority of participants, however, did not appear familiar with the statutory requirement that an official attend an interview unless the child objects or OCS determines that an official's presence will interfere.

One respondent stated that, if parents do not have a right to be present during an interview, he did not know why a school official would be allowed.

3. Does your office utilize specific criteria or guidelines to assist you in making a determination that an official's presence will interfere?

No respondent could identify an established, written policy, either regionally or statewide, that addressed conducting interviews on school grounds, including making a determination that a school official would interfere with an interview.

Several supervisors said that the decision to exclude school officials is left to the discretion and judgment of the investigators.

Several participants said the OCS manual required caseworkers to interview children alone. The ombudsman investigator presumed that these respondents were referring to OCS manual provision 2.2.5. All of these participants interpreted the provision to mean that the interview must be conducted with only the child present.

4. If you have indicated that an official is not to be present during the interview, did you document this in the case file?

None of the participants who have excluded school officials documented the exclusion, or the reasons for excluding, in the case file.

5. Do you feel that your office has a good working relationship with the school districts in your region, and what contributes to the relationship?

Participants overwhelmingly reported a good relationship with the school districts their offices cover. Participants repeatedly mentioned the same factors as contributing to a positive relationship. They mentioned the mandatory reporter training that OCS provides for district employees, maintaining open communication, maintaining a respectful attitude, and regularly keeping in contact with school staff.

However, participants also reported examples of friction between OCS and school districts. One respondent said she has experienced school personnel attempting to get faster responses from OCS by submitting exaggerated reports of harm. Several reported the belief that school personnel need additional education on OCS' purpose and authority. They specifically cited occasions where school personnel, contrary to law, notified a child's parents before allowing OCS to complete an interview. Respondents also mentioned school personnel making reports of harm for issues which, by themselves, may not be appropriate subjects for investigation such as poverty related issues like homelessness or cleanliness problems.

6. Would you, or your co-workers, benefit from additional guidance on how to conduct interviews on school grounds?

Respondents generally favored the idea of a policy or procedure to address interviews on school grounds. However, one respondent stated that the OCS manual is long, caseloads are high, and employees don't have time to read policy. The same respondent stated, however, that it would probably be helpful to have a specific policy addressing school interviews because employees refer to the manual when they have questions. Several participants mentioned high employee turnover as a reason to formulate a policy regarding school interviews. One participant said that a policy would be beneficial because everyone conducts interviews a little bit differently.

Three of the four supervisory staff surveyed expressed support for a specific policy to address interviews on school grounds.

A common concern raised by participants, however, was that an additional policy would lead to additional bureaucracy for OCS staff. Others believed that another policy might be too rigid and constrain OCS caseworkers unnecessarily; they stated that, if adopted, a new policy should be phrased as a guideline, rather than as a strict requirement.

ANALYSIS AND PRELIMINARY FINDINGS

The standard used to evaluate all Ombudsman complaints is the preponderance of the evidence. If the preponderance of the evidence indicates that it is more likely than not that the administrative act took place and the complainant's criticism of it is valid, the allegation is found justified.

The ombudsman investigated the following allegations:

Allegation One: OCS interviewed the complainant's children on school grounds arbitrarily without a school official present.

The Office of the Ombudsman's Policies and Procedures Manual at 4040(5) defines *Arbitrary* in pertinent part as:

(B) the agency's action or decision was based on a delegation of authority to the agency under inadequate standards;

(D) the agency's action or decision was not based on a conscientious consideration of all relevant factors.

Allegation Two: OCS unreasonably conducted interviews of the subjects of reports of harm in a manner inconsistent with Alaska Statute 47.17.027 and on occasion in a manner that thwarted the intent of AS 47.17.027.

The Office of the Ombudsman's Policies and Procedures Manual at 4040(2) defines an administrative act as unreasonable if:

(A) the agency adopted and followed a procedure in managing a program that was inconsistent with, or failed to achieve, the purposes of the program,

(B) the agency adopted and followed a procedure that defeated the complainant's valid application for a right or program benefit, or

(C) the agency's act was inconsistent with agency policy and thereby placed the complainant at a disadvantage relative to all others

AS 47.17.027 requires that a school official "shall be present" at an OCS interview conducted on school grounds unless either:

(1) the child objects, or

(2) the department determines that the official's presence will interfere with the investigation.

This plain language of the statute places the duty on the school official to be present when OCS caseworkers interview children on school grounds. In order for a caseworker to exclude a school official, the caseworker must determine that the official's presence will interfere with the investigation.

Research into the legislative history of the statute revealed that the drafters intended a presumption in favor of school officials being present when children are interviewed. It would therefore negate both the intent and plain language of the statute for OCS workers to make a wholesale determination to exclude school officials from all interviews they conduct on school grounds. Individualized decision making is clearly required under the statute.

However, the statute does not supply any guidelines or criteria to consider when making a determination that an official's presence would interfere with a report of harm interview, and OCS has not created any regulatory or policy guidelines in the 18 years since this statute was implemented.

Further, the plain language of the provision requires that the child be interviewed apart from the alleged perpetrator and anyone who may "compromise the investigation process."

OCS policy 2.2.5 specifies that children are to be interviewed apart from any adult who could compromise the interview process. The manual simply does not require that children always be interviewed alone, as some survey respondents indicated. The policy also does not provide any guidelines for determining whether the presence of a third party may compromise the interview process. Furthermore, while the policy addresses interactions with other third parties, such as law enforcement, medical and military personnel, and tribes, it does not address interactions with school personnel.

Ombudsman standards at 4040(5)(B) define arbitrary, in part, as a delegation of authority under inadequate standards. Because AS 47.17.027 does not contain any standards for OCS employees to employ when making a determination to exclude a school official, it appears that OCS

employees are granted some measure of discretion when making a determination. However in the 18 years since AS 47.17.027 was enacted, OCS has not developed any policy specifically addressing interviews on school grounds. A lack of any standard whatsoever is patently inadequate and, thus, creates the potential for arbitrary actions by OCS employees.

In the complaint that triggered this investigation, the OCS caseworker presented the form letter to the school and specified that an official was not to be present. In her interview with the ombudsman investigator, Ms. Fitzpatrick gave conflicting reasons for why she interviewed the children alone. Initially, she said that the children agreed to be interviewed. She later indicated that she made the decision to exclude a school official because she believes children are more forthcoming without a member of school staff present.

Neither of Ms. Fitzpatrick's proffered reasons for excluding a school official appears to be reasonable exercises of her discretion. That the children agreed to the interview is not an acceptable reason, under the statute, to exclude a school official.

Ms. Fitzpatrick's second rationale for exclusion, that children are unwilling to make disclosures with officials present, may at times have some merit. There may indeed be occasions where children are unwilling to disclose with an official present. However, there may also be occasions where children are more likely to make disclosures when an official *is* present because the child knows and trusts that person. Thus, Ms. Fitzpatrick's second rationale for excluding school officials was not reasonable unless she explained, specifically, why she did not believe the complainant's children would make disclosure with a school official present.

Ombudsman Standards at 4040(5)(D) defines an arbitrary action as an action or decision not based on a conscientious consideration of all relevant factors.

Ms. Fitzpatrick admitted she didn't allow Anchorage School District officials to sit in on her interview with the complainant's children in accord with AS 47.17.027. She instead notified school officials that they would not be allowed in her interview with the complainant's children. The agency provided Ms. Fitzpatrick no standards upon which to base this decision. That opened the way for the caseworker to make an arbitrary decision.

Ms. Fitzpatrick did not make an individualized decision based on the all relevant circumstances of the complainant's children's situation, but rather relied on her assumption that children in general do not disclose instances of abuse when officials are present. A blanket decision to exclude school officials certainly cannot be considered the kind of individualized determination contemplated by the statute at issue. That being said, it does not appear that Ms. Fitzpatrick acted with ill will when she barred school officials from her interviews of the complainant's children.

However, the caseworker did not consider all relevant factors in *this* case involving *these* children. Her decision was arbitrary.

Therefore, the ombudsman proposes to find Allegation One that OCS interviewed the complainant's children on school grounds arbitrarily without a school official present justified.

Allegation Two: OCS unreasonably conducted interviews of the subjects of reports of harm in a manner inconsistent with Alaska Statute 47.17.027 and on occasion in a manner that thwarted the intent of AS 47.17.027.

The complaint at hand is illustrative of a larger problem. When surveyed, OCS employees from all regions of the state appeared to have no knowledge of the statutory requirement placed on school officials by AS 47.17.027.

OCS employees do not have a consistent method for making a determination to exclude school personnel from interviews. Survey respondents espoused many differing views regarding the usefulness of school personnel – some believe that a familiar face puts children at ease and facilitates disclosures while others believe that the presence of a school official prevents full disclosure. Several stated that they always exclude officials, while others said they only exclude if the child does not want an official there during the interview.

Although AS 47.17.027 requires school officials' presence, it also allows for some measure of discretion, yet there are no standards to guide OCS employees in their decision-making process. Employees are unaware of the statutory duty placed on school officials and exercise their discretion inconsistently. Left to their own devices, some have opted to disregard the intent of the statute. This is especially troublesome in light of the survey responses indicating that the majority of interviews take place on school grounds.

The Ombudsman's survey of OCS offices statewide showed that caseworkers either don't know what AS 47.17.027 requires or ignore it. Although OCS years ago issued standard language to caseworkers to help them adhere to the statute, individual offices have amended or now ignore the agency-sanctioned language. Investigation also showed that many OCS caseworkers issue blanket exclusions to school staff without considering the issue on an individual basis, in violation of the spirit of the statute. The agency has failed to establish guidelines to help caseworkers determine when excluding a school official is appropriate. The absence of a statewide policy and procedure addressing school interviews 18 years after the Legislature passed the statute is untenable. This practice is inconsistent with, and fails to achieve, the purposes of the statute. That is unreasonable.

Therefore, the ombudsman proposes to find Allegation Two that OCS unreasonably failed to conduct interviews of the subjects of reports of harm in a manner consistent with AS 47.17.027 and on occasion in a manner that thwarted the intent of the statute **justified**.

Office of Children's Services Director Tammy Sandoval responded on behalf of the agency to the ombudsman's preliminary report. Director Sandoval stated:

Allegation 1 indicates that OCS arbitrarily interviewed the child on school grounds without a school official present. The decision to interview the child on school grounds was not arbitrary but based on statutory requirements. The component that appears to have been arbitrary in nature was the worker's determination of whether a school official should or should not be present.

Allegation 2 indicates that OCS failed to conduct interviews in compliance with statute and in a manner that thwarted the intent of the law. OCS concurs that staff throughout the state have not always adhered to the intent of the statute. However, it is worth noting, that these discrepancies do not generally reflect a purposeful intention to bypass the law, but more so reflect the pervasive lack of understanding on this issue.

Overall OCS concurs with the findings of the investigation and agrees with the proposed recommendations. This is a practice issue that is not sufficiently covered by our policy and procedures. The OCS philosophy supports the role of school officials in the interview process and welcomes increased participation. Additionally, we recognize that it is important to provide education to the appropriate school officials so they are aware of this statutory requirement.

RECOMMENDATIONS

OCS, at some point, developed a form letter for its investigators to present to school administrators when conducting interviews on school grounds. The letter cites OCS's statutory authority to conduct an interview on school grounds and provides a place to make a record of whether OCS has determined that a school official will interfere with the interview.

The letter, however, appears to have been modified by the various OCS offices and several versions submitted to the ombudsman investigator no longer reflect the statutory language of AS 47.17.027. The ombudsman therefore recommends the following:

Recommendation 1: OCS should re-standardize the letter of introduction used by caseworkers and presented to school personnel when interviewing children on school property to mirror the language of AS 47.17.027.

OCS agreed with this recommendation.

The agency response satisfies the intent of the recommendation.

* * * * *

Because multiple survey respondents indicated that a large percentage of interviews occur on school grounds, it is imperative that OCS caseworkers are adequately educated about the statutory duty of school officials to be present during interviews on school grounds. Of equal import is the need to provide caseworkers with appropriate criteria to decide if it appears that an official's presence will interfere with the protective services investigation.

The policy should address the procedure for conducting interviews, such as bringing state-issued identification and the use of the standard form letter. The policy should also address the duty of school officials to be present and include the circumstances in which it may be necessary to exclude an official.

The ombudsman recognizes that school districts operate differently. As such, it would be impossible to address the various nuances that OCS employees may encounter within each district. It is possible, however, to address those aspects of the interview process that are consistent statewide. For example, all employees are instructed to bring their state-issued identification cards and the form letter with them when conducting an interview on school grounds. Additionally, regardless of their location, school officials are required to be present during the interview, absent a finding that their presence will interfere or the child's objection. OCS should develop a policy that addresses, at minimum, these aspects of conducting an interview on school grounds.

The ombudsman also appreciates the concerns voiced by OCS caseworkers regarding the usefulness of an additional policy to address interviews on school grounds. An additional policy certainly could add unnecessary bureaucracy to the investigative process, which often requires quick decision-making. A rigid policy could constrain necessary action. For these reasons, the ombudsman recommends that OCS adopt a flexible, guideline-based policy, rather than a mandate-based policy.

For example, child protective services employees in Portland, Oregon use the following guidelines when assessing whether an official should be present during an interview:

1. The child may be disinclined to disclose the abuse in front of a school official that they see every day for fear of shame or humiliation.
2. The school official is acquainted with or has a relationship with the parent or the offending party.
3. The parent/offending party is well-known or respected within the community.
4. The child already feels "victimized" within the school system because of problems at school, such as academic or disciplinary problems.
5. The school official has a history of interference with (CPS) interviews.
6. Law enforcement is also present so there is no need for the presence of an additional party.
7. The abuse is especially disturbing and horrific and the child is too vulnerable to be aware of boundaries or privacy rights when being interviewed.
8. The case is murky or previous investigations were impossible to substantiate so accurate information is critical, and another presence may cause unintentional influence or interference.

If any of those criteria are met, the CPS employee may choose to exclude the official from the interview.

The ombudsman therefore recommends the following:

Recommendation 2: OCS should develop a policy or procedure to specifically address interviews on school grounds.

OCS Director Sandoval responded:

OCS will revise Policy and Procedure 2.2.5 to provide more specific and detailed guidance to workers about the statutory requirement to specifically address interviews on school grounds and will outline criteria where deviation from this requirement might be appropriate.

The agency response satisfies the intent of the recommendation

* * * * *

By statute, a school official is required to attend protective services interviews taking place on school grounds unless the child objects or OCS determines that the official's presence will interfere. It only makes sense to document in the case file the decision to exclude, and the reasons for doing so, to ensure that the file accurately reflects all actions taken during the course of the investigation. The ombudsman therefore recommends the following:

Recommendation 3: OCS should develop a method for documenting in the case file the reasons why a school official has been excluded from an interview.

Director Sandoval noted:

Included in the policy revision planned as noted in 2 above, guidance will be provided on documenting the justification for why a school official was excluded from an interview.

The agency response satisfies the intent of the recommendation

Many school district personnel are not aware of the duty imposed on them to be present during child protective services interviews. As such, OCS should incorporate information regarding this duty into the training that it already provides to many school districts regarding the duties of mandatory reporters, to foster compliance with AS 47.17.027. This training should include a discussion of OCS's behavioral expectations of school officials who are present at interviews. The Ombudsman therefore recommends:

Recommendation 4: OCS should incorporate information about the duty imposed by AS 47.17.027 into its mandatory reporter training curriculum.

Director Sandoval stated:

OCS does not have a standardized curriculum for educating mandatory reporters about their reporting responsibilities. Every region approaches the training of their communities, schools in particular, in different ways based on that community's norms. OCS shall provide guidance to each regional Children's Services Manager (CSM) about the need to highlight 47.17.027 with the school officials in their community.

The ombudsman understands the need to tailor training to community needs, but remains concerned that allowing each region to tailor training will again end up with inconsistent practice. That reservation notwithstanding, the agency response satisfies the intent of the recommendation.

Several caseworkers stated that outsiders' presence in abuse interviews negatively affect the quality of information gained. If the agency can substantiate that assertion with facts or scientific study, OCS should contact the Legislature to discuss the value of this statutory requirement. The ombudsman takes no stand on this issue other than the recommendation that OCS address the issue rather than ignore the statute. Therefore, the ombudsman recommends:

Recommendation 5: If, after review of these findings and recommendations and its own policy and procedure, OCS believes that the presence of school officials in Report of Harm interviews on school property is detrimental to the quality of the information obtained, OCS should approach the Alaska Legislature's two HS&S committees to discuss a change in the law.

Director Sandoval stated:

OCS does not believe that the presence of school officials is detrimental to the quality of the information obtained, barring rare circumstances. Therefore, OCS will not be advocating to have AS 47.17.027 modified.

The agency response satisfies the intent of the recommendation.

The complainant's children were interviewed by an OCS caseworker without a school official present. The decision to exclude was arbitrary. AS 47.17.027 creates a presumption that school officials will be present during interviews taking place on school grounds – this is the rule, not the exception. Part of the reason this requirement was put into law was to ensure that children's rights are adequately protected during child protective services interviews. The complainant's children were not provided that protection and for that, they deserve an apology. Therefore the ombudsman recommends:

Recommendation 6: OCS should issue a letter of apology to the complainant's and their children.

OCS agreed with this recommendation and will issue a letter of apology. The letter of apology was sent to the complainants in January.

The agency response satisfies the intent of the recommendation

Director Sandoval concluded:

The Office of Children's Services found the Ombudsman investigation and subsequent report to be thorough and accurate overall. We appreciate the opportunity to remedy and improve practice and policy as problematic areas are identified. These changes to practice will serve to further our efforts to standardize practice along the entire case continuum.

OCS will forward copies of the finalized P&P and a copy of the form caseworkers will be expected to use by the end of April 2009.

FINDING OF RECORD AND CLOSURE

Based on OCS's response to the proposed finding of justified, this overall complaint has been closed as justified.

OCS accepted Recommendation One, Two, Three and Six. The agency's response satisfied the intent of Recommendation Four pertaining to notifying school districts of their responsibilities under AS 47.17.027 but the ombudsman remains concerned that the inconsistent practice will result. In answer to Recommendation Five, OCS stated that it sees no need to seek amendment or revocation of AS 47.17.027. The agency response satisfies the intent of the recommendations.

This complaint will be closed with an overall finding of justified and rectified.

ALASKA

TRAUMA CARE IN ALASKA 2009

Frank Sacco MD, FACS

Alaska Trauma Systems Review Committee

Introduction

“If a disease were killing our children at the rate unintentional injuries are, the public would be outraged and demand that this killer be stopped.”

C. Everett Koop, MD, ScDC. ScD
Former US Surgeon General
Former General Chairman, The National SafeKids Campaign

Treating Trauma

- Like heart disease or cancer, trauma is best combated with a strategy that addresses prevention, acute care and rehabilitation.

Introduction

- Injury is a major public health problem
 - ▣ Leading cause of death in 1st 4 decades of life
 - ▣ Leading cause of loss of productivity

- Despite obvious magnitude little public focus
- Significant progress in individual patient care
- Trauma systems shown to save lives

Trauma in Alaska

- Leading cause of death age 1-44.
- 400-500 alaskans die each year.
- Over 5000 admitted to the hospital.
- Over 1000 with permanent disability.
- 800 alaskans hospitalized with brain or spinal cord injuries.

DEATH FROM TRAUMA IN ALASKA

AGE ADJUSTED MORTALITY FROM TRAUMA

Trauma in Alaska

- Motor vehicle crashes leading cause of death.
- Firearm related injuries, second.
- 2004 hospital cost for Alaska trauma patients over \$73 million.
- ~ 25% over trauma admissions uncompensated.

Death from Trauma

Trauma Systems

- u A trauma system consists of hospitals, personnel, and public service agencies with a preplanned response to caring for the injured patient.

Trauma Systems

- u Facilities (trauma center designation)
- u Personnel (training)
- u Patient transport
- u Triage

Facilities-Trauma Centers

- Level I -Definitive subspecialty care, research.
- Level II – Definitive subspecialty care, surgery, ortho, neurosurgery.
- Level III- General surgery, ortho no neurosurgery
- Level IV- Stabilization, limited or no surgical capacity

Personnel

- ATLS
- TNCC
- RTTDC
- ETT first responders

Transport and triage

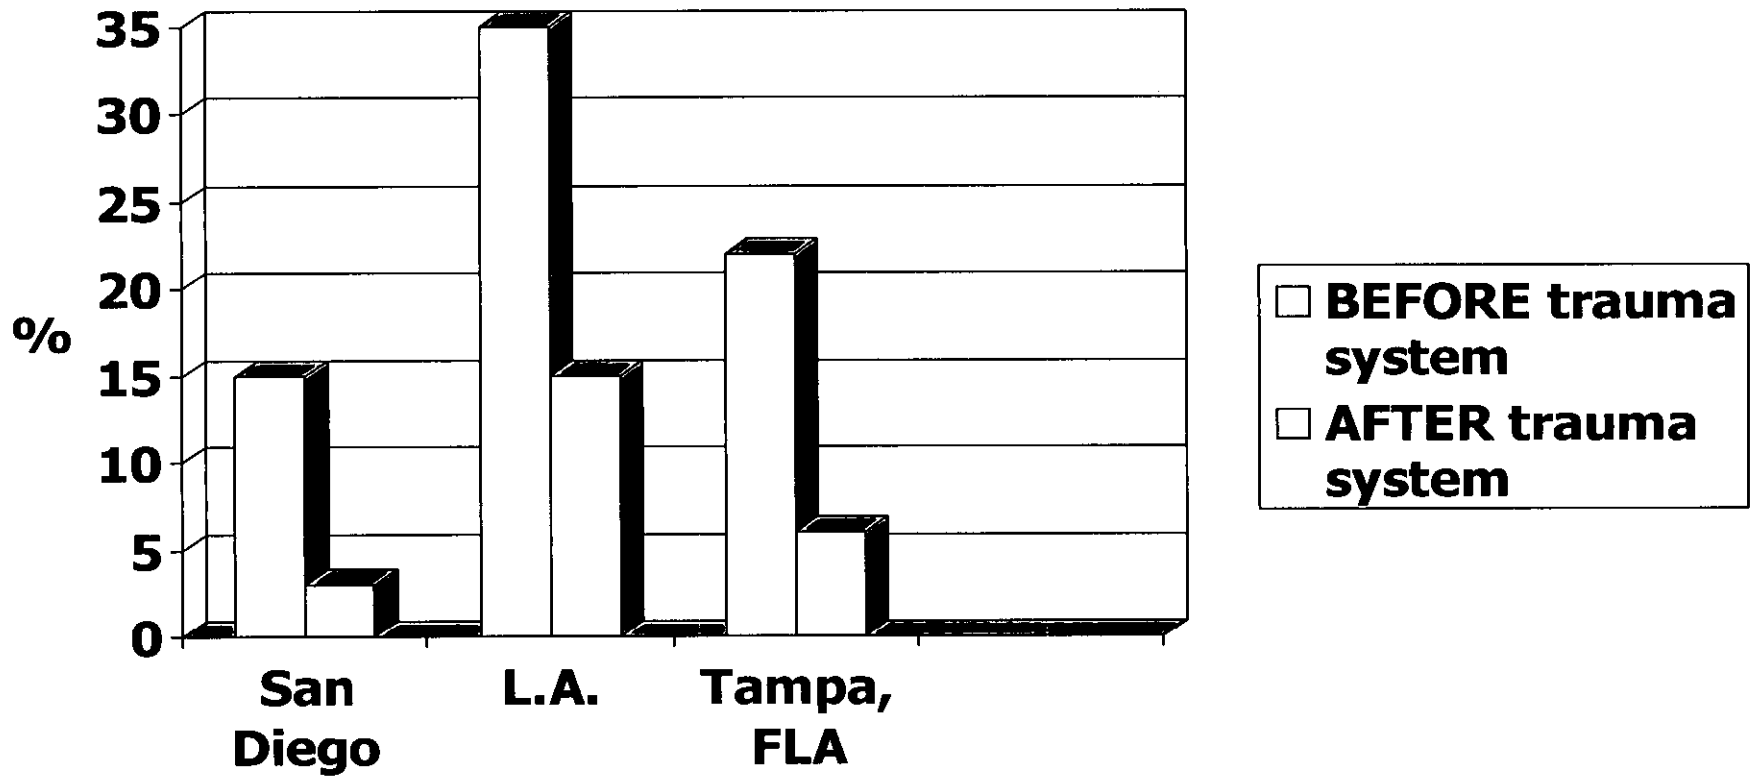

- Guidelines that take into account local resources and capabilities.
- Head Injury Guidelines
- Burn Triage

Trauma Systems

- 15-25% improvement in survival of the seriously injured.
- Increase productive working years
- Improve statewide disaster preparedness.
- Inclusive systems

Preventable Deaths: The impact of trauma systems

Trauma Systems & crash mortality

Designated

Non-Designated

Trauma Center and Disaster Preparedness

- Maintain readiness
- Staffed for all types of injury
- Broad communications with regional hospitals and aeromedical resources.
- Surge capacity
- Decontamination
- Resources to facilitate patient recovery

Trauma Systems and the Public

- 2004 Harris poll
- Most people want a trauma system in their area.
- 83% felt it was as important as fire department and were willing to pay extra for it

Trauma Systems and the Public

- 75% of those interviewed “thought” there was a trauma system in their state but only 15% lived in states with comprehensive systems

People think a trauma is very important and they want it.

Most think they already have it and they don't.

Alaska Trauma System

- ❑ **1993 statute- EMS authority for designating trauma centers created.**
- ❑ **Hospital participation voluntary.**
- ❑ **Standards for trauma center designation follow American College of Surgeons criteria.**

Alaska Trauma System

- u **Verification of compliance by outside reviewers for Level I, II, III**
- u **In-state review for Level IV**

Current Status

□ **Twenty–four hospitals in Alaska**

□ **Verified / Certified**

- 1 level II center - ANMC
- 4 level IV centers- NSH -MEH - YKHC –SCH
- 9 other reviews or consultations.

□ **Non-Verified**

- 2 centers providing care for multiple trauma patients
- 6 centers that provide surgical capabilities
- 2 military hospitals

State of Alaska:Trauma System Consultation November 2-5 2008

Site Visit Team

- Reginald A. Burton, MD FACS
Team Leader, Trauma Surgeon
- Jane Ball, RN, DrPH
ACS Consultant
- Samir M. Fakhry, MD FACS
Trauma Surgeon
- Holly Michaels
ACS Program Coordinator
- Drexdal Pratt, CEM
State EMS Director
- Nels Sanddal, PhDc, REMT-B
ACS Consultant
- James D. Upchurch, MD
Emergency Physician

Objective

- To help promote a sustainable effort in the graduated development of an inclusive trauma system for Alaska

Advantages & Assets

- Very committed individuals who use their time and expertise every day to serve Alaska citizens
- Extensive networks for transport
- 3 large medical centers with extensive subspecialty expertise within the state
- Large Level I trauma center in Seattle which freely accepts adult and pediatric trauma patients

Advantages & Assets

- One center maintaining ACS Level II verification standards and other small hospitals working toward Level IV verification
- Alaska Trauma Registry with all 24 acute care hospitals providing data
- Injury prevention activities are well established
- Initial efforts at legislative change

Challenges and Vulnerabilities

- No trauma system plan
- Geography / Weather / Remote and isolated communities
- No trauma standards for scene trauma triage or trauma inter-facility transfers
- Trauma system issues have limited visibility within the DHSS
- Public not aware of trauma system issues
- Limited human resources
- Few incentives for hospitals to participate
- No statewide evaluation of system performance

Trauma Care in Alaska 2009

- “ There are two healthcare systems for injured patients. One for Alaska natives that adheres to national standards and another for the majority of the population”

Definitive Care Facilities

- **Establish, as soon as practical, a second Level II Trauma Center in Anchorage in accordance with ACS COT verification criteria to meet the existing volume and acuity demands.**
- **Mandate participation of all acute care hospitals in the trauma system within a 2 year time frame with trauma center designation appropriate to their capabilities.**

Definitive Care Facilities

- ❑ **Study pediatric trauma care needs and establish one or more in-state centers of excellence in pediatric trauma care.**
- ❑ **Determine a method of providing financial support for hospitals designated/certified by the state as trauma centers to assist with uncompensated care and the cost of readiness**

System Coordination and Patient Flow

- Implement standardized prehospital triage and trauma activation protocols customized to the three response areas (Anchorage, Southeast, and the bush).**

Financing

- **Provide state funding to hire a fulltime trauma system manager.**
- **Determine a method of providing financial support for hospitals designated/certified by the state as trauma centers to assist with uncompensated care and the cost of readiness.**

Alaska Trauma Systems Review Committee

- MDs, nurses, admin, and prehospital. Meet twice a year.
- Oversight- Trauma designation Level IVs
 - EMS/ prehospital triage and interfacility transfer guidelines
 - Trauma system performance improvement.

Head Injury Guidelines for Rural and Remote Alaska

- Developed 2004 by an ad hoc group of the trauma systems review committee.
- Adopted mostly by the tribal system.
- Decreased unnecessary medevacs from the bush 75%. Saving of over \$300,000 medevac costs.
- No adverse consequences.

Current Activity US

- 2008 Georgia \$60,000,000 to create trauma fund.
- 2009 Arkansas \$20,000,000 to develop statewide system of trauma center
- Federal legislation currently being considered in the House and Senate.

Alaska Trauma System: Where do we go now ?

- Increasing facility participation is essential to developing an inclusive system.

- “Carrots and/or sticks”

- The time has come, this legislation can save lives.

Alaska CJATF Legislative Presentation 2/2/10

Overview

Title: Intro to the Alaska CJATF and recommendations for 2010-11
Presenter: Cathy Baldwin-Johnson MD, Chair

Background

- History of CJATF
 - 2009 projects
 - 2010 projects
 - Concerns noted by CJATF
1. Inconsistent interpretation of use of CACs statute
 2. Ability to assure confidentiality of medical and forensic interview peer review
 3. Inability of current assault statutes to adequately protect children

Recommendations

1. Clarification of use of required CACs where possible to include law enforcement
2. Minor revision to medical peer review confidentiality statute to include CAC organizations
3. New statute to allow confidentiality of forensic interviewing peer review
4. Evaluation of current criminal assault statutes as they relate to children with consideration of separate child assault laws

Our Mission: Identify areas where improvement is needed in the statewide response to child maltreatment, particularly child sexual abuse, make recommendations, and take actions to improve the system.

The Alaska Division of Public Health, Section of Women's Children's and Family Health,
Maternal and Child Health Epidemiology Unit
Alaska Surveillance of Child Abuse and Neglect (SCAN)

Overview of presentation

Title: Who, What, and Where of Fatal Child Abuse in Alaska

Presenter: Jared W. Parrish, MS

Background

- The Centers for Disease Control and Prevention recognizes child maltreatment (CM) as a serious public health problem
- Research indicates there are many resulting long-term health effects such as drug addictions, suicidal behavior, teenage pregnancy, obesity, and mental health problems resulting from CM

Public Health Implications

- No single agency has jurisdictional responsibility of all CM.
 - Child protective services address in home CM
 - Law enforcement responds to criminal CM.
- No standardized definition dictates what CM is, thus making comparisons and magnitude assessments impossible.
- The Alaska Surveillance of Child Abuse and Neglect (SCAN) links pre-existing data together to identify unique cases of maltreatment
 - Apply a standardized CDC developed public health definition of CM.
 - Using the Public health model as opposed to the legal model to CM, where prevention not conviction/prosecution is the priority the definition can be very sensitive to ensure all possible cases are captured. Thus the true magnitude of the problem, factors predisposing a child to CM, changes in rates of time, and effectiveness trials can be properly assessed.
 - SCAN is in its third year, and is 100% funded by the Title 5 MCH block grant
 - Currently mortality surveillance linkages multiple data sources and applies a working case definition to identify cases of maltreatment-confirmed, related, or suspected cases.
 - Morbidity surveillance is still being developed and will be implemented statewide, but employ a sentinel surveillance approach using regional hub sites to identify confirmed, related, and suspicious cases.
 - SCAN identifies, parent caregiver factors, incident factors, environmental/family factors, and child factors, and collects CDC developed data elements for epidemiological investigation.

Mortality Data

- Upon investigation of all infant deaths occurring in Alaska from 1992-2005, the death certificate (DC) identified 22 cases of maltreatment/homicide as a cause or contributor to death (0.15 per 1,000 live births). Including the related cases identified by SCAN the number increased to 74, and 133 with suspected cases (0.52 and 0.93 per 1,000 live births respectively). Among the 133 maltreatment-related cases, 35% were abuse (SBS, blunt force trauma), and 65% neglect (Loaded gun left out accessible, unsafe sleep w/intoxicated caregiver).

- For the years 2000-06 among those aged 0-9 years of age
 - Nearly 22% of all deaths are maltreatment-related
 - 70% occurred to infants
 - 63% were neglect related
 - 42% of abuse-related deaths were due to blunt force trauma (including SBS) or gun shot
 - 40% of abuse-related death directly involved substance abuse
 - Alaska Native children have 4 times the risk of a CM fatality compared with Alaska non-Native children.
 - Alaska Native children have 5 times the risk of a NEGLECT fatality compared with Alaska non-Native children.
 - Only 13% of all fatal SBS related deaths occurred to Alaska Native children
- Relative to Anchorage/Mat-Su region (2000 – 2006)
 - Northern region had 3 times higher CM-related infant mortality
 - 3 out of every 10 infant deaths were CM-related (~30%)
 - Interior region has no significant difference in CM-related infant mortality
 - 1 out of every 4 infant deaths were CM-related (~25%)
 - Southwest region had no significant difference in CM-related infant mortality
 - 1 out of every 8 infant deaths were CM-related (~13%)
 - Gulf Coast region had no significant difference in CM-related infant mortality
 - 2 out of every 9 infant deaths were CM-related (~22%)
 - Southeast region had no significant difference in CM-related infant mortality
 - 2 out of every 7 infant deaths were CM-related (~28%)
- For the most part maternal risk factors independently associated with CM vary by Alaska Native status, indicating a need for specific population identification when implementing CM prevention activities.

Take Home Points

- Independent associated factors uniquely differ between Alaska Native and non-Native populations
- Correctly targeted public health prevention programs are need based on evidence based data to impact maltreatment
- Alaska Native children ages 0 – 9 years have higher maltreatment-related mortality rates relative to non-Native infants for all years examined
- Neglect-related deaths account for much of this disparity
- Focus on Neglect-related mortality will have the largest impact on reducing overall maltreatment-related mortality, and is most suited for public health prevention messaging (i.e. positive parenting, risk reduction strategies, community empowerment)

Implications

Using a more sensitive definition and public health model lends the use of epidemiologic investigation that is based on local relevant data. Both appropriate messaging, and population identification will increase the impact of prevention/intervention efforts undertaken by the state and other partners.

Alaska Children's Alliance Update on CACs

February 2, 2010

Pam Karalunas
Statewide Coordinator

Alaska Children's Alliance

The mission of the Alaska Children's Alliance is to promote a culturally appropriate multidisciplinary response to child maltreatment throughout Alaska

ACA - State Chapter of National Children's Alliance which:

- **Sets minimum standards for CACs**
- **Sets minimum standards for State Chapters**
- **Provides**
 - **Limited funding for Chapters**
 - **Support, Training and Technical Assistance**
 - **National recognition**
 - **Accreditation**

**NATIONAL
CHILDREN'S
ALLIANCE**

Alaska Children's Alliance provides:

- **Technical assistance & support to existing and developing:**
 - **Children's Advocacy Centers**
 - **Multidisciplinary Teams**
 - **Child Protection Teams**
- **State representation at the regional and national levels**
- **Limited funding through national grants**
- **Coordination of statewide efforts**
 - **Training**
 - **Data Collection in collaboration w/CJA & SCAN**
 - **Statewide protocols to ensure high & consistent level of service**

Alaskan Child Advocacy Centers

- Anchorage – Alaska C.A.R.E.S.
- Bethel – TWC The Children’s Center
- Copper River Basin – Copper River Basin CAC
- Dillingham – Nitaput Child Advocacy Center
- Fairbanks – RCPC Stevie’s Place
- Kenai Peninsula – Kenai Peninsula CAC
- Juneau – S.A.F.E. CAC
- Kodiak–Kodiak Area Native Assoc. CAC – *Developing*
- Mat-Su – The Children’s Place
- Nome – Kawerak CAC

Child Advocacy Centers provide:

- A child and family friendly environment for coordination of investigative process in child abuse cases, specifically child sexual abuse

"nice people, cozy, homey, - I felt safe here"

Child Advocacy Centers provide:

- **Specialized Forensic Interview**

“They said I’m not in trouble and I did do the right thing on telling someone what my uncle was doing.”

Child Advocacy Centers provide:

- **Specialized, Non-traumatic Medical Exam**

“My favorite part (of being at the CAC) was finding out my body is OK”

Child Advocacy Centers provide:

- Collaboration with mental health services for earlier response to referrals

Child Advocacy Centers provide:

- Identification of risks and assessment of needs of child and family and referrals to address those issues

"Everything was well explained-you guys are doing a great job. Thank you."

Child Advocacy Centers provide:

- On-going support and follow up for family throughout the system process and beyond

“All the caring personalities was very comforting. Everyone kept us apprised of what was happening and were giving us very helpful information. It was nice to be treated so respectfully and I think everyone here helped my daughter find a little peace in this terrible situation.”

Child Advocacy Centers provide:

CASE TRACKING/DATA COLLECTION:

- System for monitoring case progress and tracking outcomes
- CACs in Alaska use a uniform data collection system, NCA Trak which is required for funding
- Helps identify strengths and challenges of the team & the system response

COMMUNITY AWARENESS

- Presentations
- Classes
- Radio Show, Interviews, etc

Gender of children seen at Alaska CACs in FY09

Ages of children seen at Alaska

CACs in FY09

CAC Research

Crimes against Children Research Center

University of New Hampshire

1,000 cases of Child Sexual Abuse studied at 4 CACs and 4 communities without CACs showed:

- ❖ More coordination of interviews at CACs – more police involvement in cases
- ❖ Children at CAC less fearful when interviewed
- ❖ Higher satisfaction among parents /caregivers when CAC used
- ❖ More referrals for mental health services through CACs
- ❖ More forensic medical exams when CAC used

Under Administrative Order #246

January 2010

STATE OF ALASKA

DEPT. OF HEALTH AND SOCIAL SERVICES
ALASKA HEALTH CARE COMMISSION

SEAN PARNELL, GOVERNOR
Bill Hogan, Commissioner

3601 C Street, Suite 902
ANCHORAGE, ALASKA 99503
PHONE: (907) 269-7800

January 15, 2010

To: The Honorable Sean Parnell, Governor, State of Alaska
The Honorable Gary Stevens, President, Alaska State Senate
The Honorable Mike Chenault, Speaker of the Alaska House of Representatives

We are pleased to present this report by the Alaska Health Care Commission in accordance with Administrative Order 246. The Commission was chartered by Governor Palin last winter to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility and availability of health care for all citizens of the state. This report represents the efforts of the Commission over this past year to identify and analyze problems with Alaska's health care system, develop an initial set of recommendations, and chart a course for the future.

The health care challenges faced by Alaska at this time are daunting. Costs have reached unaffordable levels, more and more Alaskans have difficulty accessing care, the delivery system is fragmented, vacancy rates among the health care workforce are high, financing and payment mechanisms make no sense, variations in medical practice and quality are not well understood, and providers are becoming more and more frustrated as they become buried under layers of government rules intended to help fix these problems.

Action is required, but these problems are complex. There are no magic bullets, there is no one solution, and the improvements required will not occur overnight. A process of transformational change must be implemented that will guide Alaska's health care system down a path to become more patient-centered, more evidence-based, more coordinated, and more efficient. Health care providers need to be supported and provided the appropriate tools they need along the way.

At the same time we need to start getting a handle on cost sooner rather than later. The health care industry represents an important part of our state's economy and we need to be careful about forcing too much change too quickly, but the continuing escalation in health care costs poses a significant and real threat to Alaska's economy and the sustainability of state government. Continuing work on the part of a future Commission must focus on this challenge.

We are optimistic that this report offers hope for the future and will lead to a health care system that focuses on creating health and not just treating illness and injury, will provide value for Alaskans' health care dollar, meets the needs of both consumers and providers, and is sustainable over the long term.

Sincerely,
Ward B. Hurlburt III, MD, MPH
Chair, Alaska Health Care Commission
Chief Medical Officer
Department of Health & Social Services

Deborah Erickson
Executive Director
Alaska Health Care Commission

Acknowledgements

This report represents the contributions of numerous individuals to whom the Commission would like to extend our thanks.

The Commission greatly appreciates the foresight of Governor Sarah Palin in establishing the Commission under Administrative Order 246.

The Commission is grateful for the leadership of our first Chair, Dr. Jay Butler, who was called to duty last spring by the U.S. Centers for Disease Control and Prevention to lead the nation's effort to develop and distribute vaccine to combat the novel H1N1 influenza pandemic. Dr. Butler was instrumental in launching the Commission, laying the groundwork and leading the critical first steps.

Special thanks goes to Department of Health & Social Services Commissioner William Hogan, who supported the Commission by loaning staff and providing information to the effort, and who stepped in as interim Chair on Dr. Butler's departure until the department's new Chief Medical Officer was named. The Commission would like to thank department staff who helped provide administrative and logistical support in their "spare time": Bonnie Caress, Nina Hauptman, Lucy Hansen, Shane Miller, Sherri Stears, and Serafine Bourne.

The Commission is most grateful to the Section of Health Planning and Systems Development in the Division of Health Care Services, who prepared a "primer" on health care in Alaska for the Commission (included as Appendix A of this report), and also supplied additional data, information and guidance in support of health care research and analysis by the Commission, including Deputy DHSS Commissioner William Streur, Pat Carr, Alice Rarig, Faith Allard, Neal Gilbertsen, Mark Millard, Mark Doughty, Karen Lawfer, and Jean Findley.

For the experts who took time out of their busy schedules to prepare presentations and other informational materials and make formal presentations to the Commission at our meetings – we are especially thankful: Dennis McMillian, Dwayne Heyman, Gina Perez, Paul Sherry, Fred Pearce, Donald Pathman, Karen Perdue, Dennis Valenzano, Harold Johnston, Rosyland Frazer, Mark Foster, Tom Hunt, Joan Fisher, George Rhyneer, David Morgan, David Johnson, Valerie Davidson, Stewart Ferguson, William Streur, Doug Eby, Jan Harris, Pat Carr, James Nesbitt, Carl Ekstrom, Kathy Allely, Andrea Fenaughty, Karol Fink, Cathy Giesel, Sharon Cissna, and Alex Cahana.

And finally, the Commission appreciates the many members of the public who were devoted enough to the health of Alaskans to take time to attend Commission meetings in person or over teleconference and testify during public hearing portions of Commission meetings. And a special thanks to those who took the effort to review drafts of the report and provide comments to the Commission.

Executive Summary

A healthy citizenry is vital to the economy and governance of the state of Alaska. Good health, both physical and mental, is essential to all Alaskans' ability to actively participate in and contribute to their families, schools, places of employment, and communities. Access to quality health care is an important contributor to the health of Alaskans.

The Alaska Health Care Commission was created to address growing concern over the condition of Alaska's health care system. The delivery of care is fragmented. Costs are unaffordably high and continue to climb, seemingly out of control. Too many Alaskans lack health care coverage, or have coverage but can't find a doctor who will accept them as a patient. Levels and variations in the quality of care are not well understood. Consumers aren't happy. Providers are frustrated. The system as currently designed is not sustainable.

The health care system has come together in a piecemeal fashion over many decades. It is funded by a conglomeration of numerous public and private payers. Care is provided under layers of government rules and regulations. Some provider organizations are government, some are quasi-government, some are non-profit, and some are private for-profit businesses. Providers trained in different regions of the country and in different fields don't have a consistent approach to diagnosis and treatment.

A system this complex cannot be fixed over night. A journey of transformation that will be many years in the making is required to redesign and implement a more rational, coherent and sustainable system that will deliver the highest quality of care at the most reasonable price in a way that protects providers and their business interests, while protecting the interests of Alaska's health care consumers.

The Commission envisions a health care system for Alaska that places individual Alaskans and their families at the center of their health care experience and focuses on creating health, not simply treating illness and injury. In addition to producing healthy Alaskans, a transformed system will provide value for Alaskans' health care dollar – delivering high quality care as efficiently as possible at a reasonable price. In this system providers' business and professional interests and integrity will be maintained. Health care consumers will be satisfied with the level and quality of services they receive. And a final but essential element of this picture is that Alaska's health care system will be sustainable.

The Commission also identified four goals for a transformed health care system – that it will:

- I. **Improve access** to health care services and affordable health insurance coverage.
- II. Turn the curve on Alaska's medical inflation rate so that it is at least below the national rate, in order to **contain cost growth**.
- III. Assure that health care services delivered in Alaska meet the highest **quality and safety** standards.
- IV. **Focus on prevention**, not just clinical preventive services for individuals, but public health community-based policies and programs, to support improved health status and to control costs by reducing the burden of preventable illness and injury.

Understanding and supporting the consumer's role in health care was a primary interest of the Commission's, and became the central focus of their strategic approach to transformation of Alaska's health care system. Two aspects emerged as critical to addressing the goals of increased access, improved value (high quality at a reasonable price), and a focus on prevention – 1) individual lifestyle

choices and the impact those choices have on health outcomes and demand for health care services; and 2) the role of primary care in placing the patient at the center of their health care experience.

A vital health care workforce and modern information management tools are the foundation upon which support for healthy lifestyles and a strong innovative primary care system depends. And the journey to a transformed health care system cannot continue without statewide leadership to see it through. On-going study, planning, and policy development is necessary to ensure Alaska's health care system is able to adapt to national health care reform, and to create a regulatory and reimbursement environment that supports the health care industry while it redesigns itself.

To achieve these goals the Commission recommends the following to the Governor and the Legislature:

- A. Strengthen the consumer's role in health and health care
 - Support healthy lifestyles and create cultures of wellness
 - Develop patient-centered primary care models through payment reform, removal of barriers, and support for pilot projects
- B. Foster statewide leadership to support health care transformation
 - Invest in the health policy infrastructure needed to respond to national reform
 - Establish a permanent state health planning and policy body in statute
- C. Develop the health care workforce
 - Make workforce a priority on health care reform and economic development agendas
 - Strengthen the pipeline of future health care workers
 - Support workforce innovation and adaptation as patient care models evolve
 - Direct workforce planning to be more coordinated
 - Increase the supply of primary care physicians by
 - Supporting educational loan repayment and financial incentives for recruitment
 - Expanding the WWAMI Alaska medical school program as resources allow
 - Supporting planning for primary care residency programs
- D. Deploy health information technology
 - Support health information technology adoption and utilization
 - Ensure public health connectivity
 - Ensure resulting information is used for optimization of medical care
 - Ensure privacy and security
 - Facilitate broadband telecommunications service access
 - Improve reimbursement for telemedicine
- E. Improve access to primary care for Medicare beneficiaries
 - Increase the supply of primary care providers
 - Support Federally Qualified Health Centers and Rural Health Clinics
 - Request relief from federal reimbursement inequities and administrative burdens
 - Develop a PACE (Program of All-Inclusive Care for the Elderly) program

The Commission provides in this report an action plan suggesting the operational steps and resources required to implement each of these recommendations. The Commission also lays out a 5-year strategic planning framework designed to facilitate an ongoing comprehensive approach to health care system transformation. Also included is a description of additional strategies for potential inclusion in continued planning efforts, such as cost and quality transparency, evidence-based medicine, payment reform, fraud and abuse control, and public health system support. Finally – as the work represented in this report is only a beginning – a one-year work plan for this or a future health care commission is outlined for 2010 to guide the continuing journey of health care system transformation for Alaska.

PART I: Introduction

A. Purpose of this Report

The purpose of this report is to convey the findings and recommendations of the Alaska Health Care Commission to Governor Parnell and the Alaska Legislature as required under Administrative Order (A.O.) 246. This report is intended to serve as a five-year strategic plan for strengthening Alaska's health care delivery system, and is meant to be a living document that will evolve each year over the course of the coming five years as problems are studied, various approaches are analyzed, and implemented strategies are evaluated. This plan will be updated and conveyed to the Governor and Legislature in subsequent annual reports of the Commission if the Commission is continued beyond this first year.

Included in this report are:

- Part I: an introduction including background on the Commission, a summary of the Commission's 2009 activities, and a description of the Commission's vision, goals and values;
- Part II: information on the challenges of delivering and accessing health care in Alaska;
- Part III: the Commission's proposed strategy for transformation of Alaska's health care system, including findings and recommendations on key issues analyzed during the year;
- Part IV: a brief explanation of the design elements required for health care system transformation identified this year that are recommended for future analysis;
- Part V: the strategic plan – laying out a framework for the five-year plan, providing a suggested action plan for implementation of the Commission's 2009 recommendations, and setting the Commission's work plan for 2010;
- Appendices: Background information on health and health care in Alaska, and additional documents produced by the Commission.

B. Background on the Alaska Health Care Commission

The Alaska Health Care Commission was established by Governor Palin on December 4, 2008 under A.O. 246 to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility, and availability of health care for all citizens of the state. The duties of the Commission as outlined in the Administrative Order are to:

- I. Serve as the state health planning and coordinating body;
- II. Provide recommendations for and foster the development of a:
 - A. Comprehensive statewide health care policy;
 - B. Strategy for improving the health of Alaskans that includes
 - i. Encouraging personal responsibility in prevention and healthy living for all residents of the state;
 - ii. A reduction in health care costs for all residents of the state to be below the national average;
 - iii. Access in communities of the state to safe water and wastewater systems;
 - iv. The development of a sustainable health care workforce in the state;
 - v. Quality health care being accessible for all residents of the state; and,
 - vi. Increasing the number of residents of the state who are covered by health care insurance; and,
- III. Submit a report to the Governor and the Legislature on or before January 15, 2010 regarding the Commission's recommendations and activities.

Commission members were appointed by Governor Palin (with legislative representatives appointed by their respective bodies) January 27, 2009. Short biographies for each of the Commission members are included in Appendix D. The members of the Commission are:

Ward Hurlburt, MD, MPH¹: Designated Chair; Chief Medical Officer for the Alaska Department of Health & Social Services; Anchorage.

C. Keith Campbell: Representing Consumers; Retired; Seward.

Valerie Davidson: Representing Alaska tribal health care providers; Senior Director of Legal and Inter-Governmental Affairs for the Alaska Native Tribal Health Consortium; Anchorage.

Jeffrey Davis: Representing Alaska's health insurance industry; President of Premera Blue Cross Blue Shield of Alaska; Anchorage.

Ryan Smith: Representing the Alaska State Hospital & Nursing Home Association; Chief Executive Officer of the Central Peninsula General Hospital; Soldotna.

Wayne Stevens: Representing the Alaska State Chamber of Commerce; President & CEO of the Alaska State Chamber of Commerce; Juneau.

Lawrence Stinson, MD: Representing Alaska health care providers; Anesthesiologist and co-owner of Advanced Pain Centers of Alaska.

Linda Hall (Ex-Officio): Representing the executive branch; Director of the Division of Insurance; Anchorage.

Representative Wes Keller (Ex-Officio): Representing the Alaska House of Representatives; Wasilla.

Senator Donny Olson (Ex-Officio): Representing the Alaska Senate; Golovin.

Creation of the Commission followed from the work of an earlier group convened by Governor Palin – the Alaska Health Care Strategies Planning Council – established under A.O. 232 in 2007. The Planning Council consisted of 17 members who met for 6 months, during which time they identified a series of goals and strategies for improving the health of and health care for Alaskans. The Council's recommendations included a strategy for creation of a permanent health planning commission established in state statute.

Governor Palin's issuance of A.O. 246 was meant to jump-start the Planning Council's recommendation for a permanent body while legislation to establish the Commission was pending in the Alaska Legislature. There are currently three bills under consideration by the legislature that would create a health care commission in statute – HB 25 (Hawker), HB 75 (Cissna), and SB 172 (Olson)². If one of these bills passes during the 2010 session and is signed into law by Governor Parnell, the work of the current Commission will continue, but potentially with a slightly different charge and different members. If none of these bills pass, and unless Governor Parnell extends the life of the Commission through Administrative Order, the work of this Commission will end, but hopefully their one year of work and this report will add some value to on-going efforts to strengthen Alaska's health care delivery system and improve the health of Alaskans.

¹ Dr. Jay Butler served as Chair of the commission through mid-June. Commissioner William Hogan assumed the role of Chair in June through September. Dr. Hurlburt was appointed Chair of the commission following his appointment as Chief Medical Officer of DHSS in September.

² A table comparing the purpose, duties and membership of the bodies that would be created under each of these bills and A.O. 246 is included in Appendix D of this report.

C. Summary of 2009 Activities

The Commission experienced a number of challenges during their first year, including lack of funding, turnover in the Chairperson's role, temporary reassignment of their one staff person, uncertainties caused by the efforts at the federal level to reform the nation's health care system, and unknowns about the future of the Commission itself. Despite these limitations the Commission was successful in analyzing a number of critical issues and developing the recommendations contained in this report.

The Commission focused this year on:

1. Developing a vision of a transformed health care system for Alaska, including goals and values for guiding decision making;
2. Defining a comprehensive health care system transformation strategy;
3. Identifying, analyzing and developing recommendations regarding a few critical priority issues;
4. Outlining a 5-year strategic planning framework, including identification of:
 - a) a preliminary set of measures for tracking the performance of Alaska's health care system, and
 - b) issues and strategies for future analysis and policy recommendation development.

The Commission identified as their initial priorities for analysis and policy recommendation development for this year the following issues:

- The consumer's role in health care
- Statewide leadership for strengthening the health care system
- Health care workforce development, with a focus on the physician workforce
- Health information technology
- Primary care access for Medicare patients

2009 Accomplishments

Meetings and public hearings: During 2009 the Commission held four face-to-face meetings: February 27-28 in Juneau; and May 1-2, August 25-26, and November 6-7 in Anchorage. All of these meetings were open to the public, and teleconferenced for members of the public unable to attend in person but interested in listening to the meeting or providing public testimony. A number of teleconferences were held during the year as well. Summaries of the meetings and teleconferences are included in Appendix D of this report. Four public hearings were held, three during the May, August, and November meetings, and one on December 14 through the Legislative Information Office teleconference system.

Administration: In their first months the Commission established meeting rules, a set of by-laws, a job description for the Executive Director, and appointed an Executive Director (initially hired by DHSS in February to expedite the first meeting of the Commission). A copy of the Commission's meeting rules, by-laws, and Executive Director job description are included in Appendix D of this report.

Communication and coordination: The Commission developed a website for posting information regarding their meetings as well as reference documents related to their priority focus areas (<http://hss.state.ak.us/healthcommission/>). A listserv was established to maintain communication with system stakeholders and members of the public interested in receiving periodic updates. As an initial step toward assuming the health planning coordination role noted in the Administrative Order, the Commission compiled an inventory of boards, committees, coalitions, and other organizations in Alaska involved in health planning in some way, as well as a list of health reports and plans (in Appendix C).

Products: The primary product developed by the Commission is this, their first report to the Governor and Legislature, which includes the Commission's vision, values and goals; findings and recommendations on the priority issues noted above, and a planning framework for the next five years.

D. The Commission's Vision for Transformation of Alaska's Health Care System

"The health of the people is really the foundation upon which all their happiness and all their powers as a state depend." Benjamin Disraeli

A healthy citizenry is vital to the economy and governance of the state of Alaska. Good health, both physical and behavioral, is essential to all Alaskans' ability to actively participate in and contribute to their families, schools, places of employment, and communities. Access to quality health care is an important contributor to the health of Alaskans.

The Alaska Health Care Commission was created to address growing concern over the state of Alaska's health care system. The delivery of care is fragmented. Costs are unaffordably high and continue to climb, seemingly out of control. Too many Alaskans lack health care coverage, or have coverage but can't find a doctor who will accept them as a patient. Levels and variations in the quality of care are not well understood. Consumers aren't happy. Providers are frustrated. The system as currently designed is not sustainable.

The health care system has come together in a piecemeal fashion over many decades. It is funded by a conglomeration of numerous public and private payers. Care is provided under layers of government rules and regulations. Some provider organizations are government, some are quasi-government, some are non-profit, some are private business. Providers trained in different regions of the country and in different fields don't have a consistent approach to diagnosis and treatment. A system this complex cannot be fixed over night. A journey of transformation that will be many years in the making is required to redesign and implement a more rational, coherent and sustainable system that will deliver the highest quality of care at the most reasonable price in a way that protects providers and their business interests, while protecting the interests of their consumers.

Vision

Alaska's Health Care System

- Produces improved health status
- Provides value for Alaskans' health care dollar
- Delivers consumer and provider satisfaction
- Is sustainable

The first step this year in the Commission's journey toward transformation of Alaska's health care system was to design a picture of the ideal system. The Commission envisions a health care system for Alaska that places individual Alaskans and their families at the center and focuses on creating health, not simply treating illness and injury. In addition to producing healthy Alaskans, a transformed system will provide value for Alaskans' health care dollar – delivering high quality care as efficiently as possible at a reasonable price. In this system providers' business and professional interests and integrity will be maintained. Health care consumers will be satisfied with the level and quality of services they receive. And a final but essential element of this picture is that Alaska's health care system will be sustainable.

Health Care Goals

- I. Improved Access
- II. Contained Cost
- III. Safe, High Quality Care
- IV. Prevention-Based

The Commission also identified four goals for a transformed health care system to support a targeted approach to identification of improvement strategies and performance measurement. The first goal is to improve access to 1) affordable health care insurance coverage, and 2) the services of a health care delivery system that is, itself, healthy. The second goal is to turn the curve on Alaska's medical inflation rate so that it is at least below the national rate, in order to contain cost growth. The third goal is to assure that health care services delivered in Alaska meet the highest quality and safety standards. The fourth goal is to focus on prevention, not just clinical preventive services for individuals, but public health community-based policies and programs, to support improved health status and to control costs by reducing the burden of preventable illness and injury.

Values

- Sustainability
- Efficiency
- Effectiveness
- Individual Choice
- Personal Engagement

The Commission agreed to the following set of values to guide planning and policy recommendation decisions for transformation of Alaska's health care system:

Sustainability: A redesigned health care system for Alaska must be sustainable in terms of: 1) government, private sector, and individual ability to financially support implementation over the long term; and, 2) health care provider ability to deliver quality care while maintaining a sound business operation.

Efficiency: A redesigned health care system for Alaska will minimize waste in clinical care and administrative processes.

Effectiveness: A redesigned health care system for Alaska will support practices best known to produce the best outcomes.

Individual Choice: A redesigned health care system for Alaska will provide information and options for Alaskans in terms of health care coverage and service providers.

Personal Engagement: A redesigned health care system for Alaska encourages and empowers Alaskans to exercise personal responsibility for healthy living and for obtaining and participating in their health care.

PART II: Health Care Delivery and Access Challenges in Alaska

The effort to transform Alaska's health care system to achieve the Commission's vision requires an accurate and complete understanding of the current condition of the system. A description of health care in Alaska – how it is structured, provided and funded – is included as Appendix A of this report. Here in Part II a discussion of some of the particular challenges associated with delivering and accessing health care in Alaska is discussed.

A. The Cost of Health Care in the U.S.

Health care spending in the United States has been growing faster than the economy for decades, doubling from 8% of the nation's gross domestic product (GDP) in 1970 to 16% in 2006. It is projected to increase to 20% of GDP, with total spending doubling from \$2 trillion in 2006 to \$4 trillion, by the year 2016.ⁱ A comparison of national health expenditures in the United States to other member countries of the Organization for Economic Cooperation and Development (OECD)(Figure 1) illustrates the challenge our nation faces in maintaining a competitive edge in today's global market place, as the increasing cost of health care contributes to higher prices for goods and services produced in the U.S.

FIGURE 1: National Health Expenditures as Percentage of National Gross Domestic Product, 2009

Source: OECD Health Data 2009, OECD (<http://www.oecd.org/health/healthdata>).

Higher costs in the United States do not necessarily reflect greater levels of health care resources. The U.S. has fewer physicians per capita than most other OECD countries, with 2.4 practicing physicians per 1,000 Americans compared to the OECD average of 3.1. The U.S. also has fewer hospital beds, with 2.7 acute care hospital beds per 1,000 Americans compared to the OECD average of 3.8 beds.ⁱⁱ Nor do higher costs mean that Americans have greater access to care. In 2004 97% of U.S. residents reported seeing at least one doctor in the previous 2 years, compared to 95% of Canadians and 98% of Australians. 84% of Americans reported having had a blood test, x-ray, or other diagnostic test in the past 2 years, compared to 84% of Canadians and 83% of Australians.ⁱⁱⁱ

Higher health care spending does not translate into better outcomes in terms of health status. Life expectancy and infant mortality are not necessarily reflective of the quality of health care, but are two general measures of population health that indicate Americans, for all the investment in health care services, are not healthier overall. Life expectancy in 2007 was at 78.1 years in the U.S., placing it 24th among the 30 OECD nations; and the U.S. ranked 28th in infant mortality at 6.7 per 1,000 live births, ahead of only Mexico and Turkey.^{iv}

Health care spending in the United States not only represents a higher proportion of our economy compared to other countries, average spending per person is significantly higher. Per capita national health expenditures in the United States increased 850% over the past three decades to \$7,290 (Figure 2). The average OECD national health expenditure in 2007 was less than half that amount, at \$2,984 per person.^v

Just one result of the escalation in health care costs is the impact on the personal finances of America's families. In 1981 medical problems contributed to just 8% of personal bankruptcies in this country. By 2007 the share of bankruptcies attributable to a medical cause had increased to 62.1%.^{vi}

B. The Cost of Health Care in Alaska

The rapid rise in the cost of health care in the U.S. is reflected in Alaska as well. In 1993 the Health Resource & Access Task Force, a group convened by the Alaska Legislature to address questions of health care cost and access, projected health care spending in Alaska would "sky-rocket" from slightly below \$1.6 billion in 1991 to nearly \$5.6 billion in 2003. The HRATF determined that this "alarming" level of spending was inevitable if nothing was done to change the status quo.^{vii} Today in 2009 estimated spending for health care in Alaska is over \$6 billion.

Government (all levels – federal, state and local) pays 64% of Alaska’s health care bill, including public insurance programs (Medicaid and Medicare), government employee and retiree insurance premiums, medical care for military personnel and dependents, Indian Health Service support of tribal programs, medical care provided through the Veterans’ Administration, grants to Community Health Centers, operation of the state psychiatric hospital and Pioneers’ Homes, and care for offenders incarcerated by the Department of Corrections. Private employers pay 17% of Alaska’s health care bill in the form of health insurance premiums, self-insured costs, and Workers’ Compensation medical benefits for their employees. Individual Alaskans pay the remaining 19% through premium contributions, co-payments, deductibles, and direct payment to providers.^{viii}

The high cost of health care presents a significant fiscal challenge for the state of Alaska. State government is currently responsible for administering over \$1.5 billion annually for all health care related expenditures (inclusive of costs for employees and retirees, Medicaid (including federal funds), a variety of grant programs, state health facilities, and services for inmates in state prisons). In 2004 Alaska had the highest annual Medicaid expenditure level per enrollee in the United States, at \$10,417.^{ix} State general fund expenditures for Medicaid grew from a little over \$80 million in FY 1991 to over \$408 million in FY 2008 – an increase of 410% during that 17 year period (Figure 3).^x

FIGURE 3: Alaska State General Fund Medicaid Expenditures, 1991-2010

Source: FY 2010 DHSS Budget Overview
 * FY 2009 and 2010 were estimated expenditures as of Nov 2008

Contributors to health care spending are numerous and varied, but there are two basic components driving total cost – price and utilization. Population increases and inflation are partly responsible for driving upward trends in utilization and pricing, but do not account fully for the rapid rise in health care spending in Alaska – which increased at an average annual growth rate of 8.9% per year between 1990 and 2005. Increased utilization due to a greater number of people living in Alaska made up 1.2% of the average annual spending increase, and general inflation contributed 2.4%. The reasons behind the remaining 5.3% average annual growth rate are not well understood.^{xi}

Increased utilization of the health care system is partly driven by the rising prevalence of health problems and the aging of the state's population. It is also influenced by payment systems that do not present incentives for patients and providers to keep spending in check. New technologies that provide additional diagnostic and therapeutic opportunities are another factor. Also contributing to utilization that may be higher than necessary is the practice of defensive medicine due to concern over medical liability. Fraudulent claims for medical services never rendered also play a role. One factor that may be a key in understanding and controlling utilization is waste in the system – by some estimates as much as 30% of total health care costs are for medical goods and services that are not medically necessary or are ineffective.

Prices of health care services and medical equipment, supplies and pharmaceuticals make up the other component contributing to total spending. The higher cost of living in Alaska contributes somewhat to higher health care prices, but the Consumer Price Index (CPI) for Anchorage increased a total of 38% for all items between 1991 and 2005, while the CPI for medical care in Anchorage increased 98% during that same period. Lack of economies of scale due to Alaska's small, widely dispersed population and also fragmentation and duplication in Alaska's health care system are assumed to contribute to higher prices. Medical liability is a component of price, as the cost of malpractice insurance premiums is passed on to the consumer. New medical technologies also play a role in higher prices, as the cost to providers of implementation is passed on to consumers.^{xii}

One sign that the price of health care in Alaska is higher than in other states is the difference in reimbursement rates between Alaska and Washington State's Medicaid programs. Many of the professional fees paid by Alaska's Medicaid program are nearly three-times higher than those paid in Washington – Figure 4 provides just a few examples from the two states' 2009 Medicaid Fee Schedule.

FIGURE 4: Differences in Medicaid Fees, Washington State and Alaska, 2009

Description	Code	AK Fee	WA Fee	% Difference
Outpatient Office Visit – Lower Level	99212	\$62.46	\$22.69	175%
Outpatient Office Visit – Highest Level	99215	\$221.58	\$76.00	192%
Emergency Department Visit	99283	\$109.14	\$37.48	191%
Knee arthroscopy/Surgery	29881	\$976.77	\$358.08	173%
Gall bladder removal, laparoscopic	47563	\$1,175.10	\$412.29	185%
Cataract Surgery w/ lens implant	66984	\$1,141.23	\$394.44	189%

Source: Alaska Department of Health & Social Services, Division of Health Care Services, December 2009

Another indicator that Alaska's health care prices are generally higher is a comparison of spending for inpatient hospital services. In 2007 the average hospital adjusted expenses per inpatient day was \$2,104 in Alaska – 24% higher than the national average of \$1,696.^{xiii} The average hospital cost per stay in Alaska was \$27,171 compared to the 2007 national average of \$15,455.^{xiv}

And one more example of higher prices and overall costs comes from the Workers' Compensation program. Alaska has ranked 1st in the nation for cost of workers' compensation premium rates since 2005. Medical costs made up 72% of total benefit claims in Alaska in 2008, compared to the national average of 58%. The average medical cost per workers' compensation claim in Alaska was \$40,000 per injury in 2008 compared to the national average of \$26,000. Alaska's Workers' Comp medical fee schedule rates were the highest in the nation in 2006 – on average 3.5 times higher than Massachusetts, the state with the lowest rates.^{xv} Below are a few examples of fees paid by Alaska's program compared to Washington's and Hawaii's.

FIGURE 5: Differences in Workers' Comp Fees, Alaska, Washington and Hawaii 2006

Description	Code	AK Fee	WA Fee	HI Fee
Outpatient Office Visit – Mid Level	99213	\$127.00	\$76.00	\$61.00
Radiology (MRI, spinal canal cervical)	72141	\$2,339.00	\$769.00	\$634.00
General Medicine (nerve conduction)	95904	\$219.00	\$81.00	\$66.00
Knee arthroscopy/Surgery	29881	\$4,181.00	\$869.00	\$693.00
Physical Medicine (therapeutic proc)	97110	\$83.00	\$40.00	\$32.00

Source: November 2009 Report of the Workers' Compensation Medical Services Review Committee, AK Dept of Labor & Workforce Development

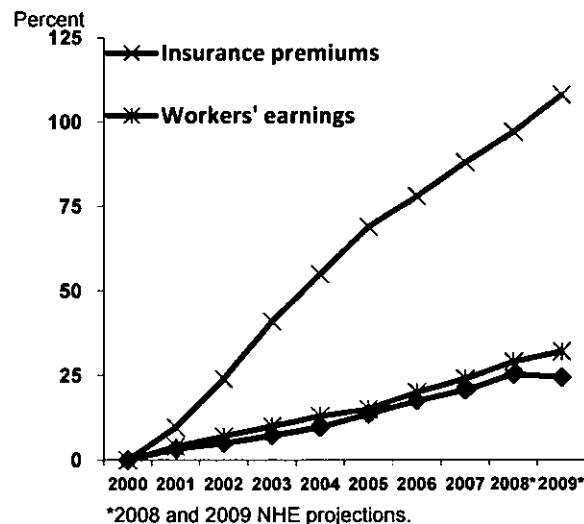

More research is required to understand the disparity in health care prices between Alaska and other states. A more comprehensive analysis of fees paid by all major payers and programs should be conducted. An analysis of variations in fees paid within Alaska as well as comparisons to other states should be included. Note the example from the above two tables in the disparity between fees paid by two different Alaskan programs for the same procedure – Alaska's Workers' Compensation program pays a professional fee for arthroscopic knee surgery (CPT 29881) that is more than four times higher than the fee paid by Alaska's Medicaid program. One other issue related to price and total cost that is not widely understood and should also be investigated is the difference between charges billed by providers and actual reimbursement levels, and how cost shifting occurs as providers adjust to changes in their payer mix and volume.

C. Health Insurance Coverage of Alaskans

Increased spending for health care translates into higher insurance premiums, as health insurance providers adjust to cover rising prices and growing utilization. Naturally therefore, as the overall cost of health care has increased over the years, the price of health insurance premiums has kept track. Unfortunately workers' wages have not kept pace with the rise in the cost of health insurance (Figure 6), and health care-related expenses are consuming a larger proportion of Americans' household income each year.

FIGURE 6: Premiums Rising Faster than Wages and Inflation^{xvi}

Cumulative Changes in Components of U.S. National Health Expenditures and Workers' Earnings, 2000–2009

In Alaska health insurance premiums for working families grew by 90.8% between 2000 and 2009. In comparison, the median earnings of Alaska's workers rose 17% during the same period. The average annual insurance premium for family health coverage in Alaska rose from \$7,456 in 2000 to \$14,226 in 2009. The average annual premium for individual health coverage rose from \$2,923 to \$5,626 during that same period.^{xvii} The percentage of income spent on health care in Alaska (based on per capita averages) increased steadily from 11% in 1991 to 19% in 2004.

14% of Alaskans are uninsured or do not have access to military, Veteran's Administration or Indian Health Service-funded health care services. The following table (Figure 7) illustrates the proportion of Alaskans covered by various types of health care coverage.

FIGURE 7: Health Insurance Coverage by Type of Coverage in Alaska and the U.S.

Health Insurance Coverage Type Average for data years 2006-2008	Alaska		United States
	Count	Percent of Total	Percent of Total
Covered by Any Source	575,269	86.0%	85.0%
Employer	388,381	58.0 %	59.0%
Individual (self-purchased)	42,891	6.4 %	9.0%
Medicaid & Denali KidCare	78,636	11.8 %	13.4%
Medicare	57,384	8.6 %	13.9%
Military/VA	88,944	13.2 %	3.7%
Indian Health Service only ³	28,095	4.2%	0.5%
Uninsured all year	93,648	14.0%	15.0%
Total	668,917	(percentages add up to more than 100% because of overlapping coverage types)	

Source: Current Population Survey (CPS), 2007-2009 surveys, 2009 data released September 2009.

84% of uninsured Alaskans belong to households with one or more workers. Most uninsured workers are self-employed, or employed by small businesses that do not offer health benefits or offer coverage they cannot afford. While nearly all firms with more than 100 employees provide health benefits, less than a quarter of Alaska's smallest businesses (those with fewer than 10 employees) offer health insurance. The seasonal nature of Alaska's workforce is an important factor in employer health coverage. The CPS survey data in the Figure 7 table does not capture Alaskans who only have coverage part of the year in the reported uninsured amount. It also does not account for Alaskans who are underinsured – those who have coverage but with such high deductibles and co-pay that they still face financial barriers to health care.^{xviii}

³ Figures in this table are adjusted to include as "covered" people of Alaska Native/American Indian race who may have access to IHS-Funded services. The CPS Survey includes IHS beneficiaries in the uninsured category if they have no 3rd-party health insurance coverage. The "Indian Health Service only" amount included here is an estimate based on respondents to the survey identified as "AI/AN only."

D. Health Care Delivery System Challenges

Alaska experiences many health care delivery challenges, including the logistical difficulties and costs involved in providing care for a relatively small number of people spread over vast geographic distances, a delivery system that is highly fragmented, and an inadequate supply and distribution of health care workers.

Logistical Challenges

Alaska is the largest state in the nation geographically, encompassing an area greater than the next three largest states – Texas, California and Montana – combined. At the same time Alaska's population is among the smallest of the states. Alaska has the lowest population density in the U.S. with 1.2 persons per square mile compared to the U.S. average population density of 79.6. 26.1% of the state's population lives in communities of fewer than 2,500 people.^{xx} The dispersion of such a small number of people over such a large area increases the difficulty and cost of delivering care here.

Approximately 75% of Alaska's more than 300 communities are not connected by road to a community with a hospital. Nearly a quarter of the state's population lives in towns and villages that can only be reached by boat or aircraft.^{xx} Transportation costs are high – air travel between a village and the nearest community with a hospital generally costs more than \$100, with airfare from some of the more remote villages to the tertiary care centers in Anchorage costing as much as \$1,200. Geography and harsh weather conditions pose additional transportation barriers, and can be especially problematic in an emergency situation.

Transportation is not just an issue in terms of patients' ability to reach needed services. The cost of moving supplies, staff and equipment required to operate clinics and hospitals in rural Alaska can be formidable. For example, the price of heating fuel and gasoline in the most remote communities of the state reached as high as \$10.00 per gallon this year – the cost of transporting the fuel to these communities was higher than the cost of the fuel itself.^{xxi}

The cost of delivering services is also made higher by a loss of economies of scale associated with operating hospitals in sparsely populated regions and clinics in nearly every small community in the state – a necessity due to the remoteness and isolation of those locations. Some of Alaska's smallest communities with a clinic have as few as 50 residents. However, the loss of economies of scale to maintain the facilities is off-set somewhat by the innovative workforce solutions used to staff them, such as the Community Health Aide/Practitioner Program, and the use of telehealth technologies. Many of Alaska's most rural facilities are also highly subsidized by the federal government.

System Fragmentation and Duplication

Alaska's health care "system" is not a system, but an assortment of private, for-profit and non-profit, large and small medical businesses; hospitals and clinics to serve military personnel, retirees and their dependents; and hospitals and clinics owned and operated by tribal organizations. Health care organizations within the same sector (military, tribal health system, or private sector) do not have interoperable electronic information systems, care coordination systems, or business management processes. In addition to fragmentation in the delivery of services, there are a variety of payers financing health care services, including Medicare, Medicaid, private insurers, self-insured employers, the military and VA, the Indian Health Service, and individuals.

Alaska has benefited from a strong military presence due to the state's strategic location, a strong tribal health system presence, and decades of representation in senior leadership in the U.S. Senate. Because of these three factors the federal government has played a lead role in development of Alaska's health care system, especially in rural Alaska as well as for medically underserved Alaskans statewide. And all Alaskans, not just the targeted service population, benefit from the presence of these services in communities where there might not otherwise be any health care delivery system. For example, the tribal health system provides care for non-Native individuals in remote communities where there are no other health care providers.

The downside of heavy federal investment in building the health care infrastructure is there are some communities that have multiple health care systems operating side-by-side. For example, one community of 9,000 people has both a community hospital and a tribal health system hospital. Another community of just 6,000 people has a community hospital, a tribal health system clinic, and a military clinic. Alaska's largest city, with a relatively small population of 285,000, has four hospitals – one military, one tribal, one for-profit, and one non-profit (plus two psychiatric hospitals). The facilities in these communities also serve regional (and in the largest city's case statewide) populations, but there is still an overabundance of infrastructure that leads to higher costs.

The duplication and fragmentation in Alaska's health care "system" is inefficient, and potentially unsustainable in the long-run if mechanisms for improved coordination and perhaps integration where appropriate are not implemented.

Health Care Workforce Shortages

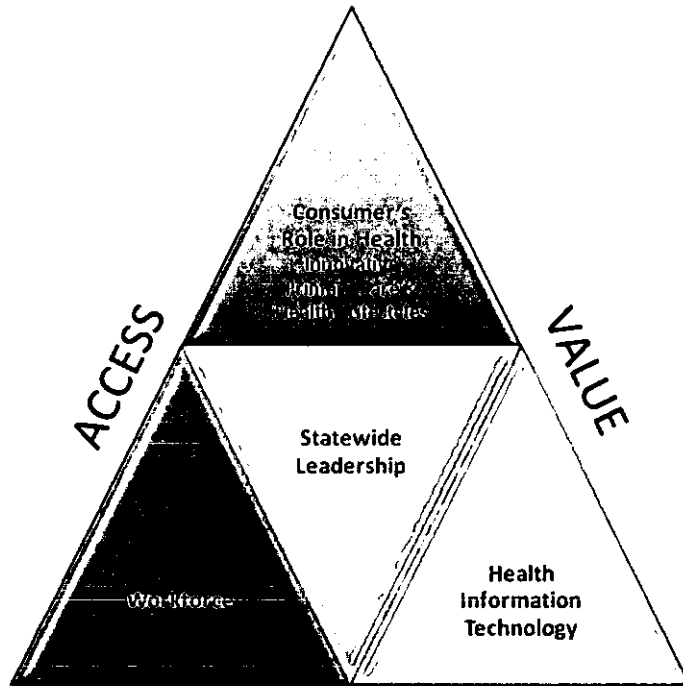

Demand for health care workers rose sharply over the past decade. Alaska's health care employment sector experienced 40% job growth between 2000 and 2007, compared to 13% for all other industries, outpacing the state's population growth during that same period by five times.^{xxii} The supply of new workers produced by Alaska's training and education programs plus those imported from outside Alaska cannot keep up.

Alaskan health care employers had an estimated 3,529 number of vacant positions in 2007. Primary care occupations are experiencing vacancy rates of 15% - 20%. Pharmacist, therapist and certain nurse specialist positions are also experiencing high vacancy rates. Behavioral health occupations have a somewhat lower vacancy rate overall, but made up the highest proportion of vacancies with 1,033 vacant positions in 2007.^{xxiii}

The costs health care organizations incur associated with recruitment and contracting for the services of temporary employees to cover vacancies is high. 80 Alaska health care organizations surveyed in 2005 reported spending \$24 million in the preceding year for vacancies in 12 key health occupations.^{xxiv} At least a portion of these costs may be passed on to consumers and insurers in the form of higher prices.

Delivery of health care is dependent on an adequate supply and distribution of qualified health care workers. 27 of Alaska's 30 boroughs and census areas contain federally designated health professional shortage areas. Staff shortages are one of the many challenges the Alaska health care delivery system is dealing with as it faces the future.

PART III: 2009 Health Policy Findings & Recommendations

The Commission identified five priority issues for analysis this year:

- A. The Consumer's Role in Health and Health Care
- B. Statewide Leadership
- C. Healthcare Workforce
- D. Health Information Technology
- E. Access to Primary Care for Medicare Patients

PREVENTION-BASED Alaska Health Care Commission's Health Care Transformation Strategy

Understanding and supporting the consumer's role in health care was a primary interest of the Commission's, and became the central focus of their strategic approach to transformation of Alaska's health care system. Over the course of learning and discussions two aspects emerged as critical to addressing the goals of increased access, improved value (cost and quality), and a focus on prevention – 1) individual lifestyle choices and the impact those choices have on health outcomes and demand for health care services; and 2) the individual's central position in their health care experience. Support for healthy lifestyles and new innovations in patient-centered primary care are the pinnacle of the Commission's health care transformation strategy.

A vital health care workforce and modern information management tools are the foundation upon which support for healthy lifestyles and a strong innovative primary care system depends. And the journey to a transformed health care system cannot continue without statewide leadership to see it through. On-going study, planning, and policy development is necessary to ensure Alaska's health care system is able to adapt to national health care reform, and to create a regulatory and reimbursement environment that supports the health care industry while it redesigns itself.

The fifth priority issue identified this year is not part of the comprehensive strategy, but was recognized as an immediate crisis worthy of special attention – the problem Medicare beneficiaries in urban Alaska are experiencing with access to primary care. This problem just may be an early indicator – “the canary in the mine” – warning us of the looming health care crisis in our state if we don't take decisive action.

A. The Role of Consumers in Health Care

1. Healthy Lifestyles

Finding A1a: Chronic disease is the leading cause of death and disability in the U.S. and Alaska.

Finding A1b: The majority of health care spending in the U.S. is for chronic disease.

Finding A1c: Three risk factors – tobacco use, poor diet and inactivity – contribute to the four leading chronic diseases – heart disease, diabetes, lung disease and cancer.

Finding A1d: Individual behavior is now the leading determinant of the health status of the population and contributor to premature death.

Finding A1e: Childhood obesity is a growing concern; for example, 33% of kindergarten and 1st grade students in the Anchorage School District are overweight or obese.

Finding A1f: Employee health risk behaviors can be changed through financial incentives coupled with other supports (e.g., coaching).

1.7 million Americans die each year from chronic disease, which cause 70% of all deaths. Cancer, heart disease, stroke, and lung disease are four of the top five leading causes of death in Alaska. 133 million Americans – nearly half our nation's population - live with at least one chronic condition. Individual health behaviors are the leading contributors to chronic disease. The World Health Organization estimates that 80% of heart disease, stroke and type 2 diabetes, and 40% of cancer, would be prevented if Americans stopped smoking, ate a healthy diet, and participated regularly in physical activity.

Complex medical care required over the prolonged course of illness and disability due to these conditions is costly. 75% of all health care expenditures are related to chronic disease. In Alaska, \$600 million is spent annually for hospitalizations due to heart disease and stroke, and \$419 million for all costs due to diabetes. The state of Alaska incurs an estimated \$9-10 million in medical costs due to obesity for state employees alone each year. The doubling in the prevalence of obesity in the U.S. between 1985 and 2004 accounted for nearly 30% of the increase in annual health expenditures.

It is not possible to address the escalation in health care costs without addressing the problem of chronic disease. The Commission began an inquiry into strategies known to be effective at supporting behavior change and learned about the success of Alaska's Tobacco Program, which led to a reduction in adult smoking from 27% in 1991 to 22% in 2008. They also learned about successful worksite wellness programs. There is much more work to be done however - understanding what government, schools, work sites, and communities can do to support healthy choices requires on-going attention.

Recommendation A1a: The Commission recommends that the Governor and Alaska Legislature investigate and support additional strategies to encourage and support healthy lifestyles, including strategies to create cultures of wellness in any setting.

Recommendation A1b: The Commission recommends that the 2010 Alaska Health Care Commission continue evaluating the question of what works to support behavior change, and identify additional recommendations for future improvement.

2. Primary Care Innovation

Finding A2a: Patient-centric health care delivery models based on a longitudinal relationship-based platform are effective at reducing unnecessary utilization of services by empowering patients to take more responsibility for their health and health care.

Primary care is the foundation of the health care delivery system – providing the main point of entry for secondary and tertiary care, and meeting the majority of patient needs for health education and disease prevention, initial assessment of health problems, treatment of acute and chronic health conditions, and overall management of a patient’s health care services. There is increasing evidence that access to high-quality primary care improves health outcomes and reduces costs. However, the rising demand for services from an aging population and increasing chronic disease, coupled with the decreasing supply of primary care physicians, is sweeping our primary care system toward a crisis.

National health care reform discussions emphasize the importance of primary care, but tend to oversimplify the issues and solutions. Some suggest all that is required to improve access to primary care is increased reimbursement levels for primary care practitioners. Others suggest that primary care practitioners must be paid for additional services that are not currently reimbursable – those services they provide to assist with the coordination and management of a patient’s care and health conditions over and above the time spent during the actual patient encounter. Reimbursement is part of the solution, but increases need to come through a restructured payment system that supports and rewards practitioners for delivering patient care in a new way.

The Commission believes that strengthening the provision of primary care is the key to transformation of the health care system, but they also determined that the current primary care model is antiquated. The traditional medical model based on episodic acute care is no longer the most effective and efficient approach to meeting patients’ needs. They learned about a new patient-centered care model tried in our own backyard, the Southcentral Foundation’s Nuka Model of Care, that’s proven successful - demonstrating reductions in hospital days by 40% and emergency room and specialty visits by 50%.

The “Medical Home Model” is a term meant to describe the ideal concept for how primary care should be provided, but the Commission felt as though this term has become too much of a buzz word in the health care reform debates and that for many it simply implies paying primary care practitioners more for working in the same way. And so the Commission is avoiding use of that term, and is focusing on key characteristics of a modernized high quality primary care model:

- Patient and family centered
- Stable trusting relationship between care team and patient/family that continues over time
- Comprehensive, coordinated, and accessible care provided by integrated multidisciplinary teams
- Focus on health and wellness (physical, behavioral, social) rather than disease care

Alaskans need to be empowered to partner with their health care providers so they can be better stewards of their own health. This will require innovation in patient care at the primary care level.

Recommendation A2a: The Commission recommends that the Governor and Alaska Legislature aggressively pursue development of patient-centric care models through payment reform, removal of statutory and regulatory barriers, and implementation of pilot projects. Development of pilot projects should include definition of the patient-centric model, identification of performance standards and measures, and payment models that are outcome-based.

B. Statewide Leadership

1. Response to National Health Care Reform

Finding B1a: National health care reform proposals under consideration by Congress will have a significant impact on Alaska's state and local governments, health care system, business community, citizens, and families.

Reform of the nation's health care system has been a top priority during 2009. The issue has been politically charged, with proponents stressing the importance of the increased access to health care coverage that would be afforded millions of Americans under the proposed reforms, and opponents decrying the increased national debt burden and inadequate attention to control of health care costs. At the core of the debate is a strong ideological divide over the appropriate role of government in health care.

Emotions are strong on both sides of the argument. The town hall meetings held by Alaska's U.S. Senators this summer and fall drew thousands of Alaskans – many with stories of desperation related to inadequate access to health care, and many others expressing fear and frustration over federal intrusion into what they believe is a personal matter. There's considerable misinformation and rhetoric from either side, with heavy use of popular media to attempt to sway public opinion. Over \$150 million has been spent on TV ads alone this year by both sides.

Unfortunately there is no one entity in Alaska responsible for objectively analyzing the potential impacts of various reform proposals on our state government, health care system, businesses, and citizens. The federal legislation currently under consideration will dramatically change the federal structure within which state health systems operate, and state governments will play a significant role in implementation of federal health care reforms if and when they pass. New responsibilities states can expect to inherit under federal reforms will be both financial and administrative.

State government will incur additional financial responsibilities if Medicaid expansion is mandated. The Alaska Department of Health & Social Services (DHSS) estimates the fiscal impact of the proposed Medicaid expansion at nearly \$450 million over a five year period. One considerable new administrative responsibility that appears likely is creation and operation of a state health insurance exchange. While many of the proposed changes are not slated to take effect until 2013 or 2014, a lot of work will be required during the interim to plan for implementation of new programs and systems.

Except for the ability to evaluate impacts of changes to Medicaid specifically, the state does not have capacity to analyze the effects of federal reform on our state. Regardless of whether federal reforms pass this year or not, the crisis in the nation's health care system will continue to drive federal proposals that will require analysis that could be provided by some form of a state health policy infrastructure.

Recommendation B1a: The Commission recommends that the Governor and Alaska Legislature invest in the state health policy infrastructure required to study, understand, and make recommendations to respond to the implications of national health care reform for Alaska.

2. Permanent State Health Planning Board

Finding B2a: The systems and policies for financing and delivering health care in Alaska are fragmented and complex, and the scope of the challenges involved in improving these systems is huge. Past efforts to improve health care in Alaska have been ad hoc in nature. A planning process to achieve health care system improvement must be sustained over time in order to ensure accountability for the achievement of meaningful change.

Over the two decades preceding the creation of the Commission, four groups have been formally convened to address the problems of access to and cost of health care. All of these entities were ad-hoc in nature with a limited lifespan, meeting over periods ranging from 6 months to 2 years. They all had limited time to study the issues and develop recommendations, and in the end no real authority or accountability for following through on their findings and proposed strategies.

In 1987 Governor Cowper created The Governor's Interim Commission on the Status of Health Care and the Health Care Industry in Alaska ("The Governor's Interim Health Care Commission" for short) under Administrative Order (A.O.) #100. The Governor's Interim Health Care Commission had 11 members and four staff, and held eight 2 to 3-day meetings over the course of nine months. The report they published in 1988 made 39 recommendations to the Governor and Alaska Legislature addressing insurance coverage expansion, access to long term care, cost controls, and state health planning.

In 1991 the Alaska Legislature created the Health Resources & Access Task Force. The 17-member HRATF held 14 monthly two-day meetings, producing a report calling for the creation of a single-payer system for Alaska. While their primary recommendation was never adopted, creation of a high-risk pool for Alaskans with pre-existing conditions who cannot otherwise obtain health insurance coverage – the Alaska Comprehensive Health Insurance Association (ACHIA) – followed from their work.

Ten years following the publication of HRATF's final report in 1993, a private group – Commonwealth North – created the Alaska Health Care Roundtable to improve access, quality and cost of health care in Alaska. The Roundtable had a 17-member executive committee representing public and private sector interests. They produced a report in 2005 focused on the improvement of primary care.

In 2007 Governor Palin created the Alaska Health Care Strategies Planning Council under A.O. #232. The Planning Council consisted of 17 members who met for 6 months, during which time they identified a series of goals and strategies for improving the health of and health care for Alaskans.

The two most recent groups recognized two problems with their ad hoc nature – 1) one year isn't long enough to get a handle on the complexity of the problems in our health care system and come up with a comprehensive approach to solutions; and 2) there was no way to ensure accountability for their efforts. Both groups recommended that a permanent health planning and policy body be established in statute to provide sufficient time for gathering information, studying the issues, and developing comprehensive solutions. The Commission concurred with their recommendation.

Recommendation B2a: The Commission recommends that the Alaska Legislature establish an Alaska Health Care Commission in statute, similar in size to the Commission established under Administrative Order #246, to provide a focal point for sustained and comprehensive planning and policy recommendations for health care delivery and financing reform, and to ensure transparency and accountability for the public in the process.

C. Health Workforce Development

1. General Workforce Development Findings & Recommendations

Finding C1a: Health care in Alaska is big business and represents a significant employment sector.

Finding C1b: Access to health care requires a sufficient supply and adequate distribution of health care providers. Successful achievement of the goal of expanding access to health care in Alaska is directly tied to health care workforce capacity and capability.

Finding C1c: Health care worker shortages in Alaska are widespread and costly.

Finding C1d: A comprehensive approach to health care workforce training includes strategies at every point on the training continuum (K12, post-secondary, graduate and post-graduate, on-the-job, continuing medical education).

Finding C1e: Alaskans have been particularly innovative in meeting their health care workforce needs.

Finding C1f: Many organizations, both public and private, have a stake in health care workforce development, and there are numerous programs and groups currently involved in health care workforce planning. There is evidence of collaboration in these planning and development efforts; however, not all related activities are fully coordinated.

Health care in Alaska is a six billion dollar industry, representing 16% of the state's gross domestic product.^{xxv} It is also one of the biggest players in Alaska's labor market. With eight percent of the state's wage and salary jobs it leads all other industries except government, trade, and hospitality. Alaska's top employer is a health care provider – Providence Health & Services – employing over 4,000 people in 2008. Five of the top 20 employers in the state are health care organizations.^{xxvi}

Health care is not only one of the largest employment sectors in Alaska, it is consistently the fastest growing. Between 2000 and 2007 the number of wage and salary jobs in the health care industry grew 40%, from 20,700 to 29,000, compared to just 13% for all other industries. Health care employment grew faster in Alaska than the U.S. overall, with 40% job growth compared to 19% in the U.S. from 2000 to 2007. Health care employment growth has outpaced Alaska's population growth rate by five times.^{xxvii} The Alaska Department of Labor & Workforce Development projects the health care industry will continue to expand in the next decade, increasing by 25% between 2006 and 2016 and adding twice as many jobs as any other industry.^{xxviii}

One other aspect of the health care industry important to the overall economy of the state is that there are health care jobs in virtually every community. There are at minimum paraprofessional health care providers in even the smallest villages. 23% of Alaska's health care workers are employed in rural areas.^{xxix}

A functional health care system cannot be sustained without an adequate workforce. One key measure of access to health care is the supply of health care providers as a ratio to population. But having an adequate workforce goes beyond simple measures of supply. The workforce must be competent to provide high quality care that is culturally appropriate, must be literate in the use of health information

technologies, and must be able to adapt to new patient care settings and models that provide integrated, interdisciplinary, patient-centered care. Having an adequate statewide supply of well trained providers is not enough either – workforce distribution is an important factor as well.

Meeting the demand of Alaska's health care industry for an increasing number of health care workers presents a significant challenge. The supply of new workers produced by Alaska's training and education system plus those imported from outside Alaska cannot keep up. Alaskan health care employers had an estimated 3,529 number of vacant positions in 2007. Primary care occupations (family physicians, general internists, nurse practitioners, physician's assistants, and community health aide/practitioners) are experiencing vacancy rates of 15% - 20%. 19% of psychiatrist positions were vacant in 2007. Other occupations for which shortages exist include pharmacists (23.7% vacancy rate), and therapists (physical, occupational, speech, and speech-language pathologists with vacancy rates ranging from 15.6 – 29.3%). Key nursing specialties also experience high vacancies, with a 23.4% vacancy rate for nurse case managers. Behavioral health occupations had a relatively lower vacancy rate at 13.9%, but made up the highest proportion of vacancies – with an estimated 1,033 vacant positions. In a 2007 survey of health care organizations conducted by the Alaska Center for Rural Health (and from which the above noted estimates are derived), 54% of respondents cited "inadequate pool of qualified workers" as the top reason for vacancies.^{xxx}

The costs associated with these vacancies are high. 80 Alaska health care organizations surveyed in 2005 reported spending \$24 million in the preceding year for vacancies in 12 key health occupations - \$11 million on recruitment costs plus \$13 million on itinerant temporary workers. They identified three main barriers to recruitment – locating qualified candidates, Alaska's geographic isolation and harsh climate, and the need to satisfy the lifestyle and employment requirements of spouses and other family members.^{xxxi}

The approach to replenishing the health care workforce as the numbers of jobs grow and workers are lost through retirement and attrition includes a combination of "growing our own" strategies – providing training and education in and for Alaska, and importing workers from outside Alaska through a variety of recruitment strategies. There is a history of collaboration in Alaska as the health care industry has partnered with the University system and state and federal funding agencies in the development of health care education and training programs in order to improve our ability to "grow our own."

The University of Alaska (UA), the Alaska Legislature and Alaska's health care industry have demonstrated a commitment to increasing in-state health career training and education opportunities in recent years. The number of students in UA health programs increased 68% between 2001 and 2008. In the fall of 2007 UA had 3,501 students enrolled in health programs. UA now has 80 health programs statewide in various fields including allied and behavioral health, emergency services, health management, medical office management, nursing, primary care, public health, and therapies. In partnership with the health care industry and with financial support from health care organizations and the state Legislature, the UA has recently added or expanded a number of programs, including:

- Doubling the nursing program to more than 220 AAS and BS admissions each year, and providing AAS nursing programs in 12 communities;
- Doubling the number of WWAMI medical school seats from 10 to 20;
- Addition of radiologic technology in six locations;
- Development of cooperative programs with outside universities for occupational, speech and language therapies and audiology;
- Expansion of the distance Master's program in social work;

- Provision of rural allied health training via distance delivery;
- Doubling the Master's of Public Health program to 70 distance students; and,
- Opening the Physician's Assistant program (beginning July 2009).^{xxxii}

Training and education strategies do not begin at the post secondary level however. They include developing the pipeline of potential future Alaskan workers – reaching them early in their K12 education, making sure they have a solid foundation in math and science, and exposing them to potential careers in the health field. One program that helps young people explore health careers is the Area Health Education Center (AHEC). AHECs are federally and state funded programs meant to create formal relationships between university health programs and community partners to support health career education development. Alaska has an AHEC based out of UAA's School of Nursing, administered by the Alaska Center for Rural Health, and serving four regions of the state through partnerships with the Yukon Kuskokwim Health Corporation, Fairbanks Memorial Hospital, the Alaska Family Practice Residency Program, and Southeast Alaska Regional Health Consortium. In addition to encouraging Alaska's youth to pursue health careers, the AHEC facilitates clinical rotation opportunities and continuing education for health professionals in underserved areas. In addition to the AHEC program, Alaska's WWAMI program and also the Alaska Native Tribal Health Consortium administer a number of health career development programs.

Training and education strategies do not end at the post-secondary level either. They also include post-graduate programs such as graduate medical education (GME – residency programs for medical school graduates) and also non-physician programs such as clinical internships for Ph.D. psychologists. Alaska currently has one GME program, the Alaska Family Medicine Residency Program, and groups are in various stages of planning residency programs for pediatrics, psychiatry and internal medicine. Alaska lacks an internship for our Ph.D. doctoral students in psychology.

One other approach to addressing health care workforce shortages that must be noted – one for which Alaska is a proven leader – is innovation in the development of new types of workers and in the utilization of existing provider types. The extreme health care delivery challenges posed by the remoteness and isolation of many of Alaska's Bush communities led to a unique workforce innovation in the middle of the past century that has become a model for other countries with similar challenges – the Community Health Aide/Practitioner. Alaska's tribal health system has used that model to address behavioral health and oral health needs in more recent years, with the development of the Behavioral Health Aide and the Dental Health Aide Therapist Programs. Another innovation is Alaska's use of mid-level practitioners – nurse practitioners and physician's assistants – who have an expanded scope of practice to allow more independent practice by these providers than in many other states. Mid-level practitioners have played an important role in meeting the primary care needs of rural communities not large enough to support a physician practice in Alaska since the 1970s, and play an important role today in urban Alaska as well.

There are a number of collaborative health care workforce planning and development efforts currently underway. Following are some key examples:

- The Alaska Health Care Workforce Coalition (AHCWC) represents a large industry-led partnership that includes not only representatives of health care provider organizations, but also the three state government agencies that play an important role in health care workforce development – Health & Social Services, Education & Early Development, and Labor & Workforce Development, as well as K12 school districts, and the University of Alaska. This

Coalition is in the process of developing a statewide strategic health care workforce plan for Alaska under the auspices of the Alaska Workforce Investment Board (AWIB). A draft of this plan is currently being circulated for public comment, and will be finalized and submitted to the AWIB for endorsement in February 2010.

- The Alaska Diversified Economic Planning Team, established under Administrative Order #249 by Governor Palin, is in the process of developing a statewide strategic comprehensive economic development plan for the state (the "Legacy Plan"). This team has 16 different workgroups currently in the process of addressing various aspects of economic development. One of the workgroups is addressing health care, as it is not only a major employer and driver of Alaska's economic engine; it is also an important support industry for other sectors of the economy. The Legacy Plan Health Care Workgroup, scheduled to produce a report in 2010, is primarily focusing on health workforce issues.
- Last year the Department of Health & Social Services (DHSS) established a position housed at UAF in the Office of the Associate Vice President for Health Programs and supported with funding from the Alaska Mental Health Trust Authority (AMHTA) charged with the responsibility for coordinating the numerous projects under AMHTA's Workforce Development Initiative with DHSS and UA behavioral health workforce projects.
- The Trust Training Cooperative, housed in the University of Alaska Anchorage (UAA) College of Health and Social Welfare's Center for Human Development, includes numerous partners focused on improving training coordination and availability for smaller and rural organizations servicing AMHTA beneficiaries. The Cooperative recently completed a behavioral health training needs assessment.

In addition to these various partnerships, coalitions and workgroups, there are a few entities that contribute routinely to research and analysis of Alaska's health care workforce.

- The Research and Analysis Section in the Alaska Department of Labor & Workforce Development;
- The Section of Health Planning and Systems Development in the Division of Health Care Services, Alaska Department of Health & Social Services; and
- The Alaska Center for Rural Health housed at UAA.

These examples demonstrate that many private and public entities are invested in health care workforce development, but there is no one entity responsible for coordination of all these activities. A single organization charged with coordination of the many health workforce development activities in the state, and designated to provide the organizational home to support implementation of the statewide strategic plan currently under development by the AHCWC, is needed. This would help minimize the possibility that efforts might be duplicated and wasted, or that gaps in important aspects of workforce development go unaddressed. The designated entity could ensure that a comprehensive approach to meeting Alaska's health care workforce needs is taken, including strategies to address:

- On-going assessment of Alaska's health care workforce size, composition and distribution
- Workforce innovations required for responding to transformation in patient care models
- Training needs along the continuum of K12 education through graduate medical education and including on-the-job training
- Improved recruitment and retention of health care workers
- Sustainability of the health care workforce planning, development and support infrastructure.

Recommendation C1a: The Commission recommends that the Governor and Alaska Legislature maintain health care workforce development as a priority on Alaska's health care reform and economic development agendas.

Recommendation C1b: The Commission recommends that the Governor and Alaska Legislature explore strategies for strengthening the pipeline of potential future Alaska health care workers.

Recommendation C1c: The Commission recommends that the Governor and Alaska Legislature explore strategies for ensuring Alaska's health care workforce continues to be innovative and adaptive, and that it is responsive to emerging patient care models.

Recommendation C1d: The Commission recommends that the Governor designate a single entity with the responsibility for coordinating all health care workforce development planning activities in and for Alaska. Coordination and collaboration of funders, policymakers and stakeholders in workforce planning and development efforts should be encouraged to the greatest extent possible.

Recommendation C1e: The Commission recommends that the 2010 Alaska Health Care Commission continue studying health care workforce needs in coordination with other organizations and coalitions addressing this issue, and identify recommendations for additional improvements.

2. Physician Shortage

Finding C2a: The United States is facing a shortage of physicians as this provider population ages and enters retirement and the production is not expected to keep up with demand. As the physician shortage increases in the U.S. the competition for recruiting physicians to Alaska will become increasingly difficult.

Finding C2b: Alaska has a shortage of primary care physicians⁴.

Finding C2c: New physicians face disincentives to entering primary care specialties.

Finding C2d: Providers stay to practice where they train.

Finding C2e: Mid-level medical practitioners (Nurse Practitioners and Physician's Assistants) and medical support staff (nurses, medical assistants, care coordinators, etc.) are essential occupations for addressing primary care physician shortages.

There are many professions that make up the health care workforce and all are vital to a functional health care delivery system. The Commission chose to focus on the physician workforce in their first year, in part because the one specific health care delivery challenge they chose to study this year is the problem of Medicare access to primary care doctors. For their analysis of the physician workforce the Commission benefited from a recent study by the Alaska Physician Supply Task Force completed in 2006.^{xxxiii} The Task Force was commissioned by the President of the University of Alaska and the

⁴ The Commission includes both osteopathic as well as allopathic medical doctors in their definition of physician. The Commission's definition of primary care physician is slightly different from most standard definitions – family practitioners, pediatricians, and general internists are included, but also psychiatrists, and Ob-Gyns are excluded.

Commissioner of the Department of Health & Social Services to address questions regarding current and future need for physicians in Alaska, and to consider current and potential strategies for meeting estimated physician need.

The United States is experiencing a shortage of physicians which is expected to worsen as the baby boomer cohort of doctors enter retirement, the nation's population ages and requires more intensive medical services, and programs to educate new physicians have insufficient capacity to keep up with demand. A deficit of 96,000 to 200,000 physicians is projected nationwide by 2020.^{xxxiv} In 2006 the Association of American Medical Colleges recommended the number of medical school slots in the country be increased by 30% by the year 2020. As the competition between states increases for a decreasing supply of physicians, it has become increasingly difficult to recruit out-of-state doctors to move to Alaska.^{xxxv}

The Physician Supply Task Force determined that Alaska has a shortage of physicians that is expected to worsen over the next 20 years. They estimated that Alaska should have 375 more physicians today, based on an assumption that Alaska should have 110% of the current national average physician-to-population ratio. The ratio of physicians to population in Alaska is 2.05 doctors per 1000 population compared to 2.38 doctors per 1000 population nationwide. Their recommendation was to increase the number of additional physicians practicing in Alaska each year from the current net average annual increase of 38 (78 new minus 40 lost to retirement and attrition) by more than 50%, to 59 net new physicians per year.

The Commission was impressed by the thorough and professional analysis conducted by the Task Force, but challenged a couple of the assumptions they used to derive estimates of current and future shortages in Alaska. One assumption the Task Force made was that the national average physician to population ratio is representative of the level of need. Another was that Alaska should have 10% more than the national average because of the structural inefficiencies in our state's health care system, and because of the additional administrative and supervisory responsibilities associated with support of paraprofessionals (Community Health Aides/Practitioners) and mid-level practitioners. The Commission felt that this assumption did not account for the fact that these other provider types relieve the actual direct patient care burden for those physicians, nor did it account for the expanded scope of practice of mid-level practitioners in Alaska that allows more independent practice on their part.

Because of questions regarding some of the Task Force's assumptions, the Commission was not prepared to agree at this time that Alaska faces a crisis in total physician supply, but conceded there is evidence pointing to a shortage of primary care physicians. The Alaska Center for Rural Health's 2007 Alaska Health Workforce Vacancy Study estimated a 20% statewide vacancy rate for general internists, a 19% vacancy rate for psychiatrists, and a 15.8% vacancy rate for family physicians. The problem Alaska's seniors are experiencing finding a primary care physician who will accept new Medicare patients is another indicator of this problem. These signs coupled with the Commission's strategic focus on developing and strengthening new primary care patient care models led to a determination that Alaska is experiencing a shortage of primary care physicians, and a recommendation that the state's limited public resources spent on physician supply development should be focused on increasing the supply of primary care physicians specifically.

A consideration of strategies to increase the supply of primary care physicians requires an understanding of the disincentives new medical school graduates face to entering primary care specialties. According to the Association of American Medical Colleges, the average educational debt of

indebted graduates of the class of 2008 was \$154,607, an increase of 11% over the previous year. 87% of graduating medical students carry outstanding loans, and 79% of graduating medical students have debt of at least \$100,000.^{xxxvi} The high level of debt most new physicians have to bear poses a significant disincentive to choosing to enter a primary care specialty, as these are the lowest paid fields. Other disincentives beyond relatively low pay exacerbated by high debt burden include the practice environments that tend to require more work hours, more on-call time, and a higher administrative burden for generalists, and also the higher prestige that is often associated with practicing as a specialist as opposed to a generalist. A combination of strategies for improving education, recruitment, and supporting innovative practice models is required to address the need for an increased supply of primary care physicians.^{xxxvii}

Alaska is one of just 6 states that do not have their own medical school. Instead, Alaska participates in a collaborative medical education program, WWAMI (Washington, Wyoming, Alaska, Montana, and Idaho), that provides a medical school opportunity to rural states in the northwest. Instead of paying to support an in-state medical school, the Alaska Legislature appropriates funds to pay the University of Washington for the government subsidy portion of the WWAMI medical school, which is approximately \$50,000 per student per year. In addition to the government subsidy, Alaska WWAMI students pay tuition of approximately \$20,000 per year (equivalent to Washington in-state tuition for UW medical students).

The number of medical student seats Alaska supports in WWAMI is set in state law (AS 14.42.033). Alaska supported 10 seats since the beginning of the program in 1971, but the legislature doubled support to 20 seats beginning with the 2007 school year. Even after this 2-fold increase, Alaska has less than half the national average medical school capacity. The U.S. average number of medical school seats to population is 26.6 per 100,000, compared to 11.9 for Alaska.^{xxxviii} The 30-member nation OECD average is 39.6/100,000.^{xxxix} The Alaska Physician Supply Task Force recommended that Alaska expand participation in WWAMI to 30 and then eventually 50 seats.

The rate of return of Alaska WWAMI students to medical practice in Alaska is 47%, compared to the national average for all U.S. public medical schools which is 39%. Alaska medical students who participated in WICHE (Alaska's participation in WICHE medical school programs ended in 1995) had an 18% return rate. The actual return on investment for Alaska when the rate of return of all WWAMI students (including those entering Wyoming, Washington, Montana, or Idaho's program) to medical practice in Alaska is 88% of the number of seats Alaska has subsidized.^{xl} As far as quality, the U.S. News & World Report ranked WWAMI as the #1 medical school for primary care in 2009 for the 15th consecutive year, and also #1 for both rural medicine and for family medicine for the 17th consecutive year.^{xli}

The physician training pipeline ends with graduate medical education. Following completion of medical school, graduates have to complete a residency program in order to be licensed and practice in the United States. Residency programs vary in length. A family medicine residency is three years long. According to national studies physicians tend to stay and enter practice in the community where they complete their final residency training. Alaska was the last state in the nation to establish an in-state residency program, but since 1997 has had the Alaska Family Medicine Residency Program (AFMRP). The program expanded capacity from eight to 12 residency slots a few years ago. In the past 12 years AFMRP has graduated 75 family practice physicians. Of those 75 graduates, 80% have stayed to practice in Alaska, and over half of those who have stayed are practicing in rural Alaska. The AFMRP was designed to train physicians for practice in rural Alaska, so it is achieving its original goal.^{xlii}

A number of other residency programs are being considered for Alaska and are at various stages in the planning process. A pediatric residency program is being planned by a collaborative group including Providence, the Alaska Native Medical Center, and a number of private providers. This program would be a branch residency program of the UW Children's Hospital Pediatric Residency Program, with residents practicing in Alaska for four months out of each of the three years in the program. A psychiatric residency program planning process is underway with financial support from the Alaska Mental Health Trust Authority. This program would also be a branch program of UW, which has already developed a similar branch model in Spokane and Boise (these two programs have been successful in terms of retaining residency graduates to practice in their communities). Psychiatric residencies are four years in length, and the Alaska branch program would have the residents spending their first two years in Seattle, and their last two years in Alaska. One other residency program under consideration is for general internal medicine, but an organized planning effort has not quite coalesced at this point due to lack of financial support and leadership.

One barrier to development of residency programs in Alaska is funding. Most residency programs receive a significant portion of their operational funding from Medicare, which since its inception in 1965 considered educational activities in teaching hospitals a reimbursable expense. Because of the substantial growth in costs associated with support of graduate medical education (GME) – which in 2007 cost Medicare \$8.8 billion – Congress imposed a cap in the Balanced Budget Act of 1997 on the number of residency positions Medicare could support. The cap was set at the number of residents who were training in a given teaching hospital as of December 31, 1996, and did not include provisions for making adjustments or redistribution based on need. This cap effectively locks Alaska out of the Medicare GME funding pool.^{xliii}

Medical education expansion is an important strategy for increasing primary care physician supply, but the time it takes to prepare a college graduate to practice medicine is a minimum of seven years. In addition to increasing capacity for education of new physicians, other strategies to improve recruitment and retention of physicians from outside Alaska must be considered. Support-for-Service programs offer an important recruitment and retention tool for states. These programs provide current or future health practitioners with educational scholarships, educational loans, repayment of educational loans, or direct monetary incentives in return for a contractual obligation with the practitioner to serve a period of service in a needy area.

Loan repayment and financial incentive programs are the most popular form of support-for-service programs, as studies document service obligations established at the beginning of a practitioner's educational process (through a scholarship or loan) are less effective in terms of achieving the desired recruitment outcome as are loan repayment and financial incentive programs. Another benefit of loan repayment and financial incentive programs is that the return is immediate. One study documented a service completion rate of 94% and 93% respectively for loan repayment and financial incentive programs, compared to 63% and 41% respectively for scholarship and loan with service option programs.^{xliv}

One last strategy the Commission considered for addressing the shortage of primary care physicians was the use of mid-level practitioners – physician's assistants and nurse practitioners – to help meet Alaska's primary care need. The recent support by the Alaska Legislature for establishing a PA training program at UAA is a significant step, but opportunities for expanding the use of "physician extender" occupations should be further explored.

Recommendation C2a: The Commission recommends that the Governor and Alaska Legislature target the state's limited financial resources invested in physician workforce development to strengthening the supply of primary care physicians.

Recommendation C2b: The Commission recommends that the Governor and Alaska Legislature support development and maintenance of an educational loan repayment and direct financial incentive program in support of recruitment and retention of primary care physicians and mid-level practitioners.⁵

Recommendation C2c: The Commission recommends that the Governor and Alaska Legislature support the continued expansion of the WWAMI program. Future expansion should be supported as resources allow.

Recommendation C2d: The Commission recommends that the Governor and Alaska Legislature support graduate medical education for primary care and behavioral medicine. State financial support should continue for on-going operation of the Alaska Family Medicine Residency Program, and should be appropriated for the planning and development of in-state residency programs for pediatrics, psychiatry, and primary care internal medicine.

Recommendation C2e: The Commission recommends that the Governor and Alaska Legislature ask Alaska's congressional delegation to pursue federal policies to address equity in the allocation and distribution of Medicare Graduate Medical Education (GME) residency slots. The exclusion of new programs is not equitable, and there should be heavier weighting for primary care GME and for shortage areas.

Recommendation C2f: The Commission recommends that the Governor and Alaska Legislature explore strategies for improving the primary care delivery model and utilizing "physician extender" occupations as an additional approach to addressing the primary care physician shortage.

⁵ The Commission's recommendation that an educational loan repayment and direct incentive program be established for Alaska to assist with addressing physician shortage specifically is not meant to exclude other provider types for which shortages are documented from such a program.

D. Health Information Technology

1. General HIT Findings & Recommendations

Finding D1a: Development and utilization of electronic information management tools is essential to health care system improvement for the purpose of supporting:

- Increased health care efficiency and effectiveness; and
- Improved clinical quality and patient safety.

Health information technology is a broad concept that encompasses the use of electronic data and communication systems for compiling, maintaining and transmitting health information. The term “health information technology” (HIT) is more commonly used today to refer to electronic health records (EHR), health information exchange (HIE), and related data collection, storage, and management applications. These data and information management applications are dependent on many of the same technologies as telemedicine/telehealth, which is the use of telecommunication technology to provide clinical and other health services when participants are at different locations. For the purposes of this report the Commission includes both EHR/HIE and telemedicine/telehealth under an umbrella definition of HIT.

Broad adoption of interoperable EHR/HIE systems is widely regarded to be an essential element of health reform, necessary to support increased efficiency and effectiveness of health care and also to improve quality and patient safety.^{xlv} Unfortunately the health care industry is far behind other industries, such as banking and commerce, in the adoption of electronic information management tools,^{xlvi} and the United States lags as much as a dozen years behind other industrialized nations in the move from paper to electronic health records.^{xlvii}

Telemedicine/telehealth has been used to improve access to health care in Alaska for decades^{xlviii, xlix}, and continued development, deployment and modernization of technologies supporting distance delivery of care is essential to meeting the Commission’s goals of improved access at a reasonable cost. Alaska is benefiting from early work in telemedicine/telehealth, as collaborative efforts to deploy and support use of telecommunication strategies for expanding access to health care in the state became the catalyst for projects and eventually whole new organizations now devoted to supporting adoption of EHRs and development of a statewide HIE.

The Commission identified HIT – both EHR/HIE and telemedicine/telehealth - as an essential cornerstone of health care delivery system transformation for Alaska because it is required for successful implementation of virtually all potential specific strategies for health care improvement – from cost and quality transparency, to fraud reduction, to supporting evidence-based clinical practice. But it is important to note that HIT is not a magic bullet that will solve all health care system problems – it is a tool – it is not a goal in itself. The Commission also found that, while there is evidence that HIT adoption leads to improved efficiency and quality of health care, there is insufficient research into the question regarding the financial effects.^{i,ii}

Recommendation D1a: The Commission recommends that the Governor and Alaska Legislature take an aggressive approach to supporting adoption, utilization, and potential funding of health information technology, including health information exchange, electronic health records and telemedicine/telehealth that promise to increase efficiency and protect privacy.

2. Health Information Exchange and Electronic Health Records

a) Development and Use of HIE/EHR

Finding D2a: Many providers in Alaska are at the early end of adopting electronic health records. Many still use paper records. Barriers to adoption of electronic health information technologies by Alaska's health care providers include:

- Start-up costs for new systems, including purchase of new hardware and software as well as costs associated with implementing new office procedures, training staff, and transitioning existing records from paper to electronic;
- The multitude of products on the market making evaluation and selection of one system time-consuming and costly for individual providers and small practices;
- Systems that are not user-friendly from the provider's perspective, i.e. are difficult, inflexible and time-consuming to use;
- Costs associated with on-going operation and maintenance; and,
- Antiquated and nonstandard eligibility and claims processing systems.

Finding D2b: Federal policies, such as the national incentive program funded under ARRA and pending Medicare payment penalties, are forcing rapid adoption of electronic health records by providers. Some Alaskan providers feel forced to move forward quickly while being concerned that standards are not yet fully in place and systems may not be ready.

Health care providers in Alaska have begun the transition of their medical record systems from paper to electronic format. A statewide survey conducted in 2009 to determine the current usage of EHRs and interest in their adoption among Alaska physician practices found that, of the 378 physicians and 62 clinic managers responding, 50% reported using an EHR and a third reported using ePrescribing.^{6:lii} Survey respondents who did not use an EHR reported that the initial cost and practice disruption are the major barriers to adoption. Uncertainty about which EHR system to buy was also a significant barrier.

Before continuing it may be helpful to define a few key terms. The federal government, in their work to standardize HIT, has developed a compendium of terms.^{liii} The new standardized definitions include:

- Electronic Health Records (EHRs) - "electronic records of health-related information on an individual that conform to nationally recognized interoperability standards and that can be created, managed and consulted by authorized clinicians and staff across more than one health care organization."
- Electronic Medical Records (EMRs) are distinguished from EHRs as being internal to one health care organization - "electronic records of health related information on an individual that conform to nationally recognized interoperability standards and that can be created, gathered, managed, and consulted by authorized clinicians and staff within one health care organization."
- Personal Health Records (PHRs) are distinguished from EHRs and EMRs as being managed and controlled by the individual patient - "electronic records of health-related information on an individual that conform to nationally recognized interoperability standards and that can be drawn from multiple sources while being managed, shared, and controlled by the individual."
- Health Information Exchange (HIE) is "the electronic movement of health-related information among organizations according to nationally recognized standards."

⁶ The surveyors noted that the percentage of respondents reporting EHR usage could not be ascribed to the total population of Alaska physicians because of the self-selecting nature of the survey methodology.

- Regional Health Information Organization (RHIO) - "a health information organization that brings together health care stakeholders within a defined geographic area and governs health information exchange among them for the purpose of improving health and care in that community."

The federal government is actively driving the health care industry toward broad adoption of HIT. In April 2004 President Bush established the Office of the National Coordinator for Health Information Technology (ONC).^{lv} The ONC is charged with coordinating and promoting the deployment of interoperable electronic health information systems throughout the nation as well as other related health technology initiatives. This agency has been leading national standards development initiatives and administering related grant programs for the past five years.

In 2009 Congress included more than \$20 billion in the American Recovery and Reinvestment Act (ARRA) for the development and adoption of health information technology under the Health Information Technology for Economic and Clinical Health (HITECH) Act. HITECH sets a goal of 2014 to increase dramatically the number of health care providers who have and effectively use EHRs and HIEs. The goal is to be achieved through an array of financial incentives, education, training and state-led actions.

Under HITECH Medicare will begin providing incentive payments of up to \$44,000 for individual providers and \$2 million for hospitals starting in 2011 for "meaningful use of electronic health records." Beginning in 2015 providers not using an EHR will be penalized through reductions to their reimbursement rate. CMS and ONC issued regulations on December 30, 2009 setting standards for the Medicaid and Medicare incentive programs, providing a definition of "meaningful use," and setting standards for certification of EHR technology. Under HITECH state governments also play a lead role in planning and implementation of efforts to establish HIE(s) for their state.^{lv}

The Alaska Legislature passed SB 133 during the 2009 session, creating a statewide health information exchange system for Alaska and directing the Department of Health & Social Services to enter into a contract and to designate a qualified entity in the state to assist in the planning and implementation of the network. The Division of Health Care Services (DHCS) is leading this effort, and expects to award the HIE contract and designate the State HIE Entity this month (Jan 2010). DHCS is also responsible for development of a new Medicaid Management Information System (MMIS), and is working to ensure that the Statewide HIE Plan is closely coordinated with the State Medicaid HIT plan.^{lvi}

Two non-governmental organizations active in the advancement of EHR/HIE in Alaska today are spin-offs from the Alaska Telehealth Advisory Council (ATAC), which was created in 1999 with federal funds earmarked to foster telemedicine in Alaska. ATAC's membership included DHSS, hospitals, tribal health organizations, professional provider groups, the insurance industry, the telecommunications industry, and the University of Alaska. The ATAC sunset in 2007, but while the group was active they developed many initiatives that are continuing to support deployment and use of telehealth applications and services. In 2005 the ATAC fostered the creation of the Alaska EHR Alliance (AEHRA), formed to support implementation of EHRs in physician practices, and ChartLink, formed to support development of a statewide HIE. Chartlink was incorporated as a 501(c)(3) in 2008 as the Alaska eHealth Network (AeHN). AEHRA conducted the EHR physician survey earlier in 2009, and is now in the process of selecting two recommended EHR vendors for Alaska's providers based on the results of that survey, and will negotiate reduced prices for Alaska's providers with those vendors.

EHR/HIE-related health information management systems currently in use by state government in Alaska include:

- **MMIS (Medicaid Management Information System):** an electronic information management system the federal government requires all states maintain to process Medicaid claims and store and retrieve data needed to manage and audit the Medicaid program. Alaska's MMIS was implemented more than 20 years ago in 1987, and now new technology and federal requirements dictate the construction of a new system. The process to design, build and operate Alaska's new MMIS began in 2006 with release by DHCS of a Request for Proposal (RFP), and the resulting contract was awarded in 2007 to Affiliated Computer Services, Inc. (ACS). The new system currently under development is known as the Alaska Medicaid Health Enterprise. It expected to be operational by the fall of 2011.
- **RPMS (Resource and Patient Management System):** an information management system administered by the U.S. Indian Health Service that includes clinical, business practice, and administrative information management applications and is in use in most health care facilities within the IHS delivery system. In addition to a number of organizations within the Alaska Tribal Health System, the Alaska Division of Public Health's Public Health Nursing Section uses RPMS as the EHR/HIE for the state's public health centers.
- **AKAIMS (the Alaska Automated Information Management System):** a state government administered web-based management information system and clinical documentation tool for the state's behavioral health provider grantees. AKAIMS provides an EHR function in addition to supporting state and federal data reporting requirements. Behavioral health providers with their own clinical information systems are able to interface electronically to a data repository to allow compliance with state and federal reporting requirements.
- **Several public health monitoring and population health protection systems:** Disease tracking, biosurveillance and epidemiological investigations, and immunization monitoring are some of the governmental public health functions supported by information management systems. Systems currently in use by the Division of Public Health in DHSS include AK-STARS (infectious disease reporting system and database), VacTRAK (vaccine registry), the Alaska Cancer Registry, the Alaska Birth Defects Registry, and the Alaska Trauma Registry.

Financing currently supporting EHR/HIE development in Alaska includes:

- \$10.4 million awarded by the Federal Communication Commission (FCC) Rural Health Care Pilot Program to the Alaska Native Tribal Health Consortium (on behalf of the private/public partnership now represented by AeHN) at the beginning of 2008 to unify electronic health care networks throughout the state and enable connectivity between rural and urban providers within Alaska and to the Lower 48. The FCC funds are supporting the design and construction of a statewide broadband network to facilitate exchange of health information, and to support telemedicine services, video conferencing, and voice-over-internet applications. The Alaska Legislature provided \$500,000 in FY 09 through a capital appropriation to provide required matching funds in support of this project, and the Alaska Federal Health Care Partnership provided an additional \$500,000 in matching funds.

- \$300,000 from ONC to assess Alaska privacy and security laws, and subsequently an additional \$300,000 to develop policies and procedures for the secure and private exchange of health information. Alaska is one of the eight original member states in the Health Information Security and Privacy Collaboration (HISPC), which has been working together to develop inter-organizational privacy agreements. See the Privacy and Security section below for more information on this project.
- \$2.5 million in capital funding was appropriated by the Alaska Legislature for the Alaska Primary Care Association in FY 2009 to support development of the Alaska Community Health Integrated Network, a Wide Area Network for Community Health Centers in Alaska to support development and sharing of electronic health records, practice management software, videoconferencing and telehealth applications.

Recommendation D2a: The Commission recommends that the Governor direct the Department of Health & Social Services to explore options for assisting providers (particularly smaller primary care practices and individual primary care providers) with adoption of electronic health record systems.

Recommendation D2b: The Commission recommends that the Governor ensure Alaska's statewide health information exchange supports providers who have not yet adopted their own electronic health record system by facilitating identification and purchase of systems that are interoperable with the state exchange.

Recommendation D2c: The Commission recommends that the Governor ensure that HIT is utilized to protect the public's health. Alaska's health information exchange should connect with electronic public health reporting systems to enable real-time disease reporting and rapid identification of public health threats.

Recommendation D2d: The Commission recommends that the Governor ensure that data available through the statewide health information exchange is utilized to identify opportunities for administrative efficiencies, coordination and optimization of care, and health care quality and safety improvement.

Recommendation D2e: The Commission recommends that the 2010 Alaska Health Care Commission track the development of the Alaska Statewide Health Information Exchange, Alaska's new Medicaid Management Information System (MMIS), and the use of ARRA funds for electronic health record deployment; and the Commission should continue to identify current issues, policy choices and recommendations based on these developments.

b) Privacy and Security

Finding D2c: Alaskans are concerned about the privacy of their personal health information. Progress has been made by the federal government to develop national health information security and privacy protection standards, and Alaskans have participated in these efforts, but more work remains to be done.

For EHR and HIE efforts to be successful consumers and health care providers must trust their information will be kept confidential and secure. An appropriate balance must be struck between protection of individual privacy violations and breaches in system security, and the need to permit appropriate access to information. Policies that are too strict will decrease the value of electronic availability and exchange of information. Policies that are too lax will erode public trust and lead providers to implement restrictions to protect their patients.

Alaska is an original member state of the national Health Information Security and Privacy Collaboration (HISPC), a multi-state collaborative funded by the U.S. Department of Health & Human Services in 2006 to address the privacy and security challenges presented by electronic health information exchange. Governor Murkowski initially designated the ATAC to be the state's HISPC representative, but a new designee has not been officially named by a Governor since the ATAC sunset in 2007. Alaska ChartLink now incorporated as the Alaska eHealth Network has been filling the role as Alaska's representative to HISPC, providing a coordinated approach to addressing privacy and security issues for Alaska.

In Phase I of the HISPC Privacy and Security Solutions project an assessment of the current privacy and security landscape in Alaska was completed. The assessment included an intensive investigation of current community practices and the legal environment. AeHN facilitated discussions with 250 Alaskan providers and consumers from across the state to identify security and privacy issues related to data sharing, and provided that information to the federal team working on national policy. Since that time AeHN participated representing Alaska on a multi-state collaborative that developed a set of standardized data sharing agreements and policies for the exchange of protected health information between private health entities, and between public health agencies. Other standardized policies and procedures developed under Phase III of HISPC include, a Privacy and Confidentiality Policy, a Policy and Procedure for Addressing Breaches of Confidentiality, an Identification and Authorization Policy, a Provider Participation Agreement, and a Patient Participation Agreement.

Federal efforts to protect privacy and security of electronic health information continues with the implementation of the HITECH Act, which includes a focus on privacy and security and expands current federal privacy and security protections already in place under HIPAA (the Health Insurance Portability and Accountability Act). At the state level, SB 133 requires the HIE State Designated Entity to adopt an opt-out provision which will allow individual Alaskans to request removal from the data sharing system. The next step in HIE development for Alaska may include an update of medical records laws to support privacy and security in the emerging electronic environment.

Recommendation D2f: The Commission recommends that the Governor designate a statewide entity with the responsibility for ensuring broad implementation of health information security and privacy protections. The entity should participate in on-going efforts at the national level to identify security and privacy standards, should oversee application of those standards to Alaska's statewide health information exchange, and should identify a process for Alaskan patients to opt out of participation in the health information exchange.

3. Telehealth/Telemedicine

Finding D3a: Alaskans have been particularly innovative in the use of telecommunications technologies as one way to bridge our vast geography and address health care access challenges.

Finding D3b: Barriers to adoption and use of telemedicine include:⁷

- Insufficient telecommunications connectivity in some rural Alaskan communities;
- Inadequate access to training for providers and their staff;
- Medical licensure restrictions across state borders;
- Misalignment of payment systems between costs and benefits.

Telemedicine – literally “medicine across distance” - is the use of medical information exchanged from one site to another via electronic communications to improve patients’ health status. The term “telehealth” encompasses a broader definition of remote health care delivery that is not limited to clinical services.^{vi} Alaska has been a leader in the development and utilization of telehealth applications as a mechanism for improving access to care for nearly a century - from a 674 mile dogsled relay to transport desperately needed diphtheria anti-toxin to the residents of Nome in the winter of 1925⁸ - to CB radio communication between doctors in regional hospitals and Community Health Aides in village clinics during the 1960s – to remote monitoring of ICU patients in rural community hospitals by critical care specialists in urban medical centers today.

The Alaska Federal Health Care Partnership (AFHCP) was founded in 1995 to support collaborative efforts among federal health care providers, including shared training opportunities, service contracts, and technology. The Partnership includes the Department of Defense (Air Force 3rd Medical Group, Bassett Army Hospital), Veteran’s Administration (Alaska Regional Office), US Coast Guard, Indian Health Service, and tribal health organizations. The Partnership has launched a number of telehealth initiatives over the years for beneficiaries of their federal programs, including a home telehealth monitoring and care coordination program, a teleradiology project, and a telebehavioral health initiative.

The AFHCP created the Alaska Federal Health Care Access Network (AFHCAN) in 1998. AFHCAN is federally funded and operated by the Alaska Native Tribal Health Consortium. It provides telehealth solutions to 248 sites throughout Alaska, including tribal health organizations, Army, Air Force, and Coast Guard sites, and state public health nursing centers.^{lviii} They also now serve customers in other states and other countries, including Greenland and Panama. AFHCAN started out with the deployment of store-and-forward applications due to limited availability of broadband connectivity in the state, but has expanded to add video conferencing applications with the increasing access to high-speed lines with greater data capacity.

Other telemedicine programs actively involved in improving access to health care in the state today include the Alaska Rural Telehealth Network, Providence’s REACH system (for remote evaluation of stroke) and eICU, the Alaska Psychiatric Institute’s Telebehavioral Health Care Services Program, and the Southeast Alaska Regional Health Consortium Telebehavioral Health Program.

⁷ The order of the bullets in this finding is not meant to imply priority order of significance.

⁸ Coordination of the relay effort was achieved through communications by Morse code transmitted over telegraph lines.

An essential telecommunication service necessary for meeting today's telehealth and also HIE/EHR needs is broadband - advanced communications systems capable of providing high-speed transmission of services such as data, voice, and video over the Internet and other networks.^{ix} There are 82 communities in Alaska without broadband service, and an additional 31 communities with unknown Internet connectivity levels.^{ix} There are currently a number of federally funded programs supporting expansion and subsidies for broadband service in the state, including:

- The Rural Health Care Program of the FCC's Universal Services Fund (USF), administered by the Universal Service Administration Company, which provides health facilities in rural communities with affordable telecommunication services by subsidizing telecom and Internet access charges related to the use of telemedicine and telehealth. The Health Planning and Systems Development Section in the Division of Health Care Services provides technical assistance to rural health clinics across the state to help with the annual USF application process. 240 health clinics in rural Alaska submitted applications to this program in FY 2009.^{ix}
- The Regulatory Commission of Alaska and the Alaska Department of Commerce, Community and Economic Development have provided federally funded grants for a number of years (since 2003) to telecommunications carriers and cable operators to provide broadband Internet service in rural Alaskan communities. The Rural Alaska Broadband Internet Access Grant Program provides up to 75% of the funding required to expand broadband service into rural communities, and subsidizes rates for these services so that they are comparable to those paid by residents of Anchorage, Fairbanks and Juneau for a period of at least two years after expansion project completion.^{ix}
- The American Recovery and Reinvestment Act of 2009 included \$7.5 billion to increase broadband access in underserved areas of the country, and also included associated funding to create a nationwide map of broadband availability. The Denali Commission received a federal stimulus grant under this initiative in November 2009 to map broadband access in Alaska down to the census block level. The project will identify availability of wireless, cable, fiber optic and telephone services along with connection speeds, and is expected to be completed by 2012. A number of Alaskan telecommunication companies have already applied for stimulus funds to continue the deployment of broadband to rural Alaska.

Recommendation D3a: The Commission recommends that the Governor and Alaska legislature work with federal and local partners to ensure all Alaskan communities have access to broadband telecommunications infrastructure that provides the connectivity and bandwidth necessary to optimize use of health information technologies.

Recommendation D3b: The Commission recommends that the Governor direct the Alaska Department of Health & Social Services to investigate innovative reimbursement mechanisms for telemedicine-delivered services; test new payment methodologies through Medicaid, and work with other payers to encourage adoption of successful methodologies.

E. Access to Primary Care for Medicare Patients

Finding E(a): Alaska's Medicare-eligible population is growing.

Finding E(b): Medicare patients in some areas of Alaska experience trouble accessing primary care. The communities experiencing the most trouble with access are those with larger populations, notably Anchorage.

Finding E(c): One contributor to the Medicare access problem is an insufficient supply of primary care physicians willing to accept and retain Medicare patients in larger urban centers.

Finding E(d): Health care providers report Medicare's burdensome administrative requirements, onerous audits, and what they find to be insufficient reimbursement rates as the primary reasons for limiting or denying provision of Medicare services.

Finding E(e): Care for Medicare patients is often more complex and time-intensive than for the general patient population.

Finding E(f): Mid-level practitioners are increasingly being used to solve the Medicare access problem.

Finding E(g): Health care providers report Medicare's physician and mid-level practitioner reimbursement schemes are not rational and not reliable.

Finding E(h): Health care providers commonly report that Medicare's audit process designed to weed out fraud and abuse in the system focuses more on identification of billing errors than intentional fraud, incentivizes audit contractors to pursue and penalize providers for unintentional billing errors, and unnecessarily places an onerous administrative and legal burden on providers. The audit process, which appears to physicians to be based on an assumption of guilt, serves as a disincentive for Alaska providers to provide care for Medicare patients.

Background

Medicare is the federal government's health insurance program for the elderly (age 65 and older) and disabled. Created by Congress in 1965, it is partially funded with payroll taxes, and is administered by the Centers for Medicare and Medicaid Services (CMS) in the U.S. Department of Health & Human Services. Medicare benefits include:

- **Part A (Hospital Insurance)**, covering inpatient hospital stays, some care in skilled nursing facilities, and hospice.
- **Part B (Medical Insurance)**, covering medically necessary services not covered under part A, such as outpatient hospital care, physician services, some preventive services, diagnostic tests, and durable medical equipment.
- **Part C (Medicare Advantage)**, an optional fee-for-service plan that provides Part A and Part B benefits through a private health insurance plan.
- **Part D (Medicare Prescription Drug Plan)**, provides prescription drug coverage.

Medicare premiums are highly subsidized by the federal government, and spending for Medicare has grown steadily since its inception with costs doubling every four years between 1966 and 1980. Medicare costs, now at \$495 billion, accounted for 19% of all health care expenditures in the U.S. in 2009. One strategy the federal government implements to control soaring costs is limiting the physician payment rate.

The sustainable growth rate (SGR) formula for Medicare was created by Congress in 1997 to limit Medicare growth. The SGR, which is tied to the GDP, triggers reductions in the Medicare physician payment rate when costs rise too steeply – which has been the case each year since the SGR was created. Congress has not had the political will to enforce the reductions however, and has intervened each year to block them. While the statutory payment reductions have not been enforced, the SGR has had the effect of limiting potential payment rate increases. This strategy has not had the intended effect however, as reduced or limited payment rates are offset by increased utilization and total Medicare costs have continued to rise.

Another variable in Medicare physician rate setting are geographic differentials. Alaska has benefited from successful efforts by our congressional delegation to enact legislative provisions to boost the reimbursement rate for Alaskan physicians by increasing Alaska’s geographic differential. Effective January 2009 Alaska’s Medicare physician reimbursement rate was set permanently in federal law at 29% above the national average.

In 2008 there were 59,435 Alaskan Medicare beneficiaries, approximately 82% of whom were aged 65 or older with the remainder qualifying due to disability. The number of Alaskans aged 65 and older has more than doubled over the past two decades, from 22,095 in 1990 to 49,455 in 2008. That number is projected to nearly triple again by the year 2030 to 134,391.

The Problem

Many Alaskan Medicare beneficiaries, particularly those in more urban communities, report they have trouble finding a physician to take them as a patient. A study conducted by the Institute for Social and Economic Research (ISER) at UAA in 2008 confirmed there are few primary care physicians in Anchorage who will accept new Medicare patients.^{lxiii} The researchers found that only 17% of Anchorage primary care physicians accept new Medicare patients compared to 61% nationally.^{lxiv}

Driving this problem is the growing demand for Medicare services due to 1) the aging of Alaska's population, and 2) the need for increasingly complex care to treat and manage chronic conditions. As noted above, Alaska is experiencing significant growth in the Medicare eligible population that is expected to continue over the next two decades. The growing number of Medicare beneficiaries is compounded by the amount of extra time and effort it takes to treat a typical Medicare patient. One study found that for every 100 Medicare patients a primary care physician treats, that physician potentially has to interact with 99 other physicians in 53 different practices as they work to coordinate treatment of multiple and complicated health problems.^{lxv}

The problem of growing demand is compounded by an inadequate supply of primary care physicians. Physicians report Medicare's low reimbursement rates, about one-third less than what private insurance pays in Alaska, as a primary reason behind decisions to not accept new Medicare patients or opt out of the Medicare system entirely. Other factors playing into these decisions include Medicare's burdensome administrative requirements, and a federal government audit process that is onerous and punitive. If there were more primary care physicians they would be able to spread the Medicare patient load and physician practices might more easily be able to absorb losses from lower reimbursement and increased paperwork.

Potential Solutions

Recognizing that the ability to drive changes in federal policy is limited, the Commission felt the most effective state-based strategy for addressing the Medicare access problem is to increase the supply of primary care providers, following similar recommendations to those specified in Part III.C of this report. The Commission was particularly interested in the opportunity to develop an internal medicine residency program for Alaska. One of the few primary care practices in Anchorage that was accepting new Medicare patients until recently was the Family Medicine Residency Program, but they had to cap the number of seniors they could accept as the elder portion of their patient population had grown to the point that the residents were not able to get the amount of experience with younger populations they needed. An internal medicine residency program would provide a dual benefit by producing more primary care physicians who specialize in treating adults and who are likely to stay in Alaska to practice, and by also creating a new clinical practice that would accept Medicare patients.

The Commission heard from a couple of groups proposing to expand clinical capacity. One group proposed starting a new for-profit primary care practice that would see Medicare patients exclusively, and would be staffed by a physician-led nurse practitioner team. The Commission had reservations regarding the proposed care model, which would limit a patient's ability to be seen for multiple conditions at the same time. The complex care needs of this population are too great and require a high level of coordination. The Commission also felt that a for-profit practice should be able to make the business case to investment partners if the proposal was viable, and that government investment would

not be appropriate. A second group suggested that expansion of the Anchorage Neighborhood Health Center (ANHC) would support the ability to expand the Medicare patient population seen there, but a specific request was not made of the Commission, and the ANHC recently received a sizeable state capital grant (\$10 M) to support the planned expansion. The Commission felt that state government strategies for expanding medical clinic capacity are most appropriately targeted at Federally Qualified Health Centers and Rural Health Clinics – which are non-profit safety net providers such as the ANHC.

The Commission determined that it was also necessary to request assistance again from Alaska's congressional delegation with seeking relief from Medicare's inequitable reimbursement rates, burdensome administrative requirements, and onerous audit conditions. There were questions about how the administrative requirements of Medicare compare to Medicaid and other 3rd party insurance providers, and a suggestion was made to investigate that question in order to support the request.

One new program the Commission considered as a potential solution to the Medicare access problem was PACE (Programs of All-Inclusive Care for the Elderly). PACE is a Medicare and Medicaid program that provides community-based care and services for older adults and people over 55 living with disabilities who would otherwise require nursing home level of care. PACE programs are required to provide a comprehensive set of wrap-around integrated medical and social services managed by an interdisciplinary team of health care professionals. Eligible Alaskans on Medicare choosing to participate in this optional program would be guaranteed access to primary care.

Initially started as a Medicare demonstration project in 1978, PACE proved so successful in improving outcomes for families and patients, health care providers, government and other payers, that it has been replicated in 31 states by 69 PACE organizations that serve nearly 18,000 individuals today. An evaluation by the federal government (then HCFA now CMS) conducted during the 1990s that studied the impacts of PACE on a wide variety of outcomes found that it resulted in long-lasting decreases in nurse visits to the home, inpatient hospital admissions, inpatient hospital days, and nursing home days. In addition, this study found that PACE enrollees lived longer and spent more days in the community than did non-PACE participants in a similar demographic control group.

The estimated number of Alaskans dually-eligible for both Medicare and Medicaid living in the Municipality of Anchorage is 7,539.^{lxvi} An estimated 10% may be eligible to participate in a PACE program. Two Anchorage health care organizations, Providence and Southcentral Foundation, have expressed some interest in potentially developing a PACE program in the community.

States may elect PACE as an optional Medicaid benefit through the Medicaid State Plan Amendment process. Approval of a State Plan Amendment by CMS does not obligate the state to implement a PACE program, but provides the option and positions the department and interested providers to move forward with program development.

