The Alaska Traumatic Brain Injury Advisory Board (ATBIAB) was formed in 2000 to fulfill the requirements of the grant and conduct business as an advisory board, holding quarterly board meetings and inviting public comment. ATBIAB earned non-profit status in 2003 and changed its name to the Alaska Brain Injury Network, Inc. in 2006.

Current Program Activities

ABIN has two primary functions: TBI Advisory Board and TBI Resource Navigation Agency.

Advisory Board

- Visit both urban and rural communities, and listen to the stories that the public shares about the issues facing Alaskans with brain injuries.
- Collaborate with our partner boards to affect changes in policies to improve programs and services.
- Advocate for safety legislation, in-state brain injury rehabilitation, and TBI Waiver services.
- Bring TBI professional training to Alaska.
- Conduct 'needs assessment' surveys of survivors, family members, and health workers.
- Maintain up to date information on emerging issues identified through callers, public testimony, and the media.

Resource Navigation (Information and Referral)

- Respond to requests for assistance, information, resources, and referral.
- Distribute a brain injury resource directory with statewide and local resources and supports available to individuals, families, friends, professionals, caregivers and the general public.
- Work to establish a TBI hotline and brain injury support groups.
- Distribute educational and informational resources to the public.

Accomplishments

TBI Advisory Board

- Visited 15 Alaska communities since 2003, hosted public comment 27 times, and heard public comment from an estimated 300 Alaskans.
- Developed the Comprehensive "10 Year Plan for TBI in Alaska".
- Increased brain injury awareness in the state.
- Advocacy efforts resulting in Alaska Mental Health Trust Authority Authorized Receipts and Authority Grant Funding approved:
 - TBI Advisory Board (FY01-FY11)
 - TBI Resource Navigation (FY07-FY11)
 - TBI Training (FY09-FY11)
 - TBI Care Coordination (FY10-FY11)
- Organized the TBI Partnership with Military including 3rd Medical Unit, Elmendorf; Veteran Affairs; Vet Centers; National Guard; and Marines.
- Instrumental in the Comprehensive Integrated Mental Health Plan, Alaska Scorecard highlights traumatic brain injury prevalence.

Accomplishments

TBI Resource Navigation

- Developed Statewide TBI Resource Directory.
- Provided information and referral to 500 Alaskans.
- Developed a 'hospital packet' of TBI information; distributed to 34 Alaska hospitals.
- Developed online discussion group for brain injury; 130 Alaskans participate.
- Organized more than 30 trainings, workshops, forums about brain injury.
- Provided technical assistance to six (6) head injury support groups. New support group organized in Mat-Su.

Resource Navigation Success Stories

A woman of approximately 48 years old called ABIN. She was "couch surfing" and had been living under a bridge and at the Brother Francis Shelter for several years. She had maintained a career as a nurse until multiple brain injuries left her unable to work or drive. Due to several referrals that ABIN's Resource Navigator made, she has now been connected with services that have significantly improved her life. She is now on disability with a payee assisting her; has bought a house with a friend who is helping look out for her; has PCA services; and has started her own business in her home with the help of Nine-Star.

ABIN received an email through the website from a woman in distress. The first line read "I am so alone – please help. 5 concussions / TBI's in the last 3 years have changed who I am. I have come to realize that my isolation will only increase without serious intervention..." After she joined the online discussion group, Alaskan Brain Matters and received lots of support and good ideas her email read: "It's only been 4 days since I contacted ABIN my life is already improving and becoming less stressful. I am so grateful!" Since then, with the help of the referrals from ABIN's Resource Navigator, she is now on social security disability income and her situation is improving.

A woman and her caregiver called. Due to a brain injury from many years ago, she developed a seizure disorder that needs further medical treatment. She was told she would need to travel to Seattle for the necessary treatment. The travel arrangements had been lingering on for a year since she lives in a remote part of Alaska where she could only get to a phone about once a week. ABIN's Resource Navigator assisted by passing detailed messages between the caregiver and the person arranging the treatment and transportation. The situation was finally resolved by mid April 2008.

ABIN Funding

Alaska Mental Health Trust Authority
State of Alaska, Department of Health and Social Services,
Division of Senior and Disabilities Services via
Federal HRSA TBI Implementation Grant
Alaska Native Tribal Health Consortium
State of Alaska, Department of Commerce, Community,
and Economic Development
U.S. Department of Health and Human Services/HRSA-
Special Congressional Initiative
Individual Donors

Regional Traumatic Brain Injury Information

TBI in Southcentral Alaska

How many Southcentral Alaskans are hospitalized due to a brain injury?

Reports show over **2300 residents** have been hospitalized over a 7 year period (An average of 338 residents/year).

What are the top 3 causes of brain injury in Southcentral Alaska?

- Motor Vehicle Accidents
- Falls
- Assault

Did you know?

Over a 7 year period, over 200 people in Southcentral Alaska were hospitalized with a TBI due to assault.

TBI in Southeast Alaska

How many Southeast residents are hospitalized due to a brain injury?

Reports show nearly **430 residents** have been hospitalized over a 7 year period (An average of 61 residents/year).

What are the top 3 causes of brain injury in Southeast Alaska?

- Falls
- Motor Vehicle Accidents
- Assault

Did you know?

In Southeast Alaska over a 7 year period, there were almost twice as many TBI hospitalizations from falling (162) as for TBI due to motor vehicle accidents (92).

TBI in Southwest Alaska

How many Southwest Alaskans are hospitalized due to a brain injury?

Reports show over **450 residents** have been hospitalized over a 7 year period. (An average of 64 residents/year).

What are the top 3 causes of brain injury in Southwest Alaska?

- ATV/Snowmachine
- Falls
- Assault

Did you know?

The Southwest region of Alaska has the highest prevalence rates of traumatic brain injury (TBI), *per capita*, in the state.

TBI in Interior Alaska

How many Interior Alaskans are hospitalized due to a brain injury?

Reports show over 450 Interior Alaskans have been hospitalized over a 7 year period (An average of 66 residents/year).

What are the top 3 causes of brain injury in Interior Alaska?

- Motor Vehicle Accidents
- Falls
- Assault

Did you know?

Over a 7 year period, the Interior region of Alaska had the second highest incidence rate of hospitalizations due to TBI.

TBI in Far North Alaska

How many Far North region Alaskans are hospitalized due to a brain injury?

Reports show nearly 250 Far North Alaskans have been hospitalized over a 7 year period. (An average of 35 residents/year).

What are the top 3 causes of brain injury in the Far North region of Alaska?

- ATV/Snowmachine
- Falls
- Assault

Did you know?

Over a 7 year period, the Far North region of Alaska had more TBIs caused by ATV/Snowmachine accidents (100) than falls and assault combined (98).

RECOMMENDATIONS

Addressing the Challenge of Brain Injury in America

2008

A report provided by the
Brain Injury Consensus Conference

Executive Summary

Introduction

Brain injury has created serious challenges for both the Department of Defense and the Department of Veterans Affairs; these challenges exist because brain injury has been, and continues to be, a critical healthcare problem in America.

Survivors, family members, and professionals all meet with a number of barriers that impede best practices in brain injury treatment and create debilitating hardships.

This report addresses those barriers, and calls for unified efforts between civilian and military systems, agencies, and organizations. Today, more than 5.3 million American civilians face challenges resulting from a brain injury. Additionally, 19.5 % of US servicemembers who have returned from Afghanistan and Iraq report experiencing a traumatic brain injury during deployment.¹

As recently as 2006, an Institute of Medicine report stated:

"...many people with TBI experience persistent, lifelong disabilities. For these individuals, and their caregivers, finding needed services is, far too often, an overwhelming logistical, financial, and psychological challenge. Individuals with TBI-related disabilities, their family members, and caregivers report substantial problems in getting basic services, including housing, vocational services, neurobehavioral services, transportation, and respite for caregivers. Yet efforts to address these issues are stymied by inadequate data systems, insufficient resources, and lack of coordination. TBI services are rarely coordinated across programs except in some service sites. Furthermore, in most states, there is no single entry point into TBI systems of care."

Brain injury is also a leading cause of death and disability among Americans. Data indicates that approximately 1.6 million Americans sustain a brain injury each year, and 125,000 are permanently disabled.^{2,3} Economically, the total impact of direct and indirect medical and other costs in 1995 dollars is reported to exceed \$56 billion.⁴ Despite the prominence of affects of brain injury in the United States, it remains one of the least understood and recognized healthcare issues in our nation.

Addressing the Challenge of Brain Injury in America

History

On November 2, 2007, more than one hundred of the nation's most respected authorities on brain injury convened in Washington D.C. to highlight accomplishments in brain injury treatment and to provide recommendations where barriers to care exist. Called the Brain Injury Consensus Conference, the two-day workgroup produced the groundwork for **Barriers and Recommendations: Addressing the Challenge of Brain Injury in America.**

Participants included members from:

- Department of Defense (DOD),
- Department of Veterans Affairs (VA)
- Defense and Veterans Brain Injury Center (DVBIC)
- Brain Injury Association of America (BIAA)
- North American Brain Injury Society (NABIS)
- National Association of State Head Injury Administrators (NASHIA)
- American Neuropsychiatric Association (ANPA)
- Over 30 other civilian public and private organizations

This report represents the results of an authoritative, cross-systems assessment on the state of brain injury in America. It addresses the treatment of all survivors across the continuum of care, from the point of injury through lifelong needs. It also includes the input of a number of other brain injury professionals who were unable to attend the conference.

This report is a free, publicly available document intended for multiple applications. It can be used as an advocacy tool, an informational resource, and a call to action. It was created to draw attention to the challenges that face Americans with brain injury, for the ultimate purpose of creating better identification of brain injury, access to care and overall bettering of their lives.

The civilian sector, the military, and the VA have made considerable strides in dealing with brain injury, and their focus and energies are to be applauded. However, brain injury in America remains a larger problem than any one entity can manage alone; it is only through a renewed spirit of collaboration that the following barriers can be managed effectively.

For more information on this report, visit: www.nabis.org

Barriers & Recommendations

BARRIER ONE

Screening protocols for brain injury are not consistent across military, civilian, and public systems, and each system poses the risk for various gaps in the identification and assessment of brain injury. Currently, no initiatives have been put forward to remedy this disparity in injury screening.

Recommendation

The screening of brain injury to date is based on a detailed account of the injury event and the resultant alteration in consciousness. To accurately assess brain injury, this screening should offer a standardized, thorough, historical account of the injury event. This is particularly important because the individual involved may have altered perception, and lack insight into the injury sustained. A neurocognitive assessment such as the Standardized Assessment of Concussion is helpful in determining the extent of injury at the point of injury, but limited thereafter.

We recommend the further development of screening tools to be used to screen for TBI in diverse populations. Individuals who screen positive should then undergo further diagnostic testing including: neuroimaging studies, neuropsychological evaluation and neurophysiologic studies.

Furthermore, for populations who are occupationally at increased risk, having a regular baseline cognitive test(s) is of benefit for comparison if risk of injury is present or sustained. Finally, we recommend an evaluation for assistive technologies and compensatory aids and strategies.

BARRIER TWO

The current classification of brain injury as Mild, Moderate, and Severe are inadequate to describe various and complex sequelae resulting from a brain injury.

Recommendation

There is much confusion as to the extent of the actual injury severity. Various cognitive impairments can improve or diminish over a period of time. Although gradual improvements can follow the injury event, impairments can manifest even after other symptoms of brain injury have resolved. Confusion is introduced by the fact that years later, debilitating life-long residual effects may exist, yet the results of that injury may be mistakenly diagnosed based on initial trauma.

Addressing the Challenge of Brain Injury in America

Repetitive concussions are dangerous and result in cumulative brain injury. The classification of traumatic brain injury should sufficiently demonstrate residual functionality at various periods of time beyond the initial injury, and incorporate the understanding of brain injury as a disease process.⁵

BARRIER THREE

Persons accessing mental health services, special education services or imprisoned may have undiagnosed brain injury and the identification/screening for such would help identify effective treatment or placement alternatives. "Unidentified TBI is a major unrecognized cause of social failure: in educational, vocational and economic arenas. Complex barriers often prevent people with mild TBI from: (a) self-identifying as having a brain injury that is seen as the cause of the disabling symptoms they experience, (b) gaining access to help and (c) addressing long-term, TBI-related problems that affect their quality of life." (Gordon & Brown, 2008).

Recommendation

All mental health organizations that offer screening services should also screen for brain injury.

BARRIER FOUR

While a variety of best practices and evidence-based guidelines exist for the treatment of brain injury, there remain no comprehensive national guidelines for best practices in brain injury treatment.

Recommendation

Currently, the guidelines for best practices in brain injury treatment vary widely. It is recommended that a national guideline for best practices in brain injury treatment be created in order to ensure consistent, quality treatment across all systems.⁶ We acknowledge the excellent work toward this goal achieved by the Brain Trauma Foundation (BTF), in which an independent analysis of their guidelines on TBI outcomes and cost savings by the Centers for Disease Control and Prevention (CDC) found that that "if the BTF guidelines were used more routinely, there would be a 50% decrease in deaths, improved quality of life, and a savings of \$288 million a year in medical and rehabilitation costs."⁷ We also call for the identification, development and refinement of additional best practices in brain injury disease management.

Barriers & Recommendations

BARRIER FIVE

Persons with brain injury often have difficulty accessing the necessary type of services needed due to finances, geography or a failure to provide best practices.

Recommendation

We recommend the development of system-wide access to treatment and support protocols to ensure the right treatment at the right time. This includes entitlement to post-acute active rehabilitation incorporating best practices including cognitive rehabilitation, independent living skills training, vocational rehabilitation and leisure therapy. This also includes access to graduated levels of support in the community, in-home, or 24-hr. supported living, allowing for efficient episodes of treatment across the lifespan in order to ensure retention of skills and enhanced quality of life. Until comprehensive guidelines in brain injury disease management are available, we recommend adherence to the Brain Injury Medical Treatment Guidelines of Colorado.⁸

Treatment and supports are needed to address the complexity of individuals with brain injury including substance issues, Post Traumatic Stress Disorder, psychiatric and significant behavioral issues.

Development of geographically disperse rehabilitation and support options are necessary to address the needs of persons in rural settings. Collaboration with civilian and public partners may be needed for servicemen and women to access timely, appropriate levels of care closer to home.

Benefits packages provided by TRICARE, the VA and Medicaid must be reviewed in order to ensure optimum uniform coverage including providing same payment for same services, access to levels of care including post-acute and cognitive rehabilitation and extension of active duty benefits to reimburse necessary after-hospital treatment.

With respect to cognitive rehabilitation, the effectiveness of cognitive rehabilitation has unfortunately proven difficult to study due to several factors, including the heterogeneity of subjects, interventions and outcomes studied, as well as the difficulty involved in attempting to control for spontaneous recovery.

Clinical consensus, along with widespread professional opinion, must be taken into account, in addition to the research evidence attesting to the efficacy of cognitive rehabilitation.⁹

Civilian and military coverage plans must be sufficient to rehabilitate patients and return them to productivity. Moreover, cognitive therapy is an essential component of the rehabilitation process for persons with brain injury and should also be a covered therapy.

BARRIER SIX

Advances in brain injury care are implemented too slowly between systems. Currently, any current cross-system coordination efforts do not include strategies for effectively supporting person with brain injury over the lifespan. Additionally, case managers/care coordinators are commonly unfamiliar with protocols and practices outside their respective system, causing unnecessary complexity for the survivor who moves between systems. No formal body exists which coordinates an effective communication between systems.

Recommendation

As the military continues to make advances in the area of brain injury treatment, a vehicle for sharing of information must occur between systems. The advances learned from the resultant military experience from the effects of blast, particularly primary blast, from helmet sensors to balance tables, from screening with standardized assessment tools at point of injury to post deployment health assessment (PDHA), must be shared with other systems in order to allow for more effective brain injury trauma care for all Americans.

Veteran's Administration and Department of Defense hospital data are not included in the states' trauma system data. We recommend coordination and communication between Department of Defense, Veteran's Administration, and civilian agencies, allowing the civilian system to accurately anticipate the impact of wounded veterans as they return to their communities. Seamless coordination should not only occur between military systems, but between military, public, and private systems as well.

Military and civilian case managers must have opportunities to learn each other's systems of care, funding mechanisms, treatment programs, community resources, and communicate with one another. We encourage the DoD, the VA, and the public/private sector to jointly engage in educational and training seminars that allows each entity to benefit from the other's successes and to learn from their challenges.

Continued on next page

Barriers & Recommendations

We also recommend the formation of a Federal Brain Injury Council, established in statute for the purpose of communication and system coordination. Members may include representatives from Federal agencies, advocacy organizations, professional associations/societies, and others.

The Council may be an effective mechanism to foster successful collaborations such as those currently in place between the Centers for Disease Control and the Social Security Administration as well as formal Memoranda of Understanding as are in place between DoD and VHA for the Office of Seamless Transition and for spinal cord injury care and neuro-optometric rehabilitation. The proposed Federal Brain Injury Council will use a variety of mechanisms to facilitate and foster ongoing communication, collaboration, and system coordination among its members. Since the Commission on Accreditation of Rehabilitation Facilities (CARF) is actively engaged with many of the members of the proposed Council, the standards that address the use of feedback from stakeholders for program development, strategic planning, resource planning and performance improvement can be used as innovative practice tools for members to foster these relationships.

In the interim, it is suggested that civilian sector advisors be added to the Senior Oversight Committee for DoD/VA Wounded, Ill and Injured. Further, it is recommended that VHA conduct a formal gap analysis, publicize its needs, as appropriate, and outreach to private sector to obtain assistance in meeting those needs.

BARRIER SEVEN

Brain injury care does not receive research funding on parity with other disease processes.

Recommendation

In 2007, the Federal AIDS budget was \$22.8 billion dollars. Parkinson's disease received \$250 million dollars. The HRSA Traumatic Brain Injury Program was allotted \$8.5 million dollars in 2007, and in 2008 President Bush proposed eliminating the funding. We recommend that brain injury treatment receive funding on parity with other disease processes

BARRIER EIGHT

Following brain injury, family members and case managers (care coordinators) are not effectively incorporated into treatment, particularly in the acute phase of care. The family often becomes the primary support unit. Families are typically ill-equipped to respond to the complexity of issues a person with brain injury may experience.

Addressing the Challenge of Brain Injury in America

Recommendation

Encouraging family members to participate in educational programs and follow-up appointments is important to ensure an accurate account of the patient.

Case Managers are helpful in tracking and supporting those requiring follow up care. We recommend that all brain injury care providers provide educational and case management services from the moment of injury. When home placement is advised, family members should be trained in maintaining quality care at home.

BARRIER NINE

There are few or no support systems that consistently monitor care and patient satisfaction throughout the continuum of care.

Recommendation

Programs should be a collaborative effort; as much as possible, the program should be directed by the person with the brain injury, but there must also be an adequate support system that monitors, advocates, and intervenes on that person's behalf as necessary.

Moreover, mental health supports are also needed, with personnel trained in and knowledgeable about the effects of brain injuries. This level of support should include a continuum of care from a brief counseling session, to an ongoing, in-depth counseling program, to an intensive crisis intervention by a mobile crisis response team. Police departments, the criminal justice system, and emergency health care providers must be trained to prevent the inappropriate placement of an individual with brain injury in psychiatric hospitals or jail.

BARRIER TEN

Across the lifespan, brain injury programs do not address all aspects of treatment. Instead, only specific symptoms receive care.

Recommendation

Brain injury programs must address every area of the person's life, including physical, financial, emotional, intellectual, vocational, recreational, and spiritual. The effect of holistic treatment is synergistic, with small efforts in many areas combining to have a large impact on overall success. We recommend adherence to the United Nations Standard Rules on the Equalization of Opportunities for Persons with Disabilities, as supported by the World Health Organization.¹⁰ These rules govern areas that span Medical Care, Rehabilitation, Support Services, Accessibility, Education, Employment, Income Maintenance and Social Security, Family Life and Personal Integrity, Culture, Recreation and Sport, and Religion.¹¹

Barriers & Recommendations

BARRIER ELEVEN

Respite care services are difficult for most family members and caregivers to access, leading to caregiver burnout, compassion fatigue, and overall lack of quality of care.

Recommendation

Respite care should be a regular and accessible service for family members and caregivers.

For mentors and life coaches, a delicate balance is required to provide necessary daily structure to ensure health and safety, while simultaneously fostering independence.

BARRIER TWELVE

Over the lifespan, offers of independent living and life-skills training are arbitrary, and sometimes unsupported.

Recommendation

Independent living and life skills training must be offered on a regular basis. As the person with a brain injury works to re-enter the community and rebuild his or her life, he or she will need to be trained in independent living and life skills.¹²

BARRIER THIRTEEN

Treatment plans for brain injury do not include strategies for dealing with aging-related issues, nor do they anticipate that brain injury is disease-causative and disease-accelerative.

Recommendation

Aging issues must be addressed by case managers/care coordinators in the treatment plan. As the person's condition changes, he or she may need additional care including physical, occupational, speech, or recreational therapies, cognitive remediation, psychiatric interventions, or pre-vocational services. We recommend new treatment plans that allow for brain injury disease management.

BARRIER FOURTEEN

Long-term, supervised housing and other residential programs for persons with brain injury are regularly denied services under most funding systems.

Recommendation

Access to affordable housing with associated services, physical access, and support must be financially attainable. Individuals may need long-term, supervised residential programs with related support care sensitive to their specific needs. Others may require a day-treatment program, where they can participate in supervised, meaningful activities. In conjunction with such programs, we recommend the provision of life care planning services such as financial resource management, legal arrangements for durable power of attorney and healthcare, wills, family and/or personal estate planning, health insurance purchase and availability, life insurance purchase and availability, and family member life insurance as a financial planning tool.

Moreover, we recommend a coordinated approach to state and federal assistance programs that are available for housing, food stamps, maternal assistance programs, child nutrition programs, Meals on Wheels, independent living programs, caregiver resources programs, public transportation assistance options, Social Security, aid to dependent families assistance, public utility relief programs, Medicare and Medicaid eligibility and pharmaceutical assistance programs.

BARRIER FIFTEEN

Transportation issues plague survivors of brain injury the duration of their lives.

Recommendation

While some individuals will be completely independent in their transportation needs, others will require assistance with accessing public transportation. Still others will be unable to access or deal with public transportation. Life care planners, case managers, and long-term care providers are encouraged to advocate within the community for supportive transportation services.

BARRIER SIXTEEN

Across all systems, case management services are not consistent. In military and VA settings, case management and care coordination services may be complicated, confusing survivors and family members; in the private sector they are either difficult to access or unavailable.

Continued on next page

Barriers & Recommendations

(Barrier 16 Cont'd) Recommendation

We encourage all case managers, care coordinators, and case management organizations who are experienced, trained and certified in disease management of brain injury to participate in collaborative initiatives to form guidelines that ensure care that offers a particular focus on the many personal needs of survivors of brain injury.

Where services are absent, we call on state healthcare officials to conduct an assessment of needs report detailing the challenges that face their respective population of survivors. We encourage the National Association of State Head Injury Administrators to facilitate dialogue and actions that promote the use of case management services where needed, and programs which help individuals access the service.

===== BARRIER SEVENTEEN =====

Despite the complexity of brain injury, there is no national certification or training for brain injury case management. Few organizations outside direct care providers encourage personnel to receive certification as a brain injury specialist (CBIS).

Recommendation

We encourage the Case Management Society of America, the Commission for Case Management Certification, and the American Academy of Certified Brain Injury Specialists to collaborate and create an effective credential that educates and empowers case managers involved in the treatment of brain injury.

Furthermore, we recommend that institutions such as mental health centers, community colleges, veterans centers, the criminal justice system, and social service systems all designate individuals who can serve in the capacity of a certified brain injury specialist.

===== BARRIER EIGHTEEN =====

For brain injury survivors under 21, case managers are underutilized or uninvolved in the creation and development of Individualized Education Plans (IEPs).

Recommendation

In the case of individuals with TBI under the age of 21, case managers should provide input to school districts

to develop Individualized Education Plans (IEP) specific to brain injury issues and educational goals.¹³

The 1975 Federal Public Law 94-142 (Disabilities Education Act- IDEA) maintains that states and school districts must develop and implement annual Individual Educational Plans (IEP) on all individuals with disabilities. Community case managers are an asset to the patient's school district in this process.

===== BARRIER NINETEEN =====

Survivors of brain injury do not typically receive special accommodations for their cognitive deficits in state and federal courts.

Recommendation

Self-advocacy and self-representation in court are basic needs that can be thwarted by cognitive deficits. Most courts currently accommodate language and physical disabilities with the necessary supports. We recommend additional cognitive deficit accommodation by the court system, particularly in matters involving the social agency interactions and medical decision-making transactions.

===== BARRIER TWENTY =====

Throughout all systems, there is a well-documented personnel shortage of healthcare professionals that provide valuable services to survivors of brain injury.¹⁴

Recommendation

We recommend that university health science programs incorporate brain injury treatment into their curricula and actively recruit healthcare professionals for the purpose of specialization in brain injury. We also suggest that community-based organizations, professional societies, and schools of higher education provide continuing education opportunities on the topic of brain injury.

Barriers & Recommendations

CONCLUSION

The Department of Defense, the Department of Veterans Affairs, and numerous organizations in the public and private sector have made tremendous strides in the treatment and care of brain injury, and they have demonstrated outstanding abilities to meet their responsibilities.

By addressing the barriers to brain injury care, we hope to encourage these different systems to renew their efforts to form collaborations, and to address gaps in service where they exist.

With respect to TBI survivors from Operation Iraqi Freedom and Operation Enduring Freedom, members of the media have been an extremely positive influence in raising public awareness and understanding of TBI and in garnering altruistic feelings for survivors, especially service members, and their and families.

The efforts of military, veteran and civilian advocacy organizations are currently synergized into a political will for TBI care that is unmatched in U.S. history. It is incumbent upon the leaders in civilian, military and veterans' systems to work cooperatively to build on strengths and minimize weaknesses to improve the quality of research, treatment and life-long living for all individuals with brain injury.

Acquired Brain Injury

Functional and cognitive deficits resulting from injuries to the main and associated structures that:

- 1) Are results from injury post partum
- 2) Are not a result of a congenital disorder
- 3) Are not a result of a deteriorating disorder related to age (i.e. dementia, picks, etc) a

And fall within in the broad categories:

- a. Hypoxic or Anoxic events
- b. Chemical induced except alcohol related
- c. Medical accidents (i.e. stroke, aneurysm)
- d. Viral, bacterial or parasitic attack
- e. Radiation poisoning
- f. Medication effects (prescribed)
- g. Idiopathic causes

The deficits must be long-standing, significantly below baseline, impact productivity in the three areas, school, work, relationship, and affect the life trajectory of the individual

Supporting information for HB 328

State of Alaska, Department of Health and Social Services Alaska Waiver and Service Options for Alaskans with Congenital and Degenerative Brain Injury

According to state law (AS. 47.80.900 (7)), the **term developmental disability (DD) means** a severe, chronic disability that: Is attributable to a mental or physical impairment or combination of mental and physical impairments; is manifested before the individual attains age 22; is likely to continue indefinitely;

- results in substantial functional limitations in **three or more** of the following areas of major life activity:
 - self care
 - receptive and expressive language;
 - learning;
 - mobility;
 - self direction; capacity for independent living;
 - economic self-sufficiency;
- and reflects the person's need for a combination and sequence of special, interdisciplinary, or generic assistance, supports or other services that are of lifelong or extended duration and are individually planned and coordinated.

Examples of types of developmental disabilities are mental retardation, cerebral palsy, autism, and seizure disorder. **Mental illness and Fetal Alcohol Syndrome may also be developmental disabilities. However, the disability must result in substantial functional limitations and meet the other criteria in the definition in order to qualify as a DD.**

FASD: FETAL ALCHOL SPECTRUM DISORDERS

88 possible slots: 10 currently on waiver, 8 in the works, 70 open slots

Definition: **Congenital** brain injury- the youth's mother consumed alcohol during pregnancy.

Eligibility: Youth must be:

- Under age 21 years
- Eligible for Medicaid
- Have an evaluation by a psychiatrist within 60 days of admission to the program, that identifies a need for the level and intensity of services provided in a Residential Psychiatric Treatment Center (RPTC)
- Have a diagnosis of Fetal Alcohol Spectrum Disorder. (If a youth is suspected of having an FASD, but has not yet received a diagnosis, the youth may receive an FASD diagnosis as part of the screening process)
- Want to receive services in community based services in Alaska instead of in an RPTC.

Waiver services include:

1. Mentoring Services
2. Daily and hourly respite
3. Residential habilitation
4. Day habilitation
5. Supported employment
6. Training and Consultative services

The Plan of care will be tailored to the specific needs of each individual program participant

ADRD: ALZHEIMER'S DISEASE AND RELATED DISORDERS

Definition of Alzheimer's disease: Degenerative

Because Alzheimer's disease and Related Disorders (ADRD) is so difficult to diagnose, the U.S. Department of Health and Social Services Advisory Panel on Alzheimer's disease recommends that ADRD be defined by functional impairment and dependency rather than diagnosis or the causes of the disease. The current working definition of ADRD used by Alaska Commission on Aging grantees, reviewed and refined at a grantee meeting in October 1996, reflects this recommendation.

For the purpose of this report an ADRD includes:

Alzheimer's, Dementia (any type), Parkinson's, Lewy Body, Creutzfeld-Jacob, Huntington, Pick's, Wernicke-Karsakof, Cerebral degeneration.

AS of 2/24/2010 from Joann Gibbens,

Senior and Disabilities Services

Total number of OA, APD or PCA individuals with Alzheimer's or dementia in their most recent diagnosis

Older Alaskans Waiver (OA)

Eligibility: Over 65 years of age and nursing home level of care.

OA Waiver Services:

1. Adult day services
2. Care Coordination
3. Respite
4. Chore
5. Environmental modifications
6. Meals
7. Residential Supported living
8. Specialized medical equipment and supplies
9. Specialized private nursing duties
10. Transportation

Alaskans With Physical Disabilities (APD)

Eligibility: Ages 21 -64, disabled meeting nursing level of care

APD Waiver Services:

1. Adult Day Services
2. Care Coordination
3. Day Habilitation
4. Residential Habilitation
5. Respite
6. Supported Employment
7. Chore
8. Environmental modifications
9. Intensive Active Treatment
10. Meals
11. Residential Supported Living
12. Specialize Medical Equipment
13. Specialized Private Nursing Duty
14. Transportation

Alaska is Combating Traumatic Brain Injury

Jill Hodges
Executive Director
Alaska Brain Injury
Network

Jeff Jessee
Chief Executive Officer
Alaska Mental Health
Trust Authority

Pat Hefley
Deputy Commissioner
Department of Health
and Social Services

Past legislative hearings

2007- What is traumatic brain injury?
What does treatment look like?

Guest presenters: Dr. Tina Trudel (national expert) and partner boards

2008- Impact of TBI on the state.

Military issues related to TBI

Guest presenters: Capt. Richard Barker, Elmendorf; Dr. Russell Cherry, Providence; Stephanie Tanner, military wife of TBI survivor

2009- Importance of Medicaid Waiver to develop coordinated, comprehensive brain injury services in-state

Guest Presenters: Dr. Christie Artuso, Providence Neuroscience Director

Today's presentation- State System Development, ready to operationalize

- Jill Hodges, Past 20 years of AK efforts
- Jeff Jessee , Trust Role
- Pat Hefley , DHSS Role
- Public testimony:
 - Martha Moore, ABIN Chair
 - Providers, partnerships essential
 - Consumer, treatment works, family support
- Jill Hodges-Questions and Solutions
 - State and Legislature

TBI Systems Development in Alaska 1990-2000

Phase 1: 1990-1995

Advocacy

- Brain injury survivors mobilize
- Early 1990's
 - Testimony to GDCSE
 - Registration of MHTTA
- Brain Injury Association of Alaska organizes

Phase 2: 1995-2000

Advocacy Continues

State of Alaska

- State of Alaska-Public Health recognizes TBI
- Public Health awarded CDC grant
 - TBI Registry
- MHDD awarded Federal Grant-systems

TBI Systems Development in AK 2000-2007

Phase 3: 2000-2003

Advocacy

State of Alaska

Federal TBI HRSA Grant

- Needs Assessment
- 1st State Action Plan
- TBI Program Coordinator (FTE)
- Advisory Board

AMHTA-beneficiary group

Alaska Brain Injury Network

- TBI Advisory Board (ABIN) organizes and becomes 501 c3

Phase 4: 2003-2005

Advocacy/TBI Advisory Board

State of Alaska

- Behavioral Health (lead agency)

Data/Surveillance

- DBH mandates screening data collection
- Consumer Satisfaction Survey
- AK Trauma Registry

Phase 5: 2005-2007

State of Alaska: TBI Dir. turnover

Data- AKAIMS(32% in BH screen TBI)

Workforce: 1st AK Brain Injury Conf

Momentum builds- 2007-2009

Phase 6: 2007-2009

ABIN

- "Service" recommendation

Info and Referral

Case Management

AMHTA-Funds ABIN recomm.

State of Alaska

- Lead agency transfers to SDS
- TBI Case Management Program developed

Workforce:

Intro to TBI Course

Advance Brain Injury

Workshop

Vocational Rehabilitation

Counselors

Legislation

- SB 118 introduced-medical assistance for TBI

Medicaid Funding: Waivers

- Preliminary research on Medicaid Waivers
- Targeted Case Management

Treatment

- After Hospital/Post-Acute

- Site Visits

- AK Providers Coalition

- Military/Tribal partnership sought

Key Points

- System Planning—
created framework
and foundation for
action
- Next step:
operationalize
- General Funds or
GF/MH essential
- Phases 1-4 (1990-2005)
 - advocacy programs
 - increasing awareness
- Phases 5-6 (2005-2009):
 - Direct 'services':
 - info and referral;
 - case management
 - Workforce development
- Phase 7 – 10 (2010-2020)
 - Case Management
 - Treatment: Funding
 - Residential and Day Programs
 - Workforce

2010 Session SB 219 and HB 328

SB 219 and HB 328

- Gives statutory authority to develop/improve program.
- Establishes standards for treatment and services.
- Defines brain injury.
- Develops cost/ longitudinal data
- Planning for Medicaid Waiver/Targeted Case Management

Opportunities

- Positions the state to access federal funding for TBI services.
- The existence of brain injury waivers supports the growth of community-based rehabilitation programs.
- DoD/VA/Tribal/State coordinate planning and implementation of rehabilitation and community re-entry programs.
- Early treatment may reduce future medical and social costs.
- Potential cost savings in acute care, existing state programs; behavioral health, juvenile justice, corrections, homeless activities, and long-term care in institutional facilities.

The Trust's Role- Jeff Jessee

- TBI as a beneficiary group (late 1990's)
- Trust role: planning, demonstration
- Maximize collaboration
- Alaska too small of a state to have separate TBI treatment systems of care (VA, DoD, Tribal, State)
- Treatment: General Fund commitment

Past 10 years, Trust has invested \$2.8 million in brain injury systems development

- Trust FY09 Funding specifically for brain injury program: \$628,000

Core Services Development

- Information and Referral
- Case Management
- Technical Assistance for planning treatment

Systems Development

- Public Awareness-anti stigma
- Workforce development
- Statewide planning- TBI Advisory Board

Department of Health and Social Services Role - Pat Hefley

- Development, now operationalizing.
- 44 States use General Revenue and Medicaid Waivers for brain injury treatment/services.
- TBI folks are already in the system - need to move them into specialty programs in order to see results.
- Appropriately staged incremental GF/MH budget requests.

Upcoming 2010 Activities

- Federal Grant- \$250.0/year 4 years
 - lead agency: Senior and Disabilities Services
- State of Alaska T/ABI program
 - Case Management
 - Research federal funding opportunities: Medicaid Waiver/Targeted Case Management
- Data/Prevention: regional study, Alaska Native and Non-Native

Public testimony

Martha Moore: ABIN Chair

Recommendation Philosophy
 Respects State role (data
 collection) and ABIN chair.

Alaska providers: readiness to
 partner- TBI post-acute
 programs

Dr. Lester, St. Elias
 Margaret Carlom, RN
 Nurse, ANMC

- Shannon- Juneau resident,
 experienced TBI

TBI treatment work

Family support

Many of Alaska's challenging questions
been asked and answered by other States

- Alaska can learn from 30 years of state system experience; and
- treatment research by the Federal Government, State experiences, military advances

Questions and Solutions

Is brain injury
impacting
State
government?

1980 findings...

- Uninsured or underinsured
- Unemployment
- Trauma/EMS
- Long-term care and support needs
- Family Support

1990 findings...

- Educational System
- Vocational Rehabilitation

2000 findings...

- Criminal Justice
- Behavioral Health

Question and Solutions

How will State
Gov't know
how to develop
TBI systems?

TBI Act of 1996

- Federal Statute
 - Defined TBI in Federal statute
 - authorized funding to HHS
 - Established TBI program in VA
 - Created State grant program
- State experience has broadened program definition to ABI- same service needs.
- National Association of State Head Injury Administrators (1990)
- TBI Technical Assistance Center-specifically for state administrators (since 1996)

Question and Solutions

Is recovery
possible after a
TBI?

Does treatment
work?

- Feds fund TBI model systems since 1987, over 20 years of longitudinal data- yes with specialized support, recovery/independence is possible
- Research at acute/medical level led to need for community reentry programs
- Military funding is supporting research of community reentry programs and Mild TBI assessment and treatment

Question and Solutions

How will States
pay for brain
injury
treatment?

- 1990's, Centers for Medicare/Medicaid Services (CMS) developed TBI HCBS Waiver prototype
- IDEA 1990 added TBI as disability to report
- State General Funds
- TBI Trust Funds

Question and Answer

How will states
develop treatment
and prepare a
specialty
workforce?

- Many providers have 30 years of experience.
 - Utilize existing models: medical, community, clubhouse, and long-term living.
- TBI specific workforce will build as TBI programs are operationalized.
 - Professional/para-professional specialists on the job training, must take special educational training.

Question and Answer

How will rural residents have access to these treatment and services?

- Military and a few states utilize telemedicine for treatment.
- Opportunity for Alaska to become the national leader in providing care to rural areas?

Question and Answer

What type of legislation is/has been successful?

- Resolutions- awareness
Last five years
- Prevention
(AK primary seatbelt law
safety/ booster sea.)
- T/ABI Program into Statute
SB 219 and HB Compas
- Interagency Taskforce
- Prevention-concussion management
- Military-screening

Alaska has an opportunity

- Alaska can operationalize at a faster rate.
- Alaska can become the leader in rural TBI treatment and supports

ANALYSIS: (Attach a separate page if nece:

HB 328 requires the Department of Health & Social Services (DHSS) to establish a traumatic or acquired brain injury (TABI) program and to provide Medicaid coverage for TBI services.

Section 2 amends the Medicaid statutes to include case management services for individuals with TABI to the list of optional Medicaid services. The provision adding TABI case management services to Alaska's optional Medicaid services has the potential to increase Medicaid utilization. This would necessitate an amendment to the state Medicaid Plan.

(continued on page 2)

Prepared by: William J. Streur, Deputy Commissioner
 Division: Health Care Services

Phone 269-7827
 Date/Time 3/15/10 4:25 PM

Approved by: Alison Elgee, Assistant Commissioner
DHSS Finance & Management Services

Date 3/15/2010

ANALYSIS CONTINUATION

Assumptions:

The Alaska Brain Injury network estimates approximately 1,300 new hospital discharges per year due to TABI. The department estimates approximately 20% of new TABI discharges would be on Medicaid, which is the same prevalence of Medicaid enrollees in the general population. Also the number of new TABI cases is expected to grow with the population at 1% per year.

$1,300 * 0.20 = 260$ new cases in FY11

$260 * 1.01 = 262.6$, rounded to 263 new cases in FY12, and so on

Case management services, based on an examination of similar services covered by Medicaid, is estimated to cost \$250/month for new TABI cases.

New Case Cost for FY12: $263 * (12 * 250) = 789,000$

In addition, there were approximately 9,200 hospital discharges due to TABI from 2001-2007 and it is estimated that 30% of these discharged individuals are still living with TABI related effects. It is estimated that 30% of people living with disabilities or effects from past TABI (existing cases) are currently on Medicaid. This estimate is somewhat higher than the general population due to a higher prevalence of disability, unemployment and lower income in this group.

$9,200$ past discharges * 0.30 living with effects from TABI = $2,760$

$2,760 * 0.30$ on Medicaid = 828 existing TABI cases

It is expected that approximately half of those cases would continue services. For existing cases - Medicaid currently has about 100 persons on waiver due to TABI (see below).

$828 - 100$ on waiver = 728

This would mean approximately 360 existing cases using case management services in FY11. Although it is anticipated that in the first year there would be a higher demand for services that in following years meaning an additional 50 cases in FY11. Future years the demand would level at about 360 continuing cases each year.

It is estimated that these existing cases would use services, but at a lower level than new cases, so \$100/month for 12 months.

Continuing Case Cost for FY12: $360 * (12 * 100) = 432,000$

Total FY12 Case Management Costs Estimate: $432,000 + 789,000 = 1,221,000$

For 2011, Title XIX services are expected be reimbursed at 61.12%, in further years, the federal reimbursement rate is estimated at 50%.

The department will also be required to either develop a new TBI Medicaid waiver or modify an existing waiver to accommodate the needs of TABI survivors. Federal regulations require that in order for individuals to be eligible for home- and community-based waivers, they must meet the state's criteria as needing an institutional level of care. Currently, those individuals with TABI who meet this level of care are already being served under the current waiver program. As of February 1, 2010 that number is 102 individuals. An increase in the cost of waiver service is not expected with this bill.

ANALYSIS: (Attach a separate page if necessary)

This bill will establish a Traumatic or Acquired Brain Injury (TABI) Registry; establish a TABI case management program within the Division of Senior and Disabilities Services; and add case management services for people with TABI to the list of optional Medicaid services available in Alaska.

Two positions will be tasked with implementing the proposed legislation: a TABI Program Manager who will supervise data collection and analysis, coordinate services to people with TABI, evaluate standards and laws related to TABI, assess the availability of and evaluate acute and long-term care community services, investigate model community services, and coordinate funding of TABI care; and a Research Analyst to develop procedures for the collection of TABI information statewide, design and present statistical data, construct and modify research procedures and instruct others in their proper use. Current resources within the Division of Senior and Disabilities Services are sufficient to meet program needs.

MEMORANDUM

February 9, 2010

SUBJECT: Sectional Summary (HB 328 (Work Order No. 26-LS1355\E))

TO: Representative Craig Johnson
Attn: Jeanne Ostnes

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds longitudinal data on traumatic or acquired brain injury from the registry established under sec. 5 of the bill to the list of databases that the Department of Health and Social Services is authorized to collect, analyze, and maintain.

Section 2. Adds case management services for traumatic or acquired brain injury to the optional services provided to recipients of state medical assistance (Medicaid).

Section 3. Defines "case management services for traumatic or acquired brain injury" and "traumatic or acquired brain injury" for purposes of the optional services added by sec. 2 of the bill.

Section 4. Requires the Department of Health and Social Services to provide medical assistance services under a waiver if approved by the federal government and if the legislature appropriates necessary funding for the services.

Section 5. Establishes a statewide traumatic or acquired brain injury program in the Department of Health and Social Services to evaluate the effectiveness and availability of information and services for the prevention and treatment of traumatic or acquired brain injury in the state. Requires consultation and collaboration with public and private entities to fulfill a list of programmatic requirements including development of a statewide service delivery plan and registry of information and evaluation of current laws and standards pertaining to traumatic or acquired brain injury.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Bill 361

“An Act requiring 911 dispatchers to be trained in cardiopulmonary resuscitation; and providing for an effective date”

Currently in Alaska State Statute there is no provision requiring 911 dispatchers to be certified in cardiopulmonary resuscitation (CPR). Most people are told that during an emergency you should call 911 immediately and someone will be able to help you. In the event that the caller does not know how to perform CPR, is unsure or panicking during the 911 call the operator should be able to not only calm the person down, but also be able to walk the caller through the process while help is on the way.

Most of the 911 dispatchers in the state are certified as Emergency Medical Dispatchers (EMD) which covers CPR. But for those remote regions in the state that don't have certified EMDs or dispatchers trained in CPR the passage of this bill may ultimately save lives.

Thank you for your consideration and I urge your support on the passage of legislation.

CS FOR HOUSE BILL NO. 361()

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVES FAIRCLOUGH, Dahlstrom

A BILL

FOR AN ACT ENTITLED

1 **"An Act moving the statewide 911 coordinator position to the Department of Public**
2 **Safety; requiring 911 dispatchers to be trained in cardiopulmonary resuscitation; and**
3 **providing for an effective date."**

4 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

5 *** Section 1.** AS 18.60 is amended by adding a new section to read:

6 **Article 13. Statewide 911 Coordinator.**

7 **Sec. 18.60.870. Statewide 911 Coordinator.** A statewide 911 coordinator is
8 established in the Department of Public Safety to coordinate and facilitate the
9 implementation of 911 systems throughout the state. The 911 coordinator shall

10 (1) participate in efforts to set uniform statewide standards for
11 automatic number identification and automatic location identification data
12 transmission for telecommunications systems;

13 (2) make recommendations as necessary for implementation of basic
14 and enhanced 911 service;

1

6
7
8
9
10

(3) facilitate and monitor the training of emergency dispatchers in cardiopulmonary resuscitation; in this paragraph, "dispatcher" has the meaning given in AS 29.35.132.

* Sec. 2. AS 29.35 is amended by adding a new section to read:

Sec. 29.35.132. Training of emergency dispatcher. A municipality shall require that emergency dispatchers on the 911 system be trained and currently certified in cardiopulmonary resuscitation. In this section, "dispatcher" has the meaning given the term "call taker" in AS 29.35.131(k).

* Sec. 3. AS 26.23.170(b) is repealed.

* Sec. 4. This Act takes effect September 1, 2010.

Carson City 911 dispatcher gives instructions to save baby

BY F.T. NORTON

A Carson City dispatcher likely saved a newborn's life Wednesday morning.

When a call came in to emergency dispatch at 8:22 a.m., communications supervisor Cindy Merrell heard a distraught mother, barking dogs and a crying toddler. But what anyone else would have missed in the cacophony was what the woman said between screams — "My baby's not breathing!" Merrell heard it right away.

"The baby's not breathing," the veteran emergency dispatcher can be heard repeating on the 911 call recording.

Merrell said she turned to coworker Liz Hertz and relayed the information. Hertz called out medics. Then Merrell, herself a mother of four and grandmother of six, went to work. She opened flip cards and tried to get the woman's attention.

"I'm going to help you," Merrell shouted over the din. "I need you to calm down so we can help your baby. OK!" When the mother responded that she understood, Merrell began giving her directions. "I need you to put your baby on a flat surface," said Merrell. "Tilt the head back and see if he's breathing."

The woman wailed as a toddler could be heard in the background crying.

"I want you to breathe two puffs of air into the baby's lungs, just enough to make the chest rise," said Merrell.

The line became silent as the mother did as she was told. Then the woman can be heard crying. "Oh my God. My son's dead, my son's dead."

"Don't give up," said Merrell. "I need you to help the baby." She instructed the mother to do chest compressions. Through the line Merrell could hear the thumping as the woman did as she was told.

Everyone in the dispatch center became fixated on what was unfolding, including John Mason, a system technician with AT&T, who hours later was still in awe of what he'd witnessed. "It was just so amazing," he said.

Merrell worried the mother was going to stop because she kept repeating her son was dead.

"Don't give up. Just keep going until the medics get there. Keep going. Keep going," Merrell said. "I need you to help the baby. Don't give up."

For six minutes, Merrell remained calm while the frantic mother wailed, the dogs barked and a toddler cried.

And then, Merrell heard a weak cry.

"Oh, he just started crying," the mother yelled.

When paramedics arrived, Merrell hung up.

The baby's family declined to comment. According to Renown Regional Medical Center in Reno, the 3-week-old infant is in good condition.

"It's absolutely amazing — Cindy staying on the phone, calming the lady down and talking her through it, probably saved the baby's life," said Sheriff Ken Furlong. "Cindy doesn't get rattled. She's an amazing woman."

Merrell said normally after an emotional call, she will get up from her desk and go into another room to cry.

"But John Mason was in the room," she said with a laugh. "I turn around and he's got these tears, and Liz has got these tears, so I had to be like, 'Oh, it's just a job.'"

For Mason, however, the experience was unforgettable.

"I got to just sit there and listen to this dispatcher and the way she took control of the situation and actually saved the baby's life," said Mason, a former Marine. "I've seen a lot of stuff that didn't affect me. This actually touched me. When that baby coughed we were (cheering).

"We were just overwhelmed with joy that one life was saved by the training and composure of this particular dispatcher," Mason said. "I think she's a hero." Merrell was more humble about her actions.

"I was just glad that the baby was alive and I could help the mom," said Merrell.

Brookline 911 dispatcher praised for helping to save a life

E-mail|Link|Comments (0) Posted December 18, 2009 12:01 PM

By Brock Parker, Globe Correspondent

Authorities in Brookline are praising the work of a rookie 911 dispatcher who helped a local man perform CPR on his wife last month until emergency medical technicians arrived.

The woman survived, and now Emergency Dispatcher Siobhan McIntyre, who has been on the job since May, has received a commendation from police for her efforts.

"There's nothing like it," McIntyre said. "I saved a life. I had a hand in this."

David Connolly, the chief emergency dispatcher for Brookline, said McIntyre was working on Nov. 13 at 5:22 a.m. when a Brookline man called 911 because he'd found his wife unresponsive in their home.

The woman, who asked to remain anonymous, was in cardiac arrest and her husband did not know how to perform CPR, Connolly said.

"He asked me numerous times: 'What do I do? What do I do?'" McIntyre said. "I was just trying to calm him down. It was frightening to say the least."

McIntyre began walking the man through the steps to perform CPR. She instructed him about how to breathe into his wife and how to perform chest compressions, which he did. At that point, emergency responders arrived and used a defibrillator to revive the woman, Connolly said.

Connolly said McIntyre gets the credit for helping to save the woman's life because she was able to stay calm, get emergency responders in route and help talk the man through performing CPR all at the same time.

"And she's only been on the job since May," Connolly said.

McIntyre, 26, said that while she started in May, she had been training with a partner until she began working on her own in October.

While she is happy to have helped save a life, McIntyre said she's hoping the situation won't arise again any time soon.

"I hope it's a while," she said. "You never want to be in that position again."

INTRODUCTION TO CPR

IMPORTANT ANNOUNCEMENT: In March 2008 the American Heart Association published an advisory statement outlining "hands-only" or "compression-only" CPR. This statement is a clarification addendum to the 2005 AHA Guidelines for CPR and ECC which dictates that lay persons who are unable or unwilling to provide rescue breaths may perform hands-only CPR. This updated recommendation does not apply to first responders and/or medical personnel with access to CPR barrier or a mechanical respirator; unwitnessed cardiac arrest, cardiac arrest in children and infants, or cardiac arrest presumed to be of non-cardiac origin (drowning, trauma, airway obstruction, acute respiratory diseases, drug overdose, etc). AHA study concedes that when performed correctly, conventional CPR continues to prove a more effective rescue method for victims of cardiac arrest and as such we will continue to educate our students in ventilation as well as compressions.

Recent statistics suggest that sudden cardiac arrest is rapidly becoming the leading cause of death in America. Once the heart ceases to function, a healthy human brain may survive without oxygen for up to 4 minutes without suffering any permanent damage. Unfortunately, a typical EMS response may take 6, 8 or even 10 minutes.

It is during those critical minutes that Cardio Pulmonary Resuscitation can provide oxygenated blood to the victim's brain and the heart, dramatically increasing his chance of survival. And if properly instructed, almost anyone can learn and perform CPR.

HOW CPR WORKS

The air we breathe in travels to our lungs where oxygen is picked up by our blood and then pumped by the heart to our tissue and organs. When a person experiences cardiac arrest - whether due to heart failure in adults and the elderly or an injury such as near drowning, electrocution or severe trauma in a child - the heart goes from a normal beat to an arrhythmic pattern called ventricular fibrillation, and eventually ceases to beat altogether. This prevents oxygen from circulating throughout the body, rapidly killing cells and tissue. In essence, Cardio (heart) Pulmonary (lung) Resuscitation (revive, revitalize) serves as an artificial heartbeat and an artificial respirator.

CPR may not save the victim even when performed properly, but if started within 4 minutes of cardiac arrest and defibrillation is provided within 10 minutes, a person has a 40% chance of survival.

CPRToday! Inc. © All Rights Reserved

Invented in 1960, CPR is a simple but effective procedure that allows almost anyone to sustain life in the first critical minutes of cardiac arrest. CPR provides oxygenated blood to the brain and the heart long enough to keep vital organs alive until emergency equipment arrives. To make learning CPR easier, a system was devised that makes remembering it as simple as "ABC":

- Airway
- Breathing
- Circulation

WHEN TO DIAL 9-1-1

It is critical to remember that dialing 9-1-1 may be the most important step you can take to save a life. If someone besides you is present, they should dial 9-1-1 immediately. If you're alone with the victim, try to call for help prior to starting CPR on an adult and after a minute on a child. Before we learn what to do in an emergency, we must first emphasize what NOT to do:

- DO NOT leave the victim alone.
- DO NOT try to make the victim drink water.
- DO NOT throw water on the victim's face.
- DO NOT prompt the victim into a sitting position.
- DO NOT try to revive the victim by slapping his face.

Always remember to exercise solid common sense. When faced with an emergency situation we may act impulsively and place ourselves in harm's way. Although time should not be wasted, only approach the victim after determining that the scene is safe: always check for cars, fire, gas, downed electrical lines, and any other potential hazards before attempting to perform CPR.

ADULT CPR

Definition

Because there is no single anatomic or physiologic characteristic that distinguishes a "child" victim from an "adult" victim and no scientific evidence that identifies a precise age to initiate Adult rather than Child CPR techniques, the ECC scientists made a consensus decision for age delineation that is based largely on practical criteria and ease of teaching. However, American Heart Association's guidelines dictate that Adult CPR is performed on any person over the age of approximately 10 to 14 years (or post-adolescence, as defined by the presence of secondary sex characteristics).

Assessing the situation

If you suspect that the victim has sustained spinal or neck injury, do not move or shake him.

1 person CPR

- Verify that the victim is unresponsive by shaking the victim gently and shouting "Are you okay?"
- If there is no response, dial 9-1-1
- Retrieve an AED if one is available
- Begin CPR and use the AED as appropriate

2 person CPR

- Verify that the victim is unresponsive by shaking the victim gently and shouting "Are you okay?"
- A trained rescuer should remain with the victim to begin CPR
- Second rescuer telephones 9-1-1 and, if available, retrieves an AED
- Continue CPR and use the AED as appropriate

A-B-C of CPR

"A" is for AIRWAY. If the victim is unconscious and is unresponsive, you need to make sure that his airway is clear of any obstructions. The breaths may be faint and shallow - look, listen and feel for any signs of breathing. If you determine that the victim is not breathing, then something may be blocking his air passage. The tongue is the most common airway obstruction in an unconscious person and it may be necessary to perform a finger sweep in order to move the tongue or any other foreign object away from the air passage. With the victim lying flat on his back, firmly hold his chin with one hand while using the finger of your other hand in a sweeping motion. Once the airway is unblocked, place your hand on victim's forehead and your other hand under the tip of the chin and gently tilt his head backward. In this position the weight of the tongue will force it to shift away from the back of the throat, opening the airway. If the person is still not breathing on his own after the airway has been cleared, you will have to assist him breathing.

"B" is for BREATHING. With the victim's airway clear of any obstructions, gently support his chin so as to keep it lifted up and the head tilted back. Pinch his nose to prevent air from escaping once you begin to ventilate. Take a full breath, place your mouth tightly over the victim's (use a shield barrier if one is available) and blow until the victim's chest rises. Maintain a tight seal around his mouth and be careful not to over-inflate his lungs as this may force air into the stomach, causing him to vomit. If this happens, turn the victim's head to the side and sweep any obstructions out of the mouth before proceeding. Between each breath allow the victim's lungs to relax - place your ear near his mouth and listen for air to escape and watch the chest fall as he exhales. If the victim remains unresponsive (no breathing, coughing or moving), check his circulation.

"C" is for CIRCULATION. In order to determine if the victim's heart is beating, place two fingertips on his carotid artery, located in the depression between the windpipe and the neck muscles, and apply slight pressure for several seconds. If there is no pulse then the victim's heart is not beating, and you will have to perform chest compressions.

Chest compressions

When performing chest compressions, proper hand placement is very important. Place two fingers on the victim's sternum and then put the heel of your other hand next to your fingers. Now you need to place your hand on top of that hand and interlace the fingers. Lock your elbows and using your body's weight, compress the victim's chest. The depth of compressions should be approximately 1½ to 2 inches - remember: 2 hands, 2 inches at a rate of 100 compressions per minute. If you feel or hear slight

cracking sound, you may be pressing too hard. Do not become alarmed and do not stop your rescue efforts! Damaged cartilage or cracked ribs are far less serious than a lost life. Simply apply less pressure as you continue compressions.

1 person CPR

Count aloud as you compress 30 times at the rate of about 3 compressions for every 2 seconds. Finish the cycle by giving the victim 2 breaths. This process should be performed 5 times - 30 compressions and 2 breaths - after which remember to check the victim's carotid artery for pulse (for no longer than 10 seconds) and other signs of consciousness. If you definitely not feel a pulse within 10 seconds, you should begin cycles of chest compressions and ventilations. Continue until an advanced airway is in place or victim regains consciousness.

2 person CPR

Count aloud as you compress 30 times at the rate of about 3 compressions for every 2 seconds. Finish the cycle by giving the victim 2 breaths. To prevent fatigue and deterioration in quality and rate of chest compressions the rescuers should change compressor and ventilator roles every 2 minutes - the switch should be accomplished as quickly as possible to minimize interruptions in compressions. Continue until an advanced airway is in place or victim regains consciousness.

911 Claims Operators Don't Need to Know CPR

A Shocking Revelation by the *Today Show* Reveals 18 State Behind the Curve

By Ryan Christopher DeVault

The 911 system in this country is broken, and the *Today Show* showed us just how broken it is. In a *Today Show* investigation of the 911 system, it was revealed that 18 states around the country do not require that their operators know CPR to be on the job. It seems that one of the reasons that the story was being done in the first place was that a city manager in Murphy, Texas said that his operators didn't know CPR because they weren't required to know it. Does this sound like a good excuse? Or does it sound like laziness where the city could be putting its residents at risk by not actually taking on training that could save lives?

Let's all just agree that knowing CPR is an important tool and that when someone takes the initiative to actually learn CPR that they are working towards the greater good. The fact is that nobody does CPR to help themselves out because obviously CPR is a tool you use to help out someone else in need. Those who go through the training to help save the lives of other people are commendable, and it creates more and more people that are capable of helping people with a medical emergency. With that in mind shouldn't anyone that could be placed in a position to use CPR go through the training simply because they can?

If you haven't learned CPR, and your child is suddenly having trouble breathing, who do you call? We are all told that you should call 911 immediately, but what are you expecting when you call 911? As a parent I would hope for immediate help with the situation, but there are 18 states (listed on page 2) around the country that don't care enough to make sure that the callers can receive help from their operators. I am of the opinion that it is important for parents to learn CPR, but if they haven't had the money to pay for the training, what are their options in those 18 states where you can't rely on 911 to help you out? I wish I had the answer to that question.

The reason that the city of Murphy, Texas is being brought up in this article is that they had a woman whose child had stopped breathing call into their 911 dispatch to receive help with CPR. The operator couldn't help, and the excuse that the city is giving is that they aren't required to know how to do CPR in Texas, and that they did nothing wrong. Maybe they learned their lesson in Murphy though, because the claim by the city manager of Murphy (to the *Today Show*) is they are now going to train their operators. It won't bring back the child that died in the sad case, but maybe it can be a warning sign for residents to take up the cause in their states for 911 operators to be required to know CPR. Unless you can answer for me the following question, "who do I call for help with CPR while in the middle of trying to save a life?"

States that DON'T require CPR Training for 911 Operators

Idaho
Nevada
Colorado
South Dakota
Nebraska
Kansas
Oklahoma
Wisconsin
Michigan
Indiana
Arkansas
Mississippi
Alabama
Florida
New York
West Virginia
Alaska
Hawaii

CS FOR HOUSE BILL NO. 392()

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVE HERRON

A BILL

FOR AN ACT ENTITLED

1 **"An Act establishing a loan repayment program and employment incentive program for**
2 **certain health care professionals employed in the state; and providing for an effective**
3 **date."**

4 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

5 *** Section 1.** AS 14.43 is amended by adding new sections to read:

6 **Article 8A. Health Care Professions Loan Repayment.**

7 **Sec. 14.43.430. Loan repayment; purpose.** (a) The commission shall repay a
8 portion of education loans made to eligible tier I and tier II health care professionals
9 under the health care professions loan repayment and employment incentive program
10 established in AS 18.29.010 and the loan repayment procedures established under this
11 section.

12 (b) The Department of Health and Social Services shall administer the health
13 care professions loan repayment program under AS 18.29.010 - 18.29.099. The
14 commission shall act as a disbursing agent in carrying out the provisions of

1 AS 14.43.430 - 14.43.449.

2 (c) Loan repayments under this section shall be made with funds appropriated
3 by the legislature for that purpose. The loan repayments made under this section do
4 not constitute a financial obligation of the corporation.

5 **Sec. 14.43.435. Eligibility.** To be eligible for loan repayment under
6 AS 14.43.430, an individual must

7 (1) meet eligibility and priority criteria established under
8 AS 18.29.030;

9 (2) have an unpaid balance on one or more education loans verified by
10 the commission; and

11 (3) meet other criteria established by the commission.

12 **Sec. 14.43.440. Conditions and limitations on loan payments.** (a) A loan
13 repayment under AS 14.43.430 - 14.43.449 shall be in an amount not to exceed 33.3
14 percent of the unpaid loan balance existing in the first year of program participation,
15 multiplied by the percentage of full time equivalent employment for each of up to
16 three years of qualified employment less a matching loan or incentive amount from an
17 employer or other entity as determined under AS 18.29.020.

18 (b) The commission shall make a loan repayment under this section in
19 quarterly installments payable to the lending institution. A loan repayment made under
20 this section may not exceed the annual benefit amounts established under
21 AS 18.29.020(b). The commission may not make a loan repayment installment for an
22 employment period of less than one calendar quarter.

23 (c) A loan or interest on a loan is not eligible for repayment under this section
24 if the loan or interest is eligible for repayment from another source, including another
25 loan repayment or forgiveness program or an employer-sponsored repayment
26 program.

27 **Sec. 14.43.449. Definitions.** In AS 14.43.430 - 14.43.449,

28 (1) "qualified employment" has the meaning given in AS 18.29.099;

29 (2) "tier I health care professional" means a dentist, pharmacist, or
30 physician;

31 (3) "tier II health care professional" means a dental hygienist,

1 registered nurse, certified nurse practitioner, physician assistant, physical therapist,
2 clinical psychologist, or clinical social worker holding at least a master's degree in
3 social work.

4 * **Sec. 2.** AS 18 is amended by adding a new chapter to read:

5 **Chapter 29. Health Care Professions Loan Repayment and Incentive Program.**

6 **Sec. 18.29.010. Health care professions loan repayment and incentive**
7 **program; purpose; advisory body.** (a) The health care professions loan repayment
8 and incentive program is established in the department for the purpose of addressing
9 the worsening shortage of certain health care professionals in the state by increasing
10 the number and improving the distribution of health care professionals who provide
11 direct patient care.

12 (b) The program established under this section must include

- 13 (1) loan repayments made under AS 14.43.430 - 14.43.449;
14 (2) direct incentives paid under AS 18.29.020;
15 (3) procedures for the commissioner's designation and prioritization of
16 sites eligible for participation in the program;
17 (4) an application process for participation in the program as
18 (A) an eligible site; or
19 (B) a tier I or tier II health care professional;
20 (5) the dissemination of public information and notices pertinent to the
21 program;
22 (6) classification by the commissioner of each eligible site as having
23 either regular or very hard-to-fill positions, or both;
24 (7) a lifetime maximum period of six years for participation in the loan
25 repayment and direct incentive aspects of the program by a tier I or tier II health care
26 professional; and
27 (8) annual program evaluations and reports.

28 (c) Except as provided under AS 14.43.430, the program shall be administered
29 by the commissioner in consultation with an advisory body appointed by the
30 commissioner. The advisory body is made up of members with health care expertise,
31 including expertise in economic issues affecting the hiring and retention of health care

1 professionals in the state. Members of the advisory body serve at the pleasure of the
 2 commissioner to provide recommendations for and oversight and evaluation of all
 3 aspects of the program. The commissioner shall accept a recommendation of the
 4 advisory body on a matter pertaining to the identification and monitoring of areas of
 5 shortages, eligible sites, payment priorities, or evaluation of the program, unless the
 6 commissioner finds, in writing, that the recommendation cannot be financially or
 7 otherwise supported by the department.

8 **Sec. 18.29.020. Direct incentives.** (a) The department shall provide direct
 9 incentives in the form of quarterly cash payments to eligible tier I and tier II health
 10 care professionals engaged in qualified employment. The department may not make an
 11 incentive payment

- 12 (1) before the employment period begins;
- 13 (2) for a period of qualified employment of less than three months; or
- 14 (3) under a contract term that is less than one calendar quarter.

15 (b) Payments made under this section, when combined with a loan repayment
 16 amount paid under AS 14.43.440, if any, may not exceed

- 17 (1) \$35,000 annually for a tier I health care professional employed in a
 18 regular position;
- 19 (2) \$47,000 annually for a tier I health care professional employed in a
 20 very hard-to-fill position;
- 21 (3) \$20,000 annually for a tier II health care professional employed in
 22 a regular position; or
- 23 (4) \$27,000 annually for a tier II health care professional employed in
 24 a very hard-to-fill position.

25 (c) The commissioner shall calculate the annual incentive payment amount by
 26 multiplying the annual maximum payment under (b) of this section by the percentage
 27 of full time equivalent employment for each of not more than three years of qualified
 28 employment less a matching payment amount as determined under (d) of this section
 29 and loan repayment amount, if any, under AS 14.43.440.

30 (d) An employer or other entity that employs an eligible tier I or tier II health
 31 care professional at an eligible site shall make nonrefundable quarterly matching

1 payments to the department. The payments must be in an amount that is

2 (1) not more than half of the combined annual incentive payment made
3 under (c) of this section and the loan repayment amount paid under AS 14.43.440(a),
4 as determined by the commissioner; and

5 (2) based on the employer's or entity's ability to pay, as determined by
6 the commissioner, in consultation with the program advisory body.

7 (e) A payment made under (d) of this section shall be combined with the
8 payment made to the professional by the department.

9 **Sec. 18.29.025. Number of participants.** (a) The number of participants to
10 whom the commissioner may provide a direct payment, loan repayment, or both under
11 the program established under AS 18.29.010 may not exceed 90 participants annually
12 as described in (b) of this section, regardless of whether the participant is a new or
13 continuing participant.

14 (b) The commissioner shall provide direct incentive payments, loan
15 repayments, or both, to not fewer than three participants employed in very hard-to-fill
16 positions at an eligible site in each of the 10 tier I and tier II health care professions.

17 **Sec. 18.29.030. Eligibility and priority.** (a) To be eligible for a direct
18 incentive payment under AS 18.29.020, an individual shall

19 (1) submit an application on a form approved by the commissioner;

20 (2) be engaged in qualified employment;

21 (3) be licensed as a tier I or tier II health care professional in the state
22 within 90 days after the first day of employment;

23 (4) meet a priority for payment established under (b) of this section;
24 and

25 (5) meet other criteria established by the commissioner.

26 (b) The commissioner shall establish priorities for payment of a loan and
27 incentive under the program based on the recommendations of the program advisory
28 body and the availability of funding. The commissioner shall prioritize eligible sites
29 based on the percentage of patients treated at the site who

30 (1) are uninsured;

31 (2) have or are eligible for medical assistance or Medicare coverage; or

1 (3) have or are eligible for other federal health program benefits.