Because only the frail elderly and disabled are eligible to participate in PACE, and those individuals are likely to be receiving higher levels of specialty care already, eligible participants are not as likely to be among those Medicare patients experiencing problems with access to health care. Developing a PACE program in Alaska would most likely make only a very small impact on the Medicare access problem, but because of the many other benefits a PACE program would offer eligible Alaskans, the Commission determined the state should facilitate development of this program.

Recommendation E(a): The Commission recommends that the Governor and Alaska Legislature improve the supply of primary care providers in order to enable increased access to care for Medicare patients by:

- Supporting a student loan repayment and financial incentive program for primary care providers practicing in Alaska and serving Medicare patients (and including other service requirements deemed necessary to meet the needs of the underserved);
- Supporting development of a primary care internal medicine residency program;
- Supporting WWAMI program expansion as resources allow; and,
- Supporting mid-level practitioner development.

Recommendation E(b): The Commission recommends that the Governor and Alaska Legislature explore strategies for removing barriers to the development of designated Federally Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs), facilitating development through state application for federal shortage designations for Medicare populations and supporting planning for new and expanded FQHCs/RHCs.

Recommendation E(c): The Commission recommends that the Governor and Alaska Legislature work with Alaska's Congressional delegation to improve Medicare's reimbursement scheme to ensure the sustainability of care to Medicare patients.

Recommendation E(d): The Commission recommends that the Governor and Alaska Legislature ask Alaska's congressional delegation to pursue federal policies to redesign the Medicare audit process so that it focuses more on identification and prosecution of fraudulent practices than on billing errors. Reported financial incentives for audit contractors should be eliminated and replaced with performance measures. Concern over billing errors should be addressed through provider training and performance reports, not through audit processes designed to weed out fraud and abuse.

Recommendation E(e): The Commission recommends that the Governor and Alaska Legislature commission an analysis comparing Medicare to Medicaid and private insurance administrative requirements, including recommendations for streamlining public insurance administrative procedures to make them more user-friendly.

Recommendation E(f): The Commission recommends that the Governor facilitate development of PACE programs in Alaska by directing the Department of Health & Social Services to submit a State Plan Amendment to the U.S. Centers for Medicare and Medicaid Services (CMS) to add PACE as a Medicaid service, and to identify and remove barriers to development of PACE programs.

PART IV: Health Care System Transformation Elements

A number of issues and potential strategies were identified by the Commission as important to a comprehensive approach to health care reform for Alaska. Potential elements of health care system transformation identified for future study are described briefly in this part of the report, and a suggested approach for planning related to these issues is provided in Part V.

A. Access to Health Care

1. Health Insurance Coverage

Because federal health care reform efforts underway during 2009 have focused primarily on increasing health insurance coverage, the Commission decided it would not be prudent to evaluate state options for expanding coverage until Congress completes their work.

Future study of access to health care coverage will require analysis and understanding of:

- **National reforms adopted in and for Alaska.** Strategies for increasing health insurance coverage in pending federal legislation include creation of a new government-administered insurance plan ("public option"), creation of health insurance exchanges, creation of non-profit member-operated health insurance cooperatives ("Co-ops"), expansion of Medicaid eligibility, individual and employer mandates requiring purchase of insurance, subsidies for low income individuals to purchase insurance, and insurance market reforms. If federal legislation passes, future state health commission work should include analyzing options and making recommendations for state policy direction needed to implement federal reforms at the state level. At a minimum, the work of this or a future commission to consider health insurance coverage expansion will require study of the impact of national reforms in Alaska.
- **Alaska's private insurance market.** Only 23% of Alaskans have health insurance purchased on the private market. An additional 32% have insurance through their employers' self-insured plan (exempt from state regulation under federal law (ERISA)). The remaining 45% of Alaskans have insurance through a public plan (Medicaid/Medicare), have health care provided by the military or the tribal health system, or are uninsured. Consideration of insurance market reform strategies will require study of the potential impact on Alaska's health care system since less than a quarter of the population is covered by the state-regulated insurance market.^{lxvii}
- **The challenge small businesses face in obtaining insurance coverage for their employees.** Most of Alaska's smallest businesses (those with fewer than 10 employees) cannot afford to offer health benefits to their employees. 52% of uninsured Alaskans are employed adults (9% are unemployed adults, and the remainders are children and others not in the work force). Those studying this issue in the future can benefit from the work conducted by the Department of Health & Social Services on health insurance coverage in Alaska during 2005-2007 under a grant from the Robert Wood Johnson Foundation. One of the findings from that study is the importance of understanding the seasonal nature of Alaska's workforce. Other results from that study were obtained from surveys and focus groups conducted with Alaska business owners regarding their ability to obtain insurance for their employees and the barriers they face.

2. Health Care Workforce Development

Alaskans' access to quality health care is dependent on the availability of a well trained health care workforce with sufficient numbers of workers in the right occupations and the right locations to meet the needs of the population. The focus by the Commission during their first year on the physician workforce was just a first small step and only one component in what should be a comprehensive and sustained approach to development and implementation of a health care workforce strategy for Alaska. As noted in Part III, Section C of this report, there are numerous organizations collaborating on various aspects of health care workforce planning and development. Future study and improvement of Alaska's health care workforce cannot occur in isolation but must consider and build on these other efforts, and a comprehensive approach to addressing Alaska's health care workforce needs must include strategies to address:

- On-going assessment of Alaska's health care workforce size, composition and distribution
- Workforce innovations required for responding to transformation in patient care models
- Training needs along the continuum of K12 education through graduate medical education and including on-the-job training
- Improved recruitment and retention of health care workers
- Sustainability of health care workforce planning, development and support infrastructure

3. Physical Health Care Services

Individual services and systems of care within the health care delivery system need to be better understood and considered as part of future work to improve the system. During this year the Commission heard specific concerns about access to dental services, and the condition of Alaska's Trauma System. Those two areas could be a starting point for delving deeper into analysis of Alaska's health care system. Additional areas might include pharmacy, vision care, and preventive services.

4. Behavioral Health & Long Term Care

The Commission noted that any effort to transform Alaska's health care system should consider the system from the consumer's perspective. From the individual health care consumer's perspective their behavioral health and long term care needs cannot be separated from their physical health needs. For that reason alone future health care planning and policy development efforts need to consider these other systems and services, and another important factor necessitating their inclusion is that behavioral health and long term care are significant cost drivers in the increasing cost of health care.

The Commission did not attempt in their first year to address issues related specifically to the funding and delivery of behavioral health and long term care in Alaska. In part because there are other groups working on planning for behavioral health and long term care improvement, such as the Alaska Mental Health Trust Authority, the Alaska Mental Health Board, the Advisory Board on Alcoholism and Drug Abuse, the Alaska Commission on Aging, and the Department of Health & Social Services, while there is no other entity charged with examining the broader health care delivery system. Future work must not leave these sectors out however. Recent plans, such as the Comprehensive Integrated Mental Health Plan and the State Plan for Long Term Care Services, should be reviewed.

If this or a future Commission wishes to foster innovation in transforming Alaska's health care system to better support a healthier Alaskan population they will need to coordinate with the behavioral health and long term care planning entities to ensure they are taking an integrated and holistic approach while not duplicating efforts.

B. Cost & Quality (Value)

The trend in state and federal health care reform efforts has been moving away from more simplistic cost control measures, such as caps on fees, towards a focus on improved value, thus most strategies to address the cost of care cannot be separated from strategies to improve quality.

1. Understanding the Cost of Care in Alaska

Information presented in Part II of this report indicates costs are higher in Alaska compared to other states, but a thorough understanding of the underlying reasons why costs vary is required prior to making specific policy recommendations to address the problem. Is it due to an insufficient supply of providers and insufficient competition between providers? Is there higher utilization of medical services in our state, and if so is it due to waste in the system or due to a higher prevalence of complex health conditions? How does fragmentation of the health care delivery system affect overall costs? Are payers unable or unwilling to negotiate the lowest possible price for services?

An important aspect of understanding variations in cost and underlying cost drivers is understanding how cost shifting occurs when one payer or set of payers underpays a health care provider (pays less than the costs the provider incurs to deliver the service). Prices charged are typically higher than the cost of care (and beyond profit margin) to make up for capped reimbursement by some providers, low fees negotiated with contract payers, and uncompensated care provided for uninsured and underinsured individuals who are not able to pay. Further analysis of cost drivers and cost shifting is needed to support development and implementation of successful strategies to control cost and improve value.

2. Primary Care Innovation

One of the Commission's central strategies for improving health care cost and quality is innovation in the patient care model at the primary care level. A lot of work must be done to implement the Commission's recommendation (#A2a) in support of primary care innovation. A collaborative effort with the primary care provider community and the Alaska Department of Health & Social Services needs to be undertaken to define the care model in more specificity beyond the identified characteristics, performance standards and measures must be developed, required internal organization supports for providers must be identified (such as information technology, knowledge management strategies for evidence-based practice, and development of effective teams), as well as requirements for a supportive payment and regulatory environment.

3. Value-Driven Purchasing

The fee-for-service approach to purchasing health care drives up the overall cost of care by incentivizing the provision of more services, and more costly services, while offering no incentives for improved quality or efficiency. "Value-driven purchasing" (VDP) identifies and implements purchasing practices intended to improve the value of health care services by holding providers accountable for both the quality and cost of services delivered to patients. VDP strategies include establishing standardized quality measures and reporting requirements, reporting of health care price and quality information, and use of direct incentives or disincentives to providers and consumers to promote improved quality of care and health outcomes as well as greater value for dollars spent. There are a number of strategies that could be studied to start Alaska on the road to value-driven purchasing.

a) Leverage State Purchasing Power

State government in Alaska represents a substantial payer for health care services. The state spent over \$1.5 billion last year in Medicaid expenditures, payment of state employee and retiree claims (not counting benefit credits paid to union health trusts), payment of state employee Workers' Compensation medical claims, and purchase of health care services for incarcerated offenders in the state correctional system. Collaboration between these state programs to develop shared value-driven purchasing strategies could provide significant market-share leverage for improving health care quality and cost in this state. This is an area that warrants additional study and potential recommendations.

b) Provider/Payer Cost Sharing Demonstration Projects

Because of the way the fee-for-service payment system is structured, health care providers may face situations where implementing measures that will reduce overall costs in the system and save money for the payer will actually increase the cost the provider incurs while reducing their revenue. This may be particularly true of hospitals, when investing in a costly new technology will improve patient outcomes and reduce hospital bed days. Future work on this issue could involve working with Alaska's hospitals to determine the extent to which these types of situations might delay innovation (and thereby delay improved patient outcomes and overall system costs), and consider the advisability of cost sharing demonstration projects.

c) Cost and Quality Transparency

Consumers need to know the price and quality of their health care options in order to make informed decisions and support their ability to participate more fully in their care. Empowering consumers with information not only supports improved decision-making on their part, but drives the entire system to provide better care for less money. An infrastructure to support transparency of health care cost and quality for Alaskan consumers, compiling and analyzing data on pricing and quality measures for physician services and hospital care and producing public information through an accessible and understandable reporting mechanism, does not currently exist.

Creating a system to provide transparency is not as simple as it may sound however. Pricing of individual services might be misleading without a more comprehensive picture of the total cost of care for a given condition and the expected outcomes of various care options. And transparency to support a market-based approach is not the only solution to the health care cost and quality problem. Health care is different than other goods and services, and all the conditions required for a competitive market do not exist in the health care market. Consumers do not fully control all of their health care dollars, and they cannot participate fully in all aspects of clinical decision-making about their care. In addition, many

health care decisions are made for consumers in urgent or emergent situations when the consumer is severely ill, injured or under too much emotional stress to participate in their care decisions.

The potential benefits of and barriers to developing an information system to support consumer choice need to be fully understood as part of a strategic approach to making the system more transparent in order to improve quality and control costs.

d) Evidence-Based Medicine

The Dartmouth Atlas of Health Care^{lxviii} and numerous other studies have consistently demonstrated wide variations in practice patterns and use of health care resources across geographic regions of the United States – the tests and treatment a patient with a given health condition receives varies based on the location in the country where the care is received. The waste in the health care system due to misused medical resources is estimated to represent as much as 30% of health care spending. Moreover, research has documented those regions of the country where there is overuse of health care resources and resulting higher spending actually have lower quality of care and worse health outcomes.^{lxix lxx lxxi}

Decreasing the variability in health care services and spending requires the application of evidence-based medicine, which seeks to improve the decision-making of individual health care providers as they make diagnosis and treatment decisions about individual patients, to engage the patient in making informed decisions about their care, and to improve the policies of payers and health care delivery organizations. Evidence-based medicine is defined as a set of principles and methods intended to ensure that to the greatest extent possible, population-based policies and individual medical decisions are consistent with evidence of effectiveness and benefit.”^{lxxii} The core idea behind evidence-based medicine is that the right care must be provided to the right patient in the right place at the right time and at the right price. And that all the determinations about what constitute these “right” decisions are based on the best available scientific evidence.

Improving evidence-based medical decision making may be the key to increasing value in health care – decreasing cost and increasing quality. There are a number of roles public policy can play in supporting and driving the use of evidence-based medicine. One state government example comes from Washington state, which has enacted a set of statutory provisions authorizing the state’s public payers (Medicaid, Workers’ Compensation, state government employee benefit plans, and the corrections department) to use evidence-based methods to improving quality of care, reduce wasteful use of health care resources, and determine what benefits should be covered.^{lxxiii} Continuing work to improve value must include identification of the best approaches to expanding the application of evidence-based medicine in Alaska

e) Payment Reform^{lxxiv}

The current fee-for-service payment system rewards health care providers for volume, not value. The financial incentives in this system lie entirely in the provision of more health care services and the sale of more health care commodities regardless of the quality of care provided, and may actually serve as a disincentive to creating health. Movement away from fee-for-service to new payment methodologies will require capacity for electronic information management, and therefore development and implementation of health information technology.

Reform of payment methodologies to reward quality can evolve in an incremental approach that can be initially pilot tested and gradually implemented to prevent harm to health care providers and their

business interests, and in a way that supports providers as they transform the health care system over time. Research is required to guide implementation of new payment methods, and careful evaluation is required to assess cost-effectiveness, impact on quality of care and patient outcomes, and identification of unintended consequences. Following are three value-driven payment strategies this or a future Commission might choose to analyze and for which they might develop policy recommendations.

- ***Pay-for-Performance***

A pay-for-performance program provides a bonus payment for health care providers meeting certain standards of quality on a predetermined set of clinical measures. One approach would provide incentives for improvement over baseline performance as well. One challenge to developing a pay-for-performance program in Alaska will be the small size of many of Alaska's hospitals and the lack of any large primary care group practices, as sufficient patient volume to provide statistically valid measurement of quality is required.

- ***Patient-Centered Primary Care Enhanced Service Payment***

The Commission in this report recommends the state of Alaska aggressively pursue development of innovative models of patient-centered primary care. Implementation of this recommendation will require further work to develop a detailed definition including the criteria a practice will have to meet in order to be deemed as meeting the new standard of care. The level and source of funding as well as the reimbursement mechanism for enhanced payment to support these new patient care models will need to be identified as well. As Medicaid is the state's largest payer, the Department of Health & Social Services is the logical entity to begin this next level of planning in support of the development of a Medicaid pilot program. DHSS might look to partner with other state agency health care purchasers and also private health insurance companies operating in Alaska to expand the reach of such a program.

- ***Bundled Payment Systems***

Payment bundling provides a global fee for a specified set of services. Development of this payment system could be evolved over time, starting with bundling of a limited set of hospital services related to certain acute care episodes (related to certain illness diagnoses for a specified period of time – for example, coronary artery bypass surgery and extending 30 days beyond discharge); and expanding over time to include physician inpatient care and post-acute care. A particular challenge to implementing this strategy in Alaska is the lack of integrated care networks here. Hospitals would initially have to contract with physicians and other service providers required to deliver the suite of services potentially needed to treat the bundled diagnoses or procedures. Other challenges involve the lack of sophistication of information and accounting systems of many of Alaska's smaller hospitals, the need to identify standards to ensure cost reduction does not negatively impact quality, mechanisms for avoiding "cherry-picking" of patients with the potential for fewer complications, and ways to reduce exposure to risk for providers.

f) Reporting and Non-Payment for "Never Events" and other Health Care Acquired Conditions

"Never events", as suggested by the term, are occurrences of medical errors that should never happen. The National Quality Forum maintains a list of 28 Serious Reportable Adverse Events considered "never events." Examples include surgery performed on the wrong body part, surgery performed on the wrong patient, leaving a foreign object in a surgical patient, patient death or disability due to use of a contaminated device, and patient death or disability due to a medication error.

CMS enacted a policy on July 31, 2008 to deny Medicare payment for medical services provided by a hospital for care required as the result of a never event. The new CMS policy also authorized State Medicaid Directors to enact this same policy in their state Medicaid program. A number of private insurance companies also have non-payment for never event policies.

Health care acquired infections, such as MRSA and C.Diff, are not included on the "never event" list; however the U.S. Centers for Disease Control and Prevention estimate that, in hospitals alone, these infections account for 1.7 million infections and result in 99,000 deaths annually. Many more are estimated to occur in other health care settings such as day-surgery clinics.

Required public reporting of these conditions can serve as an incentive for health care providers to increase efforts to prevent these problems, and also provide the public health system with information needed to assist health care providers with prevention techniques. Statutorily mandated health care acquired conditions reporting has been considered by the Alaska legislature in the past, and a plan for developing a health care acquired conditions reporting system is currently under development by the Alaska Division of Public Health in the Department of Health & Social Services.

Future work on this issue could include an assessment of the incidence of medical errors in Alaska, the extent to which never event payment policies have been adopted in Alaska, and if there are opportunities for expanded and improved use of this policy as well as other strategies for reducing the occurrence of medical errors and improving patient safety.

4. Fraud & Abuse Control

The National Health Care Anti-Fraud Association, a public-private partnership of insurance company and government health care payers, estimates that a minimum of 3% of national health care expenditures is lost to fraud and abuse. Health care fraud - intentional misrepresentation or deception for the purpose of receiving higher reimbursement - can take many forms. One of the more common forms is for criminals to obtain patient information and pose as fictitious doctors, billing public and private insurance plans for service that was never rendered. The increased cost to payers for these fraudulent claims translates into increased premiums for private insurance holders and increased taxes to support Medicaid and Medicare.

It is difficult to determine the actual extent and impact of fraud and abuse in the health care sector - one cannot survey the criminals to determine how much they are making - but future work on this issue could include analysis of the current systems in place for fraud and abuse detection, investigation and prosecution for Alaska's Medicaid program and utilized by the insurance industry here. This analysis could include a look at current capacity, including funding and staffing levels, current practices, and also criminal penalties in state statute.

5. Tort Reform

Costs associated with medical liability (medical malpractice insurance premium costs, malpractice awards, and the practice of defensive medicine) are believed to be one driver of increasing health care costs, and reform of related civil justice laws has been one cost control strategy suggested in health care reform debates at the federal and at state levels. Estimates of potential savings from medical malpractice reform vary, but two very recent studies predict measurable savings. The Congressional Budget Office, in an October 2009 study for Senator Hatch, pegs the potential cost savings at 0.5% of

total national health care spending. The National Bureau of Economic Research estimates, in a September 2009 study, that three different types of medical tort reform could reduce premiums for employer-sponsored health insurance plans by 1 to 2% each.

This is one strategy that has been addressed at least partially in Alaska. In 2005 the Alaska Legislature passed the Alaska Medical Injury Compensation Reform Act, limiting noneconomic damage awards for personal injury resulting from health care services to \$250,000 (limit increases to \$400,000 for wrongful death or injury resulting in permanent physical impairment that is more than 70% disabling). Alaska's court system also plays a role – discouraging frivolous lawsuits through Alaska Civil Rule 82, which requires the losing party to tort litigation to pay attorney fees and court costs to the prevailing party.

Future work related to this issue could include evaluation of the impact of the medical liability reform law passed in 2005 and study of additional strategies, such as regulation of medical malpractice insurance providers and development of programs to encourage alternatives to litigation.

6. Process Innovation Strategies

One other factor driving higher cost and reduced quality is operational inefficiency in the delivery of health care services. Inefficiencies associated with both direct medical services and those associated with administrative and logistical support services can benefit from systematic efforts to streamline work processes and drive out waste.^{lxxv} Health care managers have been successfully applying process-innovation strategies that are popular in the manufacturing industry to improve efficiency and quality of their services. Examples of problems tackled range from reducing the number of mistakes in invoices, to reducing the number of patients requiring intravenous antibiotics, to shortening the length of stay in chronic obstructive pulmonary disease patients.^{lxxvi}

Two popular process-innovation strategies in use in health care systems today are Lean Thinking and Six Sigma. Lean Thinking (also known as Toyota Production System (TPS), or simply "Lean") came out of the Japanese auto industry. Lean provides an integrated set of tools, principles, and practices focused on waste reduction and synchronizing work flow, utilizing an extended process flowchart as a tool for identifying non-value-added steps and bottlenecks. Six Sigma was originally introduced by Motorola as a method for driving company-wide quality improvement. It provides an organizational structure of project leaders and project owners, and a problem-solving strategy similar to medical practice – information gathering followed by careful diagnosis, application of "treatment," and follow-up to determine efficacy.

Future work to improve efficiency in health care service delivery processes in Alaska could include analysis of the extent to which manufacturing industry process innovation strategies are being applied by Alaska's major health care providers. Options and opportunities for fostering the transformation in the culture of Alaska's health care businesses to focus on continuous improvement could be identified. Also methods for spreading the adoption of process innovation strategies, for example by supporting forums for sharing best practices and providing technical assistance, could be considered.

C. Prevention

1. Public Health: Population-Based Health Promotion & Disease/Injury Prevention

Many diseases and injuries are preventable. Simple, non-medical, individual approaches to prevention such as hand washing, eating healthy foods, exercising, not smoking, drinking alcohol in moderation if at all, and wearing bicycle helmets and life jackets go a long way towards avoiding illness and injury. Individuals acting alone cannot create all of the conditions necessary to ensure good health however.^{lxxvii}

Since antiquity societal leaders recognized the importance of communal action to protect and promote the health of community members. Some of the rules described in the Old Testament were intended to prevent illness in the community from contaminated food or to prevent the spread of communicable disease. Today governments act to ensure safe food and water, maintain sanitation systems, provide vaccinations, deliver maternal and child health services, enact public policies such as seat belt laws, and operate programs such as tobacco control in order to optimize the health of the population under their jurisdiction.

Public health is defined as “what society does collectively to assure the conditions for people to be healthy.”^{lxxviii} There are two main characteristics of public health – 1) it is concerned with prevention rather than cure, and 2) it is concerned with population-level rather than individual-level health issues. Public health protects and improves communities by preventing epidemics and the spread of disease, promoting healthy lifestyles for children and families, protecting against hazards in homes, work sites, communities and the environment, assuring high quality health care services, and preparing for and responding to emergencies.

The significant improvements in health status in the United States during the 20th century – such as the increase in life expectancy from 45 years in 1900 to over 75 years in 2000 – are primarily due to public health interventions. Only five years of this 30 year increase in the average lifespan of Americans is attributable to the aggregate effects of improvements in medical care.^{lxxix} 25 years of this gain are due to advances in public health.^{lxxx} Attainment of the Commission’s vision to transform Alaska’s health care system so it focuses on creating health and not simply treating illness and injury requires an understanding of and support for Alaska’s public health system.

A report by the Institute of Medicine published in 2002 found that the nation’s governmental public health infrastructure had been neglected, and an overhaul of its components (e.g., workforce, laboratories, public health law) was needed to ensure quality of services and optimal performance. Governmental public health agencies are the backbone of the public health system but do not work alone. Other organizations and sectors of society – including the health care delivery system, communities, business, the media, and academia are important partners in the public health system.^{lxxxi}

In Alaska the state legislature is charged under the constitution to “provide for the promotion and protection of public health” (Constitution of the State of Alaska, Article VII, Section 4). The legislature has paid attention to the needs of Alaska’s public health infrastructure over the years. For example, by funding construction of two new technologically modern public health laboratories during the past 10 years, and by passing comprehensive reform of the state’s public health laws as they relate to public health functions (AS 18.15) in 2005. But a review of Alaska’s public health system has not been conducted in over a decade, and the capacity of the system to meet the need for population-based health promotion and disease and injury prevention is not well understood.

Future work by the Commission could include analyzing the adequacy of Alaska's public health infrastructure, and developing policy recommendations to ensure the state's public health system is sufficiently supported to deliver population-based disease and injury prevention and health promotion services.

2. Safe Water and Sanitation Systems

Safe water and waste water systems are essential to the prevention of disease. At the turn of the last century infectious diseases such as typhoid and cholera were the leading cause of death in the United States. Today many of those diseases have been virtually eliminated - in large part due to modern sanitation systems.

The association between safe drinking water and gastrointestinal illness has long been recognized, but a recent study conducted in Alaska by the CDC Arctic Investigation Program found a link between in-home water service and higher rates of respiratory and skin infections as well. The CDC team noted as "particularly disturbing" their finding that villages in one region with low in-home water service (less than 10% of homes served) experienced a respiratory infection hospitalization rate that was five-times higher than that of the general U.S. population, and a pneumonia hospitalization rate among infants that was 11-times higher.^{lxxxii} This study demonstrates the importance of having safe water that is not only available in the local community for drinking, but is also readily and easily available in the home for hygiene use.

Nearly every home in the U.S. – 99.4% according to the 2000 U.S. Census – now has running water and flush toilets. Alaska ranks last in the nation, with 93.7% of Alaska homes having these basic services. In rural Alaska however, only 77% of homes have modern sanitation facilities.^{lxxxiii}

Support for improved sanitation systems in rural Alaska has been underway for some time, beginning with efforts of the Indian Health Service in the 1960s. In 1972 the state of Alaska enacted the Village Safe Water Act and began contributing state resources for construction of water projects. In 1994 the Rural and Native Sanitation Development Program, jointly funded by the state and federal government, was implemented. When this program began only 37% of rural Alaska households had adequate sanitation facilities. Today the Alaska Department of Environmental Conservation administers the Village Safe Water Program in partnership with the Alaska Native Tribal Health Consortium, providing state and federal funds totaling approximately \$60 million annually as well as technical assistance to Alaska's smallest communities to design and construct water and wastewater systems.

Future work on the part of the Commission could include developing an understanding of the state's plan for bringing sustainable and appropriate safe water and wastewater systems to every Alaskan community, and developing policy recommendations to ensure the state's adherence to that plan.

3. Employee Health Risk Management

Health care spending on individuals with one chronic condition is more than twice that for people without such conditions, and spending is nearly 15 times greater on individuals with five chronic conditions. Employers and their insurance plans are increasingly working to change enrollees' health behaviors as a means of achieving cost savings.

Health Risk Management Programs offer incentives such as lower premiums or contributions to HSAs for employees who agree to participate in the program. These programs generally require a health risk assessment and health improvement goals supported by lifestyle management tools, health coaches, and disease management plans.

Health Risk Management Programs have demonstrated effectiveness in reducing the rate of increase in health insurance premiums over time. The City and Borough of Juneau has a long standing program (since 1989), and over the years their premium rate increases have consistently been below the regional average. Safeway has flat-lined employee health benefit cost increases for four years straight since implementation of such a program. Providence Alaska, which is self-insured, launched a program in November of this year based on findings that the program will reduce costs.

While this strategy has primarily been about cost control, it demonstrates how a focus on prevention can work to make individual Alaskans healthier while achieving the added benefit of lowered costs.

PART V: 2010-2014 Strategic Plan for Transforming Alaska's Health Care System

A. 5-Year Planning Framework

The Commission's recommended five-year strategic planning framework is comprised of six essential elements:

I. Develop a Vision of Alaska's Transformed Health Care System

Accomplished in 2009 – Documented in Part I of this Report.

II. Accurately Describe Alaska's Current Health Care System

Begun in 2009 – Documented in Part II and Appendix A of this Report.

Next Steps:

1. Identify gaps in knowledge (e.g., why are prices for health care services higher in Alaska?)
2. Fill in the gaps and complete the picture
3. Analyze impact of national health care reform on Alaska

III. Build the Foundation for a Transformed Health Care System

- **Statewide Leadership**
- **Workforce Development**
- **Health Information Technology**

Begun in 2009 – Documented in Part III of this Report.

Next Steps:

1. Track implementation of 2009 recommendations
2. Implement 2009 recommendations requiring Commission action
3. Continue analysis and identification of solutions for further recommendations

IV. Design Elements Required for Transformation of Alaska's Health Care System

Begun in 2009 – Documented in Part III and IV of this Report.

Next Steps:

1. Continue working on design elements for primary care innovation and healthy lifestyles
2. Prioritize additional potential strategies (identified in Part IV) for analysis and recommendations

V. Measure Progress of Health Care Transformation

First Steps:

1. Work with system stakeholders to identify and develop consensus on indicators to measure progress (see potential indicator set below).
2. Develop data collection and analysis capacity for indicators that are not currently measurable.
3. Report progress on an annual basis to Governor, Legislature, and the general public.

VI. Communicate with the Public & Engage Stakeholders

Begun in 2009 – Commission Public Communication Plan included in Appendix D of this Report.

Next Steps: Implement Commission Public Communication Plan

Potential Health Care System Transformation Measures

1. Increase Access
 - Percent of Alaskans insured
 - Percent of Alaskans who have a specific source of on-going care
 - *Measure of insurance affordability*
 - *Indicator of workforce supply*
2. Control Costs
 - Annual growth rate in total health system expenditures in Alaska
 - Annual growth rate in Alaska's Medicaid expenditures
 - Impact on Alaska's state budget: new spending, net savings, new revenues
 - *Measure of provider revenues based on value*
3. Safe, High-Quality Care
 - Percent of population receiving key preventive services or screenings
 - Percent of Alaskans with chronic conditions controlled
 - Percent reduction in gap between benchmark and actual levels of quality
 - Percent reduction in gap between benchmark and actual levels of safety
4. Focus on Prevention
 - Percent of Alaskan communities with safe water and wastewater systems
 - Percent of Alaskans reporting health risks
 - Percent of Alaskans who smoke cigarettes
 - Percent of Alaskans who are obese
 - Percent of Alaskans who are binge drinkers
 - Percent of Alaskans with moderate to severe depression
 - Death rate among Alaskans due to injury (intentional and unintentional)

B. Suggested Action Plan for 2009 Recommendations

Recommendation	Responsible Party and Action	Timeline and Resources
<p>A1a: The Commission recommends that the Governor and Alaska Legislature investigate and support additional strategies to encourage and support healthy lifestyles, including strategies to create cultures of wellness in any setting.</p>	<p>Governor: 2010 - Direct DHSS to investigate and develop recommendations for effective strategies to encourage and support healthy lifestyles of Alaskans. Legislature: 2011-2014 - Identify and consider politically and financially feasible strategies requiring legislation and/or appropriation based on recommendations from the Governor.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs variable depending on availability of funding and approach to implementation</p>
<p>A1b: The Commission recommends that the 2010 Alaska Health Care Commission continue evaluating the question of what works to support behavior change, and identify additional recommendations for future improvement.</p>	<p>Commission: Include healthy lifestyles strategies analysis and recommendation development on 2010 work plan; Coordinate with DHSS investigation of same question.</p>	<p>Jan 2010 – Dec 2010 Cost: \$0 (assumes funding of Recommendation B2a)</p>
<p>A2a: The Commission recommends that the Governor and Alaska Legislature aggressively pursue development of patient-centric care models through payment reform, removal of statutory and regulatory barriers, and implementation of pilot projects. Development of pilot projects should include definition of the patient-centric model, identification of performance standards and measures, and payment models that are outcome-based.</p>	<p>Governor: Direct DHSS to: 1) collaborate w/the AHCC to define patient-centric care models and identify performance standards and measures; 2) pursue grant opportunities to obtain funding for piloting medical home models of care; and, 3) identify statutory and regulatory barriers to development of such care models. Legislature: Consider future requests for removal of statutory barriers and financial support for pilot projects and new payment methodologies.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; (assumes funding of Recommendation B2a) Future costs variable depending on availability of funding and need for pilot project funding.</p>
<p>B1a: The Commission recommends that the Governor and Alaska Legislature invest in the state health policy infrastructure required to study, understand, and make recommendations to respond to the implications of national health care reform for Alaska.</p>	<p>Governor: Direct DHSS to develop proposal for development of health policy analysis capacity.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>B2a: The Commission recommends that the Alaska Legislature establish an Alaska Health Care Commission in statute, similar in size to the Commission established under Administrative Order #246, to provide a focal point for sustained and comprehensive planning and policy recommendations for health care delivery and financing reform, and to ensure transparency and accountability for the public in the process.</p>	<p>Legislature: Pass legislation to establish a Health Care Commission in statute, and fund associated fiscal note. Governor: Sign passed legislation into law</p>	<p>Jan 2010 – Apr 2010 Cost: \$500,000 annual operating budget (based on DHSS fiscal notes for pending legislation)</p>

<p>C1a: The Commission recommends that the Governor and Alaska Legislature maintain health care workforce development as a priority on Alaska's health care reform and economic development agendas.</p>	<p>Governor: Direct state agencies to ensure future health care and economic development plans consider health workforce needs and strategies. Legislature: Direct legislative committees to ensure health care and economic development agendas consider workforce needs and strategies.</p>	<p>Jan 2010 – Dec 2014 Cost: \$0</p>
<p>C1b: The Commission recommends that the Governor and Alaska Legislature explore strategies for strengthening the pipeline of potential future Alaska health care workers.</p>	<p>Governor: 2010 – Direct DEED, DHSS, and DoLWD to collaborate together and with stakeholders on the investigation and development of recommendations for strengthening the health workforce pipeline. Legislature: 2011-2014 - Identify and consider politically and financially feasible strategies requiring legislation and/or appropriation based on recommendations from the Governor.</p>	<p>Jan 2010 – Dec 2014 Cost: \$0</p>
<p>C1c: The Commission recommends that the Governor and Alaska Legislature explore strategies for ensuring Alaska's health care workforce continues to be innovative and adaptive, and that it is responsive to emerging patient care models.</p>	<p>Governor: 2010 – Direct DHSS to consider innovative approaches to health workforce development. Legislature: 2011-2014 – Consider future requests for legislation and financing of health workforce innovations.</p>	<p>Jan 2010 – Dec 2014 Cost: \$0</p>
<p>C1d: The Commission recommends that the Governor designate a single entity with the responsibility for coordinating all health care workforce development planning activities in and for Alaska. Coordination and collaboration of funders, policymakers and stakeholders in workforce planning and development efforts should be encouraged to the greatest extent possible.</p>	<p>Governor: 2010 – Direct DHSS to collaborate with system stakeholders to develop a recommendation for the most appropriate entity to be charged with the responsibility for health care workforce development planning coordination.</p>	<p>Jan 2010 – Dec 2014 Cost: Estimated \$0 - \$250,000 depending on capacity and needs of designated entity</p>
<p>C1e: The Commission recommends that the 2010 Alaska Health Care Commission continue studying health care workforce needs in coordination with other organizations and coalitions addressing this issue, and identify recommendations for additional improvements.</p>	<p>Commission: Include health workforce planning coordination, analysis, and recommendation development on 2010 work plan</p>	<p>Jan 2010 – Dec 2010 Cost: \$0 (assumes funding of Recommendation B2a)</p>
<p>C2a: The Commission recommends that the Governor and Alaska Legislature target the state's limited financial resources invested in physician workforce development to strengthening the supply of primary care physicians.</p>	<p>Legislature: Limit future appropriations intended to increase the supply of practicing physicians in the state to utilization for primary care physicians only (Family Physicians, Pediatricians, General Internists, and Psychiatrists).</p>	<p>Jan 2010 – Dec 2014 Cost: \$0</p>

<p>C2b: The Commission recommends that the Governor and Alaska Legislature support development and maintenance of an educational loan repayment and direct financial incentive program in support of recruitment and retention of primary care physicians and mid-level practitioners.</p>	<p>Legislature: Pass legislation to establish educational loan repayment and financial incentive program to support recruitment and retention of primary care providers. Governor: Sign passed legislation into law</p>	<p>Jan 2010 – Apr 2010 Cost: Estimated \$1.5 - \$7.5M annually</p>
<p>C2c: The Commission recommends that the Governor and Alaska Legislature support the continued expansion of the WWAMI program. Future expansion should be supported as resources allow.</p>	<p>Legislature: Pass legislation to continue WWAMI expansion as state general fund resources allow. Governor: Sign passed legislation into law</p>	<p>Jan 2010 – Apr 2010 Cost: \$600,000 (estimated annual cost of 4-seat expansion in 4th year)</p>
<p>C2d: The Commission recommends that the Governor and Alaska Legislature support graduate medical education for primary care and behavioral medicine. State financial support should continue for on-going operation of the Alaska Family Medicine Residency Program, and should be appropriated for the planning and development of in-state residency programs for pediatrics, psychiatry, and primary care internal medicine.</p>	<p>Governor: 2010 – Direct UA to collaborate with system stakeholders to develop proposals for development of pediatric, psychiatric and primary care internal medicine residency programs for Alaska. Legislature: 2011-2014 – Consider future requests for state participation in support of residency program development and operation.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs variable depending on availability of funding and approach to implementation</p>
<p>C2e: The Commission recommends that the Governor and Alaska Legislature ask Alaska’s congressional delegation to pursue federal policies to address equity in the allocation and distribution of Medicare Graduate Medical Education (GME) residency slots. The exclusion of new programs is not equitable, and there should be heavier weighting for primary care GME and for shortage areas.</p>	<p>Governor: Send letter to congressional delegation. Legislature: Send letter to congressional delegation.</p>	<p>Jan 2010 – Apr 2010 Cost: \$0</p>
<p>C2f: The Commission recommends that the Governor and Alaska Legislature explore strategies for improving the primary care delivery model and utilizing “physician extender” occupations as an additional approach to addressing the primary care physician shortage.</p>	<p>Governor: Direct DHSS to work with health workforce development stakeholders to make planning for physician extender and primary care team worker occupations a high priority. Legislature: Consider future requests for health workforce development targeted at primary care.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs variable depending on availability of funding and approach to implementation</p>
<p>D1a: The Commission recommends that the Governor and Alaska Legislature take an aggressive approach to supporting adoption, utilization, and potential funding of health information technology, including health information exchange, electronic health records and telemedicine/telehealth that promise to increase efficiency and protect privacy.</p>	<p>Governor: Follow development of the state HIE and consider future requests for support of HIT needs. Legislature: Consider future requests for HIT development.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>

<p>D2a: The Commission recommends that the Governor direct the Department of Health & Social Services to explore options for assisting providers (particularly smaller primary care practices and individual primary care providers) with adoption of electronic health record systems.</p>	<p>Governor: Direct DHSS to work with the state HIE contractor and AK EHR Alliance on exploration of options for assisting small primary care practices with adoption of EHRs.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>D2b: The Commission recommends that the Governor ensure Alaska's statewide health information exchange supports providers who have not yet adopted their own electronic health record system by facilitating identification and purchase of systems that are interoperable with the state exchange.</p>	<p>Governor: Direct DHSS to work with the state HIE contractor and AK EHR Alliance on facilitating identification of EHR systems that are interoperable with the state HIE.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>D2c: The Commission recommends that the Governor ensure that HIT is utilized to protect the public's health. Alaska's health information exchange should connect with electronic public health reporting systems to enable real-time disease reporting and rapid identification of public health threats.</p>	<p>Governor: Direct DHSS to work with the state HIE contractor and the Division of Public Health on integration of electronic real-time disease reporting systems in the statewide exchange.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>D2d: The Commission recommends that the Governor ensure that data available through the statewide health information exchange is utilized to identify opportunities for administrative efficiencies, coordination and optimization of care, and health care quality and safety improvement.</p>	<p>Governor: Direct DHSS to work with state HIE contractor to identify potential uses of data from the exchange to support health care quality, safety, and efficiency improvement opportunities.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>D2e: The Commission recommends that the 2010 Alaska Health Care Commission track the development of the Alaska Statewide Health Information Exchange, Alaska's new Medicaid Management Information System (MMIS), and the use of ARRA funds for electronic health record deployment; and the Commission should continue to identify current issues, policy choices and recommendations based on these developments.</p>	<p>Commission: Include HIE, MMIS and ARRA EHR status review, analysis and recommendation development on 2010 work plan</p> <p>DHSS: Provide quarterly report to the AHCC on status of HIE, MMIS, and ARRA EHR implementation</p>	<p>Jan 2010 – Dec 2010</p> <p>Cost: \$0 (assumes funding of Recommendation B2a)</p>
<p>D2f: The Commission recommends that the Governor designate a statewide entity with the responsibility for ensuring broad implementation of health information security and privacy protections. The entity should participate in on-going efforts at the national level to identify security and privacy standards, should oversee application of those standards to Alaska's statewide health information exchange, and should identify a process for Alaskan patients to opt out of participation in the health information exchange.</p>	<p>Governor: Direct DHSS to collaborate with the state HIE contractor and system stakeholders to develop a recommendation for the most appropriate entity to be charged with the responsibility for implementation of health information security and privacy protections.</p>	<p>Jan 2010 – Dec 2010 Cost: \$0</p>

<p>D3a: The Commission recommends that the Governor and Alaska legislature work with federal and local partners to ensure all Alaskan communities have access to broadband telecommunications infrastructure that provides the connectivity and bandwidth necessary to optimize use of health information technologies.</p>	<p>Governor & Legislature: Jan 2010 – Dec 2011: Follow Denali Commission’s 2-year broadband mapping initiative. Jan 2012 – Dec 2014: Work with local, federal and private sector partners to address gaps in service where identified.</p>	<p>Jan 2010 – Dec 2014 Cost: \$0; Future costs to be determined</p>
<p>D3b: The Commission recommends that the Governor direct the Alaska Department of Health & Social Services to investigate innovative reimbursement mechanisms for telemedicine-delivered services; test new payment methodologies through Medicaid, and work with other payers to encourage adoption of successful methodologies.</p>	<p>Governor: Direct DHSS to investigate and develop a project proposal for pilot testing innovative reimbursement mechanisms for telemedicine-delivered services through Medicaid.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>E(a): The Commission recommends that the Governor and Alaska Legislature improve the supply of primary care providers in order to enable increased access to care for Medicare patients by:</p> <ul style="list-style-type: none"> ○ Supporting a student loan repayment and financial incentive program for primary care providers practicing in Alaska and serving Medicare patients (and including other service requirements deemed necessary to meet the needs of the underserved); ○ Supporting development of a primary care internal medicine residency program; ○ Supporting WWAMI program expansion as resources allow; and ○ Supporting mid-level practitioner development. 	<p>Same as for Recommendations C2a – C2f</p>	<p>Same as for Recommendations C2a – C2f</p>
<p>E(b): The Commission recommends that the Governor and Alaska Legislature explore strategies for removing barriers to the development of designated Federally Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs), facilitating development through state application for federal shortage designations for Medicare populations and supporting planning for new and expanded FQHCs/RHCs.</p>	<p>Governor: 2010 - Direct DHSS to investigate and develop recommendations for facilitating support of FQHCs and RHCs. Legislature: 2011-2014 - Identify and consider politically and financially feasible strategies requiring legislation and/or appropriation based on recommendations from the Governor.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs variable depending on availability of funding and approach to implementation</p>
<p>E(c): The Commission recommends that the Governor and Alaska Legislature work with Alaska’s Congressional delegation to improve Medicare’s reimbursement scheme to ensure the sustainability of care to Medicare patients.</p>	<p>Governor: Send letter to congressional delegation to initiate discussion. Legislature: Send letter to congressional delegation to initiate discussion.</p>	<p>Jan 2010 – Dec 2010 Cost: \$0</p>

<p>E(d): The Commission recommends that the Governor and Alaska Legislature ask Alaska's congressional delegation to pursue federal policies to redesign the Medicare audit process so that it focuses more on identification and prosecution of fraudulent practices than on billing errors. Reported financial incentives for audit contractors should be eliminated and replaced with performance measures. Concern over billing errors should be addressed through provider training and performance reports, not through audit processes designed to weed out fraud and abuse.</p>	<p>Governor: Send letter to congressional delegation to initiate discussion. Legislature: Send letter to congressional delegation to initiate discussion.</p>	<p>Jan 2010 – Apr 2010 Cost: \$0</p>
<p>E(e): The Commission recommends that the Governor and Alaska Legislature commission an analysis comparing Medicare to Medicaid and private insurance administrative requirements, including recommendations for streamlining public insurance administrative procedures to make them more user-friendly.</p>	<p>Governor: Direct DHSS to investigate and develop a recommendation for a process to compare public and private insurance administrative requirements.</p>	<p>Jan 2010 – Dec 2014 Cost: Initial (2010) cost: \$0; Future costs to be determined</p>
<p>E(f): The Commission recommends that the Governor facilitate development of PACE programs in Alaska by directing the Department of Health & Social Services to submit a State Plan Amendment to the U.S. Centers for Medicare and Medicaid Services (CMS) to add PACE as a Medicaid service, and to identify and remove barriers to development of PACE programs.</p>	<p>Governor: Direct DHSS to develop and submit SPA to CMS adding PACE as an Alaska Medicaid benefit, and to develop capacity to negotiate rates with providers interested in developing a PACE program.</p>	<p>Jan 2010 – Dec 2010 Cost: \$200,000 (estimated by DHSS; for actuarial consultant and Office of Rate Review staff)</p>

C. 2010 Work Plan for the Alaska Health Care Commission

Following is a suggested approach to continuing the work of the Alaska Health Care Commission through 2010. This plan will need to be adapted and more details added based on the level of financial and staff resources allocated to this work once financing is determined.

- **Analyze Variations in Pricing and Resulting Cost Shifting in Alaska's Health Care Delivery System**
 - Contract with consultants who have expertise in health economics and health care business management.
- **Analyze Impact of National Health Care Reform** - If national reform legislation passes:
 - Identify state government roles and responsibilities for implementation
 - Analyze and determine potential impact on Alaska's health care system
 - Develop recommendations for Governor and Legislature for maximizing potential benefits and minimizing potential harms
- **Track Implementation of the Commission's 2009 Recommendations**
 - Monitor status of relevant bills during legislative session
 - Consult with Governor's Office on interest and approach to implementing recommendations requiring Governor's action
 - Commission staff to report quarterly to the Commission on status of implementation
- **Implement 2009 Recommendations Requiring Commission Action**
 - Recommendation A1b: Continue studying and develop additional recommendations to support healthy lifestyles
 - Recommendation A2a: Collaborate with DHSS and primary care provider community on definition of patient-centric care model and development of performance standards and measures.
 - Recommendation C1e:
 - Coordinate with the DHSS/AMHTA/UA Behavioral Health Workforce Partnership, Alaska Health Care Workforce Development Coalition and the Legacy Plan Health Care Workgroup
 - Continue analysis of health care workforce issues and develop additional recommendations
 - Recommendation D1b:
 - Coordinate with DHSS to receive a quarterly report on the development of the new statewide health information exchange, the new Medicaid Management Information System, and the use of ARRA funding for electronic health record deployment
 - Continue analysis of health information technology issues and strategies and develop additional recommendations
- **Prioritize, Analyze and Develop Recommendations on Potential Access, Value (Cost Containment and Quality Improvement), and Prevention Strategies described in Part IV of 2009 Report**
- **Implement the Commission's Public Communication Plan**
- **Develop an Evaluation Plan for Tracking the Performance of Alaska's Health Care System**
 - Work with health care system stakeholders to finalize performance metrics that will provide a snapshot of the efficiency, effectiveness, and safety of Alaska's health care delivery system.
 - Identify system for compiling, analyzing, and reporting performance metrics data.

APPENDIX A: HEALTH CARE IN ALASKA

I. HOW HEALTH CARE IN ALASKA IS PROVIDED

A. HEALTH CARE DELIVERY SYSTEMS: PRIVATE, TRIBAL, MILITARY AND VETERANS ADMINISTRATION

INTRODUCTION

People in Alaska obtain care for health needs through three different systems: the private sector, the military and Veterans' Administration health system, and the Alaska Tribal Health System. The "private sector" can be defined as any services provided by non-military/VA or non-tribal providers. It includes hospitals, physicians, dentists, mental health and substance abuse professionals, and various kinds of clinics. It also includes a wide array of support services such as pharmacies, imaging centers, renal dialysis centers, medical supplies and equipment sales and service, medical transportation services, nursing homes, rehabilitation centers, residential psychiatric treatment facilities, and home care and hospice.

The tribal and governmental systems represent a larger portion of both facilities and service providers in Alaska than in other states, since one fifth of the population (about 135,000) is eligible for services in the tribal system, and 14% percent (about 90,000) are covered by the military system. (In the U.S. as a whole the proportions are 2% tribal and 4% military.)¹

In Alaska, services that are provided by federal or state governments directly (rather than through reimbursement or an insurance program) are mostly Veterans Administration and military services for active duty and former service people in the Army, Air Force, and the Coast Guard. State and local government services are limited primarily to state psychiatric hospital, Pioneer Homes, public health services,² and some locally owned and operated clinics. Governments also play a major role in reimbursing private and tribal providers for the costs of providing care (rather than providing care directly) through Medicare, Medicaid and other programs. Governments also contract with or provide grants to private, tribal and for-profit organizations to provide services.

Alaska's health services have evolved in response to many factors including geography, population needs and traditions, and historical events. Many of Alaska's hospitals are former tuberculosis control hospitals built by the U.S. Public Health Service to treat the epidemic of the early 20th century. Then Alaska's location gave it a critical military and communication defense role for the country during World War II and during the Cold War of the 1950s and 1960s. The major role of the federally recognized tribes in planning and implementing a coordinated system

¹ U.S. Bureau of the Census, 2000 Census.

² Services include immunizations, well child care, services related to infectious diseases, sexually transmitted disease screening, treatment and partner management, newborn hearing screening, family planning, and home visits for follow-up on referrals of high risk families with children.

of care for Alaska Natives, through an agreement with the Indian Health Service called “compacting,” has supported and determined the development of care in rural areas of the state.

Health care is a major contributor to the state’s economy. Health care accounted for eight percent of Alaska’s employment in 2006, with 29,000 workers, and payroll of about \$1.2 billion. Most of the jobs were in the private and tribal sectors – 93%. Fully one third of Alaska’s health care employees worked in physicians’, dentists’ and other health practitioners’ offices, with 40% in hospitals, and 9% in nursing home and other residential care. About 9% worked in outpatient care centers such as ambulatory surgery centers, dialysis centers, imaging facilities, and other diagnostic and treatment facilities, 6% worked in home health care, and 2% in other ambulatory care settings. Seven of the twenty five largest health care employers were tribal organizations – they accounted for 6,000 employees of 16,640 in those twenty five firms. Thus employment in the non-tribal private sector was likely about 23,000 in 2007, or at least 6% of the state’s total employment.³

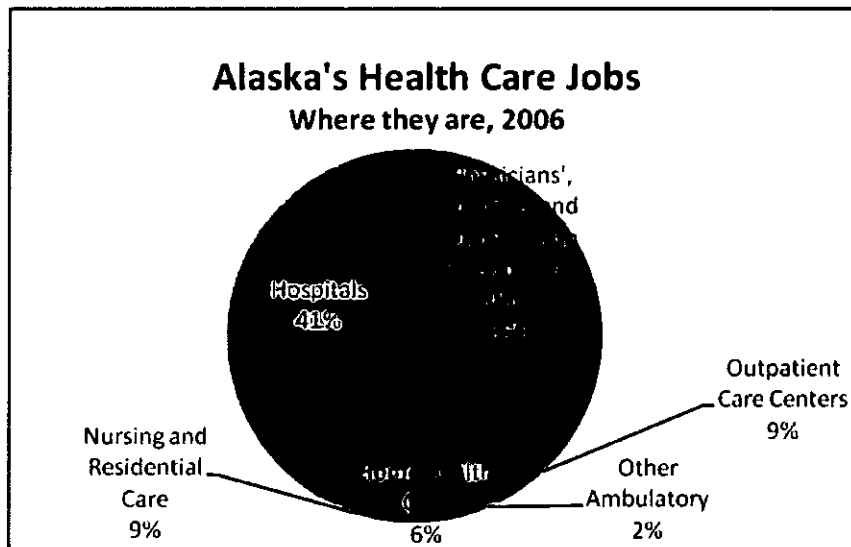

Figure 1: Alaska’s Health Care Jobs, 2006

Thinking of health care services as a “continuum” of care from prevention through treatment, rehabilitation, and maintenance of optimum health can help one comprehend the many different services, facilities and programs. A simplified graphical presentation shows relationships of some of the key components in Figure 2.

³ Fried, N. “Alaska’s Health Care Industry,” Alaska Economic Trends, Anchorage, February 2008.

1. PRIVATE HEALTH CARE SECTOR

The private health care sector includes an array of services from highly specialized diagnosis and treatment to primary care, prevention, and supporting goods and services. Firms range from self-employed professionals, contractors and small businesses to national corporations. Even the not-for-profit health services include very large entities like Providence Alaska Health Systems, the largest employer in Alaska with about 4,000 employees in 2006,⁴ to small community-based community health centers like Bethel Family Health Services with 9 employees. Seattle, Washington is still the nearest source for some highly specialized services such as heart and other organ transplants and severe trauma treatment.

Figure 3: Distribution of Health Care Employment 2006

Only two of Alaska's hospitals are for-profit entities, Alaska Regional Hospital and North Star psychiatric hospital. However many of the free-standing diagnostic, treatment and ambulatory services facilities are for-profit entities. Private sector physicians, dentists, psychologists and other practitioners are either self-employed or have incorporated to pay themselves and staff salaries. Drug stores, medical supply companies, and many other support services are for-profit firms.

Nearly one-third (approximately 10,000) of all health industry jobs in 2007 were in private hospitals. Hospitals are major employers because "they're labor intensive and provide around-the-clock care; three shifts of workers cycle through the hospitals each day."⁵ The Alaska Department of Labor identifies 82 percent of Alaska's non-military employment in hospitals to be in the privately owned and managed facilities rather than local public or tribal facilities.

The private not-for-profit organizations include community-based Community Health Centers and mental health service agencies that receive grants from federal and state government programs. Although these organizations must meet guidelines of public programs, most are not government-run organizations – their boards of directors, employment policies, salary rates, goals and programs are governed by their own bylaws and policies.

⁴ Fried, N., "The Trends 100," Alaska Economic Trends, Anchorage, July 2009. P. 6.

⁵ Ibid., p. 9.

In Alaska, no “managed care organizations” exist in the private sector, and formal provider networks are lacking. However informal referral patterns, and “panels” of preferred providers associated with a variety of insurance programs, result in some structured relationships, and some facilities and groups are affiliated or jointly managed.

2. ALASKA TRIBAL HEALTH SYSTEM

The Alaska Tribal Health System (ATHS) is a voluntary affiliation of nearly 40 tribes and tribal organizations providing health services to American Indians/Alaska Natives (AI/AN) in Alaska. The ATHS is a diverse and multifaceted health care system that has developed over the last 30 years since passage of the 1975 Indian Self-Determination and Education Assistance Act (ISDEA). Each of the tribal health organizations within the ATHS is owned and operated independently, while remaining interconnected via the system’s sophisticated patterns of referrals and their primary and common mission of improving the health status of Alaska’s American Indian/Alaska Native (AI/AN) population.

Alaska has 228 federally recognized tribes, accounting for about 135,000 people. At present, Alaska Native villages are situated mostly along the coast and rivers of Alaska. The dispersal of the communities across a huge, mostly roadless territory accounts in large part for the creation of the innovative statewide health system.

As part of its trust responsibility to Native people, the federal government is required to provide a basic level of health care services to the AI/AN population. The trust responsibility deems these services “pre-paid” with aboriginal lands and authority that tribes ceded to the U.S. government in treaties. In 1975, Congress created a process for transferring Bureau of Indian Affairs and Indian Health Service health programs to tribal governments through the Indian Self-Determination and Education Assistance Act (ISDEA, Public Law 93-638). In doing so, Congress noted the past inadequacies of Native American health care, and reaffirmed its intention to involve tribes in health care programs through tribal self-governance.⁶

⁶From *Jumping Through Hoops: Traditional Healers And The Indian Health Care Improvement Act*, 4 DePaul Journal of Health Care Law 843-860, 844-847 (Summer 1999), accessed on <http://academic.udayton.edu/health/02organ/Indian03.htm> August 10, 2009:

“In passing the Act, Congress noted the government’s “unique legal relationship with, and resulting responsibility to” Indians, necessitated the creation of a comprehensive health care system. The IHCIA set forth the following goals for the IHS:

- (1) to assure Native Americans access to high-quality comprehensive health services in accordance with need;
- (2) to assist tribes in developing the capacity to staff and manage their own health programs and to provide opportunities for tribes to assume operational authority for IHS programs in their communities; and
- (3) to be the primary federal advocate for Native Americans with respect to health care matters and to assist them in accessing programs to which they are entitled. Subsequent amendments in 1992 extended the purpose of the IHCIA to raising the health status of Native Americans over a specified period of time to the level of the general United States population. Additionally, the IHCIA sought a high level of participation by Indian tribes in the planning and management of IHS programs, services, and demonstration projects under subsequent self-determination amendments.

The Alaska Native Medical Center (ANMC), a 156 bed facility in Anchorage, serves as the referral center for specialty care. The other tribally administered hospitals (former US Public Health Service hospitals) are located in the six rural communities of Sitka, Barrow, Bethel, Dillingham, Kotzebue and Nome. There are 36 tribal health centers and 176 tribal community health aide clinics. In many rural areas of the state tribal health organizations are the only health care providers available, and serve everyone in the area regardless of race or IHS-beneficiary status.

The federal Indian Health Service (transferred from the Bureau of Indian Affairs to the US Public Health Service in 1955) manages an Alaska Area Native Health Service office (one of eleven Area Offices) that works in conjunction with nine tribally operated service units to provide comprehensive health services to about 135,000 Alaska Native people. Services funded in-part by IHS are delivered by tribal health organizations, or under contract with non tribal service providers. The federal government through the IHS holds title to six tribally operated hospitals⁷ and three tribally operated health centers in Alaska (on St Paul Island, Annette Island and Tanana Village) and is responsible for their maintenance.

Together, the tribal organizations that compose the AHS operate an \$800 million (FY2006) health care sector, and employ more than 7,000 full and part-time staff statewide. Beneficiaries are not charged for most services received within the AHS. Financing for the entirety of the AHS's programs is split between a variety of sources, including federal and state grants and contracts for specific services; Medicaid, Medicare, and private insurance revenue; rural sanitation funding; and other smaller sources of funding. While the Indian Health Service represents the largest funding source, it accounts for only 60% of total revenue.

The Alaska Tribal Health Compact, which authorizes tribes and tribal health organizations to operate health and health-related programs, was formed October 1, 1994. The Alaska Native Tribal Health Consortium (ANTHC) was organized as a statewide non-profit health service organization owned by Alaska Natives and managed by all tribes in Alaska. Other "compact" organizations under P.L. 93-638 include the tribal health corporations that serve regions and specific communities. ANTHC manages all statewide health services formerly provided by the Indian Health Service. ANTHC has responsibility for essential statewide services, including the Alaska Native Medical Center, which it manages in conjunction with the Southcentral Foundation (the regional tribal health organization serving Anchorage and the surrounding communities).

The Compact is the umbrella agreement (also identified as P.L. 93-638, Title-V Self-Governance Compact) that sets forth the terms and conditions of the government-to-government relationship between Alaska Native tribes and/or tribal organizations, and the United States government through the Indian Health Service.⁸ The 23 tribes and tribal organizations that belong to the Compact include:

⁷ The Alaska Native Medical Center in Anchorage, Samuel Simmons in Barrow, Kanakanak in Dillingham, Maniilaq Health Center in Kotzebue, Mt. Edgecumbe in Sitka, and Yukon-Kuskowim Delta Hospital in Bethel. Norton Sound Hospital in Nome is the only tribally managed hospital that is not Federally-owned.

In addition, there are 17 tribes and tribal organizations that contract with the Indian Health Services to provide health services under P.L. 93-638, Title I.

ANTHC Maps are available on www.anthc.gov in formats that can be printed to large sheets for more legible readability:⁹

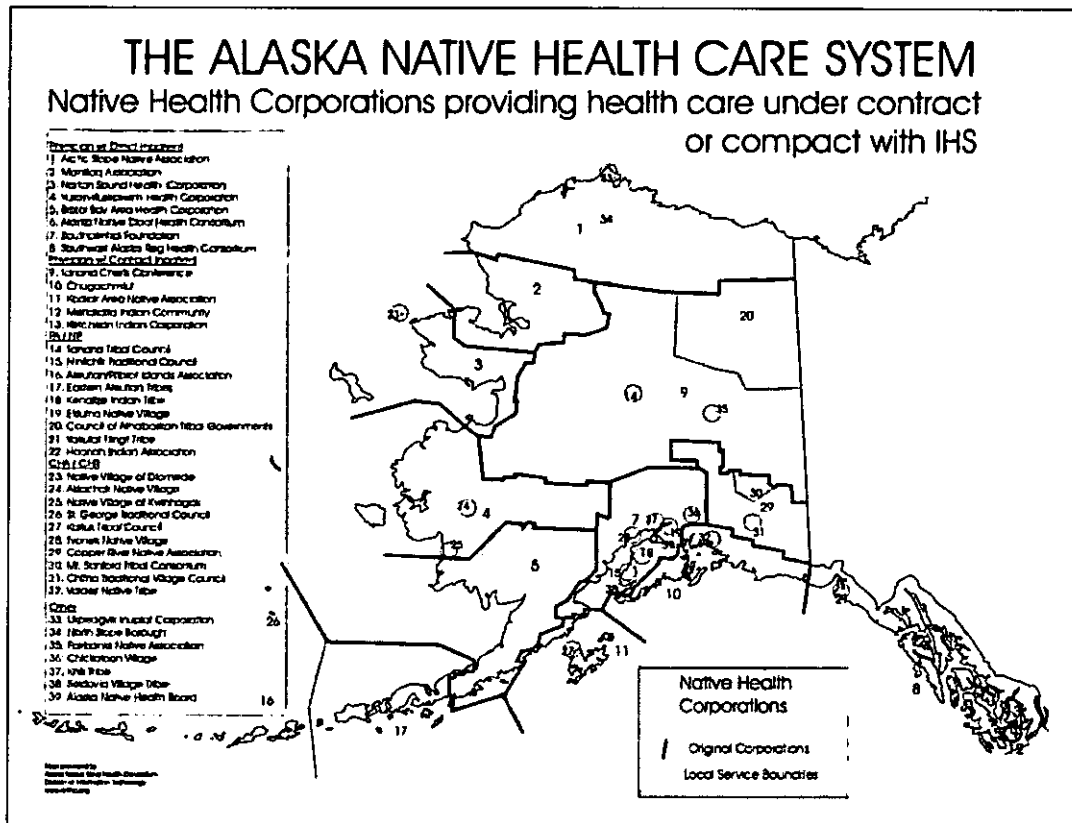

Figure 4: Map of Alaska Native Health Care System

3. U.S. MILITARY AND THE VETERANS AFFAIRS SYSTEMS

U.S. Department of Defense

About 50,000 active duty military and dependent Alaskans are eligible for health care services provided by the Department of Defense. Military retirees and veterans (numbering 76,000¹⁰) have access to certain services. The U.S. Air Force has responsibility for all military, dependents' and veterans' health care in the southern part of the state, and the U.S. Army is responsible for serving these populations in the northern part of the state. A major health center serves each of these areas: Elmendorf AFB Hospital serves the Southern Region,¹¹ and Bassett

⁹ Maps of the Tribal system as well as resource materials about its components are available on the website <http://www.anthc.org/ref/maps/>.

¹⁰ US Department of Veterans Affairs, <http://www1.va.gov/opa/fact/statesum/akss.asp> accessed 8/13/2009

¹¹ **Southern Region:** The 3rd Medical Group, Elmendorf AFB, Alaska is responsible for military services including Air Force, Army, Navy, Marine, Coast Guard, Army/Air National Guard and reserve services units and family members of active duty service personnel. The health care services provided by the 3rd Medical Group include:

a. Primary Care- Pediatrics, Family Practice, Flight Medicine, Internal Medicine and Dental.

(footnote continued)

Army Community Hospital serves the Northern Region.¹² The Veterans' Administration runs an outpatient medical center in Anchorage, and clinics in Fairbanks, Wasilla and Kenai.¹³

When a patient requires highly specialized care, he or she may be referred to a private sector hospital or, more often, to military medical centers out of state. The military has medical centers to serve local military installations in Alaska as well as to provide for surge capacity in times of emergencies. Alaska's military forces have the capability of airlifting complete surgical and hospital facilities to any part of the world or to provide services in times of national emergencies.

The Department of Defense (DOD) TRICARE program (formerly CHAMPUS) is a regionally managed health coverage program for active duty and retired members of the uniformed services, their families and survivors. TRICARE is not an insurance plan, but a health care entitlement program, funded by the U.S. Department of Defense (DoD) for active duty, Guard and Reserve and retired members of the military, and their eligible family members and survivors. TRICARE for Life now provides health care coverage to TRICARE beneficiaries 65 years of age or older. Beneficiaries need to pay the premium for participation in Medicare Part B (physician and other non-inpatient care). TRICARE provides services at military treatment facilities, and supplements that with access to civilian health care networks where necessary (much like the IHS Contract Health Care program).

-
- b. Specialty Care- Women's Health Clinic (OB/GYN), Physical and Occupational Therapy, Optometry/Ophthalmology, Ear/Nose/Throat, Surgery, and Nutritional Medicine
 - c. Ancillary- Pharmacy, Radiology, Laboratory
 - d. Inpatient services including Intensive Care Unit and Labor & Delivery
 - e. Emergency Care- Emergency Room (ER)
 - f. Supplementary Services-Family Advocacy Program/Social Work/Mental Health/Health Promotions and Life Skills.

¹² Northern Region: Bassett Army Community Hospital, Fort Wainwright, Alaska is attached to the Alaska Command, and reports to Chief of All Army Medical Services at Walter Reed Army Hospital. It serves Fort Wainwright, Eielson Air Force Base, Fort Greely and its associated units. Remote army sites are provided with health services through Troop Medical Clinics at Fort Richardson, Fort Greely and Eielson Air Force Medical Clinic. The health care services provided by are:

- a. Primary Care
- b. Women's Health Care
- c. Orthopedics
- d. Audiology
- e. Health Promotion
- f. Medical Laboratory and X-Ray
- g. Mental Health Care
- h. Dental Care
- i. Pharmacy

Alaska Veterans Administration (VA) Healthcare System

The Alaska VA Healthcare System and Regional Office offer primary, specialty, and mental health outpatient care. Services are provided at the Anchorage VA Medical Center, on Elmendorf Air Force Base (through a joint venture with the USAF), and through fee-based arrangements with community hospitals in Fairbanks, Wasilla and Kenai.¹⁴ The VA Medical Center in Anchorage also features a comprehensive Homeless Veteran Service consisting of a Domiciliary Residential Rehabilitation Treatment Program, Veterans Industries, Psychosocial Residential Rehabilitation Treatment Program, VA Supported Housing Program and outreach. These health care services are provided and coordinated through the Anchorage VA Medical Center. In addition to this center of care, the Veterans Administration has established a system of Community Based Outpatient Clinics located at Fort Wainwright, Kenai, and Wasilla.

A pilot project announced in September 2009 is intended to enable veterans to get care through community health centers or other local clinics with Veteran's Administration reimbursement so that less travel for care should be involved.

Coast Guard Clinics

The US Coast Guard history of service in Alaska dates back to the Revenue Cutter Service. Coast Guard personnel and their families are stationed throughout Alaska, including remote sites such as Port Clarence, St. Paul, Attu, Dutch Harbor, and Shoal Cove. Coast Guard clinics in Kodiak, Juneau, Sitka, and Ketchikan support the health care needs of the nearly 5,000 Coast Guard members and their families in Alaska.¹⁵

Alaska Federal Health Care Partnership

Alaska Federal Health Care Partnership (AFHCP) is a voluntary partnership of the organizations serving the federal health care beneficiaries in Alaska. AFHCP combines the healthcare resources of the Alaska Native Medical Center, Alaska Native Tribal Health Consortium, Department of Defense, Department of Homeland Security, Department of Veterans Affairs, U.S. Coast Guard, and the Indian Health Service. The combined beneficiary population of these organizations is over 250,000 with some beneficiaries having dual, or even triple, eligibility within the health and wellness provider systems. The Partnership represents over 250 health care facilities across the state-- from isolated village clinics staffed by health aides in the most remote parts of Alaska, to the Alaska Native Medical Center, the military hospitals in Anchorage and Fairbanks, and the extensive VA clinical services in the Anchorage area.¹⁶

¹⁴ About eighty health care providers are paid for by the Veterans Administration at the Elmendorf AFB Hospital, for providing emergency room care, intensive care and staffing for a medical services unit. The Veterans Administration also provides social workers to this hospital.

B. FACILITIES

I. MEDICAL FACILITIES

1. HOSPITALS

There are 27 hospitals in Alaska: 24 that provide general acute care (including two military and seven tribally operated hospitals), and three specialized hospitals (one long term acute care and two psychiatric hospitals).¹⁷ The greatest concentration of hospitals is in the Anchorage/Mat-Su region.¹⁸ The relatively large hospitals in Anchorage and Fairbanks serve as referral facilities for providers from rural areas of the state. Hospitals in Seattle also serve as key referral destinations for residents of Alaska in need of “high tech” and specialty services.

Figure 5: Map of Alaska Hospital Locations, 2004

Statewide, there are 1,562 beds in Alaska hospitals, not including those operated by the military. Of those beds, 154 are psychiatric in the two specialized hospitals, 60 are “long term acute care,”

¹⁷ A general acute care hospital must provide surgical, anesthesia, perinatal, medical, nursing, pharmaceutical, dietetic, laundry, medical records, radiological, laboratory, and emergency care services. Such a hospital must also provide speech, occupational, or physical therapy services. A rural primary care hospital or a critical access hospital must provide the services of a general acute care hospital except that the provision of surgical, anesthesia, perinatal, speech, occupational therapy, or physical therapy services is optional. A long-term acute care hospital must provide medical, nursing, pharmaceutical, dietetic, occupational therapy, physical therapy, laundry, medical records, radiological, social work, respiratory, and laboratory services. (7 AAC 12.105)

¹⁸ <http://www.hss.state.ak.us/dph/Healthplanning/publications/healthcare/default.htm> (Alaska Health Care Data Book, figure 4.170)

and 1348 are acute care beds (of which 146 are identified as swing beds that can be used for acute or long term care).

*Critical Access Hospital

** Total beds include licensed and/or certified acute care and swing beds. Many hospitals are operating with fewer beds than the number licensed.

Data Source: Health Facilities List, Licensing and Certification Section, Division of Public Health 2009

The scope of services provided by Alaska's urban hospitals has been changing dramatically. Bed counts have remained quite stable in the last decade, but hospital "campuses" have grown to accommodate an array of emerging technologies and day treatment services that were formerly available only as inpatient services or out-of-state. Examples of services that have been introduced by hospital systems in the last five years include: cardiac catheterization, cardiac electrophysiology ablation, cardiac rehabilitation, chemotherapy and cancer services, renal dialysis, pediatric medicine, birthing centers, outpatient surgery, sleep disorder testing, sports medicine rehabilitation, and expanded hospice and home care. The addition or expansion of these services to Alaska's urban hospitals has provided an incentive to physicians and businesses that support these services to establish residence and to provide care in Alaska, often partnering with the hospital care system. This has allowed Alaskans to receive care in-state.

Alaska's hospitals in communities with populations smaller than 30,000 – that is, outside of Anchorage, Mat-Su, Fairbanks and Juneau – are recognized to be critical "economic engines" of their communities, providing jobs directly, and providing assurance of emergency services and access to care for residents of their service areas, and for employers who want to attract workers. The Balanced Budget Act of 1997 (Public Law 105-33) established the Medicare Rural Hospital Flexibility Program, a national program designed to assist states and rural communities in improving access to health care services in rural areas through the development of limited service hospitals and rural health networks. Thirteen Alaska hospitals (see table above) are now certified by Medicare as Critical Access Hospitals (CAH) enabling them to obtain cost-based reimbursement rates from the Federal Medicare program.

Critical Access Hospital Certification

A Critical Access Hospital (CAH) is an acute care facility that provides emergency, outpatient, and limited inpatient services and may be linked to full service hospitals and other types of providers in a rural health network. CAHs generally provide inpatient care for up to 96 hours, unless discharge or transfer is precluded due to inclement weather or other emergency conditions. CAHs may maintain up to 25 beds to furnish both acute and skilled nursing level care, provided that no more than 15 of these beds are used for acute care at any one time. A CAH may operate nursing home beds or provider-based services like home health. CAHs are reimbursed on a "reasonable cost" basis for services provided to Medicare beneficiaries.

Trauma Center Designation

Alaska's highest level Trauma Center (Level II) is the Alaska Native Medical Center (ANMC). Level II Trauma Centers provide comprehensive trauma care, serving as the lead trauma facility for a geographical area. Emergency physicians and nurses are available in-house to provide direct patient care and initiate resuscitation and stabilization. Prompt availability of general surgeons and certain specialty surgeons is required. A Level II Trauma Center also provides educational outreach and prevention programs, and assumes responsibility for trauma system leadership in the absence of a Level I Trauma Center. Under ACS criteria, Level I centers must conduct trauma research and teach trauma care physicians. Cities in Alaska do not have the patient loads or academic medical centers to support this level of care and the nearest Level I

Trauma Center is located in Seattle. There are four Level IV-designated Trauma Centers in Alaska: Norton Sound Regional Hospital (Nome), Yukon-Kuskokwim Delta Regional Hospital (Bethel), Mt. Edgecumbe Hospital (Sitka), and Sitka Community Hospital (Sitka).

2. Outpatient Facilities

Recent changes in technology and medical practice have allowed patients to receive some services as outpatients rather than being hospitalized. Outpatient services can be performed in a hospital setting or in a freestanding facility. Currently the State of Alaska licenses ambulatory surgery centers, and birthing centers, as authorized by Alaska Statute 47.32. (It also licenses hospitals that may offer ambulatory surgery and ESRD services.)¹⁹ In addition, Alaska has Medicare certified end stage renal disease facilities.

An ambulatory surgical facility provides surgery and anesthesia service, in some cases including pain management and diagnostic services, in an outpatient setting. Ambulatory Surgery Centers (ASC) (which may be called outpatient surgery centers or same-day surgery centers when part of a hospital) perform procedures that are more intensive than those done in the average doctor's office, but not so intensive as to require a hospital stay.

In order for a facility to be licensed as an ASC, services must comply with the state's standards for surgical and anesthesia services in general acute care hospitals. There are also requirements, similar to hospital medical staff regulations,²⁰ for physicians working in these licensed facilities. Currently there are nine licensed Ambulatory Surgery Centers in the state.

Freestanding Birthing Centers are facilities which are not a hospital or in a hospital, where births are planned to occur away from the mother's residence following normal, uncomplicated pregnancy. The state has eight licensed Birthing Centers: one each in Juneau, Soldotna and Fairbanks, and three in Anchorage and two Wasilla.

Alaska also has Medicare certified facilities for treatment of end stage renal disease, commonly referred to as dialysis centers. Dialysis is used to provide an artificial replacement for lost kidney function. It may be used for acutely ill patients who have suddenly but temporarily lost their kidney function and require services for only a short time period; but is used mostly for patients who have permanently lost their kidney function and require dialysis for a long, indefinite period of time. The state currently has seven Medicare certified End State Renal Disease facilities.²¹

Other diagnostic and testing services now being established in some instances as freestanding businesses are imaging (including Magnetic Resonance Imaging and CT Scan), sleep studies,

¹⁹ Per AS 47.32.010

²⁰ Purpose and accountability include that "the provisions of AS 47.05.300 - 47.05.390, regarding criminal history, criminal history checks, criminal history use standards, and a centralized registry, apply to entities listed in (b) of this section, as provided in AS 47.05.300."

²¹ Licensing and Certification Section, Division of Public Health 2009

and laboratories. Such entities are being called “Independent Diagnostic Testing Facilities” (IDTF) when they are not engaged in patient treatment, but perform diagnostic tests by certified non-physician personnel under physician supervision. These facilities are independent of a hospital or physician’s office. The state does not license IDTFs but does monitor the credentials of staff performing tests and the proper functioning of diagnostic equipment used by the facility.

3. Community Health Centers (CHCs) and Special Clinic Certifications

Community Health Centers (CHCs, sometimes referred to as “330 Clinics”) are non-profit, community-based organizations that provide health care to low income and medically underserved areas and populations. The CHC program was established under section 330 of the Public Health Services Act, and federal grant funding is provided through the US Department of Health and Human Services, Health Resources and Services Administration (HRSA).²²

Similar to many outpatient medical clinics, CHCs are required to provide typical primary care services²³ including:

- Health services related to family medicine, internal medicine, pediatrics, obstetrics, or gynecology provided by physicians, physician’s assistants, nurse practitioners, nurse midwives, and health aides.
- Diagnostic laboratory and radiological services.
- Preventive services (prenatal services; screening for breast and cervical cancer; well-child services; immunizations; screenings for communicable diseases, environmental contaminants, and chronic health conditions; pediatric eye, ear, and dental screenings to determine the need for vision and hearing correction and dental care; family planning services; and preventive dental services.)
- Emergency medical services.
- Pharmaceutical services.

Additionally, community health centers are expected to provide:

- Referrals to providers of health related services including substance abuse and mental health services.
- Patient case management services including counseling, referral, and follow-up services.
- Patient education regarding health conditions and the availability and use of health services.

²² For criteria for designation of Medically Underserved Areas/Populations and health professional shortage areas, see <http://bhpr.hrsa.gov/shortage/index.htm>, www.hss.state.ak.us/dhcs/healthplanning or <http://www.hss.state.ak.us/dph/healthplanning/primarycare/MUA.htm>

²³ Primary care is the provision of professional, comprehensive health services that include health education and disease prevention, initial assessment of health problems, treatment of acute and chronic health problems, and the overall management of an individual’s or family’s health care services. It entails first-contact care of persons with undifferentiated illnesses, comprehensive care that is not disease or organ specific, care that is longitudinal in nature and care that includes the coordination of other health services.

CHCs differ from privately run physician offices and clinics in several ways. They are required to include a majority of consumer representatives on their Boards of Directors. Their funding is contingent upon demonstration in their funding proposals and utilization reports that they attend to the health status of the entire community in addition to the clinic's patient population. This often means that CHCs participate in prevention program opportunities to address such conditions as diabetes, hypertension, or chronic obesity. Further, chronic care management, medical homes, and the benchmarking of patient outcomes have been the foci of health center activities.

US Department of Health and Human Services, Health Resources and Services Administration, Bureau of Primary Health Care periodically makes US Public Health Service, Section 330 funds available to CHCs to expand their scope of services. Oral health and mental health services are two of the services that have been the focus of additional funding available to CHCs. Many Alaska CHCs have taken advantage of these funding opportunities, and increasingly CHCs are co-locating or otherwise integrating the provision of general dentistry and behavioral health services into their primary care clinics.

Figure 6: Growth in Number of Community Health Center Grantees and Clinics, 1974 - 2007

Between 1995 and 2009 the number of Community Health Centers in Alaska that were funded in part through Section 330 of the Public Health Service Act grew from two provider agencies – the Anchorage Neighborhood Health Center and Interior Neighborhood Health Center (Fairbanks) who were operating four sites in 1995, to 26 agencies operating 145 healthcare delivery sites.²⁴

Community Health Centers are by definition “Federally Qualified Health Centers,” or “FQHCs,” which are further defined by section 1861 of the Social Security Act.²⁵ Tribally managed clinics are also FQHCs.

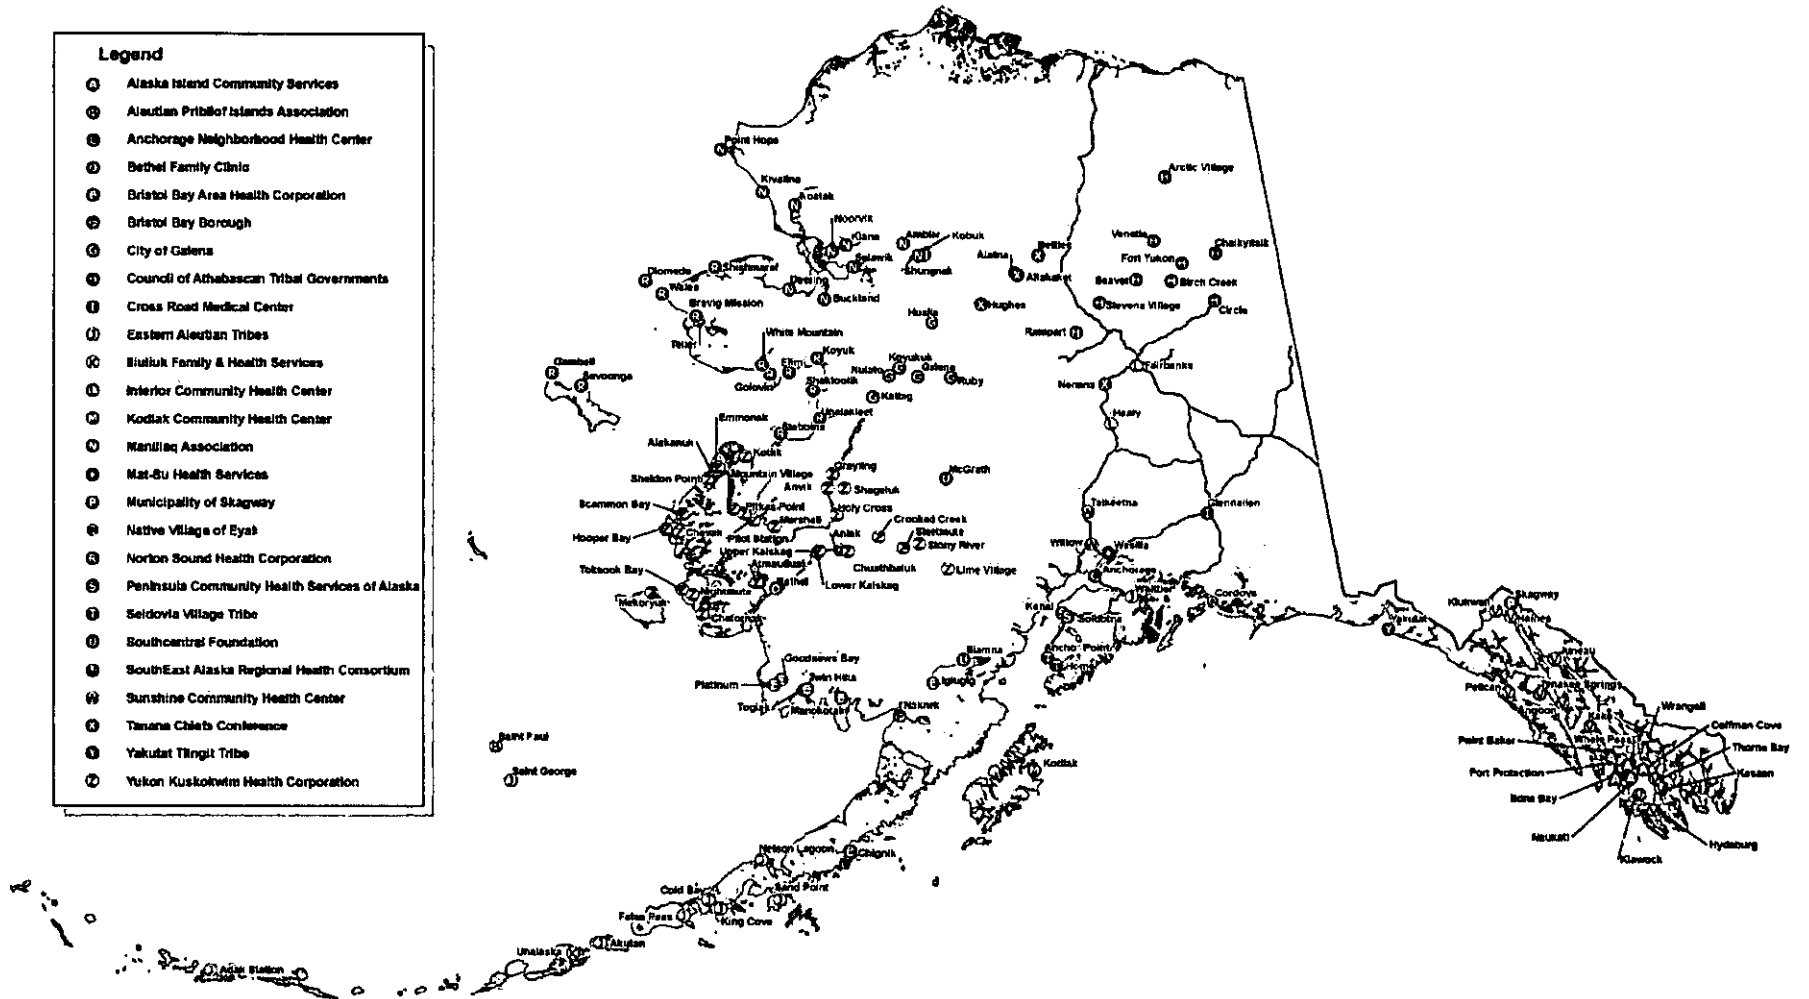

²⁴ Based on the sites listed as reporting to the Bureau of Primary Health Care’s Uniform Data System.

ftp://ftp.hrsa.gov/bphc/pdf/uds/2007/07Rollup_StateAK_08Jul2008.pdf

²⁵ Section 1861 of the Social Security Act "(4) The term “Federally qualified health center” means an entity which—

- (A)(i) is receiving a grant under section 330 (other than subsection (h)) of the Public Health Service Act, or
- (ii)(I) is receiving funding from such a grant under a contract with the recipient of such a grant, and (II) meets the requirements to receive a grant under section 330 (other than subsection (h)) of such Act;
- (B) based on the recommendation of the Health Resources and Services Administration within the Public Health Service, is determined by the Secretary to meet the requirements for receiving such a grant;
- (C) was treated by the Secretary, for purposes of part B, as a comprehensive Federally funded health center as of January 1, 1990; or
- (D) is an outpatient health program or facility operated by a tribe or tribal organization under the Indian Self-Determination Act or by an urban Indian organization receiving funds under title V of the Indian Health Care Improvement Act[423]."

Figure 7: Map of the Alaska Community Health Centers, Prepared by Alaska Primary Care Association (David Wilson), Jan. 2009

Frontier Extended Stay Clinics

In remote frontier areas of the country weather and distance can prevent patients who experience severe injury or illness from obtaining immediate transport to an acute care hospital. For residents in some of these communities providers offer observation services traditionally associated with acute care inpatient hospitals until the patient can be transferred or is no longer in need of transport. A Medicare demonstration project is under development in Alaska in which "Frontier Extended Stay Clinics" (FESCs) would be able to be reimbursed more adequately for the extended services provided to Medicare and Medicaid patients, as Medicare certified providers of these services.

Rural Health Clinics

A Rural Health Clinic is a clinic certified to receive special Medicare and Medicaid reimbursement. The purpose of the RHC program is improving access to primary care in underserved rural areas. RHCs must provide outpatient primary care and laboratory services, and are required to use a team approach of physicians and midlevel practitioners such as nurse practitioners, physician assistants, and certified nurse midwives to provide services. The clinic must be staffed at least 50% of the time with a midlevel practitioner.

RHCs can be for-profit or non-profit entities, and can be either publicly or privately owned and operated. Medicare visits are reimbursed based on allowable costs, and Medicaid visits are reimbursed under the cost-based method or an alternative Prospective Payment System (PPS). This may result in an increase in reimbursement over typical Medicare and Medicaid fee-for-service reimbursement rates.²⁶

Rural Health Clinic certification was established under the Rural Health Clinics Act, passed by Congress and signed into law in 1977. The goal of this Act was twofold. First, it encouraged the utilization of physician assistants (PAs) and nurse practitioners (NPs) by providing reimbursement for services to Medicare and Medicaid patients by these health professionals, even in the absence of a full-time physician.²⁷ Second, it created a cost-based reimbursement

²⁶ Downloaded 08-17-09: http://www.raconline.org/info_guides/clinics/rhcfaq.php#whatis

²⁷ A physician assistant (PA) is a licensed health professional who practices medicine under the supervision of a physician. A physician assistant provides a broad range of health care services that were traditionally performed by a doctor. As part of the physician/PA team, a physician assistant exercises considerable autonomy in diagnosing and treating illnesses. What a physician assistant does varies with training, experience, and state laws. In general, PA's can provide approximately 80 percent of the services typically provided by a family physician. They perform physical exams, diagnose illnesses, develop and carry out treatment plans, order and interpret lab tests, suture wounds, assist in surgery, provide preventive health care counseling, and in 39 states, can write prescriptions. A PA can do whatever is delegated to him/her by the supervising physician and allowed by law. The scope of the PA's practice corresponds to the supervising physician's practice. For example, the PA working with a surgeon would be skilled in surgical techniques in the operating room, perform pre- and post-operative care, and be able to perform special tests and procedures.

Nurse Practitioner: The American Academy of Nurse Practitioners defines Nurse Practitioners as licensed independent practitioners who practice in ambulatory, acute and long term care as primary and/or specialty care providers. They provide nursing and medical services to individuals, families, and groups according to their area of practice/specialty. In addition to diagnosing and managing acute episodic and chronic illness, they also emphasize
(footnote continued)

mechanism for services when provided at clinics located in “underserved” rural areas.²⁸ Because of subsequent changes in the Medicare law authorizing Medicare Part B coverage for PAs and NPs in all practice settings (not just RHCs), the original incentive for utilizing PAs and NPs was diminished. However, because a RHC gets reimbursed the same amount from Medicare and Medicaid regardless of whether the patient is seen by a mid-level provider (MLP) such as a PA, NP, Certified Nurse Midwife (CMN), or physician, the clinic continues to have a strong incentive to utilize these practitioners whenever it is clinically appropriate.

In Alaska where a majority of rural primary health care programs have been run with funding from the Indian Health Services (IHS) and Section 330 Community Health Center grants (USDHHS Health Resources and Services Administration), the RHC program has not provided the same financial advantages that it has in other states. Tribally managed clinics have more favorable reimbursement rates than Rural Health Clinics for their Medicare and Medicaid patients. Also, many of the tribal clinics are already within the Community Health Center program.

There are currently three Medicare-certified Rural Health Clinics in Alaska: the Edgar Nollner Health Center in Galena, the Hoonah Midlevel Practice Clinic, and the Yakutat Community Health Center.

4. Physician, Dentist and Other Professional Offices

Many physicians and dentists in Alaska are practicing in solo practice offices, but many share professional office space with others or form group practice offices. Some are primary care physician offices, others include one or more specialties. Physicians and dentists, as well as other specialty service providers, are concentrated in Alaska’s largest communities, likely due to the amenities available, support staff availability, referral resources, and access to other resources. As noted above, about a third of health care jobs are in health practitioners’ offices, according to the industry survey data of the Alaska Department of Labor.²⁹ Thus in terms of practice settings, professional offices are the most common place of work.

Urgent care centers

Some physicians operate their office as an urgent care center or clinic. They have been established in Anchorage, Fairbanks, Juneau, Kenai, and the Matanuska-Susitna Valley. These can be operated by a single physician or group of practitioners, or the center can be affiliated with a hospital based health care system. Urgent care centers are primarily used to treat patients who have an injury or illness that requires immediate care, on an unscheduled or walk-in basis, but who’s condition is not serious enough to warrant a visit to a hospital emergency department. Often urgent care clinics are not open on a continuous basis, unlike a hospital emergency room,

health promotion and disease prevention, incorporating teaching and counseling of individuals, families, and groups as a major part of their practice.

²⁸ “Underserved” means that an area has too few providers to meet the needs of the population. For official designation as an “underserved” area, the area needs to be found to be a “health professional shortage area,” or HPSA, as defined in Federal regulations. The Alaska Primary Care Office in AKDHSS handles designation applications to the USDHHS Health Services and Resources Administration, HRSA.

²⁹ Fried, N. “Alaska’s Health Care Industry,” *Alaska Economic Trends*, February 2008.

but provide extended hours compared to a primary care physicians office. They often provide basic laboratory and imaging services, and referral is made to the appropriate health care provider for follow-up care and treatment. Urgent care centers have the same licensing requirements as that of a primary care physician's office or practice.

5. Mid-Level Provider Clinics

Mid-level providers (MLPs) include Nurse Practitioners, Certified Nurse Midwives, and Physician's Assistants.³⁰ Clinics staffed by MLPs include a handful of private clinics established by these providers. Several community clinics (such as Gustavus and Hoonah) run by communities or tribal organizations have hired mid-level providers as full-time or part-time staff, since the community does not have a population base sufficient to support a physician practice. Another example of mid-level clinic models in use in Alaska is the workplace clinic model used on the North Slope, where oil companies provide contracted physician's assistant services for their employees.

6. Publicly provided clinical medical services

Services provided by state and local health departments include the Municipality of Anchorage and State Public Health Nursing and emergency preparedness immunization programs' services, Early and Periodic Diagnosis and Testing (EPSDT), home visits to high risk newborns and families (upon referral), newborn hearing screening, infectious disease follow-up including follow-up of contacts, Sexually Transmitted Diseases screening and partner management, foodborne outbreak follow-up, and other services.

Alaska Health Fairs and various periodic volunteer programs including the "Northern Edge" training program (sponsored and carried out by the military) bring additional screening, health education, and in some instances treatment services, to selected communities each year. Also, for several years, Anchorage Project Access has organized voluntary donations of services by physicians, especially specialists, and has matched patients with physicians. The Anchorage Neighborhood Health Center (providing primary care services as a Community Health Center) has referred a number of its patients requiring more highly specialized care than the CHC can provide.

7. Comment on Health Care Safety Net

"Health Care Safety Net" is a term used to refer to health care providers who are required by law to see patients regardless of ability to pay. The "health care safety net" includes a wide variety of providers delivering care to low-income and other vulnerable populations, including the uninsured and those covered by Medicaid. Major safety net providers include public hospitals and community health centers as well as teaching and community hospitals, private physicians, and other providers who deliver a substantial amount of care to these populations.

³⁰ Definition of NPs and PAs in previous footnote.

8. Health Facilities and the “Certificate of Need” Requirement

The Certificate of Need (CON) program as established in statute AS 18.07 is intended to promote the rational planning of health care facilities and health care services, improve citizen access to and choice of health care facility services, review the availability of qualified human resources available to staff facilities and provide services, contain the costs to the state for health care facility services paid for by public funds, and avoid the proliferation of unneeded health care facilities and services in the state through the application of approved standards, review of the needs and activities of an area, and considering input from residents.³¹

The certificate of need requirements of AS 18.07 apply to the following health care facilities licensed under AS 47.32:³²

- an acute care hospital;
- a critical access hospital;
- an ambulatory surgical center;
- an intermediate care facility for the mentally retarded;
- a nursing facility;
- a psychiatric hospital;
- a residential psychiatric treatment center.

The CON requirements also apply to certain health care facilities that are not licensed under AS 47.32: independent diagnostic testing facilities and kidney dialysis centers. For facilities other than nursing homes and residential psychiatric treatment centers, the process is required if costs will exceed \$1.3 million (as of 2009, threshold raised \$50,000 each fiscal year).

II. LONG TERM CARE SERVICES AND FACILITIES

Long term care is distinct from acute care, which focuses on curing an illness or restoring an individual to a previous state of better health. Long term care encompasses a broad range of assistance, services, and supports to meet health and personal care needs over an extended period of time, from nursing home care to home based assistance.

The primary goal of long term care services is to enable senior citizens and disabled individuals to remain in their homes or communities and includes not only health care but services necessary to maintain quality of life including such things as housing and transportation.

Long term care is provided in a range of settings known as a “continuum of care” depending on an individual’s needs and preference (Figure 8).³³ Most long term care is non-skilled personal care assistance, commonly referred to as custodial care, such as help performing everyday Activities of Daily Living (ADL) such as bathing and dressing, in the individual’s home. Another level of care in the patient’s home is home health care provided by skilled and licensed

³¹ As articulated in public notice for regulations 8/12/2009

³² Certificate of Need Program website http://www.hss.state.ak.us/dph/healthplanning/cert_of_need/

³³ Definitions for *Continuum of Care Matrix*, <http://www.hss.state.ak.us/dph/healthplanning/movingforward/matrices/RDdefs.htm>

medical professionals. Alaska currently has 16 licensed Home Health Care agencies which provide skilled medical care to patients in their homes. Of these 16 agencies, nine are hospital based.

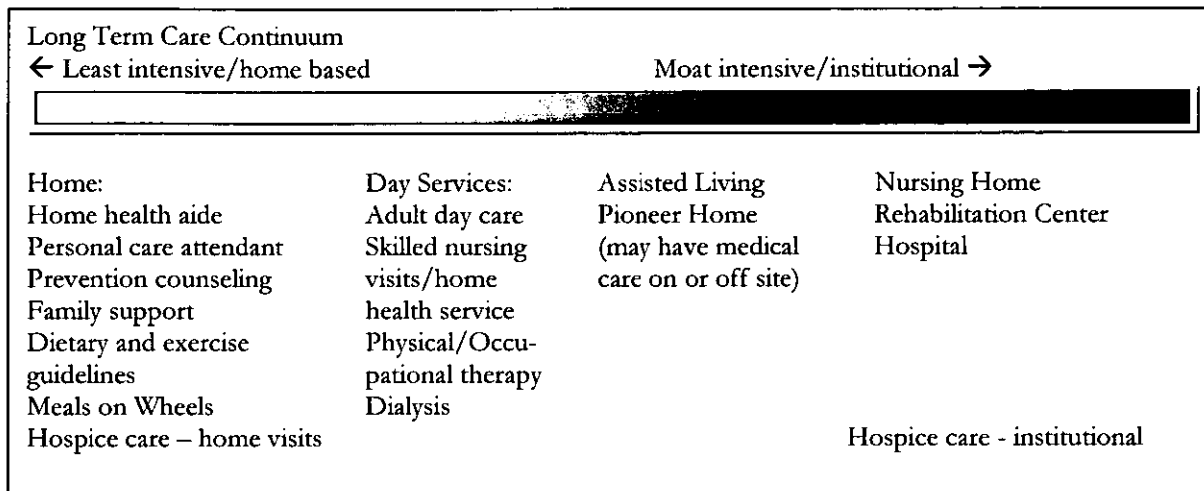

Figure 8: Long Term Care Continuum of Care

When a patient is terminally ill, regardless of age, hospice care can be a choice for the patient and their family. Hospice care provides support by both medical professionals and trained volunteers focusing on the palliation, or relief of symptoms, of a terminally ill patient. This support can be physical, emotional, spiritual, or social. The State currently has 12 licensed Hospice agencies.

Senior housing provides living arrangements designed for handicapped accessibility and convenient access to services. When a senior citizen or disabled individual is no longer able to remain in his or her own home, or with supportive family members, other types of residential care may be available to allow the person to remain in the community. Group homes with assistive services are called “assisted living” facilities. Alaska Pioneer Homes are state-run assisted living homes. Assisted living beds (other than Pioneer Homes) average 2200 annually according to State Certification and Licensing, in about 260 homes.³⁴ The six Pioneer Homes have 508 beds. Skilled Nursing Facilities (SNFs) or nursing homes provide intensive services for those needing a higher level of care. They offer both short and long-term placements for senior who require significant nursing interventions each day. Alaska has 15 nursing homes with 716 beds.³⁵

Assuming that age-specific migration and mortality patterns will remain similar to the current (2000-2005) patterns, it is projected that the population aged 65 and older will nearly triple by

³⁴ 2009 count is 269 licensed senior assisted living facilities with 2,346 beds.

³⁵ Current Facilities List, by email from Certification and Licensing, July 31, 2009

2025, from about 43,000 people in 2005 to about 124,000 in 2025.³⁶ Those who are 85 and over have the highest rates of use of long term care.

The Commission on Aging along with the Department of Health and Social Services, through their 2008-2011 Plan identifies the goal of Alaska seniors staying in their communities, and having access to an integrated array of health and social supports along the continuum of care.³⁷ These goals identify the concern for individuals to be able to maintain quality life through the least invasive and expensive services required in the continuum of care.

Figure 9: Population Projections Alaskans Age 65+, 2004-2029

The goal of keeping people in their homes and communities is also expressed through planning for services for individuals with developmental disabilities, to provide home and community based services where possible, for housing and support for employment.

Table 2: Number of Agencies Providing Long Term Care Services

Selected Agencies Providing Long Term Care Services	Number	Types of Employees	Beds (if applicable)
Home Health	16	PCA, Home Health Aide, RN	n.a.
Hospice	12	RN, LPN, Volunteers, LSW, others	n.a.
Senior Center	45*		n.a.
Pioneer Home	6		550
Assisted Living	269		2,346
Nursing Homes	15	RN, LPN, aides, physician supervision	716

*45 senior centers receive state or tribal funding; several others are known to exist with community funding.

³⁷ <http://www.hss.state.ak.us/acoa/StatePlan.htm>

III. BEHAVIORAL HEALTH FACILITIES

Facilities that offer care to people with mental illness and substance abuse problems range from community clinics (least intensive services) to hospitals for acute psychiatric care (North Star with 74 beds and Alaska Psychiatric Institute with 80 beds). Additional hospitals in Juneau, Fairbanks and regional hubs provide evaluation, stabilization, and short-term treatment and referral. Thirteen (13) non-profit organizations receive grants to provide residential substance abuse treatment.³⁸ Detoxification beds are available in Anchorage, Juneau, and Fairbanks.

Alaska has six Residential Psychiatric Treatment Centers in Anchorage for youth (total 183 beds), and a total of 438 residential psychiatric beds for youth (2009), distributed as follows:

- Northwest: 14
- Southwest: 13
- Anchorage/Mat-Su: 165
- Southeast: 114
- Interior: 117
- Kenai/Kodiak: 15

In addition, there are approximately 320 beds in "Treatment Resource Homes" with behavioral health services for youth. Most are located in the Anchorage Municipality and Matanuska-Susitna Borough.

Agencies across the state receive grant funds from the Department of Health and Social Services and the Alaska Mental Health Trust Authority³⁹ to assist residents with behavioral health needs and help to prevent suicide, substance abuse, and other problems. Approximately 65 organizations are receiving grants from the Department of Health and Social Services Division of Behavioral Health in FY 2010 to provide behavioral health treatment and recovery services. (See Behavioral Health Grantees List).

³⁸ These are:

Sitka Counseling and Prevention
Rainforest Recovery
Southeast Alaska Regional Health Corporation
Salvation Army Clitheroe
Southcentral Foundation
Akeela, Inc.
Volunteers of America - ARCH
Alaska Rehabilitation Services - Nugen's Ranch
Bristol Bay Area Health Corporation
Central Peninsula Hospital - Serenity House
Tanana Chiefs Conference
Fairbanks Native Association
Yukon Kuskokwim Health Corporation

³⁹ The Alaska Mental Health Trust Authority is a state corporation that administers the Alaska Mental Health Trust, a perpetual trust managed on behalf of Trust beneficiaries. The Trust operates much like a private foundation, using its resources to ensure that Alaska has a comprehensive integrated mental health program to serve Trust beneficiaries. Detailed elements of the program are included in the Alaska Statutes. (AS 47.30)

By default, the Department of Corrections (DOC) has become the single largest provider of mental health care in Alaska. A 2006 study found that approximately 42 percent (1,524 of 3,628 as of June 30, 2006) of the people incarcerated in Alaska correctional facilities were Trust beneficiaries, with mental illness, substance-related disorders and/or mental disabilities.⁴⁰ Also many youth within the Division of Juvenile Justice system have a co-occurring disorder (substance related disorder accompanied by a mental health disorder). A current alternative to incarceration for adults with severe mental illness is diversion into Anchorage or Palmer Coordinated Resources Projects (therapeutic courts). Therapeutic court programs are also operating in Bethel and Fairbanks.

The DHSS Behavioral Health Integration Project, supported by the Co-occurring State Incentive Grant (COSIG) from SAMHSA, has developed the state's capacity to serve clients with co-occurring disorders. Integration of behavioral health and primary care has been advanced by some Section 330 Community Health Centers that have received special funding from HRSA to include services for mental health and substance abuse.

The Department of Health and Social Services coordinates with the Alaska Mental Health Trust Authority and associated boards to develop the Comprehensive Integrated Mental Health Plan to address the needs of Alaskans with mental and emotional illness, alcoholism and substance use disorders, brain injury, developmental disabilities, and Alzheimer's disease and related dementia. The Department and the Trust convene the interested parties to review and plan for population needs, facilities, workforce, and multiple program initiatives.

IV. EMERGENCY MEDICAL SERVICES

Seven Regional EMS Programs (three non-profit EMS councils, three programs based in regional health corporations, and one program residing in a borough-wide fire department) work with the community-based emergency medical services to be sure that emergency medical services personnel (EMTs) are available to respond to the emergency medical needs of Alaska's citizens and visitors, and to be sure that the personnel and their ambulances and air transport are properly equipped. The State Division of Public Health and Alaska Council on EMS have duties to certify EMTs and work with the EMS programs on their training, reporting and assurance of adequate equipment. "Medevacs" (air rescues) play a major role in Alaska.

⁴⁰ Hornby Zeller Associates, Inc. (December, 2007). *A Study of Trust Beneficiaries in the Alaska Department of Corrections*, p. ii. This does not include individuals in custody in community residential centers or in the contracted facility in Arizona.

C. Health Care Providers

Health care professionals include a variety of specialists and primary care providers in medicine, dentistry, mental health and substance abuse services, and support services. In recent years, concerns about current and potential shortages of health care professionals have led to several studies of supply and demand, recruitment, and retention of physicians and other health care providers in Alaska.⁴¹

Primary Care and Specialty Medical Providers

Primary care services in Alaska are provided by a spectrum of providers, including over 800 primary care physicians, many of about 700 licensed mid-level providers (physician assistants and nurse practitioners), and about 550 Community Health Aides and Community Health Practitioners (see description below). The state licensing database (relying on address listed by the license applicant) shows that most physicians are located in larger communities, those with at least 1,000 people. Some of the physicians and mid-level practitioners practice in Community Health Centers and Rural Health Clinics (RHCs).

Several of the smallest hospitals have hired physicians directly to ensure staffing, and most larger hospitals as well as the tribally managed facilities have hired physician staff members, to serve as emergency room physicians, “hospitalists,” or generalists who work in outpatient, inpatient and itinerant services.

Three quarters of primary care physicians (including family practice doctors, internists, pediatricians and obstetrician-gynecologists) are in the Anchorage-Wasilla, Fairbanks and Juneau areas. Recruitment and retention are difficult in remote areas. Turnover of health personnel is an ongoing problem.

The National Health Service Corps “scholars” program (with six placements in Alaska in 2009) and loan repayment program (with ten placements in Alaska in 2009), and the Indian Health Service loan repayment program, provide financial support in exchange for service for physicians and mid-level providers committed to work in health professional shortage areas.⁴² A federal grant approved in September 2009 for a state-federal loan repayment program will expand the loan repayment opportunities for at least two years.

⁴¹ Securing an Adequate Number of Physicians for Alaska’s Needs, Alaska Physician Supply Task Force Report, August 2006 <http://www.hss.state.ak.us/commissioner/Healthplanning/publications/assets/PSTF-06.pdf>; SORRAS I: Status of Recruitment Resources and Strategies (2004), <http://www.hss.state.ak.us/dph/healthplanning/publications/assets/SORRASreport.pdf>; SORRAS II: Status of Recruitment Resources and Strategies 2005–2006, http://nursing.uaa.alaska.edu/acrh/projects/sorras_report05-06.htm; and Alaska Center for Rural Health, 2007 Alaska Health Workforce Vacancy Study, http://nursing.uaa.alaska.edu/acrh/index_downloads/workforce_7-24-07_body-final.pdf

⁴² For explanation and criteria for shortage designations, see Alaska Primary Care Office webpage http://www.hss.state.ak.us/dph/healthplanning/primarycare/PC_home.htm and USDHHS Health Resources and Services Administration, Shortage Designation Branch, <http://bhpr.hrsa.gov/shortage/>

Specialists are more likely to be in the largest urban areas where they can rely on access for their patients to the tertiary care hospitals (those with more advanced services), the support staff and other support services that can support their practices. Ninety one percent of psychiatrists practice in the Anchorage-Wasilla, Fairbanks and Juneau areas, and 89% of other specialists are located in these urban areas.

Nurses: RNs and LPNs are licensed; Certified Nurse Aides and Personal Care Attendants are not licensed. It should be noted that many nurses cycle into and out of Alaska from out-of-state employment services that help to fill needs for either specialist or generalist nurses, when local supply is insufficient to meet local needs. Data on numbers of such seasonal and/or temporary nurses is not available.

Region/Census Area	RN (Registered Nurse)	Practical Nurse

Table 7: Licensed Pharmacists and Techs, 2009

Behavioral Health Providers

Many rural Alaska communities have either only part-time workers helping with behavioral health needs or no mental health services other than the occasional itinerant provider. The *2009 Alaska Health Workforce Vacancy Study*⁴³ showed that the vacancy rates for all behavioral health occupations were about 10%, with psychiatrist and clinical psychologist vacancy rates about 16% statewide.

To help bridge the gaps in services, the Alaska Native Tribal Health Consortium has been developing a training certification program for behavioral health aides (BHAs). Currently there are 117 village-based behavioral health aide positions throughout the state, being funded by multiple sources. (Not all of these positions use the title BHA but they all operate within the BHA scope of practice). Where possible, BHA services are integrated into primary care settings.

Behavioral health professionals with current active licenses in Alaska (in August 2009) include 88 psychiatrists; 132 clinical psychologists (PhD); 417 licensed professional counselors; 77 marriage and family therapists; 488 social workers (bachelor's and master's level); and 40 psychological associates. Approximately 480 certified chemical dependency counselors, counselor technicians, and traditional counselors provide services throughout the state; many also have state behavioral health professional licenses. The levels and requirements for certification for the many categories of provider are summarized on the website of the Alaska Commission for Behavioral Health Certification.⁴⁴

⁴³ <http://nursing.uaa.alaska.edu/acrh/>

⁴⁴ [Alaska Commission for Behavioral Health Certification
http://www.nattc.org/getCertified/certification.asp?oldID=sakacbhc](http://www.nattc.org/getCertified/certification.asp?oldID=sakacbhc)

Sixty four of the State's 88 active licensed psychiatrists (73%) are located in Anchorage-Mat-Su area. Seventy percent of psychologists are in this area. Many are in private practice, others work partially or wholly as contractors or employees within the tribal system, the military or not-for-profit service agencies. Several Alaska-based and out of state psychiatrists itinerate to regional medical centers to provide psychiatric assessments and to oversee treatment for residents. Telemedicine has become a tool for increasing access to psychiatric services with links to remote sites across the state, through the tele-behavioral health program based at the Alaska Psychiatric Institute, the telebehavioral health network based at the Alaska Native Health Consortium, and through the Department of Corrections' links to prisons from Anchorage.

Table 8: Active Alaska Resident Licensed Providers in Behavioral Health (August 2009)

ALLIED HEALTH PROVIDERS

Allied health professions are clinical health care professions distinct from medicine, dentistry, and nursing, but generally supporting those services in helping to meet patients' needs. Although they are an integral part of the overall delivery of care and assist in making the health care system function, there is relatively little information tracking these workers, except for the categories of workers for whom licensure is required by state law. Their salaries and other costs are generally rolled into administrative or program costs. The Alaska Center for Rural Health at University of Alaska Anchorage conducted a study called the Alaska Health Care Workforce

Vacancy Study which identified allied health providers employed, positions available and vacancies.⁴⁵ Also, the Occupational Database files posted by the Alaska Department of Labor provide regular reports of employment by quarter, and total workers employed in each occupation each year, by standardized occupational code. Selected allied health occupations are listed in the following table, showing the average quarterly employment in Alaska for 2007 calendar year.

Table 9: Allied Health Employment (Average per Quarter, 2007)

Occupation	Average quarterly employment
Dental Assistant	1079
Dental Hygienist	584
Dental Lab Tech	59
EMT/ETT & Paramedic (308 licensed paramedics '09)	356
Medical & Clinical Lab Technician	297
Medical & Clinical Lab Technologist	238

IV. PARAPROFESSIONALS (CHA/P, DHA, BHA)

The Community Health Aide (CHA) Program was developed in the 1950s in response to a number of health concerns including the tuberculosis epidemic, high infant mortality, and high rate of injuries in rural Alaska. In 1968, the CHA Program received formal recognition and congressional funding. The long history of cooperation and coordination between the federal and state governments and the tribal health organizations has facilitated improved health status in rural Alaska.

⁴⁵ http://nursing.uaa.alaska.edu/ACRH/projects/archives/ahw_vacancy.htm

The CHA Program now consists of a network of approximately 550 Community Health Aides/Practitioners (CHA/Ps) in over 170 rural Alaska villages. CHA/Ps work within the guidelines of the 2006 *Alaska Community Health Aide/Practitioner Manual*, which outlines assessment and treatment protocols. There is an established referral relationship, which includes mid-level providers, physicians, regional hospitals, and the Alaska Native Medical Center. In addition, providers such as public health nurses, physicians, and dentists make visits to villages to see clients in collaboration with the CHA/Ps.

The Alaska Area Native Health Service has the responsibility for provision of medical and health related services to Indian Health Service beneficiaries residing in Alaska. These services are provided by tribal organizations within the Alaska Tribal Health System. The village based CHA/Ps are a vital link in the delivery system.

Community Health Aides are selected by their communities to receive training. Training centers are located in Anchorage, Bethel, Nome, and Sitka. There are four sessions of CHA training; each lasts three to four weeks. Between sessions, the CHAs work in their clinics completing a skills list and practicum. Completion of the four session training curriculum and successful completion of a clinical skills preceptorship and examination, qualify the CHA as a Community Health Practitioner (CHP). CHA/Ps at any level of training may obtain certification by the Community Health Aide Program Certification Board.

The Community Health Aide Program model is currently being used as a template to develop programs in the areas of dental care, behavioral health, and elder care.⁴⁶

VI. COMPLEMENTARY AND ALTERNATIVE HEALTH PRACTITIONERS

The National Library of Medicine (Medical Subject Headings (MeSH) Section, 2002) classifies alternative medicine under the term complementary therapies. This is defined as therapeutic practices which are not currently considered an integral part of conventional allopathic medical practice. Therapies are termed as *Complementary* when used in addition to conventional treatments and as *Alternative* when used instead of conventional treatment.

The Office of Alternative Medicine, National Institutes of Health (Bethesda, Maryland, April 1995) defined “complementary and alternative medicine (CAM) as a broad domain of healing resources that encompasses all health systems, modalities, and practices and their accompanying theories and beliefs, other than those intrinsic to the politically dominant health system of a particular society or culture in a given historical period. CAM includes all such practices and ideas self-defined by their users as preventing or treating illness or promoting health and well being. Alternative therapies include, but are not limited to folk medicine, herbal medicine, diet fads, homeopathy, faith healing, new age healing, chiropractic, acupuncture, naturopathy,

⁴⁶ <http://www.akchap.org/GeneralInfo.cfm>

massage, and music therapy. In Alaska, licensed alternative or complementary providers are chiropractors, acupuncturists and naturopaths.⁴⁷

Table 10: Licensed Complementary/Alternative Providers, 2009

Table 11: Summary of Major Health Occupational Groups' Employment Levels, 2007

Occupational Database: Alaska Health Care Employment	Calendar Year 2007 Employment	
	Total People Employed in the Jobs during 2007	Average Quarterly Employment 2007
("Covered employment" -- does not include self-employed or military)		
Allied Health	13,952	9,422
Nursing	10,088	7,581
Home Health Aides	3,497	2,191
Behavioral Health Professionals	3,480	2,394
Dental	2,805	1,806
Other professionals	2,737	1,941
Administration	1,719	1,304
Physicians	1,070	804
Lab techs	819	552
Pharmacists, Podiatrists & Speech/Language Pathologists	723	533
Mid-Levels (Physician Assistants, Nurse Practitioners)	595	382
EMTs (emergency medical technicians)	553	356
Radiologic Techs	547	428
Chiropractors	62	45
<i>Grand Total</i>	<i>42,647</i>	<i>29,737</i>

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

The worksheet contains the count of workers by occupation for the calendar year. These files are continuously updated and posted to the Web periodically. Six months must pass before data for a particular quarter is considered complete.

The Occupational Database (ODB) contains occupation and place of work information for each wage and salary worker covered by unemployment insurance employed in Alaska. This data series differs from others published by Research and Analysis in that it provides information on each unique worker/employer combination rather than an average monthly employment count or a count of the number of jobs at a particular point in time.

Worker Count Data Limitation: The count of workers is comprised of each unique worker/employer combination. Workers holding jobs with multiple employers are counted more than once.

The worker count is presented for each calendar quarter and summarized for the calendar year. The calendar year totals represent the unique worker/employer count. An employee working all four quarters for the same employer is counted only once.

Occupation codes are based on the Standard Occupational Classification (SOC) system as published by the Office of Management and Budget in October 2000.

Self-employed are NOT included in the figures above. Note that 45 chiropractors were employed on average each quarter in "covered" employment – however there are 218 licensed chiropractors in Alaska with active licenses, so it is likely many are self-employed, not in employment covered by unemployment insurance.

D. HEALTH INFORMATION TECHNOLOGY

HEALTH INFORMATION TECHNOLOGIES IN ALASKA

Health Information Technology (HIT) is expected to be a means to achieve more affordable, safe, and accessible health care. Digital applications available for use by health-care providers and organizations include personal health records (PHRs), electronic health records (EHRs), electronic medical records (EMRs), computerized physician order entry (CPOE) systems, and health information exchange (HIE) systems. All are governed by privacy and confidentiality regulations. Each of these refers to a different set of services:

- Personal health records are records the patient can have in his/her possession, to share with any health care provider seen, and have updated with each visit. Digital PHRs may be kept on a digital memory stick for the patient to carry. They may be self-contained or a copy of a record maintained by a provider.
- Electronic health records and electronic medical records are the mechanisms for replacing paper records with digital ones, that can be easier for doctors or other providers to “search” for medical history, prescriptions and lab results, and that can be stored locally or in a remote location for electronic retrieval or for “exchange” with another provider. Although they are often used interchangeably, there is a difference between EHR and EMR. The EHR is a comprehensive, longitudinal, record of the patient’s medical history or complete medical record. EMR refers to the individual pieces of the EHR such as laboratory results, electrocardiograms, prescriptions, history and physical exams, post operative reports, radiology reports, etc.
- Computerized physician order entry (CPOE) is a process of electronic entry of medical practitioner instructions for the treatment of patients (particularly hospitalized patients) under his or her care. These orders are communicated over a computer network to the medical/nursing staff or clinical departments (pharmacy, laboratory or radiology) responsible for fulfilling the order. CPOE has the potential to decrease delays in order completion, reduce errors related to handwriting or transcription, allows order entry at the point-of-care or off-site, provides an opportunity to double check for duplicate or incorrect doses or tests, and simplifies inventory and posting of charges
- Health information exchange systems provide for electronic transfer of patient record information for various possible purposes: to store records in a central place for programs that have multiple service sites; for sending referrals or requested, approved reports between providers. Such information can be limited or comprehensive according to the permissions granted to a potential recipient based on need to know and the patient’s requests and approvals.

Digital telehealth systems, such as teleradiology, laboratory reports, telebehavioral health, telepharmacy, and distance learning systems utilizing videoconferencing equipment are also emerging as ways intended to be cost-effective means to improve health care quality and outcomes.

ELECTRONIC HEALTH RECORD USE IN ALASKA

The Alaska EHR Alliance completed a state-wide survey of physicians (378 respondents) and clinic managers (62 respondents) to assess the status of EHR use in Alaska. 29 communities were represented in the survey.⁴⁸ This survey found that there are currently at least 55 different EHR systems currently being used in healthcare practices across the state. Of those 55 different EHR systems, no single entity holds a significant portion of the EHR market in Alaska with the two leading products being Centricity (11%) and eClinicalWorks (8%). Most (74%) of EHRs in use include a practice management system. Half of the EHRs are connected to labs and one third are connected to one or more pharmacy. One third of the EHRs in the survey did not connect to any other entity.

E-PRESCRIBING

Adoption of e-prescribing has been identified as being critically important to the advancement of e-Health. E-prescribing is recognized as a gateway technology that could speed the development of EHRs and widespread use of other HIT initiatives. Beginning January 1, 2009, CMS will provide an incentive to “successful e-prescribers.” The Medicare e-Prescribing incentive is a new program authorized under the Medicare Improvements for Patients and Providers Act (MIPPA) of 2008. The program begins January 1, 2009, and provides incentives for eligible professionals who are “successful e-prescribers.” Efforts to maximize implementation of e-prescribing systems statewide could result in increase systemic use of other e-health components such as personal health records and electronic health records in both the private and public sectors of health care.

Additionally, there is a disincentive for health-care providers who do not become “successful e-prescribers” by 2012. Under rules adopted by the USDHHS Center for Medicare and Medicaid Services (CMS), eligible professionals who are not “successful e-prescribers” by 2012 will be subject to a differential payment (penalty) for Medicare services beginning in 2012. The differential payment would result in the physician getting 99 percent of the total allowed charges of the eligible professional’s physician fee schedule payments in 2012, 98.5 percent in 2013, and 98 percent in 2014.

HEALTH INFORMATION EXCHANGE SYSTEM DEVELOPMENT

The current “system” of health information exchange for Alaskan healthcare providers is a conglomeration of disparate systems with a variety of capabilities and structural platforms that may or may not be interoperable with each other. An integrated Health Information Exchange HIE system is needed to bring the disparate systems together into one functional product that will improve access to critical health information by healthcare providers and the citizens of Alaska in an interoperable, secure, safe, and efficient manner.

Senate Bill 133 (SB 133), passed in the 2009 legislative session, is intended to modernize Alaska’s health-care IT infrastructure by providing for development of a secure electronic Health Information Exchange (HIE) system that will bridge connections between disparate EHR

⁴⁸ Status of EHR Use In Alaska, 05/11/ 2009:

http://www.aehra.org/images/downloads/summary_of_ehr_survey_findings_52009.pdf retrieved 08/11/2009

systems. A standards-based HIE will allow individual Alaskans to manage their own personal health records and to authorize their personal health-care providers to exchange electronic medical records in a timely, secure manner. The intended outcome of a fully implemented Alaska Health Information Exchange Network is to improve the patients' access to care, reduce unnecessary testing and procedures, improve patient safety, reduce health agency administrative costs, and enhance rapid response to public health emergencies.

The Alaska Department of Health & Social Services is in the process of soliciting proposals for the statewide HIE Entity as authorized by SB 133.

TELEHEALTH

The Alaska Federal Health Care Access Network (AFHCAN) is a telehealth system composed of 248 sites across the state. A total of 44 federal beneficiary organizations participate in the network, including Native and tribal groups, veteran and military providers, and the state of Alaska. AFHCAN initially focused on developing store-and-forward telehealth solution, but has recently expanded into broadband video conferencing telehealth solutions. Store-and-forward solutions were initially developed in response to the limited availability of broadband connectivity in Alaska. Now, however, broadband connectivity supports the larger data payloads and image sets that are often part of an electronic consultation. It has become clear that store-and-forward telehealth offers significant advantages in a distributed multi-organizational health-care environment due to the flexibility it affords providers to respond to cases at their convenience.

Every year, the Alaska Native Medical Center (ANMC) responds to approximately 3,000 telehealth cases and handles 66 percent of these consultations in the same day. Perhaps more impressive is that 50 percent of these cases are responded to within 60 minutes. While store-and-forward was specifically designed to enhance primary care access, approximately 25 percent of all cases today are specialty consultation requests. Video conferencing capacity is also increasing at a rate of three to four times every 12–18 months, with a large deployment of endpoints (funded through the Alaska Federal Health Care Partnership) planned at ANMC in 2009–10 consistent with the growth of video teleconferencing capability at most of the regional health corporations throughout Alaska.

Department of Corrections psychiatric services unit has used video conferencing since [2000], for Anchorage-based psychiatrist and psychologist to provide follow-up and counseling to prisoners in facilities around the state.

The Alaska Psychiatric Institute (API) Tele-Behavioral Health care Services (TBHS) program was originally envisioned under the auspices of the Alaska Telehealth Advisory Council to serve rural communities in south-central and northern Alaska. The API TBHS multidisciplinary team of mental health clinicians provides behavioral health-care services to rural communities throughout Alaska by way of advanced video-teleconferencing technology. The program has continued to grow in the specific number of sites that may access psychiatry because of continuing integration with other information technology, video teleconferencing, and health-care provider networks across Alaska, including the Alaska Native Tribal Health Consortium,

Alaska Federal Health Care Access Network (AFHCAN), the Alaska Rural Telehealth Network (ARTN), and GCI Connect M.D., a medical network that is comprised of over 200 facilities including clinics, hospitals, and medical corporations in the Pacific Northwest and Alaska.⁴⁹

The Alaska Rural Telehealth Network (ARTN) is operational in 11 communities across Alaska, including Soldotna, Cordova, Petersburg, Wrangell, Valdez, Kodiak, Seward, Sitka, Glennallen, Unalaska, and Homer. All sites have digital X-ray capability and most have digital mammography. A Picture Archive and Communications System (PACS) has been implemented system-wide. The PACS is a computer network dedicated to the storage, retrieval, distribution, and presentation of various types of images including ultrasound, mammography, X-ray, computerized tomography (CT), and positron emission tomography (PET). It allows facilities to have their images read from an off-site location (i.e. a Radiologist not located in their facility), which is commonly referred to as teleradiology. The PACS also replaces the need for facilities to maintain hardcopy images on-site by digitally archiving the diagnostic images on the central storage facility – a server located at the Wide Area Network (WAN) core in Anchorage.

II. HOW HEALTH CARE IN ALASKA IS FUNDED

A. Introduction

Health care in Alaska is funded by individuals, businesses, and local, state and federal government sources. Individuals pay out-of-pocket costs and contributions to insurance premiums amounting to one fifth of total expenditures. Businesses contribute almost another fifth of the total through purchase of insurance premiums, support for self-insurance programs, and worker's compensation medical benefits. Together the individual and business contributions, "private" sources, account for 38 percent of the total – just under \$2 billion of the \$5.3 billion total expenditures for health care in Alaska in 2005.

The most comprehensive recent Alaska-focused analysis of funding of health care (not including public health activities or facility construction) by ISER (UAA Institute of Social and Economic Research), identified Federal Government programs as the largest purchaser of these services, accounting for another 38 percent of the total -- \$2 billion of the total of \$5.3 billion. Local and state government expenditures for covering employee health benefits, for Medicaid and for other programs, make up the remaining 24 percent of the total.

Figure 10: Health Care Purchasers in Alaska, 2005

Table 12: Health-Care Spending in Alaska, FY 2005

Who provides the coverage?	Who Buys the Health Care? (Millions of dollars)					
	Individuals	Businesses	Local Government	State Government	Federal Government	Total*
Individuals	\$1,028					\$1,028
Employers		\$922	\$454	\$252	\$411	\$2,039
Government Health Programs			\$38	\$535	\$1,654	\$2,227
Total Spending	\$1,028	\$922	\$492	\$787	\$1,950	\$5,294

Source: *Alaska's \$5 Billion Health Care Bill – Who Pays?* March 2006 UA Research Summary No. 6. Institute of Social and Economic Research, University of Alaska, Anchorage

Nearly a quarter of the Federal share is accounted for by military health services (\$221,000), insurance premiums and self-insured costs. Half of the Federal share is attributable to Medicare and Medicaid claims paid, and another quarter covers Indian Health Service, veteran's benefits, community health centers and payments for services in elementary and secondary schools. ISER's previous study (1991) provides a base for comparison of rate of increase. In the fifteen year period, employer costs quadrupled, while government program expenditures tripled, and individual's contributions almost tripled.

B. Funding Sources: Expenditures, Services and Facilities Supported, and Covered Populations

A summary of "health care coverage" based on responses to the US Census Bureau's annual Current Population Survey (CPS) shows the following types of reported coverage by insurance programs and public programs (Table 13).

Table 13: Health Insurance Coverage of Alaskans, 2006-2008 Average

Health Insurance Coverage Type Average for data years 2006-2008	Alaska		United States
	Count	Percent of Total	Percent of Total
Covered by Any Source	547,203	81.8%	84.5%
Employer	388,381	58.0 %	59.0%
Individual (self-purchased)	42,891	6.4 %	9.0%
Medicaid & Denali KidCare	78,636	11.8 %	13.4%
Medicare	57,384	8.6 %	13.9%
Military/VA	88,944	13.2 %	3.7%
Uninsured all year	121,713	18.2%	15.5%
Total	668,917	(percentages add up to more than 100% because of overlapping coverage types)	

Source: Current Population Survey (CPS), 2007-2009 surveys, 2009 data released September 2009

It is important to note that if otherwise-uninsured American Indians and Alaska Natives are redefined as "covered," then the estimate becomes 14% "uninsured" in Alaska (15% in the US) By CPS definition, "uninsured" includes people of Alaska Native and American Indian Race who may have access to IHS-funded services. In Alaska this is 19% of the uninsured. 63% of

Alaska Natives are covered by private insurance (36%) or public programs (27%), 36% have no health insurance.⁵⁰

Being “underinsured” (lacking insurance coverage or personal resources to pay for specific services, or being required to pay deductibles or co-payments that exceed personal resources) is a major problem to many individuals even though they have some coverage. It is also an issue for their health care providers. How many people are “underinsured” is not known. Data are available from surveys asking people about their perceptions, for example, did you decide not to see a doctor or other health care provider because of cost? Data from hospitals about levels of charity care, “self-pay” patients, and “left against medical advice” may be informative.

- a. **Private Insurance** – including all employment-based except military, and individually purchased policies -- \$2.281 billion (43% of total)
 - Private insurance is generally interpreted to mean both the insurance products sold to employers and employees, and to individuals, whether the employment is for a private for profit or not-for-profit firm. Individuals who pay for private insurance are likely to pay for a policy premium, and then also to pay co-payments, deductibles, and out-of-pocket costs of any services not covered by the insurance policy. The ISER estimates⁵¹ found that about 42 percent of individuals’ costs were for such out-of-pocket expenses .
 - Expenditures for “self-insured” programs include employers’ contributions to such programs. In Alaska, about two thirds of all employers’ (non-military) contributions are to such self-insured plans, while only one third is for “insurance premiums” in the private sector, for the insurance products regulated by the State’s Division of Insurance.
 - Covered lives: the most recent Alaska Division of Insurance survey of health insurers reported 86,645 individuals were covered under comprehensive health insurance plans at year-end 2008. These numbers are reported by the insurers. The estimate suggests that as many as 340,00 individuals are covered through employer-based “self-insured” plans. (See table of Coverage Type above.)
 - Rolling up the expenditures managed by private insurance and “self insured” (private and public) entities, and the premium payments by individuals, the ISER report estimates \$1.685 billion in expenditures for what we generally consider “employment based health insurance.” This accounts for about 32% of health care expenditures in FY2005.

⁵⁰ Tribal contract health care facilities are legally required to serve their tribal members. Other qualified American Indians/Alaska Natives may be eligible to receive care as determined by the organization. This policy makes it difficult or impossible for an American Indian or Alaska Native who leaves his tribal home for education or employment to receive the health care services to which he is legally entitled. This lack of “portability” as well as limitations in some of the services that can be provided is the basis for the Census Bureau determination not to count IHS beneficiary status as “health insurance coverage.”

⁵¹ *Alaska's \$5 Billion Health Care Bill – Who Pays?* March 2006 UA Research Summary No. 6. Institute of Social and Economic Research, University of Alaska, Anchorage

b. Public insurance and coverage

i. Medicare -- \$0.419 billion (Federal)

Medicare provides coverage for health care for about 54,000 individuals in Alaska including 44,000 senior citizens (age 65 and over) and about 10,000 disabled individuals and people with end stage renal disease. Allowable costs include "Part A" (primarily inpatient) services, "Part B" (primarily outpatient/physician/clinic services) for those participating and paying a monthly enrollment fee, and certain prescription drugs under "Part D" for those who have selected that option. With the aging of the baby boomers, a cohort of about 5,000 new "seniors" will join the ranks of the senior population over the next five years, while about 1,800 deaths per year will deplete the population 65 years and over, so the net increase may be over 3,000 Medicare-eligible people per year.

For the individuals with end stage renal disease, benefits include inpatient, outpatient, and home dialysis (including training, equipment and supplies, and drugs) – not paid for are blood, transportation, or dialysis aides or technicians coming to house. Although dialysis facilities reimbursed must be certified by Medicare (CMS), a patient can obtain services at any approved site in the country, so travel is not restricted for individuals who need service usually two or three times a week. Kidney transplant costs are also allowable – organ registration fees, laboratory tests for the patient and potential donors, full cost of care for donor, and immunosuppressant drugs.

Physician participation/availability: Concern about availability of physicians who will accept Medicare patients has emerged in Alaska in the last five years. The issue arose when a two-year special reimbursement rate for Alaska physicians (effective in 2004 and 2005, providing a differential for Alaska physicians 67% above the US average) sunset in January 2006. For the three years 2006-2008, the Medicare differential for Alaska was about 5% above the US average. A new geographic differential for Alaska (29% above the US average) for "physician work" was effective January 1, 2009, but the reports of physician non-participation continue.

First in Fairbanks, then Anchorage, participants at health care forums and articles in newspapers across the state reported that physicians – especially primary care providers - were refusing to accept new Medicare patients, and in some cases were telling established patients they would no longer see them. This selective refusal to see Medicare patients appears generally not to have been followed up by notification to CMS that the provider was "opting out" of the Medicare program, so the officially reported "participation rate" for Alaska providers is still high (11% opt-out rate reported in March 2009 by ISER).⁵²

⁵² Frazier, Rosyland and Foster, Mark, "How hard is it for Alaska's Medicare Patients to Find Family Doctors?" March 2009, UA Research Summary No. 14. Institute of Social and Economic Research, University of Alaska Anchorage.

Provider non-participation has major consequences for patients who may have Medicare as “primary” payer and state retirement benefits or state employment or other insurance as secondary payer, since refusal of the primary payer to pay results in denial of all payers. As a result, individuals who thought they were very well insured found themselves paying out of pocket for all their health care costs or having to seek care from new providers. Medicare patients able to reach a federally funded community health center (CHC) can obtain at least primary care services at such clinics.

The CHCs have experienced very large increases in the number of Medicare patients seen each year since 2000 – from about 3,000 in 2002 to 7,000 in 2007. Some of the increase is attributable to the addition of community health center sites, but most of the increase is believed to have occurred in the urban clinics. In 2007 about 15 percent of all Medicare enrollees were using CHCs as at least one source of care. Anchorage Neighborhood Health Center Executive Director has reported dramatically increased numbers of Medicare patients using the Center, and also increased referrals to the Anchorage Project Access, which matches patients to specialists who have volunteered to see a certain number of charity care cases.

ii. Medicaid - \$0.303 billion State of Alaska, \$0.667 billion Federal (FY 2005)

Medicaid is an “entitlement program” created by the federal government, but administered by the state, to provide payment for medical services for low-income citizens. People qualify for Medicaid by meeting income and asset standards and by fitting into a specified eligibility category. Under federal rules, DHSS has authority to limit services as long as the services provided are adequate in “amount, duration, and scope” to satisfy the recipient’s medical needs.

Medicaid began as a program to pay for health care for poor people who were unable to work. It covered the aged, the blind, the disabled, and single parent families. Over the years, Medicaid has expanded to cover more people. For instance, children and pregnant women may qualify under higher income limits and without asset limits. Alaska’s Medicaid expansion for these children and pregnant women is called Denali KidCare. Families with unemployed parents may qualify, and families who lose regular Family Medicaid because a parent returns to work may continue to be covered for up to one year.

There have also been changes in the eligibility rules for people who need the level of care provided in an institution, such as a nursing home. Now, most Alaskans who need — but cannot afford — this expensive care may qualify for Medicaid. In addition, provisions within the Alaska Medicaid program give some people who need an institutional level of care the opportunity to stay at home to receive that care.

- iii. Dual Eligibility (for Medicare and Medicaid) – annual expenditure amounts for either program included in above totals

Low income seniors and disabled people may have “dual eligibility” for Medicare and Medicaid coverage, in which case Medicare pays first for what it covers, and Medicaid only pays for services (including beneficiary cost sharing) that are not paid by Medicare. In Alaska, Medicaid generally covers the cost of the Part B (currently \$96.40/month) for all recipients. Part B is the part of Medicare that covers physician, outpatient, some pharmaceutical, and other treatment and rehabilitation services. Part A covers hospital services; few people have to pay premiums for Part A, but Alaska Medicaid will pay those for dual eligibles if necessary.

Also Medicaid recipients do not have to pay a Part D (Pharmacy Benefit) (\$37/month) premium for basic plans, and have greatly reduced cost-sharing.

- iv. Indian Health Service Funds for Alaska Natives and American Indians - \$0.401 billion Federal (FY 2005)

Alaska Natives and American Indians in Alaska from Federally recognized tribes are entitled to health care provided by Indian Health Service, in Alaska primarily through tribal contracts to provide health care services. A portion of these funds are used for “contract health services,” purchase of specialty or out of area care from non-tribal providers for beneficiaries when the services are not available through the tribal system.

- c. Other

- i. COBRA: The *Consolidated Omnibus Budget Reconciliation Act (COBRA)* provides certain former employees, retirees, spouses, former spouses, and dependent children the right to temporary continuation of health coverage at group rates. This coverage, however, is only available when coverage is lost due to certain specific events. Group health coverage for COBRA participants is usually more expensive than health coverage for active employees, since usually the employer pays a part of the premium for active employees while COBRA participants generally pay the entire premium themselves. It is ordinarily less expensive, though, than individual health coverage. Congress passed the Consolidated Omnibus Budget Reconciliation Act (COBRA) health benefit provisions in 1986. The law amends the Employee Retirement Income Security Act, the Internal Revenue Code and the Public Health Service Act to provide continuation of group health coverage that otherwise might be terminated.⁵³
- ii. ACHIA: The Alaska Comprehensive Health Insurance Association (ACHIA) was created by the Alaska State Legislature in 1992 to provide access to health insurance

⁵³ http://www.dol.gov/ebsa/faqs/faq_consumer_cobra.html downloaded 08-17-09

coverage to all residents of the state who are unable to obtain individual health insurance due to a preexisting medical condition and who meet certain eligibility requirements.⁵⁴

- iii. Federal Programs providing care (includes some of the SAMHSA funds)
Military care provision (direct)
Veterans services
Tri-care – insurance-like coverage for dependents
Federal employee benefits
- iv. Federal Grants: support operating costs (fixed grant amounts each year) for Community Health Centers, and support Frontier Extended Stay Clinic demonstration project development – also limited direct services provided by several small demonstration projects – but little actually go to patient care which is covered through the claims-based programs.
- v. Denali Commission: Federal funding of village clinics, regional clinics and hospital clinics, also some behavioral health facilities.
- vi. Anchorage Muni: Maternal Child Health, immunizations (public health activities that relate to provision of health care – there are also many monitoring, assessment, prevention, health education – health promotion, protection and disease prevention activities not addressed here; see <http://www.muni.org/departments/health/pages/default.aspx>.)
- vii. Volunteer activities:
 - Anchorage Project Access (APA) uses a volunteer network of providers to increase access to health care for low-income uninsured members of the Anchorage area. Currently, 333 physicians, 98 mid-level providers, and other support services participate in APA's provider network. Patients are carefully screened for income eligibility, and cannot be eligible for other programs. Since December 2005, APA has processed over 2,035 applications for eligibility, with over 1,110 applicants meeting program eligibility guidelines and receiving medical treatment. See www.anchorageprojectaccess.org.
- viii. State general funds:
 - Public health services that provide direct care – Early and Periodic Screening, Diagnosis and Testing (EPSDT), newborn hearing screening, immunization clinics, other.
 - Division of Juvenile Justice, Department of Corrections, Office of Children's Services, Department of Education each pay for health services for clients to some degree.

⁵⁴ www.achia.com

- **Fishermen's Fund:** Established in 1951, the Fishermen's Fund provides for the treatment and care of Alaska licensed commercial fishermen who have been injured while fishing on shore or off shore in Alaska. Benefits from the Fund are financed from revenue received from each resident and nonresident commercial fisherman's license and permit fee.
- **Division of Behavioral Health funds for provision of behavioral health services** (i.e., not services billable to insurance). Note in the figure below, showing the funding of the continuum of care, that the majority of state funding (both Medicaid and operating API) go to the most intensive mental health and substance abuse treatment services.

Transforming Health Care in Alaska

Alaska Health Care Commission
2009 Report & 2010-2014 Strategic Plan

Presentation to
House and Senate Health & Social Services Committees
February 3, 2010

A Brief History...

1987-1988	Governor's Interim Health Care Commission
1991-1993	Health Resources and Access Task Force
2003-2005	CWN Alaska Health Care Roundtable
2007	AK Health Strategies Planning Council

And Today...

with AK Health Care Expenditures over \$6 Billion
Health Care Costs Pose a Significant Threat to Alaska's Economy and the Sustainability of State Government

The Alaska Health Care Commission

- Created by Gov. Palin under Administrative Order 246
- Members appointed January 2009
- Purpose: Foster development of statewide plan to address quality and accessibility of health care

Commission Members

- Dr. Ward Hurlburt, Chair – DHSS CMO
- Valerie Davidson – Tribal Health System
- Jeffrey Davis – Insurance Industry
- Keith Campbell – Consumer
- Ryan Smith – ASHNHA
- Wayne Stevens – Chamber of Commerce
- Dr. Lawrence Stinson – Health Care Provider
- Ex-Officio
 - Senator Donny Olson
 - Representative Wes Keller
 - Linda Hall – State Insurance Commissioner

5

Alaska Health Care Commission

Duties

1. State health planning and coordinating body
2. Foster development of a:
 - Comprehensive statewide health care policy
 - Strategy for improving the health of Alaskans
3. Report due to Governor and Legislature
January 15, 2010

The High Cost of Care in Alaska

- Alaska has the highest annual Medicaid expenditure level per enrollee in the nation at \$10,417 (2004)
- Alaska has ranked first in the nation for cost of Workers' Comp premium rates since 2005
 - Alaska has the highest Worker's Comp medical fee schedule rates in the nation – on average 3.5 times higher than the state with the lowest rates (2006)
 - Medical costs make up 72% of total Worker's Comp benefit claims in Alaska, compared to the national average of 58% (2008)
 - Alaska's average medical cost per Workers' Comp claim is \$40K per injury compared to the national average of \$26K (2008)
- The average cost per hospital stay in Alaska is \$27,171 compared to the national average of \$15,455 (2007)
- The price for medical care in Anchorage doubled between 1991 and 2005, while the Anchorage CPI for all items increased 38% during that same period

16

Diagnosis of Alaska's Health Care System

- ❑ Costs are unaffordably high and continue to climb
- ❑ The delivery of health care services is fragmented
- ❑ Financing and payment mechanisms are complex
- ❑ Many Alaskans lack health insurance
- ❑ Some Alaskans cannot find a doctor to care for them
- ❑ There are high vacancy rates in Alaska's health care workforce
- ❑ Levels and variations in quality of care are not well understood
- ❑ Consumers and health care providers are frustrated
- ❑ The system as currently designed is not sustainable

18

Commission's Strategic Plan

- 5-Year Planning Framework
 - I. Develop Vision
 - II. Accurately Describe Current System
 - III. Build the Foundation
 - IV. Design Transformation Elements
 - V. Measure Progress
 - VI. Engage Public & Stakeholders
- Action Plan for 2009 Recommendations
- 2010 Commission Work Plan

19

Vision & Values

- **Vision**
 - Alaska's health care system produces improved **health** status, provides **value** for Alaskans' health care dollar, delivers consumer and provider **satisfaction**, and is **sustainable**.
- **Reform Goals**
 - Improved Access
 - Controlled Costs
 - Improved Quality
 - Prevention-Based
- **Values**
 - Sustainability
 - Efficiency
 - Effectiveness
 - Individual Choice
 - Personal Engagement

20

Year 1 Priorities

- **Consumer's Role in Health Care**
 - Healthy Lifestyles
 - Innovative Primary Care
- **Statewide Leadership**
 - Response to National Health Reform
 - Permanent State Health Planning Board
- **Health Care Workforce Development**
 - Physician Supply and Distribution
- **Health Information Technology**
 - Health Information Exchange/EHR
 - Telemedicine
- **Primary Care Access for Medicare Enrollees**

21

22

Medicare Access Problem - The Canary in the Coal Mine?

23

Recommendations

Strengthen Consumer's Role

- Support Healthy Lifestyles and Create Culture of Wellness
- Develop Patient-Centered Primary Care Model
 - Payment Reform
 - Removal of Statutory/Regulatory Barriers
 - Pilot Projects

24

Recommendations

Foster Statewide Leadership

- Invest in Health Policy Infrastructure to Respond to National Reform
- Permanent State Health Planning Board

25

Recommendations

Develop Health Care Workforce

- Priority for Health Care Reform and Economic Development Agendas
- Strengthen the Workforce "Pipeline"
- Innovation and Adaptation
- Coordinated Planning
- Target Physician Development \$\$ to Primary Care
 - Loan Repayment & Financial Incentives for R&R
 - WWAMI Expansion as Resources Allow
 - GME for Peds, Psych, and Primary Care Internal Medicine

26

Recommendations

Deploy Health Information Technology

- Support HIT Adoption and Utilization
- Ensure Privacy and Security
- Broadband Telecom Infrastructure Access
- Reimbursement for Telemedicine

27

Recommendations

Improve Medicare Access

- Increase Supply of Primary Care Providers
 - Loan Repayment & Financial Incentives for R&R
 - WWAMI Expansion
 - GME for Primary Care Internal Medicine
 - Mid-Level Practitioners
- Support FQHCs and RHCs
- Request Relief from Federal Reimbursement Inequities and Administrative Burden
- Develop PACE Program

28

Transformation Elements

I. Access to Care

- Health Insurance Coverage
- Health Care Workforce Development
- Physical Health Care Services
- Behavioral Health & Long Term Care

29

Transformation Elements

II. Cost & Quality (VALUE)

- Analyze Cost of Care in Alaska
- Foster Primary Care Innovation
- Move to Value Driven Purchasing
 - Leverage State Purchasing Power
 - Transparency – Cost and Quality
 - Evidence-Based Medicine
 - Pay-for-Performance
 - Bundled Payment Systems
 - Medical Error and Infections Reporting & Non-Payment
- Fraud & Abuse Control
- Tort Reform
- Support Process & Quality Improvement Mgmt Strategies

30

Transformation Elements

III. Prevention

- Public Health & Community-Based Prevention
- Safe Water & Sanitation Systems
- Employee Health Risk Management

31

Commission's Future

- ❖ A.O. 246 expires 04/30/10 if not extended
- ❖ Creation of Commission in Statute
 - Bills Pending – 2010 Legislative Session
 - SB 172 Olson
 - HB 25 Hawker
 - HB 75 Cissna

**BUILDING
ALASKA'S
SYSTEMIC
CAPACITY
TO DEAL...**

Alaskans with Brain Injury: 10 Year Plan for TBI in Alaska, Core Service Assumptions

Alaska has an opportunity to strengthen families and increase the health and safety of Alaska communities through maintaining a State brain injury program.

Brain injury can happen to anyone in an instant; a fall on the playground, a slip on the ice or in the bathtub, a car or off-road vehicle crash, hockey games, and more. Alaska state government has been successful in identifying the needs of Alaskans with brain injury and developing a plan to meet those needs. Because Alaska does not have brain injury specific funding and programs, the current state service delivery system creates an environment where Alaskans who have disability due to brain injury eventually find themselves in homeless camps, chronic inebriate populations, and mental health court and correction institutions. Brain injury is a unique disability and needs a service delivery system that creates a structure where brain injury survivors, who are at risk for challenging behaviors, substance abuse, emotional impulsivity, and more, can learn to manage these behaviors, moods, and emotions. Brain injury case management, post-acute rehabilitation, community re-entry, community clubhouses, and long-term housing arrangements are just a few solutions to freeing up dollars and waiting lists in behavioral health, public assistance, juvenile justice, corrections, long-term care and other existing state programs, while getting people back into the community, school, and work.

It is important to understand the brain injury survivors described above are proportionally small in number when compared to the number of Alaskans that hit their head each year. Many children and adults are being supported in their homes, many have difficulties and challenges at school, work, with their parents or spouses, but continue to work extra hard to maintain the roles that defined them before their injury; mom, dad, teacher, CEO, professor, student, athlete, fisherman, friend, etc. There are many more individuals in the community that do not recognize they have had a brain injury. Many families and individuals are exhausted by the constant struggle, and would benefit from standard brain injury rehabilitation and long-term formal and natural supports.

The State, the Tribal Health System, the hospitals, non-profit/private/public providers, military and other partners have a role in developing this continuum of care. The assumptions listed at the end are not in priority order. They highlight opportunities to develop a full continuum of care for Alaskans with brain injury. The State's role would be to fund and maintain a TBI Program, which includes developing [a portion of] the sustainable funding so providers and community organizations can create and grow community-based services. The brain injury programs that will develop through the state brain injury program would then be utilized by Alaskans with a variety of pay sources.

Alaska state government, through maintaining a TBI Program, will provide the leadership and incentive to create a service delivery system where children, adults, and service members who sustain a brain injury and their families, will have the opportunities that all Alaskans desire; to learn, love and be loved, and find meaningful work or activities.

The Alaska Brain Injury Network worked collaboratively with the Department of Health and Social Services and the Alaska Mental Health Trust Authority to outline a 10 year plan for TBI in Alaska. You can read the full report on the website, www.alaskabraininjury.net.

This document will highlight the following information:

- Why is brain injury a unique disability? (Page 2)
- Current incidence and prevalence of traumatic brain injury in Alaska (Page 2-3)
- Description of populations that are at highest risk for brain injury (Pages 3-5)
- State agency resources currently available for TBI services (Pages 5-6)
- Current Department of Health and Social Services, Alaska TBI Program (Pages 6-7)
- Description of how other States fund TBI services (Pages 7-8)
- 10 Year Plan for TBI in Alaska: Core Service Assumptions (Pages 8-12)

Why is brain injury a unique disability?

It is important to understand that brain injury is a unique disability, and requires the development of brain injury specific programs. A few examples include:

1. Only a few brain injury survivors have a physical sequelae, autonomy often recovers through daily activities.
2. Many brain injury survivors, have a cognitive challenge, and most often have mood and behavior changes
3. Brain injury is an acquired handicap. Most brain injury survivors have a vivid memory of normal life before injury.

Incidence and prevalence of TBI in the State

Every year, the State of Alaska, Department of Health and Social Services (DHSS) reports about 800 traumatic brain injury cases resulting in hospitalization or death. In addition to the 640 seriously injured TBI patients that survive their injuries and are discharged from Alaskan hospitals each year, an estimated three times as many suffer a mild TBI. This is upwards of 3,000 new TBI survivors in Alaska each year, joining the estimated 10,000 to 12,000 Alaskans currently living with brain injury.

The highest rates of TBI in the state of Alaska are among Alaska Natives, residents of rural Alaska, youth aged 15 -19 in motor vehicle crashes, and elderly who suffer injury in some sort of fall. The Alaska Trauma Registry shows that males and females aged 80+ have the highest rates of non-fatal TBI hospitalizations. Falls, motor vehicle crashes, assault, sporting and recreational injuries, and occupational injuries – including war-related injuries – are the primary causes of TBI. Alcohol is often a contributing factor. The crude rate of non-fatal hospitalizations for TBI in Alaska for the five-year period 2001-2005 was 98.6 per 100,000.¹

TBIs are overrepresented among the Alaska Native population. The Alaska Native population comprises about 16% of the Alaskan population; however, Alaska Natives are 34% of the total population of individuals with a TBI. Similarly, the highest rates of TBIs occur in the rural regions of the state with the highest number of Alaska Native residents: the Northwest (81.1% American

¹ T. Ali. AK DHSS Division of Public Health, Section of Injury Prevention and EMS, Alaska Trauma Registry (personal communication, 2009).

Indian/Alaska Native), North Slope (70.1% American Indian/Alaska Native), Norton Sound (75.4% American Indian/Alaska Native) and Interior region (69% American Indian/Alaska Native).²

The Alaska veteran population is 17% of the statewide population, the highest rate among all the states. The Alaska VA Health Systems reports that from September 2001 to October 2008, approximately 146 (11%) veterans receiving primary care screened positive for TBI. Positive screenings are referred for a second screening. Following the second screening, 52 (39%) veterans required further neuropsychological testing to confirm a diagnosis of TBI.³

Because of the non-availability of brain injury rehabilitation in Alaska, service members returning with moderate to severe brain injuries must seek services outside of Alaska. Of active duty personnel returning to Alaska in 2007 and 2008, 1,500 have been screened for mild brain injury and 75 are receiving ongoing TBI care. It is anticipated that in the next six months and over the next few years, several thousand troops will return from Iraq and Afghanistan. Estimates are that between 20 and 30 percent of those troops will need TBI services.

Around 80 community behavioral health centers screen for TBI using the *Alaska Screening Tool*. The data is gathered by behavioral health service providers statewide and entered into the DBH Alaska Automated Information Management System (AKAIMS) database. In 2006, a total of 6,263 individuals were screened using the AKAIMS system. Of that number, just over 1/3 (2,080 individuals) screened positive for a TBI.⁴

A description of groups at high risk for TBI

Military Personnel

A recent study by the Rand Corporation found that approximately 18.5 percent of US Service Members who have returned from Afghanistan and Iraq currently have post-traumatic stress disorder (PTSD) or depression, and 19.5 percent report experiencing a traumatic brain injury during deployment.⁵ Another study provided evidence that screening for depression should be a standard component of TBI assessment protocols. In this study, researchers found that between 30 percent and 38 percent of patients with a TBI were classified as depressed with the NFI Depression Scale and the BDI, respectively.⁶

A study published in the *New England Journal of Medicine* reported on a survey conducted of 2,714 soldiers from two US Army combat infantry brigades – one Active Component and one Reserve Component (Army National Guard) – deployed in Iraq. The study found that mild TBI was strongly associated with PTSD and physical health problems three to four months after the soldiers returned home and concluded that mild traumatic brain injury (i.e. concussion) occurring among soldiers deployed in Iraq is strongly associated with PTSD and physical health problems.⁷

⁷ Hoge, C.W., et al. (2008). Mild traumatic brain injury in US soldiers returning from Iraq. *New England Journal of Medicine*, 358, 453-63.

In 2007, the Elmendorf Air Force Base in Anchorage, Alaska established a TBI clinic to diagnose and treat returning military personnel impacted by TBI. Screening of those deployed is mandatory through the Post Deployment Health Reassessment. Military base medics and officials anticipated that a portion of the 3,500 paratroopers with the 4th Airborne Brigade Combat Team, deployed to Iraq from Fort Richardson in Fairbanks, Alaska, would return to Alaska with TBI. Since the clinic's opening, 1,500 patients have been screened for TBI and 75 are currently monitored on a regular basis. The military is currently planning to construct a second TBI clinic in Fairbanks to supplement services offered at the clinic in Anchorage and to serve the Fairbanks-based military population.⁸

Because of the increased recognition of the danger of incurring brain injury while engaged in military duty, the Alaska Brain Injury Network (the state's TBI advisory board) has facilitated a TBI Partnership meeting to coordinate TBI awareness, outreach, and treatment among active duty military personnel, National Guard personnel, Veterans Administration personnel, State personnel, and entities serving Alaska Native Tribal beneficiaries since August 2007. The TBI Partnership military members include the 3rd Medical Unit, Alaska Veterans Administration Health System, Alaska National Guard, VA Vet Centers, and the Alaska Federal Health Care Partnership.

Alaska Native/Native Americans

The CDC Traumatic Brain Injury website identifies Alaska Native/American Indian people as one of the two race categories with the highest rates of hospitalization for this type of injury.⁹ The Alaska Native population comprises about 16% of the total Alaskan population. However, Alaska Natives are 34% of the total population of individuals with a TBI in the state. Similarly, the highest rates of TBI occur in the rural regions of the state with the highest number of Alaska Native residents: the Northwest (81.1% American Indian/Alaska Native), North Slope (70.1% American Indian/Alaska Native), Norton Sound (75.4% American Indian/Alaska Native) and Interior region (69% American Indian/Alaska Native).¹⁰ Thus, the Alaska Native/American Indian population is statistically overrepresented in the numbers of Alaskans impacted by Traumatic Brain Injury in the state.

Currently, available reports on Traumatic Brain Injury (TBI) statistics in Alaska include general demographic categories such as age, race, or region. Due to the elevated rate identified for Alaska Native people, in addition to the regional variance in the topography, environmental risks, and lifestyles, there is a need to identify differences in TBI incidents and risks among the regions of Alaska. This will better inform prevention efforts and help make region-specific assessments about the risk factors, disparities, trends over time, and hospitalization costs for traumatic brain injuries in Alaska Native populations. Additional information on the costs involved in injury, treatment, recovery, and rehabilitation for this population are needed. The Alaska Native Tribal Health Consortium has been contracted to gather this data by September 2010.

As has already been mentioned, many Alaska Native people live in rural parts of the state where there may be a lack of medical and social services, and a lack of awareness about the impacts of TBI and how to treat the injury in the long term. The combination of high prevalence rates and lack of a full spectrum of long-term services and rehabilitation make Alaska Natives a high priority population for services and prevention measures in the state.

¹⁰ US Census Bureau (2006)

Elderly

Accidental and usually preventable falls are the number one cause of injury to Alaskans age 65 and older, often causing serious injury such as TBI or hip fracture. Approximately one third of older Alaskans will fall each year and an average of 579 seniors will be hospitalized as a result. Although the Alaska Trauma Registry reported that during a ten-year period, 680 seniors 65 and older were hospitalized and diagnosed with TBI, research shows that brain injury among the elderly is often misdiagnosed and left untreated. Older Alaskans have the highest prevalence rate of brain injury in Alaska.

Per 100,000 Alaska Residents:

Males age 80+.....	301.3
Females 80+.....	217.2
Males age 15-19.....	215.7
Males age 70-79.....	200.9

Behavioral Health

Substance abuse is often both a cause of brain injury and a symptom after brain injury. Of the 800 Alaskans hospitalized each year, 32 percent were under the influence of alcohol when the brain injury occurred. From 1999 until 2008, the State of Alaska Department of Health and Social Services, Division of Behavioral Health (DBH), was the lead agency responsible for overseeing TBI services in the state. Through its mission to manage an integrated and comprehensive behavioral health system for Alaska, DBH requires its service provider grantees to screen Alaskans seeking behavioral health services for TBI. Around 80 community behavioral health centers screen for TBI using the *Alaska Screening Tool*. The data is gathered by behavioral health service providers statewide and entered into the DBH Alaska Automated Information Management System (AKAIMS) database. In 2006, a total of 6,263 individuals were screened using the AKAIMS system. Of that number, just over 1/3 (2,080 individuals) screened positive for a TBI.

In order to manage and treat substance abuse in clients with a history of brain injury, substance abuse treatment must be a component of a multidisciplinary treatment approach. In order to increase treatment plan success, it is essential to create a brain injury system of care, connecting behavioral health providers to a multidisciplinary team, ultimately ensuring that people who have access to these services can maintain a functional quality of life.

State Agency resources available for TBI services

DBH has made great advances in identifying TBI in those Alaskans who access services through a behavioral health facility. However, because TBI is a condition that does not necessarily present behavioral related effects, it is important that efforts to identify and serve individuals with TBI be expanded to the entire state health and social service system. In this way, an individual with TBI will have access to a spectrum of services such as speech therapy, cognitive therapy, physical therapy, and vocational assistance.

Due to Alaska’s vast geographic area and large number of remote, often inaccessible communities, coordinating brain injury projects and programs among the military, tribal, state, and community

sectors is challenging. DBH has begun the process of raising awareness, identifying individuals in the behavioral health system with brain injury and identifying the need to expand the TBI service system to include a variety of state and community agencies.

Because DBH has mandated TBI screening, grantees have begun to recognize brain injury and are connecting clients to available brain injury supports and resources. Some providers have also begun work within their own programs to respond to the need for service and prevention. In addition, data collected through AKAIMS has been helpful in advocating for increased funding to meet the needs of individuals with brain injury. This important work has provided the foundation for the state's efforts to plan and develop a comprehensive, coordinated service delivery system.

The Alaska Brain Injury Network (ABIN), incorporated in 2003, has been the TBI advisory Board to the State of Alaska, Department of Health and Social Services, and the Alaska Mental Health Board (the Trust) since 2001. ABIN educates, plans, coordinates, and advocates for a comprehensive service delivery system for the survivors of traumatic brain injury and their families. In 2007, ABIN expanded its role by adding a Resource Navigator to provide statewide information and referral for persons with brain injury, their families, providers, friends, and many others interested in brain injury services within Alaska's communities. ABIN's focus on systems improvement and advocacy, as well as its ability to bring a variety of partners together, positions them to coordinate the development of statewide brain injury services among state, tribal, and military systems. The ABIN Board of Directors consists of 18 members representing all regions of Alaska. At least 50 percent of the board members are TBI survivors or their family members.

The State of Alaska Division of Senior and Disabilities Services (SDS) provides access to a continuum of long term services and supports for low-income seniors and people with disabilities. SDS administers four Medicaid waiver programs that provide home and community based services through a network of service providers as an alternative to nursing home placement. In addition to the four Medicaid Waiver programs, SDS administers programs that assist individuals of any age with disabilities to remain safe and independent in their homes and communities. These programs include Older Americans Act programs, Assisted Living Home Certification, Adult Protective services, Personal Care Assistance services, nursing home transition, Medicare Info, and Aging and Disability Resource Centers. The focus of SDS is multi-faceted in nature – serving seniors, adults with physical disabilities, persons with developmental disabilities, vulnerable adults, and assisted living providers. Because of this broad focus, SDS's service population often includes individuals impacted by TBI.

Other State agencies directly serving Alaskan individuals with TBI include Vocational Rehabilitation (VR), Education and Early Development, and Public Health.

Current Department of Health and Social Services TBI Program

Because of the momentum and leadership provided by the State of Alaska in developing a sustainable TBI system, additional staffing was essential to oversee the activities of the developing system. Even though the state was unsuccessful in their bid for a FFY 09 HRSA TBI Implementation Partnership grant, SDS, DBH, ABIN, the Trust, and the Alaska Native Tribal Health Consortium collaborated to fund a temporary TBI Program Coordinator (Project Director) employed by ABIN. That individual was hired and began work in October 2009. During the next year the Program Coordinator will support the development of the state TBI program and research methods to expand access to TBI services in Alaska, including the development of a TBI Medicaid waiver.

During 2008, SDS designated an interim TBI program coordinator to facilitate the transition of the TBI program from DBH to SDS. That individual has been working collaboratively with ABIN on development of an SDS TBI program, which will include a TBI Program Director and Care Coordinator position.

In 2008, the AMHTA Trustees approved MHTAAR funding to support the development of a Brain Injury Care Coordination project to be administered by Senior and Disabilities Services. In spring 2009, the interim TBI Project Director and ABIN Executive Director worked with a consultant to develop this program. The care coordinator position will be hired in the fall of 2009. The Care Coordinator will assist people with traumatic brain injuries and their families to develop a person-centered, goal-oriented plan to achieve short-term and overall life goals and minimize the severity of disabilities through prevention, interventions and compensatory strategies. This position will be responsible for coordinating services to assure that people have access to a full array of needed community services including appropriate health care, medical, rehabilitative, social, educational, in-home supports or other needed services.

Through this project development, SDS has begun an official State TBI Program which, with appropriate resources, is forecasted to better meet the needs of TBI survivors over the next 10 years. The TBI Program is also forecasted to decrease the number of people with TBI who are in the correctional system, juvenile justice facilities, and behavioral health clinics.

How do other States fund and sustain a TBI Program?

States use a variety and combination of funding streams for planning, policy, prevention and research activities, and to serve individuals with brain injuries and their families who have no other access to needed care or supports. Medicaid, Home and Community-Based Services and Medicaid Waivers, and Federal Block Grant programs are used to serve individuals with disabilities and special health care needs including people with brain injury. At the State level, common non-Federal funding sources for TBI service delivery include trust funds, general revenue and special revenue. Often when two or more sources exist, funds from one are used to leverage funds from the other.

There are 24 States that have a Brain Injury Medicaid Waiver (2006). There are 20 states that have General Revenue or Special Revenue specific to brain injury (NASHIA 2005).

Medicaid waivers targeted to individuals with brain injuries operate in half of the states and are small when compared to waivers targeting other groups. These waivers provide significant cost savings, on average \$30,000 annually per person, when compared to institutional facility-based services (Rutgers 2008).

These waivers have been successful both programmatically and financially. In addition to cost savings, these waivers have provided other significant benefits. The existence of these waivers supports the growth of community non-profit brain injury agencies. There is clear evidence of the desirability of home and community-based services among those directly affected by brain injury: there has been growth of these waivers that has resulted in a doubling of the number of persons served over five years; in addition, there is a visible role played by advocates in encouraging states to develop these

waivers. These waivers, over time, have contributed to states' efforts to create and grow an in-state service capacity to provide services to individuals with brain injuries.¹¹

10 Year Plan for TBI in Alaska, Core Service Assumptions

(view the full report at www.alaskabraininjury.net)

Information and Referral

Assumptions:

- Department becomes the lead funder; currently Trust funds Information and Referral (I&R)
- GF/MH expands the program to produce and disseminate educational packets
- Department develops methods for following up with individuals hospitalized and reported to the trauma registry
- Department will coordinate brain injury I & R to ADRC
- Training/workshops to disability, health and social service agencies providing I&R to include TBI information
- Workforce will begin to understand service needs for TBI and will be incorporated into existing programs by FY17

Service Coordination (care coordination)

Assumptions:

- SDS will collect appropriate data during pilot years FY10/11 to determine need for expansion
- 30 clients/ care coordinators at any one time
- Train case managers/care coordinators in other programs regarding TBI and available resources
- Develop and continue protocols with hospitals for linking individuals to services following TBI
- Positions hired internally by SDS or granted out depending on evaluation of demonstration positions in FY10/11

¹¹Hendrickson, L. & Blume, R. (2008). Issue brief: A survey of Medicaid brain injury programs. *Rutgers Center for State Health Policy*

Acute and Post-Acute Rehabilitation

Assumptions:

- State investment will get match from Medicaid, Tribal Medicaid, Insurance, Workman's Comp, etc.
- Data will be developed through TBI Care Coordinator Program to develop service needs and costs associated with those services to direct the writing of a TBI waiver.
- Department will analyze costs of existing services to determine accuracy of forecast.
- Research a post-acute rehab waiver for TBI needs
- Department will develop funding options through general revenue, federal grant, Medicaid to pay for post-acute rehabilitation and therapies
- Community providers; i.e. hospitals or others will develop TBI post-acute and residential programs
- Pool resources for rehabilitation service system (i.e. Veterans Affairs, Department of Defense, Indian Health Services, and Worker's Compensation)
- Adopt program standards, best practices and outcomes
- Determine rehabilitation options for unserved or underserved populations (i.e. children, elderly, Alaskans living in remote areas)
- Support in-state TBI services for children and youth through BTKH

Education and Related Services

Assumptions:

- Training for STAR care coordinators
- Partner with Statewide Positive Behavior Support Initiative to include TBI-specific behaviors
- Partner with Parent Training agencies (i.e Stone Soup Group) to educate families on TBI
- Partner with SESA and Stone Soup Group to train school districts about TBI
- Hospitals and school districts will communicate when a child is hospitalized with TBI
- Develop Project BRAIN, Brain Injury Resource and Information Network for parents, students, teachers, and medical professionals supporting youth with brain injury.

Vocational Training and Rehabilitation

Assumptions:

- Referral to DVR will increase due to service coordination
- Vocational Specialists will be trained in TBI
- By FY12 there will be at least 1 VR specialist with an emphasis in brain injury

- By FY20 there will be several VR specialists depending on the pilot positions in FY12/13
- Increase long-term supported employment programs (job coaching) for persons with TBI
- Expand Mental Health Customized Employment Grant to include TBI
- Provide training to VR counselors and community VR providers on TBI
- Develop pre-vocational options to prepare people for vocational rehabilitation services
- Recruit and provide training to employers on TBI related disabilities
- Provide supports to maintain employment

Long-term Care and Community Supports

Assumptions:

- Expand existing HCBS waivers to include TBI with cognitive and behavioral problems
- Expand existing HCBS waivers to include TBI services, including therapies, behavioral therapies, counseling
- **Develop TBI HCBS Waiver to cover those who are not eligible for existing waivers**
- **Eligibility is determined by Department and available funding**
- **At least 100 Alaskans hospitalized each year are Medicaid eligible.**
- **The number of people eligible can be capped, as well as the maximum amount for each participant. Medicaid funding can be strategically controlled.**
- **Federal government has a 50% match. There is a 100% match for Alaska Native beneficiaries.**
- **State investment will get match from Medicaid, Tribal Medicaid, Insurance, Workman's Comp, etc.**
- **Develop funding for housing and residential**
- **Obtain dedicated funding or general funds to pay for the array of services needed for individuals who are not Medicaid eligible**
- Include TBI in Senior and Disabilities Services efforts to develop person-centered hospital discharge planning model to help transition to community services
- Develop housing alternatives (i.e. supportive living, structured residential, long-term living homes for people with cognitive disabilities)
- Obtain state or MHTA funds as seed money to start clubhouse/day programs for TBI
- Promote technology in activities of daily living (i.e. assistive technology, PDA, etc)
- Develop technology to support TBI survivors in their homes (i.e. online clubhouse model, support groups)

Public Awareness, Prevention, and Advocacy

Assumptions:

- Trust will continue Coordinated Communications
- DPH will expand TBI prevention awareness to rural Alaska and other populations
- Enact booster seat legislation
- Funding for prevention education programs and collaboration among programs
- TBI self-advocates to assist with injury prevention education programs
- Collaboration among injury prevention agencies to coordinate TBI prevention and support best practices
- Funding for "Second Impact Syndrome" training of health professionals and school coaches
- ASAA adopt Impact program for school sports
- Support local helmet use ordinances
- Fund and implement the Alaska Model Helmet program
- Develop and implement teen focused TBI awareness events
- Develop, fund, and implement an elderly fall prevention program
- Public Awareness funding will lead to lower rates of TBI and higher usage of state and community rehab programs

Outreach and Identification

Assumptions:

- Investment in data collection within state government
- Policy decisions
- Develop MOA to share data
- Work with local school districts, Department of Education and Early Development to expand screening to include TBI
- Incorporate TBI into mental health and substance abuse screenings for inmates in correctional facilities
- Improve Behavioral Health Screening Tool to include questions about service-related causes; i.e. blast injuries, etc.
- Improve AKAIMS information to include TBI-specific referrals, duration, costs,
- Include TBI screening questions in existing screening tools in various sectors, to be identified in further research
- TBI screening in primary care settings, schools, etc.

Training and Workforce Development

Assumptions:

- Develop distance delivered TBI curriculum
- Conduct training through existing educational certificate and endorsement programs
- Conduct training through agency sponsored workshops/conferences for direct care providers, educators and other professionals/paraprofessionals.
- Expand core competencies for the workforce to address TBI
- Expand telehealth for training providers and families, particularly in rural areas
- Integrate TBI into college and vocational curriculums
- Develop program for training long-term care and community-based programs serving older adults to identify and screen older adults for TBI.
- Develop and provide training to educators on identifying TBI symptoms.

Statewide Planning and Policy Coordination

Assumptions:

- State Hires TBI Program Coordinator
- TBI Advisory Board to continue role as a planning board for the Department of Health and Social Services and the Trust, maintaining funding eligibility under HRSA TBI ACT
- Alaska to receive Federal HRSA TBI Implementation/Partnership Grant
- Continue to provide a venue for consumer input on the TBI service delivery system.
- Expand data capacity across pertinent programs to evaluate the TBI service delivery system; i.e. individuals served, services provided, expenditures and outcomes.
- Continue TBI participation among the 4 statutory advisory boards
- MOUs to support coordination of program data; individual service planning, including TBI documentation/evaluations, subject to confidentiality release of information
- Consumer Satisfaction Surveys every 2 years

Brain injury rehabilitation and treatment is standard in many states. The following document explains two federal initiatives focusing on TBI rehabilitation research.

NIDRR funds both Rehabilitation Research and Training (RR&T) Centers and TBI Model Systems of Care.

Rehabilitation Research and Training (RR&T) Centers

The National Institute of Disability Rehabilitation Research funds two RR&T Centers on brain injury. Both are housed at The Institute for Rehabilitation and Research (TIRR), Houston, Texas. The two RR&T Centers are: (1) Rehabilitation and Training Center on Community Integration in Persons with TBI and (2) Rehabilitation Research and Training Center on Rehabilitation Interventions Following Traumatic Brain Injury.

The Rehabilitation and Training Center on Rehabilitation Interventions following Traumatic Brain Injury promotes the scientific advancement of rehabilitation research by focusing on several areas identified as needing further research. These include areas of weakness in the current knowledge and future research regarding TBI recovery and rehabilitation effectiveness: improvement of the diagnosis and treatment of persons with mild TBI; development of interventions to assist school-age children with TBI; the needs of minority groups members with TBI; evaluation of the effectiveness of rehabilitation interventions; and treatment for the family members of people with TBI. Activities include publishing an informational and technical assistance resource for consumers and professionals; training for medical and neuropsychological fellows in rehabilitation research; coordinating a state-of-the-science conference on mild TBI; and producing an educational videotape to train family members in effective coping skills. Through representation on the advisory committees, consumers are involved in all aspects of planning and evaluating research and training activities

TIRR's National Database of Educational Resources on Traumatic Brain Injury

This National Database of Educational Resources on TBI is a part of TIRR's Rehabilitation Research and Training Center in Rehabilitation Interventions in TBI grant from the National Institute on Disability and Rehabilitation Research (NIDRR). The database contains information on more than 350 educational videotapes, audiotapes, and written materials that people with TBI, their family members and health care professionals can use. Information can be retrieved directly from the web site or by calling the TIRR Department of Education. To retrieve information from the database or for more information, visit www.braininjuryresearch.org/birc/database.htm.

TBI Model Systems of Care

In 1987 the National Institute on Disability and Rehabilitation Research (NIDRR) in the U.S. Department of Education established the Traumatic Brain Injury Model Systems of Care (TBI Model Systems). NIDRR's multi-center model systems program is designed to study the course of recovery and outcomes following the delivery of a coordinated system of care including emergency care, acute neurotrauma management, comprehensive in-patient rehabilitation and long-term interdisciplinary follow-up services. Each Center systematically collects important data about each individual who meets criteria for inclusion in the TBI National Database and sends this information to the TBI National Data Center. The Centers are currently located at 16 sites throughout the United States that provide comprehensive systems of brain injury care to individuals who sustain a traumatic brain injury, from acute care through community re-entry. The mission of the TBIMS is to improve the lives of persons who experience traumatic brain injury, their families, and communities by creating and disseminating new knowledge about the course, treatment, and outcomes relating to their condition.

The TBI Model Systems serve a substantial number of individuals, allowing the projects to conduct clinical research and program evaluation, which maximize the potential for project replication. In addition, the TBI Model Systems have the advantage of a complex data collection and retrieval program with the capability to analyze the different system components and provide information on project cost effectiveness and benefits. Information is collected throughout the rehabilitation process, permitting long-term follow-up on the course of injury, outcomes, and changes in employment status, community integration, substance abuse, and family needs. The TBI Model Systems serve as regional and national models for program development and as information centers for customers, families, and professionals.

Initially, approximately \$1.5 million funded five centers: Wayne State University in Michigan, Mt. Sinai Hospital in New York, Santa Clara Valley Medical Center in California, The Institute for Rehabilitation Research in Texas, and the Medical College of Virginia in Richmond. For a few years, there were only four (Mt. Sinai left the program), and by 1997, Virginia's center no longer participated, but the Moss Rehabilitation Center in Pennsylvania won a grant for a center as did Ohio State University in Ohio.

In the fall of 1997, the Brain Injury Association of America and others successfully advocated for an additional \$5 million for the program so that more centers could be established. Twelve new sites were awarded funds to establish model systems of care for traumatic brain injury.

Alaska is Combating Traumatic Brain Injury

Jill Hodges

Executive Director

Alaska Brain Injury
Network

Jeff Jessee

Chief Executive Officer

Alaska Mental Health
Trust Authority

Pat Hefley

Deputy Commissioner

Department of Health
and Social Services

Past legislative hearings

2007- What is traumatic brain injury?
What does treatment look like?

Guest presenters: Dr. Tina Trudel (national expert) and partner boards

2008- Impact of TBI on the state.

Military issues related to TBI

Guest presenters: Capt. Richard Barker, Elmendorf; Dr. Russell Cherry, Providence; Stephanie Tanner, military wife of TBI survivor

2009- Importance of Medicaid Waiver to develop coordinated, comprehensive brain injury services in-state

Guest Presenters: Dr. Christie Artuso, Providence Neuroscience Director

Today's presentation- State System Development and Operationalizing

- Jill Hodges, Past 20 years of AK efforts
- Jeff Jessee , Trust Role
- Pat Hefley , DHSS Role
- Public testimony:
 - Martha Moore, ABIN Chair
 - Providers, partnerships essential
 - Consumer, treatment works, family support
- Jill Hodges-Questions and Solutions
 - State and Legislature

TBI Systems Development in AK- 1990-2000

Phase 1: 1990-1995

Advocacy

- Brain injury survivors mobilize
- Early 1990's
 - Testimony to GDCSE, Legislature, AMHTA
- Brain Injury Association of Alaska organizes

Phase 2: 1995-2000

Advocacy Continues

State of Alaska

- State of Alaska-Public Health recognizes TBI
- Public Health awarded CDC grant
 - TBI Registry
- MHDD awarded Federal Grant-systems

TBI Systems Development in AK 2000-2007

Phase 3: 2000-2003

Advocacy

State of Alaska

Federal TBI HRSA Grant

- Needs Assessment
- 1st State Action Plan
- TBI Program Coordinator (FTE)
- Advisory Board

AMHTA-beneficiary group

Alaska Brain Injury Network

- TBI Advisory Board (ABIN) organizes and becomes 501 c3

Phase 4: 2003-2005

Advocacy/TBI Advisory Board

State of Alaska

- Behavioral Health (lead agency)

Data/Surveillance

- DBH mandates screening and data collection
- Consumer Satisfaction Surveys
- AK Trauma Registry Data

Phase 5: 2005-2007

State of Alaska: TBI Dir. turnover

Data- AKAIMS(32% in BH screen TBI)

Workforce: 1st AK Brain Injury Conf

Momentum builds- 2007-2009

Phase 6: 2007-2009

ABIN

- “Service” recommendation
 - Info and Referral
 - Case Management

AMHTA-Funds ABIN recomm.

State of Alaska

- Lead agency transfers to SDS
- TBI Case Management Program developed

Workforce:

Intro to TBI Course

Advance Brain Injury

Workshop

Vocational Rehabilitation

Counselors

Legislation

- SB 118 introduced-medical assistance for TBI

Medicaid Funding: Waivers

- Preliminary research on Medicaid Waivers
- Targeted Case Management

Treatment

- After Hospital/Post-Acute
 - Site Visits
 - AK Providers Coalition
 - Military/Tribal partnerships sought

Key Points

- System Planning—
created framework
and foundation for
action
- Next step:
operationalize
- General Funds or
GF/MH essential
- Phases 1-4 (1990-2005)
 - advocacy, planning,
increasing awareness.
- Phases 5-6 (2005-2009):
 - Direct 'services':
 - info and referral;
 - case management
 - Workforce development
- Phase 7 – 10 (2010-2020)
 - Case Management
 - Treatment: Funding for
Residential and Day Program
 - Workforce

2010 Session: SB 219 and House Companion

SB 219 and House Companion

- Traumatic/Acquired Brain Injury Program
 - Gives statutory authority to develop/improve program.
 - Establishes standards for treatment and services.
 - Defines brain injury.
 - Develops cost/ longitudinal data
 - Planning for Medicaid Waiver/Targeted Case Management

Opportunities

- Positions the state to access federal funding for TBI services.
- The existence of brain injury waivers supports the growth of community-based rehabilitation programs.
- DoD/VA/Tribal/State coordinate planning and implementation of rehabilitation and community re-entry programs.
- Early treatment may reduce future medical and social costs.
- Potential cost savings in acute care, existing state programs; behavioral health, juvenile justice, corrections, homeless activities, and long-term care in institutional facilities.

2010 Session: FY11 Governor's Operating Budget

\$350.0 for TBI Service Coordination Program

- \$200.0 GF/MH
- \$150.0 MHTAAR

Focus: Case Management

- Year 2 of the project
 - (FY10 funded by MHTAAR)
- 2 case managers (serving 60)

Focus: Grant program

- grants funds for specialty services.

Opportunities:

- Reduce emergency dept visits;
- Deter more costly care by keeping people within their own homes;
- increase readiness for vocational rehabilitation/employment.
- Increase independence
- Serve as benchmark for Medicaid Waiver application and funding requests

The Trust's Role- Jeff Jessee

- TBI as a beneficiary group (late 1990's)
- Trust role: planning, demonstration
- Maximize collaboration
- Alaska too small of a state to have separate TBI treatment systems of care (VA, DoD, Tribal, State)
- Treatment: General Fund commitment

Past 10 years, Trust has invested \$2.8 million in brain injury systems development

- Trust FY09 Funding specifically for brain injury program: \$628,000
 - Core Services Development
 - Information and Referral
 - Case Management
 - Technical Assistance for planning treatment
 - Systems Development
 - Public Awareness-anti stigma
 - Workforce development
 - Statewide planning- TBI Advisory Board

Department of Health and Social Services Role- Pat Hefley

- Development, now operationalizing.
- 44 States use General Revenue and Medicaid Waivers for brain injury treatment/ services.
- TBI folks are already in the system - need to move them into specialty programs in order to see results.
- Appropriately staged incremental GF/MH budget requests.

Upcoming 2010 Activities

- Federal Grant- \$250.0/year 4 years
 - lead agency: Senior and Disabilities Services
- State of Alaska T/ABI program
 - Case Management
 - Research federal funding opportunities: Medicaid Waiver/Targeted Case Management
- Data/Prevention: regional study, Alaska Native and Non-Native

Public Testimony

- Martha Moore: ABIN Chair
 - Composition of ABIN
 - Recommendation Philosophy
 - Perspective: State role (data collection) and ABIN chair.
- Alaska providers: readiness to partner- TBI post-acute programs
 - Dr. Lester, St. Elias (LTACH)
 - Margaret Carloni, Trauma Nurse, ANMC
- Shannon- Juneau resident, experienced TBI
 - TBI treatment works
 - Family support

Many of Alaska's challenging questions have been asked and answered by other States

- Alaska can learn from 30 years of state system experience; and
- treatment research by the Federal Government, State experiences, military advances

Questions and Solutions

Is brain injury
impacting
State
government?

1980 findings...

- Uninsured or underinsured
- Unemployment
- Trauma/EMS
- Long-term care and support needs
- Family Support

1990 findings...

- Educational System
- Vocational Rehabilitation

2000 findings...

- Criminal Justice
- Behavioral Health

Question and Solutions

How will State
Gov't know
how to develop
TBI systems?

TBI Act of 1996

- Federal Statute
 - Defined TBI in Federal Statute
 - Authorized funding to HHS
 - Established TBI program in CDC
 - Created State grant program (HRSA)
- State experience has broadened program definition to ABI- same service needs.
- National Association of State Head Injury Administrators (1990)
- TBI Technical Assistance Center-specifically for state administrators (since 1996)

Question and Solutions

Is recovery
possible after a
TBI?

Does treatment
work?

- Feds fund TBI model systems since 1987, over 20 years of longitudinal data- yes with specialized support, recovery/ independence is possible
- Research at acute/medical level led to need for community reentry programs
- Military funding is supporting research of community reentry programs and Mild TBI assessment and treatment

Question and Solutions

How will States
pay for brain
injury
treatment?

- 1990's, Centers for Medicare/Medicaid Services (CMS) developed TBI HCBS Waiver prototype
- IDEA 1990 added TBI as disability to report
- State General Funds
- TBI Trust Funds

Question and Answer

How will states
develop treatment
and prepare a
specialty
workforce?

- Many providers have 30 years of experience.
 - Utilize existing models: medical, community reentry, clubhouse, and long-term living..
- TBI specific workforce will build as TBI programs are operationalized.
 - Professional/para-professional specialists have on the job training, does not take special educational training.

Question and Answer

How will rural residents have access to these treatment and services?

- Military and a few states utilize telemedicine for treatment.
- Opportunity for Alaska to become the national leader in providing care to rural areas?

Question and Answer

What type of legislation is/has been successful?

- Resolutions- awareness
 - Last five years
- Prevention
 - AK primary seatbelt law and child safety/ booster seat)
- T/ABI Program into Statute
 - SB 219 and HB Companion
- Interagency Taskforce
- Prevention-concussion management
- Military-screening

Alaska has an opportunity!

- Alaska can operationalize at a faster rate.
- Alaska can become the leader in rural TBI treatment and supports

Alaskans Thank the Legislature...

For recognizing
the 10,000+
Alaskans with
TBI and working
to bring more
services close to
home

Outline for TBI Presentation to House HSS, Feb. 4th 2010. 3:00-5:00 committee hearing
 1 hour presentation, 20 minutes questions/comments

CO-CHAIR: Representative Herron CO-CHAIR: Representative Keller
 VICE-CHAIR: Representative T. Wilson

MEMBER: Representative Lynn
 MEMBER: Representative Seaton
 MEMBER: Representative Cissna
 MEMBER: Representative Holmes

Presenters:
 Pat Hefley
 Jeff Jessee
 Jill Hodges

Invited testimony:
 Martha Moore
 Shannon-consumer
 St. Elias person
 Dr. Groves

Jill Hodges	Do an overview of the 1 hour presentation Review previous presentations Walk through past phases Roles of State, Trust, ABIN, Providers, legislators Highlight 10 Year plan, treatment gap analysis Talk about current bill, FY11 budget recommendation,	15 min.
Jeff Jessee	Alaska too small of a state to have separate TBI treatment systems of care (VA, DoD, Tribal, State) Purpose: max collaboration, so everyone comes out a winner History of establishing TBI as a beneficiary group Trust funding has supported planning, pilot projects, technical assistance, workforce Trust role- development, efficacy of programs. Next steps will take General Fund committment	10
Pat Hefley	State of Alaska needs to catch up- 24 States have been utilizing TBI Medicaid Waivers, and 20 states have General Funds/General Revenue for brain injury specific programming. BTKH metaphor TBI folks are in some level of care now, but need specialized type	10

	<p>of care. TBI folks are already in the system-need to move them into specialty programs in order to see results. For several years, been in development mode, now moving into operationalizing. Timeline *As we progress, there will be appropriately staged incremental budget requests. The waiver will have a GF component. Military efforts: ongoing</p>	
Martha Moore	<p>ABIN Chair- different phases met different needs Composition of ABIN Our recommendation philosophy for building system: partnership-adapting successful models-pilot projects perspective State role (data collection) and ABIN chair. ***The amount of work that has been accomplished despite the limited funding due to volunteers/ABIN Board/persistent advocates/Federal Funds/Trust funds</p>	5 min.
Shannon	<p>Share her story- wants everyone to know that improved functioning after brain injury is possible. She wouldn't be here without her mother's support.</p>	5 min.
Dr. Lester or Patti	<p>Post-acute setting to send folks to. Improved outcomes if stay in state. Workforce moral lifted. Families can stay in AK.</p>	5 min.
Dr. Groves	<p>TBI as a chronic condition, need for TBI to be identified and treated. Importance of case management, multidisciplinary treatment team meetings, improved functioning is possible</p>	5 min
Jill Hodges	<p>Take away messages: Though SOA is 30 years behind, we are in a position to move faster with better information due to initiatives in other states, Federally (TBI Model systems-know treatment improved functioning), and in the Military (identification, screening, Mild TBI). future budget recommendations, legislation possibilities Thank you to HSS members Support HB ?? /SB 219, \$350 in Governor's budget</p>	5 min.
HSS members	<p>Questions, Comments</p>	20 min.

Phases/Timeline To Develop Alaska (In-State) Brain Injury Treatment And Services

Advocates	State of Alaska/DHSS	Data/ Surveillance/ Identification	Treatment	Alaska Brain Injury Network	Workforce Development	TBI Resource Navigation (info and referral)	Case Management	Providers to develop direct services	Military efforts
Identifying where the needs are	Vocational Rehabilitation	Educational System	Criminal Justice	Prevention	Legislation				
Phase 1: 1990-1995		Advocates speak out, organize, increase awareness among state government and anybody else willing to listen							
Phase 2: 1995-2000		Advocates come together. Brain Injury Association of Alaska formalizes			State of Alaska hired TBI Program Director Federal HRSA funds Lead Agency: DHSS, Division of Mental Health/Developmental Disabilities	Data and Surveillance- CDC federal grant. Public Health reports ATR data to lead agency (projected findings: Alaska has a high rate of hospitalizations, higher than national average) Federal Funds		Treatment: Trauma/EMS- mostly available in urban settings	
Phase 3: 2000-2003		ABIN: Alaska Traumatic Brain Injury Advisory Board organized (now ABIN), funded by MHTAAR Trust funds			State of Alaska: Federal requirement Alaska multidisciplinary committee develops needs assessment and 1 st state action plan (findings: <i>TBI is public health issue, access to after hospital/long-term rehab is limited, TBI Waiver recommendation</i>)				
Phase 4: 2003-2005		ABIN: Alaska Traumatic Brain Injury Advisory Board (ATBIAB) gains non-profit status (501 c3) Trust Funds			State of Alaska: Lead Agency: DHSS, now DBH designs and implements TBI Screening tool (TBI Project Director turnover) Federal Funds		Data/Surveillance-Alaska Trauma Registry analysis continues		

<p>Phase 5: 2005-2007</p>	<p>ABIN: ATBIAB changes name and receives grant from Trust to develop TBI information and referral service (<i>projected findings: there are hundreds of Alaskans living in the community (statewide) being discharged to inappropriate facilities or home, case management will be a key service, post acute services needed, TBI Waiver</i>)</p>	<p>State of Alaska: TBI Program Director (staff turnover) Federal HRSA funds.</p>	<p>Workforce- 1st Alaska Brain Injury Conference, training for BH clinicians Federal HRSA funds.</p>	<p>Data/Surveillance-in addition to ATR data (, now have AKAIMS (BH screening tool shows 32-34 % clients screening positive for TBI)</p>
<p>Phase 6: 2007-2009</p>	<p>ABIN and partners develop 10 year plan for TBI in Alaska (Plan has been recognized nationally) TBI lead stage agency transitions to Senior and Disabilities Services- utilize strengths in that division which focuses on Aging and Disability Resource Centers. Hospital Discharge, care coordination, Medicaid Waivers State Capital Funds</p>	<p>State of Alaska: DHSS does not receive Federal funds for the TBI Systems project. No TBI Project director Workforce capacity building- Intro to TBI (distance delivered 40 students) Trust Funds Legislation: SB 118 introduced for Medicaid Brain Injury Waiver. Waivers: Preliminary research on 24 TBI Waivers in other states. Information gathering.</p>	<p>ABIN TBI Resource Navigation program develops TBI Resource Directory, provides information/referral to nearly 600 Alaskans, 'callers' or 'cases studies' <i>show need for case management, instate after hospital/community re-entry/long-term rehab/supportive living/clubhouse</i> Trust Funds</p>	<p>Data/Surveillance: Additional data collection includes: Vocational Rehabilitation, Special Education, Nursing Homes, and Hospital Discharge Data. Opportunity for Longitudinal data: Case management to identify: types of referral to the program, service needs, duration of services, costs associated, societal costs and indirect social costs (family, financial, etc)</p>
	<p>Case Management Demonstration Project: MHTAAR funds approved for TBI Service Coordination (1state employee, serving 30-50 clients)Purpose : provide framework to gather longitudinal data on persons with brain injury (money available</p>	<p>Treatment/Direct Service: Preparation/Research on post-hospital treatment (post-acute, community reentry, continuum included neurobehavioral, neuroresidential, supportive living, clubhouses, home supports,)</p>	<p>Providers: Identify providers to deliver post-hospital services (identified agencies include Providence, St. Elias, Mat Su Health Services, supportive living home in valley, "outside" brain injury programs.</p>	<p>Military brain injuries recognized; DHSS highlights need to partner with military to identify needs, coordinate planning. DHSS Commissioner, Trust, and ABIN meets-monthly with Elmendorf, VA, Vet Centers, etc.</p>

	<p>July 1, 2009, Department is interviewing first week in February) <i>(expected findings, need additional case managers, utilize federal funds to support expansion)</i></p> <p>Trust Funds</p>	<p>3 separate site visits to TBI rehabilitation programs (20 programs in New Hampshire, Wisconsin, Virginia, Texas, Kentucky, Illinois) (Funded by Trust)</p> <p>Trust Funds</p>	<p>Coalition grows to include all Alaska providers interested in seeing post-acute options available in state: Providence, St. Elias, Mat Su Health Services, Regional, community providers, supported living programs.</p>	<p>ABIN hosts Defense and Veterans Brain Injury Center and National Intrepid Centers for Excellence for Psychological Health and TBI directors. Col Michael Jaffee and Dr. James Kelly. Sen. McGuire and Rep. Craig Johnson co-host roundtable discussion.</p>
<p>Phase 7: 2010</p>	<p>TBI Case management will be hired (care coordination): 1 FTE hired 30-40 people served</p> <p>Trust Funds</p> <p>Case Management: FY11 Governor's budget includes \$350.0 (\$200.0 GF and \$150.0 MHTAAR) for TBI Service Coordination to include additional care coordinator with small grant program. Grants to support funding services needed. Positions the state to bring in federal funds (through Targeted Case Management in Medicaid State Plan)</p>	<p>ABIN: Full Time TBI Program/Project Director hired- ABIN/SDS/Trust/ANTHC funds</p>	<p>TBI Resource Navigation partners with Aging and Disability Resource Centers (250 new callers/year)</p>	<p>Waivers: More in depth research on Waivers (see additional document for timeline of activities)</p>
	<p>General Funds/Mental Health</p> <p>Trust Funds</p> <p>Research and recommend utilizing targeted case management to expand the program using federal dollars (instead of growing general funds).</p> <p>Federal Funds</p>	<p>Workforce capacity building continues-funded by Trust and ABIN- advanced course, course for vocational rehabilitation counselors</p> <p>Trust and ABIN funds</p>	<p>Prevention: TBI Study-regional information (Alaska Native and non-native) to identify priority communities for prevention efforts ABIN Funds</p>	<p>Legislation: T/ABI Program introduced by Senator McGuire</p>

Phase 8: 2010-1012	Case Management: Amend state plan to include brain injury as a target population to expand number of case managers. <i>Projected findings: case management is key for coordinating services (efficiency and cost savings)</i>	Waiver: TBI Program Director to draft first waiver based on information from Alaska Trauma Registry, ABIN TBI Resource Navigation program, SDS TBI Care Coordination project, department/agency data, research on other State waivers	Data/Surveillance-systematically improves identification through screening; criminal justice systems, corrections, juvenile justice, primary care, schools. <i>(projected findings, need to increase awareness in systems that TBI exists; message is recovery is possible, appropriate supports make a difference, identification is key to appropriate referrals and services)</i>	Workforce capacity building-increase awareness and prepare workforce through a Brain Injury Conference. (ABIN/DHSS/Trust/Partner funds)
		Federal or GF (projected purpose of 1 st waiver and projected findings- purpose-residential rehabilitation program for those who have opportunity for recovery; findings-need a clubhouse for those in the community (not a good fit for behavioral health and/or not available to work); Apply for waiver that focuses on residential neurorehabilitation. Start with 8-16 Medicaid eligible persons. <i>(Projected findings-will learn there is a need for a transitional program (supported living) from the neurorehabilitation to home)</i>	State of Alaska: DHSS/SDS applies for Federal HRSA funds to support TBI program/project director, ANTHC TBI director, workforce (\$250/year 4 years)	Additional awareness building/training to VR counselors
Phase 9: 2012-2015	TBI Info and Referral –additional grant dollars needed to support volume of callers (400 callers)	Treatment: Increase direct services: Apply for additional waiver with focus on supportive living services.	Case management- grows depending on first 3 years of the project.	Educational System: Increase awareness in educational system
	GF and Trust	General funds (aggregate funds) to pay for Medicaid brain injury services (30-40 people served) General funds to support brain injury clubhouses.	GF and Federal	Prevention: Funds requested to implement prevention programs in pilot communities
				Data Surveillance-implement screening tools in criminal justice systems <i>(expected findings higher percentage of offenders will screen positive)</i>

Phase 10: 2015-2020	TBI Info and Referral- going strong	Case management, est. to serve 60-100 people	Treatment: Providers improve post-acute services: residential neurorehabilitation, supportive living, clubhouses Decide how to deal with neurobehavioral.	Criminal Justice System-early identification leads to appropriate trials and treatment
	Vocational Rehabilitation counselors specialize in TBI	Educational System- early linkage from hospital to 504 or special education accommodations		
Projected Outcomes of a coordinated, comprehensive, interdisciplinary State TBI Program	<u>Individual outcomes:</u> increase in recovery, intact family structures, increases in return to work and school <u>Family outcomes:</u> strengthens families, supports family to support their loved one (decreases burnout), decreases divorce rate	<u>State of Alaska outcomes:</u> less strain on behavioral health system, lower recidivism in corrections/juvenile justice, decrease in discharges to nursing homes.	<u>Provider outcomes:</u> increase in jobs, improved work moral, economic gains.	<u>Community outcomes:</u> decrease in homeless population, chronic inebriation, domestic violence/sexual assault.
Key Points	<p>All activities stated above relate to unofficial State of Alaska TBI Program (systems change). Community, Tribal, Military, Individual and other activities are not included.</p> <p>All activities in the state have been funded by Federal grants administered by Behavioral Health and Senior and Disabilities Services, Alaska Mental Health Trust Authority Funds, Federal Earmark, Alaska Native Tribal Health Consortium, State Capital funds No General Funds or GF/MH</p> <p>Phases 1-4: Funding has been directed towards advocacy, planning, increasing awareness, workforce development.</p> <p>Phases 5-6: Funding (Trust funds and FY11 GF/MH Gov. budget) for Information and Referral and Case Management, the first 'direct service' projects. They are both demonstration projects with a research focus.</p> <p>Phases 7-10 Will need General Funds to support activities, move into treatment/direct services</p>

MAT-SU

SUBSTANCE

ABUSE

PREVEN-

TION...

**MAT-SU SUBSTANCE ABUSE PREVENTION
COALITION**

Data Project

MISSION

“Reduce substance abuse among youth and, over time, among adults by addressing the factors in a community that increase the risk of substance abuse and promoting the factors that minimize the risk of substance abuse.”

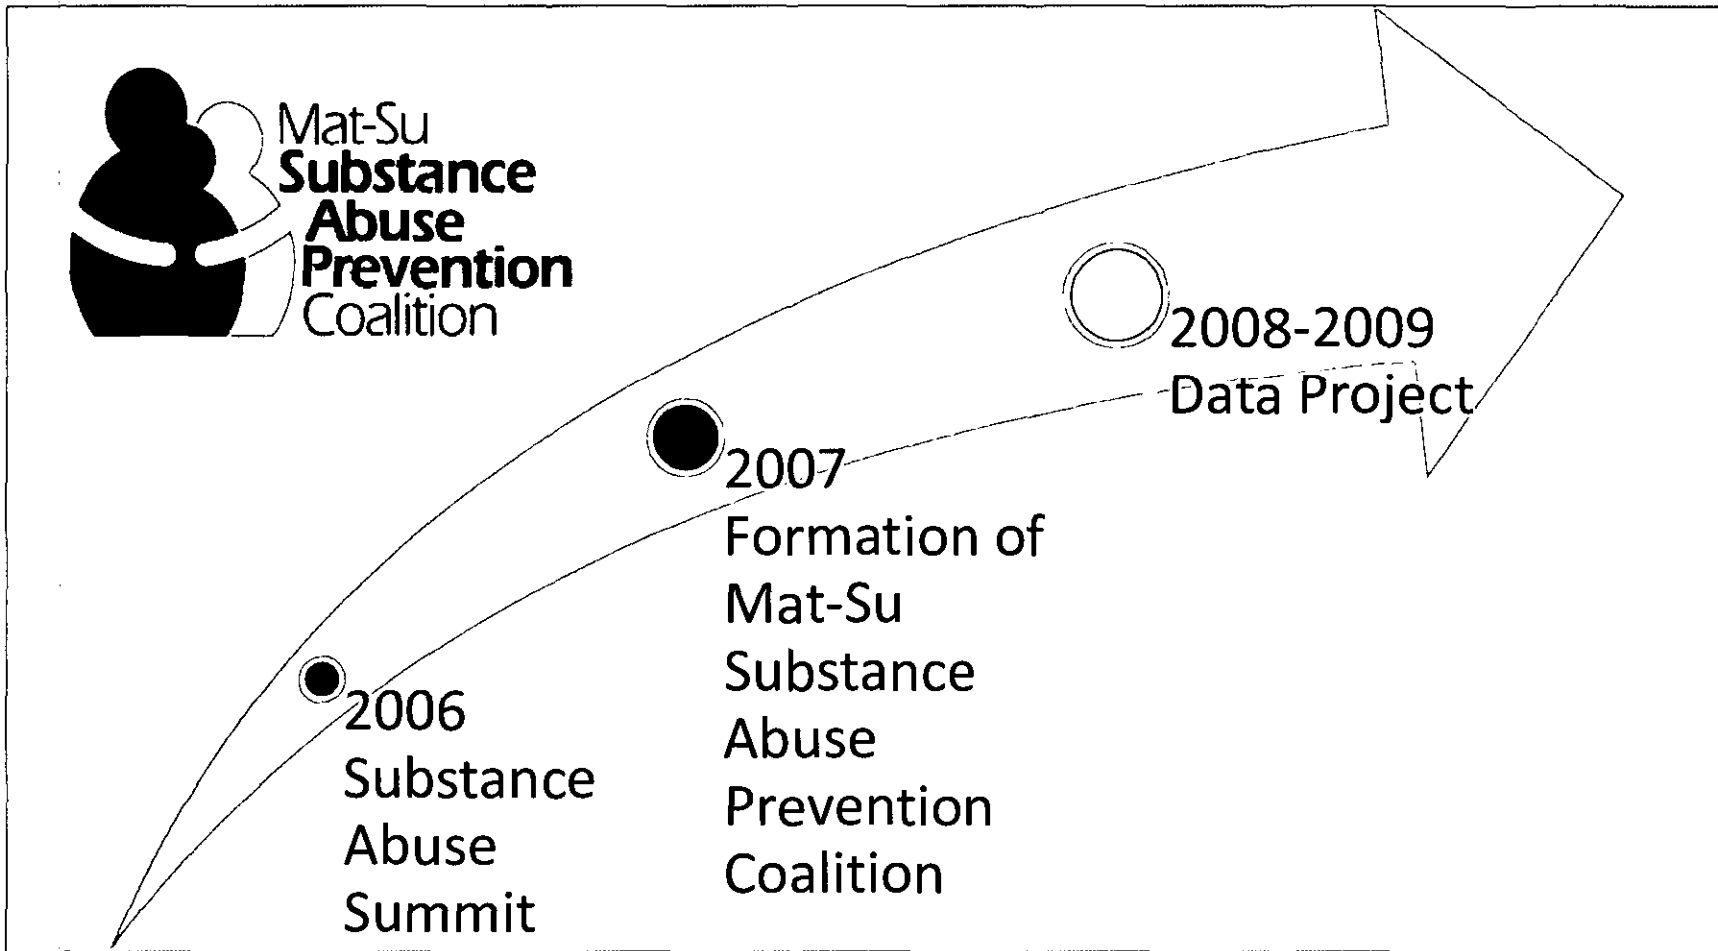

-Mat-Su Substance Abuse Coalition

Overview

1. Brief history of the coalition.
2. Description of our data project.
3. Summarize major findings and corresponding recommendations.
4. Demonstrate coalition effectiveness and describe our work.
5. Call to action.

1. BRIEF HISTORY

METHOD

Data Review

- Collection of available local data from years 2002-2007

Community Assessment

- Analysis of community data
- Development of community database
- Trends in youth substance use survey

Alaska Healthy Kids Survey

Demographic Information

Alcohol, Tobacco, and Other Drug Use

ATOD Use Correlates

Violence, Harassment, Safety & Crime

External Assets

Emotional/Physical Health

Survey Demographics

Surveys sent to 4000 youth

- Mat Su School District
- Christian Schools
- Non-District Home schools
- Homeless and At-Risk youth

2524 surveys received (61% response rate)

- 2435 valid responses
 - High School: n = 1650
 - Middle School: n = 800
 - Male: n= 49.7%
 - Female: n = 50.3%

Ethnicity

Results

After receiving the 2008 Data Report which included the Alaska Healthy Kids Survey and other information about the Mat- Su Borough the Coalition decided to utilize the feedback from stakeholder groups:

1. School Groups (Students, Nurses, Principals)
2. Law Enforcement
3. Providers (Treatment)
4. Medical (Nurses/Docs)
5. Faith based Groups

(Input from over 130 community members)

Meaningful participation from adults in the community

- As defined by the following items:
 - Outside of my home and school, I am involved in music, art, literature, sports, or a hobby.
 - Outside of my home and school, I help other people.
 - Outside of my home and school, I am part of clubs, sports teams, church/temple, or other group activities.

Meaningful Participation in Community: Percentage of students by grade

Grade	Disagree/Strongly Disagree	Neutral	Agree/Strongly Agree
Middle School	24.6	55.3	20.1
High School	29.8	51.9	18.3

Meaningful participation with adults at home

- As defined by the following items:
 - At home I do fun things or go fun places with my parents or other adults.
 - At home I do things that make a difference.
 - At home I help make decisions with my family.

Meaningful Participation at Home: Percentage of students by score

Grade	Disagree/Strongly Disagree	Neutral	Agree/Strongly Agree
Middle School	24.7	50.4	25
High School	32.3	46.1	21.6

Meaningful participation with adults at school

- As defined by the following items:
 - At school I do interesting activities.
 - At school I help decide things like class activities or rules.
 - At school I do things that make a difference.

Meaningful Participation at School: Percentage of students by score

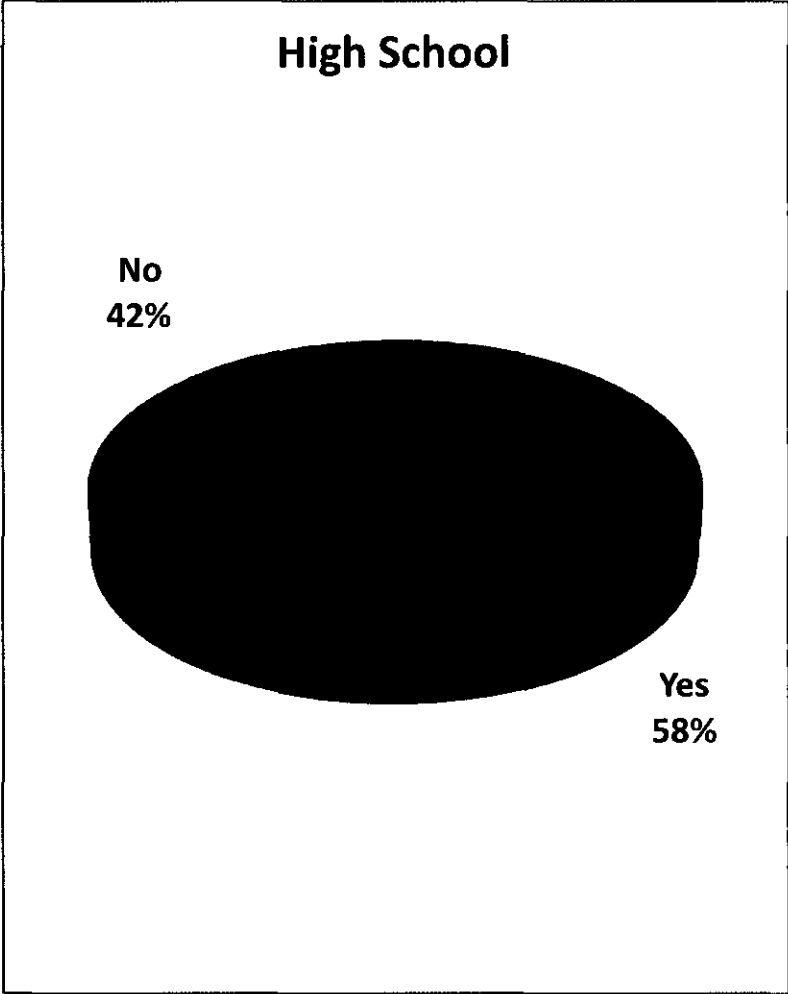

Grade	Disagree/Strongly Disagree	Neutral	Agree/Strongly Agree
Middle School	49	44.5	6.4
High School	57.0	37.5	5.5

Recommendation #1

- **Increase meaningful adult and community involvement with youth**
 - Increase the protective factors
 - Resiliency (Alaska Healthy Kids Survey, Fall 2008)

Are parents talking to their kids about substance use?

What age do our youth start using?

Age at First Use

□ 14 and under □ 15-18

Age at first use

10 and Under

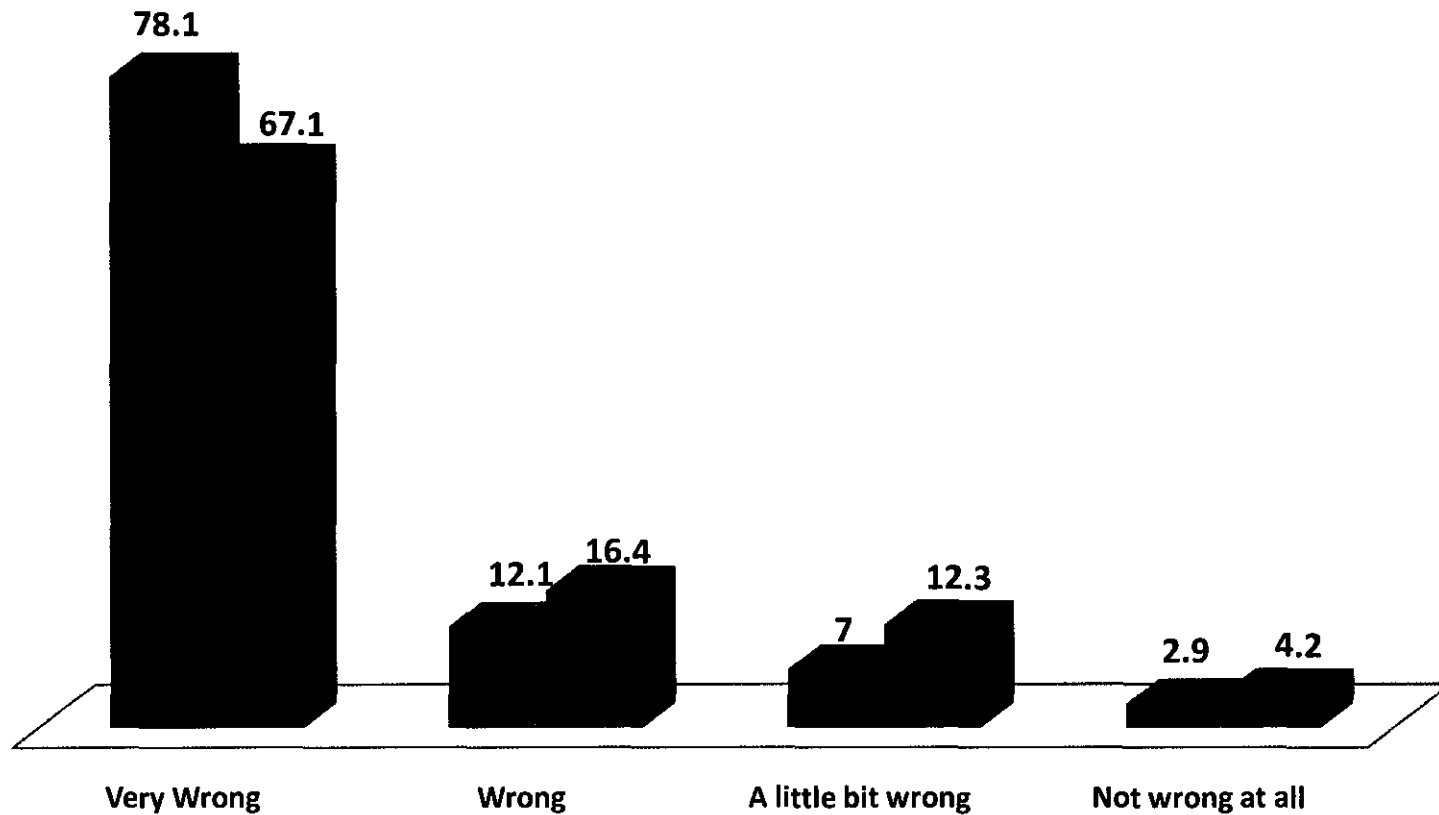

□ High School □ Middle School

Parent Perception of Use

How would your parents feel about you drinking regularly?

■ Middle School ■ High School

Parent Perception of Use

How would your parents feel about you smoking cigarettes?

■ Middle School ■ High School

Parent Perception of Use

How would your parents feel about you smoking marijuana?

■ Middle School ■ High School

Recommendation #2

- **Increase parental involvement in prevention and early intervention measures in the Mat-Su Community**
 - Parents are an important source of information in youth decisions.
 - Having parents engaged in a more direct and meaningful way with prevention and early intervention may have a strong impact on the outcomes for our community's youth.

Are substances difficult to get?

Access to Tobacco

Don't Know

54%

Are substances difficult to get?

Access to Alcohol

Are substances difficult to get?

Access to Marijuana

Don't Know
32%

Easy
47%

Difficult
21%

Recommendation #3

- **Reduce Access to substances**

- Mat-Su youth are using a variety of substances and the reported usage is, in some cases, above state and national averages.
- The majority of students report that alcohol, tobacco and marijuana are easy to get.

Recommendation #4

Increase community awareness of issues

- Alaska ranks in the United States:
 - #2 for illicit drug use (2007, National Survey on Drug Use and Health)
 - #6 for binge drinking among adults (2007, CDC, BFFSS).
- In many of the categories of use, the youth in the Valley reported above state and national averages.

Experiences from Alcohol and Drugs

High school youth reported an average of 2 experiences

Coalitions are an effective solution

(Interim DFC Program Evaluation Findings Report, 2008)

Past Month Youth Substance Use Rates in Coalition Areas are Significantly Lower than the National Average in 2007

Our Coalition

- Includes leaders from our community
- Focuses on prevention
- Utilizes Environmental Strategies
 - Ex: advocating law and policy changes
- Coincides with the state plan to reduce underage drinking
 - Ex: youth leadership

Call to Action

- Review state statutes and regulations.
 - Laws are powerful messages that demonstrate social norms and expectations around drinking and using other substances.
- Get involved/understand your local coalition's goals and efforts.
- Support funding for further research, especially regional break-out data.
- Support funding for prevention—it works!

Thank you for your time...

20 Questions to Ask Your Legislator About Health Care Overhaul

1. Legislators in both the House of Representatives and in the Senate voted, in committee, to exempt Members of Congress from having to enroll in the public health plan they are drafting right now. This is outrageous! If this legislation is supposedly good enough for the American people – why exempt Congress from it? Will you vote to sign up you and your family for any public health care program that Congress passes for the American people?
2. There are claims that there's an unfunded liability of several trillion dollars up through 2075, and that the health bill actually reduces payments to Medicare by about several hundred billion over the next decade as a way to fund this bill. Wouldn't such a cut in Medicare then lead to rationing in the system?
3. When Congress and the President rushed to pass the \$1 trillion stimulus bill, we were told it needed to be passed fast. However, the legislation has had questionable results while paying for things like public bathrooms, sex shows in San Francisco and other examples of waste. Now we are told health care legislation must be passed right away for the same reasons. When restructuring 16 percent of our nation's economy, this rush appears more politically motivated than policy motivated. Isn't it more important to do it right?
4. Will you promise to read, understand and take full responsibility for everything that is in the final version of health care legislation?
5. Will you allow the American people sufficient time to review and publicly comment on the legislation before voting on it?
6. Many claim that abortion is covered in the health care bill, despite its not being mentioned specifically in the legislation itself. Furthermore, amendments offered in the Senate by Barbara Mikulski (D-Md.) and in the House by Lois Capps (D-Calif.) now guarantee that abortion will be a part of the health care legislation. Over seventy-one percent of Americans agree that taxpayer dollars should not fund nor subsidize abortion. When it comes to abortion exclusion, will you specify that none of the funds appropriated in the health reform bill, and no resources in any trust fund to which funds are appropriated in the bill, shall be expended for abortion? If not, why?
7. Can you guarantee me that my employer will not drop my health plan, and force me into the government run Health Information Exchange? Can you guarantee me and my family will not be one of the 100 million Americans predicted to lose their employer-provided health insurance and be forced into the Health Information Exchange?
8. I am self-employed. How can you vote for a law that says if I make a single change to my existing health plan, I will be forced into the Health Information Exchange, where my plan details are controlled by the Secretary of Health and Human Services? How can you stand there and say if you like your plan you can keep it, when I am going to be forced into the Health Information Exchange?
9. Do you know that the bill before Congress gives the Secretary of Health and Human Services uber-authority over everyone's health insurance and every single plan detail, and that the bill

grants her such authority and other authority over all aspects of health care more than 200 times in the bill?

10. Do you know that if a trillion dollars were a trillion seconds, counting backwards, a trillion seconds puts us at 30,000 years before the birth of Christ? How can a bill that costs \$1 trillion dollars and that cuts Medicare by \$400 billion be called "revenue-neutral?"
11. How can a bill that costs \$1 trillion dollars be passed without raising taxes as President Obama has promised?
12. Who decides what \$400 billion in benefits and services are cut from Medicare?
13. Congress has never cut Medicare by anywhere near \$400 billion; what makes you think Congress will make the cuts needed to pay for the uninsured's health care?
14. Why should we accept \$400 billion in Medicare cuts? Why aren't other programs being cut besides Medicare? Why is this health reform being funded on the backs of seniors?
15. Why does the bill change the definition of family by stretching it to become anything liberals want to call a family?
16. Will you agree to an iron-clad guarantee that this bill will not fund abortions, leave state abortion limits in place, and protect health care providers from being forced to perform abortions?
17. Medicaid, Medicare and Social Security are all government programs that are nearly broke. Why should the American people think the government can run an efficient or trustworthy health care program, especially when the Members of Congress vote to exempt themselves from the very program they tell the people will be so good?
18. In the House version of the health care legislation, H.R. 3200, Section 1233, titled "Advance Care Planning Consultation," the bill calls for "end-of-life" planning consultations once every five years. Who will be responsible for this "end-of-life" counseling, and why would anyone want the federal government to be involved at all in this very private matter?
19. The provision on "end-of-life" planning for seniors in the House bill comes from Rep. Earl Blumenauer, a Democratic congressman from Oregon who supports assisted suicide. The state of Oregon has sent seniors letters "consulting" them that, while the state-run plan would not pay for their cancer treatments, the state would be happy to pay for assisted suicide if they choose that option. Americans have always placed a high value on human life. Why would we be interested in such a utilitarian approach regarding these important issues?
20. President Obama himself has made several public statements indicating the federal government would be making decisions on what sort of treatments people get. In a town hall meeting on June 24, 2009 President Obama told a woman caring for her elderly mother: "(W)hat we (the federal government) can do is make sure that at least some of the waste that exists in the system that's not making anybody's mom better, that is loading up on additional tests or additional drugs that the evidence shows is (sic) not necessarily going to improve care, that at least we (the federal government) can let doctors know and your mom know that, you know what? Maybe this isn't going to help. Maybe you're better off not having the surgery, but taking the painkiller." Why would I want the federal government involved in a medical decision about surgery vs. a pain killer?

FOSTER
CARE
IN
ALASKA

Foster Care Fact Sheet

Independent Living

The Office of Children's Services Independent Living Program provides services to youth in foster care ages 16 ½ and older, and youth out of custody up to the age of 21. The number of youth being served by the OCS Independent Living Program by region as of February 1st is below.

236 Youth in care ages 16 ½ and older

- SERO-30
- NRO-35
- ANC-73
- SCRO-98

152 Youth out of custody up to age 21

- SERO-24
- NRO-32
- ANC-52
- SCRO-46

143 youth who received services from the Independent Living Program left custody in FY2009

Alaskan Foster Care Alumni Study Findings

Youth served by the Independent Living Program are more likely to, "age out," of custody at 18 or older. The Alaskan Foster Care Alumni Study conducted in 2005 measured outcomes for youth who age out of foster care in Alaska. Outcomes from the study are as follows:

Socio-emotional

- Rates of early parenthood-by age 19, 57% of females, and 41% of males were parents

Physical and Behavioral Health

- 80% reported lifetime use of behavioral or mental health services
- 35% reported overnight treatment stays
- 68% reported seeing a professional such as a psychologist, social worker, or minister

Education, Employment, and Housing

- Nearly 38% of alumni reported being homeless after leaving care. This number was higher than the 12-25% from other alumni studies.
- High school completion rates were below the statewide average. Alaskan Alumni took longer to complete their high school diploma (often finishing between the ages of 19-25). Few went on to complete post secondary education
- 4.5% graduated with a vocational or technical degree or certificate

Costs to Society

- Nearly 30% of alumni were incarcerated after leaving care.

Foster Care Fact Sheet

- Alumni reported high utilization of public assistance resources. 77% of alumni including those who lived alone or with others reported using some form of public assistance in the last 6 months.

Midwest Alumni Study

- Young adult who stayed in foster care beyond age 18 were more than twice as likely to be enrolled in a school or training program as those who had been discharged
- Young adults who extended custody beyond 18 were over 3 times more likely than those no longer in care to be enrolled in a 2-4 year college program
- Compared to the 19 year olds still in foster care those who left the system were more likely to become parents

Education

Educational stability is important for children and youth in foster care to obtain a GED or high school diploma. As children move between foster care placements, they often move between schools as well. With each school change a child falls behind 4-6 months in their education.

The Anchorage School Districts Child in Transition Program reported that only about 25% of high school freshman in foster care were on track to graduate with a diploma or GED on time in 2009.

The McKinney Vento Homeless Liaisons serve about 3/5 of school age children and youth in foster care by providing transportation, tutoring services, and the tracking of school information and credits.

Needed, Achievable Changes

Action To Allow School Stability: Allow youth to remain in their school when they are moved across town to a new foster home during the school term.

Cost-Efficient Action: Help Transition Youth To Success, Not Homelessness

- ❖ Grant Support To Recruit & Screen Volunteer Youth Mentors
- ❖ \$55,000 to expand UA Scholarships for foster youth from 10 to 15.
- ❖ Add Education and Mentorship into the OCS mission by statute
- ❖ OCS concedes that 4 statewide (ILP) staff is grossly inadequate to link youth aged 17-23 to job training, school, and success after care. OCS concedes this staffing is terribly inadequate.
- ❖ Allow Foster Care Until 21 Where There's An Available Family.
- ❖ Enhance Foster Parent Recruitment.

Susan Heuer, Chair
Citizen Review Panel
Office of Public Advocacy
900 W. 5th Ave., Suite 525
Anchorage, Alaska 99501

Dear Chair Heuer:

On behalf of the Department of Health and Social Services, Office of Children's Services, our other partners and our stakeholders in the child protection system, thanks to you and your panel for the 2009 Citizen's Review Panel annual report. Enclosed please find our response to your findings and recommendations.

I truly appreciate each panel member for the time and efforts freely contributed to the most important of visions – Safe Children and Strong Families. I look forward to another year of productive partnership.

Sincerely,

Tammy Sandoval
Director

Enclosure

The Office of Children's Services (OCS) is thankful to the Alaska Citizen Review Panel (CRP) for their diligence in examining policies, procedures and practices that then inform recommendations toward systems improvement of the OCS. We know that we cannot do the work necessary to prevent, reduce and remedy child maltreatment without the assistance of all of our community partners. In 2009, the CRP and OCS continued its collaborative work to ensure the safety, permanency and well being of the children of Alaska. We believe we have forged a very effective partnership.

2009 proved to be another active, but very productive year for the OCS. Again this year, there was a federal audit for which to prepare and host. In July of 2009, the Administration for Children and Families (ACF) conducted a secondary review of the Title IV-E Foster Care Program to determine the level of Alaska's compliance with federal mandates. Secondary reviews are mandated when a primary review determines a state not in substantial compliance with Title IV-E requirements as was the case for Alaska in September of 2006. Reviews ensure compliance with IV-E eligibility requirements and validate financial claims for federal reimbursement to ensure that payments were made on behalf of eligible children.

In November, the ACF determined the OCS to be in substantial compliance with federal eligibility requirements and with the allowable percentage case error and dollar error rate of 10 percent. The OCS was commended for its efforts to improve the program since the September 2006 review and provided with recommendations for continued improvement. The next review will be held within three years of July 2009.

Another federally mandated milestone that was reached this year is the Program Improvement Plan (PIP) was approved on December 1, 2009. The PIP is the corrective action plan to address areas needing improvement as identified in the Child and Family Services in September 2008. A copy of the PIP document can be viewed/downloaded at - http://hss.state.ak.us/ocs/Publications/2009_pip.pdf . The OCS will need support and assistance from every one of its stakeholders in completing the PIP in the required 2 year period. The foundation of the PIP and that of the entire OCS, is our Practice Model Overview. This document seeks to create a conceptual map and represent our organization's ideology to how staff, stakeholders and families served within the system will partner together to engage in child welfare services. See - http://hss.state.ak.us/ocs/Publications/2009_practicemodel.pdf.

As we did last year, we continued rolling out Family to Family (F2F) within OCS, this year to Wasilla. The F2F Initiative is now almost 5 years old and we have begun institutionalizing the core principles and practices statewide, therefore we are going to soon drop the phrase "Family to Family Initiative" and instead, refer to the particular associated practices, to demonstrate our commitment to the work being fully incorporated into OCS' repertoire.

The following are the responses to the specific recommendations made in the CRP 2009 Annual Report:

Recommendation 1 - That resources for state departments be standardized.

While the OCS can only request and encourage state government to allocate resources to increase support for the safety of our children, we are appreciative that the CRP has included this recommendation in the 2009 report. We also recognize the concerted efforts of the Administration and the Legislature to increase the resources available to OCS in the past several years. Since 2005, we have been given 70 new frontline positions and a net increase of close to \$12 million.

OCS completely agrees with your observations regarding the extremely slow Internet connection speeds in our rural offices. Unfortunately, the solution is far from simple and the problem is not exclusive to OCS. Many rural offices in Alaska have Internet connectivity issues.

Department and OCS information technology staff believe that the best and only effective solution to Internet connection speeds is for some entity; be it state, federal, or private, lay a fiber optic cable from Anchorage to Western Alaska. The cost of this enterprise is in the tens of millions if not hundreds of millions of dollars. Even if funding becomes available, a solution will not be realized for several years.

Knowing that the best and most permanent solution is out of immediate reach, we aggressively remind our state Enterprise Technologies staff of the problems in our rural offices and seize any and all alternate solutions. For example, OCS was able to dramatically increase Internet speeds in our Kodiak office by partnering with our federal peers. To quote Mary Gray, our Social Worker IV Supervisor in Kodiak: "It has utterly changed our productivity for the better."

Recognizing that our Bethel, St Mary's, and Aniak offices are some of the most adversely affected offices, we were able to work with the Governor's Office to secure funding for the purchase of 17 laptop computers that now allow the field workers from those offices to enter case notes and keep up on their email correspondence while in the field. Once the field worker returns to their respective office, the case notes can then be uploaded into ORCA.

OCS is also working with our Information Technology partners on new technologies for compressing the size of the Internet signal being transmitted through the satellite to and from our rural offices. This is a difficult and expensive solution, and there is a high risk that the technology will not work in Alaska. Because we believe that if there is a chance it will help our rural offices, we must at least try.

We also agree that the ability to provide rural housing would positively impact retention of staff in the rural areas. We have taken the issue to DHSS administration and learned that while there are some existing models in other departments; those models were grandfathered in, making the effort to provide housing a little more difficult for OCS. We have learned that we may be able to provide housing by leasing existing rental property, but must charge workers for rent. When vacant, the OCS would need to continue lease payments, dipping into already stretched operating funds. This option has not been discounted, and we will continue to determine where the most need is and explore options available to us.

Mission and Mandate

MISSION

The Alaska Citizen Review Panel (CRP) is committed to reviewing and evaluating the practices and procedures of the Office of Children's Services (OCS) and in making recommendations relative to its findings to insure the safety and the well-being of the children of Alaska.

The CRP will achieve this commitment by examining the policies and procedures of the Office of Children's Services and collaborating agencies; examining, where appropriate, specific cases; evaluating the extent to which agencies are carrying out their child protection responsibilities; and preparing and making available to the public an annual report.

MANDATE FOR THE GROUP

The Citizens' Review Panel (CRP) is federally mandated through the Child Abuse Prevention and Treatment Act (CAPTA); Keeping Children and Families Safe Act of 2003. The CRP is also mandated through Alaska statute Sec. 47.14.205.

"By allowing the Panels to have complete access to child protection cases, by requiring Panels to publicize their findings, and by requiring states to respond to criticisms and recommendations of the Panels, the Committee intends to subject states to public criticism and political repercussion if they fail to protect children." (United States Congress, House Report 104-081, 1995, p.1)

DUTIES ASSIGNED TO THE GROUP

Summary of duties The CRP shall examine the policies, procedures, and practices of State and local agencies and where appropriate, specific cases, to evaluate the extent to which State and local child protection system agencies are effectively discharging their child protection responsibilities.

CRP duties

- Evaluate OCS compliance with federal and state laws, examine policies and procedures for consistent statewide implementation, review cases with fatalities or near fatalities. The CRP shall evaluate the extent to which OCS is effectively discharging its child protection responsibilities under:
 1. the State Plan submitted to the U.S. Department of Health and Human Services under 42 U.S.C. 5106a(b);
 2. Child Protection Standards under federal and state laws; and
 3. any other criteria that the CRP considers important to ensuring the protection of children, including the level and efficiency of coordination of foster care and adoption programs in the state and a review of child fatalities and near fatalities.

In carrying out the responsibilities listed above, the CRP shall examine the policies, procedures, and practices of OCS, and, where appropriate, evaluate specific cases of child abuse or neglect.
- Maintain confidentiality. A person attending a CRP meeting or a CRP member or CRP staff may not make any disclosure related to information obtained during a review by the CRP. A violation is subject to a civil penalty of up to \$2,500 for each violation.
- Conduct public outreach. The CRP shall conduct public outreach and gather public comment on current OCS procedures and practices involving children and family services.
- Produce an annual report. The CRP shall prepare and make available to the governor, the legislature, and the public an annual report containing a summary of its activities and recommendations for the improvement of child protection services in the state.
- Meet at least every three months. The CRP is required by law to meet every three months. Additional meetings and/or teleconferences are scheduled as needed.

DUTIES ASSIGNED TO OCS RELATED TO THE CRP

HSS support. The Commissioner shall, by regulation, establish policies and procedures necessary to carrying out the duties of the CRP.

- Cooperation with state panel. OCS shall provide the panel access to information on child abuse or neglect cases that is necessary for the CRP to carry out its duties.
- Report response. Not later than six months after the date on which the report is released, OCS shall submit a written response that describes whether or how OCS will incorporate the recommendations of the CRP (where appropriate) to make *measurable* progress in improving the child protection system.

Membership and Staff Support

Required membership The panel shall be composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect.

Current membership

Fred Van Wallinga, Chair, Willow
Carol Olson, Vice Chair, Anchorage
Pamela Dupras, Kodiak
Dana W. Hallett, Soldotna
Arthur S. Hansen, Fairbanks
Susan Heuer, Anchorage
Kristin Hull, Wasilla
Ralph Taylor, Eagle River

Former members who left the group during this reporting period

Paul Burke, Nome
Esperanza Redelfs, Ketchikan

Desired membership The CRP would like to meet its requirement to be broadly representative of the state by widening the geographic and racial and ethnic diversity of the membership. The group is working to recruit new members from underrepresented areas of the state as well as a greater diversity of child-centered expertise and backgrounds.

OCS liaison Tammy Sandoval, Director, is the current liaison between OCS and the CRP.

Staff support Staff support is provided by Sylvan Robb and Nancy Lowe of Information Insights.

September 10, 2008	Participated in teleconference for the Child and Family Services Review
November 18, 2008	Fairbanks: Art Hansen and Sylvan Robb met with Coleen Turner, Children's Services Manager for Northern Regional Office
November 20, 2008	Met with Alaska Department of Health and Social Services Commissioner, Bill Hogan
January 6, 2009	Safety training teleconference with Director Tammy Sandoval
January 7, 2009	Dillingham: Art Hansen and Susan Heuer met with local OCS staff and partnering agencies
January 8-9, 2009	King Salmon: Art Hansen and Susan Heuer met with local OCS staff and partnering agencies
January 12-13, 2009	St. Mary's: Dana Hallett and Kristin Hull met with local OCS staff and partnering agencies

January 18-21, 2009	Unalaska: Dana Hallett and Sylvan Robb met with local OCS staff and partnering agencies
January 28, 2009	Bethel: Pamela Dupras and Fred Van Wallinga met with local OCS staff and partnering agencies
January 29-30, 2009	Aniak: Pamela Dupras and Fred Van Wallinga met with local OCS staff and partnering agencies
April 27-30, 2009	Alaska Native Indian Child Welfare Agency, Second Annual Alaska Child Welfare Summit
May 14, 2009	Sylvan Robb presented to the Tribal State Consortium
May 20-22, 2009	Jackson Hole, Wyoming: Fred Van Wallinga attended the National Citizen Review Panel conference

Annual activities

Although the CRP was formed in May 2002, the core of its current membership has been in place for approximately five years. The group meets face-to-face quarterly, with monthly teleconferences in between. Panel membership has remained steady this year with eight members, although there were extended absences during the year. Two members missed a portion of the year; one for health reasons and the other due to military deployment. One member resigned when she moved out-of-state. A newly recruited member had to resign due to a family medical emergency before becoming very active. Another new member was recruited and has been an active participant for much of the year.

The CRP continued to focus this year on two areas for which we had previously advocated. The CRP visited the Copper River Basin area in November 2007. We had serious concerns about this area before and after our site visit. The local OCS field office in Glennallen was a one-person office and struggled to retain a staff person. We have continued to monitor the progress and keep a close eye on the office. We were extremely encouraged to see the community rally and organize to start a child advocacy center (CAC) for the area. OCS was responsive to the needs of the area and the acknowledged additional staff time required by the creation of the CAC. A second staff person has been assigned to the field office. The office suffered an unfortunate set back when the newly hired staffer was seriously injured in a car accident. OCS has been very responsive to the needs of the region and recently promptly filled that position with a new worker in the interim.

Our second area of focus has been, and continues to be, the creation of a fifth service region for OCS to be headquartered in the Bethel area. That was our most important

recommendation in our annual report last year and is a recommendation again this year. More information is included in the recommendations section of this report.

As more people become aware of our existence we receive more calls from dissatisfied citizens. As in the past, we inform people that we do not intervene in individual cases, but encourage people to avail themselves of either the OCS grievance process or to open a case with the Ombudsman's Office. When we are aware of cases, we do try to monitor complaints with an eye out for patterns of problems.

We collected a great deal of regional data personally through community site visits. We interviewed local OCS staff and staff from the following types of partnering agencies regarding what is working and what needs improvement in their relationship with OCS and how we can help facilitate those efforts.

- Counseling center staff
- District attorneys
- Foster parents
- Health aides & public health nurses
- Health clinic staff
- ICWA workers
- Local police departments
- Municipal representatives
- OCS staff
- School principals, nurses & counselors
- State troopers
- Tribal representatives
- WIC workers

We also learned a great deal from other people in these same job types during discussions at several conferences we attended. One conference we attended was the Second Annual Alaska Child Welfare Summit put on by the Alaska Native Indian Child Welfare Association (ANICWA). Attendance at these conferences provides extremely valuable networking opportunities, especially to hear from rural residents from many communities. Conference attendance is an excellent way to continue to make people aware of our existence. A 3' by 6' banner with our name and logo was purchased, and we were able to staff a table with information during the ANICWA conference. Unfortunately, attendance was down this year as travel budgets have been cut or frozen due to the poor economy.

We had additional training opportunities this year to include one member attending the National Citizen Review Panel Conference in Jackson Hole, Wyoming. Attendance at the national conference allows us to learn of any legislative changes that impact citizen review panels and to network with members from other states to exchange ideas. We are active participants in the national listserv for CRPs. We have responded to data requests

as well as submitting several questions to solicit information from the national community of CRPs.

In addition to collecting data, we also provided data this year. We attended a teleconference to provide input on the Child and Family Services Review conducted by the federal Children's Bureau. One of our members, Art Hansen, also participated in an in-person meeting and several teleconferences related to this process. We look forward to monitoring OCS' progress towards the goals laid out in the Performance Improvement Plan. We also provided feedback to OCS for the mandatory five-year plan they submitted to the federal government.

Director Tammy Sandoval has been our OCS liaison for the entire year. We have been pleased with the direct communication and access this affords us. The relationship and outcomes have improved between OCS and the CRP. In addition to her involvement in our quarterly meetings, Director Sandoval also provided us with a half-day tutorial on the Safety Assessment which is a new practice being implemented throughout the state.

As part of our public outreach we presented testimony to the Alaska House Health and Social Services Committee about our activities and recommendations. While in Juneau we also met with members of the Governor's staff, the Commissioner of Health and Social Services and numerous individual legislators. We also continue to maintain our website for public outreach at www.crpalaska.org.

At our May meeting, we held officer elections and Susan Heuer was elected as our new chair. Carol Olson was re-elected as vice chair.

Recommendations

Recommendation 1. That resources for state departments be standardized

Currently there are many resources that are available in numerous state departments that are not standardized. We acknowledge and agree that not all departments have the same needs nor do they require being treated the same in all circumstances. However, if Alaska values the safety of its children it will not prolong the time it allows the Office of Children's Services to continually be under-resourced.

In nearly every rural community we visited, we have heard of the problems plaguing OCS offices related to slow Internet connections. This is not a matter of convenience, as some may imagine it; the horrifically slow Internet connections endured by these offices has a tremendous impact on productivity. Workers in rural offices can spend 20 minutes doing something that takes two to three minutes in an office with a decent connection.

One result of these very slow connections is to impact the safety and outcomes for children as workers have less time to provide services to children and families. While that alone should be enough to motivate a remedy to the situation, directly jeopardizing the safety of children is not the only impact. Due to the overwhelming amount of time needed to enter data into OCS' ORCA database in offices with these tremendously slow connections, workers tend to get quite behind with their entries. This leads to a substantial lag between the data in ORCA and the reality on the ground. Since OCS is admirably trying to make decisions based on data, ORCA is frequently mined for data to inform decisions. However, those decisions are then made based on outdated data.

Another example of the impact this has on children could be witnessed during a recent termination trial. An OCS supervisor from Bethel was called as a witness and the Attorney General was asking her questions based on ORCA entries. Her testimony lasted four hours when it should have been 45 minutes. The long lapses allowed previously unprepared defense attorneys time to prepare and left the supervisor feeling frustrated and unprofessional. Even though it was not her fault, the delay left a bad impression of OCS's expertise on the court. Additionally, it wasted three hours of the supervisor's time.

The most frustrating part of this scenario is that in nearly all the communities we have visited where we heard of these exceedingly slow Internet connections, we have found other offices of state government to be connected at the highest speeds. OCS should not always be provided with the slowest connection. We understand that this problem requires remedy by those outside of OCS in other state agencies. We have faith that these agencies too will value Alaska's children's safety and work with OCS to find a solution to this issue. OCS workers have jobs with plenty of inherent challenges; they

don't need to endure this maddening one while knowing that the school, the Trooper's office, and the public health nurses all have faster connections.

The other resource that is available to some state agencies as a recruitment tool for rural workers is housing. Schools and Troopers in some rural communities have recognized that being able to offer decent housing makes it much easier to recruit qualified workers to remote communities. OCS would like to be able to use this recruiting tool as well since attracting applicants to rural positions is difficult. We hope this issue can be explored. Since the model already exists in other departments, the issue seems one of funding rather than figuring logistics or having to pilot a project.

While our immediate desire is to see OCS receive the same quality Internet connection as other offices and the same recruiting tools, we think the state is missing an opportunity to save money by consolidating these services. In the same way that all state agencies must book travel through the state travel office, all state agencies in a community should share an Internet connection. Likewise, all agencies could share state housing in a community for recruiting purposes. We feel this has the potential to raise the caliber of everything being offered by various agencies. Better services would decrease frustration, improve employee retention, and improve the delivery of state services.

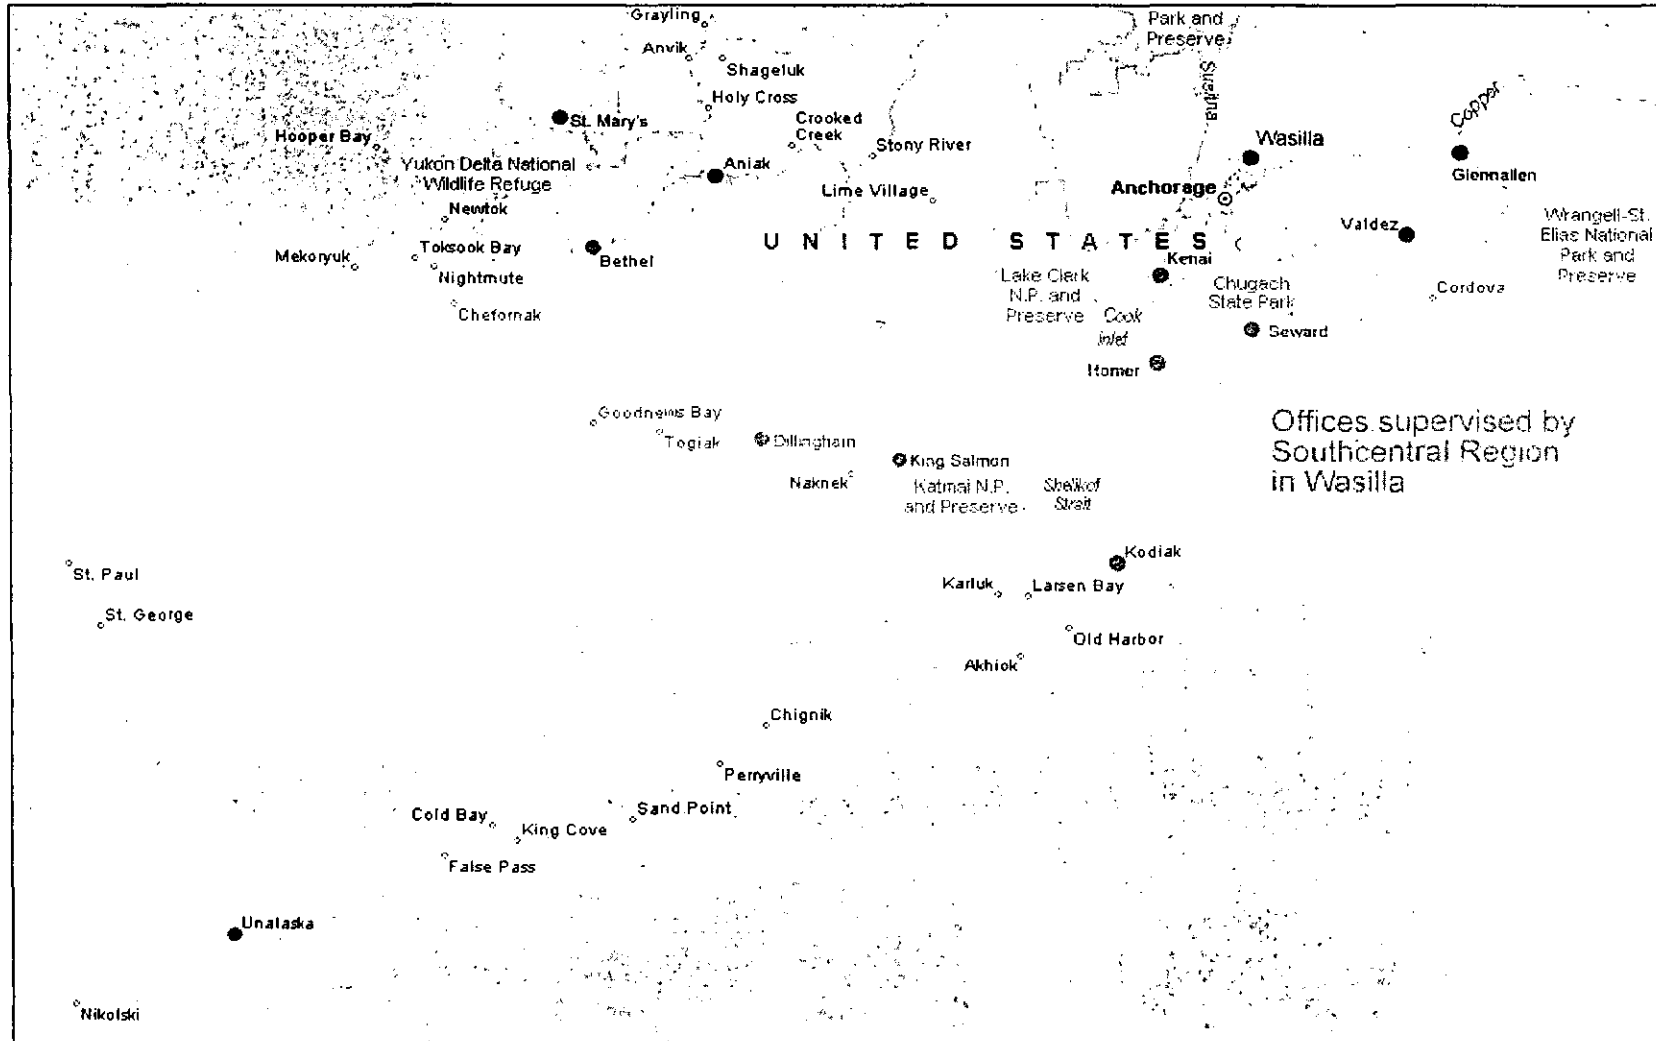

Recommendation 2. That OCS continue to work toward having a fifth service region headquartered in Bethel

Population and Land Area

Currently OCS serves the state through four regions: Southeast, Anchorage, the Northern region (which includes the area north of St. Mary's) and the Southcentral region (which is the remainder of the state). The map below shows the existing regions.

Currently there is one office in the Anchorage region, five offices in the Southeast region, seven offices in the Northern region and 13 offices in the Southcentral region. The existing Southcentral region has 12 field offices which is twice as many as the region with the next largest number of field offices—six in the Northern region--and three times as many field offices as Southeast (which has four field offices). The following map shows the dozen field offices in the Southcentral region and the regional headquarters in Wasilla.

We propose that in order to better serve the sizable and culturally distinct area of Southwest Alaska, OCS create a fifth region to be headquartered in Bethel. This region would be broken out from the existing Southcentral region (SCRO). The existing Southcentral region includes 37% of Alaska's land area and 30% of its population. SCRO as it exists is the size of California and Michigan combined.

In our annual report last year we also advocated strongly that OCS develop a fifth service region. Last year we advocated carving off six of the field offices from the existing SCRO—Aniak, Bethel, Dillingham, King Salmon, St. Mary's and Unalaska. We continue to feel passionately that creating a fifth service region will allow OCS to provide better services in both the new region and in SCRO--which would be much smaller after the creation of the new region. After making our recommendation in last year's annual report, we had the opportunity to travel to all six field offices that we proposed for inclusion in the new fifth region.

After meeting with OCS workers and community partners in all six communities, we are amending our recommendation this year. The fifth region we propose would be headquartered in Bethel and would include the Bethel, Aniak and St. Mary's field offices. While the inclusion of the six offices proposed last year makes sense geographically, the inclusion of all six communities does not make sense when travel routes are considered. As the crow flies, it is 850 miles from Wasilla to Unalaska and only 510 miles from Bethel to Unalaska. However, the only route between Unalaska and Bethel travels through Anchorage, so serving Unalaska and other communities on the Anchorage travel corridor from Bethel does not make sense. However, we continue to believe that the 56 Yup'ik villages in the Bethel area—a culturally cohesive area and an area with many challenges - deserves to be served from a region headquartered in the area.

The table below lists all the boroughs and census areas included in the existing Southcentral region. Those areas above the heavy line would remain in the Southcentral region after the proposed Southwest region is created. Those below the heavy line would be in the proposed Southwest region. The existing boundary between the Northern region and SCRO is a straight line east-west across the state, so it does not follow borough or census area boundaries. We have estimated the percentage of the census areas in the proposed Southwest region for those census areas bisected by the boundary.

Borough or Census Area	Population (2006 Census Bureau est.)	% Population Under 5 Years Old	% Population Under 18 Years Old	Land Area (sq. miles)
Aleutians East Borough	2,647	3.5	12.1	6,988
Aleutians West Census Area	5,239	3.2	12.8	4,397
Bristol Bay Borough	1,042	6.5	27.0	505
Dillingham Census Area	4,970	8.7	33.6	18,675
Lake and Peninsula Borough	1,548	8.1	31.2	23,782
Kenai Peninsula Borough	52,304	5.8	24.7	16,013
Kodiak Island Borough	13,072	7.7	30.0	6,560
Matanuska-Susitna Borough	80,480	6.4	26.2	24,682
Valdez-Cordova Census Area	9,872	6.2	24.7	34,319
Bethel Census Area	17,147	11.2	37.1	40,633
Wade Hampton Census Area	6,443*	13.7	42.4	14,614*
Yukon-Koyukuk Census Area	877**	6.5	27.9	21,885**
Total current SCRO	201,745	7.0	27.3	213,053
Total proposed Southwest region	24,467	11.7	38.2	77,132
Total remaining SCRO	177,278	6.2	25.6	135,921
Alaska	670,053	7.4	27.1	571,951

* Estimate 85% of Wade Hampton Census Area in proposed Southwest region, figure is 85% of total.

** Estimate 15% of Yukon-Koyukuk Census Area in proposed Southwest region, figure is 15% of total.

The proposed Southwest region would have 4% of Alaska's population, although it would contain 2% of Alaska's children under 18 years old. While the population in the proposed new region is not sizable, 38% of that population is children. The proposed Southwest region would also include 14% of Alaska's land area. This would leave the remaining SCRO with 26% of Alaska's population, 24% of Alaska's children under 18 years old and 24% of Alaska's land area.

The proposed Southwest region has a large number of communities. There are at least 56 villages in the Bethel region. All of those communities are substantially closer to Bethel than to Wasilla in many ways. The communities are geographically closer, culturally closer, and much closer in lifestyle being all off-road small, rural communities.

Great Need—Troubled Region

As reported in the Anchorage Daily News article, *Slowly, Western Alaska starts to break silence on sexual abuse, Children are often victims of relatives* by Alex DeMarban of the Tundra Drums, Bethel has more sexual assaults than Anchorage in absolute numbers (not per capita). This article was published on January 22, 2008. A portion of the article is excerpted below.

EPICENTER: BETHEL

New statistics from the Alaska State Troopers suggest that Western Alaska leads the state in cases of sexual abuse of a minor -- often when girls are raped or molested by intoxicated adult male relatives and acquaintances -- and cases of sexual assaults against women.

A soon-to-be released study of 989 such cases investigated statewide by troopers in 2003 and 2004 shows that the greatest number -- 476 cases, or 48 percent -- occurred in Western Alaska, said Katie TePas, a troopers program coordinator.

The region is immense -- containing more than one-third of the state's land mass -- and stretches from Kotzebue in the north to Kodiak in the south and out the Aleutian Chain past Unalaska. It's served by 13 trooper posts in what's known as the C Detachment.

But the population is small, represented by dozens of villages -- many with fewer than 500 people -- and a handful of hub communities, such as Kodiak, Bethel or Nome, each with fewer than 6,000 people.

In the vastly more populated regions along the road system -- including Anchorage, Fairbanks and the Matanuska-Susitna Borough -- troopers investigated fewer such cases during the two-year period. Combined, trooper posts in those areas investigated 299 of the studied cases, or 30.2 percent of the total during the two-year period.

Ground zero is the Bethel region, where troopers investigated 17 percent of the cases, more than any other post in the state, TePas said.

"We have an epidemic," she said. "It's a statewide epidemic, but the epicenter, our data shows, is the Bethel region."

CHILDREN MOST VULNERABLE

TePas presented the numbers at a summit on Alaska Native child sexual abuse in Anchorage earlier this month.

The results are highlights from an 102-page study done by the Justice Center at the University of Alaska Anchorage, she said.

Only trooper cases that entered the justice system during the two-year period and reached a conclusion -- cases that did and did not result in a conviction -- are included in the study, TePas said.

The early figures paint a disturbing picture of rapes and other sexual violence against adults and children in Western Alaska, where the population is largely Alaska Native and villages are often loose extensions of family.

In all the 989 cases, family members and friends sexually abuse or assault each other in more than 90 percent of the incidents, she said.

They're especially hurting children. The most common charge during the two years was second-degree sexual abuse of a minor, a class B felony that generally means the rape or other molestation of someone 16 years old or younger, often by an adult.

Almost one-fourth of the child victims were from ages 13 to 15, she said. Nearly the same number were from ages 6 to 12.

Strangers were the perpetrators in less than 1 percent of the cases involving children, TePas said.

Precedent in Other Agencies

There are other state agencies that have more than four regions. The best example is that the Alaska State Troopers divide the state into five detachments (A-E) headquartered in Anchorage, Fairbanks, Ketchikan, Palmer and Soldotna. They have posts in 36 communities. The Troopers are the best agency for OCS to compare itself to because both agencies share a need to be able to respond quickly in emergency situations. Safety requires proximity. Additionally, knowing the community can provide a great benefit in allowing workers to diffuse situations and find the most appropriate outcome. Workers in both agencies need to be culturally competent and familiar with the local services. While the Troopers' detachment C does not mirror exactly the proposed Southwest region, the areas are similar. This arrangement works well for the Troopers and would work well for OCS. With the Troopers being a primary partner for OCS, it makes good sense to have this region to strengthen the partnership between these agencies.

Community Support

Prior to our testimony before the House Health, Education, and Social Services we

received letters from residents and agencies in the Bethel area in support of keeping the Supervisor 5 position in Bethel and for the creation of a new region. We received 15 letters of support which may be viewed in their entirety on our website.

Conclusion

There are many strong reasons for creating this new region.

- The area is 14% of Alaska. If it were a state, it would be the eighteenth largest state just behind South Dakota, but ahead of Washington.
- The area is entirely off the road system, complicating travel and creating different circumstances than on-road communities face.
- The area has a higher percentage of population who are children than the state overall.
- The area has a great need having the highest rates of sexual assault.
- The area is culturally distinct due to the large, strong Yup'ik population.
- The Alaska State Troopers, who also provide public safety, serve the state through five regions.
- The community supports the effort.
- The OCS offices and staff are already in place. Only four new positions need to be added.

In addition to serving this culturally distinct area that comprises 14% of Alaska much better, removing responsibility for this area would allow the currently over-stretched SCRO to provide better services to all those children and families remaining in its area. SCRO has many challenges and would greatly benefit from having less on its plate. There are so many good reasons to do this.

Given what we have learned in the time since we first made this recommendation, we intend to continue to collect data regarding this idea. We also have a better grasp of the funding process and know that such an idea cannot be implemented immediately and will require much advocacy on our part and those from the communities in question who support the idea to make it a reality. Our conviction remains strong that this is needed to make headway at resolving a majority of the child protection issues in this region.

We request that OCS provide us with an action plan that includes a time line to make this a reality. We would like that plan to clearly specify what can be accomplished every year until the fifth region is created. The CRP pledges to continue to advocate for this region while collecting data via a survey to determine the exact boundaries of the proposed region.

Recommendation 3. Supporting and developing the relationship between OCS & ICWA (Indian Child Welfare Act) workers

A great deal of effort has been directed toward the problem of disproportionality in Alaska's child welfare system; the problem being that approximately 65% of the children in OCS custody are Alaska Native while only 15% of the population of the state is Alaska Native. There are many causes for this problem and many well-qualified, well-funded people have been and continue to work on this issue.

We have one recommendation that we feel can only help address this issue. An improved relationship between OCS workers and ICWA workers in all communities will improve communications, trust, and outcomes for children. If workers can see each other as resources, teammates, and trust that the other also has the best interest of the child as their motivation the system can only be improved.

We know that many efforts have been made at the highest levels to improve communication, collaboration and trust between OCS and the tribal agencies. However, we are really advocating for relationship building at the ground level. We recommend that OCS find models where these relationships exist, where there are new and different programs and try to replicate those successes. Some innovative programs include the Knowing Who You Are program supported by the Annie E. Casey Foundation, the program being implemented in Quinhok, and the Lakota program - Family Group Decision Making.

One way for OCS to demonstrate its trust in ICWA workers, and free its workers to make home visits and do other necessary tasks, is to allow ICWA workers to license foster homes. In many communities it takes nearly a year to become a licensed foster home, in part because of the infrequency of visits to many communities by OCS licensing workers. Allowing ICWA workers to make those visits would speed the process of becoming licensed. This will encourage more people to open their homes if the licensing process is not so drawn out and onerous.

We encourage OCS to implement any recommendations made by the Casey Foundation related to this issue.

Recommendation 4. OCS explore any and all means to relieve social workers of some of their paperwork burden

In too many of the communities we visit we hear social workers complaining that their title is a misnomer since they do not have time to practice social work due to paperwork burdens. Social workers are skilled practitioners and should be spending as much of their time as possible using those skills to provide services to children and families. Any ideas should be explored and encouraged to make this a reality, including a dictation service (being used by at least one office). Having more social services aids (SSA) on staff would enable these lower paid workers to handle some of the paperwork burden, freeing more highly paid social workers to use their valuable skills to help support Alaska's struggling families.

We urge OCS to develop and implement a staffing ratio for social workers-to-SSAs and to work to secure funding to enable this ratio to be implemented. Adequate ratio of SSAs to SW enables OCS to work smarter—using limited resources in a more efficient manner. Another way to improve social workers' productivity is to purchase more laptops for workers to use when traveling. Especially in rural Alaska where weather delays can last days, having a secure laptop is the difference between wasted time and productive time while waiting out a storm.

Enabling social workers to practice social works helps improve worker retention. This is the number one request we have heard from social workers when we are in the field. They need help with filing, making basic calls, and transporting children; all tasks that do not require a social work background to do a good job.

Commendations

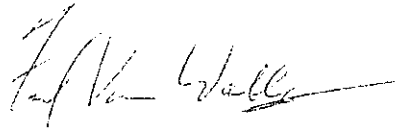

We would like to thank Governor Palin for granting a waiver to OCS during the hiring freeze.

We commend OCS for thinking outside the box to implement the Knowing Who You Are training sponsored by the Annie E. Casey Foundation to forge personal and working relationships between regional OCS and ICWA workers. Both groups report a high degree of satisfaction with the new collaborations that have resulted.

We commend OCS Director Tammy Sandoval for supporting the new child advocacy center in the Copper River Basin by finding a way to collocate the Glennallen OCS Field Office with the CAC.

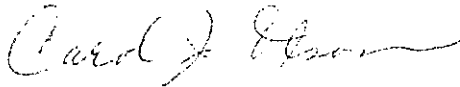

We commend OCS Director Tammy Sandoval for working to improve collaboration with several other state agencies, such as the Division of Juvenile Justice and the Division of Behavioral Health. This is an excellent idea and we hope she will continue in this vein, reaching out to as many other state agencies as possible. In this climate of reduced state funding, collaboration is one way to try and stretch state dollars to serve as many children and families as possible. Certainly, many state agencies can and frequently do have the same clients.

Recommendation 2 - That OCS continue to work toward having a fifth service region headquartered in Bethel.

While the OCS believes there is merit to the CRP recommendation to establish a fifth, 'Southwest' service region for the Bethel area, again this year the Governor's Proposed FY2011 Budget does not include such a request for OCS. The CRP reports that the current South-central region's 12 field offices, Bethel included, are twice as many as the region with the next largest number of field offices (Northern region). The current South-central region includes 37% of Alaska's land area and 30% of Alaska's population. This newly proposed region includes an area of the state with the highest rates of sexual assault. It is culturally distinct due to its large Yup'ik population. Communities in this area are geographically and culturally closer to Bethel than Wasilla, the current region's headquarters. These communities represent off-road, small and rural communities and villages.

OCS believes having a fifth service region headquartered in Bethel could result in an increase in local knowledge of families; familiarity with the available service array; an increase in cultural competency of OCS staff; better support, retention, supervision and management of OCS staff; a savings in OCS travel expenses; and improved outcomes for children and families in the region.

While the CRP has created considerable public support for this area of the state standing as its own region, it is important to note that this recommendation is contingent upon other State of Alaska priorities.

Recommendation 3 - Supporting and developing the relationship between OCS & ICWA (Indian Child Welfare Act) workers.

The OCS agrees wholeheartedly with this recommendation. It is precisely our intent to continue to collaborate with tribal agencies to best serve Native Alaskan children and families. For several years OCS and tribes (Tribal State Collaboration Group) have come together three times a year to meet, discuss and plan our collaborative work to improve outcomes for Native Alaskan children in the state's custody. TSCG addresses all policies related to the Indian Child Welfare Act (ICWA) and state compliance with ICWA.

In the past several years, both OCS and tribes have agreed on the value of cross training and have begun to invite one another to training as a means of increasing collaboration, shared education experiences and improved cultural competency of state staff. One example of such training is "Knowing Who You Are" (KWYA) training. Please see <http://www.casey.org/Resources/Initiatives/KnowingWhoYouAre/> for more information about the specific 3 phase training that has been mandated for all OCS staff involved in child and family decision making.

Most evident of the commitment by OCS to collaborate with tribes is the work of the Federal Western and Pacific Child Welfare Implementation Center (IC). In April of 2009, Central Council of Tlingit and Haida Indian Tribes of Alaska, together with 15 other Alaska Tribal Organizations, applied for and received an award of assistance to further TSCG's efforts related to disproportionality within the state child welfare system. The IC will assist tribes, OCS and the Court System to develop a targeted strategy and action plan for addressing long term systematic change with a keen focus on several crucial issues impacting Native families who come to the attention of OCS.

Additionally, last year, state and tribal work expanded to include working together on child maltreatment prevention, in that an Alaskan Team was selected to attend a National PREVENT conference to develop culturally competent strategies related to reducing the rates of child maltreatment in the Native communities in Alaska.

The OCS continues to develop and support ways to empower tribes to intervene with families before an OCS intervention is warranted and to be involved in an Alaskan Native family's OCS intervention from the very beginning. Given the past history of state involvement with tribes, this work will be ongoing and critically reviewed to assure improvement in communication, trust and outcomes for families.

Recommendation 4 - OCS should explore any and all means to relieve social workers of some of their paperwork burden.

Like most of the challenges facing Alaska's Child Protective Services (CPS) caseworkers, the paperwork aspect of the job is an area of concern for CPS workers in many other states. CPS management across the nation strives to balance the necessity of meaningful family contact with the requirements of documentation and reporting a type of public service that is subject to legal review and strict federal funding rules. The OCS completely agrees with the recommendation that caseworkers should be spending as much of their time as possible with the children and families they serve. We will continue to explore and implement ideas that can decrease time spent on administrative duties and increase the time our staff spends doing work in the field with families.

Transcription services or 'dictation services', as referenced in CRP report, was being utilized throughout the OCS Anchorage, Fairbanks, Ketchikan, Kenai, Wasilla, Homer and Unalaska offices during 2009. On average, approximately 32 caseworkers used the service each month. The availability of transcription services is explained to all new caseworkers when they attend the new employee orientation training provided by the UAA Family & Youth Services Training Academy. To increase transcription services usage in 2010, OCS management intends to focus on a promotional effort by identifying super-users of the service and asking them to deliver presentation and training opportunities to their peer groups. (As a side note to the dictation services issue, the Juneau OCS has also been using the transcription product Dragon Speak and the Fairbanks OCS recently started piloting this tool as well.)

In another effort to help caseworkers better manage the administrative requirements of their job, as noted above, the OCS distributed Netbooks to our Bethel, St. Mary's and King Salmon offices in October of 2009. These mini laptops will allow staff to access their State of Alaska e-mail accounts and word-processing applications while in travel status or otherwise away from their office computers. This tool is expected to help caseworkers maximize the hours in a work day, decreasing the amount of work waiting for them when they return to their desks and thereby increasing the amount of time available to them to make family contacts. The original distribution of Netbooks is being considered a pilot project. If implementation is deemed successful, the OCS intends to purchase more Netbooks and deploy this tool to all rural offices across the state.

The OCS agrees that having more Social Services Associates (SSA) would greatly assist the front line worker in completing their plethora of tasks; however, new appropriations are determined through the Governor's priorities and the will of the legislature. In lieu of no new proposed positions in the upcoming fiscal year, OCS will continue to review its staffing and workload levels around the state and propose current position relocations or reassignment of tasks between job positions if deemed necessary to manage workload.

In summary, OCS continues its efforts to change the culture and improve the practice of CPS work in Alaska. Systems reform will continue during 2010 and each year thereafter. Recruitment of quality staff, their development, and the support they're provided remains a top priority. We recognize that the safety of many children and the strength of many families are reliant upon our ability to retain the most competent of staff and provide the most effective of services Alaska has to offer.

Alaska's Citizen Review Panel

Our focus areas today will be:

- To provide a brief overview of the Citizen Review Panel & to highlight our activities since last year
- To share with you what we hear about the Office of Children's Services
- To ask you to help improve the situation

Mandate for the Group

The Citizen Review Panel is mandated by state and federal law. The CRP was created through the federal Child Abuse Prevention & Treatment Act (CAPTA); Keeping Children & Families Safe Act of 2003 and through Alaska statute Sec. 47.14.205.

CRP Vision

To enable the Office of Children's Services to implement its policies and procedures in a culturally sensitive and consistent manner across the state.

Who are we?

The CRP is composed of volunteer members who are broadly representative of the state, including members who have expertise in the prevention and treatment of child abuse and neglect. The group chooses its own members.

Current members

- Fred VanWallinga,
Willow (Chair)
- Carol Olson,
Anchorage (Vice-
Chair)
- Pamela Dupras,
Kodiak
- Dana Hallett,
Soldotna
- Art Hansen,
Fairbanks
- Susan Heuer,
Anchorage
- Kristin Hull, Wasilla
- Ralph Taylor,
Anchorage (currently
deployed with the
Alaska National
Guard)

CRP Duties

Evaluate Office of Children's Services (OCS) compliance with federal and state laws, examine the policies, procedures and practices of OCS, and, where appropriate, evaluate specific cases of child abuse or neglect.

CRP Duties (continued)

The CRP must also:

- Maintain confidentiality
- Conduct public outreach
- Produce an annual report
- Meet at least quarterly

Our focus for the past year

- Potential for additional 5th service region
- Improving situation in Copper River Basin

What we've been doing

- Holding monthly teleconferences
- Produced an annual report
- Attended the Alaska Native Indian Child Welfare Summit
- Attended national Citizen Review Panel conference in Minnesota
- Meeting in-person quarterly

What else we've been doing

- Meeting with OCS partner agencies
- Meeting with OCS staff from Director Sandoval to line workers
- Participated in the federal Child and Family Services Review
- Met with UA staff responsible for OCS training
- Meeting with the Commissioner and Legislators

A couple more things we did

- Attended the Family to Family Conference
- Attended the Community Care Conference
- Heard from concerned citizens
- Received training on safety assessment

Where some of us have been

- Aniak
- Bethel
- Copper Center
- Dillingham
- Fairbanks
- Glennallen
- Juneau
- King Salmon
- Naknek
- St. Mary's
- Unalaska

We've met with...

- Counseling center staff
- District attorneys
- Foster parents
- Health aides & public health nurses
- ICWA workers
- Local police departments
- OCS staff
- School principals, nurses & counselors
- State troopers
- Tribal representatives
- WIC workers

OCS is improving due to...

- Key personnel changes
- System changes—safety assessment, expanded training, ORCA programming improvements
- Increased collaboration with partnering state agencies (DJJ, Dept. of Law, etc.)

OCS is improving due to...

- Continued and increased financial support from Legislature during past couple fiscal years
- Responsive to outside recommendations (ACTION for Children, CRP, federal audit)

Issues of concern

- Hiring freeze
- Region 5
- Many solutions to problems are beyond the control of OCS, Director lacks discretion
- Standardization

Issues of concern

- Hiring freeze

OCS is public safety like the Troopers in as much as they have a protective function

In rural areas, workers are already stretched, further unfillable vacancies with no end in sight will directly affect child safety

Increased risk of current workers leaving due to work overload

Issues of concern

- Region 5
 - Last year we strongly advocated for Region 5 based on Bethel community support
 - SCRO has 13 offices, next largest region has 7
 - OCS costed-out Region 5 for \$1.5 million, but the region was not in the Governor's budget

Issues of concern

- Region 5
 - Bethel OCS and community partners continue to support this idea, but other communities have concerns
 - Over the next year, the CRP will intensively survey all Southwestern Alaska field offices and community partners
 - We continue to think that a smaller more culturally focused region is in the best interest of children

Issues of concern

- Many solutions to problems are beyond the control of OCS, Director lacks discretionary powers

Issues of concern

- Standardization of supports for employees varies between state agencies
 - Housing
 - Internet

We'd like your help to address these concerns

- Support the exemption of OCS from hiring freeze and issuance of immediate variances
- Investigate and resolve the lack of standardization between state agencies

Benefits of CRP

- Seven volunteer members all contributing a minimum of 250 active hours annually
- We're the eyes and ears of the public for the Legislature and OCS
- Unique function of identifying and advocating for ancillary services that OCS cannot request
- Jointly we can achieve a vastly improved child protection system for the children of Alaska

**OVERVIEW:
FEDERAL
HEALTH
CARE
REFORM
LEGIS.**

Overview of Federal Health Care Reform Legislation

Deborah Erickson
Department of Health & Social Services
March 30, 2010

03-30-10 DRAFT

1

Status

- P.L. 111-148: The Patient Protection & Affordable Health Care Act (H.R. 3590)
 - H.R. 3590 (health care reform legislation initially passed by the U.S. Senate last December)
 - Date of enactment: March 23, 2010

- H.R. 4872: The Health Care and Education Reconciliation Act
 - Contains the House changes to H.R. 3590
 - Passed Congress March 25, 2010
 - To be signed by the President today (March 30)

03-30-10 DRAFT

2

Status

- At the direction of the Governor, Alaska's AG is currently conducting a legal review of the new federal law
- A state executive branch interagency team is beginning work on policy review and impact analysis of the law
- The legislature will be involved in any decision regarding state implementation of any provision of the federal law that requires
 - A new state law
 - A state appropriation

03-30-10 DRAFT

3

Caveats & Disclaimers

- This presentation is a high-level overview of some key provisions and is not comprehensive
- Many of the details needed to support impact analyses and implementation planning are unknown:
 - Anticipate more than 100 pages of new federal regulations, program guidance, and grant guidance for each page of the new law

03-30-10 DRAFT

4

Overview of Legislation

- Health Care Coverage (Titles I & II)
- Health Care Delivery (Title III)
- Prevention and Public Health (Title IV)
- Health Care Workforce (Title V)
- Fraud, Waste, and Abuse (Title VI)
- Medical Technology (Title VII)
- Community Living Assistance (Title VIII)
- Taxes and Fees (Title IX)
- Amendments (Title X)

03-30-10 DRAFT

5

Health Care Coverage Overview

- Insurance Market Reforms
- Health Insurance Exchange
- Medicaid Expansion
- New Insurance Programs
- Individual Requirements & Subsidies
- Employer Requirements & Subsidies

03-30-10 DRAFT

6

Health Care Coverage

■ Insurance Market Reforms

- Exclusions for pre-existing conditions prohibited
 - For children in 2010
 - For adults in 2014
- Dependent coverage extended to 26 years of age (2010)
- Annual and lifetime limits prohibited (2010)
- Prohibition on rescissions (2010)
- Guaranteed issue and renewal rules (2014)
- Adjusted community rating rules limit variations in premiums to geographic area, tobacco use, age, and family composition (2014)
- Gender discrimination prohibited

03-30-10 DRAFT

7

Health Care Coverage

■ Health Insurance Exchange (2014)

- State-based; Multi-state option
- For individuals and small business (<100 employees)
 - Large businesses allowed to participate starting 2017
- Federal grants to states for planning and implementation (2010)
- Administered by gov't agency or non-profit
- Self-sustaining
- State opt-out provision
 - Federal government required to establish Exchanges for states that opt out

03-30-10 DRAFT

8

Health Care Coverage

- Medicaid Expansion (2014)
 - Eligibility expanded to all individuals under 65 (including childless adults) up to 133% FPL
 - Maintenance of effort requirement:
 - Effective as of March 23, 2010
 - States prohibited from reducing eligibility standards
 - For adults: Until Exchange is operational
 - For children: Until 09/30/2019
 - State option to implement expansion immediately without waiver (at state's FMAP rate until 2014, then enhanced)

03-30-10 DRAFT

9

Health Care Coverage

- Medicaid Expansion *(continued)*
 - Enhanced FMAP for expansion population
 - 2014 – 2016: 100% Fed
 - 2017: 95% Fed
 - 2018: 94% Fed
 - 2019: 93% Fed
 - 2020 and beyond: 90% Fed

03-30-10 DRAFT

10

Health Care Coverage

■ Medicaid Expansion *(continued)*

- Alaska's Projected Cost for Newly Eligible and Enrolled with Projected # of New Enrollees

Federal Fiscal Year	# of "Expansion" Enrollees	FMAP	State GF Cost
2014	23,467	100% Fed	\$0
2015	23,584	100% Fed	\$0
2016	23,702	100% Fed	\$0
2017	23,821	95% Fed	\$5.5 million
2018	23,940	94% Fed	\$7.0 million
2019	24,059	93% Fed	\$8.7 million
2020	24,179	90% Fed	\$13.2 million

03-30-10 DRAFT

11

Health Care Coverage

■ New Insurance Programs

- High-risk health insurance pool (feds may contract with states) (2010)
- Multi-state health plans created (under contract with private insurers by OPM)
- Health Care Cooperatives: Non-profit member-operated health insurance companies created through loans and grants

03-30-10 DRAFT

12

Health Care Coverage

■ Individual Requirements & Subsidies

– Requirements (2014)

- Choice between having a qualified health plan or paying a tax penalty
 - Tax penalty \$695/year (Family capped at 3x individual penalty (\$2,085)) or 2.5% of household income, whichever is greater (phased in)
 - Exemptions include
 - Financial hardship
 - Religion
 - American Indians/Alaskan Natives
 - Lowest cost option exceeds 8% of income

03-30-10 DRAFT

13

Health Care Coverage

■ Individual Requirements & Subsidies

– Subsidies (eff. 2014)

- Premium Credits
 - Refundable/Advanceable credits for purchase of insurance through the Exchange
 - Individuals/families with incomes between 133%-400% FPL
 - Amounts tied to cost of plan and set on sliding scale based on income level
- Cost Sharing Subsidies
 - Individuals/families between 100% - 400% FPL

03-30-10 DRAFT

14

Health Care Coverage

■ Employer Requirements & Subsidies

– Requirements (effective 2014)

- < 50 employees: Exempt
- > 50 employees - if 1 or more employee receives subsidy:
 - And employer does not offer coverage, employer required to pay fee of \$2,000/FTE (1st 30 FTEs excluded)
 - And employer provides coverage, employer required to pay fee of \$750/FTE or \$3,000 per subsidized employee (whichever is less)
- > 200 employees: Required to provide insurance
- Provide voucher to employees with incomes less than 400% FPL who chose to participate in Exchange
- Report value of health care benefits on employees' W-2 (2011)

03-30-10 DRAFT

15

Health Care Coverage

■ Employer Requirements & Subsidies

– Subsidies (phased in beginning 2010)

- < =25 employees: Tax credits (for businesses with average annual wages < \$50,000)
- Temporary Reinsurance Program (2010)
 - For employers (including state & local gov) offering health insurance to early retirees (aged 55-64)
 - Will reimburse employers 80% of retiree claims between \$15,000 and \$90,000 until 2014

03-30-10 DRAFT

16

Health Care Delivery

- Evidence-Based Practice (Comparative Effectiveness Research)
- Quality Improvement (National Strategy)
- Care Coordination and Service Integration
- Primary Care Enhancement
 - Medicare 10% bonus to primary care physicians (2011–2015)
 - Medicaid Medical Home State Plan Option (90% FMAP for two years) (2011)
 - Increase Medicaid payment to Medicare rate (n/a in AK)
- Payment Reform
 - Bundled payments (Medicare Pilot; Medicaid Demonstration)
 - Medicare Pay-for-Performance Program

03-30-10 DRAFT

17

Prevention & Public Health

- National Prevention Council and Fund
- Coverage of clinical preventive services
- Nutrition labeling on menus
- Community wellness grants
- Healthy lifestyles program incentives for Medicare and Medicaid enrollees

03-30-10 DRAFT

18

Health Care Workforce

- National HC Workforce Commission
- Health care workforce assessment
- Recruitment and retention programs
- National Health Service Corps increased
- Training and education programs
 - Redistribute GME (graduate medical ed) slots

03-30-10 DRAFT

19

Fraud, Waste & Abuse

- New provider enrollment processes for Medicare and Medicaid
- Data sharing across federal programs
- Financial disclosure of financial relationships between health entities
- Increased penalties
- Providers required to implement compliance program
- Demonstration grants to states for medical malpractice reform

03-30-10 DRAFT

20

Community Living Assistance

- New long-term care insurance program (2011)
 - Voluntary
 - 5-year vesting
 - Cash benefit to help aged/disabled stay in home or cover nursing home costs

03-30-10 DRAFT

21

Taxes & Fees

- 10% sales tax on indoor tanning (2010)
- \$2.8 billion annual fee on pharmaceutical industry (2012; increasing over time)
- 2.3% sales tax on medical devices (2013)
 - Glasses, contacts, hearing aids exempt
- Medicare payroll tax increased from 1.45% to 2.35% for individuals >\$200K and couples >\$250K (2013)
- New 3.8% tax on unearned income for individuals >\$200K and couples >\$250K (2013)
- Tax deduction for employers receiving Medicare Part D retiree subsidy eliminated (2013)
- \$8 billion annual fee on health insurance industry (2014; increasing over time)
- Tax on employer-sponsored high-value insurance plans (2018)

03-30-10 DRAFT

22

Other Provisions

- Enhanced funding for Community Health Centers
- Medicare Doughnut Hole Closure
- Medicare Funding Reductions
- Coordinated Health Care Office
- Indian Health Care Improvement Act
 - Adds long term care and behavioral health services

03-30-10 DRAFT

23

Timeline Highlights for States

- 2010
 - Medicaid Maintenance of Effort imposed (March)
 - Temporary high-risk insurance pool program established (June)
 - Temporary re-insurance program for early retirees established (June)
 - Feds establish website to facilitate insurance information (July)
 - Grants to states for
 - Exchange planning and implementation
 - Assistance with insurance premium review requirements
 - Establishing an office of health insurance consumer assistance
 - Smallest employers (<25) eligible for tax credits
 - Insurance Market Reforms Implemented
 - Pre-existing condition exclusion prohibited for children
 - Lifetime and annual limits prohibited
 - Prohibition on rescission of coverage
 - Preventive services coverage required
 - Dependent coverage to 26 years of age
 - Medical loss ratio reporting required

03-30-10 DRAFT

24

Timeline Highlights for States

■ 2011

- Medicaid
 - States eligible for 1% FMAP increase if certain preventive services covered with no cost-sharing
 - Required to cover tobacco cessation for pregnant women
 - New state option for home and community-based services for disabled
- Insurance Market Reforms
 - Required to spend 85% of premium revenue on medical claims (80% for insurers covering small business)

■ 2013

- States must notify U.S. DHHS regarding intent to establish Exchange
- Fed regs for health care choice compacts issued
- States eligible for 23% FMAP increase to regular CHIP match (up to 100%) until 2019

03-30-10 DRAFT

25

Timeline Highlights for States

■ 2014

- Insurance Exchanges implemented
- State Medicaid
 - Expansion to 133% FPL takes effect
 - Required to implement enrollment simplification and coordination with Exchanges
 - Required to offer premium assistance for employer-sponsored insurance
 - DSH funding reduced
 - Prohibition on exclusion of coverage for barbiturates, benzodiazepines, and tobacco cessation products
- States required to establish at least one reinsurance entity
- Insurance Market Reforms Implemented
 - Pre-existing condition exclusion prohibited for adults
 - Guaranteed issue and renewal required
 - Adjusted community rating rules take effect
- Individual and employer mandates and subsidies implemented

03-30-12 DRAFT

26

Timeline Highlights for States

- 2015
 - Insurance Exchanges must be self-sustaining
 - Medicaid programs required to begin annual enrollment reporting
- 2016
 - Health Care Choice Compacts may take effect
- 2017
 - States will begin funding share of Medicaid expansion
 - States may operate an alternative program in lieu of federal coverage reforms if waiver obtained in previous year
 - States may allow large companies (>100 employees) to participate in Exchange
- 2018
 - Excise tax on high-value health insurance plans imposed

03-30-10 DRAFT

CONFIRMA- TIONS 2009

WILLIAM H. HOGAN
P.O. Box 3896 Palmer, Alaska

William.Hogan@alaska.gov

EDUCATION

- 1991 Virginia Commonwealth University, Richmond, VA
Doctoral Work – Sociological Theory
- 1979 – 1980 West Virginia University, Morgantown, WV
Graduate – Master of Science in Social Work (MSW)
- 1976 – 1979 Syracuse University, Syracuse, NY
Graduate Course Work
- 1967- 1971 State University of New York at Buffalo, Buffalo, NY
Undergraduate – Bachelor of Arts in Sociology (B.A. Soc.)

PROFESSIONAL EXPERIENCE

2008-Current Alaska Department of Health and Social Services; Anchorage, Alaska – Commissioner –

Has authority and responsibility for all aspects of the department including policy development, planning, program and service delivery, finance and budgeting, information technology and statutory and regulatory compliance. The department is considered a “super agency” comprised of the Divisions of Public Health, Behavioral Health, Juvenile Justice, Public Assistance and Senior and Disabilities Services as well as the Office of Children’s Services and the Alaska Pioneer Homes. In addition the department provides oversight and financing (Medicaid and state grants and contracts) of all health facilities through its Division of Health Care Services.

The department currently employs over 3600 staff and has a budget of \$2.1 billion.

2005-2008 Alaska Department of Health and Social Services; Anchorage, Alaska – Deputy Commissioner, Family, Community and Integrated Services –

Had oversight responsibility for the Divisions of Public Assistance, Behavioral Health, Juvenile Justice, Senior and Disability Services, Office of Children’s Services (Child Welfare) and the Alaska Pioneer Homes (Long Term Care). In addition was the primary liaison with the Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, Alaska Commission on Aging, Governor’s Council on Special Education and Disabilities, Suicide Prevention Council and the Council on Domestic Violence and Sexual Assault. Also provided supervision to the Office of Faith Based and Community Initiatives.