2 **Sec. 18.29.099. Definitions.** In AS 18.29.010 - 18.29.099,

3 (1) "commissioner" means the commissioner of health and social
4 services;

5 (2) "department" means the Department of Health and Social Services;

6 (3) "eligible site" means a service area or health care facility that the
7 commissioner has designated as located in a health care services shortage area based
8 on a needs assessment and employment statistics for qualified tier I or tier II health
9 care professionals;

10 (4) "program" means the health care professions loan repayment and
11 incentive program;

12 (5) "qualified employment" means employment of a tier I or tier II
13 health care professional at an eligible site at which the health care professional is hired
14 and paid to work

15 (A) in a full-time or not less than half-time position;

16 (B) for a contract term that is not less than three years; and

17 (C) not less than 50 percent time on direct patient health care
18 services;

19 (6) "tier I health care professional" means a dentist, pharmacist, or
20 physician;

21 (7) "tier II health care professional" means a dental hygienist,
22 registered nurse, certified nurse practitioner, physician assistant, physical therapist,
23 clinical psychologist, or clinical social worker holding at least a master's degree in
24 social work.

25 * **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

Talking Points HB 392: Loan Repayment and Direct Incentives for Certain Medical Providers

- Financial incentives of various types—loan repayment, moving costs, housing assistance and tax breaks—can influence a provider's decision to practice in Alaska.
- Research on support-for-service programs indicate that these programs bring health care providers to needy communities where they remain in practice for many years. Of all types of programs, loan repayment and direct financial incentives that target the practitioner after training show the broadest success.¹
- HB 392 establishes in the Dept. of Health and Social Services a loan repayment and incentive program for medical providers who serve in health care shortage areas in Alaska.
- This bill will provide a combination of loan repayment or cash incentives for up to 90 applicants per year in 10 different health care occupations that fall into tier I or tier II categories.
- Tier-1 includes dentists, pharmacists, and physicians (MD and DO); and Tier-2 includes dental hygienists, nurse practitioners, nurses (RN), physical therapists, physician assistants, psychologists, and clinical social workers (LCSW).
- The amount of monetary incentive will vary with each slot, according to the category of healthcare provided and the location. The Commissioner, based on a needs assessment and employment statistics, designates sites as very hard-to-fill or regular.
- 30 slots each are reserved for very hard-to-fill sites and regular sites and 30 slots can be assigned to either category at the discretion of the Commissioner.
- Priority will be given to sites that treat patients who are uninsured and who have medical assistance or Medicare coverage.
- The combination of loan repayment and incentives cannot exceed \$47,000 at a very hard-to-fill site and \$35,000 at a regular site for a tier I medical provider.
- For a tier II provider the maximum is up to \$27,000 per year for three years at a very hard-to-fill site and up to \$20,000 per year for three years at a regular site.
- HB 392 will be one of the only programs that would allow incentives to mid-career professionals and thus will be a powerful recruitment tool. Forty-four states have "support-for-service programs" and Alaska cannot compete with these states when attempting to recruit health care professionals.
- Once HB 392 goes into effect, it will immediately begin to remedy the shortage of health care professionals within the state of Alaska. In combination with current programs aimed at students, e.g. WWAMI, we can greatly enhance the availability of medical services in our underserved areas, getting this important population the access to health care that they deserve.

Subject: Support for HB 392, Incentives for Certain Medical Providers

Dear Chair Keller and Chair Herron:

The Alaska Commission on Aging (ACoA) encourages support for HB 392 by the House HSS Committee, a bill to establish a loan repayment program to build Alaska's health care workforce by increasing the recruitment and retention of targeted health care professionals in urban and rural, underserved communities. This bill is authored by Representative Bob Herron.

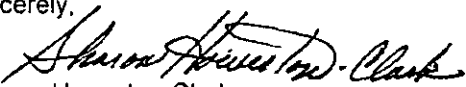

Alaska, as with the rest of the nation, is experiencing a shortage of health care workers as fewer students are entering the health care profession and many of those already working in health care are preparing for retirement. Alaska is one of five states that does not offer a state-sponsored loan repayment program for health care professions. As a result, our hospitals, clinics, and communities lose potential health care workers to other states that incentivize their workforce with loan repayment programs.

Access to quality health care is a priority for all Alaskans and a critical need for people age 65 years and older. Older Alaskans benefit from regular health care services which enhance their overall health and decrease the need for more expensive, intensive treatment and emergency visits.

Alaska continues to lead all states with the fastest growing senior population currently comprising about 12 percent of our state's population and is projected to increase by five to six percent each year until 2020. The graying of Alaska's population is creating substantial shifts for workforce, particularly in the health care and long-term support service sectors, as demand increases and providers are reaching retirement age. If older Alaskans are unable to find a health care provider, they may be forced to leave the state in search of access to health care professionals. As a result, Alaska could suffer from a loss of retirees, who contribute more than \$1.7 billion to the state's economy in addition to their significant volunteer service, caregiving activities, and community leadership.

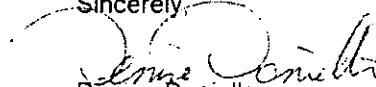

ACoA supports HB 392 and believes that the proposed legislation will help to build a qualified health care workforce who will be available to meet the health care needs of older Alaskans. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information about our position. Thank you.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

The content of your message is as follows:

Dear [The message(s) you sent had each recipient's name here]:

I am writing to urge you to support this legislation for the loan repayment and incentive program in Alaska. As a physician who works 75% time in the Aleutians I am not eligible for federal loan repayment toward my \$150,000.00 medical school loans. After three years in our community health center at a average salary, I am no longer financially able to sustain the cost of living, monthly loan payments without loan repayment of some sort. I am seriously considering moving out of state to obtain more flexibility in the reimbursement options. If this legislation passes, I will stay in Alaska to provide rural primary care to under served populations.

Sincerely,

Dr. Ann Nora Ehret

Subject: Health Care Loans to providers

Representative Herron

As I understand it, this HB 392 would provide loans to providers in order to attract more providers to Alaska.

It is apparent that there is a problem now in accessing care when you are on Medicare.

I would support this bill to help ease the problem of care.

Sincerely,

Marguerite Stetson

Subject: HB 392

Representative Herron

Alaska needs to establish a Loan Repayment & Incentive Program so we can recruit and retain the providers we need and to help solve the shortage problem.

Average debt for occupations - especially tier 1: range 100,000 to 400,000 (like a mortgage!)

Cost of doing nothing? Economics of no action:

- Without action, ongoing recruitment costs and high locum tenens costs due to high turnover and length of vacancies will continue to increase health care costs in Alaska
- Without action, Alaska will continue to trend toward a public health crisis in pockets of the state
- Without action, Alaska can expect increased ER use, increased Medivac use, increased Medicaid travel costs, and increased costs associated with chronic disease

Sincerely,

Heather Goecke

House Bill 392 establishes a loan repayment and direct incentive program in the Department of Health and Social Services (DHSS), for certain health care professionals employed in the state of Alaska. The goals of the program are to increase the quality and quantity of medical services in underserved regions using a combination of loan repayment and direct monetary incentives to recruit and retain experienced health care professionals.

Alaska has long faced a health care provider shortage that is expected to worsen. The lack of health care providers is apparent not only in urban regions but also in rural communities where it is especially difficult to recruit health care practitioners. The intent of HB 392 is to create a competent and competitive workforce that has the experience necessary to serve our citizens.

HB 392 is one of the only programs that would allow incentives to mid-career professionals and thus will be a powerful recruitment tool. Forty-four states have "support-for-service programs" and Alaska cannot compete with these states when attempting to recruit health care professionals. HB 392 is a much-needed solution to our shortage of health care professionals because the bill will allow for the employment of up to 90 participants in any given year.

DHSS would run the program and serve as the fiscal agent making quarterly loan payments directly to eligible lenders and incentive payments directly to practitioners from 10 different health care occupations.

The amount of loan repayment and/or direct incentive payment would depend on the location of the position and the category of health care provided. There are currently two tiers of practitioners: Tier-1 includes dentists, pharmacists, physicians (MD and DO); and Tier-2 includes dental hygienists, nurse practitioners, nurses (RN), physical therapists, physician assistants, psychologists, and social workers (LCSW).

A provider in Tier-1 who serves in a designated "very-hard-to-fill" position could receive up to an extra \$47,000 and in a "regular" position an extra \$35,000 per year for up to three years. A provider in Tier-2 who serves in a designated "very-hard-to-fill" position could receive up to an extra \$27,000 and in a "regular" position an extra \$20,000 per year for up to three years.

To address the shortage of health care providers in rural areas 30 of the 90 slots would be reserved for "very-hard-to-fill" positions, which are designated by the Commissioner of Health and Social Services based upon a needs assessment and employment statistics for Tier-1 and Tier-2 health care professionals.

Once HB 392 goes into effect, it will immediately begin to remedy the shortage of health care professionals within the state of Alaska. In combination with current programs aimed at students, e.g. WWAMI, we can greatly enhance the availability of medical services in our underserved areas, getting this important population the access to health care that they deserve.

MEMORANDUM

March 11, 2010

SUBJECT: Sectional Summary (HB 392; Work Order No. 26-LS1528\R)

TO: Representative Bob Herron
Attn: Nikoosh Carlo

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Requires the Alaska Commission on Postsecondary Education to repay education loans made to health care professionals, as defined, under eligibility criteria established in sec. 2. Specifies that the loan repayment obligation is not a financial obligation of the corporation. Provides for quarterly payments based on the fulfillment of qualified employment at eligible sites located in the state.

Section 2. Establishes the health care professions loan repayment and incentive program in the Department of Health and Social Services for the purpose of addressing a shortage of certain health care professionals in the state and for improving the distribution of those professionals. Requires the commissioner of health and social services to administer the program, to designate and prioritize eligible employment sites, and to monitor the program in consultation with an advisory body established under this section. Provides for maximum combined loan repayment and employment incentives based on the type of employment.

Section 3. Provides for an immediate effective date for the bill.

ANALYSIS: (Attach a separate page if necessary)

HB 392 creates a loan repayment program for identified health professional occupations and provides for cash incentives for eligible health professionals engaged in qualified employment. The intent of the legislation is to "address the worsening shortage of certain health care professionals in the state by increasing the number and improving the distribution of health care professionals who provide direct patient care."

Division of Health Care Services estimates that it will need a total of 1 FTE to fully administer the loan repayment and employment incentive programs.

DHSS Finance & Management Services

Date 3/18/2010

ANALYSIS CONTINUATION

Health Care Professions Loan Repayment & Incentive Program

The Division assumes it will need \$2,715.0 for practitioner payments in FY2011. This funding will be used for either practitioner payments as cash incentives, or payments to lender institutions for loan repayments, or there can be a combination of the two types of payments. Maximum payments established for any combination of loan repayment and cash incentive are: \$35.0 annually for tier I health care professionals employed in "regular" positions; \$47.0 annually for tier I health care professionals employed in "very hard-to-fill" positions; \$20.0 annually for tier II health care professionals employed in "regular" positions; and \$27.0 annually for tier II health care professionals employed in "very hard-to-fill" positions. The need for \$2,715.0 in FY2011 assumes the following:

Tier I 27 Practitioners \$1,161.0 (assumes 9 participants from each of 3 types comprising tier I at \$387.0 for each type)
 Tier II 63 Practitioners \$1,554.0 (assumes 9 participants from each of 7 types comprising tier II at \$222.0 for each type)
 Total 90 Practitioners \$2,715.0

The Division assumes the employing entities will provide 25% of the \$2,715.0 as contributing match as specified in HB392. Therefore, the expected GF match is \$2,036.3 The match for the employing entities is \$678.7.

Incentive payments are available to professionals for up to 3 years of qualified employment with a lifetime maximum participation of six years in the loan repayment and direct incentives aspects of the program by a tier I or tier II health care professional. The total number of participants in the program may not exceed 90 participants annually, regardless of whether the participant is a new or continuing participant.

On the fiscal note, the payments for practitioners will be paid from the contractual line:

Item	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016
Practitioner Payments	\$2,715.0	\$2,715.0	\$2,715.0	\$2,715.0	\$2,715.0	\$2,715.0
Evaluation Contract	\$ 18.0	\$ 18.0	\$ 18.0	\$ 18.0	\$ 18.0	\$ 18.0
Staff Contractual Costs	\$ 9.4	\$ 9.4	\$ 9.4	\$ 9.4	\$ 9.4	\$ 9.4
ACPE Software	\$ 35.0	\$	\$	\$	\$	\$
Total:	\$2,777.4	\$2,742.4	\$2,742.4	\$2,742.4	\$2,742.4	\$2,742.4

Administrative Costs

1 Health Program Manager II, \$89.3 (includes fringe benefits). Assumes \$9.4 per FTE annually for office space, phones, and other contractual costs; \$2.6 one time costs per FTE for computers and software; \$5.0 one time costs per FTE for office equipment; \$2.0 per FTE annually for supplies; \$6.0 per year for travel; \$18.0 each year for a program evaluation contract.

Health Program Manager II.

This position will serve as lead program manager for the loan repayment and employment incentive program and will: establish procedures for the commissioner's designation and prioritization of sites eligible for participation in the program, develop the application process for participation in the program for sites and professionals, develop and disseminate public information and notices pertinent to the program, lead the development of the methodology and procedures for classifying each eligible site as having either regular or very hard-to-fill positions, prepare annual reports that document the successes and challenges of the program, facilitate the creation of and ongoing work of the advisory committee, and establish procedures and manage the employer contribution portion of the program.

Assumes one time costs of \$35.0 for contractual services/software development for Alaska Commission on Postsecondary Education (ACPE).

ACPE will facilitate the disbursement of the loan repayment benefit. It will not be the budgetary agency for requesting and receiving the funds. After HCS selects program participants, ACPE will verify the existence of their qualifying education debt, and, on a periodic basis, transmit the appropriate benefit amount to the individual's lender.

 data from www.hrsa.gov March 3, 2009

<http://www.hpsafind.hrsa.gov/HPSASearch.aspx>

Health Professional Shortage Areas (HPSAs) are designated by HRSA as having shortages of primary medical care, dental or mental health providers and may be geographic (a county or service area), demographic (low income population) or institutional (comprehensive health center, federally qualified health center or other public facility).

Medically Underserved Areas/Populations are areas or populations designated by HRSA as having: too few primary care providers, high infant mortality, high poverty and/or high elderly population.

 USDHHS HRSA: [More about shortage areas](#)

 Alaska Primary Care Office information: http://www.hss.state.ak.us/dph/healthplanning/primarycare/PC_Home.htm

"Yes" in HPSA columns means there is a "geographic" HPSA designation approved by HRSA Office of Shortage Designation, for all or part of the census area or borough.

"CHC" indicates there is at least one Community Health Center with automatic HPSA designation. Where geographic HPSAs exist, the geographic area score is generally higher than the CHC score. Most of the areas with geographic designations also have CHCs in one or more sites within the census area or borough.

Prepared by Health Planning and Systems Development Section, Health Care Services, Alaska Department of Health and Social Services 3/19/2009

2007 Alaska Health Workforce Vacancy Study Research Summary

Key Findings: Alaska is confronted by severe shortages of professional health workers, primarily in high-level primary care occupations that include Family Physician, General Internist, Critical Care Nurse, Nurse Case Manager, Family Nurse Practitioner, Physician Assistant, Pharmacist,

Dentist, Physical/Occupational/Speech Therapist, and Behavioral Health occupations. Shortages in RNs and Allied Health are much less acute. Most affected are rural areas and Tribal Health Organizations, though growth-driven high vacancy rates affect the Anchorage-Matsu region as well.

BACKGROUND

Alaska is confronted by a "perfect storm" of health professional shortages. The state has long suffered from a deficient "supply side" characterized by insufficient numbers of key health workers whose recruitment, retention and training have been impeded by Alaska's remoteness, harsh climate, rural isolation, low population density and scarce training resources. Now exacerbating this already difficult situation is a burgeoning "demand side" for increased health services for a steadily growing and aging population. The health services industry is the fastest growing sector of Alaska's economy, employing over 7% of the state workforce.

METHODOLOGIES

The key questions this study sought to answer were: What health occupations were at this time most critically affected by shortages? Exactly how many budgeted positions existed and how many of these currently remained unfilled? Where were these vacancies regionally and in what types of organizations? What did employers perceive to be the major underlying causes of their vacancies? How many new trainees/graduates could the job market actually absorb annually and how many organizations could absorb them?

Four hundred seventy-six (476) purposively sampled Alaska health service organizations of all types responded to the study survey (Figure 1). Survey data was used to generate estimates of positions and vacancies for the entire state of Alaska.

Figure 1

KEY FINDINGS

The findings confirm and quantify the trends cited in recent studies and accumulating anecdotal evidence: despite the recent progress in training and deploying health personnel, such as Registered Nurses, critical shortages persist (Tables 1,2).

The situation for key primary care occupations – Family Physician, General Internist, Nurse Practitioner, and Physician Assistant – was troubling, particularly in the rural areas, with numerous estimated vacancies and high estimated state vacancy rates between 15% and 20%.

Though vacancies for Psychiatrists were not numerous, they were particularly in demand (19.0% estimated vacancy rate) and difficult to recruit (mean vacancy length of 34.5 months).

This study was funded by the Office of Associate VP for Health, University of Alaska Anchorage, through Center for Disease Control and Prevention grant #5-H755-DP024673, and by the Alaska Mental Health Trust Authority.

The national Pharmacist shortage has hit Alaska hard and affects every region, with high estimated vacancy numbers (98), and an estimated vacancy rate of 23.7%.

Therapists of all kinds – Physical, Occupational, Speech, and Speech-Language Pathologists – were in short supply, with estimated vacancy rates ranging from 15.6% to 29.3%. No part of the state escaped the shortages; vacancy rates were most acute in rural areas, but numerically high in the Anchorage Mat-Su region.

High numbers of vacancies and high vacancy rates were reported for key specialized nursing occupations, particularly for Nurse Case Manager, Family Nurse Practitioner, and Critical Care Nurse. These appeared to be the current areas of most critical shortage in nursing.

The estimated Registered Nurse vacancy rate was moderate (8.0%), but this masked 10% rates in hospitals and tribal health organizations, and an estimated rural rate of 16.1%.

While the estimated vacancy rate for Dentist was 10.3%, this masked a 15.3% estimated rural rate and a very high 42.0% rate for tribal health organizations, which had 39% of estimated Dentist vacancies.

Table 2. Key occupations

Key Occupations (high numbers of vacancies, high vacancy rates)	Study Sample (n=476)			State Estimate		
	Positions	Vacancies	Vacancy Rate	Positions	Vacancies	Vacancy Rate
Family Physician	252	48	18.3%	675	107	15.8%
General Internist	71	15	21.1%	200	40	20.0%
Psychiatrist	36	10	27.8%	93	18	19.0%
Registered Nurse	3109	299	9.6%	5489	439	8.0%
Critical Care Nurse	497	43	8.7%	629	60	9.5%
Nurse Case Manager	136	42	30.9%	209	49	23.4%
Family Nurse Practitioner	155	36	23.2%	364	71	19.5%
Physician Assistant	207	32	15.5%	515	98	19.0%
Pharmacist	302	73	24.2%	413	98	23.7%
Physical Therapist	271	29	10.7%	510	84	16.5%
Dentist	319	47	14.7%	692	71	10.3%
Human Services Worker	1568	170	10.8%	4800	697	14.5%
Behavioral Health Clinician	297	35	11.8%	555	71	12.8%
Case Manager/Care Coordinator	505	52	10.3%	1163	164	14.1%
Physical Therapy Assistant	35	11	31.4%	62	18	28.6%
Medical Assistant	367	38	10.4%	1092	102	9.3%
CHA/P	552	100	18.1%	552	100	18.1%
Certified Coder	85	6	7.1%	209	22	10.6%
Medical Director	49	6	12.2%	120	18	14.8%
Behavioral Health Supervisor	82	13	15.9%	176	22	12.5%

Table 1. Occupational Groups

Occupational Groups	Study Sample (n=476)			State Estimate		
	Positions	Vacancies	Vacancy Rate	Positions	Vacancies	Vacancy Rate
All Occupations	18158	1866	10.3%	34738	3529	10.2%
Physicians	730	109	14.9%	1931	226	11.7%
Professional Nurses	4202	462	11.0%	7139	696	9.8%
Other Nursing Staff	1769	135	7.6%	1762	111	6.3%
Professions/ Therapists	1240	217	17.5%	2281	404	17.7%
Behavioral Health	2938	327	11.1%	7450	1033	13.9%
Allied Health	3209	291	9.1%	5523	434	7.9%
Public Health/ Nutrition	154	18	11.7%	189	ND	ND
Other Primary Care (PA & CHAP)	759	132	17.4%	1067	198	18.5%
Managers	1337	69	5.2%	2947	160	5.4%
Health Information/ Reimbursement	1816	106	5.8%	4451	253	5.7%

In the Behavioral Health occupational group, the most acute shortages – with both extremely high vacancy numbers and high vacancy rates – appeared to be among Human Services Workers. In addition, overall estimated Behavioral Health occupation vacancies were extremely numerous (1033), around 29% of all estimated vacancies – more than any other occupational group.

Among Allied Health occupations, high vacancy rates were affecting employers of Physical Therapy Assistants and Respiratory Therapists. Sonographer vacancies were difficult to fill, and Surgical Technician vacancies, though not numerous, were averaging 3 to 4 years in length.

One hundred (100) vacancies and a vacancy rate of 18.1% were reported for Community Health Aide/Practitioners (CHA/Ps).

Among “front office” and “back office” occupations, Coding Specialist and Certified Coder had 11% estimated vacancy rates and very long mean vacancy lengths.

The managerial occupations for which high vacancy rates were reported were healthcare related: Behavioral Health Supervisor, Clinical Department Manager, Health Information Manager, Medical Director, Nurse Manager, and Practice Manager. Behavioral health organizations had the most estimated managerial vacancies.

Looking at respondent types, tribal health organizations reported the highest overall vacancy rate (16.5%). These organizations reported 87 CHA/P vacancies; approximately half of all estimated vacancies for Nurse Case Manager, Pharmacist, Chemical Dependency Counselor, Dentist, Medical Lab Tech, Medical Technologist, and Health Educator; and all the estimated vacancies for Coding Specialist. But every respondent type was a locus for acute shortages in key occupations, such as clinics/offices of physicians for PAs, hospitals/nursing homes for RNs, pharmacies for Pharmacists, behavioral health organizations for Human Services Workers, and school districts for Speech-Language Pathologists.

Higher vacancy rates were generally found in the rural respondents, particularly in the North/West and Southwest regions, which reported double digit vacancy rates for nearly all occupational groups, and overall vacancy rates of around 20% (Table 3, Figure

2). Occupations with much higher rural estimated vacancy rates included RN (6.9% urban, 16.1% rural), Behavioral Health Clinician (9.3% urban, 22.9% rural), Dentist (7.2% urban, 15.3% rural), Physical Therapist (13.5 urban, 31.6% rural), and PA (14.7% urban, 26.8% rural) (Table 4).

DISCUSSION

The "supply side" shortages apparently persist. "Inadequate Pool of Qualified Workers" was the top reason given for vacancies, cited by 54% of respondents, followed by "Transience/Moving Away" (28%), "Insufficient Compensation" (18%), and "Rural Isolation" (16%). Many tribal health organizations also reported "Insufficient/Expensive Housing" as a top reason for unfilled vacancies. The data also indicated a burgeoning "demand side," where shortages were exacerbated by population growth and an increased need and demand for health services, particularly in the high-growth Anchorage Mat-Su region.

Table 3. Regional vacancy rates

Occupational Group	Regions (Study Sample - n=476)						
	North/West (n=10)	Southwest (n=17)	Interior (n=72)	Anchorage Mat-Su (n=232)	Gulf Coast (n=69)	Southeast (n=70)	Statewide/Multiregional (n=6)
Physicians	26.7%	21.2%	21.6%	12.6%	10.4%	6.8%	30.3%
Professional Nurses	26.0%	21.6%	5.9%	11.1%	8.0%	5.9%	12.1%
Other Nursing Staff	18.6%	18.8%	5.8%	6.2%	4.6%	2.3%	8.8%
Dentists/Pharmacists/Therapists	32.4%	32.4%	20.7%	15.9%	16.5%	16.3%	12.4%
Behavioral Health	19.0%	22.7%	13.1%	8.3%	7.1%	11.1%	11.6%
Allied Health	17.0%	24.6%	7.3%	6.5%	8.4%	7.7%	8.6%
Public Health/ Nutrition	30.0%	6.3%	0.0%	4.0%	18.9%	0.0%	10.5%
Other Primary Care (PA & CHA/P)	19.7%	18.6%	24.5%	9.0%	9.1%	4.0%	0.0%
Managers	13.8%	2.4%	3.5%	3.2%	6.4%	11.7%	4.0%

All Occupations	20.1%	20.3%	9.0%	8.6%	8.1%	7.7%	10.2%

Table 4. Urban vs. Rural vacancies and vacancy rates

Occupation	Urban		Rural	
	Estimated Vacancies	Estimated Vacancy Rate	Estimated Vacancies	Estimated Vacancy Rate
Family Physician	68	14.9%	38	17.6%
General Internist	27	18.8%	13	23.1%
RN	339	6.9%	94	16.1%
Family Nurse Practitioner	36	13.3%	34	36.4%
Pharmacist	68	22.7%	30	25.9%
Behavioral Health Clinician	36	9.3%	34	22.9%
Human Services Worker	158	8.5%	209	10.1%
Dentist	32	7.2%	38	15.3%
Dental Hygienist	14	3.6%	17	10.0%
Dental Assistant	27	4.4%	64	14.9%
Physical Therapist	59	13.5%	26	31.6%
PA	50	14.7%	47	26.8%
All Occupations	1998	8.1%	1162	13.3%

Many respondents provided commentary with their surveys and noted positions that are particularly difficult to fill:

- "We have been hiring travelers for Physical Therapy positions at \$67/hr - we can't find therapists to employ. We have been looking for 2 years." (Urban Medical Clinic).
- "Without a state Physical Therapy program it is very difficult to get PT staff. Usually this area is staffed by PTs that leave competing PT clinics." (Urban Physical Therapy Office)
- "We really need a pharmacy school in Alaska. It took two years to fill our last pharmacist position." (Urban Pharmacy)
- "Pharmacists are always the most difficult position to fill." (Rural Pharmacy)

The availability of military spouses has apparently alleviated some of the workforce pressure, but has exacerbated the “transience” problem. Also affecting the shortages was the absence of local training resources (such as medical, dental, pharmacy, and therapy schools) to provide a local workforce pipeline. In the qualitative data, common refrains were, “we need a pharmacy school,” “we need a dental school,” “we need a physical therapy school.”

The acuity of workforce shortages was also reflected by the high percentage of estimated vacancies the responding employers would consider filling with new grads (Table 5). Respondents indicated that they had the capacity to hire sizeable graduating cohorts of Family Physicians, PAs, Occupational and Physical Therapists, Pharmacists, and Dentists. These may be the occupations likely to yield optimal responses to substantial investments in preparation and training programs and/or targeted recruitment and retention campaigns.

How Hard Is It for Alaska's Medicare Patients to Find Family Doctors?

By Rosyland Frazier and Mark Foster

UA Research Summary No. 14 • March 2009

Institute of Social and Economic Research • University of Alaska Anchorage

In the past few years, Alaskans have been hearing reports that some primary-care doctors won't see new Medicare patients. Medicare pays these doctors only about two-thirds of what private insurance pays—and that's after a sizable increase in 2009. But most Americans 65 or older have to use Medicare as their main insurance, even if they also have private insurance. Just how widespread is the problem of Alaska's primary-care doctors turning away Medicare patients? ISER surveyed hundreds of doctors to find out—and learned that so far there's a major problem in Anchorage, a noticeable problem in the Mat-Su Borough and Fairbanks, and almost no problem in other areas.

Medicare is the federal health insurance program for older Americans and for some younger people with disabilities. At issue is what Medicare pays primary-care doctors for their services—not what it pays for other medical costs. Alaska's 50,000 Medicare enrollees are almost all in the "fee for service" plan, which pays doctors standard fees for their services.*

Why is it so worrisome if primary-care doctors won't see Medicare patients? These are the doctors who provide broad care, track patients' overall health, and coordinate care with specialists. That's very important for older people, who often have various medical problems and chronic conditions. And the number of Alaskans over 65 is growing fast—it's expected to double in the next 15 years.

To learn how hard it is for older Alaskans to find primary-care doctors, in 2008 we tried to survey all those who could see the general population of Medicare patients. We were able to interview 229 doctors or their staffs—about 85% of those we tried to reach.

But Medicare payments for Alaska doctors increased in 2009, thanks to efforts of Alaska's U.S. senators. So we recently called back the doctors who had told us they weren't taking new Medicare patients. None of them had opened their doors to significant numbers of new Medicare patients. Four said they now see a very limited number of new Medicare patients, under special circumstances. Two doctors in a joint practice who still didn't see new Medicare patients had hired a nurse practitioner who did.

It's certainly also possible that without the 2009 increase, even more doctors would have decided not to see Medicare patients. Figure 1 shows what our 2008 and 2009 surveys found.

It's mainly doctors in Alaska's larger urban areas who are declining to see new Medicare patients. But that's where the majority of older Alaskans live. Most doctors (even in Anchorage) will still see established patients—that is, patients they've seen in the past.

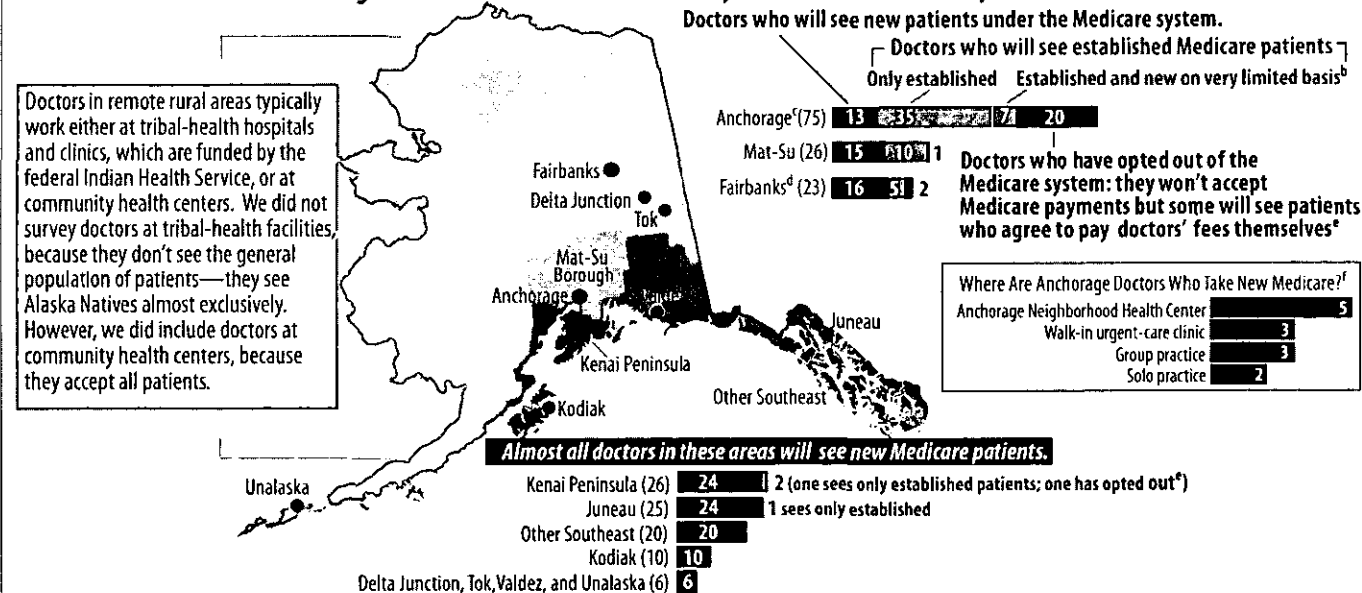

Almost all doctors in smaller communities take new Medicare patients. Rural places have few doctors—so doctors probably feel more of an obligation to see all patients. For patients (Medicare or otherwise) in rural Alaska, the challenge is more likely to be recruiting and keeping doctors.

One in ten doctors we surveyed has opted out of the Medicare system. Most are in Anchorage. They will not accept Medicare payments, but some will see patients who agree to pay the entire doctor's bill themselves.

The Anchorage Neighborhood Health Center, which accepts all patients, saw twice as many Medicare patients in 2007 as in 2001. It has become the only choice for many of Anchorage's Medicare patients.

Medicare patients are not relying more on emergency rooms, if figures for Providence Hospital's emergency room in Anchorage are typical. Numbers of Medicare patients there haven't changed much in the past several years.

Figure 1. Medicare Policies of Primary-Care Doctors We Surveyed^a

^aIn 2008 we surveyed 229 doctors; 15 weren't taking any new patients at all; 3 had no Medicare patients. In 2009 we re-surveyed doctors who didn't take new Medicare patients in 2008. ^bTen doctors (7 in Anchorage, 2 in Fairbanks, 1 in Mat-Su) accept a few new Medicare patients under special circumstances, but don't typically see new Medicare patients. ^cIncludes Eagle River/Chugiak. ^dIncludes North Pole. ^eSee Figure 9. ^fSee page 3.

*Nationwide, 21% of beneficiaries have enrolled in Medicare Advantage programs—which means they become members of private health plans, and Medicare then pays the plans a set monthly amount for each Medicare enrollee.

SURVEY OF PRIMARY-CARE DOCTORS

We surveyed only primary-care doctors. So far there hasn't been any sign that specialists are declining to see Alaska's Medicare patients—not surprising, since Medicare tends to pay them closer to private-insurance rates.

We first had to determine how many doctors fit our survey criteria: those who currently practice general, family, or internal medicine at least 20 hours a week and who could see the average Medicare patient, if they chose to.

About 700 primary-care doctors are licensed in Alaska, but most aren't available to see the general population of Medicare patients. Hundreds work for government agencies, are in public health, or see only specific groups (Figure 2).

Among those who didn't fit our criteria are doctors working for tribal-health facilities that provide Indian Health Service programs for Alaska Natives. These doctors do see Alaska Native Medicare patients.

We estimated that 264 doctors were left, after we took out those who didn't fit our criteria. In 2008 we tried to reach all 264. We were able to talk with about 85%—229 doctors or their staffs. We asked them to tell us their policies for seeing Medicare patients and to rank reasons why they might be limiting or turning them away. The top reason they cited was "inadequate reimbursement"—that is, Medicare payments aren't enough to cover the costs of seeing patients.

We also followed up, in 2009, with doctors who had told us in 2008 that they weren't taking new Medicare patients. We reached all but two.

MEDICARE VERSUS PRIVATE INSURANCE

The federal Center for Medicare and Medicaid Services (CMS) calculates Medicare payments for doctors under a complex formula that takes into account geographic differences in costs around the country. Alaska's doctors have historically been paid more than the U.S. average for seeing Medicare patients.

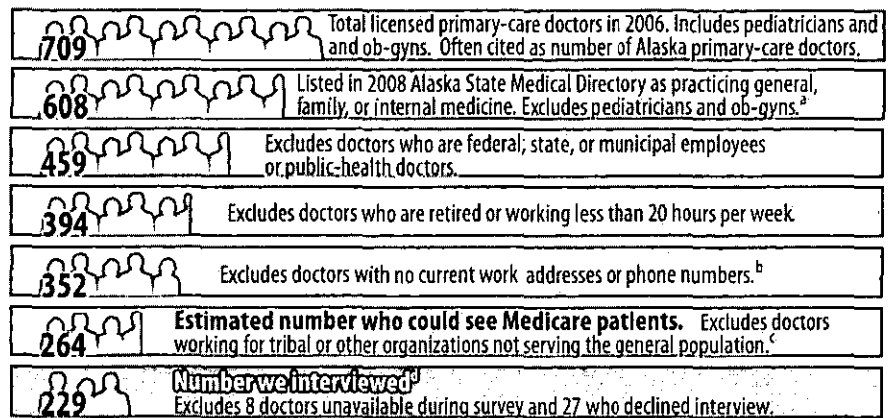

The CMS formula actually includes three geographic differentials: one for "physician work" itself, one for doctors' costs of operating practices, and one for doctors' costs of carrying liability insurance.

In 2008, Congress set the Alaska geographic differential for "physician work" at 50% above the U.S. average, effective in 2009. Alaska's U.S. senators Lisa Murkowski and Ted Stevens were instrumental in gaining that increase for Alaska doctors. But combined with the other differentials—set by CMS—the overall Medicare geographic differential for Alaska doctors in 2009 is 29% above the U.S. average. Figure 3 shows the differential since 2000.

• From 2000 to 2003, the geographic differential for Alaska doctors was about 12% above the U.S. average. That differential was set entirely under CMS's administrative process.

• In 2004 and 2005, the differential for Alaska doctors jumped to 67% above the U.S. average. Ted Stevens, at that time Alaska's senior U.S. senator, spearheaded the legislation that led to the substantial but temporary increase. In those two years, Medicare paid Alaska doctors as much as private health insurance (Figure 4).

Figure 2. How Many Primary-Care Doctors Are Available to See Medicare Patients?
(Among Alaska Doctors Practicing General, Family, or Internal Medicine at Least 20 Hours per Week)

^aWe excluded pediatricians and obstetrician-gynecologists, who are often included in definitions of primary-care doctors, because they don't routinely see older patients. ^bAbout 42 doctors were not at the addresses and phone numbers in the medical directory. We tried but weren't able to find them, and we assume they have left the state or are not practicing. ^cWe excluded doctors working for tribal-health organizations, the military, the Veterans' Administration, and Planned Parenthood, because they don't see the general population of Medicare patients. Doctors who work for tribal-health facilities do see Alaska Native Medicare patients. ^dWe interviewed either doctors or members of their staffs.

- After that legislation expired, the Medicare differential dropped sharply, to about 5% above the U.S. average from 2006 to 2008.
- In 2009, the cost differential for Alaska doctors climbed to 29% above the U.S. average, due to new federal legislation—as we just discussed. But Medicare still pays doctors less now than it did in 2005 (Figure 4).
- Medicare pays about two-thirds of what private insurance pays, in Alaska and on average nationwide. (But in the adjacent markets of Washington state, Medicare pays 68% to 75% of what private insurance pays.)
- That nationwide gap helps explain why more Medicare patients are having trouble finding doctors. Recent national surveys sponsored by the Medicare Payment Advisory Commission found that 17% of Medicare patients in the U.S. had "a big problem" finding family doctors in 2007, up from 13% in 2005. Alaska may be the harbinger of a national trend.

Figure 3. Medicare Geographic Cost Differential* for Alaska Doctors

*This is a weighted average of three geographic cost differentials the Center for Medicare and Medicaid Services uses in a complex formula that determines what doctors are paid. One of those is the differential for "physician work," and Congress set that at 150% of the U.S. average for Alaska doctors, effective in 2009. But the other differentials—for physicians' costs of operating their practices and for carrying liability insurance—are set by CMS and can vary from year to year. WHERE ARE THE MEDICARE PATIENTS?

Nearly 70% of non-Natives over 65 live in Anchorage, the Mat-Su Borough, and the Fairbanks area. Figure 5 shows only where older non-Natives live, because older Alaska Native patients have access to doctors through tribal-health care facilities. For them, the issue is not that doctors won't see them but that there may not be enough doctors, especially in rural areas.

WHO ACCEPTS MEDICARE PATIENTS?

Besides the doctors who will see new or established patients, some doctors have made another choice: they've opted out of the Medicare system. They don't accept any Medicare payments (see Figure 9), but some will see Medicare patients who agree to pay the doctor's fee themselves. Patients who can do that have more choices. But for those who need Medicare to help pay the bill, the access problem is the worst in Anchorage.

We found only 13 primary-care doctors seeing the general population of new Medicare patients in Anchorage. Of those, 3 were at walk-in, urgent-care clinics, which mostly just treat minor injuries and illnesses (Figure 1).

Five of the 13 Anchorage doctors seeing new Medicare patients in 2008 were at the Anchorage Neighborhood Health Center. That's one of dozens of federally funded community health centers in Alaska. There are hundreds more across the U.S. These centers are open to everyone, but they are mainly for medically "under-served" groups of people—poor and uninsured, for instance—or areas of the country without adequate local medical care, like many of Alaska's rural communities.

The Anchorage Neighborhood Health Center is the main choice for growing numbers of Medicare patients. Both the number of Medicare patients coming to the clinic and the percentage they make up of all patients doubled between 2001 and 2007 (Figure 6). That growth did flatten out in 2004 and 2005, when Medicare paid doctors at a level comparable to private insurance. But after that, the numbers climbed. (In Fairbanks, the community health center saw a similar percentage increase. In the Mat-Su Borough, a health center just opened in 2005, so data are limited.)

Until recently there was another choice for Anchorage's Medicare patients—the Alaska Family Medicine Residency Program, where some family doctors get their final phase of training. These resident doctors see patients, and they had been accepting growing numbers of Medicare patients. But to make sure the residents see a variety of patients, the program has now capped the number of Medicare patients it accepts.

Anchorage's Medicare patients don't seem to be turning more to emergency rooms. Data from Providence Hospital's emergency room show that visits by older patients have stayed mostly steady, with seasonal variations, since 2004 (Figure 7). But some health-care providers think that Medicare patients may be postponing care they need and coming in only when medical problems get much worse.

MEDICARE PAYMENTS TO DOCTORS AND TO HEALTH CENTERS

Medicare pays doctors and community health centers differently. Some people believe that Medicare uniformly pays health centers more than it pays private doctors, making it more feasible for health centers to see Medicare patients. But the reality is more complex.

Medicare pays health centers the same fee for seeing Medicare patients for any visit, but private doctors more for longer, more complex visits. Figure 8 compares payments for 30- and 60-minute visits with new patients, at doctors' offices and the Anchorage Neighborhood Health Center (ANHC). For a 30-minute visit, Medicare pays ANHC \$119 and doctors about \$95. But for a 60-minute visit, it still pays ANHC \$119, but the doctors \$189.

Figure 8. Medicare and Patient Payments to Private Doctors and Anchorage Neighborhood Health Center, 2009

Visit Type	Provider	Payment	
		Medicare	Patient
30-minute visit	Doctor	\$94.90	[\$23.72 ^a] = \$118.62
	ANHC	\$119.28	[\$39.60 ^b] = \$158.88
1-hour visit	Doctor	\$189.56	[\$47.39 ^a] = \$236.95
	ANHC	\$119.28	[\$76.20 ^b] = \$195.48

^aPatient co-pay: 20% of total payment. ^bFacility fee charged to patient, but many are not able to pay full charge. Patients with incomes up to 200% of federal poverty line pay on a sliding fee scale.

Sources: Anchorage Neighborhood Health Center; Ingenix National Fee Analyzer

What Medicare patients pay at health centers and at doctors' offices is also determined in different ways. Essentially, Medicare allows the health centers to take their own fees into account when determining what patients are charged. But Medicare doesn't allow doctors to use their own fees; instead, Medicare sets a maximum allowable charge for specific kinds of visits, and patients pay a portion of that (see Figure 9).

Neither ANHC nor the doctors' offices necessarily collect the amounts shown in Figure 8 as payments from patients. At ANHC, patients with incomes up to 200% of the federal poverty line are charged on a sliding fee scale. Likewise, private doctors may not always be able to collect the patient's share. And both private doctors and ANHC report losing money when they see Medicare patients.

DOCTORS AND THE SYSTEM

Primary-care doctors who see Medicare patients have three choices for getting paid. Figure 9 describes those choices among doctors we surveyed.

About 85% choose the standard Medicare process ("participating"). Another 4% still work with the Medicare system but charge patients somewhat more ("non-participating"). The final 11% have opted out of the Medicare system, but will still see patients who agree to foot the bill.

Patients also pay different amounts, depending on their doctors' policies. For a service with an allowable Medicare fee of \$100, patients seeing doctors who accept that fee would pay \$20—but only after Medicare paid the other \$80. Patients seeing "non-participating" doctors would pay the doctors \$109.25; Medicare would later reimburse the patients \$76, so their final cost would be \$33.25. Patients seeing doctors who have opted out of the Medicare system would pay a fee determined by the doctor—perhaps a negotiated fee, but still typically more than Medicare pays.

CONCLUSION

With few exceptions, Americans 65 or older who are retired have to use Medicare as their primary insurance—even if they also carry private health insurance or have retirement benefits that include health-care coverage. Any other insurance they have can *only* be used to help pay *their share of the allowable Medicare charge*. They can't use private insurance to pay doctors more than Medicare allows.

As more Alaskans turn 65, the access problem will get worse, unless something changes. Growing numbers of Medicare patients around the country are also reporting access problems. And the American College of Physicians has reported that a nationwide shortage of primary-care doctors is looming—which would make the problem even worse.

This summary talks about just a very narrow slice of the multitude of issues facing Medicare. It's one of the largest and fastest-growing federal programs, and President Obama has said reforming it will be part of his plan to improve the U.S. health-care system. How potential reforms might affect Medicare patients' access to family doctors isn't clear today.

Because Medicare is a federal program, the state's options for helping improve access are limited. But Alaskans are talking about various possibilities—like recruiting more doctors and offering them bonuses to see Medicare patients, and either establishing an Anchorage clinic for Medicare patients or expanding the Anchorage Neighborhood Health Center.

In a publication later this year, we'll look at the implications of various ways of trying to improve access for Medicare patients. We'll also report what family doctors themselves told us—how they make decisions about seeing Medicare patients and what might make them willing to see more.

Figure 9. How Do Alaska Primary-Care Doctors Who See Medicare Patients Deal with the System?

(Among 211 Surveyed Who See New or Established Patients)

Most doctors accept standard Medicare fees and bill Medicare. They are called "participating." Medicare sets maximum allowable charges for various services. Participating doctors agree not to charge more than the allowable rate, and Medicare pays them 80% of that. The patients (and their secondary insurance, if they have any) pay the other 20%.

A few doctors (called non-participating) can charge up to 9% more than the allowable Medicare charge. But Medicare pays less and patients pay more. Here's how it works. The patient pays the entire bill, but the doctor submits a statement to Medicare so the patient is paid for the Medicare share. But instead of paying 80% of the charge, Medicare pays only 76%. The patients (and their secondary insurance, if they have any) pay the rest of the bill.

Some doctors don't accept Medicare payments for their fees. They are said to have "opted out." They will still see Medicare patients, but patients must agree to pay a fee the doctor sets. Medicare doesn't pay either doctors or patients, and patients can't bill any secondary health insurance they may have. Remember that patients pay only the fee for the doctor. They still use Medicare to help pay hospital and other medical costs. Doctors who opt out have to re-confirm their decision with Medicare every two years. They can also apply to come back into the system after two years.

Example: How Much Would Patients Pay for a Service with an Allowable Medicare Charge of \$100?

	Participating Doctors Charge \$100	Non-Participating Doctors Can Charge \$109.25	Doctors Who Have Opted Out Can Set Their Own Fees
Medicare pays	\$80	\$76	\$0
Patient pays	\$20 ^a	\$33.25 ^b	Entire doctor's fee ^b

^aPatients can bill secondary insurance to help pay their share. ^bPatients can't bill secondary insurance to pay any amount.

Summary of SB 139 / HB 392 Proposal for Alaska: Health Care Professions Loan Repayment & Incentive Program

The following organizations support the loan repayment and incentive solution in SB 139 / HB 392 Incentives for Certain Medical Providers:

Alaska State Medical Association
 • Alaska Dental Society •
 Alaska Primary Care Association •
 Alaska Osteopathic Medical Association • Alaska State Hospital and Nursing Home Association • Alaska Mental Health Trust Authority • Alaska Native Health Board • Alaska Pharmacists Association •
 Alaska Physical Therapy Association • AARP-Alaska • Advisory Board on Alcoholism and Drug Abuse • Alaska Behavioral Health Association • Alaska Mental Health Board • Alaska Mental Health Trust Authority • Alaska Public Health Association • Alaska Hygienists Association • Commonwealth North • Iliuliuk Family and Health Services, Inc. • Maniilaq Association • Municipality of Anchorage Senior Citizens Advisory Board • Mary Willard, DDS, Clinical Site Director, Alaska Native Tribal Health Consortium • Alaska Chapter National Association of Social Workers • Nome Eskimo Community • SEARHC • School of Social Work- UA • Dental Hygiene Program- UA • Sunshine Community Health Center

Problem:

Having a sustainable and competent practitioner workforce is vital to the health of Alaskans. However, Alaska is at a serious disadvantage as it competes in the national health care labor market. In other states, "support-for-service programs" (SFSPs) have shown substantial and long-standing success as a cost-effective public strategy to address workforce shortages (e.g., loan repayment and direct incentive). A key problem is that Alaska does not have a robust SFSP while 44 other states have one or more SFSPs.

Solution:

The Health Care Professions Loan Repayment and Incentive Program (HCPLRIP), as outlined in Senator Olson's SB 139 and in Representative Herron's HB 392 will make Alaskan health care employment competitive and attractive enough for practitioners to want to work in Alaska, particularly in hard-to-fill localities. State funds will be used to insure that Alaskans with the greatest difficulty in obtaining care due to limited financial resources, cultural barriers, and geography will have access to professional health care services.

Program Description:

1) **Oversight Entity**

- Health Planning and Systems Development, Department of Health & Social Services will serve as the Oversight Entity.
- DHSS Commissioner will appoint a HCPLRIP Council to make recommendations regarding program administration & this Council will serve as primary communication between providers and program administrators.

2) **Fiscal Agent**

- Alaska DHSS will serve as Fiscal Agent. DHSS will make loan payments directly to eligible lenders and incentive payments directly to practitioners.

3) **Practitioner Eligibility**

- DHSS Commissioner will annually prioritize the 10 eligible practitioner types:
 - Tier-1: Dentists, Pharmacists, Physicians (MD and DO)
 - Tier-2: Dental Hygienists, Nurse Practitioners, Nurses (RN), Physical Therapists, Physician Assistants, Psychologists, Social Workers (LCSW)
- A practitioner's clinical duties must constitute at least 50% of duties to be eligible.
- A part-time practitioner may participate and be eligible for pro-rated payments.
- Practitioners are not eligible while fulfilling other service obligations (NHSC or IHS loan repayment, WWAMI obligations, service-option scholarships, etc.) but may subsequently participate in the program.
- Preference may be given to current Alaskan residents.

4) **Site Eligibility:**

- DHSS Commissioner will rank eligibility of sites annually and determine any area and/or population in Alaska as a “shortage priority.” These may include, but are not limited to, federally defined Health Professional Shortage Areas.
- Preference will be given to sites that provide care to individuals regardless of their ability to pay, including persons who are uninsured or have Medicare and/or Medicaid.

5) **Payment Detail:**

- Placement Type

	Regular	Hard-to-Fill
○ Tier 1:	up to \$35,000/year	up to \$47,000/year
○ Tier 2:	up to \$20,000/year	up to \$27,000/year
- Payment details are same for two component types: loan repayment and incentives.
- Duration of award is for a 3-year period of service.
- Payments will be made every quarter following a completed full quarter of service.
- A program practitioner in good standing may re-apply for a 2nd period of service.
- Lifetime participation cap is six years regardless of component type.

6) **Program Evaluation:**

- The Oversight Entity will conduct annual survey of program practitioners, exit interviews, and tracking of alumni.
- The Oversight Entity will develop measures to make workforce projections, according to practitioner type category and may assess sustainability, cost-benefit issues, and rural and remote benefits of program.
- The Oversight Entity will develop evaluation policy and procedures.
- The HCPLRIP Council will adopt an evaluation plan within 12 months of initial program funding and amend annually.
- HCPLRIP will assess adequacy and distribution of the Alaska health care workforce for all program eligible-practitioner types annually.
- The Commissioner will report to the Legislature every three years whether payments are adequate to meet program goals. The Oversight Entity will have specified discretion based on HCPLRIP Council’s review of report to adjust payment rates.

7) **Funding:**

- An in-cash “employer match” is required and is paid annually by eligible sites to DHSS. The level of required match will be adjusted according to the ability of the eligible site to contribute and may be set between 0% and 100%
- Program funds will not be used to offset current or expected provider supports.
- Funding will be provided to allow DHSS to (1) conduct program management; (2) monitor placements & practice environments; (3) resolve placement issues; and (4) assess the statewide health care workforce regarding the program practitioner types.
- Proposed total funding for FY11 is \$2.7 million. A total of \$7.1 million, expensed across 3 years, will fund at least 90 participants for 3-year contracts; that is, approximately 9 practitioners (at least) in each of 10 occupational categories.

Health Care Professions Loan Repayment Program

Concept Proposal

Health Care Professions Loan Repayment Program

Summary

Problem

Alaska is competing with other states and nations for the finite pool of available healthcare professionals. This competition will only intensify since the growth of supply is continuing to fall behind that of demand.

A common state-level response to these pressures is the use of financial inducements, collectively known as support-for-service programs (SFSP's). Good outcomes have been achieved with these. There are five types: scholarships, service-option loans, loan repayment, direct financial incentives, and residency support programs. All SFSP's have the same public goal: To improve healthcare staffing in shortage areas. National studies have determined loan repayment programs to be one of the most effective of the several support-for-service strategies - in terms of both recruitment and retention (see: *HCPLRP: Issue Paper, 2007*)

A key problem is that Alaska does not have a robust support-for-service program while most other states do, many have several, and further, some of those are growing. In sum, Alaska is at a substantive disadvantage as it necessarily competes in the national healthcare labor market.

Discussion

Alaskan health care provider agencies use many approaches to recruit and retain staff. This has proved difficult, however, and particularly so where (1) federal loan repayment programs do not apply, or, (2) there is insufficient resource available to meet need. More tools are needed to confront the problem of steadily growing vacancies in the Alaskan healthcare workforce.

Most all other states have state-sponsored programs that influence health professionals' geographic and specialty distributions. Programs that integrate a number of strategies for attracting and retaining health professionals have had a greater likelihood of success than have programs which rely on a single strategy. Substantial evidence indicates that state-level support-for-service programs typically are a fundamental part of those strategies.

Support-for-Service Programs

It is well-established that many healthcare professionals carry a heavy debt-burden as they come out of training and are attracted to serving in those locations where a share of that burden can be taken away. For instance, in 2004, young physicians' educational debt averages stood at over \$109,000 and this cost was increasing at the rate of more than \$4,000 per annum.

There are several types of support-for-service programs. One of the two most common types of such programs is the service-requiring scholarship program. These pay tuition and other costs for healthcare students while obligating them to a period of service that begins when they complete residency (or similar post-graduate training) years later. The other common program type is loan repayment. Loan repayment programs recruit healthcare practitioners as they complete their training and are ready to begin service in exchange for paying off the traditional education loans

they acquired years earlier. Programs of both types typically require one year of service for each year of training cost support they provide.

Considerable precedent exists for state-level offices to sponsor and manage financial support and inducement programs to thus encourage the within-state service of healthcare personnel. Overall, 81 state-level programs were identified. There were 44 states with at least one program (88% of states). Fully 21 states had two or more programs (47%), with highs found in New Mexico (at 5) and Minnesota (at 7). On average, the 44 states had nearly two programs (1.8) each.

Loan Repayment Programs

In national studies, loan repayment has been found to be a successful strategy to recruit and retain health care professionals. Twenty-five years of program evaluations have clarified many of the outcomes possible from healthcare training support-for-service programs. Furthermore, studies have demonstrated that loan repayment programs, as a whole, have better outcomes than scholarship programs. Studies have shown that there are several benefits which can accrue from loan repayment programs. Selected examples include: (a) high position-fill rates, (b) high service-completion rates, and (c) high retention rates.

These programs are successful because the benefit of loan repayment is clear to potential applicants, and programs typically only provide payments to participants after they complete each 3 or 6 months of work; therefore, if a participant leaves or otherwise fails to work in the agreed upon area or practice, payments simply stop and there is no need to enforce penalties.

In 2006, the Alaska Physician Supply Task Force recommended a number of specific strategies and action steps to assuring an adequate supply of physicians to meet Alaska's need. One of the PSTF findings was that loan repayment is a proven strategy for recruiting physicians, and the federal loan repayment programs currently available to Alaska physicians need to be stabilized financially and supplemented with Alaska-based programs.

Conclusion

Reported increasing vacancy rates, increasing costs of recruitment [SORRAS report], and comparisons with national norms [PSTF report] suggest that Alaska currently experiences a shortage of healthcare professionals, and, that shortages exist in several key occupational categories. Loan repayment programs have demonstrated substantial and longstanding success as a public strategy which has helped to rectify such shortages.

Recommendation

It is recommended that Alaska create a "Health Care Professions Loan Repayment Program".

To do this, a planning process should be established. This process should define and prepare for adoption at least the following program elements: (a.) organizational support, (b.) oversight, (c.) fiduciary agent, (d.) practitioner eligibility, (e.) site eligibility, (f) repayment details, (g.) program design & management, and (g) program evaluation.

Health Care Professions Loan Repayment Program Issue Paper

Abstract

This paper: (1.) illustrates the current and expected healthcare workforce needs of Alaska; (2.) indicates the widespread use elsewhere of support-for-service programs, and in particular loan repayment; and (3.) recommends that Alaskans should now explore creation of a Health Care Professions Loan Repayment Program (HCPLRP).

Main Issue

Alaska is increasingly vulnerable to the competitive challenges posed by other states and nations for the finite pool of available healthcare graduates. This vulnerability will increase during coming years because of two factors. (1.) The need for health care professionals in Alaska is steadily rising, and, shortages are now evident in some categories. (2.) Further, these trends are national. These workers are part of, and often respond to, nationwide labor markets. Further, these trends are expected to accelerate. This is particularly true in those states that do not produce adequate numbers of their own health workers in the given disciplines. This puts such states at a marked disadvantage. Financial incentive programs are particularly important for those states, and Alaska is one of these. As a result, several other states have become robust competitors in recruitment of the healthcare workforce, and some are planning new and expanded loan repayment programs (Pathman, 2007).

A fundamental, and common, state-level response to these pressures is the use of financial inducements, these collectively known as support-for-service programs (SFSP's). Excellent outcomes are readily achievable from these efforts. There are five types: scholarships, service-option loans, loan repayment, direct financial incentives, and resident support programs. All support-for-service programs have the same key public goal: To improve healthcare staffing in shortage area communities.

National studies have determined loan repayment programs to be one of the most effective of the several support-for-service strategies - in terms of both recruitment and retention. As compared to the other SFSP options, here loan repayment participants sign support-for-service contracts after they complete their training, when they are older and better informed as to their career options. These professionals make commitments at the time they are ready to begin their service-obligations. They are more likely to know their own needs and those of their families at this later juncture. They know where they will serve and have a sense as to how well their chosen worksites will "fit" their needs.

Problem

This section presents evidence which indicates that:

- A healthcare workforce shortage currently exists in several occupations.
- Under current conditions these shortages will continue into the foreseeable future.
- In several occupations, these shortages will escalate.

Trends in National Workforce

Numerous, prominent sources indicate that there is a growing national shortage in the rural health care workforce. Two examples follow.

GAO Position (2001): In 2001, the General Accounting Office's (GAO's) director of health care-public health issues testified before Congress regarding growing concerns about the adequacy of the health care work force and lessons learned from the experience of the National Health Service Corps (NHSC) in addressing the maldistribution of health care professionals (Heinrich, 2001). Selected key points were:

- Recruitment and retention of adequate numbers of qualified health care workers are major concerns for many health care providers today.
- Available evidence suggests emerging shortages in some fields (e.g. nurses).
- Vacancy rates for HC workers in rural areas and inner cities are especially high.
- Although demand for most health workers will continue to grow, the increasing age of Americans, and their workforce may limit supply.
- The National Health Services Corp (NHSC) illustrates the challenges in addressing shortages of health professionals in certain locations.
- Better placement coordination with waivers for J-1 visa physicians is needed.
- Loan repayment is a better approach than service-requiring scholarships, to which individuals commit when they are still students.

NOSORH Position (2006): A representative and recent understanding can be gained from the National Organization of State Offices of Rural Health (NOSORH). In September 2006 NOSORH issued a Statement of National Priorities. Presented below are selected summaries of that document, without further comment. Interested readers should see:
http://www.nosorh.org/pdf/Rural_Impact_Study_States_IT.pdf

- While most rural communities in the U.S. already experience health care workforce shortages, the demand for health care workers nationwide is projected to grow faster than the supply. This shortage of health care workers can impact health care in a variety of ways, including: decreasing quality of care, decreasing access to care, increasing stress in the workplace, increasing medical errors, increasing workforce turnover/decreasing retention rates, and increasing health care costs.
- Most rural areas ... are classified by the federal government as Health Professional Shortage Areas (HPSAs) for primary medical care. A HPSA designation is made using a formula that includes a ratio of physician to population that is greater than 1:3,500. A population is considered "adequately served" when the ratio is 1:2,000. In 1997, more than 2,200 additional physicians would have been needed in non-metropolitan areas to eliminate HPSA designations. SORH directors consider the workforce shortage to be one of the greatest issues facing rural health, in particular shortages related to physicians and nurses.

- Certain national health workforce trends that will have a profound impact on rural populations and exacerbate the current rural health workforce shortages. Examples follow:
 - If health care consumption patterns and physician productivity remain constant over time, the aging population will increase the demand for physicians per thousand population from 2.8 in 2000 to 3.1 in 2020. Demand for fulltime-equivalent RNs per thousand population would increase from 7 to 7.5 during this same period.
 - Minority and female physicians have a greater propensity than do non-minority and male physicians to practice in urban communities. Meanwhile the percentage of physicians that are minorities and women is increasing.
 - The Bureau of Health Professions projects that there will be a 33-44% increase in demand for physicians, 41 percent for RNs, and 46 percent for LPNs from 2000 to 2020.
 - According to the Bureau of Health Professions, there is an acute shortage of pharmacists in the U.S. In February 1998, there were 2,670 unfilled full and part-time positions in the U.S. as compared to 6,920 in February 2000. Adding to this, enrollment rates in U.S. schools of pharmacy declined during this period.
 - In 1970, women accounted for 13 percent of the nation's pharmacists as compared to 2000 when they were 46 percent of the nation's pharmacists. Women tend to elect part-time work as pharmacists.
 - From 1990 to 1999, there was a 46 percent increase in the number of prescriptions dispensed from hospitals.
- NOSORH concluded the following in its 2006 statement of national priorities: ...SORH directors around the U.S. determined that they are most concerned with issues related to rural health workforce, health care services, and the needs of special populations. Research suggests that this concern is warranted as: demand for health care workers is increasing while the supply is decreasing; rural health care facilities continue to be fragile, there are gaps in these services, and all of these rural health services are critical to the health and well-being of the U.S.; and the needs of rural populations are changing, however, the programs serving them are unable to meet their needs. While SORHs respond to a variety of rural health needs and issues, new health care policies and additional rural health programs and funding will be needed if states are to address these increasingly important rural health issues and concerns.

Growth in Alaskan Jobs

Healthcare Workforce Overall: In 2004 there were 301,300 jobs in Alaska, with 32,700 (10.9 percent) of these in health care and social assistance (HCSA). By 2014, the overall job count is projected to be 349,550, with the HCSA workforce at 43,650 (12.5 percent). Thus by 2014, the number of HCSA jobs is projected to grow by 10,950 (34 percent), accounting for 22.7 percent of overall statewide job growth for the period. By 2014, health care and social assistance is projected to be the largest single industry workforce category in Alaska with 43,650 workers. (AHCDB, 2007, Table 3.300).

Social Service Occupations: For 2004, employment in community & social service (CSS) occupations was estimated to be 6,025 jobs. By 2014, this category of jobs is forecasted to be at 7,487, a rise of 1,462 (24 percent). The highest projected growth rates from 2000-2014 are projected to include mental health & substance abuse social workers (36.2 percent), social & human service assistants (34.6 percent) and mental health counselors (32 percent). (AHCDB, 2007, Table 3.310).

Selected Occupations: Review of 42 particular healthcare occupations indicates that these held 14,083 jobs in 2000, and that these are forecasted to reach 25,009 by 2010, an overall rise of 10,926 jobs (78 percent). Registered nursing positions are expected to grow the most, from 4,439 in 2000 to 8,556 in 2010, a gain of 4,117 jobs or (93 percent). All but one of the examined occupations is expected to have more jobs available by 2010. Further, of the 42 occupations presented, employment in 8 of these will more than double (e.g. AHCDB, 2007, Table 3.330).

Shortage in Alaskan Workforce

Health Professional Shortage Areas: Alaska has a large number of federally designated "Health Professional Shortage Areas" (HPSAs), the point of these designations being to aid in health care planning and finance. Typically these are determined by the existence of: (1.) a relative lack of desired personnel, and (2.) the existence of particular socio-economic conditions. A second route to HPSA designation, which is automatic, is via the existence of a federally funded community health center (CHC). HPSAs are of three types. Statewide in 2007 the following HPSAs existed: 28 in Primary Care (with 16 scored, and 12 via CHCs), 27 in Mental Health (with 14 scored, and 13 via CHCs), and 24 in Dental Health (with 7 scored, & 17 via CHCs). (Alaska Health Care Databook, 2007, Table 3.360). However, an important caveat is that many observers feel that the federal HPSA designation process underestimates the extant need for more healthcare professionals (e.g. US GAO, 1995). Thus, these designations should be considered as a conservative method for establishing need for the healthcare workforce.

Medically Underserved Areas: Alaska also has numerous federally designated "Medically Underserved Areas" (MUA) and "Medically Underserved Populations" (MUP). These designations identify shortages of primary medical care, dental health or mental health providers. Designations may be either geographic (MUA, i.e. a county or service area), or demographic (MUP, i.e. low income, Medicaid-eligible populations, cultural and/or linguistic access barriers to primary medical care services). Each designation is assigned an Index of Medical Underservice (IMU) score, which is used to determine the eligibility of an area or population for MUA/MUP status. For 2007, there were 17 area designations and 11 population designations. (Alaska Health Care Databook, 2007, Table 3.350).

Resident Workers with Age: Two aspects of worker demographics further suggest the likelihood of a workforce shortage in the health care and social assistance (HCSA). The first of these regards "resident workers with age". In 2005 total employment in all HCSA occupations stood at 28,356. Of resident workers in all HCSA occupations statewide, 40 percent were age 45 and older; 27 percent were age 50 and older. Of resident workers who were in health care practitioner occupations per se, 47 percent were age 45 and older; and 31 percent were age 50 and older. Therefore, succession planning will be of concern over the next two decades as today's mature health care professionals retire (Alaska Health Care Databook, 2007, Table 3.320).

Non-Resident Workers: A second workforce demographic issue regards the sizeable number of "non-resident" workers. Overall, 10 percent of the workforce was non-residents in 2005, with a

high of (13 percent) among non-resident health care practitioner and technologist occupations. Expect additional pressure to build on the health care system if non-resident (itinerate) workers are not available to fill Alaska health care workforce gaps (e.g. AHCDB, 2007, Table 3.320).

Selected Occupations: Physicians

Physician Shortage – 1997: A decade ago Johnson and Norris (1997) conducted a comprehensive study to describe Alaska's geographic distribution of generalist physicians relative to population. These investigators queried all 443 generalist care physicians (family, general, general internal medicine, and pediatric) or their offices as to their specialties, employers, populations served, hours spent per week offering direct patient care, and locations. The results indicated a 30% overall shortage of generalist physicians for the state, representing roughly 141 full-time-equivalent generalists relative to national practice patterns and trends of health maintenance organizations. Of 17 primary health care areas, including the Anchorage area, 15 showed a need for additional generalist physicians. Most areas had a 20 to 40% shortage.

Physician Shortage – 2004: In 2004, a survey by the American Medical Association showed that, nationally, there were 2.38 practicing physicians per 1,000 people. Alaska's rate of practicing physicians was 2.05 per 1,000 people. Based on Alaska's 2004 population estimate of 656,834 and the national average of 2.38 physicians per 1,000 people, Alaska should have had 1,565 practicing physicians to be on par with national averages. The actual number of physicians practicing in Alaska was 1,347, indicating a shortage of 14 percent or 218 physicians. In areas outside of Anchorage, the rate of physician deficiency was 16 percent. (Alaska Health Care Databook, 2007, Table 3.370).