In conjunction with directors, ensured each entity or agency met or exceeded performance goals while maintaining alignment with overall department vision, mission and values.

2003-2005 Alaska Department of Health & Social Services, Division of Behavioral Health; Juneau, Alaska - Director

Was responsible for directing, planning, organizing and managing statewide programs for mental health and substance abuse (behavioral health). Formulated policy for community mental health services, the state psychiatric center and community programs for those experiencing substance abuse problems. Monitored program performance, reviewed and evaluated existing policies, procedures, statutes, regulations and recommended changes as appropriate. Oversaw all Division program and policy functions, coordinated administrative and financial activities with other components of the Department and designed and implemented the Division's performance management program. Oversaw the integration of the mental health and substance abuse service delivery system (behavioral health) as well as the development and implementation of the "Bring the Kids Home" Initiative. This initiative, designed to bring Alaskan kids with a serious emotional disturbance back to the state from out of state Residential Psychiatric Treatment Centers – and to keep kids in Alaska - by building a comprehensive system of care and proactively managing care – is considered a model program. Developed the conceptual framework for the creation of Regional Behavioral Health Authorities designed to manage care for all behavioral health services provided to Seriously Emotionally Disturbed (SED) Children and Seriously and Persistently Mentally Ill (SPMI) adults. The Division of Behavioral Health has 320 staff with a budget of \$275 million.

1998-2003 Life Quest, Wasilla, Alaska – Chief Executive Officer – Was responsible for designing, developing, implementing and managing all prevention, treatment and rehabilitation services in a private not for profit community mental health center. The organization served over 1200 individuals annually in a geographic area comparable to the size of the state of West Virginia. The agency employed 150 staff with a budget of \$6.5 Million.

1997-1998 National Association of Social Workers, New York State Chapter, Albany, NY – Executive Director – Served as chief executive and was responsible for planning, organizing, directing, and implementing all chapter programs and activities. Had management responsibility for all administrative, financial, human resource, marketing, and educational functions. The New York Chapter was the largest of all NASW Chapters with approximately 12,500 members.

1993-1997 Southwest Mississippi Mental Health (SWMMH) Complex, McComb, MS – Executive Director – Responsible for directing, planning, coordinating, operating, and monitoring all mental health, developmental disabilities services and substance abuse programs within ten counties of Mississippi. Served as Chief Executive Officer of the SWMMH Commission and President of the SWMMH Foundation. Was administratively responsible for the supervision of 200 staff members and consultants, and a \$6.5 million annual budget. Was instrumental in preparing Mississippi mental health providers for Medicaid Managed Care through the creation of a community mental health provider network.

1986-1993 Colonial Community Services Board, Williamsburg, VA – Coordinator – Planned and coordinated mental health and substance abuse prevention, treatment, and rehabilitation services in York County and the City of Poquoson, Virginia. Supervised 12 staff members and consultants. Maintained a caseload of 50 clients.

1987-1993 Systemetrics – Medical Record Reviewer/Analyst – Responsible for reviewing both care coordination and mental health records in outpatient, residential and acute inpatient settings in the first mental health managed care program undertaken by the Dept. of Defense.

1990-1993 Catholic Charities of Hampton Roads, Virginia Beach, VA – Private Practitioner – Provided individual, couple, and family therapy in a managed care environment. Member of managed care provider panel. Experienced obtaining preauthorization for services and complying with all managed care requirements.

1990-1993 Virginia Commonwealth University, Richmond, VA – Adjunct Faculty Member – Supervised graduate-level students.

1984-1986 Essex County Community Services Board, Elizabethtown, NY – Director – Planned, coordinated, and served as chief executive of mental health and substance abuse prevention, treatment, and rehabilitation programming in Essex County, N.Y. Supervised 28 staff members.

1982-1984 Appalachian Mental Health Center, Developmental Disabilities Program, Elkins, WV – Director – Developed, directed, and coordinated services for developmentally disabled children and adults in four counties in West Virginia. Supervised a staff of 26.

1980-1981 Appalachian Mental Health Center, Barbour County, Philippi, WV – Director – Coordinated and ensured the delivery of mental health and substance abuse services to county residents. Maintained a caseload of 35 clients and supervised a staff of 12.

1979 West Virginia University Center for Extension and Continuing Education, Morgantown, WV – Graduate Social Work Intern – Facilitated the planning and implementation of the Cooperative Extension Leadership Development Program, which included program-evaluation mechanisms, project planning, and grant writing

1979 Summit Center for Human Development, Clarksburg, WV – Graduate Intern and Staff Member – Developed and implemented a primary prevention project in a small mining community. Involved grant writing, developing and conducting needs-assessment surveys, organizing community education programs, and revitalizing the Harrison County Mental Health Association.

1975-1978 Oswego County Community Mental Health Center, Oswego, NY – Social Work Assistant – Developed community support programs for long-term psychiatric

clients. Acted as the liaison to state hospitals and provided case-management services to 50 clients.

PUBLICATONS AND PRESENTATIONS

Mental Health in Rural Alaska-What's Different. Party Lines, a publication of the National Association for Rural Mental Health, Summer 1999 edition.

Collaborative Services and Professional Roles for Non-Psychiatrists. Presented at the 1997 Primary Care/Behavioral Healthcare Summit, The Leadership Forum on Integrating Behavioral Healthcare and the General Medical Sector in Chicago, Illinois.

Grief and Death Issues: Working with Families Having Medically Fragile and Terminally Ill Children. Presented at the 1995 Mississippi Department of Human Services Regional Conference in McComb, Mississippi.

Successful Mental Health Program Development for Children in a Small Community. Presented at the 1987 Virginia State Social Work Conference in Williamsburg, Virginia and the 1988 National Council of Community Mental Health Centers Annual Meeting in Boston Massachusetts.

Protecting and At-Risk Disabled Adult in the Community. Presented at the 1983 Behavioral Health Conference at West Virginia University in Morgantown, West Virginia.

The Development of a Good-Neighbor Program: Using Local Resources as Federal Funds Disappear. Presented at the 1982 Behavioral Health Conference at West Virginia University in Morgantown, West Virginia.

Rural Psychiatric Rehabilitation: Effective Techniques in Selecting, Monitoring, and Evaluation the Progress of State Mental Health Clients in the Community. Presented at the 1979 National Council of Community Mental Health Center Annual Meeting in Washington, D.C.

Development of a Rural Psychiatric Aftercare Group, in the Psychosocial Rehabilitation Journal, Volume 2, Number 1, 1978.

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Medical Board, public seat
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: Casey (Kathleen) M. Miller
Mailing Address: 15801 Windsong Dr.
Residence Address: " "
City, State and Zip Code: Anchorage, AK 99516
Home or Message Telephone: 907-522-2251 Business Telephone: _____
Fax Number: 2 Cell Phone: _____
Email address: millar@gci.net

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.) _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?

YES NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES _____ NO

If "YES", explain:

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

See attached

B. List both formal and informal education and training experiences: (Use additional paper if necessary).

1-1 1'

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.

*Volunteer server @ the Anchorage Rescue Mission
Volunteer hosting weekly staff meetings for
YoungLife - Alaska*

D. Employment work history - paid, unpaid or voluntary: (Use additional paper of necessary).

See attached

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: _____ SEX: FEMALE MALE _____

ETHNICITY:
Alaska Native _____ American Indian _____ Asian or Pacific Islander _____ Black _____ Hispanic _____ White

MILITARY SERVICE (if applicable, give dates): _____

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Signature (in ink): *Casie (Kathleen) Mida* Date: *11-25-08*

Please attach a current resume with your application.

MEMORANDUM

Date: 2010

To: All Committees

From: Suzi Lowell
Chief Clerk

Subject: Confirmation Committee Report (Signature Page) for Governor's
Appointments

The attached Confirmation Committee Report (signature page) should be used in conjunction with the Referral for Confirmation form for the Governor's appointments to boards and commissions requiring legislative confirmation. After a committee has reviewed the qualifications of the appointee(s), the Referral for Confirmation form(s) should be dated and attached to a signature page. Have members sign the signature page and return the confirmation packet to the Chief Clerk's office.

Please use a single signature page for multiple appointees if the names of all members signing the report are the same for each attached referral. This change allows members to sign once for multiple appointments.

Attached are several signature pages for your use. We used colored paper to make them easier to identify. If you anticipate needing more forms or need assistance, please call Nancy McMullen at 6809.

Note: A separate report, including the signatures, will be used for department commissioners.

ALASKA STATE LEGISLATURE
Rep. Carl Gatto

MEMORANDUM

TO: Representative Wes Keller Co-Chair Health and Social Services and
Representative Bob Herron Co-Chair Health and Social Services
FROM: Rep. Carl Gatto
DATE: January 22, 2009
RE: Request for Hearing

Enclosed is the committee packet for HB 2 "*An Act relating to the issuance of a certificate of birth resulting in stillbirth.*" I have included a sponsor statement, the most recent version of the bill, and other supplemental material.

Please schedule a committee hearing before the House Health and Social Services Committee at your earliest convenience. I appreciate your time and look forward to reviewing this bill.

Please contact my staff member Sandra Wilson at 465-3163 with any questions or comments regarding this request.

Thank you

SPONSOR STATEMENT

HB 2

"An Act relating to the issuance of a certificate of birth resulting in stillbirth."

HB 2 brings closure to parents who have suffered the loss of a stillborn child by giving them a Birth Certificate reflecting that they had a child who was stillborn. To paraphrase one parent of a stillborn child: being able to receive a Birth Certificate for my daughter would make me feel complete in that it would acknowledge that my daughter existed, even if it was only for a short while. This is true not only for her but also heard from other parents that have suffered this loss.

Under current law parents of stillborn children receive a fetal death certificate. HB 2 allows parents the option of requesting a certificate of birth for their stillborn child. This birth certificate is optional, and if the parents choose to receive a Birth Certificate they have the option of naming their child.

There are twenty-five states that now offer parents of stillborns the option of obtaining a Birth Certificate for their child. I urge your support for HB 2.

certificate. The name of the stillborn child provided on the certificate of birth resulting in stillbirth must be the same name as the name on the fetal death certificate.

(c) A certificate of birth resulting in stillbirth must include the state file number of the corresponding fetal death certificate.

(d) The department shall prescribe the form and content of a certificate of birth resulting in stillbirth to record the birth of a stillborn child and specify the information required to prepare the certificate.

(e) A certificate issued under this section is not proof of a live birth, and the certificate must contain the phrase "not proof of live birth." The bureau may not use a certificate of birth resulting in stillbirth to calculate live birth statistics.

(f) A parent may request that the bureau issue a certificate of birth resulting in still birth regardless of the date on which the certificate of fetal death was issued.

(g) The department may adopt regulations needed to implement this section.

(h) In this section, "stillbirth" or "stillborn" refers to an unintended, intrauterine fetal death occurring in the state after a gestational age of 20 completed weeks.

ANALYSIS: (Attach a separate page if necessary)

HB002 would require the Bureau of Vital Statistics (BVS) to issue, upon the request of a parent, a "certificate of birth resulting in a stillbirth" for an intrauterine fetal death occurring after 20 complete gestational weeks. These certificates would cost \$20 each. Approximately 50 stillbirths are recorded in Alaska annually. Based on response in other states passing similar legislation, it is expected most families would request such a certificate. The division has adequate budget authorization to receive these additional receipts, resulting in a zero fiscal note - even though there will be a cost to the requestor similar to other certificates. (Continued on P. 2)

Prepared by: Beverly Wooley, Director Phone 269-8126
 Division: Public Health Date/Time 1/23/09 12:00 AM

Approved by: Alison Elgee, Assistant Commissioner Date 2/18/2009
DHSS Finance & Management Services

FISCAL NOTE

**STATE OF ALASKA
2009 LEGISLATIVE SESSION**

BILL NO. HB002 _____

ANALYSIS CONTINUATION

Minimal programming and administrative time will be necessary to issue such certificates - amounting to an estimated \$1,000 annually. Assuming 50 certificates are issued each year at \$20 each, costs will be covered by the fee. The BVS budget is funded primarily by receipt supported services; all certificates issued - birth, death, fetal death - require a \$20 fee.

MEMORANDUM

January 22, 2009

SUBJECT: Sectional Summary (HB 2 (Work Order No. 26-LS0003\A))

TO: Representative Carl Gatto
Attn: Sandra Wilson

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Establishes a process for the bureau of vital statistics to issue a certificate of birth resulting in a stillbirth at the request of a parent of the stillborn child. Requires the bureau to transmit the certificate to the local registrar for filing with the fetal death certificate.

JMM:lmb
09-002.lmb

January 20, 2009

To the Alaska Legislature

In Support of HB 2

This is the Story of Daniel Gavin Sheppard,

My name is Chauna and in 2002, I became pregnant for the first time in my life at the age of 32. We were overjoyed and considered this a miracle baby after being diagnosed with Fertility problems.

I walked on air with happiness, eating healthier, drinking extra water and taking every breath with my precious baby in mind. That summer we purchased a larger car, a crib and swing, stocked up on diapers of various sizes, and dozens of outfits, We went to child birth classes and even did relaxation exercises at home to prepare for labor. I never missed a doctor appointment and even switched doctors so I could get higher quality care. We got ultrasound videos and pictures. I really enjoyed feeling his regular kicking, rolling and occasional hic ups.

Daniel was due on November 26th 2002. It was that morning that after a bit of poking and juice drinking that I couldn't seem to wake my son. My doctor sent me to the maternity ward where using a Doppler speaker they couldn't hear a heartbeat. At that point we had an ultrasound where we could not see any heart movement in those tiny, clearly visible, ribs on the tv screen. It was the most painful reality of my life to know my baby had died.

I was induced at apx 2:30pm that day. We went through 17 hours of labor that including an epidural, pain and nausea medication, IV's and 2 hours of pushing. Daniel Gavin was born weighing 7lb 14oz and 19 inches long at 7:30am on November 27, 2002. His warm, soft, beautiful body was placed on my chest where my husband and I cuddled and kissed and loved him even more than the day before. The nurse bathed him. We dressed him and friends and family came to hold him as well. I distinctly remember one dear friend rocking him just like he was any other baby. The hospital took foot prints and cut a lock of hair for us to keep. They also gave us two camera's to take pictures of our beautiful boy. We were so lucky to be able to keep him with us for 12 hours. We sang to him and prayed before we had to let him go and begin the long painful journey of grief.

The next day the hospital gave us a generic card with his name and birthday on it written in marker and told us that we won't get a birth certificate because he never took a breath. This was a harsh blow after all we had been through. After all, I had given birth to Daniel and he was certainly born.

We drove home from the hospital on Thanksgiving Day with an empty car seat, empty arms and broken hearts.

As sad as this was, we still love Daniel so much, he will always be a part of our family. We do things on his birthday and other times of the year to show him our love. Though we never saw his eyes or heard him cry, my son Daniel is such a gift and we are so thankful for him. There never has been a day when I thought I wasted 9 months carrying him or a time when I wish he never existed. Never, ever... I wish the State of Alaska would not treat him as such.

In 1892 American Author Mark Twin said, "Favored above Kings and Emperors is the stillborn child." I wish stillbirth and the experience of having to deliver a dead baby was respected in this manner today.

This tragedy strikes everywhere. According to the Center for Positive Outcomes in Pregnancy in Washington DC, there are more than 39,000 stillbirths in the U.S. every year.

Historically, we share this horrific experience with John Quincy Adams, Rutherford Hayes, Ernest and Pauline Hemingway, and John and Jackie Kennedy, whose stillborn daughter is buried with her parents and siblings.

Ask any woman why she would endure the pain and agony of giving birth and she will tell you because of the 'reward' at the end...it is 'all worth it' we frequently hear. But what about the silent births- the women who get no reward for all their hard work...

I am writing this today asking you for your support...Please pass HB 2.

Sincerely,

Chauna Sheppard

To: Sandra Wilson
Subject: RE: Hello

Sandra,

HB 2, to create a 'Birth Certificate resulting in a Still Birth' would make me and a lot of people feel complete. My daughter was still born at 36 weeks and we had a large funeral for her. The idea that the state will only accept the fact that she died is so heart breaking. How can a person die with out being born? Having that piece of paper in my hand would bring closure to the entire grieving process. This would validate that my little girl was once here and apart of our lives.

Thanks so much for bringing this bill forward.

Hello everyone. Today was the first day of session and I am preparing the packet that will accompany our request for hearing. I need updated letters of support. You can either write new ones or use the same ones as last year but I need them to reflect the new bill number for this bill which is HB 2. The sooner you can get these to me the sooner I will get a request in. Again I thank everyone for being willing to take the time and send me these letters.

Sincerely,

Sandra Wilson

Why We Need a Certificate of Still Birth

Haven't we all at one time been in a movie theater when the film broke? One moment we're caught up in the action and suddenly, there is no story on the screen. Time out while the projectionist rethreads the rest of the reel. If only life were like that. If only sudden interruptions in life could pick up where they left off.

"Mommy has birth certificates for all of us. They prove that we were borned."

The birth of a dead baby is a break in the action. The story is over. We get to say hello and goodbye in the same breath. Instead of a bright future, all we're left with is the shattered dreams of what might have been. When a movie breaks we get our money back. In real life when the "film" breaks we're given a fetal death certificate. No baby to take home. No reward for the months of waiting. No acknowledgement for having given birth.

When we discover that what once lived within us is dead we want to run away. But we can't. First we must deliver our baby, just like mothers of live babies do. We must endure the pain. Just like mothers of live babies. And when it's over we hold our baby, just like mothers of live babies do. But then we have to give our baby back, and go home to an empty nursery.

Contrary to what the pundits say, it is possible to fool Mother Nature. She doesn't know our baby died, and so she dutifully produces milk to nourish and protect that, which is no longer. She knows we gave birth. We know we gave birth. But the state says not. Stillbirth mothers are not yet acknowledged as mothers by most states, but we're working to change that.

"We will recognize your baby's death, but not its birth" is the message.

But how can that die which has not been born? How did it come into being? Did it ride a space ship to earth? Or did it arrive the way every other baby arrived, from the womb of a mother who conceived and delivered it?

Birth is a process that all mothers endure; live or "still" is the outcome of that process. If we recognize a live birth, why would the state not recognize a stillbirth? Is it to punish the mother whose baby is born dead? Is she somehow not worthy? Did she fail? That's what she thinks. If we give a the mother of a live birth a "Certificate of Live Birth" why would we not give the mother of a stillborn baby a Certificate of Still Birth? That's the reality of what happened.

All mothers give birth; only the outcomes of those births differ.

To deny a woman a "Certificate of Still Birth", when she fails to produce a living child, is to say that she did not give birth, which is not true. To deny a woman recognition for this seminal event in her life is to deny the event occurred. To deny a woman recognition is to tell her she is a failure. It is an open wound upon her soul that will never heal unless and until her sacrifice is recognized; just as live birth mothers are recognized.

On August 9, 2001 in Phoenix, Arizona, Sharon Arnold, wife of NSS Founder Richard K. Olsen, along with Joanne Cacciatore-Garard, NSS National Director and founder of the MISS Foundation, were given the first Certificates of Birth Resulting in Still Birth to be issued in the United States. Arizona has led the way by acknowledging that these brave women gave birth and that their daughters, Camille and Cheyenne, though born still, did for one brief and glorious moment pass through this world. Your state should recognize you and your babies too, because all our children matter.

The National Stillbirth Society

When Your Baby Is Stillborn

W I S S P

When your baby is stillborn, expectations, hopes and dreams are cruelly shattered and lives are changed. Many parents have initial feelings of shock and confusion when told that their baby has died. What happened? Why you? Babies are not supposed to die. When they do, it can be devastating, overwhelming, and painful. We are very sorry that your baby died. No one can take away the pain, but we hope the following information will answer some questions, provide reassurance, and help you.

What Is Stillbirth?

You may not have heard of stillbirth until you experienced it. When a baby dies before delivery, many people commonly think of miscarriage. Both stillbirth and miscarriage are types of pregnancy loss, but they differ by when the loss occurs. A *miscarriage* (sometimes called a spontaneous abortion) is when a baby dies *before* the 20th week of pregnancy. *Stillbirth* is the death of a baby *after* the 20th week of pregnancy but before delivery. Whenever parents deal with the death of their baby, whether it be early in pregnancy, late in pregnancy, or sometime after birth, there can be a great sense of disappointment, loss, and suffering. Stillbirth and miscarriage are separately defined not because one or the other is an easier or more difficult loss with which to deal, but because they differ in many ways. Stillbirth and miscarriage have different causes, need different evaluations, and differ medically and in the ways that parents and families can best be helped.

Stillbirth is common. It may affect anyone. There is no way to predict when stillbirth will happen or who will experience it. Stillbirth occurs in families of all races, religions, and income levels. Each year in the United States

about 25,000 babies, or 68 babies every day, are born still. This is about 1 stillbirth in every 115 births. Most often a stillbirth is detected while the baby is in the mother's uterus, sometimes not until labor is underway.

Why Was Your Baby Stillborn?

Following a stillbirth, parents frequently ask, "Why did this happen?" Sometimes a reason is found; other times a specific cause remains unknown. Extensive and careful evaluation of the baby and placenta following delivery may help identify a reason in about 40%-50% of stillbirths. When a specific cause is not identified, evaluation may still be helpful by at least ruling out potential high risks for recurrence.

Identifiable causes of stillbirth generally fall into one of three different categories: birth defects in the baby, problems with the placenta or umbilical cord, or maternal illnesses or conditions which may sometimes affect pregnancy.

- *Birth defects* are common but often overlooked causes for stillbirth. About one-fourth of babies who are stillborn have one or more birth defects that are responsible for their death.

- The *placenta and umbilical cord* are the baby's "lifeline" for oxygen and nutrients. Problems in either one may completely cut off or severely interfere with the needed flow of blood, oxygen, and nutrients to the baby. Although commonly pointed to as the likely cause for death of a baby, problems with the placenta or umbilical cord actually account for only a moderate number of stillbirths.

- Although uncommon, *maternal conditions* may be responsible for stillbirth. Certain illnesses in the mother, such as diabetes or hypertension, and their treatments, sometimes cause stillbirths. An increased risk for stillbirth is also associated with the use of certain recreational drugs, particularly cocaine.

In addition, there are many other rare causes of

stillbirth. Whether or not a specific cause for your baby's death is identified, it is most important to remember that *stillbirths most often are not caused by something you did or did not do.*

What Is Involved In An Extensive Evaluation Of The Baby?

Following delivery of a stillborn, parents may be asked to provide consent for extensive evaluation of their baby. This evaluation involves many different studies, including an internal post-mortem examination (autopsy), a physical examination, photographs of the baby's face, body, and any unusual features, X-rays, and genetic testing of some of the baby's tissues. If permission is given, evaluations are started soon after the baby's delivery. Detailed results are usually available and communicated to parents in a few weeks to a few months.

These studies can be helpful for many reasons. They may provide answers or insight to some of your questions including the frequently asked, "Why did it happen?" and "Will it happen again?", as well as those about management and care in future pregnancies. Even if some questions remain unanswered, there may be comfort in knowing that as much as possible was learned about the baby and that important information may be added to medical knowledge which could help other babies in the future. The baby is treated respectfully at all times. Agreeing to a comprehensive evaluation does not prevent a family from spending time with their baby or choosing to have a funeral, memorial service, cremation, or burial.

Such evaluation is valuable to most parents as they try to deal with the full impact of their loss. In fact, very few parents express regret for having the suggested evaluations done. Nevertheless, some may think that such assessment violates their baby and intrudes upon their grief. Parents must choose what is best for them. Whatever the decision, it is respected.

What About Future

Generally one stillbirth does not predict

*Pregnancies? Will
Stillbirth Happen
Again?*

another. On average, there is approximately a 3% chance for stillbirth to happen again in the next pregnancy—or approximately a 97% chance that a future pregnancy would *not* end in stillbirth. Extensive evaluation of the baby may provide information that allows a geneticist, genetics counselor, or your doctor to determine more accurately what the chances are that stillbirth could happen again. Finding a specific cause may imply a much higher or lower risk than this average one. Specific causes, when discovered, more often result in a decrease in the estimated risk that stillbirth may happen again and less often in an increase in that estimated risk. In almost all circumstances, subsequent healthy pregnancies *are* possible.

*Making Sense Of What
Happened*

In the natural course of life events, babies are least of all expected to die. The loss of a baby through stillbirth can be overwhelming and devastating. Although surprising to some, the stillbirth of a baby is a great loss, as great as that of an older child or any loved one.

When stillbirth occurs, parents who were anxiously awaiting a baby suddenly are not. It is natural for you to grieve deeply for your baby who has died and for the hopes, dreams, and wishes that will never be; hopes, dreams, and wishes that, for you, were real long before the anticipated birth of your baby. You may feel a strong sense of sadness, anger, or maybe bitterness at the unfairness of this tragedy. You may experience feelings of loneliness and longing, helplessness, or, because of the intensity of your emotions, confusion. Many parents also feel guilt. They often wonder if they did something to cause their baby's death; this is rarely true.

These intense emotions are real and a normal part of grieving. Grieving is a process of making meaning out of your loss and of life without your baby. Grieving is not easy. It is long, unpredictable, and requires a lot of energy. But you *need* time to grieve since grieving is necessary to work through pain toward healing.

Coping With Your Loss

Dealing with the death of your baby may be one of the most painful experiences in your life. Everyone copes and mourns differently. Perhaps a few of the following suggestions can help you survive some of the difficult times.

- *Take care of yourself.* Eat well. Get plenty of rest. Stay well physically so that you can continue to heal emotionally.

- *Express yourself.* Talk about your baby, your feelings, your fears, your grief. Or keep a diary, write a journal, create, start a flower garden. This may help you to see things more clearly.

- *Read written resources.* There are many books, articles, poems, and videos that can provide information, guidance, and support.

- *Find a support network.* Such a network may be your family, your friends, or your faith community. You may want to contact a support group for parents who have experienced the death of a baby, to share your story and feelings and to learn from others who have also "been there".

Above all, give yourself *time*. Be patient. You will never forget your baby, but you will heal. Healing is an ongoing process; it does not happen overnight. But it *will* happen.

Departments affected by HB 2:

Vital statistics is the only department affected by HB 2

Witness list:

I am unable to provide a witness list until the hearing date is schedule due to the schedules of those who may or may not be able to testify.

A **stillbirth** occurs when a fetus which has died in the uterus or during labor or delivery exits a woman's body. The term is often used in distinction to live birth or miscarriage. Most stillbirths occur in full term pregnancies.

Some sources reserve the term "stillbirth" for a fetus which has died after reaching mid-second trimester to full term gestational age. For example, in the United Kingdom, "stillbirth" is used to describe an infant delivered without life after 24 weeks gestation. The sources that use this definition tend to use the term "miscarriage" if the death occurs earlier in development. In contrast, other sources use the term "stillbirth" regardless of the stage of fetal development.

Sec. 18.50.950. Definitions.

In this chapter,

- (1) "adoptive parent" means a person who has adopted another person under AS 25.23;
- (2) "biological parent" means a parent named on the original certificate of birth of an adopted person;
- (3) "bureau" means the Bureau of Vital Statistics;
- (4) *[Repealed, 88 ch 56 SLA 2005.]*
- (5) "commissioner" means the commissioner of health and social services;
- (6) "dead body" means a lifeless human body or parts or bones of it from the state of which it reasonably may be concluded that death recently occurred;
- (7) "department" means the Department of Health and Social Services;
- (8) "fetal death" means death before the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, where
 - (A) the death is indicated by the fact that, after expulsion or extraction, the fetus does not breathe or show evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles; and
 - (B) the expulsion or extraction is not caused by an induced termination of pregnancy;
- (9) "filing" means the presentation of a certificate, report, or other record provided for in this chapter, of a birth, death, fetal death, adoption, marriage, or divorce for registration by the bureau;
- (10) "final disposition" means the burial, interment, cremation, or other disposition of a dead body or fetus;
- (11) "induced termination of pregnancy" means the purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant, and that does not result in a live birth, except that "induced termination of pregnancy" does not include management of prolonged retention of products of conception following fetal death;
- (12) "institution" means a public or private establishment that provides in-patient medical, surgical, or diagnostic care or treatment, or nursing, custodial, or domiciliary care to two or more unrelated individuals, or to which persons are committed by law;
- (13) "live birth" means the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, that, after expulsion or extraction, breathes or shows evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached;
- (14) "medical history" includes information relating to a person's medical conditions and treatment, immunization records, and other medical information about the person that could be important to the health care of the adopted person;
- (15) "physician" means a person authorized or licensed to practice medicine under the laws of the state;
- (16) "registration" means the acceptance by the bureau and the incorporation in its official records of certificates, reports, or other records provided for in this chapter, of births, deaths, fetal deaths, adoptions, marriages, or divorces;
- (17) "state registrar" means the state registrar of vital statistics;

(18) "system of vital statistics" includes the registration, collection, preservation, amendment, and certification of vital statistics records, and related activities including the tabulation, analysis, and publication of statistical data derived from them;

(19) "vital statistics" means records of birth, death, fetal death, induced termination of pregnancy, marriage, divorce, adoption, and related data.

What is the legal definition of a stillbirth?

A stillborn child is legally defined as a child born after the 24th week of pregnancy who did not show any signs of life after being born. UK

United Kingdom

In the **United Kingdom**, stillbirths must be **registered by law**. The Stillbirth Definition Act (**1992**) requires that any 'child' expelled or issued forth from its mother after the 24th week of pregnancy that did not breathe or show any other signs of life be registered as a stillbirth. This must be done within 42 days and a Stillbirth **Certificate** is issued to the parent(s).^[1]

United States

In the **United States**, there is no standard definition of the term 'stillbirth'.^[4] The **Centers for Disease Control and Prevention** collects statistical information on "live births, fetal deaths, and induced termination of pregnancy" from 57 reporting areas in the United States. Each reporting area has different guidelines and definitions for what is being reported; many do not use the term "stillbirth" at all. The federal guidelines suggests (at page 1) that fetal death and stillbirth can be interchangeable terms. The CDC definition of "fetal death" is based on the definition promulgated by the World Health Organization in 1950 (see **section above on Canada**).

The federal guidelines recommend reporting those fetal deaths whose birth weight is over 350g, or those over 19 weeks gestation. Forty-one areas use a definition very similar to the federal definition, thirteen areas use a shortened definition of fetal death, and three areas have no formal definition of fetal death. Only 11 areas specifically use the term 'stillbirth', oftentimes synonymously with fetal death, however they are split between whether stillbirths are "irrespective of the duration of pregnancy", or whether some age or weight constraint is applied.

Subject: RE: Stillbirth definition

John,

I think your first alternative is fine, since if the bill is adopted the Bureau will be required to include the state file number from the corresponding fetal death certificate on the certificate of birth resulting in stillbirth under section (C). We can only do this if we have a fetal death record on record.

The only change I would suggest is to change "is issued" to "has been registered". We have many records (fetal death and otherwise) that have been registered but never issued. As (h) is currently written a stillbirth could meet the fetal death definition of 18.50.950 but not be considered a stillbirth since the fetal death certificate had never been issued. If I haven't explained this well let me know; it may be easier if we talked.

Phillip

Subject: RE: Stillbirth definition

Dear Richard Olsen,

Thank you for your prompt response. I have done significant research since my previous email to you. I have learned that a number of states have adopted laws providing birth certificates resulting in stillbirth, and that there is a split on the use of a specific gestation period.

Alaska Statutes presently defines "fetal death" at AS 18.50.950 (8), which definition is the same as the WHO definition. Alaska Dept. of Vital Statistics issues a fetal death certificate for stillborns at or beyond 20 weeks gestation, and it is optional to issue a fetal death certificate for a stillborn prior to 20 weeks.

So as to keep our stillbirth certificate law consistent with our fetal death and fetal abuse laws we are thinking that the definition in the propose law ought to be something such as follows:

- (h) In this section, "stillbirth" or "stillborn child" refers to a fetal death occurring in the state as defined in AS 18.50.950 (8) (A) and (B), and for which a fetal death certificate is issued.

Or alternatively:

- (h) In this section, "stillbirth" or "stillborn child" refers to a fetal death occurring in the state as defined in AS 18.50.950 (8) (A) and (B).
- (i) A certificate of birth resulting in stillbirth may only be issued if a certificate of fetal death has been issued.

I would appreciate your thoughts.

Thank you for your time and attention to this matter.

Subject: RE: Stillbirth definition

TO: John Davies

Birth is an event. The majority of babies are delivered "live". In fact, what we commonly refer to as a "birth certificate" to memorialize the event is more properly described as a "Certificate of Live Birth". Have a look at http://www.cdc.gov/nchs/vital_certs_rev.htm for more information.

If there is a Certificate of Live Birth, does it not make a prima facie case for the issuance of a "Certificate of Stillbirth". As stated above, "birth" is an event. Live or still is an outcome.

A stillbirth is the delivery of a baby, that has completed 20 weeks or more of gestation, vaginally or by cesarean that is not live at time of birth. That means 1) there is no beating heart, 2) no pulsating umbilical cord, 3) no respiration and 4) no voluntary movement. If any of these signs are present and the baby subsequently dies it is deemed to be a fetal death.

Fetal deaths prior to 20 weeks gestation are deemed to be "miscarriages", not "stillbirths". The foregoing refers to involuntary fetal death that is not the product of an elective termination for medical or personal reasons.

See attached, "Why we Need a Certificate of Stillbirth" and Open Letter to Alaska Legislature sent last session.

Subject: Stillbirth definition

Dear National Stillborn Society,

I am working for the Alaska State Legislature, and we are in the process of drafting a law that would allow parents

of a stillborn child to obtain a birth certificate for the stillborn. We are struggling with a definition for "stillbirth" and "stillborn" and "stillborn child". Is there a model definition that we could use that would be acceptable to both the pro life and pro choice camps that would stand up to legal challenge? Any input would be greatly appreciated.

Thank You,

John Davies

I am well aware of that fact. And yes I have seen that video and it is an excellent one. My concern has been that by holding up the bill drastically decreases the chances of it passing this year strictly due to time constraints. The bill was modeled off of another bill and the definition was taken directly from what other states had used.

Thanks, I just came from that website before I wrote to you. I also went on the MISS website and viewed an excellent video. Will you carry the bill? Will you show the video? Yes, I read the definition in the Arizona materials. I don't mean to be reinventing the wheel, I was asked to weigh in on the definition and am doing my due diligence. You probably know all this already. In my view the more your bill looks like other existing legislation the better chance it has of passing without any "hitches". JD

From: Sandra Wilson
Sent: Tuesday, March 03, 2009 12:15 PM
To: John Davies
Subject: RE: HB 2

The suggestions would be as follows and this is based off of the CS that was heard in committee:

On page 1 line 6 following "of" delete "a stillborn child" and insert "the stillbirth"

On page 1 line 12 following "of" delete "a stillborn child" and insert "the stillbirth"

On page 1 line 13 following "name" delete "of a stillborn child"

On page 2 line 1 following "name" delete "of the stillborn child"

On page 2 line 6 following "birth" delete "of a stillborn child"

On page 2 line 14 remove everything following "stillbirth" and insert "is that as defined in AS 18.50.950(8).

If you were to make those changes there would be no reference to a child and take away any concerns that have been raised.

To: John Davies
Subject: RE: HB 2

You could make it simpler by saying that in this section "stillbirth" or "stillborn child" is that as defined in AS 18.56.950 (8)

I do not have a problem meeting with the two of you tomorrow. I was just hoping that we would be able to get this heard and passed out today because the hope that both myself and Rep. Gatto is that we could pass this bill through this year. This is more and more unlikely as it takes longer to get it out of committee. I guess I don't completely understand the issue at hand because it states very clearly in the bill that the issuance of the birth certificate is not proof of live birth.

Dear Sandra,

This email is a heads up for your to keep you apprised of the movement on your bill. Here is the proposed definition of "stillborn child" that we propose:

- (h) In this section, "stillbirth" or "stillborn child" refers to the unintended death of a product of human conception as defined in AS18.50.950 (8)(A) and (B).

Give this some thought. We have an appointment to meet with Jean Mischal, Leg Legal, tomorrow at 9am at her office in the TMOB. I would like you to attend with Matt and I so that you can have your input heard on this.

We are trying to make sure that the definition is tight enough so as not to cause the bill to fail or run into problems with legal challenges.

Jean was working on a drafting job today and couldn't see us until tomorrow.

Regards,
John Davies

Subject: HB 2

Dear Sandra,

This email is a heads up for your to keep you apprised of the movement on your bill. Here is the proposed definition of "stillborn child" that we propose:

- (h) In this section, "stillbirth" or "stillborn child" refers to the unintended death of a product of human conception as defined in AS18.50.950 (8)(A) and (B).

Give this some thought. We have an appointment to meet with Jean Mischal, Leg Legal, tomorrow at 9am at her office in the TMOB. I would like you to attend with Matt and I so that you can have your input heard on this.

We are trying to make sure that the definition is tight enough so as not to cause the bill to fail or run into problems with legal challenges.

Jean was working on a drafting job today and couldn't see us until tomorrow.

Cc: 'phillip.mitchell@alaska.gov'; Sandra Wilson
Subject: RE: Stillbirth definition

Dear Richard Olsen,

Thank you for your prompt response. I have done significant research since my previous email to you. I have learned that a number of states have adopted laws providing birth certificates resulting in stillbirth, and that there is a split on the use of a specific gestation period.

Alaska Statutes presently defines "fetal death" at AS 18.50.950 (8), which definition is the same as the WHO definition. Alaska Dept. of Vital Statistics issues a fetal death certificate for stillborns at or beyond 20 weeks gestation, and it is optional to issue a fetal death certificate for a stillborn prior to 20 weeks.

So as to keep our stillbirth certificate law consistent with our fetal death and fetal abuse laws we are thinking the definition in the propose law ought to be something such as follows:

- (h) In this section, "stillbirth" or "stillborn child" refers to a fetal death occurring in the state as defined in AS 18.50.950 (8) (A) and (B), ^{the death of a fetus} and for which a fetal death certificate ^{is issued}.

Or alternatively:

- (h) In this section, "stillbirth" or "stillborn child" refers to a fetal death occurring in the state as defined in AS 18.50.950 (8) (A) and (B).
 (i) A certificate of birth resulting in stillbirth may only be issued if a certificate of fetal death has been issued.

I would appreciate your thoughts.

Thank you for your time and attention to this matter.

Subject: RE: Stillbirth definition

TO: John Davies

Birth is an event. The majority of babies are delivered "live". In fact, what we commonly refer to as a "birth certificate" to memorialize the event is more properly described as a "Certificate of Live Birth". Have a look at http://www.cdc.gov/nchs/vital_certs_rev.htm for more information.

If there is a Certificate of Live Birth, does it not make a prima facie case for the issuance of a "Certificate of Stillbirth". As stated above, "birth" is an event. Live or still is an outcome.

A stillbirth is the delivery of a baby, that has completed 20 weeks or more of gestation, vaginally or by cesarean that is not live at time of birth. That means 1) there is no beating heart, 2) no pulsating umbilical cord, 3) no respiration and 4) no voluntary movement. If any of these signs are present and the baby subsequently dies it is

deemed to be a fetal death.

Fetal deaths prior to 20 weeks gestation are deemed to be "miscarriages", not "stillbirths". The foregoing refers to involuntary fetal death that is not the product of an elective termination for medical or personal reasons.

Subject: HB 2

Dear Sandra,

In your research for HB 2 have you had the opportunity to talk to Vital Statistics? Do you know the circumstances under which a fetal death certificate is issued? I did some research on the VS website and found a report called "Fetal and Infant Deaths" 1995 Annual Report. That report says a fetal death certificate is required if fetal death occurs at at least twenty weeks. It goes on to say the a fetal death certificate is optional for "fetal deaths which occur prior to the twentieth week of pregnancy. It also says that a "fetal death is defined as the death of a fetus after the eighth week of gestation and before delivery." That definition is different from the statute. Do you know if the statute was changed since 1995 regarding the definition?

I have a call in to Phillip Mitchell of VS to ask him about the mechanics of issuing the fetal death certificate.

Also I have taken a look at other jurisdictions and there is a split on whether a gestation period is used. The state of Maryland simple permits the issuance of the birth certificate if a fetal death certificate is issued which seems appropriate. Since in Alaska it appears that a fetal death certificate may be issued for a stillborn prior to 20 weeks I suggest that the definition of stillborn child be consistent with what the VS Dept is now doing with the fetal death certificates.

What do you think of this?

(h) In this section, "stillbirth" or "stillborn child" refers to an unintended fetal death occurring in the state as defined in AS 18.50.950 (8) (A) and (B) and for which a fetal death certificate is issued.

Yes I am Familiar with the National stillbirth Society. The definition that is currently in the bill is one that is also in many versions around the country. I have spoken with the founder of this society and he actually testified on the bill last year. The lady whose name I mentioned is the founder of the M.I.S.S. Foundation. The national stillbirth society describes stillbirth as the intrauterine death and subsequent delivery of a developing infant that occurs beyond 20 completed weeks of gestation. (A loss prior to 20 weeks is termed a miscarriage or "pregnancy loss".) this is found on their website. <http://www.stillnomore.org/main.htm>

MISSING ANGELS FOUNDATION

MISSING ANGELS BILL FACT SHEET

- I. The bill establishes a "Certificate of Birth Resulting in Stillbirth" as an *optional* document for families requesting and paying for it in our state;
- II. There is already a *death certificate* issued and *legislated final disposition at families' expense* for all stillborn babies in our state;
- III. Stillbirth is the unintentional death of an unborn baby who has *passed 20 completed gestational weeks* as defined by the NICHD. These are not early losses or abortions. Rather these are the births of dead babies;
- IV. Between 25,000-30,000 babies are stillborn in the U.S. each year, one in 100 pregnancies. Most occur at or near full term to otherwise apparently healthy babies;
- V. Other countries including the United Kingdom, Australia, and Ireland already issue certificates of birth for stillborn babies;
- VI. The bill has been passed in 15 U.S. states, and legislation is pending in more than five states;
- VII. A baby born at 19 weeks gestation, pre-viability, but who takes one breath is issued a Certificate of Live Birth and is counted in infant mortality rates. Conversely, a baby born at 40 weeks gestation and past viability can die just one second prior to birth, will only receive a death certificate, and is not counted in infant mortality statistics;
- VIII. It is not only about dignity and validation, but also about maternal health and newborn well-being, epidemiology, and research. It is the right thing to do for women in our state and their families.

Research on Miscarriage and Stillbirth

Miscarriage

Miscarriage is the term health care providers use to describe the loss of pregnancy from natural causes before the 20th week of pregnancy. Most miscarriages occur very early in pregnancy, in some cases before a woman even knows she is pregnant. Researchers estimate that, among women who already know they are pregnant, nearly 15 percent will have a miscarriage.

There are many different causes for miscarriage, some of them known and others unknown. In most cases, there is nothing a woman can do to prevent a miscarriage. Having a miscarriage does not mean that a woman won't become pregnant again, or that she will not have normal pregnancies in the future. And, for most women, miscarriage is not a sign of a larger health problem.

Having a miscarriage can be devastating to a woman and her family. A woman or family who is having trouble coping with the loss of a miscarriage should ask a health care provider.

NICHD Research on Miscarriage

The NICHD supports and conducts research on the causes of miscarriage in hopes of finding ways to prevent women from having them. For instance, NICHD-supported researchers recently found that women with a disorder called Polycystic Ovary Syndrome (PCOS) are three times more likely to miscarry during the early months of pregnancy than women who don't have PCOS. Women with PCOS often have great difficulty getting pregnant naturally.

Research has found that women with PCOS also tend to have a condition called insulin resistance, which means their bodies have trouble using the insulin they make to get energy from their cells. Insulin resistance often occurs before someone develops diabetes. To treat this insulin resistance, researchers had been prescribing a drug called *metformin*. What they found was that metformin not only reduced insulin resistance, but it also brought about changes to the uterine lining that could help women with PCOS get pregnant and reduce the risk of miscarriage during their first trimester (the first three months) of pregnancy.

Studies are now underway to confirm the positive effects of the using metformin in women with PCOS, and to evaluate the safety of taking the drug throughout pregnancy. The NICHD's Reproductive Sciences Branch, through its Reproductive Medicine Network (RMN) is currently conducting a clinical trial for the treatment of infertility related to PCOS, using metformin. The RMN Web site provides more information on this trial and on the RNM itself.

Other NICHD-supported research is trying to learn more about repeated miscarriage. Researchers estimate that between 1 percent and 2 percent of women in the United States has more than one miscarriage without a known cause. Women who experience repeated miscarriages may undergo expensive and lengthy tests to try to identify a cause, but often get no answers. NICHD researchers, examining the vuva of these women, have found that many of them share a genetic mutation, or change. This mutation, on one of the X chromosomes, was found in nearly 15 percent of women who had a history of repeated, unexplained miscarriage. If this genetic mutation is confirmed as a cause of repeated miscarriages, researchers may be able to develop a simple blood test that could predict a

Stillbirth

Stillbirth is the term health care providers use to describe the loss of a pregnancy after the 20th week of pregnancy, due to natural causes. According to national statistics, stillbirths occur in nearly one in 200 pregnancies in the United States every year.

Stillbirth can occur before delivery, or as a result of complications during labor and delivery. In at least half of all cases, researchers can find no cause for the pregnancy loss.

In some cases of stillbirth, the mother may notice a decrease in the movement or kicking of the fetus. In these cases, the health care provider uses an ultrasound, a machine that uses sound waves to create a picture of the fetus, to learn more about its health. If you are pregnant and have concerns about stillbirth, ask your health care provider if there are special ways he or she wants you to track movement.

Stillbirth can be devastating to a woman and her family. If you or your family are having trouble coping with the loss of a stillbirth, please talk to your health care provider.

In spite of how often stillbirth occurs, and how emotionally painful it can be, little research has been done on this type of pregnancy loss. To encourage more research on stillbirth, the NICHD is supporting a new research initiative, *Research on the Scope and Causes of Stillbirth in the United States*. Through this effort, the NICHD will create a network of research sites whose sole focus will be on understanding stillbirth, its features, its causes, and its effects on a woman's uterus. Patients in this network will include women from a variety of ethnic and economic backgrounds, to provide a clearer picture of this problem. Through this initiative, the NICHD hopes to support work that may some day be able to predict and prevent stillbirths.

The March of Dimes Birth Defects Foundation offers some patient information about stillbirth.

Today is **December 15, 2005**.

On December 12, Carolyn and I were invited to Senator Zaffirini's office at the state capitol building in Austin.

We attended an informal ceremony there - and we were given Bump's Certificate of Birth Resulting in Stillbirth.

A picture (or two) is worth a thousand words:

Department of State of Health Services
Texas Vital Statistics

Certificate of Birth Resulting in Stillbirth

According to State Records Bump Nevels

Was Delivered on August 1, 2002

In Weatherford, Parker County, Texas

To Carolyn Anne Puckett and John Earl Nevels II

Date Issued: 11/29/2005

FD Number: 001682-2002

This certificate is not proof of live birth.

This certificate has been issued in accordance to Texas Health and Safety Code Sec. §192.0022.

VS-300 9/2005

You can get a CBRS for your child by visiting: <http://www.dshs.state.tx.us/vs/field/stillbirth.shtm>

On **June 9, 2005**, Governor Rick Perry signed Senator Judith Zaffirini's Senate Bill 271 (The Texas MISSING Angels Bill) into law.

Starting on September 1, 2005, parents of stillborn children in the state of Texas will be able to request and receive a Certificate of Birth Resulting in Stillbirth for any stillborn child they have had, regardless of the date of stillbirth.

Words cannot convey how thankful we are to Senator Zaffirini and her Legislative Director, Mr. Larkin Tackett, for their tireless support and hard work.

If you have a moment - please take the time to thank them - for they are truly worthy of our praise.

You can send an e-mail to Senator Zaffirini **HERE**.

Representative Lon Burnam sponsored the bill on the House side.. you can send him an e-mail **HERE**.

The official History of Senate Bill 271 can be found here:
SB 271 - Legislative Session: 79(R)

At present time, we are waiting to hear from Austin on if (and when) a public bill-signing ceremony will take place. As soon as we hear - we'll get the word out!

On **May 13, 2005** - Senate Bill 271 was heard by the House Committee on Public Health.

Testimony in favor of the measure was given by Becky Ellis, John Nevels, and Brenda Nevels. Carolyn Nevels acted as a witness in support of the measure.

Of the committee members present (two were absent), a unanimous decision was made to favorably report the bill to the LOCAL & CONSENT CALENDERS committee. This is considered good news because passage from this committee will most likely mean that SB 271 will go to the House floor for a full vote within a few days.

If you'd like to see the public hearing, it's available on the internet. Make sure you have RealPlayer installed (it's free and easy to find on the internet if you don't already have it) and then click here: <http://www.house.state.tx.us/fx/av/committee79/50513p33.ram>.

NOTE: There were 3 bills heard before Senate Bill 271. This clip is only about 1 hour and 15 minutes in length.

On **March 15, 2005** - Senate Bill 271 was heard by the Senate Health and Human Services Committee. Upon stating the intent of the legislation, Senator Zaffirini also stated that a committee substitute was being offered that would only be technical in nature and would not impact the original intent of the bill.

Along with my oral testimony, the committee heard from stillbirth mother Amanda Turner, and two other stillbirth parents, Kristi & Howard Davis.

Also testifying on the bill was a young lady named Candice Lewis from the Austin branch of the ACLU. Her position was that she felt it was unfair that a woman who might have to give birth to a dead infant at 19 weeks and 5 days would not be able to receive a CBRS. She wanted 'viability language' written into the legislation.

In 1987, a Texas statute defined viability as follows: "Viable means the stage of fetal development when, in the medical judgment of the attending physician based on the particular fact of the case, an unborn child possesses the capacity of live outside its mother's womb after its premature birth resulting from any cause."

The 1987 bill and current statute also uses "good faith according to the physician's best medical judgment."

So, her suggestion was that the state consider offering a bill that replaces the 20 week gestational age with

"viability", as defined in the Medical Practice Act, determined by the attending physician acting in good faith and using his/her best medical judgement.

One of the Senators on the panel agreed with her and offered to submit an admendment that would redefine stillbirth as a doctor's decision of viability alone.

Senator Zaffirini came out against the admendment stating that the families who have had stillborn children have been waiting long enough, that she and her staff had made every effort to have the legislation be controversy-free, and that while she would accept language that made a compromise - such as "a doctor's determination of viability OR 20 weeks", she would not accept viability language alone.

The Senator with the viability language then withdrew his proposed amendment.

All of the Senators present then voted that the committee substitute for Senate Bill 271 be reported favorably to the Senate.

Afterwards, many of the Senators on the panel met with us, expressed their sympathy, and told us they would do whatever they could do to make the CBRS happen for us.

If you'd like to see the public hearing, it's available on the internet. Make sure you have RealPlayer installed (it's free and easy to find on the internet if you don't already have it) and then click here: <http://www.senate.state.tx.us/avarchive/ram.php?ram=00002175>.

NOTE: Once you get the clip up and running, the part regarding Senate Bill 271 starts at about 1:40:00 on the 2:14:13 length clip.

On **March 14, 2005** - Larkin sent me an email with one question:
Why does the bill define a stillbirth at twenty weeks?

I responded:

The bill specifies 20 weeks because that's the criteria that is used when a Certificate of Fetal Death is issued.....

Texas Administrative Code Title 25 Chapter 181.7

(a) A certificate of fetal death shall be filed for any fetus weighing 350 grams or more, or if the weight is unknown, a fetus aged 20 weeks or more as calculated from the start date of the last normal menstrual period to the date of delivery.

(b) A certificate of fetal death shall be considered properly filed:

(1) when all of the items thereon have been satisfactorily and definitely answered; and

(2) when the certificate has been presented for filing to the local registrar of the registration district in which the fetal death (stillbirth) occurred or the fetus was found. A certificate of fetal death (stillbirth) shall be filed with the local registrar within five days after the date of fetal death (stillbirth).

So.....the state should also offer the parents the opportunity to receive a CBRS based on the same '20 week' criteria.

Also on March 14, Larkin asked:

1. Why not replace the "20 weeks" definition with "after viability?"
2. Why not issue a seperate "Certificate of Birth Resulting in a Miscarriage?"

I responded:

1. Because we have a 'Certificate of Fetal Death' based on 20 weeks. We don't need to get doctors involved in making viability decisions when the state has already made it clear that our child has died and has issued us a 'Certificate of Fetal Death'. We want recognition of the birth event.
2. Stillbirth and Miscarriage are two different events entirely. There is no vital records registration required when a child is miscarried. Our issue is that whenever a 'Certificate of Fetal Death' is issued - a CBRS should be offered.

On **March 11, 2005** - Larkin sent an e-mail with 2 questions.

1. Why not have the fetal death certificate and CBRS be one certificate?
2. Will there be problems with fraud for a CBRS that is left blank?

I responded:

1. Why not have the fetal death certificate and CBRS be one certificate?
Currently, the specific cause of death data placed on Fetal Death Certificate is collected by the state in order to meet CDC/National Center for Health Statistics requirements. It wouldn't be a positive recognition of the birth of a child (whether 'live' or 'stillborn') if the parent had to look at the cause of death (or the contributing factors to that cause of death) on the combination certificate. It makes sense that if the state is mandated to issue a 'death certificate' that the state should issue a 'birth certificate' as well.
2. Will there be problems with fraud for a CBRS that is left blank?
There shouldn't be. The Certificate of Fetal Death is a document containing a serialized number. That number should also be used on the CBRS so that an effective match can be made. In the vast majority of cases.. the parent that does not wish to name a stillborn child will not order a CBRS. Since the CBRS is not proof of a live birth - there should be little if any chance that it would be used in a fraudulent manner.

On **March 10, 2005** - I heard from Larkin that Senator Van de Putte was interested in signing on to SB 271 as a co-author. Also, we heard on this date that the public hearing might be on March 15th (later in the day, it was confirmed, we were set for the 15th).

On **March 9, 2005** - Larkin asked if I could provide him with the full article from the Indianapolis Star that I had previously cited - so I did. A copy of it can be found here.

On **March 7, 2005** - In thinking more about the 'issue' that Planned Parenthood had created I did some research and emailed Larkin with an idea:

Larkin,
The Indianapolis Star ran an article titled "Bill allowing birth certificates for stillbirths advances" on January 22, 2002.

In that article, Dinah Farrington, vice president of public policy for Planned Parenthood of Great Indiana, said her group would not oppose Indiana's legislation because...

"The proposed certificate would not be proof of a live birth."

If we added the language similar to that into Senate Bill 271 - would it be enough to keep them happy?

Larkin then asked if I could provide him a copy of Indiana's law - so I did:

Indiana Code 16-37-1-8.5

Certificate of birth resulting in stillbirth; required contents of certificate

Sec. 8.5.

(a) Upon request by a parent of a stillborn child, a local health officer shall provide to the parent a certificate of birth resulting in stillbirth.

(b) A certificate of birth resulting in stillbirth provided under subsection (a) must contain the following:

(1) The caption "Certificate of Birth Resulting in Stillbirth".

(2) A space for the name of the stillborn child.

(c) A certificate provided under this section is in addition to a certificate of stillbirth registration provided under section 8 of this chapter.

(d) For purposes of federal, state, and local taxes, the certificate provided under this section is not proof of a live birth.

(e) A local health department may charge the same fee for a certificate provided under this section as the fee charged for a certificate of birth registration provided under section 8 of this chapter.

(f) A certificate of birth resulting in stillbirth must be issued on tamper resistant paper.

As added by P.L.13-2002, SEC.1.

On **March 4, 2005** - I received word from Larkin that Planned Parenthood had some issues with the language in Senate Bill 271 and they were proposing changes.

Here is the language proposal I received from Planned Parenthood folks.
Your thoughts?

Thanks,
Larkin

-----Original Message-----

In 1987, Texas passed a ban on third trimester abortions if the fetus was viable. The bill amended the Medical Practice Act of Vernon's Texas Civil Statutes. Sen. Zaffirini was already a member of the Texas Senate then.

You may want to look up the entire statute, but we generally concluded yesterday that it would be best to use some of the language from that existing statute to frame the stillborn birth certificate bill. Specifically, instead of using 20 weeks or any other number, we suggest that "after viability" be used. The 1987 statute defined viability as follows:

"Viable means the stage of fetal development when, in the medical judgment of the attending physician based on the particular fact of the case, an unborn child possesses the capacity of live outside its mother's womb after its premature birth resulting from any cause. However, the term does not apply to a fetus whose biparietal diameter is less than 60 millimeters."

The 1987 bill and current statute also uses "good faith according to the physician's best medical judgment."

Our suggestion is that you consider offering a bill with that replaces the 20 week gestational age with "viability", as defined in the Medical Practice Act, determined by the attending physician acting in good faith and using his/her best medical judgement.

Carolyn and I were both shocked. After a lot of thought (and after receiving some guidance from folks I really trusted) I responded to Larkin on Saturday, March 5, 2005:

Larkin,

I've given this a lot more thought - and I'm willing to provide you alternate definitions of "stillbirth" but I am not willing to muddy our legislation with definitions of "viability".

It is certainly not my desire to put you in the awkward position of placing Senator Zaffirini in the middle of a controversial firestorm.

I have to believe my son would have wanted me to stand up for him.

Let us not hinge the availability of this certificate - a certificate that can provide comfort and help heal grieving hearts - on a doctor's decision of viability.

In looking at the law Maryland passed (link:

<http://198.187.128.12/maryland/lpext.dll/Infobase/2b8ca/2bae3/2bb38/2bc4e?fn=document-frame.htm&f=templates#LPTOC1>) I found language that I would be willing to use as a substitute:

"The Department shall make available a certificate of birth resulting in stillbirth to the parent or parents of a stillborn child for whom a fetal death was registered."

Maryland (link:

<http://198.187.128.12/maryland/lpext.dll/Infobase/2b8ca/2bae3/2bb38/2bb39?fn=document-frame.htm&f=templates#LPTOC1>), defines "fetal death" as:

"Fetal death" means death of a product of human conception, before its complete expulsion or extraction from the mother, regardless of the duration of the pregnancy, as indicated by the fact that, after the expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as heart beat, pulsation of the umbilical cord, or definite movement of voluntary muscle."

Iowa (link: <http://www.legis.state.ia.us/IACODE/2003SUPPLEMENT/144/1.html>) defines "fetal death" as:

"Fetal death" means death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy. Death is indicated by the fact that after expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. In determining a fetal death, heartbeats shall be distinguished from transient cardiac contractions, and respirations shall be distinguished from fleeting respiratory efforts or gasps."

Minnesota (link: <http://ww2.revisor.leg.state.mn.us/arule/4601/0100.html>) defines "fetal death" as:

"Fetal death. "Fetal death" means death of a product of human conception before the complete expulsion or extraction from its mother, irrespective of the duration of pregnancy, that is not an induced termination of pregnancy. The death is indicated by the fact that after expulsion or extraction, the fetus does not breathe or show any other evidence of life, including beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions. Respirations are to be distinguished from fleeting respiratory efforts

or gasps."

Could any of these definitions be used for "stillbirth" in our Senate Bill 271 - and therefore keep everyone happy? There's no mention of gestational age.

Larkin, even though my wife Carolyn spent 18 hours in pain to bring our son into this world, there was no acknowledgement of the birth of my son. The vast majority of the people I have told that to were absolutely shocked.

In working out how a parent would receive the CBRS if the stillbirth occurred before the law was enacted, we talked about the fact that having the Certificate of Fetal Death is the key - it would most likely be the 'qualifying criteria' that the state is going ask for when a parent requests a CBRS. What more would 'Planned Parenthood' ask a grieving parent to do? Track down a doctor and get his opinion on viability? What if the doctor is no longer in practice, no longer living, etc? How much more difficult must this be made to appease them? How much more grief would they have us endure?

We have come too far to have this thing turned upside-down on us now. Please - let's stay the course and try to make this happen the way we have worked so hard to have it happen. Let's leave viability out of it and make sure there's nothing 'commemorative' about it.

It's just too important to let it get screwed up.

On **February 26, 2005** - Adel, our precious daughter, died.

We learned that we were pregnant in January 2005.

We found out on February 18 that the HcG level in Carolyn's blood was rapidly falling.

We had already chosen names for this baby - and her name is Adel. It's short for Carolyn's hometown of Adelaide. Carolyn had had dreams about Adel - and she thought they were a positive sign because she had never dreamt about our other children before or after their deaths. In the last dream Carolyn had, Adel was about 8 or 9 years old, she had beautiful blonde hair, was dressed in denim overalls and she was playing outside. She looked so happy.

Adel left us at 12:15 in the morning on February 26.

We'll miss you always, Adel.

On **February 24, 2005**, Larkin sent me an email stating that Senator Zaffirini was going to request to hear SB271 (in committee) on March 8, 2005.

On **February 16, 2005**, I began reaching out to the membership of the MISS Foundation, my family, friends, and co-workers. I created a web page that included a sample letter (much like the one dated February 10 above) and the mailing address of all of the members of the Senate Committee on Health and Human Services. The money we spent on postage was well worth it. I wanted to make sure that the members of the committee were aware that there was, indeed, public support for the bill.

At this point in time - Senate Bill 271 had already been...
Received by the Secretary of the Senate (on 01/25/2005), Filed (on 01/25/2005), Read first time (on 02/03/2005), and Referred to Health & Human Services (on 02/03/2005).

It was rapidly approaching the time when a public hearing would take place - and Carolyn and I wanted to be there.

On **February 11, 2005** - Larkin responded to my February 10 email:

John,
Where does the reference in your letter to twenty weeks in other state regulations come from?

Thanks,
Larkin

I responded on the same day:

Larkin,
I'm glad you asked!
See: <http://www.cdc.gov/nchs/data/misc/itop97.pdf>

It's slightly different from state to state (and reporting area to reporting area), but the most widely accepted definition of 'Stillbirth' (a/k/a Fetal Death) is:

"Fetal death" means death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

Forty-one areas use a definition very similar to this definition, thirteen areas use a shortened definition of fetal death, and three areas have no formal definition of fetal death.

Current fetal death reporting requirements The 1992 Revision of the Model State Vital Statistics Act and Regulations (1) recommends the following reporting requirement for

fetal death:

"Each fetal death of 350 grams or more, or if weight is unknown, of 20 completed weeks gestation or more, calculated from the date last normal menstrual period began to the date of delivery, which occurs in this state shall be reported within 5 days after delivery to the (Office of Vital Statistics) or as otherwise directed by the State Registrar."

Eleven areas report all periods of gestation as a fetal death; 25 areas report gestation periods of 20 weeks or more; 13 areas specify birthweight of 350 grams or more or 20 weeks of gestation or more; 1 area specifies 20 weeks or more or birthweight of 400 grams or more; 1 area specifies 20 weeks or more or birthweight of 500 grams or more; 1 area specifies birthweight of 350 grams or more; 3 areas specify birthweight of 500 grams or more; 1 area specifies 16 weeks of gestation or more; and 1 area specifies 5 months of gestation or more.

Also on February 11, 2005 - I responded to Colin's February 9 email:

Colin,
Sorry not to have gotten back with you sooner.

If you'll give me about 2 weeks advance notice, I can pretty much be wherever you need me to be.

I'm very happy that Rep. Burnam has filed HB335, and that he has agreed to become the House sponsor for SB271 - but I'm a little concerned that the language is not quite the same.

SB271 will make it the state's responsibility to offer the Certificate of Birth Resulting in Stillbirth (instead of relying on the parent to know that it's available before the event occurs). SB271 also provides that a parent who has had a stillborn child prior to the enactment of the legislation will be able to request the certificate upon providing sufficient documentary evidence of the event.

Please let me know your thoughts.

Subsequently, I was told by Colin that any differences between House Bill 335 and Senate Bill 271 would be changed with what is known as a "Committee Substitute".

On **February 10, 2005** - I sent the following message to Larkin:

Larkin,
Per our recent telephone conversation, attached is the letter I intend to send to the Senate Committee Chairs and Members. Please review and let me know your thoughts. If something needs changing - please just let me know, okay? I just want your opinion on

how I can get this done the right way so we can be successful.
Thanks,
John

Here is the text from the letter that was attached to the e-mail:

A letter to the Senate Committee on Health and Human Services in support of SB-271, which requires the State of Texas to issue Certificates of Birth Resulting in Stillbirth (CBRS) to the parent of a stillborn child if the parent so requests.

February 10, 2005

The Honorable Jane Nelson
P.O. Box 12068
Capitol Station
Austin, Texas 78711

The Honorable Kyle Janek
P.O. Box 12068
Capitol Station
Austin, Texas 78711

Dear Committee Chair Nelson and Committee Vice Chair Janek,

We write today to urge your support for Senate Bill 271 (SB-271), introduced by Senator Judith Zaffirini (D-Laredo). Under this bill, parents whose children are stillborn would be given the option to receive a "Certificate of Birth Resulting in Stillbirth".

Your consideration of this legislation sends a message of hope and compassion for bereaved parents who suffer the devastating loss of a child by stillbirth. Current state policies mandate that when a woman loses a child after 20 weeks of gestation, even though in the vast majority of cases she will have to endure the physical and emotional pains of childbirth, the only certificate available to the parents is a "Certificate of Fetal Death".

By officially acknowledging our stillborn children in a positive manner, our state will provide a level of comfort and support that has been missing. However briefly, our state's stillborn children lived and died. Even in death, all of these children very much matter to all those who continue to love them, continue to grieve for their loss, and continue to wish to honor their memory.

We respectfully request your "YES" vote on SB-271.

Sincerely,

John & Carolyn Nevels

cc: Members, Senate Committee on Health and Human Services

On **February 9, 2005** - I received this message from Colin Leyden (Representative Burnam's aide):

As you are probably aware, Senator Zaffirini and Rep. Burnam have both filed the same legislation to establish a certificate of birth resulting in stillbirth. Our bill has been referred to the Public Health committee in the House of Representatives. We will request a hearing, and need to line up our witnesses to testify for the bill. What is your availability for testifying on behalf of the bill?

Senator Zaffirini will also be moving her bill through the Senate process. Rep. Burnam has agreed to defer to the Senator's bill, at which time he would become the House Sponsor for her bill, if and when it makes it over to the House. We feel it is important to keep the separate bills moving through both chambers, just to be sure. Please call when you get the chance so we can discuss further.

Thanks,
Colin Leyden

On **January 25, 2005** - I received this message from Larkin:

Today, Senator Zaffirini filed SB 271, which requires the State of Texas to issue Certificates of Birth Resulting in Stillbirth (CBRS) to the parents of a stillborn child if the parents so requests.

I'll be in touch.

Thanks,

Larkin Tackett
Legislative Director
Senator Judith Zaffirini

A copy of Senate Bill 271 - as it was first introduced - can be found **HERE**. (Adobe Acrobat Reader may be required).

Subsequently, I asked Larkin what I should be doing next. He suggested that I send a brief letter to each of the Senate Health & Human Services Committee members - asking them for their support on Senate Bill 271. It was also suggested that I have friends and colleagues do the same.

On **January 24, 2005** - after discussing some of the above issues with Joanne Cacciatore, I sent Larkin the following:

Here's something I just learned this from the founder of the MISS Foundation in Arizona (Joanne Cacciatore - who pioneered this legislation there) and wanted to pass it to you: "we've never experienced a circumstance in Arizona where a parent requested a CBRS and did NOT name their child at time of birth. **Never.** Never since 2001 and more than 2,000 CBRS issued."

On **January 21, 2005** - I sent the following comments to Larkin so that he could work with the DSHS and reach a consensus before filing:

Define it however it needs to be defined - but the certificate should remain titled "CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH". It is of paramount importance that the words "Certificate of Birth" are in the title of this certificate. Anything else (or anything less) is a Death Certificate - and that is **not** what I want.

If they give it the title "Certificate of Stillbirth" - that's a definite deal-breaker (as stated above). Moving on to the certificate 'name amending' thing... Make no mistake; the birth of my son - the event itself - was tremendously emotional and difficult. I can fully appreciate and understand why parents may not want to name their child at the time of the birth. My opinion is that if a parent did not have the desire (or emotional wherewithal) to name his or her child at the time of the birth, but now, months or years later they wish to do so, (regardless of whether or not they are trying to obtain a CBRS), the state should do **whatever it takes** to make it possible for a parent to name their heretofore un-named child. I'm relatively confident that the beneficial psychological aspects of naming a child are documented.

On **January 19, 2005** - Larkin sent me the following from the DSHS:

Here are the agency comments:

Sec. 192.0022 (b) (2) and (3) - References to Bureau of Vital Statistics - should be changed to reflect the new name under the Texas Department of State Health Services as "Texas Department of State Health Services Vital Statistics Unit."

Sec. 192.0022 (a) - Definitions on "stillbirth" - the definition in the draft bill may conflict with the National Center for Health Statistics (NCHS) definitions for "live birth" versus "fetal death or stillbirth." These NCHS definitions have been adopted by the World Health Assembly and are recommended for use in the United States. I have a copy of these definitions and will fax them to you separately. As Senator Zaffirini moves forward on this bill, DSHS staff will continue to research the definitions.

Sec. 192.0022 (c) - Name on Certificate of Stillbirth - because it would be necessary to corroborate prior stillborn deaths through existing fetal death certificates, any name placed on the "certificate of birth resulting in stillbirth" would need to be the same name

indicated on the fetal death record. According to the Vital Statistics staff, many of the past fetal death registrations do not have names listed. If the requesting parents want a name listed where no name currently exists, then The fetal death record would have to be amended. It is important that the "certificate" be linked to the fetal death record so there can not be different names on both documents. Parents should only be able to supply a name at the time of the fetal death or if no exists on a previously filed fetal death record.

On **January 7, 2005** - Representative Lon Burnam filed House Bill 335. I found this strange and interesting. It was an almost identical copy to the first draft that Larkin had sent to me back in November - but no other changes had been made to it. I was later told by Larkin that this would be okay - and we had little to worry about.

On **January 6, 2005** - I was sent yet another draft to review and comment on. The text is transcribed below - but you can also access it by clicking **HERE**. (Microsoft Word may be required).

A BILL TO BE ENTITLED
AN ACT

relating to the issuance of a certificate of birth resulting in stillbirth on request of a parent.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:

SECTION 1. Subchapter A, Chapter 192, Health and Safety Code, is amended by adding Section 192.0022 to read as follows:

Sec. 192.0022. CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH.

(a) In this section:

- (1) "Stillbirth" means an unintended, intrauterine fetal death occurring in this state after a gestational age of not less than twenty completed weeks.
- (2) "Certificate of birth resulting in stillbirth" means a birth certificate issued to record the birth of a stillborn child.

(b) The person who is required to file a fetal death certificate under Section 193.002 shall advise the parent or parents of a stillborn child:

- (1) that a parent may, but is not required to, request the preparation of a certificate of birth resulting in stillbirth;
- (2) that a parent may obtain a certificate of birth resulting in stillbirth by contacting the bureau of vital statistics to request the certificate and paying the required fee; and
- (3) regarding the way or ways in which a parent may contact the bureau of vital statistics to request the certificate.

(c) A parent may provide a name for a stillborn child on the request for a certificate of birth resulting in stillbirth. The person who prepares the certificate shall leave blank any references to the stillborn child's name if the requesting parent does not wish to provide a name.

(d) The department shall prescribe the form and content of a certificate of birth resulting

in stillbirth and shall specify the information necessary to prepare the certificate.

(e) A parent may request the bureau of vital statistics to issue a certificate of birth resulting in stillbirth without regard to the date on which the fetal death certificate was issued.

(f) The executive commissioner of the Health and Human Services Commission may adopt rules necessary to administer this section.

SECTION 2. Not later than the 60th day following the effective date of this Act, the bureau of vital statistics of the Department of State Health Services shall prescribe the form and content of a certificate of birth resulting in stillbirth and specify the information necessary to prepare the certificate as required by Section 192.0022, Health and Safety Code, as added by this Act.

SECTION 3. A parent may request the bureau of vital statistics of the Department of State Health Services to prepare and issue a certificate of birth resulting in stillbirth without regard to whether the fetal death occurred on, before, or after the effective date of this Act.

SECTION 4. This Act takes effect September 1, 2005.

It was perfect. The only thing was - Larkin wanted to make sure that the DSHS completely agreed with the language in the bill before it would be filed in the Senate.

On **January 4, 2005** - Larkin wanted to make sure that I was okay with the renaming of the certificate from "Birth Certificates for Birth Resulting in Still Birth" (BCBRS) to "Certificates of Birth Resulting in Stillbirth" (CBRS). My response was affirmative - but I reminded him that anything less would not be acceptable.

On **January 3, 2005** - I was send a another draft to review and comment on. The text is transcribed below - but you can also access it by clicking **HERE**. (Microsoft Word may be required).

A BILL TO BE ENTITLED
AN ACT

relating to the issuance of a birth certificate for a birth resulting in stillbirth on request of a parent.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:

SECTION 1. Subchapter A, Chapter 192, Health and Safety Code, is amended by adding Section 192.0022 to read as follows:

Sec. 192.0022. BIRTH CERTIFICATE FOR A BIRTH RESULTING IN STILLBIRTH.

(a) In this section, "stillbirth" means an unintended, intrauterine fetal death occurring in

this state after a gestational age of not less than twenty completed weeks.

(b) The party responsible for filing the fetal death certificate pursuant to Sec. XX shall advise the parent or parents of the stillbirth of all of the following:

(1) That they may request preparation of a birth certificate for a birth resulting in stillbirth.

(2) That preparation of the certificate is optional.

(3) How to obtain a certified copy of the certificate if one is requested and prepared.

~~) A parent may request the bureau of vital statistics to issue a birth certificate for a birth resulting in stillbirth.~~

(c) A parent may provide a name for a stillborn child on the request for a birth certificate for a birth resulting in stillbirth submitted under Subsection (b). The person who prepares the certificate shall leave blank any references to the stillborn child's name if the requesting parent does not wish to provide a name.

(d) The department shall prescribe the form and content of a birth certificate for a birth resulting in stillbirth and shall specify the information necessary to prepare the certificate.

(e) Any parent in possession of a fetal death certificate issued prior to the effective date of this Act may request a birth certificate for a birth resulting in stillbirth pursuant to this section.

(e) The executive commissioner of the Health and Human Services Commission may adopt rules necessary to administer this section.

SECTION 2. Not later than the 60th day following the effective date of this Act, the bureau of vital statistics of the Department of State Health Services shall prescribe the form and content of a birth certificate for a birth resulting in stillbirth as required by Section 192.0022, Health and Safety Code, as added by this Act.

SECTION 3. This Act takes effect September 1, 2005.

It met every expectation.

On **December 20, 2004** - I heard back from Larkin - he had feedback from DSHS and wanted to know if I had any questions:

Here are the initial thoughts from DSHS staff:

Basically, there is not any concern about giving parents information about the availability of a certificate at the time of stillbirth from the time of enactment of such legislation. This would be conducted by the hospital and/or funeral home staff as part of the other information the parents receive about the stillborn fetal death certificate. Information could be included in the training materials and process that are conducted by DSHS. Giving them information about the availability of a special certificate may, in fact, provide some measure of solace. However, there is concern that going back to parents whose stillbirth occurred five years ago is not the same situation at all.

As for the retroactive availability of the certificate or "grandfathering"...The grandfathering concept sounds good in principle, but program and legal staff view this as potentially problematic and recommend against inclusion in the bill language. How will parents of stillborn children know about this after the fact? If DSHS is mandated to contact them, there is concern that this would likely result in the reopening of old wounds and a lot of unintended heartache. This could create some unneeded ill will between the

State and these parents. Yet, we understand that there are some parents who would want this certificate regardless of the time that has passed.

And if DSHS is required to do a mass notification, it would obviously increase our short-term expenses and effort. Due to the nature of how records of fetal death certificates have been kept in Texas over time...if this bill is retroactive, it will be labor intensive and time consuming to produce a certificate of birth that resulted in a stillbirth if there was a large demand from years past. There is concern that requiring an affirmative notification of a parent of the availability of a certificate who experienced a stillborn birth prior to the enactment of the law could present some logistical and resources burdens, not to mention potential heartache for the parents. In addition, many of the fetal death registrations do not have names; and would also have to be amended for names to be added. If a fetal death certificate indicates a name, such as "Baby Smith," then program staff recommends that the name be the one used on a still birth certificate. It would be necessary to corroborate prior stillborn deaths through existing records. Please note the interesting facts regarding the registration of Texas fetal death certificates:

- * Fetal death registration begin in 1924 to the present
- * Years 1925, 1928 through 1931-no records located
- * From 1924 through 1988 (213,589 records)-no indices for retrieval (have to manually search each record) and no microfilm or electronic images
- * From 1989 to present (36,995 records as of December 2, 2004) These records also have not been imaged or microfilmed and there is only an limited abstracted database for these.

If Sen. Zaffirini wants to accommodate this request, we think the safest course of action is to simply create within the legislation the right of a parent to request a stillborn certificate for a stillborn event prior to the effective date of the bill, but not impose any obligation on the State or anyone else to affirmatively publicize this option beyond putting the information on our website. This is, of course, assuming we can corroborate a prior stillborn death.

On the same day - I sent the following response to Larkin:

Overall, I believe their feedback is positive. I'm pleased that the parents will be told of the availability of the certificate at the time of the stillbirth (this is still something that I want 'written' into the legislation, though, it's too important to leave out).

I fully understand their concerns with regards to 'grandfathering'. I absolutely agree with the last paragraph where they state that the best course of action is to "simply create within the legislation the right of a parent to request a stillborn certificate for a stillborn event prior to the effective date of the bill, but not impose any obligation on the State or anyone else to affirmatively publicize this option beyond putting the information on our website."

By the way - do we have any idea what the DSHS will require from the parents to corroborate the stillbirth of their child in order to receive the 'BIRTH CERTIFICATE FOR A BIRTH RESULTING IN STILLBIRTH'? All we have from the state is our son's Certificate of Fetal Death.. will that be enough?

Okay... what's next?

On **November 29, 2004** - I received by e-mail the first draft of the legislation for my personal review. It had not been made public - and it had not yet been filed. The text is transcribed below - but you can also access it by clicking **HERE**. (Microsoft Word may be required).

A BILL TO BE ENTITLED
AN ACT

relating to the issuance of a birth certificate for a birth resulting in stillbirth on request of a parent.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:

SECTION 1. Subchapter A, Chapter 192, Health and Safety Code, is amended by adding Section 192.0022 to read as follows:

Sec. 192.0022. BIRTH CERTIFICATE FOR A BIRTH RESULTING IN STILLBIRTH.

(a) In this section, "stillbirth" means an unintended, intrauterine fetal death occurring in this state after a gestational age of not less than twenty completed weeks.

(b) A parent may request the bureau of vital statistics to issue a birth certificate for a birth resulting in stillbirth.

(c) A parent may provide a name for a stillborn child on the request for a birth certificate for a birth resulting in stillbirth submitted under Subsection (b). The person who prepares the certificate shall leave blank any references to the stillborn child's name if the requesting parent does not wish to provide a name.

(d) The department shall prescribe the form and content of a birth certificate for a birth resulting in stillbirth and shall specify the information necessary to prepare the certificate.

(e) The executive commissioner of the Health and Human Services Commission may adopt rules necessary to administer this section.

SECTION 2. Not later than the 60th day following the effective date of this Act, the bureau of vital statistics of the Department of State Health Services shall prescribe the form and content of a birth certificate for a birth resulting in stillbirth as required by Section 192.0022, Health and Safety Code, as added by this Act.

SECTION 3. This Act takes effect September 1, 2005.

Later that evening - after having had some time to review - I sent my concerns to Larkin Tackett:

Thanks for allowing me the opportunity to look this over. The language in this bill draft is a huge step in the right direction, but I think something is missing. Unless parents know that the certificate exists - they will not ask for it. Somewhere in the chain of events that occurs when a parent's baby dies to stillbirth - the parent needs to be told that this certificate has been made available for them. Somehow we need to mandate that hospitals (and/or funeral directors) educate their employees in order to ensure compliance with this new law. In some states where the education hasn't been mandated, the parents don't know that the state has made the certificate available to them until they find the information on a website somewhere.

Changes:

1. Let's strike the whole 'on request of a parent' thing. Lines 11 and 12 on Page 1 bug me. I would like it to be made MANDATORY that the parent be offered the opportunity to receive the Certificate of Birth Resulting in Stillbirth (BCBRS). The parent or parents should be offered the option to receive the BCBRS at the same time that the information for the Fetal Death Certificate is being gathered (presumably by the "person in charge of interment or in charge of removal of a body from a registration district for disposition" - because in the state of Texas, that's who is responsible for obtaining and filing a fetal death certificate).

Wisconsin's legislation includes this:

"...the party responsible for filing the fetal death report under s. 69.18(1)(e)1. shall advise the parent or parents of the stillbirth of all of the following:

- (a) That they may request preparation of a certificate of birth resulting in stillbirth.
- (b) That preparation of the certificate is optional.
- (c) How to obtain a certified copy of the certificate if one is requested and prepared."

Arizona's legislation includes the sentence:

"THIS CERTIFICATE SHALL BE OFFERED TO THE PARENT OR PARENTS OF A STILLBORN CHILD."

It's all about the word 'shall' - and I think it makes a huge difference.

2. I would like the Certificate of Birth Resulting in Stillbirth to be "grand-fathered" and made available to all the parents of stillborn children whose birth/death occurred BEFORE this legislation becomes law.

Wisconsin's legislation includes this:

"...if a birth that occurred in this state at any time resulted in a stillbirth for which a fetal death report was required under s. 69.18 (1)(e) 1. but a certificate of birth resulting in stillbirth was not prepared under sub. (2), a parent of the stillbirth may, on or after August 1, 2004, submit to the state registrar a written request for preparation of a certificate of birth resulting in stillbirth and evidence of the facts of the stillbirth that is satisfactory to the state registrar. The state registrar shall prepare and file the certificate of birth resulting in stillbirth within 30 days after receiving satisfactory evidence of the facts of the stillbirth."

3. With regards to lines 19 through 21 on Page 1 and lines 4 through 9 on Page 2, I know that there have been some issues in other states, most notably in South Carolina, where the form and content of the certificate was completely left to the discretion of the state (without input from parents, the true stakeholders) and in those cases, the parents were extremely disappointed when they received something that looked more akin to a fast-food receipt than a state-issued birth certificate. I'd like it very much if we could work together to provide parents what they would like.

Please let me know if you have any questions regarding the changes I'm asking for.

On **November 17, 2004** - I received official word that Senator Zaffirini had agreed to carry the bill.

Today is **November 3, 2004**. In the month of October, we made some significant progress. I've been in contact with hundreds of folks here in Texas - and I have asked them to tell their legislators that they fully support the 'MISSing Angels' legislation that Representative Burnam and Senator Zaffirini are considering.

By the way, if you live in Texas, and would like your legislators to know what's on your mind - regarding the MISSING Angels legislation or anything else - find out who represents you by clicking on the link below:

Who Represents Me? -- Districts By Address

Mr. Tackett and I have been in constant contact. I've also kept Mr. Colin Leyden (Representative Burnam's Legislative Aide) informed of the progress that is being made.

Yesterday, on a conference call with representatives from Department of State Health Services, Mr. Tackett gave me the opportunity to speak on why I was proposing the legislation. I can't say that all of the DSHS participants in the conference call really understood what it was I was asking for.

We are asking that Texas do something more - and that 'something more' is simply this: Under Texas Law, when a certificate of fetal death is required to be filed - and the child was stillborn - the parents will be offered the opportunity to receive (and subsequently pay for) a 'Certificate of Birth - Resulting in Stillbirth'. It really is that simple.

I'm confident that we're making steps in the right direction.

I'd like to say "THANKS!!" to everyone for hanging in there - and helping me to do this. I should have some more news to report in the days ahead.

On **September 24, 2004**, Mr. Tackett and I spoke on the phone. I was told that Senator Zaffairini was very interested in the legislation. Saturday evening, Carolyn and I spent a few hours putting together a packet of information for the Senator, and we'll be mailing it out to Austin on Monday morning, September the 27th.

On **September 23, 2004**, I received the following e-mail:

John & Carolyn,

My name is Larkin Tackett and I'm the Legislative Director for State Senator Judith Zaffirini. I've just recently joined Senator Zaffirini's staff and came across your work on the MISSING Angels bill. I would very much appreciate the opportunity to discuss this issue with you as we are currently compiling our legislative package for the 2005 Session.

Please give me a call or email at your earliest convenience.

Thanks,

Larkin Tackett
Legislative Director
Office of Senator Judith Zaffirini, 21st District
512.463.0121 (o)
512.475.3738 (f)
larkin.tackett@senate.state.tx.us

Today is **March 19, 2004**.

It's been a long time since my last update - sorry about that.

I've since met with the State Representative who represents the district I've worked in for the past 5 years. His name is Lon Burnam.

His Legislative Director in Austin, Colin Leyden, recently wrote:

"At this point it is on track to be part of our legislative package for the 79th session. All ideas for legislation will still be reviewed for final approval by our District 90 Legislative Committee."

"The legislature does not convene until January of 2005. Our final decisions for our legislative package will not happen until probably towards the end of this summer into early fall. You have been an effective advocate for the legislation. At this point, I don't see any reason why it won't end up as part of our final package. However, I will certainly let you know ASAP if it did not - to allow you time to "shop" the bill elsewhere. Please keep me updated with any developments of similar bills across the nation."

During our meeting, Representative Burnam seemed genuinely interested in introducing this legislation - and doing so in a manner that would make it clearly bipartisan.

As his Legislative Director requested, I've been keeping them updated on Missing Angels legislation across the country.

Today is **October 10, 2003**.

I've received an e-mail from my Representative's office - and the news isn't good.

The Representative's Chief of Staff wrote:

"In all truth, I can not offer you a lot of encouragement at this time as to her offering legislation in this regard. Her opinion seems to be that birth certificates are to be used for statistics and not memorials. She understands and certainly sympathizes with you and your wife."

The hope that Representative Anna Mowery had been giving us - was crushed.

So,... now I'm 'shopping' for a better, "kinder gentler" bill author - and I hope to know something soon. With Texas' continuing redistricting mess - and the next regular legislative session being so far away - I understand that this is going to be a slow, arduous process.

Keep checking back. This is Texas.. you never know what might happen.

Today is **October 2, 2003**.

So much has happened with our personal lives - and - in so short a time.

At the end of July (right around the time I last updated this site) Carolyn and I found out that we were pregnant. Cautiously optimistic, we began to prepare for the arrival of Bump's little brother or sister. On September 3rd, during a routine ultrasound examination, Carolyn and I learned that at just shy of 11 weeks gestational age, our baby's heart was no longer beating.

Although it was actually too early in the pregnancy to determine gender, we'd always thought of this baby as a girl and we decided to name her Skye. We're doing better day by day. Slowly, we're learning to deal with this new kind of grief. The messages of sympathy and support that we have received have been awesome. It means so much to us that so many kind people have kept us - and our children - in their thoughts.

From the bottom of our hearts - thank you all.

On **September 9, 2003**, the Governor issued yet another proclamation.

Yep, Congressional Redistricting is back on the agenda again (among other important topics). I haven't been in contact with Representative Mowery's aides in quite awhile. With all this "redistricting stuff" going on, it just seems a little pointless. Once this third special session is over (and it looks like Representative Mowery might be spending some amount of time in her district office) then I will be in contact.

Here we go again... today is **July 30, 2003**.

On July 28, Texas Governor Rick Perry issued yet another proclamation calling for a second special session to consider congressional redistricting.

The "very partisan environment" continues to unfold - and there is no end in sight.

I am still in regular contact with Representative Mowery's aides in Austin and Fort Worth. They have assured me that I will have a chance to speak with the Representative at the earliest possible moment.

I can only speculate that our meeting will take place sometime in later part of August.

Silently, our son came into this world on August 1, 2002. For me, it's hard to believe that nearly one year has passed... we'll always remember and miss you, Bump.

Today is **June 27th, 2003**.

On June 21, Texas Governor Rick Perry issued a proclamation calling the legislators back to Austin (starting June 30th) for a special session to "consider legislation relating to congressional redistricting."

I've since been in contact with Representative Mowery's office. Upon the completion of the special session (which has no set 'completion date') and prior to the Representative taking a leave of absence for a much-needed vacation, they have promised to set aside a block of time for us to visit her in the district office (in Fort Worth) and talk about a MISSING Angels Bill for Texas.

I think we're on the right track.

On **June 6, 2003**, I e-mailed (in part) the following to Representative Mowery's aide:

Once upon a time, you wrote: "If for some reason we are not able to get it passed this session, please contact us well before the next session starts and we can begin to work on it before the session starts."

I have a couple of questions. How soon can we begin working on this legislation, and, is Representative Mowery still interested in authoring and sponsoring it?

Thanks and Best Regards,

John Nevels, II
Proud Father to Bump Nevels
{Born Sleeping 8/1/2002}

Long story short, Representative Mowery is expecting to be called back to Austin for a special session.

I truly believe that her aide is NOT going to let her forget about the Texas MISSING Angels Bill.

This is due, in part, to that fact that I'm not going to let her aide forget about the Texas MISSING Angels Bill!

I'll keep you posted.

On **June 2, 2003**, the 78th Legislature 'Regular Session' ended. Not at all surprising to those familiar with the very partisan environment that unfolded during this session, the 'MISSing Angels Bill' was not formally introduced.

Indeed, we 'came to the table' too late.

Some may see this as a defeat, but this 'battle' has only just begun. With 'courageous patience', I assure you, this will be done.

On **May 22nd through the 24th 2003**, Carolyn and I attended The M.I.S.S. Foundation's annual "Passages" conference for 2003. "Fulfilling",... "thought-provoking",... "healing",... "refreshing". These are the words that come instantly to our minds when thinking of how much the conference meant to us. A special "THANK YOU!" goes out from us to all those who sponsored, attended, and publicized this event.

Kara L.C. Jones (writer, poet, publisher and friend) posted her account of the event, "A Bereaved Parent in Context: "Rising from the Ashes..." on The M.I.S.S. Foundation's Seattle Chapter's website.

On **May 1, 2003**, through e-mail correspondence, I learned from an aide in Representative Mowery's office that one of the Senators had expressed an interest and had planned to offer this as an amendment to one of the existing bills; however, when the bill came out, it did not have the amendment on it."

Subsequently, when I asked the aide if I had any "real" chance this session, I was told:

"As much as I'd like to say yes, there is not much of a chance this session. We got started too late and they are debating budget, ethics, etc. which is of primary interest to all of them now and they don't seem to be making much headway. I wish I could be more positive."

On **April 21, 2003**, I wrote a brief letter to each of the above asking for their support. The text of the letter follows:

Senator/Representative _____,

My name is John Nevels, II - I am the father of Bump Nevels, my only child, who was stillborn on August 1, 2002.

Recently, Representative Anna Mowery contacted your office with regards to adding a "Missing Angels" amendment to Senate/House Bill _____.

This amendment would allow for the issuance of a "Certificate of Birth Resulting in Stillbirth".

Please give the "Missing Angels" amendment proposal a close look - and then, please help to give our mothers in the State of Texas the recognition that they deserve.

Respectfully,

John Nevels, II
Proud Father of Bump Nevels
(Born Sleeping on August 1, 2002)

On **April 9, 2003**, Representative Mowery wrote me the following response:

Dear Mr. Nevels:

Thank you for your fax with bill numbers of possible germane legislation now pending. This was of tremendous help.

I have sent a copy of your original letter to each of the bill authors with a suggestion they offer an amendment to the bill which they have authored in the respective Houses.

I will let you hear from me as soon as I receive a reply from them.

Sincerely,
Anna Mowery

For the record:

House Bill No. 1353 was authored by State Representative Carlos Uresti,
House Bill No. 2990 was authored by State Representative Jaime Capelo,
Senate Bill No. 1553 was authored by Senator Kyle Janek, and,
Senate Bill No. 1744 was authored by Senator Judith Zaffirini.

On **March 31, 2003**, I received a phone call from Representative Mowery during which she informed me that in Texas, we were more than halfway through our current legislative session (which only meets once

every two years). We 'came to the table' too late to author and submit a "MISSing Angels Bill" all by itself. Representative Mowery assured me that she would look for existing legislation that might be germane (related to) the "MISSing Angels Bill". The idea is that the language contained in Arizona's "MISSing Angels Bill" could be written as an amendment and attached to the pre-existing and somewhat relative legislation.

After consulting with some well-respected colleagues, I did a little research on pending legislation and faxed Representative Mowery the following:

April 4, 2003

State Representative Anna Mowery
Texas House of Representatives
Capitol Office
Room CAP 1N.05
P.O. Box 2910
Austin, TX 78768

Representative Mowery,

Once again, thank you for your phone call last Monday afternoon.

I hope I'm not being too forward, but after doing some research, I believe that I may have found some bills that are germane to the "Missing Angels" legislation that I am requesting.

The bills that I've found are:

House Bill No. 1353
House Bill No. 2990
Senate Bill No. 1553
and
Senate Bill No. 1744

Please let me know what your thoughts are to amending one of these bills to include the "Missing Angels" language.

Respectfully,

John Nevels, II
Proud Father of Bump Nevels
(Born Sleeping on August 1, 2002)

On **March 24, 2003**, I sent a written letter to Texas State Representative Anna Mowery. The following is the text of that letter:

The Honorable Representative Anna Mowery
Texas House of Representatives

6421 Camp Bowie Blvd. #310
Fort Worth, Texas 76116

Dear Representative Mowery,

Texas' mothers, parents and families are in need of your help. As a registered voter and a constituent in your district, I ask that you please take a little time and consider what I am about to share with you.

Let me start by telling you about my wife Carolyn, and the birth of our son, Bump Nevels.

In mid-January 2002, Carolyn and I were overjoyed to learn that we were pregnant with our first child. Although having a child is meant to be one of the happiest things that can happen in one's life, our pregnancy ended abruptly in complete devastation. On July 30th, during a routine prenatal non-stress test, we discovered that our son's heart was no longer beating. He was no longer alive. It's important for me to convey to you that during our pregnancy Carolyn never drank alcohol, she didn't smoke, and she didn't endanger our son in any 'way, shape or form'. We followed our doctor's advice at every turn and regardless of our doing the 'right things', our son was dead. Our doctor prescribed medication that would induce labor on the 31st of July and after Carolyn endured natural childbirth for 18 long hours - she delivered our son on August 1, 2002.

'Stillbirth protocols' at hospitals, or the lack of them, dictate if the parents will be given mementos such as the 'crib-card' or the wrist and ankle bands associated with the birth of their baby. Parents of stillborn babies go home with empty arms and broken hearts. It's easy to understand how any 'tangible item' from these tragic events can be considered important in the bereavement process.

In those mind-numbing and surreal hours in the labor and delivery room after our son was born, we were asked what official name we'd like to give our son. We were then told that we would have to make a decision - our son would have to be buried or cremated. Within a few days of his delivery, we received an official 'Certificate of Fetal Death' along with our son's cremains (ashes) from the funeral home.

The most perfect and natural case of 'adding insult to injury' has to be this: Carolyn's body was still producing milk for our son nearly a full month after we had him cremated.

The second most perfect case of 'adding insult to injury' has to be this: Shortly after picking up Bump's ashes from the funeral home, we were shocked to learn that there would be no 'Birth Certificate' from the State of Texas - since there are no provisions for them 'by law', it's simply 'not done'.

Carolyn endured the physical pain of natural childbirth alone - as all mothers must do. I would have suffered that pain for her if it were scientifically possible - but it's not. Together, my wife and I have learned to live with the emotional trauma of our son's death. I think we've come a long way, but we still don't understand why the State of Texas, by omission, refuses to officially acknowledge the birth of our son.

I am asking you to support a 'Missing Angels Bill' for the State of Texas. Under this bill, parents who lose a child after 20 weeks of gestation would be given the option to receive a "Certificate of Birth Resulting in Stillbirth". As of this letter, Texas would be the 6th state to adopt such meaningful legislation as Arizona, Utah, Indiana, Massachusetts, and Michigan have already enacted 'Missing Angels Bills' into law.

According to The Texas Department of Health, Bureau of Vital Statistics 2001 Annual Report Summary, the number of fetal deaths (stillbirths) increased from 2,150 in 2000 to

2,315 in 2001. It is my hope that Texas will quickly rise to the occasion, follow Arizona's lead, and meet the expectations of bereaved parents who suffer such devastating losses. Perhaps one day the state will deem it appropriate to acknowledge my son Bump, and all of Texas' stillborn children. The fact is: they lived, they died, and that - even in death, all of these children very much matter.

I have enclosed four pages of information regarding Arizona's "Missing Angels Bill" for your review. I will contact your office for an appointment to meet with you regarding this, or if you have any further questions prior, you may contact me at either of the above phone numbers. Thanks for all that you do to help Texas families and we appreciate your attention to this important issue.

Respectfully,

John Nevels, II
Proud Father of Bump Nevels
(Born Sleeping on August 1, 2002)

P.S. A great number of people, at home and abroad, have shown their support in getting a Missing Angels Bill passed in Texas (and beyond). I encourage you to view two online petitions that I've created. They are located at:
www.PetitionOnline.com/bn812002 and www.PetitionOnline.com/4ourkids
I hope you will allow me some 'latitude' if you feel that the language on these petitions seems hostile towards legislators in general. Anger has often been identified as one of the many stages of grief; please be assured that I'm learning to better deal with it.
Thanks again.

Arizona House Bill 2416 – Certificate of Stillbirth Fact Sheet

What is the definition of “stillbirth?”

Stillbirth is the intrauterine death of an infant that occurs after the 20th week of pregnancy. (A miscarriage is an intrauterine death prior to 20 completed weeks.) Following its death the mother **must still deliver her baby**. Most stillbirths occur at or near full term.

How are stillbirths recorded in Arizona?

Prior to HB 2416 the Registrar of Vital Records issued only a “*Certificate of Fetal Death*”. This is the only record of the birth the family was able to receive. At the behest of The MISS Foundation the Arizona Legislature in 2001 enacted “The Missing Angels Bill”. It requires the Arizona Department of Health and Human Services to issue a “*Certificate of Birth, Resulting in Stillbirth*”.

How many stillbirths occur every year?

According to the ADHS website, in 1999 there were 682 stillbirths in Arizona. It is estimated 26,000 stillbirths occur nationwide every year, almost as many as there are highway fatalities! Accurate numbers are unknown due to the manner in which stillbirths are recorded. For one, **stillbirths are not included in infant mortality rates**, thereby substantially understating the extent of the problem. As a consequence of this lack of information neither couples nor the general public are aware of the true risks involved. If they were we believe there would be a hue and outcry for medical research to find the answers.

Why do stillbirths occur?

Only 40% of all stillbirths can be attributed to a specific cause such as a cord “accident”, placental problem, malformation, etc. The remainder are said to be due to “undetermined medical reasons”. Crack mothers can have normal babies and Norman Rockwell mothers can have stillborn babies. There is no identifiable socio-economic, ethnic, lifestyle or behavioral predictor that can be identified at this point. Stillbirth is truly an “Equal Opportunity” destroyer of dreams. Every woman who conceives is at risk when one considers that **1 in every 115 births is a stillbirth.**

House Bill 2416 benefits Arizona families in the following ways:

1. **Standardized statistical benefits:** Issuing Birth Certificates for stillbirths will allow clear definitions for accurate statistical analysis and enhanced understanding of stillbirth. It will also allow for better clarity in classification.
2. **Heightened sensitivity:** Feelings of inadequacy among women who experience the simultaneous death and birth of their stillborn infant can be devastating. Issuance of a Certificate of Stillbirth recognizes the reality that a physical birthing occurred and validates their “motherhood”.
3. **Consistency in the law:** The family of a stillborn infant is required by law to bury or cremate their child, despite the fact there was no acknowledgement by the state prior to HB 2416 that this infant they were obliged to dispose of had even been “born”.
4. **Common Sense:** Parents of a baby delivered prematurely at 21 weeks who takes just one breath before dying, are given a Certificate of Birth. Parents of a 10-pound baby whose heart stopped beating just minutes prior to delivery, do not receive a Certificate. This inequity has now been remedied by the passage of HB 2416. It is the first step toward solving the mystery of why babies unexpectedly die in their mother’s womb, by simply recognizing the event. “*Passing HB2416 was the right thing to do and long overdue*”, according to Governor Hull, who spoke those words at the Bill signing earlier

Arizona House Bill 2416 – Certificate of Stillbirth Fact Sheet

What is the definition of “stillbirth?”

Stillbirth is the intrauterine death of an infant that occurs after the 20th week of pregnancy. (A miscarriage is an intrauterine death prior to 20 completed weeks.) Following its death the mother **must still deliver her baby**. Most stillbirths occur at or near full term.

Medically speaking, stillbirth is the death of a baby in it's mother's womb, after 20 weeks gestational age up to the moment of delivery.

Stillbirth is unpredictable and random, and often strikes like lightning in a thunderstorm. There is no way to know if or when or where it will strike next. The reason it is unpredictable is because half to two-thirds of all stillbirths occur for indeterminable reasons, and cannot be attributed to a specific identifiable medical cause.

Because of it's randomness, and the lack of any warning, stillbirth is said to be "an equal opportunity destroyer of dreams". It cuts across socio-economic classes, races, religions, body types and maternal age groups. No woman is immune from this "last great mystery of obstetrics." Even women who have had several successful prior births can experience a subsequent stillbirth.

That so many stillbirths occur at or near late term- when the developing baby is well beyond the point of viability and could survive outside the womb- is especially devastating, leading mothers and their doctors to speculate what might have been had their baby been delivered earlier.

Autopsies, when performed, rarely uncover any cause of stillbirth not already apparent from physical examination of the baby and placenta. There is no uniform stillbirth post-mortem (autopsy) protocol in use today anywhere in America. Every autopsy is done according to local practice. Because of that there is no uniform data available for analysis. When a post-mortem procedure is performed, it is rare for the mother to be interviewed, in spite of the fact she may have vital clues to her baby's cause of death. A uniform protocol would address this shortcoming.

Mothers who suffer a stillbirth do not receive recognition in 44 of 50 states. Only Arizona, Utah, Indiana, Iowa, Kentucky and Massachusetts give these mothers a Certificate of Birth Resulting in Stillbirth. Birth is a process, live or dead is a result. Why would any state issue a "Certificate of Live Birth" to one mother, and not a "Certificate of Stillbirth" to the other? Both mothers did the same work, only the outcomes differed.

A mother of identical twins, who delivers one "still" is given a Certificate of Live Birth for the surviving twin, but nothing for the stillborn twin, rendering the birth of that child all but "invisible", and a non-event!

Proofreader.

Sealed with the Great Seal and presented to the Governor, for his approval this
____ day of _____ at _____ o'clock, _____ M.

Speaker.

CHAPTER _____

1 AN ACT concerning

2 **Vital Statistics - Certificate of Birth Resulting in Stillbirth**

3 FOR the purpose of requiring the Secretary of Health and Mental Hygiene to
4 establish procedures for the issuance of a certificate of birth resulting in
5 stillbirth for each fetal death occurring after a certain gestation period;
6 requiring the Secretary to collect, index, and safeguard from certain damage
7 each certificate of birth resulting in stillbirth; requiring certain format and
8 filing requirements for each certificate of birth resulting in stillbirth; requiring
9 the Secretary to adopt certain regulations; requiring the Secretary to provide a
10 copy of a certificate of birth resulting in stillbirth upon request and to collect a
11 certain fee for a copy of a certificate of birth resulting in stillbirth; providing for
12 certain prohibited acts related to a certificate of birth resulting in stillbirth;
13 defining certain terms; requiring the Department of Health and Mental Hygiene
14 to offer make available a certificate of birth resulting in stillbirth to certain

22 Annotated Code of Maryland

23 (2000 Replacement Volume and 2002 Supplement)

24 SECTION 1. BE IT ENACTED BY THE GENERAL ASSEMBLY OF
 25 MARYLAND, That the Laws of Maryland read as follows:

26 **Article - Health - General**

27 ~~4-201.~~

28 ~~(a) In this subtitle the following words have the meanings indicated.~~

29 ~~(e) "Fetal death" means death of a product of human conception, before its~~
 30 ~~complete expulsion or extraction from the mother, regardless of the duration of the~~
 31 ~~pregnancy, as indicated by the fact that, after the expulsion or extraction, the fetus~~
 32 ~~does not breathe or show any other evidence of life, such as heart beat, pulsation of~~
 33 ~~the umbilical cord, or definite movement of voluntary muscle.~~

34 ~~(f) "File" means to present for registration any certificate, report, or other~~
 35 ~~record including records transmitted by approved electronic media, including~~
 36 ~~facsimile, of birth, BIRTH RESULTING IN STILLBIRTH, death, fetal death, adoption,~~
 37 ~~marriage, or divorce for which this subtitle provides and to have the Secretary accept~~
 38 ~~the record.~~

1 (m) "Registration" means acceptance by the Secretary and incorporation in the
2 records of the Department of any certificate, report, or other record of birth, BIRTH
3 RESULTING IN STILLBIRTH, death, fetal death, adoption, marriage, divorce, or
4 dissolution or annulment of marriage for which this subtitle provides.

5 (n) "Vital record" means a certificate or report of birth, BIRTH RESULTING IN
6 STILLBIRTH, death, fetal death, marriage, divorce, dissolution or annulment of
7 marriage, adoption, or adjudication of paternity that is required by law to be filed
8 with the Secretary.

9 (o) "Vital statistics" means the data derived from certificates and reports of
10 birth, BIRTH RESULTING IN STILLBIRTH, death, fetal death, marriage, divorce,
11 dissolution or annulment of marriage, and reports related to any of these certificates
12 and reports.

13 4-203.

14 (a) The Secretary is charged with administering efficiently and uniformly this
15 subtitle throughout this State.

16 (b) (1) The Secretary shall establish appropriate methods and the necessary
17 forms for accurate registration of vital records.

18 (2) The forms shall provide for the information that the Secretary needs
19 for proper registration and use of these vital records.

20 4-204.

21 (a) The Secretary shall collect, index, and safeguard from fire, loss, or damage
22 each certificate of birth, BIRTH RESULTING IN STILLBIRTH, death, and fetal death.

23 (b) After registration of a completed death or fetal death certificate, the
24 Secretary shall send a copy of the original certificate to the county registrar for the
25 county where the event occurred. The copy may be photographic or electronic or
26 produced by other means as prescribed by the Secretary.

27 4-207.

28 (a) (1) Each certificate of birth, BIRTH RESULTING IN STILLBIRTH, death, or
29 fetal death shall be typed or printed legibly in unfading black ink, or stored on
30 electronic media approved by the Secretary.

31 (2) The person who is required to complete the record shall attest to its
32 accuracy either by signature or by approved electronic process.

33 (b) A certificate is not complete or correct if it does not give each item of
34 required information to the extent the information is obtainable.

1 ~~4-213.~~

2 (a) ~~If a fetal death occurs after a gestation period of 20 weeks or more, then~~
3 ~~within 72 hours after delivery, a certificate of fetal death shall be filed by:~~

4 (1) ~~The mortician who first takes custody of a fetus;~~

5 (2) ~~The person in charge of the institution or the person's designated~~
6 ~~representative when a fetus is delivered in an institution;~~

7 (3) ~~The physician in attendance at or immediately after delivery when a~~
8 ~~fetus is delivered outside an institution; or~~

9 (4) ~~The medical examiner when a fetal death occurs without medical~~
10 ~~attendance at or immediately after the delivery when a medical examiner's inquiry is~~
11 ~~required.~~

12 (b) ~~The person who files the fetal death certificate shall obtain:~~

13 (1) ~~The personal information from the next of kin or the best qualified~~
14 ~~individual or source available; and~~

15 (2) ~~The medical certification of cause of death:~~

16 (i) ~~From the medical examiner, within 24 hours after the medical~~
17 ~~examiner takes charge of the fetus; or~~

18 (ii) ~~If the medical examiner does not take charge of the fetus, from~~
19 ~~the attending physician within 24 hours after delivery.~~

20 ~~4-213.1.~~

21 (A) ~~IN ADDITION TO THE REQUIREMENTS OF § 4-213 OF THIS SUBTITLE, THE~~
22 ~~SECRETARY SHALL ESTABLISH PROCEDURES FOR THE ISSUANCE OF A CERTIFICATE~~
23 ~~OF BIRTH RESULTING IN STILLBIRTH FOR EACH FETAL DEATH OCCURRING IN THE~~
24 ~~STATE AFTER A GESTATION PERIOD OF 20 WEEKS OR MORE.~~

25 (B) ~~THE CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH SHALL:~~

26 (1) ~~BE OFFERED TO THE PARENT OR PARENTS OF A STILLBORN CHILD;~~

27 (2) ~~BE FILED WITHIN 72 HOURS AFTER DELIVERY; AND~~

28 (3) ~~MEET ALL OF THE FORMAT AND FILING REQUIREMENTS OF § 4-208~~
29 ~~OF THIS SUBTITLE, RELATING TO A LIVE BIRTH.~~

30 (B) THE DEPARTMENT SHALL OFFER MAKE AVAILABLE A CERTIFICATE OF
31 BIRTH RESULTING IN STILLBIRTH TO THE PARENT OR PARENTS OF A STILLBORN
32 CHILD FOR WHOM A FETAL DEATH WAS REGISTERED.

1 (C) THE INDIVIDUAL PREPARING THE CERTIFICATE OF BIRTH RESULTING IN
 2 STILLBIRTH SHALL NOT INCLUDE ANY REFERENCES TO THE STILLBORN CHILD'S
 3 FIRST NAME IF THE STILLBORN CHILD'S PARENT OR PARENTS DO NOT WISH TO
 4 PROVIDE A FIRST NAME FOR THE STILLBORN CHILD.

5 ~~4-213.2.~~

6 (A) ~~THE SECRETARY SHALL ADOPT REGULATIONS TO GOVERN THE FILING OF~~
 7 ~~A RECORD OF BIRTH RESULTING IN STILLBIRTH IF A CERTIFICATE OF BIRTH~~
 8 ~~RESULTING IN STILLBIRTH IS NOT FILED WITHIN THE TIME REQUIRED BY § 4-213.1~~
 9 ~~OF THIS SUBTITLE.~~

10 (B) ~~THE REGULATIONS ADOPTED UNDER SUBSECTION (A) OF THIS SECTION~~
 11 ~~SHALL BE CONSISTENT WITH REGULATIONS ADOPTED UNDER § 4-210 OF THIS~~
 12 ~~SUBTITLE REGARDING DELAYED BIRTH REGISTRATION.~~

13 ~~4-217.~~

14 (a) (1) ~~Except as provided in subsection (b) of this section, the Secretary~~
 15 ~~shall provide, on request, any person authorized by regulations adopted under this~~
 16 ~~subtitle with a certified or abridged copy of a birth, BIRTH RESULTING IN~~
 17 ~~STILLBIRTH, death, or fetal death certificate registered under this subtitle or of the~~
 18 ~~certificate of a marriage performed after June 1, 1951.~~

19 (e) (1) ~~Except as otherwise provided by law, the Department shall collect a~~
 20 ~~\$6 fee for each certified or abridged copy of a birth, BIRTH RESULTING IN STILLBIRTH,~~
 21 ~~death, fetal death, or marriage certificate or for a report that a search of the files was~~
 22 ~~made and the requested record is not on file.~~

23 ~~4-226.~~

24 (a) ~~A person may not fail or refuse to execute and deliver a certificate of birth,~~
 25 ~~BIRTH RESULTING IN STILLBIRTH, death, or fetal death required by this subtitle.~~

26 (b) (1) ~~A person may not willfully provide false information for entry or~~
 27 ~~willfully enter false information on a certificate of birth, BIRTH RESULTING IN~~
 28 ~~STILLBIRTH, death, or fetal death.~~

29 (2) ~~A person may not fail to provide a Social Security number or willfully~~
 30 ~~provide a false Social Security number to the clerk of court under § 4-208(g) of this~~
 31 ~~subtitle.~~

32 (e) ~~Except as authorized by this subtitle, a person may not willfully alter any~~
 33 ~~certificate, certified copy of a certificate, or other certified statement that relates to a~~
 34 ~~birth, BIRTH RESULTING IN STILLBIRTH, death, fetal death, or marriage registered~~
 35 ~~under this subtitle.~~

36 (d) (1) ~~A person may not willfully use or attempt to use, with the intention to~~
 37 ~~deceive, any certificate of birth or certified copy of a record of birth knowing that the~~
 38 ~~certificate or certified copy:~~

1 (i) Was issued on a record that is wholly or partly false; or

2 (ii) Relates to the birth of another individual.

3 (2) A person may not willfully and knowingly provide a certificate of
4 birth or a certified copy of a record of birth to another person with the intention that
5 it be used by that person to deceive.

6 (e) Without authorization, a person may not produce, reproduce, or distribute
7 a blank certificate or other form that the Secretary uses to register or certify facts
8 that relate to a birth, BIRTH RESULTING IN STILLBIRTH, death, fetal death, or
9 marriage.

10 (f) A person may not willfully use or attempt to use a photocopy of a birth,
11 BIRTH RESULTING IN STILLBIRTH, death, fetal death, or marriage certificate for any
12 fraudulent or deceptive purpose.

13 (g) A person who has access to the birth, BIRTH RESULTING IN STILLBIRTH,
14 death, or fetal death records in the custody of the Secretary or an agent of the
15 Secretary may not willfully communicate to anyone known to the person to be
16 unauthorized any fact recorded on any birth, BIRTH RESULTING IN STILLBIRTH,
17 death, or fetal death certificate.

18 (h) A person may not willfully transport or accept for transportation,
19 dissection, or other disposition a body without a burial transit permit, as provided in
20 this subtitle.

21 (i) A person may not willfully:

22 (1) Violate any provision of this subtitle;

23 (2) Neglect to perform any duty imposed by this subtitle; or

24 (3) Violate any rule or regulation adopted under this subtitle.

25 ~~SECTION 2. AND BE IT FURTHER ENACTED, That this Act shall take effect~~
26 ~~October 1, 2003.~~

27 SECTION 2. AND BE IT FURTHER ENACTED, That the Department of
28 Health and Mental Hygiene shall establish procedures for the issuance of a certificate
29 of birth resulting in stillbirth upon the request of a parent or parents who have
30 received a certificate of fetal death prior to the effective date of this Act.

31 SECTION 3. AND BE IT FURTHER ENACTED, That:

32 (a) The Department of Health and Mental Hygiene shall adopt and implement
33 the procedures required by this Act on or before January 1, 2004; and

34 (b) On or before October 1, 2005, the Department of Health and Mental
35 Hygiene shall report to the Governor, and in accordance with § 2-1246 of the State
36 Government Article, to the Senate Education, Health, and Environmental Affairs

1 Committee and the House Health and Government Operations Committee, on the
2 implementation of this Act, including the number of certificates of births resulting in
3 stillbirth issued in the State and the procedures implemented by the Department.

4 SECTION 4. AND BE IT FURTHER ENACTED, That this Act shall take
5 effect ~~October 1, 2003~~ June 1, 2003.

this summer. HB 2416 took effect August 9th 2001 and is available for all stillbirths, prospective and past alike.

Stillbirth

From Wikipedia, the free encyclopedia

A **stillbirth** occurs when a fetus which has died in the uterus or during labor or delivery exits a woman's body. The term is often used in distinction to live birth or miscarriage. Most stillbirths occur in full term pregnancies.

Some sources reserve the term "stillbirth" for a fetus which has died after reaching mid-second trimester to full term gestational age. For example, in the United Kingdom, "stillbirth" is used to describe an infant delivered without life after 24 weeks gestation. The sources that use this definition tend to use the term "miscarriage" if the death occurs earlier in development. In contrast, other sources use the term "stillbirth" regardless of the stage of fetal development.

eMedicine	topic list

Human stillbirth

Causes

The causes of a large percentage of human stillbirths remain unknown, even in cases where extensive testing and autopsy have been performed. A rarely used term to describe these is **sudden antenatal death syndrome** or SADS.^[1]

In cases where the cause is known, some possibilities of the cause of death are:

- bacterial infection

- birth defects
- chromosomal aberrations
- growth retardation
- Intrahepatic Cholestasis of Pregnancy
- maternal diabetes
- high blood pressure, including preeclampsia
- maternal consumption of nicotine, alcohol, recreational drugs (excluding cannabis^[2]), or pharmaceutical drugs contraindicated in pregnancy
- postdate pregnancy
- placental abruptions
- physical trauma
- radiation poisoning
- Rh disease
- umbilical cord accidents

Sometimes a pregnancy is terminated deliberately during a late phase, for example for congenital anomaly. UK law requires these procedures to be registered as "stillbirths".^[3] If a fetus is aborted late during pregnancy this is called feticide.

Prenatal diagnosis

A decrease or cessation of fetal activity may be an indication of fetal distress or death, though it is not entirely uncommon for a healthy fetus to exhibit such changes, particularly near the end of a pregnancy when there is considerably little space in the uterus for the fetus to move about. Still, medical examination, including a nonstress test, is recommended in the event of any change in the strength or frequency of fetal movement, especially a complete cease; most midwives and obstetricians recommend the use of a kick chart to assist in detecting any changes. Fetal distress or death can be confirmed or ruled out via fetoscopy/doptone, ultrasound, and/or electronic fetal monitoring. If the fetus is alive but inactive, extra attention will be given to the placenta and umbilical cord during ultrasound examination to ensure that there is no compromise of oxygen and nutrient delivery.

Prenatal maternal treatment

An in utero stillbirth does not usually present an immediate health risk to the woman and labour will usually begin spontaneously after two weeks, so the woman may choose to wait and deliver vaginally. After two weeks, the woman is at risk of developing blood clotting problems, and induction is recommended at this point. In many cases, the woman will find the idea of carrying the dead baby emotionally traumatizing and will elect to be induced. Cesarean birth is not recommended unless complications develop during vaginal birth.

Prevalence

Stillbirth is a relatively common, but often random, occurrence. The mean stillbirth rate in the United States is approximately 1 in 115 births, which is roughly 26,000 stillbirths each year, or on an average one every 20 minutes. In Australia,^[4] England, Wales, and Northern Ireland, the rate is approximately 1 in every 200 births, in Scotland 1 in 167. (From The National Statistical Office and other sources.) Many stillbirths occur at fullterm to apparently healthy mothers, and a postmortem evaluation reveals a cause of death in only about 40% of autopsied cases.^[5]

In developing countries, where medical care can be of low quality or unavailable, the stillbirth rate is much higher.

Legal definitions of stillbirth

Australia

In Australia any stillborn baby weighing more than 400 grams, or more than 20 weeks in gestation, must have its birth registered.^[6]

Canada

Beginning in 1959, "the definition of a stillbirth was revised to conform, in substance, to the definition of fetal death recommended by the World Health Organization." ^[7] The definition of "fetal death" promulgated by the World Health Organization in 1950 is as follows:

"Fetal death" means death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.^[8]

United Kingdom

Throughout the United Kingdom, stillbirths must be registered by law. The Stillbirth Definition Act (1992) states: *"any 'child' expelled or issued forth from its mother after the 24th week of pregnancy that did not breathe or show any other signs of life should be registered as a stillbirth."*^[9] In England and Wales, this must be done within 42 days and a Stillbirth Certificate is issued to the parent(s).^[10] In Scotland, this must be done within 21 days.^[11]

United States

In the United States, there is no standard definition of the term 'stillbirth'.^[8] The Centers for Disease Control and Prevention collects statistical information on "live births, fetal deaths, and induced termination of pregnancy" from 57 reporting areas in the United States. Each reporting area has different guidelines and definitions for what is being reported; many do not use the term "stillbirth" at all. The federal guidelines suggests (at page 1) that fetal death and stillbirth can be interchangeable terms. The CDC definition of "fetal death" is based on the definition promulgated by the World Health Organization in 1950 (see section above on Canada).

The federal guidelines recommend reporting those fetal deaths whose birth weight is over 350g, or those more than 20 weeks gestation. Forty-one areas use a definition very similar to the federal definition, thirteen areas use a shortened definition of fetal death, and three areas have no formal definition of fetal death. Only 11 areas specifically use the term 'stillbirth', often synonymously with late fetal death, however they are split between whether stillbirths are "irrespective of the duration of pregnancy", or

whether some age or weight constraint is applied.

Dear National Stillborn Society,

I am working for the Alaska State Legislature, and we are in the process of drafting a law that would allow parents of a stillborn child to obtain a birth certificate for the stillborn. We are struggling with a definition for "stillbirth" and "stillborn" and "stillborn child". Is there a model definition that we could use that would be acceptable to both the pro life and pro choice camps that would stand up to legal challenge? Any input would be greatly appreciated.

Thank You,

John Davies
Chief of Staff to
Rep. Wes Keller

House Engrossed

State of Arizona
House of Representatives
Forty-fifth Legislature
First Regular Session
2001

HOUSE BILL 2416

AN ACT

AMENDING TITLE 36, CHAPTER 3, ARTICLE 2, ARIZONA REVISED STATUTES, BY ADDING SECTIONS 36-329.01 AND 36-329.02; RELATING TO VITAL STATISTICS CERTIFICATES.

Be it enacted by the Legislature of the State of Arizona:

Section 1. Title 36, chapter 3, article 2, Arizona Revised Statutes, is amended by adding sections 36-329.01 and 36-329.02, to read:

36-329.01. Certificate of birth resulting in stillbirth; requirements

A. IN ADDITION TO THE REQUIREMENTS OF SECTION 36-329, THE STATE REGISTRAR OF VITAL STATISTICS SHALL ESTABLISH A CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH ON A FORM APPROVED BY THE STATE REGISTRAR FOR EACH FETAL DEATH OCCURRING IN THIS STATE AFTER A GESTATIONAL PERIOD OF AT LEAST TWENTY COMPLETED WEEKS. THIS CERTIFICATE SHALL BE OFFERED TO THE PARENT OR PARENTS OF A STILLBORN CHILD.

B. THE CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH SHALL MEET ALL OF THE FORMAT AND FILING REQUIREMENTS OF SECTION 36-322, RELATING TO A LIVE BIRTH.

C. THE PERSON WHO PREPARES A CERTIFICATE PURSUANT TO THIS SECTION SHALL LEAVE BLANK ANY REFERENCES TO THE STILLBORN CHILD'S NAME IF THE STILLBORN CHILD'S PARENT OR PARENTS DO NOT WISH TO PROVIDE A NAME FOR THE STILLBORN CHILD.

D. NOTWITHSTANDING SUBSECTIONS A AND B OF THIS SECTION, THE CERTIFICATE OF BIRTH RESULTING IN STILLBIRTH SHALL BE FILED WITH THE DESIGNATED REGISTRAR WITHIN THREE DAYS FOLLOWING THE DELIVERY AND PRIOR TO CREMATION OR REMOVAL OF THE FETUS FROM THE REGISTRATION DISTRICT.

36-329.02. Delayed registration of birth resulting in stillbirth

WHEN A BIRTH RESULTING IN STILLBIRTH OCCURRING IN THIS STATE HAS NOT BEEN REGISTERED WITHIN ONE YEAR AFTER THE DATE OF DELIVERY, A CERTIFICATE

MARKED "DELAYED" MAY BE FILED AND REGISTERED IN ACCORDANCE WITH REGULATIONS OF THE DIRECTOR OF THE DEPARTMENT OF HEALTH SERVICES RELATING TO EVIDENTIARY AND OTHER REQUIREMENTS SUFFICIENT TO SUBSTANTIATE THE ALLEGED FACTS OF BIRTH RESULTING IN STILLBIRTH.

Sec. 2. Short title

Section 36-329.01, Arizona Revised Statutes, as added by this act, may be cited as the "Missing Angels Act".

FETAL DEATHS

A fetal death is defined as the death of a fetus after the eighth week of gestation and before delivery. Alaska Statute 18.50.240 requires the filing of a certificate for each fetal death that occurs in the state when the pregnancy has lasted at least 20 weeks. The filing of certificates for fetal deaths which occur prior to the twentieth week of pregnancy is optional. This report includes information only for fetal deaths in which either the estimated gestation or the calculated gestation (last menstrual date subtracted from the date of delivery) is at least twenty weeks.

INFANT DEATHS

Infant deaths are defined as deaths which occur before an individual's first birthday. Infant mortality may be calculated by either of two methods: *birth cohort* or *death cohort*. The *birth cohort* method considers all babies born in one year and determines the number of those babies who die before reaching their first birthday, either in that year or the next. The *death cohort* method groups together infants who die in the same year.

The birth cohort method is more reliable for calculating infant mortality rates because it calculates a rate for a specific group of infants, whereas the death cohort method calculates a rate based on comparing deaths in one year against births in that same year. The flaw in using the death cohort is that some of the infants who died in that year were born in the previous year, and some of the infants born in that year will die in the next year. When using the birth cohort method in this report, all infants born in 1994 are considered, whether the death occurred in 1994 or 1995, if the infant died before its first birthday. Birth cohort calculations are not included for 1995 in this report because not all 1996 death records were complete at the time this report was compiled.

The death cohort method is used in this report for calendar year 1995. This method compares the number of deaths to infants who died during 1995 prior to their first birthday with the number of infants who were born in 1995.

Infant Mortality Rates

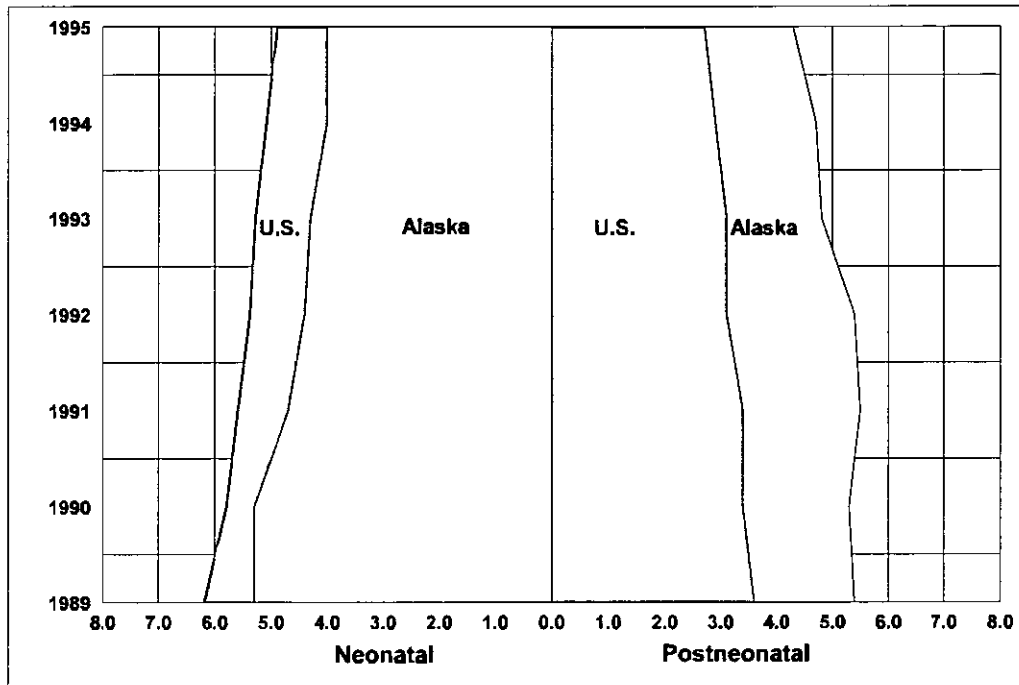

Using the death cohort, the total number of infant deaths during 1995 was 80. This is a 1.2 percent decrease from 82 infant deaths during 1994.¹ Since relatively small changes in infant deaths can cause large fluctuations in the infant mortality rate (IMR) from one year to the next, Alaska's annual IMR is calculated on a five-year moving average. The 1991-1995 five-year average infant mortality rate was 8.3 deaths per 1,000 live births, down from 8.8 deaths per 1,000 live births for 1990-1994. The U.S. infant mortality rate of 7.6 deaths per 1,000 live births in 1995 reflects a 5% decrease from 8.0 infant deaths per 1,000 live births in 1994.² Both the U.S. and Alaska infant mortality rates have been steadily decreasing in recent years, and both are now at the lowest rates ever recorded.

In discussing infant mortality, a distinction is made between neonatal mortality (deaths prior to the 28th day of life) and postneonatal mortality (deaths from the 28th day up to one year). Neonatal deaths are frequently associated with circumstances related to pregnancy and delivery while postneonatal deaths are associated with living conditions. Alaska's neonatal mortality rate has generally been lower than the neonatal mortality rate for the United States, while its postneonatal mortality rate has been higher. Chart 2.1 provides a graphic comparison of the neonatal and postneonatal rates for Alaska and the United States.

CHART 2.1 NEONATAL AND POSTNEONATAL MORTALITY RATES PER 1,000 LIVE BIRTHS, ALASKA AND THE UNITED STATES, 1989-1995 (DEATH COHORT METHOD)

United States rates are single year rates and are provided by the National Center for Health Statistics.³ Alaska infant mortality rates are calculated using five-year moving averages per 1,000 live births, based on death-cohort.

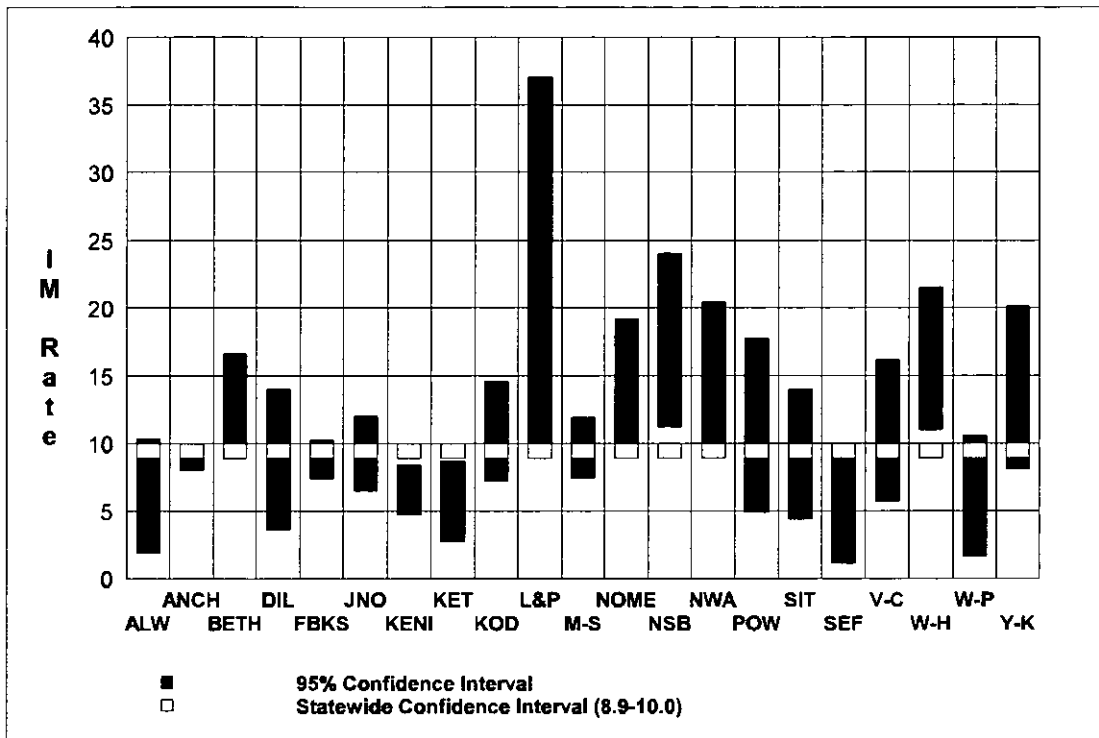

Chart 2.2 compares confidence intervals for infant mortality in individual census areas against the statewide average. When smaller populations, such as individual census areas, are analyzed, ten-year averages and 95 percent confidence intervals are used. The calculated infant mortality rate occurs at the midpoint of the confidence interval. The smaller the population, the larger the confidence interval. (For a detailed discussion of confidence intervals and statistical significance, refer to Appendix B.)

Several census areas (Aleutians East, Angoon-Hoonah-Skagway, Bristol Bay, Denali, Haines Borough, and Yakutat) have been omitted from Chart 2.2 because occurrences of infant mortality are too few for rates to be reliable. Those census areas which have infant mortality rates significantly above the statewide 95% confidence interval of 8.9-10.0 deaths per 1,000 live births are North Slope and Wade Hampton. Kenai Peninsula and Ketchikan are the only census areas with rates below the statewide 95% confidence interval. The confidence intervals for all other areas fell at least partly within the range of the statewide average.

Infant Mortality Rates by Race

Table 2.6 shows 5-year moving average infant mortality rates by race for the years 1991 through 1995. In the process of preparing this report, it was discovered that while the child's race at birth is reported to be the same as the mother's, the child's race on the death certificate may be reported differently. To ensure consistent reporting and calculation of rates, a new procedure was used in this report. All death certificates for decedents who were born in Alaska in 1989 or later are matched with the birth certificate and the child's race at birth is used for calculating deaths and death rates by race.

Infant Deaths by Cause of Death

Although the same coding system (ICD9) is used in reporting causes of death for infants and the general population, the codes are grouped differently since causes of death for infants up to one year generally differ from those in the general population. For specific causes of death for infant mortality refer to Appendix C, Table C.2.

Certain causes of death are associated with factors such as age and birth weight. For instance, Sudden Infant Death Syndrome (SIDS) almost always occurs in the postneonatal period. Respiratory Distress Syndrome generally occurs only in low birth weight infants. The single greatest cause of infant death is Sudden Infant Death Syndrome. In the five-year period from 1991 through 1995, 120 infants were reported to have died of SIDS, a rate of 2.2 per thousand live births. This compares with a rate of 0.9 per thousand live births for the United States in 1995.⁴ The United States rate for SIDS deaths dropped 28% since 1994 when the rate was 1.1 deaths per thousand live births.

Because of its mysterious nature, Sudden Infant Death Syndrome can never be positively determined; rather, it is a diagnosis which occurs after other causes of death have been ruled out. What we can say about SIDS is that it affects normally healthy, sleeping infants under one year of age. One potential risk factor for SIDS is putting infants to sleep on their stomachs (the prone position).⁵

The Alaska Maternal and Infant Mortality Review Committee (MIMR) is composed of representatives from the medical professions including obstetricians and gynecologists, pediatricians, neonatologists, and representatives of the Indian Health Service. The work of the committee is coordinated by staff from the Section of Maternal, Child and Family Health in the Division of Public Health. This committee reviews medical records and, in some cases, police records for each infant death and either concurs with the cause of death as stated on the death certificate or determines a different cause of death. The committee reviewed 39 cases in 1993 and 1994 in which SIDS was the reported cause of death. In 33 of those cases they concurred that SIDS was the cause of death; in six cases they believed the cause of death to be other than SIDS.

In 1995, there were six SIDS deaths reported in the neonatal period (less than 28 days old). SIDS is extremely rare in this age group; there were only five SIDS deaths in this age group in the previous nine years.

To: John Davies
Subject: RE: HB 2

The suggestions would be as follows and this is based off of the CS that was heard in committee:

On page 1 line 6 following "of" delete "a stillborn child" and insert "the stillbirth"

On page 1 line 12 following "of" delete "a stillborn child" and insert "the stillbirth"

On page 1 line 13 following "name" delete "of a stillborn child"

On page 2 line 1 following "name" delete "of the stillborn child"

On page 2 line 6 following "birth" delete "of a stillborn child"

On page 2 line 14 remove everything following "stillbirth" and insert "is that as defined in AS 18.50.950(8)."

If you were to make those changes there would be no reference to a child and take away any concerns that have been raised.

Yes, I had the word fetus in my first draft, but changed it to follow the referred to statute. I am glad that you have been talking to others with experience. That's a great help. Based on your conversations do you have any new draft language? Thanks JD

I understand. I have been talking with those who have worked on this in other states. And in states where this issue has come up what they have done to quash any belief that this would in any way give rights to or somehow do what we did not want it to do was delete the word child and insert the word fetus. By doing this we take away any reference to a child.

Subject: RE: HB 2

Let's talk to Jean about this tomorrow and look to get the bill out of committee next week. It would be better to get it right now to insure its passage later. JD

From: Sandra Wilson

To: John Davies
Subject: RE: HB 2

You could make it simpler by saying that in this section "stillbirth" or "stillborn child" is that as defined in AS 18.56.950 (8)

I do not have a problem meeting with the two of you tomorrow. I was just hoping that we would be able to get this heard and passed out today because the hope that both myself and Rep. Gatto is that we could pass this bill through this year. This is more and more unlikely as it takes longer to get it out of committee. I guess I don't completely understand the issue at hand because it states very clearly in the bill that the issuance of the birth certificate is not proof of live birth.

Subject: HB 2

Dear Sandra,

This email is a heads up for your to keep you apprised of the movement on your bill. Here is the proposed definition of "stillborn child" that we propose:

- (h) In this section, "stillbirth" or "stillborn child" refers to the unintended death of a product of human conception as defined in AS18.50.950 (8)(A) and (B).

Give this some thought. We have an appointment to meet with Jean Mischal, Leg Legal, tomorrow at 9am at her office in the TMOB. I would like you to attend with Matt and I so that you can have your input heard on this.

We are trying to make sure that the definition is tight enough so as not to cause the bill to fail or run into problems with legal challenges.

Jean was working on a drafting job today and couldn't see us until tomorrow.

Regards,
John Davies

Yes, I had the word fetus in my first draft, but changed it to follow the referred to statute. I am glad that you have been talking to others with experience. That's a great help. Based on your conversations do you have any new draft language? Thanks JD

I understand. I have been talking with those who have worked on this in other states. And in states where this issue has come up what they have done to quash any belief that this would in any way give rights to or somehow do what we did not want it to do was delete the word child and insert the word fetus. By doing this we take away any reference to a child.

You could make it simpler by saying that in this section "stillbirth" or "stillborn child" is that as defined in AS 18.56.950 (8)

I do not have a problem meeting with the two of you tomorrow. I was just hoping that we would be able to get this heard and passed out today because the hope that both myself and Rep. Gatto is that we could pass this bill through this year. This is more and more unlikely as it takes longer to get it out of committee. I guess I don't completely understand the issue at hand because it states very clearly in the bill that the issuance of the birth certificate is not proof of live birth.

Just a little more information, I talked with Joanne Cacciatore and she told me that no state has ever had anyone challenge their stillbirth laws. This includes states such as California which had strong opposition to the bill. Just wanted to make you aware of that.

CS FOR HOUSE BILL NO. 2()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GATTO, Gruenberg, Dahlstrom, Lynn

A BILL
FOR AN ACT ENTITLED

"An Act relating to the issuance of a certificate of birth resulting in a stillbirth."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 18.50 is amended by adding a new section to read:

Sec. 18.50.235. Certificate of birth resulting in stillbirth. (a) The person required to file a fetal death registration under AS 18.50.240(b) shall advise the mother and, if the father is present, the father of a stillborn child

(1) that the parent may request the preparation of a certificate of birth resulting in stillbirth;

(2) that the parent may obtain a certificate of birth resulting in stillbirth by contacting the bureau; and

(3) of the contact information for the bureau.

(b) The parent of a stillborn child who requests a certificate of birth resulting in stillbirth may provide a name of a stillborn child for placement on the certificate. If a name is not provided, the bureau shall cause the certificate to show either "baby boy" or "baby girl," as appropriate, and the last name of the parent who requested the

1 certificate. The name of the stillborn child provided on the certificate of birth resulting
2 in stillbirth must be the same name as the name on the fetal death certificate.

3 (c) A certificate of birth resulting in stillbirth must include the state file
4 number of the corresponding fetal death certificate.

5 (d) The department shall prescribe the form and content of a certificate of
6 birth resulting in stillbirth to record the birth of a stillborn child and specify the
7 information required to prepare the certificate.

8 (e) A certificate issued under this section is not proof of a live birth, and the
9 certificate must contain the phrase "not proof of live birth." The bureau may not use a
10 certificate of birth resulting in stillbirth to calculate live birth statistics.

11 (f) A parent may request that the bureau issue a certificate of birth resulting in
12 still birth regardless of the date on which the certificate of fetal death was issued.

13 (g) The department may adopt regulations needed to implement this section.

14 (h) In this section, "stillbirth" or "stillborn" refers to an unintended,
15 intrauterine fetal death occurring in the state after a gestational age of 20 completed
16 weeks.

Sec. 18.50.950. Definitions.

In this chapter,

- (1) "adoptive parent" means a person who has adopted another person under AS 25.23;
- (2) "biological parent" means a parent named on the original certificate of birth of an adopted person;
- (3) "bureau" means the Bureau of Vital Statistics;
- (4) *[Repealed, 88 ch 56 SLA 2005.]*
- (5) "commissioner" means the commissioner of health and social services;
- (6) "dead body" means a lifeless human body or parts or bones of it from the state of which it reasonably may be concluded that death recently occurred;
- (7) "department" means the Department of Health and Social Services;
- (8) "fetal death" means death before the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, where
 - (A) the death is indicated by the fact that, after expulsion or extraction, the fetus does not breathe or show evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles; and
 - (B) the expulsion or extraction is not caused by an induced termination of pregnancy;
- (9) "filing" means the presentation of a certificate, report, or other record provided for in this chapter, of a birth, death, fetal death, adoption, marriage, or divorce for registration by the bureau;
- (10) "final disposition" means the burial, interment, cremation, or other disposition of a dead body or fetus;
- (11) "induced termination of pregnancy" means the purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant, and that does not result in a live birth, except that "induced termination of pregnancy" does not include management of prolonged retention of products of conception following fetal death;
- (12) "institution" means a public or private establishment that provides in-patient medical, surgical, or diagnostic care or treatment, or nursing, custodial, or domiciliary care to two or more unrelated individuals, or to which persons are committed by law;
- (13) "**live birth**" means the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, that, after expulsion or extraction, breathes or shows evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached;
- (14) "medical history" includes information relating to a person's medical conditions and treatment, immunization records, and other medical information about the person that could be important to the health care of the adopted person;
- (15) "physician" means a person authorized or licensed to practice medicine under the laws of the state;
- (16) "registration" means the acceptance by the bureau and the incorporation in its official records of certificates, reports, or other records provided for in this chapter, of births, deaths, fetal deaths, adoptions, marriages, or divorces;
- (17) "state registrar" means the state registrar of vital statistics;

(18) "system of vital statistics" includes the registration, collection, preservation, amendment, and certification of vital statistics records, and related activities including the tabulation, analysis, and publication of statistical data derived from them;

(19) "vital statistics" means records of birth, death, fetal death, induced termination of pregnancy, marriage, divorce, adoption, and related data.