Physician Shortage – 2006: In 2006, the AK DHSS and the University of Alaska jointly assembled the "Alaska Physician Supply Task Force" (PSTF). This group then conducted a large inter-agency study, issuing the authoritative report, "*Securing an Adequate Number of Physicians for Alaska's Needs*". It found that Alaska had a shortage of physicians. Although not at crisis levels, the shortage was affecting access to care throughout the state, and, increasing cost to hospitals and other health care organizations. Up to 16% of rural physician positions in Alaska were vacant in 2004. Patients with Medicare were having difficulty finding a primary care physician. Several important specialties were in serious shortage in Alaska. It concluded that:

- The shortage is very likely to worsen over the next 20 years as the state's population increases and ages. Physician supply nationwide is entering a period of shortage, according to the best current predictions. Physicians in Alaska are aging and one-third may be retiring in the next 10-15 years. The new generation of physicians wants a more balanced life, meaning fewer hours on duty and more predictable schedules. These trends mean that more physicians will be required to serve the same population. Technology and scientific advances have increased the amount of medical care available, also adding to the need for physicians, as the patients expect more care than previously.
- As the supply of physicians shrinks, recruitment will become more competitive. Alaska's traditional system of recruiting physicians from federal assignment in the military and Indian Health Service is much less effective with changes in these systems. Alaska is far behind the other states in production capacity. (1-2) Long-range planning, even if it includes a four-year medical school in Alaska, will not address current physician needs in a timely fashion, so interim measures are needed. (59)

Selected Occupations: Nurses

Nursing Shortage – 2003: The nursing shortage is particularly acute, both in Alaska and nationwide. It is estimated that during this decade the need for RN's will increase by 4,117 (in 2000: 4,439; in 2010: 8,556) (Fried, N. & Keith, B. (2003). National shortages will make recruitment yet more difficult. As a result, Alaska will have a great need to recruit and retain registered nurses. Addressing the need of rural and remote areas will be yet more difficult and expensive than to do so for urban areas.

Impact on CHC's

Rosenblatt, et al. (2006) examined the status of provider workforce shortages such as these may limit CHC expansion. They noted that the federal government has continued to expand the capacity of community health centers (CHCs) to provide care to underserved populations. The researchers therefore conducted a survey of all 846 federally funded US CHCs that directly provide clinical services and are within the 50 states and the District of Columbia (May-Sept, 2004). Questionnaires were completed by the chief executive officer of each grantee. Overall response rate was 79.3%. Information was supplemented by data from the 2003 Bureau of Primary Health Care Uniform Data System and weighted to be nationally representative.

Rosenblatt, et al (2006) found that primary care physicians made up 89.4% of physicians working in the CHCs, the majority of whom are family physicians. In rural CHCs, 46% of the direct clinical providers of care were non-physician clinicians compared with 38.9% in urban CHCs. There were 428 vacant funded full-time equivalents (FTEs) for family physicians and 376 vacant FTEs for registered nurses. There were vacancies for 13.3% of family physician positions, 20.8% of obstetrician/gynecologist positions, and 22.6% of psychiatrist positions. Rural CHCs had a higher proportion of vacancies and longer-term vacancies and reported greater difficulty filling positions compared with urban CHCs. Physician recruitment in CHCs was heavily dependent on National Health Service Corps scholarships, loan repayment programs, and international medical graduates with J-1 visa waivers. The study concluded that CHCs face substantial challenges in recruitment of clinical staff, particularly in rural areas. The largest numbers of unfilled positions were for family physicians at a time of declining interest in family medicine among graduating US medical students. They stated that success of the current US national policy to expand CHCs may be challenged by these workforce issues.

Strategy

It is essential to enhance the capacity of Alaskan health care provider agencies to recruit and retain staff where: (1.) federal loan repayment programs either do not apply, or, (2.) there are insufficient resources available to meet need. More tools are needed to confront the problem of steadily growing vacancies in the Alaskan healthcare workforce.

Most other states have programs that influence health professionals' geographic and specialty distributions. Programs that integrate a number of strategies for attracting and retaining health professionals have a greater likelihood of success than do programs which rely on a single strategy. Substantial evidence indicates that state-level support-for-service programs should be, and typically are, a fundamental part of those strategies.

Debt from Health Care Training

What follows are brief summaries of recent, representative studies which suggest that:

- Health care student debt affects subsequent practitioner career choices;
- Loan repayment options support recruitment goals; and
- These programs directly help to correct practitioner maldistributions.

Factors in Recruitment & Retention: Daniels, et al. (2007) sought to identify factors associated with rural recruitment and retention of graduates from a variety of health professional programs in the southwestern United States. They conducted a longitudinal study by mailing a survey to graduates from 12 health professional programs in New Mexico. The main outcomes examined were: (1.) first rural employment, and, (2.) aspects of any rural employment, since graduation. Daniels, et al. (2007) concluded that rural background and preference for smaller sized communities are associated with both recruitment and retention. In addition, however, they stated that loan forgiveness and rural training programs appear to support recruitment. Retention efforts must focus on financial incentives, professional opportunity, and desirability of rural locations

Medical Student Debt & Career Choice: Rosenblatt & Andrilla (2005) examined the notion that medical students' rising total educational debt is one of the factors that explains the recent decline in students' interest in family medicine and primary care. They analyzed the results from questions on the Association of American Medical Colleges' 2002 Medical School Graduation Questionnaire that focused on students' debt and career choices. Students reported that higher levels of debt influenced their future career choices. An inverse relationship was observed between the level of total educational debt and the intention to enter primary care, with the most marked effect noted for students owing more than \$150,000 at graduation.

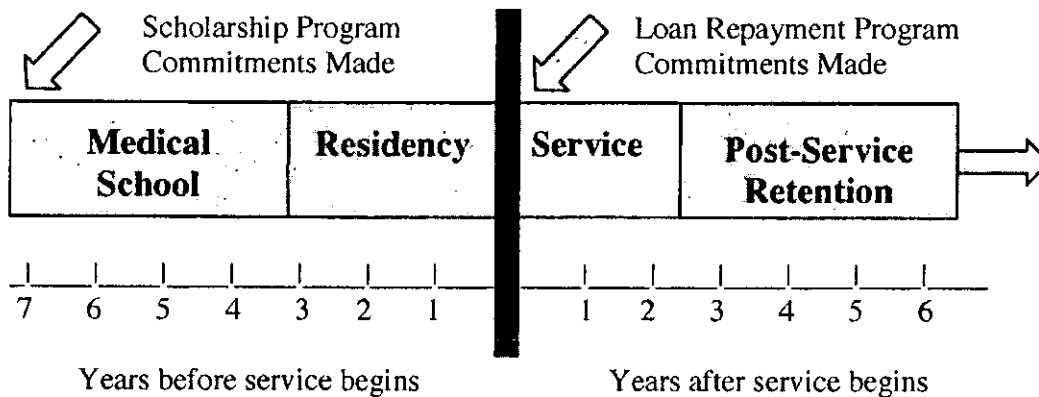

Medical Training Debt & Service Commitments: Pathman, et al (2000) assessed how student loan debt and scholarships, loan repayment and related programs with service requirements influence the incomes young physicians seek and attain, influence whether they choose to work in rural practice settings and affect the number of Medicaid-covered and uninsured patients they see. Data are from a 1999 mail survey of a national probability sample of 468 practicing family physicians, general internists and pediatricians who graduated from U.S. medical schools in 1988 and 1992. A majority of these generalist physicians recalled "moderate" or "great" concern for their financial situations before, during and after their training. Eighty percent financed all or part of their training with loans, and one-quarter received support from federal, state or community-sponsored scholarship, loan repayment and similar programs with service obligations. In their first job after residency, family physicians and pediatricians with greater debt reported caring for more patients insured under Medicaid and uninsured than did those with less debt. For no "specialty" was debt associated with physicians' income or likelihood of working in a rural area. Physicians serving commitments in exchange for training cost support, compared to those without obligations, were more likely to work in rural areas (33 vs. 7 percent, respectively, $p < 0.001$) and to provide care to more Medicaid-covered and uninsured patients (53 vs. 29 percent, $p < 0.001$), but did not differ in their incomes (\$99,600 vs. \$93,800, $p = 0.11$). Thus, among physicians who train as generalists, the high costs of medical education appear to promote, not harm, national physician work force goals by prompting participation in service-requiring financial support programs and perhaps through increasing student borrowing.

Support-for-Service Programs

It is well-established that a sizeable number of healthcare professionals carry a heavy debt-burden as they come out of training and are attracted to serving in those locations where a share of that burden can be taken away. For instance, training to become a physician is expensive, as 80 percent of medical students who graduate in debt will attest (e.g. Jolly, 2005). In 2004, young physicians' educational debt averages stood at over \$109,000 and was this cost was increasing at the rate of more than \$4,000 per annum (e.g. AAMC, 2004). Nonetheless, educational costs and students' fears of acquiring six-figure debts have created a market for government programs that link support for healthcare training costs to a period of obligated clinical work in shortage areas.

There are several types of financial "support-for-service programs" (SFSP's). These include: scholarships, service-option loans, loan repayment, direct financial incentives, and resident support programs. One of the two most common types of such programs is the service-requiring scholarship program. These pay tuition and other costs for healthcare students while obligating them to a period of service that begins when they complete residency (or similar post-graduate training) years later. The other common program type is loan repayment. Loan repayment programs recruit healthcare practitioners as they complete their training and are ready to begin service in exchange for paying off the traditional education loans they acquired years earlier. Programs of both types typically require one year of service for each year of training cost support they provide.

Figure 1 - Timeline of physicians' training years, signing of commitments with service-requiring scholarship and loan repayment programs, service periods (typically two-to-four years) and post service retention.

(After: Pathman, D.E. (2006). What Outcomes Should We Expect From Programs That Pay Physicians' Training Expenses in Exchange For Service? *NCMEDJ*, 67(1), pg. 77)

Support-for-service programs appear to be a natural solution to both the students' and the public's needs. They have grown in popularity over the past 25 years in tandem with rising tuition costs, with both federal and state agencies using them. In one well-known federal example, in 2005 the Bureau of Health Professions reported that the National Health Service Corps (NHSC) was providing an obligated physician workforce of about 1,700 scholars and loan re-payers. As a result of NHSC shifting most of its funding to loan repayment, more workers were immediately brought into the fold, and that census has now roughly doubled. In addition, most states also

sponsor their own support-for-service programs. In 1996 there were a total of 69 state programs with an estimated workforce of 1,300 practicing physicians. These state programs doubled in number from 1990 to 1996 and very likely have grown further since (Pathman, et al. 2000).

State Scholarship, Loan Forgiveness, and Related Programs: Pathman, Taylor, et al (2000) noted that in the mid-1980s, states expanded their initiatives of scholarships, loan repayment programs, and similar incentives to recruit primary care practitioners into underserved areas. These programs have since grown substantially during the ensuing two decades. The authors thus sought to identify and describe state programs that provide financial support to physicians and midlevel practitioners in exchange for a period of service in underserved areas, and to begin to assess the magnitude of the contributions of these programs to the US health care safety net. This cross-sectional, descriptive study established the number and types of state support-for-service programs in 1996; trends in program types and numbers since 1990; distribution of programs across states; numbers of participating physicians and other practitioners in 1996; numbers in state programs relative to federal programs; and basic features of the state programs.

The study found that in 1996 there were 82 eligible programs operating in 41 states, including 29 loan repayment programs, 29 scholarship programs, 11 loan programs, 8 direct financial incentive programs, and 5 resident support programs. Programs more than doubled in number between 1990 (n = 39) and 1996 (n = 82). In 1996, an estimated 1306 physicians and 370 midlevel practitioners were serving obligations to these state programs, a number comparable with those in federal programs. Common features of state programs were a mission to influence the distribution of the health care workforce within their states' borders, an emphasis on primary care, and reliance on annual state appropriations and other public-funding mechanisms.

The authors concluded that as of 1996 the several states had fielded an obligated primary care workforce comparable in size to the better-known federal programs. Thus, these state programs constitute a major portion of the US health care safety net. The study emphasized that such state programs should be considered in plans to further improve health care access.

Experience of Other States

State-Level Support-for-Service Programs (2007): Considerable precedent exists for state-level offices to sponsor and manage financial support and inducement programs to thus encourage the within-state service of healthcare personnel. Tables 1, 2 & 3 here-present listings of those state-level support-for-service programs that were web-posted by the Association of American Medical Colleges (as of 8/10/07). These provide a selective look at state and federal loan repayment, forgiveness and scholarship programs available to allopathic medicine and other health professions students. This compilation is not exhaustive, and at present, our office is not aware of one that is. The here-derived tables shows that, overall, there were 81 programs. There were 44 listed states with at least one program (88% of US states). Fully, 21 of these states had two or more programs (47% of listing), with highs found in New Mexico (at 5) and Minnesota (at 7). On average, the 44 listed states had nearly 2 programs (1.8) each. Table 1 presents 43 listings that were designated as "state programs". Table 2 presents another 20 listings that were designated as "federal/state programs". Finally, Table 3 presents another 18 programs were not otherwise classified, though quick inspection of titles suggests that many can be readily classified. Those programs that were categorized as (strictly) "federal" (e.g. NIH, military) are not further considered. Click on any program title for more programmatic detail.

Loan Repayment Programs

In national studies, loan repayment has been found to be a successful strategy to recruit and retain physicians and nurses. Twenty-five years of program evaluations have clarified many of the outcomes possible from healthcare training support-for-service programs. Furthermore, studies have demonstrated that loan repayment programs, as a whole, have better outcomes than scholarship programs. Results of these comparisons have proved compelling. For example, studies demonstrating the strengths of loan repayment programs prompted Congress recently to allow the NHSC to make more loan repayment and fewer scholarship awards (e.g. Bureau of Health Professions, 2005) and led some states to expand their loan repayment programs (Pathman, et al. 2000).

Studies have shown that there are several benefits which can accrue from loan repayment programs. Selected examples follow:

High Position Fill-Rates: Some programs, including the NHSC, have many more applicants than their funds can support and regularly fill all funded positions; other programs have many unfilled positions for lack of applicants.

High Service Completion Rates: Very few loan repayment programs, accordingly, have found a need to set any buy-out penalties; as a group, their service completion rates average 93% without them (Pathman, et al, 2004). It is the physician-program-community fit and the financial attractiveness of the program that prompts physicians to complete their obligations with service (the "carrot"), not financial and legal threats (the "stick").

High Retention Rates: Beyond merely completing obligations with service, there has long been the hope that obligated physicians will remain in their service communities for years afterwards ... In fact, data show that physicians participating in state-run support-for-service programs remain in their service sites as long on average as other young physicians remain in practices of all types nationwide. Physicians obligated to state-run loan repayment programs remain substantially *longer* than other young physicians (e.g. Pathman, 2004).

Effectiveness of Support-for-Service: Sempowski, I.P. (2004) attempted to evaluate the effectiveness of programs that provide financial incentives to physicians in exchange for a rural or underserved area return-of-service (ROS) commitment. This was done via a systematic literature review using Medline and Ovid HealthSTAR databases were searched from 1966 to 2002. The initial search yielded 516 results. Bibliography review yielded additional references. Ten publications were selected as the highest level of evidence available. The main outcome measures were: (a.) initial recruitment of physicians, (b.) buyout rates, and (c.) long-term retention.

The majority of studies reported effective recruitment despite high buyout rates in some US-based programs. The one prospective cohort study on retention showed that physicians who chose voluntarily to go to a rural area were far more likely to stay long term than those who located there as an ROS commitment. Multidimensional programs appeared to be more successful than those relying on financial incentives alone. Sempowski, I.P. (2004) concluded that ROS programs to rural and underserved areas have achieved their primary goal of short-term recruitment but have had less success with long-term retention. However, this study combined different types of support-for-service programs within its analysis thus somewhat preventing conclusions as to loan repayment programs, per se.

Loan Repayment vs. Payback Programs: Miller & Crittenden (2001) sought to determine and contrast the possible impact that two different types of support-for-service programs might have on medical school choice, and, students' intentions to return to their home states. The authors examined difference in preferences for: (a.) payback programs regarding state-subsidized medical education which are designed to increase the rate of graduates returning to those states to practice; and (b.) loan repayment programs that are designed to entice medical school graduates from rural states to return to their home states.

Miller & Crittenden (2001) surveyed 229 medical students (response rate 80 percent). The questionnaire collected background information on the students and addressed the possible

impact of payback and loan repayment policy proposals on student plans. Forty-seven percent of students reported that they would attend a different medical school if a required payback program were in place. Students who were more competitive at the time of admission to medical school were significantly more likely to say they would attend another medical school than were less competitive students. In contrast, 48 percent of students reported that they would be more likely to return to their home states if expanded loan repayment programs were available for service in areas of need. The findings suggest that payback programs may dissuade more competitive students from entering medical schools with such requirements, compromising the pool of students most likely to return to rural areas. Conversely, medical students appear willing to consider loan repayment programs upon completion of their training.

Why Do Loan Repayment Programs Work? Expert opinion was sought for insights into why loan repayment programs work. Donald Pathman, MD, MPH, (Univ. of North Carolina) was queried as to his view. Dr. Pathman stated:

“As a whole, state-run (loan repayment) programs are successful but not because they are run well---- most are under-funded, under-staffed and can't offer individualized assistance to the health care practitioners they support. They are successful because the benefit of loan repayment is clear to potential applicants and programs typically only provide payments to participants after they complete each 3 or 6 months of work; therefore, if a participant leaves or otherwise fails to work in the agreed upon area or practice, payments simply stop and there is no need to enforce penalties.” (Pathman, 2007)

Does a Loan Repayment Program Make Sense for Alaska? Expert opinion was sought for perceptions as to whether a loan repayment program makes sense for Alaska. Again, Donald Pathman, MD, MPH, (Univ. of North Carolina) was queried as to his view. Dr. Pathman stated:

“I am glad to hear that Alaska is thinking of expanding loan repayment opportunities. I visited Alaska for the first time this past spring for the National Rural Health Association meeting, in Anchorage, with a side trip to Minto and Fairbanks. What an amazing place! I spoke with several folks working with the Native American health corporation in the state, and realize the physician shortages for the populations they serve. I was impressed that they knew little about how to attract and keep a physician. Lots of opportunities there for improvement in programs.” (Pathman, personal communication, 2007)

Position of the Alaska Physician Supply Task Force (2006): The PSRF recommended a number of specific strategies and action steps to achieve four main goals related to assuring an adequate supply of physicians to meet Alaska's need. One of the PSRF findings was that Alaska's clinics and hospitals receive inquiries from physicians about the availability of loan forgiveness often. Loan repayment is a proven strategy for recruiting physicians, and the federal loan repayment programs currently available to Alaska physicians need to be stabilized financially and supplemented with Alaska-based programs. For detail, see: “*Securing an Adequate Number of Physicians for Alaska's Need*” (2006).

Precedents in Alaska: There are, and have been, other circumspect loan repayment programs for health professionals here in Alaska. These have typically been via categorical federal funding. Examples include Indian Health Service supports, and use of the National Health Service Corp. There have also been selected opportunities via the regional health corporations, and certain hospitals. Further, the Alaska Mental Health Trust has recently considered some loan repayment supports in the behavioral health field. While promising, these will collectively still fall far short of garnering the needed workforce to face projected need.

Recommendation

Recommended: Alaska should establish a Health Care Professionals Loan Repayment Program (HCPLRP). Decisions as to particular program elements must await further public process. Questions should be addressed regarding at least the following program elements:

- Organizational Support: What are the best ways to build legislative and public understanding and support on this issue? For instance, members of the Alaska Physician Supply Task Force supported a loan payback provision for physicians.
- Oversight: What is that governance entity most suited to provide leadership and oversight of this program? Similarly, which entity is most suited to administer the program? There is evidence that no single entity has the expertise to properly oversee and administer such a program. This might argue for a blended or interagency oversight structure. One agency might provide programmatic administration, while the other might serve as fiduciary agent.
- Fiduciary Agent: It may prove both workable and preferred that fiduciary mechanics and other administrative aspects be organizationally separated. If so, which agency is most to assume this fiduciary role? One approach might be to have the program work in tandem with the Alaska Commission on Postsecondary Education (ACPE). It is possible that the functions of the Alaska Commission on Postsecondary Education could be amended as these relate to repayment provisions healthcare degree program participants. It appears likely that no substantive change would be necessary for ACPE to act strictly as fiscal agent for participant payments. Further, this would not be a recommendation to change the scope of the ACPE mission to include direct workforce development. This later function would likely be accomplished by another state agency via interagency partnership.
- Provider Eligibility: Which healthcare occupations are to be deemed as eligible for the HCPLRP? Are all eligible occupations to benefit equally from the HCPLRP, or, will the occupations differ in terms of: (a.) maximum financial benefit, (b.) length of service required, (c.) specificity of service location, and, (d.) penalty for early-quit? There is evidence that for a loan repayment program, marked penalties are not needed, and, are actually likely harm outcomes.
- Repayment Details: Several policy and procedural decisions must be concluded. Examples follow. What is an adequate period of service-payback? What is the proportionality of payback when scheduled over years? What are the most useful policies with which to govern service payoff?
- Work Processes: Several work-process details will need to be established as regards management client relationships. Programmatically, what ways do we want to work, one-on-one, with program applicants to help them find suitable communities/positions? What types of assistance do we most want to provide to applicants, practices and communities?
- Program Evaluation: An ongoing evaluation should be installed and maintained as an expected part of any proposed support-for-service program (e.g. Henderson & Fox-Grage, 1997). It is in everyone's interest, and particularly in those of Alaska's medically underserved communities, that such programs: (a.) have explicit outcome objectives, (b.)

are regularly monitor as to those outcomes, (c.) openly acknowledge weaknesses, and (d.) embrace change as needed. Many different types of outcomes might be monitored. Reasonable measures might include:

- Practice in specific needy communities (e.g. HPSAs)
- Serve high-priority patient groups (e.g. Medicaid)
- Service completion of participants
- Retention rate of participants
- Satisfaction of participants
- Indictors as to the content of practice/work of program participants (e.g., proportion that provide inpatient care, that provide obstetrical care, or whatever specific services are deemed to have critical workforce shortages)

Other Support-For-Service Options to Consider:

As robust as a state-level loan repayment is likely to prove, there are other programmatic strategies. At least two other strategies should also be thoroughly examined: (a.) service-option loans, and (b.) direct incentives.

- Strategy: Service-Option Loan Programs

Consider provision of educational loans to all citizens of Alaska who undertake health professions training, where the loans will be forgiven if they work within Alaska after graduation. This would provide added incentive for health care students who were raised in Alaska to return to Alaska to practice, rather than being wooed away by the states/communities where they receive their training. There is evidence that these have worked well elsewhere, given attention to key programmatic details. For Alaska, a service-option loan program should nicely complement a loan repayment program; because the former would address only Alaska residents and the latter would primarily attract those health practitioners coming from out-of-state.

- Strategy: Direct Incentive Programs

Consider provision of direct incentive programs. In these, funding is provided to practitioners who agree to work in needy settings whether or not they have educational loans to be repaid. There is no reason to believe that only young practitioners-with-debt are suited to work in rural areas and/or with underserved populations.

Loan repayment programs only target recent graduates who have weighty educational debts. For instance, as regards physicians, many recent graduates carry minimal debt (perhaps 40%). Further, a large portion of those physicians who are potentially recruit-able to Alaska are 10 or 20 years out of training and have no educational debts. It is possible, even likely, that "an Alaskan adventure" would appeal to some number of mid and late-career physicians. It may prove informative to assess the State's medical licensure files to learn the average/median/quartiles of age of physicians as to when they gain their first Alaska license. If, indeed, many are older, then this is a group that should be targeted. Direct incentive programs target those practitioners without loans, and, older practitioners.

Finally, support-for-service programs (of all types) constitute only one way to help bolster recruitment and retention of health care professionals. Alaska must develop a multi-pronged approach to confronting our growing healthcare workforce shortage.

Conclusion

Substantial evidence shows that Alaska currently experiences a shortage of healthcare professionals, and, that this shortage exists in several key occupational categories.

There are several types of support-for-service programs, and the national experience has proven loan repayment programs to be robust. These have demonstrated substantial and longstanding success as a public strategy which has helped to rectify such shortages. To quote from Pathman, et al. (2004),

“As a whole, states’ support-for-service programs bring physicians to needy communities where they find satisfying work caring for at-risk patient populations and remain for many years. Of all program types, the loan repayment and direct financial incentive forms, which target physicians after training, show the broadest successes. The successes of these state programs warrant their continued support and perhaps expansion to remedy the continuing maldistribution of physicians.” (pg. 567).

Re: Support for Alaska Health Care Professions Loan Repayment & Incentive Program

Dear Governor and Members of the Alaska State Legislature:

Because the health care workforce shortage in Alaska is reducing health care access for our state's residents, the National Association of Social Workers – Alaska Chapter strongly supports the concept of a state-sponsored loan repayment and incentive program to allow Alaska to compete with the Lower 48 in recruitment of providers from a shrinking national pool.

With alarming and rising vacancy rates, Alaska is posed for a crisis without intervention. Alaska is one of only six states without a state-sponsored support-for-service program such as a loan repayment and incentive program and is losing ground. The competition for recruitment of providers is very difficult. Currently only 2% of medical students nationally are choosing the primary care field; more than 90 pharmacist vacancies exist in Alaska; many communities have inadequate access to dentists; physician assistants and nurse practitioners are increasingly difficult to recruit; nurses, dental hygienists, psychologists, licensed certified social workers, and physical therapists are all in short supply in Alaska.

The Health Care Professions Loan Repayment & Incentive Program proposal – SB 139 and HB 392 – bring to the table an important part of the solution to the workforce shortage Alaska faces. The proposal was developed after careful review of national studies of best practices for workforce recruitment and retention and input from stakeholders statewide, including consideration of factors unique to Alaska. More cost-efficient and results-producing than other methods, loan repayment and incentives have been shown to effectively help alleviate shortage problems in other states. The proposed program designed for Alaska will provide much needed relief for our state.

We recommend the establishment of the Alaska Health Care Professions Loan Repayment & Incentive Program and requests that you actively take steps to create and fund the program.

Respectfully,

/s/

LaVerne Demientieff

Re: Support for HB 392 Incentives for Certain Medical Providers

March 11, 2010

Dear Senate and House Members of the Alaska State Legislature:

Because the health care workforce shortage in Alaska is reducing health care access for our state's residents, Iliuliuk Family and Health Services, Inc. (IFHS) strongly supports HB 392 to establish a loan repayment and incentive program to allow Alaska to compete with the lower 48 in recruitment of providers from a shrinking national pool.

Our organization, IFHS, is the only comprehensive service provider for medical, dental and behavioral health services within 800 air miles of Unalaska. We are remote, and we frequently find that we are unable to compete with "lower 48" medical practices for providers, since we also cannot compete effectively with salaries. State loan repayment options for our providers would help us offer a competitive package.

With alarming and rising vacancy rates, Alaska is posed for a crisis without intervention. Alaska is one of only six states without a state-sponsored support-for-service program such as a loan repayment and incentive program and is losing ground. The competition for recruitment of providers is very difficult. Currently only 2% of medical students nationally are choosing the primary care field; more than 90 pharmacist vacancies exist in Alaska; many communities have inadequate access to dentists; physician assistants and nurse practitioners are increasingly difficult to recruit; nurses, dental hygienists, psychologists, licensed certified social workers, and physical therapists are all in short supply in Alaska.

It takes IFHS over a year to recruit a single doctor; six months to recruit a behavioral health specialist, and the last time we recruited a dentist, it took us four years to do so. We cannot recruit RNs – until July of 2009, we had two open RN positions for over two years, and currently have one RN position that has been open for over three years. A state-sponsored support-for-service program would help make our recruitment package more appealing and more competitive.

The Alaska Health Care Professions Loan Repayment & Incentive Program provides an important part of the solution to the workforce shortage Alaska faces. The proposal was developed after careful review of national studies of best practices for workforce recruitment and retention and input from stakeholders statewide, including consideration of factors unique to Alaska. More cost-efficient and results-producing than other methods, loan repayment and incentives have been shown to effectively help alleviate shortage problems in other states. HB

"Serving Unalaska, the Aleutian Islands and the Bering Sea"

392 establishes a loan repayment and incentive program customized for Alaska and will provide much needed relief for our state.

IFHS supports HB 392 and urges passage of this important legislation. Your active steps to assure the establishment of the Alaska Health Care Professions Loan Repayment & Incentive Program are greatly appreciated.

Re: Support for HB 392 Incentives for Certain Medical Providers

March 10, 2010

Dear Representative Herron,

The Alaska Primary Care Association (APCA) works to promote primary care access for all Alaskans. The APCA represents 26 health care organizations operating 142 Community Health Center (CHC) clinic sites, as well as other primary care safety net providers, throughout Alaska. Currently, health professional workforce shortages are impacting the ability of CHC clinics and other health entities to provide access to health care services for Alaskans. The CHCs in Alaska exist to provide care for medically underserved populations and communities; however, the CHCs are having great difficulty recruiting and retaining providers. The CHCs provided primary health care services to over 81,000 patients (1 in 9 Alaskans) last year with the following estimated vacancies: 22 physicians, 20 physician assistants, 26 nurse practitioners, 6 dentists, and 10 licensed clinical social workers – to name a few.

Not only is Alaska suffering from labor shortages in most professional health care occupations,² but there is a national shortage of primary care providers as well. With most areas of Alaska designated as a Health Professional Shortage Area or a Medically Underserved Area,³ the national shortages have made recruitment and retention even more challenging for clinics here. All but six of the fifty states have addressed similar professional health provider shortages by implementing state sponsored support-for-service programs which have helped to attract and retain health care providers.⁴

The APCA hears routinely from frustrated medical directors throughout Alaska that they are “losing candidates to other states.” Expensive temporary hires and repeated recruitment costs are driving up the cost of health care. The lack of continuity of providers is impacting health care access and outcomes for Alaskans. It is time for

fx. 907-929-2734
www.alaskapca.org

Alaska to establish a state-sponsored loan repayment and incentive program to help mitigate the health care workforce shortage problem.

In closing, the Alaska Primary Care Association strongly supports HB 392 and the creation of a "Health Care Professions Loan Repayment and Incentive Program" in Alaska. Thank you for your efforts to expand access to health care for all Alaskans.

Respectfully,

Regan Mattingly

Alaska Primary Care Association

"...uncompromising in the pursuit of access to primary care for all Alaskans."

Alaska Primary Care Association Board of Directors

RESOLUTION 2009-02

Health Care Professions Loan Repayment and Incentive Program for Alaska

WHEREAS the Alaska Primary Care Association strives toward the goal of a healthy population, it recognizes that a robust health care workforce is necessary to provide adequate health care access for all Alaskans and is a key ingredient in improving the public health of all Alaskans; and

WHEREAS Alaska is competing with other states and nations for the finite pool of available health care professionals; and

WHEREAS Alaska is suffering from labor shortages in most professional health care occupations¹, and these shortages are hitting primary care "safety net" agencies particularly hard; and

WHEREAS most of the State of Alaska has been designated either a Health Professional Shortage Area or a Medically Underserved Area;² and

WHEREAS a common state-level response to these pressures is the use of financial inducements, collectively known as support-for-service programs (SFSPs), and good outcomes have been achieved with these;³ and

WHEREAS national studies have determined loan repayment and incentive programs to be two of the most effective of the several SFSP strategies in terms of both recruitment and retention;⁴ and

WHEREAS a key problem is that Alaska does not have a robust SFSP while most other states do, many have several, and further, some of those are growing;⁵ and

WHEREAS most all other states have state-sponsored SFSPs that influence health professionals' geographic and specialty distributions;⁶ and

WHEREAS it is well-established that many health care professionals carry a heavy debt-burden as they come out of training and are attracted to serving in those locations where a share of that burden can be taken away; and

Alaska Primary Care Association

"...uncompromising in the pursuit of access to primary care for all Alaskans."

WHEREAS for areas in the state where providers are required to work in professional isolation due to remote settings, direct incentives are needed to attract more experienced health care providers who do not carry debt and are considered desirable placements; and

WHEREAS considerable precedent exists for state-level offices to sponsor and manage financial support and inducement programs to thus encourage the within-state service of health care personnel; and

WHEREAS in 2006, the Alaska Physician Supply Task Force recommends a number of specific strategies and action steps to assuring an adequate supply of physicians to meet Alaska's need, including creation of a SFSP, and the 2007 Alaska Workforce Vacancy Study and the 2005-2006 Status of Recruitment Resources and Strategies (SORRAS II) point to the need for a state loan repayment and incentive program in order for Alaska to compete with the lower 48 to recruit from a limited pool of numerous types of health care providers nationwide; and

WHEREAS a concept proposal submitted to the Alaska Primary Care Council by Pat Carr, Chief Health Planning and Systems Development for the Department of Health and Human Services, concludes the following:

Reported increasing vacancy rates, increasing costs of recruitment [SORRAS report], and comparisons with national norms [PSTF report] suggest that Alaska currently experiences a shortage of healthcare professionals, and, that shortages exist in several key occupational categories. Loan repayment programs have demonstrated substantial and longstanding success as a public strategy which has helped to rectify such shortages;⁷ and

WHEREAS the above proposal recommends that "Alaska create a 'Health Care Professions Loan Repayment Program.'"⁸

THEREFORE BE IT RESOLVED that the Alaska Primary Care Association supports the creation of a state-sponsored "Health Care Professions Loan Repayment and Incentive Program" and will advocate for the necessary authorizing and fiduciary legislation.

**Mat-Su Health Foundation Resolution to Support
Health Care Professions Loan Repayment & Incentive Program for Alaska**

WHEREAS the Mat-Su Health Foundation's mission is to enhance the health of Alaskans living in Mat-Su, where health is in part determined by access to primary, behavioral, and dental care and preventive services;

WHEREAS an adequate healthcare workforce is necessary to provide this access, and according to the *2005-2015 Mat-Su Borough Health Plan*, Mat-Su has an "inadequate number of providers to meet the demands of a growing population" in both the core area and the outlying rural areas of the borough;ⁱ

WHEREAS Mat-Su is designated a Medically-Underserved Area/Population by the U.S. Health Resources and Services Administration and has sub-regions designated Primary Care Health Professional Shortage Area, Mental Health Professional Shortage Area, and Dental Care Health Professional Shortage Area;ⁱⁱ

WHEREAS the Mat-Su Borough is the fastest growing area of Alaska, growing from 5,188 in 1960 to 82,515 in 2008 due to both positive birth and in-migration rates; and the AK Department of Labor projects that all Mat-Su age groups will continue to grow through 2020;ⁱⁱⁱ

WHEREAS the Mat-Su Borough is experiencing one of the highest rates of population growth in the state among senior citizens, who use the healthcare system disproportionately more than any other age group; and the Alaska Commission on Aging reports Mat-Su's senior growth rate at 11.6%, which includes a net gain from a senior in-migration rate that is almost double its senior out-migration rate;^{iv}

WHEREAS the Alaska Health Care Commission has designated Medicare-access as one of its six focus areas; and the University of Alaska Anchorage Institute of Social and Economic Research has reported that access to primary care for Medicare beneficiaries is problematic in Mat-Su, where data reveals that only 57.7% of Mat-Su primary care physicians will see new Medicare patients;^v

WHEREAS the Mat-Su Health Foundation believes that an investment in the education of Mat-Su residents will help to build the healthcare workforce of the future and an engaged citizenship with a higher capacity to address the health-related challenges impacting Mat-Su and Alaska; and to this end has offered scholarships to help defray the cost of higher education and encourage Mat-Su residents to complete a degree or certificate program that emphasizes health and/or wellness; but also recognizes that more needs to be done to bolster the healthcare workforce in Mat-Su and Alaska;

WHEREAS Mat-Su Regional Medical Center has spent \$6,238,438 on contract labor over the last five years on temporary health professionals from outside the state to fill current needs;

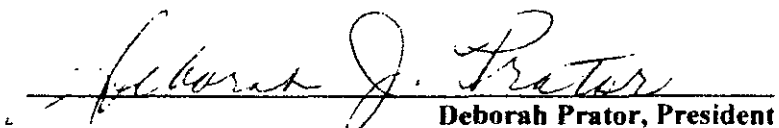

WHEREAS Alaska is competing with other states for the finite pool of available health care professionals; and over 40 states currently offer Support-for-Service Programs (SFSPs) that have influenced health professionals' geographic and specialty distributions;

WHEREAS national studies have determined loan repayment and incentive programs to be two of the most effective strategies in terms of both recruitment and retention;^{vi}

WHEREAS without this incentive, it will be challenging for Alaska to compete for medical and health professionals, especially to work in rural areas;

BE IT THEREFORE RESOLVED that the Mat-Su Health Foundation promotes and advocates for the establishment of the Health Care Professions Loan Repayment & Employment Incentive Program to bring more qualified medical professionals to Alaska and will advocate for the necessary authorizing and fiduciary legislation.

Approved by the Mat-Su Health Foundation Board of Directors on January 18, 2010.

saje@ak.net

Dear Representative Herron,

Recently I was informed about HB392 and SB139. The bill seeks to address the shortage of certain health care professionals in Alaska by increasing their numbers. Unfortunately the bill does not include Licensed Professional Counselors who now constitute one of the largest bodies (if not THE largest body) of mental health professionals working in our state. As Chair of the Board of Professional Counselors, I feel it is imperative to ask you to support an amendment to add this group of licensed professionals to this bill.

As you are probably aware, there are roughly 450 Licensed Professional Counselors in Alaska. These mental health care providers have gone through a process of qualifications that is demanding, academic, and professionally challenging. They must have a minimum of 3,000 hours of counseling and a sixty credit master's degree in counseling or a closely related field before they can even consider pursuing a license. In a field that has only existed for less than ten years in Alaska, LPCs have caught up to many of the other mental health care providers in numbers and have surpassed many of them with their requirements. I recently attended the American Association of State Counseling Boards yearly conference where I represent Alaska. At this meeting I always provide a workshop which enables me to closely compare notes with LPC requirements from other states. I can honestly report to you that Alaskan standards are the highest for licensure of LPCs.

To my knowledge, Psychological Associate Licenses are not given in other states. Many of the students graduating with a master's level psychology degree end up before my board requesting an LPC. Licensed Profession Counseling Licenses are easily transferable 'outside'. LPC work is almost identical to PA work with the exception of two types of psychological testing that LPCs do not provide (although we do many other types of testing).

I am requesting that you consider amending HB392 Sec. 18/29/009 (b)(7) to include counselors who have a master's degree from a program that qualified them as a professional counselor. As you know, the need for mental health professionals in Alaska continues to grow and here is a qualified group of people ready to take up the challenge

Most Sincerely,
Shawnie Olson
Board of Professional Counselors, Chair
LPC license 25

To: Rep. Bob Herron

Dear Representative Herron,

As the President of AKAMFT, I am writing you on behalf of our members and profession.

Just this morning I was informed about HB392 and SB139. The stated objective of the bills is to address "the worsening shortage of certain health care professionals in the state by increasing the number and improving the distribution of health care professionals who provide direct patient care", yet the bill omits one of the largest bodies of mental health professionals working in Alaska.

It is my understanding that currently LPC's and MFT's make up the majority of licensed counselors in our state. There is not a school in Alaska that offers a Marriage and Family Therapist program, so most therapists in Alaska have received their education in others states or were grandfathered in. This year MFT's became recognized in all fifty states and is a recognized licensure by the VA and other federal programs. I have personally know several people who have left our state to get a MFT degree and then returned to work in Alaska. To get a MFT license more education is required in families, systems and working with couples. Licensing requirements for MFT's in all fifty states are as stringent or higher than that of psychologist and master level clinical social workers.

I don't understand the omission of both LPC and LMFT qualified master's level graduates. Alaska Pacific University graduates about 20 master's level psychologists per year—they eventually get the LPC license. UAA and UAF graduates scores of people yearly with master's degrees—many of whom also seek the LPC. The reason master's level grads go for the LPC is because the master's level Psychological Associate license is not recognized outside of Alaska. However the LPC is now a license type in all 50 states. We may be late to the party, but we have a big presence—especially here where in fewer than 10 years of licensing LPC's have virtually caught up with social workers for numbers and presence across the state. We do all of the same work as the other disciplines with the exception of two types of psychological testing—but can do all other types of testing.

The bottom line is that I am encouraging you to amend HB392 Sec. 18.29.009 (b)(7) to include something like the following language: or a counselor holding a master's degree from a program that qualifies them for professional counselor or marital and family therapist license. I also believe that hundreds of other licensed professionals—who will also not utilize the opportunities of this bill, would encourage the passage of this bill. There are too few of us and the need is great.

This change will optimize the possibilities for increasing access to behavioral health/mental health professionals in rural Alaska.

Thank you for your support.

Group advocates incentives to lure health care workers**SHORTAGE: Problem is especially acute in alaska's rural areas, planner says.**

By ROSEMARY SHINOHARA

rshinohara@adn.com

(02/15/10 21:37:22)

Armed with reports of continued shortages of doctors and other health care workers in Alaska, a group of health care organizations is pushing for the state to begin offering doctors, dentists, nurses and others money to come practice in Alaska.

Shelley Hughes of the Alaska Primary Care Association, one of the backers of financial incentives for health care workers, led a workshop to talk about the idea Monday at the Alaska Native Tribal Health Consortium.

Her group represented 142 community health clinics -- nonprofits that offer health care on a sliding scale to anyone. Their turnover of doctors, physician assistants and nurse practitioners is about one-third every year, Hughes said.

Statewide, the number of doctors with active licenses in Alaska increased by 2 percent from 2007 to 2009 -- barely keeping up with population growth, and not keeping up with the health care needs of Alaska's growing number of senior citizens, said Alice Rarig, a planner with the state Department of Health and Social Services.

Rarig said the problem is especially acute in some rural areas and for primary care doctors. For example, in Anchorage and Mat-Su, there's a doctor for every 352 people, but in northern and Southwest Alaska, the ratio is closer to one doctor for more than 950 people.

Alaska has a pretty good supply of specialists in urban areas but not enough internists -- primary care doctors -- and psychiatrists, she said.

The Primary Care Association, Alaska State Hospital and Nursing Home Association, Alaska State Medical Association, Alaska Native Health Board, AARP-Alaska and numerous other groups are supporting SB 139, a bill in the Legislature that calls for the state to spend \$7.9 million over the next three years on drawing people to work in medical professions in Alaska.

The bill, introduced by Sen. Donny Olson of Nome, has been approved by one committee and now sits in the Senate Finance Committee.

Under the bill, the state would repay student loans over a three-year period for health care professionals recently out of school. It would give direct payments to already-established health care workers in exchange for their practicing in Alaska, also over three years.

The \$7.9 million would cover at least 90 positions, with payments ranging from \$20,000 to \$27,000 per year for those in jobs such as nurse practitioner, physician assistant and physical therapist, and \$35,000 to \$47,000 annually for doctors, dentists and pharmacists, said Hughes.

People who took especially hard-to-fill positions, such as in remote areas, would get the highest

The Honorable Bob Herron, Co-Chair
House Health and Social Services Committee
Alaska State Capitol, Room 411
Juneau, AK 99801-1182

Subject: Support for HB 392, Incentives for Certain Medical Providers

Dear Chair Keller and Chair Herron:

The Alaska Commission on Aging (ACoA) encourages support for HB 392 by the House HSS Committee, a bill to establish a loan repayment program to build Alaska's health care workforce by increasing the recruitment and retention of targeted health care professionals in urban and rural, underserved communities. This bill is authored by Representative Bob Herron.

Alaska, as with the rest of the nation, is experiencing a shortage of health care workers as fewer students are entering the health care profession and many of those already working in health care are preparing for retirement. Alaska is one of five states that does not offer a state-sponsored loan repayment program for health care professions. As a result, our hospitals, clinics, and communities lose potential health care workers to other states that incentivize their workforce with loan repayment programs.

Access to quality health care is a priority for all Alaskans and a critical need for people age 65 years and older. Older Alaskans benefit from regular health care services which enhance their overall health and decrease the need for more expensive, intensive treatment and emergency visits.

Alaska continues to lead all states with the fastest growing senior population currently comprising about 12 percent of our state's population and is projected to increase by five to six percent each year until 2020. The graying of Alaska's population is creating substantial shifts for workforce, particularly in the health care and long-term support service sectors, as demand increases and providers are reaching retirement age. If older Alaskans are unable to find a health care provider, they may be forced to leave the state in search of access to health care professionals. As a result, Alaska could suffer from a loss of retirees, who contribute more than \$1.7 billion to the state's economy in addition to their significant volunteer service, caregiving activities, and community leadership.

ACoA supports HB 392 and believes that the proposed legislation will help to build a qualified health care workforce who will be available to meet the health care needs of older Alaskans. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information about our position. Thank you.

Sincerely,

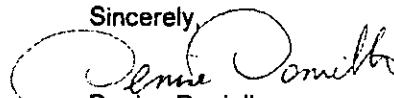

Sharon Howerton-Clark

ALPHA

ALASKA PUBLIC HEALTH ASSOCIATION

Committed To Advancing Alaska's Public Health Since 1978

March 18, 2010

Dear Senate and House Members of the Alaska State Legislature:

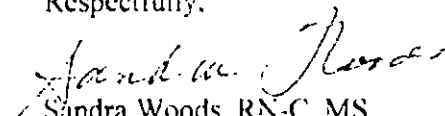

Because the health care workforce shortage in Alaska is reducing health care access for our state's residents, the Alaska Public Health Association (ALPHA) strongly supports HB 392 to establish a loan repayment and incentive program to allow Alaska to compete with the lower 48 in recruitment of providers from a shrinking national pool.

With alarming and rising vacancy rates, Alaska is posed for a crisis without intervention. Alaska is one of only six states without a state-sponsored support-for-service program such as a loan repayment and incentive program and is losing ground. The competition for recruitment of providers is very difficult. Currently only 2% of medical students nationally are choosing the primary care field; more than 90 pharmacist vacancies exist in Alaska; many communities have inadequate access to dentists; physician assistants and nurse practitioners are increasingly difficult to recruit; nurses, dental hygienists, psychologists, licensed certified social workers, and physical therapists are all in short supply in Alaska.

The Alaska Health Care Professions Loan Repayment & Incentive Program provides an important part of the solution to the workforce shortage Alaska faces. The proposal was developed after careful review of national studies of best practices for workforce recruitment and retention and input from stakeholders statewide, including consideration of factors unique to Alaska. More cost-efficient and results-producing than other methods, loan repayment and incentives have been shown to effectively help alleviate shortage problems in other states. SB 139 establishes a loan repayment and incentive program customized for Alaska and will provide much needed relief for our state.

ALPHA supports HB 392 and urges passage of this important legislation. Your active steps to assure the establishment of the Alaska Health Care Professions Loan Repayment & Incentive Program are greatly appreciated.

Respectfully,

Sandra Woods, RN-C, MS
President
ALPHA Board of Directors

Subject: HB 392 Makes Sense: Please Support

Representative Herron

I live in a rural area, Glennallen, Alaska. We have one primary care center to serve the entire Copper River Valley which is the size of the entire state of Ohio. Our residents range from upper middle class and below (I believe). Cross Road Medical Center has a high turnover of providers, making it hard to have continuity of care; many people drive the approximately 400 mile round trip to get primary care. We have many seniors who simply leave our area. Please support HB 392 as it will help rural under served area's such as the one I live in, plus help our urban areas to have higher level providers (ie there is no cardiologist in all of South East Alaska. UA has a "grow our own" philosophy, but cannot grow enough of our own fast enough; some schooling isn't even available in Alaska such as dentistry and pharmacy. We truly need your help!

Sincerely,

Janie Fillman

Representative Herron

I support HB 392 as we need it so bad. I also believe All Doctors should have to take a % of Medicare. I bless the ones that do. They care for the people not their pockets. We need this bill so bad. What are we seniors to do for a Doctor??? No one can find one to care for us. We all have paid into Medicare all our lives for what ? One of the best programs the government every come up with. It needs to go on plus social security. It adds to our retirement so one can retire. Everyone goes on Medicare at 65 so we need to support HB 392

Subject: HB 392 - Loan repayment

Representative Herron

I am writing to urge you to support this legislation for the loan repayment and incentive program in Alaska. As a physician who works 75% time in the Aleutians I am not eligible for federal loan repayment toward my \$150,000.00 medical school loans. After three years in our community health center at a average salary, I am no longer financially able to sustain the cost of living, monthly loan payments without loan repayment of some sort. I am seriously considering moving out of state to obtain more flexibility in the reimbursement options. If this legislation passes, I will stay in Alaska to provide rural primary care to under served populations.

Sincerely,

Dr. Ann Nora Ehret

Subject: HB 392 Good solution for health care workforce strategy

Representative Herron

As executive director for the Sunshine Community Health Center, I cannot tell you how valuable a loan repayment and incentive program is to recruiting potential medical and dental providers.

Sunshine has been actively recruiting for a dentist now for 14 months and while there are other obstacles (i.e. licensing for one) that hamper our efforts, loan repayment has become the number one question asked by candidates. In addition to our dental vacancy, we have been recruiting for a medical provider and the last three candidates said loan repayment was critical in their choice of employment.

While AK certainly has a lot of offer we cannot compete with clinics and centers in the lower 48 if the playing field is not level. One-way to make this happen to approve a loan and incentive program in Alaska.

I urge you to support this bill because without it there is the potential of clinics closing or scaling back hours due to no providers/staff (happened in S.E. when dentist retired and there was no replacement).

Sincerely,

Sharon Montagnino

Representative Herron

To have seasoned professional Medical staff able to come to Alaska and build our health community, in my opinion, is so valuable for our growing needs. This would perhaps be a step forward to making this state competitive to lower 48 states with new ideas, that open up great incentives to better the health care areas here. To become self sufficient in Alaska has always been our motto of looking forward has it not? Then make it possible to help those that want to make the journey here perhaps for the first time, and stay in our great state and bring the knowledge they have as well as their wonderful medical ideas to us.

Thank you.

**TESTIMONY ON House Bill 392
March 17, 2010**

ASHNHA represents 27 private, federal, state, and tribal health care facilities located throughout Alaska. The testimony presented here has been approved by ASHNHA's general membership (see detailed member list at bottom of testimony).

ASHNHA's membership strongly supports **HB 392**.

Health care occupation workforce shortages continue to persist throughout Alaska but are most critical in rural areas of the State.

The Alaska Legislature has been extremely responsive to addressing these shortages by providing increased funding to the University of Alaska to expand health care education programming, and by expanding the WWAMI program from 10 to 20 educational placements each year.

HB 392 complements these other initiatives by establishing a new program that will give the Department of Health & Social Services authority to attract already trained health care professionals in 10 critical occupation categories. The Department will offer either loan repayment or cash incentives commitment to willing providers in exchange for time served in health care shortage areas in Alaska. Up to 90 health care professionals could be attracted to Alaska each year through this program.

Extensive study of Alaska's health care workforce needs have been completed and those data disclose shortages that cannot be overcome by expanded educational programming or WWAMI enrollments alone. These investments, while extremely important, will take from 4 years to 10 years to produce trained clinicians depending on the health care occupation chosen for study. HB 392 will bridge the gap Alaskans face today in many rural and underserved communities throughout the State.

ASHNHA has worked with a large group of other stakeholders to help develop the program outline contained in HB 392. Passage of this measure will help Alaska become competitive with other states in attracting 'practice ready' professionals from around the country.

HB 392 has the strong support of many organizations concerned about the severe shortage of health care professionals in many rural areas of the State. The Alaska Health Care Commission recommended consideration of a loan repayment and incentive program in their report to the Governor and the Legislature.

ASHNHA respectfully urges your support for HB 392 and passage of this bill from House HSS to the next committee of referral.

Thank you for your consideration.

RE: HB 392 (Herron)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support HB 392, authored by Committee Co-Chair Herron.

The intent of HB 392 is to provide incentives for health care providers, especially for expertise that is in short supply in Alaska as well as to secure providers in our many underserved geographic areas.

AARP approaches HB 392 from the standpoint of the customer. Our members are the group most likely to need health care services and are often the first ones to face critical health care problems because they cannot find a provider.

You are well aware of our health care workforce shortages in Alaska. If our members cannot find a health provider, the results can be bad for them as well as for the state.

Postponing a needed health visit often results in health deterioration and, in many cases, more intense and more expensive treatment. With an increase in providers, our members are more likely to seek prevention and early treatment. The overall health status of older Alaskans will improve.

However, if our members cannot find a health care provider, Alaska will be the loser.

As you know, prior to 1990 many older Alaskans left the state after retirement because they could not count on finding medical facilities and providers to meet their needs.

This trend reversed and now Alaska has the highest percentage of older people who decide to stay in their home state after retirement. The economic value of these retirees is estimated at over \$1.7 billion.

We want our citizens to stay here after retirement. The most significant determination of where retirees decide to live is the availability of quality health care. We must have an adequate health care workforce if we are going to keep older Alaskans in our state.

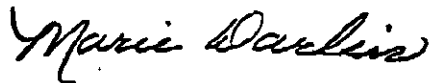

HB 392 will go a long way in helping us secure that workforce.

AARP recommends an "AYE" vote on HB 392.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

I am writing to urge you to support and pass HB 392. I am the executive director of the community health center in Unalaska. We budget for four physicians, three mid-levels, three RNs, two counselors, one physical therapist and one dentist. Our center currently has two open RN positions, one of which has been open for three years, one open counselor position and one open physical therapy position. One of our physicians is considering leaving because, even several years out of school, she still owes over \$100,000 and is not eligible for NHSC loan repayment. Our dentist gave us a three year notice six months ago because he knew it would take that long to fill the position. We must compete nationally for our health care providers. HB 392 would be enormously helpful to us in recruiting and retaining vital staff members. Please support HB392. Thank you.

Subject: Support for HB 392 INCENTIVES FOR CERTAIN MEDICAL PROVIDERS

Co-Chair Herron,
Co-Chair Keller,
Vice-Chair Wilson,
House HSS Committee,

RE: HB 392 INCENTIVES FOR CERTAIN MEDICAL PROVIDERS

For several election cycles I have watched us lose more professionals who treat patients for their illnesses one-on-one and in auxiliary roles as well. Support for physicians and medical professionals to practice in Alaska is so long overdue. We have a crisis in interior Alaska!

The lack of proper care resulted in my daughter, who has very good insurance, being rushed through a quick clinic, being told that she just had a virus and to go home and treat it with fluids and rest. A week later, no better, she went back again. She went back for additional treatment, was handled quickly, and given some kind of antibiotic as she continued to cough and become more weak.

Finally, she wrangled an office visit with a physician in an outlying area through a family contact. He examined her thoroughly to find that she had been trying to function with walking pneumonia and had developed damage to one lung. She was required to have bed rest with antibiotics and inhalers, and then was restricted to only very minimal activity, as necessary to prevent the loss of her job, so that her lung could heal. She, having deteriorated from lack of early care, had more antibiotics, inhalers and months of re-exams and repeated X-rays to make sure her lung healed. This is a lady who has completed the Fairbanks Equinox Marathon at least 5 times, so it wasn't because she was a softie!

This is one reason that we must act to make physicians and other medical professionals work in Alaska. Remember that Alaska serves a large number of military dependents that add to our patient population. It is no longer only those who are on Medicare. We have a critical shortage for a conglomerate of reasons. Typically, an appointment for someone who is currently ill, not a check-up, has a 6-week wait. If you get very ill, rather than have a regular patient go into emergency for a "temporary patch job" your doctor will likely try to get you in where someone cancelled or between appointments during his lunch time.

Please pass HB 392 so that over time we will have some improvements in our situation.

Thank you,

Doris Robbins

Subject: Support and Testimony for HB 392

Representative Herron

I am writing you in regards to HB 392. I believe this bill to be of utmost importance to the future health of Alaska residents. I came to Alaska this past summer in hopes of acquiring loan repayment through the National Health Service Corps, a process that is arduous and drawn-out. When preparing for this move, I had spoken with several colleagues who had stated that they would be greatly interested in joining the ranks of Alaska Health Care Professionals, however, there is little incentive to do so. They spoke of the high cost of living and that their loans were minimal or already payed down. These are experienced individuals who have a great deal to give to this state. HB 392 and its incentive aspect would be a considerable draw for these people.

The National Health Service Corps does indeed bring many people to this state to fill openings in the health care system, however, as I stated previously, this can be a monstrous undertaking due to working with the Federal bureaucracy. This system also is flawed in that the required time of service is two years, then the people have a choice to stay or move on. It also pays up front, where HB 392 pays out after time has been delivered. My understanding of HB 392 is that it would help people choose to stay in the state due to these requirements.

By taking hold of this at the state level, Alaska can bring in qualified individuals to work and stay in our communities, many of whom will bring a great deal of needed experience.

Thank you considering my testimony and, Please, consider this bill's passing.

Sincerely,

James Lepich

Subject: Please support loan repayment for health care professionals

Representative Herron

I have been an RN in hospital facilities for the past 31 year. I have spent 15 years in AK caring for the critically ill AK citizens and visitors to this state. Many of my new nurse colleagues come out of school with several thousands of dollars in school loans. The only facility that I am aware of that helps with loan repayment is the ANMC. It would help to keep the students educated in AK to stay in AK if they would get loan repayment assistance. I like this bill because the cost to the state is as the professional completes a certain length of time, they then receive payment.

Many states and facilities offer competitive loan repayment programs in order to get professionals to work in their state.

I urge you to look at this bill closely for securing the health care future for the state. Thanks.

Representative Carl Gatto

DATE: April 1, 2010
TO: Rep. Wes Keller
FROM: Rep. Carl Gatto
SUBJECT: HB 423 The Alaska Health Freedom Act

The mission of the Liberty Caucus, as articulated by Representative Kelly at its inception, is to fight government overreach "at the expense of personal liberty and state's rights." The recently passed federal *Patient Protection and Affordable Care Act* is the most egregious example of such overreach in a generation, if not in a century. Accordingly, the enclosed members of the Liberty Caucus stand in resolute opposition to this unprecedented usurpation of individual freedom and disregard for the popular will.

The *Alaska Health Freedom Act*, offered by the House Judiciary Committee at the request of Representative Carl Gatto, affirms the right of all Alaskans to choose their own "mode of securing health care services." It also bars state officials from imposing fines or fees on any Alaskans who choose not to participate in the federal government's unconstitutional health care experiment. Finally, it compels the Attorney General to stand up for the Tenth Amendment of the U.S. Constitution and the sovereignty of the State of Alaska.

As members of the Liberty Caucus, we insist that federal law can only be supreme if it is indeed constitutional. The myriad of unnamed rights reserved to the States and the people are equally important to our system of government as the relatively few powers constitutionally granted to the federal government. People across this nation have begun to stand up for individual freedom, limited government, and an end to generational debt. We ask the members of the committee to join us in standing with them and asserting that, at least in Alaska, we still believe in government "of the people, by the people, and for the people."

Sponsor Statement HB 423

March 29, 2010

For over a year, this nation has been locked in a battle over health care. Roughly 55% of the public, and the entirety of Congressional Republicans, opposed the passage of so-called "health reform" and would like to see the recently-passed health care legislation overturned.¹ Opponents of the health care initiative point to the bill's hidden costs, special exemptions for certain states, and the nineteen point gap between those who strongly support the plan and the larger group that strongly opposes it. Accordingly, I am proposing the *Alaska Health Freedom Act*. The bill is modeled after Idaho HB 391 (and a similar package of legislation in Virginia), which became the first statute enacted by a state legislature to directly challenge the provisions of federal health care "reform."

The *Alaska Health Freedom Act* would:

- Argue that the power to regulate or require a person's health care delivery choices is not found in the U.S. Constitution and is therefore reserved to the people and the States by the 9th and 10th Amendments, respectively
- Establish that every Alaskan "has the right and is free to choose or decline any mode of securing health care services."

¹ Rasmussen, Scott. "Health Care Reform." *Politics*. Rasmussen Reports, 21 Mar. 2010.
<http://www.rasmussenreports.com/public_content/politics/current_events/healthcare/september_2009/health_care_reform>

Rasmussen, Scott. "55% Favor Repeal of Health Care Bill." *Politics*. Rasmussen Reports, 05 Mar. 2010.
<http://www.rasmussenreports.com/public_content/politics/current_events/healthcare/march_2010/55_favor_repeal_of_health_care_bill>

- Require the Attorney General to actively protect the aforementioned right to choose a mode of health care services
- Bar public employees and officials from enforcing, imposing, implementing, or collecting any penalty for resisting government-run healthcare.

The four main tactics being employed among states that oppose the federal government's health care overreach are²:

- **Legislative Discontent Model**: under this plan, states would pass a resolution discouraging the federal government from implementing nationalized medicine; the recent passage of the federal *Patient Protection and Affordable Care Act* makes mere statements of the Alaska Legislature's disapproval fairly moot.
- **Constitutional Amendment Model**: following this model, state legislatures would offer a constitutional amendment to the voters that would enshrine the right of individuals to make their own health care determinations in the state's constitution; the constitutional amendment model, pursued through Alaska HJR 35, has not garnered sufficient support in the legislature, particularly given the time-sensitive nature of this issue.
- **Statutory Model**: in the statutory model, states enact statutes through the regular legislative process that either establish the freedom to make one's own health care decisions as a right or discount the so-called "right of universal healthcare;" these bills also prohibit state officials and agencies from enforcing, collecting, or implementing fees imposed under the new federal health care plan and direct the state's Attorney General to actively defend the provisions of the bill in court
- **Nullification Model**: finally, states following the nullification model to oppose nationalized health care would enact legislation declaring the *Patient Protection and Affordable Care Act* unconstitutional and null and void within the state's jurisdiction.

² "Health Care Freedom Act." *Legislative Tracking*. The Tenth Amendment Center. 29 Mar. 2010. <<http://www.tenthamendmentcenter.com/nullification/health-care/>>.

The problems with the legislative discontent model now that Congress has actually passed health care "reform" are readily apparent. In addition to the issues mentioned above, the constitutional amendment model is problematic because of the Supreme Court's general hesitation to hear conflicts between the federal and state constitutions (i.e. gay marriage in MA, CA). The nullification model is the most popular alternative, but seems inherently flawed. There is little-to-no chance the federal courts would rule that states can pass legislation with a simple majority and overturn duly enacted federal law. Unlike the nullification model, the statutory model challenges the constitutionality of the new federal health care statute without limiting our attorney general to a nullification argument. The Alaska Health Freedom Act does not presume to overturn federal legislation, but instead adopts a distinct public policy for Alaska under the reasoning that the *Patient Protection and Affordable Care Act* misinterprets the Constitution. If universal health care is a "right," shouldn't the freedom to make one's own health care decisions be protected from government intrusion? Also, is there no limit on Congress' power under the Commerce and General Welfare clauses? If Congress can mandate the purchase of any private commodity it so chooses, then what control does an individual really have over their own "pursuit of happiness?"

I hope that this sponsor statement effectively communicates the urgency and practicality of the *Alaska Health Freedom Act*. Questions or concerns can be directed to my staffer, Thomas Reiker, at 465-3163 or Thomas.Reiker@legis.state.ak.us. I thank you for your time and respectfully request a hearing for HB 423.

Sincerely,

Representative Carl Gatto

GOLDWATER

I N S T I T U T E

in defense of liberty

The Health Care Freedom Act: Questions & Answers

by Clint Bolick, Litigation Director, Goldwater Institute

The Health Care Freedom Act will appear as a proposed constitutional amendment on Arizona's 2010 election ballot, and similar measures are under consideration in more than 30 other states. With the possibility that Congress will enact some sort of national health insurance legislation, questions are being raised about the scope of the Health Care Freedom Act and its effect should a federal bill become law. In the following pages, Clint Bolick, who helped to author the Health Care Freedom Act, answers frequently asked questions.

Q: What is the Health Care Freedom Act?

A: The Health Care Freedom Act is a proposed amendment to the Arizona Constitution that would preserve certain existing rights that individuals have regarding health care. It was initially proposed by two Arizona physicians, Dr. Eric Novack and Dr. Jeffrey Singer, with drafting assistance from the Goldwater Institute. The measure qualified as a voter initiative on the 2008 ballot, and despite a well-financed opposition campaign, it was defeated by less than one-half of 1 percent of the vote. Changes were made to address concerns raised by the opponents, and the Arizona Legislature voted to refer the revised version to the 2010 ballot.

The American Legislative Exchange Council adopted model legislation based on the Arizona measure, and activists and legislators in at least 35 additional states are pursuing constitutional amendments or statutes based on the Arizona model.

Q: What are the key provisions?

A: Although the precise language varies from state to state, the Health Care Freedom Act seeks to protect two essential rights. First, it protects a person's right to participate or not in any health care system, and prohibits the government from imposing fines or penalties on that person's decision. Second, it protects the right of individuals to purchase—and the right of doctors to provide—lawful medical services without government fine or penalty. The Health Care Freedom Act would place these essential rights in the state constitution (or, in some states, it would protect them by statute).

Q: What motivated the Health Care Freedom Act?

A: No one questions the need for serious health care reform. However, the proponents of the Health Care Freedom Act believe that regardless of how such reform is fashioned, either at the state or federal level, the essential rights protected by the Health Care Freedom Act should be preserved. Many advocates of a larger government role in regulating or providing health insurance support a mandate that would compel individuals to join a government-approved health insurance plan, whether or not they can afford it and whether or not the system best fits their needs. In some countries in which government plays a large role in providing health insurance, medical services are rationed and individuals are prevented or discouraged from obtaining otherwise lawful medical services. Supporters of the Health Care Freedom Act have a variety of perspectives on the form that health care reform should take. But they agree that no matter what legislation is passed, it should not take from Americans their precious right to control their own medical affairs.

Q: By what authority can states pass the Health Care Freedom Act?

A: It is well-established that the U.S. Constitution provides a baseline for the protection of individual rights, and that state constitutions may provide additional protections—and all of them do. For instance, some states provide greater protections of freedom of speech or due process rights. Because the Health Care Freedom Act offers greater protection than the federal constitution, states are allowed to enact it.

Q: Does it matter whether the Health Care Freedom Act is passed as a statute or as a constitutional amendment?

A: A state constitution is the organic law of the state, reflecting the most fundamental values shared by the citizens of the state. Moreover, a state constitutional amendment will ensure the state legislature can never infringe upon the protected rights. So a constitutional amendment is preferable, especially to protect against legislative tinkering. However, for purposes of a federalism defense against excessive federal legislation, it should not matter whether the people of the state have acted through their constitution or by statute.

Q: Does the Health Care Freedom Act attempt to “nullify” federal health insurance legislation?

A: Absolutely not. If federal legislation is enacted, individuals would still have the option to participate in federal health insurance programs. This act simply protects a person’s right not to participate.

Q: To the extent that the Health Care Freedom Act conflicts with provisions of federal legislation, isn't the state law automatically preempted by the Supremacy Clause of the U.S. Constitution?

A: No. In any clash between state and federal provisions, at least four federal constitutional provisions are relevant. The Supremacy Clause establishes the Constitution as the supreme law of the land and provides that federal laws prevail over conflicting state laws where Congress has the legitimate authority to enact the legislation and where it does not impermissibly tread upon state sovereignty. The federal government will have to demonstrate that its legislation legitimately is derived from congressional authority to regulate interstate commerce. It will also have to show the legislation does not violate the 10th Amendment, which reserves to the states all government power not expressly delegated to the national government; and the 11th Amendment, which protects states from being used as mere instrumentalities of the national government. This constitutional construct is known as federalism.

Q: Are certain provisions of proposed federal health care legislation vulnerable to constitutional challenge even without the Health Care Freedom Act?

A: Yes, in at least three ways. First, to the extent that the legislation purports to regulate transactions that do not directly affect interstate commerce, such as mandating insurance for individuals, Congress may lack authority to do so under the Commerce Clause. Several relatively recent decisions by the U.S. Supreme Court have invalidated federal legislation on this basis. In *U.S. v. Lopez* (1995), the Court struck down federal laws that restricted guns in school zones; and in *U.S. v. Morrison*, it struck down a federal statute involving violence against women. In both cases, the Court found the subject matter of the federal laws did not "substantially affect" interstate commerce, so Congress had no power to regulate it under the circumstances presented.