A **stillbirth** occurs when a fetus which has died in the uterus or during labor or delivery exits a woman's body. The term is often used in distinction to live birth or miscarriage. Most stillbirths occur in full term pregnancies.

Some sources reserve the term "stillbirth" for a fetus which has died after reaching mid-second trimester to full term gestational age. For example, in the United Kingdom, "stillbirth" is used to describe an infant delivered without life after 24 weeks gestation. The sources that use this definition tend to use the term "miscarriage" if the death occurs earlier in development. In contrast, other sources use the term "stillbirth" regardless of the stage of fetal development.

parent's second marriage and has not been adopted by that parent.

Step-down in basis. A reduction in the income tax basis of property. See also **Step-up in basis**.

Step-father. The husband of one's mother by virtue of a marriage subsequent to that of which the person spoken of is the offspring.

Step-in-the-dark rule. Such rule of contributory negligence is that one who enters a totally unfamiliar area in the darkness is not justified, in the absence of any special stress, in proceeding without first ascertaining whether there are any obstacles to his safe progress. *Yoder v. Greenwald*, Fla.App., 246 So.2d 148, 150.

Step-mother. The wife of one's father by virtue of a marriage subsequent to that of which the person spoken of is the offspring.

Step-parent. The mother or father of a child born during a previous marriage of the other parent and hence, not the natural parent of such child.

Step-son. The son of one's wife by a former husband, or of one's husband by a former wife.

Step-up in basis. An increase in the income tax basis of property.

Sterbreche, or strebrich. The breaking, obstructing, or straitening of a way.

Stère /stír/stéhr/. A French measure of solidity, used in measuring wood. It is a cubic meter.

Sterility /stérilēdi/. Barrenness; unfruitfulness; incapacity to germinate or reproduce.

Sterilization. The act or process by which one is rendered incapable of procreation as, for example, the act of tying the female Fallopian tubes or a vasectomy. Also, the act or process by which an article or instrument is rendered free of germs.

Sterling. In English law, current or standard coin, especially silver coin; a standard of coinage.

Stet processus /stét prasésás/. An entry on the roll in the nature of a judgment of a direction that all further proceedings shall be stayed (i.e., that the process may stand), and it is one of the ways by which a suit may be terminated by an act of the party, as distinguished from a termination of it by judgment, which is the act of the court. It was used by the plaintiff when he wished to suspend the action without suffering a nonsuit.

Stevadore. A person employed in loading and unloading vessels.

Steward. A man appointed in the place or stead of another. A union official who represents other union employees in grievances with management and who oversees the carrying out of the union contract.

Steward of all England. In old English law, an officer who was invested with various powers; among others, to preside on the trial of peers.

Steward of a Manor. In old English law, an important officer who had the general management of all

forensic matters connected with the manor of which he was steward. He stood in much the same relation to the lord of the manor as an under-sheriff did to the sheriff.

Stews. Certain brothels anciently permitted in England, suppressed by Henry VIII. Also, breeding places for tame pheasants.

Stickler. An arbitrator. An obstinate contender about anything.

Stick up. Rob at the point of a gun.

Stifling a prosecution. Agreeing, in consideration of receiving a pecuniary or other advantage, to abstain from prosecuting a person for an offense not giving rise to a civil remedy.

Still. Any device used for separating alcoholic spirits from fermented substances. The word is sometimes applied to the whole apparatus for evaporation and condensation used in the manufacture of ardent spirits, but in the description of the parts of the apparatus it is applied merely to the vessel or retort used for boiling and evaporation of the liquid.

Stillborn child. A child born dead or in such an early stage of pregnancy as to be incapable of living, though not actually dead at the time of birth.

Stillicidium /stilisid(i)yam/. Lat. In the civil law, the drip of water from the eaves of a house. The servitude stillicidii consists in the right to have the water drip from one's eaves upon the house or ground of another. The term "flumen" designated the rain-water collected from the roof, and carried off by the gutters, and there is a similar easement of having it discharged upon the adjoining estate.

Stint. In English law, limit; a limited number. Used as descriptive of a species of common. See *Common sans nombre*.

Stipend /stáypēnd/. A salary; settled pay; fixed or regular payment. Offering made to clergyman.

Stipendiary estates /stáypēnd(i)yēhri/. Estates granted in return for services, generally of a military kind.

Stipendiary magistrates. In English law, paid magistrates; appointed in London and some other cities and boroughs, and having in general the powers and jurisdiction of justices of the peace.

Stipendium /stáypēnd(i)yam/. Lat. In the civil law, the pay of a soldier; wages; stipend.

Stipes /stáypiyz/. Lat. In old English law, stock; a source of descent or title. *Communis stipes* the common stock.

Stipital /stípedal/. Relating to stirpes, roots, or stock. "Stipital distribution" of property, is distribution per stirpes; that is, by right of representation.

Stipulate. Arrange or settle definitely, as an agreement or covenant. See *Stipulation*.

Stipulated damage. Liquidated damage (q.v.).

Stipulatio /stípyaléysh(i)yow/. Lat. In the Roman law, stipulatio was the verbal contract (verbal contract).

tio), and was the most solemn contracts in that system entered into by question thereto, by the parties, at some time, and usually by *spondeo*, "promittis?" *pro*

fficio judges of the

old English law, a
gistrate, who pre-
orman kings, and

who was also the principal minister of state, the
second man in the kingdom, and, by virtue of his
office, guardian of the realm in the king's absence. 3
Bl.Comm. 38.

Chief lord. The immediate lord of the fee, to whom the
tenants were directly and personally responsible.

Chief magistrate. The head of the executive depart-
ment of government of a nation, state, or municipal
corporation. The President is the chief executive
of the United States.

Chief office. Office of paramount importance or the
leading office.

Chief pledge. In old English law, the borsholder, or
chief of the borough.

Chief rents. In old English law, the annual payments of
freeholders of manors; also called "quit-rents," be-
cause by paying them the tenant was freed from all
other rents or services. Abolished by Law of Proper-
ty Act of 1922.

Chiefrie. In feudal law, a small rent paid to the lord
paramount.

Chief, tenant in. In English feudal law, all the land in
the kingdom was supposed to be holden mediately or
immediately of the king, who was styled the "Lord
Paramount," or "Lord Above All;" and those that
held immediately under him, in right of his crown and
dignity, were called his tenants "*in capite*" or "in
chief," which was the most honorable species of
tenure, but at the same time subjected the tenant to
greater and more burdensome services than inferior
tenures did. One who held directly of the king.

Child. Progeny; offspring of parentage. Unborn or
recently born human being. *Wilson v. Weaver*, 358
F.Supp. 1147, 1154. At common law one who had
not attained the age of fourteen years, though the
meaning now varies in different statutes; e.g. child
labor, support, criminal, etc. statutes. The term
"child" or "children" may include or apply to: adopt-
ed, after-born, or illegitimate child; step-child;
child by second or former marriage; issue.

See also Delinquent child; Disobedient child; Fos-
ter child; Illegitimate child; Infancy; Juvenile; Minor;
Neglected child; Person; Posthumous child; Preter-
mitted heir; Viable child. For negligence of child, see
Parental liability.

Childs part. A "child's part," which a widow, by
statute in some states, is entitled to take in lieu of
dower or the provision made for her by will, is a full
share to which a child of the decedent would be
entitled, subject to the debts of the estate and the
cost of administration up to and including distribu-
tion.

Illegitimate child. Child born out of lawful wedlock.

Legitimate child. Child born in lawful wedlock.

Natural child. Child by natural relation or procrea-
tion. Child by birth, as distinguished from a child by
adoption. Illegitimate children who have been ac-
knowledged by the father.

Posthumous child. One born after the father's death.

Quasi-posthumous child. In the civil law, one who,
born during the life of his grandfather, or other male

ascendant, was not his heir at the time he made his
testament, but who by the death of his father became
his heir in his life-time.

Rights of unborn child. Medical authority has recog-
nized long since that a child is in existence (*i.e.* alive)
from the moment of conception, and for many pur-
poses its existence is recognized by the law. The
criminal law regards it as a separate entity, and the
law of property considers it in being for all purposes
which are to its benefit, such as taking by will or
descent. After its birth, it has been held that it may
maintain a statutory action for the wrongful death of
the parent. In addition, the child, if he is born alive,
is permitted to maintain an action for the conse-
quences of prenatal injuries, and if he dies of such
injuries after birth an action will lie for his wrongful
death. Many states have allowed recovery even
though the injury occurred during the early weeks of
pregnancy, when the child was neither viable nor
quick. *Sylvia v. Gobeille*, 1966, 101 R.I. 76, 220 A.2d
222; *Hornbuckle v. Plantation Pipe Line Co.*, 1956,
212 Ga. 504, 93 S.E.2d 727, conformed to 94 Ga.
App.2d 328, 94 S.E.2d 523; *Bennett v. Hymers*, 1958,
101 N.H. 483, 147 A.2d 108; *Sinkler v. Kneale*, 1960,
401 Pa. 267, 164 A.2d 93; *Smith v. Brennan*, 1960, 31
N.J. 353, 157 A.2d 497.

Child abuse. Any form of cruelty to a child's physical,
moral or mental well-being. Also used to describe
form of sexual attack which may or may not amount
to rape. Such acts are criminal offenses in most
states. See also *Abuse (Female child)*; *Abused and
neglected children.*

Child labor laws. Network of laws on both federal and
state levels prescribing working conditions for chil-
dren in terms of hours and nature of work which may
be performed, all designed to protect the child. See
also *Fair Labor Standards Act*; *Working papers.*

Children's court. See *Juvenile courts.*

Child support. The legal obligation of parents to con-
tribute to the economic maintenance, including edu-
cation, of their children; enforceable in both civil and
criminal contexts. In a dissolution or custody action,
money paid by one parent to another toward the
expenses of children of the marriage. See also *Non-
support.*

Child welfare. A generic term which embraces the
totality of measures necessary for a child's well be-
ing; physical, moral and mental.

Childwit. In Saxon law, the right which a lord had of
taking a fine of his bondwoman gotten with child
without his license.

The custom in Essex county, England, whereby
every reputed father of a bastard child was obliged to
pay a small fine to the lord.

Chilling a sale. The act of bidders or others who
combine or conspire to suppress fair competition at a
sale, for the purpose of acquiring the property at less
than its fair value.

Chilling effect doctrine. In constitutional law, any law
or practice which has the effect of seriously discour-
aging the exercise of a constitutional right, e.g. the
right of appeal. *North Carolina v. Pearce*, 395 U.S.
711, 89 S.Ct. 2072, 23 L.Ed.2d 656.

Subject: advice please

Good Morning John,

I think we need all the help and brains we can get focused on a pending amendment by Rep Holmes for HB 2. It is very possible that my concerns are exaggerated and unrealistic, but I need you, Kevin Clarkson, and Jim Pound and Matt to assure me that is so before we get to our next HSS meeting (March 3). Research to confirm that I am being over-cautious may be easy to come by, but frankly I don't have enough time or confidence in my legal abilities to make that assumption on my own.

Matt will help you with the bill (HB 2), the pending amendment language, and questions you may have of the Sponsor of HB 2.

The amendment simply adds the word "child" to 'stillborn'. My concern is the potential for a passionate, distracting, and maybe destructive debate about the definition of "child". AK statute establishing crimes against unborn children has a good definition of an "unborn child" but I do not remember what other definitions of 'child' there may be in statute. I am concerned that using the word 'child' in HB 2 will be the catalyst to enable someone to ask a legal question about whether a certificate would need to be issued for an aborted child... Maybe that is a good discussion to have, but I do not believe the sponsor of the bill is prepared for that ---and we need to ask ourselves if this is a battle we want right now. If my concern is appropriate the entire Committee needs to know the potential before we take on the amendment. It is possible that the maker of the amendment is being used (advised) by the pro-death lobby and would choose to withdraw her amendment if she gets a glimpse of the 'black hole'?--- It is possible that it is an innocent attempt to be helpful. It is also believable that she is fully aware and this is a first step to a 'full court press' ---- Either way, we need to proceed with both eyes open.

I recommend checking with National Right to Life to see what other states have done so we don't proceed without the advantage of any vetting that has already happened.

Clearly, the level of legal advice that we need at this point is probably not available from our own legal services. After we compare notes and either confirm or refute my concerns --- we can consider getting an official response from legal services on specific questions we want confirmed.

I am asking you to engage the group I am copying (if they are available and willing) --- divide the job up between you if appropriate, and take whatever action you feel is appropriate to get some consensus on the advice I am asking for. Maybe a teleconference and/or meeting @ our condo if my concerns are confirmed to have some validity.

Again --- I am asking for consideration regarding the wisdom or potential consequences of the amendment to HB 2 being proposed by Representative Lindsey Holmes. Your response will guide the 'next step/s'.

Thanks

Wes

2582001 *Jak*

When they pass through they often leave nothing behind but footprints.

Cheyenne Cacciatore July 27, 1994

Over 26,000 times a year in the United States a mother delivers a "still" baby. For many footprints on paper are the only memento they have to show they once had a baby who passed through this world. The lucky ones find out why their baby died. But for two-thirds of mothers no answer can be given them to explain why their "normal" baby was delivered dead. Not knowing a cause leaves them blaming themselves, and searching for answers.

Far from being a rare event, Sudden Antenatal Death Syndrome (SADS) – as it's referred to in medical circles - **was 12 times as prevalent as S.I.D.S. or crib death last year.** And yet one neither hears nor reads much about it. Until the National Stillbirth Society was founded last year by a bereaved stillbirth father, there was no organization fighting to defeat stillbirth.

One reason there's so little SADS awareness is because the birth of a "still" baby, rather than being acknowledged in official state records, has been swept under the carpet. The death of the baby is acknowledged, but not the birth. A woman who delivers a live baby receives a **Certificate of Live Birth.** But let the same mother give birth to a "still" baby and she doesn't get a certificate of birth for that baby.... as if that birth never happened!

Birth is a process; live or "still" is only a result. A mother of twins, who delivers one twin live and one "still", is now given a certificate for the live birth only in 38 states. We believe a mother should receive a **Certificate of Birth Resulting in Stillbirth** in recognition of having delivered her dead baby too, as should all stillbirth mothers. That's the reality of what happened. They all gave birth!

Arizona, the first state to pass legislation, named it "**The Missing Angel Act**". Since then states across the nation have introduced their own version of the Bill and as of February 1, 2004 there were 12 states that issue a Certificate of Birth Resulting in Stillbirth. It's a simple bill that seeks only to provide closure for mothers who suffered the pains and joys of pregnancy and childbirth, without getting to take home their reward.

The Missing Angel Act does not impact on or involve in any way "elective terminations of pregnancies". That is not our issue and never will be our issue! We are fighting solely for the rights of stillbirth mothers – and there are more than a million living in this country today – who carried a child, in some cases to full term, and having lost that child to stillbirth, were denied a certificate that says they tried. The right to receive a Certificate that acknowledges they went through a birthing process.

PLEASE SUPPORT OUR LEGISLATION IN YOUR STATE

Sudden Antenatal Death Syndrome

The National Stillbirth Society Inc.

"Because all our Children Matter"

TO: An Open Letter to Members of the Alaska Legislature

Please enact HB 159 to create Certificates of Birth Resulting in Stillbirth

The written record of life usually begins with a Certificate of Birth and ends with a Certificate of Death, but not for all babies. Last year 30,000 babies were "stillborn", victims of Sudden Antenatal Death Syndrome. These babies, past 20 weeks and for the most part viable, often died mysteriously in their mothers' wombs for no discernable reason. For them there is no Certificate of Birth. They are issued Certificates of Fetal Death that record their passing, but not Certificates of Birth that acknowledge their delivery. Why Not? Should not two certificates be issued, one to mark their death, the other to record their birth?

Birth is a process all mothers go through, regardless of the outcome. Mother's of stillborn babies "give birth", they just don't give life. The piece of paper we routinely refer to as a Certificate of Birth is actually titled, "Certificate of Live Birth". Doesn't this wording suggest there is another kind of birth? The answer is an obvious "Yes". There's "live birth" and then there's "stillbirth". Both qualify as "births".

Stillbirth mothers deserve to have their motherhood recognized and validated by the issuance of a Certificate of Birth Resulting in Stillbirth, just as live birth mothers have their birth event recognized. They are mothers; that their baby died before its birth does not take that reality away from them. And stillbirth fathers are no less fathers because of their loss.

I am a father. My daughter Camille died in utero on the eve of her delivery at 41 weeks!

Arizona recognized the inequality of how stillbirths were being treated and in 2001 passed HB2416, mandating that the Bureau of Vital Statistics offer parents of all stillborn babies a "Certificate of Birth Resulting in Stillbirth". This certificate is in addition to - and separate from - the Certificate of Fetal Death which is **not affected in any way by the legislation**. One document recognizes the brave act of the mother who bore a "still" baby, while the other recognizes the death of that child prior to birth. (For a recap of current legislative activity in all states and specimen bills see <http://www.missingangelsbill.org>.)

Both past and current stillbirths in Arizona are eligible to be issued such a Certificate.

The issuance of a Certificate of Birth Resulting in Stillbirth does not impact in any way a woman's right to choose to terminate her pregnancy. Such certificates are issued only for deliveries following naturally occurring fetal deaths. Women who choose an elective termination of their pregnancy would neither be required to obtain a Certificate of Birth Resulting in Stillbirth, nor would they even be eligible for the reason elective terminations don't fall within the definition of a "stillbirth".

Also important to note is that this measure is not about taxes or financial relief or gain of any type. Stillbirth parents are not seeking a dependent deduction, though one must ask whether it would not be appropriate to offer stillbirth parents the same tax benefit as live birth parents, since they bear the added cost of burial. But for the present, we want to focus solely on the societal issue of equal treatment for all birth mothers.

At present the mothers and fathers of stillborn babies suffer not only the loss of their baby but also the loss of societal acknowledgement that they are parents. Our country has historically been silent about stillbirth, preferring not to discuss this uncomfortable topic. Because of that silence there has been little done in the way of research or prevention. Stillbirth is a phenomenon that cuts across every strata of society; no one is immune. It strikes women as randomly as lightening bolts come to ground in a thunderstorm, making it all the more terrifying.

One in every 116 births is a stillbirth! Eighty eventy babies a day are born still every day in America; over five hundred every week.

The National Stillbirth Society, founded in 2001 by this stillbirth father, is sponsoring a nationwide drive to draw attention to the devastation caused to families worldwide by stillbirth. We will achieve this goal in part by getting state legislatures to enact legislation to acknowledge that mothers of stillborn babies are entitled to receive recognition for the child that they conceived and nurtured, but lost at birth..

When she signed the enabling legislation, Arizona's Governor Jane Dee Hull commented, "This is a step long overdue". She must have been right because legislators in every state where it has been enacted into law have done so on unanimous votes! That's because dead babies and bereaved parents are deemed to deserve more respect than they have been given up to now. It passed in Massachusetts – a liberal state – as easily as it did in Utah. This is truly a non-partisan issue, non-controversial issue. Thank you.

RE: House Bill 26

I request that House Bill 26, which would extend the current Medicaid Adult Dental program, be scheduled for a hearing at your earliest convenience. The program is scheduled to sunset on June 30, 2009. Early passage of this legislation will ensure continuation of care for the patients who rely on these services.

I have attached a Sponsor Statement, copy of the bill, Sectional Analysis, and some background materials. I have requested additional materials from the Department of Health and Social Services, which is the only department affected by this program. As soon as these materials are finalized, I will forward them to you. I will not need any audio/visual equipment.

I expect testimony from the following organizations:

Department of Health & Social Services
The Alaska Mental Health Trust Authority
The Alaska Dental Society or Dental Providers

Please feel free to contact me, or my legislative aide, Juli Lucky at 465-6587, if you need any additional information.

“An Act repealing the repeal of preventative and restorative adult dental services reimbursement under Medicaid; providing for an effective date by repealing the effective date of sec. 3, ch. 52, SLA 2006; and providing for an effective date.”

House Bill 26 would extend the current Medicaid Adult Dental program, which is scheduled to sunset this year. In 2006, the legislature passed House Bill 105, which restructured our approach to adult dental services allowed under Medicaid to provide a more complete level of services.

Prior to 2006, adults on Medicaid could only receive emergency care to relieve pain and fight infection. The passage of HB 105 authorized exams, cleaning, tooth restoration or extraction and dentures. In short, Alaska moved from a “Deferred Maintenance” to a “Preventative Maintenance” approach for adult dental care.

In order to have a chance to assess the viability of the program, the legislature added a sunset to the program of June 30, 2009. House Bill 26 would remove the sunset, allowing the program to become permanent.

HB 26

Sectional Analysis

Prepared by Representative Mike Hawker's Office

- Section 1:** Repeals Section 3 and 5 of ch. 52, SLA 2006 (HB 105). Section 3 reinserted the statute as it existed before passage of HB 105; Section 5 repealed the new section added by HB 105.
- Section 2:** Repeals Section 7 of ch. 52, SLA 2006 (HB 105), which provided an effective date for Section 3.
- Section 3:** Immediate effective date.

ANALYSIS: (Attach a separate page if necessary)

This bill eliminates the sunset date of June 30, 2009 on enhanced dental services for adult Medicaid recipients. Services for adult Medicaid recipients would otherwise revert to emergent dental services (treatment for immediate relief of pain and acute infection), only. During FY2008 about 7,600 adults received treatment under this program. Forecasted expenditures are based on an analysis of paid claims reflecting the most recent trends. The estimated federal portion is based on projected federal financial participation rates for 2010 through 2015 using federal reimbursement rates from the American Recovery and Reinvestment Act 2009 economic stimulus bill. The amount for FY2010 is included in the Governor's amended budget request. (continued on page 2)

FISCAL NOTE

**STATE OF ALASKA
2009 LEGISLATIVE SESSION**

BILL NO. HB026

ANALYSIS CONTINUATION

In April 2007, Alaska began providing preventive and restorative dental care for adults age 21 and older enrolled in Medicaid. The Legislature established a three year trial period to evaluate the new program, which will end June 30, 2009, if not reauthorized. Services provided under the Adult Preventative Dental Medicaid program must be preauthorized and are subject to a \$1,150 annual cap per individual. Services include exams, cleanings, fillings, root canals and dentures. Total program costs are controlled by spending limits set by the legislature, ensuring that total program spending remains within the budgeted amount.

The Adult Preventative Dental Medicaid program helps protect and promote the health of Alaskans by improving affordable access to dental care services to the nearly 40,000 eligible adult Alaskans enrolled in Medicaid annually. During fiscal year 2008 about 7,600 adults received treatment under this program. In the past, Medicaid only treated emergency pain relief and acute infection for adult dental needs. This coverage expansion was added because infections in the mouth are no different than infections in other parts of the body. Dental infections cause pain and lost time at work, and affect overall health. Waiting until a dental emergency occurs can result in more expensive dental care. Missing teeth can affect employability.

The Alaska Mental Health Trust Authority contributed to state matching funds during the first three years of the program but will not do so after June 30, 2009. Fund source calculations for this fiscal note assume only GF match for the state portion. The federal portion is estimated for 2010 through 2015 based on the proportion of tribal and Title XIX reimbursable costs as forecast for 2010, and the estimates of federal matching percentages for 2010 through 2015. Approximately 18% of the claims are eligible for Indian Health Services which receives 100% federal reimbursement. The remaining 82% of claims are eligible for regular title XIX FMAP, which is projected to average 58.68% for state FY2010, 54.34% for FY2011 and 50% for FY2012 to FY2015.

HB 26

Adult Dental Program Facts

Prepared by Representative Mike Hawker's Office
Information Provided by DH&SS

1. How many recipients have taken advantage of the program?

The unduplicated count of adult Medicaid recipients receiving these services since implementation of the services on April 1, 2007 – September 30, 2008 is approximately 9,300 adults with 283 dental providers participating in the program.

2. How much has been expended so far?

The expenditure information on preventative and restorative dental services for adult Medicaid recipients (in thousands of dollars) is:

Fiscal Year 2007 (4th Quarter): \$418.5

Fiscal Year 2008: \$4,640.5

Providers have up to 12 months to submit Medicaid claims and the listed expenditures are based on the date of payment of the claims.

3. What services were the funds spent on?

The expenditures for categories of dental services for the period of April 1, 2007 – September 30, 2008 (as reflected on claims for this period that had been processed the 2nd week of November 2008) are:

- ◆ Fillings (1 and 2 surface amalgam and resin restorations): 9,313 procedures - \$1,015,196
- ◆ Root canal therapy on permanent teeth: 1,027 procedures (including 289 of those on front teeth) - \$435,412. *These are situations that would have often resulted in extracting teeth as Medicaid was not covering root canals under emergent dental.*
- ◆ Dentures (includes full & partial dentures): 2,343 procedures - \$2,227,288. *Please note that the Medicaid program restricts denture coverage to every five years for adults, however procedures to adjust the fit of the would be covered. The denture procedures and expenditures listed do not include repairs and/or adjustments to dentures.*

LAWS OF ALASKA

2006

Source
SCS CSHB 105(FIN)

Chapter No.
52

AN ACT

Relating to coverage for adult dental services under Medicaid; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

1 Relating to coverage for adult dental services under Medicaid; and providing for an effective
2 date.

3

4 * **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 PURPOSE; INTENT. (a) The purpose of this Act is to increase adult dental care
7 services for an eligible recipient of Medicaid under AS 47.07 to ensure that services critical to
8 a recipient are implemented first, while controlling the overall growth of the costs of the
9 increase in services.

10 (b) It is the intent of the legislature that the Department of Health and Social Services
11 implement the increase in adult dental care services authorized by this Act through the
12 adoption of regulations consistent with the department's obligation to contain the costs of the
13 increased services in order to provide the services within appropriation limits. It is further the
14 intent of the legislature that the Department of Health and Social Services implement

1 mechanisms to contain costs, which may include establishing a maximum amount of benefits
2 for each eligible recipient in a fiscal year for the services and specifying the scope of the
3 services.

4 * **Sec. 2.** AS 47.07 is amended by adding a new section to read:

5 **Sec. 47.07.067. Payment for adult dental services.** (a) Subject to
6 appropriation, the department shall pay for minimum treatment and for preventative
7 and restorative adult dental services provided under AS 47.07.030(b) and under
8 regulations adopted by the commissioner in conformity with applicable federal
9 requirements and this chapter. Regulations adopted under this section must include the
10 following:

11 (1) a maximum amount of benefits for preventative and restorative
12 adult dental services of \$1,150 for each eligible recipient in a fiscal year; and

13 (2) specification of the scope of coverage for preventative and
14 restorative adult dental services.

15 (b) On or before June 30 of each year, the department shall review
16 appropriations available for the purposes of this section for the following fiscal year,
17 and estimate the scope of services to be used and the number of eligible recipients
18 anticipated to be served during the following fiscal year. Notwithstanding the
19 maximum amount of benefits specified in (a)(1) of this section, the department shall
20 reduce, by regulation, the specified maximum amount of benefits for the following
21 fiscal year if the department's estimates under this subsection would exceed
22 appropriations available for that fiscal year.

23 (c) Notwithstanding any contrary provision of AS 44.62, the department may
24 adopt emergency regulations to implement (b) of this section.

25 (d) As used in this section, "minimum treatment" means the application or
26 prescription of a medication or material deemed necessary by a licensed dentist for the
27 immediate relief of pain or to reduce the spread of infection.

28 * **Sec. 3.** AS 47.07.900 is amended by adding a new paragraph to read:

29 (20) "adult dental services" means minimum treatment for the
30 immediate relief of pain and acute infection provided by a licensed dentist.

31 * **Sec. 4.** AS 47.07.900(1) is repealed.

1 * **Sec. 5.** AS 47.07.067, as added in sec. 2 of this Act, is repealed June 30, 2009.

2 * **Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to
3 read:

4 **TRANSITION: REGULATIONS.** The Department of Health and Social Services may
5 proceed to adopt regulations necessary to implement the changes made by this Act. The
6 regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the
7 effective date of the statutory changes.

8 * **Sec. 7.** Section 3 of this Act takes effect July 1, 2009.

9 * **Sec. 8.** Section 6 of this Act takes effect immediately under AS 01.10.070(c).

10 * **Sec. 9.** Except as provided in secs. 7 and 8 of this Act, this Act takes effect July 1, 2006.

The Honorable Bob Herron, Co-Chair
House Health and Social Services Committee
Alaska Capitol, Room 415
Juneau, AK 99801-1182

RE: HB 26 (Hawker)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support HB 26, authored by Representative Mike Hawker and co-sponsored by Representatives Munoz, Gara and Kerttula.

Previously, under Alaska's Medicaid program, the only dental coverage offered adult beneficiaries was for emergency care. HB 105 offered funding, albeit annually capped at \$1,150, which began to address preventive and restorative care. Now, for example, an older Alaskan on Medicaid who resides in a long term care facility and needs dentures can secure them under the program. Older persons who have dental problems, missing teeth, or are in need of dentures often have accompanying nutrition problems. These nutrition problems can exacerbate other health issues and create an overall deterioration in health status. We believe dental care is essential to quality health care. Funding for dental care should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not be need to be spent on more serious health care problems resulting from poor oral health status.

Understandably, the Legislature wanted to evaluate the initial results of the program and scheduled it to sunset in June, 2009. As Representative Hawker indicates in his sponsor's statement, the program has moved adult Alaska Medicaid beneficiaries from "deferred maintenance" to "preventive maintenance." Representative Hawker's HB 26 would eliminate the sunset provision.

Of the 7,600 adults who have benefited, about 1,800 are older Alaskans, including 900 who received dentures. The average cost for care provided to a senior Alaskan in the program was \$855.

The only concern we have about the program is the annual cap of \$1,150. Although the average cost of a senior Alaskan was \$855, we understand that the fee for an upper or lower set of dentures is now between \$1,700 and \$1,800. We also understand that some adult Medicaid beneficiaries have more significant oral health problems that may go considerably beyond the cap.

One of the goals of the program was to provide care that might take a Medicaid beneficiary from being among the unemployed because of missing teeth (and unable to pass an employment interview) to enabling them to secure employment and eventually getting off the Medicaid program. Some of these adults will need more oral care than can be provided under the cap.

We suggest exploring the possibility of raising the cap to enable more beneficiaries to get the total dental care they need.

AARP urges an "AYE" vote on HB 26.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

Adult Dental

New Adult Dental Services

On March 29, 2007, Alaska's Medicaid for adults began covering \$1,150 worth of preventive dental care, such as exams and cleanings, each year for Alaskans 21 and older who receive Medicaid services.

New services also include fillings, root canals and dentures.

In the past, adult dental Medicaid only treated emergency pain relief and acute infection.

For a full list of new services in the state regulations passed last year authorizing the changes, [click here](#).

The limited amount of preventive and restorative coverage, as well as limited access to dentists who accept Medicaid patients, means patients will need to

- ▶ plan carefully with their dentists what to do first, and when it can be scheduled;
- ▶ keep their appointments.

Missed appointments are a primary complaint among dentists. The state recently clarified that when dentists charge patients for missed appointments, that policy includes Medicaid patients. Medicaid will not cover the cost of missed appointments.

For help finding a dentist who takes new Medicaid patients, call the recipient helpline: 1-800-780-9972.

Funding

The state investment of \$1.3 million in general funds is being matched with federal funds and \$1.425 million a year from the Mental Health Trust Authority, for a total annual cost of \$10.2 million, an eight-fold return on state general fund dollars.

The coverage expansion was added because infections in the mouth are no different than infections in other parts of the body. Dental infections cause pain, lost time at work and missing teeth can affect employability. Waiting for dental emergencies often results in more expensive dental care and limits the dentist's ability to address dental problems that will result in future dental emergencies.

Reauthorize preventative and restorative dental services for adult Medicaid recipients

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, and Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority, jointly support the reauthorization of preventive and restorative dental services for adult Medicaid recipients. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization. The provisions for this reauthorization are in HB 26.

- The Department of Health and Social Services reports that approximately 7,600 adult Medicaid recipients received these dental services in FY08 with 252 participating dental providers.
- The American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs, and as former U.S. Surgeon General C. Everett Koop stated, "You're not healthy without good oral health."ⁱ
- Trust beneficiaries continue to list dental services as a priority unmet health needs.
- Dental pain, missing and decayed teeth and infection can affect employment and job advancement, contribute to missed work, dietary choices for seniors, and complicate management of other chronic diseases.ⁱⁱ
- Individuals on public assistance who receive rehabilitative dental treatment (including fillings, extractions, and dentures) were "... twice as likely to receive favorable or neutral employment outcomes as they were to receive unfavorable outcomes."ⁱⁱⁱ
- Dental infections due to periodontal disease have been associated with adverse pregnancy outcomes (e.g., pre-term births)^{iv}, management problems for individuals with diabetes, risks for pneumonia in nursing homes, and other chronic diseases including cardiovascular disease.^v
- The bacteria involved with the dental decay process are typically passed parent to child. Part of the efforts to reduce dental decay in young children relates to reducing the level of dental infection in the caregiver.^{vi} Additionally, parents with dental coverage are more likely to access dental services for their children.
- The coverage of preventive and restorative dental care for adult Medicaid recipients along with necessary behavioral changes, over the long term, offer the potential for

reduced utilization of emergent dental services (e.g., accessing the hospital emergency room for management of a dental infection).

Supporters: AARP-Alaska, Alaska Public Health Association, Alaska Dental Society All-Alaska Pediatric Partnership, ANTHC and Alaska Primary Care Association.

February 2, 2009

The Honorable Representative Mike Hawker, Co-Chair
House Finance Committee
Alaska State Capitol, Room 505
Juneau, AK 99801-1182

Subject: Support for Reauthorization of the Medicaid Adult Dental Program

Dear Co-Chair Hawker:

The Alaska Commission on Aging (ACoA) encourages support of HB 26, a bill to reauthorize preventive and restorative dental services for adult Medicaid recipients, sponsored by you and co-sponsored by Representative Muñoz. Medicaid coverage for these services will sunset June 30, 2009 without legislative reauthorization.

Good nutrition is vital for health and wellness across the life span and depends on oral health. Dental pain and missing or decayed teeth can affect dietary choices for seniors that may impact overall health and wellness. Without preventive and restorative dental services, which include exams, fillings, extractions, and dentures, vulnerable older Alaskans are at risk of developing dental infections that have been associated with periodontal disease, diabetes, pneumonia, and other chronic diseases including cardiovascular disease. Currently, Medicaid dental services are limited to expensive emergency care for immediate relief of pain and acute infection, with no coverage for preventative and restorative dental care. These limited services often lead to extraction of permanent teeth.

In addition to the health issues involved, decayed or missing teeth can be a significant factor in employability or job advancement, which is of concern to all persons seeking employment, regardless of age. Preventive and restorative dental services result in fewer tooth extractions for Medicaid clients and offer increased chance of employment, according to research findings (University of California, San Francisco School of Dentistry 2004).

Preventive and restorative dental services can help prevent the progression of serious dental disease and discomfort which can result in more costly emergency care. These services promote healthy lifestyles, assist in chronic disease prevention, and help to contain future Medicaid costs for emergency dental work and other related health care problems.

Since inception on April 1, 2007 through September 30, 2008, this program has served 9,267 unduplicated persons, which includes approximately 1,800 persons aged 60 years and older, of whom 900 received dentures.

Currently, the limit for services is \$1,150 per year per Medicaid beneficiary. This amount was originally used because it would pay for an exam and either an upper or lower set of dentures. We understand that the average cost for dentures has increased to \$1,700 or \$1,800 per set. The Commission suggests that the cap for services be reconsidered in light of the current costs for providing dental care.

ACoA supports HB 26 and believes this program to be a wise public investment that will help reduce expensive emergency dental needs and associated health care costs, and enhance health and wellness for elderly Alaskans. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your support of this important legislation.

Sincerely,

Sharon Howerton-Clark
Chair Alaska Commission on Aging

Sincerely,

Denise Daniello

**Alaska Commission on Aging
KEY POINTS TO KNOW ABOUT:**

**Continuation of the Medicaid Adult Dental Program
February 2009**

Issue:

The Alaska Commission on Aging was a strong proponent of the original 2006 legislation which added preventive and restorative dental care to the palette of services available to adult Medicaid recipients. At the time, we realized that many low-income seniors were living with a variety of painful, destructive dental problems because they could not afford to pay for routine dental exams or dentures.

Prior to implementation of this program in 2006, dental services for Medicaid recipients were limited to expensive emergency care for relief of pain and acute infection only – often leading to extraction of permanent teeth. Waiting for dental emergencies resulted in more expensive dental care and limited the dentist's ability to address problems that would result in future dental emergencies.

While much of the focus on tooth decay concentrates on children, adults remain at high risk for dental decay, especially elderly and other adults on certain medications or undergoing cancer treatments that decrease saliva output. Studies have also shown the link between oral health and chronic diseases such as diabetes and cardiovascular disease. For seniors, the inability to properly chew food due to poor dentition leads to chronic malnutrition and its many consequences for health. Furthermore, those with ill-fitting dentures, missing teeth, no dentures, and other disfiguring dental problems may avoid the social engagement that is so essential to maintaining mental and physical health for seniors.

Program statistics for the period April 1, 2007 through September 30, 2008 indicate the following:

- ◆ Approximately 1,800 seniors were served by this program, comprising 19.4 percent of all those served.
- ◆ Approximately 900 seniors received dentures under the program, 38.6 percent of the total persons who received dentures.
- ◆ Expenses for seniors totaled 24.6 percent of program expenses.
- ◆ The average cost for care provided to a senior on the program was \$855.

Recommendation:

Re-authorize the Medicaid Adult Dental Program. Continue this beneficial program, which supports the health of low-income seniors and others.

Subject: HHSS committee today

Hi,

Last Thursday, Co-Chair Keller closed public testimony for HB 26. Do you know if there is a plan to open that again?

Do you know if there will be more public testimony on HB 2?

If so, I will prepare witness registers, though I do keep some blank ones with me, just in case.

Thanks,

Butch

CS FOR HOUSE BILL NO. 26()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES HAWKER, Muñoz, Gara, Kerttula

A BILL
FOR AN ACT ENTITLED

1 **"An Act relating to adult dental services; providing for an effective date by amending**
2 **the effective date of sec. 3, ch. 52, SLA 2006; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** Section 5, ch. 52, SLA 2006, is amended to read:

5 Sec. 5. AS 47.07.067, as added in sec. 2, ch. 52, SLA 2006 [OF THIS ACT], is
6 repealed June 30, 2014 [2009].

7 *** Sec. 2.** Section 7, ch. 52, SLA 2006, is amended to read:

8 Sec. 7. Section 3 of this Act takes effect July 1, 2014 [2009].

9 *** Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

HB

50

Alaska State Legislature

Representative Peggy Wilson
House District 2

MEMORANDUM

HB 50 Version M Changes:

1. **Concern:** Rural hospitals may face more difficulty than urban facilities in complying with the HB 50 requirement

Mitigation 1: Added new exemption, "Temporary nurse staffing emergency"

- 30 day duration.
- Report describing efforts to staff the facility required.
- Report must be filed with DOL
 - i. Limit to 2 reports in 6 months or 3 in 1 year or the reports must be sent to the Legislature as well. (pg 4, line 19-31, pg 5, line1-3)

Mitigation 2: Unforeseen weather condition added. (pg 3, line 11-18)

Mitigation 3: Rural community is defined. (pg 8 line15-21)

2. **Concern:** Nurses would leave surgical units or other units while procedures or surgeries are ongoing.

Mitigation 1: An exemption for a nurse who is participating in an on-going surgery or medical procedure has been added. (pg 3, line 2-3)

3. **Concern:** Specialized work schedules for weekends used at North Star Behavioral Health would be a problem

Mitigation: This specific practice has been exempted. (pg 4, line 1-15)

4. **Concern:** On call hours could require a nurse to work beyond the maximum 14 consecutive hour limit.

Mitigation: An exemption allowing nurses the ability to refuse mandatory on-call if they believe they are too tired to perform their duties safely. (pg 3, line 21-24)

Alaska State Legislature

Representative Peggy Wilson
House District 2

5. **Concern:** The 80 limitation for 14 days was not flexible.

Mitigation: that limitation has been deleted

6. **Concern:** There are potential legal problems with jurisdiction.

Mitigation: The federal and Native facilities have been exempted. (pg. 7, line 13-17)

7. **Concern:** Reporting Requirements for facilities that do not use mandatory overtime are too arduous.

Mitigation: Allow a facility to submit a statement that there are no hours to report. (pg 7, line 9-10)

Two other changes were made to the bill: Facilities will be required to post a sign describing these statutes. (pg 7, line 18-23) The one hour exemption to find a replacement nurse has been extended to be more flexible (pg 4, line 16-18)

Sponsor(s): REPRESENTATIVES WILSON, GARA, TUCK, PETERSEN, LYNN, SEATON, GATTO, CISSNA, MUÑOZ, AND GARDNER, Ramras, Foster, Kerttula

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to limitations on mandatory overtime for registered nurses and**
2 **licensed practical nurses in health care facilities; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 **LEGISLATIVE FINDINGS AND INTENT.** The legislature finds that

7 (1) it is essential that registered nurses and licensed practical nurses providing
8 direct patient care be available to meet the needs of patients;

9 (2) quality patient care is jeopardized by registered nurses and licensed
10 practical nurses who work unnecessarily long hours in health care facilities;

11 (3) registered nurses and licensed practical nurses are leaving their profession
12 because of workplace stresses, long work hours, and depreciation of their essential role in the
13 delivery of quality and direct patient care;

14 (4) it is necessary to safeguard the efficiency, health, and general well-being

1 of registered nurses and licensed practical nurses, and the health and general well-being of the
2 persons receiving care from registered nurses and licensed practical nurses in health care
3 facilities;

4 (5) it is necessary that registered nurses and licensed practical nurses be made
5 aware of their rights, duties, and remedies concerning hours worked and patient safety; and

6 (6) health care facilities should provide adequate and safe nurse staffing
7 without the need for or use of mandatory overtime.

8 * **Sec. 2.** AS 18.20 is amended by adding new sections to read:

9 **Article 4. Overtime Limitations for Nurses.**

10 **Sec. 18.20.400. Limitations on nursing overtime.** (a) Except as provided in
11 (c) of this section, a nurse in a health care facility may not be required or coerced,
12 directly or indirectly,

13 (1) to work beyond a predetermined and regularly scheduled shift that
14 is agreed to by the nurse and the health care facility; or

15 (2) to accept an assignment of overtime if, in the judgment of the
16 nurse, the overtime would jeopardize patient or employee safety.

17 (b) Except as provided by (c) of this section, after working a predetermined
18 and regularly scheduled shift that is agreed to by the nurse and the health care facility
19 as authorized by (a)(1) of this section, a nurse in a health care facility shall be allowed
20 not less than 10 consecutive hours of off-duty time immediately following the end of
21 that work.

22 (c) Subsection (a) of this section does not apply to

23 (1) a nurse who is employed by a health care facility providing
24 services for a school, school district, or other educational institution, when the nurse is
25 on duty for more than 14 consecutive hours during an occasional special event, such as
26 a field trip, that is sponsored by the employer;

27 (2) a nurse voluntarily working overtime on an aircraft in use for
28 medical transport, so long as the shift worked is allowable under regulations adopted
29 by the Board of Nursing based on accreditation standards adopted by the Commission
30 on Accreditation of Medical Transport Systems;

31 (3) a nurse on duty in overtime status

1 (A) who is participating in the performance of a medical
2 procedure or surgery that has begun but has not been completed;

3 (B) because of an unforeseen emergency situation that could
4 jeopardize patient safety; in this subparagraph, "unforeseen emergency
5 situation" means an unusual, unpredictable, or unforeseen situation caused by
6 an act of terrorism, disease outbreak, natural disaster, major disaster as defined
7 in 42 U.S.C. 5122, or disaster emergency under AS 26.23.020 or 26.23.140,
8 but does not include a situation in which a health care facility has reasonable
9 knowledge of increased patient volume or inadequate staffing because of some
10 other cause, if that cause is foreseeable;

11 (C) because the health care facility has a scheduling problem
12 caused by unforeseen weather conditions that prevent a second nurse from
13 arriving at the facility to relieve the nurse on duty; in this subparagraph,
14 "unforeseen weather conditions" means unusual, unpredictable, or unforeseen
15 weather so extreme as to impair travel to the health care facility, but does not
16 include a situation in which the health care facility has knowledge of the
17 weather conditions far enough in advance to act so that a scheduling problem
18 under this subparagraph can reasonably be avoided; or

19 (D) at a health care facility located in a rural community that
20 declares a temporary nurse staffing emergency under AS 18.20.410;

21 (4) a nurse fulfilling on-call time that is agreed on by the nurse and a
22 health care facility before it is scheduled unless fulfilling the on-call time would, in the
23 nurse's judgment, create an unacceptable risk to the physical safety of the nurse, a
24 patient, or an employee of the facility;

25 (5) a nurse voluntarily working overtime so long as the work is
26 consistent with professional standards and safe patient care and does not exceed 14
27 consecutive hours;

28 (6) a nurse voluntarily working beyond 80 hours in a 14-day period so
29 long as the nurse does not work more than 14 consecutive hours without a 10-hour
30 break and the work is consistent with professional standards and safe patient care;

31 (7) a nurse who

1 (A) is employed

2 (i) at a psychiatric treatment hospital that treats only
3 adolescents and children;

4 (ii) at a residential psychiatric treatment center under
5 AS 18.07.111 or AS 47.12.990; or

6 (iii) at a secure residential psychiatric treatment center
7 under AS 47.32.900;

8 (B) voluntarily agrees to work a 16-hour shift for the period
9 between 5:00 p.m. on a Friday and 8:00 a.m. on the Monday that immediately
10 follows and receives pay and benefits for that work that are equal to or greater
11 than the pay and benefits the nurse would receive for working 20 regular hours
12 in the same position; and

13 (C) during the period described in (B) of this paragraph does
14 not work a 16-hour shift consecutive with another shift of eight hours or more
15 without an intervening break of at least eight hours;

16 (8) the first two hours on overtime status when the health care facility
17 is obtaining another nurse to work in place of the nurse in overtime status, so long as
18 the nurse in overtime status is not on duty for more than 14 consecutive hours.

19 **Sec. 18.20.410. Temporary nurse staffing emergency.** (a) If, after making a
20 substantial and reasonable effort to increase the number of available nurses on staff
21 and failing in that effort, a health care facility in a rural community determines it is not
22 able to meet the overtime limitations in AS 18.20.400 without putting the safety of its
23 patients at risk of serious harm, the health care facility may declare a temporary nurse
24 staffing emergency. A declaration of a temporary nurse staffing emergency under this
25 section

26 (1) must be made in a writing, signed by the administrator of the health
27 care facility or the administrator's designee, that describes the facility's reasonable
28 effort to avoid the temporary nurse staffing emergency; and

29 (2) may not exceed 30 days.

30 (b) Immediately after declaring a temporary nurse staffing emergency under
31 (a) of this section, a health care facility shall file with the division of labor standards

1 and safety, Department of Labor and Workforce Development, a report that includes a
2 copy of the signed writing required under (a) of this section. A report under this
3 subsection is a public document.

4 (c) In addition to the requirements of (a) and (b) of this section, a health care
5 facility shall notify the legislature immediately by delivery of a written report to the
6 Alaska Legislative Council each time the facility declares a temporary nurse staffing
7 emergency under AS 18.20.400(c) that exceeds two occurrences in a six-month period
8 that begins on January 1 or July 1 of the year in which the declaration occurs, or three
9 occurrences in the one-year period that begins on January 1 of that year. A report
10 under this subsection must include a copy of each report that is required of the health
11 care facility under (b) of this section for the one-year period that begins on January 1
12 of the year the excessive declaration under this subsection occurs.

13 **Sec. 18.20.420. Health care facility complaint process for overtime work**
14 **by nurses.** A health care facility shall provide for an anonymous process by which a
15 patient or a nurse may make a complaint about staffing levels and patient safety that
16 relate to overtime work by nurses and to limitations on overtime work by nurses under
17 AS 18.20.400.

18 **Sec. 18.20.430. Enforcement, offenses, and penalties.** (a) The commissioner
19 shall administer AS 18.20.400 - 18.20.499 and adopt regulations for implementing and
20 enforcing AS 18.20.400 - 18.20.499.

21 (b) A complaint alleging a violation of AS 18.20.400 - 18.20.499 must be filed
22 with the commissioner within 30 days after the date of the alleged violation. The
23 commissioner shall provide a copy of the complaint to the health care facility named
24 in the filing within three business days after receiving the complaint.

25 (c) If the commissioner finds that a health care facility has knowingly violated
26 an overtime provision of AS 18.20.400 - 18.20.499, the following civil penalties shall
27 apply:

28 (1) for a first violation of AS 18.20.400 - 18.20.499, the commissioner
29 shall reprimand the health care facility;

30 (2) for a second violation of AS 18.20.400 - 18.20.499 within 12
31 months, the commissioner shall reprimand the health care facility and assess a penalty

1 of \$500;

2 (3) for a third violation of AS 18.20.400 - 18.20.499 within 12 months,
3 the commissioner shall reprimand the health care facility and assess a penalty of not
4 less than \$2,500 but not more than \$5,000;

5 (4) for each violation of AS 18.20.400 - 18.20.499 after a third
6 violation of AS 18.20.400 - 18.20.499 within 12 months, the commissioner shall
7 reprimand the health care facility and assess a penalty of not less than \$5,000 but not
8 more than \$25,000.

9 (d) As an employer, a health care facility violates an overtime provision of
10 AS 18.20.400 - 18.20.499 "knowingly" when the facility is either aware that its
11 conduct is of a nature prohibited by the overtime provision or aware that the
12 circumstances described in the overtime prohibition exist; however, when knowledge
13 of the existence of a particular fact is required to establish that the violation was
14 knowing, that knowledge exists when the facility is aware of a substantial probability
15 of its existence, unless the facility reasonably believes it does not exist.

16 **Sec. 18.20.440. Prohibition of retaliation.** A health care facility may not
17 discharge, discipline, threaten, discriminate against, penalize, or file a report with the
18 Board of Nursing against a nurse for exercising rights under AS 18.20.400 - 18.20.499
19 or for the good faith reporting of an alleged violation of AS 18.20.400 - 18.20.499.

20 **Sec. 18.20.450. Enforcement of prohibition against retaliation.** The
21 commissioner shall investigate every complaint alleging a violation of AS 18.20.440,
22 and, within 90 days after the date of filing of the complaint, provide to the
23 complainant, the Department of Law, and the health care facility named in the
24 complaint a written determination as to whether the health care facility violated
25 AS 18.20.440. If the commissioner finds a violation of AS 18.20.440, the
26 commissioner shall request that the Department of Law represent the department and
27 the complainant and obtain from the health care facility all appropriate relief,
28 including rehiring or reinstatement of the complainant to the complainant's former
29 position with back pay.

30 **Sec. 18.20.460. Report requirements.** (a) A health care facility shall file with
31 the division of labor standards and safety, Department of Labor and Workforce

1 Development, a semiannual report on a form provided by the department. The report
2 for the six-month period ending June 30 must be filed before the following August 1,
3 and the report for the six-month period ending December 31 must be filed before the
4 following February 1. The report must include, for each nurse employed by the health
5 care facility or under contract with the health care facility, the number of overtime
6 hours worked and the number of hours the nurse was on call. A health care facility that
7 does not employ a nurse who worked overtime hours or who was on call during the
8 reporting period is not required to describe hours worked as overtime and on-call
9 hours for individual nurses but may instead complete the report by stating on the form
10 that there are no reportable hours.

11 (b) A primary care outpatient facility is not subject to the reporting
12 requirements of (a) of this section.

13 **Sec. 18.20.470. Provisions not applicable to nurses employed in federal or**
14 **tribal facilities.** The provisions of AS 18.20.400 - 18.20.499 do not apply to a nurse
15 employed in a health care facility that is operated by

- 16 (1) the federal government; or
17 (2) a tribal organization as defined in 25 U.S.C. 450b.

18 **Sec. 18.20.480. Notice to employees.** A health care facility shall post and
19 maintain, in places readily accessible to individuals in the service of the health care
20 facility, printed statements that describe employee rights and employer obligations
21 under AS 18.20.400 - 18.20.499 and regulations adopted under AS 18.20.430. The
22 commissioner shall supply the printed statements to a health care facility without cost
23 to the facility.

24 **Sec. 18.20.499. Definitions.** In AS 18.20.400 - 18.20.499,

- 25 (1) "commissioner" means the commissioner of labor and workforce
26 development;
27 (2) "health care facility" means a private, municipal, or state hospital;
28 independent diagnostic testing facility; primary care outpatient facility; skilled nursing
29 facility; kidney disease treatment center, including freestanding hemodialysis units;
30 intermediate care facility; ambulatory surgical facility; Alaska Pioneers' Home or
31 Alaska Veterans' Home administered by the Department of Health and Social Services

1 under AS 47.55; correctional facility owned or administered by the state; private,
2 municipal, or state facility employing one or more public health nurses; long-term care
3 facility; psychiatric hospital; residential psychiatric treatment center, as defined in
4 AS 18.07.111 or AS 47.32.900; secure residential psychiatric treatment center under
5 AS 47.32.990; juvenile detention facility; juvenile detention home, juvenile work
6 camp, or treatment facility as defined in AS 47.12.990;

7 (3) "nurse" means an individual licensed to practice registered nursing
8 or practical nursing under AS 08.68 who provides nursing services through direct
9 patient care or clinical services and includes a nurse manager when delivering in-
10 hospital patient care;

11 (4) "on-call" means a status in which a nurse must be ready to report to
12 the health care facility and may be called to work by the health care facility;

13 (5) "overtime" means the hours worked in excess of a predetermined
14 and regularly scheduled shift that is agreed to by a nurse and a health care facility;

15 (6) "rural community" means a village or city that has a population of
16 less than 10,000, as determined by the Department of Labor and Workforce
17 Development, and is in

18 (A) the unorganized borough; or

19 (B) an organized borough that has a population of less than
20 25,000, as determined by the Department of Labor and Workforce
21 Development.

22 * **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to
23 read:

24 **APPLICABILITY.** A health care facility that is required to file reports under
25 AS 18.20.460, enacted in sec. 2 of this Act, shall file its first report before February 1, 2010,
26 for the period July 1, 2009, through December 31, 2009.

27 * **Sec. 4.** AS 18.20.460, enacted in sec. 2 of this Act, and sec. 3 of this Act take effect
28 July 1, 2009.

29 * **Sec. 5.** Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

Alaska State Legislature

Representative Peggy Wilson
House District 2

MEMORANDUM

Date: March 30, 2009

To: Representative Bob Herron and Representative Wes Keller, Co-Chairs Health, and Social Services Committee

From: Representative Peggy Wilson *PW*

Re: HB 50 – Limit Overtime for Registered Nurses

I would like to request the House HSS Committee schedule another hearing on HB 50.

During the first hearing of this bill in the House Health and Social Services there was testimony that brought up several issues. The attached revision of the bill addresses those issues. This memo will outline the changes made to the bill and the issue it is designed to mitigate.

1. **Concern:** Rural hospitals may face more difficulty than urban facilities in complying with the requirement to not exceed the shift length maximum of 14 hours or to allow 10 hours of rest following such a shift. Witnesses in opposition testified that generally hospitals don't use mandatory overtime, but the concern was raised that in certain circumstances in remote rural facilities, mandatory overtime was occasionally necessary.

Mitigation 1: A new exemption has been added, called "Temporary nurse staffing emergency" for rural communities. Under this provision, facilities may declare a "temporary nurse staffing emergency" of up to 30 days after making all reasonable efforts to avoid this circumstance. These facilities shall file a report signed by the facility administrator with the Department of Labor & Workforce Development that describes the facilities' efforts to avoid the staffing emergency. The reports must also be filed with the Legislature if there are more than two such emergencies declared within 6 months or 3 emergencies within 1 year. (pg 4, Sec. 18.20.410)

Alaska State Legislature

Representative Peggy Wilson
House District 2

Mitigation 2: An exemption for "unforeseen weather condition" and a definition of that condition were added. (pg 3, line 12-19)

Mitigation 3: The temporary exemption described above is available to any village or city with a population of less than 10,000. This exemption also applies to communities in organized boroughs with a population of more than 25,000. (pg 7, line 30-31, pg 8 line 1-5)

2. **Concern:** Because of the 14 hour maximum for a shift there seemed to be a concern, from multiple witnesses testifying in opposition to the bill, that nurses would be forced to leave surgical units with ongoing surgeries or leaving neonatal units without the specially trained nurses in attendance. This was never the intent of the proponents of this bill.

Mitigation 1: An exemption for a nurse who is participating in an on-going surgery or medical procedure has been added. (pg 3, line 2-3)

Mitigation 2: The exemption for unforeseen emergency situation has been expanded to include "a life-threatening circumstance". (pg 3, line 7)

3. **Concern:** The committee heard testimony describing a situation where a modified Baylor program of staffing is used by North Star Behavioral Health. This staffing situation is used only at psychiatric hospitals and residential treatment centers that treat adolescents and children and only on the weekends.

Mitigation: This specific practice has been exempted. (pg 3, line 23-25)

4. **Concern:** During testimony by both those opposed and those in favor it was brought out that mandatory on-call was used more frequently as a staffing tool than mandatory overtime. This practice often requires nurses to work beyond the number of hours that are safe for both the patient and the nurse.

Mitigation: Language has been added to the general on-call exemption allowing nurses the ability to refuse mandatory on-call if they believe they are too tired to perform their duties safely. (pg 3, line 23-25)

Alaska State Legislature

Representative Peggy Wilson
House District 2

I have also made other changes described below.

Facilities will be required to post signs that describe the statutes created by this bill. The signs will be distributed by the Department of Labor and must be displayed in a conspicuous work area in all facilities. (pg 7, line 4-9)

The 1 hour exemption while the health care facility is obtaining another nurse to work in place of the nurse in overtime status has been extended to 2 hours so long as the nurse has not exceeded the 14 hour limit. In some cases nurses live some distance from the facility and I believe this extension of the provision gives the facility more flexibility. (pg 4, line 11)

Thank you for your consideration of my request.

CS FOR HOUSE BILL NO. 50()

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY

Offered:

Referred:

**Sponsor(s): REPRESENTATIVES WILSON, GARA, TUCK, PETERSEN, LYNN, SEATON, GATTO,
CISSNA, MUÑOZ, AND GARDNER, Ramras, Foster, Kerttula**

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to limitations on mandatory overtime for registered nurses and**
2 **licensed practical nurses in health care facilities; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 **LEGISLATIVE FINDINGS AND INTENT.** The legislature finds that

7 (1) it is essential that registered nurses and licensed practical nurses providing
8 direct patient care be available to meet the needs of patients;

9 (2) quality patient care is jeopardized by registered nurses and licensed
10 practical nurses who work unnecessarily long hours in health care facilities;

11 (3) registered nurses and licensed practical nurses are leaving their profession
12 because of workplace stresses, long work hours, and depreciation of their essential role in the
13 delivery of quality and direct patient care;

14 (4) it is necessary to safeguard the efficiency, health, and general well-being

1 of registered nurses and licensed practical nurses, and the health and general well-being of the
2 persons receiving care from registered nurses and licensed practical nurses in health care
3 facilities;

4 (5) it is necessary that registered nurses and licensed practical nurses be made
5 aware of their rights, duties, and remedies concerning hours worked and patient safety; and

6 (6) health care facilities should provide adequate and safe nurse staffing
7 without the need for or use of mandatory overtime.

8 * **Sec. 2.** AS 18.20 is amended by adding new sections to read:

9 **Article 4. Overtime Limitations for Nurses.**

10 **Sec. 18.20.400. Limitations on nursing overtime.** (a) Except as provided in
11 (c) of this section, a nurse in a health care facility may not be required or coerced,
12 directly or indirectly,

13 (1) to work beyond a predetermined and regularly scheduled shift that
14 is agreed to by the nurse and the health care facility;

15 (2) to work beyond 80 hours in a 14-day period; or

16 (3) to accept an assignment of overtime if, in the judgment of the
17 nurse, the overtime would jeopardize patient or employee safety.

18 (b) Except as provided by (c) of this section, after working a predetermined
19 and regularly scheduled shift that is agreed to by the nurse and the health care facility
20 as authorized by (a)(1) of this section, a nurse in a health care facility shall be allowed
21 not less than 10 consecutive hours of off-duty time immediately following the end of
22 that work.

23 (c) Subsection (a) of this section does not apply to

24 (1) a nurse who is employed by a health care facility providing
25 services for a school, school district, or other educational institution, when the nurse is
26 on duty for more than 14 consecutive hours during an occasional special event, such as
27 a field trip, that is sponsored by the employer;

28 (2) a nurse voluntarily working overtime on an aircraft in use for
29 medical transport, so long as the shift worked is allowable under regulations adopted
30 by the Board of Nursing based on accreditation standards adopted by the Commission
31 on Accreditation of Medical Transport Systems;

(3) a nurse on duty in overtime status

(A) who is participating in the performance of a medical procedure or surgery that has begun but has not been completed;

(B) because of an unforeseen emergency situation that could jeopardize patient safety; in this subparagraph, "unforeseen emergency situation" means an unusual, unpredictable, or unforeseen situation caused by an act of terrorism, disease outbreak, life-threatening circumstance, natural disaster, major disaster as defined in 42 U.S.C. 5122, or disaster emergency under AS 26.23.020 or 26.23.140, but does not include a situation in which a health care facility has reasonable knowledge of increased patient volume or inadequate staffing because of some other cause, if that cause is foreseeable;

(C) because the health care facility has a scheduling problem caused by unforeseen weather conditions that prevent a second nurse from arriving at the facility to relieve the nurse on duty; in this subparagraph, "unforeseen weather conditions" means unusual, unpredictable, or unforeseen weather so extreme as to impair travel to the health care facility, but does not include a situation in which the health care facility has knowledge of the weather conditions far enough in advance to act so that a scheduling problem under this subparagraph can reasonably be avoided; or

(D) at a health care facility located in a rural community that declares a temporary nurse staffing emergency under AS 18.20.410;

(4) a nurse fulfilling on-call time that is agreed on by the nurse and a health care facility before it is scheduled unless fulfilling the on-call time would, in the nurse's judgment, create an unacceptable risk to the physical safety of the nurse, a patient, or an employee of the facility;

(5) a nurse voluntarily working overtime so long as the work is consistent with professional standards and safe patient care and does not exceed 14 consecutive hours;

(6) a nurse voluntarily working beyond 80 hours in a 14-day period so long as the nurse does not work more than 14 consecutive hours without a 10-hour break and the work is consistent with professional standards and safe patient care;

1 (7) a nurse at a psychiatric treatment hospital that treats only
2 adolescents and children or a residential psychiatric treatment center under
3 AS 18.07.111 or AS 47.12.990, or a secure residential psychiatric treatment center
4 under AS 47.32.900 who voluntarily agrees to work a 16-hour shift on a weekend and
5 receives pay and benefits for that work that are equal to or greater than the pay and
6 benefits the nurse would receive for working 20 regular hours in the same position; a
7 nurse under this paragraph may not work a 16-hour shift consecutive with another
8 shift of eight hours or more without an intervening break of at least eight hours; in this
9 paragraph, "weekend" means the period between 5:00 p.m. on a Friday and 8:00 a.m.
10 on the Monday that immediately follows;

11 (8) the first two hours on overtime status when the health care facility
12 is obtaining another nurse to work in place of the nurse in overtime status, so long as
13 the nurse in overtime status is not on duty for more than 14 consecutive hours.

14 **Sec. 18.20.410. Temporary nurse staffing emergency.** (a) If, after making a
15 substantial and reasonable effort to increase the number of available nurses on staff
16 and failing in that effort, a health care facility in a rural community determines it is not
17 able to meet the overtime limitations in AS 18.20.400 without putting the safety of its
18 patients at risk of serious harm, the health care facility may declare a temporary nurse
19 staffing emergency. A declaration of a temporary nurse staffing emergency under this
20 section

21 (1) must be made in a writing, signed by the administrator of the health
22 care facility or the administrator's designee, that describes the facility's reasonable
23 effort to avoid the temporary nurse staffing emergency; and

24 (2) may not exceed 30 days.

25 (b) Immediately after declaring a temporary nurse staffing emergency under
26 (a) of this section, a health care facility shall file with the division of labor standards
27 and safety, Department of Labor and Workforce Development, a report that includes a
28 copy of the signed writing required under (a) of this section. A report under this
29 subsection is a public document.

30 (c) In addition to the requirements of (a) and (b) of this section, a health care
31 facility shall notify the legislature immediately by delivery of a written report to the

1 Alaska Legislative Council each time the facility declares a temporary nurse staffing
2 emergency under AS 18.20.400(c) that exceeds two occurrences in a six-month period
3 that begins on January 1 or July 1 of the year in which the declaration occurs, or three
4 occurrences in the one-year period that begins on January 1 of that year. A report
5 under this subsection must include a copy of each report that is required of the health
6 care facility under (b) of this section for the one-year period that begins on January 1
7 of the year the excessive declaration under this subsection occurs.

8 **Sec. 18.20.420. Health care facility complaint process for overtime work**
9 **by nurses.** A health care facility shall provide for an anonymous process by which a
10 patient or a nurse may make a complaint about staffing levels and patient safety that
11 relate to overtime work by nurses and to limitations on overtime work by nurses under
12 AS 18.20.400.

13 **Sec. 18.20.430. Enforcement, offenses, and penalties.** (a) The commissioner
14 shall administer AS 18.20.400 - 18.20.469 and adopt regulations for implementing and
15 enforcing AS 18.20.400 - 18.20.469.

16 (b) A complaint alleging a violation of AS 18.20.400 - 18.20.469 must be filed
17 with the commissioner within 30 days after the date of the alleged violation. The
18 commissioner shall provide a copy of the complaint to the health care facility named
19 in the filing within three business days after receiving the complaint.

20 (c) If the commissioner finds that a health care facility has knowingly violated
21 an overtime provision of AS 18.20.400 - 18.20.469, the following civil penalties shall
22 apply:

23 (1) for a first violation of AS 18.20.400 - 18.20.469, the commissioner
24 shall reprimand the health care facility;

25 (2) for a second violation of AS 18.20.400 - 18.20.469 within 12
26 months, the commissioner shall reprimand the health care facility and assess a penalty
27 of \$500;

28 (3) for a third violation of AS 18.20.400 - 18.20.469 within 12 months,
29 the commissioner shall reprimand the health care facility and assess a penalty of not
30 less than \$2,500 but not more than \$5,000;

31 (4) for each violation of AS 18.20.400 - 18.20.469 after a third

1 violation of AS 18.20.400 - 18.20.469 within 12 months, the commissioner shall
2 reprimand the health care facility and assess a penalty of not less than \$5,000 but not
3 more than \$25,000.

4 (d) As an employer, a health care facility violates an overtime provision of
5 AS 18.20.400 - 18.20.469 "knowingly" when the facility is either aware that its
6 conduct is of a nature prohibited by the overtime provision or aware that the
7 circumstances described in the overtime prohibition exist; however, when knowledge
8 of the existence of a particular fact is required to establish that the violation was
9 knowing, that knowledge exists when the facility is aware of a substantial probability
10 of its existence, unless the facility reasonably believes it does not exist.

11 **Sec. 18.20.440. Prohibition of retaliation.** A health care facility may not
12 discharge, discipline, threaten, discriminate against, penalize, or file a report with the
13 Board of Nursing against a nurse for exercising rights under AS 18.20.400 - 18.20.469
14 or for the good faith reporting of an alleged violation of AS 18.20.400 - 18.20.469.

15 **Sec. 18.20.450. Enforcement of prohibition against retaliation.** The
16 commissioner shall investigate every complaint alleging a violation of AS 18.20.440,
17 and, within 90 days after the date of filing of the complaint, provide to the
18 complainant, the Department of Law, and the health care facility named in the
19 complaint a written determination as to whether the health care facility violated
20 AS 18.20.440. If the commissioner finds a violation of AS 18.20.440, the
21 commissioner shall request that the Department of Law represent the department and
22 the complainant and obtain from the health care facility all appropriate relief,
23 including rehiring or reinstatement of the complainant to the complainant's former
24 position with back pay.

25 **Sec. 18.20.460. Report requirements.** A health care facility shall file with the
26 division of labor standards and safety, Department of Labor and Workforce
27 Development, a semiannual report. The report for the six-month period ending June 30
28 must be filed before the following August 1, and the report for the six-month period
29 ending December 31 must be filed before the following February 1. The report must
30 include, for each nurse employed by the health care facility or under contract with the
31 health care facility, the number of overtime hours worked, the number of overtime

1 hours that were mandatory, the number of overtime hours that were voluntary, the
2 number of on-call hours, the number of on-call hours that were mandatory, and the
3 number of on-call hours that were voluntary.

4 **Sec. 18.20.465. Notice to employees.** A health care facility shall post and
5 maintain, in places readily accessible to individuals in the service of the health care
6 facility, printed statements that describe employee rights and employer obligations
7 under AS 18.20.400 - 18.20.469 and regulations adopted under AS 18.20.430. The
8 commissioner shall supply the printed statements to a health care facility without cost
9 to the facility.

10 **Sec. 18.20.469. Definitions.** In AS 18.20.400 - 18.20.469,

11 (1) "commissioner" means the commissioner of labor and workforce
12 development;

13 (2) "health care facility" means a private, municipal, state, or federal
14 hospital; psychiatric hospital; independent diagnostic testing facility; skilled nursing
15 facility; kidney disease treatment center, including freestanding hemodialysis units;
16 intermediate care facility; ambulatory surgical facility; Alaska Pioneers' Home or
17 Alaska Veterans' Home administered by the Department of Health and Social Services
18 under AS 47.55; correctional facility owned or administered by the state; private,
19 municipal, state, or federal facility employing one or more public health nurses; long-
20 term care facility; juvenile detention facility; juvenile detention home, juvenile work
21 camp, or treatment facility, as defined in AS 47.12.990;

22 (3) "nurse" means an individual licensed to practice registered nursing
23 or practical nursing under AS 08.68 who provides nursing services through direct
24 patient care or clinical services and includes a nurse manager when delivering in-
25 hospital patient care;

26 (4) "on-call" means a status in which a nurse must be ready to report to
27 the health care facility and may be called to work by the health care facility;

28 (5) "overtime" means the hours worked in excess of a predetermined
29 and regularly scheduled shift that is agreed to by a nurse and a health care facility;

30 (6) "rural community" means a village or city that

31 (A) has a population of less than 10,000, as determined by the

1
2
3
4
5
6
7

13

Department of Labor and Workforce Development;

(B) is in the unorganized borough; or

(C) is in an organized borough that has a population of less than 25,000, as determined by the Department of Labor and Workforce Development.

* Sec. 3. The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. A health care facility that is required to file reports under AS 18.20.460, enacted in sec. 2 of this Act, shall file its first report before February 1, 2010, for the period July 1, 2009, through December 31, 2009.

* Sec. 4. AS 18.20.460, enacted in sec. 2 of this Act, and sec. 3 of this Act take effect July 1, 2009.

* Sec. 5. Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

CS FOR HOUSE BILL NO. 50(HSS)
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES WILSON, GARA, TUCK, PETERSEN, LYNN, SEATON, GATTO, CISSNA, MUÑOZ, AND GARDNER, Ramras, Foster, Kerttula

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to limitations on mandatory overtime for registered nurses and**
2 **licensed practical nurses in health care facilities; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 **LEGISLATIVE FINDINGS AND INTENT.** The legislature finds that

7 (1) it is essential that registered nurses and licensed practical nurses providing
8 direct patient care be available to meet the needs of patients;

9 (2) quality patient care is jeopardized by registered nurses and licensed
10 practical nurses who work unnecessarily long hours in health care facilities;

11 (3) registered nurses and licensed practical nurses are leaving their profession
12 because of workplace stresses, long work hours, and depreciation of their essential role in the
13 delivery of quality and direct patient care;

14 (4) it is necessary to safeguard the efficiency, health, and general well-being

1 of registered nurses and licensed practical nurses, and the health and general well-being of the
 2 persons receiving care from registered nurses and licensed practical nurses in health care
 3 facilities;

4 (5) it is necessary that registered nurses and licensed practical nurses be made
 5 aware of their rights, duties, and remedies concerning hours worked and patient safety; and

6 (6) health care facilities should provide adequate and safe nurse staffing
 7 without the need for or use of mandatory overtime.

8 * **Sec. 2.** AS 18.20 is amended by adding new sections to read:

9 **Article 4. Overtime Limitations for Nurses.**

10 **Sec. 18.20.400. Limitations on nursing overtime.** (a) Except as provided in
 11 (c) of this section, a nurse in a health care facility may not be required or coerced,
 12 directly or indirectly,

13 (1) to work beyond a predetermined and regularly scheduled shift that
 14 is agreed to by the nurse and the health care facility; or

15 (2) to accept an assignment of overtime if, in the judgment of the
 16 nurse, the overtime would jeopardize patient or employee safety.

17 (b) Except as provided by (c) of this section, after working a predetermined
 18 and regularly scheduled shift that is agreed to by the nurse and the health care facility
 19 as authorized by (a)(1) of this section, a nurse in a health care facility shall be allowed
 20 not less than 10 consecutive hours of off-duty time immediately following the end of
 21 that work.

22 (c) Subsection (a) of this section does not apply to

23 (1) a nurse who is employed by a health care facility providing
 24 services for a school, school district, or other educational institution, when the nurse is
 25 on duty for more than 14 consecutive hours during an occasional special event, such as
 26 a field trip, that is sponsored by the employer;

27 (2) a nurse voluntarily working overtime on an aircraft in use for
 28 medical transport, so long as the shift worked is allowable under regulations adopted
 29 by the Board of Nursing based on accreditation standards adopted by the Commission
 30 on Accreditation of Medical Transport Systems;

31 (3) a nurse on duty in overtime status

1 (A) who is participating in the performance of a medical
2 procedure or surgery that has begun but has not been completed;

3 (B) because of an unforeseen emergency situation that could
4 jeopardize patient safety; in this subparagraph, "unforeseen emergency
5 situation" means an unusual, unpredictable, or unforeseen situation caused by
6 an act of terrorism, disease outbreak, natural disaster, major disaster as defined
7 in 42 U.S.C. 5122, or disaster emergency under AS 26.23.020 or 26.23.140,
8 but does not include a situation in which a health care facility has reasonable
9 knowledge of increased patient volume or inadequate staffing because of some
10 other cause, if that cause is foreseeable;

11 (C) because the health care facility has a scheduling problem
12 caused by unforeseen weather conditions that prevent a second nurse from
13 arriving at the facility to relieve the nurse on duty; in this subparagraph,
14 "unforeseen weather conditions" means unusual, unpredictable, or unforeseen
15 weather so extreme as to impair travel to the health care facility, but does not
16 include a situation in which the health care facility has knowledge of the
17 weather conditions far enough in advance to act so that a scheduling problem
18 under this subparagraph can reasonably be avoided; or

19 (D) at a health care facility located in a rural community that
20 declares a temporary nurse staffing emergency under AS 18.20.410;

21 (4) a nurse fulfilling on-call time that is agreed on by the nurse and a
22 health care facility before it is scheduled unless fulfilling the on-call time would, in the
23 nurse's judgment, create an unacceptable risk to the physical safety of the nurse, a
24 patient, or an employee of the facility;

25 (5) a nurse voluntarily working overtime so long as the work is
26 consistent with professional standards and safe patient care and does not exceed 14
27 consecutive hours;

28 (6) a nurse voluntarily working beyond 80 hours in a 14-day period so
29 long as the nurse does not work more than 14 consecutive hours without a 10-hour
30 break and the work is consistent with professional standards and safe patient care;

31 (7) a nurse who

1 (A) is employed

2 (i) at a psychiatric treatment hospital that treats only
3 adolescents and children;

4 (ii) at a residential psychiatric treatment center under
5 AS 18.07.111 or AS 47.12.990; or

6 (iii) at a secure residential psychiatric treatment center
7 under AS 47.32.900;

8 (B) voluntarily agrees to work a 16-hour shift for the period
9 between 5:00 p.m. on a Friday and 8:00 a.m. on the Monday that immediately
10 follows and receives pay and benefits for that work that are equal to or greater
11 than the pay and benefits the nurse would receive for working 20 regular hours
12 in the same position; and

13 (C) during the period described in (B) of this paragraph does
14 not work a 16-hour shift consecutive with another shift of eight hours or more
15 without an intervening break of at least eight hours;

16 (8) the first two hours on overtime status when the health care facility
17 is obtaining another nurse to work in place of the nurse in overtime status, so long as
18 the nurse in overtime status is not on duty for more than 14 consecutive hours.

19 **Sec. 18.20.410. Temporary nurse staffing emergency.** (a) If, after making a
20 substantial and reasonable effort to increase the number of available nurses on staff
21 and failing in that effort, a health care facility in a rural community determines it is not
22 able to meet the overtime limitations in AS 18.20.400 without putting the safety of its
23 patients at risk of serious harm, the health care facility may declare a temporary nurse
24 staffing emergency. A declaration of a temporary nurse staffing emergency under this
25 section

26 (1) must be made in a writing, signed by the administrator of the health
27 care facility or the administrator's designee, that describes the facility's reasonable
28 effort to avoid the temporary nurse staffing emergency; and

29 (2) may not exceed 30 days.

30 (b) Immediately after declaring a temporary nurse staffing emergency under
31 (a) of this section, a health care facility shall file with the division of labor standards

1 and safety, Department of Labor and Workforce Development, a report that includes a
2 copy of the signed writing required under (a) of this section. A report under this
3 subsection is a public document.

4 (c) In addition to the requirements of (a) and (b) of this section, a health care
5 facility shall notify the legislature immediately by delivery of a written report to the
6 Alaska Legislative Council each time the facility declares a temporary nurse staffing
7 emergency under AS 18.20.400(c) that exceeds two occurrences in a six-month period
8 that begins on January 1 or July 1 of the year in which the declaration occurs, or three
9 occurrences in the one-year period that begins on January 1 of that year. A report
10 under this subsection must include a copy of each report that is required of the health
11 care facility under (b) of this section for the one-year period that begins on January 1
12 of the year the excessive declaration under this subsection occurs.

13 **Sec. 18.20.420. Health care facility complaint process for overtime work**
14 **by nurses.** A health care facility shall provide for an anonymous process by which a
15 patient or a nurse may make a complaint about staffing levels and patient safety that
16 relate to overtime work by nurses and to limitations on overtime work by nurses under
17 AS 18.20.400.

18 **Sec. 18.20.430. Enforcement, offenses, and penalties.** (a) The commissioner
19 shall administer AS 18.20.400 - 18.20.499 and adopt regulations for implementing and
20 enforcing AS 18.20.400 - 18.20.499.

21 (b) A complaint alleging a violation of AS 18.20.400 - 18.20.499 must be filed
22 with the commissioner within 30 days after the date of the alleged violation. The
23 commissioner shall provide a copy of the complaint to the health care facility named
24 in the filing within three business days after receiving the complaint.

25 (c) If the commissioner finds that a health care facility has knowingly violated
26 an overtime provision of AS 18.20.400 - 18.20.499, the following civil penalties shall
27 apply:

28 (1) for a first violation of AS 18.20.400 - 18.20.499, the commissioner
29 shall reprimand the health care facility;

30 (2) for a second violation of AS 18.20.400 - 18.20.499 within 12
31 months, the commissioner shall reprimand the health care facility and assess a penalty

1 of \$500;

2 (3) for a third violation of AS 18.20.400 - 18.20.499 within 12 months,
3 the commissioner shall reprimand the health care facility and assess a penalty of not
4 less than \$2,500 but not more than \$5,000;

5 (4) for each violation of AS 18.20.400 - 18.20.499 after a third
6 violation of AS 18.20.400 - 18.20.499 within 12 months, the commissioner shall
7 reprimand the health care facility and assess a penalty of not less than \$5,000 but not
8 more than \$25,000.

9 (d) As an employer, a health care facility violates an overtime provision of
10 AS 18.20.400 - 18.20.499 "knowingly" when the facility is either aware that its
11 conduct is of a nature prohibited by the overtime provision or aware that the
12 circumstances described in the overtime prohibition exist; however, when knowledge
13 of the existence of a particular fact is required to establish that the violation was
14 knowing, that knowledge exists when the facility is aware of a substantial probability
15 of its existence, unless the facility reasonably believes it does not exist.

16 **Sec. 18.20.440. Prohibition of retaliation.** A health care facility may not
17 discharge, discipline, threaten, discriminate against, penalize, or file a report with the
18 Board of Nursing against a nurse for exercising rights under AS 18.20.400 - 18.20.499
19 or for the good faith reporting of an alleged violation of AS 18.20.400 - 18.20.499.

20 **Sec. 18.20.450. Enforcement of prohibition against retaliation.** The
21 commissioner shall investigate every complaint alleging a violation of AS 18.20.440,
22 and, within 90 days after the date of filing of the complaint, provide to the
23 complainant, the Department of Law, and the health care facility named in the
24 complaint a written determination as to whether the health care facility violated
25 AS 18.20.440. If the commissioner finds a violation of AS 18.20.440, the
26 commissioner shall request that the Department of Law represent the department and
27 the complainant and obtain from the health care facility all appropriate relief,
28 including rehiring or reinstatement of the complainant to the complainant's former
29 position with back pay.

30 **Sec. 18.20.460. Report requirements.** (a) A health care facility shall file with
31 the division of labor standards and safety, Department of Labor and Workforce

1 Development, a semiannual report on a form provided by the department. The report
 2 for the six-month period ending June 30 must be filed before the following August 1,
 3 and the report for the six-month period ending December 31 must be filed before the
 4 following February 1. The report must include, for each nurse employed by the health
 5 care facility or under contract with the health care facility, the number of overtime
 6 hours worked and the number of hours the nurse was on call. A health care facility that
 7 does not employ a nurse who worked overtime hours or who was on call during the
 8 reporting period is not required to describe hours worked as overtime and on-call
 9 hours for individual nurses but may instead complete the report by stating on the form
 10 that there are no reportable hours.

11 (b) A primary care outpatient facility is not subject to the reporting
 12 requirements of (a) of this section.

13 **Sec. 18.20.470. Provisions not applicable to nurses employed in federal or**
 14 **tribal facilities.** The provisions of AS 18.20.400 - 18.20.499 do not apply to a nurse
 15 employed in a health care facility that is operated by

16 (1) the federal government; or

17 (2) a tribal organization as defined in 25 U.S.C. 450b.

18 **Sec. 18.20.480. Notice to employees.** A health care facility shall post and
 19 maintain, in places readily accessible to individuals in the service of the health care
 20 facility, printed statements that describe employee rights and employer obligations
 21 under AS 18.20.400 - 18.20.499 and regulations adopted under AS 18.20.430. The
 22 commissioner shall supply the printed statements to a health care facility without cost
 23 to the facility.

24 **Sec. 18.20.499. Definitions.** In AS 18.20.400 - 18.20.499,

25 (1) "commissioner" means the commissioner of labor and workforce
 26 development;

27 (2) "health care facility" means a private, municipal, or state hospital;
 28 independent diagnostic testing facility; primary care outpatient facility; skilled nursing
 29 facility; kidney disease treatment center, including freestanding hemodialysis units;
 30 intermediate care facility; ambulatory surgical facility; Alaska Pioneers' Home or
 31 Alaska Veterans' Home administered by the Department of Health and Social Services

1 under AS 47.55; correctional facility owned or administered by the state; private,
 2 municipal, or state facility employing one or more public health nurses; long-term care
 3 facility; psychiatric hospital; residential psychiatric treatment center, as defined in
 4 AS 18.07.111 or AS 47.32.900; secure residential psychiatric treatment center under
 5 AS 47.32.990; juvenile detention facility; juvenile detention home, juvenile work
 6 camp, or treatment facility as defined in AS 47.12.990;

7 (3) "nurse" means an individual licensed to practice registered nursing
 8 or practical nursing under AS 08.68 who provides nursing services through direct
 9 patient care or clinical services and includes a nurse manager when delivering in-
 10 hospital patient care;

11 (4) "on-call" means a status in which a nurse must be ready to report to
 12 the health care facility and may be called to work by the health care facility;

13 (5) "overtime" means the hours worked in excess of a predetermined
 14 and regularly scheduled shift that is agreed to by a nurse and a health care facility;

15 (6) "rural community" means a village or city that has a population of
 16 less than 10,000, as determined by the Department of Labor and Workforce
 17 Development, and is in

18 (A) the unorganized borough; or

19 (B) an organized borough that has a population of less than
 20 25,000, as determined by the Department of Labor and Workforce
 21 Development.

22 * Sec. 3. The uncodified law of the State of Alaska is amended by adding a new section to
 23 read:

24 **APPLICABILITY.** A health care facility that is required to file reports under
 25 AS 18.20.460, enacted in sec. 2 of this Act, shall file its first report before February 1, 2010,
 26 for the period July 1, 2009, through December 31, 2009.

27 * Sec. 4. AS 18.20.460, enacted in sec. 2 of this Act, and sec. 3 of this Act take effect
 28 July 1, 2009.

29 * Sec. 5. Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

CS FOR HOUSE BILL NO. 50()

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

**Offered:
Referred:**

**Sponsor(s): REPRESENTATIVES WILSON, GARA, TUCK, PETERSEN, LYNN, SEATON, GATTO,
CISSNA, MUÑOZ, AND GARDNER, Ramras, Foster, Kerttula**

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to limitations on mandatory overtime for registered nurses and**
2 **licensed practical nurses in health care facilities; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 **LEGISLATIVE FINDINGS AND INTENT.** The legislature finds that

7 (1) it is essential that registered nurses and licensed practical nurses providing
8 direct patient care be available to meet the needs of patients;

9 (2) quality patient care is jeopardized by registered nurses and licensed
10 practical nurses who work unnecessarily long hours in health care facilities;

11 (3) registered nurses and licensed practical nurses are leaving their profession
12 because of workplace stresses, long work hours, and depreciation of their essential role in the
13 delivery of quality and direct patient care;

14 (4) it is necessary to safeguard the efficiency, health, and general well-being

1 of registered nurses and licensed practical nurses, and the health and general well-being of the
2 persons receiving care from registered nurses and licensed practical nurses in health care
3 facilities;

4 (5) it is necessary that registered nurses and licensed practical nurses be made
5 aware of their rights, duties, and remedies concerning hours worked and patient safety; and

6 (6) health care facilities should provide adequate and safe nurse staffing
7 without the need for or use of mandatory overtime.

8 * Sec. 2. AS 18.20 is amended by adding new sections to read:

9 **Article 4. Overtime Limitations for Nurses.**

10 **Sec. 18.20.400. Limitations on nursing overtime.** (a) Except as provided in
11 (c) of this section, a nurse in a health care facility may not be required or coerced,
12 directly or indirectly,

13 (1) to work beyond a predetermined and regularly scheduled shift that
14 is agreed to by the nurse and the health care facility; or

15 (2) to accept an assignment of overtime if, in the judgment of the
16 nurse, the overtime would jeopardize patient or employee safety.

17 (b) Except as provided by (c) of this section, after working a predetermined
18 and regularly scheduled shift that is agreed to by the nurse and the health care facility
19 as authorized by (a)(1) of this section, a nurse in a health care facility shall be allowed
20 not less than 10 consecutive hours of off-duty time immediately following the end of
21 that work.

22 (c) Subsection (a) of this section does not apply to

23 (1) a nurse who is employed by a health care facility providing
24 services for a school, school district, or other educational institution, when the nurse is
25 on duty for more than 14 consecutive hours during an occasional special event, such as
26 a field trip, that is sponsored by the employer;

27 (2) a nurse voluntarily working overtime on an aircraft in use for
28 medical transport, so long as the shift worked is allowable under regulations adopted
29 by the Board of Nursing based on accreditation standards adopted by the Commission
30 on Accreditation of Medical Transport Systems;

31 (3) a nurse on duty in overtime status

1 (A) who is participating in the performance of a medical
2 procedure or surgery that has begun but has not been completed;

3 (B) because of an unforeseen emergency situation that could
4 jeopardize patient safety; in this subparagraph, "unforeseen emergency
5 situation" means an unusual, unpredictable, or unforeseen situation caused by
6 an act of terrorism, disease outbreak, natural disaster, major disaster as defined
7 in 42 U.S.C. 5122, or disaster emergency under AS 26.23.020 or 26.23.140,
8 but does not include a situation in which a health care facility has reasonable
9 knowledge of increased patient volume or inadequate staffing because of some
10 other cause, if that cause is foreseeable;

11 (C) because the health care facility has a scheduling problem
12 caused by unforeseen weather conditions that prevent a second nurse from
13 arriving at the facility to relieve the nurse on duty; in this subparagraph,
14 "unforeseen weather conditions" means unusual, unpredictable, or unforeseen
15 weather so extreme as to impair travel to the health care facility, but does not
16 include a situation in which the health care facility has knowledge of the
17 weather conditions far enough in advance to act so that a scheduling problem
18 under this subparagraph can reasonably be avoided; or

19 (D) at a health care facility located in a rural community that
20 declares a temporary nurse staffing emergency under AS 18.20.410;

21 (4) a nurse fulfilling on-call time that is agreed on by the nurse and a
22 health care facility before it is scheduled unless fulfilling the on-call time would, in the
23 nurse's judgment, create an unacceptable risk to the physical safety of the nurse, a
24 patient, or an employee of the facility;

25 (5) a nurse voluntarily working overtime so long as the work is
26 consistent with professional standards and safe patient care and does not exceed 14
27 consecutive hours;

28 (6) a nurse voluntarily working beyond 80 hours in a 14-day period so
29 long as the nurse does not work more than 14 consecutive hours without a 10-hour
30 break and the work is consistent with professional standards and safe patient care;

31 (7) a nurse who

1 (A) is employed

2 (i) at a psychiatric treatment hospital that treats only
3 adolescents and children;

4 (ii) at a residential psychiatric treatment center under
5 AS 18.07.111 or AS 47.12.990; or

6 (iii) at a secure residential psychiatric treatment center
7 under AS 47.32.900;

8 (B) voluntarily agrees to work a 16-hour shift for the period
9 between 5:00 p.m. on a Friday and 8:00 a.m. on the Monday that immediately
10 follows and receives pay and benefits for that work that are equal to or greater
11 than the pay and benefits the nurse would receive for working 20 regular hours
12 in the same position; and

13 (C) during the period described in (B) of this paragraph does
14 not work a 16-hour shift consecutive with another shift of eight hours or more
15 without an intervening break of at least eight hours;

16 (8) the first two hours on overtime status when the health care facility
17 is obtaining another nurse to work in place of the nurse in overtime status, so long as
18 the nurse in overtime status is not on duty for more than 14 consecutive hours.

19 **Sec. 18.20.410. Temporary nurse staffing emergency.** (a) If, after making a
20 substantial and reasonable effort to increase the number of available nurses on staff
21 and failing in that effort, a health care facility in a rural community determines it is not
22 able to meet the overtime limitations in AS 18.20.400 without putting the safety of its
23 patients at risk of serious harm, the health care facility may declare a temporary nurse
24 staffing emergency. A declaration of a temporary nurse staffing emergency under this
25 section

26 (1) must be made in a writing, signed by the administrator of the health
27 care facility or the administrator's designee, that describes the facility's reasonable
28 effort to avoid the temporary nurse staffing emergency; and

29 (2) may not exceed 30 days.

30 (b) Immediately after declaring a temporary nurse staffing emergency under
31 (a) of this section, a health care facility shall file with the division of labor standards

and safety, Department of Labor and Workforce Development, a report that includes a copy of the signed writing required under (a) of this section. A report under this subsection is a public document.

(c) In addition to the requirements of (a) and (b) of this section, a health care facility shall notify the legislature immediately by delivery of a written report to the Alaska Legislative Council each time the facility declares a temporary nurse staffing emergency under AS 18.20.400(c) that exceeds two occurrences in a six-month period that begins on January 1 or July 1 of the year in which the declaration occurs, or three occurrences in the one-year period that begins on January 1 of that year. A report under this subsection must include a copy of each report that is required of the health care facility under (b) of this section for the one-year period that begins on January 1 of the year the excessive declaration under this subsection occurs.

Sec. 18.20.420. Health care facility complaint process for overtime work by nurses. A health care facility shall provide for an anonymous process by which a patient or a nurse may make a complaint about staffing levels and patient safety that relate to overtime work by nurses and to limitations on overtime work by nurses under AS 18.20.400.

Sec. 18.20.430. Enforcement, offenses, and penalties. (a) The commissioner shall administer AS 18.20.400 - 18.20.469 and adopt regulations for implementing and enforcing AS 18.20.400 - 18.20.469.

(b) A complaint alleging a violation of AS 18.20.400 - 18.20.469 must be filed with the commissioner within 30 days after the date of the alleged violation. The commissioner shall provide a copy of the complaint to the health care facility named in the filing within three business days after receiving the complaint.

(c) If the commissioner finds that a health care facility has knowingly violated an overtime provision of AS 18.20.400 - 18.20.469, the following civil penalties shall apply:

- (1) for a first violation of AS 18.20.400 - 18.20.469, the commissioner shall reprimand the health care facility;
- (2) for a second violation of AS 18.20.400 - 18.20.469 within 12 months, the commissioner shall reprimand the health care facility and assess a penalty

1 of \$500;

2 (3) for a third violation of AS 18.20.400 - 18.20.469 within 12 months,
3 the commissioner shall reprimand the health care facility and assess a penalty of not
4 less than \$2,500 but not more than \$5,000;

5 (4) for each violation of AS 18.20.400 - 18.20.469 after a third
6 violation of AS 18.20.400 - 18.20.469 within 12 months, the commissioner shall
7 reprimand the health care facility and assess a penalty of not less than \$5,000 but not
8 more than \$25,000.

9 (d) As an employer, a health care facility violates an overtime provision of
10 AS 18.20.400 - 18.20.469 "knowingly" when the facility is either aware that its
11 conduct is of a nature prohibited by the overtime provision or aware that the
12 circumstances described in the overtime prohibition exist; however, when knowledge
13 of the existence of a particular fact is required to establish that the violation was
14 knowing, that knowledge exists when the facility is aware of a substantial probability
15 of its existence, unless the facility reasonably believes it does not exist.

16 **Sec. 18.20.440. Prohibition of retaliation.** A health care facility may not
17 discharge, discipline, threaten, discriminate against, penalize, or file a report with the
18 Board of Nursing against a nurse for exercising rights under AS 18.20.400 - 18.20.469
19 or for the good faith reporting of an alleged violation of AS 18.20.400 - 18.20.469.

20 **Sec. 18.20.450. Enforcement of prohibition against retaliation.** The
21 commissioner shall investigate every complaint alleging a violation of AS 18.20.440,
22 and, within 90 days after the date of filing of the complaint, provide to the
23 complainant, the Department of Law, and the health care facility named in the
24 complaint a written determination as to whether the health care facility violated
25 AS 18.20.440. If the commissioner finds a violation of AS 18.20.440, the
26 commissioner shall request that the Department of Law represent the department and
27 the complainant and obtain from the health care facility all appropriate relief,
28 including rehiring or reinstatement of the complainant to the complainant's former
29 position with back pay.

30 **Sec. 18.20.460. Report requirements.** (a) A health care facility shall file with
31 the division of labor standards and safety, Department of Labor and Workforce

1 Development, a semiannual report on a form provided by the department. The report
2 for the six-month period ending June 30 must be filed before the following August 1,
3 and the report for the six-month period ending December 31 must be filed before the
4 following February 1. The report must include, for each nurse employed by the health
5 care facility or under contract with the health care facility, the number of overtime
6 hours worked and the number of hours the nurse was on call. A health care facility that
7 does not employ a nurse who worked overtime hours or who was on call during the
8 reporting period is not required to provide overtime hours worked or ~~hours on call~~ for
9 individual nurses but may instead complete the report by stating on the form that there
10 are no reportable hours.

11 (b) A primary care outpatient facility is not subject to the reporting
12 requirements of (a) of this section.

13 **Sec. 18.20.465. Provisions not applicable to nurses employed in federal or**
14 **tribal facilities.** The provisions of AS 18.20.400 - 18.20.469 do not apply to a nurse
15 employed in a health care facility that is operated by

16 (1) the federal government; or

17 (2) a tribal organization as defined in 25 U.S.C. 450b.

18 **Sec. 18.20.467. Notice to employees.** A health care facility shall post and
19 maintain, in places readily accessible to individuals in the service of the health care
20 facility, printed statements that describe employee rights and employer obligations
21 under AS 18.20.400 - 18.20.469 and regulations adopted under AS 18.20.430. The
22 commissioner shall supply the printed statements to a health care facility without cost
23 to the facility.

24 **Sec. 18.20.469. Definitions.** In AS 18.20.400 - 18.20.469,

25 (1) "commissioner" means the commissioner of labor and workforce
26 development;

27 (2) "health care facility" means a private, municipal, state, or state
28 hospital; independent diagnostic testing facility; primary care outpatient facility;
29 skilled nursing facility; kidney disease treatment center, including freestanding
30 hemodialysis units; intermediate care facility; ambulatory surgical facility; Alaska
31 Pioneers' Home or Alaska Veterans' Home administered by the Department of Health

1 and Social Services under AS 47.55; correctional facility owned or administered by
 2 the state; private, municipal, or state facility employing one or more public health
 3 nurses; long-term care facility; psychiatric hospital; residential psychiatric treatment
 4 center, as defined in AS 18.07.111 or AS 47.32.900; secure residential psychiatric
 5 treatment center under AS 47.32.990; juvenile detention facility; juvenile detention
 6 home, juvenile work camp, or treatment facility as defined in AS 47.12.990;

7 (3) "nurse" means an individual licensed to practice registered nursing
 8 or practical nursing under AS 08.68 who provides nursing services through direct
 9 patient care or clinical services and includes a nurse manager when delivering in-
 10 hospital patient care;

11 (4) "on-call" means a status in which a nurse must be ready to report to
 12 the health care facility and may be called to work by the health care facility;

13 (5) "overtime" means the hours worked in excess of a predetermined
 14 and regularly scheduled shift that is agreed to by a nurse and a health care facility;

15 (6) "rural community" means a village or city that

16 (A) has a population of less than 10,000, as determined by the
 17 Department of Labor and Workforce Development;

18 (B) is in the unorganized borough; or

19 (C) is in an organized borough that has a population of less
 20 than 25,000, as determined by the Department of Labor and Workforce
 21 Development.

22 * Sec. 3. The uncoded law of the State of Alaska is amended by adding a new section to
 23 read:

24 APPLICABILITY. A health care facility that is required to file reports under
 25 AS 18.20.460, enacted in sec. 2 of this Act, shall file its first report before February 1, 2010,
 26 for the period July 1, 2009, through December 31, 2009.

27 * Sec. 4. AS 18.20.460, enacted in sec. 2 of this Act, and sec. 3 of this Act take effect
 28 July 1, 2009.

29 * Sec. 5. Except as provided in sec. 4 of this Act, this Act takes effect January 1, 2010.

Alaska State Legislature

Representative Peggy Wilson
House District 2

SPONSOR STATEMENT HB 50

“An Act relating to limitations on overtime for registered nurses and licensed practical nurses in health care facilities and providing for an effective date.”

Nurses are working excessive amounts of hours without adequate rest. This creates an unsafe work environment for patients and nurses. Mandatory overtime is one of the main reasons nurses leave nursing. Recent studies indicate that one in five nurses is considering leaving the profession. When polled on their reasons for leaving, mandatory overtime is always listed in the top ten. The purpose of HB 50 is to promote better patient and nurse safety and to create an environment that will keep nurses at the bedside.

HB 50 would prohibit mandatory overtime. Mandatory overtime hours are those hours above an agreed upon, predetermined, regularly scheduled shift, which the employer makes compulsory (as opposed to voluntary). The threat of reprisals includes but is not limited to discharge, discipline, demotion or assignment to unattractive tasks or work shifts or in some cases licensure removal, retaliatory reporting, and charges of “patient abandonment”.

The bill does not ban overtime. The bill allows nurses to work up to 14 consecutive hours, but then requires a rest period of at least 10 hours. Another provision provides a nurse cannot be forced to work more than 80 hours in a 14-day period. Nurses can voluntarily agree to exceed the 80-hour limit, so long as they don't work more than 14 consecutive hours without the 10-hour rest period.

HB 50 allows for a number of exceptions to these requirements, including school nurses on field trips, nurses working on medivac flights, and if needed, for an unforeseen emergency that could jeopardize patient safety such as natural disasters or disease outbreaks.

There are 15 other states that have adopted similar requirements, including Washington, Oregon and California. Most of these versions restrict nurses to only 12 consecutive hours, with a mandated rest period of 12 hours. HB 50 extended those requirements to a 14-hour limit with a 10-hour rest period to provide additional flexibility to our hospitals, particularly those operating in smaller communities.

HB 50 addresses these problems in a reasonable and balanced manner, while making a work environment safer. It will also help to retain nurses instead of giving them reason leave the state or retire early.

House Bill 50

“An act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date.”

Section 1. Describes the intent and reasons for the Act.

Section 2. Defines the Act:

- the limitations on overtime for nurses,
- the process for complaints,
- the enforcement, offenses and penalties as they apply to mandatory overtime for nurses,
- prohibition of retaliation, and enforcement of the retaliation,
- the reporting requirements.
- the definitions of terms .

Section 3. Sets the reporting periods.

Section 4. Sets the effective date for sections 2 and 3 at July 1, 2009

Section 5. Sets effective date at Jan. 1, 2010.

Sectional Analysis

House Bill 50

“An act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date.”

Section 1. Describes legislative findings and intent for the Act. The purpose of this Act is to ensure public safety and assist with the retention of nurses at health care facilities by minimizing long working hours for nurses without adequate rest.

Section 2. This section addresses the major elements of the proposed legislation.

- Sec. 18.20.400(a) prohibits a health care facility from forcing a nurse to work beyond certain prescribed periods of time, or to accept an assignment of overtime if, in the judgment of the nurse, the overtime would jeopardize patient safety or employee safety.
- Sec. 18.20.400(b) requires nurses to receive not less than 10 consecutive hours of rest after working a predetermined and regularly scheduled shift.
- Sec. 18.20.400(c) lists 7 exceptions to the requirements of (a) & (b), including for school nurses, medivac flights, unforeseen emergencies that could jeopardize patient safety, and certain on-call situations. Voluntary overtime is permitted so long as it does not exceed more than 14 consecutive hours.
- Sec. 18.20.410 requires a health care facility to provide an anonymous process for complaints by a patient or a nurse about staffing levels or patient safety related to overtime work by nurses.
- Sec. 18.20.420 lays out a process for formal complaints by individuals against a health care facility that violates the provision of this Act, a mechanism to adjudicate these complaints involving the Department of Labor and Workforce Development, and a graduated schedule of penalties if it is determined that a violation has occurred.
- Sec. 18.20.430 provides an explicit prohibition against retaliation by a health care facility against a nurse who attempts to exercise their rights under the Act, or for the good faith reporting of an alleged violation.

REPRESENTATIVE PEGGY WILSON HOUSE DISTRICT 2

- Sec. 18.20.445 establishes a semiannual reporting requirement for a health care facility to provide certain data relating to overtime and on-call activity for nurses.
- Sec. 18.20.449 provides a number of definitions related to the Act.

Section 3. Sets the reporting period for this first report required under sec. 2 of this Act. The report for the last six months of 2009 will be due on February 1, 2010.

Section 4. Sets July 1, 2009 as the effective date for the provisions dealing with the reporting requirements under AS 18.20.445.

Section 5. Sets an effective date of January 1, 2010 for all other provisions of the Act.

ANALYSIS: (Attach a separate page if necessary)

The bill requires the Department of Labor and Workforce Development to investigate and take enforcement action to resolve complaints of unlawful mandatory overtime use and alleged retaliation. Due to the significant number of registered nurses and licensed practical nurses currently licensed in Alaska (approximately 9,000 RN's and 1,000 LPN's), the department anticipates the workload will require at least one full-time Wage and Hour Investigator I position funded with General Funds. Costs include \$73.6 for salary and benefits, \$3.0 for investigation travel, \$18.9 for contractual which includes normal per position costs such as office space, phone, data processing and administrative support and \$5.0 for Department of Law advice and representation, \$0.5 for office supplies and an additional \$3.3 for office furniture and equipment in the first year and an additional \$1.3 for computer equipment replacement in the fourth year.

ANALYSIS: (Attach a separate page if necessary)

HB 50 establishes limitations on overtime for Registered Nurses (RNs) in health care facilities, provides penalties for violations, and requires reporting of any overtime, with the overtime designated as voluntary or mandatory by the RN. The intent of HB 50 is to eliminate mandatory overtime for RNs unless the overtime is due to a grave and unforeseen event. Under the bill, use of mandatory overtime in excess of the bill's limitations will result in a report to the Department of Labor.

The division has determined that passage of this bill will have a zero fiscal impact. Situations requiring overtime are adequately addressed by utilizing on-call RNs and requesting voluntary overtime.

ANALYSIS: (Attach a separate page if necessary)

This bill sets limitations for nurses working overtime hours beyond the scope of their regular duties. While the language in the bill makes it applicable to public health nurses, it would have a very limited effect on the Division of Public Health Section of Public Health Nursing. Most Public Health Nurses, as salaried employees, are not overtime eligible.

The mandated semi-annual report to the Department of Labor and Workforce Development would typically require no effort because public health nurses rarely work "in excess of a predetermined and regularly scheduled shift that is agreed upon by the nurse and a health care facility." Normal itinerant schedules, even though they often involve more than a 7.5-hour day, are always predetermined and agreed upon. In addition, the bill exempts reporting requirements for unforeseen emergencies requiring extra work. There is no projected fiscal impact on the Section of Public Health Nursing.

Hi Matt,

Here is a list of potential testifiers for a hearing in House HSS for the Nurses Mandatory Overtime bill, HB 50.

Let me know if there is anything else you need. One thing on your list is a Fiscal note. Since yours is the first committee you will be the one to request it. In the past the only fiscal note came from Labor.

Cheers,
Becky

Position Statements

Assuring Patient Safety: The Employers' Role in Promoting Healthy Nursing Work Hours for Registered Nurses in All Roles and Settings

Effective Date: December 8, 2006
Status: New Position Statement
Originated by: Congress on Nursing Practice and Economics
Adopted by: ANA Board of Directors

Purpose: This position statement articulates the American Nurses Association's position with regard to patient¹ safety and encourages employers of registered nurses² to establish policies and procedures that promote healthy nursing work hours and patterns that do not extend beyond the limits of safety for both nurses and patients.

ANA Position: Given the well-documented relationship between nurse fatigue and an increased risk of nurse error with the potential for compromising patient care and safety, it is the position of the American Nurses Association that all employers of registered nurses should ensure sufficient system resources to provide the individual registered nurse in all roles and settings with:

1. a work schedule that provides for adequate rest and recuperation between scheduled work; and
2. sufficient compensation and appropriate staffing systems that foster a safe and healthful environment in which the registered nurse does not feel compelled to seek supplemental income through overtime, extra shifts, and other practices that contribute to worker fatigue.

It is intended that this position statement be used in conjunction with ANA's position statement on the responsibility of the individual registered nurse to make decisions consistent with her or his ethical obligation to decline work assignments when fatigue may compromise her or his ability to deliver safe patient care, "*Assuring Patient Safety: Registered Nurses' Responsibility in All Roles and Settings to Guard Against Fatigue*" (in press).

¹ ANA, in its *Nursing's Social Policy Statement*, "recognized the importance of clearly identifying the recipients of professional nursing care, be they individuals, groups, families, communities, or populations." The *Social Policy Statement* notes that "[t]o date, professional nursing has not yet selected ... the term best depicting the healthy or ill recipients of professional nursing care." Therefore the term "patient" was selected to be used "throughout the text to provide consistency and brevity" ... and readers are asked "to keep in mind that the breadth of nursing practice always includes the various recipients of care," be they the individual, the group, the family, the community, or the population. *Nursing's Social Policy Statement (2nd edition)*, 2003, American Nurses Association, p. v & 22.

² While ANA's membership is limited to registered nurses, it is ANA's belief that employers of health care personnel have a similar obligation to these employees to establish policies and procedures regarding employee fatigue and patient safety.

History/Previous Position Statements: In 2000, the American Nurses Association (ANA) House of Delegates adopted an action "Opposing the Use of Mandatory Overtime as a Staffing Solution" (CNPE-2). Embedded in this and other statements on related issues, ANA has consistently reiterated its position that registered nurses have a responsibility to reject any work assignment that puts patients or themselves in jeopardy (1995 ANA Position Statement, "*The Right to Accept or Reject an Assignment*"). Further, ANA's consistent position has been that such a principled rejection does not constitute "patient abandonment;" on the contrary, it is the only ethical option for the fatigued nurse.

Then, in 2004, the House of Delegates adopted a resolution entitled "Transforming the Work Environment for Nurses," based largely on the recommendations set out in the exhaustive Institute of Medicine (IOM) report of the same year, *Keeping Patients Safe: Transforming the Work Environment of Nurses*. The report described the central role of registered nurses in protecting patient safety and achieving better patient outcomes; and it discussed the frequent mismanagement of the nurse's work environment that often threatens these integral contributions. Among those issues highlighted in the report, the IOM focused on institutional support and structures for maintaining nurse staffing at levels sufficient to avoid patient safety issues cause by nurse fatigue.

The ANA 2005 House of Delegates overwhelmingly passed a resolution regarding the "Implications of Fatigue on Patient and Nurse Safety." That resolution built on the above described significant work that ANA has pursued for several years linking patient safety with a host of workplace environmental and staffing factors that affect the number of hours registered nurses work. It acknowledged the impact of nurse fatigue on patient safety, quality of care and nurse safety and urged individual nurses, nurse managers, nurse administrators, employers of nurses, trustees and other stakeholders to fulfill their legal and ethical obligations to assure that registered nurses' work hours and patterns do not extend beyond the limits of safety for both nurses and patients.

Supportive Material: The 2004 IOM report, *Keeping Patients Safe: Transforming the Work Environment of Nurses*, recognized that creating a healthy work environment for registered nurses that is most conducive to patient safety will require fundamental change within a health care organization.

Strong evidence links prolonged work hours (more than 12 hours in a 24-hour span, or more than 60 hours in 7 days), rotating shifts and insufficient breaks to:

- slowed reaction time,
- lapses of attention to detail,
- errors of omission,
- compromised problem solving,
- reduced motivation, and
- decreased energy for successful completion of required tasks (IOM, 2004, p.12).

Further, Rogers, Hwang, Scott, Aiken, and Dinges (2004) found that the likelihood of making an error was three times higher when nurses worked shifts lasting 12.5 hours or more, and that

nurses, indeed, worked longer than scheduled on a daily basis, and generally worked more than 40 hours a week. Research examining consecutive hours worked by medical interns and residents also found that after extended work shifts there was an increased risk for both patient errors while at work and motor vehicle crashes leaving work (Landrigan, et al., 2004; Barger, et al., 2005).

Recent research with 2,273 RNs by Trinkoff, Geiger-Brown, Brady, Lipscomb and Muntaner (2006) documented that more than half of the hospital nurses in their study typically worked 12 hours or more per day and more than 50 hours per week. Further, nurses were likely to work many days consecutively, without sufficient rest between shifts and during scheduled time off.

Excessive total hours worked puts nurses and patients at risk; in addition, *rotating* shifts can also threaten patient safety. Research by Circadian Technologies Incorporated has found that the number of accidents for all shift workers is 1.2 times greater than that for traditional workers and the resulting incremental cost to business is \$8.5 billion (BNA, 2003).

Given this risk, the individual nurse's ethical responsibility to consider her or his level of fatigue when deciding whether to accept a patient assignment is addressed in the ANA's complementary position statement, "*Registered Nurses' Responsibility in All Roles and Settings to Guard Against Working When Fatigued.*" In the present statement, "*Assuring Patient Safety: The Employers' Role in Promoting Healthy Nursing Work Hours for Registered Nurses in All Roles and Settings,*" ANA urges employers of registered nurses to acknowledge their responsibility to assure a safe workforce, and to initiate fundamental change in their staffing and salary policies so as to create incentives for a rested and safe nursing workforce.

At the institutional or organizational level, the risk that fatigue poses to both nurse and patient safety mandates that nurse managers and administrators actively promote changes in the work environment of nurses. Provision Six of *the Code of Ethics for Nurses with Interpretive Statements* clarifies:

The nurse participates in establishing, maintaining, and improving health care environments and conditions of employment conducive to the provision of quality health care and consistent with the values of the profession through individual and collective action (p. 20).

Interpretive Statement 6.3 further delineates the ethical responsibilities of nurse managers and administrators to take action to curtail extended work hours and insufficient rest time between shifts:

Acquiescing and accepting unsafe or inappropriate practices, even if the individual does not participate in the specific practice, is equivalent to condoning unsafe practice (p. 21).

Nurse managers and administrators, bound by this ethical code of practice, may feel torn by conflicting professional obligations. Hospitals and other health care entities, not similarly bound, are clearly under pressure to reduce expenses; the managers of these institutions and organizations may not recognize the connections between their budget and nurse fatigue. Their

response to market pressures has often been an "adhocracy" of registered nurse understaffing, patched with excessive overtime, expensive agency nurses and rotating shifts that further deteriorates working conditions for already overworked nurses, thereby threatening patient safety.

Administrators need to be educated to the larger costs to their institutions of nurse fatigue as well as the costs of excessive overtime and agency nurses. The most obvious cause-and-effect may be seen in the reduction of adverse patient outcomes when an adequate, appropriate, and *rested* nursing staff is available. Study after study has concluded that nursing care, specifically, and appropriate staffing in general, is central to improved patient outcomes. This directly affects the institution's bottom line.

For example, ANA's 2000 study, *Nurse Staffing and Patient Outcomes in the Inpatient Hospital Setting*, describes five adverse outcomes measures that respond favorably to adequate nurse staffing: hospital length of stay, nosocomial pneumonia, postoperative infections, pressure ulcers, and nosocomial urinary tract infections. Each of these might cost a hospital or health facility money that it would otherwise not spend. Appropriate nurse staffing that permits time for thorough patient assessment and timely interventions ultimately improves outcomes, and has the potential for significantly reducing these types of expensive risks.

Risks to nurses in the health care environment, only amplified by the fatigue factor, can similarly affect the cost of doing business for employers of nurses. Health care jobs are already among the most hazardous occupations. In a 2004 survey, the U.S. Bureau of Labor Statistics noted that, of the fourteen private industry sectors with the highest reported number of cases of injury or illness, three were in the health care and social assistance sector. In fact, "hospitals and nursing and residential care facilities have *led* [italics added] the list of industries reporting [the highest number of] cases for the past two years" (p. 8). The rate of illnesses experienced by workers in the hospital industry was almost three times that of workers in private industry as a whole.

Knowing all of this, and supported by the extensive research linking human fatigue with error, institutions that persist in policies supporting a culture where overwork, understaffing and underpay are the norm may ultimately find themselves facing extensive accountability for their short-sightedness. The consequence of institutional intractability is even more stark as the evidence accumulates specifically linking nurse fatigue with errors in clinical judgment that have the potential to harm patients or nurses themselves.

Employers may begin to experience the legal implications of the mounting research on fatigue, as well. For example, a registered nurse successfully claimed workers' compensation for injuries from a motor vehicle accident that occurred when she fell asleep while driving home after working back-to-back double shifts, at the behest of her manager and against her own judgment. The court ruled in her favor because it deemed the hospital's systematic abuse of overtime as a foreseeable and avoidable cause of the accident (*Deland v. Hutchings*, 1994). As hospitals and other health care institutions increasingly look to *institutional systems* to assure patient safety, as opposed to a model that only looks at individual responsibility, it is possible

that courts will follow the trend in finding institutional liability for those lapses in *institutional* policy that foreseeably result in harm to patients or staff.

Institutions also accrue the secondary costs of nurse fatigue that must be paid in time, and that ultimately affect the *entire* health care system. Clearly, nurse fatigue and the factors contributing to it are not isolated from the larger issues of health care workforce and access to care. In its 2001 report, "Nursing Workforce: Emerging Nurse Shortages Due to Multiple Factors," the US General Accountability Office cites "inadequate staffing, heavy workloads, the increased use of overtime, a lack of sufficient support staff, and the adequacy of wages" as key factors in the emerging registered nurse shortage (p. 2). When all the related factors are considered, fairer wages for registered nurses may be, at a minimum, cost-neutral for hospitals and other entities.

The drive for "organizational efficiency," when its proponents fail to balance it with other values, continues to backfire in industry after industry. Increasingly, businesses must balance the cost of assuring a rested workforce against the regrettable cost of *not* having rested workers. The shift and duty times of airline pilots and truck drivers are regulated for precisely these reasons. In health care, teaching hospitals can be denied their accreditation for graduate medical education if they routinely ignore resident work hour limits. Although the application of this logic has been slow to reach the rest of the health care community, employers need to make the connection between nurse fatigue and safety of both the patient and the nurse.

The management of hospitals and other healthcare entities must be accountable for making the changes necessary to align their rewards systems with their espoused value of high quality patient care and safety. Nursing can support this mission by generating specific recommendations as to what institutions can do differently to address the factors that contribute to nurse fatigue.

Several nursing specialty organizations have addressed how their members might best balance work and rest to optimize safety, and how their employers might support their doing so. The Association of periOperative Registered Nurses (AORN), an organizational affiliate of the American Nurses Association (ANA), offers several strategies in its 2005 Position Statement on Safe Work/On-Call Practices, to promote patient and perioperative personal safety. Those strategies that directly target action by institutions and organizational systems include:

- Perioperative Registered Nurses should not be required to provide direct patient care for more than 12 consecutive hours in 24 hours and not more than 60 hours in a seven-day period.
- Off-duty periods should be scheduled to provide for an uninterrupted eight-hour sleep cycle.
- Arrangements should be made to relieve a perioperative registered nurse who has worked on-call and is scheduled to work the following shift to allow for adequate off-duty recuperation time.
- The type of facility and possible number of sustained work hours should be taken into consideration when making on-call shift assignments.

- The individual's ability to be able to meet the potential work demands should be considered when making on call assignments.
- Employers should support perioperative registered nurses to change cultural attitudes so that fatigue is recognized as an unacceptable risk to patient and worker safety rather than a sign of their dedication to their job.

AORN's full position statement and guidance statement on Safe On-Call Practices in Perioperative Practices can be found on the AORN web site at the following link:
<http://www.aorn.org/about/positions/default.htm>.

The American Association of Critical Care Nurses has explored how "mental and physical fatigue can contribute to errors and 'near-misses' with medications and case-related procedures" in its position statement opposing mandatory overtime. Without the ability to resort to mandatory overtime, "hospitals and health care institutions will have to look at real remedies for understaffed facilities, such as: 1) hiring more RN's, and 2) utilizing strategies to recruit and retain more nurses" (<http://www.aacn.org/AACN/pubpolicy.nsf/vwdoc/pmp>, ¶ 7).

A 2006 study by Scott, Rogers, Hwang and Zhang targeted at this critical care nursing population generally affirms earlier studies, showing respondents "worked longer [hours] than scheduled and for extended periods," and that "longer work duration increased the risk of error and near error and decreased nurses' vigilance" (p. 1). It also supports the IOM's recommendations to minimize the use of 12-hour shifts and to limit nurses' working hours to 12 consecutive hours during any one 24-hour period. The authors were particularly persuaded by the potentially dire consequences of a fatigue-induced mistake in critical care, where "patients are not only exposed to more medications and treatments than are patients in general care areas but are also seriously ill, with little natural resilience or ability to defend themselves from the consequences of healthcare mishaps" (Scott, 2006, p. 1).

This evidence, highlighting the detrimental effects of nurse fatigue on patient and nurse safety, as well as on institutional and organizational accountability, leads ANA to recommend the following actions for registered nurses, employers, researchers and educators.

Recommendations: As a means of implementing this position statement, the ANA recommends the following eleven specific actions:

Practicing Registered Nurses:

1. Individual registered nurses should consistently exercise their ethical obligations as articulated in the ANA's position statement on *Registered Nurses' Responsibility in All Roles and Settings to Guard Against Working When Fatigued* (ANA, in press).
2. Nurse managers and administrators have a responsibility to examine and institute scheduling practices that promote safe work hours, adequate break time, and minimal rotation of shifts.

Employers/Health Care Agencies:

3. All employers should provide fair compensation that encourages the elimination of the need for such strategies as excessive overtime or rotating shifts. The ANA recommends a thorough examination of overtime pay expenditures and a reassignment of those dollars toward both the additional staff necessary to eliminate overtime and subsequent increases in registered nurses' base compensation. These steps should be cooperatively pursued and negotiated in an open and equitable process that includes both registered nurses and healthcare administrators.
4. Registered nurses' salaries must be adjusted to appropriately reflect their education, training, experience and the value they add within the health care entity for which they work. In particular, "wage compression," or the stagnation of salary growth relatively early in a nurse's career, should be eliminated and experience rewarded so that the health care system retains its nursing workforce. Salaries should be such that registered nurses do not feel compelled to seek supplemental income through rotating shifts, overtime and other voluntary practices that contribute to worker fatigue.
5. All employers of health professionals should provide ongoing education to employees concerning the impact of consecutive and total hours worked and employee fatigue on patient safety, quality of care, and the personal safety of employees.
6. Employers should institute policies, including whistleblower protections, permitting the free exchange of ideas and information about staffing and quality of care issues among their staff without fear of reprisal or retribution.
7. Employers should adopt as official policy, the position that registered nurses have the right to accept or reject a work assignment based on fatigue; that such rejection does not constitute patient abandonment; and that registered nurses should not suffer adverse consequences in retaliation for rejecting in good faith a work assignment based on fatigue.
8. Employers should have a system in place for evaluating instances of registered nurses rejecting assignments in order to evaluate causes and effectiveness of staffing patterns.

Education:

9. Schools of Nursing should add to their curricula information on the impact of hours worked, rotating shifts, and neglecting to take meal and rest breaks on patient safety and harm to self and peers. In addition, the ethical obligation of the individual registered nurse to monitor fatigue and to decline assignments that put patients at risk should be

stressed, relying on Provisions and Interpretive Statements from the *Code of Ethics for Nurses* (ANA, 2001).

10. Academic education and training programs for health care administrators should include curricula content regarding the impact of nurse and health care worker fatigue on patient and staff safety, and the importance of supporting a healthy workplace for registered nurses and other employees.

Research:

11. ANA should partner with specialty nursing organizations and other stakeholders to assure that the following subjects are included on the research agendas of various funding entities:
 - Determinants of registered nurse fatigue
 - Impact of nurse fatigue on the health and well-being of nurses
 - Impact of registered nurse fatigue on patient safety
 - Patient classification/acuity systems
 - Staffing patterns and nursing-sensitive patient outcomes
 - Salaried registered nurse-staffing models
12. Schools of Nursing, as well as Schools of Public Health, Occupational Health, Health Services Research and Economics, should develop graduate research foci around the areas of patient acuity, nurse staffing patterns, nurse fatigue and quality of care.

House Bill No.50: "Safe Nursing & Patient Care Act"

What Does *HB 50* Do?

- Protects patients and nurses in a health care facility by limiting forced overtime unless needed for an emergency.
- **Nurses cannot work more than 14 consecutive hours without 10 hours of rest**, or be forced to work more than 80 hours in a 14-day period. **Nurses can volunteer to work additional shifts beyond this limit, so long as the nurse does not work more than 14 consecutive hours without 10 hours of rest.**
- **Exceptions are allowed for unforeseen emergencies**, school nurses, medivac flights, and certain on-call situations.

Why is *HB 50* Needed?

- **Purpose of bill is to promote patient safety and better working conditions for nurses.**
- **Nurses in Alaska are working an excessive amount of overtime without adequate rest.** Nurses often work well beyond 12 consecutive hours, or come back within 2-4 hours of completing a 12-hour shift. In other cases, nurses are working several 12-day shifts over consecutive days.
- In most cases, **this is forced or mandated through a practice called "mandatory call", which the hospitals freely admit is used.** In some cases, this is accomplished by pressure tactics designed to get nurses to "volunteer" for overtime hours. Suggestions of patient abandonment or assertions that nurses will be letting down co-workers are not uncommon.
- ***HB 50* will help with nurse recruitment and retention by prohibiting excessive amounts of overtime.** The nurse workforce is aging – a ban on excessive overtime will keep these nurses working longer.
- A recent phone survey by AaNA documents that not all of the new UA nursing school graduates are being hired. **The bill will not exacerbate the so-called shortage – there are additional graduates available to fill positions.**
- **Data suggests many hospitals are using overtime as a staffing tool.** Hospitals are not hiring all available graduates and maintain vacancy rates of between 7% to 25%. It appears that many hospitals are trying to avoid hiring Full-Time Equivalent (FTE) employees.
- **83% of the Alaska RN workforce is over 40 years of age and 53% is over the age of 50. We need to conserve the workforce we have, and at the same time not scare away the 17% of the workforce that is under age 40.** People with young families are not going to stay in the profession if they are constantly being forced to work.

Comments on SB 12 & HB 50: "An act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities." Patient Safety Act

To Whom It May Concern:

Thank you for listening to my comments. As a physician, specializing in endocrinology, I am distressed at the physical alterations that can occur in an aging nursing workforce while their hours and demands steadily rise. It is no secret that the population of America is aging. In Alaska the average age of a professional registered nurse is close to 49 years old.

According to John Howard, MD, former director of the National Institute for Occupational Safety and Health, "the average number of hours worked annually by workers in the United States has increased steadily over the past several decades and currently surpasses that of Japan and most of Western Europe." (2004) Dr. Howard continues noting, "the influence of overtime and extended work shifts on worker health and safety, as well as on worker errors, is gaining increased attention from the scientific community, labor representatives, and industry...the volume of legislative activity seen nationwide indicates a heightened level of societal concern and timeliness of the issue." Many states have passed safe patient legislation with its foundation based on research correlating much higher error rates with overtime. The Institute of Medicine identifies long hours for nurses as one of the critical problems in safety studies, and has been advocating for safeguards.

Nurses are critical thinking professionals employed to assess, treat, and evaluate patients, and need a non-mandated work environment to function well. Patients should not be subjected to those who are fatigued, stressed, and forced to work overtime. We all depend on the nurse to be alert and aware.

I encourage the Alaska Legislature to be judicious and rational in its thinking. Regardless of the workforce challenges for institutions, we have no alternative but to follow a strategy of safety for patients and communities. Please limit the overtime and extended hours worked by nurses in the State of Alaska.

I thank you for this opportunity,

Patrick M. Nolan, D.O., F.A.C.E.

Re: HB50/SB12

Dear Honorable Legislators

I would like to see mandatory overtime/on call addressed. I was in the hospital from 0645 till 0045 last night then had to return at 0645 today. I am on call again this pm 1900 to 0700 tomorrow.

I still have to come to work tomorrow and if I get called in tonight how mentally alert will I be?

Thanks,

JoAnne Zemlicka

To my Legislature regarding patient safety:

February 10, 2009

Ladies and Gentleman,

As a current Registered Nurse in Alaska of 31 years, I must say that patient safety is very important to me as a professional. I would not ever practice as a Nurse if patient safety was an issue for me. Making a Nurse work mandatory overtime puts not only the Nurse at risk of injury, it also puts her patients at risk as well. For 29 years I worked in an Intensive Care Unit full time 12 hour shifts leaving home at 6pm and getting home most mornings at 8:30am if my patients did not go bad on me in the last hour of work, otherwise it might be more like 10am.

Nurses work extremely hard with life and death situations and would not hesitate to help when needed. To make it mandatory for a Nurse to work overtime is not only wrong, it is dangerous.

I feel that Nursing is such a hard job, that it is truly a calling from God himself to accomplish this professional practice every single day.

Sincerely,

Helen Christine Wood, RN, B.S.N.

RE: HB 50/SB12

Dear Legislators:

I am writing this letter in support of HB 50/SB 12, acts relating to limitations on mandatory overtime for RNs and LPNs. Having been a nurse for over 25 years I can attest to how physically and mentally draining it is to work a shift as a nurse. A nurse caring for adults lifts over 1.2 tons in an 8 hour shift. The patients are feeling poorly and can become critically ill at any point, medications must be given in correct amounts to avoid toxic effects, families are anxious and often a little short, and there are many other healthcare providers with whom care must be coordinated. Because the consequences of errors can be so serious, this is not the type of work environment where nurse fatigue should be allowed to happen.

Over 30% of the nursing workforce is over the age of 50 years, and many of these nurses plan to retire in the next five years. In Alaska we have worked hard to train new nurses. We do not want to drive these nurses out of the Alaskan workforce because they are being forced to work excessive hours. Remember, Oregon, Washington and California have banned mandatory overtime for nurses making them a very attractive destination for Alaska nurses. Everyone I have talked to has been amazed that there would be any opposition to limiting the hours a nurse can work to 14.

Thank you for considering my views. Hopefully this will be the year that we work to create a work environment in which RNs and LPNs can provide quality patient care without concern of being worked to exhaustion.

Sincerely,

Patricia Senner MS, RN, ANP

February 16, 2009

Re: SB12/HB50

Dear Legislators,

I am currently a nurse educator, but have 25+ years of clinical nursing experience, as well as having recently been a consumer of health care for close family members. I am also a Certified Professional in Healthcare Quality (CPHQ), and in that role in a hospital reviewed medical records and worked to drill down adverse patient outcomes. It has been my personal experience as a bedside nurse in hospital and long term care positions that mandated overtime to cover staffing shortfalls, that the quality of care delivered was adversely impacted.

Exhausted people make poor drug calculations, poor assessments, and are less apt to walk around and check in on their patients frequently. It puts patient care in jeopardy and it also puts nurses at risk for bad practice and subsequent litigation. It is also a major reason why some nurses quit practicing in direct care positions -- and we need those nurses with high standards and clear boundaries taking care of us and our families through critical illnesses.

I ask you to support legislation that would ban mandatory overtime for nurses. Instead, support nursing education opportunities and we will continue to bring bright and motivated caregivers into the healthcare field.

Thank you for your consideration.

February 16, 2009

Dear Representative Wilson:

Thank you for introducing HB 50, Limit Overtime for Nurses. Nurses perform tasks that require accuracy, quick thinking and sound judgment; each of which is diminished after long consecutive hours of work in stressful environments. Both as a patient myself and as a caretaker for my father and then my mother as they had extended stays in hospital settings, I have seen overworked nurses make mistakes. Fortunately, for us, they were not life-threatening, but it is easy to imagine how they might have been.

Although some nurses may want to work overtime in these tough economic times and hospitals may believe the practice saves money, neither reason should take precedence over patient safety. Nurses need to be alert and ready to handle emergency situations as they arise. We should do everything we can to help ensure the dedicated people who choose to work in the nursing profession can do their jobs safely and well. HB 50 is a good first step.

Sincerely,

Lauree Morton

Letter of Support HB 50, Limit Overtime for Nurses

The Alaska Women's Lobby, a statewide group working to defend and advance the rights and needs of women, children and families, supports HB 50. Limiting overtime for nurses is a patient safety issue. When you are in their care you want someone available to you that is well rested and nourished, can think quickly on their feet, and can interact with patients in a friendly professional manner. You do not want someone responsible for your care that has been working for ten or twelve or more hours straight without a break to be the one in charge of the decisions that can mean the difference between your living or dying. Regardless of how hospitals or nurses posit this bill, patient safety should be paramount to any other concern.

Several studies have found patient safety is at risk when nurses work more than 12 hours in a 24 hour period. The 2004 study, Working Hours of Hospital Staff Nurses and Patient Safety, found that nurses working more than 12.5 consecutive hours were three times more likely to make an error than nurses working shorter hours. Working overtime at the end of a shift also increased the risk of making an error. Possible errors, which also applied to nurses who worked unplanned overtime at the end of a scheduled shift, included giving patients incorrect medications or dosages, according to the study.

According to a 2007 study sponsored by the US Agency for Healthcare Research and Quality (AHRQ), components of working conditions, including a hospital's organizational climate, staffing, and overtime, were found to influence outcomes in the elderly patients in hospital intensive care units (ICUs). Other recent AHRQ-funded studies on nurses' working conditions and patient outcomes have found a significantly greater risk to patient safety when nurses worked beyond their regularly scheduled number of hours.

The Institute of Medicine in its 2003 report, Keeping Patients Safe: Transforming the Work Environment of Nurses recommended that nurses provide direct patient care for no more than 12 hours in any given 24-hour period and less than 60 hours in a 7-day period. AHRQ called for the report in recognition of the key role of nurses in patient safety.

Alaska should do everything possible to ensure patient safety. Limiting overtime for nurses is a solid first step. Support passage of HB 50 this session. Take seriously the charge to keep Alaskans safe as they try and get their health care needs met.

2/11/09

Re: HB50/SB12

To the Honorable Senators and Representatives of the Alaska Legislature,

Please join with your counterparts in 12 other states that have passed legislation to prohibit mandatory overtime for nurses. Join our congressional delegation of Senator Murkowski and Congressman Young who co-sponsored the Safe Nursing and Patient Care Act of 2007 which prohibits mandatory overtime except in cases of states of emergency.

Most people would not choose to fly in a plane with a pilot forced to work beyond what they felt was their safety limit in competence for work hours. In fact, it is illegal. How then has it taken so long to pass this legislation that will contribute to patient safety? This is not a matter of employer rights in staffing. If a nurse tells the employer she or he has worked too many hours and is not safe to practice; why on earth would you not believe him/her? Would you risk your life or a loved one's on the nurse's word or their employers?

The rules for pilots solved this long ago. Similar restrictions in on-call and work hours are even now being addressed for medical residents due to safety reasons in an attempt to reduce medical errors. Alaska will not be the first state to address this problem with legislation but I certainly hope it will not be the last.

Although I no longer work in a hospital myself, I have been a patient in one and may be again. Speaking both as a nurse and a consumer, I urge you to support passage of HB 50 and SB 12.
Sincerely,

Lynn Hartz MSN, FNP-BC
3104 Brookside Drive
Anchorage, AK 99517

fax 907-222-1498

Re: HB50/SB12

2/11/09

Dear Legislators,

As a registered nurse (RN), I heartily support these two pieces of legislation. Patient safety will be jeopardized if health care facilities are given free reign to impose mandatory overtime.

Patient safety is Job 1 for nurses, to borrow a phrase from different industry. An RN who is required to work overtime beyond a twelve-hour day or even an eight-hour day is physically, mentally, and emotionally fatigued. Thus, her judgment is potentially compromised, her physical strength weakened, and her emotional capacity diminished.

In my institution, on my unit, I care for extremely sick individuals, with co-morbidities that include dementia, confusion, obesity (majority of patients), and often lower extremity amputation.

My unit is already suffering from budget issues that have resulted in less nurse's aide assistance. Hence I am responsible for safely assisting any combination of obese patients with altered mental status who are missing at least one leg to the toilet, with little or no staff assistance. At the end of a twelve-hour day, I am ready to go home. I have reached my daily limit of sharp, focused thought for decision-making, and accurate charting.

I may or may not have had a chance to take a quick break for a snack. Sometimes I am so busy caring for patients I forget to use the ladies room. Our institution's break and meal policy is catch as catch can. So, if mandatory overtime was added, I am not sure I would even get to eat dinner before my next "shift" started.

Mandatory overtime? That's too much to ask. It is not humane, IT IS NOT SAFE FOR THE PATIENT OR THE NURSE. An increase in back injuries in nurses, medication errors, and patient falls are examples of the consequences of mandatory overtime.

I care for renal patients who often have a minimum of a dozen or more scheduled medications in addition to "PRN" or as needed medications. These medications usually include insulin, blood pressure medications, and heparin or coumadin---all high risk medications. At the end of a twelve hour day, I can tell you that I become fatigued, and would be prone to making mistakes.

The health care industry is seriously compromising the public trust with mandatory overtime. The health care industry is exchanging the health and safety of their patients/clients for monetary gain.

Mandatory overtime results in nurses who themselves become patients due to fatigue, stress, and physical deterioration of their feet and legs.

The health care industry, in requiring mandatory overtime, falls in with a crowd that practices human exploitation.

Sincerely, Theresa E. Philbrick, RN

Gary C. Goins, MS,BSN, RN

February 10, 2009

To The Legislative Committee:

It is easy to see that the sacrifices a nurse makes to help the individuals in our communities is a significant one.

We do not take our responsibility lightly nor should we. Privileged to care for the injured and ill, for our neighbors and friends, sharing their moments of triumph and helping them cope with devastating losses.

I want to tell you that a nursing practice ratio makes a patient safer. In that bed that will be you, me, our child or our loved one. By focusing on each person we care for, we are able to see signs of problems early, catch them, alert the doctors and fix them. If we are exhausted from no breaks or seeing to many patients we can, like all good people, fail.

In practice for 20 years I have seen hundreds of these cases. I can tell you that patients in California are safer due to support to nurses for adequate breaks and established rules.

These laws most likely cost more but please believe me, if that was your child or your mom, you would sacrifice your life savings and more to secure their well being. I would too. No amount of tears can solve an error caused by lack of adequate and safe staffing. I have sat with people as those tears flow like mountain streams with family and clinicians devastated by the simple lack of prudence in health care planning.

I urge you, the noble men and women to adequately consider what effects are created by adequate staffing or the lack thereof.

Very truly yours:

Gary C. Goins MS, BSN, RN.

Re: House Bill 50 Senate Bill 12

Dear Legislator,

My name is Debbie Thompson, I am a Registered Nurse certified in the Operating Room and Peri-Operative nursing and I am the Executive Director of the Alaska Nurses Association. In this role I act as a spokesperson for not only the public safety at large but just as importantly for the nurses of Alaska.

I would like to express my support in both House Bill 50 and Senate Bill 12. As a long time operating room nurse I can tell you that these bills address a serious public safety issue within the health care industry. Each citizen in the state of Alaska deserves to have a well rested nurse taking care of them. The government has stepped in made requirements for the airplane pilots, truck drivers and train conductors and engineers. Why would anyone put the lives of their loved ones or themselves at risk for potentially fatal medical errors.

Thank you for consideration to this matter.

Debbie Thompson, BSN, RN, CNOR

February 10, 2009

Dear Honorable Senators and Representatives:

I have been a Registered Nurse for the past 30 years. Twenty-nine of those have been spent in the Intensive Care Unit in various hospitals across the US. I have been contributing to the care of Alaskans for the past 15 years. I have shared in some very intense and uncertain times for many families. I know that nurses do not let patients or their families know when staffing is short, or when we are exhausted or hungry. We really try to make people feel secure when they are in our care.

The Institute of Medicine (IOM) report has identified how long hours and fatigue contributes to errors in healthcare. These errors can cost lives, or increase length of stay in the hospital which in turn adds to the already ballooning cost of healthcare.

I urge you to support HB 50 & SB 12. When patient are at their most vulnerable, is not the time they or their families should be concerned at the number of hours the nurse caring for them has worked. Long hours, fewer resources and higher patient acuity drive nurses from staying at the bedside in today's hospitals. Nurses will only last so long, when they go home after 12.5 hours concerned about what they might have missed because they are so exhausted and hungry. The University of Alaska is doing a great job educating tomorrow's nurses. I encourage you to do what you can by passing this legislation that will help to keep the nurses of the future working in hospitals.

Thank you,
Donna Phillips, RN
Girdwood, AK

February 13, 2009

Re: Support for HB50/SB12

Dear State Legislators,

I am a registered nurse of over 14 years now. I am in total favor of supporting HB50 and SB12. It is absolutely imperative that registered nurses and licensed practical nurses be able to provide safe patient care, this is why we became nurses, to care for patients. Patient care will without a doubt, be in jeopardy when nurses are forced against their better judgment to work excessive hours in health care facilities. Any overtime should be done out of personal choice and professional judgment. With mandatory overtime, we are placing the patients, whom have entrusted us to take care of them at one of the most vulnerable times in their life in danger.

Nurses are compassionate, caring individuals. It takes a special person to become a nurse, and then stay one for any length of time. Many nurses do not make it through the first year. That is not due to the fact that they suddenly do not care anymore. It is due to increased workload demands, workplace stresses, long working hours, and a complete lack of respect in general by administrative personnel who run hospitals.

Can you imagine what it is like to have to walk out of one patient's room who is dying of cancer and may be at the end of their life and then be able to go on to the next patient with a smile on our face and deal with a whole new set of circumstances. We are not only caring for that patient we are caring for their family members as well. This routine gets played out several times just in one shift.

Nurses are burning out at a high rate and there is not going to be another nurse just around the corner to replace them. By the year 2020 there will be a nursing shortage of estimated 500,000 nurses. We cannot continue to look the other way. We must make a positive step, not only to make nursing a honored profession to the newcomer, but also retain the experienced knowledgeable nurses we have.

A nurse's bottom line is patient care and safety. Please help support HB50 & SB12, the very life it may save may be your own.

Thank you,

Janet Hilleary RN

Re: Support for HB 50 & SB 12

Dear Legislators,

I know how important this bill is for the future of nursing experience. I do 12 hour nights and I know there's no way in the world I'd want to be responsible for patients beyond my shift time. I'm sure our malpractice insurance won't cover that kind of stupidity!

Thanks.

Ginny Weisman

Re: HB50/SB12

Dear Honorable Legislators,

My name is Barbara Quaid and I have been a registered nurse since 1970. Currently I am employed as a recovery room nurse at a local Anchorage hospital. Because I work in an O.R. setting we must take call. Recently I worked for 21 hrs, and that wasn't the first time. If it is your call night and things run late, or emergency cases are added, we must stay.