Second, to the extent the legislation interferes with the individual's right to choose health insurance providers, doctors, or lawful medical services, it may violate the right to medical self-determination recognized under the U.S. Constitution. As the Court declared in *Griswold v. Connecticut* (1965), "We have recognized that the special relationship between patient and physician will often be encompassed within the domain of private life protected by the Due Process Clause." Several of the early abortion cases involved what Justice William O. Douglas, concurring in *Doe v. Bolton* (1973), described as the "right to seek advice on one's health and the right to place reliance on the physician of one's choice." Whether or not one agrees with those abortion rulings, they establish a strong basis for challenging certain federal and state intrusions.

Third, several recent decisions have invalidated federal laws that "commandeer" state governments to do their bidding. In *New York v. United States* (1992), for instance, the Court struck down federal rules requiring states to take ownership of certain radioactive waste and to expose themselves to liability. Speaking for the Court, Justice Sandra Day O'Connor ruled that

“no matter how powerful the federal interest involved, the Constitution simply does not give Congress the authority to require the States to regulate.” Tellingly, she added “the Constitution protects us from our own best intentions: It divides power among sovereigns . . . precisely so that we may resist the temptation to concentrate power in one location as an expedient solution to the crisis of the day.” To the extent that federal health insurance legislation forces states to implement its provisions, it could be subject to robust constitutional challenge.

Q: Could the Health Care Freedom Act provide additional protection against federal health insurance legislation that violates protected rights?

A: Yes. Although the federal government usually prevails in federalism clashes, the current U.S. Supreme Court is the most pro-federalism Court in decades. There are no cases precisely on point, but the Court under Chief Justice John Roberts has sided with the states in at least three major recent federalism clashes. In the case most closely on point, *Gonzales v. Oregon* (2006), the Court upheld the state’s “right-to-die” law, which was enacted by Oregon voters, over the objections of the U.S. Attorney General, who argued that federal law pre-empted the state law. Applying “the structure and limitations of federalism,” the Court observed that states have great latitude in regulating health and safety, including medical standards, which are primarily and historically a matter of local concern. Holding that the attorney general’s reading of the federal statute would mark “a radical shift of authority from the States to the Federal Government to define general standards of medical practice in every locality,” the Court interpreted the statute to allow Oregon to protect the rights of its citizens.

Horne v. Flores (2009) considered a measure adopted by Arizona voters to require English immersion as the state’s educational policy for students for whom English is a second language. Lower federal courts had imposed an injunction based on a finding that Arizona was failing to comply with federal bilingual education requirements. The Supreme Court held that injunctions affecting “areas of core state responsibility, such as public education,” should be lifted as quickly as circumstances warrant. It observed that “federalism concerns are heightened when . . . a federal court decree has the effect of dictating state or local budget priorities.” The Court remanded the case to lower courts to reconsider the injunction.

In *Northwest Austin Municipal Utility District No. 1 v. Holder* (2009), the Court examined a challenge to section 5 of the Voting Rights Act, which places certain states and localities in a penalty box, requiring them to obtain “pre-clearance” by the U.S. Department of Justice for any changes that impact voting. The Court was sharply critical of the “federalism costs” imposed upon the covered jurisdictions. It avoided the constitutional question by applying the federal law in a way that allowed the utility district to “bail out” from pre-clearance requirements under section 5.

In each of these cases, the Court sided with states in federalism disputes with the federal government.

Q: Will the Health Care Freedom Act affect future state legislation regarding health insurance?

A: Yes. If it is passed as a constitutional amendment, it would prevent any future legislation that infringes upon the rights protected by the amendment.

Q: Won't this be really expensive for the states to defend in court?

A: The Goldwater Institute has offered to defend the constitutionality of the Health Care Freedom Act at no cost to any state. Because legal challenges would involve purely constitutional issues and would not require expensive trials, to the extent that states become involved in litigation, they should be able to do so within existing Attorney General litigation budgets. Moreover, depending on the details of national health insurance legislation, the cost of federal mandates is likely to far exceed the cost of litigation.

Q: Even if the states and individuals did not prevail in a challenge to intrusive federal health insurance legislation, would there be reasons to support the Health Care Freedom Act?

A: Yes. First, if these rights are given additional protection under state constitutions, they will create an absolute barrier to future state legislation that violates those rights. Moreover, efforts to enact the Health Care Freedom Act send a powerful message to our nation's capitol that people at the grassroots take these rights very seriously and intend to protect them.

Q: Does the Health Care Freedom Act impair drug laws?

A: Absolutely not. It protects the right to purchase or provide "lawful" medical services. It does not limit the power of any government to determine what constitutes lawful medical services.

Q: Does the Health Care Freedom Act affect the issue of abortion?

A: No. Again, to the extent that states may regulate abortion under applicable constitutional doctrine and state or federal law, this measure would not alter that power in any way. The Health Care Freedom Act does, however, prevent the government from forcing individuals into health care systems against their will, and matters of conscience may influence such individual decisions.

Q: Does the Health Care Freedom Act affect Veterans' Administration programs, workers' compensation, Medicare, Medicaid, or state health-care systems?

A: Generally, no. The Health Care Freedom Act leaves intact any rules and regulations that were in place as of January 1, 2009. The only way such programs could be affected is if they are changed in the future in ways that violate the freedom of choice protected by the Health Care Freedom Act.

Q: Will this restrict the government from limiting the choice of providers or imposing other limits for the people who do opt-in to a government health care system?

A: No and yes, respectively. If a person voluntarily joins a government health care system, the government may set the terms and conditions, including choice of providers. However, the government cannot prevent a person from purchasing, or a health care professional from providing, lawful medical services outside that system.

Q: Is the Health Care Freedom Act supported financially by insurance companies?

A: No. Many insurance companies support an individual mandate (requiring individuals to buy health insurance or face government fines), which the Health Care Freedom Act would prohibit. An individual mandate guarantees a customer base to the insurance industry. It is present in some legislative proposals as a means to subsidize health insurance for others. If insurance companies play a role in the battle over the Health Care Freedom Act, we expect they will oppose it, possibly with significant resources.

Q: Are there other ways in which freedom advocates can use state constitutions to protect their liberties?

A: Absolutely. State constitutions are full of provisions unknown to the U.S. Constitution that are designed to protect individual liberty and limit the power of government, such as the line-item veto, anti-monopoly provisions, prohibitions against corporate subsidies ("gift clauses"), constraints against earmarks ("special law clauses"), and the like. Citizens and legislatures can amend their state constitutions to add additional protections; and taxpayers can enforce their state constitutional rights in state courts. State constitutions were intended to be the first line of defense in protecting the freedoms of the people. As the power of government grows at every level, we need to use whatever tools are available to us to safeguard our rights. For more on how state constitutions can protect liberty, see the recent Goldwater Institute report, "**50 Bright Stars: An Assessment of Each State's Constitutional Commitment to Limited Government.**"

by Brion McClanahan

When Idaho Governor C.L. “Butch” Otter signed HO391 into law on 17 March 2010, the “national” news media circled the wagons and began another assault on State sovereignty. The bill required the Idaho attorney general to sue the federal government over insurance mandates in the event national healthcare legislation passed. The lead AP reporter on the [story](#), John Miller, quoted constitutional “scholar” David Freeman Engstrom of Stanford Law School as stating that the Idaho law would be irrelevant because of the “supremacy clause” of the United States Constitution.

In his words, “That language is clear that federal law is supreme over state law, so it really doesn’t matter what a state legislature says on this.” Now that Barack Obama has signed healthcare legislation into law, almost a dozen States have filed suit against the federal government, with Idaho in the lead. Battle lines have been drawn. Unfortunately, the question of State sovereignty and the true meaning of the “supremacy clause” may be swallowed up in the ensuing debate.

Engstrom’s opinion is held by a majority of constitutional law “scholars,” but he is far from correct, and Idaho and the thirty seven other States considering similar legislation have a strong case based on the original intent of the powers of the federal government vis-à-vis the States.

The so-called “supremacy clause” of the Constitution, found in Article 6, states, “This Constitution, and the Laws of the United States *which shall be made in Pursuance thereof*; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding [emphasis added].”

The key, of course, is the italicized phrase. All laws made in pursuance of the Constitution, or those clearly enumerated in the document, were supreme, State laws notwithstanding. In other words, the federal government was supreme in all items clearly listed in the document.

A quick reading of the Constitution illustrates that national healthcare is not one of the enumerated powers of the federal government, so obviously Engstrom’s blanket and simplistic statement is blatantly incorrect, but his distortion of the supremacy clause goes further.

The inclusion of such a clause in the Constitution was first debated at the Constitutional Convention on 31 May 1787. In Edmund Randolph’s initial proposal, called the Virginia Plan, the “national” legislature had the ability to “legislate in all cases to which the separate states are incompetent...” and “to negative all laws passed by the several states contravening, in the opinion of the national legislature, the Articles of Union...” John Rutledge, Pierce Butler, and Charles Pinckney of South Carolina challenged the word “incompetent” and demanded that Randolph define the term. Butler thought that the delegates “were running into an extreme, in taking away the powers of the states...” through such language.

Randolph replied that he “disclaimed any intention to give indefinite powers to the national legislature, declaring that he was entirely opposed to such an inroad on the state jurisdictions, and that he did not think any considerations whatever could ever change his determination [emphasis added].” James Madison, the author of the Virginia Plan, was not as forthcoming as to his sentiment. Ultimately, Madison preferred a negative over State law and wished the national legislature to be supreme in all cases. But he was not in the majority.

The Convention again broached a federal negative on State law on 8 June 1787. Charles Pinckney, who presented a draft of a constitution shortly after Randolph offered the Virginia Plan, believed a national negative necessary to the security of the Union, and Madison, using imagery from the solar system and equating the sun to the national government, argued that without a national negative, the States “will continually fly out of their proper orbits, and destroy the order and harmony of the political system.” Such symbolism made for a beautiful picture, but it belied reality.

To most of the assembled delegates, the national government was not the center of the political universe and the States retained their sovereignty. Hugh Williamson of North Carolina emphatically stated he “was against giving a power that might restrain the states from regulating their internal police.”

Elbridge Gerry of Massachusetts was against an unlimited negative, and Gunning Bedford of Delaware believed a national negative was simply intended “to strip the small states of their equal right of suffrage.” He asked, “Will not these large states crush the small ones, whenever they stand in the way of their ambitious or interested views?”

When the negative power was put to a vote, seven States voted against it and three for it, with Delaware divided (and Virginia only in the affirmative by one vote). Roger Sherman of Connecticut summarized the sentiment of the majority when he stated he “thought the cases in which the negative ought to be exercised might be defined.” Since the negative did not pass, such a definition was unnecessary.

Thus, the federal government was supreme only in its enumerated powers and it did not have a negative over State law. Supremacy had limits.

By the time the Constitution was debated in the several State ratifying conventions in 1787 and 1788, the “supremacy clause” galvanized opponents of the document. The Constitution, they said, would destroy the States and render them impotent in their internal affairs. The response from *proponents* of ratification illuminates the true intent of the clause. William Davie, a delegate to the Constitutional Convention from North Carolina and proponent of the Constitution, responded to attacks levied on the “supremacy clause” by stating that:

This Constitution, *as to the powers therein granted*, is constantly to be the supreme law of the land. Every power ceded by it must be executed without being counteracted by the laws or constitutions of the individual states. *Gentlemen should distinguish that it is not the supreme law in the exercise of power not granted. It can be supreme only in cases consistent with the powers specially granted, and not in usurpations* [emphasis added].

Davie wasn't alone in this opinion. Future Supreme Court justice James Iredell of North Carolina argued that, “This clause [the supremacy clause] is supposed to give too much power, when, in fact, it only provides for the execution of those powers which *are already given in the foregoing articles*... If Congress, under pretence of executing one power, should, in fact, usurp another, they will violate the Constitution [emphasis added].”

Furthermore, in a foreshadowing of nullification, Iredell argued that, "It appears to me merely a general clause, the amount of which is that, when they [Congress] pass an act, if it be in the execution of a power given by the Constitution, it shall be binding on the people, *otherwise not* [emphasis added]. Other ratifying conventions had similar debates, and proponents of the Constitution continually reassured wavering supporters that the Constitution would only be supreme within its delegated authority.

Most bought their assurances, though to staunch opponents, the Constitution still vested too much power in the central authority. The States would lose their sovereignty, they argued, and as a result, these men demanded an amendment to the Constitution that expressly maintained the sovereignty of the States and placed limits on federal power. Even several moderate supporters of the Constitution embraced this idea.

Ultimately, the three most powerful States in the Union, New York, Massachusetts, and Virginia, demanded that a bill of rights be immediately added to the Constitution; near the top of those recommended amendments on every list, a State sovereignty resolution. These ultimately became the Tenth Amendment to the Constitution, which reads, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Clearly the intent of this amendment was to mitigate any design the federal government had on enlarging its powers through the "supremacy clause." If the power was not enumerated in the Constitution and the States were not prohibited by the Constitution from exercising said power, then that power was reserved to the States.

Several other constitutional "scholars" have weighed in on the debate in the last week, and each has invoked the "supremacy clause" to defend their opposition to State action against healthcare. Duke Law Professor Neil Siegel went so far as to suggest that the States are not reading the Tenth Amendment correctly. In perhaps the most outlandish statement of the debate, he also said, "Any talk of nullification bothers me because it's talk of lawlessness."

I guess Mr. Siegel has failed to consider that Idaho bill HO391 was passed by a legitimate legislative body elected by the people of the State. That would make it lawful.

Of course, this debate ultimately boils down to loose interpretation verses strict construction. Thomas Jefferson had the best line on this issue. When asked to read between the lines to "find" implied powers, Jefferson responded that he had done that, and he "found only blank space."

The original intent of both the "supremacy clause" and the Tenth Amendment indicate that Idaho and the other States challenging Obamacare are justified and correct and that the legal profession is either in the tank for the federal government or has not read either the debates of the Constitutional Convention and/or the State ratifying debates. This should make people like Engstrom and Siegel, rather than legitimate State law directed at unconstitutional authority, irrelevant.

Brion McClanahan holds a Ph.D in American history from the University of South Carolina and is the author of The Politically Incorrect Guide to the Founding Fathers (Regnery, 2009).

State Legislatures to Challenge Health Care Law

In addition to constitutional challenges to the law, legislators in at least 36 states are attempting to limit, alter or oppose some of its provisions through state constitutional amendments or laws, according to the National Conference of State Legislatures.

Many of the proposals seek to keep health insurance coverage optional for individuals and exempt employers from penalties if they don't offer coverage for workers.

Earlier this month, Virginia and Idaho became the first states to enact laws specifically stating that health insurance coverage is not required.

Still, many legal experts say these legislative efforts will ultimately be trumped by the so-called supremacy clause in the U.S. Constitution, which says federal laws "shall be the supreme law of the land."

"State law cannot nullify federal law," Timothy Stoltzfus Jost, a health law expert at Washington and Lee University School of Law, writes in the New England Journal of Medicine.

"This principle is simply beyond debate, and state legislators, many of them lawyers, know that. The purpose of these laws, therefore, is not legal but rather political

Indiana joins 13 states to challenge health reform

13 other states raise constitutional questions about the new legislation

By Bill Ruthhart

Posted: March 30, 2010

Indiana became the 14th state Monday to challenge the constitutionality of the federal health-care legislation, but legal experts warned the lawsuit faces an uphill climb against previous court rulings.

After reviewing the sweeping health-care reforms, Indiana Attorney General Greg Zoeller announced he would join a lawsuit already filed jointly by 13 other attorneys general in a Florida federal court.

At the core of Zoeller's decision to join the suit is the charge that Congress does not have the power to force Americans to buy health insurance coverage or require them to pay a fine if they fail to do so.

"It's really critical that we have these questions asked and answered," he said, "so that the Supreme Court's final word as to whether the new reach of the federal government in this statute meets constitutional muster."

Zoeller also argued that the new reforms impinge on states' sovereignty by requiring states to set up health insurance exchanges for their residents to purchase coverage.

Democrats immediately accused Zoeller of playing politics. Of the 13 other attorneys general who have joined the lawsuit, 12 are Republicans.

"This is purely politics, nothing but," said Indiana Democratic Party Chairman Dan Parker. "The legal argument is weak, the political argument is weak. It's all based on false information, and the opponents of this couldn't stop it, so they're grasping at straws and this is the final straw to grasp."

Zoeller's announcement came after Gov. Mitch Daniels said Friday he had encouraged Zoeller to join the suit, even though Daniels said he was skeptical of

INDYSTAR★COM

its chances for success. The attorney general said Monday he made the decision based on the case's merits and independent from any political input.

"It's unfortunate that the entire subject matter has been politicized," Zoeller said, "but that was done in Washington before we ever joined (the lawsuit)."

Parker declared the suit a waste of taxpayer dollars.

Zoeller said he could not give an estimate of how much the lawsuit would cost but said he has no plans to hire outside counsel. He said the state's initial cost would be its undetermined share of a contract capped at \$50,000 with a Washington, D.C., law firm hired to handle the case.

Indiana Republican Party Chairman Murray Clark said the lawsuit has merit.

"I think it's the right decision," he said. "Clearly, there's some constitutional questions that need to be asked and answered in light of one of the largest federal government overreaches we've seen in a long time."

The key question the lawsuit raises is whether the new law's requirement that all Americans carry health insurance coverage or be forced to pay a penalty should serve as a new test to the Constitution's commerce clause, which gives Congress the power to regulate business.

Over the past several decades -- starting in the 1930s -- constitutional law experts say, the courts and lawmakers have broadly interpreted that clause, giving Congress wide-ranging regulatory power.

Most legal scholars think those precedents would make it difficult for the Supreme Court, or any other, to rule that Congress does not have the power to add the new insurance regulations, said Carl Tobias, a constitutional law expert at the University of Richmond in Virginia.

Furthermore, he said, backers of the bill will defend the prospective fine for those who don't buy insurance under the taxing power that the Constitution gives Congress.

"The precedents all favor constitutionality," Tobias said. "There's nothing exactly the same as this challenge, but the relevant precedents, if

Advertisement

INDYSTAR★COM

you analogize from them, lead you to the conclusion that this challenge won't succeed."

But that's not to say the lawsuit isn't a worthy one, he said.

"I think it might have merit, but I just don't think it's going to win," Tobias said. "I think the best argument is about the individual mandates, but I think a fair number of constitutional scholars, and I agree, think that it's probably going to withstand the challenge."

Charles Rice, a constitutional law expert at the University of Notre Dame, said the case certainly is worth litigating.

"I think it's a legitimate thing to do. The outcome is not certain," Rice said. "It's really interesting, because it brings in precedents from a lot of the cases involving the Social Security Act and things like that, and it could provide the opportunity, if it gets to the Supreme Court, for the case to go either way."

Key to its outcome could be how the American public views the new law in the future, said Gerard Magliocca, a constitutional law professor at Indiana University School of Law-Indianapolis.

"This likely wouldn't be decided for two years, and a lot will depend on what people think of the health-care bill," Magliocca said. "If it's very unpopular, the courts are more likely to find a reason to declare it unconstitutional

than if it turns out to be popular."

Parker, the state Democratic Party chairman, said Zoeller's decision would cost the attorney general in his next election in 2012, when he will have to explain why he fought against a bill that reformed the insurance industry to the benefit of so many Hoosiers. "Greg Zoeller is going to be on the wrong side of history on this one," Parker said.

Zoeller countered that almost everyone agrees the new law has raised fresh constitutional issues that the courts need to resolve.

"There aren't many people who say there isn't a new question here, because this is the first time the federal government has required people to purchase a commercial good, a commercial product," he said. "This is an insurance product that everyone, as a condition of being a citizen of the United States, will be required to purchase under the threat of penalty."

Advertisement

Print Powered By  FormatDynamics

INDYSTAR★COM

In the end, Magliocca said, he gives the lawsuit a 25 percent chance of success.

"There is a plausible argument for saying this is unprecedented," he said. "It has a chance, but I think most everybody, most legal scholars, think it's unlikely this suit will succeed."

HEALTH CARE REFORM: WHO WINS AND WHO LOSES

While the health care bill is not as sweeping as many had once hoped (or others had feared), make no mistake: The new legislation will dramatically change the nation's health care system.

So who wins and who loses? "The people who gain the most are low-income people who do not get health insurance from an employer," says John Goodman, president, CEO and the Kaitie Wright Fellow of the National Center for Policy Analysis. "Just about everybody else loses."

Groups that will especially bear the burden include:

- Generation Y: Most of the 19 million uninsured Americans between the ages of 18 and 34 will be forced to buy coverage -- coverage likely more expensive than they might have otherwise chosen.
- Anyone who earns more than \$200,000: Workers earning more than \$200,000 a year or couples with a combined income over \$250,000 will pay an additional 0.9 percent in federal income tax to help fund Medicaid expansion starting in 2013, and will likely pay a new 3.8 percent Medicare tax on all investment income.
- Individuals with so-called Cadillac health insurance: A 40 percent tax will be levied on plans with premiums of \$10,200 or more per person.

Goodman also notes that "as many as 8.5 million seniors could lose their Medicare Advantage coverage altogether" under government plans to reduce benefits offered under the program.

Advocates of the legislation argue that winners include anyone with a preexisting condition, recent college graduates who can now get coverage through their parents, small businesses who will have access to insurance pools and doctors who will get paid for seeing uninsured patients they were treating for free.

In addition, individuals aged 60 to 64 - the oldest age demographic not eligible for Medicare - will pay no more than three times the cost of the premium paid by a healthy 20-something. But as Goodman notes, "People who are 60 to 64 are going to pay lower premiums than they otherwise would because people who are 20 to 24 are going to pay higher premiums."

8 WAYS THAT HEALTH REFORM WILL AFFECT YOU

The health care legislation could "have an effect on almost every citizen," according to Kaiser Health News. So what should you expect?

Within six months after the bill is signed into law:

- Health insurers will no longer be allowed to impose lifetime caps on coverage.
- Parents who have insurance through their employers will be allowed to continue coverage for their unmarried dependents up to age 26.
- Health insurers will be required to cover certain preventive services like osteoporosis screening for women over 65, smoking cessation counseling and interventions, and screenings for diabetes and sexually transmitted diseases.
- And later this year, people with serious health conditions that have prevented them from obtaining coverage will be eligible to purchase a policy from a high-risk pool in a government-subsidized exchange at a cost similar to healthy individuals' premiums.

Individuals will also be required to obtain health insurance or face a fine. Government subsidies will be available on a sliding scale for people making up to \$43,000 per year (or nearly \$90,000 per year for a family of four), but those who don't qualify for government subsidies should expect to pay about \$5,000 a year for a policy on the exchange, while families should expect to pay about \$15,000, says John Goodman, president, CEO and Kellye Wright Fellow of the National Center for Policy Analysis.

The penalty starts in 2014 at \$95 or up to 1 percent of income for individuals, whichever is greater, and rises to \$695 by 2016 or 2.5 percent of income, whichever is greater. Families pay heftier fines - \$2,085 or 2.5 percent of income by 2016.

Other changes:

- Insurers won't be able to deny coverage based on preexisting conditions.
- Maternity support will be increased for women in the workplace.
- Additional, less expensive insurance options will be available when you lose or quit your job.

Increasing the number of insured individuals, however, will also mean longer waits to see a new doctor. In Massachusetts, for example, where health insurance is universal, Boston residents have to wait about twice as long to see a doctor as people in any other U.S. city, says Goodman.

20 WAYS OBAMACARE WILL TAKE AWAY OUR FREEDOMS

It is worthwhile to take a comprehensive look at the freedoms we will lose under ObamaCare, says blogger David Hogberg. Among them:

- You are young and don't want health insurance? You are starting up a small business and need to minimize expenses, and one way to do that is to forgo health insurance? Tough. You have to pay \$750 annually for the "privilege." (Section 1501).
- You are young and healthy and want to pay for insurance that reflects that status? Tough. You'll have to pay for premiums that cover not only you, but also the guy who smokes three packs a day, drinks a gallon of whiskey and eats chicken fat off the floor. That's because insurance companies will no longer be able to underwrite on the basis of a person's health status. (Section 2701).
- You're a single guy without children? Tough, your policy must cover pediatric services. You're a woman who can't have children? Tough, your policy must cover maternity services. You're a teetotaler? Tough, your policy must cover substance abuse treatment. (Add your own violation of personal freedom here.) (Section 1302).
- You are an employer in the small-group insurance market and you'd like to offer policies with deductibles higher than \$2,000 for individuals and \$4,000 for families? Tough. (Section 1302 (c) (2) (A)).
- If you are a physician and you don't want the government looking over your shoulder? Tough. The Secretary of Health and Human Services is authorized to use your claims data to issue reports that measure the resources you use, provide information on the quality of care you provide, and compare the resources you use to those used by other physicians. Of course, this will all be just for informational purposes. It's not like the government will ever use it to intervene in your practice and patients' care. Of course not. (Section 3003 (i)).
- You will have to pay an additional 0.5 percent payroll tax on any dollar you make over \$250,000 if you file a joint return and \$200,000 if you file an individual return. What? You think you know how to spend the money you earned better than the government? Tough. (Section 9015). That amount will rise to a 3.8 percent tax in 2013 and will also apply to investment income, estates, and trusts. You think you know how to spend the money you earned better than the government? Like you need to ask. (Section 1402).

PETITION DEMANDING ALASKA JOIN IN LEGAL ACTION TO REPEAL HEALTH CARE BILL

With the passage of the Health Care Reform Bill, America is teetering toward tyranny. A mandate requiring all individuals to purchase health insurance is an unprecedented form of federal action. A legal challenge by the States appears to be the only hope of protecting the American people from this unprecedented attack on our system of government.

At least fifteen states are instituting legal action to challenge the constitutionality of the health care reform bill. Alaska should take its place in this list of States and join in the legal fight.

By signing this petition you are demanding the Governor and Attorney General join in the legal action to repeal the Health Care Bill.

PETITION DEMANDING ALASKA JOIN IN LEGAL ACTION TO REPEAL HEALTH CARE BILL

With the passage of the Health Care Reform Bill, America is teetering toward tyranny. A mandate requiring all individuals to purchase health insurance is an unprecedented form of federal action

A legal challenge by the States appears to be the only hope of protecting the American people from this unprecedented attack on our system of government.

At least fifteen states are instituting legal action to challenge the constitutionality of the health care reform bill. Alaska should take its place in this list of States and join in the legal fight.

By signing this petition you are demanding the Governor and Attorney General join in the legal action to repeal the Health Care Bill.

PETITION DEMANDING ALASKA JOIN IN LEGAL ACTION TO REPEAL HEALTH CARE BILL

With the passage of the Health Care Reform Bill, America is teetering toward tyranny. A mandate requiring all individuals to purchase health insurance is an unprecedented form of federal action.

A legal challenge by the States appears to be the only hope of protecting the American people from this unprecedented attack on our system of government.

At least fifteen states are instituting legal action to challenge the constitutionality of the health care reform bill. Alaska should take its place in this list of States and join in the legal fight.

By signing this petition you are demanding the Governor and Attorney General join in the legal action to repeal the Health Care Bill.

PETITION DEMANDING ALASKA JOIN IN LEGAL ACTION TO REPEAL HEALTH CARE BILL

With the passage of the Health Care Reform Bill, America is teetering toward tyranny. A mandate requiring all individuals to purchase health insurance is an unprecedented form of federal action.

A legal challenge by the States appears to be the only hope of protecting the American people from this unprecedented attack on our system of government.

At least fifteen states are instituting legal action to challenge the constitutionality of the health care reform bill. Alaska should take its place in this list of States and join in the legal fight.

By signing this petition you are demanding the Governor and Attorney General join in the legal action to repeal the Health Care Bill.

PETITION DEMANDING ALASKA JOIN IN LEGAL ACTION TO REPEAL HEALTH CARE BILL

With the passage of the Health Care Reform Bill, America is teetering toward tyranny. A mandate requiring all individuals to purchase health insurance is an unprecedented form of federal action

A legal challenge by the States appears to be the only hope of protecting the American people from this unprecedented attack on our system of government.

At least fifteen states are instituting legal action to challenge the constitutionality of the health care reform bill. Alaska should take its place in this list of States and join in the legal fight.

By signing this petition you are demanding the Governor and Attorney General join in the legal action to repeal the Health Care Bill.

**CS FOR HOUSE JOINT RESOLUTION NO. 10(HSS)
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION**

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:

Referred:

Sponsor(s): REPRESENTATIVES GUTTENBERG, Kawasaki, Salmon, Kerttula, Gruenberg, Cissna, Lynn

A RESOLUTION

1 **Urging the United States Congress to improve health care for veterans.**

2 **BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

3 **WHEREAS** the Veterans Health Administration in the United States Department of
4 Veterans Affairs, the gateway to veterans' health care, is backlogged because of inadequate
5 resources; and

6 **WHEREAS** the Partnership for Veterans Health Care Budget Reform is composed of
7 the American Legion, AMVETS, Blinded Veterans Association, Disabled American
8 Veterans, Jewish War Veterans, Military Order of the Purple Heart, Paralyzed Veterans of
9 America, Veterans of Foreign Wars, and Vietnam Veterans of America; and

10 **WHEREAS** the Partnership for Veterans Health Care Budget Reform has found the
11 current funding mechanism for veterans' health care to be unreliable and vulnerable to
12 political posturing, cost cutting, and budget gimmickry; and

13 **WHEREAS** the number of veterans increases every day as members of the military
14 return from overseas and re-enter civilian life; and

15 **WHEREAS** the medical needs of returning veterans, especially those suffering from
16 traumatic brain injury, post-traumatic stress syndrome, and other combat-related

1 psychological injuries, must be met; and

2 **WHEREAS** the Veterans Affairs Healthcare System facility in Anchorage, the
3 Veterans Affairs Community-based Outpatient Clinics at Fort Wainwright and in Kenai, and
4 the soon to open facilities in the Matanuska-Susitna Borough, Juneau, and Homer provide
5 outpatient services for Alaska's veterans; and

6 **WHEREAS** the Veterans Health Care Budget Reform and Transparency Act of 2009,
7 introduced in the 111th Congress, allows for a two-fiscal-year budget authority for veterans'
8 health care programs and requires the Comptroller General of the United States to conduct a
9 study on the adequacy and accuracy of baseline model projections for veterans' health care
10 expenditures of the United States Department of Veterans Affairs; and

11 **WHEREAS** the Partnership for Veterans Health Care Budget Reform endorses the
12 Veterans Health Care Budget Reform and Transparency Act of 2009;

13 **WHEREAS** veterans of the United States-led wars in Afghanistan and Iraq are
14 entitled to five years of health care without charge from the United States Department of
15 Veterans Affairs regardless of the priority group to which they are assigned, but are
16 reimbursed for the cost of traveling to access that care only if they meet the eligibility criteria
17 in the travel regulations of the United States Department of Veterans Affairs; and

18 **WHEREAS** United States Senator Lisa Murkowski conducted a hearing under the
19 auspices of the Senate Committee on Indian Affairs in November 2007 which established that
20 veterans of the wars in Afghanistan and Iraq who live in rural Alaska have limited, or no
21 access to their earned United States Department of Veterans Affairs health benefits and that
22 the Alaska Native health system and Community Health Centers, which are severely under
23 funded, are providing care to these veterans without reimbursement from the United States
24 Department of Veterans Affairs at the expense of the Native health system's and Community
25 Health Centers' primary missions; and

26 **WHEREAS** the Secretary of Veterans Affairs "CARES Decision" states, "Medical
27 care is a key component of the benefits and services enacted by Congress in recognition of the
28 service, and sometimes the sacrifice, of the men and women whose military service preserved
29 and protected America's freedoms."; and

30 **WHEREAS** in written testimony to the United States House Committee on Veterans
31 Affairs, Andy Behrman, Rural Health Policy chair of the National Rural Health Association,

1 asserted that "The disproportionate numbers of rural Americans serving in the military has
2 created a disproportionate need for veterans' care in rural areas and yet rural areas are less
3 likely to have VA services available to them," that "time and distance prevent many rural
4 veterans from getting their healthcare benefits through a VHA facility," and that other
5 approaches are "readily available in the VA system and in the rural health landscape that
6 could improve this situation"; and

7 **WHEREAS** the written testimony of the National Rural Health Association also
8 stresses the problem that "Federally Qualified Community Health Centers (CHCs) serve
9 millions of rural Americans, but most veterans cannot use their VA health benefits to receive
10 care at these CHCs" because a "national policy advocating VHA-CHC collaboration has not
11 emerged in an effective way"; and

12 **WHEREAS** the written testimony of the National Rural Health Association
13 emphasizes that a "limited number of collaborations between the VHA and CHCs already
14 exist and have proven to be prudent and cost-effective solutions to serving eligible veterans in
15 remote areas" and that this "model of collaboration between VHA and CHCs might do well in
16 other rural states and with other rural providers and systems of care and should be
17 implemented further"; and

18 **WHEREAS** a report written by David R. Selig, Chief Executive Officer of the
19 Community Care Network of Virginia, provides a concrete proposal of collaboration between
20 community health centers and the United States Department of Veterans Affairs by
21 suggesting that community health centers "serve as a vehicle for increasing access to primary
22 care for Veterans" and presents a model where community health centers "function as a
23 Community Based Outpatient Clinics (CBOCs) as defined by the Department of Veterans
24 Affairs"; and

25 **WHEREAS** the existing Community Health Centers and tribal health organizations
26 infrastructure in Alaska should be used to its full potential to provide access to cost-effective,
27 quality care for Alaska Veterans whether through a Community Based Outpatient Clinic
28 arrangement, a network arrangement, or individual arrangements with individual Community
29 Health Centers or tribal clinics; and

30 **WHEREAS** Community Health Centers and tribal health organizations provide
31 comprehensive primary care and mental health and substance abuse services to medically

1 underserved areas and populations, including veterans who do not reside near a VA health
2 care facility;

3 **BE IT RESOLVED** that the Alaska State Legislature urges the United States
4 Congress to provide adequate funding and resources to enable the Veterans Health
5 Administration to properly care for the health care needs of all veterans by adopting a method
6 similar to that proposed in the Veterans Health Care Budget Reform and Transparency Act of
7 2009; and be it

8 **FURTHER RESOLVED** that the Alaska State Legislature urges the United States
9 Congress to provide the United States Department of Veterans Affairs with sufficient, timely,
10 and predictable funding for veterans' health care programs; and be it

11 **FURTHER RESOLVED** that the Alaska State Legislature urges the United States
12 Congress to ensure that health care services follow veterans to where they live and work so
13 that veterans are not obligated to search for the veterans' services to which they are entitled;
14 and be it

15 **FURTHER RESOLVED** that the Alaska State Legislature urges the United States
16 Congress to increase funding for research into traumatic brain injuries; and be it

17 **FURTHER RESOLVED** that the Alaska State Legislature urges the United States
18 Congress to encourage the Veterans Health Administration to improve its electronic claims
19 filing process and its ability to use information contained in military records; and be it

20 **FURTHER RESOLVED** that the Alaska State Legislature supports federal and state
21 funding and other efforts to ensure that veterans across the state have access to quality health
22 care at Community Health Centers, community mental health centers, substance abuse
23 treatment centers, tribal health organizations, and other appropriate local providers in the
24 outlying areas where the United States Veterans Administration does not have clinics.

25 **COPIES** of this resolution shall be sent to the Honorable Barack Obama, President of
26 the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and
27 President of the U.S. Senate; the Honorable Robert C. Byrd, President Pro Tempore of the
28 U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the
29 Honorable Daniel Akaka, Chair of the U.S. Senate Committee on Veterans' Affairs; the
30 Honorable Bob Filner, Chair of the U.S. House Committee on Veterans' Affairs; the
31 Honorable Eric K. Shinseki, United States Secretary of Veterans Affairs; the Honorable

1 Michael B. Donley, United States Secretary of the Air Force; the Honorable Pete Geren,
2 United States Secretary of the Army; and the Honorable Lisa Murkowski and the Honorable
3 Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of
4 the Alaska delegation in Congress.

Representative David Guttenberg

“A Resolution urging the United States Congress to improve health care for veterans”

The United States government has a responsibility to all veterans for their service to our state and nation. HJR- 10 urges the United State Congress to live up to that responsibility by providing veterans with adequate and improved health care. Alaska has the highest per capita population of veterans in the nation.

The Partnership for Veterans Health Care Budget Reform (a non profit whose mission is to support sufficient, timely and predictable funding for veteran health care) has found the current funding mechanism for veterans' health care to be unreliable and vulnerable to political posturing, cost cutting, and budget gimmickry. Our veterans deserve better than that. Along with the increasing number of veterans is the increasing number of traumatic brain injury and combat-related psychological injuries.

Without a streamlined and comprehensive health care system, veterans are being denied the health care they are entitled to. This house joint resolution seeks to establish the voice of the 26th Alaska State Legislature in favor of better health care reform for all veterans.

FAX: (907) 465-1398

February 23, 2009

The Honorable Carl Gatto
House Military and Veterans' Affairs
Alaska State Capitol, Room 108
Juneau, Alaska 99801-1182

Subject: Support for HJR 10

Dear Chair Gatto:

The Alaska Commission on Aging (ACoA) encourages support for HJR 10 sponsored by Representative Guttenberg, Representative Kawasaki, Representative Salmon, Representative Kerttula, Representative Gruenberg, and Representative Cissna that encourages the United States Congress to improve health care and access for veterans. ACoA supports this resolution and its intent for Congress to provide sufficient, timely, and stable funding for veterans' health programs and to improve service delivery.

Health care is a key benefit of the services provided to persons who served in the armed forces. The number of veterans returning from military duty, in addition to veterans who are aging, is increasing along with the associated health care expenses. Although Alaska has the highest per capita population of veterans in the nation, our state remains as one of three states in the nation without a veterans' hospital that provides acute care inpatient services.

Moreover, Alaskan veterans come from all areas of the state. Veteran clinic facilities are located only in Anchorage, Fairbanks, Juneau, and Kenai. If a veteran lives outside of these areas and his/her medical condition is not 51% or more service-related, that individual is responsible for paying their own travel expenses. The Commission on Aging supports the Resolution's recommendation of a special "Heroes Health Card" to provide veterans access to health care in communities where they live, including those without veteran clinic facilities, by coordinating care provided by local medical providers and community health care facilities with care provided by military doctors and medical facilities.

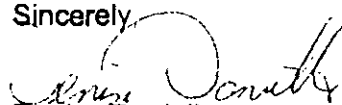

ACoA supports HJR 10 and believes that veterans who served our country deserve decent health care. It is our responsibility and obligation to provide quality and accessible health care for veterans who joined the armed forces to serve and protect our nation. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello,

February 10, 2009

Representative David Guttenberg
Alaska State Capitol, Room 418
Juneau, Alaska 99801

Re: Support for HJR 10

Representative Guttenberg:

The Advisory Board on Alcohol and Drug Abuse and the Alaska Mental Health Board appreciate your recognition of our nation's responsibility to our returning veterans and military service members. We support HJR 10 calling for a comprehensive national response to our service members' health care needs and offer our assistance in helping to pass this important resolution.

We respectfully recommend the inclusion of a specific provision to address the behavioral health needs of veterans and returning service members. We also recommend specifically including tribal health organizations as an important resource in the coordination of care for returning service members, since many Alaskan veterans return to rural communities served exclusively by tribal health organizations. We also would strongly recommend that any expansion of veterans' health care services be carefully constructed so as not to result in a reduction of services already being provided to veterans with service-connected disabilities.

We respectfully offer the following language to be considered as a possible amendment to the resolution:

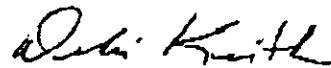

27 **FURTHER RESOLVED** that the Alaska State Legislature encourages the United
28 States Department of Veterans Affairs to create a special health pass or "heroes health card"
29 to provide veterans with health care in local communities by coordinating care provided by
30 local doctors, [and] community health care facilities, community mental health centers and
31 substance abuse treatment centers, and tribal health organizations with care provided by
32 military doctors and medical facilities.

We appreciate your advocacy on behalf of our military service members and look forward to working with you on this issue.

Sincerely,

Lonnie Walters, Chair
ABADA

The Honorable Bob Herron
 The Honorable Wes Keller
 House Health and Social Services
 Alaska State Capitol, Rooms 415 and 13
 Juneau, Alaska 99801-1182

Subject: Support for CSHJR 10 (MLV)

Dear Chair Herron and Chair Keller:

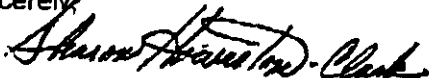

The Alaska Commission on Aging (ACoA) supports CSHJR 10 sponsored by Representative Guttenberg, Representative Kawasaki, Representative Salmon, Representative Kerttula, Representative Gruenberg, Representative Lynn, and Representative Cissna. ACoA concurs with this resolution and its petition to Congress to improve health care and access for veterans by providing sufficient, timely, and stable funding for their health programs and enhanced service delivery.

Health care is a key benefit of the services provided to persons who served in the armed forces. The number of veterans returning from military duty, in addition to veterans who are aging, is increasing along with the associated health care expenses.

Alaskan veterans come from all areas of the state. Veteran clinic facilities are located only in Anchorage, Fairbanks, Juneau, and Kenai. If a veteran lives outside of these areas and his/her medical condition is not 51% or more service-related, that individual is responsible for paying their own travel expenses. The Commission on Aging supports the Resolution's recommendation of a special "Heroes Health Card" to provide veterans access to quality health care in communities where they live, including those without veteran clinic facilities, by coordinating care provided by local medical providers, community health care facilities, mental health centers, substance abuse treatment centers, tribal health organizations, and other appropriate providers with care provided by military doctors and medical facilities. In addition, ACoA supports the Resolution's request for Congress to increase funding for research into traumatic brain injuries and to improve its electronic claims filing process.

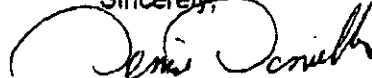

ACoA supports CSHJR 10 and believes that veterans who served our country deserve decent health care where they live. It is our responsibility and obligation to provide quality and accessible health care for veterans who joined the armed forces to serve and protect our nation. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark
 Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello,
 ACoA Executive Director

February 24, 2009

Re: Support of HJR 10 *Veterans' Health Care*

Dear (H)MVA Chair, Representative Gatto,

The Alaska Primary Care Association (APCA) works to promote primary care access for all Alaskans and is strongly in support of HJR 10 *Veterans' Health Care*. Many of the veterans in Alaska reside in medically underserved areas; with the current funding levels and criteria for VA sponsored health care, many of our Alaskan veterans do not have adequate primary care access. When the medical condition is not service-related and does not exceed a certain degree of disability, these veterans in outlying areas have primarily three choices: 1) cover their own expenses to fly in to Anchorage or Fairbanks to access VA care; 2) go without care; or 3) access services at a non-VA clinic, very likely to be one of the 141 Community Health Center (CHC) sites in the state.

For those veterans who opt for the third choice above, often, the CHC does not receive reimbursement because the veteran did not file the necessary paperwork in advance. The CHC typically eats the cost. The APCA is working at this time with the Alaska VA Health Care System to increase access for all the veterans who live in areas outside of the vicinity of the VA clinics, including all the veterans who have gone without but need care and all those who have had limited care because of the cost of travel.

It is very important that Congress adequately fund VA health care so that veterans from every corner of Alaska have appropriate access – all veterans, those returning from the current conflict with pressing issues as well as those who served previously and are experiencing increasing health care needs as they age. The APCA urges congress to utilize the CHC infrastructure across Alaska rather than duplicate services by establishing new VA clinics where there is already a CHC.

The Alaska Primary Care adamantly supports HJR 10 and appreciates the Alaska State Legislature working to promote health care access for veterans throughout the state by passing this important resolution in order to communicate this priority to the U.S. Congress.

Alaska State Capitol, Room 418
Juneau, Alaska 99801

Re: Support for CSHJR 10

Representative Guttenberg:

The Advisory Board on Alcohol and Drug Abuse and the Alaska Mental Health Board appreciate your recognition of our nation's responsibility to our returning veterans and military service members. We support CSHJR 10 calling for a comprehensive response to our service members' health care needs, including the behavioral health needs of veterans and returning service members.

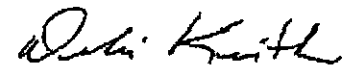

We support expanded cooperation between the Veteran's Administration and Alaska's community health care providers to increase access for returning veterans with service-connected disabilities. Many veterans are returning to rural communities. The most effective and efficient way for them to access needed health care is through community mental health centers, substance abuse treatment centers, community health centers, and tribal health organizations. By expanding partnerships between the Veteran's Administration and local health care providers, we can insure that veterans with service-connected disabilities receive the health care they need as close to home as possible.

We appreciate your advocacy on behalf of our military service members and look forward to continuing work with you on this issue.

Sincerely,

March 6, 2009

Re: Support of CSHJR 10 (MLV) *Veterans' Health Care*

Dear (H)HSS Co-Chairs Keller and Herron and Members of the House Health & Social Services Committee,

The Alaska Primary Care Association (APCA) works to promote primary care access for all Alaskans and is strongly in support of CSHJR 10 (MLV) *Veterans' Health Care*. Many of the veterans in Alaska reside in outlying areas where they are unable to access VA health care facilities. When their medical conditions are not service-related and do not meet certain criteria, these veterans in outlying areas have three choices: 1) cover their own expenses to travel to access VA care; 2) go without care; or 3) access services at a non-VA clinic, very likely to be one of the 141 Community Health Center (CHC) sites in the state.

For those veterans who opt for the third choice above, often, the CHC does not receive reimbursement because the veteran did not file the necessary paperwork in advance. The CHC typically eats the cost. Although the APCA has been working with the Alaska VA Health Care System to increase access for all the veterans who live outside the vicinity of the VA clinics, little progress has been made due to federal barriers within the VA system. Currently, veterans cannot readily use their VA health benefits to receive care at CHCs because a national policy advocating VA-CHC collaboration has not emerged in an effective way. CSHJR 10 (MLV) would encourage such collaboration.

The APCA urges the VA system to utilize the CHC infrastructure across Alaska rather than duplicate services by establishing new VA clinics where CHCs already exist. CHCs are well-positioned to provide access to cost-effective, quality care for Alaska's veterans whether through a CBOC arrangement, a network arrangement, or individual arrangements with individual CHCs

Lastly, it is very important that Congress adequately fund VA health care so that veterans from every corner of Alaska have access – all veterans, those returning from the current conflict with pressing issues as well as those who served previously and have increasing health care needs as they age.

The Alaska Primary Care adamantly supports CSHJR 10 (MLV) *Veterans' Health Care* and appreciates the Alaska State Legislature working to promote health care access for veterans throughout the state by passing this important resolution in order to communicate this priority to the U.S. Congress.

**The Honorable Carl Gatto
House Military and Veterans Affairs
Alaska State Capitol, Room 108
Juneau, AK 99801-1182**

Subject: Support for HRJ 10.

Dear Chairman Gatto, and other sponsors/supporters of HJR 10.

The MOPH, Department of Alaska, is in full support of HJR 10 and its intent to provide the best health care available to our veterans. Those who answered the call to defend our country have fully earned the right to have the country be there for them in their time of need.

As the current military conflict continues there will be an ongoing need to care for those who will stand among others who served previously. It is only fair for our nation to provide the care and assistance that our veterans have rightfully earned. Reasonable access to that health care is equally important, especially to those who suffer the most and often need special assistance just to get to the location providing that health care. While many veterans are fortunate to be able to drive to and walk to the point of health care assistance, it is important to not forget about those who need wheel chairs or other special assistance. The need to reach out to provide adequate care can be stated like this "LET NO VETERAN BE LEFT BEHIND" and that responsibility falls on the system charged with providing the health care that has already been paid for by our nations veterans.

HRJ 10 is a commendable approach in proving that Alaska truly cares about its veteran population. As such HRJ 10 has the support of the MOPH, Department of Alaska.

Jill Hodges
Alaska Brain Injury Network
3745 Community Park Loop #140
Anchorage, Alaska 99501
March 6, 2009

Representative David Guttenberg
Alaska State Legislature
State Capitol Building
Juneau, Alaska 99801

Dear Representative Guttenberg:

Thank you for your continued concern for returning service members in Alaska, as well as traumatic brain injury research. The Alaska Brain Injury Network supports HJR 10 – Veterans Health Care.

The Alaska Brain Injury Network is a non-profit 501 (c) 3 whose mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for survivors of traumatic brain injury and their families.

ABIN supports the need for traumatic brain injury research; yet also requests the committees take into consideration equal access to rehabilitation and ongoing support programs for all Alaskans with cognitive disabilities.

Recent studies show at least 20% of service members will return from war with a traumatic brain injury. Additionally, there are 800 Alaskans each year hospitalized for more than 24 hours with a moderate to severe traumatic brain injury (Alaska Trauma Registry). There is an estimated 3000 Alaskans that visit the Emergency Department each year (CDC). Falls, motor vehicle crashes, assault, ATV/Snowmachine and bicycle crashes are the leading causes of traumatic brain injury in Alaska. The Alaska Brain Injury Network, "10 Year Plan for TBI in Alaska" highlights the many recommendations needed to provide information and referral, case management, acute and post-acute rehabilitation, educational supports, vocational supports, and long-term care to all Alaskans with brain injuries. (http://www.alaskabraininjury.org/documents_akbrain/10%20Year%20TBI%20Plan.pdf)

It is important to understand brain injury affects Civilians and Military Members alike. The health care issue is a matter of access, as well as availability of services locally and payment for those serves. Currently the Alaska VA Health Systems and the Department of Defense, 3rd Medical Unit are developing TBI clinics, polytrauma clinics and brain injury rehabilitation and ongoing support services which will benefit both active duty and veterans; however these programs are being built with little coordination among the state and community providers. At the same time Alaska community providers are planning the development of brain injury residential programs because currently there are civilians who are not receiving the care they need to recover and/or

best learn to live with their cognitive disability. Alaska does not have the workforce to operate three separate brain injury service delivery systems (including the Tribal system).

ABIN Activities Promoting Coordination among Military, State, Tribal, and Community

ABIN has been meeting with military partners since October 2007 for the purposes of determining the impact of returning service members with brain injuries and the impact it will have on state and community providers and resources. Participants have included 3rd medical unit, Elmendorf, TBI Clinic; Alaska VA Health Systems Polytrauma and Neuropsychology program; National Guard; Service and Family Assistance Center-Warrior Transition Battalion; Marines; Vet Center representatives; and Alaska Federal Health Care Partnership. We have learned that we can share outreach and awareness resources, but with program planning and implementation there has been little collaboration.

Potential Challenges

It is important to recognize how service members with brain injury may have challenges without the proper services and supports and are at risk for additional brain injuries. Highest rates of brain injury in civilians are among rural Alaskans and Alaska Natives. Many national guardsmen/women live in rural Alaska. A risk factor for a brain injury is history of brain injury; i.e. A national guardsperson is in an IED blast in Afghanistan. He/she returns to Alaska and may have challenges with balance, memory, attention, etc. He is riding his snowmachine and crashes, no helmet or maybe even with a helmet, he sustains an additional brain injury. There is potential for an influx of brain injuries in the next 5-20 years; a coordinated TBI prevention program and service delivery system would benefit all Alaskans.

Recommendations

The leadership and collaboration among State Government, Tribal Systems, Military and Veterans, and Community Providers is key to developing appropriate, timely, and coordinated brain injury services in Alaska.

If we do not have the essential brain injury awareness and treatment in Alaska

- Alaskans are at risk for bankruptcy, homelessness, divorce, or institutional care.
- This impacts State and local behavioral health, corrections, and educational systems greatly.

The Alaska Brain Injury Network encourages coordination in planning and implementation of brain injury programs in-state, as well as a state funding source to support the payment of brain injury rehabilitation and long-term care for both military and civilians.

The Alaska Brain Injury Network supports HJR 10-Veterans Health Care. We also support collaboration efforts in the planning and implementation of the services that are needed in both rural and urban Alaska to support veterans and civilians.

Sincerely,

Jill Hodges

SPONSOR STATEMENT

HJR 35 – HEALTHCARE FREEDOM ACT

“Proposing amendments to the Constitution of the State of Alaska prohibiting passage of laws that interfere with direct payments for health care services and the right to purchase health care insurance from a privately owned company, and that compel a person to participate in a health care system.”

HJR 35 would give Alaskans the opportunity to vote on a Constitutional Amendment prohibiting the passage of laws that would force any person or employer to participate in a particular health care system or plan. Similar measures are under consideration in 35 states.

The Health Care Freedom Act seeks to protect two essential rights. First, it would protect a person’s right to participate or not in any health care system, and it would prohibit the government from imposing fines or penalties because of that person’s decision. Second, it would protect the right of an individual to purchase – and the right of doctors to provide – lawful medical services without government fines or penalties. HJR 35 would place these essential rights in the state constitution.

Few Alaskans question the need for effective health care reform to improve access, quality and affordability while ensuring that personal health care is patient-driven. Advocates of a larger government role in regulating and providing health insurance and care support forcing individuals to join a government-approved health insurance plan, whether or not they want it, can afford it, or it best meets their personal needs. But the overwhelming majority of Alaskans oppose this mandate.

If the federal government adopts nationalized health care and a significant block of states change their constitutions to protect their citizens, a legal clash may well be winnable for the states. This United States Supreme Court may just be in the mood to protect individual liberty and state sovereignty in such a private matter as personal health care.

MEMORANDUM

DATE: February 8, 2010
TO: Representative Kelly
FROM: Derek Miller
RE: Sectional Analysis for HJR 35
(26-LS1063\R)

A sectional summary of a bill should not be considered an authoritative interpretation of the bill. The bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1.

Proposes to amend Article 1, Section 15 of the State of Alaska Constitution by inserting **(a)** before the clause.

Section 2.

Proposes to amend Article 1, Section 15 of the State of Alaska Constitution by inserting a new section that would prohibit the passage of laws that prohibit a person or penalize a person for making direct payments to a health care provider for tendering health care services or prohibit or penalize the purchase of health care insurance from a privately owned health care insurance company. The section also prohibits the passage of laws that compel a person, employer, or health care provider to participate in a health care system or that penalizes a person, employer, or health care provider for declining to participate in a health care system. The section exempts a health care system that provides indemnity and medical benefits to injured workers.

Section 3.

Places the amendments proposed by this resolution before the voters of the state at the next general election in conformity with Article 13, Section 1 of the Constitution of the State of Alaska and the election laws of the state.

MEMORANDUM

DATE: February 15, 2010

TO: Representative Mike Kelly

FROM: Derek Miller

RE: Answers to Questions @ 2/9/10 HESS Hearing

-
- 1) **Does HJR 35 prevent the State of Alaska from initiating a new tier to the state retirement system? How would this constitutional amendment impact future changes to the current State of Alaska retirement system?**

This resolution does NOT prevent the State from initiating a new tier to the state retirement system. Changes can be made to the retirement system as long as those changes aren't a mandate on individuals or employers to purchase insurance. The state would also be prohibited from passing laws that penalize or fine individuals or employers from choosing not to purchase coverage.

- 2) **Does this resolution prevent the federal government from making changes to Medicare, Tricare, Indian Health Services, etc...?**

This resolution does NOT preclude the federal government from doing anything. Individuals would still have the option to participate in the federal health insurance program. This act simply protects a person's right not to participate.

- 3) **How does this legislation address the problems the HESS committee has looked at? Example: Access, quality, affordability? Are there any fixes in the bill?**
HJR 35 prevents a one-size-fits-all universal coverage system. Alaska legislators must work on a targeted set of policy solutions to cover the uninsured and there are reforms that will advance this goal, along with HJR 35.
- 4) **Does this bind future legislatures from adopting the program the federal government comes up with?**
Yes, if that program includes mandating individuals and employers to purchase insurance or penalizes individuals for choosing not to purchase insurance. Individuals however, would still have the option to participate in the program.
- 5) **Does this amendment prevent the state from implementing a plan if it penalized employees and employers for not purchasing health insurance?**
Yes.

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

ALEC

ISSUE ALERT

To: Alaska ALEC Members
From: ALEC's Health and Human Services Task Force
Re: Alaska House Joint Resolution 35
Date: February 9, 2010

It has come to our attention that Alaska Joint Resolution 35 will be heard by the House Health and Social Services Committee today. HJR 35 would preserve in the Alaska Constitution the right of patients to make their own health care choices, and is modeled after ALEC's own *Freedom of Choice in Health Care Act*. In total, 36 states have either filed, prefiled, or have announced their intentions to file this legislation.

ALEC applauds HJR 35 and urges all Alaska ALEC members to consider the following key points about this legislation:

HJR 35 Ensures Access to Health Services—Without Waiting Lists

Single-payer systems, like in Canada, make it illegal for citizens to go outside of the government's health care plan and contract for their own medical services. HJR 35 would make this fundamental provision of single-payer health care unconstitutional. Citizens should have the right to pay directly for health care services with their own money. When government controls the dollars, they make treatment decisions based on what is best for government, not what is best for the patient.

HJR 35 Stops Health Mandates That Don't Work

It is important for people to have health insurance coverage, but a government requirement to purchase health insurance is ineffective, bureaucratic, and costly. In Massachusetts, a state that has imposed an individual and employer mandate since 2006, more than 1/3 of the uninsured still don't have coverage; health insurance costs 40% more than in the rest of the country; it's harder for the newly-insured to see a doctor; and legislators expect a \$2-4 billion shortfall over the next decade.

An individual mandate would harm patients, and an employer mandate would threaten our fragile economy. HJR 35 would protect Alaska from these threats.

HJR 35 May Help Shield Alaskans from a Federal Individual Mandate

HJR 35 would render any state attempt to require an individual to purchase health insurance—or to forbid an individual from securing medical care outside of the required health care system—unconstitutional. HJR 35 may also cause a federalism clash if Congress passes a law with either of these provisions.

This is a legal battle that has been fought before and won before. ALEC recognizes that the Supremacy Clause renders federal law as the law of the land. However, states may provide stronger protection of individual freedoms than the U.S. Constitution allows, and the federal government has limited recourse in violating those protections. In the case of federal-state conflict, courts must balance the competing interests—and recent Supreme Court cases have upheld the power of states to protect individual freedoms.

Thank you for your attention in this matter. Should you have any questions on HJR 35, please contact the director of ALEC's HHS Task Force, Christie Herrera, at 202-742-8505 or christie@alec.org.

GOLDWATER I N S T I T U T E

The Health Care Freedom Act: Questions & Answers

by Clint Bolick, Litigation Director, Goldwater Institute

The Health Care Freedom Act will appear as a proposed constitutional amendment on Arizona's 2010 election ballot, and similar measures are under consideration in more than 30 other states. With the possibility that Congress will enact some sort of national health insurance legislation, questions are being raised about the scope of the Health Care Freedom Act and its effect should a federal bill become law. In the following pages, Clint Bolick, who helped to author the Health Care Freedom Act, answers frequently asked questions.

Q: What is the Health Care Freedom Act?

A: The Health Care Freedom Act is a proposed amendment to the Arizona Constitution that would preserve certain existing rights that individuals have regarding health care. It was initially proposed by two Arizona physicians, Dr. Eric Novack and Dr. Jeffrey Singer, with drafting assistance from the Goldwater Institute. The measure qualified as a voter initiative on the 2008 ballot, and despite a well-financed opposition campaign, it was defeated by less than one-half of 1 percent of the vote. Changes were made to address concerns raised by the opponents, and the Arizona Legislature voted to refer the revised version to the 2010 ballot.

The American Legislative Exchange Council adopted model legislation based on the Arizona measure, and activists and legislators in at least 35 additional states are pursuing constitutional amendments or statutes based on the Arizona model.

Q: What are the key provisions?

A: Although the precise language varies from state to state, the Health Care Freedom Act seeks to protect two essential rights. First, it protects a person's right to participate or not in any health care system, and prohibits the government from imposing fines or penalties on that person's decision. Second, it protects the right of individuals to purchase—and the right of doctors to provide—lawful medical services without government fine or penalty. The Health Care Freedom Act would place these essential rights in the state constitution (or, in some states, it would protect them by statute).

Q: What motivated the Health Care Freedom Act?

A: No one questions the need for serious health care reform. However, the proponents of the Health Care Freedom Act believe that regardless of how such reform is fashioned, either at the state or federal level, the essential rights protected by the Health Care Freedom Act should be preserved. Many advocates of a larger government role in regulating or providing health insurance support a mandate that would compel individuals to join a government-approved health insurance plan, whether or not they can afford it and whether or not the system best fits their needs. In some countries in which government plays a large role in providing health insurance, medical services are rationed and individuals are prevented or discouraged from obtaining otherwise lawful medical services. Supporters of the Health Care Freedom Act have a variety of perspectives on the form that health care reform should take. But they agree that no matter what legislation is passed, it should not take from Americans their precious right to control their own medical affairs.

Q: By what authority can states pass the Health Care Freedom Act?

A: It is well-established that the U.S. Constitution provides a baseline for the protection of individual rights, and that state constitutions may provide additional protections—and all of them do. For instance, some states provide greater protections of freedom of speech or due process rights. Because the Health Care Freedom Act offers greater protection than the federal constitution, states are allowed to enact it.

Q: Does it matter whether the Health Care Freedom Act is passed as a statute or as a constitutional amendment?

A: A state constitution is the organic law of the state, reflecting the most fundamental values shared by the citizens of the state. Moreover, a state constitutional amendment will ensure the state legislature can never infringe upon the protected rights. So a constitutional amendment is preferable, especially to protect against legislative tinkering. However, for purposes of a federalism defense against excessive federal legislation, it should not matter whether the people of the state have acted through their constitution or by statute.

Q: Does the Health Care Freedom Act attempt to “nullify” federal health insurance legislation?

A: Absolutely not. If federal legislation is enacted, individuals would still have the option to participate in federal health insurance programs. This act simply protects a person’s right not to participate.

Q: To the extent that the Health Care Freedom Act conflicts with provisions of federal legislation, isn't the state law automatically preempted by the Supremacy Clause of the U.S. Constitution?

A: No. In any clash between state and federal provisions, at least four federal constitutional provisions are relevant. The Supremacy Clause establishes the Constitution as the supreme law of the land and provides that federal laws prevail over conflicting state laws where Congress has the legitimate authority to enact the legislation and where it does not impermissibly tread upon state sovereignty. The federal government will have to demonstrate that its legislation legitimately is derived from congressional authority to regulate interstate commerce. It will also have to show the legislation does not violate the 10th Amendment, which reserves to the states all government power not expressly delegated to the national government; and the 11th Amendment, which protects states from being used as mere instrumentalities of the national government. This constitutional construct is known as federalism.

Q: Are certain provisions of proposed federal health care legislation vulnerable to constitutional challenge even without the Health Care Freedom Act?

A: Yes, in at least three ways. First, to the extent that the legislation purports to regulate transactions that do not directly affect interstate commerce, such as mandating insurance for individuals, Congress may lack authority to do so under the Commerce Clause. Several relatively recent decisions by the U.S. Supreme Court have invalidated federal legislation on this basis. In *U.S. v. Lopez* (1995), the Court struck down federal laws that restricted guns in school zones; and in *U.S. v. Morrison*, it struck down a federal statute involving violence against women. In both cases, the Court found the subject matter of the federal laws did not "substantially affect" interstate commerce, so Congress had no power to regulate it under the circumstances presented.

Second, to the extent the legislation interferes with the individual's right to choose health insurance providers, doctors, or lawful medical services, it may violate the right to medical self-determination recognized under the U.S. Constitution. As the Court declared in *Griswold v. Connecticut* (1965), "We have recognized that the special relationship between patient and physician will often be encompassed within the domain of private life protected by the Due Process Clause." Several of the early abortion cases involved what Justice William O. Douglas, concurring in *Doe v. Bolton* (1973), described as the "right to seek advice on one's health and the right to place reliance on the physician of one's choice." Whether or not one agrees with those abortion rulings, they establish a strong basis for challenging certain federal and state intrusions.

Third, several recent decisions have invalidated federal laws that "commandeer" state governments to do their bidding. In *New York v. United States* (1992), for instance, the Court struck down federal rules requiring states to take ownership of certain radioactive waste and to expose themselves to liability. Speaking for the Court, Justice Sandra Day O'Connor ruled that

“no matter how powerful the federal interest involved, the Constitution simply does not give Congress the authority to require the States to regulate.” Tellingly, she added “the Constitution protects us from our own best intentions: It divides power among sovereigns . . . precisely so that we may resist the temptation to concentrate power in one location as an expedient solution to the crisis of the day.” To the extent that federal health insurance legislation forces states to implement its provisions, it could be subject to robust constitutional challenge.

Q: Could the Health Care Freedom Act provide additional protection against federal health insurance legislation that violates protected rights?

A: Yes. Although the federal government usually prevails in federalism clashes, the current U.S. Supreme Court is the most pro-federalism Court in decades. There are no cases precisely on point, but the Court under Chief Justice John Roberts has sided with the states in at least three major recent federalism clashes. In the case most closely on point, *Gonzales v. Oregon* (2006), the Court upheld the state’s “right-to-die” law, which was enacted by Oregon voters, over the objections of the U.S. Attorney General, who argued that federal law pre-empted the state law. Applying “the structure and limitations of federalism,” the Court observed that states have great latitude in regulating health and safety, including medical standards, which are primarily and historically a matter of local concern. Holding that the attorney general’s reading of the federal statute would mark “a radical shift of authority from the States to the Federal Government to define general standards of medical practice in every locality,” the Court interpreted the statute to allow Oregon to protect the rights of its citizens.

Horne v. Flores (2009) considered a measure adopted by Arizona voters to require English immersion as the state’s educational policy for students for whom English is a second language. Lower federal courts had imposed an injunction based on a finding that Arizona was failing to comply with federal bilingual education requirements. The Supreme Court held that injunctions affecting “areas of core state responsibility, such as public education,” should be lifted as quickly as circumstances warrant. It observed that “federalism concerns are heightened when . . . a federal court decree has the effect of dictating state or local budget priorities.” The Court remanded the case to lower courts to reconsider the injunction.

In *Northwest Austin Municipal Utility District No. 1 v. Holder* (2009), the Court examined a challenge to section 5 of the Voting Rights Act, which places certain states and localities in a penalty box, requiring them to obtain “pre-clearance” by the U.S. Department of Justice for any changes that impact voting. The Court was sharply critical of the “federalism costs” imposed upon the covered jurisdictions. It avoided the constitutional question by applying the federal law in a way that allowed the utility district to “bail out” from pre-clearance requirements under section 5.

In each of these cases, the Court sided with states in federalism disputes with the federal government.

Q: Will the Health Care Freedom Act affect future state legislation regarding health insurance?

A: Yes. If it is passed as a constitutional amendment, it would prevent any future legislation that infringes upon the rights protected by the amendment.

Q: Won't this be really expensive for the states to defend in court?

A: The Goldwater Institute has offered to defend the constitutionality of the Health Care Freedom Act at no cost to any state. Because legal challenges would involve purely constitutional issues and would not require expensive trials, to the extent that states become involved in litigation, they should be able to do so within existing Attorney General litigation budgets. Moreover, depending on the details of national health insurance legislation, the cost of federal mandates is likely to far exceed the cost of litigation.

Q: Even if the states and individuals did not prevail in a challenge to intrusive federal health insurance legislation, would there be reasons to support the Health Care Freedom Act?

A: Yes. First, if these rights are given additional protection under state constitutions, they will create an absolute barrier to future state legislation that violates those rights. Moreover, efforts to enact the Health Care Freedom Act send a powerful message to our nation's capitol that people at the grassroots take these rights very seriously and intend to protect them.

Q: Does the Health Care Freedom Act impair drug laws?

A: Absolutely not. It protects the right to purchase or provide "lawful" medical services. It does not limit the power of any government to determine what constitutes lawful medical services.

Q: Does the Health Care Freedom Act affect the issue of abortion?