It is definitely a safety issue. A nurse at hour 3 of her shift is not the same nurse at hour 16, etc. With hospitals running at full capacity, be it due to a shortage of floor RNs or available beds, we must at times manage patients all night and all day in the recovery room. More times than not these are ICU/CCU patients.

We definitely need legislature governing the amount of hours a nurse is allowed to work, because it is not being safely managed the way it runs now. I testified via teleconference this past summer regarding this issue, and would be most willing to testify again. I hope this will be of assistance in your endeavor to keep nursing at a safe level.

Sincerely,

Barbara M. Quaid, R.N. CPAN.

February 13, 2009

Re: HB50/SB12

Dear Honorable Legislators,

My name is Ginger Spohr and I am an Emergency Room nurse. This is my first time getting involved in the legislative process and I am doing so because HB 50 and SB 12 are important bills for both myself and my co-workers. I strongly want to encourage support for both of these bills.

Right now there is a great opportunity for those in the House and Senate to help us continue the hard work that we do every day and help insure that we do so in a safe way.

My husband recently retired after working 20 years on the slope. He went back to school and earned a degree in nursing. After his first week of work, he told me, "I've never worked so hard in my entire life." Nursing is hard work at any age but with more and more people retiring and entering the field as a "second" profession, we must insure a safe and welcoming environment for them.

In closing, I would also like to ask anyone considering blocking these bills to imagine being a patient of a nurse who has just been told he/she must stay and work late. Imagine your boss telling you that you had to miss a birthday party of child or friend and that it would cost you your job if you didn't stay and work.

Please help keep nursing a respected profession. Most of the nurses I know are proud of what they do, please help us continue take pride in the work we do and help to ensure we are rested and willing to work.

Please support HB 50 and SB 12.

Sincerely,

Ginger Spohr, RN.

Re: SB12/HB50

I am a registered nurse at providence hospital. I want to tell you how important it is for nurses to be well rested & alert when caring for sick people. We make critical decisions, often at a moment's notice, that affect the lives of our patients. The giving of medications also is a critical event, considering the risk of making a mistake. Patients depend on us to make the right decisions for them. They have to trust us to do the job safely. That is dangerously hard to do when you are over tired & needing sleep.

Most of us work twelve hour shifts. The thought that employers can insist that we continue to work beyond that is scary. Likewise, working more than 3 days in a row, I feel, puts us at risk to make mistakes. When human lives are at stake, this could be a critical mistake. Only the individual knows how they feel, how tired, how sleepy, etc. nurses need to have the option to say no to mandatory overtime, to agree to that only if they feel fresh enough.

I'm hoping that we can get HB50SB12 passed this session.

Thank you for your help.

Sincerely,

Connie Lynch RN

Re: HB50/SB12

Dear Legislators,

Please support HB50 and SB 12. I believe RN's will provide overtime when we can. For our 36 week, we do what we can, as the population gets sicker. Management is getting more illogical.

Scott Young, RN

258-1861

Re: HB50/SB12

Dear State Legislator,

I am against mandatory overtime in any form. When we are subjected to mandatory overtime it leads too more mistakes in medication administration because we are tired. At one of my jobs; I work a 12 hour shift at a local hospital and find that the longer I am required to stay to finish required paperwork or patient care the more I have problems focusing on the task at hand and thus the more potential for a mistake. At another job that I work 8 hours; if I am mandated to work an extra shift The more I feel unsafe as I work in a psychaitric facility where patient safety and staff safety are imperative. Being tired I have problems with determining when patient's are feeling unsafe or threatened and thus there is more potential for violent and threatening outcomes.

Again I am very against manditory overtime. I just hope with the nursing shortage coming it is not made worse by mandating overtime in unsafe jobs as it will lead to more nurses rethinking this line of career choice thus increasing the nursing shortage.

Thank you for allowing me to air my opinions,

Barbara Popken RN

February 14, 2009

Re: HB50/SB12

Dear Legislatures,

I am an active member of the AaNA organization. I send this message in support of HB 50 and SB 12. Upon review of the last years (2008) activity around these two Bills, I stand behind all of the nurses in support of the passing of these two Bills.

As a nurse, I am in support of protecting the nursing professional at the bedside (and elsewhere as it applies) in being able to conduct a full day's work without the intimidation of mandatory overtime on their shoulders.

Thank you for all the work you do.

Sincerely,

Shirley LaForge, RN, MSN

2/11/09

Re: HB50 and SB12

Dear Honorable Senators and Representatives,

I am not in favor of mandatory overtime for nurses. Any overtime should be the nurse's choice. In addition I am not in favor of a nurse working more than 14 hours in a row. That allows for a 12 hour shift and any follow-up charting, etc. I know too many nurses who cannot recall how they even got home after working too long. Also, though 15 minute breaks are great, what concerns me is someone who doesn't even have time for lunch.

Thank you,

Mary Ann Wilson, RNC

2/12/09

Re: HB50/SB12

Dear Honorable Senators and Representatives,

I support the passage of HB 50 and SB 12. Please work on my behalf as well as my colleagues and patients to see that these bills are passed. Mandatory overtime for nurses has the potential for creating a more severe shortage of nurses in areas already in desperate need of licensed staff. Mandatory overtime and inflexible scheduling has the potential for deterring students from selecting nursing as a career option.

Please seek options that enhance the appeal of nursing as a career option, increase the nurse's ability to provide safe and effective care at the bedside, and decrease the attrition of nursing staff related to excessive work hours and work load. Please vote yes on HB50/SB12.

Thank you,

Janice McGraw, MS, RN, CNRN

February 10, 2009

Re: HB50/SB12

Dear Legislators,

As a Registered Nurse in the State of Alaska, I find it critically important that we have a say in our work scheduling and who dictates our professional practice. As a Registered Nurse, I make it my prime responsibility to be the advocate of patients. Because of this and the importance of our profession, I am supportive of House Bill 50 and Senate Bill 12.

Sincerely,

Joshua Meals, RN, BSN.

2/11/09

Re: HB5/SB 12

To the Honorable Senators and Representatives:

This is a letter of support for HB 50 and SB 12. As a working nurse in the Operating Room at Providence Hospital, I feel it is important for me to share my support for legislation that ends the practice of mandatory overtime for nurses in Alaska. Such practices are unfair to nurses, and unfair to the patients who deserve top-notch care from nurses who are properly rested and satisfied in their work environment. Currently, I am obligated to be available for over 24 hours of mandatory overtime each month.

Sincerely,

Paul Bryner

2/11/09

Re: HB50/SB12

Dear Honorable Legislators,

I am asking for your support on House Bill 50 & Senate Bill 12. I have been a registered nurse for 16 years and have been personally affected by both mandatory overtime and insufficient rest between shifts. We have tried to address these safety concerns with our employer; however, there is no incentive for hospital administrations to change current practice. It becomes financial, and the bottom line is it is cheaper to work a nurse extended hours than it is to provide safe working conditions. I have worked in other states with this type of legislature and it does have a positive impact. Therefore, I ask for your support from a state level. If the employer won't self regulate, then someone needs to for the sake of quality patient care and safe working conditions for the nurses. .

Thanks you for your time.

Wendy Conradi, RN, CNOR

2/11/09

Subject: Support for HB 50 and SB12

I urge house and senate members to support HB 50 and SB 12 to protect the rights of our patients and the welfare of our nurses.

Patricia Peacock, RN, BSN, CURN, CHPN.

RE: HB50/SB12

2/11/09

Dear Legislator,

As an RN of 30+ years, I am writing to support HB 50 and SB 12. I recently returned to bedside nursing after working outside of the hospital for the past 14 years. I find it astounding that the legislature wants to continue to require mandatory overtime for nurses.

After working 3, 12 hr. shifts in one week, I find I need a day to recovery and then have 3 days "off" to enjoy things other than my job, which allow me to have the energy to return to the bedside for 3 more days the next week. While I have worked overtime in the past year, it was done by choice. If overtime is to be required, it will decrease morale in nursing staff, thereby compromising patient care. Perhaps a meat packing plant or other assembly line type job sees the benefits of mandatory overtime. When one is caring for the human spirit and body, it is definitely not in the best interests of the patient to be cared for by a nurse who is working mandatory overtime.

Thank you for your work on our behalf.

Sincerely Yours,
Jeanne Kemp RN, BSN

Date: 2/11/09
Re: HB50/SB12

Dear Legislators,

I have just been informed of the ASHNA's position regarding legislation to block any regulations regarding employer rights to address such issues as nurse and patient safety. It seems to me that this is not in the best interest of any of the parties that participate in direct patient care, much less the person who is being cared for. I seriously doubt that the public knows anything regarding this and would that be known, there would be an abundance of objections from both parties. The only persons who this would benefit would be the people managing the books of these employers and their board of directors. That is, unless it was their family or themselves who was receiving this care. This issue has been going on for too long and as one of those people who work long shifts for the sickest of these patients, it would be akin to whipping a horse who has plowed the fields too long in the day. It just can't be done without consequences. These consequences would have implications for public health and in the long run risk increasing hospital days for the patients who got marginal care from the employees forced to do this work. It is also comparable to asking for volunteers, then picking them anyway, should no one raise their hand. It is one thing for someone to use their judgement in working overtime, but another to cut costs and recruiting people to do this extra work, such as travelers who have no intention to stay in this area. The answer to the higher paid travelers would be make the lower paid employees do this work. It is also like bringing in employees from out of the country, give them lower wages, and make them do a job, whatever that job is. Thankfully, we have the union here to prevent such nonsense, but then the ASHNA position is just as ridiculous. The term "Magnet Hospital" has been tossed around as a buzz word for quite some time now, and it is laughable that forcing employees to do something that not only would affect their life outside of work, but to risk their license as well, would somehow make a difference in obtaining that status. It is words on paper and a status that looks good but really means nothing if employees are not happy. Please know that even though you may not have hundreds of comments regarding this, that it is due to not many people knowing the position of this board. I have been in critical care for close to 30 years and have seen my job get harder, despite the experience I have. This risks everything that health care has to offer, despite breakthroughs in disease prevention and treatment.

Sincerely Yours,

Debbie O'Brien, RN, CCRN
Anchorage, Alaska

Re: HB50/SB12

To the Honorable Senators and Representatives of the Alaska Legislature,

Please join with your counterparts in 12 other states that have passed legislation to prohibit mandatory overtime for nurses. Join our congressional delegation of Senator Murkowski and Congressman Young who co-sponsored the Safe Nursing and Patient Care Act of 2007 which prohibits mandatory overtime except in cases of states of emergency.

Most people would not choose to fly in a plane with a pilot forced to work beyond what they felt was their safety limit in competence for work hours. In fact, it is illegal. How then has it taken so long to pass this legislation that will contribute to patient safety? This is not a matter of employer rights in staffing. If a nurse tells the employer she or he has worked too many hours and is not safe to practice; why on earth would you not believe him/her? Would you risk your life or a loved one's on the nurse's word or their employers?

The rules for pilots solved this long ago. Similar restrictions in on-call and work hours are even now being addressed for medical residents due to safety reasons in an attempt to reduce medical errors. Alaska will not be the first state to address this problem with legislation but I certainly hope it will not be the last.

Although I no longer work in a hospital myself, I have been a patient in one and may be again. Speaking both as a nurse and a consumer, I urge you to support passage of HB 50 and SB 12. Sincerely,

Lynn Hartz MSN, FNP-BC
3104 Brookside Drive
Anchorage, AK 99517

fax 907-222-1498

Re: HB50/SB12

2/11/09

Dear Legislators,

As a registered nurse (RN), I heartily support these two pieces of legislation. Patient safety will be jeopardized if health care facilities are given free reign to impose mandatory overtime.

Patient safety is Job 1 for nurses, to borrow a phrase from different industry. An RN who is required to work overtime beyond a twelve-hour day or even an eight-hour day is physically, mentally, and emotionally fatigued. Thus, her judgment is potentially compromised, her physical strength weakened, and her emotional capacity diminished.

In my institution, on my unit, I care for extremely sick individuals, with co-morbidities that include dementia, confusion, obesity (majority of patients), and often lower extremity amputation.

My unit is already suffering from budget issues that have resulted in less nurse's aide assistance. Hence I am responsible for safely assisting any combination of obese patients with altered mental status who are missing at least one leg to the toilet, with little or no staff assistance. At the end of a twelve-hour day, I am ready to go home. I have reached my daily limit of sharp, focused thought for decision-making, and accurate charting.

I may or may not have had a chance to take a quick break for a snack. Sometimes I am so busy caring for patients I forget to use the ladies room. Our institution's break and meal policy is catch as catch can. So, if mandatory overtime was added, I am not sure I would even get to eat dinner before my next "shift" started.

Mandatory overtime? That's too much to ask. It is not humane, IT IS NOT SAFE FOR THE PATIENT OR THE NURSE. An increase in back injuries in nurses, medication errors, and patient falls are examples of the consequences of mandatory overtime.

I care for renal patients who often have a minimum of a dozen or more scheduled medications in addition to "PRN" or as needed medications. These medications usually include insulin, blood pressure medications, and heparin or coumadin---all high risk medications. At the end of a twelve hour day, I can tell you that I become fatigued, and would be prone to making mistakes.

The health care industry is seriously compromising the public trust with mandatory overtime. The health care industry is exchanging the health and safety of their patients/clients for monetary gain.

Mandatory overtime results in nurses who themselves become patients due to fatigue, stress, and physical deterioration of their feet and legs.

The health care industry, in requiring mandatory overtime, falls in with a crowd that practices human exploitation.

Sincerely, Theresa E. Philbrick, RN

POSITION PAPER

SB 12/HB 50 – "An Act relating to limitations on mandatory overtime for registered nurses and licensed practical nurses in health care facilities; and providing for an effective date."

**CONTACT: Valerie Davidson, Senior Director
Legal and Intergovernmental Affairs
through Pat Jackson, State Liaison for Alaska Native Health
523-0363 – pajackson@anthc.org**

DATE: March 9, 2009

POSITION: Oppose

The Alaska Native Tribal Health Consortium (ANTHC) is a tribally controlled, non-profit, statewide tribal health organization formed pursuant to federal law to provide a range of medical and community health services for more than 130,000 Alaska Natives. It is part of the Alaska Tribal Health System (ATHS), which is owned and managed by the 231 federally recognized tribes in Alaska and by their respective regional health organizations.

ANTHC and Southcentral Foundation jointly manage the Alaska Native Medical Center (ANMC), the tertiary hospital of the ATHS located in Anchorage. We employ 500 nurses. In January of this year ANMC was recognized for a second time as a Magnet Hospital, a highly prized award given by the American Nursing Association. Only five percent of all U.S. hospitals achieve Magnet Status, and even fewer are designated a second time. ANMC is the first and only Alaska hospital to receive Magnet Status. Magnet hospitals have demonstrated that they meet a set of criteria designed to measure the strength and quality of their nursing, including the ability of its nurses to contribute to patient outcomes, and where nurse job satisfaction, low turnover rates and appropriate grievance resolution are part of the standard.

We value our nurses, but we do not support SB 12 or HB 50, bills that seek to legislate work schedules and tie the hands of managers who are constantly juggling the demands of patient care against workforce availability and rising costs/chronic underfunding in the tribal health care system. We have three primary concerns about the bill as currently written:

- 1) *It would have a disproportionate and detrimental impact on patients in rural Alaska*
- 2) *It conflicts with Alaska's longstanding policy of supporting access to health care through allowing health care facilities an appropriate degree of flexibility in scheduling direct health care providers.*
- 3) *It creates the inaccurate impression that it applies to federal and tribal facilities and programs that comprise the Alaska Tribal Health System*

1) Disproportionate and Detrimental Impact on Patients in Rural Alaska

The bill provides no new resources and no new options. In rural Alaska recruiting and retaining qualified nurses is not merely a challenge, as it is for all of Alaska and much of the United States; it is a constant struggle. Vacancy rates, recruitment costs and staff turn-over continually plague these providers, especially tribal health providers.

This bill restricts the ability of hospital managers to work with their nursing staff to craft options in a health system that is already stretched to its limits in both staffing and financial resources. There is a real risk that the bill would lower nurse/patient ratios and decrease the quality of care patients receive by tying the hands of providers to balance patient needs with available workforce, including nurses. In rural Alaska, when nurses are not available, then patients must be diverted to another facility. Since there are no other options in rural Alaska, patients typically get diverted to the Alaska Native Medical Center. Because ANMC, as a statewide facility, serves all regions, then we experience a compounding effect at ANMC, a facility that is already too small to meet patient care needs. When ANMC is at capacity, we too are forced to divert patients to other facilities in Anchorage. This is an every day challenge, but is especially problematic during public health outbreaks. Diverting patients disrupts the continuity of care for our patients and imposes an additional financial burden on our already under-funded health system.

The bill also sets forth a reporting requirement to the State Department of Labor. Because tribal health facilities are not licensed by the state, as explained below, we believe we would not be subject to the reporting requirements. To the extent a tribal provider did comply, it would create a new, costly system of collecting data and preparing reports. ANMC employs nurses who are licensed by the state and nurses who are part of the Commissioned Corp under the federal Public Health Service, further complicating any perception of what would be required under a state law.

2) Conflict with Longstanding State Policy of Supporting Access to Health Care

The Alaska Legislature has recognized the necessity of promoting access to health care through appropriate limitations to wage and hour requirements since at least 1962 when it enacted the "hospital employee" exemption.¹ From 1962 to 1983, all employees of *non-profit hospitals* were exempt from that law. While the exemption was narrowed slightly in 1983 to cover only those employees who provide "medical services," the Legislature also expanded the exemption to the employees of *all hospitals*, not just those employed by non-profits.² This change addresses the "interest in keeping medical facilities open and providing more flexible schedules for employees whose extended hours of labor were needed to maintain the hospital in operation at all time" and more generally the need to "enhanc[e] access to health care" in Alaska.³

¹ AS 12.10.060 (1962); *Hutka v. Sisters of Providence*, 102 P.3d 947, 952 (Alaska 2004).

² *Hutka*, 102 P.3d at 952-53.

³ *Hutka*, 102 P.3d at 953.

3) Applicability to Federal and Tribal Health Providers

Providing health care services to Alaska Natives and American Indians is a federal function that contributes to the fulfillment of the federal government's trust responsibility to Alaska Natives and their Tribes.⁴ A federal facility performing a federal function is not subject to state regulation, even if the function is carried out by another entity, unless Congress clearly authorizes such regulation.⁵ Congress has not authorized state regulation of federal health facilities serving Indian tribes and their members or of tribal facilities that fulfill this federal function pursuant to the Indian Self-Determination and Education Assistance Act.

Rather, Congress has taken pains to promote self-determination and self-governance by ensuring that Tribes and tribal organizations have sufficient flexibility to address the unique needs of Native Americans and the extraordinary challenges of providing quality, culturally appropriate health care with very limited resources, often in extremely remote locations. This is because one of the purposes of the ISDEAA is to provide

a meaningful Indian self-determination policy which will permit the orderly transition from the Federal domination of programs for, and services to, Indians to effective and meaningful participation by the Indian people in the planning, conduct, and administration of those programs and services.⁶

For similar reasons, Congress has provided an explicit exemption for Tribes and tribal organizations from the operation of most federal employment law, including Title VII of the Civil Rights Act of 1964, the American with Disabilities Act, and the Davis-Bacon prevailing wage rate requirements.⁷ Courts have also recognized tribal exemptions with respect to other federal laws, like the Age Discrimination in Employment Act (ADEA), that do not specifically address their applicability to Tribes and tribal organizations.⁸ One federal appellate court ruled that other federal laws and interests must give way to ISDEAA's overriding objectives when it

⁴See, e.g., 25 USC § 1616f; S. Rep. No. 102-392 at 2 (1992), as reprinted in 1992 USCCAN 3943, 3944. See, also, note 2, *supra*.

⁵*Goodyear Atomic Corporation v. Miller*, 486 U.S. 174, 181 (1988).

⁶25 USC § 450a(b).

⁷42 USC § 2000e(b)(1); 42 USC § 12111(5)(B)(i); 25 USC § 450e(a). See also, *Pink v. Modoc Indian Health Project*, 157 F.3d 1185, 1188-89 (9th Cir. 1998) (non-profit corporation created by two tribes qualified as an "Indian tribe" under Title VII where corporation was formed to deliver health care services under an ISDEAA agreement, even though services were provided outside the boundaries of a reservation), *Setchell v. Little Six, Inc.*, No. C4-95-2208, 1996 WL 162560, at *2 (Minn.App. April 9, 1996), *cert. den.* 521 U.S. 1124 (1997).

⁸29 USC § 626(d). E.g., *EEOC v. Karuk Tribe Housing Authority*, 260 F.3d 1071, 1081 (9th Cir. 2001) (ADEA inapplicable to tribal housing authority that "occupies a role quintessentially related to self-governance"); *Taylor v. Alabama Intertribal Council*, 261 F.3d 1032 (11th Cir. 2001) (employee's race discrimination claim concerned tribal self-governance and intramural Indian matters). See also *Penobscot Nation v. Fellencer*, 164 F.3d 706 (1st Cir. 1999) (employment of a non-Native in federally funded public health nurse position is an "internal tribal matter" and not subject to state regulation).

addressed the potential applicability of the National Labor Relations Act to the Yukon-Kuskokwim Health Corporation.⁹

Congress and the federal courts have thus essentially deemed the Fair Labor Standards Act (FLSA) to be sufficient protection for tribal employees.¹⁰ Because of the unique nature of nursing care, however, some nurses are exempt from FLSA's wage and hour requirements while others are protected through special provisions that specifically accommodate the need for scheduling flexibility. The Act's implementing regulations were recently revised with the benefit of comprehensive comments from nursing associations, patient advocacy groups, and health care facilities and they continue to recognize the need and appropriateness of allowing for this degree of flexibility. Alaska's own wage and hour laws and regulations are quite similar to the federal scheme in this respect.

At the same time, the Indian Health Care Improvement Act (IHCIA) and the Indian Self-Determination and Education Assistance Act (ISDEAA) provide a comprehensive framework for regulating tribal health care. Their broad language, together with the exemption from most federal employment law, provide a clear indication that Congress did not intend to allow federal agencies to impose their own rules on Tribes and tribal organizations, much less subject them to potentially overlapping and less flexible requirements enacted by individual states. Otherwise state law would "obstruct[] the execution of the purpose of the federal [law]."¹¹ The Supremacy Clause and the federal preemption doctrine prohibit this, especially in areas like Indian health care that has been a federal responsibility for centuries.¹²

"The Alaska courts have noted that the provision of Indian health care services is an area that is "comprehensively and pervasively regulated by the federal government which is manifested in both the ISDEAA and the IHCIA."¹³ Once the federal government has thus occupied the field, there is no allowance for state regulations, even if it is consistent with statutory purposes.¹⁴

⁹*YKHC v. NLRB*, 234 F.3d 714, 718 (D.C. Cir. 2000) ("NLRA must make in order to accommodate federal Indian law, as reflected in [ISDEAA]"). The Board concluded that it was inappropriate to exercise jurisdiction over YKHC in light of its role in fulfilling federal government's trust responsibility to provide free health care to Alaska Natives. See also 29 USC § 151, *et seq.*; *YKHC and International Brotherhood of Teamsters, Local 959, AFL-CIO, CLC*, 341 NLRB No. 139, May 28, 2004 (declining to exert jurisdiction over off-reservation tribal health organization fulfilling federal trust responsibility to provide free health care to Alaska Natives, even though organization employs many non-Natives and provides health care services to a small number of non-Natives).

¹⁰ 29 USC § 201, *et seq.*

¹¹*The Alaska Dental Society, et. al. v. State of Alaska, et. al.*, 3AN-0604797 CI, 12 (June 27, 2006), quoting *Catalina Yachts v. Pierce*, 105 P.3d 125, 128 (Alaska 2005).

¹² *Alaska Dental Society* at 15, citing *Wachovia Bank, N.A. v. Burke*, 414 F.3d 305, 313 (2d Cir. 2005) (no presumption against federal preemption in fields substantially occupied by federal authority for extended time); *United States v. Locke*, 529 US 89, 108 (2000) (no presumption against preemption is triggered when significant history of a federal presence.).

¹³ *Alaska Dental Society* at 15, citing *Ketchikan Gateway Borough v. Ketchikan Indian Corporation*, 75 P.3d 1043, 1049 (Alaska 2003). See also, *id.* at 1048 (majority setting aside issues of whether tribal health clinic is "subject to comprehensive and pervasive federal oversight.")

¹⁴E.g., *National Audubon Society v. Davis*, 307 F.2d 835, 851 (9th Cir. 2002).

In addition to this existing federal law, CMS quality standards and Joint Commission standards impose high quality standards on federal and tribal facilities that participate in the Medicare and Medicaid programs. In Alaska, this includes all of the major IHS and tribal health facilities.

Together, these federal laws address the same concerns intended to be addressed by SB12/HB50. However, they do so in a way that allows facilities more flexibility. While they impose certain performance and quality standards, they do not dictate the means for accomplishing them by imposing rigid requirements that may or may not lead to the same level of performance or quality (or, in the case of rural Alaska, undermine the very goals that the bill sponsor is trying to promote).

Conclusion

We understand that the bill sponsors and supporters are trying to protect nurses from being overworked and patients from accidental errors that may occur as a result. However, we don't believe legislating hours is the right solution. ANTHC and our partner tribal health facilities work very hard to recruit and retain quality nurses. We place high value on the nurses who work for us, and are actively involved in programs like the University of Alaska's Rural Nursing Program. We have been innovative in crafting solutions where physician and nursing services have been non-existent—principal among them, the Community Health Aide Program.

We also value the partnerships we have with many of our non-tribal hospitals/health system partners. We understand the value of flexibility in workforce negotiations. Legislation, of course, takes discussion regarding choices off the table. We in the tribal health system have our own history of suffering unintended consequences from legislation that started with the best of intentions. Today, through our compact with the Indian Health Service, we engage each year in a very formal negotiation, where challenges for everyone involved are brought to the table and worked through to the point of consensus. We support the request of our partners that this legislation be held and to let the process of labor negotiations to proceed.

Thank you for your careful consideration of these issues. We would be happy to provide any further information upon request.

Alaska Native Health Board

Fax: (907) 563-2001

March 6, 2009

Representative Peggy Wilson
State Capital Building, Room 406
Juneau, Alaska 99801-1182

Dear Representative Wilson,

We write to express our deep reservations over HB 50, limiting mandatory nurse overtime.

The Alaska Native Health Board appreciates and values the services nurses provide to patients in Alaska, especially our Alaska Native patients, whom we consider to be our customer-owners.

It is the experience of Tribal health providers that nurses are highly dedicated, caring providers who will give their last ounce of skill to care for their patients. Tribal health providers expend a great deal of effort and expense to recruit and retain good nurses to provide care and cover all necessary shifts. Providing adequate and safe nurse staffing is an important part of Tribal health providers' overall responsibility to provide high-quality care to our patients. It is out of this responsibility to care for our patients that we express our concerns over HB 50, as follows:

HB 50 will hurt patient care, especially in rural Alaska

In healthcare, the guiding principle is "do no harm." However, with HB 50, in many remote Tribal health locations, all it would take to leave a shift uncovered would be for one or two nurses to decide, for any reason or no reason at all, that they don't want to work overtime.

The rural Tribal health provider would in many cases have no choice but to simply not cover the shift and put patients at risk, because rural Tribal health providers do not have the urban luxuries of (1) calling in other off-duty nurses, (2) getting temporary "agency" nurses to cover shifts on short notice or (3) re-directing patients to other nearby facilities.

In practice, HB 50 would make it impossible for Tribal health providers to make sure all shifts were covered, particularly in the remote rural parts of the State. Perhaps this is why almost no rural States have adopted legislation similar to HB 50.

HB 50 is an unfunded mandate that will unnecessarily drive up costs

Many Alaska Tribal health providers are having a tough time financially due to sky-high fuel and other costs commonly associated with running a facility in rural Alaska. They have had no choice in some cases but to lay off healthcare workers and reduce services.

Under HB 50, even in a situation where a Tribal health provider might be able to cover a shift when one or more nurses were to choose not to work overtime, the Tribal health provider would likely only be able to do so at GREAT COST, e.g., (1) over-hiring extra regular-shift nurses ahead of time (assuming a sufficient labor pool) and hoping one of the new hires is willing to pull non-scheduled shifts; (2) flying in temporary "agency" nurses from an urban area at the last minute (expensive), or (3) transferring / referring patients to an urban provider (adding an additional expensive travel cost to providers and to the Medicaid program).

Laws such as HB 50 are intended to solve urban problems not applicable in Alaska

Legislation such as HB 50 has been adopted in only 15 States, nearly all urban, out of concern that hospitals might be (1) under-hiring and then abusing mandatory overtime in order to control payroll/benefits costs, or (2) abusing mandatory overtime rules as a collective bargaining tactic.

There is no evidence that these conditions exist in Alaska. While there are well-documented chronic challenges in nurse staffing, particularly among Tribal health providers, these staffing challenges are no different than the staffing challenges we experience with all the healthcare professional categories. And while we cannot speak for others, we can say unequivocally that Alaska Tribal health providers are not purposely understaffing as an abusive labor practice. The reality is that to the degree we have nurse staffing challenges, it is because of the tight national nurse labor market, compounded by the never-ending challenge of figuring out how to get good nurses, doctors, technicians, administrators, etc. to live and work in remote locations in Alaska.

HB 50's proponents agree that *"there are few official overtime complaints by nurses..."*, and that there are *"low numbers of complaints and benign exit interviews..."*

We acknowledge that nursing is a tough profession. The work itself is challenging enough, in addition to the difficult shift scheduling that of necessity must put patients' needs first. But those challenges come with the territory in healthcare: Physicians, administrators, technicians, clerks, etc. also must adjust the scheduling of their work to meet the needs of the patients.

HB 50 is unnecessary: mandatory nurse overtime issues can be addressed by other means

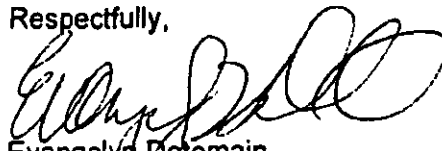

Because of the well-documented nurse shortage in Alaska, there is a very tight labor market for nurses. Nurses have significant leverage in negotiating the terms and conditions of their employment. Hours and shifts to be worked, shift-swapping flexibility, on-call requirements and how to handle anticipated overtime are all commonly agreed to in employment agreements.

In reality, the tight labor market for nurses in Alaska, combined with well-established avenues and procedures for nurses to negotiate the terms and conditions of employment, give nurses more than sufficient leverage to address any concerns they might have with regard to mandatory overtime, or for that matter, any other terms or conditions of employment.

The result, acknowledged by HB 50's proponents, is that *"there are few official overtime complaints by nurses..."*, and *"low numbers of complaints and benign exit interviews..."*

Representative Wilson, we thank you for efforts on behalf of Alaska Tribal health providers. We appreciate this opportunity to express our concerns with HB 50, and we look forward to working with you in a cooperative manner on the many important healthcare issues pending this session.

Respectfully,

Evangelyn Dotomain
President/CEO

Alaska State Hospital and Nursing Home Association

TESTIMONY ON HOUSE BILL 50

ASHNHA represents 27 private, federal, state, and tribal health care facilities located throughout Alaska. The testimony presented here has been approved by ASHNHA's general membership (see detailed member list at bottom of testimony).

ASHNHA's membership does not believe the limitations proposed in House Bill 50 are needed to assure continued delivery of excellent patient care throughout the State.

ASHNHA's members have a long-standing commitment to respect the individual importance of each nurse in our health care delivery mission, and to treat each nurse fairly in the work place. This obligation to our nursing staff must be balanced with providing the best possible care to each patient.

ASHNHA believes our members are responsibly negotiating work scheduling policies with their nursing staff through local work agreements that meet the unique needs in each community. Solutions in Anchorage to work scheduling challenges for Petersburg will be different than what will meet the needs of management and nursing staff in Anchorage. A standard statewide mandate on how work scheduling must be done as proposed in House Bill 50 is not a realistic approach to solving these work scheduling challenges around the state.

From the consumers' perspective there are tools for determining objectively how well Alaska hospitals and nursing homes are meeting their patient care goals while not overburdening the nursing staff. Two of these resources include:

1. *Hospital Compare* data collected by the U.S. Department of Health & Human Services. This data captures critical information on care provided as well as patient feedback on their experience in the hospital setting. Specifically with respect to the patient's satisfaction with their hospital experience, Alaska's hospitals compare quite favorably against national statistics in this area. Some examples from the U.S. DHSS data include:
 - How often did patients feel they received help quickly?
 - a. U.S. average was 88% reporting 'always' or 'usually'
 - b. Alaska average was 90% reporting 'always' or 'usually'
 - How often did nurses communicate well to the patients?
 - a. U.S. average was 94% reporting 'always' or 'usually'
 - b. Alaska average was 95% reporting 'always' or 'usually'
 - How did patients rate their hospital experience overall?
 - a. U.S. average was 89% reporting 7 or higher on scale of 10
 - b. Alaska average was 89% reporting 7 or higher on scale of 10

2. **Numerous federal, state and private resources** are available that examine medical care delivery processes, policies, outcomes, patient complaints, and adequacy of staffing among others. None of these organizations have pointed to any patient care issues related to requiring nurses to work beyond agreed upon shifts.

In addition to these consumer resources, *ASHNHA* has tracked mandatory overtime usage for four years in Alaska through our own survey. The latest data is shown in the attached table. This survey has allowed *ASHNHA* to gain a better understanding of the frequency with which 'mandatory' overtime is used by our member facilities. 'Mandatory' in this context is overtime that is not willingly worked by a nurse and does not include 'on-call' overtime hours.

While there certainly are times when a nurse is required to stay beyond their shift because of an unexpected staffing problem, this happens very seldom and management's policy is to find nursing staff quickly to fill these unanticipated staffing gaps. *ASHNHA's* latest nurse overtime survey comparing 2007 and 2008 mandatory overtime usage demonstrates our members continuing commitment to minimize use of mandatory overtime. In fact only 4 facilities reported mandatory overtime usage in 2008 and the majority of the overtime hours reported were by the state operated Alaska Psychiatric Institute.

How do Alaska facilities keep use of mandatory overtime to a minimum? Alaska facilities have developed strategies to avoid situations that would require the use of mandatory overtime. These strategies begin with a comprehensive analysis of patient activity, types of procedures and other information to determine the number of nursing staff required by time of year, time of day and area of hospital care. Management uses this information to insure adequate staff is available to meet patient care needs 24/7, 365 days a year.

Based on this analysis, management and nursing staff agree to on-call policies to meet the needs of patients during low demand periods for very specialized procedures. These on-call expectations are known by nursing staff when they choose these specialized areas to work in. In small, rural facilities there may be general on-call expectations in order to be sure nursing staff is available 24/7 given the low volume of patient admissions that these facilities experience and the greater difficulty these facilities have hiring experience nursing staff.

In addition, hospitals and nursing homes have pre-established arrangements with temporary nurse staffing agencies to bring in temporary nursing staff to fill unexpected gaps in staffing. As you will note on the attached table displaying temporary nursing hours purchased by Alaska facilities, nearly ¼ million hours of temporary nursing time was used by Alaska facilities to avoid imposing mandatory overtime on their nursing staff.

A key contributor to Alaska's facilities' need to use temporary staffing hours is the ongoing challenge in hiring adequate nursing staff for the many different care settings that a facility must provide. *ASHNHA* members have been very proactive to address this issue over the last five years including:

1. Financially contributing to the University of Alaska expansion of their nursing program from 100 nurses each year to over 200 nurses each year.
2. Creating clinical experiences for student nurses and recently graduated nurses to gain hands-on nursing experience required to complete their education, or to achieve the patient care experiences necessary to become employed in a hospital setting.
3. Providing distance learning opportunities so local residents can take nursing courses in their own community with minimal need to spend large amounts of time out of town to achieve their clinical experiences.
4. Purchasing tens of thousands of hours of temporary nursing hours to fill staffing gaps to minimize use of mandatory overtime.

Even with these initiatives approximately 1/3rd of the facilities reporting on this year's survey believe the nursing shortage situation has worsened. The good news is that with all the additional attention provided by the University of Alaska to graduate more nurses combined with Alaska facilities expanded programs to provide hands-on training experiences for them, 2/3rd of the facilities reported that the nursing shortage was at least the same if not better. This is a slight improvement over years past.

RECAP OF ASHNHA's CONCERNS with HB 50:

- *ASHNHA's* data shows Alaska's hospitals and nursing homes are not routinely relying on mandatory overtime to fill staffing gaps. On the contrary *ASHNHA's* data shows that use of mandatory overtime is a rare occurrence with all but 4 facilities reporting **ZERO** use of mandatory overtime in 2008 (see attached chart).
- *ASHNHA's* data continues to show that no employee grievances on inappropriate use of mandatory overtime were reported for 2007 or 2008 by facilities.
- *ASHNHA* believes that establishing work hours and scheduling are appropriately a local employer responsibility to negotiate with its employees. This is being done in every community in a responsible manner with equal concern to employee and patient concerns. Work force challenges vary significantly from one community to the next making a single approach to addressing this challenge unworkable. A number of facilities are either in negotiations with nursing staff or will begin those negotiations shortly. These negotiations should be given an opportunity to address any concerns from nursing staff.
- The ongoing monitoring systems operated by federal, state or independent private agencies that review patient care show Alaska health care quality is excellent. None of these organizations has identified use of mandatory overtime as a problem related to delivery of excellent patient care in Alaska.
- *ASHNHA's* members have worked diligently to reduce the nursing shortage problem in Alaska by contributing substantial funding over the last four years to help support an expanded nursing program at the University of Alaska. This program is now graduating 200 nurses annually compared to 100 nurses before the program's expansion.

- House Bill 50 would impose a new reporting burden for Alaska facilities. These reports would have to be filed semi-annually and must contain detailed work hour information for each staff nurse employed by the facility as well as each contract nurse.

House Bill No. 50: "Safe Nursing & Patient Care Act"

What Does *HB 50* Do?

- **Protects patients and nurses in a health care facility by limiting forced overtime unless needed for an emergency.** A health care facility cannot force a nurse to work beyond certain prescribed periods of time, or to accept an assignment of overtime if, in the judgment of the nurse, the overtime would jeopardize patient safety or employee safety.
- **Nurses cannot work more than 14 consecutive hours without 10 hours of rest, or be forced to work more than 80 hours in a 14-day period. Nurses can volunteer to work additional shifts beyond this limit, so long as the nurse does not work more than 14 consecutive hours without 10 hours of rest.**
- **Exceptions are allowed for unforeseen emergencies, school nurses, medivac flights, and certain on-call situations.**

Why is *HB 50* Needed?

- **Purpose of bill is to promote patient safety and better working conditions for nurses.**
- **Nurses in Alaska are working an excessive amount of overtime without adequate rest.** Nurses often work well beyond 12 consecutive hours, or come back within 2-4 hours of completing a 12-hour shift. In other cases, nurses are working several 12-hour shifts over consecutive days.
- **In most cases, this is forced or mandated through a practice called "mandatory call", which the hospitals freely admit is used.** In some cases, this is accomplished by pressure tactics designed to get nurses to "volunteer" for overtime hours. Suggestions of patient abandonment or assertions that nurses will be letting down co-workers are not uncommon.
- ***HB 50* will help with nurse recruitment and retention by prohibiting excessive amounts of overtime.** The nurse workforce is aging – a ban on excessive overtime will keep these nurses working longer.
- **A recent phone survey by AANA documents that not all of the new UA nursing school graduates are being hired. The bill will not exacerbate the so-called shortage – there are additional graduates available to fill positions.**
- **Data suggests many hospitals are using overtime as a staffing tool.** Hospitals are not hiring all available graduates and maintain vacancy rates of between 7% to 25%. It appears that many hospitals are trying to avoid hiring Full-Time Equivalent (FTE) employees.
- **83% of the Alaska RN workforce is over 40 years of age and 53% is over the age of 50. We need to conserve the workforce we have, and at the same time not scare away the 17% of the workforce that is under age 40.** People with young families are not going to stay in the profession if they are constantly being forced to work.

House Bill No. 50: "Safe Nursing & Patient Care Act"

Facility October 1st - March 31, 2008	Facility Visited	Nurses Interviewed	Staff Nurses Reporting mandatory Overtime	Mandatory On-Call Required	Number of Nurses Interviewed	Practice Issues if Abandoning Patients
Alaska Regional Hospital	Yes	Yes	100%	Yes	25	Yes
Alaska Psychiatric Institute	No	Yes	50%	Yes	10	Yes
Bartlett Regional Hospital	Yes	Yes	100%	Yes	30	Yes
Central Peninsula Hospital	Yes	Yes	75%	Yes	60	Yes
Fairbanks Memorial Hospital	Yes	Yes	100%	Yes	10	Yes
Heritage Place Nursing Home	Yes	Yes	100%	Yes	14	Yes
Providence Alaska Medical Center	Yes	Yes	100%	Yes	150	Yes

Providence Seward Medical Center	Yes	Yes	100%	Yes	2	Yes
Providence Valdez Medical Center	Yes	Yes	100%	Yes	5	Yes
Sitka Community Hospital						
South Peninsula Hospital	Yes	Yes	50%	Yes	30	Yes
Wrangell Medical Center	No	Yes	100%	Yes	2	Yes

This data is based on face to face meetings conducted by Tom Renkes prior Executive Director of AaNA, and confirmed over the past months by current Executive Director Debbie Thompson.

Dangers of Mandatory Overtime: **FATIGUE and ERRORS**

Support House Bill 50

Referred to as the Alaska Safe Nursing and Patient
Care Act

Danger: Might As Well Of Had a Drink!

The long hours worked by some nurses pose some of the most serious threats to patient safety. Prolonged periods of wakefulness can produce effects that are similar to the effects produced by alcohol intoxication. This may include decreases in reaction time and the speed of mental processing.

Danger – Close to Intoxication

Periods of wakefulness in excess of 16 hours can produce performance decrements equivalent to a blood alcohol concentration (BAC) level of .05 percent. Alcohol intoxication is defined as .08 to .10 varying among the individual states. Do you want an exhausted nurse taking care of you or your family members?

Danger – Patient Safety at Risk

The impact of hours worked, duration of work, and overtime in this study were shown to have a statistically significant impact on patient safety as well as nurse satisfaction and retention in the profession.

Danger –
likely to make at least one error

“The likelihood of making an error increased with longer work hours and was three times higher when nurses worked shifts lasting 12.5 hours or more....” and “working overtime increased the odds of making at least one error, regardless of how long the shift was originally scheduled.”

Link Found

The authors of this study conclude that these findings imply a link between poor working conditions (long hours and overtime, mandatory or otherwise) and patient safety. In response to this and other admonitions concerning the elimination of mandatory overtime for nurses, almost half of the states in the nation have either enacted or introduced legislation concerning this issue.

- The sources for the previous slides are a 2002 Report from the Michigan Nurses Association and from an article by the Institute of Medicine written in 2004, with updates from other sources.

Danger — PATIENT SAFETY AT RISK!

Threats to patient safety that are likely to result from extensive nursing overtime include the following:

- **Nurses being less alert to changes in patients' condition**
- **Nurses having slower reactions**
- **Medication errors – adverse drug events**
- **Increase in nosocomial infections**
- **Increase in decubiti**

Institute of Medicine Report

The Institute of Medicine estimates that approximately 100,000 hospital deaths can be attributed to medical errors each year. Mandatory overtime is a serious contributing factor to medical errors. The final recommendation of the IOM is that all overtime, voluntary and mandatory/involuntary done by nurses should be curtailed.

Not A “Bargaining Issue”!

This is a Public Safety Issue

The Alaska public has a right to expect when they walk into a healthcare facility, that the nurse taking care of them is properly rested and alert.

(And that their RN hasn't been working 16 hours that day already.)

Not A “Bargaining Issue”! This is a Public Safety Issue

- At registration, a member of the public should not have to request a copy of the most recent Collective Bargaining Agreement to see how successful their nursing staff has been in negotiating reasonable working conditions.
- Not all nurses are represented by a union. What do we do for these nurses and their patients?

Washington State Passes Law in 2002

Anne Piazza, lobbyist for WSNA testified before Representative Peggy Wilson's special House HESS committee in January 2006:

“The State of Washington passed a law to prohibit mandatory overtime for nurses with the cooperation of the WSNA, other nursing unions, and the Washington Hospital Association.”

Washington State

Mandatory overtime puts patients, nurses and the profession at risk. Many health care facilities have turned to the use of mandatory overtime as a common practice to fill longstanding staffing and scheduling problems.

Shifting the entire burden to employees when there is a labor shortage is not the answer to attracting qualified persons to the profession.

Washington State

One of the reasons that the nursing shortage as it exists today is because qualified nurses are not working in the field or leaving the profession because they can no longer work the long hours or safely take care of their patients. Forced overtime is adding to this shortage.

Massachusetts Study

Research from the University of Massachusetts shows a strong link between working overtime and sustaining a work-related injury. This was found to be true for all occupations... working longer hours (12 hours a day or more) was associated with a 37 percent increase in risk.

(Chantal Britt, Bloomberg, "Overtime, Long Hours Increase Illness, Injury Risk, Study Shows," August 22, 2005.)

States Which Ban or Limit Forced Overtime

California

Connecticut

Illinois

Maine

Maryland

Minnesota

Missouri

New Hampshire

New Jersey

New York

Pennsylvania

Oregon

Texas

Washington

West Virginia

Additional States Lining Up

There is legislation banning the use of mandatory overtime pending in the following states:

Alaska

Florida

Georgia

Hawaii

Iowa

Michigan

Nevada

Ohio

Rhode Island

Tennessee

Vermont

States that have passed a Mandatory Overtime Bill & States with Legislation Pending.

The American Nurses Association's Nationwide State Legislative Agenda

PROHIBITION OF MANDATORY OVERTIME

Support Alaska House Bill 50

Your nurse will always be there for you in time of an unforeseen emergency situation, disease outbreak, natural or man-made disaster.

Your nurse will be able to voluntarily work overtime so long as the work is consistent with professional standards of safe patient care and does not exceed 14 consecutive hours.

Questions for you as Law Makers

- The Federal Government has passed laws to limit the number of hours that pilots can safely fly, truckers can safely drive, construction workers and engineers can drive a train and a ship. IOM has recommended the number of consecutive hours that medical residents and interns can safely work - all for public safety. Why would anyone not want to do the same for nurses when they care people who are at their most vulnerable?
- Where is the law that says as a nurse you lose your right to basic human rights? Time off, time to rest, to eat and to have time off for family?

Support Alaska House Bill 50

But with HB 50, a nurse will be able to say, “I am tired and do not think that I can practice quality, safe patient care at this time.”

Knowing his or her own limits, the nurse can refuse to be assigned the forced overtime in the first place. Our nurse would now be able to do this without fear of reprisal, retribution, or loss of job.

Questions for you as Law Makers

•Do you think that nurses should have the right to refuse
 over a basic _____ use
 safety _____ in emergency?

•When you answer these questions, we hope that you will
 not only support HB50, but also support the nurses that have
 come forward putting safe patient care above their job, their
 license and concern for retaliation to protect the public when,
 _____ care at a time when patients are their most
 vulnerable and need a strong committed advocate. Now it is
 your turn to become a nurse advocate.

We Urge Your Support for HB 50

It will protect the individual patient.

It will protect the Registered Nurse.

It will protect the healthcare facility.

It will enhance the nursing profession.

It will help recruit nurses.

It will help retain nurses.

It's good public policy.

It's common sense.

Thank you.

Testimony on House Bill 50
House Health and Social Services Committee
presented by Roger Lewerenz, RN at the Heart Center
Providence Alaska Medical Center
March 12, 2009

Good afternoon Mr. Chairman and Committee members. My name is Roger Lewerenz and I am a registered nurse and work as a clinical nurse education for the Heart Center at Providence which includes cardio vascular observation, cardio vascular intervention unit and the Cath Lab.

The cath lab is a highly specialized area where patients having heart attacks, strokes and other life-threatening problems receive care. The staff consists of RN's, cardio vascular technologists, and radiology technologists. All of these staff have extensive specialized training making them competent to work in the Cath Lab. We care for patients from neonatal infants, who are hours old, to those who are just over one hundred years old.

I cannot have just any RN come into the Lab to assist because of the specialized nature of the work. I would estimate it would take approximately one year to fully train an experienced critical care nurse before he or she could be deemed qualified to provide care in the Cath Lab.

We staff the Cath Lab, Monday to Friday from 7:30 a.m. to 4:00 p.m. to handle regularly scheduled procedures. From 4:00 p.m. until 7:30 a.m. the next morning and on weekends we utilize a call team. This call team consists of an RN, a radiology technologist, and cardio vascular technologist. Each individual takes one night a week and one weekend every five weeks.

It is not unusual for this team to be called in, in the middle of the night, to provide care for a patient experiencing a heart attack or other life threatening emergency.

Without the availability of this call team, many patients may not receive the timely care they require.

Recently the team was called in to care for a patient experiencing a heart attack. Because of the availability of this call team, the patient survived.

There are nights when the call team does not get called in. There are other nights when they are there for several hours.

The restrictions that would be imposed if this bill passes would negatively impact our ability to care for this patient population due to the unavailability of trained staff.

Thank you very much for the opportunity to testify today.

Testimony on House Bill 50
House Health and Social Services Committee
presented by Cindy Alkire, Assistant Chief Nurse Executive
Providence Alaska Medical Center
Marcy 12, 2009

Good afternoon Mr. Chairman and members of the Committee. My name is Cindy Alkire and I am here today to testify on behalf of Providence Health and Services Alaska. I am the Assistant Chief Nurse Executive at Providence Alaska Medical Center. I have been a nurse for over 26 years and have provided direct patient care during my nursing career. In my current role as a nurse executive I am responsible for managing and directing the activities of nurses employed within The Children's Hospital at Providence.

Providence opposes House Bill 50 for many reasons. First, most Alaskan hospitals have been successful in avoiding the use of mandatory scheduled overtime, recognizing that nurses need rest between their shifts. Providence does not use mandatory overtime.

Secondly, this bill does not appropriately address the "on call" issue currently present in our operating rooms, post anesthesia care unit, cath lab, and dialysis unit. "On call" is defined as being available within 30 minutes to come in to work and care for patients. This is only used to provide rapid response to care for patients in life-threatening situations.

I have read through the history of this legislation and the "on call" issue appears to be the most critical issue that is unresolved.

The issue of "on call" is not easily solved since hospitals must provide emergency services 24 hours per day. Nurses working in the OR, Cath lab (Acute stroke, acute MI, infant cardiac defects), and Dialysis must have specialized training and experience to work in those areas. It is such specialized training that it makes its impossible to have just any RN step in and help. This specialized training can take up to 2 years to complete. Even within the Operating room there are specialties such as "the heart team". While routine procedures in these areas are scheduled during normal operating hours healthcare institutions must have a mechanism to deal with emergencies outside of normal business hours, that is the reason an "on-call" system was developed. Why is this important?

Our interpretation of the bill uses "on call" to mean the same as "work" thus limiting staff in these critical areas to be on call in combination with time actually worked. For example, if a nurse is on call in any of these areas during the week he/she could easily exceeds the 80 hours in a 14 day period or more than 14 hours in one day mandate.

Furthermore nurses many times choose to take their call time on the days they are scheduled to work so that it does not interfere with their regularly scheduled day off – this legislation would impact the nurse's ability to manage their own schedule and their own time off.

While Providence has done much to limit the amount of "on-call" it is still necessary because these areas must staff available for emergencies that occur on evenings, nights, holidays, and weekends. If requiring an "on call" staff person to fulfill their on call obligation is considered mandatory overtime, this bill would adversely impact the ability of hospitals to provide emergency surgery, heart cath, and emergency dialysis.

The way this bill is written and the implications of the "on call" piece could result in unsafe conditions for patients because there would not be enough volunteers of staff with the experience needed to provide 24 hours 7 day a week access to emergency care. There is even the risk that Alaskan hospitals would have to close some of their beds causing patients to seek healthcare outside of Alaska.

I ask you to consider for a moment how such an unsafe patient situation could occur. In our Neonatal Intensive Care unit we care for the most vulnerable of babies. One of the complications that can occur as they are growing and developing is an infection in their intestines. This infection can lead to an intestinal rupture and it occurs quite suddenly. The only way to survive this complication is immediate surgical intervention. This legislation could prevent this surgery from happening. Put yourself in the place of the family of this baby when they are told their baby died because we did not have the staff to perform the needed surgery. This type of situation could occur with many different patients and families if our "on-call" system is compromised. Therefore, we must have the flexibility to effectively staff, manage, and deliver healthcare that our patients expect and demand of our health care system.

Quality and safe patient care is Providence's first priority. Hospitals and health systems have many safeguards in place to ensure that patients receive quality care, including detailed inspections by the federal government, the state Department of Public Health, and private accrediting agencies such as the Joint Commission. Quality, performance improvement, staffing, competencies, and patient satisfaction are monitored continuously. In order to maintain accreditation, hospitals are required to measure patient acuity and care requirements and provide adequate hours of nursing care to meet those requirements. In addition our hospital's ability to maintain the confidence of their communities in providing top quality care determines, in large measure, the success of their futures.

Finally, Providence believes the use of mandatory nurse overtime which according to the this bill could include "on-call" is a labor relations issue and needs to be handled at the negotiating table. Collective bargaining affords

management and nursing representatives to work out local issues with solutions that work for that community. Flexibility in developing solutions and adjusting those along the way is far preferable to a one-size solution prescribed in state law. Providence is scheduled to begin negotiations with the union representing our nurses, the Alaska Nurses Association, in mid-March and the use of mandatory nurse overtime will be a part of those negotiations. Providence respectfully requests that the Alaska Legislation allow us the opportunity to address these critical issues during our upcoming negotiations.

Thank you for allowing me the opportunity to appear before you today to present testimony on House Bill 50.

Testimony on House Bill 50
House Health and Social Services Committee
presented by Marilyn Edwards, Operating Room Clinical Manager
Providence Alaska Medical Center
Marcy 12, 2009

Mr. Chairman and members of the Committee – my name is Marilyn Edwards and I am the Operating Room Clinical Manager at Providence Alaska Medical Center. I have been a nurse for 31 years, 30 of those in the operating room – the last five years at Providence.

My immediate concerns revolve around safe quality patient outcomes and a safe work environment for my operating room staff.

It would be devastating to patient outcomes to enact a "one-size solution" prescribed in state law to resolve/control a mandatory nurse overtime concern that does not exist at the Providence Alaska Medical Center Operating Room.

We pride ourselves in the OR at Providence in being able to provide quality care to our patients needing surgical intervention while providing optimal work/life balance for our staff.

We have staff RN's scheduled to work from Sunday at 6:45 a.m. through Saturday at 7:00 p.m.

We are fully staffed with RN's. I have zero vacancies currently. To clarify optimum work/life balance: less than half of my RN's work full time. The full breakdown is as follows:

48 OR registered nurses total. This includes:

- 2 educators
- 1 RN traveler
- 6 Team leads
- 1 registered dialysis nurse

8 of the 48 nurses work 12 hour shifts

Four of these 12 hour shifts were added in the past year at the request of four of these 48 RN's

7 nurses work 10 hour shifts, and
33 nurses work 8 hour shifts

22 of the 48 RN's work a 1.0 full time equivalent position

9 RN's work a .09 full time equivalent

4 RN's work a .08 full time equivalent, and

2 RN's work a .06 full time equivalent

We have 10 "registry" RN's – a registry RN is only required to work 3 shifts per month, with minimal call.

A 1.0 full time employee working 6:45 a.m. to 3:15 p.m., has an average of one evening call, one night call, and two weekend shifts, either scheduled shifts or "call" per four week period.

A 12 hour RN, .09 FTE, usually has night or weekend "call." Much of this call is assigned around the individual RN's request because they may want the call scheduled when they are also scheduled to work to allow for consecutive days/nights of time off.

2 RN team leads volunteer to take second night call more often. One team lead averages 7 to 9 orthopedic call shifts per month. The one heart team leader averages 14 to 17 calls/shifts per month that she volunteers for.

During the interview process for a new position, all OR staff candidates are notified of the call requirements for the OR. The assigned call coverage is necessary to provide rapid (30 minutes from when notified) response for emergent patient care above what we are routinely staffed for based on volume trends of operation.

I have read and heard anecdotal stories of nurses being "tired" and unable to provide quality, safe care to our patients. One such story I saw in the February 2009 edition of the Alaska Nurses Association publication reports "an acuity system that was failing the nurses at a facility. There was sadness expressed regarding the load these nurses carried home with them." I'm unsure if the over-worked and under-staffed nurses that this article mentions were in a Montana facility where the author's relative received care. I'm not sure because it does not mention the location of the facility.

Why I bring this up is that we provided for time off for the employee to be with their sick and dying relative out of state. During this period, OR RN's volunteered and covered the mentioned employee's shifts and call while we interviewed and contracted to bring a traveling RN in to fill the staffing gap so as not to overburden our nurses with more call for a longer duration.

If the fellow PAMC OR nurses had not been "allowed" to cover the call shifts due to already meeting their call and work requirements, as set out by this bill, we would not have been able to accept heart patients during this short time period. That would be devastating to these critically ill patients -- to have to turn them away – divert them from the care they desperately need.

Re: Nurse Overtime
HB 50 and 51

Dear Representatives Herron and Keller:

Current proposals to limit Mandatory Nurse Overtime (HB 50, 51 and SB 12) seek to address a very real and serious problem: i.e. the national and state shortage of nurses. The national nursing shortage is expected to continue to worsen through 2016. In response, hospitals outside of Alaska have increased mandatory nurse overtime, and in response, national nursing associations have initiated a national state-by-state effort to obtain limits on mandatory nursing overtime. To date, fifteen (15) other states have enacted legislation to limit mandatory nursing overtime in some form.

The bills before the legislature seek to implement a generic national response to the nursing shortage problem with regulation similar to that recently enacted in other states. This approach may be appropriate to large urbanized metropolitan states, and may reflect an appropriate national response to a national problem. However, the approach may not necessarily reflect Alaska's unique health care system circumstances and needs. Specifically, Alaska presents unique circumstances, including

- labor market forces in which nurses are in high demand, requiring employer accommodation to individual nurse demands
- collective bargaining agreements, with strong nurse unions
- heavy reliance on *locum tenens* (traveling) nurses sourced out-of-state
- the challenges presented in providing rural health services in Alaska's bush, and
- an extensive federal health care system (tribal/Indian Health Service, Veterans, military)

A number of concerns have arisen in response to this proposed legislation, which should be addressed in the legislative process. These concerns include:

YUKON FLATS

Arctic Village
Beaver
Birch Creek
Canyon Village
Chalkyitsik
Circle
Fort Yukon
Venetie

YUKON

KOYUKUK

Galena
Huslia
Kallag

Tanana

1) Federal Facilities. The legislation purports to apply these regulations to "federal" facilities, which is likely beyond the state's regulatory authority. These federal facilities include Veterans, and military facilities which are clearly beyond the states' regulatory authority. Equally, the Indian Health Facilities, which are federal, raise serious questions, particularly with nurses who are federal employees working with tribal organizations under Intergovernmental Personal Act (IPA) assignments. The legislation would be clearly pre-empted as to the IPA nurses, and is highly questionable as to direct hire nurses (non-IPA) working in a federal facility.

2) IPA/non-IPA Parity. If the legislation does apply to non-IPA staff working in federal facilities, the legislation has the un-intended consequences of shifting the entire burden of possible mandatory overtime to federal IPA nurses, which concentrates and exacerbates the problem as to certain nurses.

3) Travel. Nurses travel from urban centers to rural areas. The legislation does not address how travel time is treated, which would normally be dealt with in light of federal regulations which are incorporated by reference into the AWHHA; however, the legislation is inconsistent with several provisions of federal laws and regulations and the treatment of travel time under inconsistent regulations will cause serious problems. Moreover, some proposed substitutes attempt to make distinctions between rural/urban nurses. Urban based nurses traveling to rural areas to work will create confusion as to which rules apply if the substitutes are adopted.

4) Nurse Specialties. The bill assumes that nurses are fungible; i.e. any single nurse may be substituted for another nurse. This does not reflect various nursing specialties, so that nurses practicing in specialty areas cannot be easily replaced by general nurses or nurses with specialties in other areas.

5) Collective Bargaining Agreements. The bill would conflict with some existing collective bargaining agreements, which would raise constitutional issues associated with state statutes that impair the right of contract. Moreover, the bill would prohibit certain scheduling systems (e.g. 3 x12 hours shifts a week). Scheduling issues are mandatory bargaining subjects under the National Labor Relations Act, and are the state statute may impair the rights of employer and nurse unions to negotiate a mandatory bargaining subject.

6) Application to Non-Hospital Facilities. In almost all cases, the concerns relate to nurse staffing patterns in hospitals. However, the statute applies to many non-hospital facilities. It is not clear that problems arising in hospital work environments relate to non-hospital work environments. The legislation is overly broad relative to the problem being addressed, and if adopted, should apply to hospital environments only.

7) Unnecessary Reporting. The bill would impose regulatory reporting and related burdens on all nurse employers, even if the nurse employers do not utilize

mandatory overtime practices. The majority of nurse employers in Alaska do not require mandatory overtime, but would be required to report on non-activity. This is highly unusual in labor law, which normally only requires reporting where the activity in question is occurring. The reporting requirements respecting non-activity, is unnecessary.

Finally, we do not believe that that increased regulation in Alaska will effectively address a national nursing shortage. We believe that a better approach is to provide support for increased training of nurses in Alaska, particularly for Alaska residents that are likely to remain in Alaska or likely to seek employment in underserved areas such as rural Alaska. We would encourage the Legislature to explore options to expand UAF nurse training as a more effective approach to deal with the nurse shortage.

Sincerely,
TANANA CHIEFS CONFERENCE

Michael J. Waller
General Counsel

MEMORANDUM

Date: April 8, 2009

To: Rod Betit, President/CEO ASHNHA
Evangelyn Dotomain, President/CEO Alaska Native Health Board

From: Starla Fox, Deputy Director of Nursing

Cc: Robert Clark, CEO
Lorraine Jewett, COO
Sue Mulkeit, Director of Nursing

Re: Response to Nurse Overtime Bill

This memo is testimony regarding HB 50 and SB 12 – Nurse Overtime Bill.

As the direct supervisor of the current Inpatient and Emergency Nursing workforce at BBAHC, I've heard the concerns voiced by nurses on the unit. Many are upset that the possibility of working extra hours and extra shifts may not be available for them or will be limited by the legislation. As you probably know there are some nurses who are not interested in working extra and they are never forced to do so; however we do have a group of nurses who are very interested in working extra to gain added income. These staff members know their limitations and are never forced to cover shifts if they do not want to. My concern for this bill is that it puts the facilities in a difficult situation, yet may not help with solving the issue of nurses working long tedious hours if that is what the nurses choose to do. For example, if I'm a nurse in the Anchorage area, I can work as many hours as I choose and no one would know the difference. I could be employed at one facility and also moonlight at another facility down the street. It seems that the language of this Overtime Bill does not limit the individual nurse but instead the facilities. If the purpose of limiting hours worked is to protect the patient population from fatigued and overworked nurses, then the responsibility should also be placed on the individual nurse as well as the facility.

Rural hospitals in Alaska are very isolated and have a small limited workforce. There is not a major competitor down the street that we can pull nurses from to moonlight for us

when there is a shift that needs to be covered. This Overtime Bill will limit the small hospitals and increase our cost without truly getting to the problem in the larger urban settings defined in SECTION 1 #2 that reads "*quality of patient care is jeopardized by registered nurses and licensed practical nurses who work unnecessarily long hours in health care facilities;*". Nurses who want the additional income that live in the city will still be able to work as many hours as they want if they work part-time at several facilities in addition to their permanent employer. I don't see this as helping with patient safety in these urban areas and it puts undue stress on the rural facilities that have a smaller pool of licensed nurses to draw from. It will be difficult to sell 8 hour shifts to nurses who love working 12 hour shifts and the housing availability in the remote settings is limited and will only worsen if we are forced to increase our workforce to accommodate 8 hour shifts. The reporting requirements in HB 50 and SB 12 are onerous for the small hospitals. I believe that this bill will create additional barriers to affordable healthcare for those patients who reside in remote parts of the state. The April-June 2007 issue of Nursing Administration Quarterly was entitled "The Perfect Storm: Ratios, Retirement and Entry Into Practice". We are already experiencing a nationwide nursing shortage, why would our legislators want to tie the hands of the rural healthcare facilities by passing a bill that does not solve the real issue of nurses working long hours in the urban settings.

Please consider this testimony as you prepare your statement to our state legislature.

Sincerely,

Starla Fox, RN, MNS
Deputy Director of Nursing

CS FOR HOUSE BILL NO. 71()

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:

Referred:

Sponsor(s): REPRESENTATIVES HOLMES, DAHLSTROM, MILLETT, AND KAWASAKI

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to a registry for advance health care directives."**

2 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

3 *** Section 1.** AS 13.52.080 is amended by adding a new subsection to read:

4 (d) A health care facility or hospital is not subject to civil or criminal liability
5 for

6 (1) acting in reliance on an advance health care directive obtained from
7 the directive registry established under AS 13.52.310; or

8 (2) not checking the directive registry established under AS 13.52.310
9 to determine if a patient of the health care facility has filed an advance health care
10 directive in the registry.

11 *** Sec. 2.** AS 13.52 is amended by adding a new section to read:

12 **Sec. 13.52.310. Advance health care directive registry.** (a) The department
13 shall establish and maintain a registry for advance health care directives. The registry
14 must consist of

15 (1) a list of the names of individuals who have made written directives

1 for themselves and who have filed them with the department under (b) of this section;
2 and

3 (2) scanned copies of the directives identified in (1) of this subsection.

4 (b) An individual who has made a written directive for the individual may file
5 the directive with the department for placement in the registry.

6 (c) Except as provided in this subsection and by (d) of this section, the registry
7 is confidential, and the department may not use the information in the registry for
8 another purpose. The department may release by mail or fax

9 (1) the name of an individual who filed a directive with the department
10 under (b) of this section and a copy of a directive in the registry to

11 (A) the individual who made the directive;

12 (B) the agent, guardian, or surrogate of the individual who
13 made the directive; or

14 (C) a health care facility in this state or hospital in this state if
15 the individual who made the directive is a patient of the health care facility or
16 hospital;

17 (2) a copy of a directive in the registry to a hospital in another state if
18 requested by the

19 (A) individual who made the directive; or

20 (B) agent, guardian, or surrogate of the individual who made
21 the directive.

22 (d) The department shall make the registry accessible for viewing on the
23 Internet 24 hours a day to a hospital in this state to determine if an individual who is a
24 patient at the health care facility has a directive or to obtain a copy of a directive for an
25 individual who is a patient at the health care facility.

26 (e) The department is not required to review a directive for validity or
27 compliance with this chapter or another law before placing the directive in the
28 registry.

29 (f) The department shall remove a directive from the registry and return it to
30 the individual who made the directive if the individual requests in writing that the
31 directive be removed.

1 (g) Not filing a directive with the department for placement in the registry
2 does not affect the validity of the directive. Failure to notify the department that a
3 directive in the registry has been revoked does not affect the validity of the revocation.

4 (h) The department may charge a fee to file, return, or provide a copy of a
5 directive filed in the registry under this section, except that the department may not
6 charge a fee for removing a directive from the registry or for answering an inquiry by
7 a health care facility or hospital in this state regarding whether an individual has a
8 directive in the registry. The fee may not exceed the department's administrative costs
9 of fulfilling the request.

10 (i) To protect the security of the directives and names on the registry, the
11 department shall establish by regulation identification procedures and requirements for
12 an individual, agent, surrogate, guardian, hospital, or health care facility to access the
13 registry.

14 (j) The department shall establish by regulation criteria and a schedule for
15 removing directives from the registry.

16 (k) The department and its employees are not liable for civil damages as a
17 result of an act or omission in the establishment or maintenance of the registry or other
18 implementation of this section.

19 (l) In this section,

20 (1) "directive" means a written advance health care directive;

21 (2) "registry" means the registry established under this section.

AMENDMENT B

TO: HB 71 (26-LS0289\P)

BY REPRESENTATIVE HOLMES

1 Page 3, line 14

2 After "criteria":

3 Insert "and procedures for the collection, storage, access, distribution,

5 After "file"

6 Delete ", return,"

REPRESENTATIVE LINDSEY HOLMES

HOUSE DISTRICT 26

House Bill 71 Sponsor Statement

An Act relating to a registry for advance health care directives.

An advance health care directive is a document that allows a person to designate what health care they wish to receive and who can make medical decisions for them in the case that they are incapacitated. Alaska Statute 13.52.010 provides that anyone may fill out an advance health care directive, but it does not provide a system to store and access these important documents.

Medical emergencies can occur at any place at any time. A person may be on vacation and not have a copy of their advance health care directive with them, or family members may simply be too distraught to remember or find a copy of the directive. In cases like these, medical professionals and family members need an effective tool to locate and access information on a patient's health care wishes.

House Bill 71 would establish a voluntary registry of advance health care directives for the State of Alaska. The registry would be strictly voluntary—no person would ever be required to submit his or her advance health care directive to the registry, and directives not filed with the registry would remain every bit as valid. Other features of the registry include:

- Hospitals and similar health care facilities would have 24-hour online access to their patients' records in case of emergencies.
- A person or his or her agent, guardian or surrogate would be able to request copies of their directive.
- The Department of Health and Social Services would be able to charge modest fees to pay for administrative costs of the registry.
- All advance health care directives in the registry would be confidential.
- An individual could update or remove his or her advance health care directive from the registry at any time.

A number of other states already use an advance health care directive registry to ensure that patients' wishes are available to guide the decisions of doctors and loved ones during medical emergencies.

Please join me in helping to ensure that Alaskans' medical decisions are respected by supporting this legislation.

MEMORANDUM

January 23, 2009

SUBJECT: Sectional summary of HB 71, a bill relating to a registry for advance health care directives (Work Order No. 26-LS0289\E)

TO: Representative Lindsey Holmes
Attn: James Waldo

FROM: *JB*
Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Protects a health care facility from civil or criminal liability for two listed types of actions related to the directive registry.

Section 2. Allows a hospital to make a reasonable search of the directive registry when the hospital refers an individual at or near death to a procurement organization.

Section 3. Makes a procurement organization's access to the department's records subject to the new directive registry provisions.

Section 4. This is the main authorizing section for the directive registry. Directs the department to maintain a registry for advance health care directives. Allows individuals to place their directives in the registry. Makes the registry confidential and indicates when the department may release information from the registry. Directs the department to make the registry accessible for viewing on the Internet 24 hours a day to a health care facility for the facility's patients. States that the department is not required to review a directive for validity or compliance with law before placing it in the registry. Directs the department to remove a directive from the registry and return it to the maker when requested by the maker or an agent, guardian, or surrogate of the maker. Requires the department to review the registry every five years and to remove directives of individuals deceased for six months or more. Provides that not filing a directive does not affect the directive's validity. Provides that failing to tell the department about a revocation does not affect the revocation. Allows the department to charge certain fees to implement the section. Directs the department to adopt regulations about identification procedures and requirements to protect the security of the registry.

If I may be of further assistance, please advise.

MEMORANDUM

April 15, 2009

SUBJECT: CSHB 71(HSS) relating to a registry for advance health care directives (Work Order No. 26-LS0289\C)

TO: Representative Wes Keller
Co-Chair of the House Health and Social Services Committee
Attn: Matthew Johnson

FROM:  Theresa Bannister
Legislative Counsel

This memo accompanies the bill described above. This bill incorporates amendments made by the committee. I recommend that certain adjustments be made to the amendments to carry out the intent of the amendments and that two corrections be made to the language that was in the version that the committee considered. Since this bill has passed out of your committee, would you please pass these comments along to the next committee of referral?

1. Corrections. On page 2, "health care facility" should be replaced with "hospital" on both lines 24 and 25 because sec. 13.52.310(d) is limited to hospitals.
2. First adjustment. In sec. 13.52.310(f), on page 2 of the bill, the phrase "who made the directive" needs to be added after "individual" to indicate which individual can request the removal.
3. Second adjustment. In sec. 13.52.310(j), on page 3, the added language needs to be changed to avoid using "from the registry" for all of the listed preceding items. The language could read "and procedures for the collection of, storage of, access to, and distribution of directives in the registry and the removal and disposal of directives from the registry." Right now each item hinges on "from the registry," which doesn't completely work. For example, you would not say "storage from the registry."

If I may be of further assistance, please advise.

ANALYSIS: (Attach a separate page if necessary)

The bill is intended to more effectively honor and implement an individual's advance health care directive by creating a central registry for access by health care providers and procurement organizations. Information Technology Business Applications staff estimate that development of the registry, either by the state or a third party vendor, will require an estimated capital expenditure of \$250K with an additional \$50K to develop an interface with the Bureau of Vital Statistics. Two FTE personnel will be required to enter the documents into the registry and provide access to the information: Public Health Specialist II (R20, step C) at \$100K and an Administrative Clerk III (R10, step C) at \$56.1K. Work stations, lease, phone service, etc. is estimated to be \$19K for the 2 employees. An additional contractual expenditure is system maintenance (10%), or \$25K per year. Training expenditures for hospital and other personnel to access the registry is estimated at \$6K per year, with a one-time travel increase in FY2011 to train hospital personnel. Supplies are estimated at \$1.5K per year. The fund source amount includes the total anticipated operating and capital expenditures.

RE: HB 71 (Holmes, Dahlstrom, Millett, Kawasaki)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support HB 71, authored by your Committee colleague Representative Lindsey Holmes and Representatives Nancy Dahlstrom, Charisse Millett, and Scott Kawasaki.

AARP encourages our 97,000 members in Alaska to prepare advance health care directives and to discuss their wishes with their family.

Unfortunately, all too often a serious illness or accident may strike when an individual does not have their directives on their person. It is also not uncommon for someone to arrive at a hospital and be unable to speak and express their wishes. This often results in a health care provider being unable to discern or to follow the preferences of a patient.

HB 71 would help alleviate this situation. HB 71 would establish a voluntary registry for health care directives which could be accessed by health care providers in time of need.

HB 71 offers everything we could ask for:

- Voluntary
- Confidential
- Available on a 24 hour basis
- Inexpensive
- Available for updating if the individual so chooses

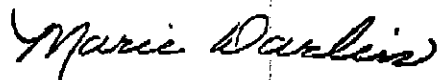

If passed, AARP Alaska will encourage every one of our members to participate in the registry and to encourage their younger family members to do likewise.

AARP urges an "AYE" vote on HB 71.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

STATE OF ALASKA

Department of Labor and Workforce Development

OFFICE OF THE COMMISSIONER

SEAN PARNELL, GOVERNOR

P.O. BOX 111149
JUNEAU, ALASKA 99811-1149

PHONE: (907) 465-2700
FAX: (907) 465-2784

February 1, 2010

The Honorable Bob Herron
The Honorable Wes Keller
Co-Chairs House Health and Social Services Committee
State Capital Building
Juneau, AK 99801-1182

Dear Representatives Herron and Keller,

Thank you for scheduling House Bill 89 which establishes a State Vocational Rehabilitation Committee (SVRC) in the House Health and Social Services Committee. The primary purpose of this legislation is to bring current state statute into compliance with federal law. The SVRC will function as the State Rehabilitation Council and the Assistive Technology Advisory Committee, both of which are required by federal law to accept funding from the U.S. Department of Education, Rehabilitation Services Administration to operate the Vocational Rehabilitation Client Services program and Assistive Technology grant. The SVRC will replace the Governor's Committee on Employment and Rehabilitation of People with Disabilities (GCERPD).

It is important that this legislation pass during this session. The Division of Vocational Rehabilitation is currently undergoing a federal review and monitoring of programs authorized under Title I of the Rehabilitation Act of 1973, as amended. Management and organization of the State Rehabilitation Council is included in this compliance review to determine whether the agency is fully constituted in accordance with federal law and regulations, including membership composition. Current state statutes are not in compliance with the federal laws related to the State Rehabilitation Council or the Assistive Technology Advisory Committee. Current statute was written for a committee that no longer exists, the President's Committee on Employment of People with Disabilities.

The GCERPD will continue to perform the duties of the State Rehabilitation Council and the Assistive Technology Advisory Committee until this matter is resolved. The Division of Vocational Rehabilitation could be sanctioned during the federal review. Similar legislation regarding SVRC was introduced during the 25th Legislative Session.

Federal compliance is critical to assist Alaskans with disabilities to become employed and have access to appropriate assistive technology services and devices. Thank you for your consideration of this important matter. Please contact me or my Legislative Liaison, Paula Scavera at 465-2700 if you would like to discuss this further.

Sincerely,

Clark Bishop
Commissioner

CS HB 89 (L& C)

An Act relating to the State Vocational Rehabilitation Committee

Sectional Analysis

Section 1 repeals the Governor's Committee on Employment of People with Disabilities (GCEPD). Creates the State Vocational Rehabilitation Committee and describes its purpose.

Section 2 describes the appointment, number, composition of committee members. It states that the number and composition of the committee must consistent with the requirements of 29 U.S.C. 725 and 29 U.S.C. 3003, as amended.

Section 3 addresses the selection and term of the Committee Chair. It eliminates the need for the Governor to appoint the Chair, allowing the voting members of the Committee to make a selection, subject to disapproval by the Governor. Term of Chair is one year.

Section 4 provides for four (4) meetings per year. Meeting may be conducted telephonically.

Section 5 addresses the transition of current members of the GCEPD. Current members, who on the day before the effective date of this Act meet the requirements for membership on the new committee, will continue to serve their original GCEPD term on the new committee until that term would have expired. They may apply to the Governor for reappointment after their term expires.

Section 6 is a new section that changes the heading of art. 2 of AS 23.15 from the "Governor's Committee on Employment of People with Disabilities" to "State Vocational Rehabilitation Committee."

Section 7 provides for an effective date.

ANALYSIS: (Attach a separate page if necessary)

This bill will increase the number of individuals on the State Vocational Rehabilitation Committee to align with federal regulations by adding three additional seats. Additional costs estimated at \$7.5 will result from travel, per-diem, and lodging for the three additional members. The Client Services component will absorb the additional costs within currently budgeted funding.

29 USC Sec. 725

-EXPCITE-

TITLE 29 - LABOR

CHAPTER 16 - VOCATIONAL REHABILITATION AND OTHER REHABILITATION
SERVICES

SUBCHAPTER I - VOCATIONAL REHABILITATION SERVICES

Part A - General Provisions

-HEAD-

Sec. 725. State Rehabilitation Council

-STATUTE-

(a) Establishment

(1) In general

Except as provided in section 721(a)(21)(A)(i) of this title, to be eligible to receive financial assistance under this subchapter a State shall establish a State Rehabilitation Council (referred to in this section as the "Council") in accordance with this section.

(2) Separate agency for individuals who are blind

A State that designates a State agency to administer the part of the State plan under which vocational rehabilitation services are provided for individuals who are blind under section 721(a)(2)(A)(i) of this title may establish a separate Council in accordance with this section to perform the duties of such a Council with respect to such State agency.

(b) Composition and appointment

(1) Composition

(A) In general

Except in the case of a separate Council established under subsection (a)(2) of this section, the Council shall be composed of -

(i) at least one representative of the Statewide Independent Living Council established under section 796d of this title, which representative may be the chairperson or other designee of the Council;

(ii) at least one representative of a parent training and information center established pursuant to section 671 of the Individuals with Disabilities Education Act [20 U.S.C. 1471];

(iii) at least one representative of the client assistance program established under section 732 of this title;

(iv) at least one qualified vocational rehabilitation counselor, with knowledge of and experience with vocational rehabilitation programs, who shall serve as an ex officio, nonvoting member of the Council if the counselor is an employee of the designated State agency;

(v) at least one representative of community rehabilitation program service providers;

(vi) four representatives of business, industry, and labor;

(vii) representatives of disability advocacy groups representing a cross section of -

(I) individuals with physical, cognitive, sensory, and mental disabilities; and

(II) individuals' representatives of individuals with disabilities who have difficulty in representing themselves

or are unable due to their disabilities to represent themselves;

(viii) current or former applicants for, or recipients of, vocational rehabilitation services;

(ix) in a State in which one or more projects are carried out under section 741 of this title, at least one representative of the directors of the projects;

(x) at least one representative of the State educational agency responsible for the public education of students with disabilities who are eligible to receive services under this subchapter and part B of the Individuals with Disabilities Education Act [20 U.S.C. 1411 et seq.]; and

(xi) at least one representative of the State workforce investment board.

(B) Separate Council

In the case of a separate Council established under subsection (a) (2) of this section, the Council shall be composed of -

(i) at least one representative described in subparagraph

(A) (i);

(ii) at least one representative described in subparagraph

(A) (ii);

(iii) at least one representative described in subparagraph

(A) (iii);

(iv) at least one vocational rehabilitation counselor described in subparagraph (A) (iv), who shall serve as described in such subparagraph;

(v) at least one representative described in subparagraph

(A) (v);

(vi) four representatives described in subparagraph

(A) (vi);

(vii) at least one representative of a disability advocacy group representing individuals who are blind;

(viii) at least one individual's representative, of an individual who -

(I) is an individual who is blind and has multiple disabilities; and

(II) has difficulty in representing himself or herself or is unable due to disabilities to represent himself or herself;

(ix) applicants or recipients described in subparagraph (A) (viii);

(x) in a State described in subparagraph (A) (ix), at least one representative described in such subparagraph;

(xi) at least one representative described in subparagraph (A) (x); and

(xii) at least one representative described in subparagraph (A) (xi).

(C) Exception

In the case of a separate Council established under subsection (a) (2) of this section, any Council that is required by State law, as in effect on October 29, 1992, to have fewer than 15 members shall be deemed to be in compliance with subparagraph (B) if the Council -

(i) meets the requirements of subparagraph (B), other than

the requirements of clauses (vi) and (ix) of such subparagraph; and

(ii) includes at least -

(I) one representative described in subparagraph (B) (vi); and

(II) one applicant or recipient described in subparagraph (B) (ix).

(2) Ex officio member

The Director of the designated State unit shall be an ex officio, nonvoting member of the Council.

(3) Appointment

Members of the Council shall be appointed by the Governor or, in the case of a State that, under State law, vests authority for the administration of the activities carried out under this chapter in an entity other than the Governor (such as one or more houses of the State legislature or an independent board), the chief officer of that entity. The appointing authority shall select members after soliciting recommendations from representatives of organizations representing a broad range of individuals with disabilities and organizations interested in individuals with disabilities. In selecting members, the appointing authority shall consider, to the greatest extent practicable, the extent to which minority populations are represented on the Council.

(4) Qualifications

(A) In general

A majority of Council members shall be persons who are -

(i) individuals with disabilities described in section 705(20)(B) of this title; and

(ii) not employed by the designated State unit.

(B) Separate Council

In the case of a separate Council established under subsection (a) (2) of this section, a majority of Council members shall be persons who are -

(i) blind; and

(ii) not employed by the designated State unit.

(5) Chairperson

(A) In general

Except as provided in subparagraph (B), the Council shall select a chairperson from among the membership of the Council.

(B) Designation by chief executive officer

In States in which the chief executive officer does not have veto power pursuant to State law, the appointing authority described in paragraph (3) shall designate a member of the Council to serve as the chairperson of the Council or shall require the Council to so designate such a member.

(6) Terms of appointment

(A) Length of term

Each member of the Council shall serve for a term of not more than 3 years, except that -

(i) a member appointed to fill a vacancy occurring prior to the expiration of the term for which a predecessor was appointed, shall be appointed for the remainder of such term; and

(ii) the terms of service of the members initially appointed shall be (as specified by the appointing authority described in paragraph (3)) for such fewer number of years as

will provide for the expiration of terms on a staggered basis.

(B) Number of terms

No member of the Council, other than a representative described in clause (iii) or (ix) of paragraph (1)(A), or clause (iii) or (x) of paragraph (1)(B), may serve more than two consecutive full terms.

(7) Vacancies

(A) In general

Except as provided in subparagraph (B), any vacancy occurring in the membership of the Council shall be filled in the same manner as the original appointment. The vacancy shall not affect the power of the remaining members to execute the duties of the Council.

(B) Delegation

The appointing authority described in paragraph (3) may delegate the authority to fill such a vacancy to the remaining members of the Council after making the original appointment.

(c) Functions of Council

The Council shall, after consulting with the State workforce investment board -

(1) review, analyze, and advise the designated State unit regarding the performance of the responsibilities of the unit under this subchapter, particularly responsibilities relating to -

(A) eligibility (including order of selection);

(B) the extent, scope, and effectiveness of services provided; and

(C) functions performed by State agencies that affect or that potentially affect the ability of individuals with disabilities in achieving employment outcomes under this subchapter;

(2) in partnership with the designated State unit -

(A) develop, agree to, and review State goals and priorities in accordance with section 721(a)(15)(C) of this title; and

(B) evaluate the effectiveness of the vocational rehabilitation program and submit reports of progress to the Commissioner in accordance with section 721(a)(15)(E) of this title;

(3) advise the designated State agency and the designated State unit regarding activities authorized to be carried out under this subchapter, and assist in the preparation of the State plan and amendments to the plan, applications, reports, needs assessments, and evaluations required by this subchapter;

(4) to the extent feasible, conduct a review and analysis of the effectiveness of, and consumer satisfaction with -

(A) the functions performed by the designated State agency;

(B) vocational rehabilitation services provided by State agencies and other public and private entities responsible for providing vocational rehabilitation services to individuals with disabilities under this chapter; and

(C) employment outcomes achieved by eligible individuals receiving services under this subchapter, including the availability of health and other employment benefits in connection with such employment outcomes;

(5) prepare and submit an annual report to the Governor and the Commissioner on the status of vocational rehabilitation programs operated within the State, and make the report available to the public;

(6) to avoid duplication of efforts and enhance the number of individuals served, coordinate activities with the activities of other councils within the State, including the Statewide Independent Living Council established under section 796d of this title, the advisory panel established under section 612(a)(20) of the Individuals with Disabilities Education Act [20 U.S.C. 1412(a)(20)], the State Council on Developmental Disabilities established under section 15025 of title 42, the State mental health planning council established under section 300x-3(a) of title 42, and the State workforce investment board;

(7) provide for coordination and the establishment of working relationships between the designated State agency and the Statewide Independent Living Council and centers for independent living within the State; and

(8) perform such other functions, consistent with the purpose of this subchapter, as the State Rehabilitation Council determines to be appropriate, that are comparable to the other functions performed by the Council.

(d) Resources

(1) Plan

The Council shall prepare, in conjunction with the designated State unit, a plan for the provision of such resources, including such staff and other personnel, as may be necessary and sufficient to carry out the functions of the Council under this section. The resource plan shall, to the maximum extent possible, rely on the use of resources in existence during the period of implementation of the plan.

(2) Resolution of disagreements

To the extent that there is a disagreement between the Council and the designated State unit in regard to the resources necessary to carry out the functions of the Council as set forth in this section, the disagreement shall be resolved by the Governor consistent with paragraph (1).

(3) Supervision and evaluation

Each Council shall, consistent with State law, supervise and evaluate such staff and other personnel as may be necessary to carry out its functions under this section.

(4) Personnel conflict of interest

While assisting the Council in carrying out its duties, staff and other personnel shall not be assigned duties by the designated State unit or any other agency or office of the State, that would create a conflict of interest.

(e) Conflict of interest

No member of the Council shall cast a vote on any matter that would provide direct financial benefit to the member or otherwise give the appearance of a conflict of interest under State law.

(f) Meetings

The Council shall convene at least four meetings a year in such places as it determines to be necessary to conduct Council business and conduct such forums or hearings as the Council considers appropriate. The meetings, hearings, and forums shall be publicly announced. The meetings shall be open and accessible to the general public unless there is a valid reason for an executive session.

(g) Compensation and expenses

The Council may use funds allocated to the Council by the designated State unit under this subchapter (except for funds appropriated to carry out the client assistance program under section 732 of this title and funds reserved pursuant to section 730(c) of this title to carry out part C of this subchapter) to reimburse members of the Council for reasonable and necessary expenses of attending Council meetings and performing Council duties (including child care and personal assistance services), and to pay compensation to a member of the Council, if such member is not employed or must forfeit wages from other employment, for each day the member is engaged in performing the duties of the Council.

(h) Hearings and forums

The Council is authorized to hold such hearings and forums as the Council may determine to be necessary to carry out the duties of the Council.

REFERENCES IN TEXT

The Individuals with Disabilities Education Act, referred to in subsec. (b)(1)(A)(x), is title VI of Pub. L. 91-230, Apr. 13, 1970, 84 Stat. 175, as amended. Part B of the Act is classified generally to subchapter II (Sec. 1411 et seq.) of chapter 33 of Title 20, Education. For complete classification of this Act to the Code, see section 1400 of Title 20 and Tables.

-MISC1-

PRIOR PROVISIONS

A prior section 725, Pub. L. 93-112, title I, Sec. 105, as added Pub. L. 102-569, title I, Sec. 126(a), Oct. 29, 1992, 106 Stat. 4381; amended Pub. L. 103-73, title I, Sec. 107(d)(1), Aug. 11, 1993, 107 Stat. 721, related to State Rehabilitation Advisory Council, prior to the general amendment of this subchapter by Pub. L. 105-220.

AMENDMENTS

2004 - Subsec. (b)(1)(A)(ii). Pub. L. 108-446, Sec. 305(h)(2), substituted "671 of the Individuals with Disabilities Education Act" for "682(a) of the Individuals with Disabilities Education Act (as added by section 101 of the Individuals with Disabilities Education Act Amendments of 1997; Public Law 105-17)".

Subsec. (c)(6). Pub. L. 108-446, Sec. 305(h)(3), substituted "section 612(a)(20)" for "section 612(a)(21)" and "Individuals with" for "Individual with" and struck out "(as amended by section 101 of the Individuals with Disabilities Education Act Amendments of 1997; Public Law 105-17)" before ", the State Council".

2000 - Subsec. (c)(6). Pub. L. 106-402 substituted "the State Council on Developmental Disabilities established under section

15025 of title 42" for "the State Developmental Disabilities Council described in section 6024 of title 42".

1998 - Subsec. (b)(3). Pub. L. 105-277, Sec. 101(f) [title VIII, Sec. 402(c)(6)(A)], substituted "Governor or, in the case of a State that, under State law, vests authority for the administration of the activities carried out under this chapter in an entity other than the Governor (such as one or more houses of the State legislature or an independent board), the chief officer of that entity" for "Governor" in first sentence and "appointing authority" for "Governor" in second and third sentences.

Subsec. (b)(4)(A)(i). Pub. L. 105-277, Sec. 101(f) [title VIII, Sec. 402(c)(6)(B)], substituted "section 705(20)(B)" for "section 705(20)(A)".

Subsec. (b)(5)(B). Pub. L. 105-277, Sec. 101(f) [title VIII, Sec. 402(c)(6)(C)], substituted "chief executive officer" for "Governor" in heading and "appointing authority described in paragraph (3) shall" for "Governor shall" in text.

Subsec. (b)(6)(A)(ii), (7)(B). Pub. L. 105-277, Sec. 101(f) [title VIII, Sec. 402(c)(6)(D)], substituted "appointing authority described in paragraph (3)" for "Governor".

-End-

29 USC SEC. 3003

-EXCISE-

TITLE 29 TABLE

CHAPTER 31 - ASSISTIVE TECHNOLOGY FOR INDIVIDUALS WITH DISABILITIES
CHAPTER 311

-FED-

Sec. 3003. State grants for assistive technology

SEC. 3003 - STATE GRANTS FOR ASSISTIVE TECHNOLOGY

-STATUTE-

(a) Grants to States

The Secretary shall award grants under subsection (b) to States to maintain comprehensive statewide programs of technology-related assistance to support programs that are designed to maximize the ability of individuals with disabilities across the human lifespan and across the wide array of disabilities, and their family members, guardians, advocates, and authorized representatives, to obtain assistive technology, and that are designed to increase access to assistive technology.

(b) Amount of financial assistance

(1) In general

From funds made available to carry out this section, the Secretary shall award a grant to each eligible State and eligible outlying area from an allotment determined in accordance with paragraph (c).

(2) Calculation of State grants

(A) Base year

Except as provided in subparagraphs (E) and (C), the Secretary shall allot to each State and outlying area for a fiscal year an amount that is not less than the amount the State or outlying area received under the grants provided under section 3011 of this title (as in effect on the day before October 25, 2004) for fiscal year 2004.

(B) Ratable reduction

(i) In general

If funds made available to carry out this section for any fiscal year are insufficient to make the allotments required for each State and outlying area under subparagraph (A) for such fiscal year, the Secretary shall ratably reduce the allotments for such fiscal year.

(ii) Additional funds

If, after the Secretary makes the reductions described in clause (i), additional funds become available to carry out this section for the fiscal year, the Secretary shall ratably increase the allotments, until the Secretary has allotted the entire base year amount.

(C) Higher appropriation years

Except as provided in subparagraph (D), for a fiscal year for which the amount of funds made available to carry out this section is greater than the base year amount, the Secretary shall -

(i) make the allotments described in subparagraph (A);

(ii) from a portion of the remainder of the funds after the Secretary makes the allotments described in clause (i), the Secretary shall -

(I) from 50 percent of the portion, allot to each State

or outlying area an equal amount; and

(II) from 50 percent of the portion, allot to each State or outlying area an amount that bears the same relationship to such 50 percent as the population of the State or outlying area bears to the population of all States and outlying areas,

until each State has received an allotment of not less than \$410,000 and each outlying area has received an allotment of \$125,000 under clause (i) and this clause;

(iii) from the remainder of the funds after the Secretary makes the allotments described in clause (ii), the Secretary shall -

(I) from 80 percent of the remainder allot to each State an amount that bears the same relationship to such 80 percent as the population of the State bears to the population of all States; and

(II) from 20 percent of the remainder, allot to each State an equal amount.

(D) Special rule for fiscal year 2005

Notwithstanding subparagraph (C), if the amount of funds made available to carry out this section for fiscal year 2005 is greater than the base year amount, the Secretary may award grants on a competitive basis for periods of 1 year to States or outlying areas in accordance with the requirements of subchapter III of this chapter (!) (as in effect on the day before October 25, 2004) to develop, support, expand, or administer an alternative financing program.

(E) Base year amount

In this paragraph, the term "base year amount" means the total amount received by all States and outlying areas under the grants described in subparagraph (A) for fiscal year 2004.

(c) Lead agency, implementing entity, and advisory council

(1) Lead agency and implementing entity

(A) Lead agency

(i) In general

The Governor of a State shall designate a public agency as a lead agency -

(I) to control and administer the funds made available through the grant awarded to the State under this section; and

(II) to submit the application described in subsection (d) on behalf of the State, to ensure conformance with Federal and State accounting requirements.

(ii) Duties

The duties of the lead agency shall include -

(I) preparing the application described in subsection (d) and carrying out State activities described in that application, including making programmatic and resource allocation decisions necessary to implement the comprehensive statewide program of technology-related assistance;

(II) coordinating the activities of the comprehensive statewide program of technology-related assistance among public and private entities, including coordinating efforts related to entering into interagency agreements, and

maintaining and evaluating the program; and

(III) coordinating efforts related to the active, timely, and meaningful participation by individuals with disabilities and their family members, guardians, advocates, or authorized representatives, and other appropriate individuals, with respect to activities carried out through the grant.

(B) Implementing entity

The Governor may designate an agency, office, or other entity to carry out State activities under this section (referred to in this section as the "implementing entity"), if such implementing entity is different from the lead agency. The implementing agency shall carry out responsibilities under this chapter through a subcontract or another administrative agreement with the lead agency.

(C) Change in agency or entity

(i) In general

On obtaining the approval of the Secretary, the Governor may redesignate the lead agency, or the implementing entity, if the Governor shows to the Secretary good cause why the entity designated as the lead agency, or the implementing entity, respectively, should not serve as that agency or entity, respectively. The Governor shall make the showing in the application described in subsection (d).

(ii) Construction

Nothing in this paragraph shall be construed to require the Governor of a State to change the lead agency or implementing entity of the State to an agency other than the lead agency or implementing entity of such State as of October 25, 2004.

(2) Advisory council

(A) In general

There shall be established an advisory council to provide consumer-responsive, consumer-driven advice to the State for, planning of, implementation of, and evaluation of the activities carried out through the grant, including setting the measurable goals described in subsection (d)(3).

(B) Composition and representation

(i) Composition

The advisory council shall be composed of -

(I) individuals with disabilities that use assistive technology or the family members or guardians of the individuals;

(II) a representative of the designated State agency, as defined in section 7 of the Rehabilitation Act of 1973 (29 U.S.C. 705) and the State agency for individuals who are blind (within the meaning of section 101 of that Act (29 U.S.C. 721)), if such agency is separate;

(III) a representative of a State center for independent living described in part C of title VII of the Rehabilitation Act of 1973 (29 U.S.C. 796f et seq.);

(IV) a representative of the State workforce investment board established under section 111 of the Workforce Investment Act of 1998 (29 U.S.C. 2821);

(V) a representative of the State educational agency, as defined in section 7801 of title 20; and

(VI) representatives of other State agencies, public agencies, or private organizations, as determined by the

State.

(ii) Majority

(I) In general

A majority, not less than 51 percent, of the members of the advisory council, shall be members appointed under clause (i)(I).

(II) Representatives of agencies

Members appointed under subclauses (II) through (VI) of clause (i) shall not count toward the majority membership requirement established in subclause (I).

(iii) Representation

The advisory council shall be geographically representative of the State and reflect the diversity of the State with respect to race, ethnicity, types of disabilities across the age span, and users of types of services that an individual with a disability may receive.

(C) Expenses

The members of the advisory council shall receive no compensation for their service on the advisory council, but shall be reimbursed for reasonable and necessary expenses actually incurred in the performance of official duties for the advisory council.

(D) Period

The members of the State advisory council shall be appointed not later than 120 days after October 25, 2004.

(E) Impact on existing statutes, rules, or policies

Nothing in this paragraph shall be construed to affect State statutes, rules, or official policies relating to advisory bodies for State assistive technology programs or require changes to governing bodies of incorporated agencies who carry out State assistive technology programs.

(d) Application

(1) In general

Any State that desires to receive a grant under this section shall submit an application to the Secretary, at such time, in such manner, and containing such information as the Secretary may require.

(2) Lead agency and implementing entity

The application shall contain information identifying and describing the lead agency referred to in subsection (c)(1)(A). The application shall contain information identifying and describing the implementing entity referred to in subsection (c)(1)(B), if the Governor of the State designates such an entity.

(3) Measurable goals

The application shall include -

(A) measurable goals, and a timeline for meeting the goals, that the State has set for addressing the assistive technology needs of individuals with disabilities in the State related to -

(i) education, including goals involving the provision of assistive technology to individuals with disabilities who receive services under the Individuals with Disabilities Education Act (20 U.S.C. 1400 et seq.);

(ii) employment, including goals involving the State vocational rehabilitation program carried out under title I

of the Rehabilitation Act of 1973 (29 U.S.C. 720 et seq.);
(iii) telecommunication and information technology; and
(iv) community living; and

(B) information describing how the State will quantifiably measure the goals to determine whether the goals have been achieved.

(4) Involvement of public and private entities

The application shall describe how various public and private entities were involved in the development of the application and will be involved in the implementation of the activities to be carried out through the grant, including -

(A) in cases determined to be appropriate by the State, a description of the nature and extent of resources that will be committed by public and private collaborators to assist in accomplishing identified goals; and

(B) a description of the mechanisms established to ensure coordination of activities and collaboration between the implementing entity, if any, and the State.

(5) Implementation

The application shall include a description of -

(A) how the State will implement each of the required activities described in subsection (e), except as provided in subsection (e) (6) (A); and

(B) how the State will allocate and utilize grant funds to implement the activities, including describing proposed budget allocations and planned procedures for tracking expenditures for activities described in paragraphs (2) and (3) of subsection (e).

(6) Assurances

The application shall include assurances that -

(A) the State will annually collect data related to the required activities implemented by the State under this section in order to prepare the progress reports required under subsection (f);

(B) funds received through the grant -

(i) will be expended in accordance with this section; and
(ii) will be used to supplement, and not supplant, funds available from other sources for technology-related assistance, including the provision of assistive technology devices and assistive technology services;

(C) the lead agency will control and administer the funds received through the grant;

(D) the State will adopt such fiscal control and accounting procedures as may be necessary to ensure proper disbursement of and accounting for the funds received through the grant;

(E) the physical facility of the lead agency and implementing entity, if any, meets the requirements of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) regarding accessibility for individuals with disabilities;

(F) a public agency or an individual with a disability holds title to any property purchased with funds received under the grant and administers that property;

(G) activities carried out in the State that are authorized under this chapter, and supported by Federal funds received under this chapter, will comply with the standards established

by the Architectural and Transportation Barriers Compliance Board under section 508 of the Rehabilitation Act of 1973 (20 (12) U.S.C. 794d); and

(H) the State will -

- (i) prepare reports to the Secretary in such form and containing such information as the Secretary may require to carry out the Secretary's functions under this chapter; and
- (ii) keep such records and allow access to such records as the Secretary may require to ensure the correctness and verification of information provided to the Secretary under this subparagraph.

(7) State support

The application shall include a description of the activities described in paragraphs (2) and (3) of subsection (e) that the State will support with State funds.

(e) Use of funds

(1) In general

(A) Required activities

Except as provided in subparagraph (B) and paragraph (6), any State that receives a grant under this section shall use a portion of the funds made available through the grant to carry out activities described in paragraphs (2) and (3).

(B) State or non-Federal financial support

A State shall not be required to use a portion of the funds made available through the grant to carry out the category of activities described in subparagraph (A), (B), (C), or (D) of paragraph (2) if, in that State -

- (i) financial support is provided from State or other non-Federal resources or entities for that category of activities; and
- (ii) the amount of the financial support is comparable to, or greater than, the amount of the portion of the funds made available through the grant that the State would have expended for that category of activities, in the absence of this subparagraph.

(2) State-level activities

(A) State financing activities

The State shall support State financing activities to increase access to, and funding for, assistive technology devices and assistive technology services (which shall not include direct payment for such a device or service for an individual with a disability but may include support and administration of a program to provide such payment), including development of systems to provide and pay for such devices and services, for targeted individuals and entities described in section 3002(16) (A) of this title, including -

- (i) support for the development of systems for the purchase, lease, or other acquisition of, or payment for, assistive technology devices and assistive technology services; or
- (ii) support for the development of State-financed or privately financed alternative financing systems of subsidies (which may include conducting an initial 1-year feasibility study of, improving, administering, operating, providing capital for, or collaborating with an entity with respect to, such a system) for the provision of assistive technology

devices, such as -

- (I) a low-interest loan fund;
- (II) an interest buy-down program;
- (III) a revolving loan fund;
- (IV) a loan guarantee or insurance program;
- (V) a program providing for the purchase, lease, or other acquisition of assistive technology devices or assistive technology services; or
- (VI) another mechanism that is approved by the Secretary.

(E) Device reutilization programs

The State shall directly, or in collaboration with public or private entities, carry out assistive technology device reutilization programs that provide for the exchange, repair, recycling, or other reutilization of assistive technology devices, which may include redistribution through device sales, loans, rentals, or donations.

(C) Device loan programs

The State shall directly, or in collaboration with public or private entities, carry out device loan programs that provide short-term loans of assistive technology devices to individuals, employers, public agencies, or others seeking to meet the needs of targeted individuals and entities, including others seeking to comply with the Individuals with Disabilities Education Act (20 U.S.C. 1400 et seq.), the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.), and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(D) Device demonstrations

(i) In general

The State shall directly, or in collaboration with public and private entities, such as one-stop partners, as defined in section 101 of the Workforce Investment Act of 1998 (29 U.S.C. 2801), demonstrate a variety of assistive technology devices and assistive technology services (including assisting individuals in making informed choices regarding, and providing experiences with, the devices and services), using personnel who are familiar with such devices and services and their applications.

(ii) Comprehensive information

The State shall directly, or through referrals, provide to individuals, to the extent practicable, comprehensive information about State and local assistive technology vendors, providers, and repair services.

(3) State leadership activities

(A) In general

A State that receives a grant under this section shall use a portion of not more than 40 percent of the funds made available through the grant to carry out the activities described in subparagraph (B). From that portion, the State shall use at least 5 percent of the portion for activities described in subparagraph (B) (i) (III).

(B) Required activities

(i) Training and technical assistance

(I) In general

The State shall directly, or provide support to public or private entities with demonstrated expertise in collaborating with public or private agencies that serve individuals with disabilities, to develop and disseminate

training materials, conduct training, and provide technical assistance, for individuals from local settings statewide, including representatives of State and local educational agencies, other State and local agencies, early intervention programs, adult service programs, hospitals and other health care facilities, institutions of higher education, and businesses.

(II) Authorized activities

In carrying out activities under subclause (I), the State shall carry out activities that enhance the knowledge, skills, and competencies of individuals from local settings described in subclause (I), which may include -

(aa) general awareness training on the benefits of assistive technology and the Federal, State, and private funding sources available to assist targeted individuals and entities in acquiring assistive technology;

(bb) skills-development training in assessing the need for assistive technology devices and assistive technology services;

(cc) training to ensure the appropriate application and use of assistive technology devices, assistive technology services, and accessible technology for e-government functions;

(dd) training in the importance of multiple approaches to assessment and implementation necessary to meet the individualized needs of individuals with disabilities; and

(ee) technical training on integrating assistive technology into the development and implementation of service plans, including any education, health, discharge, Olmstead, employment, or other plan required under Federal or State law.

(III) Transition assistance to individuals with disabilities

The State shall directly, or provide support to public or private entities to, develop and disseminate training materials, conduct training, facilitate access to assistive technology, and provide technical assistance, to assist -

(aa) students with disabilities, within the meaning of the Individuals with Disabilities Education Act (20 U.S.C. 1400 et seq.), that receive transition services; and

(bb) adults who are individuals with disabilities maintaining or transitioning to community living.

(ii) Public-awareness activities

(I) In general

The State shall conduct public-awareness activities designed to provide information to targeted individuals and entities relating to the availability, benefits, appropriateness, and costs of assistive technology devices and assistive technology services, including -

(aa) the development of procedures for providing direct communication between providers of assistive technology and targeted individuals and entities, which may include partnerships with entities in the statewide and local workforce investment systems established under the Workforce Investment Act of 1998 (29 U.S.C. 2801 et

seq.), State vocational rehabilitation centers, public and private employers, or elementary and secondary public schools;

(bb) the development and dissemination, to targeted individuals and entities, of information about State efforts related to assistive technology; and

(cc) the distribution of materials to appropriate public and private agencies that provide social, medical, educational, employment, and transportation services to individuals with disabilities.

(II) Collaboration

The State shall collaborate with entities that receive awards under paragraphs (1) and (3) of section 3005(b) of this title to carry out public-awareness activities focusing on infants, toddlers, children, transition-age youth, employment-age adults, seniors, and employers.

(III) Statewide information and referral system

(aa) In general

The State shall directly, or in collaboration with public or private (such as nonprofit) entities, provide for the continuation and enhancement of a statewide information and referral system designed to meet the needs of targeted individuals and entities.

(bb) Content

The system shall deliver information on assistive technology devices, assistive technology services (with specific data regarding provider availability within the State), and the availability of resources, including funding through public and private sources, to obtain assistive technology devices and assistive technology services. The system shall also deliver information on the benefits of assistive technology devices and assistive technology services with respect to enhancing the capacity of individuals with disabilities of all ages to perform activities of daily living.

(iii) Coordination and collaboration

The State shall coordinate activities described in paragraph (2) and this paragraph, among public and private entities that are responsible for policies, procedures, or funding for the provision of assistive technology devices and assistive technology services to individuals with disabilities, service providers, and others to improve access to assistive technology devices and assistive technology services for individuals with disabilities of all ages in the State.

(4) Indirect costs

Not more than 10 percent of the funds made available through a grant to a State under this section may be used for indirect costs.

(5) Prohibition

Funds made available through a grant to a State under this section shall not be used for direct payment for an assistive technology device for an individual with a disability.

(6) State flexibility

(A) In general

Notwithstanding paragraph (1)(A) and subject to subparagraph (B), a State may use funds that the State receives under a

grant awarded under this section to carry out any 2 or more of the activities described in paragraph (2).

(B) Special rule

Notwithstanding paragraph (3)(A), any State that exercises its authority under subparagraph (A) -

(i) shall carry out each of the required activities described in paragraph (3)(B); and

(ii) shall use not more than 30 percent of the funds made available through the grant to carry out the activities described in paragraph (3)(B).

(F) Annual progress reports

(1) Data collection

States shall participate in data collection as required by law, including data collection required for preparation of the reports described in paragraph (2).

(2) Reports

(A) In general

Each State shall prepare and submit to the Secretary an annual progress report on the activities funded under this chapter, at such time, and in such manner, as the Secretary may require.

(B) Contents

The report shall include data collected pursuant to this section. The report shall document, with respect to activities carried out under this section in the State -

(i) the type of State financing activities described in subsection (e)(2)(A) used by the State;

(ii) the amount and type of assistance given to consumers of the State financing activities described in subsection (e)(2)(A) (who shall be classified by type of assistive technology device or assistive technology service financed through the State financing activities, and geographic distribution within the State), including -

(I) the number of applications for assistance received;

(II) the number of applications approved and rejected;

(III) the default rate for the financing activities;

(IV) the range and average interest rate for the financing activities;

(V) the range and average income of approved applicants for the financing activities; and

(VI) the types and dollar amounts of assistive technology financed;

(iii) the number, type, and length of time of loans of assistive technology devices provided to individuals with disabilities, employers, public agencies, or public accommodations through the device loan program described in subsection (e)(2)(C), and an analysis of the individuals with disabilities who have benefited from the device loan program;

(iv) the number, type, estimated value, and scope of assistive technology devices exchanged, repaired, recycled, or reutilized (including redistributed through device sales, loans, rentals, or donations) through the device reutilization program described in subsection (e)(2)(B), and an analysis of the individuals with disabilities that have benefited from the device reutilization program;

(v) the number and type of device demonstrations and

referrals provided under subsection (e) (2) (D), and an analysis of individuals with disabilities who have benefited from the demonstrations and referrals;

(vi) (I) the number and general characteristics of individuals who participated in training under subsection (e) (3) (B) (i) (such as individuals with disabilities, parents, educators, employers, providers of employment services, health care workers, counselors, other service providers, or vendors) and the topics of such training; and

(II) to the extent practicable, the geographic distribution of individuals who participated in the training;

(vii) the frequency of provision and nature of technical assistance provided to State and local agencies and other entities;

(viii) the number of individuals assisted through the public-awareness activities and statewide information and referral system described in subsection (e) (3) (B) (ii);

(ix) the outcomes of any improvement initiatives carried out by the State as a result of activities funded under this section, including a description of any written policies, practices, and procedures that the State has developed and implemented regarding access to, provision of, and funding for, assistive technology devices, and assistive technology services, in the contexts of education, health care, employment, community living, and information technology and telecommunications, including e-government;

(x) the source of leveraged funding or other contributed resources, including resources provided through subcontracts or other collaborative resource-sharing agreements, from and with public and private entities to carry out State activities described in subsection (e) (3) (B) (iii), the number of individuals served with the contributed resources for which information is not reported under clauses (i) through (ix) or clause (xi) or (xii), and other outcomes accomplished as a result of such activities carried out with the contributed resources; and

(xi) the level of customer satisfaction with the services provided.

STATE OF ALASKA

Department of Labor and Workforce Development

DIVISION OF VOCATIONAL REHABILITATION

Governor's Committee on Employment & Rehabilitation
Of People with Disabilities

Sean Parnell, Governor

801 West 10th Street, Suite A
Juneau, AK 99801

V/TTY: (907) 465-2814

Fax: (907) 465-2856

January 26, 2010

Dear Representative:

The Governor's Committee on Employment & Rehabilitation of People with Disabilities strongly supports CS House Bill 89(L&C). This legislation will bring state statute into compliance with federal law. It will also eliminate the need to change state statute every time federal law changes. This committee will also function as the assistive technology advisory council which is also required under federal law and has similar membership requirements.

The Governor's Committee on Employment and Rehabilitation of People with Disabilities, which operates as Alaska's State Rehabilitation Council, is mandated by 29 U.S.C. 725 as amended, to have a very specific composition that is comprised of employers, service providers and individuals with disabilities. This varied composition provides an avenue for the Division of Vocational Rehabilitation to receive direct public feedback from a variety of stakeholders throughout Alaska. The Division utilizes this valuable feedback to continuously improve and refine its program.

We support the name change of the Governor's Committee on Employment of People with Disabilities to the State Vocational Rehabilitation Committee. Since this committee provides oversight to the Vocational Rehabilitation program, the name will clearly align it with the State of Alaska, Department of Labor and Workforce Development, Division Vocational Rehabilitation. The name change will also reduce the on-going confusion between this committee and the Governor's Council on Disability and Special Education.

Thank you for considering the CS HB 89(L&C). It is important that this committee is compliant with federal law to ensure continued funding which is critical to assist Alaskans with disabilities to become employed and have access to appropriate assistive technology services and devices. Please contact us if we can be of any assistance or provide any additional information.

Sincerely,

Ron Boynton
Committee Chair

Equipping Alaskans who are blind and visually impaired with skills for success in life and work

February 3, 2009

To Whom It May Concern:

This letter is to express strong support for HB 89, changing the name of the Governor's Committee on Employment of People with Disabilities to the State Vocational Rehabilitation Committee. Since this committee provides oversight of Vocational Rehabilitation, the name will clearly align it with the State of Alaska, Department of Labor and Workforce Development, Division of Vocational Rehabilitation. The name change will also reduce the ongoing confusion between this committee and the Governor's Council on Disabilities and Special Education.

This legislation will bring state statute into compliance with federal law. It will eliminate the need to change statutes every time federal law changes. This committee will also function as the assistive technology advisory council as required under federal law.

Thank you for considering HB 89. It is important that this committee is compliant with federal law to ensure continued funding which is critical to assisting Alaskans with visual and other disabilities to be employed and have access to assistive technology services. Please contact me if I can be of any assistance or provide additional information.

Sincerely,

Karla Jutzi

DIVISION OF VOCATIONAL REHABILITATION

Governor's Committee on Employment
of People with Disabilities

January 26, 2009

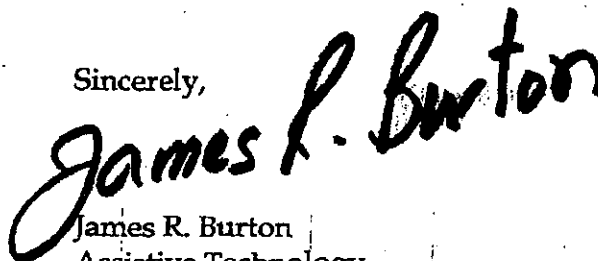

To Whom It May Concern:

The Governor's Committee on Employment of People with Disabilities strongly supports HB 89. This legislation will bring state statute into compliance with federal law. It will also eliminate the need to change state statute every time federal law changes. This committee will also function as the assistive technology advisory council as required under federal law.

We support the name change of the Governor's Committee on Employment of People with Disabilities to the State Vocational Rehabilitation Committee. Since this committee provides oversight to the Vocational Rehabilitation program, the name will clearly align it with the State of Alaska, Department of Labor and Workforce Development, Division Vocational Rehabilitation. The name change will also reduce the on-going confusion between this committee and the Governor's Council on Disability and Special Education.

Thank you for considering HB 89. It is important that this committee is compliant with federal law to ensure continued funding which is critical to assist Alaskans with disabilities to become employed and have access to appropriate assistive technology services and devices. Please contact us if we can be of any assistance or provide any additional information.

Sincerely,

James R. Burton
Assistive Technology

House Bill 110 - "Psychologists' Licensing and Practice"

Sponsor Statement

HB 110, "Psychologists' Licensing and Practice", hopes to clarify current statute regarding the licensing and regulation of psychologists in Alaska.

When current statute was written outlining the licensure of psychologists, the State Board of Psychologist and Psychological Associate Examiners offered the qualifying exam once every six months. Now the exam is offered more frequently, but AS 08.86.162 still specifically requires that an applicant who takes but does not pass the exam must wait six months before trying again. HB 110 deletes this requirement, allowing applicants to re-take the exam the next time it is offered. This change creates a more efficient licensure system, without sacrificing professional standards or quality.

HB 110 also clarifies to whom Alaska's laws regarding licensure do, and do not, apply. Passage will not limit the work of any other mental health service providers in Alaska – secular, spiritual, professional, or within volunteer-driven programs.

HB 110 is supported by the State Board of Psychologist and Psychological Associate Examiners, the Alaska Psychological Association, the Alaska Mental Health Board, and the Advisory Board on Alcohol and Drug Abuse.

Thank you for your interest. Please freely contact myself, or aide Liz Clement, with any questions.

MEMORANDUM

November 3, 2009

SUBJECT: Sectional summary (CSHB 110(HSS);
Work Order No. 26-LS0474\A)

TO: Representative Bob Herron
Co-chair of the House Health and Social Services Committee
Attn: Liz Clement

FROM: Alpheus Bullard *AB*
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Removes language that prevented a person from taking a psychological associate examination if the person had failed an examination administered by the Board of Psychologist and Psychological Associate Examiners in the preceding six months.

Section 2. Clarifies that the state's laws regulating psychologists and psychological associates (AS 08.86) do not apply to (1) school psychologists performing duties within school district facilities for a school district employer and (2) officers or employees of the United States Government practicing psychology while in the discharge of their official duties.

Lorin Bradbury Ph.D.
Chairperson
Board of Psychologists and Psychological
Associate Examiners

Dear Dr. Bradbury;

The Executive Board of the Alaska Psychological Association voted unanimously at its February 11th meeting to support the efforts of the Psychological Licensing Board to modify the language of the Psychology Licensing Law that describes who can call themselves Psychologists or advertise themselves as Psychologists. Currently in the Scope of practice section of our license, any mental health professional working in a government agency, private mental health clinic or other mental health organization could potentially practice as a licensed psychologist and advertise themselves as such in providing psychological evaluations, psychological testing and related psychological reports to the public or other agencies. The Alaska Psychological Association Executive Board appointed Phillip Baker Ed.D. And Robert Lane Ph.D. to work with the Psychological Licensing Board to help prepare and testify in new legislation to close this loop hole. We feel that anyone working in any setting that is holding themselves out as a psychologist, **MUST HAVE A PSYCHOLOGIST LICENSE.**

This letter was written to display the support of our professional organization for this proposed legislation. If there are further questions about this letter, please direct them to Dr. Phillip Baker Ed.D., Legislative Chair Person for the Alaska Psychological Association. Dr. Baker's telephone number is: (907) 562-2392. His email address is:

Sincerely,
Phillip Baker Ed.D.

Juneau, AK 99801-1182

Re: HB 110

Dear Mr. Herron:

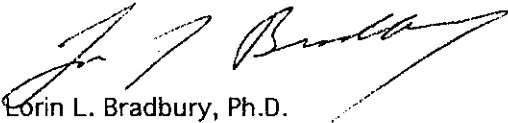

This letter is in support of HB 110, which has the support of both the Board of Psychologist and Psychological Associate Examiners, and the Alaska Psychological Association. The most substantial change by passage of this bill will be to AS 08.86.180(b). Passage of this bill is clearly in the best interest of the public because it provides the level of protection to the public that was originally intended by the passage of a licensing law for psychologists.

As the law currently stands, it has led some to believe that AS 08.86.180(b)(1) exempts a variety of individuals who might be eligible for licensure from the requirement of licensure. Passage of HB 110 will more clearly define who needs to obtain licensure.

Passage of this bill will not discriminate against school psychologists who are credentialed by the Department of Education, nor against those already exempted from licensure by federal law. Also, it will not negatively impact other mental health professionals because they are already protected under AS 08.86.180(b)(5) and (d).

Thank you for your support of this very worthy piece of legislation.

Sincerely,

Lorin L. Bradbury, Ph.D.

Chairman

ALASKA STATE LEGISLATURE

State Representative Bob Herron

Official Business

State Capitol
Juneau, Alaska
99801-1182

HOUSE BILL 110

"Psychologists' Licensing and Practice"

Questions and Answers

What does HB 110 do?

Two things. Section 1 is a simple efficiency measure, to ease the licensing process. When current statute was written, the Board of Psychologists and Psychological Associates Examiners offered the qualifying exam only once every six months. It is now offered every three months. This change to AS 08.86.162 will allow applicants who need to re-take the exam to do so in a more timely manner.

Section 2 clarifies who is subject to regulation by the Board, and who is not. It takes away very vague language (a person employed "by a governmental unit, educational institution or private agency who may be required to engage in some phase of work of a psychological nature in the course of the person's employment"), and replaces it with more specific groups:

- 1) School psychologists under the supervision of their employing districts. These professionals do not fall under the purview of the Board of Psychologists and Psychological Associate Examiners. School psychology is a unique field of study, separate from general psychology. In Alaska, school psychologists are licensed and regulated by the state's Department of Education and Early Development.
- 2) Federal officers and employees, *while performing official job duties*. The State does not have the authority to regulate the official work of the Federal government. It is important to note this exemption applies only while the individual in question is performing official duties.

Other exemptions to Board regulation currently in statute will remain untouched for:

- Properly supervised psychology students, interns, and residents in a board-approved course of study.
- Other mental health professionals whose work is also of a psychological nature, as long as they do not publicly claim to be a psychologist. – Examples: Licensed Professional Counselors (regulated by the Board of Professional Counselors), Marital and Family Therapists (regulated by the Board of Marital and Family Therapy), and Licensed Clinical Social Workers (regulated by the Board of Social Work Examiners). For further information on the qualifications these professions require in Alaska, please see the attached Mental Health Provider Comparison chart.

Who does HB 110 affect?

HB 110 affects only individuals seeking licensure by the Board of Psychologist and Psychological Associate Examiners, and people who may publicly claim to be psychologists but do not have the required board-issued license.

Other licensed mental health professionals doing work within their scope of practice and in accordance with their own profession's ethics code (including various State of Alaska employees) are *not* impacted by the HB 110. Volunteers serving in either secular or faith-based peer support programs are *not* impacted by HB 110.

What differentiates a psychologist's work from the work of other types of licensed professionals whose work may also be of a "psychological nature"?

Psychologists are the only professionals who can purchase, perform, evaluate, and interpret psychological tests. Counseling (or "psychotherapy") is a specialty area for psychologists, but it is not necessarily an area of expertise for all psychologists in the way it is for Licensed Professional Counselors or Marital and Family Therapists.

Is there a difference between a "psychologist" and a "school psychologist"?

Yes. School psychology is its own unique field of study. Educational programs in school psychology are accredited by different organizations than are educational programs in "psychology". In Alaska, as in many other states, school psychologists are also licensed and regulated by the state's Department of Education and Early Development. They are not licensed to practice independently, but rather to perform work under supervision of the employing school districts, within district facilities. School psychologists are not subject to the authority of AS 08.86 or the Board of Psychologist and Psychological Associate Examiners, and therefore will not be impacted by passage of HB110.

Alaska Mental Health Providers: Pre-Licensure Requirements

Psychologists

Regulated by the Board of Psychologist and Psychological Associate Examiners

Per AS 08.86.130:

1. Doctorate degree in psychology from a program that meets the Board's criteria in clinical psychology, counseling psychology, or a specialty deemed equivalent by the Board,
2. Has not engaged in dishonorable conduct related to the practice of counseling or psychometry, and
3. Has one year of post doctoral supervised experience approved by the Board.

Psychological Associates

Regulated by the Board of Psychologist and Psychological Associate Examiners

Per AS 08.86.160 and AS 08.86.162:

1. Masters degree in psychology from a program that meets the Board's criteria in clinical psychology, counseling psychology, or a specialty deemed equivalent by the Board,
2. Has not engaged in dishonorable conduct related to the practice of counseling or psychometry,
3. Has two years of post master's supervised experience approved by the Board, and
4. Passes the Board-approved objective examination for psychological associates.

Qualifications to sit for the Psychologist Associate Examination:

- a) Number 1, above.
- b) Number 2, above, including the equivalent of at least 48 semester credit hours of graduate course work directly related to a specialized area of psychology,
- c) Recommendation by an immediate supervisor, and
- d) Has not failed the exam within the previous six months.*

**HB 110 also seeks to remove the six month requirement.*

School Psychologists

Regulated by the Alaska Department of Education and Early Development, not subject to changes made by HB 110.

1. Masters or Doctoral degree in school psychology, and
2. Recommendation for endorsement by an institution whose program has been approved by:
 - a) The National Council for Accreditation of Teacher Education,
 - b) The National Association of State Directors of Teacher Education and Certification,
 - c) The National Association of School Psychologists, or
 - d) The American Psychological Association, and
3. Completes a 1,200 hour internship in school psychology;

OR

Be a nationally certified school psychologist under the National School Psychologist Certification System established by the National Association of School Psychologists.

HB110 has the support of the Psychological Licensing Board as well as the Executive Board of the Alaska Psychological Association. Its main purpose is to clarify statutory language regarding the licensing of psychologists. Under current law, any mental health professional working in a government agency, private mental health clinic, or other mental health organization could potentially practice as a licensed psychologist. The Psychological Licensing Board believes that anyone working in any setting that is holding themselves out as a psychologist must have a psychological license. The bill, therefore, replaces the broader language with language to allow only school psychologists to be exempt. It also requires that the school district maintain appropriate supervision of the activities of the school psychologist. The bill also adds a section exempting an officer or employee of the US Gov't while executing official duties.

(1) holds an earned master's degree from an academic institution whose program of graduate study for a master's degree in psychology meets the criteria established by the board by regulation in

- (A) clinical psychology;
- (B) counseling psychology; or
- (C) education in a field of specialization considered equivalent by the board;

(2) has not engaged in dishonorable conduct related to the practice of counseling or psychometry;

(3) has two years of post master's supervised experience approved by the board; and

(4) takes and passes the objective examination developed or approved by the board for psychological associates.

(b) The board may not deny recognition as an accredited or approved academic institution to an educational institution solely because its program has not been accredited by a professional organization of psychologists. (§ 5 ch 65 SLA 1973; am § 4 ch 51 SLA 1996)

Effect of amendments. — The 1996 amendment, effective September 4, 1996, rewrote this section.

NOTES TO DECISIONS

Applied in *Allred v. State*, 554 P.2d 411 (Alaska 1976).

Sec. 08.86.162. Qualifications for associates' examination. A person is entitled to take a psychological associate examination if the board finds that the person:

- (1) has not engaged in dishonorable conduct related to the practice of counseling or psychometry;

shall issue a psychologist institution whose program of criteria established by the

nt by the board; practice of counseling or

proved by the board; and approved by the board.

Cross references. — For professional designation requirements for psychologists, see AS 08.02.010.

NOTES TO DECISIONS

Applied in Allred v. State, 554 P.2d 411 (Alaska 1976).

Sec. 08.86.180. Practice of psychology. (a) Unless licensed under this chapter, a person may not practice psychology or hold out publicly as a psychologist or as practicing psychology. A person holds out as a psychologist by using a title or description of services incorporating the words "psychology," "psychological," "psychologist," "psychometry," "psychotherapy," "psychotherapeutic," "psychotherapist," "psychoanalysis," or "psychoanalyst" or when holding out publicly to be trained, experienced, or qualified to render services in the field of psychology.

(b) This section does not apply to

(1) a person employed by a governmental unit, educational institution or private agency who may be required to engage in some phase of work of a psychological nature in the course of the person's employment, if the employer maintains appropriate supervision of psychological activities and professional conduct, and if the person is performing the psychological activities as part of the duties for which the person was employed, is performing the activities solely within the facilities of the organization in which the person is employed or under the supervision of the organization in which the person is employed, and does not render or offer to render psychological services to the public for compensation in addition to the salary the person receives from the organization;

(2) a student, intern, or resident in psychology pursuing a course of study approved by the board as qualifying training and experience for a psychologist, if that person's activities constitute a part of that person's supervised course of study and that person is designated by titles such as "psychology intern" or "psychology trainee";

(3) a qualified member of another profession, in doing work of a psychological nature consistent with that person's training and consistent with the code of ethics of that person's profession, if the person does not hold out to the public by a title or description of services incorporating the words "psychology," "psychological," "psychologist," "psychometry," "psychotherapy," "psychotherapeutic," "psychotherapist," "psychoanalysis," or "psychoanalyst" or represent to be trained, experienced, or qualified to render services in the field of psychology.

(4) [Repealed, § 15 ch 65 SLA 1973.] — psychiatrists

(5) a physician engaged in the normal practice of medicine for which the physician is licensed under AS 08.64.

(c) Nothing in this chapter authorizes a person licensed as a psychologist to engage in the practice of medicine, as defined by the laws of the state.

(d) Nothing in this section prohibits a licensed clinical social worker, a licensed marital and family therapist, or a licensed professional counselor from holding out to the public by a title or description of services incorporating the words "psychoanalysis," "psychoanalyst," "psychotherapy," "psychotherapist," or "psychotherapeutic." (§ 1 ch 136 SLA 1967; am § 10 ch 69 SLA 1970; am §§ 7, 15 ch 65 SLA 1973; am §§ 14, 15 ch 58 SLA 1980; am §§ 4, 5 ch 29 SLA 1983; am § 1 ch 77 SLA 2006)

Effect of amendments. — The 2006 amendment, effective September 17, 2006, substituted "licensed clinical social worker, a licensed marital and family therapist, or a licensed professional counselor" for "clinical social worker," and inserted "psychoanalysis," "psychoanalyst," in subsection (d).

Collateral references. — Psychologist, 81 ALR2d 791.

Sec. 08.86.185. Practice of counseling and psychometrics. [Repealed, § 24 ch 58 SLA 1980. For current law, see AS 08.86.180.]

Sec. 08.86.190. Name under which person practices. (a) A licensed psychologist may practice psychology only under that person's own name.

(b) A licensed psychological associate may practice counseling or psychometry only under that person's own name. (§ 1 ch 136 SLA 1967; am § 9 ch 64 SLA 1973)

NOTES TO DECISIONS

Applied in *Allred v. State*, 554 P.2d 411 (Alaska 1976).

Sec. 08.86.200. Confidentiality of communication. (a) A psychologist or psychological associate may not reveal to another person a communication made to the psychologist or psychological associate by a client about a matter concerning which the client has employed the psychologist or psychological associate in a professional capacity. This section does not apply to

(1) a case conference with other mental health professionals or with physicians and surgeons;

(2) a case in which the client in writing authorized the psychologist or psychological associate to reveal a communication;

(3) a case where an immediate threat of serious physical harm to an identifiable victim is communicated to a psychologist or psychological associate by a client;

(4) disclosures of confidential communications required under Rule 504, Alaska Rules of Evidence; or

(5) proceedings conducted by the board or the department where the disclosure of confidential communications is necessary to defend against charges that the psychologist or psychological associate has violated provisions of this chapter; information obtained by the board or department under this paragraph is confidential and is not a public record for purposes of AS 40.25.110 — 40.25.140.

(b) Notwithstanding (a) of this section, a psychologist or psychological associate shall report to the appropriate authority incidents of child abuse or neglect as required by AS 47.17.020, incidents of abuse of a vulnerable adult as required by AS 47.24.010, and incidents of abuse of disabled persons disclosed to the psychologist or psychological associate by a client. In this subsection "disabled person" means a person who has a physical or mental disability or a physical or mental impairment, as defined in AS 18.80.300. (§ 1 ch 136 SLA 1967; am § 10 ch 65 SLA 1973; am § 7 ch 63 SLA 1986; am §§ 1, 2 ch 102 SLA 1988; am § 1 ch 129 SLA 1994; am § 7 ch 51 SLA 1996)

Revisor's notes. — In 2000, "AS 40.25.110 — 40.25.140" was substituted for "AS 09.25.110 — 09.25.140" to reflect the 2000 renumbering of AS 09.25.110 — 09.25.140.

Effect of amendments. — The 1994 amendment, effective July 9, 1994, substituted "abuse of a vulnerable adult" for "elder abuse" in the first sentence in subsection (b).

The 1996 amendment, effective September 4, 1996, in subsection (a), substituted "mental health professionals" for "psychologists, psychological associates" in paragraph (1) and added the semicolon and the language following it at the end of paragraph (5).

NOTES TO DECISIONS

Enactment as "anti-gossip" measure. — For case discussing enactment of this section as an "anti-gossip" measure rather than as creation of a statutory privilege in criminal cases, see *Allred v. State*, 554 P.2d 411 (Alaska 1976).

Assertion of insanity defense waives privilege. — The psychotherapist-patient privilege is waived by the assertion of a defense of insanity as to communications which are relevant to that defense. *Post v. State*, 580 P.2d 304 (Alaska 1978).

Representative Bob Herron
State Capitol
Juneau, AK 99801-1182

Re: HB 110

Dear Mr. Herron:

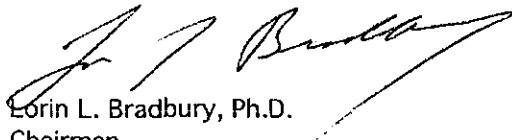

This letter is in support of HB 110, which has the support of both the Board of Psychologist and Psychological Associate Examiners, and the Alaska Psychological Association. The most substantial change by passage of this bill will be to AS 08.86.180(b). Passage of this bill is clearly in the best interest of the public because it provides the level of protection to the public that was originally intended by the passage of a licensing law for psychologists.

As the law currently stands, it has led some to believe that AS 08.86.180(b)(1) exempts a variety of individuals who might be eligible for licensure from the requirement of licensure. Passage of HB 110 will more clearly define who needs to obtain licensure.

Passage of this bill will not discriminate against school psychologists who are credentialed by the Department of Education, nor against those already exempted from licensure by federal law. Also, it will not negatively impact other mental health professionals because they are already protected under AS 08.86.180(b)(5) and (d).

Thank you for your support of this very worthy piece of legislation.

Sincerely,

Lorin L. Bradbury, Ph.D.
Chairman
Board of Psychologist and Psychological Associate Examiners

2/26/08

Lorin Bradbury Ph.D.
Chairperson
Board of Psychologists and Psychological
Associate Examiners

Dear Dr. Bradbury;

The Executive Board of the Alaska Psychological Association voted unanimously at its February 11th meeting to support the efforts of the Psychological Licensing Board to modify the language of the Psychology Licensing Law that describes who can call themselves Psychologists or advertise themselves as Psychologists. Currently in the Scope of practice section of our license, any mental health professional working in a government agency, private mental health clinic or other mental health organization could potentially practice as a licensed psychologist and advertise themselves as such in providing psychological evaluations, psychological testing and related psychological reports to the public or other agencies. The Alaska Psychological Association Executive Board appointed Phillip Baker Ed.D. And Robert Lane Ph.D. to work with the Psychological Licensing Board to help prepare and testify in new legislation to close this loop hole. We feel that anyone working in any setting that is holding themselves out as a psychologist, MUST HAVE A PSYCHOLOGIST LICENSE.

This letter was written to display the support of our professional organization for this proposed legislation. If there are further questions about this letter, please direct them to Dr. Phillip Baker Ed.D., Legislative Chair Person for the Alaska Psychological Association. Dr. Baker's telephone number is: (907) 562-2392. His email address is:

Sincerely,

Phillip Baker Ed.D.
Licensed Clinical Psychologist
AK-PA Legislative Chairperson

Model Act for State Licensure of Psychologists

As APA policy, the Model Act serves as a prototype for drafting state legislation regulating the practice of psychology. State legislatures are encouraged to use the language of this document and the policies that it espouses as the model for their own state licensure law. Inevitably each state law will reflect compromises and changes particular to that state, but the APA Model Act is meant to serve as a guide for those involved in the drafting process. State licensing boards must develop their own rules and regulations to supplement the legislation proposed here.

This is the fourth set of guidelines for state legislation regulating the practice of psychology that has been developed by the American Psychological Association (APA). The first model for such regulation was developed and adopted as APA policy in 1955 (APA, 1955).

The 1955 guidelines stood for 12 years, during which the number of states enacting licensure legislation grew from 9 to 32. In 1967 the APA Committee on State Legislation (COSL) prepared the first revision of the guidelines. That revision was more comprehensive, provided more detailed guidance, and covered more issues relating to regulation of the practice of psychology, while reaffirming the basic concept found in the 1955 model (APA, 1967).

By 1977 all states and the District of Columbia had enacted licensure legislation. APA's Council of Representatives then determined that the model approved in 1967 was outdated and directed COSL to undertake a revision. However, in January 1979 the Council of Representatives failed to approve the revised model guidelines, leaving the 1967 guidelines to remain as APA policy.

In 1984 the Council of Representatives directed the Board of Professional Affairs (BPA) to develop another revision of the existing 1967 model for the Council's consideration. BPA, in turn, directed its Committee on Professional Practice (COPP) to prepare it.

A COPP subcommittee undertook this effort. Its early drafts were based on a review of the comments provided by APA governance units and divisions regarding the 1979 COSL proposal. Specific recommendations were received from the Board of Directors (B/D) Subcommittee on the Future of Professional Psychology in April 1985. Numerous drafts were subsequently developed and revised based on comments provided by members of COPP and BPA, the American Association of State Psychology Boards, individual psychologists from around the country and Canada, relevant APA divisions and governance groups, unaffiliated psychology interest groups, and APA legal counsel. This document, Draft 14, is the result of three years of continual discussion, review, and compromise by many concerned and dedicated APA members. It was passed unanimously by the Council of Representatives on February 7, 1987.

Each section of the proposed Model Act is introduced by commentary, the purpose of which is to explain the rationale for the proposed section that follows. To differentiate between the commentary and the proposed statutory language, the latter is set in smaller type.

A. Declaration of Policy

This section declares that the intent of legislation for state licensure of psychologists is to ensure the practice of psychology in the public interest. The consumer should be assured that psychological services will be provided by qualified professionals. The public must also be protected from the consequences of unprofessional conduct by persons licensed to practice psychology.

The practice of psychology in (name of state) is hereby declared to affect the public health, safety, and welfare, and to be subject to regulation to protect the public from the practice of psychology by unqualified persons and from unprofessional conduct by persons licensed to practice psychology.

B. Definitions

Definitions provide consistent interpretation throughout the Act without unnecessary repetition of terms. Thus *Board* once defined in this section can subsequently be cited with the same meaning as presented in the definition.

In defining *institution of higher education*, professional schools are included as a result of a number of suggestions to recognize these institutions' growing contributions to the education and training of professional psychologists. It is further recognized that many foreign institutions prepare psychologists for professional practice, and provision should be made to accommodate them in Board regulations.

In 1979, the definition of the *practice of psychology* appeared to be the major obstacle that prevented passage of the Committee on State Legislation's (COSL) guidelines. A predominant concern in defining the practice of psychology for the purpose of licensure is to describe psychological services adequately. These services must be specified in order to identify clearly the areas of psychological services, provided to individuals or groups of individuals, that require qualified and sound professional psychological practice. The final definition in this section deals with the term *psychologist* as it applies to the Act in the provision of psychological services. The title "psychologist" is also used by psychologists who are exempt from licensure as specified in Section J of this Act in their roles as teachers, researchers, and consultants to or employees of organizations.

1. *Board* means the (name of state) State Board of Examiners of Psychologists.

2. *Institution of higher education* means any regionally accredited institution of higher education in the United States, including a professional school, that offers a full-time doctoral course of study in psychology that is acceptable to the Board. For Canadian universities, it means an institution of higher education that holds recognized membership in the Association of Universities and Colleges of Canada.
3. *Practice of psychology* is defined as the observation, description, evaluation, interpretation, and modification of human behavior by the application of psychological principles, methods, and procedures, for the purpose of preventing or eliminating symptomatic, maladaptive, or undesired behavior and of enhancing interpersonal relationships, work and life adjustment, personal effectiveness, behavioral health, and mental health. The practice of psychology includes, but is not limited to, psychological testing and the evaluation or assessment of personal characteristics, such as intelligence, personality, abilities, interests, aptitudes, and neuropsychological functioning; counseling, psychoanalysis, psychotherapy, hypnosis, biofeedback, and behavior analysis and therapy; diagnosis and treatment of mental and emotional disorder or disability, alcoholism and substance abuse, disorders of habit or conduct, as well as of the psychological aspects of physical illness, accident, injury, or disability; and psychoeducational evaluation, therapy, remediation, and consultation. Psychological services may be rendered to individuals, families, groups, and the public. The practice of psychology shall be construed within the meaning of this definition without regard to whether payment is received for services rendered. (See Section J for exemptions.)
4. *Psychologist*: A person represents himself or herself to be a psychologist if that person uses any title or description of services incorporating the words *psychology*, *psychological*, or *psychologist*, or if he or she possesses expert qualification in any area of psychology, or if that person offers to the public or renders to individuals or to groups of individuals services defined as the practice of psychology in this Act.

C. State Board of Examiners of Psychologists

Legislation concerning the membership of the Board of Examiners should designate a sufficient number of members to accomplish the work of the Board, as well as make provisions for the appointment of public members. The appointing authority shall ensure that specialties in psychology are represented, as well as trainers and practitio-

The Model Act was developed over a period of three years, and was largely the work of Jarold R. Niven and Norma P. Simon, both members of the Board of Professional Affairs' Committee on Professional Practice (COPP). In the last year major revisions were accomplished by a COPP subcommittee chaired by Norma P. Simon and consisting of Jarold R. Niven, R. Mark Mays, David H. Reilly, and Tommy T. Stigall. As a member of the Board of Directors Subcommittee on the Future of Professional Psychology, Carl N. Zimet played a major role in the coordination process. Other COPP members who worked on the project over the three years include Jean L. Balinky, Jacob Chwast, Herbert Dorken, G. Rita Dudley, Thomas J. Hefele, Hannah R. Hirsh, Robert J. Resnick, and Castellano B. Turner. Bev Hitchins served as staff liaison to the project with the support of Patricia J. Aletky, Paul D. Nelson, and Russ Newman.

Correspondence concerning this document should be addressed to Office of Professional Affairs, American Psychological Association, 1200 17th St., NW, Washington, DC 20036.

ners. A minimum of five psychologists plus one public member is recommended.

The addition of public (consumer) members on boards is a recognition of the impact of consumerism on the current functioning of boards. The involvement of the public in Board affairs can be of great value to both psychology and the public and should be viewed as an opportunity to enhance the stature of psychology with the public.

Obviously, members should be appointed at staggered times so that the entire group of members is not replaced at any one time.

There is hereby created the (*name of state*) State Board of Examiners of Psychologists. The Board shall consist of minimally five licensed psychologists and one public member. At least two members shall be engaged full-time in the doctoral teaching and training of psychologists, and at least two members shall be engaged full-time in the professional practice of psychology. Psychologist Board members shall be licensed to practice in this state.

Each psychologist serving on the Board shall have a minimum of five years of postlicensure experience. Board members shall reflect a diversity of practice specialties.

Board members shall be appointed who are free from conflicts of interest in performing the duties of the Board. A public member shall not be a psychologist, an applicant or former applicant for licensure as a psychologist, a member of another health profession, or a member of a household that includes a psychologist, or otherwise have conflicts of interest or the appearance of such conflicts with duties as Board members. Appointments to the Board shall be made by the duly constituted appointing authority in this state. The appointing authority in this state shall solicit nominations from psychological organizations and licensed psychologists in this state. The term of office shall be five years, with provision for reappointment for one additional term. Lengths of terms of Board members shall be staggered. The Board as first constituted shall have two members, including the public member, appointed for five years; one member appointed for four years; two members appointed for three years; and one member appointed for two years.

It is clear that the Board will need, from time to time, to adopt or delete rules and regulations to carry out the provisions of the Act that establish and enable the Board to operate. It is wise to have this authority clearly established within the Act.

In addition to the powers set forth elsewhere in this Act, the Board may adopt rules and regulations to carry out the provisions of this Act.

It is desirable for the Board to be self-supporting. Self-generated fees should be sufficient to cover all costs. This avoids the necessity of the Board's returning to the budgetary authority for approval each time fees must be increased in order for the Board to remain self-supporting. Boards should consider carefully the various elements of expense in establishing fees. Items such as overhead, examination costs, travel and per diem, disciplinary proceedings, and other expenses should be considered.

The Board shall, from time to time, establish reasonable fees for the issuance and renewal of licenses and its other services. Fees shall be set so as to defray the cost of administering the provisions of this Act, including applications, examinations, enforcement, and the cost of maintaining the Board.

It is important to have within the Act a statement that a member of the Board shall not be civilly liable for any act performed in good faith and within the scope of duties of the Board. It should be noted that such a statement does not pertain to any criminal charges brought against a member of the Board.

A member of the Board or any employee or agent of the Board shall not be held civilly liable for any act performed in good faith and within the scope of the duties of the Board.

D. Requirements for Licensure

This recommendation includes significant changes from the 1967 guidelines. It should be noted that terms such as *department of psychology* and *PhD* are explicitly excluded from the recommended wording.

There is a core of basic theory, principles, and accumulated knowledge that all professional psychologists should possess. Each practitioner must also master the specific skills and knowledge appropriate for the competent performance of psychological practice. The language of the model requires the Board to specify its criteria for acceptable professional education in psychology. In this regard, the Board will be guided by national standards.

This revision states that by 1995 all applicants for licensure must minimally be graduates of a regionally accredited institution of higher education and must have completed a training program accredited by the American Psychological Association. Where no accreditation exists, the applicant will be required to meet standards developed by the Board. These standards will be based on recognized standards for the area of competence. The law recognizes that new doctoral programs may be developed in newly or already recognized specialties of professional psychology. In such instances, the law affords those programs an eight-year period in which to achieve accreditation, during which the graduates of those programs may sit for licensure.

1. Educational Requirements

The Act recognizes the doctorate as the minimum educational requirement for entry into professional practice as a psychologist.

Applicants for licensure shall possess a doctoral degree in psychology from an institution of higher education. The degree shall be obtained from a recognized program of graduate study in psychology as defined by the rules and regulations of the Board.

By 1995 applicants for licensure shall have completed a doctoral program in psychology that is accredited by the American Psychological Association (APA). In areas where no accreditation exists, applicants for licensure shall have completed a doctoral

program in psychology that meets recognized acceptable professional standards as determined by the Board. When a new specialty of professional psychology is recognized as being within the accreditation scope of the APA, doctoral programs within that specialty will be afforded a transition period of eight years from their first class of students to the time of their accreditation. During that transition period, graduates of such programs may sit for licensure examination whether or not the program has been accredited. The same principle applies as well to new doctoral programs of specialties previously recognized within the scope of APA accreditation.

Applicants trained in institutions outside the United States shall meet requirements established by the Board.

2. Experience Requirements

APA recommends that legislation requires one year of supervised experience subsequent to the granting of the doctorate. In rules and regulations, the Board must define acceptable supervised experience at the predoctoral and postdoctoral levels as well as mechanisms for evaluation of this experience. Psychologists are required to limit their practice to their demonstrated areas of professional competence. Experience should be compatible with training.

For admission to the licensure examination, applicants shall demonstrate that they have completed two years of supervised professional experience, one year of which shall be postdoctoral. The criteria for appropriate supervision shall be in accordance with regulations to be promulgated by the Board. Postdoctoral experience shall be compatible with the knowledge and skills acquired during formal doctoral or postdoctoral education in accordance with professional requirements and relevant to the intended area of practice. Applicants shall be required to show evidence of good character, that is, that they have not been convicted of a criminal offense that bears directly on the fitness of the individual to be licensed.

3. Examinations

APA recommends that the Act specify the requirements for examination and the conditions under which the Board is authorized to waive examination. All examinations serve the purpose of verifying that a candidate for licensure has acquired a basic core of knowledge in the discipline of psychology and can apply that knowledge to the problems confronted in the practice of psychology. Boards should clearly specify the conditions under which the endorsement of another license will be granted. The Board shall administer examinations to qualified applicants on at least an annual basis. The Board shall determine the subject matter and scope of the examination and shall require a written, and may require an oral examination of each candidate for licensure. The Board at its discretion, according to rules and regulations promulgated by the Board, may waive said examination of candidates for licensure.

4. Prior Credentials

APA recommends that the Act provide for continued licensure of persons already licensed as a psychologist at the time of enactment of a new law.

A person who is licensed as a psychologist under the provisions of (cite relevant section(s) of previous licensing law) as of the effective date of this Act shall be deemed to have met all requirements for licensure under this Act and shall be eligible for renewal of licensure in accordance with the provisions of this Act.

E. Interstate Practice of Psychology

Psychologists may have legitimate interests in practicing in another jurisdiction for a limited amount of time. This section provides for limited practice in a jurisdiction other than the state in which the psychologist is licensed. The psychologist must have an earned doctoral degree in another jurisdiction.

Nothing in this Act shall be construed to prohibit the practice of psychology in this state by a person holding an earned doctoral degree in psychology from an institution of higher education who is licensed or certified as a psychologist under the laws of another jurisdiction, provided that the aggregate of sixty (60) days of professional services as a psychologist per year under the provision of this subsection is not exceeded.

F. Temporary Authorization to Practice

This portion of the Act provides for the conditions under which a licensed psychologist may practice until obtaining licensure in another jurisdiction. Provision is also made for the Board to waive examination if the requirements met by the psychologist in the original jurisdiction are judged to be equivalent to those in this state.

A psychologist licensed or certified under the laws of another jurisdiction may be authorized by the Board to practice psychology as defined in this Act for a maximum of one year, provided that the psychologist has made application to the Board for licensure and has met the educational and experience requirements for licensure in this state. Denial of licensure terminates this authorization. The Board may choose to waive examination if a psychologist has been licensed in another jurisdiction on the basis of qualifications that are not less than those required for licensure in this state.

G. Limitation of Practice

This provision of the Act is intended to ensure that licensed psychologists will not practice outside the limits of their competence. The burden of proof is on the applicant to provide evidence, acceptable to the Board, that the applicant has obtained the training necessary to engage in the practice of psychology in the specified area of competence. The Board may wish to develop forms that provide for the specification of the intended area of practice and the evidence necessary to document competence. This provision recognizes the broad areas of specialization (e.g., clinical, counseling, school, industrial/organizational) and emerging specialties (e.g., neuropsychology, environmental) and the variety of academic training as separate from proficiencies. It is expected that if the psychologist is trained in a broad specialty area, there are many proficiencies within that training that are possible areas of competence. This limitation is intended to ensure

that a psychologist trained in one area (e.g., experimental, developmental) will not practice in another area (e.g., counseling, industrial/organizational) without completing a retraining program.

The Board shall ensure through regulations and enforcement that licensees limit their practice to demonstrated areas of competence as documented by relevant professional education, training, and experience.

H. Inactive Status

A psychologist who is on military assignment outside the state, suffering from health problems, on sabbatical, or who moves to another state may wish to be on inactive status. Relieving the psychologist from paying the fee will make it possible for that person to remain in good standing without being an active practitioner.

A psychologist in good standing who will not be practicing in the state for at least one year may petition the Board to have his or her license placed on inactive status without penalty. When such psychologist wishes to return to practice, an application shall be made to the Board, which shall reinstate him or her upon payment of the registration fee for the current year.

I. Practice Without a License

The Act must clearly specify what constitutes a violation of law and what penalties may be imposed for practice without a license or for misrepresentation of oneself as a psychologist. State legislatures have the latitude to determine penalties for such illegal activities. Boards are provided with the authority to suspend or revoke licenses and to prescribe conditions for reinstatement.

It shall be a violation of this Act for any person not licensed in accordance with the provisions of this Act to represent himself or herself as a psychologist. It shall be a violation of this Act for any person not licensed in accordance with the provisions of this Act to engage in the practice of psychology as defined in this Act, whether practicing as an individual, firm, partnership, corporation, agency, or other entity.

Any person who shall represent himself or herself as a psychologist in violation of this Act, or who shall engage in the practice of psychology in violation of this Act, shall be guilty of a misdemeanor and shall be fined not less than ___ dollars and not more than ___ dollars and, in addition thereto, may be imprisoned for not more than ___ months. Each day such person shall practice psychology without meeting all the requirements of all laws now in force and of this Act shall constitute a separate offense. Any person filing or attempting to file, as his or her own, a diploma or license of another or a forged affidavit of identification shall be guilty of a felony and shall be subject to the punishment prescribed for forgery in the second degree.

Whenever a license to practice as a psychologist in the state has been suspended or revoked, it shall be unlawful for the person whose license has been so suspended or revoked to practice psychology in this state. The Board may issue, with or without reexamination, a new license whenever it deems such course safe and just.

The Board on its own motion may investigate any evidence or

allegation that appears to show that any person is or may be in violation of any provision of this Act.

J. Exemptions

1. There should be an exemption from licensure for persons engaged solely in teaching, research, or provision of psychological services to organizations, because such activities are unlikely to pose a risk of immediate harm to the public health or welfare. For example, an organizational psychologist providing consultation to business in order to improve efficiency, a teacher of child development courses at a university, a researcher in the field of sleep disorders, and a social psychologist researching group behavior in stressful situations would all be exempt. The exemption should not be determined on the basis of work setting or place of primary employment, but on the basis of the purpose of the activity as defined in Section B3 (Practice of psychology). The exemption should not be allowed if the individual engages in the direct delivery or supervision of psychological services to individuals or groups of individuals in any setting. Persons engaged in teaching, research, or the provision of psychological services to organizations should not be excluded from licensure if they meet the statutory requirements for licensure.

Nothing in this Act shall be construed to prevent the teaching of psychology, the conduct of psychological research, or the provision of psychological services or consultation to organizations or institutions, provided that such teaching, research, or service does not involve the delivery or supervision of direct psychological services to individuals or groups of individuals who are themselves, rather than a third party, the intended beneficiaries of such services, without regard to the source or extent of payment for services rendered. Nothing in this Act shall prevent the provision of expert testimony by psychologists who are otherwise exempted by this Act. Persons holding an earned doctoral degree in psychology from an institution of higher education may use the title "psychologist" in conjunction with the activities permitted by this subsection.

2. Members of other established professions, such as physicians, attorneys, and clergy, may provide services that are similar or related to the scope of practice of psychology. They should be exempted from licensure on the condition that they not represent themselves to be psychologists.

Nothing in this Act shall be construed to prevent members of other recognized professions that are licensed, certified, or regulated under the laws of this state from rendering services consistent with their professional training and code of ethics, provided that they do not represent themselves to be psychologists. Duly recognized members of the clergy shall not be restricted from functioning in their ministerial capacity, provided that they do not represent themselves to be psychologists.

3. It is recognized that school psychologists who are certified by the state education agency are permitted to use the term *school psychologist* or *certified school psychologist* as long as they are practicing in the public schools.

Individuals who have been certified as school psychologists by the (*cite relevant state education authority or statutory provisions*) shall be permitted to use the term "school psychologist" or "certified school psychologist." Such persons shall be restricted in their practice to employment within those settings under the purview of the state board of education. By 1995 such exempted persons should be certificated by the state board of education on the basis of having completed a program for the preparation of school psychologists that is accredited by a specialized professional accrediting body recognized by the Council on Postsecondary Accreditation.

4. Graduate students, interns, postdoctoral trainees, and applicants for licensure are permitted to function under the supervision of a licensed psychologist, as are assistants not eligible for licensure in some states. None may use the title psychologist, but titles such as *psychological trainee*, *psychological intern*, *psychological resident*, and *psychological assistant* would be permissible under this exemption. The supervising psychologist is responsible for the actions of the student, trainee, or assistant. The Board is required to adopt regulations defining the nature and extent of training for qualified assistants and supervision for each category.

Nothing in this Act shall be construed to prevent persons from engaging in activities defined as the practice of psychology, provided that such persons shall not represent themselves by the title "psychologist." Such persons may use the terms "psychological trainee," "psychological intern," "psychological resident," and "psychological assistant" and provided further that such persons perform their activities under the supervision and responsibility of a licensed psychologist in accordance with regulations promulgated by the Board. Nothing in this section shall be construed to apply to any person other than:

- (a) a matriculated graduate student in psychology whose activities constitute a part of the course of study for a graduate degree in psychology at an institution of higher education;
- (b) an individual pursuing postdoctoral training or experience in psychology, including persons seeking to fulfill the requirements for licensure under the provisions of this Act; or
- (c) a qualified assistant employed by, or otherwise directly accountable to, a licensed psychologist. The Board in regulations shall determine the number of assistants that a psychologist may employ and the conditions under which they will be supervised.

K. Grounds for Suspension or Revocation of Licenses

In order to have an effective law, the Board must have the power to suspend and revoke a license. In the previous guidelines, the offenses requiring suspension or revocation were not specified. Many state laws specify these offenses. Actions that are a violation of the standards subscribed to by the Board should be clearly stated in the licensing law. Two considerations are specified below that refer to specific points in the text that follows:

1. Concerning Numbers 6 and 7

The Board shall specify, in rules and regulations, criteria for determining how long or under what conditions an individual or group of individuals remains a patient or a client.

2. Concerning Number 17

In this section, physical condition shall be differentiated from physical disability. There is no intent to obstruct physically disabled candidates' entry into the profession of psychology nor from practicing their profession after licensure as long as they practice with reasonable skill and safety to patients or clients.

A psychologist and anyone under his or her supervision shall conduct his or her professional activities in conformity with ethical and professional standards promulgated by the Board under its rules and regulations.

The Board shall have the power and duty to suspend, place on probation, or require remediation for any psychologist for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology or to take any other action specified in the rules and regulations whenever the Board shall find by a preponderance of the evidence that the psychologist has engaged in any of the following acts or offenses:

1. fraud in applying for or procuring a license to practice psychology;
2. immoral, unprofessional, or dishonorable conduct as defined in the rules and regulations promulgated by the Board;
3. practicing psychology in such a manner as to endanger the welfare of clients or patients;
4. conviction of a felony (a copy of the record of conviction, certified to by the clerk of the court entering the conviction shall be conclusive evidence);
5. conviction of any crime or offense that reflects the inability of the practitioner to practice psychology with due regard for the health and safety of clients or patients;
6. harassment, intimidation, or abuse, sexual or otherwise, of a client or patient;
7. engaging in sexual intercourse or other sexual contact with a client or patient;
8. use of repeated untruthful or deceptive or improbable statements concerning the licensee's qualifications or the effects or results of proposed treatment, including functioning outside of one's professional competence established by education, training, and experience;
9. gross malpractice or repeated malpractice or gross negligence in the practice of psychology;
10. aiding or abetting the practice of psychology by any person not licensed by the Board;
11. conviction of fraud in filing Medicare or Medicaid claims or in filing claims to any third party payor (a copy of the record of conviction, certified to by the clerk of the court entering the conviction, shall be conclusive evidence);
12. exercising undue influence in such a manner as to exploit the client, patient, student, or supervisee for financial or other personal advantage to the practitioner or a third party;
13. the suspension or revocation by another state of a license to practice psychology (a certified copy of the record of suspension or revocation of the state making such a suspension or revocation shall be conclusive evidence thereof);

14. refusal to appear before the Board after having been ordered to do so in writing by the executive officer or chair of the Board;

15. making any fraudulent or untrue statement to the Board;

16. violation of the code of ethics adopted in the rules and regulations of the Board; and

17. inability to practice psychology with reasonable skill and safety to patients or clients by reason of illness, inebriation, misuse of drugs, narcotics, alcohol, chemicals, or any other substance, or as a result of any mental or physical condition.

When the issue is whether or not a psychologist is physically or mentally capable of practicing psychology with reasonable skill and safety to patients or clients, then, upon a showing of probable cause to the Board that the psychologist is not capable of practicing psychology with reasonable skill and safety to patients, the Board may petition a court of competent jurisdiction to order the psychologist in question to submit to a psychological examination by a psychologist to determine psychological status and/or a physical examination by a physician to determine physical condition. Such psychologist and/or physician is to be designated by the court. The expense of such examination shall be borne by the Board. Where the psychologist raises the issue of mental or physical competence or appeals a decision regarding his or her mental or physical competence, the psychologist shall be permitted to obtain his or her own evaluation at the psychologist's expense. If the objectivity or adequacy of the examination is suspect, the Board may complete an examination by its designated practitioners at its own expense. When mental or physical capacity to practice is at issue, every psychologist licensed to practice psychology in the state shall be deemed to have given consent to submit to a mental or physical examination or to any combination of such examinations and to waive all objections to the admissibility of the examination, or to previously adjudicated evidence of mental incompetence.

L. Board Hearings and Investigations

In the interest of protecting the public, the Board must have authority to regulate the practice of psychology. This section specifies the powers and duties of the Board to conduct investigations, hold hearings, consider evidence or allegations brought against a psychologist, and to discipline a licensee for violation of law or regulation. Both the Board and licensee are required to follow due process standards in any disciplinary proceeding.

The Board on its own motion may investigate or cause to be investigated any allegation or evidence that appears to show that a psychologist licensed to practice in this state is, or may be, in violation of this Act or of any of the acts, offenses, or conditions set forth by the Board in rules and regulations.

The Board shall have the power and duty to suspend, place on probation, or require remediation for a licensee for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology, whenever the licensee shall be found by the Board, by a preponderance of the evidence, to have engaged in conduct prohibited by this Act or rules and regulations duly promulgated pursuant thereto.

Any psychologist holding a license to practice in this state is required to report to the Board any information such psychologist in good faith may have that appears to show that any psychologist holding a license to practice in this state may be in violation of this Act or guilty of any of the acts, offenses, or

conditions set forth by the Board. Any psychologist who in good faith makes such a report to the Board shall be absolutely immune from civil liability to any person for any statement or opinion made in such report.

If, in the opinion of the majority of the Board, there is probable cause that the information provided to it under the provisions of this section may be valid, the Board shall request by registered mail a formal interview with the psychologist. If the psychologist who is ordered to a formal interview before the Board refuses to appear for such interview, such refusal shall be considered grounds for the Board, at its discretion, to suspend or revoke the license of such psychologist. Any proceeding for suspension or revocation of a license to practice as a psychologist in this state shall be conducted in accordance with procedures established by the Board. The psychologist shall be informed of his or her rights concerning Board hearings and investigations:

1. the right to notice and hearing;
2. the right to self-representation or representation by counsel;
3. the right to produce witnesses and to confront and cross-examine opposing witnesses;
4. the right to a written decision setting forth the violation, findings of fact, sanctions, and reasons for the sanctions;
5. a determination of the size of the vote necessary to find a violation;
6. a determination whether the hearing will be closed or open to the public; and
7. the right to an appeal to an administrative board of review and/or to a court of competent jurisdiction.

The licensee may knowingly and voluntarily waive his or her right to the formal adversary proceeding described in this section.

The Board shall have the right to conduct an *ex parte* hearing if, after due notice, the individual fails or refuses to appear. The Board shall have the right to issue subpoenas for production of documents and witnesses and to administer oaths. The Board shall have the right to apply to a court of competent jurisdiction to take appropriate action should a subpoena not be obeyed.

The Board shall temporarily suspend the license of a psychologist without a hearing simultaneously with the institution of proceedings for a hearing provided under this section if the Board finds that evidence in its possession indicates that the psychologist's continuation in practice may constitute an immediate danger to the public. Appropriate officials may petition the court for an injunction barring further practice unless or until the person is properly licensed. The injunction may be issued in addition to, or in lieu of, the criminal sanctions provided for in this section.

A psychologist may surrender his or her license when such person is charged with unethical conduct and upon receipt of that charge, that person decides to surrender the license, such surrender and acceptance by the Board shall constitute acknowledgment by the psychologist of guilt as charged.

A psychologist may request in writing to the Board that a restriction be placed upon his or her license to practice as a psychologist. The Board, in its discretion, may accept a surrender or grant such a request for restriction and shall have the authority to attach such restrictions to the license of the psychologist to practice psychology within this state or otherwise to discipline the licensee.

Subsequent to the holding of a hearing and the taking of evidence by the Board as provided for in this section, if a majority of the

Board finds that a psychologist is in violation of this Act or guilty of any of the acts, offenses, or conditions as enumerated by the Board, the following actions may be taken:

1. The Board may revoke or suspend the license and impose a monetary penalty.
2. The Board may suspend imposition of a revocation or suspension of a license and/or a monetary penalty.
3. The Board may impose revocation or suspension of a license and/or a monetary penalty, but suspend enforcement thereof by placing the psychologist on probation, which probation shall be revocable if the Board finds the conditions of the probation order are not being followed by the psychologist.
4. As a condition of probation the Board may require the psychologist to submit to care, counseling, or treatment by a professional designated by the Board. The expense of such action shall be borne by the psychologist.
5. The Board may, at any time, modify the conditions of the probation and may include among them any reasonable condition for the purpose of the protection of the public, or for the purpose of the rehabilitation of the probationer, or both.
6. The Board shall have the power to require restitution when necessary.
7. The Board shall have the power to assess the costs of the disciplinary proceeding.

M. Privileged Communication

This section regulates and limits the powers of the judicial system. The courts or other administrative agencies with subpoena power have the right to make use of all relevant information in the judicial fact-finding process unless this right of access to information is specifically limited. Historically, courts and legislatures have been charged with fact-finding in order to seek truth and administer justice. At the same time they have attempted to maintain the integrity of the confidential and private relationship between psychologist and patient or client. However, some societal issues have emerged, such as child abuse and sexual abuse, that have changed the absolute nature of privileged communication. Though the privilege is not absolute, it is designed to be sufficiently broad to cover all situations except those specifically enumerated. It is a privilege "owned" by the patient or client, who may assert it or waive it, although the psychologist may assert it for a patient or client who wishes to maintain such privilege of communication. It is understood that the privilege encompasses only communications between the patient or client and the psychologist in a professional relationship.

In judicial proceedings, whether civil, criminal, or juvenile; in legislative and administrative proceedings; and in proceedings preliminary and ancillary thereto, a patient or client, or his or her guardian or personal representative, may refuse to disclose or prevent the disclosure of confidential information, including information contained in administrative records, communicated to a psychologist licensed or otherwise authorized to practice psychology under the laws of this jurisdiction, or to persons reasonably believed by the patient or client to be so licensed, and their agents, for the purpose of diagnosis, evaluation, or treatment of any mental or emotional condition or disorder. In the absence of evidence to the contrary, the psychologist is presumed authorized to claim the privilege on the patient's or client's behalf.

This privilege may not be claimed by the patient or client, or on his or her behalf by authorized persons, in the following circumstances:

1. where abuse or harmful neglect of children, the elderly, or disabled or incompetent individuals is known or reasonably suspected;
2. where the validity of a will of a former patient or client is contested;
3. where such information is necessary for the psychologist to defend against a malpractice action brought by the patient or client;
4. where an immediate threat of physical violence against a readily identifiable victim is disclosed to the psychologist;
5. in the context of civil commitment proceedings, where an immediate threat of self-inflicted damage is disclosed to the psychologist;
6. where the patient or client, by alleging mental or emotional damages in litigation, puts his or her mental state at issue;
7. where the patient or client is examined pursuant to court order; or
8. in the context of investigations and hearings brought by the patient or client and conducted by the Board, where violations of this Act are at issue.

N. Severability

As with any law, one provision may be subject to court challenge and ruled invalid or unconstitutional. For example, it is not legally clear whether state licensing boards can regulate persons working for federal agencies. Thus, if any provision is ruled invalid or unconstitutional, it is

important that the entire Act not be affected. This can only be achieved by inserting a clause at the end of the Act stating that each provision of the Act is severable from all other provisions and that the declaration that one section is invalid or unconstitutional will not affect the constitutionality or enforceability of any other section.

If any section in this Act or any part of any section thereof shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of any section or part thereof.

O. Effective Date

In any law regulating a profession there needs to be a specific date establishing when the law shall become effective. Thus, the final paragraph states:

This Act shall become effective upon the date it is signed by the Governor or on the date it otherwise becomes effective by operation of law.

Model Act for State Licensure

Public Comment

Model Act for State Licensure (1987)	Revision of Model Act for State Licensure (Revised 03/06/2009)
<p><i>Preamble</i></p> <p>As APA policy, the Model Act serves as a prototype for drafting state legislation regulating the practice of psychology. State legislatures are encouraged to use the language of this document and the policies that it espouses as the model for their own state licensure law. Inevitably each state law will reflect compromises and changes particular to that state, but the APA Model Act is meant to serve as a guide for those involved in the drafting process. State licensing boards must develop their own rules and regulations to supplement the legislation proposed here.</p> <p>This is the fourth set of guidelines for state legislation regulating the practice of psychology that has been developed by the American Psychological Association (APA). The first model for such regulation was developed and adopted as APA policy in 1955 (APA, 1955).</p> <p>The 1955 guidelines stood for 12 years, during which the number of states enacting licensure legislation grew from 9 to 32. In 1967 the APA Committee on State Legislation (COSL) prepared the first revision of the guidelines. That revision was more comprehensive, provided more detailed guidance, and covered more issues relating to regulation of the practice of psychology, while reaffirming the basic concept found in the 1955 model (APA, 1967).</p> <p>By 1977 all states and the District of Columbia had enacted licensure legislation. APA's Council of Representatives then determined that the model approved in 1967 was outdated and directed COSL to undertake a revision. However, in January 1979 the Council of Representatives failed to approve the revised model guidelines, leaving the 1967 guidelines to remain as APA policy.</p> <p>In 1984 the Council of Representatives directed the Board of Professional Affairs (BPA) to develop another revision of the existing 1967 model for the Council's consideration. BPA, in turn, directed its Committee on Professional Practice (COPP) to prepare it.</p> <p>A COPP subcommittee undertook this effort. Its early drafts were based on a review of the comments provided by APA governance units and divisions regarding the 1979 COSL proposal. Specific recommendations were received from the Board of Directors (B/D) Subcommittee on the Future of Professional Psychology in April 1985. Numerous drafts were</p>	<p><i>Preamble</i></p> <p>As APA policy, the Model Act serves as a prototype for drafting state legislation regulating the practice of psychology. However, in January 1979 the Council of Representatives failed to approve the revised model guidelines, leaving the 1967 guidelines to remain as APA policy. In 1984 the Council of Representatives directed the Board of Professional Affairs (BPA) to develop another revision of the existing 1967 model for the Council's consideration. BPA, in turn, directed its Committee on Professional Practice (COPP) to prepare it.</p> <p>This document was approved by the Council of Representatives in February, 1987.</p> <p>In 2006, at the recommendation of the Board of Professional Affairs and the Committee for the Advancement of Professional Practice, the APA Board of Directors and Council of Representatives funded a Task Force to undertake the revision of the 1987 model act. The existing model act did not reflect the</p>

subsequently developed and revised based on comments provided by members of COPP and BPA, the American Association of State Psychology Boards, individual psychologists from around the country and Canada, relevant APA divisions and governance groups, unaffiliated psychology interest groups, and APA legal counsel. This document, Draft 14, is the result of three years of continual discussion, review, and compromise by many concerned and dedicated APA members. It was passed unanimously by the Council of Representatives on February 7, 1987.

Each section of the proposed Model Act is introduced by commentary, the purpose of which is to explain the rationale for the proposed section that follows. To differentiate between the commentary and the proposed statutory language, the latter is set in smaller type.

developments in professional practice that had occurred over the preceding 20 years. Specific developments included some psychologists obtaining prescriptive authority, changes in the provision of industrial/organizational and consulting psychology that could make it desirable for those psychologists to be licensed, and changes in the recommended sequence of education and training for psychologists. The Task Force undertook this effort beginning with a comprehensive review of the 1987 document as well as relevant APA policies and other documents. Draft revisions were circulated for review and a 90-day public comment period ensued. Changes were made to the document based on commentary received. A second public comment period ensued and another review by governance groups occurred prior to the document being approved by Council.

Each section of the proposed Model Act is introduced by commentary, the purpose of which is to explain the rationale for the proposed section that follows. To differentiate between the commentary and the proposed statutory language, the latter is *italicized*.

A. Declaration of Policy

This section declares that the intent of legislation for state licensure of psychologists is to ensure the practice of psychology in the public interest. The consumer should be assured that psychological services will be provided by qualified professionals. The public must also be protected from the consequences of unprofessional conduct by persons licensed to practice psychology.

The practice of psychology in (name of state) is hereby declared to affect the public health, safety, and welfare, and to be subject to regulation to protect the public from the practice of psychology by unqualified persons and from unprofessional conduct by persons licensed to practice psychology.

A. Declaration of Policy

This section declares that the intent of legislation for state licensure of psychologists is to ensure the practice of psychology in the public interest. The consumer should be assured that psychological services will be provided by licensed and qualified professionals according to the provisions of this act. The public must also be protected from the consequences of unprofessional conduct by persons licensed to practice psychology.

The practice of psychology in (name of state) is hereby declared to affect the public health, safety, and welfare, and to be subject to regulation to protect the public from the practice of psychology by unqualified persons and from unprofessional conduct by persons licensed to practice psychology.

B. Definitions

Definitions provide consistent interpretation throughout the Act without unnecessary repetition of terms. Thus *Board* once defined in this section can subsequently be cited with the same meaning as presented in the definition.

In defining *institution of higher education*, professional schools are included as a result of a number of suggestions to recognize these institutions' growing contributions to the education and training of professional psychologists. It is further recognized that many foreign institutions prepare psychologists for professional practice, and provision should be made to accommodate them in Board regulations.

In 1979, the definition of the *practice of psychology* appeared to be the major obstacle that prevented passage of the Committee on State Legislation's (COSL) guidelines. A

B. Definitions

Definitions provide consistent interpretation throughout the Act without unnecessary repetition of terms. Thus *Board*, once defined in this section, can subsequently be cited with the same meaning as presented in the definition.

In defining institution of higher education, it is further recognized that many foreign institutions prepare psychologists for professional practice, and provision should be made to accommodate them in Board regulations.

Psychological services should be described adequately and specified in order to identify clearly the areas of psychological services, provided to individuals, groups of individuals, or organizations, that require qualified and sound professional psychology practice. There can be a legitimate use for

predominant concern in defining the practice of psychology for the purpose of licensure is to describe psychological services adequately. These services must be specified in order to identify clearly the areas of psychological services, provided to individuals or groups of individuals that require qualified and sound professional psychological practice. The final definition in this section deals with the term *psychologist* as it applies to the Act in the provision of psychological services. The title "psychologist" is also used by psychologists who are exempt from licensure as specified in Section J of this Act in their roles as teachers, researchers, and consultants to or employees of organizations.

1. *Board* means the (name of state) State Board of Examiners of Psychologists.
2. *Institution of higher education* means any regionally accredited institution of higher education in the United States, including a professional school that offers a full-time doctoral course of study in psychology that is acceptable to the Board. For Canadian universities, it means an institution of higher education that holds recognized membership in the Association of Universities and Colleges of Canada.
3. *Practice of psychology* is defined as the observation, description, evaluation, interpretation, and modification of human behavior by the application of psychological principles, methods, and procedures, for the purpose of preventing or eliminating symptomatic, maladaptive, or undesired behavior and of enhancing interpersonal relationships, work and life adjustment, personal effectiveness, behavioral health, and mental health. The practice of psychology includes, but is not limited to, psychological testing and the evaluation or assessment of personal characteristics, such as intelligence, personality, abilities, interests, aptitudes, and neuropsychological functioning; counseling, psychoanalysis, psychotherapy, hypnosis, biofeedback, and behavior analysis and therapy; diagnosis and treatment of mental and emotional disorder or disability, alcoholism and substance abuse, disorders of habit or conduct, as well as of the psychological aspects of physical illness, accident, injury, or disability; and psychoeducational evaluation, therapy, remediation, and consultation. Psychological services may be rendered to individuals, families, groups, and the public. The practice of psychology shall be construed within the meaning of this definition without regard to whether payment is received for services rendered. (See Section J for exemptions.)
4. *Psychologist*: A person represents himself or herself to be a psychologist if that person uses any title or description of services incorporating the words *psychology*, *psychological*, or *psychologist*, or if he or she possesses expert qualification in any area of psychology, or if that person offers to the public or renders to individuals or to groups of individuals services defined as the practice of psychology in this Act.

technology-supported services, such as electronic or telephonic means. All such activities must operate within appropriate APA Ethical guidelines.

1. *Board* means the (name of state) State Psychology Board.
2. *Institution of higher education* means any regionally accredited institution of higher education in the United States, including a professional school, that offers a full-time doctoral course of study in psychology that is acceptable to the Board. For Canadian universities, it means an institution of higher education that is provincially or territorially chartered.
3. *Practice of psychology* is defined as the observation, description, evaluation, interpretation, prediction, and modification of human behavior by the application of psychological principles, methods, and procedures, for the purposes of (a) preventing, eliminating, evaluating, assessing, or predicting symptomatic, maladaptive, or undesired behavior; (b) evaluating, assessing and/or facilitating the enhancement of individual, group and/or organizational effectiveness – including personal effectiveness, adaptive behavior, interpersonal relationships, work and life adjustment, health, and individual, group and/or organizational performance, or (c) assisting in legal decision-making.

The practice of psychology includes, but is not limited to, (a) psychological testing and the evaluation or assessment of personal characteristics, such as intelligence; personality; cognitive, physical, and/or emotional abilities; skills; interests; aptitudes; and neuropsychological functioning; (b) counseling, psychoanalysis, psychotherapy, hypnosis, biofeedback, and behavior analysis and therapy; (c) diagnosis, treatment, and management of mental and emotional disorder or disability, alcoholism and substance abuse, disorders of habit or conduct, as well as of the psychological aspects of physical illness, accident, injury, or disability; (d) psychoeducational evaluation, therapy, and remediation; (e) consultation with physicians, other health care professionals and patients regarding all available treatment options, including medication; (f) provision of direct services to individuals and/or groups for the purpose of enhancing individual and thereby organizational effectiveness, using psychological principles, methods and/or procedures to assess and evaluate individuals on personal characteristics for individual development and/or behavior change or for making decisions about the individual, such as selection; and (g) the supervision of any of the above. Psychological services may be rendered to individuals, families, groups, systems, and/or organizations. The practice of psychology shall be construed within the meaning of this definition without regard to whether payment is received for services rendered. (See Section G for Limitation of Practice and Maintaining and Expanding Competence and Section J for Exemptions.)

4. *Psychologist*: Means (a) any person licensed as a psychologist under this act and (b) any General applied psychologist (see 5b

below) whose practice areas are specifically exempted under this act, and includes a person representing himself or herself to be a psychologist if that person uses any title or description of services incorporating the words psychology, psychological, or psychologist, or if he or she uses any term that implies that he or she possesses expert qualification in any area of psychology, or if that person offers to the public or renders to individuals or groups of individuals services defined as the practice of psychology in this Act. The title "psychologist" is also used by psychologists who are exempt from licensure as specified in Section J of this Act in their roles as teachers and/or researchers.

5. Applied psychologist

An applied psychologist is one who provides services to individuals, groups and/or organizations outside of an academic setting. Within this broad category there are two major groupings – those who are Health Service Providers and those who are not. Although licensure is generic, some of the Board's Rules and Regulations need to account for variations in relevant training, supervision and practice.

a. Health service provider (HSP)

Psychologists are certified as Health Service Providers if they are duly trained and experienced in the delivery of preventive, assessment, diagnostic, therapeutic intervention and management services relative to the psychological and physical health of consumers based on: 1) having completed scientific and professional training resulting in a doctoral degree in psychology; 2) having completed an internship and supervised experience in health care settings; and 3) having been licensed as psychologists at the independent practice level.

b. General applied psychologists

General applied psychologists provide psychology services that are defined as services outside of the health and mental health field and shall include: 1) the provision of direct services to individuals and groups, using psychological principles, methods and/or procedures to assess and evaluate individuals on personal abilities and characteristics for individual development, behavior change, and/or for making decisions (e.g., selection, individual development, promotion, reassignment) about the individual, all for the purpose of enhancing individual and/or organizational effectiveness; and 2) the provision of services to organizations that are provided for the benefit of the organization and do not involve direct services to individuals, such as job analysis, attitude/opinion surveys, selection testing (group administration of standardized tests in which responses are mechanically scored and interpreted), selection validation studies, designing performance appraisal systems, training, organization design, advising management on human behavior in organizations, organizational assessment, diagnosis and intervention, and related services.

6. Specialty

A specialty is a defined area of psychological practice which requires advanced knowledge and skills acquired through an

organized sequence of education and training. The advanced knowledge and skills specific to a specialty are obtained subsequent to the acquisition of core scientific and professional foundations in psychology.

7. Developed area of practice

Developed practice areas of psychology have all of the following characteristics:

- National recognition of the practice area by a national organization(s) whose purpose includes recognizing or representing and developing the practice area, by relevant divisions of the APA, or by involvement in similar umbrella organizations;
- An accumulated body of knowledge in the professional literature that provides a scientific basis for the practice area including empirical support for the effectiveness of the services provided;
- Representation by or in a national training council that is recognized, functional, and broadly accepted;
- Development and wide dissemination by the training council of doctoral educational and training guidelines consistent with the Accreditation Guidelines & Principles;
- Existence of the practice area in current education and training programs;
- Geographically dispersed psychology practitioners who identify with the practice area and provide such services

8. Emerging area of practice

An emerging area of practice is one that meets some but not all of the six requirements for a Developed Area of Practice, or does not meet some of the requirements completely (e.g., there is some professional literature providing a scientific basis, but not an "accumulated body of knowledge" in that literature).

9. Client

The term client is used to refer to the child, adolescent, adult, older adult, couple, family, group, organization, community, or other populations receiving psychological services. In many situations there are important and valid reasons for using such terms as patient, consumer or person in place of client to describe the recipients of services.

C. State Board of Examiners of Psychologists

Legislation concerning the membership of the Board of Examiners should designate a sufficient number of members to accomplish the work of the Board, as well as make provisions for the appointment of public members. The appointing authority shall ensure that specialties in psychology are represented, as well as trainers and practitioners. A minimum of five psychologists plus one public member is recommended.

The addition of public (consumer) members on

C. State Psychology Board

Legislation concerning the membership of the State Psychology Board should designate a sufficient number of members to accomplish the work of the Board, as well as make provisions for the appointment of public members. The appointing authority shall ensure that specialties in psychology are represented, as well as trainers and practitioners, both in health care and general applied psychology. A minimum of six psychologists plus one public member is recommended.

boards is a recognition of the impact of consumerism on the current functioning of boards. The involvement of the public in Board affairs can be of great value to both psychology and the public and should be viewed as an opportunity to enhance the stature of psychology with the public.

Obviously, members should be appointed at staggered times so that the entire group of members is not replaced at any one time.

There is hereby created the (name of state) State Board of Examiners of Psychologists. The Board shall consist of minimally five licensed psychologists and one public member. At least two members shall be engaged full-time in the doctoral teaching and training of psychologists, and at least two members shall be engaged full-time in the professional practice of psychology. Psychologist Board members shall be licensed to practice in this state.

Each psychologist serving on the Board shall have a minimum of five years of postlicensure experience. Board members shall reflect a diversity of practice specialties.

Board members shall be appointed who are free from conflicts of interest in performing the duties of the Board. A public member shall not be a psychologist, an applicant or former applicant for licensure as a psychologist, a member of another health profession, or a member of a household that includes a psychologist, or otherwise have conflicts of interest or the appearance of such conflicts with duties as Board members. Appointments to the Board shall be made by the duly constituted appointing authority in this state. The appointing authority in this state shall solicit nominations from psychological organizations and licensed psychologists in this state. The term of office shall be five years, with provision for reappointment for one additional term. Lengths of terms of Board members shall be staggered. The Board as first constituted shall have two members, including the public member, appointed for five years; one member appointed for four years; two members appointed for three years; and one member appointed for two years.

It is clear that the Board will need, from time to time, to adopt or delete rules and regulations to carry out the provisions of the Act that establish and enable the Board to operate. It is wise to have this authority clearly established within the Act.

In addition to the powers set forth elsewhere in this Act, the Board may adopt rules and regulations to carry out the provisions of this Act.

It is desirable for the Board to be self-supporting. Self-generated fees should be sufficient to cover all costs. This avoids the necessity of the Board's returning to the budgetary authority for approval each time fees must be increased in order for the Board to remain self-supporting. Boards should consider carefully the various elements of expense in establishing fees. Items such as overhead, examination costs, travel and per diem, disciplinary proceedings, and other expenses should be considered.

The Board shall, from time to time, establish reasonable fees for the

Public (consumer) members on boards is a recognition of the impact of consumerism on the current functioning of boards. A public member is recommended in order to insure the representation of the public; that is, the recipient of psychological services. Members should be appointed at staggered times so that the entire group of members is not replaced at any one time.

There is hereby created the (name of state) State Psychology Board. The Board shall consist of minimally six licensed psychologists and one public member. Members should be representative of teaching, training and the professional practice of psychology. Psychologist Board members shall be licensed to practice in this state. Each psychologist serving on the Board shall have a minimum of five years of post-licensure experience. Board members shall reflect a diversity of practice specialties, both in health care and other applications.

Board members shall be appointed who are free from conflicts of interest in performing the duties of the Board. A public member shall not be a psychologist, an applicant or former applicant for licensure as a psychologist, a member of another health profession, or a member of a household that includes a psychologist, or otherwise have conflicts of interest or the appearance of such conflicts with duties as Board members. Appointments to the Board shall be made by the duly constituted appointing authority in this state. The appointing authority in this state shall solicit nominations from psychological organizations and licensed psychologists in this state. The term of office shall be five years, with provision for reappointment for one additional term. Lengths of terms of Board members shall be staggered.

It is clear that the Board will need, from time to time, to adopt or delete rules and regulations to carry out the provisions of the Act that establish and enable the Board to operate. It is wise to have this authority clearly established within the Act.

In addition to the powers set forth elsewhere in this Act, the Board may adopt rules and regulations to carry out the provisions of this Act.

In general it is desirable for the Board to be self-supporting. Self-generated fees should be sufficient to cover all costs. This avoids the necessity of the Board's returning to the budgetary authority for approval each time fees must be increased in order for the Board to remain self-supporting. Boards should consider carefully the various elements of expense in establishing fees. Items such as overhead, examination costs, travel and per diem, disciplinary proceedings, and other expenses should be considered.

The Board shall, from time to time, establish reasonable fees for the issuance and renewal of licenses and its other services. Fees shall be set so as to defray the cost of administering the provisions of this Act, including applications, examinations, enforcement, and the cost of maintaining the Board.

issuance and renewal of licenses and its other services. Fees shall be set so as to defray the cost of administering the provisions of this Act, including applications, examinations, enforcement, and the cost of maintaining the Board.

It is important to have within the Act a statement that a member of the Board shall not be civilly liable for any act performed in good faith and within the scope of duties of the Board. It should be noted that such a statement does not pertain to any criminal charges brought against a member of the Board.

A member of the Board or any employee or agent of the Board shall not be held civilly liable for any act performed in good faith and within the scope of the duties of the Board.

It is important to have within the Act a statement that a member of the Board shall not be civilly liable for any act performed in good faith and within the scope of duties of the Board. It should be noted that such a statement does not pertain to any criminal charges brought against a member of the Board. Though individual members of the Board will not be held civilly liable, individuals may pursue legal action against the Board under any applicable state laws, such as, for example, under any administrative procedure act.

A member of the Board or any employee or agent of the Board shall not be held civilly liable for any act performed in good faith and within the scope of the duties of the Board.

D. Requirements for Licensure

This recommendation includes significant changes from the 1967 guidelines. It should be noted that terms such as *department of psychology* and *PhD* are explicitly excluded from the recommended wording.

There is a core of basic theory, principles, and accumulated knowledge that all professional psychologists should possess. Each practitioner must also master the specific skills and knowledge appropriate for the competent performance of psychological practice. The language of the model requires the Board to specify its criteria for acceptable professional education in psychology. In this regard, the Board will be guided by national standards.

This revision states that by 1995 all applicants for licensure must minimally be graduates of a regionally accredited institution of higher education and must have completed a training program accredited by the American Psychological Association. Where no accreditation exists, the applicant will be required to meet standards developed by the Board. These standards will be based on recognized standards for the area of competence. The law recognizes that new doctoral programs may be developed in newly or already recognized specialties of professional psychology. In such instances, the law affords those programs an eight-year period in which to achieve accreditation, during which the graduates of those programs may sit for licensure.

D. Requirements for Licensure

There is a core of basic theory, principles, and accumulated knowledge that all professional psychologists should possess. Each practitioner must also master the specific skills and knowledge appropriate for the competent performance of psychological practice. The language of the model requires the Board to specify its criteria for acceptable professional education in psychology. In this regard, the Board will be guided by national standards.

All applicants for licensure must minimally be graduates of a regionally accredited institution of higher education, or a Canadian university that is provincially or territorially chartered, and must have completed a planned program of study which reflects an integration of the science and practice of psychology. A formal training program accredited by the American Psychological Association or Canadian Psychological Association is required. For areas of psychology where APA or CPA program accreditation does not exist, psychology programs must meet all the requirements listed below (D1).

The law recognizes that new doctoral programs may be developed in newly or already recognized specialties of professional psychology. In such instances, the law affords those programs an eight-year period in which to achieve accreditation or to meet the standards described in D1, during which the graduates of those programs may sit for licensure.

D-1. Educational Requirements

The Act recognizes the doctorate as the minimum educational requirement for entry into professional practice as a psychologist.

Applicants for licensure shall possess a doctoral degree in psychology from an institution of higher education. The degree shall be obtained from a recognized program of graduate study in psychology as defined by the rules and regulations of the Board. By 1995 applicants

D-1. Educational Requirements

The Act recognizes the doctorate as the minimum educational requirement for entry into professional practice as a psychologist.

Applicants for licensure shall possess a doctoral degree in psychology from a regionally accredited institution of higher education or from a Canadian university that is provincially or territorially chartered. The degree shall be obtained from a

for licensure shall have completed a doctoral program in psychology that is accredited by the American Psychological Association (APA). In areas where no accreditation exists, applicants for licensure shall have completed a doctoral program in psychology that meets recognized acceptable professional standards as determined by the Board. When a new specialty of professional psychology is recognized as being within the accreditation scope of the APA, doctoral programs within that specialty will be afforded a transition period of eight years from their first class of students to the time of their accreditation. During that transition period, graduates of such programs may sit for licensure examination whether or not the program has been accredited. The same principle applies as well to new doctoral programs of specialties previously recognized within the scope of APA accreditation. Applicants trained in institutions outside the United States shall meet requirements established by the Board.

recognized program of graduate study in psychology as defined by the rules and regulations of the Board.

Applicants for licensure shall have completed a doctoral program in psychology that is accredited by the American Psychological Association (APA) or Canadian Psychological Association (CPA) or where APA or CPA program accreditation does not exist that meets all of the following requirements:

- 1. Training in professional psychology is doctoral training offered in a regionally accredited institution of higher education. A regionally accredited institution is an institution with regional accreditation in the United States or an university that is provincially or territorially chartered in Canada.*
- 2. The program, wherever it may be administratively housed, must be clearly identified and labeled as a psychology program. Such a program must specify in pertinent institutional catalogues and brochures its intent to educate and train professional psychologists.*
- 3. The psychology program must stand as a recognizable, coherent organizational entity within the institution.*
- 4. There must be a clear authority and primary responsibility for the core and specialty areas whether or not the program cuts across administrative lines.*
- 5. The program must be an integrated, organized sequence of study.*
- 6. There must be an identifiable psychology faculty sufficient in size and breadth to carry out its responsibilities and a psychologist responsible for the program.*
- 7. The program must have an identifiable body of students who are matriculated in that program for a degree.*
- 8. The program must include supervised practicum, internship, field or laboratory training appropriate to the individual's chosen area of practice of psychology.*
- 9. The curriculum shall encompass a minimum of three academic years of full time graduate study and a minimum of one year's residency or the equivalent thereof at the educational institution granting the doctoral degree. The core program shall require every student to demonstrate competence in each of the following substantive areas. Some content areas may appropriately be taught by integrating content across the curriculum, or this requirement may be met through substantial instruction in each of these foundational areas, as demonstrated by evidence of an integrated curriculum or a minimum of three graduate semester hours, 4.5 or more graduate quarter hours (when an academic term is other than a semester, credit hours will be evaluated on*

the basis of fifteen hours of classroom instruction per semester hour), or the equivalent:

- a. scientific and professional ethics and standards;
- b. research design and methodology;
- c. statistics;
- d. psychometric theory;
- e. biological bases of behavior: such as physiological psychology, comparative psychology, neuropsychology, sensation and perception, physical ergonomics or psychopharmacology;
- f. cognitive-affective bases of behavior: such as learning, thinking, motivation, emotion, memory, cognitive information processing, or social cognition;
- g. social bases of behavior: such as social psychology, group processes, organizational and systems theory; and
- h. individual differences: such as personality theory, human development, personnel psychology, or abnormal psychology.

10. All professional education programs in psychology shall include course requirements in developed practice areas/specialties.

11. The program must demonstrate that it provides training relevant to the development of competence to practice in a diverse and multicultural society.

When a new area of professional psychology is recognized as being a developed practice area and within the accreditation scope of the APA, doctoral programs within that area will be afforded a transition period of eight years from their first class of students to the time of their accreditation – or, where there is no accreditation, applicants for licensure must show that they have successfully obtained substantial instruction in the foundational areas listed above. During that transition period, graduates of such programs may sit for licensure examination whether or not the program has been accredited. The same principle applies as well to new doctoral programs in traditional practice areas previously recognized within the scope of APA accreditation.

Applicants trained in institutions outside the United States shall meet requirements established by the Board.

Psychologists trained in an area that falls outside the scope of APA accreditation (e.g., experimental, developmental, social) and who intend to practice in a traditional or developed practice area must complete a retraining program and/or appropriate supervised experience (e.g., internship in the developed practice area). Similarly, psychologists trained in HSP programs who intend to practice in General Applied Psychology non-exempt areas and psychologists trained in General Applied Psychology areas who intend to provide health services must first acquire the appropriate training and supervision.

D-2. Experience Requirements

D-2. Experience Requirements

APA recommends that legislation requires one year of supervised experience subsequent to the granting of the doctorate. In rules and regulations, the Board must define acceptable supervised experience at the predoctoral and postdoctoral levels as well as mechanisms for evaluation of this experience. Psychologists are required to limit their practice to their demonstrated areas of professional competence. Experience should be compatible with training.

For admission to the licensure examination, applicants shall demonstrate that they have completed two years of supervised professional experience, one year of which shall be postdoctoral. The criteria for appropriate supervision shall be in accordance with regulations to be promulgated by the Board. Postdoctoral experience shall be compatible with the knowledge and skills acquired during formal doctoral or postdoctoral education in accordance with professional requirements and relevant to the intended area of practice. Applicants shall be required to show evidence of good character, that is, that they have not been convicted of a criminal offense that bears directly on the fitness of the individual to be licensed.

APA recommends that legislation requires the equivalent of two full-time years of sequential, organized, supervised, professional experience prior to obtaining the license. This training may be completed prior or subsequent to the granting of the doctoral degree. For applicants prepared for practice in the health services domain of psychology, one of those two years of supervised professional experience shall be a predoctoral internship which may be completed as a part-time intern over a two year period provided that the total experience is the equivalent of one year of full time experience. For applicants prepared for practice in the General Applied (non-HSP) domain of psychology, whose graduate programs may not have formal internships, the option to obtain all supervision post doctorally should be available. In rules and regulations, the Board must define acceptable supervised experience at the predoctoral and postdoctoral levels as well as mechanisms for evaluation of this experience. Boards are encouraged to create definitions that are flexible and capture the variety of training and supervisory models that are appropriate for both HSP and General Applied practice. Psychologists are required to limit their practice to their demonstrated areas of professional competence. Experience should be compatible with training.

To obtain licensure, applicants shall demonstrate that they have completed the equivalent of two full-time years of sequential, organized, supervised professional experience. For applicants prepared for practice in the health services domain of psychology, one of those two years of supervised professional experience shall be a predoctoral internship. For applicants prepared for practice in the General Applied domain of psychology, whose graduate programs may not have formal internships, the option to obtain all supervision post doctorally should be available. The criteria for appropriate supervision shall be in accordance with regulations to be promulgated by the Board. Experience shall be compatible with the knowledge and skills acquired during formal doctoral and/or postdoctoral education in accordance with professional requirements and relevant to the intended area of practice. General Applied (non-HSP) Psychologist trainees may be supervised by an appropriate licensed psychologist outside the supervisee's place of employment so long as (a) the supervisee's employer engages the licensed supervisor to provide the required supervision; and (b) the supervisor assumes responsibility for the training of the supervisee. Applicants shall be required to show evidence of good character, e.g., that they have not been convicted of a criminal offense that bears directly on the fitness of the individual to be licensed.

D-3. Examinations

APA recommends that the Act specify the requirements for examination and the conditions under which the Board is authorized to waive examination. All examinations serve the purpose of verifying that a candidate for licensure has acquired a basic core of knowledge in the discipline of psychology and can apply that knowledge to the problems

D-3. Examinations

APA recommends that the Act specify the requirements for examination and the conditions under which the Board is authorized to waive examination. All examinations serve the purpose of verifying that a candidate for licensure has acquired a basic core of knowledge in the discipline of psychology and can apply that knowledge to the problems confronted in the practice

confronted in the practice of psychology. Boards should clearly specify the conditions under which the endorsement of another license will be granted. The Board shall administer examinations to qualified applicants on at least an annual basis. The Board shall determine the subject matter and scope of the examination and shall require a written, and may require an oral examination of each candidate for licensure. The Board at its discretion, according to rules and regulations promulgated by the Board, may waive said examination of candidates for licensure.

of psychology. Boards should clearly specify the conditions under which the endorsement of another license will be granted.

The Board shall administer examinations to qualified applicants on at least an annual basis. The Board shall determine the subject matter and scope of the examination and shall require a written, and may require an oral examination of each candidate for licensure. The Board at its discretion, according to rules and regulations promulgated by the Board, may waive said examination of candidates for licensure. It is recommended that individuals applying for licensure be eligible to sit for the examination upon completion of all the requirements of the doctoral degree.

D-4. Prior Credentials

APA recommends that the Act provide for continued licensure of persons already licensed as a psychologist at the time of enactment of a new law.

A person who is licensed as a psychologist under the provisions of *(cite relevant section(s) of previous licensing law)* as of the effective date of this Act shall be deemed to have met all requirements for licensure under this Act and shall be eligible for renewal of licensure in accordance with the provisions of this Act.

D-4. Prior Credentials

APA recommends that the Act provide for continued licensure of persons already licensed as a psychologist at the time of enactment of a new law.

A person who is licensed as a psychologist under the provisions of (cite relevant section(s) of previous licensing law) as of the effective date of this Act shall be deemed to have met all requirements for licensure under this Act and shall be eligible for renewal of licensure in accordance with the provisions of this Act.

D-5. Applications from individuals licensed in other jurisdictions.

Jurisdictions are strongly encouraged to adopt regulations to facilitate the mobility and portability of licensure. Jurisdictions may set criteria to determine conditions under which verification of education, experience and examination requirements will be waived. These criteria may include holding a credential that verifies education and experiences of individuals (e.g. American Board of Professional Psychology (ABPP), National Register of Health Service Providers in Psychology, Association of State and Provincial Psychology Boards' Certificate of Professional Qualification in Psychology (ASPPB's CPQ)), Board determination that the criteria of the other jurisdiction are comparable to the Board's criteria or other specified mechanism.

An individual applying for licensure with the Board who holds an active psychology license in another jurisdiction and shows evidence of good character is considered an eligible candidate for licensure in the jurisdiction. The Board may waive verifying the education, experience and examination requirements for individuals who meet these criteria and for whom the Board's mechanism for verifying comparability of education, experience and examination requirements is met. The Board retains the right to administer any required jurisdiction-specific examinations (written, oral, jurisprudence) prior to awarding the license.

E. Interstate Practice of Psychology

E. Interstate Practice of Psychology

Psychologists may have legitimate interests in practicing in another jurisdiction for a limited amount of time. This section provides for limited practice in a jurisdiction other than the state in which the psychologist is licensed. The psychologist must have an earned doctoral degree in another jurisdiction.

Nothing in this Act shall be construed to prohibit the practice of psychology in this state by a person holding an earned doctoral degree in psychology from an institution of higher education who is licensed or certified as a psychologist under the laws of another jurisdiction, provided that the aggregate of sixty (60) days of professional services as a psychologist per year under the provision of this subsection is not exceeded.

Psychologists may have legitimate interests in practicing in another jurisdiction for a limited amount of time. This section provides for limited practice in a jurisdiction other than the state in which the psychologist is licensed. This is not intended to eliminate the necessity for licensure for those who are setting up a regular professional practice in that jurisdiction. The psychologist must have an earned doctoral degree and be licensed in another jurisdiction.

Nothing in this Act shall be construed to prohibit the practice of psychology in this state by a person holding an earned doctoral degree in psychology from an institution of higher education who is licensed or certified as a psychologist under the laws of another jurisdiction, provided that the aggregate of sixty (60) days per year of professional services as a psychologist per year under the provision of this subsection is not exceeded. Prior to providing services in this state, a doctoral level licensed psychologist from another jurisdiction should provide written notice to the Board of the type of services to be provided, approximate duration of such services along with documentation of licensure and consent to operating under the jurisdiction, law and regulations of this state. Because the state recognizes the occasional need for rapid provision of certain services, notice does not require approval of the Board prior to delivery of service if the aggregate of 60 days of services is maintained and the individual does not establish an ongoing, regular, professional practice in the jurisdiction.

In disaster situations the time frame and conditions under which psychologists will provide disaster services in the jurisdiction will be defined by the Board.

To the extent that the jurisdiction has adopted the Uniform Emergency Volunteer Health Practitioners Act, it will apply in times of disaster.

F. Temporary Authorization to Practice

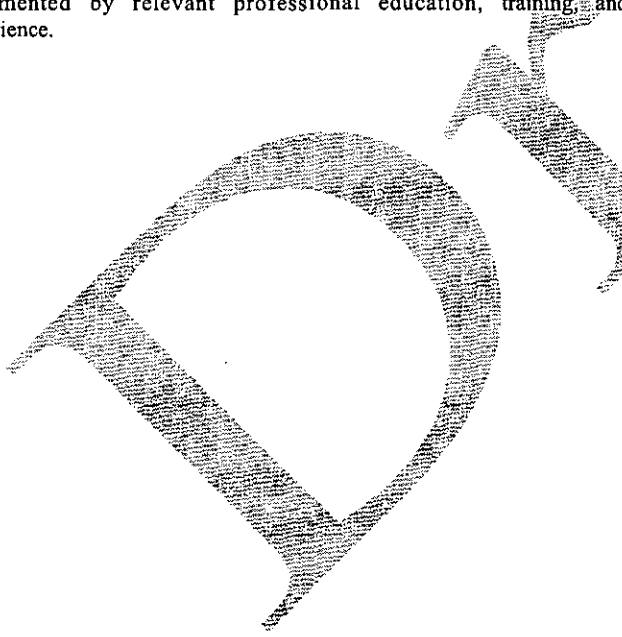

This portion of the Act provides for the conditions under which a licensed psychologist may practice until obtaining licensure in another jurisdiction. Provision is also made for the Board to waive examination if the requirements met by the psychologist in the original jurisdiction are judged to be equivalent to those in this state.

A psychologist licensed or certified under the laws of another jurisdiction may be authorized by the Board to practice psychology as defined in this Act for a maximum of one year, provided that the psychologist has made application to the Board for licensure and has met the educational and experience requirements for licensure in this state. Denial of licensure terminates this authorization. The Board may choose to waive examination if a psychologist has been licensed in another jurisdiction on the basis of qualifications that are not less than those required for licensure in this state.

F. Temporary Authorization to Practice

This portion of the Act provides for the conditions under which a licensed psychologist may practice until obtaining licensure in another jurisdiction. Jurisdictions are encouraged to adopt regulations to facilitate the mobility and portability of licensure. Provision is also made for the Board to waive examination if the requirements met by the psychologist in the original jurisdiction are judged to be equivalent to those in this state.

A psychologist holding a current, active license or certification under the laws of another jurisdiction may be authorized by the Board to practice psychology as defined in this Act for a maximum of one year, provided that the psychologist has made application to the Board for licensure and has met the educational and experience requirements for licensure in this state. Denial of licensure terminates this authorization. The Board may choose to waive examination if a psychologist is licensed in another jurisdiction on the basis of qualifications that

	<i>are not less than those required for licensure in this state.</i>
<p>G. Limitation of Practice</p> <p>This provision of the Act is intended to ensure that licensed psychologists will not practice outside the limits of their competence. The burden of proof is on the applicant to provide evidence, acceptable to the Board, that the applicant has obtained the training necessary to engage in the practice of psychology in the specified area of competence. The Board may wish to develop forms that provide for the specification of the intended area of practice and the evidence necessary to document competence. This provision recognizes the broad areas of specialization (e.g., clinical, counseling, school, industrial/organizational) and emerging specialties (e.g., neuropsychology, environmental) and the variety of academic training as separate from proficiencies. It is expected that if the psychologist is trained in a broad specialty area, there are many proficiencies within that training that are possible areas of competence. This limitation is intended to ensure that a psychologist trained in one area (e.g., experimental, developmental) will not practice in another area (e.g., counseling, industrial/organizational) without completing a retraining program.</p> <p>The Board shall ensure through regulations and enforcement that licensees limit their practice to demonstrated areas of competence as documented by relevant professional education, training, and experience.</p> 	<p>G. Limitation of Practice; Maintaining and Expanding Competence</p> <p>This provision of the Act is intended to ensure licensed psychologists who provide services will not practice outside the limits of their competence. The burden of proof is on the applicant to provide evidence, acceptable to the Board, that the applicant has obtained the training necessary to engage in the practice of psychology in the specified area of competence. The Board may wish to develop forms that provide for the specification of the intended area of practice and the evidence necessary to document competence. The Board should recognize that training in psychology includes broad and general training in scientific psychology and in the foundations of practice. Practice areas include: clinical psychology, counseling psychology, school psychology, industrial-organizational psychology and other developed practice areas.</p> <p>Psychologists provide services to populations and in areas within the boundaries of their competence, based on their education, training, supervised experience, consultation, study or professional experience and do not practice beyond their areas of competence. The Board develops requirements or structures (e.g., continuing education in general areas of practice as well as in specific areas such as ethics, domestic violence and multicultural competence; declaration and documentation of competence) to ensure that psychologists undertake ongoing efforts to identify, develop, and maintain competence and ethical practice. Boards may choose to require applicants for licensure and renewal of licensure to self-declare their areas of practice competence. Should a psychologist's area of practice change, then the psychologist shall be required to provide documentation of the training, supervision and/or mentoring undertaken to achieve competence in the new area at the time of license renewal. Psychologists practicing in emerging areas take reasonable steps to ensure the competence of their work by using relevant research, training, consultation, or study.</p> <p><i>The Board shall ensure through regulations and enforcement that licensees limit their practice to demonstrated areas of competence as documented by relevant professional education, training, and experience. The Board shall develop structures to ensure that psychologists undertake ongoing efforts to maintain competence and ethical practice. The Board adopts as its standard of conduct the Ethical Principles of Psychologists and Code of Conduct of the American Psychological Association.</i></p>
<p>H. <p>J. Exemptions</p> <p>1. There should be an exemption from licensure for persons</p>	<p>J. Exemptions</p> <p>1. There should be an exemption from licensure for persons</p>

engaged solely in teaching, research, or provision of psychological services to organizations, because such activities are unlikely to pose a risk of immediate harm to the public health or welfare. For example, an organizational psychologist providing consultation to business in order to improve efficiency, a teacher of child development courses at a university, a researcher in the field of sleep disorders, and a social psychologist researching group behavior in stressful situations would all be exempt. The exemption should not be determined on the basis of work setting or place of primary employment, but on the basis of the purpose of the activity as defined in Section B3 (Practice of psychology). The exemption should not be allowed if the individual engages in the direct delivery or supervision of psychological services to individuals or groups of individuals in any setting. Persons engaged in teaching, research, or the provision of psychological services to organizations should not be excluded from licensure if they meet the statutory requirements for licensure.

Nothing in this Act shall be construed to prevent the teaching of psychology, the conduct of psychological research, or the provision of psychological services or consultation to organizations or institutions, provided that such teaching, research, or service does not involve the delivery or supervision of direct psychological services to individuals or groups of individuals who are themselves, rather than a third party, the intended beneficiaries of such services, without regard to the source or extent of payment for services rendered. Nothing in this Act shall prevent the provision of expert testimony by psychologists who are otherwise exempted by this Act. Persons holding an earned doctoral degree in psychology from an institution of higher education may use the title "psychologist" in conjunction with the activities permitted by this subsection.

2. Members of other established professions, such as physicians, attorneys, and clergy, may provide services that are similar or related to the scope of practice of psychology. They should be exempted from licensure on the condition that they not represent themselves to be psychologists.

Nothing in this Act shall be construed to prevent members of other recognized professions that are licensed, certified, or regulated under the laws of this state from rendering services consistent with their professional training and code of ethics, provided that they do not represent themselves to be psychologists. Duly recognized members of the clergy shall not be restricted from functioning in their ministerial capacity, provided that they do not represent themselves to be psychologists.

3. It is recognized that school psychologists who are certified by the state education agency are permitted to use the term *school psychologist* or *certified school psychologist* as long as they are practicing in the public schools.

Individuals who have been certified as school psychologists by the (*cite relevant state education authority or statutory provisions*) shall be permitted to use the term "school psychologist" or "certified school psychologist." Such persons shall be restricted in their practice to employment within those settings under the purview of the state board of education. By 1995 such exempted persons should be certificated by the state board of

engaged solely in teaching in academic institutions, or research in academic and/or research institutions. In addition, those General Applied (non-HSP) Psychologists who provide services for the benefit of the organization and not involving direct services to individuals should be exempt from licensure and be allowed to refer to themselves as psychologists. The exemption should not be determined on the basis of work setting or place of primary employment, but on the basis of the purpose of the activity as defined in Section B3 (Practice of psychology). The exemption should not be allowed if the individual engages in the direct delivery or supervision of psychological services to individuals or groups of individuals in any setting. Persons engaged in teaching or research, should not be excluded from licensure if they meet the statutory requirements for licensure.

Nothing in this Act shall be construed to prevent the teaching of psychology or the conduct of psychological research, provided that such teaching or research does not involve the delivery or supervision of direct psychological services. Nothing in this Act shall prevent the provision of General Applied Psychology services to organizations so long as those services are for the benefit of the organization, and does not involve direct service to individuals. Nothing in this Act shall prevent the provision of expert testimony by psychologists who are otherwise exempted by this Act. Persons holding a doctoral degree in psychology from an institution of higher education may use the title "psychologist" in conjunction with the activities permitted by this subsection.

2. Members of other established professions, such as physicians, attorneys, and clergy, may provide services that are similar or related to the scope of practice of psychology. They should be exempted from licensure on the condition that they not represent themselves to be psychologists.

Nothing in this Act shall be construed to prevent members of other recognized professions that are licensed, certified, or regulated under the laws of this state from rendering services consistent with their professional training and code of ethics, provided that they do not represent themselves to be psychologists. Duly recognized members of the clergy shall not be restricted from functioning in their ministerial capacity, provided that they do not represent themselves to be psychologists.

3. The prior version of this Model Act included an exemption for the use of the terms *school psychologist* or *certified school psychologist* for all individuals credentialed by the state agency regulating practice in public schools. This version restricts the use of the term *school psychologist* or *certified school psychologist* to individuals who: 1) have a doctoral degree in psychology; 2) are certified by the state education agency; and (3) are using the terms only during their practice in the public schools.

Only those persons who are credentialed by state education agencies to provide psychoeducational services and who possess a doctoral degree in

education on the basis of having completed a program for the preparation of school psychologists that is accredited by a specialized professional accrediting body recognized by the Council on Postsecondary Accreditation.

4. Graduate students, interns, postdoctoral trainees, and applicants for licensure are permitted to function under the supervision of a licensed psychologist, as are assistants not eligible for licensure in some states. None may use the title psychologist, but titles such as *psychological trainee*, *psychological intern*, *psychological resident*, and *psychological assistant* would be permissible under this exemption. The supervising psychologist is responsible for the actions of the student, trainee, or assistant. The Board is required to adopt regulations defining the nature and extent of training for qualified assistants and supervision for each category.

Nothing in this Act shall be construed to prevent persons from engaging in activities defined as the practice of psychology, provided that such persons shall not represent themselves by the title "psychologist." Such persons may use the terms "psychological trainee," "psychological intern," "psychological resident" and "psychological assistant" and provided further that such persons perform their activities under the supervision and responsibility of a licensed psychologist in accordance with regulations promulgated by the Board. Nothing in this section shall be construed to apply to any person other than:

- (a) a matriculated graduate student in psychology whose activities constitute a part of the course of study for a graduate degree in psychology at an institution of higher education;
- (b) an individual pursuing postdoctoral training or experience in psychology, including persons seeking to fulfill the requirements for licensure under the provisions of this Act; or
- (c) a qualified assistant employed by, or otherwise directly accountable to, a licensed psychologist. The Board in regulations shall determine the number of assistants that a psychologist may employ and the conditions under which they will be supervised.

psychology from a regionally accredited institution may use the title "school psychologist" or "certified school psychologist." Such persons shall be restricted in their practice and in the use of such title to those settings under the purview of the state education agency. This provision is not intended to apply to licensed psychologists.

4. Graduate students, interns, unlicensed postdoctoral trainees, and applicants for licensure are permitted to function under the supervision of a licensed psychologist, as are assistants not eligible for licensure in some states. None may use the title psychologist, but titles such as *psychological trainee*, *psychological intern*, *psychological resident*, and *psychological assistant* or *psychological associate* would be permissible under this exemption. The supervising psychologist is responsible for the professional actions of the student, trainee, or assistant. The Board is required to adopt regulations defining the nature and extent of training for qualified assistants and supervision for each category.

Nothing in this Act shall be construed to prevent graduate students, interns, unlicensed postdoctoral trainees and applicants for licensure under the supervision of a licensed psychologist from engaging in activities defined as the practice of psychology, provided that such persons shall not represent themselves by the title "psychologist" in accordance with regulations promulgated by the Board. Such persons may use the terms such as "psychological trainee," "psychological intern," "psychological resident," and "psychological assistant" and provided further that such persons perform their activities under the supervision and responsibility of a licensed psychologist in accordance with regulations promulgated by the Board.

Nothing in this section shall be construed to apply to any person other than:

- (a) a matriculated graduate student in psychology whose activities constitute a part of the course of study for a graduate degree in psychology at an institution of higher education;*
- (b) an unlicensed individual pursuing postdoctoral training or experience in psychology, including persons seeking to fulfill the requirements for licensure under the provisions of this Act; or*
- (c) a qualified assistant employed by, or otherwise directly accountable to, a licensed psychologist. The Board in regulations shall determine the number of assistants that a psychologist may employ and the conditions under which they will be supervised.*

5. This provision clarifies that the focus of licensure is the individual providing the services. Where the individual providing the services is duly licensed and qualified to provide the services, the goal of assuring the public that the services will be provided by licensed and qualified professionals is served.

Nothing in this Act shall be construed to require a license under this Act in order for a firm, partnership, corporation, limited liability company or other entity to provide General Applied

Psychology services where such services are performed by an individual: (a) duly licensed in this State or otherwise authorized to provide General Applied Psychology services under this Act; or (b) supervised by a licensed psychologist in this State and permitted to provide General Applied Psychology services with such supervision under this Act.

6. Individuals who were previously unable to obtain licensure because of exemptions or exclusions in the previous version of this Act or where fulfilling requirements for licensure has been prohibitive (in some instances this has included I-O, Human factors and consulting psychologists) but are now expected to become licensed under the new regulations, a provision for extending licensure to those psychologists should be enacted.

All who have been practicing for 5 years or more exclusively outside of the healthcare psychology area and who were previously unable to obtain licensure because of exemptions or exclusions in the previous version of this Act or where fulfilling requirements has been prohibitive shall be grandparented, with the following requirements:

(a) Candidates should have graduated from a regionally accredited institution with a doctoral degree in I-O, consulting, or other recognized program in general applied psychology.

(b) Attestation from the candidate that documents at least 5 years of relevant work history in I-O, consulting, or other general applied psychology practice. This should include written support from at least two licensed psychologists in good standing within that jurisdiction or APA Fellows in the same or similar area of practice that attests to the candidate's work history, quality of work, ethical practice and lack of any disciplinary action.

(c) Completion of the jurisprudence examination of that jurisdiction with a passing grade.

Individuals must have applied for this Grandparenting option within two years from the enactment of this act. After that date, the individual must comply with the regular licensing laws.

K. Grounds for Suspension or Revocation of Licenses

In order to have an effective law, the Board must have the power to suspend and revoke a license. In the previous guidelines, the offenses requiring suspension or revocation were not specified. Many state laws specify these offenses. Actions that are a violation of the standards subscribed to by the Board **should be** clearly stated in the licensing law. Two considerations are specified below that refer to specific points in the text that follows:

1. Concerning Numbers 6 and 7

The Board shall specify, in rules and regulations, criteria for determining how long or under what conditions an individual or group of individuals remains a patient or a client.

K. Grounds for Suspension or Revocation of Licenses

In order to have an effective law, the Board must have the power to suspend and revoke a license. Actions that are a violation of the enforceable standards of the APA Ethical Principles of Psychologists and Code of Conduct and other standards subscribed to by the Board should be clearly stated in the licensing law. One consideration is specified below that refers to a specific point in the text that follows:

Concerning Number 14

In this section, physical condition shall be differentiated from physical disability. There is no intent to obstruct physically disabled candidates' entry into the profession of psychology nor from practicing their profession after licensure as long as they practice with reasonable skill and safety to patients or clients.

2. Concerning Number 17

In this section, physical condition shall be differentiated from physical disability. There is no intent to obstruct physically disabled candidates' entry into the profession of psychology nor from practicing their profession after licensure as long as they practice with reasonable skill and safety to patients or clients.

A psychologist and anyone under his or her supervision shall conduct his or her professional activities in conformity with ethical and professional standards promulgated by the Board under its rules and regulations.

The Board shall have the power and duty to suspend, place on probation, or require remediation for any psychologist for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology or to take any other action specified in the rules and regulations whenever the Board shall find by a preponderance of the evidence that the psychologist has engaged in any of the following acts or offenses:

1. fraud in applying for or procuring a license to practice psychology;
2. immoral, unprofessional, or dishonorable conduct as defined in the rules and regulations promulgated by the Board;
3. practicing psychology in such a manner as to endanger the welfare of clients or patients;
4. conviction of a felony (a copy of the record of conviction, certified to by the clerk of the court entering the conviction shall be conclusive evidence);
5. conviction of any crime or offense that reflects the inability of the practitioner to practice psychology with due regard for the health and safety of clients or patients;
6. harassment, intimidation, or abuse, sexual or otherwise, of a client or patient;
7. engaging in sexual intercourse or other sexual contact with a client or patient;
8. use of repeated untruthful or deceptive or improbable statements concerning the licensee's qualifications or the effects or results of proposed treatment, including functioning outside of one's professional competence established by education, training, and experience;
9. gross malpractice or repeated malpractice or gross negligence in the practice of psychology;
10. aiding or abetting the practice of psychology by any person not licensed by the Board;
11. conviction of fraud in filing Medicare or Medicaid claims or in filing claims to any third party payor (a copy of the record of conviction, certified to by the clerk of the court entering the conviction, shall be conclusive evidence);
12. exercising undue influence in such a manner as to exploit the client, patient, student, or supervisee for financial or other personal advantage to the practitioner or a third party;
13. the suspension or revocation by another state of a license to practice psychology (a certified copy of the record of suspension or revocation of the state making such a suspension or revocation shall be conclusive evidence thereof);
14. refusal to appear before the Board after having been ordered to do so in writing by the executive officer or chair of the Board;
15. making any fraudulent or untrue statement to the Board;
16. violation of the code of ethics adopted in the rules and regulations of the Board; and
17. inability to practice psychology with reasonable skill and

A psychologist and anyone under his or her supervision shall conduct his or her professional activities in conformity with the ethical and professional standards of the APA Ethical Principles of Psychologists and Code of Conduct and those standards promulgated by the Board under its rules and regulations.

The Board shall have the power and duty to suspend, place on probation, or require remediation for any psychologist for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology or to take any other action specified in the rules and regulations whenever the Board shall find by a preponderance of the evidence that the psychologist has engaged in any of the following acts or offenses:

1. *fraud in applying for or procuring a license to practice psychology;*
2. *immoral, unprofessional, or dishonorable conduct as defined in the rules and regulations promulgated by the Board;*
3. *practicing psychology in such a manner as to endanger the welfare of clients or patients;*
4. *conviction of a felony (a copy of the record of conviction, certified to by the clerk of the court entering the conviction shall be conclusive evidence);*
5. *conviction of any crime or offense that reflects the inability of the practitioner to practice psychology with due regard for the health and safety of clients or patients;*
6. *use of repeated untruthful or deceptive or improbable statements concerning the licensee's qualifications or the effects or results of proposed treatment, including functioning outside of one's professional competence established by education, training, and experience;*
7. *gross malpractice or repeated malpractice or gross negligence in the practice of psychology;*
8. *aiding or abetting the practice of psychology by any person not licensed by the Board;*
9. *conviction of fraud in filing Medicare or Medicaid claims or in filing claims to any third party payor (a copy of the record of conviction, certified to by the clerk of the court entering the conviction, shall be conclusive evidence);*
10. *the suspension or revocation by another state of a license to practice psychology (a certified copy of the record of suspension or revocation of the state making such a suspension or revocation shall be conclusive evidence thereof);*
11. *refusal to appear before the Board after having been ordered to do so in writing by the executive officer or chair of the Board;*
12. *making any fraudulent or untrue statement to the Board;*
13. *violation of the APA Ethical Principles of Psychologists and Code of Conduct and other standards adopted in the rules and regulations of the Board; and*
14. *inability to practice psychology with reasonable skill and safety to patients or clients by reason of illness, inebriation, misuse of drugs, narcotics, alcohol, chemicals, or any other substance, or as a result of any mental or physical condition.*

When the issue is whether or not a psychologist is physically or mentally capable of practicing psychology with reasonable skill

safety to patients or clients by reason of illness, inebriation, misuse of drugs, narcotics, alcohol, chemicals, or any other substance, or as a result of any mental or physical condition.

When the issue is whether or not a psychologist is physically or mentally capable of practicing psychology with reasonable skill and safety to patients or clients, then, upon a showing of probable cause to the Board that the psychologist is not capable of practicing psychology with reasonable skill and safety to patients, the Board may petition a court of competent jurisdiction to order the psychologist in question to submit to a psychological examination by a psychologist to determine psychological status and/or a physical examination by a physician to determine physical condition. Such psychologist and/or physician is to be designated by the court. The expense of such examination shall be borne by the Board. Where the psychologist raises the issue of mental or physical competence or appeals a decision regarding his or her mental or physical competence, the psychologist shall be permitted to obtain his or her own evaluation at the psychologist's expense. If the objectivity or adequacy of the examination is suspect, the Board may complete an examination by its designated practitioners at its own expense. When mental or physical capacity to practice is at issue, every psychologist licensed to practice psychology in the state shall be deemed to have given consent to submit to a mental or physical examination or to any combination of such examinations and to waive all objections to the admissibility of the examination, or to previously adjudicated evidence of mental incompetence.

and safety to patients or clients, then, upon a showing of probable cause to the Board that the psychologist is not capable of practicing psychology with reasonable skill and safety to patients or clients, the Board may petition a court of competent jurisdiction to order the psychologist in question to submit to a psychological examination by a psychologist to determine psychological status and/or a physical examination by a physician to determine physical condition. Such psychologist and/or physician is to be designated by the Board. The expense of such examination shall be borne by the Board. Where the psychologist raises the issue of mental or physical competence or appeals a decision regarding his or her mental or physical competence, the psychologist shall be permitted to obtain his or her own evaluation at the psychologist's expense. If the objectivity or adequacy of the examination is suspect, the Board may complete an examination by its designated practitioners at its own expense. When mental or physical capacity to practice is at issue, every psychologist licensed to practice psychology in the state shall be deemed to have given consent to submit to a mental or physical examination or to any combination of such examinations and to waive all objections to the admissibility of the examination, or to previously adjudicated evidence of mental incompetence.

L. Board Hearings and Investigations

In the interest of protecting the public, the Board must have authority to regulate the practice of psychology. This section specifies the powers and duties of the Board to conduct investigations, hold hearings, consider evidence or allegations brought against a psychologist, and to discipline a licensee for violation of law or regulation. Both the Board and licensee are required to follow due process standards in any disciplinary proceeding.

The Board on its own motion may investigate or cause to be investigated any allegation or evidence that appears to show that a psychologist licensed to practice in this state is, or may be, in violation of this Act or of any of the acts, offenses, or conditions set forth by the Board in rules and regulations.

The Board shall have the power and duty to suspend, place on probation, or require remediation for a licensee for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology, whenever the licensee shall be found by the Board, by a preponderance of the evidence, to have engaged in conduct prohibited by this Act or rules and regulations duly promulgated pursuant thereto.

Any psychologist holding a license to practice in this state is required to report to the Board any information such psychologist in good faith may have that appears to show that any psychologist holding a license to practice in this state may be in violation of this Act or guilty of any of the acts, offenses, or conditions set forth by the Board. Any psychologist who in good faith makes such a report to the Board shall be absolutely immune from civil liability to any person for any statement or opinion made in such report.

L. Board Hearings and Investigations

In the interest of protecting the public, the Board must have authority to regulate the practice of psychology. This section specifies the powers and duties of the Board to conduct investigations, hold hearings, consider evidence or allegations brought against a psychologist, and to discipline a licensee for violation of law or regulation. Both the Board and licensee are required to follow due process standards in any disciplinary proceeding.

The Board on its own motion may investigate or cause to be investigated any allegation or evidence that appears to show that a psychologist licensed to practice in this state is, or may be, in violation of this Act or of any of the acts, offenses, or conditions set forth by the Board in rules and regulations.

1) Any accusation filed against a psychologist licensed to practice in this state shall be filed within three years from the date the Board discovers the alleged act or omission that is the basis for disciplinary action, or within seven years from the date the alleged act or omission that is the basis for disciplinary action occurred, whichever occurs first. If an alleged act or omission involves a minor, the seven-year limitations period provided for shall be tolled until the minor reaches the age of majority.

2) The following are exceptions to the limitations period in paragraph (1):

a. acts or offences involving a violation of Sections K(1)

If, in the opinion of the majority of the Board, there is probable cause that the information provided to it under the provisions of this section may be valid, the Board shall request by registered mail a formal interview with the psychologist. If the psychologist who is ordered to a formal interview before the Board refuses to appear for such interview, such refusal shall be considered grounds for the Board, at its discretion, to suspend or revoke the license of such psychologist. Any proceeding for suspension or revocation of a license to practice as a psychologist in this state shall be conducted in accordance with procedures established by the Board. The psychologist shall be informed of his or her rights concerning Board hearings and investigations:

1. the right to notice and hearing;
2. the right to self-representation or representation by counsel;
3. the right to produce witnesses and to confront and cross-examine opposing witnesses;
4. the right to a written decision setting forth the violation, findings of fact, sanctions, and reasons for the sanctions;
5. a determination of the size of the vote necessary to find a violation;
6. a determination whether the hearing will be closed or open to the public; and
7. the right to an appeal to an administrative board of review and/or to a court of competent jurisdiction.

The licensee may knowingly and voluntarily waive his or her right to the formal adversary proceeding described in this section. The Board shall have the right to conduct an *ex parte* hearing if, after due notice, the individual fails or refuses to appear. The Board shall have the right to issue subpoenas for production of documents and witnesses and to administer oaths. The Board shall have the right to apply to a court of competent jurisdiction to take appropriate action should a subpoena not be obeyed.

The Board shall temporarily suspend the license of a psychologist without a hearing simultaneously with the institution of proceedings for a hearing provided under this section if the Board finds that evidence in its possession indicates that the psychologist's continuation in practice may constitute an immediate danger to the public. Appropriate officials may petition the court for an injunction barring further practice unless or until the person is properly licensed. The injunction may be issued in addition to, or in lieu of, the criminal sanctions provided for in this section.

A psychologist may surrender his or her license when such person is charged with unethical conduct and upon receipt of that charge, that person decides to surrender the license, such surrender and acceptance by the Board shall constitute acknowledgment by the psychologist of guilt as charged.

A psychologist may request in writing to the Board that a restriction be placed upon his or her license to practice as a psychologist. The Board, in its discretion, may accept a surrender or grant such a request for restriction and shall have the authority to attach such restrictions to the license of the psychologist to practice psychology within this state or otherwise to discipline the licensee.

Subsequent to the holding of a hearing and the taking of evidence by the Board as provided for in this section, if a majority of the Board finds that a psychologist is in violation of this Act or guilty of any of the

K(13), or K(15) ;

- b. acts or offences involving a violation of Sections K4, where there is an element of dishonesty or fraud, and Section K5.
- c. acts or offences involving fraudulent, deceptive or dishonest conduct that adversely affects the persons' ability or fitness to practice psychology.
- d. acts or offences involving allegations of sexual misconduct with a client, or with a former client for a period of two years following the date of the last professional contact with the former client.

The Board shall have the power and duty to suspend, place on probation, or require remediation for a licensee for a specified time, to be determined at the discretion of the Board, or to revoke any license to practice psychology, whenever the licensee shall be found by the Board, by a preponderance of the evidence, to have engaged in conduct prohibited by this Act or rules and regulations duly promulgated pursuant thereto.

Any psychologist holding a license to practice in this state is required to report to the Board ethical violations by a licensed psychologist who has substantially harmed or is likely to substantially harm a person or organization, if that violation is not appropriate for informal resolution (APA Ethical Standard 1.04, Informal Resolution of Ethical Violations and 1.05, Reporting Ethical Violations.) Any psychologist who in good faith makes such a report to the Board shall be absolutely immune from civil liability to any person for any statement or opinion made in such report.

If, in the opinion of the majority of the Board, there is probable cause that the information provided to it under the provisions of this section may be valid, the Board shall request by registered mail a formal interview with the psychologist. If the psychologist who is ordered to a formal interview before the Board refuses to appear for such interview, such refusal shall be considered grounds for the Board, at its discretion, to suspend or revoke the license of such psychologist. Any proceeding for suspension or revocation of a license to practice as a psychologist in this state shall be conducted in accordance with procedures established by the Board. In the event that these provisions conflict with the state's general administrative procedures, these specific provisions will take precedence. The psychologist shall be informed of his or her rights concerning Board hearings and investigations:

1. the right to a hearing and 30-days notice of the hearing;
2. the right to see a signed complaint (non anonymous);
3. the right to have access to the Board's rules and procedures;
4. the right to self-representation or representation by counsel;
5. the right to discovery: each side can request from the other side relevant documents, a list of witnesses, and for any expert witnesses, the name, C.V. and a detailed

acts, offenses, or conditions as enumerated by the Board, the following actions may be taken:

1. The Board may revoke or suspend the license and impose a monetary penalty.
2. The Board may suspend imposition of a revocation or suspension of a license and/or a monetary penalty.
3. The Board may impose revocation or suspension of a license and/or a monetary penalty, but suspend enforcement thereof by placing the psychologist on probation, which probation shall be revocable if the Board finds the conditions of the probation order are not being followed by the psychologist.
4. As a condition of probation the Board may require the psychologist to submit to care, counseling, or treatment by a professional designated by the Board. The expense of such action shall be borne by the psychologist.
5. The Board may, at any time, modify the conditions of the probation and may include among them any reasonable condition for the purpose of the protection of the public, or for the purpose of the rehabilitation of the probationer, or both.
6. The Board shall have the power to require restitution when necessary.
7. The Board shall have the power to assess the costs of the disciplinary proceeding.

- report of the expert's expected testimony;*
6. *the right to compel the attendance of, and produce, witnesses and to confront and cross examine opposing witnesses, and to have witnesses testify under oath;*
7. *the right to a written decision setting forth the violation, findings of fact, sanctions, and reasons for the sanctions;*
8. *a determination of the size of the vote necessary to find a violation;*
9. *a determination whether the hearing will be closed or open to the public;*
10. *the right not to have Board members who were on the investigative committee also appear on the formal hearing panel.*
11. *the right to an appeal to an administrative board of review and/or to a court of competent jurisdiction.*

The licensee may knowingly and voluntarily waive his or her right to the formal adversary proceeding described in this section.

The Board shall have the right to conduct an ex parte hearing if, after due notice, the individual fails or refuses to appear. The Board shall have the right to issue subpoenas for production of documents and witnesses and to administer oaths. The Board shall have the right to apply to a court of competent jurisdiction to take appropriate action should a subpoena not be obeyed.

The Board shall temporarily suspend the license of a psychologist without a hearing simultaneously with the institution of proceedings for a hearing provided under this section if the Board finds that evidence in its possession indicates that the psychologist's continuation in practice may constitute an immediate danger to the public. Appropriate officials may petition the court for an injunction barring further practice unless or until the person is properly licensed. The injunction may be issued in addition to, or in lieu of, the criminal sanctions provided for in this section.

A psychologist may surrender his or her license when such person is charged with unethical conduct and upon receipt of that charge, that person decides to surrender the license, such surrender and acceptance by the Board shall constitute acknowledgment by the psychologist of guilt as charged.

A psychologist may request in writing to the Board that a restriction be placed upon his or her license to practice as a psychologist. The Board, in its discretion, may accept a surrender or grant such a request for restriction and shall have the authority to attach such restrictions to the license of the psychologist to practice psychology within this state or otherwise to discipline the licensee.

Subsequent to the holding of a hearing and the taking of evidence by the Board as provided for in this section, if a majority of the Board finds that a psychologist is in violation of this Act or guilty

of any of the acts, offenses, or conditions as enumerated by the Board, the following actions may be taken:

1. The Board may revoke or suspend the license and impose a monetary penalty.
2. The Board may suspend imposition of a revocation or suspension of a license and/or a monetary penalty.
3. The Board may impose revocation or suspension of a license and/or a monetary penalty, but suspend enforcement thereof by placing the psychologist on probation, which probation shall be revocable if the Board finds the conditions of the probation order are not being followed by the psychologist.
4. As a condition of probation the Board may require the psychologist to submit to care, counseling, or treatment by a professional designated by the Board. The expense of such action shall be borne by the psychologist.
5. The Board may, at any time, modify the conditions of the probation and may include among them any reasonable condition for the purpose of the protection of the public, or for the purpose of the rehabilitation of the probationer, or both.
6. The Board shall have the power to require restitution when necessary.
7. The Board shall have the power to assess the costs of the disciplinary proceeding.

M. Privileged Communication

This section regulates and limits the powers of the judicial system. The courts or other administrative agencies with subpoena power have the right to make use of all relevant information in the judicial fact-finding process unless this right of access to information is specifically limited. Historically, courts and legislatures have been charged with fact-finding in order to seek truth and administer justice. At the same time they have attempted to maintain the integrity of the confidential and private relationship between psychologist and patient or client. However, some societal issues have emerged, such as child abuse and sexual abuse that have changed the absolute nature of privileged communication. Though the privilege is not absolute, it is designed to be sufficiently broad to cover all situations except those specifically enumerated. It is a privilege "owned" by the patient or client, who may assert it or waive it, although the psychologist may assert it for a patient or client who wishes to maintain such privilege of communication. It is understood that the privilege encompasses only communications between the patient or client and the psychologist in a professional relationship.

In judicial proceedings, whether civil, criminal, or juvenile; in legislative and administrative proceedings; and in proceedings preliminary and ancillary thereto, a patient or client, or his or her guardian or personal representative, may refuse to disclose or prevent the disclosure of confidential information, including information contained in administrative records, communicated to a psychologist licensed or otherwise authorized to practice psychology under the laws of this jurisdiction, or to persons reasonably believed by the patient or client to be so licensed, and their agents, for the purpose of diagnosis, evaluation, or treatment of any mental or emotional condition or

M. Privileged Communication

This section regulates and limits the powers of the judicial system. The courts or other administrative agencies with subpoena power have the right to make use of all relevant information in the judicial fact-finding process unless this right of access to information is specifically limited. Historically, courts and legislatures have been charged with fact-finding in order to seek truth and administer justice. At the same time they have attempted to maintain the integrity of the confidential and private relationship between psychologist and patient or client. However, some societal issues have emerged, such as child abuse and sexual abuse, that have changed the absolute nature of privileged communication. Though the privilege is not absolute, it is designed to be sufficiently broad to cover all situations except those specifically enumerated. It is a privilege "owned" by the patient or client, who may assert it or waive it, although the psychologist may assert it for a patient or client who wishes to maintain such privilege of communication. It is understood that the privilege encompasses only communications between the patient or client and the psychologist in a professional relationship.

In judicial proceedings, whether civil, criminal, or juvenile; in legislative and administrative proceedings; and in proceedings preliminary and ancillary thereto, a patient or client, or his or her guardian or personal representative, may refuse to disclose or prevent the disclosure of confidential information, including information contained in administrative records, communicated to a psychologist licensed or otherwise authorized to practice psychology under the laws of this jurisdiction, or to persons reasonably believed by the patient or client to be so licensed, or

disorder. In the absence of evidence to the contrary, the psychologist is presumed authorized to claim the privilege on the patient's or client's behalf.

This privilege may not be claimed by the patient or client, or on his or her behalf by authorized persons, in the following circumstances:

1. where abuse or harmful neglect of children, the elderly, or disabled or incompetent individuals is known or reasonably suspected;
2. where the validity of a will of a former patient or client is contested;
3. where such information is necessary for the psychologist to defend against a malpractice action brought by the patient or client;
4. where an immediate threat of physical violence against a readily identifiable victim is disclosed to the psychologist;
5. in the context of civil commitment proceedings, where an immediate threat of self-inflicted damage is disclosed to the psychologist;
6. where the patient or client, by alleging mental or emotional damages in litigation, puts his or her mental state at issue;
7. where the patient or client is examined pursuant to court order; or
8. in the context of investigations and hearings brought by the patient or client and conducted by the Board, where violations of this Act are at issue.

to students, interns, and trainees under the supervision of a licensed psychologist, and their agents, for the purpose of diagnosis, evaluation, or treatment of any mental or emotional condition or disorder. In the absence of evidence to the contrary, the psychologist is presumed authorized to claim the privilege on the patient's or client's behalf.

This privilege may not be claimed by the patient or client, or on his or her behalf by authorized persons, in the following circumstances:

1. where abuse or harmful neglect of children, older adults, or disabled or incompetent individuals is known or reasonably suspected;
2. where the validity of a will of a former patient or client is contested;
3. where such information is necessary for the psychologist to defend against a malpractice action brought by the patient or client;
4. where an immediate threat of physical violence against a readily identifiable victim is disclosed to the psychologist;
5. in the context of civil commitment proceedings, where an immediate threat of self-inflicted damage is disclosed to the psychologist;
6. in any proceeding in which the party relies upon his or her mental or emotional condition as an element of the party's claim or defense;
7. where the patient or client is examined pursuant to court order; or
8. in the context of investigations and hearings brought by the patient or client and conducted by the Board, where violations of this Act are at issue.

N. Severability

As with any law, one provision may be subject to court challenge and ruled invalid or unconstitutional. For example, it is not legally clear whether state licensing boards can regulate persons working for federal agencies. Thus, if any provision is ruled invalid or unconstitutional, it is important that the entire Act not be affected. This can only be achieved by inserting a clause at the end of the Act stating that each provision of the Act is severable from all other provisions and that the declaration that one section is invalid or unconstitutional will not affect the constitutionality or enforceability of any other section.

If any section in this Act or any part of any section thereof shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of any section or part thereof.

N. Severability

Subject: FW: Request for Information

Dear Representative Keller –

Last week at the hearing for HB 110, you asked a question related to the reimbursement rate for services and if the level of certification or type of provider (psychologist, social worker, etc.) influenced the rate of pay received. Since we have just made changes to our reimbursement rate, I wanted to check and be sure I gave you the correct response. Teri Keklak from our Anchorage office provides the following comments and attachments. As Teri states, the rate of reimbursement is based on the service, not the provider.

After you have a chance to review the attached information, please do not hesitate to contact me if you have additional questions. I hope this information answers your question.

Subject: RE: Request for Information

Diane, the BH Medicaid rates for services provided at Community Mental Health Clinics and Substance Abuse Agencies are based on the service provided. While there are no differentials based solely on the credentials of the servicing provider, many of the services require a certain level of professional licensure. The cost of the individual practitioners was considered in our rate review and therefore the services that must be provided by licensed psychologists or physicians typically have the highest reimbursement rates. I have attached a copy of the revised regulations that indicate the rate changes that went into effect on December 26.

The Medicaid rates for services provided by Independent Psychologists are based on the Medicaid physician (RBRVS) fee schedule. As a result of the emergency regulations that were effective March 1, rates to these providers changed. I have attached a spreadsheet which indicates these changes.

Subject: Request for Information

Hello Teri – Yesterday I received a request for information from Rep. Keller asking if our payment rates vary for different professional groups – such as someone with a BSW, MSW, LCSW, Psychological Associate, Psychologist, etc.). I told him I would get the specific information to him—I know we just went through a rate review project, so I want to make sure I give him the most recent information. If I could have a response from you by COB Monday that would be great. Thanks so much. Please let me know if you have any questions.

Code	Description	Max thru 12/31/08	As of 1/1/09	As of 3/1/09
96101	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, e.g., MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these tests results and preparing the report.	\$123.82	\$164.22	\$151.06
96103	Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, e.g., MMPI), administered by a computer, with qualified health care professional interpretation and report.	\$57.36	\$79.61	\$73.23
96105	Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, e.g. by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour.	\$101.01	\$106.97	\$98.39
96110	Developmental testing: limited (e.g. Developmental Screening test II, Early Language Milestone Screen) with interpretation and report	\$17.25	\$15.59	\$14.34
96111	Developmental testing: extended (includes assessment of motor, language, social adaptive and/or cognitive functioning by standardized developmental instruments) with interpretation and report.	\$186.97	\$245.56	\$225.87
96116	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgement, e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spacial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report.	\$139.02	\$178.20	\$163.92
96118	Neurobehavioral testing (e.g. Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report.	\$243.83	\$295.86	\$272.15

Questions and Answers

Q: Why do we need this legislation? Have there been specific complaints submitted regarding people who are not licensed doing the work of a licensed psychologist?

A: The reason is protection of the public. Right now it is possible for someone who has lost their license for misconduct in another state, province, or territory to come to Alaska and obtain employment in an agency as a clinician, or potentially as a psychologist. The person would have the skills and the individual might even be given the title of Clinical Psychologist by an agency, but without being licensed the misconduct would go undiscovered and others could be hurt. By that person being required to obtain a license, their background would be thoroughly checked.

Q: Why should we remove the language "for a fee", which in essence defines the practice of psychology as only that work done in exchange for payment?

A: The reason the statute revision is necessary is the same as above, protection of the public. If you are not allowed to harm people for a fee, you shouldn't be allowed to harm them for free. This part of the bill will not impact other types of professionals – *only* licensed psychologists. This statute only applies to those who would qualify as psychologists educationally. (See comparison of psychologists to other licensed professionals in the counseling fields). These other types of counselors are exempt under AS 08.86.180(d). The language has nothing to do with pastors, pastoral counselors, licensed clinical social workers, marital and family counselors, licensed professional counselors, etc.

Q: What differentiates a psychologist's work from that of another type of licensed professional who engages in counseling work?

A: Psychologists are the only group who can purchase, perform and evaluate/interpret psychological tests – in fact, counseling is not necessarily an area of expertise for psychologists (as opposed to licensed professional counselors or marital and family counselors).

Q: Is the point of tightening the language to exclude faith based groups (which under current statute would fall under "private organizations")?

A: Faith-based has nothing to do with licensing. Faith-based is the concept that government funds can be used to fund ministries by faith-based groups to help people in a multitude of ways, such as treatment for substance abuse, sex-offenders, etc. As long as the workers are not presenting themselves to the

public as psychologists or psychological associates, this legislation would not apply.

Q: What are some examples of tests that only licensed psychologists can give? Why is it important that only licensed psychologists give these tests? Also - can school psychologists give any types of psychological tests, such as an IQ test?

A: I have attached a Test Qualification Form. Some of the tests cannot be purchased even by Psychological Associates because they must be licensed to a Psychologist or an agency that takes responsibility for the security and use of the test. To find the names of tests all you have to do is get a testing catalog or go on line to a test publisher. They require that you send in your credentials before you can buy the test. **IQ tests, Personality Tests, Neuropsychological Tests,** are examples of some that require licensure at the doctoral level.

Compare Psychologists to other counselors

Psychologists

1. Doctorate degree in psychology in:
 - o Clinical psychology
 - o Counseling psychology
 - o Education in equivalent field
2. Hasn't engaged in dishonorable conduct
3. Has **one** year post doctoral supervised experience approved by the board

NB: The board may not deny recognition as an accredited or approved academic institution to an educational institution solely because its program has not been accredited by a professional organization of psychologists.

Psychological Associates

1. Masters Degree in psychology in:
 - o Clinical psychology
 - o Counseling psychology
 - o Education in an equivalent field
2. Hasn't engaged in dishonorable conduct
3. Has **two** years of post masters supervised experience approved by the board
4. Takes and passes the objective examination approved by the board for psychological associates

NB: The board may not deny recognition as an accredited or approved academic institution to an educational institution solely because its program has not been accredited by a professional organization of psychologists.

Qualifications to take the Exam:

1. Hasn't engaged in dishonorable conduct
2. Holds a masters w/primary emphasis on psychology [...] with the equivalent of at least 48 semester credit hours of grad course work related to a specialized area of psychology
3. Has the recommendation of an immediate supervisor
4. *has not failed the exam w/in the proceeding 6 months*

School Psychologists

1. Has a Masters or Doctoral degree in school psychology and
2. Has been recommended for endorsement by an institution whose psychology program has been approved by:
 - a. The National Council for Accreditation of Teacher Education,
 - b. The National Association of State Directors of Teacher Education and Certification,
 - c. The National Association of School Psychologists, or
 - d. The American Psychological Association

AND has completed a 1200 hour internship in school psychology;

OR

Be a nationally certified school psychologist under the National School Psychologist Certification System established by the National Association of School Psychologists

Compare Psychologists to other counselors

Licensed Professional Counselors

4. 18 or older
5. Is not under investigation
6. Has not had a license related to the practice of counseling, psychology, marital and family therapy or social work suspended, revoked or surrendered
7. Has passed a written exam
8. Has completed either:
 - o A Doctoral degree in counseling or a related field
 - o A Masters degree in counseling or a related field AND at least 60 graduate semester hours in counseling during or after earning the Masters degree
9. Has at least 3000 hours of supervised experience practicing professional counseling

Marital and Family Therapists

5. Applies on a form
6. pays the fee
7. Furnishes evidence that:
 - o They haven't engaged in dishonorable conduct
 - o They hold a master's degree or doctorate in marital and family therapy or allied mental health field
 - o After receiving the degree mentioned above, has:
 - i. 1500 hours of clinical contact
 - ii. Supervised for at least 200 hours
 - o Has training related to domestic violence
 - o Has passed the written or oral examination

Licensed Clinical Social Worker

3. Has a Masters or Doctoral degree in social worked
4. Has completed, within 10 years of application, and under the supervision of a licensed social worker:
 - a. At least two years of continuous full time employment in post-grad clinical social work, or
 - b. At least 3000 hours of less than full time employment in a period of not less than two years
5. Is of good moral character
6. Is in good professional standing
7. Has provided three professional references
8. Has completed the examination
9. Has paid the required fees
- 10.

CS FOR HOUSE BILL NO. 126()

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY

**Offered:
Referred:**

**Sponsor(s): REPRESENTATIVES GARA, Crawford, Kerttula, Gardner, Harris, Richard Foster, Edgmon,
Muñoz, Lynn**

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to residential shelters for runaway minors; and relating to extensions**
2 **of state custody of children."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.10.080(c) is amended to read:

5 (c) If the court finds that the child is a child in need of aid, the court shall

6 (1) order the child committed to the department for placement in an
7 appropriate setting for a period of time not to exceed two years or in any event not to
8 extend past the date the child becomes 19 years of age, except that the department, the
9 child, or the child's guardian ad litem may petition for and the court may grant in a
10 hearing

11 (A) two-year extensions of commitment that do not extend
12 beyond the person's 21st birthday if the continued custody is in the best
13 interests of the person and the person consents to it [ONE-YEAR
14 EXTENSIONS OF COMMITMENT THAT DO NOT EXTEND BEYOND

1 THE CHILD'S 19TH BIRTHDAY IF THE EXTENSION IS IN THE BEST
2 INTERESTS OF THE CHILD]; and

3 (B) an additional [ONE-YEAR] period of state custody past 19
4 years of age or, if the person is emancipated, past the date of emancipation,
5 that does not extend beyond the person's 21st birthday, if the resumption
6 of [CONTINUED] state custody is in the best interests of the person and the
7 person

8 (i) consents to it;

9 (ii) was placed in out-of-home care by the
10 department immediately before being released from state custody,
11 if the person was released for a reason other than court-ordered
12 reunification with the person's parent; and

13 (iii) is in need of out-of-home care to avoid personal
14 harm, homelessness, or economic hardship, or to enhance the
15 person's ability to continue the person's education or training or
16 otherwise improve the person's successful transition to
17 independent living;

18 (2) order the child released to a parent, adult family member, or
19 guardian of the child or to another suitable person, and, in appropriate cases, order the
20 parent, adult family member, guardian, or other person to provide medical or other
21 care and treatment; if the court releases the child, it shall direct the department to
22 supervise the care and treatment given to the child, but the court may dispense with
23 the department's supervision if the court finds that the adult to whom the child is
24 released will adequately care for the child without supervision; the department's
25 supervision may not exceed two years or in any event extend past the date the child
26 reaches 19 years of age, except that the department or the child's guardian ad litem
27 may petition for and the court may grant in a hearing

28 (A) one-year extensions of supervision that do not extend
29 beyond the child's 19th birthday if the extensions are in the best interests of the
30 child; and

31 (B) an additional one-year period of supervision past 19 years

1 of age if the continued supervision is in the best interests of the person and the
2 person consents to it; or

3 (3) order, under the grounds specified in (o) of this section or
4 AS 47.10.088, the termination of parental rights and responsibilities of one or both
5 parents and commit the child to the custody of the department, and the department
6 shall report quarterly to the court on efforts being made to find a permanent placement
7 for the child.

8 * Sec. 2. AS 47.10.310 is amended by adding a new subsection to read:

9 (e) A program for runaway minors that operates a licensed residential shelter
10 in the state shall provide a shelter with a capacity designated in the license issued
11 under AS 47.10.300 - 47.10.390.

12 * Sec. 3. AS 47.10.990(3) is amended to read:

13 (3) "child" means a person who is

14 (A) under 18 years of age;

15 (B) [AND A PERSON] 19 years of age if that person was
16 under 18 years of age at the time that a proceeding under this chapter was
17 commenced; and

18 (C) under 21 years of age if that person is living in out-of-
19 home care as defined in AS 47.14.900;

ANALYSIS: (Attach a separate page if necessary)

The intent of CSHB126(HSS) is to improve outcomes for youth that are preparing to transition out of state custody and their foster care settings into independent living situations by extending the time they may remain in state custody and allowing for opportunities to re-enter state custody after they have exited foster care.

This fiscal note addresses increased foster care special needs costs for youth who remain in foster care beyond age 18. Special needs costs include items such as extraordinary clothing, family vacations, biological family visitation, medical costs that fall outside of Medicaid.

Prepared by: Tammy Sandoval, Director
Division: Office of Children's Services

Phone 465-3191
Date/Time 4/1/10 1:00 PM

Approved by: Alison Elgee, Assistant Commissioner
DHSS Finance & Management Services

Date 4/1/2010

ANALYSIS CONTINUATION

The following assumptions have been applied:

1. OCS successfully implements all federal program requirements to extend foster care to age 21.
2. The number of youth who return to foster care after emancipation will be minimal. An estimate provided by the Facing Foster Care in Alaska group equaled 3. These youth are included in the calculations provided below.
3. The number of youth who turn age 18 will remain somewhat consistent from year to year. No consideration has been included in this note for a possible influx of youth into the program extension during the first year of implementation.
4. Calculations are based on full time equivalents (FTEs) to account for youth who move in and out of the program for varying reasons.
5. FTEs are a simple estimate based on the unsupported assumptions that 10% of the number of FTE youth currently in care ages 18, 19, and 20, will remain in foster care (34 FTE youth).
6. Excluding youth already in extended care because of special needs, 6 FTE special needs children ages 18, 19, and 20 will remain in care longer, bringing the annual FTE count to 40.
7. Calculations use the average cost per child for special needs items.
8. The foster care penetration rate and the Federal Medical Assistance Percentage will remain somewhat stable.
9. 66% percent of the youth who remain in care will pursue secondary education and thus remain within the requirements of the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 and eligible for IV-E federal reimbursement.

Estimated cost per FTE = \$2,340.00 annually x 40 FTEs = \$93,600. Federal reimbursement for these costs is estimated at 5.4% or \$5,540.

 6 Assistance Improvement Act of 2001) or to require the hiring of additional personnel."
 7

8 Reletter the following subsection accordingly.

9
 10 Page 2, lines 15 - 20:

11 Delete all material and insert:

12 "(1) "homeless student" means a person under 19 years of age who is
 13 in a state of homelessness for lack of a fixed, regular, and adequate nighttime
 14 residence that is intended to serve as a permanent home; "homelessness" includes

15 (A) placement in an emergency shelter;

16 (B) placement in out-of-home care as defined under
 17 AS 47.14.400;

18 (C) placement in transient housing; and

19 (D) the period in which a student is awaiting placement in out-
 20 of-home care as defined under AS 47.14.400."
 21

22 Page 9, following line 10:

23 Insert a new bill section to read:

24 **** Sec. 9.** AS 47.10.080(c) is amended to read:

25 (c) If the court finds that the child is a child in need of aid, the court shall

26 (1) order the child committed to the department for placement in an
 27 appropriate setting for a period of time not to exceed two years or in any event not to
 28 extend past the date the child becomes 19 years of age, except that the department or
 29 the child's guardian ad litem may petition for and the court may grant in a hearing

30 (A) one-year extensions of commitment that do not extend
 31 beyond the child's 19th birthday if the extension is in the best interests of the

1 child; and

2 (B) one-year extensions of commitment that do not extend
 3 beyond the child's 21st birthday [AN ADDITIONAL ONE-YEAR PERIOD
 4 OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state
 5 custody is in the best interests of the person and the person consents to it;

6 (2) order the child released to a parent, adult family member, or
 7 guardian of the child or to another suitable person, and, in appropriate cases, order the
 8 parent, adult family member, guardian, or other person to provide medical or other
 9 care and treatment; if the court releases the child, it shall direct the department to
 10 supervise the care and treatment given to the child, but the court may dispense with
 11 the department's supervision if the court finds that the adult to whom the child is
 12 released will adequately care for the child without supervision; the department's
 13 supervision may not exceed two years or in any event extend past the date the child
 14 reaches 19 years of age, except that the department or the child's guardian ad litem
 15 may petition for and the court may grant in a hearing

16 (A) one-year extensions of supervision that do not extend
 17 beyond the child's 19th birthday if the extensions are in the best interests of the
 18 child; and

19 (B) an additional one-year period of supervision past 19 years
 20 of age if the continued supervision is in the best interests of the person and the
 21 person consents to it; or

22 (3) order, under the grounds specified in (o) of this section or
 23 AS 47.10.088, the termination of parental rights and responsibilities of one or both
 24 parents and commit the child to the custody of the department, and the department
 25 shall report quarterly to the court on efforts being made to find a permanent placement
 26 for the child."

CS FOR HOUSE BILL NO. 126()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GARA, Crawford, Kerttula, Gardner, Harris, Foster, Edgmon, Muñoz

A BILL
FOR AN ACT ENTITLED

1 **"An Act relating to continuing the secondary public education of a homeless student;**
2 **relating to the purpose of certain laws as they relate to children; relating to tuition**
3 **waivers, loans, and medical assistance for a child placed in out-of-home care by the**
4 **state; relating to foster care; relating to children in need of aid; and relating to out-of-**
5 **home care transition to independent living."**

6 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

7 *** Section 1. AS 14.03 is amended by adding a new section to read:**

8 **Sec. 14.03.096. Continuing the public education of a homeless student. (a)**
9 **Except as provided in (b) and (d) of this section, the governing body of a school**
10 **district shall, consistent with the student's best interest, provide transportation services**
11 **and coordinate with the Department of Health and Social Services the continuation of**
12 **the public education of a homeless student in the student's school of origin for the**
13 **remainder of the current school year or, if the student is attending school for a summer**

1 term, for the remainder of the summer term.

2 (b) The requirements in (a) of this section do not apply if the student moves to
3 a school district other than the school district in which the student's school of origin is
4 located.

5 (c) If a homeless student is transferred to a school other than the student's
6 school of origin, the school of origin shall provide a copy of the student's records to
7 the student's new school within seven school days after notification of the transfer.
8 The student's new school shall allow the student to attend school while awaiting the
9 transfer of records under this subsection.

10 (d) A school district is required to comply with this section only

11 (1) if the legislature appropriates funds for the purpose; and

12 (2) to the extent possible using funds appropriated for the purpose.

13 (e) A school district shall promote a homeless student's best interest by

14 (1) except when requested by the student or the student's legal
15 guardian, maintaining the enrollment of the homeless student in the student's school of
16 origin;

17 (2) providing a written explanation that includes an appeal procedure
18 for a decision that removes a homeless student from the student's school of origin; and

19 (3) considering the views of the homeless student and the student's
20 legal guardian.

21 (f) A school district shall designate a liaison between the school district and
22 the homeless student and the student's legal guardian to coordinate compliance with
23 this section.

24 (g) Nothing in this section is intended to supersede the applicable
25 requirements of 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education
26 Assistance Improvement Act of 2001) or to require the hiring of additional personnel.

27 (h) In this section,

28 (1) "homeless student" means a person under 19 years of age who is in
29 a state of homelessness for lack of a fixed, regular, and adequate nighttime residence
30 that is intended to serve as a permanent home; "homelessness" includes

31 (A) placement in an emergency shelter;

1 (B) placement in out-of-home care as defined under
2 AS 47.14.400;

3 (C) placement in transient housing; and

4 (D) the period in which a student is awaiting placement in out-
5 of-home care as defined under AS 47.14.400;

6 (2) "school of origin" means the school in which the student was last
7 enrolled.

8 * Sec. 2. AS 14.43 is amended by adding a new section to read:

9 **Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.**

10 **Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home**
11 **care.** (a) A person who enrolls as a student in good standing in a state-supported
12 educational institution in the state is entitled to a waiver of tuition, fees, and room and
13 board expenses if the person provides adequate proof that the person

14 (1) was in the custody of the state under AS 47.10 or AS 47.14;

15 (2) was placed in out-of-home care for a period of not less than six
16 consecutive months on or after the person became 16 years of age;

17 (3) has applied for educational grants or scholarships that the person is
18 otherwise eligible for as recommended by the educational institution;

19 (4) has applied for an available federal education loan; and

20 (5) is under 29 years of age.

21 (b) The amount of the waiver to which a person is entitled under this section is
22 the amount of unmet need for tuition, room, and board expenses, as determined by the
23 commission, after deducting funding for the school year from education loans, grants,
24 or scholarships received by a person eligible for a waiver.

25 (c) The proceeds of an education loan, grant, or scholarship received by a
26 person eligible for a waiver under this section must be paid to the educational
27 institution to offset the person's tuition, fees, and room and board expenses.

28 (d) A state-supported educational institution in the state is required to provide
29 a waiver under (a) of this section only if the legislature appropriates funds for the
30 purpose of offsetting waivers under this section. If an appropriation is not sufficient to
31 fully offset waivers for each person entitled to a waiver under (a) of this section, the

1 institution may offer full or partial waivers to eligible applicants as funding permits
2 and at the discretion of the institution.

3 * **Sec. 3.** AS 14.43.160 is amended by adding a new paragraph to read:

4 (7) "out-of-home care" has the meaning given in AS 47.14.400.

5 * **Sec. 4.** AS 36.30.850(b)(42) is amended to read:

6 (42) grants and contracts with qualified entities for services under
7 AS 47.18.330 for the out-of-home [FOSTER] care transition program;

8 * **Sec. 5.** AS 47.05.060 is amended to read:

9 **Sec. 47.05.060. Purpose and policy relating to children.** The purpose of this
10 title as it relates to children is to secure for each child the care and guidance,
11 preferably in the child's own home, as well as an education, that will serve the moral,
12 emotional, mental, intellectual, and physical welfare of the child and the best interests
13 of the community; to preserve and strengthen the child's family ties unless efforts to
14 preserve and strengthen the ties are likely to result in physical or emotional damage to
15 the child, removing the child from the custody of the parents only as a last resort when
16 the child's welfare or safety or the protection of the public cannot be adequately
17 safeguarded without removal; and, when the child is removed from the family, to
18 secure for the child adequate custody, education, and care and adequate planning for
19 permanent placement of the child.

20 * **Sec. 6.** AS 47.05.065 is amended to read:

21 **Sec. 47.05.065. Legislative findings related to children.** The legislature finds
22 that

23 (1) parents have the following rights and responsibilities relating to the
24 care and control of their child while the child is a minor:

25 (A) the responsibility to provide the child with food, clothing,
26 shelter, education, and medical care;

27 (B) the right and responsibility to protect, nurture, train, and
28 discipline the child, including the right to direct the child's medical care and
29 the right to exercise reasonable corporal discipline;

30 (C) the right to determine where and with whom the child shall
31 live;

1 (D) the right and responsibility to make decisions of legal or
2 financial significance concerning the child;

3 (E) the right to obtain representation for the child in legal
4 actions; and

5 (F) the responsibility to provide special safeguards and care,
6 including appropriate prenatal and postnatal protection for the child;

7 (2) it is the policy of the state to strengthen families and to protect
8 children from child abuse and neglect; the state recognizes that, in some cases,
9 protection of a child may require removal of the child from the child's home; however,

10 (A) except in those cases involving serious risk to a child's
11 health or safety, the Department of Health and Social Services should provide
12 time-limited family support services to the child and the child's family in order
13 to offer parents the opportunity to remedy parental conduct or conditions in the
14 home that placed the child at risk of harm so that a child may return home
15 safely and permanently; and

16 (B) the state also recognizes that when a child is removed from
17 the home, visitation between the child and the child's parents or guardian and
18 family members reduces the trauma for the child and enhances the likelihood
19 that the child will be able to return home; therefore, whenever a child is
20 removed from the parental home, the Department of Health and Social
21 Services should encourage frequent, regular, and reasonable visitation of the
22 child with the child's parent or guardian and family members;

23 (3) it is the policy of the state to recognize that, when a child is a ward
24 of the state, the child is entitled to reasonable safety, adequate care, and adequate
25 treatment and that the Department of Health and Social Services as legal custodian and
26 the child's guardian ad litem as guardian of the child's best interests and their agents
27 and assignees, each should make reasonable efforts to ensure that the child is provided
28 with reasonable safety, adequate care, and adequate treatment for the duration of time
29 that the child is a ward of the state;

30 (4) it is in the best interests of a child who has been removed from the
31 child's own home for the state to apply the following principles in resolving the

1 situation:

2 (A) the child should be placed in a safe, secure, and stable
3 environment;

4 (B) the child should not be moved unnecessarily;

5 (C) a planning process should be followed to lead to permanent
6 placement of the child;

7 (D) every effort should be made to encourage psychological
8 attachment between the adult caregiver and the child;

9 (E) frequent, regular, and reasonable visitation with the parent
10 or guardian and family members should be encouraged; [AND]

11 (F) parents and guardians must actively participate in family
12 support services so as to facilitate the child's being able to remain in the home;
13 when children are removed from the home, the parents and guardians must
14 actively participate in family support services to make return of their children
15 to the home possible; **and**

16 **(G) the child should continue to attend the child's school of**
17 **origin as provided under AS 14.03.096;**

18 (5) numerous studies establish that

19 (A) children undergo a critical attachment process before the
20 time they reach six years of age;

21 (B) a child who has not attached with an adult caregiver during
22 this critical stage will suffer significant emotional damage that frequently leads
23 to chronic psychological problems and antisocial behavior when the child
24 reaches adolescence and adulthood; and

25 (C) it is important to provide for an expedited placement
26 procedure to ensure that all children, especially those under the age of six
27 years, who have been removed from their homes are placed in permanent
28 homes expeditiously.

29 * Sec. 7. AS 47.07.020(b) is amended to read:

30 (b) In addition to the persons specified in (a) of this section, the following
31 optional groups of persons for whom the state may claim federal financial

1 participation are eligible for medical assistance:

2 (1) persons eligible for but not receiving assistance under any plan of
3 the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act,
4 Supplemental Security Income) or a federal program designated as the successor to the
5 aid to families with dependent children program;

6 (2) persons in a general hospital, skilled nursing facility, or
7 intermediate care facility, who, if they left the facility, would be eligible for assistance
8 under one of the federal programs specified in (1) of this subsection;

9 (3) persons under 21 years of age who are under supervision of the
10 department, for whom maintenance is being paid in whole or in part from public
11 funds, and who are in out-of-home care [FOSTER HOMES] or private child-care
12 institutions;

13 (4) aged, blind, or disabled persons, who, because they do not meet
14 income and resources requirements, do not receive supplemental security income
15 under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not
16 receive a mandatory state supplement, but who are eligible, or would be eligible if
17 they were not in a skilled nursing facility or intermediate care facility to receive an
18 optional state supplementary payment;

19 (5) persons under 21 years of age who are in an institution designated
20 as an intermediate care facility for the mentally retarded and who are financially
21 eligible as determined by the standards of the federal program designated as the
22 successor to the aid to families with dependent children program;

23 (6) persons in a medical or intermediate care facility whose income
24 while in the facility does not exceed \$1,656 a month but who would not be eligible for
25 an optional state supplementary payment if they left the hospital or other facility;

26 (7) persons under 21 years of age who are receiving active treatment in
27 a psychiatric hospital and who are financially eligible as determined by the standards
28 of the federal program designated as the successor to the aid to families with
29 dependent children program;

30 (8) persons under 21 years of age and not covered under (a) of this
31 section [,] who would be eligible for benefits under the federal program designated as

1 the successor to the aid to families with dependent children program, except that they
2 have the care and support of both their natural and adoptive parents;

3 (9) pregnant women not covered under (a) of this section and who
4 meet the income and resource requirements of the federal program designated as the
5 successor to the aid to families with dependent children program;

6 (10) persons under 21 years of age not covered under (a) of this section
7 who the department has determined cannot be placed for adoption without medical
8 assistance because of a special need for medical or rehabilitative care and who the
9 department has determined are hard-to-place children eligible for subsidy under
10 AS 25.23.190 - 25.23.210;

11 (11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title
12 XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom
13 a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title
14 XVI, Social Security Act) because they meet all of the following criteria:

15 (A) they are 18 years of age or younger and qualify as disabled
16 individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

17 (B) the department has determined that

18 (i) they require a level of care provided in a hospital,
19 nursing facility, or intermediate care facility for the mentally retarded;

20 (ii) it is appropriate to provide their care outside of an
21 institution; and

22 (iii) the estimated amount that would be spent for
23 medical assistance for their individual care outside an institution is not
24 greater than the estimated amount that would otherwise be expended
25 individually for medical assistance within an appropriate institution;

26 (C) if they were in a medical institution, they would be eligible
27 for medical assistance under other provisions of this chapter; and

28 (D) home and community-based services under a waiver
29 approved by the federal government are either not available to them under this
30 chapter or would be inappropriate for them;

31 (12) disabled persons, as described in 42 U.S.C.

1 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under
 2 applicable federal regulations or guidelines, is less than 250 percent of the official
 3 poverty line applicable to a family of that size according to the United States
 4 Department of Health and Human Services, and who, but for earnings in excess of the
 5 limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be
 6 individuals with respect to whom a supplemental security income is being paid under
 7 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is
 8 not eligible under another provision of this section shall pay a premium or other cost-
 9 sharing charges according to a sliding fee scale that is based on income as established
 10 by the department in regulations;

11 (13) persons under 19 years of age who are not covered under (a) of
 12 this section and whose household income does not exceed 175 percent of the federal
 13 poverty line as defined by the United States Department of Health and Human
 14 Services and revised under 42 U.S.C. 9902(2);

15 (14) pregnant women who are not covered under (a) of this section and
 16 whose household income does not exceed 175 percent of the federal poverty line as
 17 defined by the United States Department of Health and Human Services and revised
 18 under 42 U.S.C. 9902(2);

19 (15) persons who have been diagnosed with breast or cervical cancer
 20 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII);

21 (16) persons under 21 years of age who were in the custody of the
 22 department under AS 47.10 or AS 47.14 and who were placed in out-of-home
 23 care for a period of not less than six consecutive months on or after reaching 16
 24 years of age.

25 * Sec. 8. AS 47.07.020 is amended by adding a new subsection to read:

26 (o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

27 * Sec. 9. AS 47.10.080(c) is amended to read:

28 (c) If the court finds that the child is a child in need of aid, the court shall

29 (1) order the child committed to the department for placement in an
 30 appropriate setting for a period of time not to exceed two years or in any event not to
 31 extend past the date the child becomes 19 years of age, except that the department or

1 the child's guardian ad litem may petition for and the court may grant in a hearing

2 (A) one-year extensions of commitment that do not extend
3 beyond the child's 19th birthday if the extension is in the best interests of the
4 child; and

5 (B) one-year extensions of commitment that do not extend
6 beyond the child's 21st birthday [AN ADDITIONAL ONE-YEAR PERIOD
7 OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state
8 custody is in the best interests of the person and the person consents to it;

9 (2) order the child released to a parent, adult family member, or
10 guardian of the child or to another suitable person, and, in appropriate cases, order the
11 parent, adult family member, guardian, or other person to provide medical or other
12 care and treatment; if the court releases the child, it shall direct the department to
13 supervise the care and treatment given to the child, but the court may dispense with
14 the department's supervision if the court finds that the adult to whom the child is
15 released will adequately care for the child without supervision; the department's
16 supervision may not exceed two years or in any event extend past the date the child
17 reaches 19 years of age, except that the department or the child's guardian ad litem
18 may petition for and the court may grant in a hearing

19 (A) one-year extensions of supervision that do not extend
20 beyond the child's 19th birthday if the extensions are in the best interests of the
21 child; and

22 (B) an additional one-year period of supervision past 19 years
23 of age if the continued supervision is in the best interests of the person and the
24 person consents to it; or

25 (3) order, under the grounds specified in (o) of this section or
26 AS 47.10.088, the termination of parental rights and responsibilities of one or both
27 parents and commit the child to the custody of the department, and the department
28 shall report quarterly to the court on efforts being made to find a permanent placement
29 for the child.

30 * Sec. 10. AS 47.10.080 is amended by adding new subsections to read:

31 (v) A social worker employed by or under contract with the department shall,

1 not less than monthly, conduct visits with a child committed to the custody of the
 2 department under (c) of this section. The visits must be of sufficient substance and
 3 duration to address issues pertinent to case planning and service delivery to ensure the
 4 child's safety, permanency, and well-being. The majority of the visits conducted under
 5 this subsection must be at the location of the child's current placement. Nothing in this
 6 paragraph creates a private right of action against the department's employees or
 7 contractors. In this subsection, "visit" means face-to-face contact between social
 8 worker and child.

9 (w) The department shall

10 (1) notify the governing body of a school district and the principal of
 11 the school in which a student who is in the custody of the department is enrolled of a
 12 change in the placement of the student if the placement is outside of the attendance
 13 boundaries of the school; and

14 (2) assist the district in complying with the requirements of
 15 AS 14.03.096.

16 * Sec. 11. AS 47.10.990(3) is amended to read:

17 (3) "child" means a person who is

18 (A) under 18 years of age;

19 (B) [AND A PERSON] 19 years of age if that person was
 20 under 18 years of age at the time that a proceeding under this chapter was
 21 commenced; and

22 (C) under 21 years of age if that person is living in out-of-
 23 home care;

24 * Sec. 12. AS 47.10.990 is amended by adding a new paragraph to read:

25 (33) "out-of-home care" has the meaning given in AS 47.14.400.

26 * Sec. 13. AS 47.18.300(a) is amended to read:

27 (a) The department, in coordination with local public and private agencies,
 28 shall design, develop, and implement an out-of-home care [A FOSTER CARE]
 29 transition program to provide support and services to individuals who

30 (1) reach or have reached the age of 16 or older while in state custody
 31 and placed in out-of-home [FOSTER] care and have not yet reached 23 years of age;

1 and

2 (2) meet other eligibility criteria established by the department under
3 (b) of this section.

4 * Sec. 14. AS 47.18.310 is amended to read:

5 **Sec. 47.18.310. Program design.** The department, in coordination with local
6 public and private agencies, shall design the program as a continuation of the training
7 efforts related to independent living skills that were initiated for a child in state
8 custody who was placed in out-of-home care and [WHEN THE STATE FOSTER
9 CARE RECIPIENTS WERE] identified as being likely to remain in out-of-home
10 [STATE FOSTER] care until reaching not less than the age of 18. The program
11 design must require that program participants are directly involved in identifying the
12 program activities that will prepare them for independent living.

13 * Sec. 15. AS 47.18.320(a) is amended to read:

14 (a) Subject to the availability of an appropriation made for the purposes of
15 AS 47.18.300 - 47.18.390, the program may provide

- 16 (1) education and vocational training;
17 (2) assistance in obtaining basic education and training;
18 (3) career and employment services;
19 (4) training in basic life skills;
20 (5) housing and utility assistance;
21 (6) mentoring and counseling; and
22 (7) other appropriate services to complement the efforts of former state
23 foster care recipients or a child who was in state custody and placed in out-of-
24 home care to achieve self-sufficiency.

25 * Sec. 16. AS 47.18 is amended by adding a new section to read:

26 **Sec. 47.18.335. Monetary living expense stipend.** The department shall
27 provide to an individual eligible for services under the program who has left out-of-
28 home care a monthly stipend in an amount that is necessary to meet an individual's
29 living expenses as determined by the department and that is not more than the daily
30 rate provided to a licensed foster parent. The stipend shall continue for a period of not
31 more than one year and shall end before the individual is 23 years of age. The

1 department may adopt regulations to implement this section.

2 * Sec. 17. AS 47.18.390(1) is amended to read:

3 (1) "program" means the out-of-home [FOSTER] care transition
4 program authorized under AS 47.18.300 - 47.18.390;

5 * Sec. 18. AS 47.18.390(3) is repealed and reenacted to read:

6 (3) "out-of-home care" has the meaning given in AS 47.14.400.

CS FOR HOUSE BILL NO. 126(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVES GARA, Crawford, Kerttula, Gardner, Harris, Foster, Edgmon, Muñoz, Lynn

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to continuing the secondary public education of a homeless student;**
2 **relating to the purpose of certain laws as they relate to children; relating to tuition**
3 **waivers, loans, and medical assistance for a child placed in out-of-home care by the**
4 **state; relating to foster care; relating to children in need of aid; and relating to out-of-**
5 **home care transition to independent living."**

6 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

7 *** Section 1.** AS 14.03 is amended by adding a new section to read:

8 **Sec. 14.03.096. Continuing the public education of a homeless student. (a)**
9 Except as provided in (b) and (d) of this section, the governing body of a school
10 district shall, to the extent feasible and consistent with the student's best interest,
11 provide transportation services and coordinate with the Department of Health and
12 Social Services the continuation of the public education of a homeless student in the
13 student's school of origin for the remainder of the current school year.

1 (b) The requirements in (a) of this section do not apply if the student moves to
2 a school district other than the school district in which the student's school of origin is
3 located.

4 (c) If a homeless student is transferred to a school other than the student's
5 school of origin, the school of origin shall provide a copy of the student's records to
6 the student's new school within seven school days after notification of the transfer.
7 The student's new school shall allow the student to attend school while awaiting the
8 transfer of records under this subsection.

9 (d) A school district is required to comply with this section only

10 (1) if the legislature appropriates funds for the purpose; and

11 (2) to the extent possible using funds appropriated for the purpose.

12 (e) A school district shall promote a homeless student's best interest by

13 (1) except when requested by the student or the student's legal
14 guardian, maintaining the enrollment of the homeless student in the student's school of
15 origin;

16 (2) providing a written explanation that includes an appeal procedure
17 for a decision that removes a homeless student from the student's school of origin; and

18 (3) considering the views of the homeless student and the student's
19 legal guardian.

20 (f) A school district shall designate a liaison between the school district and
21 the homeless student and the student's legal guardian to coordinate compliance with
22 this section.

23 (g) Nothing in this section is intended to supersede the applicable
24 requirements of 42 U.S.C. 11431 - 11435 (McKinney-Vento Homeless Education
25 Assistance Improvement Act of 2001) or to require the hiring of additional personnel
26 or more than one liaison in each school district.

27 (h) In this section,

28 (1) "homeless student" means a person under 19 years of age who is in
29 a state of homelessness for lack of a fixed, regular, and adequate nighttime residence
30 that is intended to serve as a permanent home; "homelessness" includes

31 (A) placement in an emergency shelter;

1 (B) placement in out-of-home care as defined under
2 AS 47.14.400;

3 (C) placement in transient housing; and

4 (D) the period in which a student is awaiting placement in out-
5 of-home care as defined under AS 47.14.400;

6 (2) "school of origin" means the school in which the student was last
7 enrolled.

8 * **Sec. 2.** AS 14.43 is amended by adding a new section to read:

9 **Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.**

10 **Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home**
11 **care.** (a) A person who enrolls as a student in good standing in a state-supported
12 educational institution in the state is entitled to a waiver of tuition, fees, and room and
13 board expenses if the person provides adequate proof that the person

14 (1) was in the custody of the state under AS 47.10 or AS 47.14;

15 (2) was placed in out-of-home care for a period of not less than six
16 consecutive months on or after the person became 16 years of age;

17 (3) has applied for educational grants or scholarships that the person is
18 otherwise eligible for as recommended by the educational institution;

19 (4) has applied for an available subsidized federal education loan; and

20 (5) is under 29 years of age.

21 (b) The amount of the waiver to which a person is entitled under this section is
22 the amount of unmet need for tuition, room, and board expenses, as determined by the
23 institution, after deducting funding for the school year from education loans, grants, or
24 scholarships received by a person eligible for a waiver.

25 (c) The proceeds of an education loan, grant, or scholarship received by a
26 person eligible for a waiver under this section must be paid to the educational
27 institution to offset the person's tuition, fees, and room and board expenses.

28 (d) A state-supported educational institution in the state is required to provide
29 a waiver under (a) of this section only if the legislature appropriates funds for the
30 purpose of offsetting waivers under this section. If an appropriation is not sufficient to
31 fully offset waivers for each person entitled to a waiver under (a) of this section, the

1 institution may offer full or partial waivers to eligible applicants as funding permits
2 and at the discretion of the institution.

3 * **Sec. 3.** AS 14.43.160 is amended by adding a new paragraph to read:

4 (7) "out-of-home care" has the meaning given in AS 47.14.400.

5 * **Sec. 4.** AS 36.30.850(b)(42) is amended to read:

6 (42) grants and contracts with qualified entities for services under
7 AS 47.18.330 for the out-of-home [FOSTER] care transition program;

8 * **Sec. 5.** AS 47.05.060 is amended to read:

9 **Sec. 47.05.060. Purpose and policy relating to children.** The purpose of this
10 title as it relates to children is to secure for each child the care and guidance,
11 preferably in the child's own home, as well as an education, that will serve the moral,
12 emotional, mental, intellectual, and physical welfare of the child and the best interests
13 of the community; to preserve and strengthen the child's family ties unless efforts to
14 preserve and strengthen the ties are likely to result in physical or emotional damage to
15 the child, removing the child from the custody of the parents only as a last resort when
16 the child's welfare or safety or the protection of the public cannot be adequately
17 safeguarded without removal; and, when the child is removed from the family, to
18 secure for the child adequate custody, education, and care and adequate planning for
19 permanent placement of the child.

20 * **Sec. 6.** AS 47.05.065 is amended to read:

21 **Sec. 47.05.065. Legislative findings related to children.** The legislature finds
22 that

23 (1) parents have the following rights and responsibilities relating to the
24 care and control of their child while the child is a minor:

25 (A) the responsibility to provide the child with food, clothing,
26 shelter, education, and medical care;

27 (B) the right and responsibility to protect, nurture, train, and
28 discipline the child, including the right to direct the child's medical care and
29 the right to exercise reasonable corporal discipline;

30 (C) the right to determine where and with whom the child shall
31 live;

1 (D) the right and responsibility to make decisions of legal or
2 financial significance concerning the child;

3 (E) the right to obtain representation for the child in legal
4 actions; and

5 (F) the responsibility to provide special safeguards and care,
6 including appropriate prenatal and postnatal protection for the child;

7 (2) it is the policy of the state to strengthen families and to protect
8 children from child abuse and neglect; the state recognizes that, in some cases,
9 protection of a child may require removal of the child from the child's home; however,

10 (A) except in those cases involving serious risk to a child's
11 health or safety, the Department of Health and Social Services should provide
12 time-limited family support services to the child and the child's family in order
13 to offer parents the opportunity to remedy parental conduct or conditions in the
14 home that placed the child at risk of harm so that a child may return home
15 safely and permanently; and

16 (B) the state also recognizes that when a child is removed from
17 the home, visitation between the child and the child's parents or guardian and
18 family members reduces the trauma for the child and enhances the likelihood
19 that the child will be able to return home; therefore, whenever a child is
20 removed from the parental home, the Department of Health and Social
21 Services should encourage frequent, regular, and reasonable visitation of the
22 child with the child's parent or guardian and family members;

23 (3) it is the policy of the state to recognize that, when a child is a ward
24 of the state, the child is entitled to reasonable safety, adequate care, and adequate
25 treatment and that the Department of Health and Social Services as legal custodian and
26 the child's guardian ad litem as guardian of the child's best interests and their agents
27 and assignees, each should make reasonable efforts to ensure that the child is provided
28 with reasonable safety, adequate care, and adequate treatment for the duration of time
29 that the child is a ward of the state;

30 (4) it is in the best interests of a child who has been removed from the
31 child's own home for the state to apply the following principles in resolving the

1 situation:

2 (A) the child should be placed in a safe, secure, and stable
3 environment;

4 (B) the child should not be moved unnecessarily;

5 (C) a planning process should be followed to lead to permanent
6 placement of the child;

7 (D) every effort should be made to encourage psychological
8 attachment between the adult caregiver and the child;

9 (E) frequent, regular, and reasonable visitation with the parent
10 or guardian and family members should be encouraged; [AND]

11 (F) parents and guardians must actively participate in family
12 support services so as to facilitate the child's being able to remain in the home;
13 when children are removed from the home, the parents and guardians must
14 actively participate in family support services to make return of their children
15 to the home possible; and

16 (G) the child should continue to attend the child's school of
17 origin as provided under AS 14.03.096;

18 (5) numerous studies establish that

19 (A) children undergo a critical attachment process before the
20 time they reach six years of age;

21 (B) a child who has not attached with an adult caregiver during
22 this critical stage will suffer significant emotional damage that frequently leads
23 to chronic psychological problems and antisocial behavior when the child
24 reaches adolescence and adulthood; and

25 (C) it is important to provide for an expedited placement
26 procedure to ensure that all children, especially those under the age of six
27 years, who have been removed from their homes are placed in permanent
28 homes expeditiously.