A: No. Again, to the extent that states may regulate abortion under applicable constitutional doctrine and state or federal law, this measure would not alter that power in any way. The Health Care Freedom Act does, however, prevent the government from forcing individuals into health care systems against their will, and matters of conscience may influence such individual decisions.

Q: Does the Health Care Freedom Act affect Veterans' Administration programs, workers' compensation, Medicare, Medicaid, or state health-care systems?

A: Generally, no. The Health Care Freedom Act leaves intact any rules and regulations that were in place as of January 1, 2009. The only way such programs could be affected is if they are changed in the future in ways that violate the freedom of choice protected by the Health Care Freedom Act.

Q: Will this restrict the government from limiting the choice of providers or imposing other limits for the people who do opt-in to a government health care system?

A: No and yes, respectively. If a person voluntarily joins a government health care system, the government may set the terms and conditions, including choice of providers. However, the government cannot prevent a person from purchasing, or a health care professional from providing, lawful medical services outside that system.

Q: Is the Health Care Freedom Act supported financially by insurance companies?

A: No. Many insurance companies support an individual mandate (requiring individuals to buy health insurance or face government fines), which the Health Care Freedom Act would prohibit. An individual mandate guarantees a customer base to the insurance industry. It is present in some legislative proposals as a means to subsidize health insurance for others. If insurance companies play a role in the battle over the Health Care Freedom Act, we expect they will oppose it, possibly with significant resources.

Q: Are there other ways in which freedom advocates can use state constitutions to protect their liberties?

A: Absolutely. State constitutions are full of provisions unknown to the U.S. Constitution that are designed to protect individual liberty and limit the power of government, such as the line-item veto, anti-monopoly provisions, prohibitions against corporate subsidies ("gift clauses"), constraints against earmarks ("special law clauses"), and the like. Citizens and legislatures can amend their state constitutions to add additional protections; and taxpayers can enforce their state constitutional rights in state courts. State constitutions were intended to be the first line of defense in protecting the freedoms of the people. As the power of government grows at every level, we need to use whatever tools are available to us to safeguard our rights. For more on how state constitutions can protect liberty, see the recent Goldwater Institute report, "**50 Bright Stars: An Assessment of Each State's Constitutional Commitment to Limited Government.**"

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

ALEC

Questions and Answers: ALEC's *Freedom of Choice in Health Care Act* *For more information, contact Christie Herrera, director of ALEC's Health and Human Services Task Force, at (202) 742-8505 or christie@alec.org.*

Why does my state need the *Freedom of Choice in Health Care Act*?

Efforts in our state capitol, and in Washington, are gaining steam to put complete control over your health care in the hands of government bureaucrats and appointed "experts." Government control means you will have less freedom to make the health care choices that are best for you and your family. The *Freedom of Choice in Health Care Act* will protect your health care freedom from these threats.

What does the *Freedom of Choice in Health Care Act* do?

The *Freedom of Choice in Health Care Act* will preserve and protect your right to make your own health care and health insurance choices. Specifically, it would protect your right to pay directly for medical care, and it would prohibit any individual or employer from being penalized for not purchasing government-defined health insurance.

Why should my state's constitution protect the right of patients to pay directly for medical care?

Single-payer systems, like in Canada, make it illegal for citizens to go outside of the government's health care plan and contract for their own medical services. The *Freedom of Choice in Health Care Act* would make this fundamental provision of Canadian-style, single-payer health care unconstitutional.

Patients should have the right to pay directly for medical services with their own money. When consumers control the dollars, they make the treatment decisions. When the government controls the dollars, they make treatment decisions based on what's best for the government, not what's best for the patient.

The consequences of government making medical decisions are often dire, and sometimes deadly. In New Zealand, breast cancer patients were blocked from accessing the lifesaving drug Herceptin because it cost too much. In Sweden the wait for heart surgery can be as long as 25 weeks. In Canada more than 800,000 patients are currently on waiting lists for medical procedures.

Questions and Answers: ALEC's *Freedom of Choice in Health Care Act*
For more information, contact Christie Herrera at (202) 742-8505 or christie@alec.org

The *Freedom of Choice in Health Care Act* will ensure that patients, not government bureaucrats, decide which doctor to see or what medical treatments to get.

More information about the consequences of single-payer health care can be found in:

* Michael Tanner, "The Grass Is Not Always Greener: A Look at National Health Systems Around the World," Cato Institute Policy Analysis No. 613, March 18, 2008: <http://www.cato.org/pubs/pas/pa-613.pdf>.

* John C. Goodman, Linda Gorman, Devon Herrick, and Robert M. Sade, *Health Care Reform: Do Other Countries Have the Answers?*, National Center for Policy Analysis, March 10, 2009: http://www.ncpa.org/pdfs/sp_Do_Other_Countries_Have_the_Answers.pdf.

* <http://BigGovHealth.org>: A website with "single-payer horror stories" and fact sheets on the U.S. and worldwide infant mortality/life expectancy statistics; whether the U.S. Veterans Administration is a model for health reform; and much more.

Why should my state's constitution block penalties for individuals or employers who don't purchase health insurance?

It is important for people to have health insurance coverage, but a government requirement to purchase health insurance is ineffective, bureaucratic, and costly. The *Freedom of Choice in Health Care Act* would strike at heart of individual and employer mandates—implemented in Massachusetts, Hawaii, and elsewhere—that just don't work.

In Massachusetts—a state that imposed an individual mandate and an employer mandate in 2006—more than 1/3 of their uninsured still don't have coverage; health insurance is 40% more expensive than in the rest of the country; it's getting harder to see a doctor since before "reform" was enacted; and legislators expect a \$2-\$4 billion shortfall over the next decade.

The Massachusetts mandate didn't just affect the uninsured. The Massachusetts government actually told 20% of its already-insured citizens to buy more health insurance, because their existing coverage wasn't "good enough." When the government enforces a requirement for people to buy health insurance, they need to define what "insurance" is. The Cato Institute estimates that a federal individual mandate will force 100 million Americans to drop their existing plans and buy more expensive health insurance that is "good enough" for bureaucrats.

Employer mandates don't yield universal coverage and are harmful for consumers and workers. Hawaii has had a "pay or play" employer mandate for 35 years, and yet the number of uninsured has remained the same because employers shifted jobs to (exempt) part-time employees. And when the government forces businesses to buy health insurance for their

Questions and Answers: ALEC's *Freedom of Choice in Health Care Act*
For more information, contact Christie Herrera at (202) 742-8505 or christie@alec.org

workers, it really means higher taxes and fewer jobs. When businesses face cost increases, they'll pass on those costs in the form of increased prices, job cuts, or wage freezes.

An individual mandate would harm patients, and an employer mandate would threaten our fragile economy. The *Freedom of Choice in Health Care Act* would protect our citizens from these threats.

More information about the consequences of individual and employer mandates can be found in:

* James Sherk and Robert A. Book, "Employer Health Care Mandates: Taxing Low-Income Workers to Pay for Health Care," Heritage Foundation WebMemo No. 2552, July 21, 2009: http://www.heritage.org/Research/HealthCare/upload/wm_2552.pdf.

Does supporting the *Freedom of Choice in Health Care Act* mean that I favor "free riders" who choose to not purchase health insurance and then show up in the emergency room?

Free riders do present a cost-shifting problem as uncompensated care costs are borne by the already-insured—although researchers estimate uncompensated care to be just 2-3% of overall health costs. The Massachusetts data reveal that at best, an individual mandate didn't affect ER visits at all—and at worst, an individual mandate actually increased ER usage by 17%.

The Massachusetts example shows that an individual mandate alone will not decrease ER usage. One Massachusetts survey reported that although the newly-insured had "insurance coverage" on paper, 90% of them did not have access to care from a non-ER provider. Other reports indicate that average wait times to get appointments with doctors in Boston ranged from 21 days for cardiologists to 70 days for obstetrician-gynecologists. And the Massachusetts Medical Society reports that the average wait to see a primary care doctor is 36 days.

Lawmakers cannot artificially create a growing demand for care without other policies (encouraging "minute clinics," enacting medical liability reform to encourage more doctors to practice, loosening scope of practice laws, etc.) to encourage healthcare supply. And those reforms can be achieved without a bureaucratic, ineffective, and costly requirement to

Questions and Answers: ALEC's *Freedom of Choice in Health Care Act*
For more information, contact Christie Herrera at (202) 742-8505 or christie@alec.org

purchase health coverage.

More information about the why an individual mandate won't solve the "free rider" problem can be found in:

* Minna Jung, "What Massachusetts Teaches Us About Emergency Departments and Reform," Robert Wood Johnson Foundation's User's Guide to the Health Reform Galaxy Blog, October 5, 2009: <http://rwjfblogs.typepad.com/healthreform/2009/10/what-massachusetts-teaches-us-about-emergency-departments-and-reform.html>.

* Liz Kowalczyk, "ER Visits, Costs in Massachusetts Climb," *Boston Globe*, April 24, 2009: http://www.boston.com/news/local/massachusetts/articles/2009/04/24/er_visits_costs_in_mass_climb/.

Does the *Freedom of Choice in Health Care Act* only benefit insurance companies?

The *Freedom of Choice in Health Care Act* prohibits the forced purchase of private health insurance plans. This benefits patients, not insurance companies.

How will the *Freedom of Choice in Health Care Act* affect Medicaid, SCHIP, or Medicare?

The *Freedom of Choice in Health Care Act* will not in any way impact the funding of, or functioning of Medicaid, SCHIP, or Medicare. The language "This section does not affect laws or rules in effect as of January 1, 2009" clarifies this matter. Citizens will be free to participate in any safety net program (Medicaid, Medicare, SCHIP) to which they are entitled, as well as participate in any proposed programs (the public option or the national health insurance exchange) as they do today. The *Freedom of Choice in Health Care Act* simply ensures that citizens are not forced into these programs.

Does the *Freedom of Choice in Health Care Act* enable my state to block any kind of federal health reform?

No. The *Freedom of Choice in Health Care Act* would not attempt to block implementation of any federal law as long as the federal law does not require an individual/employer mandate, or forbid patients from paying directly for medical services.

Congress is still debating health reform. Doesn't this solve a problem that doesn't yet exist?

Two hundred and twenty years ago, some founders questioned the need for the Bill of Rights to be included in the U.S. Constitution. Eventually, they realized that the Bill of Rights was essential in protecting the people from a powerful central government. Today, the First through Tenth Amendments preserve our freedoms—and the *Freedom of Choice in Health Care Act* will protect our right to health care freedom in the same way.

Questions and Answers: ALEC's *Freedom of Choice in Health Care Act*
For more information, contact Christie Herrera at (202) 742-8505 or christie@alec.org

But this is more than an issue of federal encroachment. Threats of single-payer health care, or of an individual/employer mandate, also exist at the state level. In 2009, 14 states introduced legislation to enact state-based, single-payer health care. Countless other states have proposed requirements for individuals or employers to purchase health coverage or else pay a fine to the state. The *Freedom of Choice in Health Care Act* would make these state-based assaults on patients' rights unconstitutional.

Does supporting the *Freedom of Choice in Health Care Act* mean that I am against health reform? Doesn't this tie our hands with future reforms?

No. The *Freedom of Choice in Health Care Act* simply states that the cornerstone of any future health care reform must be the preservation and protection of patients' rights.

Governor Sean Parnell
STATE OF ALASKA

January 13, 2010

The Honorable Lisa Murkowski
United States Senate
709 Hart Senate Office Building
Washington, DC 20510

The Honorable Mark Begich
United States Senate
144 Russell Senate Office Building
Washington, DC 20510

The Honorable Don Young
United States Congress
2111 Rayburn House Office Building
Washington, DC 20515

Dear Senators Murkowski and Begich and Congressman Young,

As Congress contemplates final passage of the proposed health care reform legislation, I ask that you consider the concerns raised by my administration on behalf of Alaska's residents. As I have previously communicated to you, both publicly, and through my staff, the current federal proposal does little to address the main health care issues facing Alaskans – cost and access.

The current health care reform legislation before Congress is troubling on several levels. For the many Alaskans currently unable to afford insurance, the proposal, as outlined by Congress, will do nothing but mandate they purchase it, while increasing the insurance premiums. I am particularly concerned with the increase in costs by the pending legislation for Alaska's seniors, families, small businesses, and physicians. Beyond this burden, which is placed squarely on the shoulders of Alaskans, the legislation will put a significant strain on the State of Alaska's General Fund budget.

In addition to the enormous cost Alaskans would face, the proposal does little to address Alaska's health care workforce shortage; requiring individuals to purchase health insurance does not guarantee that people will have access to health care.

Beyond the practical concerns about the benefits of this legislation that I have raised, I am concerned about the constitutionality of forcing Americans to purchase health insurance. As you know, I have directed Alaska's Attorney General to conduct a review of the reform legislation, including this requirement.

So that you are fully aware of the State of Alaska's concerns, I am including two supplementary documents provided to you over the course of the health care reform debate. The first document updates a previously submitted policy review of the healthcare legislation passed by the Senate. The second document provides Alaska's perspective on the so-called "Nebraska Compromise" whereby the cost of

The Honorable Lisa Murkowski
The Honorable Mark Begich
The Honorable Don Young

Page 2

Medicaid expansion in Nebraska will be indefinitely supported by the federal government. As you will note, this expansion will cost Alaskans \$700 million over the first 20-year window of implementation while Nebraskans will not be responsible for paying anything.

Finally, I ask that you consider securing a 100-percent federal Medical Assistance Percentage for services rendered to Native Americans and Alaska Natives outside of Tribal facilities. Such a provision would be advantageous to Alaska and other states with large Native populations. Supporting documents outlining this request have previously been submitted to you.

Thank you for your serious consideration of my concerns regarding the proposed legislation. I look forward to continue to work with you to ensure that Alaskans are treated fairly, and that the health care needs of the citizens of this great state are adequately met.

Sincerely,

Sean Parnell
Governor

Majority Leader
United States Senate
Washington, D.C. 20510

The Honorable Mitch McConnell
Minority Leader
United States Senate
Washington, D.C. 20510

The Honorable Nancy Pelosi
Speaker
U.S. House of Representatives
Washington, D.C. 20515

The Honorable John Boehner
Minority Leader
U.S. House of Representatives
Washington, D.C. 20515

Dear Senator Reid, Senator McConnell, Speaker Pelosi, and Representative Boehner:

As governors, we believe the reform of the health care system can be very beneficial to our nation's economic future and the well-being of our citizens; however, the current health care bills are a lost opportunity to improve the lives of Americans, create a sustainable system of health care and help stabilize both our state and national economies.

Health care reform should be about fixing our broken Medicaid and Medicare systems; instead, the current health care bills entitle 15-20 million more people to Medicaid. While providing health care to low income individuals is important, the net result of this entitlement expansion will be a significant cost shift to those privately insured around the country. According to the Congressional Budget Office (CBO), the unfunded mandate to states and territories is \$25 billion; although many states disagree with that figure. For example, Texas costs are estimated to be \$21 billion over ten years.

The National Association of State Budget Directors (NASBO) has demonstrated states/territories are in no position to comply with the maintenance of effort provisions found in the bills or to accept any increased costs or additional administrative burdens to expand Medicaid. State general fund expenditures have dropped for the second year in a row. The December 2009 survey shows that the budget situation faced by states truly is unprecedented. Many states cannot afford their current share of the Medicaid program, and they will also have to face a funding cliff whenever the stimulus-enhanced FMAP dollars are exhausted. States have already been forced to cut vital services with 30 states cutting education, 29 states cutting Corrections, and 28 states already cutting Medicaid.

Current federal proposals would strip the states of our ability to negotiate Medicaid provider rates, and we believe that states and territories should be allowed to negotiate Medicaid provider rates as found in current law. The pending bills cause states and territories to lose money through the bills' treatment of the prescription drug rebate provisions. States and territories also should not be asked to forego a share of the savings from any new Medicaid rebates collected for the dual eligible population receiving prescription drugs through the Medicare Part D program.

These bills also impose a one-size-fits all federally-designed health insurance exchange and the insurance rating rules tie states' and territories' hands. Health insurance exchanges desired by any state should be state-based and state-designed to ensure maximum state flexibility to design and operate exchange mechanisms that facilitate the purchase of insurance. Utah should not be forced to replicate Massachusetts' exchange, and vice versa. In the same vein, the health insurance rating rules should account for the existing variation in state and territory statutes and the state and territory should retain the authority to provide oversight and adopt tighter rating bands if necessary.

In order to pay for the bills, the legislation cuts Medicare \$571 billion in the House bill and \$466.7 billion in the Senate bill. Also included are far-reaching massive tax increases which will impact American individuals and families at all income levels. From employer mandates and taxes on high-value insurance plans to taxes on both branded and generic drugs and medical devices, these bills are funded, and thereby the bills' costs are lowered, by taking more from taxpayers and reforming the health care system less. In particular, the Senate's \$6.7 billion insurance premium tax will be passed directly to consumers and will impose new costs on Americans who already have coverage. The unfunded mandates to states likely will require many states to necessarily raise taxes, too.

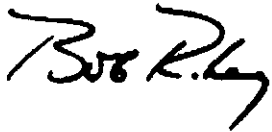

Although CBO has scored the Senate bill at \$842 billion and the House bill at \$1.3 trillion both bills are full of budget gimmicks. The bills delay spending until the fourth year and exclude the costly "Doc Fix" which ignores the over \$200 billion price tag associated with stopping the unavoidable cuts to physicians under the Medicare program.

Governors agree we should work to enhance the quality of health care while making it more affordable and efficient. Unfortunately, the opportunity to truly lower the cost of care has been lost in the rush to try to finish health reform. Both CBO and the Chief Actuary of the Centers for Medicare and Medicaid Services have warned the current legislation will increase the overall costs of health care. The federal government and the states should refocus efforts to lowering the cost of care which will in turn increase coverage, but simply increasing the number of individuals on the public plans without a plan to improve the public programs for participants is irresponsible.

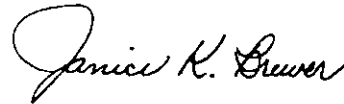

At this juncture, small businesses, seniors, states and territories, and taxpayers have anxiety about Congress' pending health care legislation and rightfully so-- one-sixth of our GDP is at stake. As Republican Governors, we believe in a system which eliminates red tape, empowers consumers to engage in making good health care decisions in the private market, and guarantees affordable coverage for patients with preexisting conditions. Missing from this important legislation is real medical liability reform and provisions which protect seniors' Medicare benefits and access to care. Several states have already implemented medical liability reform with good results; no real medical reform can be accomplished without tort reform. Instead, premiums are increased and small businesses are faced with onerous mandates rather than given the power to pool together and offer health care at lower prices, just as corporations and labor unions do.

Along with the majority of Americans and as leaders of 20 states and territories, we are disappointed with the lack of transparency. We urge you not to circumvent the normal committee process and to conduct an open, fully-bipartisan negotiation. It is time to slow down and pass meaningful health care reform, not hastily prepared partisan legislation which omits reform and saddles American taxpayers for generations to come.

Sincerely,

The Voice of Small Business®

ALASKA

January 19, 2010

The Honorable Mike Kelly
Room 513
State Capitol
Juneau, Alaska 99801-1182

Dear Representative Kelly

RE: HJR 35

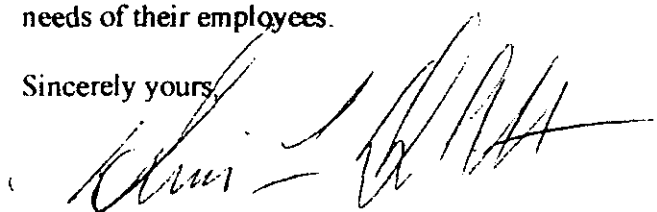

On behalf of the National Federation of Independent Business/Alaska, I wish to express our support for House Joint Resolution 35. The National Federation of Independent Business/Alaska is the largest small-business advocacy group in our state.

HJR 35 provides for placing an amendment to Alaska's Constitution before voters during the next general election making explicit the individual right to health care free choice. The constitutional amendment would prohibit passage of laws that compel any person or employer to participate in a particular health care system. The proposed constitutional change will also permit the purchase of private insurance and allow Alaskans to pay their own health care provider directly.

NFIB/AK is critically concerned about the cost and access to health care for Alaskans. The current versions of health care reform that have passed the U.S. House and U.S. will not address those issues. The mandates they include clearly impose unreasonable burdens on Alaskans and Alaskan businesses. These mandates cannot address the needs of Alaskans.

This proposal will protect Alaskans from the unconstitutional federal mandates to purchase health insurance that may not meet their needs. It will protect small businesses from being taxed for not providing health insurance designed by the federal government that may not meet the needs of their employees.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

To: Members of the Alaska House of Representatives

RE: HJR 35 (Kelly, Keller, Gatto, P. Wilson)—Oppose

On behalf of the members of AARP in Alaska, we encourage you to oppose HJR 35, authored by Representatives Mike Kelly, Wes Keller, Carl Gatto and Peggy Wilson, and co-sponsored by Representatives Tammie Wilson, Bob Lynn, Jay Rainras and Bill Stoltze.

In an attempt to stall or halt health care reform efforts at the national and/or state levels, legislators in several states have introduced legislation or resolutions to limit, alter, or oppose certain state or federal actions, including mandates that would require people to purchase insurance. HJR 35 is one of these.

HJR 35 would keep the purchase of health insurance optional and prohibit the "interference" in an individual's medical services choices.

Let's be honest about what HJR 35 actually is.

This is not just a simple resolution of protest to what Congress passed nor is it a simple political gesture.

HJR 35 seeks to change the Alaska Constitution.

Once we change it, we must live with the unintended consequences for a long time. Amending our state constitution is an inappropriate vehicle to show concern over national health care reform.

If passed, HJR 35 could tie the hands of current legislators as well as future ones. While the resolution's intent is to address a very specific issue of a non-existent federal health care law, if passed it could lead to a constitutional amendment that would be permanent for Alaska. It could block the ability of current and future lawmakers to fully tackle Alaska's health care issues and prevent them from accessing a full array of options.

Can the supporters of HJR 35 tell us what the impact will be?

The language is so vague and will be open to so many interpretations that it can only result in costly litigation for the state.

This movement across the nation in Alaska and other states is designed to create litigation and to challenge the US Constitution's supremacy clause. Supporters openly share this strategy on their various websites.

Our health care should not end up in litigation—that's nobody's idea of freedom of choice.

Congress has passed health care reform and, if we amend our Constitution as HJR 35 intends, it is entirely possible that existing programs could also be jeopardized including Medicaid matching funds and Denali KidCare.

This resolution could also impact the private sector too. It could result in insurance companies raising premiums, deductibles and co-pays—driving up already skyrocketing health care costs for individuals and businesses. Physicians and other providers, including our network of community health centers, hospitals and nursing homes, could lose future Medicaid reimbursement and would find themselves serving even more uninsured patients.

HJR 35 is a risky gamble. It is more than a political gesture to Washington, DC. HJR 35 raises too many unanswered questions and unintended consequences. Why bet Alaska's health care on an unproven idea?

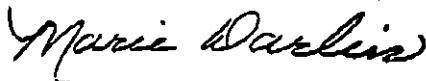

AARP is worked with Congress to ensure that, with the passage of health care reform, the implementation improves the state's ability to deliver health care for its citizens. Health care for our citizens is too important to become a turf war between the state and federal government.

AARP requests an "NAY" vote on HJR 35.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

REPRESENTATIVE MIKE CHENAULT SPEAKER OF THE HOUSE

SPONSOR STATEMENT

HOUSE RESOLUTION 14: *Urging the United States Congress to oppose federal health care reform bills.*

House Resolution 14 requests the Alaska Congressional delegation to vote against current health care reform bills and to develop health care reform that is affordable and accessible to all legal residents. It also requests the Governor to review the constitutionality of the Nebraska Compromise that guaranteed Nebraskans would receive a break to pay for expanded access to Medicaid benefits. This exemption was granted in order to obtain Senator Ben Nelson's vote in order to get the 60 votes needed to send the health care reform legislation to the Senate floor. Vermont, Florida and Louisiana also received special deals in order to get Senators' votes to reach the 60 vote threshold.

As noted in the letter from the Republican Governors Association (RGA), "health care reform should be about fixing our broken Medicaid and Medicare systems; instead, the current health care bills entitle 15-20 million more people to Medicaid....the unfunded mandate to states and territories is \$25 billion."

Also noted by the RGA was the fact that the health care reform bills "impose a one-size fits all federally-designed health insurance exchange." Alaska, as well as the other states, needs the flexibility to design and operate mechanisms to purchase insurance. Alaska and the rest of the states will face increased health care entitlement costs every year if this legislation passes.

The proposed health care reform legislation is also opposed by small businesses around the state and country. NFIB/Alaska states "it fails to address fundamental small business priorities. It does not make health insurance more accessible or affordable to small businesses....this legislation actually increases the overall costs of doing business for small businesses."

A RESOLUTION

1 Urging the Attorney General of Georgia to begin preparations to challenge the
2 constitutionality of H.R. 3590, the federal "Patient Protection and Affordable Care Act"; and
3 for other purposes.

4 WHEREAS, recently, the United States Senate passed H.R. 3590, the "Patient Protection and
5 Affordable Care Act"; and

6 WHEREAS, H.R. 3590 expands citizens' eligibility to receive Medicaid services if they earn
7 less than 133 percent of the federal poverty level; and

8 WHEREAS, in Georgia alone, this expansion of Medicaid is estimated by the Georgia Senate
9 Budget Office to add \$1 billion to state health care entitlement costs every year; and

10 WHEREAS, the impact of H.R. 3590 on Georgians is enormously costly and could be a risk
11 to maintaining many essential state programs; and

12 WHEREAS, in order to obtain the 60 votes required to send the legislation to the Senate
13 floor for a vote and final passage, the United States Senate leadership included an
14 unprecedented special exemption called the Nebraska Compromise to obtain Senator Ben
15 Nelson of Nebraska's key 60th vote to pass the bill; and

16 WHEREAS, the Nebraska Compromise guaranteed Nebraskans that they would never have
17 to pay for their citizens' expanded access to Medicaid benefits included in H.R. 3590; and

18 WHEREAS, the Nebraska Compromise violates the principle that federal legislation must
19 have a legitimate national interest and cannot benefit any one state over another; and

23 WHEREAS, H.R. 3590 also creates a federal mandate requiring all Americans to participate
24 in one national health insurance program; and

25 WHEREAS, this unprecedented Congressional mandate threatens our individual liberty and
26 many legal experts believe that this federal mandate is unconstitutional; and

27 WHEREAS, the members of this body realize that Georgia does not yet have standing to sue
28 until President Obama signs H.R. 3590 into law; however, in light of the questionable
29 validity of this legislation and its potential negative effects on the budget of the State of
30 Georgia, it would be prudent to begin preparations now for a potential legal action
31 challenging this legislation should it become law by completing the necessary legal research
32 and preparing to join with what is reported to be at this time over a dozen other states to
33 challenge the constitutionality of this bill.

34 NOW, THEREFORE, BE IT RESOLVED BY THE SENATE that the members of this body
35 respectfully request the Attorney General of the State of Georgia to initiate a formal
36 investigation into the constitutionality of the special exemption set forth in the United States
37 Senate's version of this national health care legislation and explore the availability of all other
38 legal challenges that Georgia could pursue to oppose this unconstitutional provision as well
39 as research the federal mandated health care provisions in H.R. 3590.

40 BE IT FURTHER RESOLVED that the members of this body ask the Attorney General of
41 Georgia to join with the other state attorneys general who have publicly stated they intend
42 to investigate and collectively and individually sue to challenge the legality of any national
43 health care legislation that contains either the Nebraska Compromise or the federal
44 single-payer mandate.

45 BE IT FURTHER RESOLVED that the members of this body request that the Attorney
46 General of Georgia report to this body regarding how the Attorney General intends to address
47 this constitutionally flawed legislation which will financially harm every Georgian and
48 advise the members of this body when and if the Attorney General intends to sue the federal
49 government on behalf of the people of this state.

HOUSE COMMITTEE REPORT

State Legislation Opposing Certain Health Reforms, 2009-2010

Updated: March 11, 2010 - subject to additions

by: Richard Cauchi, Program Director, NCSL Health Program

States have an extensive and complicated shared power relationship with the federal government in regulating various aspects of the health insurance market and in enacting health reforms.

As part of state-based responses to federal health reform legislation, individual members of at least **36 state legislatures** are using the legislative process to seek to limit, alter or oppose selected state or federal actions, including single-payer provisions and mandates that would require purchase of insurance. In general the measures seek to make or keep health insurance optional, and allow people to purchase any type of coverage they may choose. The individual state language varies.

Constitutional amendments: In 26 of the states, the proposals include a proposed constitutional amendment by ballot question. In a majority of these states, their constitution includes an additional "hurdle" for passage - requiring either a "supermajority of 60% or 67% for passage, or requiring two affirmative votes in two separate years, such as 2010 and 2011.

Changing state law: In 13 states proposed bills would amend state law, not the state constitution. These require a simple majority vote and action by the governor; they also can be re-amended or repealed by a future state law. So far in 2010,

Virginia became the first in the nation to enact a new statute section titled, " Health insurance coverage not required." It became law on March 4, 2010; see [SB 283 and related bills](#) below. NEW

A bill in **Utah** has passed both chambers and was enrolled on March 9; another bill in **Idaho** also passed both chambers and was enrolled on March 9. NEW

Unfunded mandates: New Hampshire has a bill that would prohibit any Medicaid expansion unless paid for by the federal government or approved by the NH Legislature.

Based on actions initially in Arizona, several states propose or may propose state constitutional amendments, using language such as:

"To preserve the freedom of all residents of the state to provide for their own health care... A law or rule shall not compel, directly or indirectly, any person, employer or health care provider to participate in any health care system ... A person or employer may pay directly for lawful health care services and shall not be required to pay penalties or fines for paying directly for lawful health care services..."

[see full text in [Appendix 1](#)]

Arizona voters are scheduled to cast ballots on this constitutional amendment in November 2010. If adopted by voters, it could block future state health reforms and at least raise questions about some features within future federal health reforms.

According to *The New York Times*, "Conservatives and libertarians, mostly, have been advancing the theory lately that the individual mandate, in which the government would compel everyone to buy insurance or pay a penalty, is unconstitutional." (*NY Times*, 9/26/09) A current Massachusetts law, passed in 2006, includes an individual mandate, although it was written to be consistent with both state and federal constitutions. To the extent that congressional proposals provide for state opt-out or opt-in features, these proposals to restrict "reform" could well become more widely discussed.

Arizona Resolution passed, 2009

[Recent News](#) NEW

36 States with 2009-2010 Legislation Opposing Certain Health Reforms (map updated 3/5/10)

As of early March, formal resolutions or bills had been filed in **Alabama, Alaska, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Hampshire, New Jersey, New Mexico, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, South Dakota, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin** and **Wyoming**. Up to three additional states were reported in media or association articles to have discussed future action or intentions; examples are [listed below](#).

Laws: On March 4, 2010 a **Virginia** law passed both Senate and House, was amended by the Governor and became law, becoming the first such statute in the nation.*

Passed bills: None of the other proposals listed have been finally approved; **Arizona's** resolution of June 2009 was the first measure to have passed the legislative process; **Idaho** and **Utah** bills have passed their initial chamber. Constitutional resolutions have advanced through initial steps in **Florida** and **Georgia**.

States with discussions but no known legislation are listed separately; information in the examples list below is based on media statements by individual legislators or legislative associations.^[1]

The issue has garnered state-level interest in part due to the American Legislative Exchange Council's (ALEC) [model "Freedom of Choice in Health Care Act,"](#) which was described as "How Your State Can Block Single-Payer and Protect Patients' Rights." The ALEC-endorsed language mirrors Arizona Proposition 101, which was narrowly defeated in 2008.

Several legal experts have expressed opinions on the validity of this approach. [See [Appendix 2](#) for comment and quotes.]

**Table 1:
Filed Bills and Resolutions for 2009-2010**

Table 1 indicates 1) Activity and status for measures filed;
2) the percentage of affirmative votes in the legislature required for approval;
3) the earliest date that a proposed constitutional amendment can appear on the statewide ballot. Timing and parliamentary steps vary among states.

The Constitutional process:

In 35 states, the legislature can enact a proposed constitutional amendment during a single session. [Appendix 3] This would allow passed measures to appear on the state ballot in 2010 or later. In 12 states the legislature must enact a proposed constitutional amendment during two sessions, which would make 2012 the earliest date for voter decisions.

STATE	ACTIVITY/LEGISLATION	REQUIRED FOR PASSAGE
-------	----------------------	----------------------

<p>Alabama</p>	<p><u>HB 42</u> by Rep. Bentley; <u>HB 47</u> by Rep. Gipson Would propose a constitutional amendment to prohibit any person, employer, or health care provider from being compelled to participate in any health care system. <i>(Prefiled 11/5/09 for 2010 session; sent to Health Committee 1/12/10)</i></p>	<p>60% both legislative chambers + 2010 ballot vote</p>
<p>Alaska <small>NEW</small></p>	<p><u>HJR 35</u> by Rep. Kelly filed for 2010 session Would propose a state constitutional amendment prohibiting passage of laws that interfere with direct payments for health care services and the right to purchase health care insurance from a privately owned company, and that compel a person to participate in a health care system. <i>(Filed & sent to Health & Human Services Comm. 1/19/10)</i></p>	<p>2/3rds both legislative chambers + 2010 ballot vote</p>
<p>Arizona (2009) Arizona (2010) <small>NEW</small></p>	<p><u>Resolution HCR 2014</u> of 2009 by Rep. Barto Refers to the November 2010 ballot a proposed amendment to the State Constitution "which provides that no law or rule shall compel any person or employer to participate in any health care system, a person or employer may pay directly for lawful health care services and shall not be required to pay penalties or fines for doing so, a health care provider may provide directly purchased lawful health care services; prohibits the terms or conditions of a health care system from imposing certain mandates or limitations." <i>[full text in Appendix 1 below]</i> <i>(Filed 1/16/09; passed House 6/11/09; passed Senate 6/22/09) Also see 2008 ballot question history, below.</i></p>	<p>50% both legislative chambers <i>(Passed)</i> 2010 ballot vote</p>
	<p><u>HB 2443</u> by Rep. Burges Would add by state statute the Health Care Freedom of Choice Act requiring Arizona to exercise its option to decline the public health care plan if authorized by the federal government. <i>(Filed and sent to committees 1/26/10)</i></p>	<p>Proposed statute: majority both legislative chambers</p>
<p>Arkansas <small>NEW</small></p>	<p><u>ISP 2009-204</u> by Rep. Glidewell (Interim Study Proposal for 2010 Fiscal Session) Would add a state statute to "ensure freedom of choice in health care" for state residents; "to prevent involuntary enrollments in health care insurance programs" and providing that an "individual or an employer may make direct payment for lawful health care services and shall not be required to pay penalties or fines" for making direct payment for health services. <i>(Filed 12/17/09 for 2010 session)</i></p>	<p>Proposed statute: majority both legislative chambers</p>
<p>California <small>NEW</small></p>	<p><u>SCA 29</u> by Sen. Strickland Would propose a state constitutional amendment prohibiting the effectiveness or enforcement of a state or federal program that (1) requires individuals to obtain health care coverage, (2) requires health care service plans or health insurers to guarantee issue contracts and policies to all applicants, (3) requires employers to either provide health care coverage to their employees or pay a fee or tax to the state or the federal government in lieu thereof, (4) allows an entity created, operated, or subsidized by the government to compete with health care service plans and health insurers in the private sector, or (5) creates a single-payer health care system, unless the program is approved by the electorate by ballot measure. <i>(Filed 2/19/10)</i></p>	<p>2/3rds both legislative chambers + 2010 ballot vote</p>
<p>Colorado <small>NEW</small></p>	<p><u>HJR 10-1009</u> by Rep Acree Resolution stating the intent of the General Assembly, to "Reserve the opportunity and ability of the State of Colorado and its citizens, under the state's and the people's Tenth Amendment rights, to opt out of any obligations due or participation required in any new federal health care legislation. <i>(Filed and sent to committees 2/5/10)</i> A separate citizen initiative application was filed with Secretary of State. See footnote below</p>	<p>50% both legislative chambers</p>
<p>Florida</p>	<p><u>HJR 37</u> (Joint Resolutions filed for 2010) by Rep. Plakon; 39 co-sponsors; <u>SJR 72</u> by Sen Baker.</p>	<p>60% both legislative</p>

	<p>Joint resolutions would propose a State Constitutional amendment to prohibit laws or rules from compelling any person, employer, or health care provider to participate in any health care system; permits person or employer to purchase lawful health care services directly from health care provider, and permits health care providers to accept direct payment from a person or employer for lawful health care services.</p> <p><i>(HJR 37 prefiled 7/27/2009 for 2010 session; SJR 72 prefiled 10/5/09; sent to 3 committees 12/9/09; favorable comm. report 3/4/10)</i></p>	<p>chambers + 2010 ballot vote</p>
<p>Georgia</p>	<p>2010 resolutions: <u>HR 1086</u> by Rep. Calvin Hill; <u>HR 1107</u> by Rep. Mills; <u>SR 794</u> by Sen. Hill; <u>SR 795</u> by Sen. Harp.</p> <p>Would propose an amendment to the Constitution so as to provide that no law or rule or regulation shall compel any person, employer, or health care provider to participate in any health care system and to authorize persons and employers to pay directly for lawful health care services without penalties or fines; would provide for submission of the amendment for ratification or rejection.</p> <p>SR 795 would provide that residents would not be subject to penalties or fine for not having health insurance.</p> <p><i>(Prefiled 11/23/09 for 2010 session; SR 795 favorable report by Senate Judiciary 2/2/10; Senate 2nd Reading 2/3/10)</i> <i>(SR 794 Senate 2nd reading 2/11/10)</i> <u>SR 829</u> and <u>SR 830</u> by Sen. Hill.</p> <p>Resolutions would direct the Attorney General to "initiate a formal investigation into the constitutionality of the special exemption set forth in the United States Senate's version of this national health care legislation and explore the availability of all other legal challenges ." <i>(Filed 1/15/10; Senate Judiciary 2/2/10; Senate 2nd reading 2/11/10)</i></p>	<p>2/3rds both legislative chambers + 2010 ballot vote</p> <p>Resolutions; majority vote</p>
<p>Idaho <small>NEW</small></p>	<p><u>HB 391</u> by State Affairs Comm.</p> <p>Would amend and add to existing law to establish the Idaho Health Freedom Act, stating in part, "that every person within the state of Idaho is and shall be free to choose or decline to choose any mode of securing health care services without penalty or threat of penalty." <i>(Filed 1/19/10; passed House 52y-8n, 2/9/10; amended; passed Senate 24y-10n & enrolled, 3/9/10)</i></p>	<p>Proposed statute: majority both legislative chambers</p>
<p>Indiana (2009)</p> <p>Indiana <small>NEW</small> (2010)</p>	<p><u>SJR 65</u> by Sen. Waltz; <u>SJR 91</u> by Sen. Waltz; <u>SJR 111</u> by Sen. Waltz (Advisory resolutions for 2009)</p> <p>SJR 91: Resolved, "That the Indiana General Assembly must ensure that all residents of Indiana may enter into private contracts with health care providers for health care services and may purchase private coverage for health care services. That the Indiana General Assembly should not require an individual to participate in a health care system or plan or impose on an individual a penalty or fine of any type for choosing to obtain or decline coverage for health care services or participating in a particular health care system or plan." <i>(SR 65 - filed 4/7/09 - did not pass by end of session; SR 91 - filed 4/27/09 - did not pass by end of session; SR 111 - filed 4/28/09 - did not pass by end of session; Indiana does not carry over bills or resolutions to 2010)</i></p> <p><u>SJR 14</u> by Sen. Krause, <u>HR 6</u>; also non binding resolution <u>SCR 10</u></p> <p>Would propose a state constitutional amendment stating, "A person, an employer, or a health care provider shall not be compelled, directly or indirectly, to participate in any health care system. A person or an employer may pay directly for lawful health care services and shall not be subject to penalties or fines for paying directly for lawful health care services. A health care provider may receive direct payment for health care services from a person or an employer and shall not be subject to penalties or fines for accepting direct payment from a person or an employer." <i>(Filed 1/11/10)</i></p>	<p>Non-binding resolutions</p> <p>50% both legislative chambers + 2012 ballot vote</p>

Iowa <small>NEW</small>	<p><u>HJR 2007</u> by Rep. Upmeyer Would propose a state constitutional amendment prohibiting passage of laws that interfere with direct payments for health care services and the right to purchase health care insurance from a privately owned company, and that compel a person to participate in a health care system. <i>(Filed for 2010 session)</i></p>	50% both legislative chambers + 2012 ballot vote
	<p><u>HF 2214</u> by Rep. Upmeyer Would establish by statute that the people of Iowa have the right to enter into contracts with health care providers for health care services and to purchase private health care coverage. In addition, the general assembly cannot require any person to participate in any health care system or plan, or impose any type of penalty or fine on any person for choosing to obtain or declining to obtain health care coverage or for participating or declining to participate in any particular health care system or plan. <i>(Filed 1/26/10; motion to expedite failed 44y-53n, 2/12/10; pending in committee)</i></p>	Proposed statute: majority both legislative chambers
Kansas <small>NEW</small>	<p><u>SCR 1626</u> by Sen. Pilcher-Cook Would propose a state constitutional amendment providing that "A law or rule shall not compel, directly or indirectly, any person, employer or health care provider to participate in any health care system or purchase health insurance." (2) A person or employer may pay directly for lawful health care services and shall not be required to pay penalties or fines for paying directly for lawful health care services. <i>(Filed & sent to committees 2/2/10, 2/17/10)</i></p>	2/3rds both legislative chambers + 2010 ballot vote
Kentucky <small>NEW</small>	<p><u>HB 307</u> by Rep Moore Would prohibit by statute any other law "from requiring any individual to participate in any health care system or plan, or to impose a penalty or fine regarding participation; permit an individual or an employer to pay directly for health care services and a health care provider to accept direct payment without penalties or fines. Also would prohibit the state executive branch from "participating in or complying with any federal law, regulation, or policy that would compromise the freedom of choice in the health care." <i>(Filed 1/21/10; sent to Banking & Insurance Comm. 1/26/10)</i></p>	Proposed statute: majority both legislative chambers
Louisiana <small>NEW</small>	<p><u>SB ___</u> by Sen. Crowe Would prohibit by statute any other law requiring a "person, employer, health care provider to participate" in a health system or insurance system; also would prohibit compelling participation in any health care system or health insurance plan. Would establish a misdemeanor offense and penalty (\$500 or five day in prison) for any state or local official who "attempts to coerce any individual to purchase health insurance." <i>(Measure drafted; to be filed for 2010 session) SA</i></p>	Proposed statute: majority both legislative chambers
Maryland <small>NEW</small>	<p><u>SB 397</u> by Sen. Pitkin Would propose a state constitutional amendment limiting the regulation of health care in the state; prohibiting a law from compelling residents to participate in any health care system; prohibiting residents from being required to pay penalties or fines for not participating in health insurance; specifying that the purchase or sale of specified health insurance may not be prohibited by law; authorizing residents to pay directly or accept direct payment for specified health care services. <i>(Filed and sent to committee 1/29/10)</i></p>	60% both legislative chambers + 2010 ballot vote
Michigan	<p><u>SJR K</u> of 2009 by Sen. Kuipers; <u>HJR CC</u> by Rep. Calley; <u>HJR Z</u> of 2009 by Rep. Amash Would propose a state constitutional amendment "to affirm the right to independent health care." Includes a statement that "a person or employer shall not be required to pay penalties or fines for paying directly for lawful health care services." <i>(Filed 8/1/9/09, 8/29/09 and 9/9/09; pending in Committee on Health Policy; no floor vote in 2009; carried over to 2010)</i></p>	2/3 both legislative chambers + 2010 ballot vote

Minnesota	<p>HF 171 by Rep. Emmer, S_325 by Sen. Koch, S_1282 by Sen. Hann Would propose an amendment to the Minnesota Constitution stating that "no law shall be passed that restricts a person's freedom of choice of private health care systems or private health plans of any type. No law shall interfere with a person's or entity's right to pay directly for lawful medical services, nor shall any law impose a penalty or fine, of any type, for choosing to obtain or decline health care coverage or for participation in any particular health care system or health plan." <i>(Filed 1/22/09, 3/9/09; did not pass committee by end of 2009 session; subject to carryover to 2010)</i></p>	50% both legislative chambers + 2010 ballot vote
Mississippi <small>NEW</small>	<p>HCR 17 by Rep. Monsour Resolution, would propose a constitutional amendment to prohibit laws compelling any person, employer or health care provider to participate in any health care plan. Would provide that a "person or employer may pay directly for lawful health care services and shall not be required to pay penalties or fines for paying directly." <i>(Filed; sent to Committee on Constitution 1/7/10)</i></p>	2/3 both legislative chambers + 2010 ballot vote
Missouri <small>NEW</small>	<p>HJR 48 by Rep. Davis; HJR 50 by Rep. Ervin; HJR 57 by Rep. Jones Ti; SJR 25 by Sen. Cunningham Joint resolutions, would propose a constitutional amendment which would prohibit compelling a person to participate in any health care system. "Upon voter approval, this proposed constitutional amendment prohibits any person, employer, or health care provider from being compelled to participate in any health care system. Individuals and employers may pay directly for lawful health care services, and health care providers can accept payment for health care services from individuals or employers without being subject to fines or penalties. The purchase or sale of health insurance in private health care systems cannot be prohibited by law or rule. <i>(Prefiled 12/1/09 , 12/4/09 & 1/6/10 for 2010 session) 4, 10</i></p>	50% both legislative chambers + 2010 ballot vote
Nebraska <small>NEW</small>	<p>LR 289CA by Sen. McCoy Proposed constitutional amendment stating "no law shall be passed that: (1) Restricts a person's freedom of choice of private health care systems or private health plans of any type; (2) Interferes with a person's or an entity's right to pay directly for lawful medical services; or (3) Imposes a penalty or fine of any type for choosing to obtain or decline health care coverage." <i>(Filed & sent to Health & Human Services Committee 1/13/10)</i></p>	60% both legislative chambers + 2010 ballot vote
New Hampshire <small>NEW</small>	<p>CACR 30 of 2010 by Rep. Renzullo Would propose a state constitutional amendment to establish a right stating, "People may enter into private contracts with health care providers for health care services and to purchase health care coverage." APPENDIX 1 - The Arizona Proposed Constitutional Amendment

House Engrossed
 State of Arizona, House of Representatives
 Forty-ninth Legislature, First Regular Session, 2009

HOUSE CONCURRENT RESOLUTION 2014

A CONCURRENT RESOLUTION

PROPOSING AN AMENDMENT TO THE CONSTITUTION OF ARIZONA; AMENDING ARTICLE XXVII, BY ADDING SECTION 2, CONSTITUTION OF ARIZONA; RELATING TO HEALTH CARE SERVICES.

Be it resolved by the House of Representatives of the State of Arizona, the Senate concurring:

1. Article XXVII, Constitution of Arizona, is proposed to be amended by adding section 2 as follows if approved by the voters and on proclamation of the Governor:

2. Health care; definitions

section 2. A. To preserve the freedom of Arizonans to provide for their health care:

1. A law or rule shall not compel, directly or indirectly, any person, employer or health care provider to participate in any health care system.

2. A person or employer may pay directly for lawful health care services and shall not be required to pay penalties

or fines for paying directly for lawful health care services. A health care provider may accept direct payment for lawful health care services and shall not be required to pay penalties or fines for accepting direct payment from a person or employer for lawful health care services.

B. Subject to reasonable and necessary rules that do not substantially limit a person's options, the purchase or sale of health insurance in private health care systems shall not be prohibited by law or rule.

C. This section does not:

1. Affect which health care services a health care provider or hospital is required to perform or provide.
2. Affect which health care services are permitted by law.
3. Prohibit care provided pursuant to article xviii, section 8 of this constitution or any statutes enacted by the legislature relating to worker's compensation.
4. Affect laws or rules in effect as of January 1, 2009.
5. Affect the terms or conditions of any health care system to the extent that those terms and conditions do not have the effect of punishing a person or employer for paying directly for lawful health care services or a health care provider or hospital for accepting direct payment from a person or employer for lawful health care services.

D. For the purposes of this section:

1. "compel" includes penalties or fines.
2. "direct payment or pay directly" means payment for lawful health care services without a public or private third party, not including an employer, paying for any portion of the service.
3. "health care system" means any public or private entity whose function or purpose is the management of, processing of, enrollment of individuals for or payment for, in full or in part, health care services or health care data or health care information for its participants.
4. "lawful health care services" means any health-related service or treatment to the extent that the service or treatment is permitted or not prohibited by law or regulation that may be provided by persons or businesses otherwise permitted to offer such services .
5. "penalties or fines" means any civil or criminal penalty or fine, tax, salary or wage withholding or surcharge or any named fee with a similar effect established by law or rule by a government established, created or controlled agency that is used to punish or discourage the exercise of rights protected under this section.

2. The article heading of article XXVII, Constitution of Arizona, is proposed to be changed as follows if approved by the voters and on proclamation of the Governor:

The article heading of article XXVII, Constitution of Arizona, is changed from "REGULATION OF PUBLIC HEALTH, SAFETY AND WELFARE" to "REGULATION OF HEALTH, SAFETY AND WELFARE".

3. The Secretary of State shall submit this proposition to the voters at the next general election as provided by article XXI, Constitution of Arizona.

Arizona 2008 History/Action: In 2008, Arizona Proposition 101 appeared on the ballot, referred to by proponents as the "Freedom of Choice in Health Care Act." If it had passed, it would have added the following language to the Arizona Constitution: "Because all people should have the right to make decisions about their health care, no law shall be passed that restricts a person's freedom of choice of private health care systems or private plans of any type. No law shall interfere with a person's or entity's right to pay directly for lawful medical services, nor shall any law impose a penalty or fine, of any type, for choosing to obtain or decline health care coverage or for participation in any particular health care system or plan." Proposition 101 failed to pass by a vote of 1,048,512 in favor and 1,057,199 opposed, a difference of 8,687 votes. Arizona's Proposition 101 language from 2008 has served as the basis for 2009 legislative language drafted by the American Legislative Exchange Council (ALEC).

Arizona Opinions: ALEC article: "Arizona Poised to Block Single-Payer Health Care"
http://www.alec.org/am/pdf/Inside_July09.pdf

The 2009 legislative resolution was approved "along party lines." "I certainly would expect it would go to the courts as a states' rights issue," says Bert Coleman, manager of the Arizona campaign. Coleman adds that proponents of the efforts chose to go through the legislative route rather than a much slower citizen petition (as in 2008) process in order to be part of the ongoing discussion over health reform. "We wanted to be part of the debate now," Coleman stated to Inside Health Policy. "Will it influence the debate? I certainly hope so."

APPENDIX 2: Some Legal and Legislative Opinions on Anti-Reform State Actions

Rep. Nancy Barto, chairwoman of the Arizona House's Health and Human Services Committee, sponsored the bill that led to the ballot referendum. Her basic argument is that "there is no place for government between someone and their doctor," said Becky Blackburn, communications director for the Republican Caucus of the Arizona House of Representatives.

Rep. Linda Upmeyer, Iowa State Representative and the chair of ALEC's Health and Human Services Task Force stated, "Federal health care reform efforts may include a requirement that individuals purchase health insurance, and a so-called 'public option' which will result in less choices for consumers and new government mandates."

Thomas Miller, resident fellow at the American Enterprise Institute, stated that lawsuits are likely to challenge the mandate as an unprecedented violation of inherent individual rights under the U.S. Constitution in enforcing the purchase of a product "with no other reason other than the fact that you are just living in the country. "There's no clear Supreme Court precedent suggesting that this is going to be overturned constitutionally," he said. However, "give me the right five justices and anything's possible. Enforce it in a particularly onerous, all-encompassing, unfair manner and then it's more politically viable for judges to have problems with the way it comes out." [2]

The New York Times cited several legal experts who said "they saw little room for such a challenge:"

Mark A. Hall, professor of law and public health at Wake Forest University, says states don't have the power to override or "opt out" of, or not participate in the mandate. The debate is "a flash in a pan" set off by libertarians who say "Washington, D.C. shouldn't be telling us what to do," he said. "There is no way this challenge will succeed in court," adding that the state measures seemed more "an act of defiance, a form of civil disobedience if you will." [2] Hall has studied the constitutionality of mandates that people buy health insurance, for the O'Neill Institute at Georgetown University.

Timothy Stoltzfus Jost, a health law expert at Washington and Lee University School of Law, concludes that "States can no more nullify a federal law like this than they could nullify the civil rights laws by adopting constitutional amendments." [3, 8]

Randy E. Barnett, a Georgetown law school professor who has written about what he views as legitimate constitutional questions about health insurance mandates, seemed doubtful. "While using federal power to force individuals to buy private insurance raises serious constitutional questions," Professor Barnett said, "I just don't see what these state resolutions add to the constitutional objections to this expansion of federal power." [8]

Ruth Marcus, a legal analyst writing for the Washington Post (November 26, 2009), "Constitution no bar to health reform," seeks to make a detailed case that the latest federal proposals are constitutional. She states,

"Is Congress going through the ordeal of trying to enact health-care reform only to have one of the main pillars -- requiring individuals to obtain insurance -- declared unconstitutional? An interesting debate for a constitutional law seminar. In the real world, not a big worry. ... it's worth explaining where the Constitution grants Congress the authority to impose an individual mandate. There are two short answers: the power to regulate interstate commerce and the power to tax. The (Commerce) clause empowers Congress "to regulate commerce . . . among the several states," which may not sound terribly far-reaching. But since the New Deal, the Supreme Court has interpreted this authority to cover local activities with national implications.

... But the individual mandate is central to the larger effort to reform the insurance market. Congress may not be empowered to order everyone to go shopping to boost the economy. Yet health insurance is so central to health care, and the individual mandate so entwined with the effort to reform the system, that this seems like a different, perhaps unique, case. Congress clearly has authority to, in effect, require employees to purchase health insurance for their old age by imposing a payroll tax to fund Medicare.

The individual mandate is to be administered through the tax code: On their forms, taxpayers will have to submit evidence of adequate insurance or, unless they qualify for a hardship exemption, pay a penalty.

APPENDIX 3: Number of Sessions During Which Legislative Enactment Is Required

In the following 35 states, the legislature enacts a proposed constitutional amendment during only one session.

Alabama	Louisiana	North Dakota
Alaska	Maine	Ohio
Arizona	Maryland	Oklahoma
Arkansas	Michigan	Oregon
California	Minnesota	Rhode Island
Colorado	Mississippi	South Dakota
Florida	Missouri	Texas
Georgia	Montana	Utah
Idaho	Nebraska	Washington
Illinois	New Hampshire	West Virginia
Kansas	New Mexico	Wyoming
Kentucky	North Carolina	

In the following 12 states, the legislature must enact a proposed constitutional amendment during two sessions.

Delaware **	Nevada	Tennessee
Indiana	New York	Vermont
Iowa	Pennsylvania	Virginia
Massachusetts	South Carolina	Wisconsin

** Delaware does not require a public vote once a proposed amendment passes two consecutive sessions by a 2/3 vote.

In the following three states, the vote total determines the number of sessions during which a proposed constitutional amendment must be enacted.

Connecticut

New Jersey

Hawaii

Twenty Republican governors and governors-elect sent a letter to Congressional leaders today urging them to refocus and pass "meaningful health care reform, not hastily prepared partisan legislation which omits reform and saddles American taxpayers for generations to come."

"Governors of both parties have said for months how bad this bill is for the states and our nation," said RGA Chairman Haley Barbour. "Now is the time for leaders in Congress to finally listen and restart this process so they can get health care reform right."

The governors criticized the lack of transparency in the legislative process and called the current health care bills "a lost opportunity to improve the lives of Americans, create a sustainable system of health care and help stabilize both our state and national economies."

The governors highlighted that the House and Senate bills fail to fix the broken Medicaid and Medicare systems and instead entitle 15-20 million more people to Medicaid. The net result of this

expansion “will be a significant cost shift to those privately insured around the country” and will further damage already hurting state budgets.

They also criticized the inflexibility forced upon states in the current bills. The governors write that the current proposals would eliminate the ability of states to negotiate Medicaid provider rates and force the states into a one-size-fits-all, federally-designed health insurance exchange.

Last, the governors urged Congress to take steps to create a system, which “eliminates red tape, empowers consumers to engage in making good health care decisions in the private market, and guarantees affordable coverage for patients with preexisting conditions.”

Full text of the letter can be found below:

Dear Senator Reid, Senator McConnell, Speaker Pelosi, and Representative Boehner:

As governors, we believe the reform of the health care system can be very beneficial to our nation's economic future and the well-being of our citizens; however, the current health care bills are a lost opportunity to improve the lives of Americans, create a sustainable system of health care and help stabilize both our state and national economies.

Health care reform should be about fixing our broken Medicaid and Medicare systems; instead, the current health care bills entitle 15-20 million more people to Medicaid. While providing health care to low income individuals is important, the net result of this entitlement expansion will be a significant cost shift to those privately insured around the country. According to the Congressional Budget Office (CBO), the unfunded mandate to states and territories is \$25 billion; although many states disagree with that figure. For example, Texas costs are estimated to be \$21 billion over ten years.

The National Association of State Budget Directors (NASBO) has demonstrated states/territories are in no position to comply with the maintenance of effort provisions found in the bills or to accept any increased costs or additional administrative burdens to expand Medicaid. State general fund expenditures have dropped for the second year in a row. The December 2009 survey shows that the budget situation faced by states truly is unprecedented. Many states cannot afford their current share of the Medicaid program, and they will also have to face a funding cliff whenever the stimulus-enhanced FMAP dollars are exhausted. States have already been forced to cut vital services with 30 states cutting education, 29 states cutting Corrections, and 28 states already cutting Medicaid.

Current federal proposals would strip the states of our ability to negotiate Medicaid provider rates, and we believe that states and territories should be allowed to negotiate Medicaid provider rates as found in current law. The pending bills cause states and territories to lose money through the bills' treatment of the prescription drug rebate provisions. States and territories also should not be asked to forego a share of the savings from any new Medicaid rebates collected for the dual eligible population receiving prescription drugs through the Medicare Part D program.

These bills also impose a one-size-fits all federally-designed health insurance exchange and the insurance rating rules tie states' and territories' hands. Health insurance exchanges desired by any state should be state-based and state-designed to ensure maximum state flexibility to design and operate exchange mechanisms that facilitate the purchase of insurance. Utah should not be forced to replicate Massachusetts' exchange, and vice versa. In the same vein, the health insurance rating rules should account for the existing variation in state and territory statutes and the state and territory should retain the authority to provide oversight and adopt tighter rating bands if necessary.

In order to pay for the bills, the legislation cuts Medicare \$571 billion in the House bill and \$466.7 billion in the Senate bill. Also included are far-reaching massive tax increases which will impact American individuals and families at all income levels. From employer mandates and taxes on high-value insurance plans to taxes on both branded and generic drugs and medical devices, these bills are funded, and thereby the bills' costs are lowered, by taking more from taxpayers and reforming the health care system less. In particular, the Senate's \$6.7 billion insurance premium tax will be passed directly to consumers and will impose new costs on Americans who already have coverage. The unfunded mandates to states likely will require many states to necessarily raise taxes, too.

Although CBO has scored the Senate bill at \$842 billion and the House bill at \$1.3 trillion both bills are full of budget gimmicks. The bills delay spending until the fourth year and exclude the costly "Doc Fix" which ignores the over \$200 billion price tag associated with stopping the unavoidable cuts to physicians under the Medicare program.

Governors agree we should work to enhance the quality of health care while making it more affordable and efficient. Unfortunately, the opportunity to truly lower the cost of care has been lost in the rush to try to finish health reform. Both CBO and the Chief Actuary of the Centers for Medicare and Medicaid Services have warned the current legislation will increase the overall costs of health care. The federal government and the states should refocus efforts to lowering the cost of care which will in turn increase coverage, but simply increasing the number of individuals on the public plans without a plan to improve the public programs for participants is irresponsible.

At this juncture, small businesses, seniors, states and territories, and taxpayers have anxiety about Congress' pending health care legislation and rightfully so— one-sixth of our GDP is at stake. As Republican Governors, we believe in a system which eliminates red tape, empowers consumers to engage in making good health care decisions in the private market, and guarantees affordable coverage for patients with preexisting conditions. Missing from this important legislation is real medical liability reform and provisions which protect seniors' Medicare benefits and access to care. Several states have already implemented medical liability reform with good results; no real medical reform can be accomplished without tort reform. Instead, premiums are increased and small businesses are faced with onerous mandates rather than given the power to pool together and offer health care at lower prices, just as corporations and labor unions do.

Along with the majority of Americans and as leaders of 20 states and territories, we are disappointed with the lack of transparency. We urge you not to circumvent the normal committee process and to conduct an open, fully-bipartisan negotiation. It is time to slow down and pass meaningful health care reform, not hastily prepared partisan legislation which omits reform and saddles American taxpayers for generations to come.

Sincerely,

Governor Bob Riley, Alabama

Governor Jan Brewer, Arizona

Governor Sean Parnell, Alaska

Governor Charlie Crist, Florida

**U.S. Chamber Poll Shows Alaskans Opposed to
Current Health Care Reform Proposal**

WASHINGTON, D.C.—The U.S. Chamber of Commerce today released a public opinion poll showing that 55% of Alaskans oppose the health care reform plan currently being discussed in Congress while only 31% support it. The poll of 500 registered voters was conducted November 8-10 by Ayres, McHenry & Associates to gauge support for health legislation currently being proposed.

“Polling clearly shows that Alaskans overwhelmingly oppose the current direction of health care legislation,” said Bruce Josten, executive vice president of government affairs at the U.S. Chamber of Commerce. “The Chamber has been a strong advocate for reforms that improve access to quality care and lower costs but, like Alaskans, we are very concerned about the increased costs that would result from the legislation.”

The Chamber commissioned polls in seven key states – Alaska, Arkansas, Indiana, Louisiana, Nebraska, North Carolina, and Virginia – all of which showed voters in those states oppose current legislation, with substantial majorities saying it will increase the federal deficit and raise the cost of their health care.

Highlights of the Alaska poll findings include:

Overall

**Question Wording and State Results for Statewide Surveys on Health Care Reform
November 8-10, 2009**

Results are based on 600 respondents each in AR, IN, LA, NE, NC, and VA (Margin of Error \pm 4.00 percent).

Results are based on 500 respondents in AK (Margin of Error \pm 4.38 percent).

Percentages may not equal 100 percent due to rounding.

Which priority do you think the country should focus on first (ROTATE: improving the quality of health care, lowering the costs of health care, or covering more of the uninsured)?

	AK	AR	IN	LA	NE	NC	VA
Quality	19%	25%	22%	35%	22%	24%	24%
Costs	42%	45%	49%	41%	52%	41%	39%
Uninsured	23%	16%	19%	14%	16%	22%	22%
Don't Know	16%	14%	10%	10%	11%	12%	15%

One of the proposals suggested to address health care reform is to create a "public option," with the federal government selling health insurance. Do you support or oppose a government-run health insurance plan? IF SUPPORT/OPPOSE, ASK: Would that be strongly (support/oppose) or just somewhat (support/oppose)?

	AK	AR	IN	LA	NE	NC	VA
Strongly Support	21%	16%	17%	19%	15%	22%	23%
Somewhat Support	11%	11%	12%	14%	12%	15%	12%
Somewhat Oppose	8%	11%	12%	9%	11%	9%	8%
Strongly Oppose	47%	55%	52%	51%	56%	44%	44%
Don't Know	12%	8%	8%	7%	7%	11%	12%

Thinking about the overall health care reform plan being discussed in Congress, would you say you generally support or oppose that reform plan?

	AK	AR	IN	LA	NE	NC	VA
Support	31%	29%	31%	36%	29%	40%	40%
Oppose	55%	60%	59%	55%	63%	49%	48%
Don't Know	14%	12%	11%	9%	9%	12%	12%

Do you agree or disagree with each of the following statements about health care reform being discussed in Congress? (RANDOMIZE) IF AGREE OR DISAGREE, ASK: Would that be strongly (agree/disagree), or just somewhat (agree/disagree)?

A government-run public option will raise my health care costs.

	AK	AR	IN	LA	NE	NC	VA
Strongly Agree	39%	47%	42%	43%	47%	42%	38%

Don't Know	18%	11%	11%	7%	11%	13%	14%

Methodology

These seven statewide surveys were conducted November 8-10, 2009 by telephone with live interviewers, with 600 respondents in Arkansas, Indiana, Louisiana, Nebraska, North Carolina, and Virginia, and 500 respondents in Alaska. All respondents were selected randomly from a list of registered voters in the state, and confirmed their registration. Quotas were set by race, gender, and geography consistent with previous elections.

The margin of error for responses with an even split – 50 percent for one response and 50 percent for another response – is plus or minus 4.00 percent for 600 respondents and plus or minus 4.38 percent for 500 respondents. The margin of error is smaller when one response receives a higher level of support. For example, the margin of error when 75 percent of respondents choose one response and 25 percent choose another response is plus or minus 3.46 percent for 600 respondents and is plus or minus 3.80 percent for 500 respondents.

Juneau, Alaska 99801-1182

RE: House Resolution 14

Dear Representative Chenault:

On behalf of the National Federation of Independent Business/Alaska, I wish to respectfully share our support for House Resolution 14. The National Federation of Independent Business is the largest small-business advocacy group in Alaska.

NFIB has vigorously opposed the current federal health care reform bill because it fails to address fundamental small business priorities. It does not make health insurance more accessible or affordable for small business. In fact, through new taxes, fees and government regulation, this legislation actually increases the overall costs of doing business for small businesses.

We join you in asking the Alaska Congressional delegation to vote against the current health care reform bills and to develop health care reform that is affordable and accessible to Alaska residents.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

RE: House Resolution 14

Dear Representative Chenault:

On behalf of the National Federation of Independent Business/Alaska, I wish to respectfully share our support for House Resolution 14 opposing current health care bills being considered in the U.S. Congress. The National Federation of Independent Business is the largest small-business advocacy group in Alaska.

No one has a larger stake in this. Small businesses have so much to gain yet so much to lose too. In economic times like these we must tread lightly and always remind our leaders in Washington to continuously check their policies by asking: Will this hurt or harm small business? Thus far, the bills passed hurt, rather than help, small businesses.

NFIB and its members have been constructive participants in the reform debate. We have worked to help our leaders understand the struggles small business owners face owning and operating their business. We have been, and will continue to be, committed to offering real solutions to real small business owners' problems. From pooling ideas to the optional free choice voucher we have pushed to be creative and constructive throughout the process.

The following are highlights of NFIB concerns with the federal bills:

Employer Mandate

Economic research has shown time and again that mandates are a "one-two punch" where the cost is first borne by the employer, but is ultimately paid by the employee – through job loss and lower wages. While we have strong concerns that the employer mandate in the Senate-passed bill will most greatly harm low-wage and entry-level workers, the approach in the House-passed legislation is even worse. A pay-or-play approach tied to payroll tax is exceptionally onerous because profitable *and* unprofitable small employers are forced to pay this tax. In addition, because the exemption thresholds in the House-passed bill are not indexed for inflation, the exemption will become a healthcare equivalent of the alternative minimum tax, hitting more and more employers until there is no one exempted at all.

Small Business Health Insurance Tax

Though small business has repeatedly called for reducing the cost of health insurance, the Senate-passed bill includes a devastating new \$60 billion dollar tax that will fall almost

National Federation of Independent Business – ALASKA

P. O. Box 34761 • Juneau, AK 99803-4761 • 907 723 6667 • www.NFIB.com

exclusively on small business. Today, 87 percent of small business owners purchasing insurance can only buy plans in the fully-insured market. They will actually bear the full weight of this "fee" through premium increases or face the possibility of forgoing insurance altogether. Early estimates indicated that this new tax could increase premiums by nearly \$500 per year for a family of four. Additionally, as a result of the changes made in the Manager's Amendment to the Senate bill, the exemptions to self-insured businesses and certain not-for-profit insurers will further increase those costs. These exemptions, meant to pacify and garner support from big business and to secure votes from specific state delegations, are a devastating blow to the very population the bill was purported to help: small business.

Construction Mandate

The recently-released December 2009 jobs report reinforces what so many in the construction industry already know: job loss is at historic levels. In December, 53,000 of the 85,000 jobs lost were in the construction industry. This narrowly-focused provision singles out one industry and excludes them from the small business exemption. This is an unprecedented assault on the construction industry. Worst of all, this mandate will kill jobs and is nothing more than a political payoff designed to make it easier for big unions to grow their membership rolls. In an industry where the national unemployment rate is exceeding 22 percent, this is NOT the reform our nation's construction industry needs or can afford. We strongly encourage you to support the removal of this arbitrary and onerous provision.

Paperwork Mandate

Both bills enact a new tax-compliance paperwork burden on all small businesses. The "corporate reporting" provision is an expansion on reporting requirements (for transactions of more than \$600), which increases the cost of operating a small business and diverts resources away from growing and creating jobs.

Medicare Payroll Tax

Since its creation, payroll taxes that fund Medicare programs have not been wage-based and have been dedicated specifically to funding Medicare. The Senate-passed bill increases the Medicare payroll tax and uses the additional revenue to pay for non-Medicare programs, creating a dangerous precedent to use payroll taxes to pay for more non-Medicare programs in the future.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

Cc: NFIB/AK Leadership Council
House Health and Social Services Committee

February 24, 2010

The Honorable Harry Reid
Majority Leader
United States Senate
Washington, D.C. 20510

The Honorable Nancy Pelosi
Speaker
U.S. House of Representatives
Washington, D.C. 20510

Dear Leader Reid and Speaker Pelosi:

On behalf of the country's largest, oldest and most respected associations in the small business and self-employed communities, the Small Business Coalition for Affordable Healthcare is writing to reaffirm our dedication to developing responsible solutions that will constrain healthcare costs and improve access to quality, affordable healthcare. As Congress reassesses its role in the healthcare reform discussion, we urge you to listen closely to the input of those on Main Street in towns and cities across the United States of America - our small businesses.

Regardless of political party or philosophical persuasion, there is overwhelming agreement that small business owners and their employees are trapped in a broken insurance marketplace with no choices and high costs. For more than a decade these men and women have been some of the most active and vocal advocates for reform - but not just any reform. They have specifically sought reforms that lower costs, increase competition, and expand choice. While they have expressed opposition to both the House-passed "Affordable Health Care for America Act" (H.R. 3962) and the Senate-passed "Patient Protection and Affordable Care Act" (H.R. 3590), they remain steadfast in their commitment to continue advocating for policy solutions that lower healthcare costs, but do not increase the overall cost of doing business.

America's small business community has supported various incremental reform efforts and has worked to include similar provisions in comprehensive reform proposals. Healthcare reform that improves access to quality, affordable healthcare includes:

- New opportunities for small businesses to pool together and purchase insurance across state lines
- Balanced and responsible insurance market reforms
- Streamlined benefit packages
- Much-needed choices like SIMPLE cafeteria plans
- Tax equity for our nation's self-employed
- Meaningful liability reform

These types of provisions open the door to many potential benefits for small business. However, if the price for these benefits increases the cost of doing business, small businesses will not support the overall legislation. Our small business owners remain deeply concerned that if new taxes, new mandates and new government programs are used to finance healthcare reform, those costs would quickly erase any savings that could have been realized from the reforms outlined above. Simply put, healthcare reform that improves access to quality, affordable healthcare should not include:

- New taxes on small business health insurance

- An employer mandate that encourages job cuts, not job creation, including mandates targeted at specific industries
- Union and big business carve-outs
- Increases in Medicare payroll taxes
- New paperwork burdens and costs for small businesses
- New taxes specifically targeted at the small business community
- Prohibitions on HSAs, FSAs and HRAs that limit employer and employee flexibility and choice

For more than a decade, our nation's entrepreneurs in the small business and self-employed communities have called on Congress to address the most critical problem they face – high healthcare costs. Our small business owners remain focused on finding solutions and the Small Business Coalition for Affordable Healthcare remains a resource to those in Congress committed to advancing policies that make access to quality, affordable healthcare a reality for the men and women who drive the engine of our economy – small business.

CC: Senate Minority Leader Mitch McConnell, House Minority Leader John Boehner

The White House's Web site has a section where you can "find out what health insurance reform would mean for you and your family." It then asks you to pick your situation (e.g. "I am a small business owner") and walks through a Q and A. The answers provided by the president for small businesses don't exhibit what we believe is a fair representation of the facts and real impact on small business owners. Below are the *real* answers you need to know to those questions.

What Will the President's Proposal Mean for You? (and The Real Answers)

Q: Will I be required to provide coverage that I can't afford?

A: President's answer: No.

The real answer: Yes.

Many businesses that have 50 or more workers consider themselves (and run their operations as) small businesses. These businesses will now have to pay a penalty of \$2,000 per worker if they do not offer healthcare coverage and have workers who access the exchanges. This penalty has *nothing* to do with affordability and *everything* to do with punishing businesses for something the government has decided businesses should be forced to provide. Worse, with new mandates like these, what incentive is there for a firm to grow any bigger than 50 employees when it means employers may face such stiff fines? This approach is the exact opposite of a recipe for incentivizing job growth.

Q: Why would it be easier to provide coverage than it is today?

A: President's answer: Reform will provide at least three tangible benefits that will make it easier and cheaper for small businesses to provide coverage...

The real answer: The only thing that will make it easier to provide coverage is to make it less expensive. Cost is the No. 1 problem facing small businesses.

The real issue that the president needs to focus on is controlling costs, this is the only way to make purchasing insurance "easier" for small business. Frankly, small business owners aren't interested in placing a \$1 trillion bet on a proposal that can't assure them that their costs won't go up.

The proposal ignores ideas that small business supports that will first and foremost reduce costs, which will make it less expensive and easier for businesses to offer coverage. One real and immediate solution the president could have provided to small businesses was something we have brought up frequently but wasn't included in his proposal. It is called the Optional Free Choice Voucher. This would allow employers to give pre-tax dollars to their workers and let the worker purchase the plan that best fits their needs. This idea creates choice, portability and puts the consumer in the driver's seat, a win-win for employers *and* workers.

Q: Will I be able to pool with other small businesses to buy coverage?

A: President's answer: Yes.

The real answer: Not in a way that is any different than you do today, and not across state lines.

Current law already requires each insurer to pool small businesses (small-group plans) together at the state level. But any small business that has received a premium increase that doesn't lower their costs because the pools are too small to bring about savings. But if they could pool across state lines

the pools would be bigger and the savings significant. However, the president's proposal does not allow pooling across state lines. If the president wants to give greater purchasing power to small businesses, he would let them pool their own risk together across state lines to purchase insurance just like big business and unions do today.

Q: Will my employees be able to buy coverage if I cannot afford to provide it?

A: President's answer: Yes.

The real answer: Yes. But you will still be paying for it.

Healthcare coverage is not free. Someone is going to pay if there are requirements on individuals and businesses to pay into the healthcare system. As the employer, if your employees go into the exchange, you'll be left footing a portion of that bill to help cover your workers, whether or not you can afford to provide health benefits.

One of the most common refrains in the healthcare debate is that there will be plenty of tax credits to help small businesses and individuals afford coverage. Tax credits seem to have become the magic elixir that cures all that ails small business and their employees. But not everyone will receive a tax credit. Tax credits for employees (individuals and families) are only available if you meet strict income level requirements.

Q: Will my taxes go up to pay for the cost of covering the uninsured?

A: President's answer: No.

The real answer: Yes, your taxes will go up.

A nearly \$1 trillion bill that the president says "will not add one dime" to the deficit has to be paid for somehow and that means taxes. The President's proposal includes even higher taxes and fees than the Senate bill, and they fall on small businesses, including a new \$60 billion tax on health insurance, increased Medicare payroll taxes and a new Medicare tax on investments.

The new \$60 billion tax on health insurance is an especially egregious tax, since it directly and specifically hits small businesses and individuals. Big businesses and unions were specifically exempted. The penalties of \$2,000 per worker levied on small businesses with more than 50 workers who can't afford to provide healthcare (and who have workers accessing the exchange) is another indirect tax, but a fee no less. Medicare payroll taxes will also be increased by .9 percent as well as a brand new 2.9 percent Medicare tax on non-wage income like dividends, interest and capital gains.

Q: What are you going to do about all the confusing forms I have to fill out?

A: President's answer: Make it simple.

The real answer: We'll have to wait and see...

But when have you known bureaucrats in Washington to ever make things "simpler?" The fact is that the cost of complying with onerous paperwork is especially burdensome to small businesses, who lack in-house finance departments and experts. For example, the cost of tax compliance is 66 percent higher for small businesses compared to large businesses. And their isn't a good track record on this, the recently-passed Senate bill added a new reporting requirement that will be levied on small businesses as a pay-for for healthcare reform. Sadly, the president did not exclude this pay-for in his proposal.

- March 11, 2010

Senate Health Bill Would Up Costs for Millions in Middle Class, Analysis Finds

A nonpartisan study is casting new doubt on President Obama's campaign pledge not to raise taxes on the middle class.

The Senate health care bill crucial to saving President Obama's signature domestic initiative will hit the wallets of a quarter of all Americans making less than \$200,000 per year, according to an analysis by the nonpartisan Joint Tax Committee that assessed the way the bill would hit taxpayers directly through new taxes and fees and indirectly through taxes levied on health care providers and passed on to consumers.

The committee also determined that the bill would subsidize insurance premiums for 7 percent of taxpayers -- about 13 million people -- while some 73 million people would face higher costs from the new fees and taxes.

The potential tax increases in the bill could pose significant problems for the president as he makes his final push for health care reform because he promised to protect middle-class Americans from any tax hikes. Republicans already are pouncing on the committee's analysis.

"For every family that gets some benefit from this program, in other words, a premium subsidy, three families are going to get a tax increase and those three families obviously include the bulk of people you'd call middle class America," Sen. Chuck Grassley, R-Iowa, told Fox News.

Democratic leaders are scrambling to gather enough votes to pass the bill in the House later this month so that changes House members want can be added in the Senate through reconciliation, an unusual tactic that allows a simple majority in the Senate to counteract a filibuster by the minority. The steps are part of Obama's final push to pass a comprehensive health care reform bill.

The analysis comes as the Congressional Budget Office updated its cost tally of the Senate bill, estimating that the last-minute changes made to the bill before it was passed Christmas Eve upped the price to \$875 billion from \$871 billion. The CBO also estimates that the bill would reduce the federal deficit by \$118 billion over a 10-year period, revised down from \$132 billion.

But the projection could be undermined by future spending needed to administer parts of the bill, including up to \$10 billion for the IRS, up to \$20 billion for Health and Human Services and up to \$50 billion for "grant programs and other provisions."

The new analysis highlighting the tax burdens of the Senate bill could undercut the president's push.

There's a long list of taxes in the Senate bill, including some paid directly by consumers. Other taxes are on providers who will simply pass it on to consumers.

"It has imposed a lot of taxes and fees on the drug companies, on the medical device manufacturers, on the insurance companies," said economist Doug Holtz Eakin. "All of that is going to show up in higher sticker prices for those that have health insurance."

And then there is the proposed tax on high-cost insurance plans, which was pushed back but will result in significantly higher tax payments by tens of millions of Americans who have generous insurance plans through their workplace.

Also, there would be a brand new Medicare tax on dividends and capital gains, which haven't been taxed before.

Analysis of Reid Health Bill with CBO Highlights

COST: The CBO Scores Reid's Bill at \$849, Republicans say the cost of the bill is \$2.5 trillion over 10 years of full implementation: The Republicans estimate is based on the *true* bill implementation date of 2014 (for ten years), rather than 2010, when revenues start being collected, but coverage doesn't occur until FOUR YEARS LATER. This results in a significantly higher score than that estimated by the CBO.

COVERAGE: Reid's bill will extend coverage to 31 million uninsured Americans covering 94% of the nation's population: According to the CBO, this still leaves 24 million nonelderly residents uninsured, about 1/3 of whom are undocumented immigrants. Currently 84% of the nation's population has health insurance.

ABORTIONS: The bill extends current law that prohibits federal funds from being used for abortions by requiring those funds be segregated by private insurers that offer abortion coverage. The bill does, however, allow the Health and Human Services Secretary to determine if the government plan will cover abortions. It would allow the public option to cover elective abortions as long as it uses money collected as premiums — not subsidies — to pay for the procedure, and as long as the government does not bear any "insurance risk" for the coverage.

INDIVIDUAL MANDATE: Penalties reaching \$750 per person for noncompliance by 2016. The penalties start in 2014.

	Single	Single +1	Single +2<
2014	\$95	\$190	\$285
2015	\$350	\$700	\$1050
2016 etc.	\$750	\$1500	\$2250

EMPLOYER MANDATE: According to the CBO, "*Employers with 50 or more workers that do not offer coverage would have to pay a fine of \$750 for each full-time worker if any of their workers obtained subsidized coverage through the insurance exchanges. This dollar amount would be indexed, and thus will increase as health care costs rise. If a full time worker is offered coverage through his employer, he would not be eligible for subsidies through the exchanges unless the worker had to pay more than 9.8 percent (in 2014, but indexed over time) of their income for employer insurance, in which case the employer would be penalized.*" CBO estimates a cost savings of \$28 billion/10 years.

MEDICARE PAYROLL TAX INCREASE: There will be an increase in the Medicare payroll tax of 1.95% (vs. the current 1.45%) for individuals making \$200,000 or more and couples earning \$250,000 or more to 1.95 percent. The income thresholds triggering the 0.5 percent increase in the Medicare payroll tax are not indexed for inflation, meaning it will trap more people each year. CBO estimates this raises \$54 billion/10 years.

	Wages (Employer/Employee)	Self-Employment Net Income
Current Law and New Rate on First \$200,000 (\$250,000 MFJ)	1.45%/1.45%	2.9%
New Rate on Amount Which Exceeds \$200,000 (\$250,000 MFJ)	1.45%/1.95%	3.4%

The 0.5% new rate addition is not deductible for the self-employment tax adjustment.

NEW TAXES:

Tax on high-cost "Cadillac" insurance plans: Plans valued at \$8,500 for individuals and \$23,000 for families will be subject to taxation. The Baucus plan had high-cost plans at \$8,000 individual and \$21,000 family. States with high health costs will get a \$3,000 increase in the thresholds. The CBO estimates this raises \$149 billion/10 years, which means the lion's share of paying for this bill is on the backs of those with robust health plans. Beginning in 2013, these Cadillac plan would be subject to a 40 percent excise tax. After 2013, those amounts would be indexed to overall inflation plus 1 percentage point.

Medical Device Tax: \$2 billion per year. This has been cut in half (from an annual amount of \$4 billion/year) to appease Minnesota, Indiana and Massachusetts senators.

Insurers Tax: \$6 billion per year.

Pharma Tax: \$2 billion per year.

Medicine Cabinet Tax: No longer allowable to use health savings account (HSA), flexible spending account (FSA), or health reimbursement (HRA) pre-tax dollars to purchase non-prescription, over-the-counter medicines (except insulin). Raises \$5 billion/10 years.

HSA Withdrawal Tax Hike: Increases additional tax on non-medical early withdrawals from an HSA from 10 to 20 percent, disadvantaging them relative to IRAs and other tax-advantaged accounts, which remain at 10 percent. Raises \$1.3 billion/10 years.

FSA Cap: Imposes cap on FSAs of \$2,500 (now unlimited). Raises \$14.6 billion/10 years.

Raises Medical Itemized Deduction from 7.5% to 10% of AGI: Waived for 65+ taxpayers in 2013-2016 only. Raises \$15.2 billion/10 years.

MEDICARE CUTS:

Medicare Cuts: \$464.4 billion. The CBO says “[the Reid bill] substantially reduces the growth of Medicare’s payment rates for most services. The Medicare provisions that result in the largest budget savings include: permanent reduction in the annual updates to Medicare payment rates for most services in the fee-for-service sector (other than physicians’ services) yielding budget saving of \$192 billion over 10 years. The other cuts come from Medicare Advantage (\$118 billion over 10 years) and reducing Medicaid and Medicare payments (\$43 billion) to hospitals that serve a large number of low-income patients, known as disproportionate share hospitals (“DSH”) (pronounced DISH).

Independent Medicare Advisory Board (IMAB): Will be established to recommend changes to the Medicare program, in order to limit the rate of growth in that program’s spending. These recommendations go into effect automatically unless blocked by subsequent legislative action, similar to BRAC. IMABs recommendations will focus on reductions in subsidies for Medicare Advantage plans and changes to payment rates or methodologies for services furnished in the fee-for-Service sector by providers other than hospitals, physicians, hospices and suppliers of durable medical equipment. Its first set of recommendations will be in 2013 for implementation in 2015. The CBO estimates savings would be \$23 billion over the 2015-2019 period.

DEFICIT REDUCTION:

Reduces the deficit by \$118 billion/10 years and by \$640 in the out years (2019-2028): The CBO however says the following: “*In the subsequent decade (2019 and beyond), the collective effect of [the Reid bill] provisions would probably be small reductions in the federal budget deficits if all of the provisions continued to be fully implemented. Those estimates are subject to substantial uncertainty.*”

NEW MANDATORY/ENTITLEMENT SPENDING:

Medicaid: The non-elderly at or below 133 percent of FPL would be made eligible for Medicaid. According to the CBO, “*The federal government would pay all of the costs of covering newly eligible enrollees through 2016; in subsequent years the share of federal spending would vary somewhat from year to year but ultimately would average about 90 percent. Beginning in 2014, states would receive higher federal reimbursement for SCHIP beneficiaries, increasing from an average of 70 percent to 93 percent.*”

CLASS Act: The bill includes a long-term insurance program known as the CLASS Act that some senators have concerns with, saying its early savings would eventually be eaten up by benefits paid to enrollees. Reid has attempted to appease them by not applying the \$75 billion in

savings from the program to the offsets. The CBO and the Obama Administration's Chief Health Actuary have both said that the CLASS Act will run significant budget shortfalls outside the 10 year budget window. CBO wrote that under the current benefit structure, **"the program would add to future federal budget deficits in large and growing fashion."**

- Sen. Kent Conrad (D-N.D.) Chairman of the Senate Budget Committee, called the CLASS Act **"a Ponzi scheme of the first order, the kind of thing that Bernie Madoff would have been proud of,"** and he vowed to block its inclusion in the Senate bill.
- In its review of the House legislation, the Administration's Chief health Actuary said the CLASS Act would result **"in a net Federal cost in the longer term."** The Chief Actuary also determined that the program faces **"a significant risk of failure"** because the high costs will attract sicker people and lead to low participation.
- The Congressional Budget Office agreed, saying that **"the CLASS program included in the bill would generate net receipts for the government in the initial years when total premiums would exceed total benefit payments, but it would eventually lead to net outlays when benefits exceed premiums....** In the decade following 2029, the CLASS program would begin to increase budget deficits."
- The *Washington Post* called the CLASS Act a **"gimmick"** **"designed to pretend that health care is fully paid for."** The *Post* goes on to say that **"...the money that flows in during the 10 year budget window will flow back out again. These are not 'savings' that can honestly be counted on the balance sheet of reform."**

Medicare SGR: According to the CBO, *"[Under this bill] Physicians reimbursement rates will increase for 2010 but would be reduced by about 23 percent for 2011 and then remain at current-law levels for subsequent years. According to CBO, the legislation includes a number of provisions that would constrain payment rates for other providers of Medicare services. In particular, increases in payment rates for many providers would be held below the rate of inflation."*

Prevention and Public Health Fund: This is a Harkin pet project that was included in the HELP bill. The Reid bill provides mandatory appropriations of \$15 billion to establish this fund. CBO estimates that outlays of these funds would total \$13 billion over ten years.

Key Talking Points:

- **Effective Dates:**
 - *The effective date of the Reid bill for the mandates and penalties to individuals and employers has been delayed by four years, to January 1, 2014 to take in people's money for four full years, before ever having to pay for health care coverage. This essentially means this bill would collect money for four years, and pay our benefits for six years, under the current CBO score. Moving back the effective date is a transparent budget gimmick designed to push spending outside the 10-year window.*
 - *Is our job here to do things for optics or are we here to implement changes to help struggling Americans, particularly in this time of economic downturn, be able to purchase health insurance despite a pre-existing condition?*

- *Keep in mind, taxes and penalties will increase before your health benefits start in 2014.*
- **Medicaid Expansion:**
 - *The provisions in this program would require states to expand their Medicaid programs but what if states aren't able to continue covering those lives after the federal match money decreases? Will our states be forced to push those lives off the Medicaid program or will states have to further reduce Medicaid reimbursement rates, and diminish access to patients?*
- **Premium Increases:**
 - *Premera Blue Cross Blue Shield of Alaska estimated that premiums will likely rise by 60-161% (\$1,500 - \$2,500 annually) (similar to the Senate Finance Committee passed bill) because of the increased requirement of a higher level of insurance coverage (65% actuarial value.)*
- **Medicare Tax Increase:**
 - *Nearly half a trillion in cuts to Medicare and no reform of the flawed SGR formula to ensure updates to doctors and nurses for caring for Medicare patients.*
- **Junk Lawsuit Reform:**
 - *This bill contains NO provisions to address what the CBO estimates would save nearly \$60 billion/10 years and independent studies have estimated could save between \$100-200 billion a year in limiting the cost of defensive medicine that affects our overall health care costs and premiums as well as the cost to the patients.*

What ISER – the Institute for Social Economic Research at the University of Alaska Anchorage - has said about Medicare in Alaska

- **Seniors in Low Paying Medicare States Will Be Forced to Wait In Line:** *Independent of the doc fix, in Alaska, the remainder of seniors are at risk of long lines to see a primary care doctor and overflowing to community health centers and hospital emergency rooms where existing capacity is highly likely to be quickly overwhelmed and long wait times become increasingly common*
- **Additional New Insured Patients Will Hurt Medicare Beneficiaries in this Low Paying Federal Health Program:** *Federal health care reform applied to Alaska likely to exacerbate an already very challenging access situation for Alaska's seniors as baby boomers age in to Medicare and find themselves waiting in line behind a rapidly expanding line of better paying private plans.*
- **In Alaska's Largest City, with the Highest Number of Seniors in Alaska, the Medicare Shortages Are Most Severe:** *17% of Primary Care Doctors – only 5 are accepting new Medicare patients in Anchorage. The five are at the Anchorage Neighborhood Health Center – a community health center that should be for those who are uninsured or poor, but are being utilized by seniors and the disabled who are on Medicare because these patients simply don't have access to a primary care doctor.*
 - **42% of all non-native Alaskans 65 and older live in Anchorage and 38% of all Alaska 65 and older are in Anchorage.**
 - **Due in large part to baby boomers (those born between 1946 and 1964) hitting Medicare age, one in four Alaskans is a baby boomer.**
 - **In 2008, there were 49,455 Alaskans 65 and over -- by 2015 – in 5 years, the number is expected to increase 50% to almost 75,000 by 2015.**
 - **By 2020, in just 10 years, the estimate is projected to increase to over 86,000 in Anchorage.**
 - Yet, we have fewer and fewer primary care doctors willing to accept Medicare patients and we're looking to cut half a trillion from Medicare to pay for a new government entitlement.
- **Medicare Patients Are Being Pushed Out of Doctors Offices Because of Low government Reimbursement Rates:** *The numbers of patients 65 and older at Anchorage Neighborhood Health Center (ANHC) and Anchorage's VA facilities have jumped on the order of 50% within a few years. The ANHC saw twice as many Medicare patients in 2007 as in 2001.*
 - Older Alaskans have also been visiting the emergency room at Providence Hospital in growing numbers. *Through early 2009, visits by older residents were growing just slightly – less than 3% a years over the past five years. But from May 2008 to September 2009, the number of visits increased at an annualized rate of 12%.*

ISER Report on Medicare in Western States as Compared to Private Insurance Rates:

- **According to a recent GAO study from 2006, the percentage of Medicare beneficiaries having “big problems” finding a personal doctor were most acute in states such as Alaska, Oregon, Nevada, Colorado and New Mexico. (*percentage indicates the number of Medicare beneficiaries reporting “big problems” finding a personal doctor)**
 - Alaska: 15% (One in 10 doctors surveyed has opted out of the Medicare program, and most are in Anchorage)
 - Oregon; Colorado; New Mexico; Nevada: 8-15%
 - Washington and Idaho: 6-8%
 - Utah; Arizona: 4-6%
 - *While we have growing problems in the Western part of the United States with fewer and fewer primary care doctors willing to accept Medicare patients, this health care bill before the Senate today seeks to cut half a trillion from Medicare to pay for a new government entitlement.*

- **Medicare versus Private Insurance Reimbursement for Physicians Services in 2008-2009:**
 - **Wyoming and Alaska:** Medicare ranks “substantially behind” both private insurance and Medicaid
 - **Montana, Idaho, Arizona and New Mexico, Washington, Oregon, Utah and Colorado:** Medicare ranks behind private insurance
 - *While we have already low reimbursement rates under Medicare in the Western part of the United States, this health care bill before the Senate today seeks to cut half a trillion from Medicare to pay for a new government entitlement.*

- **Why Primary Care Providers Won’t Accept New Medicare Patients:**
 - **Of the 142 primary care doctors in Alaska, 98% reported “Inadequate reimbursement” as the reason for not accepting Medicare. While this is Alaska specific, if your state is one of the states where your Medicare beneficiaries are facing major problems finding a primary care doctor, you can bet this statistic applies to your state as well.**
 - *So instead of addressing a long-term fix for how we reimburse primary care doctors under the Medicare program, this bill completely ignores the problems facing seniors throughout this country, and particularly in the western part of the U.S., by bringing to the Senate floor a health care bill that seeks to cut half a trillion from Medicare to pay for a federal expansion of health care and a new government entitlement program.*

POLITICO

Obama wants side deals out of bill

By: Carrie Budoff Brown
March 10, 2010 08:11 PM EST

President Barack Obama is pushing Senate Majority Leader Harry Reid to go further than Obama has previously disclosed to strip the final health care reform bill of the narrow deals aimed at appeasing specific senators.

The president wants to eliminate more than just Sen. Ben Nelson's "Cornhusker Kickback" and Sen. Bill Nelson's agreement to shield 800,000 Florida seniors from Medicare Advantage cuts, the White House told POLITICO Wednesday in response to questions about other deals in the bill.

Obama has asked Reid to strike provisions requested by senators from at least five other states, in an unusual move that accentuates the culture clash between the president's rhetoric on changing the ways of Washington and the Senate leader's needs to exercise the old-fashioned tools of Congress to pass laws.

"We've removed many of the special provisions that initially found their way into the legislation, and we've made it clear to the Senate that the president's position is that the final bill shouldn't include any earmarks or provisions that would favor a single state or district over the rest of the country," White House spokesman Reid Cherlin said in a statement Wednesday.

Reid spokesman Jim Manley said the decision on what to keep in the bill rests with congressional leaders and that no determinations have been made.

Senators whose deals have been targeted — some of whom did not know the deals might be in danger — said they would fight to maintain them, arguing they are in no way as egregious as the Cornhusker Kickback.

"We have defended it, and we will defend it," said Sen. Bernie Sanders (I-Vt.), whose state picked up \$600 million in extra Medicaid funding for having already expanded its coverage of low-income individuals.

But ever since last-minute deal making helped sour voters on the Senate bill that passed on Christmas Eve, any provision identified by Republicans or the media as benefiting a single state or a small number of states has sat on shaky ground.

Obama tried to publicly distance himself from the deals, saying he wasn't in the room when they were struck, even though some of his aides were. The president rankled Reid and House Speaker Nancy Pelosi by criticizing them for doing what

Advertisement

POLITICO

generations of their predecessors have done: cut deals. And in the process, he may have made it entirely untenable for them to deploy one of the tried-and-true methods for muscling major reforms through Congress.

"Legislators need pork to make things happen," Julian Zelizer, a Princeton University professor of history and public affairs, wrote in POLITICO Wednesday. "It is unrealistic to expect that legislative leaders won't use one of the few tools at their disposal to get things done."

Zelizer noted that then-Senate Majority Leader Lyndon B. Johnson promised the construction of a federal dam in exchange for votes for the Civil Rights Act of 1957 from a group of Western Democrats.

In a letter to congressional leaders last week, Obama targeted the Nebraska and Florida deals for elimination. (The Florida provision could also shield some seniors in California, New York, New Jersey and Pennsylvania, according Sen. Bill Nelson's office.) But in response to questions from POLITICO, the White House detailed other provisions that the president wants to see removed.

The so-called Louisiana Purchase is still safe, according to the White House, since the provision requested by Sen. Mary Landrieu (D-La.) would apply to any state in which all the counties have been declared a disaster zone. The Medicaid funding formula fix is worth \$300 million to Louisiana, according to Landrieu.

But Obama has asked Reid to strike a provision that would send \$1.1 billion in

extra Medicaid funding to Massachusetts and Vermont — states that have already expanded Medicaid coverage but would otherwise not be reimbursed at the same level as states that would boost their Medicaid populations for the first time under the bill's mandate.

"What I told Harry Reid is that Vermont does the right thing, and I don't want Vermont to be penalized for doing the right thing," Sen. Patrick Leahy (D-Vt.) said in a statement.

Through a spokeswoman, Sen. John Kerry (D-Mass.) said he, too, was working with the president "to make sure Massachusetts's past investment to expand health coverage to low-income individuals is recognized in health reform."

The president is also asking Reid to "look at removing" a \$100 million hospital grant program requested by Sen. Chris Dodd (D-Conn.), who has acknowledged that the University of Connecticut would qualify for the money.

Advertisement

POLITICO

But the senator's aides added that university teaching hospitals in a dozen states would also qualify and that the program is not an earmark, since the money would be awarded on a competitive basis through the Department of Health and Human Services.

Another provision the president has asked Reid to consider removing was promoted by Senate Finance Committee Chairman Max Baucus (D-Mont.) on behalf of residents of Libby, Mont.

The bill includes language that would allow people who have been exposed to asbestos from a vermiculite mine in the town to receive Medicare assistance, although a Baucus aide said the language would apply to victims of any government-declared public health emergency. The language would fulfill the government's responsibility, first codified in a 1980 law, to provide health care to victims of public health emergencies, the aide said.

Libby was the first town to receive the emergency declaration, and implementing language is needed to finish the process, the aide said.

"The Senate bill meets the responsibility that was established in 1980, so I can't understand why anyone would want to make it impossible to meet our statutory obligation to address disasters of this magnitude, where more than 290 people have died from asbestos-related disease," Baucus said in a statement. "This type of tragedy could happen to any town, anywhere across the country, and all Americans deserve to have this protection."

The aide added: "The public health emergency provision is not a special deal."

Senator Betty Davis

SB 10 - Cancer Clinical Trials

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

SPONSOR STATEMENT

Clinical trials are research studies that test how well new medical approaches work in patients. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat disease. Patients who take part in cancer clinical trials have an opportunity to contribute to the knowledge of, and progress against cancer. They also receive state-of-the art treatment from experts in the field. The National Cancer Institute, as part of the U.S. National Institutes of Health, reports 6,000 cancer trials in the United States any one time. They include trials in prevention, screening, diagnosis, treatment, quality-of-life, and genetic studies.

SB 10 removes important barriers to the participation of patients in cancer clinical trials in Alaska. It requires that applicable health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment, and palliation (supportive care) of cancer. Medicare, the VA and military insurance already cover the benefits that SB 10 provides. Currently Alaska health plans may exclude coverage for routine patient-care costs while a patient with cancer is enrolled in a clinical trial. Providers of health care plans often conclude that money is saved by excluding care while patients participate in clinical trials. But these patients, if not enrolled in clinical trials, will continue to receive conventional therapy at roughly the same or slightly increased costs.

Over 2600 Alaskans are diagnosed with cancer each year. In FY 2007 an estimated 4,600 patients received cancer treatments through Alaska's Medicaid program at a cost of \$21.5 million. The average payment per beneficiary was about \$4,675. The federal government reimburses the state at about 50% of the total costs. Without in-state facilities and support of clinical trials participants in Alaska currently have to travel out of state, increasing the cost of non-emergency transportation which is about 3% of total Medicaid costs.

Studies have shown that only 2% to 3% of adult cancer patients and less than 0.5% Medicare patients enroll in clinical trials of the approximately 20% who are eligible -largely due to fear of denial of insurance. A recent study found only slight increase in treatment costs for adult clinical trial patients compared to nonparticipants, \$35,418 versus \$33,248 or about 6.5% increase in costs for clinical trial participants compared to nonparticipants. Even if enrollment was increased to the full 20%, it is unlikely that these numbers will significantly impact overall costs to health plans. See National Conference of State Legislatures, "Clinical Trials: What are States Doing? February, 2009 Update," www.ncsl.org/programs/health/clinicaltrials.htm.

Twenty-three or more states have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care patients receive while participating in clinical trials. Passage of SB 10 will result in more successful outcomes in cancer treatments in Alaska, increase retention of patients in Alaska for their cancer care, and also, after full implementation, result in cost savings in the short and long term.

A description of "The Access to Cancer Clinical Trials Act of 2009" H.R. 716, 111th Congress 2009-2010, (Rep. Sue Myrick) per "The Hill's Congress Blog" January 30, 2009 sums up to a large extent what SB 10 is attempting to do:

"Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply states that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medical advancements we've experienced toward finding a cure for cancer would not be possible."

MEMORANDUM

April 17, 2009

SUBJECT: Mandatory health care insurance coverage for clinical trials for cancer (CSSB 10(HSS), Work Order No. 26-LS0073\S)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey *DCB*
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Requires health care insurers to cover approved clinical trials for cancer if there is no clearly superior noninvestigational treatment alternative, and available clinical or preclinical data provide a reasonable expectation that the treatment in the clinical trial will be at least as efficacious as any noninvestigational alternative; identifies the items that must be included in and excluded from the required coverage; makes coverage for clinical trials subject to standard policy provisions that are applicable to other benefits; and defines the meaning of an approved clinical trial.

Section 2. Allows the state health insurance plan provided by the Comprehensive Health Care Insurance Association to include clinical trials related to cancer in its minimum standard benefits.

Section 3. Requires the state Medicaid program to cover clinical trials related to cancer.

Section 4. Gives the Act a January 1, 2010, effective date.

This bill requires companies that offer health care insurance in Alaska cover routine patient care costs incurred by a patient enrolled in an approved clinical trial related to cancer. The coverage provided must include the costs of prevention, diagnosis, treatment, and palliative care of cancer. The health care insurer is required to provide coverage under this section only if the patient's treating physician determines that there is no clearly superior non-investigational treatment alternative; and available clinical or preclinical data provide a reasonable expectation that the treatment provided in the clinical trial will be at least as efficacious as any non-investigational alternative.

SB 010 amends the Medicaid statute (AS 47.07.030) to add a new subsection (e) that requires the program to pay for Medicaid covered services for Medicaid recipients even when provided as part of an approved clinical trial related to cancer.

The bill would be effective on January 1, 2010. It is not expected to result in an increase in Medicaid expenditures as Medicaid already covers these services.

MEMORANDUM

March 9, 2010

SUBJECT: Clinical trials; fraternal benefit societies (CSSB 10(HSS))
(Work Order No. 26-LS0073\S)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Dennis C. Bailey *DCB*
Legislative Counsel

You asked for an explanation of a fraternal benefit society, which is excluded from the application of proposed sec. 21.42.410 under sec. 21.42.410(f).

A fraternal benefit society is described and regulated under AS 21.84. A fraternal benefit society is defined in AS 21.84.900, which provides:

(7) "fraternal benefit society" means an incorporated society, order, or supreme lodge, without capital stock, including one exempted under AS 21.84.700(a)(2), whether incorporated or not, that is conducted solely for the benefit of its members and their beneficiaries and not for profit, that is operated on a lodge system with ritualistic form of work, that has a representative form of government, and that makes provision for the payment of benefits under this chapter;

The following highlight the statutory sections relating to fraternal benefit societies. A fraternal benefit society:

- Must have a representative form of government. AS 21.84.005.
- Operates for the benefit of its members and their beneficiaries providing (1) death benefits, (2) endowment benefits, (3) annuity benefits, (4) temporary or permanent health care benefits, (5) hospital, medical, or nursing benefits, (6) monument or tombstone benefits, and (7) certain life insurance benefits. AS 21.84.015, AS 21.84.201.
- Operates for a social, intellectual, educational, charitable, benevolent, moral, fraternal, patriotic, or religious purpose for the benefit of its members or others. The purposes may be carried out directly or through subsidiary or affiliated corporations. AS 21.84.015.
- Must have 500 initial applicants (AS 21.84.080 and 21.84.090) and must maintain 400 members. AS 21.84.530.

Senator Bettye Davis

March 9, 2010

Page 2

- Applicants pay premiums for the benefits. AS 21.84.090.
- May be converted to a mutual life insurance company under certain circumstances. AS 21.84.195.
- Shall issue a benefit contract to the contract owner describing the benefits provided. AS 21.84.255.
- Is subject to many of the laws applicable to insurance companies. AS 21.84.335.
- Are included in the definition of a health care insurer. AS 21.54.500.

Fraternal benefit societies are excluded from many of the mandatory health care benefits set out in AS 21.42. I do not know the reasons for these exclusions, but I presume the decision is a policy decision to treat fraternal benefit societies differently because they are non-profit organizations, they are relatively small in number and in size, and they provide benefits only to their members.

I routinely recommend that sponsors of bills that regulate insurance confer with the Division of Insurance to take advantage of the division's expertise. The division may have additional information concerning the workings of fraternal benefit societies.

If I may be of further assistance, please advise.

Overview of the issue

"Routine patient care costs" are the usual costs of medical care, such as doctor visits, hospital stays, clinical laboratory tests, x-rays, etc., that you would receive whether or not you were participating in a clinical trial. Some health plans don't cover these costs once you join a trial, even though studies have shown that they are not appreciably higher than costs for patients who are not enrolled in trials. (See [Cost of Clinical Trials](#).)

Lack of such coverage is a significant barrier to many patients who might otherwise enroll in a trial. Lack of coverage also makes it harder for researchers to successfully conduct trials that could improve prevention and treatment options.

These laws and agreements do not cover the research costs associated with the conduct of the trial, such as tests purely performed for research purposes. In most cases, such costs would be paid for by the group sponsoring the trial, such as the National Cancer Institute or a pharmaceutical company.

A Service of the National Cancer Institute

Clinical Trials

Primer

Clinical trials are essential gateways to developing better tools for cancer prevention, detection, treatment and care. The research conducted through clinical trials helps move scientific discoveries from the laboratory into new therapies that can be used at the bedside to improve the quality of patient care. Yet consistently low enrollment of adults in clinical trials, particularly among racial and ethnic minority groups and low income groups, delays our progress.

**Only 3-5% of adult cancer patients participate in clinical trials each year.
This slows the pipeline for bringing new cancer advances to patients.**

What is a clinical trial?

A clinical trial is a research study that answers specific questions about the safety and effectiveness of new drugs and treatments developed to address serious illness like cancer. Carefully conducted clinical trials are the fastest and safest way to find new vaccines, early detection tests, treatments, and therapies that support improved quality of life. There are no placebos in clinical trials for cancer treatment. Typically, researchers use trials to compare a new approach or agent to the most effective, standard therapy. Clinical trials may take place at a local hospital, university, cancer center, military or veteran's hospital, or even a physician's office.

Who sponsors clinical trials?

There are many different potential sponsors of clinical trials, including the federal government and drug or medical device companies. Many different agencies within the federal government such as the National Institutes of Health, the National Cancer Institute, and the Department of Veteran Affairs sponsor clinical trials.

Who is eligible for a clinical trial?

Each clinical trial has established protocols that identify patient eligibility requirements, all of which depend on the purpose of the particular study. Patients whose standard therapy is ineffective or patients for whom standard therapy may induce serious health risks may wish to seek treatment in a clinical trial.

Who pays for a clinical trial?

The trial sponsor (e.g., a drug company) generally pays for the investigational drug/treatment and any research-related costs such as data collection and analysis. Therefore, the only portion of the clinical trial that is not paid for by the sponsor is patient care costs—the costs for the care that a patient would receive whether they were receiving standard care or care provided through a clinical trial. Insurance coverage for patient care costs in clinical trials varies considerably across the country.

Why do so few patients enroll in clinical trials?

While about 20% of cancer patients in any given year meet eligibility requirements for participation in active clinical trials, fewer than 5% of all adult cancer patients actually enroll in a clinical trial. People with low income, the elderly, racial/ethnic minorities, women, and those living in rural areas represent the smallest percentage of clinical trials participants.

Many barriers to trials participation have been identified, including:

- Concerns about health insurance coverage for patient care costs in clinical trials
- Insufficient information, education and outreach directed toward healthcare professionals and their patients regarding the availability and location of cancer clinical studies
- Patient or family misunderstanding or fear about participating in a clinical trial
- Doctor does not recommend clinical trial participation to patient

Clinical Trials

Primer

What is the clinical trials process?

Traditionally, there are four phases of clinical trials. In phases one through three, the clinical trial enrolls progressively more participants—phase one trials involve only a handful of participants while phase three trials may involve thousands of individuals at multiple trials sites. New drugs or treatments must progress through each phase to establish safety and efficacy before they can be approved for broad use in the market. The fourth phase of a clinical trial takes place after the new drug or treatment has been released to the general public to continue monitoring the product and its effects in the broader population.

Are there different types of clinical trials?

Yes. There are four main types of cancer clinical trials: prevention, detection, treatment, and those focused on symptom management and other aspects of care supporting quality-of-life. Prevention trials are designed to evaluate cancer-causing behavior or anti-cancer development. Detection trials test new methods for detecting cancer in the disease's earliest stage. Treatment trials, the most common type of cancer clinical trial, test new and emerging therapies for cancer patients. Lastly, quality-of-life trials look at ways to increase the comfort and well-being of cancer patients.

How can patients find the right clinical trial for them?

They can contact the American Cancer Society at 1-800-ACS-2345 or by visiting www.cancer.org to get assistance in finding trials for which they may be eligible through its clinical trials matching service. The Society and the Coalition of Cancer Cooperative Groups joined forces to provide information to patients seeking clinical trials. After providing some demographic, clinical, and geographic information, the Society can provide information about available trials.

Why are some patients afraid of participating in a clinical trial?

One huge misconception about cancer clinical trials is that trial participants are treated like "guinea pigs." This is not true. Just as with standard care, individuals may have side effects or experience complications from treatments in trials, but great care and consideration goes into the health and safety of clinical trial participants in trial design and implementation. Participants also may drop out of the study at any time if they chose to do so.

Sponsors of clinical trials are monitored by several federal agencies to ensure participant safety, including the Office of Human Research Protections (OHRP) and the Food and Drug Administration (FDA). Trials are monitored closely at all times. For example, each Phase III trial is required to have a Data Safety Monitoring Board, which has the power to prematurely terminate a trial should the experimental therapy prove more effective than the standard therapy, or alternatively halt the trial immediately if significant adverse events arise. Each trial is responsible for meeting the Code of Federal Regulations for the Protection of Human Subjects and ensuring the safety of clinical trial participants. In order to do this, the trial must receive approval from an institutional review board (IRB).

How has clinical trial research help us win the cancer fight?

Cancer clinical trials have been dramatically successful in delivering progress for childhood cancer survival rates. Since 1960, mortality rates for all children with cancer have decreased 62%. Specifically, the survival rate for children with acute lymphocytic leukemia, the most common leukemia in children, has increased from 4% to approximately 80%.

Clinical Trials

The Costs of Patient Care

Numerous studies show that patient care in clinical trials costs approximately the same as care delivered in standard therapy. In some cases, because the third-party payer is not billed for the drug or treatment under investigation, care in a clinical trial can actually cost less than the care delivered in standard therapy.

Costs of patient care provided in a clinical trial are comparable to the costs of standard therapy.

Several studies on the costs of cancer clinical trials have been published in respected peer-reviewed publications.

- A pilot study conducted by the American Association of Cancer Institutes (AACI) showed that the total mean direct medical charges for patients enrolled in a clinical trial *were less than the charges for patients receiving standard therapy*.¹
- A December 2001 *Journal of Clinical Oncology* article similarly found that some clinical trials may actually result in *lower* patient care costs. In addition, in cases where trials resulted in modest increases in patient care costs, the authors concluded that these costs were justified by the benefits that clinical trials bring to all patients.²
- The Mayo Clinic has found that the cost of care for patients enrolled in clinical trials is often little more than for patients who received standard therapy.³
- Authors of a study conducted at Kaiser Permanente found that the cost of medical care for enrollees in clinical trials without bone marrow transplant were no higher than for patients who were not enrolled in a trial. Kaiser further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."⁴
- The most comprehensive study yet, published in 2003, also confirmed that there are only slightly higher patient-care costs associated with treating patients in cancer clinical trials compared to treating similar patients outside of trials.⁵

Some esteemed hospitals and universities have also conducted cost analysis studies.

- A study at Memorial Sloan-Kettering Cancer Center in New York City showed that the overall average cost of treating clinical trial patients was 17% *less* than treating patients receiving standard care.⁶
- A study conducted at the Karmanos Cancer Center in Detroit showed that the 6-month costs for treating advanced lung cancer were an average \$1,400 less for patients enrolled in a clinical trial.⁷

The Institute of Medicine has also concluded that the cost impact of providing coverage for routine patient care costs is likely to be "quite small."⁸ According to IOM, this is because:

- Reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial.
- Approximately 20% of adult cancer patients are eligible to participate in a clinical trial and approximately 3% of cancer patients actually do. Even if enrollment increased to the full 20% of eligible patients, it is unlikely that this would significantly impact overall costs to health plans.
- Through clinical trials, we will be able to also identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.

Mandating coverage of routine care costs in clinical trials causes premiums to increase by less than 1%.

In general, mandates can potentially raise premiums. However, each mandate is different. Mandating that insurers pay for routine care costs in clinical trials has a minute effect on premiums. For instance, the Council for Affordable Health Insurance found that mandating coverage of routine care costs in clinical trials increased health insurance premiums by less 1%. There are several reasons for this.

- A small number of people enroll in clinical trials—roughly 3% of adult cancer patients.
- Routine care costs have been found to be, at most, marginally higher than care costs associated with standard treatment.

Clinical Trials: What are States Doing? February 2009 Update

What is a Clinical Trial?

A clinical trial is a research study on human patients to test the safety and effectiveness of new treatments. These trials offer patients access to new and potentially life saving drugs and cures.

The dramatic progress made in treating childhood cancers in recent years, is attributable, in part, to clinical trials, because 60 percent of all children with cancer are enrolled in some kind of trial. A ten percent drop in breast cancer mortality for women under the age of 50 is said to be the result of clinical trials research conducted in the 1970's.

Who Enrolls in Clinical Trials?

Only two to three percent of eligible adult patients enroll in clinical trials. For cancer patients, clinical trials are often the last resort after exhausting all other approved means of treatment.

Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;¹

Insurance Coverage for Clinical Trials

Typically, when a patient enrolls in a clinical trial, the cost of tests, procedures, drugs and any research activity directly associated with the investigation, are covered by the group sponsoring the trial, such as a pharmaceutical company or the National Cancer Institute.

However, because some health plans define clinical trials as "experimental" or "investigational," health insurance coverage may or may not include some or all of the costs of "routine patient care," such as the doctor visits, hospital stays, tests and x-rays, that a patient would normally receive whether or not they were enrolled in a trial.

A growing number of states have passed legislation or instituted special agreements requiring health plans to pay the cost of the routine medical care a patient receives as a participant in a clinical trial.

Advantages:

For cancer patients, properly designed and conducted clinical trials represent an important therapeutic option, as well as a critical means of advancing medical knowledge. Lack of insurance coverage is a barrier to patients who might otherwise participate. Sixty percent of patients in one survey cited fear of insurance denial as a major reason for not participating in clinical trials. And finally, a recent study found only a slight increase in treatment costs for adult clinical trial patients compared to nonparticipants--\$35,418 versus \$33,248.²

Some large HMOs have computed costs associated with patients in clinical trials. Kaiser Permanente discovered the cost of medical care for enrollees in clinical trials that haven't had bone marrow transplant were no higher than for patients who were not enrolled in a trial. The Kaiser report further states, "Kaiser has been participating in cancer clinical trials without substantial increases in the direct costs of medical care."³

Researchers at the Mayo Clinic found that patient care costs for those enrolled in clinical trials is only slightly more than for patients who received standard therapy protocols.⁴

The Institutes of Medicine has also found the following:

- The reimbursement costs are limited to the cost of "standard care" which would be covered if the patient were not enrolled in the trial;¹
- Only a small percentage (approximately 20%) of cancer patients are eligible to participate in a clinical trial and very few (approximately 3% of cancer patients and less than 0.5% of Medicare patients) currently enroll. Even if enrollment was increased to the full 20 percent, it is unlikely that these numbers will significantly impact overall costs to health plans;¹
- Through clinical trials, we will be able to identify ineffective treatments, which could save health plans money and will benefit the nation as a whole.¹

Disadvantages:

Even though the same recent study found only a slight increase in treatment costs, the 6.5 percent increase between participants and

nonparticipants in clinical trials translated into an additional \$16 million in 1999 spent on treatment costs for the 19,000 adult patients enrolled in National Cancer Institute-sponsored clinical trials.² These additional insurance costs, like other mandated benefits and services, may result in higher insurance premium rates, which are often cost-shifted onto workers in the form of higher deductibles and copayments.

For states without insurance mandates, it is possible that some physicians may enroll patients in clinical trials but not inform the patients' insurance companies, bypassing the reimbursement issue for the patient and potentially the physician.⁵

It may also be possible to encourage participation in clinical trials by working within networks of health care providers and industry, research facilities, patient groups, as well as major media outlets, without enacting a state wide insurance mandate.

Definitions of Phases:

A clinical trial study is conducted in four phases.

Phase I: Research is conducted on a small group of volunteers (20 to 80 people) for the first time to evaluate its safety, determine a safe dosage range and identify side effects.

Phase II: The experimental drug or treatment is given to or a procedure is performed on a larger group of people (100 to 300 individuals) to further measure its effectiveness and safety.

Phase III: Further research is conducted to confirm the effectiveness of the drug, treatment or procedure, monitor the side effects, compare commonly used treatments and collect information on safe use. Phase III trials are typically conducted on 1,000 to 3,000 individuals.

Phase IV: After the drug, treatment or medical procedure is marketed, investigators continue testing to determine the effects on various populations and whether there are side effects associated with long-term use.

Summary of State Laws as of December 2008

Table One provides a summary of the 23 states and District of Columbia that have enacted laws regarding mandated coverage of clinical trials.

Table One Clinical Trials Laws			
State Year of Enactment Bill Number and/or Citation	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Arizona (2000) Senate Bill 1213 20-2328	Hospital or medical service corporations, benefit insurers, health care service organizations, disability insurers, group disability insurers and accountable health plans	Patient costs associated with participation in Phase I through IV cancer clinical trials.	Trail must be reviewed by an Institutions Review Board in AZ. Health professional must agree to accept reimbursement from insurer as payment in full. Only covers trial when no clearly superior noninvestigational treatment exists. Trail must be in AZ.

California (2000) Senate Bill 37	All California insurers, including Medicaid and other medical assistance programs.	Routine patient care costs associated with Phase I through IV cancer clinical trials.	May restrict coverage to services in CA.
Connecticut (2001) Senate Bill 325 Public Act 01-171	Private insurers, individual and group health plans	Routine patient care costs associated with cancer clinical trials.	Prevention trials are covered only in Phase III and only if involve therapeutic intervention. Insurer may require documentation of the likelihood of therapeutic benefit, informed consent, protocol information and/or summary of costs.
Delaware (2001) Senate Bill 181	Every group of blanket policy, including policies or contracts issued by health service corporations	Routine patient care costs for covered persons engaging in clinical trials for the treatment of life threatening diseases under specified conditions.	Trial must have therapeutic intent and enroll individuals diagnosed with the disease. Trial must not be designed exclusively to test toxicity or disease pathophysiology.
District of Columbia (2008) Bill 17-469 (D.C. Law 17-166)	All insurers in the District	Routine patient care costs for people in clinical trials undertaken for prevention, early detection, treatment, or monitoring of cancer and approved or funded in full or in part by one of the following: National Institutes of Health or one of its cooperative groups or centers, Centers for Disease Control and Prevention, Agency for Health Care Research and Quality, Centers for Medicare and Medicaid Services, U.S. Food and Drug Administration (FDA), U.S. Department of Defense, U.S. Department of Veterans Affairs, U.S. Department of Energy, nongovernmental research entity that has been awarded a National Cancer Institute support grant.	Routine patient care costs shall not include tests or measurements conducted primarily for the purpose of the clinical trial involved. services or products provided solely for data collection and analysis purposes. services or products customarily provided free of charge to trial participants by the research sponsors.
Georgia* (1998) 33-24-59.1	Insurers and the state health plan	Routine patient costs incurred in Phase II and III of prescription drug clinical trial programs for the treatment of children's cancer.	For the treatment of cancer that generally first manifests itself in children under the age of 19.
Illinois (1999) House Bill 1622 (amended 2004) Senate Bill 2339 Public Act No. 93-1000 20 ILCS 1405/56.3**	HMOs and individual/group insurance policies to offer coverage to the applicant or policyholder (2004 amendment: Plans may not be canceled or non renewed based on an individual's participation in a qualified clinical trial)	Routine patient care if the individual participates in an approved Phase II through IV cancer research trial.	Coverage benefit can have annual limit of \$10,000. Trial must be conducted at multiple sites in state. Primary care MD must be involved in coordination of care. Researchers must submit results of trial for publication in nationally recognized scientific literature.
Louisiana (1999) RS 22:230.4	HMOs, PPOs, State Employee Benefits Program and other specified insurers	Patient costs incurred in Phase II through IV cancer clinical trials.	Only covers costs when no clearly superior, noninvestigational approach exists. Available data must support reasonable expectation that the treatment will be as effective as the noninvestigational alternative. Patient must sign an Institutional Review Board-approved consent form.
Maine (2000) 24-A-4310	Managed care organizations and private insurers	Routine patient care costs associated with clinical trial.	Participation must offer meaningful potential for significant clinical benefit. Referring physician must conclude that trial participation is appropriate.

Maryland*** (1998) Chap 146-15-827	Private Insurers and other specified managed care organizations.	Patient costs for Phase I through IV cancer treatment, supportive care, early detection, and prevention trials. Phase II through IV for other life-threatening conditions, with Phase I considered on a case-by-case basis.	There is no clearly superior, noninvestigational alternative. The data provide a reasonable expectation that the treatment will be as least as effective as the alternative.
Massachusetts (2002) Chap 176A Sec 8X	All health plans issued or renewed after Jan. 1, 2003	Patient care services associated with all phases of qualified cancer clinical trials.	Insurers must provide payment for services that are consistent with the usual and customary standard of care provided under the trial's protocol and that would be covered if the patient did not participate in the trial.
Missouri (2002) 376.429 (2006)- Phase II SB 567 & 792	All health benefit plans operating in the state	Routine patient care costs as the result of Phase II, III or IV clinical trials for the prevention, early detection, or treatment of cancer.	There must be identical or superior noninvestigational treatment alternatives available before providing clinical trial treatment, and there must be a reasonable expectation that the trial will be superior to the alternatives. Requires coverage of FDA-approved drugs and devices even if they have not been approved for use in treatment of patient's particular condition.
New Hampshire (2000) 415:18	Private insurers and specified managed care plans	Medically necessary routine patient care costs incurred as a result of a treatment for Phase I through IV cancer clinical trial or trial for a life-threatening disease.	Coverage for Phases I or II decided on a case-by-case basis. Coverage is required for services needed to administer drug or device under evaluation. Coverage is required for routine patient care associated with drugs or devices which are not subject of trial, as long as they have been approved by FDA.
Nevada (2003) (amended 2005) SB 29 NRS 695G.173	All health insurance insurers, medical service corporations, HMOs and managed care organizations	Patient costs associated with Phase I through IV cancer or chronic fatigue clinical trial	Healthcare facility and personnel must have experience and training to provide the treatment in a capable manner. There must be no medical treatment available which is considered a more appropriate alternative medical treatment than the medical treatment provided in the clinical trial. There must be a reasonable expectation based on clinical data that the medical treatment provided in the clinical trial or study will be at least as effective as any other medical treatment. Amendment revises type of medical treatment covered.
New Mexico (2002) (amended 2004 to delay repeal until July 1, 2009) 59A-22-43	A health insurer; a nonprofit health service provider; a HMO; a managed care organization; a provider service organization; or the state's medical assistance program.	Routine patient care costs incurred as a result of the patient's participation in a phase II, III or IV cancer clinical trial.	Must be undertaken for the purposes of the prevention of reoccurrence of cancer, early detection or treatment of cancer for which no equally or more effective standard cancer treatment exists. Must not be designed exclusively to test toxicity or disease pathophysiology and it has a therapeutic intent. Must be provided as part of a scientific study of a new therapy or intervention and is for the prevention of reoccurrence, early detection, treatment or palliation of cancer in humans and in which includes specific provisions of scientific study.
New Mexico	Private insurers,	Routine patient care costs incurred as result of	Effective through July 1, 2004.

(2001) 59A-22-43	specified managed care plans, and Medicaid and other state medical assistance programs	Phase I through IV cancer clinical trial.	Trial must have therapeutic intent. Reasonable expectation that investigational treatment will be at least as effective as standard treatment.
North Carolina (2001) ? 58-3-255	All health insurance plans and teachers' and state employees' comprehensive major medical plan.	Medically necessary costs of health care services associated with Phase II through IV of covered clinical trials.	Patients suffering from a life-threatening disease or chronic condition may designate a specialist who is capable of coordinating their health care needs.
Ohio (2008) ORC Ann. 1751.01 (2008)	All health benefit plans including those for public employees.	Medically necessary costs of health care services associated with any stage of clinical trial.	Trial must be approved by NIH or another group under HHS, FDA, DOD or VA. May exclude coverage for service or product that is part of the investigative trial, item or procedure used only for data collection for the trial, item not approved by FDA, and transportation, lodging and food related to travel for participation in the trial.
Rhode Island (1994, 1997) 94-S 2623B 97-S 1A am	Private insurers and specified managed care plans	Coverage for new cancer therapies if treatment is provided under Phase II through IV cancer clinical trial.	
Tennessee (2005) HB 837	All health benefit plans	Routine patient care costs related to Phase I through IV cancer clinical trial.	Treatment must involve drug that is exempt under federal regulations from a new drug application, or approved by: NIH, FDA in form of new drug application, DOD, or VA.
Vermont (2001) (amended 2005 to remove March 1, 2005 sunset provision) Chap 107 7 4088b HB 6	All health insurance policies and health benefit plans, including Medicaid	Routine patient care costs incurred during the participation in a cancer clinical trial.	Providers and insurers required to participate in a cost analysis to determine impact of the program on health insurance premiums. Amended law allows for participation in trial outside of Vermont if patient notifies health benefit plan prior to participation, and no clinical trial is available at Vermont or New Hampshire cancer care providers.
Virginia (1999) ? 38.2-3418.8	Private insurers, specified managed care plans, and public employee health plans	Patient costs incurred during the participation in Phase II through IV cancer clinical trials. Coverage provided on a case-by-case basis for Phase I.	There must be no clearly superior, noninvestigational alternative. Data must provide a reasonable expectation that the treatment will be at least as effective as the alternative.
West Virginia (2003) 29-2-12	Individual and group insurers, health service corporations, health care corporations, HMOs, public employees insurance agency, Medicaid and the children's health insurance program	Patient costs associated with the participation in Phase II through IV clinical trial for treatment of life-threatening condition or the prevention, early detection and treatment of cancer.	Facility and personnel providing the treatment are capable of doing so by virtue of their experience, training and volume of patients treated to maintain expertise. There must be no clearly superior, noninvestigational treatment alternative. Data provide a reasonable expectation that the treatment will be more effective than the noninvestigational treatment alternative.
Wisconsin AB 617 (2006) Act 194	Any health insurance plan offered by the state, any self-insured plans	Routine patient care costs incurred during the participation in all phases of a cancer clinical trial. No policy, plan, or contract may exclude coverage for the cost of any routine patient care that is administered to an insured in a cancer	Trial must meet all criteria: 1. The purpose is to test whether the intervention potentially improves the trial participant's health outcomes. 2. The treatment provided as part of the trial is given with the intention of

		clinical trial satisfying the criteria under par. (c) and that would be covered under the policy, plan, or contract if the insured were not enrolled in a cancer clinical trial.	<p>improving the trial participant's health outcomes.</p> <p>3. The trial has therapeutic intent and is not designed exclusively to test toxicity or disease pathophysiology.</p> <p>4. The trial does one of the following:</p> <p>a. Tests how to administer a health care service, item, or drug for the treatment of cancer.</p> <p>b. Tests responses to a health care service, item, or drug for the treatment of cancer.</p> <p>c. Compares the effectiveness of health care services, items, or drugs for the treatment of cancer with that of other health care services, items, or drugs for the treatment of cancer.</p> <p>d. Studies new uses of health care services, items, or drugs for the treatment of cancer.</p> <p>5. The trial is approved by one of the following:</p> <p>a. A National Institute of Health, or one of its cooperative groups or centers, under the federal department of health and human services; federal food and drug administration; federal department of defense; federal department of veterans affairs.</p>
Wyoming SF 024 (2008 budget session)	All health insurance policies, contracts, and certificates providing coverage to any resident of this state.	Routine patient care for a person enrolled in a Phases II- IV clinical trial. Includes a medical service or treatment that is a benefit under a health plan that would be covered if the patient were receiving standard cancer treatment; or a drug provided to a patient during a cancer clinical trial, other than the drug that is the subject of the clinical trial, if the drug has been approved by the federal food and drug administration for use in treating the patient's particular condition.	<p>Trial must also be approved by NIH, FDA, Dept. of Defense, or Dept. of Veterans Affairs. The medical treatment must be provided by a licensed health care provider operating within the scope of his/her license in a facility whose personnel has the experience and training necessary to provide the treatment in a competent manner.</p> <p>The clinical trial participant must have signed an informed consent document prior to starting the trial.</p>

*In 2002, all major insurers in Georgia agreed to cover routine patient care costs associated with Phase I, II, III, or IV cancer clinical trials. Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. The agreement also provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization (see below).

**Illinois Executive Branch Administrative Code (20 ILCS 1405/1405-20) required the Department of Insurance to conduct an analysis and study of costs and benefits derived from the implementation of the coverage requirements for investigational cancer treatments. The study covered the years 2000 through 2002 and included an analysis of the effect of the coverage requirements on the cost of insurance and health care, the results of the treatments to patients, the mortality rate among cancer patients, any improvements in care of patients, and any improvements in the quality of life of patients.

***A 2003 Maryland law (S 128) repealed a reporting requirement for insurers, nonprofit health service plans, and HMOs to submit a report that described the trials covered during the previous year.

Summary of Other Actions

Table Two summarizes the special agreements some states have arranged with insurance companies to voluntarily provide coverage for

clinical trials.

Table Two Special Agreements			
State (Year Agreement Became Effective)	Who is Required to Pay?	What Services or Benefits are Covered?	Other Key Criteria:
Georgia (2002) <u>Georgia Cancer Coalition</u>	All major insurers	Routine patient care costs associated with Phase I through IV cancer clinical trials.	Trials include those that involve a drug that is currently exempt under federal regulations from a new drug application or those that are approved by specified federal agencies or a local institutional review board. Provides for the coverage of cancer screens and examinations in accordance with the most recently published guidelines and recommendations established by any nationally recognized health care organization.
Michigan (2002) Michigan Consensus Agreement	Private insurance plans, HMOs and Medicaid	Routine patient care costs associated with Phase II and III cancer clinical trials.	Coverage for Phase I trials is under consideration.
New Jersey (1999) New Jersey Consensus Agreement	All insurers	Routine patient care costs associated with all phases of cancer clinical trials.	
Ohio (1999) Ohio Med Plan	State employees on Ohio Med Plan	Routine patient care costs associated with Phase II and III cancer treatment clinical trials.	Preauthorization is required for clinical trial participation.

Federal Activity

In 2000, Medicare began covering beneficiaries patient care costs in clinical trials. While many state Medicaid programs have no legal requirements to cover clinical trials costs, many do cover all or some of the costs.

POSITION PAPER ON HEALTH PLAN COVERAGE FOR PATIENT CARE COSTS IN CANCER CLINICAL TRIALS

Sponsored by the Denali Oncology Group, the Alaska State Affiliate of the American Society of
Clinical Oncology

February 14, 2009

BACKGROUND:

1. Clinical trials for cancer patients provide state-of-the-art treatment for patients with life-threatening diseases. Cancer patients and their physicians typically look to clinical trials as an option when the investigational treatment offers as much or more benefit than standard treatment.
2. Currently, in Alaska, health plans can exclude coverage for routine patient care costs while a patient with cancer is enrolled on a clinical trial.
3. Since 2000, Medicare has provided coverage for beneficiaries for routine costs associated with cancer clinical trial enrollment. Results have shown increased enrollment, while no increase in cost has been identified.
4. Twenty-four states in the United States plus the District of Columbia have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care a patient receives while participating in a clinical trial.
5. Some health plans mistakenly think that money is saved by excluding care when patients participate in clinical trials. However, if not enrolled on a clinical trial, these patients will continue to receive conventional therapy. Studies have shown that there are not significant differences in cost of care for patients enrolled on clinical trials compared with patients on conventional therapy.
6. Results of clinical trials lead to more rational use of cancer treatment and more successful outcomes, resulting in short-term and long-term cost savings.

PROPOSED LEGISLATION:

We propose that the Senate and House of the State of Alaska pass a bill requiring that all health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment and palliation (supportive care) of cancer.

BENEFITS:

1. Passage of this bill will remove an important barrier to the participation of patients in cancer clinical trials. It will result in physicians more often recommending patient participation and in patients having greater desire to enroll in clinical trials.
2. Greater participation by Alaskans in cancer clinical trials will result in improved care of our patients in the short- and long-term, improved doctor-patient relationship, increased patient satisfaction with treatment, and increased retention of patients in Alaska for their cancer care.
3. Alaska will be in the forefront in making meaningful progress in providing care for cancer and other life threatening conditions.

American Society of Clinical Oncology

February 17, 2009

The Honorable Bettye Davis
Alaska State Senator
District K
Capitol Building Room 30
Juneau, AK 99801-1182

Dear Senator Davis:

The Denali Oncology Group and American Society of Clinical Oncology are pleased to offer support for your legislation to require insurance coverage for people who participate in clinical trials. Our organizations represent physicians specializing in cancer treatment and clinical research, and clinical research is a vital mission of our membership.

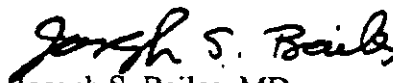

Clinical trials are critically important because they offer the promise of new cancer treatments. As you know from personal experience, they also provide an essential, state-of-the-art treatment option for current cancer patients. Therefore, insurance coverage of the routine patient care costs associated with clinical trials is vital for cancer patients.

For many people with cancer, participation in a clinical trial is often their best treatment option. Yet, as you know, many third-party payers take the position that routine patient care costs should be denied to anyone who enrolls in such trials. We believe such policy deprives beneficiaries of the value of their health insurance, wrongly restricts their treatment options, and inhibits medical progress against serious and life-threatening diseases. DOG and ASCO believe that insurers should cover all routine care costs for patients who are enrolled in cancer clinical trials. Your legislation is the key to making this happen.

DOG and ASCO applaud your leadership in pursuing legislation that provides this essential element of quality cancer care. We are eager to work with you to ensure passage. Please do not hesitate to contact Suanna Bruinooge, ASCO's Director of Research Policy, at 571-483-1613 or suanna.bruinooge@asco.org, or Dr. Mary Stewart at mstewartonc@yahoo.com or 907-279-3155.