29 * Sec. 7. AS 47.07.020(b) is amended to read:

30 (b) In addition to the persons specified in (a) of this section, the following
31 optional groups of persons for whom the state may claim federal financial

1 participation are eligible for medical assistance:

2 (1) persons eligible for but not receiving assistance under any plan of
3 the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act,
4 Supplemental Security Income) or a federal program designated as the successor to the
5 aid to families with dependent children program;

6 (2) persons in a general hospital, skilled nursing facility, or
7 intermediate care facility, who, if they left the facility, would be eligible for assistance
8 under one of the federal programs specified in (1) of this subsection;

9 (3) persons under 21 years of age who are under supervision of the
10 department, for whom maintenance is being paid in whole or in part from public
11 funds, and who are in out-of-home care [FOSTER HOMES] or private child-care
12 institutions;

13 (4) aged, blind, or disabled persons, who, because they do not meet
14 income and resources requirements, do not receive supplemental security income
15 under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not
16 receive a mandatory state supplement, but who are eligible, or would be eligible if
17 they were not in a skilled nursing facility or intermediate care facility to receive an
18 optional state supplementary payment;

19 (5) persons under 21 years of age who are in an institution designated
20 as an intermediate care facility for the mentally retarded and who are financially
21 eligible as determined by the standards of the federal program designated as the
22 successor to the aid to families with dependent children program;

23 (6) persons in a medical or intermediate care facility whose income
24 while in the facility does not exceed \$1,656 a month but who would not be eligible for
25 an optional state supplementary payment if they left the hospital or other facility;

26 (7) persons under 21 years of age who are receiving active treatment in
27 a psychiatric hospital and who are financially eligible as determined by the standards
28 of the federal program designated as the successor to the aid to families with
29 dependent children program;

30 (8) persons under 21 years of age and not covered under (a) of this
31 section [,] who would be eligible for benefits under the federal program designated as

1 the successor to the aid to families with dependent children program, except that they
2 have the care and support of both their natural and adoptive parents;

3 (9) pregnant women not covered under (a) of this section and who
4 meet the income and resource requirements of the federal program designated as the
5 successor to the aid to families with dependent children program;

6 (10) persons under 21 years of age not covered under (a) of this section
7 who the department has determined cannot be placed for adoption without medical
8 assistance because of a special need for medical or rehabilitative care and who the
9 department has determined are hard-to-place children eligible for subsidy under
10 AS 25.23.190 - 25.23.210;

11 (11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title
12 XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom
13 a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title
14 XVI, Social Security Act) because they meet all of the following criteria:

15 (A) they are 18 years of age or younger and qualify as disabled
16 individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

17 (B) the department has determined that

18 (i) they require a level of care provided in a hospital,
19 nursing facility, or intermediate care facility for the mentally retarded;

20 (ii) it is appropriate to provide their care outside of an
21 institution; and

22 (iii) the estimated amount that would be spent for
23 medical assistance for their individual care outside an institution is not
24 greater than the estimated amount that would otherwise be expended
25 individually for medical assistance within an appropriate institution;

26 (C) if they were in a medical institution, they would be eligible
27 for medical assistance under other provisions of this chapter; and

28 (D) home and community-based services under a waiver
29 approved by the federal government are either not available to them under this
30 chapter or would be inappropriate for them;

31 (12) disabled persons, as described in 42 U.S.C.

1 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under
2 applicable federal regulations or guidelines, is less than 250 percent of the official
3 poverty line applicable to a family of that size according to the United States
4 Department of Health and Human Services, and who, but for earnings in excess of the
5 limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be
6 individuals with respect to whom a supplemental security income is being paid under
7 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is
8 not eligible under another provision of this section shall pay a premium or other cost-
9 sharing charges according to a sliding fee scale that is based on income as established
10 by the department in regulations;

11 (13) persons under 19 years of age who are not covered under (a) of
12 this section and whose household income does not exceed 175 percent of the federal
13 poverty line as defined by the United States Department of Health and Human
14 Services and revised under 42 U.S.C. 9902(2);

15 (14) pregnant women who are not covered under (a) of this section and
16 whose household income does not exceed 175 percent of the federal poverty line as
17 defined by the United States Department of Health and Human Services and revised
18 under 42 U.S.C. 9902(2);

19 (15) persons who have been diagnosed with breast or cervical cancer
20 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII);

21 (16) persons under 21 years of age who were in the custody of the
22 department under AS 47.10 or AS 47.14 and who were placed in out-of-home
23 care for a period of not less than six consecutive months on or after reaching 16
24 years of age.

25 * Sec. 8. AS 47.07.020 is amended by adding a new subsection to read:

26 (o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

27 * Sec. 9. AS 47.10.080(c) is amended to read:

28 (c) If the court finds that the child is a child in need of aid, the court shall

29 (1) order the child committed to the department for placement in an
30 appropriate setting for a period of time not to exceed two years or in any event not to
31 extend past the date the child becomes 19 years of age, except that the department or

1 the child's guardian ad litem may petition for and the court may grant in a hearing

2 (A) one-year extensions of commitment that do not extend
3 beyond the child's 19th birthday if the extension is in the best interests of the
4 child; and

5 (B) one-year extensions of commitment that do not extend
6 beyond the child's 21st birthday [AN ADDITIONAL ONE-YEAR PERIOD
7 OF STATE CUSTODY PAST 19 YEARS OF AGE] if the continued state
8 custody is in the best interests of the person and the person consents to it;

9 (2) order the child released to a parent, adult family member, or
10 guardian of the child or to another suitable person, and, in appropriate cases, order the
11 parent, adult family member, guardian, or other person to provide medical or other
12 care and treatment; if the court releases the child, it shall direct the department to
13 supervise the care and treatment given to the child, but the court may dispense with
14 the department's supervision if the court finds that the adult to whom the child is
15 released will adequately care for the child without supervision; the department's
16 supervision may not exceed two years or in any event extend past the date the child
17 reaches 19 years of age, except that the department or the child's guardian ad litem
18 may petition for and the court may grant in a hearing

19 (A) one-year extensions of supervision that do not extend
20 beyond the child's 19th birthday if the extensions are in the best interests of the
21 child; and

22 (B) an additional one-year period of supervision past 19 years
23 of age if the continued supervision is in the best interests of the person and the
24 person consents to it; or

25 (3) order, under the grounds specified in (o) of this section or
26 AS 47.10.088, the termination of parental rights and responsibilities of one or both
27 parents and commit the child to the custody of the department, and the department
28 shall report quarterly to the court on efforts being made to find a permanent placement
29 for the child.

30 * Sec. 10. AS 47.10.080 is amended by adding new subsections to read:

31 (v) A social worker employed by or under contract with the department shall,

1 not less than monthly, conduct visits with a child committed to the custody of the
2 department under (c) of this section. The visits must be of sufficient substance and
3 duration to address issues pertinent to case planning and service delivery to ensure the
4 child's safety, permanency, and well-being. The majority of the visits conducted under
5 this subsection must be at the location of the child's current placement. In this
6 subsection, "visit" means face-to-face contact between social worker and child.

7 (w) The department shall

8 (1) notify the governing body of a school district and the principal of
9 the school in which a student who is in the custody of the department is enrolled of a
10 change in the placement of the student if the placement is outside of the attendance
11 boundaries of the school; and

12 (2) assist the district in complying with the requirements of
13 AS 14.03.096.

14 * Sec. 11. AS 47.10.990(3) is amended to read:

15 (3) "child" means a person who is

16 (A) under 18 years of age;

17 (B) [AND A PERSON] 19 years of age if that person was
18 under 18 years of age at the time that a proceeding under this chapter was
19 commenced; and

20 (C) under 21 years of age if that person is living in out-of-
21 home care;

22 * Sec. 12. AS 47.10.990 is amended by adding a new paragraph to read:

23 (33) "out-of-home care" has the meaning given in AS 47.14.400.

24 * Sec. 13. AS 47.18.300(a) is amended to read:

25 (a) The department, in coordination with local public and private agencies,
26 shall design, develop, and implement an out-of-home care [A FOSTER CARE]
27 transition program to provide support and services to individuals who

28 (1) reach or have reached the age of 16 or older while in state custody
29 and placed in out-of-home [FOSTER] care and have not yet reached 23 years of age;
30 and

31 (2) meet other eligibility criteria established by the department under

1 (b) of this section.

2 * **Sec. 14.** AS 47.18.310 is amended to read:

3 **Sec. 47.18.310. Program design.** The department, in coordination with local
4 public and private agencies, shall design the program as a continuation of the training
5 efforts related to independent living skills that were initiated for a child in state
6 custody who was placed in out-of-home care and [WHEN THE STATE FOSTER
7 CARE RECIPIENTS WERE] identified as being likely to remain in out-of-home
8 [STATE FOSTER] care until reaching not less than the age of 18. The program
9 design must require that program participants are directly involved in identifying the
10 program activities that will prepare them for independent living.

11 * **Sec. 15.** AS 47.18.320(a) is amended to read:

12 (a) Subject to the availability of an appropriation made for the purposes of
13 AS 47.18.300 - 47.18.390, the program may provide

- 14 (1) education and vocational training;
- 15 (2) assistance in obtaining basic education and training;
- 16 (3) career and employment services;
- 17 (4) training in basic life skills;
- 18 (5) housing and utility assistance;
- 19 (6) mentoring and counseling; and
- 20 (7) other appropriate services to complement the efforts of former state
21 foster care recipients or a child who was in state custody and placed in out-of-
22 home care to achieve self-sufficiency.

23 * **Sec. 16.** AS 47.18 is amended by adding a new section to read:

24 **Sec. 47.18.335. Monetary living expense stipend.** (a) The department shall
25 provide a monthly monetary living expense stipend for a period not to exceed nine
26 months in an amount described in (b) of this section to an individual who

- 27 (1) has left out-of-home care at age 18 or older;
- 28 (2) is participating in services in the program; and
- 29 (3) has monthly contact with a social worker involved in the program.

30 (b) A stipend provided under this section shall be in an amount necessary to
31 meet an eligible individual's living expense as determined by the department. The

1 amount may not exceed

2 (1) for the first six months of eligibility, the daily rate provided to a
3 licensed foster parent; or

4 (2) for a period not to exceed three additional months during the period
5 that follows the first six months of eligibility, half of the daily rate provided to a
6 licensed foster parent.

7 (c) The department shall pay the stipend provided under this section until the
8 later of the date that the individual

9 (1) reaches 21 years of age; or

10 (2) has left out-of-home care for six months.

11 (d) The department may adopt regulations to implement this section.

12 * **Sec. 17.** AS 47.18.390(1) is amended to read:

13 (1) "program" means the out-of-home [FOSTER] care transition
14 program authorized under AS 47.18.300 - 47.18.390;

15 * **Sec. 18.** AS 47.18.390(3) is repealed and reenacted to read:

16 (3) "out-of-home care" has the meaning given in AS 47.14.400.

17 * **Sec. 19.** AS 47.32.160 is amended by adding a new subsection to read:

18 (c) A nonprofit organization that, and a person acting on behalf of the
19 organization who, engages in recruitment activities for foster homes that become
20 licensed under this chapter may not be held liable for the consequences of the
21 recruitment.

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

April 5, 2010

Dear Health and Social Services Committee members:

During a committee hearing on April 1, 2010 a committee member asked how the cost of foster care compared to other costs to society. In response to that question, I have prepared the attached comparison.

The figures are from the 2005 Alaska Foster Care Alumni Study prepared by the University of Alaska Anchorage, School of Social Work and the 2009 Cost of Crime Research Summary prepared by the Institute of Social and Economic Research. Both reports are attached.

Please let me know if you have any questions or would like any additional information.

Thank you,

A handwritten signature in cursive script that reads "Rose Foley".

Rose Foley
Aide to Representative Les Gara
465-2647

Incarceration

Cost of Extending Foster Care to age 21:	\$508,000 for 40 youth
Cost per youth per year:	\$12,700
Percentage of foster youth incarcerated after leaving care:	29%
Average number of incarcerations:	2.1
Average longest incarceration:	53.5 days
Cost of incarceration per year:	\$44,000
Cost of incarceration per day:	\$120
Average cost of foster youth incarceration:	\$12,840

Incarceration costs approximately \$140 per year more than foster care.

Public Assistance

Percentage of former foster youth receiving public assistance:	73.3%
Percentage of former foster youth living with someone who receives public assistance:	78.4%

RESEARCH SUMMARY

Institute of Social and Economic Research
University of Alaska Anchorage • January 2009
R.S. No. 71

THE COST OF CRIME: COULD THE STATE REDUCE FUTURE CRIME AND SAVE MONEY BY EXPANDING EDUCATION AND TREATMENT PROGRAMS?

By Stephanie Martin and Steve Colt

Alaska's prison population is among the fastest-growing in the U.S., with five times more inmates in 2007 than in 1981. Spending for the state justice system has nearly doubled since 1981—but the crime rate has dropped only about 30%.

Here's the dilemma for the state, given the pattern shown in Figure 1: what can it do to hold down the number of inmates and stem the rising costs—while at the same time keeping the public safe and using tax dollars effectively?

Senator Hollis French asked ISER to project growth in the number of Alaska inmates and the associated costs—and then evaluate whether the state could reduce that growth by expanding intervention and prevention programs for people already in prison or at risk of ending up there. Alaska currently spends about \$17 million a year for such programs, but they aren't available to many of those who might benefit from them.

There are a wide range of such programs. But it is programs for adults who are already in prison or jail that have the most potential to save money and reduce crime in the next 20 years. That's because they can reach the most people.

We know that without any intervention, about two-thirds of those who serve their sentences and are released commit new crimes. Stopping at least some of them from committing more crimes would not only help improve public safety but also reduce growth in both the number of inmates and in spending.

Figure 1. Percentage Changes in Alaska Crime Rate, Spending for Justice System, and Number of Inmates, 1981-2007

^aInmates in prisons, jails, and halfway houses

^bSpending for Departments of Corrections, Public Safety, and Law; court system; Division of Juvenile Justice; Public Defender Agency; and Office of Public Advocacy. Does not include capital spending or payment on debt.

^cRates per 100,000 for murder, rape, robbery, aggravated assault, burglary, larceny, and motor vehicle theft.

Sources: U.S. Department of Justice; state budget documents; Alaska Department of Corrections

Also, most of those released committed misdemeanors (Figure 2). Those who commit the most serious crimes serve long sentences and make up a small share of those released in any given year.

To analyze which programs have the most potential to reduce crime *and* save the state money, we worked with the Alaska Criminal Justice Working Group and the Washington State Institute of Public Policy. That institute did a similar analysis for Washington state and provided us with data it collected from program evaluations nationwide (see back page). What did our study show?

Figure 2. Who Gets out of Jail or Prison in Alaska?

(Total Releases, 2002-2007: 82,339)

Source: Alaska Department of Corrections

• With no change in policies, the number of Alaska inmates is likely to double by 2030, from 5,300 to 10,500.

• If the state spent an additional \$4 million a year to expand programs it already has, the prison population in 2030 might be 10% smaller than projected—about 1,050 fewer inmates.

• The state would spend about \$124 million for expanded programs through 2030 but would avoid \$445 million in costs—a savings of \$321 million. It would save money by incarcerating fewer people and by delaying prison construction costs. (Figures 3 and 8).

• Education and substance-abuse treatment programs—in prison, after prison, and instead of prison—save the state two to five times what they cost and reach the most people. Programs for teenagers are also very effective at reducing crime and saving money, but they reach fewer people.

Figure 3. Potential Effects, Costs of, and Savings from Expanded Prevention or Intervention Programs

Immediate Costs

- \$17 million: Current annual state spending on programs
- \$4 million: Additional spending every year to expand programs

Long-Term Effects on Prison Population

By 2030, expanded programs could keep 1 in 10 people out of prison who would otherwise be there

Long-Term Savings (2009-2030)

Cost of expanded programs* **\$124 million** — Savings: **\$321 million**
 Avoided inmate costs and delayed prison construction costs* **\$445 million**

*Assumes 2% annual inflation through 2030

WHY CONSIDER EXPANDING PROGRAMS?

In 1980, 2 in 1,000 Alaskans were behind bars; today that share is approaching 10 in 1,000. The sharp increase started in the 1980s, when the state government began collecting large oil revenues. The state used some of that money to expand police agencies, courts, and other parts of the criminal justice system statewide. Also in the 1980s, it made sentencing for the most serious felonies more uniform and stiffened sentences.

The crime rate in Alaska has declined since the 1980s. But the number of Alaskans in prisons, jails, and halfway houses has increased much faster, as have costs for the state justice system. Alaska's prisons are full, and the 1,500-bed prison scheduled to open in 2012 is projected to be full soon after it opens.

Locking people up is expensive, whether their crimes are major or less serious. Alaska spends on average \$44,000 a year per inmate in prisons, jails, and halfway houses. Adjusted for inflation, that's actually less than in the 1980s—but it's still a lot (Figure 4).

Studies in other states have shown that some intervention and prevention programs can help cut both costs and crime, either by keeping people who have served their sentences from committing new crimes after they're released, or preventing some people from going to prison in the first place.

WHAT PROGRAMS DID WE ANALYZE?

The Alaska Criminal Justice Working Group gave us a list of programs to analyze. We looked for programs with the biggest potential payoff for the state—those that could reduce growth in both numbers of inmates and in spending for corrections, at a reasonable cost for the state.

Alaska already has a number of programs in place, and we found that expanding some of those would be most cost-effective. Table 1 lists the programs in our final analysis. As a guideline for what was a "reasonable" expansion, we used 10% to 20% of the eligible people not already served—except for very small programs that can't easily be expanded that much.

These programs would serve inmates, at-risk juveniles, and young children. They are all intended to reduce future crime in some way. Programs that treat substance-abuse or mental health disorders have been shown to reduce recidivism—and as Figure 5 shows, almost all current inmates have those disorders.

Figure 4. Annual State Costs Per Inmate,* 1981-2008
(In Thousands of Dollars)

*Average cost of incarcerating people in prisons, jails, and halfway houses.

Figure 5. How Many Alaska Inmates Have Substance Abuse or Mental Health Disorders?

Sources: Alaska Department of Corrections; Alaska Mental Health Trust

Table 1. Current Size and Potential Expansion of Intervention and Prevention Programs^a

Programs	Currently serve	Reasonable expansion	Potentially eligible (2008)
Prison-based programs			
Education (adult basic; vocational)	More than 1,000	500	Almost all inmates (4,500)
Substance-Abuse (residential; intensive outpatient)	Close to 500	500	90% of inmates (approximately 4,000)
Sex-offender treatment ^b	0	50	10% of 500 eligible inmates
Transition from prison			
Transition for inmates with mental health disorders (Institutional Discharge Project)	70	100	36% of inmates (1,600)
Alternatives to incarceration			
Mental health, drug, alcohol courts; electronic monitoring; residential substance-abuse treatment	500	500	Approximately 5,000 ^c
Juvenile offenders			
Aggression replacement training; family therapy; residential treatment; institutional transition	Approximately 500	1,000	Approximately 3,000
Prevention			
Head Start for 3- and 4-year olds from low-income families ^d	3,025	450	Approximately 8,000 ^e

^aPrograms included in our final analysis are those for which we found evidence that expansion would have significant pay-offs for the state at a reasonable cost. We evaluated additional programs not included here, either because there wasn't sufficient evidence to assess their effectiveness or because they weren't feasible to implement in Alaska at this time.

^bTo effectively reduce crime, sex offender treatment programs need to be offered in both prison and the community. Treatment is currently available only in the community, so the number served in prison is currently zero—but there are proposals to add treatment in prison.

^cPeople facing low-level charges and with substance-abuse problems.

^dHead Start is a federal program, but the state supplements federal money and Governor Sarah Palin has proposed additional state funding.

^eWe assume all children from families with up to double the poverty-level income would be eligible.

We looked at but excluded other programs from our final analysis. The criminal justice working group decided that a few programs, while effective elsewhere, wouldn't be feasible to implement in Alaska at this time. For other programs, there wasn't enough available evidence to judge how effective they were in saving money or reducing crime, or the available evidence showed them to be largely ineffective.

How Do the Programs Compare?

As Figure 3 (front page) shows, expanding programs to serve more of the eligible people would save the state about \$321 million and reduce the projected number of inmates 10% by 2030. Figures 6 and 7 show how the various programs contribute to costs, savings, and reductions in the number of Alaskans behind bars.

- Education and substance-abuse treatment programs for inmates save two to four times what they cost, reduce recidivism by about four percentage points, and can reach the most people.

- Intervention programs for juveniles who have committed crimes are very effective at saving money and reducing recidivism, but they serve a much smaller number of people.

- Programs that set up transition services for inmates with mental-health disorders coming out of prison are among the most effective—but they can't readily be expanded to serve the many people who could benefit from them.

- Alternatives to prison for some people charged with lesser offenses save the state money right away, and almost all reduce recidivism. The exception is electronic monitoring, which is inexpensive but hasn't been shown to reduce future crime.

- Treatment programs for sex offenders do reduce crime, but they are very expensive and so don't save the state money.

- Programs that prevent future crime by helping very young at-risk children are the most effective. But the effects of spending for those programs aren't apparent until many years later.

Figure 6. How Effective Are Various Programs at Saving Money and Reducing Crime?

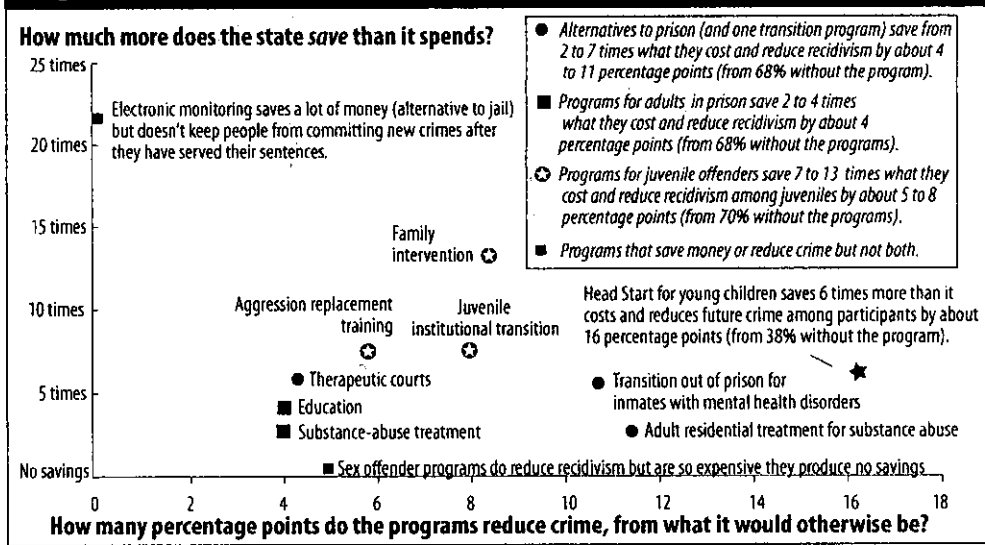

Figure 7. How Would Expanding Specific Programs Contribute to Reducing Growth in Numbers of Inmates?

CONCLUSION

In conclusion, Figure 8 shows how Alaska's corrections system got where it is and where it's likely to go—if intervention and prevention programs are kept at their current levels, and if the most effective programs are expanded to serve more of the eligible people.

We found that the state could both reduce the number of Alaskans in prison or jail and save considerable money over the next 20 years, by adding about \$4 million a year to the \$17 million it currently spends to keep people from returning to prison—or prevent them from ever going there at all.

Spending more for these programs even as oil prices and state revenues are falling may not seem like a good idea. But Alaska also needs to look to the future—and over time the benefits of strategically expanding those programs that reduce crime and keep more Alaskans out of prison far outweigh the costs.

METHOD OF ANALYSIS

Our job was to assess whether specific programs could reduce long-term state spending for corrections by reducing growth in the number of inmates. As a starting point, we needed evaluations of how effective various programs are at reducing future crime.

But except for some of the therapeutic court programs, most programs in Alaska have not been rigorously evaluated. Therefore, we used results of a Washington state assessment that systematically reviewed 571 program evaluations from around the country.

To be included, evaluations had to have carefully designed control groups, replicable results in multiple settings, and long-lasting effects. This method is evidence-based public policy, which merges research and practice. It is similar to clinical trials in medicine. Keep in mind that this is a new field, and only about 10% of programs in place nationwide have been evaluated at this standard.

With data from rigorous evaluations, the Washington State Institute of Public Policy created a model that estimated the effects of programs on recidivism—and then combined those results with a cost-benefit analysis to estimate the long-term effects on state spending and inmate populations.

We combined the institute's estimates of recidivism with Alaska data on program costs, eligible groups, and state population to estimate long-term effects on crime and state spending.

The authors thank the members of the Alaska Criminal Justice Working Group for their help in identifying programs to evaluate and for comments on drafts of this publication. The Alaska Legislature funded this group in 2007 and authorized the Alaska Judicial Council to act as its staff.

The group is chaired by a justice of the Alaska Supreme Court and Alaska's lieutenant governor. Other members include top policymakers from the departments of Corrections, Public Safety, Health and Social Services, and Law, as well as the Alaska Mental Health Trust Authority; the heads of the Alaska Public Defender Agency and the Office of Public Advocacy; the administrative and deputy directors for the Alaska Court System; the executive director of the Judicial Council, the U.S. attorney, and Anchorage's police chief.

This group meets monthly to talk about long-term justice issues, as well as to resolve any inter-branch issues that come up among the many agencies and organizations that deal with aspects of Alaska's justice system.

The authors also thank Elizabeth Drake and Steve Aos of the Washington State Institute of Public Policy for developing the methods and models we used and for helping us apply them to Alaska. For more information go to www.wsipp.wa.gov.

Alaska Foster Care Alumni Study

Conducted by

THE UNIVERSITY OF ALASKA ANCHORAGE
School of Social Work
Child Welfare Evaluation Program

EXECUTIVE SUMMARY

Study Overview

The Alaskan Foster Care Alumni Study examined the outcomes of young adults who had "aged out" of State custody after spending much of their adolescence in foster care. The study team, composed of representatives from the State of Alaska Office of Children's Services, Casey Family Programs, the Tribal-State Collaboration Group, and the University of Alaska Anchorage, sought to answer the following questions about a cohort of Alaskan foster care alumni: where are they living, how they were faring socially, economically, and emotionally, and how do they perceived their experiences in foster care? Alumni eligible for the study were 19 to 29 years of age, had spent at least one continuous year in out-of-home care in state protective custody, with that year being between 15 and 18 years of age, and had left care on or after their 16th birthday. Of the 140 alumni who met these criteria, nearly 53% were female and 50% were Alaska Native. Sixty-six interviews were conducted between May and December 2004, representing an adjusted response rate of nearly 60%.

Findings

Despite the hardships of abuse and neglect, removal from biological family, multiple moves and transitions, and minimal preparation for adult living, many Alaskan foster care alumni were thriving. Through persistence, emotional support and connections, and their own resourcefulness and that of others, they have grown into contributing members of the communities where they live. The outcomes below represent both the successes and difficulties experienced by the Alaskan foster care alumni studied. Most participants spent their time in foster care before Chafee funds were readily available for educational and other transitional services. In addition, regional independent living services have recently been expanded by the State Office of Children's Services to provide more foster youth with the resources to successfully transition into adulthood.

Whole Population Outcomes:

- Nearly three-quarters of the foster care alumni remain in Alaska. These alumni were predominately clustered in the Southcentral region of the state, followed by the Southwestern and Southeastern regions.
- Nearly one in five alumni had been involved in the criminal justice system at some point in their lives.

Outcomes from Interviewed Alumni:

Socio-Emotional:

- Positive relationships formed while youth were in care continued to be an important source of support later in life. Nearly 76% of alumni reported having had a positive close relationship with an adult while in foster care. Almost three-quarters of these alumni reported still being in contact with these adults.
- Fewer than 10% of alumni were placed with their siblings in their first foster home. Nearly three-quarters of these alumni were *never* placed with their siblings. Study participants reported that sibling relationships continued to be important to them into adulthood.
- Rates of early parenthood were high. Nearly 10% of interviewed females became pregnant before age 17. By age 19, 57% of females and 41% of males were parents.
- Alumni reported having a wide social network of family and friends. The average number of friends alumni reported having was nearly eight. Contact with friends was frequent—82% reported talking on the phone or visiting with friends a few times a month or more, including 38% with daily contact.
- In general, most alumni reported being happy with their current living situations. More than 8 in 10 alumni reported feeling “happy” or “very happy” in each area of a life satisfaction rating. A relatively substantial proportion, however, reported extremely poor mental health.

Physical and Behavioral Health:

- Use of mental health resources among alumni was high. Nearly 80% reported lifetime use of behavioral or mental health services, including 35% reporting overnight treatment stays and 68% seeing a professional (such as a psychologist, social worker, or minister) outside of an overnight stay. About 27% reported using any of these services in the past year, while nearly 17% of the total reported that they were *currently* seeing a professional.
- Alcohol use by alumni was slightly below the average for statewide alcohol use figures for people of similar age, while their rates of marijuana use were slightly higher than the statewide rate. Although nearly 50% of alumni reported drinking in the past month, 21% reported being drunk during the same time period. Use of illicit drugs other than marijuana was rare.
- Most alumni rated their overall physical health at the same level as the general population. A small number, however, reported very poor health.

Education, Employment, and Health Insurance:

- Few alumni received financial, employment, or educational assistance as they made their transition out of state care to living on their own. Compared with the Wisconsin or the Northwest alumni studies, Alaskan alumni received fewer services in most areas as they exited state care. However, the exception was in finding contact persons to help with future problems.
- Nearly 38% of alumni reported being homeless after leaving care. This is higher than the homeless rates of 12-25% from other foster care alumni studies.

- The high school completion rate for foster care alumni was slightly below the statewide average. Many Alaskan alumni took longer to achieve their high school diploma (often finishing between 19 and 25 years of age), but few went on to complete post-secondary education.
- Many alumni were struggling financially. Although some were doing quite well, average income was low, and the proportion lacking health insurance coverage doubled state and national rates.

Costs to Society:

- * Nearly 30% of alumni were incarcerated for some period of time after leaving care. Nearly 21% of interviewed alumni reported being placed in juvenile corrections while in care, but only 64% of these were jailed again after leaving care.
- * Alumni reported a high utilization of public assistance resources in their households. Over 77% of alumni (including 73% of those who live alone and 78% of those living with others) reported that someone with whom they lived received some form of public assistance in the last six months.

Recommendations

The following recommendations address the outcomes revealed in this study. They are based on policies, programs, and practices that have been shown to be effective in other research. Stakeholders (representing members of the research partnership) participated in refining and clarifying these recommendations, as well as adding their own list of actions which they believe will improve foster care in Alaska.

- **Increase early intervention:** In general, early intervention efforts are recommended to minimize most of the poor outcomes described in this report. Research has shown, for example, that family support programs are more successful the younger the children are.
- **Involve youth in planning:** Simply being more informed can help increase a youth's sense of predictability, while having a say can increase the sense of control.
- **Provide comprehensive assessment:** A comprehensive assessment—covering physical and emotional development, cognitive functioning and academics, life-skills, social relationships and functioning, etc.—can result in a detailed service and support plan, a road map for all concerned with helping the youth return to an optimal developmental path.
- **Maximize placement stability:** A comprehensive assessment can help match youth to foster parents. Better matching can improve relationships with foster families, which in turn results in improved outcomes during and after care.
- **Encourage positive adult relationships:** The development of a consistent adult relationship can have a variety of positive effects, including socio-emotional, educational, and employment outcomes.
- **Promote legal ties, such as adoption and guardianship, throughout adolescence and even into adulthood:** Subsidized guardianship may be an especially appropriate choice of permanency options for adolescents and/or

children in kinship care placements, particularly in Native communities that might disapprove of termination of parental rights.

- **Support relationships with foster parents after youth reach 18:** In order to promote maintenance of adult connections, the State should work to remove barriers to having young people remain in the home or in contact after emancipation.
- **Promote sibling contact, as appropriate:** Optimally, sibling groups would remain intact. There is a slowly growing body of research supporting the benefits of keeping sibling groups together when appropriate.
- **Provide sexuality education to all foster youth:** Foster youth appear to be relatively likely to engage in early sex, often resulting in pregnancy and/or sexually transmitted diseases.
- **Provide parenting support for youth who do become parents:** Once a young person does have a child, they need support and training to avoid the poor outcomes common to young parents.
- **Improve mental health treatment:** Proper assessment can help develop a treatment plan to be implemented by caseworkers, foster parents, teachers, and others, in the home and out. Proper training, for example in cognitive-behavioral interventions, will maximize the effectiveness of this plan.
- **Extend foster care services:** Intact families do not expect their children to live alone at 18. Given the array of difficulties faced by foster children, as well as the negative short-term outcomes found in this and other studies (e.g., 30% homeless within a year of leaving care), some form of extended service is warranted.
- **Use the Chafee Medicaid option to extend health coverage:** Given the health problems, poor finances, and lack of health insurance experienced by many alumni, they appear to be at risk of joining the tens of thousands of Americans who die each year due to a lack of health insurance.
- **Develop a detailed transition plan with each youth:** Youth often express anxiety over the prospect of leaving care and being on their own. Having a plan can help alleviate that anxiety.
- **Facilitate communication across roles and functions:** The benefits of assessment and thorough planning can come only if parties communicate. Thus, information must pass from professional to professional and also from caseworker to foster parent, caseworker to new caseworker (if necessary), school to school, child welfare agency to educational system, caseworker and foster parent to therapist, and so on.
- **Support caseworkers in their efforts to help youth transition to adulthood:** Training should include developmental issues and information on accessing the wide variety of resources, within OCS and without, that are available. Only if a worker is aware of a service and of how to pay for it can a youth or young adult take advantage of opportunities that are available to them. Worker-youth relationships can also be improved by matching trained and interested workers with adolescents.

Stakeholder Recommendations: Strategies to Improve Foster Care in Alaska

In addition to the recommendations above, various advocates of improved foster care emphasized the following strategies to improve foster care in the state:

- Increase the number and cultural diversity of resource families.
- Expand targeted recruitment of resource families to reach underrepresented cultural groups, with particular emphasis on reaching out to Alaska Native families.
- Increase the number of resource families with the capacity and expertise to provide care to adolescents, with the goal of maintaining relationships into adulthood.
- Expand efforts to more carefully match children's needs with the culture, style, and capabilities of foster families
- Increase kinship care; provide support and training to families providing this care.
- Expand the use of the Team Decision Making model currently used in the Anchorage OCS office (from Family to Family by the Annie E. Casey Foundation). This process involves families and community members actively in case planning and decision-making.
- Reduce the reliance on emergency shelter care.
- Reduce the use of residential care.
- Provide more agency and respite support to resource families.
- Build academic support for foster children through working with schools and other community resources.
- Increase post-secondary education and vocational training for foster youth and alumni, including job training, job shadowing, and apprenticeships.
- Increase the number of safe, affordable transitional housing options for foster care alumni.

Conclusions

The intent of this study was to provide insight into the experiences of foster care alumni with the hopes of improving the lives of current and future generations of youth who find themselves removed from their birth families and placed in state custody. This responsibility does not rest solely with the State of Alaska, but with communities, families, caregivers, tribal programs, caseworkers, residential youth facilities, schools, and even the youth themselves. This study's findings support those of several other studies supporting the need to promote key ingredients that, if provided to youth early, can greatly enhance their chances of success.

These are, among many others: positive, consistent adult relationships; youth participating in their own planning; early and on-going preparation for independent living; on-going connection to family members when appropriate; and allowing youth to receive the economic and emotional benefits of remaining in care until 21. Care, support, mentoring, training, and financial assistance will ultimately benefit foster youth, their communities, and all of us.

Employment, finances, and health insurance

Nearly 6 in 10 respondents (58.5%) were working at the time of the interview, while 17% were not in the workforce. The unemployment rate among this sample was 29.6%, compared to a reported unemployment rate in Alaska of 7.1% in May 2004 and 7.6% in December 2004 (5.6% and 5.4%, respectively, in the US) (Robinson, 2004, 2005). (Note that while the interview asked if respondents were "looking for work" this may not meet the definition applied by the State and the Federal government, requiring an active attempt to find work, as reported to the unemployment office, in the past 4 weeks.) Among those who worked, the range of hours was from 8 to 60, with an average of 35 hours per week. Two respondents were reportedly permanently disabled.

Given the high rate of unemployment and low rates of college completion in this sample, average income was low. The average of approximately \$12,300 is a little more than half of the Census Bureau's 2003 estimate of per capita income for Alaska of \$24,361. The median income was \$9,500, equivalent to the Federal poverty level for a single person household in 2003 (DeNavas-Walt, Proctor, & Mills, 2004); only five alumni reported personal incomes above \$40,000. Approximately 39% of the respondents had no health insurance.

Cost to Society

Criminality

One in five alumni (14 alumni, or 21.2%) reported in the interview that they had experienced placement in a juvenile corrections facility before leaving care (and perhaps before entering care), starting at an average age of just over 15 years of age. The alumni reported an average total time in such placements of 27 days.

Several sources of information can be combined to examine alumni interactions with the criminal justice system after leaving care. State and federal records indicated that more than 1 in 5 alumni (21.4% of the entire population of 140) had some criminal record, including 15 alumni who were incarcerated throughout the interviewing period. Interview data revealed that more than half of the alumni had been arrested, which may have included while they were juveniles. Nineteen alumni (28.8% of those interviewed) reported being jailed after leaving care, including 9 of the 14 (64.3%) who reported spending time in juvenile detention. The average first age of imprisonment was 19.9, or less than 18 months after the average age of leaving care (18.5). The average number of incarcerations was 2.1, with an average longest stay of 53.5 days. More than half of those imprisoned after leaving care were jailed only once (see Figure 13). Combining interview data with government records indicated that 43% of the entire population of alumni had some interaction with the criminal justice system after leaving care.

Household public assistance use

Over 77% of alumni (including 73.3% of those who live alone and 78.4% of those living with others) reported that someone in their household received some form of public assistance in the last six months, including 32% receiving food stamps, 27% receiving Temporary Assistance to Needy Families aid, and 27% receiving help from the Women,

Figure 13. Times in jail since leaving care among interviewed alumni.

Infants, and Children program (see Table 15). Three alumni reported that someone in their household was receiving a foster care or adoption subsidy. Nearly 11% reported that someone in the household was receiving unemployment benefits. Five alumni (7.7%) reported that someone in their household was receiving financial aid to attend school.

Table 15. Household public assistance or aid program use, past 6 months.

Any program:	77.3%
Medicaid/Medicare	55.6%
Food stamps	31.8%
TANF	26.6%
WIC	27.3%
Supplemental Social Security	26.6%
Foster care or adoption subsidy	4.6%
Unemployment	10.6%
Public housing	9.4%
Energy program	7.6%
Child care subsidy	4.6%
Student financial aid	7.7%
Other aid	15.6%

DISCUSSION

Socio-emotional Outcomes

Supportive Adult Relationships

“Optimal child development occurs when a spectrum of needs are consistently met over an extended period” (American Academy of Pediatrics, 2000, p. 1146). Many youth in long-term foster care experience a host of disruptions to their relationships: removal from their birth family, new foster parents, new foster siblings, a new school, a new caseworker, and new guardian ad litem. These multiple disruptions make it difficult to develop trusting relationships (Briere, 1992; Chalk et al., 2002; Downs & Williams, 2003; Mech, 2003). Nearly a quarter of the Alaska alumni reported no close relationship with an adult while they were in care.

I think (my foster mom) has really helped with a lot of my successes. She's the only one that I can really pinpoint.
Study participant

The development of a consistent adult relationship, a constant through the storm of foster care, can have a variety of positive effects, including socio-emotional, educational, and employment outcomes. Positive adult relationships help youth develop into psychologically healthy adults (American Academy of Pediatrics, 2000). Viewing this

from the Assets Framework, trusting adult relationships and positive role models are protective factors that can promote the development of other assets: creative activities, high expectations and achievement motivation, interpersonal competence, self-esteem, etc. (Mannes, Roehlkepartain, & Benson, 2005; see the Search Institute website at www.search-institute.org/ for more information). An “available...and devoted” adult (Downs & Williams, 2003, p. 496) can be a foster parent, an elder or extended family member with whom the youth maintains contact, a dedicated caseworker, or some other mentor.

Mentors have been shown to be effective in helping produce positive outcomes in youth (see, for example, Grossman & Rhodes, 2002; Grossman & Tierney, 1998), particularly when mentors are trained and supported. Mech (2003) describes mentors as a form of social capital, a way to connect foster youth to resources—community resources, other helpful individuals, job and education resources, etc.—that can have positive returns for the individual and society, in the form of reductions in school dropouts, delinquency, and antisocial behavior; avoidance of adolescent pregnancy; prevention of family violence; and future taxable income. Mentors provide examples of functional adulthood and healthy relationships. They can reinforce the value of education and provide informal tutoring, supply job shadowing opportunities, and encourage youth to explore and learn. This was supported by a recent study of Alaskan youth ages 14-19 in state custody (Pope & Williams, 2005a) who reported that adult mentors, coaches, foster parents and other positive role models were essential to them as they acquired and practiced the skills they think are important to live as successful adults.

There has been increased discussion about connecting foster youth or alumni with adults (Collins, 2001), including adoption beyond what has been traditionally considered something of a deadline for adoption: the onset of adolescence. Alumni in the current project discussed the benefits of feeling like there was someone they could count on even after leaving their (last) foster home:

She was just such a cheery little person; you could talk to her about anything. I still go and visit her. She is just an awesome person. She is so much like what a mother should be, in my eyes. (Study participant)

In addition to individuals taking on this role spontaneously, formal efforts, such as the California Permanency for Youth Project (www.cypyp.org), are appearing around the country to promote permanency for older youth and even adult foster care alumni. Such programs are not intended to take the place of independent living preparation. The focus is less on independence and more on connections—personal and legal—with adults (Louisell, 2004). Alaska’s development of subsidized guardianship should provide another way to increase connections with adults. Guardianship may be an especially feasible choice for adolescents and/or those in kinship care situations (National Abandoned Infants Assistance Resource Center, 2003) by establishing connections without severing birth family ties.

No matter what form they take, encouraging the formation of positive, consistent adult relationships will have many preventive effects (Downs & Caldwell, 2003; Downs &

Williams, 2003; Mannes et al., 2005; Pecora et al., 2005a). Assets research has shown that maximizing the number of assets is related to increased thriving behaviors, decreased high-risk behaviors, and improved well-being (Mannes et al., 2005). Thus, concentrating on developing adult relationships among foster youth will in turn address many of the poor outcomes for which foster care alumni seem to be at risk: the Northwest Alumni Study report (Pecora et al., 2005a) recommendations discuss adult connections as being important for improving outcomes in mental health, education, and employment and finances. The current study, similar to others (Collins, 2001), documents that social contact and support appear to be strengths among foster care graduates (although no comparisons were made with the general population). Further analysis will illustrate the protective nature of this support for foster care alumni.

Sibling and Birth Family Contact

As demonstrated in Figure 6, too many of the alumni in this study lived through the experience of not only being separated from their parents, but also from their siblings. Although sibling contact appears to have been fairly well supported (71% of those not placed with siblings reported seeing them again at least once before leaving care), a number of responses to the open-ended question "*What could have been done to better help you while you were in care?*" indicated that for those who were unable to have contact with their siblings, this was a negative experience that left a major impression:

The people who cared for my brother and sister did not make an effort for us to see one another and we all lost communication.

I would have liked to have been closer to my siblings; they should have made a greater effort to keep me close to family.

I think I should have been kept with all my siblings. I was emotionally stressed about that; I loved my brothers and sisters.

[It would have been better to have] contact with my brothers more and family more and the social workers more.

There is a slowly growing body of research supporting the benefits of keeping sibling groups together when appropriate (Herrick & Piccus, 2005; Leathers, 2005; Tarren-Sweeney & Hazell, 2005). Siblings can provide a protective factor for adjusting to foster care and preventing placement change. By helping youth maintain these relationships, workers can increase the probability of a young person having supportive relationships upon leaving care.

Birth family contact can also be important when such contact is appropriate (American Academy of Pediatrics, 2000). Consistent with previous research, Leathers (2005) found that the frequency of maternal visitation among foster youth predicted chances for reunification. Birth family members are important for youth that do not reunify, as well. Many young people move in with birth parents or other relatives soon after leaving care, sometimes by default (Courtney et al., 2001; Courtney et al., 2005; McDonald et al., 1996). Foster youth struggle with being disconnected from people and resources and they

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

Sponsor Statement

HB 126: Success For Foster Youth

HB 126 is designed to fix some of the most glaring problems in our foster care system – problems that serve to deny opportunity and success to at risk foster youth. It is cost effective, and designed to supplement partial efforts that exist today. Given the number of foster youth in Alaska – approximately 2,000 – the cost of this effort will not be substantial, but the economic and human and opportunity cost of not passing it will be.

The legislation is an outgrowth of this past fall's bi-partisan legislative foster care conference, and work by Alaska's foster youth, who have become increasingly active in seeking solutions for the problems they face on a day to day basis.

Today roughly 40% of foster youth end up homeless at some point in their lives after leaving foster care. That's unacceptable, and HB 126 proposes cost effective solutions to that problems. It is estimated that less than 10% of our foster youth graduate from college. Foster youth end up in jail and on state-paid social services, and in social service treatment in greater numbers than their peers. Tolerating this costs Alaskans in terms of money, lost economic activity and human opportunity.

HB 126 does the following:

- It requires OCS to meet federal standards by requiring in person visits with foster children on a monthly basis. Many states impose such a requirement to spur compliance by their state agencies, and the language in HB 126 is taken from Minnesota. The most recent federal review of our system states that in roughly 1/3 of the cases OCS staff meet once every 8 months with foster youth. OCS is working on improving this, and OCS staff are eager to find ways to comply with the monthly visit standards that are so important if we are to protect our foster youth from harm, and learn their needs so they can succeed.
- It provides housing assistance to youth coming out of foster care, for up to a year. Current rules allow OCS to pay for one month of full rent, and then 2 months of rent at 50% of the youth's cost.
- It provides tuition and room and board for in-state job training and college. Currently there are a limited number of tuition-only scholarships available to youth, and some job training assistance. This provision would make that assistance complete. The room and

board component is crucial, as foster youth have no home they can live in after foster care ends.

- It requires that foster youth be allowed to remain in their current school when they suffer a foster family placement change. Bouncing youth between schools causes failure, and federal law provides partial funding to allow students to avoid school transfers.
- It requires that when foster youth are transferred to a new school, they be allowed to attend immediately, and requires that their transcript information be transferred to the new school within 7 days.

Federal funding is available for portions of this effort, and the limited number of foster youth in Alaska would make implementation of this effort relatively inexpensive. If we don't pursue this legislation, Alaska's foster youth will continue facing unfair barriers to their success – and that shouldn't be an acceptable option.

Please don't hesitate to contact us with questions.

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

MEMORANDUM

DATE: March 11, 2009

TO: Representative Wes Keller
Representative Bob Herron

FROM: Representative Les Gara

RE: Sectional Summary for CSHB126(EDC)

Section 1: Provides for the continuation of a public education in a student's school of origin for a homeless student under federal specifications. Provides exceptions for a move outside of a school district. Requires the transfer of a student's school records from the school of origin within seven days after notification of a school transfer. Modifies federal definition of homelessness to include students who are placed in out-of-home care by the state.

Section 2: Provides for a waiver of tuition, fees, and room and board expenses at a state-supported educational institution for a person who was placed in out-of-home care under specified circumstances for a person who is under 29 years of age. Provides an exception to educational institutions giving the waivers if insufficient funding is appropriated by the legislature.

Section 3: Defines out-of-home care for purposes of student loans and waivers.

Section 4: Replaces the term "foster care" for "out-of-home care" for purposes of grants and contracts.

Section 5: Amends the state's purpose and policy related to children to include education and intellectual development.

Section 6: Amends the legislative intent related to children to include providing a public education as provided under section 1.

Section 7: Replaces the term "foster homes" with "out-of-home care" for purposes of establishing medical assistance eligibility for certain persons and adds a category of eligibility for persons under 21 years of age who were in out-of-home care for a specified period of time on or after the person's 16th birthday.

Section 8: Defines "out-of-home care" for the purposes of medical assistance eligibility.

Section 9: Establishes mandatory monthly visits by social workers employed by the department to make monthly home visits, as described, to all children in the custody of the department.

Section 10: Amends the definition of "child" for purposes of the child in need of aid statutes.

Section 11: Defines "out-of-home care" for purposes of juvenile programs and institutions.

Section 12: Replaces the term "foster care" with "out-of-home care" for purposes of transition programs. Redefines the beneficiaries of those programs as individuals who have been in state custody and out-of-home care rather than "foster care".

Section 13: Increases the maximum eligibility age from 18 to 21 for purposes of the foster care transition program.

Section 14: Expands the recipients of state services to include children who were in state custody and placed in out-of-home care.

Section 15: Establishes a monetary stipend to be paid to persons who are eligible for the foster care transition program.

Section 16: Replaces the term "foster care" with "out-of-home care" for purposes of the transition program.

Section 17: Defines "out-of-home care" for the purposes of the transition program.

CS FOR HOUSE BILL NO. 126(EDC)
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GARA, Crawford, Kerttula

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to continuing the secondary public education of a homeless student;**
2 **relating to the purpose of certain laws as they relate to children; relating to tuition**
3 **waivers, loans, and medical assistance for a child placed in out-of-home care by the**
4 **state; relating to foster care; relating to children in need of aid; and relating to out-of-**
5 **home care transition to independent living."**

6 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

7 *** Section 1. AS 14.03 is amended by adding a new section to read:**

8 **Sec. 14.03.096. Continuing the public education of a homeless student. (a)**
9 **Except as provided in (b) and (d) of this section, the governing body of a school**
10 **district shall comply with the requirements for continuing the public education of a**
11 **homeless student in the student's school of origin and for providing transportation**
12 **services for the remainder of the current school year or, if the student is attending**
13 **school for a summer term, for the remainder of the summer term, under 42 U.S.C.**

1 11431 - 11435 (McKinney-Vento Homeless Education Assistance Improvement Act
2 of 2001), as those provisions existed on February 1, 2009.

3 (b) The requirements in (a) of this section do not apply if the student moves to
4 a school district other than the school district in which the student's school of origin is
5 located.

6 (c) If a homeless student is transferred to a school other than the student's
7 school of origin, the school of origin shall provide a copy of the student's records to
8 the student's new school within seven school days after notification of the transfer.
9 The student's new school shall allow the student to attend school while awaiting the
10 transfer of records under this subsection.

11 (d) A school district is required to comply with this section only

12 (1) if the legislature appropriates funds for the purpose; and

13 (2) to the extent possible using funds appropriated for the purpose.

14 (e) In this section,

15 (1) "homeless student" has the meaning given in 42 U.S.C. 11434a for
16 "homeless child or youth," and the phrase "awaiting foster care placement" in that
17 definition shall be interpreted to include all students who are placed in out-of-home
18 care and in the custody of the Department of Health and Social Services under
19 AS 47.10.080(c) or who are committed to the custody of the Department of Health and
20 Social Services under AS 47.12.120(b)(1) or (3);

21 (2) "school of origin" means the school in which the student was last
22 enrolled.

23 * Sec. 2. AS 14.43 is amended by adding a new section to read:

24 **Article 3A. Free Tuition for a Person Who Was in Out-of-Home Care.**

25 **Sec. 14.43.086. Free tuition and fees for a person who was in out-of-home**
26 **care.** (a) A person who enrolls as a student in good standing in a state-supported
27 educational institution in the state is entitled to a waiver of tuition, fees, and room and
28 board expenses if the person provides adequate proof that the person

29 (1) was in the custody of the state under AS 47.10 or AS 47.14;

30 (2) was placed in out-of-home care for a period of not less than six
31 consecutive months on or after the person became 16 years of age;

1 (3) has applied for educational grants or scholarships that the person is
2 otherwise eligible for as recommended by the educational institution;

3 (4) has applied for an available federal education loan; and

4 (5) is under 29 years of age.

5 (b) The amount of the waiver to which a person is entitled under this section is
6 the amount of unmet need for tuition, room, and board expenses, as determined by the
7 commission, after deducting funding for the school year from education loans, grants,
8 or scholarships received by a person eligible for a waiver.

9 (c) The proceeds of an education loan, grant, or scholarship received by a
10 person eligible for a waiver under this section must be paid to the educational
11 institution to offset the person's tuition, fees, and room and board expenses.

12 (d) A state-supported educational institution in the state is required to provide
13 a waiver under (a) of this section only if the legislature appropriates funds for the
14 purpose of offsetting waivers under this section. If an appropriation is not sufficient to
15 fully offset waivers for each person entitled to a waiver under (a) of this section, the
16 institution may offer full or partial waivers to eligible applicants as funding permits
17 and at the discretion of the institution.

18 * Sec. 3. AS 14.43.160 is amended by adding a new paragraph to read:

19 (7) "out-of-home care" has the meaning given in AS 47.14.400.

20 * Sec. 4. AS 36.30.850(b)(42) is amended to read:

21 (42) grants and contracts with qualified entities for services under
22 AS 47.18.330 for the out-of-home [FOSTER] care transition program;

23 * Sec. 5. AS 47.05.060 is amended to read:

24 **Sec. 47.05.060. Purpose and policy relating to children.** The purpose of this
25 title as it relates to children is to secure for each child the care and guidance,
26 preferably in the child's own home, as well as an education, that will serve the moral,
27 emotional, mental, intellectual, and physical welfare of the child and the best interests
28 of the community; to preserve and strengthen the child's family ties unless efforts to
29 preserve and strengthen the ties are likely to result in physical or emotional damage to
30 the child, removing the child from the custody of the parents only as a last resort when
31 the child's welfare or safety or the protection of the public cannot be adequately

1 safeguarded without removal; and, when the child is removed from the family, to
2 secure for the child adequate custody, education, and care and adequate planning for
3 permanent placement of the child.

4 * Sec. 6. AS 47.05.065 is amended to read:

5 **Sec. 47.05.065. Legislative findings related to children.** The legislature finds
6 that

7 (1) parents have the following rights and responsibilities relating to the
8 care and control of their child while the child is a minor:

9 (A) the responsibility to provide the child with food, clothing,
10 shelter, education, and medical care;

11 (B) the right and responsibility to protect, nurture, train, and
12 discipline the child, including the right to direct the child's medical care and
13 the right to exercise reasonable corporal discipline;

14 (C) the right to determine where and with whom the child shall
15 live;

16 (D) the right and responsibility to make decisions of legal or
17 financial significance concerning the child;

18 (E) the right to obtain representation for the child in legal
19 actions; and

20 (F) the responsibility to provide special safeguards and care,
21 including appropriate prenatal and postnatal protection for the child;

22 (2) it is the policy of the state to strengthen families and to protect
23 children from child abuse and neglect; the state recognizes that, in some cases,
24 protection of a child may require removal of the child from the child's home; however,

25 (A) except in those cases involving serious risk to a child's
26 health or safety, the Department of Health and Social Services should provide
27 time-limited family support services to the child and the child's family in order
28 to offer parents the opportunity to remedy parental conduct or conditions in the
29 home that placed the child at risk of harm so that a child may return home
30 safely and permanently; and

31 (B) the state also recognizes that when a child is removed from

1 the home, visitation between the child and the child's parents or guardian and
2 family members reduces the trauma for the child and enhances the likelihood
3 that the child will be able to return home; therefore, whenever a child is
4 removed from the parental home, the Department of Health and Social
5 Services should encourage frequent, regular, and reasonable visitation of the
6 child with the child's parent or guardian and family members;

7 (3) it is the policy of the state to recognize that, when a child is a ward
8 of the state, the child is entitled to reasonable safety, adequate care, and adequate
9 treatment and that the Department of Health and Social Services as legal custodian and
10 the child's guardian ad litem as guardian of the child's best interests and their agents
11 and assignees, each should make reasonable efforts to ensure that the child is provided
12 with reasonable safety, adequate care, and adequate treatment for the duration of time
13 that the child is a ward of the state;

14 (4) it is in the best interests of a child who has been removed from the
15 child's own home for the state to apply the following principles in resolving the
16 situation:

17 (A) the child should be placed in a safe, secure, and stable
18 environment;

19 (B) the child should not be moved unnecessarily;

20 (C) a planning process should be followed to lead to permanent
21 placement of the child;

22 (D) every effort should be made to encourage psychological
23 attachment between the adult caregiver and the child;

24 (E) frequent, regular, and reasonable visitation with the parent
25 or guardian and family members should be encouraged; [AND]

26 (F) parents and guardians must actively participate in family
27 support services so as to facilitate the child's being able to remain in the home;
28 when children are removed from the home, the parents and guardians must
29 actively participate in family support services to make return of their children
30 to the home possible; and

31 (G) the child should continue to attend the child's school of

1 **origin as provided under AS 14.03.096;**

2 (5) numerous studies establish that

3 (A) children undergo a critical attachment process before the
4 time they reach six years of age;

5 (B) a child who has not attached with an adult caregiver during
6 this critical stage will suffer significant emotional damage that frequently leads
7 to chronic psychological problems and antisocial behavior when the child
8 reaches adolescence and adulthood; and

9 (C) it is important to provide for an expedited placement
10 procedure to ensure that all children, especially those under the age of six
11 years, who have been removed from their homes are placed in permanent
12 homes expeditiously.

13 * Sec. 7. AS 47.07.020(b) is amended to read:

14 (b) In addition to the persons specified in (a) of this section, the following
15 optional groups of persons for whom the state may claim federal financial
16 participation are eligible for medical assistance:

17 (1) persons eligible for but not receiving assistance under any plan of
18 the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act,
19 Supplemental Security Income) or a federal program designated as the successor to the
20 aid to families with dependent children program;

21 (2) persons in a general hospital, skilled nursing facility, or
22 intermediate care facility, who, if they left the facility, would be eligible for assistance
23 under one of the federal programs specified in (1) of this subsection;

24 (3) persons under 21 years of age who are under supervision of the
25 department, for whom maintenance is being paid in whole or in part from public
26 funds, and who are in out-of-home care [FOSTER HOMES] or private child-care
27 institutions;

28 (4) aged, blind, or disabled persons, who, because they do not meet
29 income and resources requirements, do not receive supplemental security income
30 under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not
31 receive a mandatory state supplement, but who are eligible, or would be eligible if

1 they were not in a skilled nursing facility or intermediate care facility to receive an
2 optional state supplementary payment;

3 (5) persons under 21 years of age who are in an institution designated
4 as an intermediate care facility for the mentally retarded and who are financially
5 eligible as determined by the standards of the federal program designated as the
6 successor to the aid to families with dependent children program;

7 (6) persons in a medical or intermediate care facility whose income
8 while in the facility does not exceed \$1,656 a month but who would not be eligible for
9 an optional state supplementary payment if they left the hospital or other facility;

10 (7) persons under 21 years of age who are receiving active treatment in
11 a psychiatric hospital and who are financially eligible as determined by the standards
12 of the federal program designated as the successor to the aid to families with
13 dependent children program;

14 (8) persons under 21 years of age and not covered under (a) of this
15 section [,] who would be eligible for benefits under the federal program designated as
16 the successor to the aid to families with dependent children program, except that they
17 have the care and support of both their natural and adoptive parents;

18 (9) pregnant women not covered under (a) of this section and who
19 meet the income and resource requirements of the federal program designated as the
20 successor to the aid to families with dependent children program;

21 (10) persons under 21 years of age not covered under (a) of this section
22 who the department has determined cannot be placed for adoption without medical
23 assistance because of a special need for medical or rehabilitative care and who the
24 department has determined are hard-to-place children eligible for subsidy under
25 AS 25.23.190 - 25.23.210;

26 (11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title
27 XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom
28 a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title
29 XVI, Social Security Act) because they meet all of the following criteria:

30 (A) they are 18 years of age or younger and qualify as disabled
31 individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

(D) home and community-based services under a waiver approved by the federal government are either not available to them under this chapter or would be inappropriate for them;

(12) disabled persons, as described in 42 U.S.C. 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under applicable federal regulations or guidelines, is less than 250 percent of the official poverty line applicable to a family of that size according to the United States Department of Health and Human Services, and who, but for earnings in excess of the limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is not eligible under another provision of this section shall pay a premium or other cost-sharing charges according to a sliding fee scale that is based on income as established by the department in regulations;

(13) persons under 19 years of age who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as defined by the United States Department of Health and Human Services and revised under 42 U.S.C. 9902(2);

(14) pregnant women who are not covered under (a) of this section and whose household income does not exceed 175 percent of the federal poverty line as

1 defined by the United States Department of Health and Human Services and revised
2 under 42 U.S.C. 9902(2);

3 (15) persons who have been diagnosed with breast or cervical cancer
4 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII);

5 (16) persons under 21 years of age who were in the custody of the
6 department under AS 47.10 or AS 47.14 and who were placed in out-of-home
7 care for a period of not less than six consecutive months on or after reaching 16
8 years of age.

9 * Sec. 8. AS 47.07.020 is amended by adding a new subsection to read:

10 (o) In this section, "out-of-home care" has the meaning given in AS 47.14.400.

11 * Sec. 9. AS 47.10.080 is amended by adding a new subsection to read:

12 (v) A social worker employed by or under contract with the department shall,
13 not less than monthly, conduct visits with a child committed to the custody of the
14 department under (c) of this section. The visits must be of sufficient substance and
15 duration to address issues pertinent to case planning and service delivery to ensure the
16 child's safety, permanency, and well-being. The majority of the visits conducted under
17 this subsection must be at the location of the child's current placement. Nothing in this
18 paragraph creates a private right of action against the department or the department's
19 contractors. In this subsection, "visit" means face-to-face contact between social
20 worker and child.

21 * Sec. 10. AS 47.10.990(3) is amended to read:

22 (3) "child" means a person who is

23 (A) under 18 years of age;

24 (B) [AND A PERSON] 19 years of age if that person was
25 under 18 years of age at the time that a proceeding under this chapter was
26 commenced; and

27 (C) under 21 years of age if that person is living in out-of-
28 home care;

29 * Sec. 11. AS 47.10.990 is amended by adding a new paragraph to read:

30 (33) "out-of-home care" has the meaning given in AS 47.14.400.

31 * Sec. 12. AS 47.18.300(a) is amended to read:

1 (a) The department, in coordination with local public and private agencies,
2 shall design, develop, and implement an out-of-home care [A FOSTER CARE]
3 transition program to provide support and services to individuals who

4 (1) reach or have reached the age of 16 or older while in state custody
5 and placed in out-of-home [FOSTER] care and have not yet reached 23 years of age;
6 and

7 (2) meet other eligibility criteria established by the department under
8 (b) of this section.

9 * Sec. 13. AS 47.18.310 is amended to read:

10 **Sec. 47.18.310. Program design.** The department, in coordination with local
11 public and private agencies, shall design the program as a continuation of the training
12 efforts related to independent living skills that were initiated for a child in state
13 custody who was placed in out-of-home care and [WHEN THE STATE FOSTER
14 CARE RECIPIENTS WERE] identified as being likely to remain in out-of-home
15 [STATE FOSTER] care until reaching not less than the age of 18. The program
16 design must require that program participants are directly involved in identifying the
17 program activities that will prepare them for independent living.

18 * Sec. 14. AS 47.18.320(a) is amended to read:

19 (a) Subject to the availability of an appropriation made for the purposes of
20 AS 47.18.300 - 47.18.390, the program may provide

21 (1) education and vocational training;

22 (2) assistance in obtaining basic education and training;

23 (3) career and employment services;

24 (4) training in basic life skills;

25 (5) housing and utility assistance;

26 (6) mentoring and counseling; and

27 (7) other appropriate services to complement the efforts of former state
28 foster care recipients or a child who was in state custody and placed in out-of-
29 home care to achieve self-sufficiency.

30 * Sec. 15. AS 47.18 is amended by adding a new section to read:

31 **Sec. 47.18.335. Monetary living expense stipend.** The department shall

1 provide to an individual receiving services under the program a monthly stipend in an
2 amount set by the department that is not less than the daily rate provided to a licensed
3 foster parent for necessary living expenses. The stipend shall continue for a period of
4 not more than one year after the individual leaves out-of-home care. The department
5 may adopt regulations to implement this section.

6 * Sec. 16. AS 47.18.390(1) is amended to read:

7 (1) "program" means the out-of-home [FOSTER] care transition
8 program authorized under AS 47.18.300 - 47.18.390;

9 * Sec. 17. AS 47.18.390(3) is repealed and reenacted to read:

10 (3) "out-of-home care" has the meaning given in AS 47.14.400.

ANALYSIS: (Attach a separate page if necessary)

The intent of CS HB 126 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

The Office of Children's Services Online Resource for the Children of Alaska (ORCA) data base is mandated by the federal government and must be continuously updated to reflect changes in both state and federal law and policy. The following provides the estimated cost of ORCA updates that will be required to implement this bill.

ANALYSIS: (Attach a separate page if necessary)

The intent of CS HB 126 is to address the educational, medical, financial, and housing challenges that face youth as they transition out of foster care and to support those care providers that are willing to help them during that period of transition.

Sec. 11 amends AS 47.10.990 to change the definition of child to include under age 21 years if that person is living in out-of-home care as defined in AS 47.14.400.

FISCAL NOTE

STATE OF ALASKA

BILL NO. CS HB 126 (EDC)

2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

Foster care reimbursement payments will be made available to care for children who remain in the custody of the state, who are age 18 through 20;

Approximately 15% (17 children) of the 110 that turn age 18 annually will chose to stay in foster care until age 19; 10% (10) to age 20; 5% to 21 (6); totaling 34 children. This is based simply on program experience and the assumption that most children will want to leave foster care at age 18, but that others who have stable homes will decide to stay with their foster families and that most of these children will attend post secondary education programs.

In addition to the 33 children who may wish to participate in the program in its initial year, approximately 12 of those special needs children who are 18 years of age, 6 at age 19, and 6 at age 20 will remain in care for 2010, bringing the total for 2010 to 57 children. This is based on the current numbers of children who age out with special needs. We estimate that 18 children with special needs age out annually, with 6 of them already staying in foster care until age 20, leaving 12 that may chose to stay in care.

For years 2011 - 2015, the number of participants has been reduced to 35, where it may stabilize because OCS speculates those children reaching the age of 19 or 20 will more likely opt to chose the monetary stipend in this bill.

Calculations are based on 360 days at an average base foster care base rate of \$35.33 a day $35.33 \times 30 = 1,060$. This calculation is used to equally distribute funding estimates, and makes very little difference to the resulting totals.

Currently, federal reimbursement for the extension of the foster program is not available, however, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20. This fiscal note assumes that option will be implemented when available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011 forward only.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. CSHB126(EDC)

ANALYSIS CONTINUATION

Assumptions applied to this fiscal note:

The monetary stipends will be made available to children leaving out of home care, who are age 18 through 20, and does not need to be requested immediately upon leaving care;

70% of the 220 children currently participating in the Independent Living Program (IL) will become eligible for monetary stipends in FY 2010 (ages 18, 19, and 20) – equating to about 155 FTEs (full time equivalents), resulting in higher program costs the first year the stipends are available. FTEs help provide a more stable count as it is assumed that recipients will migrate on and off the program and not all will receive a full year's stipends;

After the first year of stipends, it is assumed that about 1/3 of the IL population will be eligible for and request monetary stipends annually equaling 75 FTEs, and that number will remain somewhat static;

Calculations are based on 360 days at an average base foster care base rate of \$35.33 a day $35.33 \times 30 = 1,060$.

Currently, federal reimbursement for the extension of the IL program is not available, however, the Adoption and Guardianship Fostering Connections to Success and Increasing Adoptions Act of 2008 includes the option to extend the assistance age through 20 under certain conditions. This fiscal note assumes those conditions will be established in regulation and when met, IV-E reimbursement will apply. This option is available October 1, 2010, therefore is available for the final three quarters of state fiscal year 2011.

(3) Local educational agency requirements

(A) In general

The local educational agency serving each child or youth to be assisted under this part shall, according to the child's or youth's best interest -

(i) continue the child's or youth's education in the school of origin for the duration of homelessness -

(I) in any case in which a family becomes homeless between academic years or during an academic year; or

(II) for the remainder of the academic year, if the child or youth becomes permanently housed during an academic year; or

(ii) enroll the child or youth in any public school that nonhomeless students who live in the attendance area in which the child or youth is actually living are eligible to attend.

(B) Best interest

In determining the best interest of the child or youth under subparagraph (A), the local educational agency shall -

(i) to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian;

(ii) provide a written explanation, including a statement regarding the right to appeal under subparagraph (E), to the homeless child's or youth's parent or guardian, if the local educational agency sends such child or youth to a school other than the school of origin or a school requested by the parent or guardian; and

(iii) in the case of an unaccompanied youth, ensure that the homeless liaison designated under paragraph (1)(J)(ii) assists in placement or enrollment decisions under this subparagraph, considers the views of such unaccompanied youth, and provides notice to such youth of the right to appeal under subparagraph (E).

(5) Coordination

(A) In general

Each local educational agency serving homeless children and youths that receives assistance under this part shall coordinate -

(i) the provision of services under this part with local social services agencies and other agencies or programs providing services to homeless children and youths and their families, including services and programs funded under the Runaway and Homeless Youth Act (42 U.S.C. 5701 et seq.); and

(ii) with other local educational agencies on interdistrict issues, such as transportation or transfer of school records.

origin, as determined in paragraph (3)(A), in accordance with the following, as applicable:

(I) If the homeless child or youth continues to live in the area served by the local educational agency in which the school of origin is located, the child's or youth's transportation to and from the school of origin shall be provided or arranged by the local educational agency in which the school of origin is located.

(II) If the homeless child's or youth's living arrangements in the area served by the local educational agency of origin terminate and the child or youth, though continuing his or her education in the school of origin, begins living in an area served by another local educational agency, the local educational agency of origin and the local educational agency in which the homeless child or youth is living shall agree upon a method to apportion the responsibility and costs for providing the child with transportation to and from the school of origin. If the local educational agencies are unable to agree upon such method, the responsibility and costs for transportation shall be shared equally.

(2) COMPLIANCE-

(A) IN GENERAL- Each plan adopted under this subsection shall also describe how the State will ensure that local educational agencies in the State will comply with the requirements of paragraphs (3) through (7).

(B) COORDINATION- Such plan shall indicate what technical assistance the State will furnish to local educational agencies and how compliance efforts will be coordinated with the local educational agency liaisons designated under paragraph (1)(J)(ii).

(3) LOCAL EDUCATIONAL AGENCY REQUIREMENTS-

(A) IN GENERAL- The local educational agency serving each child or youth to be assisted under this subtitle shall, according to the child's or youth's best interest--

(i) continue the child's or youth's education in the school of origin for the duration of homelessness-OR OUT OF home or foster care

(I) in any case in which a family becomes homeless between academic years or during an academic year; or

(II) for the remainder of the academic year, if the child or youth becomes permanently housed during an academic year; or

(ii) enroll the child or youth in any public school that nonhomeless students who live in the attendance area in which the child or youth is actually living are eligible to attend.

(B) BEST INTEREST- In determining the best interest of the child or youth under subparagraph (A), the local educational agency shall--

(i) to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's ~~parent~~ guardian;

(ii) provide a written explanation, including a statement regarding the right to appeal under subparagraph (C), to the homeless child's or youth's ~~parent~~ guardian, if the local

(1)

School District

educational agency sends such child or youth to a school other than the school of origin or a school requested by the parent or guardian; and

(iii) in the case of an unaccompanied youth, ensure that the school district homeless liaison designated under paragraph (1)(J)(ii) assists in placement or enrollment decisions under this subparagraph, considers the views of such unaccompanied youth, and provides notice to such youth of the right to appeal under subparagraph

(E)

(C) ENROLLMENT- (i) The school selected in accordance with this paragraph shall immediately enroll the homeless child or youth, even if the child or youth is unable to produce records normally required for enrollment, such as previous academic records, medical records, proof of residency, or other documentation.

(ii) The enrolling school shall immediately contact the school last attended by the child or youth to obtain relevant academic and other records.

(iii) If the child or youth needs to obtain immunizations, or immunization or medical records, the enrolling school shall immediately refer the parent or guardian of the child or youth to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall assist in obtaining necessary immunizations, or immunization or medical records, in accordance with subparagraph (D).

(D) RECORDS- Any record ordinarily kept by the school, including immunization or medical records, academic records, birth certificates, guardianship records, and evaluations for special services or programs, regarding each homeless child or youth shall be maintained--

(i) so that the records are available, in a timely fashion, when a child or youth enters a new school or school district; and

(ii) in a manner consistent with section 444 of the General Education Provisions Act (20 U.S.C. 1232g).

(E) ENROLLMENT DISPUTES- If a dispute arises over school selection or enrollment in a school--

(i) the child or youth shall be immediately admitted to the school in which enrollment is sought, pending resolution of the dispute;

(ii) the parent or guardian of the child or youth shall be provided with a written explanation of the school's decision regarding school selection or enrollment, including the rights of the parent, guardian, or youth to appeal the decision;

(iii) the child, youth, parent, or guardian shall be referred to the local educational agency liaison designated under paragraph (1)(J)(ii), who shall carry out the dispute resolution process as described in paragraph (1)(C) as expeditiously as possible after receiving notice of the dispute; and

(iv) in the case of an unaccompanied youth, the homeless liaison shall ensure that the youth is immediately enrolled in school pending resolution of the dispute.

(F) PLACEMENT CHOICE- The choice regarding placement shall be made regardless of whether the child or youth lives with the homeless parents or has been temporarily placed elsewhere.

and the person in charge of children's services for DHHS

2

Educational Stability for Youth in Foster Care

The McKinney-Vento Act¹ applies to many children in DFCS custody and provides those children with rights that promote educational stability.

What is the McKinney-Vento Act?

- ❖ McKinney-Vento is a federal law that promotes stability, access, and academic success for homeless youth. McKinney-Vento also provides assistance for homeless youth with enrollment in a new school, transportation to school, and other educational and supplemental services. It promotes educational stability by allowing homeless youth to remain in their school of origin even if homelessness has caused them to move outside the school district. School of origin is defined as the school a student attended before becoming homeless or the school where the student was last enrolled.

Are children in foster care homeless?

- ❖ In order to be eligible for the benefits and services provided for by the McKinney-Vento Act, a student must meet the criteria for homelessness. Some children in foster care meet the criteria and are therefore considered homeless under the Act.
- ❖ The McKinney-Vento Act defines homeless children and youth as "(A) individuals who lack a fixed, regular and adequate nighttime residence...; and (B) includes – (i) children and youths who are sharing the housing of other persons due to loss of housing, economic hardship, or a similar reason; are living in motels, hotels, trailer parks, or camping grounds due to the lack of alternative accommodations; *are living in emergency or transitional shelters; are abandoned in hospitals; or are awaiting foster care placement...*"² Thus, some children in DFCS custody are considered homeless for the purpose of the McKinney-Vento Act, specifically children living in shelters, abandoned in hospitals, and children awaiting foster care placement
- ❖ Using McKinney-Vento to secure rights for children in foster care helps to minimize educational disruption. The child is able to remain in the same school, continue with the current academic curriculum, and is less likely to fall behind academically.

Are children covered by McKinney-Vento after they move into a foster home?

- ❖ Once the provisions of McKinney-Vento have been met, an eligible child remains eligible for services for the remainder of that school year even if s/he moves into a foster home.
- ❖ When the next school year begins, if the child continues to live in a foster home, s/he will no longer qualify under McKinney-Vento and at that time may have to transfer to a school in the district where s/he is residing.

What about the documents schools require to enroll a child in school?

- ❖ McKinney-Vento requires schools to immediately enroll homeless children in school even without records normally required for enrollment, such as previous academic records, medical records including immunization records, proof of guardianship, and proof of residency.
- ❖ The enrolling school must contact the last school attended to obtain relevant records to facilitate enrollment and the school should refer the child to the school liaison for assistance in obtaining immunization records.

What if the child has moved out of district and the old school refuses to allow the child to continue to attend?

- ❖ All decisions about where a homeless child shall be allowed to go to school must be made according to the child's best interests. In determining best interests of the child, the local educational agency shall "to the extent feasible, keep a homeless child or youth in the school of origin, except when doing so is contrary to the wishes of the child's or youth's parent or guardian."³

Created by:
The Barton Child Law and Policy Clinic
Emory University School of Law
Gambrell Hall
Atlanta, GA 30322

Tel 404 727 6664
www.child-law.org
children@law.emory.edu

- ❖ Whenever there is a disagreement between a school and a parent, guardian, or youth, the school must:
 - Immediately enroll the student in the school the parent, guardian, or youth chooses;
 - Keep the student at that school until the disagreement is settled;
 - Explain, in writing, its decision and the right to have the disagreement settled; AND
 - Send the parent, guardian or youth to the Georgia Liaison/Coordinator of Education for Homeless Children and Youth to settle the disagreement quickly. Please see the contact information below.

What if it is best to transfer the child to a new school in the district where the foster parents or relative placement live?

- ❖ Homeless children and youth have the right to stay in the school they went to before they lost their housing, to stay at whatever school they were enrolled in last, or to attend the local school where they are now living.

Is there any help with transportation?

- ❖ If McKinney-Vento applies to the child, then the school district must provide or arrange transportation for the student to stay at the school of origin, even if the student moves to a different city, county, or school district.
 - If a student is living in the same school district as the school of origin, then that school district has to provide transportation. If the student moves across district lines, then both districts have to work together to provide transportation.

What type of transportation will the school provide?

- ❖ Schools can provide transportation in different ways, including:
 - Re-routing school buses and making sure buses go to shelters, group homes and other places where students live;
 - Providing passes for public buses and subways, including passes for caretakers when needed;
 - Using the transportation systems social services use;
 - Using approved van or taxi services;
 - Reimbursing parents, guardians or youth for gas;
 - Working with service providers and public assistance agencies to make transportation plans or provide transportation;
 - Getting local businesses or other agencies to help with transportation costs; and

Where can I get more information?

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

MEMORANDUM

DATE: March 11, 2009

TO: Representative Wes Keller
Representative Bob Herron

FROM: Representative Les Gara

RE: Departments affected by HB126

Department of Health and Social Services
Department of Education
University of Alaska

Facing Foster Care in Alaska **Policy Agenda 2008**

In May of 2008, the youth and alumni of Facing Foster Care in Alaska, (FFCA) came together from across the state and gathered in Anchorage to share their ideas and experiences about life in Alaska's foster care system. During their gathering youth/alumni brainstormed ideas on what they thought would be most beneficial to them and others in foster care in Alaska. As a result of these ideas, the members of FFCA voted to create this policy agenda.

Tuition Waivers for ALL foster youth in the state of Alaska

The University of Alaska Anchorage currently offers 10 Presidential Tuition Waivers a year to foster youth who are eligible for the OCS Independent Living Program. A young person must have been in foster care on or after their 16th birthday for six consecutive months in order to be eligible for the waiver program. Since these waivers are competing, not every young person in Alaska who applies will receive one. Youth who are placed in a guardianship, adopted, or reunified before age 16 are not eligible to apply for the waiver. Many states provide Tuition Waivers or other forms of reimbursement for college expenses to foster youth interested in pursuing post-secondary education. The youth and alumni of FFCA feel that by providing All of Alaska's foster youth with tuition waivers there would be a higher percentage of foster youth attending post-secondary education. Studies show that approximately 17% of young people who exit foster care pursue post-secondary education, and only about 1% graduate from a four year degree or certificate program. FFCA would like to see that All of Alaska's foster youth are provided with tuition waivers to reduce the stress of worrying about college expenses and knowing that they are guaranteed a higher education.

Support to foster youth pursuing post-secondary education

Many of the youth and alumni who attend post-secondary education programs in Alaska have complained about not having any supports to help them achieve their goals. FFCA members would like to see that universities and vocational programs have supports put in place for foster youth transitioning to higher education. FFCA members recommended adult or alumni mentors, a family to spend the holidays with, and someone within the

university or vocational program to talk with about stressors. If every youth in Alaska's foster care system made a permanent connection with a caring adult during their stay in foster care this would be less of an issue. FFCA members also recommended implementing the, "Circles of Support Program," to ensure youth in care are making permanent connections with caring adults before exiting from care.

More Independent Living Funds going to youth/alumni

The state of Alaska currently gets approximately \$500,000 a year (FY2008 \$518,814) in Federal Chafee funds to be used for youth in foster care to work toward independent living. There is currently no state match for this money and it is being stretched very thin as the states Independent Living Program grows, and begins to offer more programs and resources to youth in transition. The youth and alumni of FFCA would like to see that more of this money is offered to youth and alumni transitioning from foster care for housing, education, life skills training, and anything that may support them in becoming independent productive members of society. FFCA is also aware that many states provide a match for the Chafee dollars they receive and would like to see that this is made possible by the state of Alaska.

Transitional Living for youth

Alaska currently allows for youth who turn 18 in foster care the option to extend their time in state custody until the age of 20. There many states that allow for youth to extend custody until age 21, or to leave custody and re-enter if they are willing to pursue post-secondary education. According to the Alaskan Alumni Study 38% of Alaska's alumni reported being homeless after exiting foster care. The Covenant House Shelter in Anchorage reports that two-thirds of their current population is comprised of current and former OCS youth. The youth and alumni of FFCA would like to see a stronger focus in the area of transitional housing for youth who exit from the foster care system. FFCA members shared ideas and recommend allowing youth to remain in state custody while living in college dorms, apartments on their own, or other least restrictive environments outside of the traditional family foster home after reaching age 18.

Independent Housing Program

Some states currently allow for foster youth to live, "on their own," after reaching age 18, but to remain in state custody and receive foster care payments on behalf of themselves until the age of 21. This allows for foster youth to continue services with their social worker as well as other services offered to youth in custody, and learn to successfully transition out of state custody. The youth and alumni of FFCA would like to see a program such as this put into place in Alaska, or for the state to consider more creative placements for young people once they reach 18, but are not ready to exit from foster care.

Medicaid increased to age 21 under the Chafee Independence Act

There are currently 17 states that have chosen to enact the Chafee option to extend Medicaid to age 21 for former foster youth, Alaska is not one of these states. Currently, youth in Alaska's foster care system can receive Denali Kid Care until age 19 under the 1115 Waiver. After age 19 these young people can apply for adult Medicaid, but this holds them back from obtaining decent paying jobs and forces them to choose to go without medical coverage. Youth in foster care often attend counseling and have other medical needs, but they are forced to cut off many of these services when they leave custody. The youth and alumni of FFCA would like to see that Medicaid is increased for Alaska's foster youth to age 21 under the Chafee Foster Care Independence Act.

Braces covered under Medicaid

Children and youth in Alaska's foster care system often have only their Basic needs met because there is a strong emphasis on safety and permanency. There is little or no value put on whether a young person in custody needs braces, as this is usually a cosmetic procedure that parents would normally pay for. The youth and alumni of FFCA felt very strongly about this issue and believe that braces should be covered under Medicaid or by OCS. FFCA members discussed how braces could support higher self-esteem for a young person in foster care, and would give them one less thing to worry about besides the social pressures they face as a, "foster youth." FFCA is also aware that braces are covered under Medicaid in the state of Texas, so this could be an option for Alaska.

Decreased use of Psychotropic Medication for Alaska's foster youth

Many of Alaska's youth and alumni complain about being prescribed psychotropic medications after entering the foster care system for symptoms of depression, anxiety, trauma, attachment issues, and misbehavior. The youth and alumni of FFCA feel that these are all normal symptoms of child maltreatment and dealing with all that comes out of being placed in foster care. There has been a national focus on the use of psychotropic medications being over-prescribed for children and youth in foster care. FFCA members have also complained about side-effects caused by these medications resulting in a decreased ability to focus on their education as well as function in everyday society. The youth and alumni of FFCA would like to see that the prescription of psychotropic medications for Alaska's foster children and youth is decreased and reviewed more closely.

Definitions (according to FFCA)

Youth- A young person currently in state custody (foster care).

Alumni- A person who has spent any period of time in the foster care system

Facing Foster Care in Alaska (FFCA)

Mission Statement: Our mission is to improve the foster care system through sharing our experiences, supporting and educating youth and social services and implementing positive change in society as a whole.

FFCA is Alaska's only foster care advocacy organization completely run by youth and alumni of the foster care system. Since their inception in 2003, FFCA has been working to improve Alaska's foster care system by sharing their experiences with people who can create positive changes for Alaska's foster youth. FFCA is a statewide organization that provides support to Alaska's foster youth and alumni and, gives them the ability to share their voice and become leaders in their community.

Action

- Pass the Foster Care Continuing Opportunities Act.
- Pass the Medicaid Foster Care Coverage Act.
- Expand eligibility and improve services to youth in the child welfare system, or who were formerly in child welfare, through the John H. Chafee Foster Care Independence Program. Expand eligibility for independent living services to age 24, including room and board. Increase funding to at least \$200 million to support expansion of eligibility and services.
- Improve education opportunities for youth in foster care by making improvements to the Education and Training Voucher program. Increase funding for the voucher program to at least \$60 million and ensure all of the funds are used for this purpose.
- Include provisions in the reauthorization of the No Child Left Behind Act to enhance education supports for children in foster care.
- Provide the necessary resources for implementing the National Youth in Transition Database.

History

Federal support for independent living services for foster youth began in 1986 when Title IV-E was amended to include the Independent Living Program to assist youth who would eventually be emancipated from foster care. In 1993, Congress permanently extended the authority for independent living. Significant improvements were enacted in 1999 with passage of the John H. Chafee Foster Care Independence Program, in honor of the Rhode Island senator who was one of the law's sponsors and who died before it was enacted. The law allows states to extend Medicaid coverage to former foster children between 18 and 21 years old, and funding was doubled to \$140 million per year, which became effective in 2001. Also in 2001, Congress authorized an additional \$60 million in discretionary funds for education and training vouchers for youth who are eligible for the Foster Care Independence Program, as well as youth who are adopted from foster care after reaching age 16.

Foster Care Continuing Opportunities Act

Senator Barbara Boxer (D-CA) introduced the Foster Care Continuing Opportunities Act (S. 1512) on May 24, 2007. This legislation would extend Title IV-E foster care funding to age 21.

In 2005, 24,211 young people left foster care simply because they became too old. This is referred to as aging-out of foster care. Many young people transitioning out of the foster care system face great instability once finding themselves on their own, with few, if any, financial resources, no place to live, and little or no support from family, friends, and community. The experiences of these youth place them at higher risk for unemployment, poor educational outcomes, health issues, early parenthood, long-term dependency on public assistance, increased rates of incarceration, and homelessness.

This legislation would simply amend the current law that defines foster children to age 18. States would have an option to extend this to age 21. Under current law, limited funds are available under the John H. Chafee Foster Care Independence Program (*see below*).

Medicaid Foster Care Coverage Act

Rep. Dennis Cardoza (D-CA) introduced the Medicaid Foster Care Coverage Act (H.R. 1376) on March 7, 2007. This legislation amends title XIX of the Social Security Act to establish independent foster care adolescents as a mandatory category of individuals for coverage under state Medicaid programs.

For young people leaving foster care, lack of health care poses a substantial challenge. The Chafee Program allows states to extend Medicaid coverage to former foster children between ages 18 and 21. Despite Medicaid's tremendous advantage for youth in foster care, only 17 states had implemented the extension by early 2007.

Given the high rates of physical and mental health problems extensively documented among children and youth in foster care, access to health services is a critical factor as young people transition to adulthood. Because most children and youth in foster care are covered by Medicaid, use of the expansion option would allow a state to readily facilitate the transfer of a youth's Medicaid eligibility from one category to another without any gap in coverage as they exit foster care. Medicaid coverage should continue for all foster youth until at least age 21. Keeping medical records up to date and accessible is another challenge for young people involved with child welfare. Advances have been made in electronic record keeping, but more are needed.

John H. Chafee Foster Care Independence Program

The John H. Chafee Foster Care Independence Program helps states provide services to young people who are likely to remain in foster care until age 18, as well as former foster children beyond age 18. The program helps eligible children make the transition to self-sufficiency through such services as assistance in earning a high school diploma, support in career exploration, vocational training, job placement and retention, and training in daily living skills. In addition to the Medicaid coverage, the program allows up to 30% of the funds be used for room and board. Chafee is a capped entitlement with an annual ceiling of \$140 million, which has not been increased since 2001.

Adolescents constitute a major segment of the youngsters the child welfare system serves. Most youth enter out-of-home care as a result of abuse, neglect, and exploitation. Others have run away from home or have no home. Young people transitioning out of the foster care system are significantly affected by the instability that accompanies long periods of out-of-home placement during childhood and adolescence.

The resulting harm to the youth themselves, their communities, and the society at large is unacceptably high. To reduce these outcomes, outreach to youth and the quality of services provided need to be improved. In addition, expanding eligibility for critical support for young people leaving

foster care will ensure a successful transition to independence and self-sufficiency, and reduce the numbers of young people who become homeless, unemployed, incarcerated, and/or at high risk of becoming victims and victimizers. To accomplish this improvement and expansion, funding for the Chafee Foster Care Independence Program needs to be increased significantly.

Education

Reauthorizing the Title X, Part C of the No Child Left Behind (NCLB) McKinney-Vento Homeless Assistance Act (McKinney-Vento) is an opportunity to improve education outcomes for children and youth in foster care. McKinney-Vento provides access to essential federal education protections and rights for homeless children and youth. Children and youth who are eligible for McKinney-Vento have access to supports for school success that many children involved in child welfare lack: school stability or immediate enrollment if stability is not possible, school staff charged with ensuring their prompt enrollment, and more. While these protections currently apply to a subset of children involved in foster care, including those "awaiting foster care placement," states have defined this phrase differently. States vary widely in their application of these protections for this population. As a result, the opportunities for children and youth in foster care may depend on where they live. The reauthorization of McKinney-Vento provides an opportunity to ensure these protections are available to all children in foster care, with special accommodation for the needs and family dynamics that face children in foster care.

The Education and Training Voucher (ETV) program provides assistance of up to \$5,000 per year for the cost of attendance at an institution of higher education for youth who age out of foster care or are adopted after age 16. Funding for this program has never reached the amount requested by President Bush-\$60 million-which itself is not enough to meet the need. The ETV program began receiving funds in 2003 and was set at \$42 million. In 2005, funding increased to \$46.6 million; however, for FY 2008, funds were reduced to \$45.3 million. Funding for the ETV program should be expanded to at least the level proposed by the President. Further improvements to the ETV program are needed, including adjusting eligibility to include youth adopted after age 14, and requiring technical assistance for states to ensure funds are fully utilized. Also, instead of being returned to the federal treasury, unused state ETV funds should be transferred to other states' ETV programs with demonstrated unmet need.

National Youth In Transition Database

Congress should provide the resources necessary for implementation of the National Youth in Transition Database. This new initiative is a tremendous opportunity to provide valuable information that will inform future improvements in services to young people. The funds for implementation should be a priority for Congress and not come at the expense of existing services or supports or reduced services to adolescents receiving Chafee and ETV funding.

Key Facts

- In 2005, 24,211 children aged-out of out-of-home care. ^{1, 2}
- A study of young adults who had spent a year or more in foster care between age 14 and 18 found that 25% had experienced post-traumatic stress, compared to 4% of the general adult population. ³
- Three in 10 of the nation's homeless adults report foster care history. ⁴

- A recent study found that one-third of older youth in foster care were identified by caseworkers as having one or more special mental health, medical, pregnancy and parenting, substance abuse, or developmental needs that significantly interfered with their ability to live independently.⁵
- In Clark County, Nevada, 55% of former foster youth reported not having health insurance after leaving foster care.⁶
- Forty-four percent of former foster youth in Wisconsin reported difficulty accessing health and mental health services.⁷
- The rate at which foster youth complete high school (50%) is significantly below the rate of their peers (70%), and the rate at which college-qualified foster youth attend postsecondary education (20%) is substantially below the rate of their peers (60%).⁸
- The Census Bureau reports college graduates make \$23,000 more per year than those with high school diplomas.⁹

EXECUTIVE SUMMARY

This report analyzes the potential costs and benefits of allowing foster youth to remain in care until age 21, the policy encouraged by the Fostering Connections to Success and Increasing Adoptions Act and proposed in California's Assembly Bill 12, the California Fostering Connections to Success Act. Our estimates of the costs of extending care are based on the experience of Illinois in providing care past age 18 and data on public assistance receipt by youth aging out of foster care. Our estimates of the potential benefits of extending care are based on college participation rates at age 21 suggestive of the effect of extending care on post-secondary educational attainment as well as data on increased work-life earnings associated with post-secondary education.

Our analyses lead to the following conclusions:

- We estimate that the average per youth cost of extending foster to age 21, net cost offsets associated with public assistance utilization when youth cannot remain in care, to be approximately \$37,948. Available state-level data on public assistance utilization suggest that the net cost of extending care in California may be a few hundred dollars less than our estimate. We would expect the Federal government to pay \$13,282, the State of California \$9,866, and the placing county \$14,800 per person to extend foster care in California to age 21.
- Our estimates of the benefits of extending care until age 21 on bachelor's degree completion range from approximately \$27,000 to \$196,000. The wide range reflects different assumptions about 1) college graduation by former foster youth generally and 2) the persistence over time of the educational advantages associated with remaining in care. Our best estimate is that the increase in bachelor's degree completion predicted to result from extending care to age 21 would increase per-person work-life earnings by approximately \$92,000. This represents about \$2.4 for every dollar spent.
- Even if we assume no continuation of the favorable educational trajectory observed at age 21 associated with the Illinois policy of extending care, we estimate that the per-person work-life earnings of foster youth making the transition to adulthood would increase by an average of \$84,000 as a result of allowing foster youth to remain in care until they are 21 years old. This conservative estimate is based only on the expected effect of extending care on the likelihood of completing at least some college and represents a return of over two dollars for every dollar spent.

There is good reason to believe that the stark differences in college attainment that we observe at age 21 and attribute to the extension of foster care in Illinois will, over time, result in advantages in terms of both degree completion and sub-baccalaureate attainment. Thus, it seems reasonable to assume that the average increase in work-life earnings that would result from extending foster care is substantially higher than either of our estimates suggest, although how much higher is not clear. Our estimates suggest that the costs associated with extending foster care to age 21--an option that is now much less costly to states as a result of the Fostering Connections Act--are more than offset by the potential benefits to foster youth and society.

Introduction

Although they make up a relatively small proportion of all children in foster care, foster youth approaching the transition to adulthood have, over the years, attracted considerable attention from policymakers. Title IV-E of the Social Security Act has been amended three times in the past twenty-five years as part of an effort to better support young people making this transition. The shift over time in federal policy arguably reflects an evolving understanding of normative transitions to adulthood, growing knowledge of the particular challenges faced by transitioning foster youth, and changing views of the state's role and responsibilities as corporate parent. In practice, few states allow young people to remain in care much beyond their eighteenth birthday largely because, until now, federal reimbursement for foster care maintenance and administration costs has been limited to youth under age 18, or until age 19 in the case of youth who are likely to graduate from high school or an equivalent program before their 19th birthday (Bussey et al., 2000).

However, the Fostering Connections to Success and Increasing Adoptions Act (Public Law 110-351, hereafter referred to as the "Fostering Connections Act"), passed unanimously in both houses of Congress and signed into law by President Bush in October 2008, amends Title IV-E of the Social Security Act to allow states, at their option, to care for and support foster youth until the age of 21 provided that the youth are either 1) completing high school or an equivalency program; 2) enrolled in post-secondary or vocational school; 3) participating in a program or activity designed to promote, or remove barriers to, employment; 4) employed for at least 80 hours per month; or 5) incapable of doing any of these activities due to a medical condition. Young people age 18 and older can be living independently in a supervised setting as well as placed in a foster home or group care setting, but the procedures afforded to state wards under age 18 (e.g., judicial or administrative case review every six months) would continue to apply. The Fostering Connections Act also requires child welfare agencies to help young people ages 18 and older develop a personal transition plan during the 90 days immediately before they exit care. The plan must be as detailed as the youth desires and include specific options for housing, health insurance, education, mentoring opportunities, continuing support services, workforce supports and employment services.

The Fostering Connections Act will begin reimbursing states that choose to extend foster care in fiscal year 2011 (i.e., October 2010).¹ In December 2008, California Assembly Bill 12, the California Fostering Connections to Success Act, was introduced. Among its provisions AB 12 would extend the California foster care program to age 21 in accordance with the provisions of the Fostering Connections Act. One factor that may help determine whether California policymakers decide to exercise this option is how the

¹ Depending on the state, the federal government provides reimbursement of 50% to 83% of foster care maintenance costs for children who are Title IV-E eligible, and states pay the rest. The federal portion or Federal Financial Participation (FFP) is the same as the state's Federal Medical Assistance Percentage (FMAP) and is based primarily on the state's per capita income. State with a higher per capita income have a lower FMAP. States are responsible for covering the entire cost of care for children who are not Title IV-E eligible. This would also apply to foster youth ages 18 and older.

benefits to foster youth and society compare with the costs to government. In this report, we provide some preliminary estimates of those benefits and costs using data from a variety of sources including the Midwest Evaluation of the Adult Functioning of Former Foster Youth ("Midwest Study"), the Illinois Department of Children and Family Services (DCFS), the 1988 National Education Longitudinal Study and the US Census Bureau.² We conclude that the benefits to foster youth and society of extending care outweigh the costs to government by a factor of at least two to one.

The Midwest Study

The Midwest Study is a collaborative effort among the public child welfare agencies in Illinois, Iowa, and Wisconsin, Chapin Hall at the University of Chicago, the University of Wisconsin Survey Center (UWSC), and Partners for Our Children (POC) at the University of Washington, Seattle. The Principal Investigator for the study, Mark E. Courtney, is currently Executive Director of POC and a Faculty Associate of Chapin Hall.

The Midwest Study is examining the transition to adulthood among foster youth from the three participating states who had entered care prior to their 16th birthday, were still in care at age 17, and whose primary reason for placement was not delinquency.³ Baseline interviews were conducted with 732 of the 758 young people eligible for the study, between May 2002 and March 2003 (63 from Iowa, 474 from Illinois, and 195 from Wisconsin) when they were 17 or 18 years old. That translates into a response rate of almost 97 percent. Eighty-two percent (n = 603) of this baseline sample (386 from Illinois, 54 from Iowa, and 163 from Wisconsin) were re-interviewed between March and December 2004 when nearly all (n = 575) were age 19. A third wave of survey data was collected between March 2006 and January 2007 from 81 percent (n = 591) of the baseline sample (364 from Illinois, 50 from Iowa, and 176 from Wisconsin) when almost all of the study participants were 21 years old. The interviews covered a variety of domains, including living arrangements, relationships with family of origin, social support, receipt of independent living services, education, employment, economic well-being, receipt of government benefits, physical and mental well-being, health and mental health service utilization, sexual behaviors, pregnancy, marriage and cohabitation, parenting, and criminal justice system involvement.

An important feature of the Midwest Study, and one that allows us to undertake this analysis, is that the three participating states have different child welfare policies regarding the age until which foster youth can remain in care. Foster youth in Iowa and

² This report was produced in response to a request from policymakers and advocates in California involved in developing legislation to extend foster care to age 21 in their state. The time constraints imposed by the legislative process meant that we needed to produce a best estimate of the potential benefits and costs associated with extending care using survey data from the Midwest Study. The authors of this report are engaged in a longer-term project aimed at a more thorough benefit-cost analysis of extending care than that reported here. We would like to thank the John D. and Catherine T. MacArthur Foundation and the Walter S. Johnson Foundation for their support of the work involved in producing this report.

³ For a more detailed description of the baseline study sample and procedures, see Courtney & Dworsky, 2006.

Wisconsin are generally discharged from care around the time of their 18th birthday and almost never after age 19. This is similar to what happens in most states. By contrast, Illinois is one of the few jurisdictions where foster youth can and routinely do remain in care until their 21st birthday.⁴ Despite some claims that many foster youth would choose not to remain under the care and supervision of the public child welfare agency and juvenile court beyond age 18 if given the opportunity, our data suggest that the opposite is true. Most of the young people from Illinois, who could have left care at any time after reaching the age of majority, were still in care on their 20th birthday, and many remained in care until age 21.

The Potential Costs of Extending Foster Care to 21

We estimate of the expected costs to government if foster care were extended until age 21 based on (1) the per day cost of caring for young people beyond their 18th birthday; (2) the average amount of time young people would remain in care after reaching age 18; and (3) the costs of public assistance that could be avoided if young people remained in care. The Illinois Department of Children and Family Services (DCFS) provided us with a weighted average of the per-day costs associated with different types of living arrangements (e.g., foster homes, supervised independent living, and subsidy payments for youth attending college) in 2007. Using their numbers, the average cost of keeping one Illinois youth in care after his or her 18th birthday is approximately \$20,800 per year.

We know from the Midwest Study that foster youth in Illinois are much older when they exit care than their counterparts in Iowa and Wisconsin. The average age at exit was 20 years old in Illinois compared with only 17.9 in Iowa and 17.8 in Wisconsin. This reflects the fact that all of the young people in the Wisconsin sample exited care before their 19th birthday as did nearly all of the young people in the Iowa sample. By contrast, more than half of the young people in the Illinois sample were still in care after their 20th birthday. Assuming that what happens in Illinois is similar to what would happen in other states if young people were allowed to remain in care until age 21, and that Iowa and Wisconsin are good examples of what happens in states that routinely discharge youth at age 18, extending care to age 21 would increase by about two years the average length of time states could expect to provide care. Multiplying the average estimated annual cost of extending care (i.e., \$20,800) by the average estimated increase in care years (2 years) produces an estimated average additional cost of \$41,600 per youth.

However, at least some of this cost would be offset by the avoidance of expenditures on public assistance. To estimate what those cost offsets might be, we draw primarily upon survey data collected from Midwest Study participants when they were 21 years old ($N = 555$). Table 1 shows both the percentage of study participants who reported that they

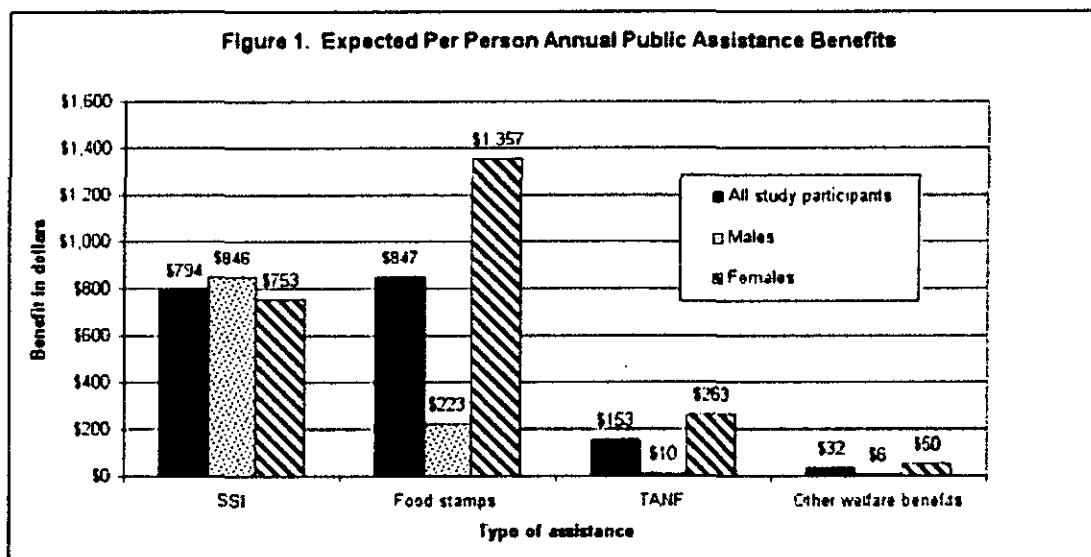

⁴ At the time these data were collected, Iowa foster youth could remain in care beyond their 19th birthday if the child welfare agency and juvenile court concluded that doing so would enable them to graduate from high school. However, only seven of the 63 Iowa youth in the Midwest Study sample were still in foster care at age 19.

were receiving public assistance as well as the mean benefit they were receiving each month.⁵

Table 1. Current Public Assistance Receipt at Age 21 (N = 555)

	% Receiving Assistance			Mean Monthly Benefit		
	Total	Male	Female	Total	Male	Female
SSI	11.9	12.8	11.2	\$555.90	\$550.59	\$560.00
Food stamps	32.5	9.9	50.2	\$217.24	\$187.33	\$225.31
TANF	2.9	0.4	4.8	\$440.13	\$200.00	\$456.13
Other cash welfare benefits	0.9	0.4	1.3	\$296.58	\$116.67	\$322.29

We used the reported monthly benefits to calculate what the annual benefits would be. If we assume that the percentage who were current recipients represents the probability of public assistance receipt, then the expected per person annual benefit is shown in Figure 1.

On average, Midwest Study participants received \$794 in SSI benefits, \$847 in food stamps benefits, \$153 in TANF benefits and \$32 in other welfare benefits, or a total of \$1,826 in benefits, over the course of a year. Because the young women were far more likely than young men to be custodial parents, and hence eligible for TANF, that value was considerably higher for females (\$2,423) and lower for males (\$1,083).⁶

Importantly, we limited our analysis to cash and “cash-like” (i.e., food stamp) benefits which were readily monetized. However, we know that some of these young people were receiving housing assistance (e.g., public housing, Housing Choice Vouchers) or benefits from the Special Supplemental Nutrition Program for Women, Infants and Children (WIC).

⁵ “Other welfare benefits” would include SSI, general assistance, emergency assistance, or Cuban/Haitian or Indian assistance payments.

⁶ At age 21, 51 percent of the young women but only 11 percent of the young men were custodial parents.

If we had taken this other public assistance into account, the estimates shown in Figure 1 would have been higher.

Assuming average annual public assistance receipt of \$1,826 for each former foster youth between the ages of 18 and 21 and assuming that these costs are defrayed for two years on average when young people remain in care, the expected net cost of extending care would be reduced by \$3,652, or from \$41,600 to \$37,948. This is not a large reduction relative to the overall cost, but it should be acknowledged.

Estimating the Cost of Extending Care in California

It is important to consider whether the cost of extending care would be significantly different in California than in the three Midwest Study states. In the simplest terms, the cost to the California child welfare system of extending foster care from age 18 to 21 is a function of (1) the average cost per day of caring for young people age 18 and older in various placements under the new policy, (2) the number of youth in each kind of placement, and (3) the average increase in the number of days young people would remain in care beyond their 18th birthday. Unfortunately, these figures are unknown. In the absence of California-specific data, we assume that the per-day costs of extending care in California would be similar to the per-day costs in Illinois and that young people in California would behave like their Midwest Study counterparts and remain in care an average of two years longer than they do now. In other words, our best estimate of the additional costs to the California child welfare system of extending care would be \$41,600 per youth.

Although state-level data on public assistance receipt among 18-21 year olds, the population most affected by extending foster care, are not readily available, the cost offsets associated with the avoidance of public assistance receipt may be somewhat larger in California than the Midwest Study data would suggest. Between 2000 and 2002, the average percentage of low-income children receiving TANF benefits was 18 percent in California compared with only 11 percent in Illinois, 8 percent in Iowa, and 6 percent in Wisconsin (National Center for Children in Poverty, 2004). By contrast, Food Stamp receipt among low-income children varied relatively little across these states (National Center for Children in Poverty, 2004). Given that TANF benefits accounted for less than one-tenth of our estimated cost offset of \$3,652 per youth, the additional per youth cost offset in California is unlikely to exceed a few hundred dollars.

The costs of extending foster care to age 21 under the *Fostering Connections Act* will be shared among federal, state, and county governmental entities. In thinking about the fiscal implications of AB 12, California policy makers need to consider several factors: the state's Title IV-E reimbursement rate, the percentage of foster youth who would be Title IV-E eligible, and how costs are shared between counties and the state.

In California, for example, the proportion of foster children currently eligible for Title IV-E reimbursement is approximately 70 percent. Assuming that this proportion would be the same for foster youth between the ages of 18 and 21, the federal government would pay half of what it costs the state to keep 70 percent of these older foster youth in care, or 35 percent of the total. In addition, California has a county-administered child

welfare system, and foster care costs are shared between counties and the state, with counties paying 60 percent and the state paying 40 percent.

What this means in practice is that for the 30 percent of young people who would presumably not be eligible for Title IV-E reimbursement, foster care costs would be split between the county, which would cover 60 percent, and the state, which would cover 40 percent. By contrast, for the 70 percent of young people who would presumably be eligible for Title IV-E reimbursement, foster care costs would be divided among the county, which would cover 30 percent, the state, which would cover 20 percent, and the federal government, which would cover 50 percent. The overall breakdown is as follows:

Table 2: Allocation of the Costs of Extending Care Across Levels of Government

	Title IV-E Ineligible		Title IV-E Eligible		Total
Federal		+	50% * 70%	=	35%
State	40% * 30%	+	40% * 50% * 70%	=	26%
County	60% * 30%	+	60% * 50% * 70%	=	39%
Total	30%	+	70%	=	100%

The actual costs borne by each level of government would, of course, depend on the number of young people who choose to remain in foster care (as well as the number of years they choose to remain). Assuming the percentages listed in Table 2 and a total cost per person of extending care of \$37,948, we would expect the Federal government to pay \$13,282, the State of California \$9,866, and the placing county \$14,800 per person to extend foster care in California to age 21. Assuming that most foster youth in transition in California will remain in the state for most if not all of their lives, it is worth noting that the potential benefits to individuals and society of extending care in California are likely to be concentrated in California, even though the federal government assumes a significant proportion of the costs of extending care.

The Potential Benefits of Extending Foster Care to Age 21

The starting point for our analysis of the potential benefits of extending foster care were the findings that we described in *When Should the State Cease Parenting? Evidence from the Midwest Study* (Courtney, Dworsky, & Pollack, 2007), namely, that allowing young people to remain in care until age 21 was associated with increased post-secondary educational attainment, delayed pregnancy, higher earnings, and a greater likelihood of receiving independent living services. Because rigorous empirical studies have yet to demonstrate that receipt of independent living services has long-term positive effects (Montgomery, Donkoh, & Underhill, 2006), we had initially planned to estimate the potential monetary benefits associated with increased post-secondary educational attainment, delayed pregnancy, and higher earnings. However, further consideration led us to focus exclusively on the first. Before discussing the potential monetary benefits due to increased post-secondary educational attainment, we explain our decision not to include the potential monetary benefits due to increased earnings and delayed pregnancy in our estimate.

As Courtney and colleagues reported, each additional year young people remained in care beyond their 18th birthday was associated with an increase in earnings of between \$470 and \$924 (depending on the statistical model that was used) during the year before the wave three interview at age 21 relative to mean annual earnings of \$6,894 (Courtney, Dworsky, & Pollack, 2007). At first glance it might make sense to try to estimate how this early earnings differential might translate into higher earnings over a young person's work-life. However, as we describe below, work-life earnings are strongly associated with educational attainment. Although our models predicting earnings during the year before the wave three interview controlled for differences in human capital (e.g., grade retention and reading level) and college aspirations at ages 17 or 18, they did not control for changes in educational attainment that occurred after the baseline interview. Thus, some or all of the earnings differences we observed at age 21 may reflect the effects of being able to remain in care on educational attainment. For this reason we chose not to include the earnings estimates reported in *When Should the State Cease Parenting* in our estimate of potential monetary benefits.

Courtney and colleagues also reported a relationship between remaining in care and delayed pregnancy (Courtney, Dworsky, & Pollack, 2007). Specifically, they found that being in care was associated with a 38 percent reduction in the risk of becoming pregnant between the baseline interview and the wave two interview at age 19. Given the wide range of challenges facing foster youth during the transition to adulthood and the likelihood that those who become parents during this period will do so under very unfavorable conditions (e.g., unstable or no employment, economic insecurity, no spouse or stable partner to assist with parenting), it seems reasonable to argue that this reduction in the risk of pregnancy associated with being in care would benefit the young women involved as well as society (Courtney et al., 2007). However, a review of the literature on teenage pregnancy revealed that almost all of the monetary benefits associated with pregnancy prevention comes from delaying births that would have occurred before age 18 until age 20 or 21 (Hoffman, 2006; Hoffman & Maynard, 2008). Delaying births to young women at ages 18 or 19 may have monetary benefits that have not been measured but we cannot quantify them at this point in time. Consequently, we chose not to include the potential monetary benefits of delayed pregnancy in our estimate of the potential benefits associated with extending foster care.

The Benefits of Extending Foster Care to Age 21 on Higher Education

The advantages of post-secondary education are well established. A bachelor's degree in particular is regarded as an investment that yields large returns over the life of an individual. According to the National Center for Educational Statistics, young adults with at least a bachelor's degree earn significantly more than those with less education, and the gap in median income between college graduates and high school graduates has increased over time. In 2005, 25 to 34 year olds who had at least a bachelor's degree earned, on average, 61 percent more than those with only a high school diploma or GED (Planty, Provasnik, Hussar, Snyder, Kena, Hampden-Thompson, Dinkes & Choy, 2007).

We know that foster youth approach the transition to adulthood with significant educational deficits (Courtney, Terao, & Bost, 2004; Wolanin, 2005). For example, nearly two-fifths of Midwest Study participants were at least one year behind in school at age 17 or 18 (Courtney, et al., 2004), and one quarter did not have a high school diploma

or GED by age 21 compared to 11 percent of their peers in the general population (Courtney, Dworsky, Cusick, Havlicek, Perez, & Keller, 2007).

There is a lack of a consensus among researchers regarding college graduation rates for former foster youth, with estimates ranging from as low as 1 percent to as high as 11 percent (Emerson, 2006; Pecora, Williams, Kessler, Downs, O'Brien, Hiripi, & Morello, 2003; Wolanin, 2005). These estimates, however, are based on non-representative samples of former foster youth, nearly all of whom left care before federally-funded Education and Training Vouchers (ETVs) were made available through the John H. Chafee Foster Care Independence Program in 2002. Moreover, the studies on which these estimates are based often assessed educational progress too early in adulthood to provide valid data on college degree completion. Nevertheless, there is ample evidence that former foster youth lag considerably behind their peers with respect to post-secondary educational attainment.

The potential benefits of extending foster care resulting from an increase in educational attainment will depend on our answers to two questions:

- 1) What is the expected baseline rate of educational attainment for foster youth making the transition to adulthood if they are not allowed to remain in care until age 21?
- 2) How much higher do we expect that rate to be if young people are given the option to remain in care?

Our focus is on educational attainment beyond a high school diploma or the equivalent because the returns to post-secondary education are considerable.

Advantages of Extending Care Associated with a Baccalaureate Degree

We begin by estimating the potential benefits of extending care on bachelor's degree completion and the effects of BA completion on work-life earnings. Given the lack of consensus regarding college completion rates among former foster youth, we draw upon the 1988 National Education Longitudinal Study (NELS) to provide both lower and upper bounds.⁷ This study found that 29.6 percent of 26 year olds in the US had a bachelor's degree.⁸ However, that percentage varied considerably by socioeconomic status (SES).⁹ Most notably, only 7.3 percent of young people in the lowest SES quartile obtained a bachelor's degree by age 26. The NELS also found a relationship between number of

⁷ NELS involved a national probability sample of students from 1,057 public and private schools across all 50 states and the District of Columbia who were eighth graders in the spring of 1988 (US Department of Education, 2000).

⁸ Because the NELS estimates are based on educational attainment at age 26 and some individuals obtain college degrees after age 26, our figures most likely underestimate the percentage of adults who ultimately earn a bachelor's degree.

⁹ The NELS measure of SES is based on five equally weighted and standardized components: father's education, mother's education, family income, father's occupation, and mother's occupation.

“risk factors” and rates of college graduation.¹⁰ The graduation rate among young people with three or more risk factors was only 4.5 percent compared with 10.4 percent among young people with two, 22.0 percent among those with one, and 40.2 percent among those with none.

Most, but not all, transitioning foster youth are eligible for Title IV-E funding, which means that they come from low income families.¹¹ Moreover, they have typically been removed from homes because their safety and well being were significantly at risk. Averaging the NELS college graduation rates for those who were in the bottom SES quartile and those who had three or more risk factors, we estimate a lower bound for bachelor’s degree attainment of 5.9 percent. To estimate our upper bound, we use the average of the rate for the bottom three quartiles of the NELS SES distribution (18.6 percent) and the rate for youth with two risk factors (10.4 percent), or 14.5 percent. Taking the midpoint between these two estimates, we assume that approximately 10.2 percent of foster youth are likely to eventually earn a bachelor’s degree.¹²

Data from the Midwest Study indicate that college attendance among former foster youth is considerably higher in Illinois, where young people have the option to remain in care until the age of 21, than in Iowa and Wisconsin, where young people are routinely discharged from care on or close to their 18th birthday. Specifically, at age 21, young people who had aged out of foster care in Illinois were 2.25 times more likely than their counterparts from Iowa or Wisconsin to have completed at least one year of college (Courtney, Dworsky, & Pollack, 2007). Because between-state differences in foster youth populations could account for some or all of this difference in educational attainment, we estimated a multivariate model predicting at least one year of college completion that controlled for a range of foster youth characteristics that might be expected to be associated with college enrollment. However, controlling for these factors only *increased* the difference between states. In other words, despite exhibiting characteristics associated with *lower* rates of college enrollment, young people from Illinois had estimated odds of completing one or more years of college that were more than three times higher than the

¹⁰ Risk factors, measured in 8th grade, included living in a single-parent household; having a low-income family; having parents who had not graduated from high school; having an older sibling who dropped out of school; spending 3 or more hours alone at home after school per day; and having limited English proficiency.

¹¹ The Federal government reimburses states for the costs of foster care provided to children from low-income families through Title IV-E. For states to claim Title IV-E reimbursement, they must document that a child’s family would have been income-eligible for the state’s Aid to Families with Dependent Children (AFDC) under the criteria that existed before the program was eliminated in 1997. Although the percentage of children entering foster care who are Title IV-E eligible (commonly called the IV-E penetration rate) has always varied across states due to between-state differences in AFDC eligibility criteria, and have generally fallen since 1997, long-term national data on IV-E eligibility suggest that at least half of the children who enter foster care are IV-E eligible.

¹² Additional support for this figure comes from the Casey National Alumni Study (Pecora et al., 2003), the only study that provides reasonably recent data on college degree completion among former foster youth. Interviews were conducted with 1,087 young adults who had been in the care of Casey Family Programs in one of 13 states for at least one year between 1966 and 1998. Not all of these young adults had exited care by aging out, but most had spent time in care as adolescents and their average age at exit was 19 years old. Of the young adults who were age 25 or older, 10.8 percent had a BA degree. This is very similar to our midpoint estimate.

estimated odds of their peers in Iowa and Wisconsin (Courtney, Dworsky, & Pollack, 2007).

We base our estimates of the long-term benefits of extending care on bachelor's degree completion on this finding that former foster youth from Illinois were more than twice as likely as their Wisconsin and Iowa counterparts to have completed at least one year of college by age 21. Our best estimate is that allowing youth to remain in care is associated with a doubling of college degree attainment. This assumes that the difference in educational attainment that we observed at age 21 will be relatively stable over time. However, it could be argued that extending care has diminishing returns as young people can no longer rely on the state for care and supervision once they are 21 years old. We take this possibility into account by estimating the long-term benefits of extending care under the assumption that allowing youth to remain in care increases bachelor's degree completion by a factor of 1.5. It can also be argued that our best estimate is too low given the results of our multivariate analyses which suggest that extending care is associated with a tripling of the odds of completing at least one year of college. Thus, we also estimate the long-term benefits of extending care under the assumption that allowing youth to remain in care increases bachelor's degree completion by a factor of 2.5.

US Census Bureau data indicate that individuals with a bachelor's degree can expect to earn approximately \$2.1 million in 1999 dollars over the course of their work-life whereas those with only a high school diploma can expect to earn approximately \$1.2 million (Day & Newburger, 2002).¹³ This \$900,000 difference reflects the added value in work-life earnings of a bachelor's degree beyond the value of a high school diploma alone. To calculate the expected return in earnings if extending foster care to age 21 increased the rate of college graduation, we multiply the added value of a bachelor's degree by the difference between the predicted rate of college graduation under a policy of extended care and the estimated "baseline" rate of college graduation under the policy that currently exists in most states (i.e., discharge at age 18):

$$\begin{aligned} & \text{Estimated additional earnings per person from extending foster care to age 21} = \\ & \text{Lifetime return in earnings for a bachelor's degree (\$900,000) } \times \\ & (\text{Predicted graduation rate if foster youth are allowed to remain in care until age 21} - \\ & \text{Estimated baseline graduation rate}) \end{aligned}$$

The results of these calculations are illustrated in Figure 2. Note that the estimated additional earnings are heavily influenced by our assumptions about the baseline bachelor's degree completion rate and the increased bachelor's degree completion rate associated with extending care. The upper line represents the return in dollars if extending care increased the bachelor's degree completion rate by a factor of 2.5 and the lower line represents the return if extending care increased the bachelor's degree completion rate by a factor of 1.5. Our most realistic estimates are represented by the middle line which shows what would happen if extending care doubled the bachelor's

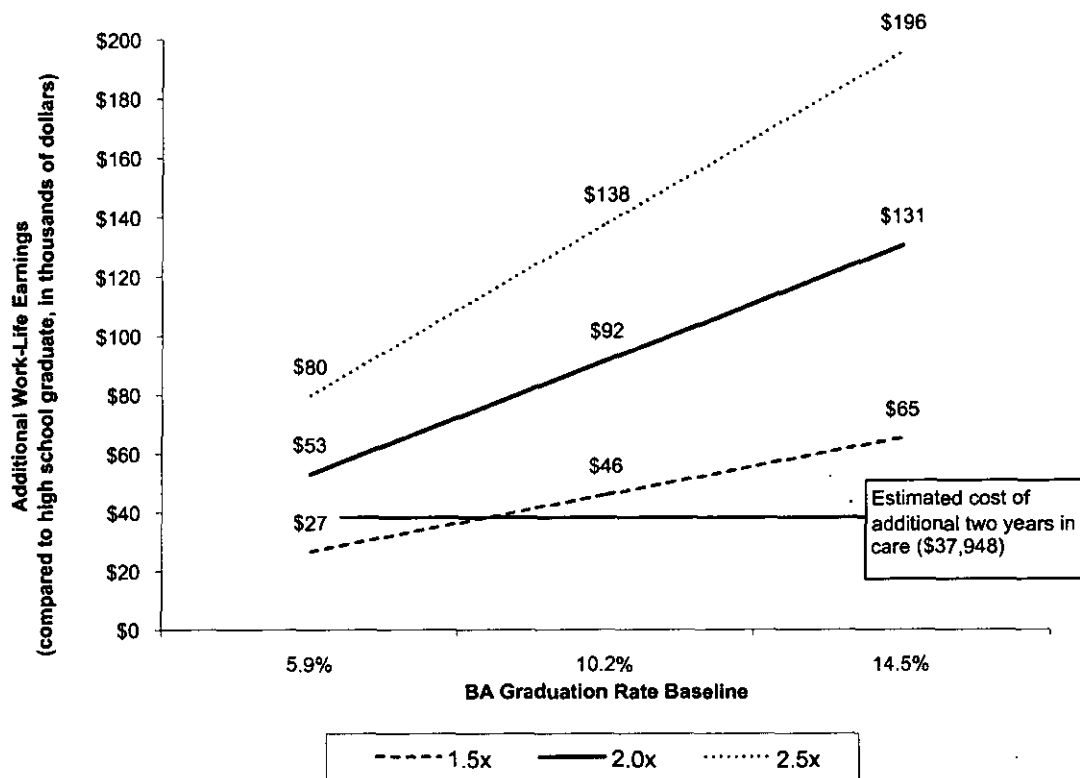

¹³ Day and Newburger (2002) estimated work-life earnings by summing age-specific average annual earnings for working people ages 25 to 64 years old. The total represents what similarly educated individuals could expect to earn, on average, in 1999 dollars, during a hypothetical 40-year working life.

degree completion rate---slightly lower than the difference observed in the Midwest Study.

Using our midpoint baseline college graduation estimate of 10.2 percent and our "best guess" that this rate will double if care is extended, we predict that 20.4 percent of foster youth would earn their baccalaureate degree if other states adopted Illinois' policy and allowed young people to remain in care until age 21. This is still considerably lower than the overall NELS estimate of 29.6 percent, but it does suggest that extending care would increase per person work-life earnings by an average of \$92,000.

Figure 2, which also shows the consequences of altering our assumptions regarding either the expected baseline rate of bachelor's degree completion or the effects of extending care on degree completion, indicates that the expected per-person work-life earnings increase associated with extending care ranges from a lower bound estimate of \$27,000 to an upper bound estimate of \$196,000. Note that for all but the estimate that assumes the lowest baseline graduation rate and the lowest projected increase in degree completion, the return in earnings exceeds the average cost of an additional two years in care (\$37,948), the average length of time that Illinois foster youth remain in care beyond their 18th birthday. Our midpoint (and most realistic) estimate translates into a benefit to cost ratio of \$2.4 dollars in increased earnings due to higher rates of degree completion for every dollar spent on extending foster care.

Figure 2: Estimated Earnings Benefits from Increased College Degree Attainment of Extending Foster Care to 21

Advantages of Extending Care Associated with Completing Any College

By limiting our estimates to the effects of completing a baccalaureate degree, we may be underestimating the benefits of extending foster care to age 21. Researchers have found “substantial and statistically significant” returns on sub-baccalaureate credentials, such as vocational certificates and associate degrees (Grubb, 1997, p241). For example, compared with individuals who have only a high school diploma, individuals with an associate’s degree earn an estimated 12 to 27 percent more (Surrette, 1997; Kane & Rouse, 1995). Moreover, according to Census Bureau estimates, completing any college increases work-life earnings by \$300,000, and completing an associate’s degree increases work-life earnings by \$400,000 relative to the work-life earnings of individuals with only a high school diploma (Day & Newburger, 2002).

This is important because data from the Midwest Study suggest that allowing youth to remain in care until age 21 is associated with significantly higher rates of college attendance (Courtney, Dworsky, & Pollack, 2007). Specifically, 58 percent of the former foster youth from Illinois had ever attended college by age 21 compared with only 29 percent of former foster youth from Iowa and only 31 percent of the former foster youth from Wisconsin. It is also associated with a greater likelihood of completing at least one

year of college. By age 21, 38 percent of the Illinois sample had completed at least one year of college compared with just 17 percent of the Wisconsin sample and 16 percent of the Iowa sample.

Given that post-secondary education can have benefits even if it does not result in a baccalaureate degree, and the fact that more follow-up data are needed to know whether Midwest study participants continue their educational trajectories, we also estimated the potential monetary benefits in terms of additional work-life earnings associated with extending care assuming that former foster youth terminate their education at age 21.¹⁴ This more conservative estimate represents the increase in per person work-life earnings we might expect due to the differences in educational attainment observed at age 21 between young people for whom remaining in care is an option and those for whom it is not:

$$\begin{aligned} & \text{Estimated additional earnings per person from extending foster care to age 21} = \\ & \text{Lifetime return in earnings for "some college" beyond HS (\$300,000) } \times \\ & (\text{Predicted college attendance if foster youth are allowed to remain in care until age 21} - \\ & \text{Estimated baseline college attendance rate}) \end{aligned}$$

Based on this formula, we estimate that the additional per-person work-life earnings associated with extending foster care would be \$84,000 (i.e., \$300,000 x (.58-.30)). In other words, even if former foster youth do not persist toward baccalaureate completion, the potential benefits of extending care exceed the costs by a factor of over 2 to 1.

Nonmarket Benefits of Post-Secondary Education

It is important to note that post-secondary education has a number of nonmarket benefits that are not easily monetized, at least not directly (Wolfe & Haveman, 2002; Baum & Ma, 2007). These benefits include improved personal and familial health, childbearing choices, and education choices of offspring. According to one estimate, if the "social gains from all of the categories of private nonmarket and external/public goods [...] are taken into account, their sum could equal estimates of the annual earnings impacts of an additional year of schooling" (Wolfe & Haveman, 2002, p118). Thus, if we were able to account for these nonmarket benefits in our estimates, extending foster care until age 21 could significantly increase the return to foster youth in transition and to society.

Limitations

Consideration of the conclusions reached in this report should take into account the limitations of the data and the methods that we used. First, our estimates of both the costs and benefits of extending care are largely based on observed differences between what happens in one state that allows young people to remain in care until age 21 and two other states with similar but not identical policies in which remaining in care until age 21 is not an option. Caution should be exercised in applying these estimates to other

¹⁴ Data from interviews conducted at age 23 will be available in summer 2009 and from interviews at age 25 in Spring 2011.

jurisdictions that take a different approach to extending care than Illinois or that provide a different set of aftercare services to support post-secondary education than either Iowa or Wisconsin.

Second, we attribute all of the between-state differences in post-secondary educational attainment that we observe at age 21 after controlling for foster youth characteristics measured at baseline to the fact that in one state people can remain in care until age 21 and in the two other states they cannot. This assumes that other between-state policy or contextual differences, as well as unmeasured between-state differences in foster youth characteristics, cannot account for the between-state differences we observed in post-secondary educational attainment. We are reasonably confident in making those assumptions for reasons discussed elsewhere (Courtney, Dworsky, and Pollack, 2007), but recognize the limitations of the non-experimental nature of our analyses.

Third, we rely on estimates of returns to post-secondary education among the general population (e.g., Day & Newburger, 2002). Our estimates will be biased to the extent that returns to post-secondary education are different for young people making the transition from foster care to adulthood.

Fourth, we have not accounted for all of the potential costs and cost offsets that might be associated with allowing young people to remain in care until age 21. For example, states' ability to extend Medicaid coverage to former foster youth until their 21st birthday will not change under the new law. Nonetheless, extending care could affect Medicaid expenditures. On the one hand, it could increase Medicaid expenditures if being in care results in greater attention to young people's health care needs and to a subsequent increase in their health care service utilization. On the other hand, it could improve young people's access to primary health care and hence reduce Medicaid expenditures on emergency treatment. Another cost that we have not taken into account is the cost of maintaining court supervision for as many as three additional years.

Finally, we have not exhausted the tools of benefit-cost analysis. For example, we have not adjusted for the fact that the data on which our estimates are based often come from different years. Our estimates of the costs of providing care and supervision to 18 to 21 year old foster youth in Illinois were based on 2007 data, our data on educational attainment at age 21 were collected in 2006, and our work-life earnings estimates were based on "present value" figures for 1999 (Day & Newburger, 2002). Although we do not believe that adjusting for these differences would substantively alter our conclusions, it could result in more precise estimates. Another convention of benefit-cost analysis is to allocate costs and benefits between society as a whole and the individuals affected by a policy or program. We have not tried to allocate our estimated benefits between individuals and society. Increased work-life earnings may appear to benefit only the individuals who are employed, but at least some of those earnings are returned to society in the form of tax revenues.

Conclusion

We analyzed the potential costs and benefits of allowing foster youth to remain in care until age 21, the policy option encouraged by the Fostering Connections Act and proposed in California's AB 12. We estimate that the average per youth cost of extending foster care for two years, net cost offsets associated with public assistance utilization when youth cannot remain in care, to be approximately \$37,948. This estimate is based on cost data from Illinois, observed between-state differences in the age at which youth left care in the Midwest Study states, and Midwest Study survey data on public assistance utilization. Available state-level data on public assistance utilization suggest that the net cost of extending care in California may be a few hundred dollars less than our estimate suggests. California-specific data pertaining to the costs of providing out-of-home care to transition-age youth and the length of time that youth are likely to remain in care beyond age 18 could improve our estimate, but in the absence of such data we believe it to be the best available.

Our analysis of the benefits of extending care focused on potential increases in work-life earnings owing to increased higher education. Our estimates are limited primarily by the fact that Midwest Study data are only available on the educational attainment of foster youth at age 21. However, even if we assume no continuation of the favorable educational trajectory associated with the Illinois policy of extending care, we estimate that the per-person work-life earnings of foster youth making the transition to adulthood would increase by an average of \$84,000 as a result of allowing foster youth to remain in care until they are 21 years old. This conservative estimate is based only on the expected effect of extending care on the likelihood of completing at least some college and represents a return of over two dollars for every dollar spent.

Our estimates of the benefits of extending care until age 21 on bachelor's degree completion are based on more tenuous assumptions because most young adults do not graduate from a four year college or university until they are least 22 years old. Our estimates of the increase in average per-person work-life earnings associated with the predicted increase in college graduation range from approximately \$27,000 to \$196,000. The wide range reflects different assumptions about 1) college graduation by former foster youth generally and 2) the persistence over time of the educational advantages associated with remaining in care. Our best estimate is that the increase in bachelor's degree completion predicted to result from extending care to age 21 would increase per-person work-life earnings by approximately \$92,000. This represents about \$2.4 for every dollar spent.

These two estimates of the benefit-cost ratio of extending care are not mutually exclusive. The former estimate assumes no benefit of extending care on college degree completion whereas the latter estimate does not take into account the positive effects of extending care on sub-baccalaureate attainment. There is good reason to believe that the stark differences in college attainment that we observe at age 21 and attribute to the extension of foster care in Illinois will, over time, result in advantages in terms of both degree completion and sub-baccalaureate attainment. Thus, it seems reasonable to assume that the average increase in work-life earnings that would result from extending foster care is

substantially higher than either of our estimates suggest, although how much higher is not clear. Future analysis of Midwest Study survey data being collected at ages 23 and 25 should reduce the need for speculation. In the meantime, our estimates suggest that the costs associated with extending foster care to age 21--an option that is now much less costly to states as a result of the Fostering Connections Act--are more than offset by the potential benefits to foster youth and society.

State isn't equipped to give youths a hand after they turn 18

ELISE PATKOTAK
COMMENT

(03/10/09 18:51:28)

I've said it before and I'll say it again. The state makes a lousy parent. It rarely remembers your birthday and it almost never takes a turn having all the relatives over for the holidays. But if you're a kid stuck in state custody, it's often all you have in the way of a parent except maybe for an ever changing cast of foster parents.

This is not a condemnation of the state or its system of caring for children in its custody. Given the resources we are willing to provide for this service, and given the needs of the children who become part of the system, the Office of Children's Services is pretty much doing the best it can.

The problem has always been that words are much cheaper than actual actions. So we make a big fuss about children being our future and then try to meet the needs of the future on a shoestring budget. If you think about what it costs to raise a child from birth to maturity under the best of circumstances, you can pretty much quadruple that cost for a child coming out of a nightmarish family situation who may or may not be already damaged almost beyond repair. Quadrupling the cost is probable a conservative estimate.

For many of these kids, the future is predetermined way before the state is actively involved. Whether it's because mom drank during pregnancy and brought the child into the world with 10 strikes already against him or her, or whether mom and dad created such a hellish family life of physical, sexual and mental abuse that the child is totally screwed up before he or she is 5 years old, the result is pretty much the same. The child starts life at an extreme disadvantage.

Take that child and put him into a state system that tries to supply some stability but is often hampered by rules that require the child to be bounced back and forth between birth family and foster care multiple times before the state is allowed to terminate parental rights, and you have the recipe for total disaster.

Anytime a child comes out of this kind of background with his or her head screwed on right, still able to dream of a better life and future, mentally capable of grasping academic subjects and studying for a career in life outside of adult penal institutions, I must stand up in awe and wonder and applaud that child's resilience.

There is a move in our state Legislature to allow the state to provide graduates of foster care and family services a chance at a postsecondary education, complete with some funding to support their living needs while they get their education. This is nothing more nor less than what most families do for their children as they start the process of emancipation into productive adults.

But kids coming out of the state system usually don't have a family willing and able to pick up the slack while they get that education. They have no one to turn to who can guide them through the shoals of applying for housing, putting a budget together, or getting a part-time job to help meet expenses. These kids don't have something as simple as an adult they can shoot the breeze with

over the future and what's out there for them. You know, the kind of conversation you have with your kid while you're driving them to the movies or school or sitting around during the commercials on ESPN.

The state has already started to try and meet these needs through transitional living assistance to young people as they age out of the system. That's a great start. But it isn't enough, because once we wave goodbye to them when they turn 18, they are on their own at a time when most of us would have been hard pressed to make good decisions for our future without some continuing adult guidance.

That these kids survived despite what their birth families did to them is a miracle. That they can come out of the state system and still have dreams of a better future is astounding. That there is any debate at all that we should be doing all we can for them is mind-boggling.

Children of the System

New research supports a radical shift in child-welfare policy for the thousands of teens who 'age out' of foster care at age 18, only to face high rates of homelessness, unemployment and incarceration.

Daniel Heimpel
Newsweek Web Exclusive

Eighteen-year-old John Kyzer's blue eyes are bleary and the skin around them puffy as he paces a corner of Hollywood Boulevard in Los Angeles. Kyzer has been spending his nights on a bench in front of a Starbucks. And now, he is dangerously close to entering the ranks of dozens of other former foster youth who "cop a squat" (sit) on concrete stairwells and sleep in "abandos" (abandoned buildings) up and down the street.

Soon after his 18th birthday, the state of California "terminated" Kyzer's case and he was forced to leave his group home. He moved in with his girlfriend and their 4-month-old baby in the home she shared with three generations of her family. Wanting to help support his son, Kyzer got a job at Starbucks and worked as many hours as the boss would give him. For two months his confidence brimmed.

But then he did something many teenagers do. He blew off work and was fired. Now, the door to his girlfriend's house is shut. Kyzer is on his own.

For Kyzer and many of the more than 25,000 other foster youth in the United States who "age out" of the system every year, there is no family and no support network to pick you up when you fall. Within two years of emancipation, half of Los Angeles County's foster youth will be unemployed, one fifth will be homeless and a quarter will have been to prison, according to the Children's Law Center. Similar fates can be expected across the country for many of the 500,000 children who call the state their parents.

But a law signed by President Bush in the waning days of his administration could radically change the futures of these children. The Fostering Connections to Success and Increasing Adoptions Act of 2008 offers states matching federal funds to extend care to age 21 for all foster youth who choose to stay in the system after their 18th birthday. What's meant by "care" would vary state by state, but could include extending Medicaid coverage to age 21 (which about 20 states now do), providing housing vouchers or access to group homes, vocational training, educational funding and psychological counseling services.

"We have known for a long time that kids don't suddenly become self-sufficient at the age of 18," says the federal bill's sponsor, Rep. Jim McDermott of Washington state. "The law we passed last year finally recognized the need to better provide the building blocks of success to these children."

Research released Monday suggests that the approach makes financial sense for a government weighed down by the costs of incarceration, welfare, Medicaid and homelessness incurred by former foster youth who struggle after emancipation. Conducted by the University of Washington School of Social Work, the study finds that caring for young adults until age 21 will represent a return of \$2.40 on every government dollar spent in California.

Experts hope the report will lead more states to implement the federal law. But adding anything to

a state budget right now is a hard sell. Thus far only seven states have put forward such legislation, including California. And before the passage of the federal legislation, only two states had implemented comprehensive extended care for foster kids after age 18—Illinois and Vermont.

The study's leading researcher, Mark Courtney, director of Partners for Our Children, a public-private collaboration promoting child-welfare reform at the University of Washington, sees the federal legislation as the most radical shift in child-welfare policy in the last decade. "The government has been unwilling to help kids after 18 beyond teaching them independent-living skills," he says. "That is not what parents do. A parent is not happy to kick a kid out at 18 and say good luck."

Courtney's earlier work has shown significant long-term benefits for kids who get a few more years' care versus those who are pushed out of the system at 18. His hallmark "Midwest Study," published in 2005, was instrumental in shaping the current federal legislation. That report followed 732 foster youth through their 17th, 18th and 21st birthdays. It found that along with lower rates of incarceration, homelessness and unemployment, young people in a state like Illinois, which extends care until 21, were 3.5 times as likely to have completed a year of college than peers in states like Iowa and Wisconsin, which routinely cut care at 18. (Census data show that less than 3 percent of foster kids earn college degrees, compared with 28 percent of the population as a whole.)

"The minute we kick them out they start looking for their families," says Karen Bass, speaker of the California Assembly and coauthor of The California Fostering Connections to Success Act. The legislation plans to increase spending to \$70 million in California for youths age 18 to 21, largely through the newly available federal funds. "When they can't find their families, they make families of their own on Hollywood Boulevard. In L.A., they are couch surfing; you have groups of young people living together and it is homelessness, just a different form." Bass and coauthor Jim Beall say that despite the budget wrangle and deficits that California faces, the bill bears the name of 26 Assembly members, has wide cross-aisle support and will likely pass.

In this latest study of foster care, Courtney narrowed his focus on higher education. As he had already shown, young people in extended care were better equipped to pursue a higher level of education and thus vastly increased their lifetime earning potential. For an expenditure of \$37,948 over the course of extended care, Courtney concludes that those foster youth will earn \$92,000 more in their working life. "We are talking about spending \$38,000 over one to three years versus what it costs to incarcerate somebody for 20 to 30 years," says Bass. In California, the Department of Corrections anticipates the annual cost of incarceration will jump to \$53,000 in fiscal year 2009-10.

But these undeniable statistics are running headlong into the cold reality of a national financial crisis. "Here is the most significant piece of [foster-care] legislation in a decade and it may be slowed down by these economic times," says Kathi Crowe, executive director of the Foster Care Coalition. "It's almost too bad it is optional." Nonetheless, Courtney believes that the evidence he has presented along with the [National Youth in Transition Database](#), which will be implemented nationwide as of October 2010 and will track young people as they mature into adulthood, will force states to act. "At that point some states may be shamed into changing their laws if the outcomes of their former foster youth look much worse than the outcomes for youth in states that have extended care to 21."

But for Kyzer and the kids currently "copping a squat" on the streets, it may be too late. "I just wasn't ready," Kyzer says of being a father, holding a job and moving into his own place. Tonight he is couch surfing, but tomorrow, his only option may be an abando.

March 11, 2009

To Members of the House Education Committee:

I am writing in support of CS for HB 126 (EDC) which relates to the education of students who are homeless or in foster care or awaiting foster care. As you know, we have a large and growing homeless population in our district; we also have a large and growing number of students awaiting placement in foster care or who are in foster care. One of the major challenges for these young people is finding stability in their lives, including being able to attend school on a regular basis.