Sincerely,

Mary Stewart, MD

**American Society of Clinical Oncology
Statement In Support of Insurance Coverage for Clinical Trials**

With more than 26,000 members worldwide, ASCO is the leading medical society for physicians involved in cancer treatment and research. Engagement in clinical research is a vital mission of ASCO members. Unfortunately, many cancer patients have limited curative treatment options and enrollment in a clinical trial may offer hope for a response to a new drug or other intervention. Oncologists want their patients to consider enrolling in clinical trials, not only because of potential treatment benefits for the individual patient but also because it is through these trials that general progress against cancer is achieved. Patients are usually eager to participate if given the opportunity. ASCO considers the opportunity to participate in cancer clinical trials as an essential element of quality cancer care.

Unfortunately, participation in clinical trials is significantly deterred by the prospect that insurance coverage may be withheld on the ground that treatment provided in trials is "experimental" or "investigational." This position has been effectively discarded by the federal Medicare program, as well as by the Department of Defense health care system, and by many states. ASCO strongly supports state and federal efforts to ensure that patients enrolled in clinical trials receive coverage for the routine health care costs that would be covered if they did not participate on a trial. It is a basic issue of fairness, and it will help ensure that we continue to improve treatment options for cancer patients and learn about this devastating group of diseases.

What is a Clinical Trial?

Clinical trials are research studies involving people. Clinical trials are designed to evaluate whether a new treatment is safe, effective, and better than the current standard of care. These interventions can include new drugs, new combinations of existing therapies, new approaches to radiation therapy or surgery, new methods of treatment, complementary or alternative therapies, and new prevention methods. Cancer clinical trials are designed to compare an investigational therapy with the standard treatment regimen being used at the time. Placebo-controlled clinical trials in cancer research are rare, but are used when there is no effective, standard treatment available.

Cancer clinical trials have led to scientific advances that have increased doctors' understanding of how and why tumors develop and grow. The knowledge gained has helped scientists and doctors develop new ideas on how

to slow, halt, and even prevent the development of the disease. Clinical trials are the most reliable route to definitive answers and are the only accepted scientific method to determine if a new treatment works better than the current standard of care.

Clinical trials undergo rigorous review prior to opening and involve regular oversight during and after a trial to protect the safety and rights of the participants involved. Each clinical trial follows a set of rules called a protocol. A protocol describes inclusion and exclusion criteria; the schedule of tests, procedures, medications, and doses; and the length of the study. While in a clinical trial, participants are seen regularly by the research staff to monitor their health and determine the safety and effectiveness of the treatment.

Precedents for Clinical Trials Coverage

For more than two decades, the cancer community has expressed its concerns about the negative impact of restrictions on coverage of clinical trials by third-party payers, both public and private. Such restrictions are harmful not only to individual patients but also to overall progress against cancer. In 1999, public authorities began to respond favorably to these arguments and to reform their coverage policies with respect to clinical trials.

Pursuant to a negotiated agreement between the National Cancer Institute (NCI) and the Department of Defense (DoD), the DoD's TRICARE health care plan commenced coverage of NCI-sponsored clinical trials in 1999. The original agreement, began as a pilot project, was made a permanent benefit in March 2008, accompanied by a DoD press release describing it as "a long successful project between the NCI and DoD."

In 2000, the Medicare program took a more expansive approach to clinical trial coverage. In an Executive Memorandum, President Clinton instructed Medicare officials to adopt a clinical trials policy covering not just cancer trials but all diseases and all phases. To implement the policy, the Centers for Medicare & Medicaid Services (then the Health Care Financing Administration) published a National Coverage Determination in September 2000.

State governments have also been active in ensuring coverage of clinical trials by private insurance plans under their control. Almost half of the states throughout the U.S. enjoy coverage of clinical trials, either through legislation

or through voluntary consensus agreements with insurers, and more are considering such requirements.

Impact of Policy Changes on Clinical Trial Participation

One of the nation's leading cooperative research groups, the Southwest Oncology Group (SWOG), has conducted studies that underscore the impact of the Medicare coverage policy on clinical trial participation among the elderly. In 1999, SWOG published a study finding significant underrepresentation of the elderly in cancer clinical trials.¹ The study found that, whereas 63% of cancer patients were Medicare eligible, seniors were only 25% of those patients participating in SWOG clinical trials during the period 1993-1996. Following the Medicare coverage policy in 2000, a second SWOG study found there was a significant increase in participation among Medicare beneficiaries, with seniors representing 38% of SWOG trial participants in the period 2001-2003.²

Cost of Clinical Trials Coverage

While there have been no definitive studies of the cost consequences of clinical trial coverage, there have been a series of articles finding that participation in clinical trials "did not result in substantial increases in the direct costs of medical care,"³ that "[c]linical protocols may add relatively little to that cost,"⁴ and that "additional costs of an open reimbursement policy for government-sponsored cancer clinical trials appear minimal."⁵ And with almost eight years of experience with the 2000 Medicare coverage policy, there is no evidence of increased cost to the program.

Conclusion

In light of the experience described above, we heartily support efforts to ensure that health plans and all insurers provide coverage for the routine costs

Making a world of difference in cancer care

*American Association
for Cancer Research*

Association of
American Cancer Institutes

American Society of Clinical Oncology

December 1, 2008

Kevin J. Cullen, MD
Director, University of Maryland
Marlene and Stewart Greenebaum Cancer Center
22 South Greene Street
Baltimore, MD 21201

Dear Dr. Cullen:

This letter is written in follow-up to our recent discussions about Medicare coverage of routine patient care costs for beneficiaries participating in phase I cancer clinical trials. As the world's leading professional and scientific organizations representing oncology cancer care professionals, we write to affirm our position that phase 1 cancer clinical trials are the essential gateway for advancement of new cancer treatments—and a vital component of our cancer treatment armamentarium.

It is the view of the undersigned organizations that the current Medicare National Coverage Determination (NCD) (310.1) for Routine Costs in Clinical Trials explicitly includes coverage of phase I cancer clinical trials and that these trials should be covered.

Requirements for Medicare Coverage

The NCD lays out three basic requirements for Medicare coverage:

- The subject or purpose of the trial must be the evaluation of an item or service that falls within a Medicare benefit category (e.g., physicians' service, durable medical equipment, diagnostic test) and is not statutorily excluded from coverage (e.g., cosmetic surgery, hearing aids).
- The trial must not be designed exclusively to test toxicity or disease pathophysiology. It must have therapeutic intent.
- Trials of therapeutic interventions must enroll patients with diagnosed disease rather than healthy volunteers. Trials of diagnostic interventions may enroll healthy patients in order to have a proper control group.

The NCD also requires that clinical trials covered under the policy have seven "desirable characteristics."

1. The principal purpose of the trial is to test whether the intervention potentially improves the participants' health outcomes;
2. The trial is well-supported by available scientific and medical information or it is intended to clarify or establish the health outcomes of interventions already in common clinical use;

3. The trial does not unjustifiably duplicate existing studies;
4. The trial design is appropriate to answer the research question being asked in the trial;
5. The trial is sponsored by a credible organization or individual capable of executing the proposed trial successfully;
6. The trial is in compliance with Federal regulations relating to the protection of human subjects; and
7. All aspects of the trial are conducted according to the appropriate standards of scientific integrity.

The policy also states that certain trials "are presumed to meet these characteristics and are automatically qualified to receive Medicare coverage." Trials that are automatically deemed include:

1. Trials funded by NIH, CDC, AHRQ, CMS, DOD, and VA;
2. Trials supported by centers or cooperative groups that are funded by the NIH, CDC, AHRQ, CMS, DOD and VA;
3. Trials conducted under an investigational new drug application (IND) reviewed by the FDA; and
4. Drug trials that are exempt from having an IND under 21 CFR 312.2(b)(1) will be deemed automatically qualified until the qualifying criteria are developed and the certification process is in place. At that time the principal investigators of these trials must certify that the trials meet the qualifying criteria in order to maintain Medicare coverage of routine costs. This certification process will only affect the future status of the trial and will not be used to retroactively change the earlier deemed status."

Phase 1 Cancer Clinical Trials Have Therapeutic Intent

The National Cancer Institute's (NCI) Investigator Handbook is instructive as to the therapeutic intent of a Phase I trial. That handbook includes the following information about phase 1 cancer clinical trials (emphasis added):

Phase 1 trials determine a safe dose for Phase 2 trials and define acute effects on normal tissues. In addition, these trials examine the agent's pharmacology and may reveal evidence of antitumor activity. **Therapeutic intent is always present in Phase 1 trials; indeed, anticancer agents are not tested in patients unless preclinical activity studies have already demonstrated evidence of significant activity in laboratory models.**¹

The Food and Drug Administration (FDA) has also adopted a definition of phase 1 trials that is consistent with the NCI's definition. FDA states that phase 1 studies "are designed to determine the metabolic and pharmacologic actions of the drug in humans, the side effects associated with increasing doses, and, if possible, to gain early evidence of effectiveness." This early evidence of effectiveness is the grounding for therapeutic intent – both in the choice of oncologists and patients to enroll in the trial, and as one of the aims of the trial.

Although the scientific goals of a phase 1 trial are to determine the toxic effects, pharmacologic behavior, and recommended doses for future study of a new agent, there is always a strong preclinical

¹ Available on the NCI website at <http://ctep.cancer.gov/handbook/index.html>

rationale for bringing the drug into the clinic with the expectation of positive clinical outcomes for some patients.² In fact, Institutional Review Boards would not permit the administration of potentially toxic treatments to patients unless there was some reasonable prospect of antitumor effect.³ It is also important to note that phase 1 oncology treatment trials are never done in healthy volunteers because of the potential toxicities associated with the treatments under investigation.

Additionally, many of the NCI phase 1 trials involve agents that are already approved for the treatment of one type of cancer and are being studied in a different type of cancer, or in combination with other treatments. As a result, we have some evidence of therapeutic effectiveness that provides solid grounding on which to base therapeutic intent. Indeed, an analysis of 12,000 individuals who participated in 460 NCI-funded phase 1 trials done in 2005 found that 10.6% of patients experienced an objective response. This number increased to 17.8% of patients when one drug included in the trial regimen was already FDA-approved.⁴

Furthermore, our growing knowledge of the molecular basis of cancer is allowing us to increasingly develop treatments that are targeted to particular molecular pathways and personalized to specific patient populations. These types of agents will provide a "high pretreatment probability of achieving both an objective response and more subjective clinical benefit" for the trial participants.⁵

To bring about these exciting new developments in cancer treatment, clinical trials participation is required. It is particularly important in the Medicare-aged population not only because of the increased incidence of cancer in the elderly and but also to develop our understanding of how treatments work in this population. Both the NCI and FDA definitions demonstrate that phase 1 oncology trials meet the requirements for Medicare coverage, including therapeutic intent, and should be covered.

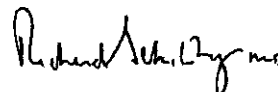

Sincerely,

Medicare Widens Drugs It Accepts for Cancer

By REED ABELSON and ANDREW POLLACK

Medicare, with little public debate, has expanded its coverage of drugs for cancer treatments not approved by the Food and Drug Administration.

Cancer doctors had clamored for the changes, saying that some of these treatments, known as off-label uses, were essential if patients were to receive the most up-to-date care. But for many such uses there is scant clinical evidence that the drugs are effective, despite costing as much as \$10,000 a month. Because the drugs may represent a patient's last hope, though, doctors are often willing to try them.

The new Medicare rules are the latest twist in a protracted debate over federal spending on off-label drugs — drugs prescribed for uses other than those for which they have been specifically approved.

Proponents of the changes say such spending not only helps patients, but can also enhance medical understanding of which treatments work against various forms of cancer.

But opponents argue that the new approach may waste money and needlessly expose patients to the side effects of drugs that may not help them. They also raise the possibility of conflicts of interest, because the rules rely on reference guides that in some cases are linked to drug makers.

The new policy, which took effect in November, makes it much easier to get even questionable treatments paid for, critics of the changes say. Medicare is providing "carte blanche in treatment for cancers," said Steven Findlay, a health policy analyst for Consumers Union. He said overly expansive coverage encourages doctors to use patients as guinea pigs for unproved therapies.

Because Medicare officials canceled a cost analysis of the changes, it is hard to predict how much spending will increase beyond the \$2.4 billion Medicare paid in 2007 for cancer drugs. But cancer doctors and other experts say the new policies, adopted in the final months of the Bush administration, seem almost certain to raise the federal drug bill, while making it more difficult for the new administration to rein in spending on unproven medical treatments.

Although President Obama has made a goal of controlling health care costs, a spokesman for the Obama administration declined to comment on the Medicare changes.

One of the many drugs whose use is likely to expand is the Eli Lilly product Gemzar, which costs \$2,500 to \$5,000 a month. The F.D.A. has approved it to treat only four types of cancer. But the new rules will virtually guarantee that Medicare will pay for its use for about a dozen other cancers, including advanced cervical cancer — even though the evidence supporting Gemzar for that use is "inconclusive," according to one of the reference guides Medicare will now be consulting.

In the case of Genentech's Avastin, one of the world's most expensive and widely used cancer drugs, Medicare

rejected in 2007 nearly all of the estimated \$16 million in requests from doctors' offices to cover its off-label use for ovarian cancer, according to claims specialists who work with Medicare data but declined to be identified because of the controversy over the topic. Under the new rules, Avastin will be routinely covered for ovarian cancer — as will at least some other off-label uses, including for brain and kidney cancer.

It is unclear how much precedent Medicare's new rules might have on private insurers, which often follow the agency's lead on paying for drugs.

Medicare officials defend the new policies, saying they respond to cancer doctors' concerns that the agency has been too slow to recognize promising new off-label treatments. Dr. Steve Phurrough, who has overseen coverage for the agency since 2003, noted that a 1993 federal law gave Medicare specific authorization to cover some unapproved uses of cancer drugs.

"Congress wanted a lesser level of evidence," Dr. Phurrough said. The question of what is adequate evidence is "not a line in the sand," he said. "It's a broad stripe in the sand."

The American Society of Clinical Oncology, which represents cancer doctors, has hailed the new rules, saying they will ensure that the appropriate off-label uses are covered.

But some specialists say that being able to offer off-label drugs can also let physicians avoid hard discussions with patients about a grim prognosis.

"It makes it easier to give drug after drug," said Dr. Andrew Berchuck, director of gynecologic oncology at Duke University, "and keep the fantasy alive."

The new rules expand the number of reference guides — or compendiums — that Medicare relies on for determining which off-label uses of cancer drugs to cover. The writers and editors of these compendiums, who work completely outside the federal government, scan the medical literature and evaluate the evidence in making their recommendations.

In 1993, Congress had authorized three compendiums for Medicare, all published by not-for-profit organizations. But by 2007 two had stopped publishing, leaving Medicare with a single compendium. Having selected three additional guides last year, the agency plans to review its choice of guides every year.

Under the old rules, Medicare representatives were supposed to consult the compendiums but also use their own discretion in interpreting the guides' recommendations. The new rules essentially delegate the decision to guides Medicare has selected, even when there is little clinical evidence behind a particular recommendation. As long as at least one of them recommends a cancer treatment, Medicare is essentially obliged to pay for it — unless one of the other guides specifically advises against it.

And some of these new compendiums have close financial ties to the drug industry, according to the draft of a report Medicare commissioned last year after Congress raised questions about possible conflicts of interest. The draft was completed in October, with a final version to be released soon.

The draft criticizes the new rules for essentially taking most decisions about off-label cancer drugs out of Medicare's hands, even when the agency is aware of potential conflicts. The guide's recommendation, the report says, "becomes the final word."

For some experts, the bigger concern about using some cancer drugs off-label without adequate evidence is that they may not only be useless — they may cause dangerous side effects.

"We have very little faith that those indications that make it into the compendia are safe, let alone effective," said Dr. Allan M. Korn, the chief medical officer for the Blue Cross and Blue Shield Association, who added that Medicare should cover off-label drugs only if the results of their use are carefully tracked afterward. There is no such requirement in the new Medicare guidelines.

There have been three different top Medicare administrators since the off-label rule changes were set in motion a few years ago. The second of them, Leslie V. Norwalk, chose to select the compendiums through a streamlined and internal administrative process, instead of the more elaborate and public process that Medicare often uses for broad coverage decisions.

"I did not see it as a significant step in coverage," said Ms. Norwalk, who left Medicare in 2007.

Drug makers say they welcome the Medicare changes. A spokesman for the Pharmaceutical Research and Manufacturers of America, the industry's main trade group, said the new rules ensured "that cancer patients have access to the treatments they need."

Many oncologists say they needed greater flexibility in using cancer drugs because it can take months or years for a new use to be approved by the F.D.A. They cite the example of Celgene's drug thalidomide, now a mainstay treatment for multiple myeloma, which was prescribed only off-label for years before the F.D.A. formally approved it for that use.

And in the case of rare types of cancer, there may be so few potential patients that companies have little financial incentive to undergo the formal F.D.A. process for approving a drug for expanded use. Only two drugs have been approved by the F.D.A. for brain cancer, for example, and cancer doctors say they need the ability to try other drugs or other combinations of treatments.

"To arbitrarily stop after two drugs to me is ludicrous," especially for younger patients, said Dr. Virginia Stark-Vance, a solo practitioner in Dallas and Fort Worth. She said one of her brain cancer patients had been kept alive for 10 years by off-label use of irinotecan, a colon cancer drug that was the ninth drug the patient tried.

Medicare seems to have ignored some concerns raised by a group of outside researchers whom the agency had asked to survey a half-dozen compendiums, including the four that Medicare has now adopted. That report, completed in 2007, found that the six guides "cited very little of the available evidence," said Dr. Amy P. Abernethy, a Duke oncologist who led the study.

The study also found great variability among the guides, in terms of what uses were recommended — or discussed at all.

Despite her study's findings, Dr. Abernethy says she does not oppose Medicare's new rules.

"I think the addition of the new compendia this year is an important increase in the bandwidth," she said.

Critics say the agency also seems to have played down the potential financial conflicts of interests between the drug industry and the producers of the compendiums. The draft study that was completed in October notes that one of the new guides is published by the National Comprehensive Cancer Network, a group of 21 leading

cancer centers that routinely employs experts who have financial ties to the drug industry.

William T. McGivney, the network's chief executive, said each committee of reviewers had 20 to 30 members, which "diminishes the opportunity for dominance of one person's opinion," regardless of any ties to drug makers.

Then there is the American Hospital Formulary compendium, the one that Medicare was using before the November changes and will continue to consult. It has long been published by the nonprofit American Society of Health-System Pharmacists. But last year the society forged a financial relationship with a foundation linked to drug companies and some cancer doctors' private practices.

A drug company can apply to that foundation, the Foundation for Evidence-Based Medicine, and pay a \$50,000 fee to have new uses of its drug reviewed by the compendium within 90 days. The foundation was started in 2007 by the Association of Community Cancer Centers, which represents oncology practices, and says it received about \$200,000 in initial funding from drug makers.

Gerald K. McEvoy, the guide's editor in chief, said the application fee was meant to raise money to pay for additional researchers, to address previous criticism that the publication was too slow to vet new evidence. The foundation insulates the guide's staff from industry pressure, he said, and fewer than one-third of the reviews under the new arrangement have resulted in a positive recommendation in the compendium.

Medicare officials acknowledge that some of the potential conflicts need to be addressed. But they say they have confidence in the guides they have chosen. "We had significant conversations with all the companies," Dr. Phurrough said.

Coverage of Routine Patient Care Costs in Clinical Trials Position Statement

Approved by the ASCO Board of Directors, March 2005

For people with serious or life-threatening illness, like cancer, completely satisfactory or curative treatment often is not available. Those patients are nevertheless able to receive state-of-the-art therapy through high-quality clinical trials, offering not only an important treatment option but an opportunity to advance medical knowledge.

Cancer patients face a number of obstacles to clinical trials enrollment. One of the barriers is the potential denial of third party payment for the routine patient care costs for those enrolled in clinical trials. Historically, payers have denied coverage for care provided in a clinical trial, arguing that such care is "experimental" and therefore not a covered benefit.

Current Clinical Trials Coverage

The American Society of Clinical Oncology (ASCO) and its partners in the patient advocacy community have sought, over the course of more than a decade, to reform clinical trials payment policy in public and private health plans. These efforts have resulted in reforms in Medicare payment policy and in enactment of legislation to ensure clinical trials coverage in more than 20 states.

In 2000, in response to Congressional pressure and cancer community advocacy, the Clinton Administration issued an Executive Memorandum setting a policy for coverage of the routine patient care costs for Medicare beneficiaries enrolled in clinical trials for all diseases.

In addition to action by Medicare, a number of states have enacted legislation that would ensure coverage of routine patient care costs in clinical trials (coverage ranges from cancer clinical trials only to trials for all diseases) by those health plans that are regulated by the state. Some of those states have adopted, either in statute or in implementing regulations, the coverage standards of the Medicare program. In several states without clinical trials coverage mandates, third party payers have entered into voluntary agreements to cover routine costs in clinical trials. States continue to engage in efforts to improve coverage in state plans.

ASCO Position

These federal, state, and private sector initiatives reflect widespread recognition of clinical trials coverage as a critical element of quality cancer care. However, not all of the initiatives meet the standards for coverage endorsed by ASCO, and a significant number of cancer patients remain beyond the reach of these reimbursement reforms. ASCO recommends that every cancer patient should have access to clinical trials under the criteria defined below.

Standards for Clinical Trials Coverage

The following ASCO standards should remain the standard for Medicare coverage and should serve as the model for state legislative initiatives, including provisions governing coverage under state-funded programs like Medicaid, as well as mandates for private insurance and managed care plans.

The cost of medical care provided when a patient with serious or life-threatening disease is entered on a Phase I, II, III, or IV (post-marketing) clinical trial – including hospital, physician, and other health care items and services as well as the cost of approved drugs for labeled or unlabeled uses which might be part of the regimen¹ – should not be denied coverage when all of the following are demonstrated:

- Treatment is provided with a therapeutic intent²;
- Treatment is being provided pursuant to a clinical trial approved by one of the National Institutes of Health (NIH), an NIH cooperative group or an NIH center; the Food and Drug Administration (FDA) in the form of an investigational new drug (IND) or new device (IDE) exemption; the Department of Defense; the Department of Veterans Affairs; or a qualified non-governmental research entity as identified in National Cancer Institute guidelines or center support grants;
- The trial is conducted according to a written protocol, which includes the following elements: trial design and scientific justification, criteria for inclusion and exclusion, outcome measures, statistical analysis plan, conflicts and other ethical controls, and publication policy;
- The protocol has undergone scientific review by a group of independent and qualified experts;
- The clinical trial has been reviewed and approved by a qualified institutional review board (IRB);
- The facility and personnel providing the treatment are capable of doing so by virtue of their experience or training;
- There is no non-investigational therapy that is clearly superior to the protocol treatment; and
- The available clinical or preclinical data provide a reasonable expectation that the protocol treatment will be at least as efficacious as non-investigational therapy.³

Originally adopted February 1993
As amended June 1994 and March 2005

¹ Items and services required by the design of the trial should be covered, except those items or services normally paid for by other funding sources such as the cost of certain investigational drugs, the costs of any non-health services that might be required for a person to receive the treatment, and the costs of managing the research.

² Treatment with therapeutic intent may be aimed at improving patient outcome relative to either survival or quality of life.

³ While these standards refer to clinical trials involving “treatment” or “therapy”, the same principles would apply equally to trials of interventions to prevent, rather than treat, diseases.

POSITION PAPER ON HEALTH PLAN COVERAGE FOR PATIENT CARE COSTS IN CANCER CLINICAL TRIALS

Sponsored by the Denali Oncology Group, the Alaska State Affiliate of the American Society of
Clinical Oncology

February 24, 2008

BACKGROUND:

1. Clinical trials for cancer patients provide state-of-the-art treatment for patients with life-threatening diseases. Cancer patients and their physicians typically look to clinical trials as an option when the investigational treatment offers as much or more benefit than standard treatment.
2. Currently, in Alaska, health plans can exclude coverage for routine patient care costs while a patient with cancer is enrolled on a clinical trial.
3. Since 2000, Medicare has provided coverage for beneficiaries for routine costs associated with cancer clinical trial enrollment.
4. Twenty-three states in the United States have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care a patient receives while participating in a clinical trial.
5. Health plans mistakenly think that money is saved by excluding care while patients participate in clinical trials. However, if not enrolled on a clinical trial, these patients will continue to receive conventional therapy. Studies have shown that there are not differences in cost of care for patients enrolled on clinical trials compared with patients on conventional therapy.
6. Results of clinical trials lead to more rational use of cancer treatment and more successful outcomes, resulting in short-term and long-term cost savings.

PROPOSED LEGISLATION:

We propose that the Senate and House of the State of Alaska pass a bill requiring that all health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment and palliation (supportive care) of cancer.

BENEFITS:

1. Passage of this bill will remove an important barrier to the participation of patients in cancer clinical trials. It will result in physicians more often recommending patient participation and in patients having greater desire to enroll in clinical trials.
2. Greater participation by Alaskans in cancer clinical trials will result in improved care of our patients in the short- and long-term, improved doctor-patient relationship, increased patient satisfaction with treatment, and increased retention of patients in Alaska for their cancer care.
3. Alaska will be in the forefront in making meaningful progress in providing care for cancer and other life threatening conditions.

CANCER CLINICAL TRIALS FAST FACTS
DENALI ONCOLOGY GROUP, October 28, 2007

Frequently Asked Questions (FAQ)

1. **What is a clinical trial?** A clinical trial is a scientific way of studying a new treatment for a specific disease that may be better and/or safer than existing treatments.
2. **Why are clinical trials necessary?** Without these studies, we can not determine whether a new treatment is safe, effective, and better than existing options.
3. **What types of cancer clinical trials exist?** Trials may be for prevention, early detection, diagnosis, or treatment of cancer. There are also trials for reducing symptoms and improving quality-of-life.
4. **Why would a cancer patient consider participating in a clinical trial?**
 - a. Treatment given on the clinical trial offers the potential for better outcome (e.g. longer life or higher cure rate) than the standard treatment.
 - b. Results of the trial will help improve treatment for future patients.
5. **Is it risky to be on a clinical trial?** There are risks with any type of cancer treatment. Side effects that occur in patients on a clinical trial are monitored very closely and described in paperwork that patients receive (i.e., consent form).
6. **Are clinical trials available in Alaska?** Yes, more than 50 cancer clinical trials are open in Alaska for patients to receive treatment in-state.
7. **Do doctors or patients gain financially from participating in clinical trials?** We only support the conduct of studies where there is no financial gain for patients or physicians. Support is provided by the sponsor of the study to help pay for costs associated with the trial, such as research personnel and regulatory requirements.

Myths

1. **"I may receive placebo."** Placebo is rarely used in cancer clinical trials because there is usually an acceptable standard treatment. However, if the standard is to offer no treatment, then the new treatment under investigation will be compared to no treatment (i.e., placebo). Patients will always be informed of the potential to receive placebo.
2. **"I will be a guinea pig."** Patients on clinical trials are treated with respect, receive informed consent, and have all questions answered. They have the right to withdraw from the study at any time without compromising their future care.
3. **"I'm not sick enough for a clinical trial."** Many trials are studying ways to prevent cancer in healthy people at risk for cancer. Other trials are studying ways to improve upon the most common types of treatment used when patients are first diagnosed with cancer.

State Laws Addressing Third-Party Reimbursement for Clinical Trials for the Treatment of Cancer
(as of September 30, 2007)

State	Statute	Coverage Requirements			Types of Insurers Covered			Clinical Trial Phases Covered				
		Mandatory Coverage	Mandatory Offer	Prohibits Exclusion of Coverage	Private Insurers	Specified Managed Care	Medicaid/Other Medical Assistance	Public Employee Health Plans	Phase I	Phase II	Phase III	Phase IV

State Laws Addressing Third-Party Reimbursement for Clinical Trials for the Treatment of Cancer

(as of September 30, 2007)

State	Statute	Coverage Requirements			Types of Insurers Covered				Clinical Trial Phases Covered			
		Mandatory Coverage	Mandatory Offer	Prohibits Exclusion of Coverage	Private Insurers	Specified Managed Care	Medicaid/Other Medical Assistance	Public Employee Health Plans	Phase I	Phase II	Phase III	Phase IV
West Virginia	W. VA. CODE §§ 5-16-7d, 5-16-7e, 5-16B-6a, 5-16B-6b, 9-2-12, 9-2-12a, 33-25F-1, and 33-25F-2	X ⁴			X	X	X	X		X	X	X
Wisconsin	WIS. STAT. ANN. §§ 632.87 and 40.51			X ⁴	X			X	X	X	X	X

Note: Because arrangements for the reimbursement of clinical trials for several states fall outside the scope of the State Cancer Legislative Database protocols, those states are not included herein. Michigan and New Jersey, for example, instituted special non-legislative agreements whereby insurers voluntarily cover routine medical care that is part of a clinical trial. According to the state employee benefits handbook, Ohio provides coverage for cancer treatment clinical trials to state employees who are enrolled in the state employee health benefit plan. In Georgia, a non-legislative agreement among a number of private health plans and state-based plans provides coverage for adults and children.

* Laws in Delaware, Maine, and North Carolina provide coverage of clinical trials for life threatening medical conditions and not specifically for the treatment of cancer.

¹ Indicated insurers are only obligated to provide coverage for covered patient costs that are directly associated with the clinical trial.

² Coverage requirement applies only to routine patient care costs related to cancer clinical trials having a therapeutic purpose, upon recommendation by a treating physician.

³ In order to be eligible for coverage, clinical trials for the *prevention of cancer* must be a Phase III trial that involves a therapeutic intervention and is conducted at multiple institutions under the auspices of an independent peer-reviewed protocol approved by a specified Federal authority.

⁴ Coverage requirement applies only to clinical trials that have a therapeutic intent.

⁵ Coverage requirement applies only to routine patient care costs incurred in connection with clinical trials for the treatment of children's cancer.

⁶ Applies only to Phase II or III prescription drug clinical trial programs.

⁷ Coverage for Phase I and Phase II clinical trials is decided on a case-by-case basis.

⁸ Requires the state Department of Banking, Insurance, Securities, and Health Care Administration to issue regulations that specify the requirements for coverage of routine costs for patients who participate in approved cancer clinical trials conducted by specified providers. Coverage requirements are included in Regulation H-2001-04.

⁹ Treatment in a Phase I clinical trial may be covered on a case-by-case basis.

Clinical Trial Information

The greater the number of people who participate in clinical trials, the faster emerging anticancer therapies can be brought to market. US Oncology accrued more than 32,000 cancer patients to clinical trials, and is bringing the search for new therapies directly into local communities across America.

Our research team members conduct more than 50 clinical trials each year. While we have complete Phase I-IV capabilities, the majority of our research is in Phase II and III development stages.

Our extensive clinical trial program, plus our provision of care for approximately 200,000 new cancer patients each year, provides us with a unique research platform. In sharing what we learn with one another, we can more readily advance the latest developments as they relate to investigational drugs, the reduction of side effects, and new methods of care.

If you are interested in contacting a US Oncology-affiliated physician to learn more about our clinical trial program, please [click here](#).

Frequently Asked Questions About Clinical Trials

If you are a cancer patient or someone you know is a cancer patient, you may be interested in learning more about clinical trials. The information below offers a brief overview of the clinical trial process, with a look at key questions and terms.

What are Clinical Trials?

Clinical trials, or research studies, utilize patient volunteers to help investigate different ways to treat diseases - such as cancer. Clinical trials involve the use of investigational drugs (also known as study drugs) and drug delivery methods. Each study tries to answer specific scientific questions about different ways to prevent, diagnose, and treat whatever disease it is addressing.

Why are Clinical Trials Important?

Clinical trials contribute to the overall knowledge and progress made in developing therapies for diseases, such as cancer. These research studies are conducted to determine if a study drug or delivery method is safe and effective. Patients who agree to participate may possibly benefit from the research study, while receiving the best current standard treatment as well.

How are Clinical Trials Structured?

Clinical trials are structured into four phases:

In *Phase I clinical trials*, researchers test a study drug in a small group of people (20 to 80) for the first time to evaluate its safety, determine a safe dosage range, and identify side effects.

In *Phase II clinical trials*, the study drug is tested in a larger group of people (100 to 300) to measure its effectiveness and further evaluate its safety.

In *Phase III clinical trials*, the study drug is tested in large groups of people (1,000 to 3,000) to confirm its effectiveness, monitor side effects, compare it to approved standard treatments, and collect information that will allow the study drug to be used safely.

In *Phase IV clinical trials*, the drug is tested after it has been marketed to collect information about its effect in various populations and about any side effects associated with long-term use.

What Happens During a Clinical Trial?

In many trials, if the patient is eligible and agrees to participate through Informed Consent, the patient is randomized (by chance, like a coin toss) to either receive the current standard treatment, or the current standard treatment and the study drug regimen. If no standard treatment is available, a trial may compare the study drug to a placebo, which is similar to the study drug, but contains no active ingredient. During a trial, patients are treated and monitored by a team of health care professionals. This team will give the patient specific instructions about the trial, about more tests, and additional doctor's visits that might be required.

Throughout the clinical trial, you come first. If there is no improvement or you experience intolerable side effects, you and your physician can decide to discontinue trial participation and resume other

treatment options. Should you do so, your decision will be respected without any effect on future treatment plans.

Why Do Some Cancer Patients Choose to Participate in Clinical Trials?

Some cancer patients may participate because they are hoping for a possible cure and longer life or a way to feel better. Others find that the current standard therapies are not optimal for their cancer and wish to be among the first to participate in a research study and receive an investigational drug. Whatever the reason, participation could make a difference in a patient's future, as well as in the lives of future cancer patients.

How Do I Know If I Should Participate in a Clinical Trial?

The decision to participate in a clinical trial is one that only you can make, with the help of your physician and the people close to you. If you are interested in participating in a clinical trial, you will be informed of the clinical trial's potential benefits and drawbacks before making your decision. If the investigational drug is proven to be effective, you may be among the first to benefit. In addition, through your participation in a research study, you will also be helping future cancer patients.

Are There Risks Involved in Participating?

Because clinical trials are research studies, study drugs may not be better than current standard drugs or treatments. In addition, you may experience side effects that are worse than those of current standard drugs and treatments. Also, your health insurance company or managed care provider may not cover all of the patient care associated with a clinical trial. All of these factors should be discussed thoroughly with your physician and those close to you before deciding whether or not to participate in a clinical trial.

Where are the Trials Held?

Many clinical trials may be available right in your own community. Ask your physician for specific information or [search the US Oncology clinical trial list](#) to find a current US Oncology trial in your region.

How Do I Learn More About a Specific Clinical Trial?

Through a process called "Informed Consent," you will learn the key facts about a particular clinical trial before making a decision about participating. Your doctor will explain the purpose and requirements of the study, including any potential drawbacks and benefits. If you agree to take part in the trial, you will be asked to review and sign a form that outlines the study's details prior to participating.

How Do I Get More Information?

Consult your physician to find out whether or not there is a clinical trial that would be appropriate for your care. If you are a US Oncology patient, your physician has information on clinical trials that are being held throughout the company's national research network. Or you can [search a list of all current US Oncology clinical trials](#) for more specific information.

For more details on clinical trial research conducted by the US Oncology network, please click [USON Research](#).

Clinical Trials: Questions and Answers

Key Points

- **Clinical trials** are research studies that test how well new medical approaches work in people (see [Question 1](#)).
- Every clinical trial has a **protocol**, which describes what will be done in the study, how it will be conducted, and why each part of the study is necessary (see [Question 4](#)).
- **Informed consent** is a process by which people learn the important facts about a clinical trial to help them decide whether to participate (see [Question 6](#)).
- Payment of patient care costs in clinical trials varies by health insurance plan and by study (see [Question 11](#)).

1. What are clinical trials, and why are they important?

Clinical trials are research studies that test how well new medical approaches work in people. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat a disease. People who take part in **cancer** clinical trials have an opportunity to contribute to knowledge of, and progress against, cancer. They also receive up-to-date care from experts.

2. What are the types of clinical trials?

There are several types of clinical trials:

- **Prevention trials** test new approaches, such as medications, **vitamins**, or other **supplements**, that doctors believe may lower the risk of developing a certain type of cancer. Most prevention trials are conducted with healthy people who have not had cancer. Some trials are conducted with people who have had cancer and want to prevent **recurrence** (return of cancer), or reduce the chance of developing a new type of cancer.
- **Screening trials** study ways to detect cancer earlier. They are often conducted to determine whether finding cancer before it causes **symptoms** decreases the chance of dying from the disease. These trials involve people who do not have any symptoms of cancer.
- **Diagnostic trials** study tests or procedures that could be used to identify cancer more accurately. Diagnostic trials usually include people who have signs or symptoms of cancer.
- **Treatment trials** are conducted with people who have cancer. They are designed to answer specific questions about, and evaluate the effectiveness of, a new treatment or a new way of using a **standard treatment**. These trials test many types of treatments, such as new drugs, **vaccines**, new approaches to **surgery** or **radiation therapy**, or new combinations of treatments.
- **Quality-of-life** (also called **supportive care**) trials explore ways to improve the comfort and quality of life of cancer patients and cancer survivors. These trials may study ways to help people who are experiencing **nausea**, **vomiting**, sleep disorders, **depression**, or other effects from cancer or its treatment.
- **Genetics studies** are sometimes part of another cancer clinical trial. The genetics component of the trial may focus on how **genetic** makeup can affect detection, **diagnosis**, or **response** to cancer treatment.

Population- and family-based genetic research studies differ from traditional cancer clinical trials. In these studies, researchers look at **tissue** or **blood** samples, generally from families or large groups of people, to find genetic changes that are associated with cancer. People who participate in genetics studies may or may not have cancer, depending on the study. The goal

of these studies is to help understand the role of genes in the development of cancer.

3. Who sponsors clinical trials?

Government agencies, such as the National Cancer Institute (NCI) and other parts of the National Institutes of Health (NIH), the Department of Defense, and the Department of Veterans Affairs, sponsor and conduct clinical trials. In addition, organizations or individuals, such as physicians, medical institutions, foundations, volunteer groups, and pharmaceutical companies, also sponsor clinical trials.

NCI sponsors a large number of clinical trials and has a number of programs designed to make clinical trials widely available in the United States. These programs include the following:

- **The Cancer Centers Program** provides support to research-oriented institutions, including those that have been designated as NCI Comprehensive or Clinical Cancer Centers for their scientific excellence. More information is available in the NCI fact sheet *The National Cancer Institute Cancer Centers Program*, which is available at <http://www.cancer.gov/cancertopics/factsheet/NCI/cancer-centers> on the Internet.
- **The Specialized Programs of Research Excellence (SPOREs)** bring together scientists and researchers to design and implement research programs that can improve prevention, detection, diagnosis, and treatment of specific types of cancer. More information about SPOREs is available at <http://spores.nci.nih.gov/index.html> on the Internet.
- **The Clinical Trials Cooperative Group Program** brings researchers, cancer centers, and doctors together into cooperative groups. These groups work with the NCI to identify important questions in cancer research, and design and conduct multisite clinical trials to answer these questions. Cooperative groups are located throughout the United States and in Canada and Europe. For more information, refer to the fact sheet *NCI's Clinical Trials Cooperative Group Program* at <http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-trials-cooperative-group> on the Internet.
- **The Cancer Trials Support Unit (CTSU)** makes NCI-sponsored phase III treatment trials available to doctors and patients in the United States and Canada. Doctors who are not affiliated with an NCI-sponsored Clinical Trials Cooperative Group (see above) must complete an application process, which includes credential verification and site preparedness assessment, to become members of the CTSU's National Network of Investigators. CTSU members can enroll patients in clinical trials through the program's Web site, which is located at <http://www.ctsu.org> on the Internet. General information about the CTSU is also available on the program's Web site, or by calling 1-888-823-5923.
- **The Community Clinical Oncology Program (CCOP)** makes clinical trials available in a large number of communities across the United States. Local hospitals throughout the country affiliate with a cancer center or a cooperative group. This affiliation allows doctors to offer people participation in clinical trials more easily, so they do not have to travel long distances or leave their usual caregivers. The **Minority-Based Community Clinical Oncology Program** focuses on encouraging minority populations to participate in clinical trials. More information about the CCOP can be found in the NCI fact sheet *Community Clinical Oncology Program: Questions and Answers*, which is available at <http://www.cancer.gov/cancertopics/factsheet/NCI/CCOP> on the Internet.
- **The National Institutes of Health Clinical Center**, a research hospital located in Bethesda, Maryland, is part of the NIH. Trials at the Clinical Center are conducted by the components of the NIH, including the NCI. The NCI fact sheet *Cancer Clinical Trials at the National Institutes of Health Clinical Center: Questions and Answers* has more information about the Clinical Center. This fact sheet is available at <http://www.cancer.gov/cancertopics/factsheet/NCI/clinical-center> on the Internet.

4. How are participants protected?

Research with people is conducted according to strict scientific and ethical principles. Every clinical trial has a protocol, or action plan, which acts like a "recipe" for conducting the trial. The plan describes what will be done in the study, how it will be conducted, and why each part of the study is necessary. The same protocol is used by every doctor or research center taking part in the trial.

All clinical trials that are federally funded or that evaluate a new drug or medical device subject to Food and Drug Administration regulation must be reviewed and approved by an Institutional Review Board (IRB). Many institutions require that all clinical trials, regardless of funding, be reviewed and approved by a local IRB. The Board, which includes doctors, researchers, community leaders, and other members of the community, reviews the protocol to make sure the study is conducted fairly and participants are not likely to be harmed. The IRB also decides how often to review the trial once it has begun. Based on this information, the IRB decides whether the clinical trial should continue as initially planned and, if not, what changes should be made. An IRB can stop a clinical trial if the

researcher is not following the protocol or if the trial appears to be causing unexpected harm to the participants. An IRB can also stop a clinical trial if there is clear evidence that the new intervention is effective, in order to make it widely available.

NIH-supported clinical trials require data and safety monitoring. Some clinical trials, especially phase III clinical trials, use a Data and Safety Monitoring Board (DSMB). A DSMB is an independent committee made up of statisticians, physicians, and patient advocates. The DSMB ensures that the risks of participation are as small as possible, makes sure the data are complete, and stops a trial if safety concerns arise or when the trial's objectives have been met.

5. What are eligibility criteria, and why are they important?

Each study's protocol has guidelines for who can or cannot participate in the study. These guidelines, called eligibility criteria, describe characteristics that must be shared by all participants. The criteria differ from study to study. They may include age, gender, medical history, and current health status. Eligibility criteria for treatment studies often require that patients have a particular type and stage of cancer.

Enrolling participants with similar characteristics helps to ensure that the results of the trial will be due to what is under study and not other factors. In this way, eligibility criteria help researchers achieve accurate and meaningful results. These criteria also minimize the risk of a person's condition becoming worse by participating in the study.

6. What is informed consent?

Informed consent is a process by which people learn the important facts about a clinical trial to help them decide whether to participate. This information includes details about what is involved, such as the purpose of the study, the tests and other procedures used in the study, and the possible risks and benefits. In addition to talking with the doctor or nurse, people receive a written consent form explaining the study. People who agree to take part in the study are asked to sign the informed consent form. However, signing the form does not mean people must stay in the study. People can leave the study at any time—either before the study starts or at any time during the study or the follow-up period.

The informed consent process continues throughout the study. If new benefits, risks, or side effects are discovered during the study, the researchers must inform the participants. They may be asked to sign new consent forms if they want to stay in the study.

7. Where do clinical trials take place?

Clinical trials take place in doctors' offices, cancer centers, other medical centers, community hospitals and clinics, and veterans' and military hospitals in cities and towns across the United States and in other countries. Clinical trials may include participants at one or two highly specialized centers, or they may involve hundreds of locations at the same time.

8. How are clinical trials conducted?

Clinical trials are usually conducted in a series of steps, called phases. Treatment clinical trials listed in PDQ[®], the NCI's comprehensive cancer information database, are always assigned a phase. However, screening, prevention, diagnostic, and quality-of-life studies do not always have a phase. Genetics clinical trials generally do not have a phase.

- Phase I trials are the first step in testing a new approach in people. In these studies, researchers evaluate what dose is safe, how a new agent should be given (by mouth, injected into a vein, or injected into the muscle), and how often. Researchers watch closely for any harmful side effects. Phase I trials usually enroll a small number of patients and take place at only a few locations. The dose of the new therapy or technique is increased a little at a time. The highest dose with an acceptable level of side effects is determined to be appropriate for further testing.
- Phase II trials study the safety and effectiveness of an agent or intervention, and evaluate how it affects the human body. Phase II studies usually focus on a particular type of cancer, and include fewer than 100 patients.
- Phase III trials compare a new agent or intervention (or new use of a standard one) with the current standard therapy. Participants are randomly assigned to the standard group or the new group, usually by computer. This method, called randomization, helps to avoid bias and ensures that human choices or other factors do not affect the study's results. In most cases, studies move into phase III testing only after they have shown promise in phases I and II. Phase III trials often include large numbers of people across the country.
- Phase IV trials are conducted to further evaluate the long-term safety and effectiveness of a

treatment. They usually take place after the treatment has been approved for standard use. Several hundred to several thousand people may take part in a phase IV study. These studies are less common than phase I, II, or III trials.

People who participate in a clinical trial work with a research team. Team members may include doctors, nurses, social workers, dietitians, and other health professionals. The health care team provides care, monitors participants' health, and offers specific instructions about the study. So that the trial results are as reliable as possible, it is important for participants to follow the research team's instructions. The instructions may include keeping logs or answering questionnaires. The research team may continue to contact participants after the trial ends.

9. What are some of the benefits of taking part in a clinical trial?

The benefits of participating in a clinical trial include the following:

- Participants have access to promising new approaches that are often not available outside the clinical trial setting.
- The approach being studied may be more effective than the standard approach.
- Participants receive regular and careful medical attention from a research team that includes doctors and other health professionals.
- Participants may be the first to benefit from the new method under study.
- Results from the study may help others in the future.

10. What are some of the possible risks associated with taking part in a clinical trial?

The possible risks of participating in a clinical trial include the following:

- New drugs or procedures under study are not always better than the standard care to which they are being compared.
- New treatments may have side effects or risks that doctors do not expect or that are worse than those resulting from standard care.
- Participants in randomized trials will not be able to choose the approach they receive.
- Health insurance and managed care providers may not cover all patient care costs in a study.
- Participants may be required to make more visits to the doctor than they would if they were not in the clinical trial.

11. Who pays for the patient care costs associated with a clinical trial?

Health insurance and managed care providers often do not cover the patient care costs associated with a clinical trial. What they cover varies by health plan and by study. Some health plans do not cover clinical trials if they consider the approach being studied "experimental" or "investigational." However, if enough data show that the approach is safe and effective, a health plan may consider the approach "established" and cover some or all of the costs. Participants may have difficulty obtaining coverage for costs associated with prevention and screening clinical trials; health plans are currently less likely to have review processes in place for these studies. It may, therefore, be more difficult to get coverage for the costs associated with them. In many cases, it helps to have someone from the research team talk about coverage with representatives of the health plan.

Health plans may specify other criteria a trial must meet to be covered. The trial might have to be sponsored by a specified organization, be judged "medically necessary" by the health plan, not be significantly more expensive than treatments the health plan considers standard, or focus on types of cancer for which no standard treatments are available. In addition, the facility and medical staff might have to meet the plan's qualifications for conducting certain procedures, such as bone marrow transplants. More information about insurance coverage can be found on the NCI's *Clinical Trials and Insurance Coverage: A Resource Guide* Web page at <http://www.cancer.gov/clinicaltrials/learning/insurance-coverage> on the Internet.

Many states have passed legislation or developed policies requiring health plans to cover the costs of certain clinical trials. For more information, visit the NCI's Web site at <http://www.cancer.gov/clinicaltrials/developments/laws-about-clinical-trial-costs> on the Internet.

Federal programs that help pay the costs of care in a clinical trial include those listed below:

- Medicare reimburses patient care costs for its beneficiaries who participate in clinical trials designed to diagnose or treat cancer. Information about Medicare coverage of clinical trials is available at <http://www.medicare.gov> on the Internet, or by calling Medicare's toll-free number for beneficiaries at 1-800-633-4227 (1-800-MEDICARE). The toll-free number for the hearing impaired is 1-877-486-2048. Also, the NCI fact sheet *More Choices in Cancer Care: Information for Beneficiaries on Medicare Coverage of Cancer Clinical Trials* is available at <http://www.cancer.gov/cancertopics/factsheet/support/medicare> on the Internet.
- Beneficiaries of TRICARE, the Department of Defense's health program, can be reimbursed for the medical costs of participation in NCI-sponsored phase II and phase III cancer prevention

(including screening and early detection) and treatment trials. Additional information is available in the NCI fact sheet *TRICARE Beneficiaries Can Enter Clinical Trials for Cancer Prevention and Treatment Through a Department of Defense and National Cancer Institute Agreement*. This fact sheet can be found at <http://www.cancer.gov/cancertopics/factsheet/NCI/TRICARE> on the Internet.

- The Department of Veterans Affairs (VA) allows eligible veterans to participate in NCI-sponsored prevention, diagnosis, and treatment studies nationwide. All phases and types of NCI-sponsored trials are included. The NCI fact sheet *The NCI/VA Agreement on Clinical Trials: Questions and Answers* has more information. It is available at <http://www.cancer.gov/cancertopics/factsheet/NCI/VA-clinical-trials> on the Internet.

12. What are some questions people might ask their health care provider before entering a clinical trial?

It is important for people to ask questions before deciding to enter a clinical trial. Questions people might want to ask their doctor or nurse include the following:

The Study

- What is the purpose of the study?
- Why do the researchers think the approach being tested may be effective? Has it been tested before?
- Who is sponsoring the study?
- Who has reviewed and approved the study?
- What are the medical credentials and experience of the researchers and other study personnel?
- How are the study results and safety of participants being monitored?
- How long will the study last?
- How will the results be shared?

Possible Risks and Benefits

- What are the possible short-term benefits?
- What are the possible long-term benefits?
- What are the short-term risks, such as side effects?
- What are the possible long-term risks?
- What other treatment options are available?
- How do the possible risks and benefits of the trial compare with those of other options?

Participation and Care

- What kinds of treatment, medical tests, or procedures will the participants have during the study? How often will they receive the treatments, tests, or procedures?
- Will treatments, tests, or procedures be painful? If so, how can the pain be controlled?
- How do the tests in the study compare with what people might receive outside the study?
- Will participants be able to take their regular medications while in the clinical trial?
- Where will the participants receive their medical care? Will they be in a hospital? If so, for how long?
- Who will be in charge of the participants' care? Will they be able to see their own doctors?
- How long will participants need to stay in the study? Will there be follow-up visits after the study?

Personal Issues

- How could being in the study affect the participants' daily lives?
- What support is available for participants and their families?
- Can potential participants talk with people already enrolled in the study?

Cost Issues

- Will participants have to pay for any treatment, tests, or other charges? If so, what will the approximate charges be?
- What is health insurance likely to cover?
- Who can help answer questions from the insurance company or health plan?

13. What happens when a clinical trial is over?

After a clinical trial is completed, the researchers look carefully at the data collected during the trial before making decisions about the meaning of the findings and further testing. After a phase I or II trial, the researchers decide whether to move on to the next phase, or stop testing the agent or intervention because it was not safe or effective. When a phase III trial is completed, the researchers look at the data and decide whether the results have medical importance.

The results of clinical trials are often published in peer-reviewed, scientific journals. Peer review is a process by which experts review the report before it is published to make sure the analysis and conclusions are sound. If the results are particularly important, they may be featured by the media and discussed at scientific meetings and by patient advocacy groups before they are published. Once a new approach has been proven safe and effective in a clinical trial, it may become standard practice. (Standard practice is a currently accepted and widely used approach.)

The National Library of Medicine's Web site offers links to resources for finding the results of clinical trials. It includes information about published and unpublished results. This resource can be found at <http://www.nlm.nih.gov/services/ctresults.html> on the Internet.

14. Where can people find more information about clinical trials?

In addition to the resources described in Question 3, people interested in taking part in a clinical trial should talk with their health care provider. Information about cancer clinical trials is also available from the NCI's [Cancer Information Service \(CIS\)](#). Information specialists at the CIS use PDQ to identify and provide detailed information about specific ongoing clinical trials. PDQ includes all NCI-funded clinical trials and some studies conducted by independent investigators at hospitals and medical centers in the United States and Europe.

People also have the option of searching for clinical trials on their own. The clinical trials page of the NCI's Web site, located at <http://www.cancer.gov/clinicaltrials/> on the Internet, provides information about clinical trials and links to PDQ. Another resource is the NIH's [ClinicalTrials.gov](#) Web site. [ClinicalTrials.gov](#) lists clinical trials sponsored by the NIH, other Federal agencies, and the pharmaceutical industry for a wide range of diseases, including cancer and other conditions. This site can be found at <http://clinicaltrials.gov> on the Internet.

Cancer Facts

Cancer Clinical Trials: Participation by Underrepresented Populations

INTRODUCTION

- Clinical trials are a critical resource for the discovery of new prevention, diagnostic and treatment methods for cancer. Many of today's most effective prevention and treatment modalities are based on previous clinical trial results.
- Only about 3-5% of the 10.1 million adults with cancer in the U.S. participate in cancer clinical trials. This low rate stands in sharp contrast to the

60% participation of children with cancer.

- Certain populations, such as those that are low income, elderly, racial/ethnic minorities or those who live in rural areas have the smallest percentage of clinical trial participants. Unfortunately, these same populations also bear a disproportionate burden of cancer morbidity and mortality.

- Without adequate representation of these populations in clinical trials, researchers cannot learn about potential differences among groups and cannot ensure the generalization of results. In addition, participation in clinical trials increases access to state-of-the-art cancer care, a critical factor in many minority and underrepresented populations that suffer disproportionately from cancer.

Disparities in Clinical Trials

- The National Cancer Institute (NCI) is the largest sponsor of cancer clinical trials in the U.S., with approximately 800 ongoing trials at 3,000 sites. Over 30,000 patients are enrolled in cancer clinical trials annually. From 1998-2001, total enrollment in NCI-sponsored treatment trials increased 22%. However, the number of minority participants during that period remained stable, causing a decrease in the overall percentage of minorities in trials.^{4,11}
- A review of Food and Drug Administration (FDA) approved drugs from 1995-1999 revealed that African Americans, Asian/Pacific Islanders, Hispanics/Latinos and Native Americans collectively represented less than 10% of participants in trials that were testing cancer drugs.¹²
- The rate of participation in U.S. clinical trials is correlated with the demographics of income, educational attainment, employment status, and insurance coverage. Regardless of race or ethnicity, low socioeconomic status has a negative impact on clinical research participation.^{5,13,14}
- The Coalition of Cancer Cooperative Groups evaluated accrual to NCI publicly funded treatment trials from January 2003 through June 2005. The data presented in the figures at right show accrual rates by racial and ethnic status:

• In 2004, the SELECT prostate cancer prevention trial completed recruiting over 35,000 men of whom 21% were minorities. However, previous NCI-sponsored prevention trials have not recruited significant numbers of minorities or other subpopulations.¹⁵ For example, NCI's Prostate Cancer Prevention Trial, which was conducted in 1993-2003, recruited only 8% minority participants of over 18,000 men enrolled.¹⁶

Underrepresented Populations

- **Adolescents:** Only 10% of 15-to-19 year old adolescent cancer patients are entered into trials, compared to 60% of those under the age of 15.^{17,18}
- **Elderly:** According to Lewis and colleagues, 61% of new cancer cases occurred among the elderly in 2003, but only 25% of participants in national cancer clinical trials were over 65 years of age. Moreover, in Phase II and III clinical trials, the elderly carried 60% of the disease burden but represented only 32% of enrolled patients.¹⁹
- **Racial/Ethnic Groups:** Enrollment in clinical trials is disproportionately low among African Americans/blacks and Hispanics/Latinos in NCI-sponsored surgical trials.^{6,13}
- **Rural:** Among 24,332 patients enrolled in NCI sponsored clinical trials over a one-year period, investigators found marked regional and state variations in patient accrual, and suburban geographic areas had the highest overall accrual.²⁰
- **Women:** An investigation of nonsurgical NCI cancer trials demonstrated that women were less likely than men to be enrolled in colorectal and lung cancer trials.⁸

Patient Barriers to Cancer Clinical Trial Participation

- **Cost/Lack of insurance:** Costs associated with clinical trials are often a concern. A study of NCI-sponsored cancer treatment trials found that uninsured patients represented only 5.4% of all clinical trial participants.²⁰ Even when participants have insurance, some private third-party payers do not cover the full costs associated with participating in the clinical trial.¹¹ Numerous studies have shown that the cost for a patient to take part in a clinical trial is not necessarily any more expensive than it is for the patient to receive standard cancer care.^{11,21-23}
- **Cultural barriers:** Many people from various ethnic and cultural backgrounds may have views that differ from Western medicine. As a result, some beliefs regarding health and disease (e.g., family involvement in decisions about treatment, views regarding traditional healers, religion, prayer, and alternative medicine) may make clinical trials a less desirable option.¹
- **Lack of awareness:** A national survey of cancer patients found that 85% of respondents were unaware that participating in a clinical trial was a treatment option for them.^{21,25}

- **Lack of invitation:** According to a review of enrollment decisions for health research studies, racial and ethnic minorities were less likely to be invited to participate in research studies compared with non-Hispanic/Latino whites.²⁶
- **Language/Linguistic differences:** Many U.S. clinical trials require English proficiency for potential participants, automatically excluding those who do not speak the language.²⁷ Language factors also pose a serious barrier to provider-patient communications and attempts to recruit patients into clinical trials.⁵
- **Low literacy:** The complexity of consent forms and other clinical trials materials may also be a barrier to those patients with low literacy. For example, the initial consent form for the STAR trial, a national breast cancer prevention trial, was over eight pages long and required a 10th grade reading level.²⁸
- **Mistrust:** According to a review conducted by the Agency for Healthcare Research and Quality⁸ and others^{2,29-32} mistrust of research and the medical system is a frequently reported barrier to participating in clinical trials.
- **Practical obstacles:** Transportation to and from a trial, particularly if it is located in a distant location, can be a barrier for many patients. Individuals with low incomes may find it difficult to take time off from work, find childcare or manage other family responsibilities while participating in a trial.^{1,33}
- **Study design eligibility criteria:** Strict inclusion and exclusion eligibility criteria are a commonly reported barrier to trial participation.^{8,34-38} For example, in a study of African American/black cancer patients, only 8.3% were eligible for clinical trial participation due to strict eligibility criteria. Nearly 20% of them were excluded due to the presence of additional health problems.³⁴

Physician/Investigator Barriers to Referring Patients to Cancer Trials

- **Lack of minority investigators:** Increasing the diversity of the investigator pool has been cited as an important strategy to increase recruitment of racial and ethnic populations to clinical trials. Yet, 2005 data show that African Americans/blacks, Hispanics/Latinos, American Indians/Alaska Natives, and Native Hawaiians/Pacific Islanders collectively represent less than 10% of all U.S. medical school faculty who have an M.D. or Ph.D.³⁹

Compared to non-Hispanic/Latino white physicians, Hispanic/Latino physicians were significantly less involved in clinical trials and found less value in them. This in turn, may influence their decision to refer patients to be enrolled in clinical trials.⁴⁰

- **Lack of physician referral:** Although physician referral is one of the most effective means of recruiting patients to cancer clinical trials,⁴¹ some physicians are reluctant to engage in referral. This may be because they believe that

standard therapy is best, or they fear losing control of the patient's care, or that referring or participating in a trial is an excessive administrative or financial burden to their practice. Some community physicians also indicate a mistrust of the academic or research centers conducting the trials.^{1,38,42-44}

- **Physician lack of awareness:** Being unaware that clinical trials are available is one of the most common reasons physicians fail to refer patients to trials.^{45,46} Primary care physicians do not have sufficient information on available clinical trials, and often leave the discussion of clinical research to the patient's oncologist. Yet, many oncologists outside of the academic setting may also not be aware of trials or otherwise choose not to participate in or refer their eligible patients to clinical trials.⁴⁷

Public Attitudes toward Clinical Trials

- Research has shown that the general public is unaware of clinical trials as a treatment/prevention option or is misinformed about the clinical trials process.^{1,25,48}
- Among surveyed U.S. adults who reported having ever participated in a clinical trial, 84% stated they would do so again if given a chance.⁴⁸
- Most U.S. adults agree that clinical research participants are making a significant contribution to science. However, 49% also feel that clinical trial participants are gambling with their health and are treated like "guinea pigs."⁴⁸
- Results from a recent study demonstrated that, in general, the more knowledgeable the respondent, the more likely the respondent was to participate in a clinical trial. However, regardless of their degree of knowledge, racial/ethnic minorities and those aged 18-24 years reported being reluctant to participate.⁴⁹

Clinical Trial Policies and Mandates

- **Center for Medicare and Medicaid Services:** In 2000, Medicare authorized the payment of routine care costs for beneficiaries who are patients in clinical trials.⁵⁰
- **FDA:** The FDA Modernization Act of 1997 provides guidelines on standardization of data collection of racial/ethnic groups in clinical trials, but does not address appropriate racial and ethnic inclusion.⁵¹
- **NIH:** The NIH Revitalization Act of 1993 mandated that women and minorities be included in clinical trials.⁴⁸ However, over a decade later, minorities continue to be underrepresented at varying levels in both cancer prevention and treatment trials.⁸
- **States:** As of 2007, only 20 states in the U.S. ensured the reimbursement of routine medical costs for clinical trial participants by legislative mandates or agreements with large health insurers.⁵²

SB 280 Testimony 4/3/08

Jeanne E. Anderson, MD
Katmai Oncology Group, LLC
3851 Piper Street, Suite U340
Anchorage, AK 99508-4627

I am Jeanne Anderson, a Medical Oncologist in practice in Anchorage. On behalf of Alaska cancer physicians and patients, I thank the members of the Labor and Commerce Committee members for considering this bill. It is predicted that 2,650 Alaskans will be diagnosed with cancer in 2008. In the 1970's, only 50% of cancer patients lived 5 years after diagnosis. In 2008, 66% are predicted to survive 5 years. We all know that many Alaskans die of cancer every day and that improvements are desperately needed. The cancer physicians in Alaska are committed to providing the best care possible to our patients, to relieve suffering and reduce death from cancer. In caring for our patients, we often turn to clinical trial as providing the best treatment for our patients. A clinical trial is a formal, scientific way to test whether a new treatment is safe, effective, and superior to existing treatments. The physicians and hospitals in Alaska support clinical trials and there are over 50 trials open in this state for our cancer patients. However, only a small number of our patients enroll on these clinical trials, approximately 40 per year. There are many reasons why enrollment is low. These reasons include lack of knowledge or interest on the part of the patient or physician, lack of availability of an appropriate trial for the patient, and (relevant to this bill) lack of insurance coverage or fear by the patient they will lose coverage if enrolled on a study. Passage of this bill will clearly remove an important barrier to access of a clinical trial. It will result in Alaska physicians providing improved care for our patients, reducing the burden of cancer in our population, and facilitating patients to stay in Alaska for state-of-the-art care.

April 2, 2008

Testimony to Support SB280

To

Senate Labor & Commerce Committee,

I am a medical oncologist-hematologist practicing in Anchorage. Hence I am involved in caring for many, many patients with cancer, which are oftentimes deadly.

As yet, many cancers do not have curative treatments. One of the options I offer to all my patients is to consider treatment under clinical trials- scientifically conducted studies by approved medical organizations to try & improve cancer care.

Unfortunately, due to Insurers denying coverage for routine medical care when patients enter clinical trials, patients very obviously & naturally, decline to participate in clinical trials.

In my opinion, this state of affairs is a major handicap for patients/ individuals in Alaska to receive State of Art Care for Cancer & related problems in Alaska.

Just to give you an example, Herceptin is now used in early breast cancer treatment as the women with breast cancer who participated proved its efficacy in a clinical trial. This trial included at least 2 women in Alaska.

I wholeheartedly support SB280 & sincerely hope your committee members will too for all of our sakes.

Sincerely,

Latha Subramanian MD, FACP

Krista Rangitsch, RN, BSN, OCN, CCRC

523 East 17th Avenue

Anchorage, AK 99504

My name is Krista Rangitsch and I am a Cancer Research Nurse at Providence Alaska Medical Center, however, I am not representing Providence. I am testifying on my own behalf.

First, I'd like to take this opportunity to thank the members of this committee for considering Senate Bill 10 and for allowing me to testify today.

From my perspective, when a clinical trial is recommended to a patient by their physician as the best treatment option, they are referred to our office. Part of my discussion about the study with the patient includes informing them that their insurance company may not cover some or all of the routine costs associated with treating their cancer while on the study. We strongly encourage all patients find out what their policy says about clinical trial coverage. This is the stage where, in my experience, we encounter the majority of barriers to patient enrollment to clinical trials.

Patients go through a lot emotionally and financially when being diagnosed with cancer – the last thing they should have to worry about is finding out if their insurance will cover a clinical trial that their physician thinks is in their best interest.

I've noticed that one of our ever-increasing reasons for patients not enrolling on a clinical trial is because of lack of or fear of lack of insurance coverage. There are many instances, where due to the severity of the cancer and the necessity to start treatment right away, there just isn't reasonable sufficient time to investigate if insurance will cover clinical trial expenses or the insurance company just takes too long to determine coverage.

In closing, if insurance companies were mandated to cover routine care costs associated with a clinical trial, I am confident that many more people would be able to participate in clinical trials, which in turn, would increase the likelihood of improved cancer treatments and maybe someday lead to a cure.

Thank you again for the opportunity and for supporting Senate Bill 10.

March 9, 2009

Senator Bettye Davis
State Capitol
Rm. 30
Juneau, AK 99801-1182

Jack C. McRae
Senior Vice President

Dear Senator Davis:

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you to express our concerns with SB 10 regarding coverage of routine patient care costs during a cancer clinical trial. We would like to work with you and members of the committee to suggest amendments to this bill.

We recognize the importance of cancer clinical trials in identifying effective and safe treatments that are based on evidence and research. To that effect, Premera currently covers the routine costs for our members who are participating in phase 2 or 3 cancer clinical trials.

As drafted, SB 10 is a mandate requiring insurance companies to cover all phases of cancer clinical trials. Mandates have the net effect of increasing the cost of insurance, and we expect that SB 10 will increase the cost of insurance to Alaska consumers. However, if passed and implemented, this requirement would not apply to ERISA or self-funded groups. Since self-funded groups are not regulated under state law, mandates such as this one, will primarily apply to insurance coverage offered to individual policyholders and small groups. As you are well aware, small groups are currently struggling to provide insurance for themselves and their employees, especially during these tough economic times. SB 10 will impact the most vulnerable segment of the insurance market by increasing the cost of their health insurance.

Our concerns with the bill are expanding this coverage to phase 1 and 4 trials for patient safety and treatment effectiveness reasons.

In a phase 1 trial, the drug or treatment is still being evaluated and there is no reasonable expectation of a therapeutic benefit to the patient. Phase 1 trials may be considered close to basic research since they involve testing agents that are not known to have an effect on cancers in the human body. Basic dose mechanisms, drug toxicities, and safety aspects have yet to be validated. We are concerned with requiring coverage for phase 1 clinical trials when the safety and efficacy of the proposed treatment have not been established.

At a phase 4 trial, we would cover the treatment if it is medically necessary. However, there may be other known medical treatments that are available for the patient that are more effective. And, we would like the flexibility to review and pay for these other medical treatments that may be more beneficial to our members.

Thank you for considering our concerns. If health insurance is mandated to cover routine care for members in phase 1 and 4 trials, healthcare costs will increase and add to the rising premiums borne mostly by small groups and individual policyholders. We offer our amendments to encourage participation by Alaska residents in cancer clinical trials to expand research and evidence based medicine, while at the same time balancing patient safety and the rising costs of healthcare insurance.

Sincerely,

Jack C. McRae

The Honorable Bettye Davis
Alaska State Senate
State Capitol Building
Juneau, Alaska 99801-1182

RE: Senate Bill 10

Dear Senator Davis,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to Senate Bill 10. The National Federation of Independent Business is the largest small-business advocacy group in the Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

For many small employers in Alaska insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term. Much of the increase is driven by the additions to coverage by state mandates

Unfortunately, SB10 mandates specified coverage of medical care coverage during specified clinical trials that may not fit employee's needs but for which small employers providing health insurance bear the cost. Increased mandates force employers to consider whether they can afford to continue coverage or are forced

The Honorable Betty Davis

January 20, 2009

Page 2

by increased prices to eliminate health insurance for their employees. Mandates prevent small employers from providing affordable insurance programs tailored to its specific work force.

SB 10 is discriminatory against small employers as the mandate applies to those who provide coverage regulated by state insurance statutes, but not programs offered by the state and other governmental entities or large employers who typically offer ERISA programs. Thus it creates a less fair business environment for small employers.

Sincerely yours,

Dennis L. DeWitt

TESTIMONY OF D. LAWRENCE WICKERHAM, MD,
ASSOCIATE CHAIRMAN OF THE NSABP, CONCERNING SB280

I am Dr. Lawrence Wickerham, the Associate Chairman of the National Surgical Adjuvant Breast and Bowel Project (NSABP), which is one of the National Cancer Institute's Cooperative Trials Groups.

The NSABP conducts large phase III studies that compare standard treatments with newer innovative therapies in patients with early stage breast or colorectal cancer. The group's mission is to improve the survival and quality of life of these patients. 2008 is the 50th anniversary of the NSABP and over those years we have entered over 130,000 individuals into our trials. Today we have 200 participating centers and 300 satellite centers located throughout the U.S., Canada, Puerto Rico, and Ireland, and we do have centers in Alaska.

Results of previous NSABP studies have had a major impact in improving the care of both breast and bowel cancer. The results of our breast cancer studies have eliminated the use of true radical mastectomies, demonstrated that lumpectomy is an effective alternative, and we have shown that adjuvant treatment (treatment after surgery) can improve survival. Adjuvant therapy for breast cancer includes chemotherapy, hormonal therapy, and newer targeted treatments.

Figures from the American Cancer Society demonstrate that the mortality rate from breast cancer in the U.S. has declined for over a decade. This improvement is thought to be the result of screening mammograms to detect the disease and improvements in treatment. These improvements in care come primarily from clinical

D. Lawrence Wickerham, MD

trials like those conducted by the NSABP. The more patients that enter these studies, the more quickly we get results and the faster we can improve care. Unfortunately, for a variety of reasons, less than 5% of cancer patients choose to enter clinical trials. Cost is a major barrier.

Requiring health care insurers to cover the standard of care costs for individuals participating in cancer clinical trials would remove one significant barrier to increasing participation. Any research trial includes two general categories of costs: 1) research costs – expenses that the patient would not routinely incur if he or she was not a part of the trial (extra lab tests, x-rays, etc.), and 2) standard of care costs – expenses that would occur whether or not the patient entered the trial.

NSABP studies routinely identify the non-standard of care components. We provide the drug(s) being studied and typically provide additional non-federal funding to help defray the costs of trial participation, including the cost of non-standard of care items. The goal is to minimize any additional costs to the patient, improve trial participation and improve cancer care in general.

I and the NSABP strongly urge you to enact this bill so that cancer patients in Alaska can have improved access to state-of-the-art research studies like those available to patients in other states.

Thank you for listening to my testimony and I would be pleased to try to answer your questions.

RE: SB 10 (Davis)--Support

Dear Chair Davis,

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 10, authored by you.

SB 10 would require insurance programs, including Medicaid, to provide coverage for cancer victims undergoing clinical trials just as they would if the individual was not in the trial.

Most of our significant advances in cancer treatment that have become standard procedures began as clinical trials.

It makes no sense not to offer health insurance coverage for procedures that may be still considered experimental but offer some hope for the cancer victim. We purchase insurance (or the State provides it through Medicaid) so that we can have help with the costs that accompany a threatening disease. SB 10 is one of those bills that AARP believes makes sense, especially to a cancer victim and his/her family.

AARP recommends an "AYE" vote on SB 10.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

Cancer Clinical Trials CS for SB 10 (HSS)

CS for Senate Bill 10 (HSS) requires state-regulated insurance plans to cover routine care costs associated with cancer clinical trials. SB10 does not require plans to cover the actual costs of the clinical trial.

Why clinical trials:

Clinical trials are essential gateways to developing better tools for cancer prevention, detection, treatment and care. The research conducted through clinical trials helps move scientific discoveries from the laboratory into new therapies that can be used at the bedside to improve the quality of patient care. Yet consistently low enrollment of adults in clinical trials delays our progress.

Routine care defined:

Routine patient care is considered to be those services not specific to the clinical trial, such as infusion, labs, x-rays, and general medical care. **Basically, it means any care that would be provided anyway outside the context of a clinical trial.** SB10 adds the requirement that these routine care costs be covered while participating in a cancer clinical trial.

Costs are comparable:

Numerous studies show that patient care in clinical trials costs approximately the same as care delivered in standard therapy. In most cases, the third-party payer is not billed for the drug or treatment under investigation, therefore, care in a clinical trial can actually cost less than the care delivered in standard therapy.

Other market segments:

State regulated plans are one of the last segments of Alaska's insurance market to provide this coverage. Coverage for routine care costs are currently provided for under Medicare, Medicaid, Military, and a number of self-insured plans such as Providence Health System Alaska.

Why we need the law changed:

- SB10 removes a significant barrier to participation in cancer clinical trials, and
- Opens up treatment options for Alaskans.

Ultimately, increased participation in cancer clinical trials leads to advances that benefit everyone.

Alaska Capitol, Room 411
Juneau, AK 99801-1182

RE: SB 10 (Davis)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and the members of the House Health and Social Services Committee to support SB 10, authored by Senator Bettye Davis and co-sponsored by Senator Joe Paskvan, your Committee colleague Representative Bob Lynn as well as Representatives Carl Gatto, Cathy Munoz, Pete Peterson, Charisse Millet and Les Gara.

SB 10 would require insurance programs, including Medicaid, to provide coverage for routine costs of cancer victims undergoing clinical trials just as they would if the individual was not in the trial. Research indicates that the costs for patient care in clinical trials are comparable to costs for care delivered in standard practice.

Most of our significant advances in cancer treatment that have become standard procedures began as clinical trials.

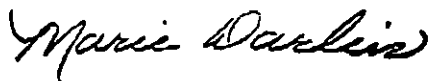

It makes no sense not to offer health insurance coverage for procedures that may be still considered experimental but offer some hope for the cancer victim. We purchase insurance (or the State provides it through Medicaid) so that we can have help with the costs that accompany a threatening disease. SB 10 is one of those bills that AARP believes makes sense, especially to a cancer victim and his/her family.

AARP recommends an "AYE" vote on SB 10.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Office of Senator Bettye Davis

January 20, 2010

Representatives Herron and Keller, Co-Chairs, House HSS Committee

RE: Request for Hearing for SB 13- "Denali KidCare" – "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Dear Representatives Herron and Keller,

Senator Davis respectfully requests a hearing concerning SB 13 before the House HSS Committee as soon as possible. SB 13 increases and restores the income eligibility standard for Denali KidCare to 200% of the Federal Poverty Guideline Level (FPL) – the level at which it was established over 10 years ago. Per the Kaiser Commission on Medicaid and the Uninsured in December, 2009 Alaska remains only one of four states below the 200% FPL. Twenty-three states are 200-249% FPL. Twenty-four states are 250% or higher FPL, including DC.

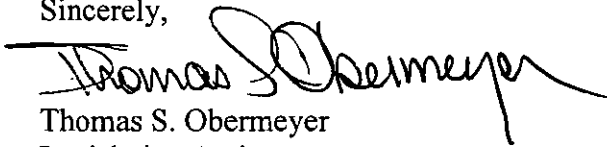

In 2009 over 26 states increased coverage for low income children, parents, and pregnant women. Nineteen states improved children's access to coverage by increasing eligibility, simplifying procedures, and/or eliminating premiums. The enactment of the Children's Health Insurance Program Reauthorization Act (CHIPRA) and the infusion of fiscal relief through the American Recovery and Reinvestment Act (ARRA) in 2009 provided key federal support to help states maintain and expand coverage. Alaska was among nine states rewarded by the federal government for enrolling more uninsured children in Medicaid in 2009. On December 21, 2009 Kathleen Sebelius, Secretary of Health and Social Services, reported Alaska is receiving a \$789,000 bonus for boosting health insurance coverage for children. (See AP article, *Anchorage Daily News* attached).

Governor Parnell indicated to Senator Davis in Fall, 2009 that he supported increasing Denali KidCare to 200% FPL. Prompt action by the House HSS Committee will assure continued federal funding and enhanced matching funds for Denali KidCare through September, 2013.

Attached in order are the following:

<http://www.akdemocrats.org>

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Sponsor Statement

SB 13 increases and restores to original levels 12 years ago the qualifying income eligibility standard for the Denali KidCare Program to 200% of the Federal Poverty Line (FPL). Alaska as one of the nation's wealthiest states is only one of 5-7 states which funds its SCHIP program below 200% FPL. SB 13 makes health insurance accessible to an estimated 1277 more uninsured children and 225 pregnant women in Alaska. Denali KidCare is an "enhanced" reimbursement program with up to 70% matching funds (Alaska currently receives about 66%) under the federal government's State Children's Health Insurance Program (SCHIP), which was created in 1997. Congress reauthorized the SCHIP program for five years and President Obama just signed into law on February 4, 2009 with expanded coverage for 4 million more children.

Consider the following information from the Kaiser Commission on Medicaid and the Uninsured, January, 2009:

- 44 states, including D.C., cover children in families with incomes at 200% FPL or higher.
- 33 states cover children in families with income between 200% and 250% FPL.
- 19 states including D.C., cover children in families with income at 250% or higher. 10 of these states cover children in families with income at 300% FPL or higher.
- 35 states allow premiums or enrollment fees, and 24 states have co-payments for selected services in SCHIP programs on a sliding scale of FPL.
- 46 states do not require asset tests

Denali KidCare serves an estimated 7900 Alaska children and remains one of the least costly medical assistance programs in the state at about \$1,700 per child with full coverage, including dental, which is about 20% of the cost of adult senior coverage.

Early intervention and preventative care under SB 13 will greatly increase Alaska children's health and yield substantial savings to the state and public and private sector hospital emergency rooms which must admit indigent and uninsured patients for non-emergency treatment. It is estimated that

uninsured children with a medical need are five times as likely not to have a regular doctor as insured children and four times more likely to use emergency rooms at a much higher cost.

There are still an estimated 18,000 uninsured children in Alaska, or about 9% of the children age 18 and under. Private health care coverage for children has declined over 30% in the last ten years, and the deepening recession is pulling more children and families into the uninsured ranks. The reauthorized SCHIP program and "Stimulus Package" should help, and Alaska should do its share and take advantage of available federal matching funds by insuring its low income children up to and including 200% FPL under SB 13.

MEMORANDUM

January 22, 2009

SUBJECT: Sectional Summary (SB 13; Work Order No. 26-LS0076A)

TO: Senator Betty Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the medical assistance eligibility provisions for persons under 19 years of age and for pregnant women by increasing the household income limit from 175 to 200 percent of the federal poverty line.

Section 2. Increases the household income limit from 175 to 200 percent of the federal poverty line for requiring premiums and cost-sharing contributions from medical assistance recipients who are under 19 years of age.

Section 3. Provides for an immediate effective date.

ANALYSIS: (Attach a separate page if necessary)

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

Between October 2003 and July 2007, the upper income limit for these individuals was "frozen" at an amount equivalent to the 2003 federal poverty guideline (FPG). By April 2007, that income amount was calculated by the department to correspond to about 150% of the 2007 FPG. Senate Bill 27, implemented in summer 2007, made the upper income standard for children and certain pregnant and postpartum women equal to 175% of the (continued on page 2)

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB013

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015; however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Behavioral Health Medicaid Services component were determined based on the component's share of expenses for the affected eligibility subtypes in 2008. Behavioral Health paid about a quarter of the costs for affected DKC children in 2008. No charges for services for DKC pregnant women were paid by this component in 2008.

ANALYSIS: (Attach a separate page if necessary)

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200 percent of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare (DKC) program was originally created.

Between October 2003 and July 2007, the upper income limit for these individuals was "frozen" at an amount equivalent to the 2003 federal poverty guideline (FPG). By April 2007, that income amount was calculated by the department to correspond to about 150% of the 2007 FPG. Senate Bill 27, implemented in summer 2007, made the upper income standard for children and certain pregnant and postpartum women equal to 175% of the (continued on page 2)

BILL NO. SB013

ANALYSIS CONTINUATION

prevailing federal poverty guideline (FPG) for Alaska, as published annually in the federal register, and effectively raised the income level from 150% to 175% FPG. However, children and pregnant women with incomes between 176% and 200% of the prevailing FPG did not regain eligibility.

Between 2003 and 2006, the number of enrolled children with household incomes between 151% and 200% FPG dropped by 2,553 and the number of enrolled pregnant women with incomes between 134% and 200% dropped by 436. This fiscal analysis assumes that the additional enrollment due to this bill will be equal to about half that number of people (estimated as 218 pregnant women and 1,277 children). The assumption is that most people affected by this bill will enroll by the end of SFY 2010 and that enrollment will resume normal growth (about 2% per year) thereafter.

Further assumptions are that participation, i.e. the proportion of enrollees that obtain services during the year, will not change with implementation of this bill and will remain the same throughout the projection period. First year costs are based on an estimate for the number of new enrollees times the average cost per enrollee for the affected eligibility subtypes in 2008. Medicaid children in the income range addressed by this bill tend to have lower Medicaid costs than those from families with lower incomes, and those lower costs are reflected in our estimates.

Costs projections incorporate 8.6% annual growth (Long Term Forecast of Medicaid Enrollment and Spending in Alaska: 2005-2025, DHSS, updated for 2006). That growth rate includes changes in population, enrollment, utilization, and medical-price inflation.

Fund source calculations are based on the relative proportion of costs for these eligibility types that were reimbursed at IHS, Title XIX, or Title XXI rates during 2008 and our best estimates for federal medical assistance percentages (FMAPs) between 2010 and 2015. Children affected by this legislation are included in the State Children's Health Insurance Program (SCHIP) so most of their Medicaid costs would normally be matched at the enhanced rate for Title XXI services. Fund projections assume sufficient SCHIP allocation to fully fund the additional children between 2010 and 2015; however, the program is currently funded under a continuing resolution. Title XXI funding for the balance of SFY 2009 after March 30, 2009 and for SFY 2010 will not be established until Congress takes additional action to reauthorize and fund the SCHIP program.

Expenditures for the Health Care Services Medicaid component were determined based on that component's share of expenses for the affected eligibility subtypes in 2008. Health Care Services Medicaid paid 100% of the costs for DKC pregnant women and about three quarters of the costs for affected DKC children in 2008.

ANALYSIS: (Attach a separate page if necessary)

This legislation increases the income level for covering children and pregnant women under Denali KidCare to 200% of the federal poverty guidelines, up from 175%. It restores eligibility levels to the levels used when the Denali KidCare(DKC) program was originally created.

This fiscal note represents the additional administrative costs needed to support the increased eligibility determination workload resulting from more pregnant women and children applying for medical assistance, using the assumptions from the companion fiscal notes for the Division of Health Care Services and the Division of Behavioral Health.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. SB 013

ANALYSIS CONTINUATION

The eligibility decision includes verifying information and determining whether a pregnant woman or child qualifies for DKC when they apply, acting on changes, and periodically re-examining a household's eligibility.

We assume that 218 pregnant women and 1,277 children will enroll in Medicaid if the qualifying income limit is revised to 200% FPG, and that implementation will begin July 1, 2009. We estimate two additional Eligibility Technician I (Range 13) positions will be needed to manage this additional work in FY2010.

Total Administrative Costs for ET I Positions:

Personal Services: Two Eligibility Technician I Range 13 at a cost of \$134.4, including benefits, for 12 months.

Contractual: Annual cost for office space, phones, etc. will be \$17.6.

Commodities: Annual cost for the office supplies will be \$1.0.

Additional Cost of FY2010:

Equipment/Supply: A one time cost of \$14.4 for desktop computer, software, printer, and work stations will be needed for the new positions.

<http://www.akdemocrats.org>

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Background of SCHIP/Denali Kid Care

- SCHIP was created in 1997 to reduce the number of uninsured children by providing subsidized insurance to children of those parents who are too poor to afford insurance but make too much to receive Medicaid coverage. About 1/3 of all children in America get health services through Medicaid or the State Children's Health Insurance Program (SCHIP), which is administered in Alaska through the Denali KidCare Program.
- The Denali KidCare Program is 70% funded by the federal government up to the state's allocated funding level. After that, the reimbursement rate declines to slightly over 50%. In fiscal year 2006 the cost of Denali KidCare was \$25.9 million, of which \$18.2 million was paid by the federal government.
- Denali KidCare provides health insurance for children age 18 and pregnant women who meet income guidelines. There is no cost to eligible children, teens and pregnant women. However, youth who are 18 may be required to contribute a limited amount for some services.
- Roughly 7,600 children were covered by Denali KidCare as of December, 2006.
- The cost per child of Denali KidCare is about \$1,700 annually, compared to over \$12,000 for an elderly person who qualifies for federal aid.
- By comparison, private health insurance for a family of three, e.g., a pregnant woman with two children, is estimated at \$8,000-\$17,000 annually. Unlike Denali KidCare, this insurance may require a \$1,000 deductible, 20% co-pay, and no vision, dental or hearing benefits.
- Alaska remains one of the lowest eligibility rates in the nation. Forty-one states allow participation by families at or above 200% of the FPL. Seven have rates at or above 300% of the FPL. The US and state governments' rationale for higher eligibility for children's health insurance is that it will save huge sums in transfer costs and improve health in the future through early detection and care.

<http://www.akdemocrats.org>

Senator Bettye Davis

SB 13 "An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Repercussions of the unmet health needs of Alaska's uninsured children

- The number of uninsured children in Alaska is estimated to be about 18,000 or 9% of the population age 18 and under (Urban Institute and Kaiser Commission on Medicaid and the Uninsured).
- Over the last 10 years Alaska has seen a 31% decline in the number of children covered by private health insurance (Robert Wood Johnson Foundation).
- Nationally, more than 80% of uninsured children are from working families (Kaiser Commission on Medicaid and the Uninsured).
- Uninsured children have much higher health risks than do covered children. They receive less preventative care and are diagnosed at more advanced stages of illness (Kaiser, *supra*).
- Uninsured children are more likely to develop throat, eye, and ear infections, serious dental problems, and chronic conditions such as asthma and diabetes. They are more than five times as likely as insured children to have an unmet need for medical care and nine times more likely not to be examined by a regular doctor. They are also four times more likely to use emergency rooms which are much more costly than care in physicians' offices (*Pediatrics* 105, 113; "Care for Children," *New England Journal of Medicine*, 330).
- Almost 1/3 of uninsured children received no medical treatment during a 1-year period between 2002 and 2003 (*Health Affairs* 23, no. 5, September-October 2004).
- Uninsured children are 25% more likely to miss school than insured children (Children's Defense Fund, Minnesota). Continued illness affects school performance and, in the long run, workforce participation (Southern Institute on Children and Families). A National Institute of Medicine study indicates that lack of insurance results in lost national economic productivity of \$65-\$130 billion annually.

Why Coverage for Pregnant Women is Important In Alaska

- Alaska has one of the nation's highest documented pregnancy-associated mortality ratios – 58 per 100,000 live births during 1990-1999 (DHSS). National data indicate that women who receive no prenatal care are at increased risk of pregnancy-related death.
- Only 58% of women in Alaska receive adequate prenatal care, compared with 75% nationally.
- Mothers having late or no prenatal care are more likely to have low birth weight or pre-term infants and are at increased risk for pregnancy-related mortality and complications of childbirth (DHSS).
- The average cost of hospital care for a premature baby was \$75,000 in 2001, compared with \$1,300 for a healthy, full-term infant. The March of Dimes Prenatal Data Center reports that premature babies cost about \$13.1 billion annually.

Office of Senator Bettye Davis

April 7, 2009

Representatives Wes Keller, Co-Chair
House HSS Committee

RE: Request for Hearing for SB 13

"An Act relating to eligibility requirements for medical assistance for certain children and pregnant women; and providing for an effective date."

Dear Representative Keller,

Senator Davis respectfully requests a hearing concerning SB 13 before the House HSS Committee. SB 13 increases and restores the maximum income eligibility standard for Denali KidCare to 200% of the Federal Poverty Guideline Level (FPL). Denali KidCare, Alaska's federal Medicaid-funded State Children's Insurance Program (SCHIP), was just reauthorized for five years by Congress and signed into law as a priority with expanded coverage by President Obama on February 4, 2009. Continued federal funding should assure enhanced matching funds at 66%-70% for Denali KidCare through FY2015.

Alaska remains only one of five states below the 200% Federal Poverty Level for the SCHIP/Denali KidCare Program. The Alaska Health Care Strategies Planning Council recommended increasing Denali KidCare to 200% FPL in its Final Report on December 23, 2007. It is our understanding that the Governor's office also supports increasing Denali KidCare to 200% FPL.

Attached in order are the following:

1. Sponsor Statement
2. The most recent version of the bill, SB 13
3. Sectional analysis
4. Fiscal Notes
5. Additional Documentation

Sincerely,

Thomas S. Obermeyer,
Legislative Administrative Assistant

Alaska rewarded for kids' health insurance

The Associated Press
(12/21/09 21:40:13)

Alaska is among nine states being rewarded by the federal government for enrolling more uninsured children in Medicaid. Health Secretary Kathleen Sebelius said Alaska is receiving a \$789,000 bonus for boosting health insurance coverage for children.

The payouts were part of the Children's Health Insurance Program reauthorization signed into law by President Barack Obama.

The amounts totaled \$72.6 million in this fiscal year.

THE HENRY J.
KAISER
FAMILY
FOUNDATION

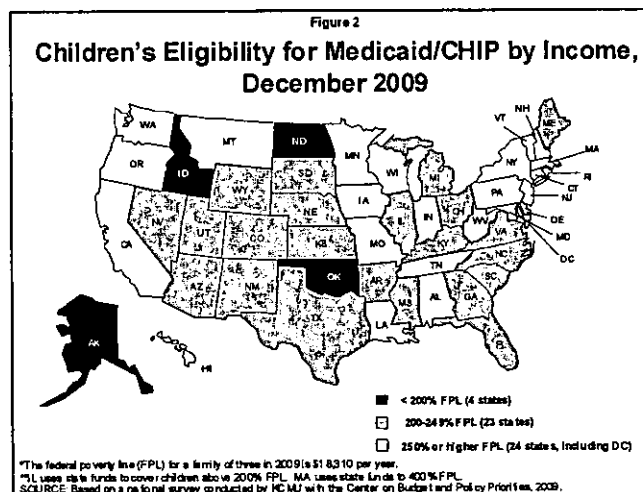

Executive Summary

Over the past decade, substantial progress has been made on covering low-income families through Medicaid and the Children's Health Insurance Program (CHIP). However, states' ability to sustain and advance this coverage faced a difficult test in 2009. As the year began, CHIP still had not been reauthorized and states were facing the bleakest economic picture in years. Then, in early 2009, several developments, including the enactment of the Children's Health Insurance Program Reauthorization Act (CHIPRA) and the infusion of fiscal relief through the American Recovery and Reinvestment Act (ARRA), provided key federal support to help states maintain and expand coverage. ARRA also established important protections to Medicaid eligibility and enrollment procedures that helped preserve coverage (although these did not extend to CHIP).

In 2009, health coverage programs for low-income children and parents managed not only to survive the tumultuous economic environment, but also to expand and improve access. The stabilizing force of ARRA's fiscal relief, along with its stipulations preventing states from reducing eligibility or imposing enrollment barriers in Medicaid, enabled states to avoid cuts to these aspects of their programs and move forward, making use of new resources and opportunities in CHIPRA. Based on a national survey, this report provides an overview of state actions on eligibility rules, enrollment and renewal procedures, and cost-sharing practices in Medicaid and CHIP for children and parents during 2009. It finds:

More than half the states (26 states) advanced health coverage for low-income children, parents, and pregnant women in 2009 (Figure 1). These advancements included eligibility expansions, such as increases in income eligibility limits for children (9 states) and expansions to immigrant children and/or pregnant women who have been legally residing in the U.S. for less than five years under the new CHIPRA option (18 states), as well as enrollment and renewal simplifications and premium reductions.

Children were the main beneficiaries of expansions in 2009. Nineteen states improved children's access to coverage by increasing eligibility, simplifying procedures, and/or eliminating premiums. Reflecting this progress, currently, 47 states cover children in families with income at 200 percent of the federal poverty line (\$36,620 for a family of three in 2009) or higher (Figure 2). States also continued to make strides forward in simplifying enrollment and renewal

procedures for children (9 states) and by reducing CHIP premiums (2 states). Overall, of the 34 states that charge premiums for children, most do not charge families with incomes below 150 percent of the federal poverty line and the median charge for two children in a family of three with income at 200 percent of the federal poverty line remains modest at \$480 per year (\$40 per month), or 1.3 percent of family income.

Although most actions were positive, 15 states scaled back coverage due to budget pressures. CHIP programs bore the brunt of reductions since the eligibility and enrollment protections included in ARRA only applied to Medicaid and did not protect CHIP. No state reduced income eligibility for children. However, two states froze CHIP enrollment for some period of time in 2009 and one state reduced eligibility for low-income parents. Other actions included increases in waiting periods for CHIP, retractions in eligibility simplifications, and relatively modest increases in CHIP premiums.

Coverage for parents continues to lag significantly behind children, with disparities growing in 2009. While children's health coverage has grown stronger over time, millions of their parents remain uninsured, since, in most states, eligibility limits for parents remain extremely low. Further, because of the recent advancements for children, the gap between coverage for children and parents has become even more profound. Currently, the median income eligibility limit for children is 235 percent of the federal poverty line, compared to 64 percent of the federal poverty line for working parents. Overall, in 34 states, eligibility for working parents is limited to less than 100 percent of the federal poverty line (\$18,310 for a family of three in 2009) with 17 states limiting eligibility to less than half of poverty (\$9,155 per year for a family of three in 2009) (Figure 3). Additionally, in most states, it remains more difficult to enroll an eligible parent than it does to enroll an eligible child.

States' commitment to provide Medicaid and CHIP coverage to low-income families and hold onto the accomplishments of 2009 will continue to be tested in 2010. States' grim budget situations are projected to persist and the fiscal support and requirements for states to maintain Medicaid eligibility and enrollment practices, which proved instrumental in helping states preserve and continue to advance coverage in 2009, are scheduled to expire. Without additional fiscal relief, states will likely begin to contemplate severe cuts to health coverage programs, which will not only jeopardize coverage for low-income families but weaken the base of coverage upon which broader health reform efforts will seek to build. Current reform proposals would build upon Medicaid to expand coverage to the millions of individuals who remain uninsured. Thus, the status of Medicaid and CHIP programs today and their ability to continue to maintain and advance coverage in the coming year will have important implications for broader reform. Continued actions to strengthen the foundation of Medicaid and CHIP coverage will be key to supporting future reform efforts.

An Overview of the CHIPRA Outreach and Enrollment Grants

On July 6, 2009, HHS Secretary Kathleen Sebelius and Medicaid Director Cindy Mann announced a request for a first round of outreach grant proposals funded through the Children's Health Insurance Program Reauthorization Act (CHIPRA). More information about the long-awaited "Request for Proposals" (RFP) can be found [here](#).

A major goal of CHIPRA is to cover more of the millions of uninsured children who already are eligible for Medicaid or CHIP, but whose families lack information about the programs, face red-tape barriers to enrollment, or encounter unnecessary barriers when seeking to renew their children's coverage. To this end, CHIPRA gave states a range of new tools and incentives to enroll already-eligible children and also created the \$100 million outreach fund.

These outreach grants can help boost awareness and encourage further simplification of the enrollment and renewal processes while targeting areas with high rates of eligible but not enrolled children and minority children who are disproportionately uninsured. Outreach, including community-based assistance, is also critical during a recession, when newly unemployed families may be particularly unlikely to know about the availability of public programs for their children.

The Centers for Medicaid and Medicare (CMS) will administer the grants. In soliciting proposals, CMS emphasizes that a strong connection must exist between outreach efforts and resultant enrollment and retention of eligible children. Data must be collected, reported, and analyzed against performance measures to determine the effectiveness of outreach efforts, and refinements to strategies must be made in real time when outcomes are not achieving the desired gains in enrollment and retention.

Legislative Background

Congress provided \$100 million in CHIPRA for outreach and enrollment activities through September 2013. Of this amount, \$10 million will be used for a national enrollment campaign and \$10 million will be granted directly to Indian health service providers and urban Indian organizations receiving funds under Title V of the Indian Health Care Improvement Act for outreach to and enrollment of Native American children. The remaining \$80 million will be granted to other eligible entities, which may include state, county, and local governments, community-based or faith-based organizations, schools, and federal safety net providers. These grants are the focus of the RFP and up to \$40 million will be awarded in this first round.

As required by CHIPRA, priority for the grant awards will be given to eligible entities that target geographic areas with high rates of:

- eligible but unenrolled children, including children who reside in rural areas; or

- racial and ethnic minorities and populations with health disparities, including proposals that address cultural and linguistic barriers to enrollment.

In applying for outreach grants, eligible entities must establish that they have access to, and credibility with, ethnic or low-income populations in the communities where activities will be conducted. As stipulated in statute and reiterated in the RFP, applicants must also demonstrate the ability to address barriers to enrollment, such as lack of awareness of eligibility, stigma concerns and other punitive fears associated with receipt of benefits, as well as other cultural barriers to application and enrollment in public programs.

The Request for Proposal Process

CMS announced that it plans to award the \$80 million in outreach grant funds in two or more rounds. This first round will grant up to \$40 million in two-year projects ranging from \$25,000 to \$1,000,000. CMS anticipates awarding about 200 grants in this round.

Prospective grantees have their work cut out for them, with proposals on a fast timeline, due one month after the release of the RFP. CMS will employ a multi-phased review process that includes an objective assessment by a panel that may include private sector experts, beneficiaries, and federal policy staff, based on weighted criteria as defined in the RFP.

Key Dates

July 22, 2009 – Conference Call for Prospective Grant Applicants
July 27, 2009 – Voluntary Letter of Intent Requested (but not required)
August 6, 2009 – Electronic Submission of Application
August 10, 2009 – Mail Submission of Application
On or before September 30, 2009 – Announcement and Commencement of Grants

Grant Principles

In announcing the grants, CMS expressly stated the purpose of providing outreach money is to not only find the children who are eligible but not enrolled in Medicaid and CHIP but to ensure that they are enrolled and that they retain their coverage while eligible. The award of the grants is based on the following principles:

- *Outreach must be results driven and connected to actual enrollment and retention of children in Medicaid and CHIP.*
- *Grantees must provide sound data demonstrating the connection between the proposed outreach efforts and actual enrollment and retention.*
- *Data and systems improvements that are appropriate within the context of the proposed outreach strategies will be considered for funding.*
- *Best practices and lessons learned will be shared among grantees and successful outreach strategies that can be replicated are of particular interest.*

Eligible Entities

By law, a diverse group of entities is eligible to apply for grants. The common thread is that these organizations must have experience serving low-income children and families. Coalitions or eligible entities representing broad community partnerships with evidence of community involvement are allowed. Only one application may be submitted by a single entity in this grant round, but an eligible entity may be a member of multiple coalitions.

Eligible entities include:

- A State;
- A local government;
- An Indian tribe, tribal consortium, Indian Health Service Provider, or other tribal organization receiving funds under title V of the Indian Health Care Improvement Act;
- A federal health safety net organization such as a federally-qualified community health center or disproportionate-share hospital;
- A national, state, local or community-based public or nonprofit private organization, including those that use community health workers or have doula programs;
- A faith-based organization or consortia (subject to section 1955 of the Public Health Service Act); and
- An elementary or secondary school.

Outreach and Enrollment Strategies

Applicants are required to submit an outreach and enrollment plan. It is expected that such plans will have different components depending on the strategies proposed. For example, a proposal to establish or strengthen a community-based application and renewal assistance program will have different elements than a plan aimed at improving notices, processes, or systems to enroll or retain eligible children.

All proposals must include certain components, which include utilizing demographic data in the design of outreach projects for target populations and describing how the applicant will submit and analyze the enrollment and retention data. Also required are descriptions of each vulnerable population to be targeted and estimates of the expected numbers of uninsured children by population to be enrolled through the grant activities. Plans must describe the proposed outreach strategies and the methods that will be used to track and measure the effectiveness of each strategy in enrolling and retaining targeted Medicaid- and CHIP-eligible children. All applicants must demonstrate the ability to refine the strategies in real time based on the assessment of the effectiveness of the strategies.

Target Populations

The design of the outreach projects should target populations with high levels of uninsured children under 200 percent of the Federal Poverty Level (FPL) who may be eligible for Medicaid

or CHIP, but are not enrolled. While *target populations are not limited to the following*, proposals addressing these groups with high rates of uninsurance and issues with access to health care will be viewed favorably:

- Legal immigrants or children living in households with mixed immigration status;
- Cross-border populations;
- Children of migrant farmers;
- Hispanic children;
- Teens;
- Rural children;
- Homeless children; and
- American Indian/Alaska Native children.

Budgets, Match and Sustainability

Grant awards will range from \$25,000 to \$1,000,000 over the two-year period. Funds can be used for a variety of expenses including personnel, equipment, travel, and other direct costs. Applicants are cautioned to use a reasonableness test when determining a cost per new enrollee, as well as the percentage of funds attributable to administrative costs. *The outreach grants do not require a match* from the recipient, but applicants must demonstrate the ability to sustain the outreach, enrollment, and retention efforts beyond the grant period by providing a plan for sustainability. Weight will be given to applications that can show additional funding or in-kind support.

Data Reporting and Evaluation

All proposals must describe how data will be defined, collected, analyzed, and reported to assess the effectiveness of grant activities. Specific outcome measures, which may vary based on the proposed strategies, must be developed as part of the evaluation plan. Applicants must demonstrate the capacity to modify strategies when the data indicate that activities are not achieving the goals of the project. Throughout the RFP, there is a consistent and strong emphasis on data reporting, assessing progress, and redirecting efforts when needed. *The Secretary is also required to submit an annual report to Congress on the outreach and enrollment activities conducted with these funds and make the enrollment data and information collected available publicly.*

Best Practices and Lessons Learned

Applicants must participate in specific program elements to document strategies and outcomes, as well as share and report results. Grantees must commit to sharing policy documents, best practices, and lessons learned with CMS and through peer-to-peer learning and conferences. Grantees must also be willing to coordinate messages and strategies with the national outreach and enrollment campaign.

Specific Requirements for Different Types of Grantees

- ***State Applicants***

By law, a maintenance of effort (MOE) on outreach and enrollment expenditures is required. If funds are granted directly to a state, it must maintain the same level of state funding for outreach and enrollment activities as expended in the prior year. In the proposed grant budget, states must submit the amount of money that was spent on Medicaid and CHIP outreach and enrollment efforts in the preceding fiscal year. This may be challenging to quantify as states have a variety of mechanisms and funding streams for supporting outreach and enrollment. States are also required to submit a certification of maintenance of effort verifying that the grant funds will not supplant existing state expenditures for Medicaid and CHIP outreach and enrollment efforts.

Due to the responsibility that State Medicaid or CHIP agencies have in enrolling eligible children and their possession of critical data, proposals from these agencies or coalitions that include these agencies are subject to additional criteria. Depending on the proposal, such requirements may include:

- Formal agreements with coalition grantees or enrollment facilitators (if proposed in the grant);
- Coordination of coalition grantees for the national outreach and enrollment campaign; and
- Evidence that the state can provide technical assistance to coalition grantees such as providing mapped census demographic data so grantees can target areas of disparities; conducting focus groups or surveys; and broadening partnerships with key entities that can be utilized by grantees.

State applicants must demonstrate a commitment to facilitating enrollment and retention. *Of particular interest are innovative applications of technology* such as web-based applications, telephone enrollment and renewal processes, development of new simplification practices or new methods for premium payments, and other proposals including information technology and systems improvements to support outreach, enrollment, and retention.

- ***Non-State Applicants***

In general, applicants must show that the state is supportive of their application. Non-state applicants must develop a Memorandum of Understanding (MOU) with the State Medicaid and CHIP agencies for the purposes of data collection or alternate plans to demonstrate enrollment or retention results. *In the absence of state collaboration,* applications must demonstrate the efforts will be effective in increasing enrollment among eligible children. No specific guidance is provided on how this might be accomplished.

- ***Tribes or Tribal Entities***

While tribes and tribal organizations are eligible for grants in this solicitation, they are also eligible for the \$10 million in grants targeted to Native American outreach and enrollment. Duplication of funding for activities is not allowed.

(202) 690-6343

Secretary Sebelius Awards \$40 Million to States to Find, Enroll Children in CHIP, Medicaid

HHS Secretary Kathleen Sebelius today announced \$40 million in grants to 69 grantees in 41 states and the District of Columbia to help them find and enroll children who are uninsured but eligible for either Medicaid or the Children's Health Insurance Program (CHIP).

"Today's awards will help fulfill President Obama's pledge to assure the health and well-being of our nation's children," said Secretary Sebelius. "With millions of Americans either out of work or otherwise struggling to make ends meet during this recession, there is an even greater urgency to bring steady, reliable health care to children in these families who may have lost their coverage."

Recognizing that millions of children are eligible for Medicaid or CHIP, but are therefore needlessly uninsured, the Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) set aside \$100 million for fiscal years 2009-2013 expressly to help find and enroll eligible children. Of the total outreach amount, \$80 million will be given to states and other organizations, \$10 million to Tribal organizations and \$10 million for a national outreach effort. Today's awards are for a two year period ending Dec. 31, 2011, which will then be followed by a second round of \$40 million in new grants.

As called for in CHIPRA, grants were awarded to applicants whose outreach, enrollment and retention efforts will target geographic areas with high rates of eligible but uninsured children, particularly those with racial and ethnic minority groups who are uninsured at higher-than-average rates. For example, 20 percent of the projects to be funded will target Hispanic children, with an emphasis on Hispanic teens, and 11 percent will focus on homeless children and seven percent will be aimed at Native American/Alaska Native children.

The vast majority of grantees will be using multiple, community-based approaches. One grantee in Missouri, for example, will work with a consortium of 35 churches in low-income, minority communities. Those parishioners will go door-to-door to locate potentially eligible children and then help those families apply for CHIP or Medicaid coverage. Another grantee will place self-service kiosks in community centers and Native American Chapter Houses (community halls) where there will also be staff available to help with applications if needed. One state school system will track children who receive free or reduced cost lunches and, with the families' permission, share that information with state health programs, which will, in turn, mail applications for CHIP and Medicaid to those families. The state will also provide one-on-one assistance with those applications.

The grant awards require that recipients be able to show actual increases in enrollment and retention of children already in the programs. Both CHIP and Medicaid state agencies are to report to the Centers for Medicare & Medicare Services (CMS) the number of new enrollees and those who retained coverage that are directly attributable to the grant activities. Grantees are also to report activities they believe were the most effective in finding, enrolling and maintaining children in these benefit programs.

"No child in America should go without decent health care," said Cindy Mann, director of the Center for Medicaid and State Operations -- the group within CMS that will administer the grants. "With the funds we are awarding today we hope to reduce the number of children who do."

A list of grantees by state is below.

State	Grantee	Award
<u>Arizona</u>	Pima Community Access Program	\$982,577
<u>Alabama</u>	Alabama Primary Care Association	\$987,732
	Tombigbee Healthcare Authority	\$141,167

Setting Income Thresholds in Medicaid/SCHIP: Which Children Should Be Eligible?

Timely Analysis of Immediate Health Policy Issues

January 2009

Genevieve Kenney and Jennifer Pelletier

Summary

As the reauthorization of the State Children's Health Insurance Program (SCHIP) is being considered, important policy questions will include where eligibility thresholds should be set for public coverage and how much latitude states should have in setting their thresholds. The original SCHIP bill targeted children with incomes below 200 percent of the federal poverty level (FPL). For families at that income level in 1996, just before SCHIP was enacted, employer-sponsored insurance (ESI) premiums for family health insurance coverage made up 16 percent of income on average for a family of four. Since then, health insurance costs have risen so much that for families at 300 percent of the FPL, ESI premiums for family coverage now make up 19 percent of income on average for a family of four. Put differently, ESI coverage is less affordable for families at 300 percent of the FPL today than it was for families at 200 percent of the FPL when SCHIP was passed. In addition, the large differences in cost of living that prevail both across and within states mean that imposing a single eligibility threshold nationally would place families in higher-cost areas at a disadvantage.

Background

The United States has experienced sharp growth in health care spending in recent decades. Between 1985 and 2005, health care spending nearly tripled in real terms, reaching \$1.9 trillion in 2005.⁶ Rising health care costs over this time period have numerous root causes, including advances in medical technology and increases in personal income, health sector prices, and administrative costs.⁷ Increases in health care costs exert upward pressure on premiums and cost-sharing.⁸ Between 2001 and 2005 alone, total annual premiums for family coverage increased nearly 30 percent per enrolled employee in private sector firms, or about \$2,500.⁹ Cost-sharing in the form of deductibles and copayments has also been on the rise.¹⁰ Moreover, while no comprehensive data are available to compare cost-of-living differences for families targeted by Medicaid and SCHIP in different areas of the country, the information that is available shows that the cost of living varies substantially across areas, both within and across states.¹¹

Historically, states have had flexibility to set their income eligibility limit in Medicaid/SCHIP.¹² Nationally, seven states have implemented an income limit of less than 200 percent of the FPL, 20 states have implemented an income limit at 200 percent of the FPL, and 24 states cover kids above 200 percent of the FPL. Of the states with higher income limits, 13 cover kids up to 250

Introduction

SCHIP was designed to address gaps in health insurance coverage for children whose family incomes were too high to allow them to qualify for Medicaid but too low to afford private coverage. One of the issues that received considerable attention during the 2007 SCHIP reauthorization debate was the income level at which subsidized public coverage should be available to children through Medicaid and SCHIP.^{1,2} On the one hand, some argued that SCHIP had drifted from its statutory intent by allowing children with incomes above 200 percent of the FPL to be covered in so many states, exposing the programs to an increased

risk that public coverage will substitute for—or crowd out—private coverage.^{3,4} On the other hand, it was argued that private premiums had grown faster than the federal poverty level since the inception of SCHIP, which in turn was placing private insurance out of reach for a growing number of moderate-income families with incomes above 200 percent of the FPL, and that cost-of-living differences across states affect how affordable health insurance premiums are for families.⁵ Where eligibility thresholds are set and the extent to which states have latitude over their thresholds are important because they likely affect how effective SCHIP and Medicaid will be at filling gaps in coverage for children.

Robert Wood Johnson Foundation

percent of the FPL, 10 cover kids up to 300 percent of the FPL, and only one state—New Jersey—covers kids above 300 percent of the FPL with federal funds.¹³ Most states that cover children with incomes above 200 percent of the FPL under Medicaid and SCHIP charge premiums for coverage, but public premiums vary substantially across states and across income levels.¹⁴

Despite the fact that nearly half of all states cover children with incomes above 200 percent of the FPL, the vast majority of children enrolled in these programs appear to be from low-income families. Nationally, 91 percent of children enrolled in SCHIP live in families earning 200 percent of the FPL or less.^{15,16} In addition, legislation passed in 2007 to reauthorize SCHIP (H.R. 3963) would have covered an additional 3.9 million uninsured children, an estimated 80 percent of whom would have had incomes below 200 percent of the FPL; an earlier version of the bill passed by the House was even more targeted, with the share of newly-insured children who would be low-income estimated to be about 85 percent.¹⁷

This brief examines the extent to which increases in the costs of employer-sponsored insurance have outstripped income growth since the time that SCHIP was enacted. The implications of cost-of-living differences are also addressed.

Data and Methods

To assess how the affordability of private health insurance coverage has been changing over the past decade, we use information on the cost of employer-sponsored insurance premiums from the Medical Expenditure Panel Survey Insurance Component (MEPS-IC). The MEPS-IC includes survey information for an average of 38,500 private sector establishments per year, going back to 1996. Response rates range from 67 percent to 81 percent, with the early years of the survey experiencing lower response rates.¹⁸ The standard errors on the premium data are small, making the annual estimates of average employer-sponsored insurance premiums very precise. For example, the standard error

associated with the average total family premium in 2006 was less than 0.3 percent as large as the average premium for that year. The survey contains data on the insurance plan offered, including total premiums, employer contributions, cost sharing arrangements and information on the establishment. Data on the average premium cost for single coverage (employee only) and family coverage are available back to 1996.

The FPL for a family of four was obtained for each year from the Department of Health and Human Services (DHHS) Poverty Guidelines for the 48 contiguous states.¹⁹ The poverty guidelines are updated each year by DHHS using the consumer price index. With the exception of Hawaii and Alaska, the same federal poverty thresholds are defined for each state.

We create ratios of average employer-sponsored insurance family premium levels to income for families of four with two different income levels: at 200 percent of the FPL and at 300 percent of the FPL.²⁰ We focus on changes in the average premium relative to family income for ease of presentation. We also examined alternative affordability measures including (1) the average employee premium contribution for family coverage combined with average total out-of-pocket spending on deductibles, coinsurance, and copayments²¹ relative to income (to capture the direct burden on employees); (2) the average premium for family coverage relative to an adjusted income measure that includes the average premium measure (to approximate total compensation), and (3) the average nongroup premium for family coverage relative to income. We found that changes in all three alternative measures tracked closely with changes in the average premium for family coverage relative to income.

We use changes in the average employer premium for family coverage as a proxy for how the costs of private insurance coverage have been changing over time. Fully capturing how the affordability of private coverage has been changing over time would ideally rely on information

on how private nongroup premiums have been changing. However, only limited information is available to estimate changes in nongroup premiums. The MEPS Household Component (MEPS-HC) contains data on nongroup premiums, which are based on small samples of respondents with nongroup family coverage, and even smaller samples that represent a family size of four.²² Studies using the MEPS-HC data found that nongroup premiums for family coverage increased about 25 percent between 2002 and 2005 and by about 67 percent between 1996 and 2005.²³ Using the average premium growth between 2002 and 2005, we estimated the average premium cost for nongroup family coverage in 2006. While the MEPS data suggest that the nongroup premiums have not risen as fast as ESI premiums, we still found substantial growth in nongroup family premiums.²⁴

To assess the implications of the area-variation in the cost of living, we use the Council for Community and Economic Research ACCRA Cost of Living Index data for the third quarter of 2008.²⁵ This index takes into account relative prices for a market basket of consumer goods (including grocery items, housing, utilities, transportation, health care, and miscellaneous goods and services) for a “mid-management standard of living,” which is defined according to spending in the highest quintile in more than 300 urban areas across the country.²⁶

Findings

On average, employer-sponsored insurance premiums for family health insurance coverage rose by 8.7 percent per year between 1996 and 2006, increasing from \$4,954 in 1996 to more than double that at \$11,381 in 2006.²⁷ At the same time, the federal poverty level rose by an average of just 2.4 percent per year. As a consequence, where family employer-sponsored insurance premiums constituted 16 and 11 percent of family income, respectively, for families at 200 and 300 percent of the FPL in 1996, by 2006, those ratios had risen to 28 and 19 percent (figure 1). Overall, the ratio of

total premiums to income rose by about 75 percent for both groups between 1996 and 2006.

Similar growth was found in the ratio of average employee ESI costs (employee contributions to premiums and total out-of-pocket costs) to income over the period, increasing from less than 8 percent of family income in 1996 to 12 percent in 2006 for families at 200 percent of the FPL and from 5 to 8 percent for families at 300 percent of the FPL.²⁹ Because premiums paid by employers are part of an employee's total benefit package, we also examined the share of income spent on premiums after including the value of the employer's premium contribution in the family's income. The trend using this definition of family income tracks very closely to the trend using the simpler definition, increasing from 14 percent in 1996 to 24 percent in 2006 for families at 200 percent of the FPL and from 10 to 17 percent for families at 300 percent of the FPL (data not shown). Regardless of the definition used, the ratio of ESI costs to income was higher for families with incomes at 300 percent of the FPL in 2006 than it was for families with incomes at 200 percent of the FPL in 1996, the year before SCHIP was enacted.

Growth in nongroup premiums, though not as high as that in ESI premiums, was also large. In 1996, the average nongroup premium for family coverage in the nongroup market was \$3,329, representing 11 percent of income for families earning 200 percent of the FPL and 7 percent of income for families at 300 percent of the FPL. In 2006, the average nongroup premium for family coverage rose to an estimated \$6,038, making up 15 percent of income for families at 200 percent of the FPL and 10 percent of income for families at 300 percent of the FPL.²⁹

Another factor determining whether available coverage is affordable for families is the cost of living, which translates into very different effective incomes for families with the same nominal income living in different areas. For example, in 2008, families living in San Francisco and Philadelphia,

two urban areas with higher than average cost of living than the other areas included in the ACCRA index, would have to earn 2.1 and 1.5 times as much, respectively, to have the same purchasing power as families living in Douglas, Georgia, the lowest cost urban area in the study (figure 2). Consequently, a family living in San Francisco or Philadelphia earning 200 percent of the FPL is much less well-off than a family earning the same income but living in Douglas, Georgia and has fewer resources available to devote to health care. Even within a given state, families face very different costs of living; families living in Philadelphia have to earn 1.4 times as much as those living in Pittsburgh while families living in San Francisco have to earn 1.6 times as much as families living in Bakersfield to have equivalent purchasing power.

Discussion

Given that health care cost growth has historically exceeded general inflation rates, capping eligibility levels for public

coverage at an income level indexed to inflation rather than indexed to changes in the costs of health care premiums will likely mean that more and more moderate-income children are likely to become uninsured as their parents find that they cannot afford the increasingly high costs of private coverage. The effect of the rising premium burdens may have contributed to recent increases in the uninsured rate among children with moderate incomes. Between 2005 and 2006, the number of uninsured children rose by more than 700,000, and fully two-thirds of the increase was composed of children from families earning more than 200 percent of the FPL.³⁰ Over ten states have responded to the declining affordability of private coverage by enacting income eligibility expansions in the past five years.³¹

In addition, imposing a single eligibility threshold nationally, without regard for the substantial variation in purchasing power both across and within states, places families living in higher-cost areas at a disadvantage. Moreover,

Note: Share of income evaluated for families earning exactly 200% and exactly 300% of the FPL.
Source: 1996 and 2006 Medical Expenditure Panel Survey Insurance Component. Premiums reported are for a family of four. Federal poverty level for a family of four from the Department of Health and Human Services available at <http://aspe.hhs.gov/poverty/figures-fed-reg.shtml>

expanding eligibility to higher income levels has been shown to have positive spillover effects on the enrollment of lower-income children who were previously eligible.³² At the same time however, allowing states to expand public eligibility to higher income levels increases the risks that public coverage will substitute for ESI coverage and raises questions about the target efficiency of public subsidies.³³

As states expand coverage to higher incomes, it is also important to consider whether their premium schedules adequately reflect the greater ability of higher-income families to afford coverage. It is important to note that past research has shown that premiums charged in public programs have a negative effect on enrollment, despite being much lower than premiums in the private insurance market, suggesting that even low amounts of cost sharing

can deter families from enrolling their children in coverage.³⁴ At the same time, however, there may be room for some states to raise premium levels, especially for moderate income children, without incurring significant enrollment declines. There is substantial variation in the premiums that states charge in their Medicaid/SCHIP programs to cover families above 200 percent of the FPL—of the eleven states that cover children in SCHIP at 300 percent of the FPL, monthly premiums range from zero in the District of Columbia to over \$100 in New Jersey and Missouri for one child.³⁵ While defining what is Affordable for families of different income levels is analytically difficult because the concept is inherently subjective, it is critical to efforts to achieve and finance universal coverage.³⁶

Whereas 200 percent of the FPL might have been a reasonable eligibility

threshold for coverage in many states when SCHIP was first created, that may not be the case today, particularly in high cost-of-living areas, given the large increases in health care premiums relative to income that have occurred over the past decade. In fact, this analysis suggests that ESI premiums now constitute an even higher share of family income for families at 300 percent of the FPL than they did for families at 200 percent of the FPL in 1996—that is, where health insurance premiums are concerned, 300 percent of the FPL has become what 200 percent of the FPL was over 10 years ago when SCHIP was enacted.³⁷ In addition, this analysis suggests that unless effective cost containment strategies are implemented that reduce the rate of increase of private premiums, pressures on public programs are going to continue to increase.

Source: ACCRA Cost of Living Index, based on the data provided by Kaiser State Health Facts 2008. Income data were adapted to reflect purchasing power at 200% of the FPL by multiplying given income data (for purchasing power at 300% of the FPL) by 2/3. - ² SCHIP was established over a decade ago as part of the Balanced Budget Act of 1997. Though an optional program, all states expanded coverage under SCHIP, with an estimated 6.7 million children and 700,000 adults having coverage under SCHIP at some point during 2006. State programs vary in terms of their structure and characteristics (e.g., cost sharing arrangements and income eligibility levels), reflecting the flexibility over program design that was built into the SCHIP statute (Kenney 2008).

- ¹² Before 2007, states had broad latitude to set their own eligibility levels and to use income disregards to subtract costs of child care or work expenses from a family's gross income, thereby establishing eligibility based on the family's net income; states also applied "blanket" income disregards to reach children at higher income levels, as had long been permitted for Medicaid under Section 1902(r)(2) of the Social Security Act. On August 17, 2007, the Centers for Medicare and Medicaid Services issued a letter to state health officials (SHO-#07-001) restricting states' ability to cover children in families with gross income above 250 percent of the FPL. Specifically, in order to expand income eligibility above 250 percent of the FPL, the letter required states to achieve a coverage rate of 95 percent for low-income children and to ensure that the rate of employer-sponsored coverage for children had not dropped more than two percentage points in the past five years. States were also required to impose a 12-month waiting period for children coming off of other insurance before they could enroll in SCHIP and to charge the maximum amount of cost sharing allowable by law (5 percent of family income) for children in families earning more than 250 percent of the FPL (Mann, C. and M. Odeh. "Moving Backward: Status Report on the Impact of the August 17 SCHIP Directive To Impose New Limits on States' Ability to Cover Uninsured Children." Georgetown Center for Children and Families. Washington, DC: Georgetown University Health Policy Institute. 2007b). Both SCHIP reauthorization bills that passed Congress but were vetoed by the president in 2007 (H.R. 976 and H.R. 3963) would have overturned the August 17th Directive. The Directive was set to take effect on August 17, 2008 for states already covering children above 250 percent of the FPL; however, CMS has applied the new rules only to states seeking to expand coverage (including New York, Ohio, Oklahoma, Louisiana, Indiana, and Wisconsin) and not to those who had already implemented coverage expansions (Associated Press, "States Won't Be Sanctioned over Kids' Health Insurance." 2008. http://www.usatoday.com/news/health/2008-08-14-children-insurance_N.htm?csp=34).
- ¹³ These income eligibility levels reflect those in effect as of October 2008. Several states have authorized income eligibility increases that have not yet been implemented either because of legislative delays or CMS denials of the increases (see footnote 12). In addition, four states have moved to use state-only funds to increase their income eligibility levels above the limit set in their SCHIP program. Illinois and Wisconsin use state funds to cover kids up to 300 percent of the FPL (Illinois' SCHIP eligibility level is 200 percent of the FPL; Wisconsin's is 250 percent of the FPL); Massachusetts and New York cover kids up to 400 percent of the FPL (Massachusetts' SCHIP eligibility level is 300 percent of the FPL; New York's is 250 percent of the FPL) (Georgetown Center for Children and Families. "Eligibility Levels in Medicaid & SCHIP for Children, by State as of October 1, 2008." Georgetown University Health Policy Institute. October 20, 2008).
- ¹⁴ Selden, T., G. Kenney, M. Pantell, and J. Ruhter. "Cost Sharing Arrangements in Medicaid and SCHIP: Implications for Out-of-Pocket Spending Burdens." Under Review.
- ¹⁵ Congressional Research Service. "REVISED: Estimates of SCHIP Child Enrollees up to 200% of Poverty, above 200% of Poverty, and of SCHIP Adult Enrollees, 2007." May 30, 2008. This study evaluated low-income families by their net income since that is how SCHIP eligibility is determined in most states. Some children with net income of less than 200 percent of the FPL have gross income above 200 percent of the FPL after adding back in child care and work-related expenses and other disregards.
- ¹⁶ When both Medicaid and SCHIP children are considered together, the proportion of enrollees who are low-income rises to 98 percent (Author's tabulation based on SCHIP enrollment as reported in Congressional Research Service 2008 and Medicaid enrollment from Georgetown Center for Children and Families, "Number of Children Ever Enrolled in Medicaid/SCHIP by Program Type and State, FY 2007." Washington, DC: Georgetown University Health Policy Institute. 2008).
- ¹⁷ Kenney, G., A. Cook, and J. Pelletier. "SCHIP Reauthorization: How Will Low-Income Kids Benefit under House and Senate Bills?" Washington, DC: Urban Institute. 2007. <http://www.urban.org/publications/411545.html>
- ¹⁸ Establishments are pre-screened over the phone, and those that offer health insurance to their employees are mailed a complete questionnaire. Those who do not offer health insurance to their employees are only asked a few questions over the phone. Establishments that do not return the questionnaire are sent a second mailing, and those that do not return the second mailing are called to complete the information over the phone.
- ¹⁹ Available at <http://aspe.hhs.gov/poverty/figures-fed-reg.shtml>
- ²⁰ Two-hundred percent of the FPL for a family of four translates into \$31,200 in 1996 and \$40,000 in 2006. Three-hundred percent of the FPL translates into \$46,800 in 1996 and \$60,000 in 2006.
- ²¹ Data on out-of-pocket costs are based on Urban Institute tabulations of the Household Component of the 1996 and 2006 Medical Expenditure Panel Survey and include average out-of-pocket costs for families with ESI coverage for the entire survey year.

- ²² Examining nongroup premium growth is also important when considering coverage options for this income group because few low- and moderate-income children have access to ESI coverage. (Kenney, Cook, and Pelletier. "Prospects for Reducing Uninsured Rates Among Children: How Much Can Premium Assistance Programs Help?" Urban Institute. Forthcoming).
- ²³ Bernard, D. "Premiums in the Individual Health Insurance Market for Policyholders under Age 65, 1996 and 2002." Statistical Brief #72. Rockville, MD: Agency for Healthcare Research and Quality. March 2005; Bernard, D. and J. Banthoin. "Premiums in the Individual Health Insurance Market for Policyholders under Age 65: 2002 and 2005." Statistical Brief #202. Rockville, MD: Agency for Healthcare Research and Quality. April 2008.
- ²⁴ Because of the small sample sizes, the nongroup premium estimates in the MEPS have large standard errors associated with them and are therefore much less precise than the ESI premium data. For example, the standard error associated with the mean nongroup family premium for 2005 was close to 10 percent of the mean, compared to a ratio of less than 0.3 percent for the mean ESI family premium in 2006 (MEPS-IC Table I.D.1(2006); Bernard and Banthoin 2008). We also looked at out-of-pocket spending when evaluating the cost of nongroup coverage but chose not to include it because the sample sizes for families of four are very small.
- ²⁵ Kaiser State Health Facts (2008) provides ACCRA data on what a family of four would need to earn in select U.S. cities to have purchasing power equal to 300 percent of the FPL. Because the focus of this brief is on children currently targeted by SCHIP, the income figures were multiplied by 2/3 in order to represent purchasing power equal to 200 percent of the FPL. Mann and Odeh (2007a) used ACCRA data and a similar method to show purchasing power for a family of three at 200 percent of the FPL.
- ²⁶ The index is based on the spending distribution across the six major categories of purchases listed on page 2 for consumers in the top income quintile in the Consumer Expenditure Survey. The distribution is relatively similar to the distribution for the lowest income quintile, which would represent lower-income families. The largest share of expenditures for both quintiles is due to housing costs, which represent 37 and 35 percent of total expenditures in the six categories of goods and services for the top and bottom quintiles, respectively. Because housing costs are highly variable across the country and constitute such a large share of expenditures in the index, the cost of living can vary greatly between cities. Transportation costs make up the second-largest share of expenditures (31 percent for the top quintile and 23 percent for the bottom quintile); groceries and utilities each constitute 10 percent of expenditures for the top quintile and 15 percent for the bottom quintile. Health care costs account for 8 percent of spending in the top quintile and 10 percent of spending in the bottom quintile (Urban Institute tabulations of the 2007 Consumer Expenditure Survey).
- ²⁷ The standard errors associated with these estimates were \$32.33 in 2006 and \$36.06 in 1996 (MEPS-IC Table I.D.1 from 1996 and 2006).
- ²⁸ For firms with large shares of low-wage workers (50 percent or more), the ratio of average employee premium to income is slightly higher than for all firms: For families at 200 percent of the FPL, the ratio is 6 percent in 1996 and 8 percent in 2006, and for families at 300 percent of the FPL, the ratio is 4 percent in 1996 and 5 percent in 2006 (data not shown). Employee contributions remained fairly constant over the period, constituting about a quarter of the total premium (data not shown).
- ²⁹ The premium for 2006 was estimated using the average growth rate in the nongroup premium between 2002 and 2005. The standard errors associated with these estimates are large, \$241 in 1996, or 7.2 percent of the mean, and \$513 in 2005, or 9.2 percent of the mean.

- ³⁵ The cost of enrolling two children in both Missouri and New Jersey is the same as enrolling one child (Selden et al. Under Review).
- ³⁶ Blumberg, L., J. Holahan, J. Hadley, and K. Nordahl. "Setting a Standard of Affordability for Health Insurance Coverage." *Health Affairs* 26(4): w463-w473. 2007.
- ³⁷ These numbers understate the extent to which coverage has become unaffordable at 300 percent of FPL, compared to coverage at 200 percent of FPL when SCHIP was signed into law. The 1996 estimates in the text represent the cost of coverage one year before the 1997 enactment of SCHIP. The 2006 estimates, by contrast, are at least three years before the potential reauthorization of SCHIP; if SCHIP is reauthorized at its earlier possible point (2009), the year most directly analogous to 1996 would be 2008. Between 2006 and 2008, premium growth continued to outstrip increases in the FPL. According to surveys by the Kaiser Family Foundation (KFF) and the Health Research & Educational Trust (HRET), average premiums for family coverage rose by 10.5 percent from 2006 to 2008 (KFF/HRET 2008. Available at <http://ehbs.kff.org/>). During that same period, the FPL rose by 6 percent. Using the recent premium increase reported by KFF/HRET to project ESI premiums for 2008, ESI family coverage in 2008 consumed an average of 30 percent of family income at 200 percent of FPL and 20 percent of family income at 300 percent of FPL. If average nongroup premiums are estimated for 2008 based on the growth rate between 2002 and 2005, nongroup premiums would have constituted 17 percent of income for families at 200 percent of the FPL and 11 percent of income for families at 300 percent of the FPL.

About the Urban Institute

The Urban Institute is a nonprofit, nonpartisan policy research and educational organization that examines the social, economic, and governance problems facing the nation.

About the Robert Wood Johnson Foundation

The Robert Wood Johnson Foundation focuses on the pressing health and health care issues facing our country. As the nation's largest philanthropy devoted exclusively to improving the health and health care of all Americans, the Foundation works with a diverse group of organizations and individuals to identify solutions and achieve comprehensive, meaningful, and timely change. For more than 35 years the Foundation has brought experience, commitment, and a rigorous, balanced approach to the problems that affect the health and health care of those it serves. When it comes to helping Americans lead healthier lives and get the care they need, the Foundation expects to make a difference in your lifetime. For more information, visit www.rwjf.org.

Notes: The methods used to determine whether a child qualifies for coverage, based on his or her family income, vary from state to state. Under longstanding federal law, states must follow certain rules in determining income-eligibility, but they also have considerable flexibility regarding whether they will count or exempt certain types or amounts of income and whether they allow deductions for certain types or amounts of expenses. Typically, states "disregard" — that is, they do not count — a portion of earnings from a working family's income to reflect that these resources are needed to cover work-related expenses and generally are not available to cover other costs, such as the cost of purchasing health coverage. Estimates presented here reflect *net* income, taking into account each state's income disregard policy, since this is how states provide income information to CMS and is the basis on which enrollees' eligibility is determined.

The SCHIP statute defines low-income children as those at or below 200% of poverty. States use two different types of income disregards in determining eligibility for SCHIP which in turn affects the income levels reported CMS. The first type of disregard is the exclusion of particular dollar amounts or types of income, and the second occurs when a state excludes an entire block of percent-of-poverty income. For more information, see Sources.

Sources: Peterson, Chris, Domestic Social Policy Division, Congressional Research Service (CRS), January 27, 2009 memorandum based on analysis of data from the SCHIP Statistical Enrollment Data System (SEDS) provided by the Centers for Medicare and Medicaid Services (CMS).

Definitions: NA: Children in families with incomes above 200% poverty level were not eligible for the state's SCHIP program as of FY2008.

Federal Poverty Level (FPL) was established to help government agencies determine eligibility levels for public assistance programs such as Medicaid. FPL is represented in this resource as poverty guidelines as opposed to the slightly different poverty thresholds.

Federal Fiscal Year (FY): Unless otherwise noted, years preceded by "FY" on statehealthfacts.org refer to the Federal Fiscal Year, which runs from October 1 through September 30. For example, FY 2009 refers to the period from October 1, 2008 through September 30, 2009.

Subject: SCHIP Cost Sharing Rules

Senator Davis,

We enjoyed listening to your Health and Social Services committee meeting on Monday. This memo is intended to answer the question posed about the SCHIP cost-sharing rules.

Alaska's SCHIP program is a Medicaid expansion program and therefore must comply with Medicaid's cost-sharing rules as specified under the Deficit Reduction Act of 2005. Under provisions of the Deficit Reduction Act of 2005 (DRA), states generally cannot impose cost sharing on children in families with income below 150 percent of the federal poverty guidelines except in certain circumstances. In addition, even at more moderate-income levels, federal rules exempt some special services from any cost sharing requirements.

Most children under the age of 18 are exempt from premiums and from cost-sharing on most services. However, the DRA rules allow states to require co-payments for prescription drugs and use of the emergency room for non-emergency care on all children in certain circumstances. The DRA also allows states to assess premiums and cost-sharing charges on some children in families with income above the poverty line. The total amount of premiums and cost-sharing charges cannot exceed a cap of five percent of family income, which is calculated on a monthly or quarterly basis at the option of the state.

Please see the following document by the Center on Budget and Policy Priorities for more detailed information about cost-sharing and premiums in Medicaid:

Cost-sharing and Premiums in Medicaid: What Rules Apply? February 28, 2007

<http://www.cbpp.org/2-28-07health.pdf>

In addition, you may also find the following document by the Congressional Research Service helpful. The table on page 5 compares service-related cost-sharing rules in traditional Medicaid, the DRA options and SCHIP.

CRS Report for Congress, January 25, 2007

http://assets.opencrs.com/rpts/RS22578_20070125.pdf

The following document by the Centers for Medicare and Medicaid Services (CMS) also summarizes these Medicaid requirements and you may find the "Important Links" on the bottom of page 2 helpful.

See the CMS document here:

<http://www.cms.hhs.gov/DeficitReductionAct/Downloads/Costsharing.pdf>

For more general information about cost sharing and SCHIP, please see the following CMS website:

http://www.cms.hhs.gov/MedicaidGenInfo/05_SCHIP%20Information.asp

(Scroll down to see the information under the heading "Cost Sharing.")

To create cost sharing requirements that differ from the Medicaid requirements, states can do so by submitting a waiver to and obtaining approval from the Centers for Medicare and Medicaid Services (CMS) or by creating a stand-alone SCHIP program.

If you have more specific or detailed questions regarding cost-sharing requirements under Alaska's SCHIP program, I would suggest that you contact CMS directly.

Best regards,

Jennifer Saunders

THE 2009 HHS POVERTY GUIDELINES

One Version of the [U.S.] Federal Poverty Measure

[[Federal Register Notice, January 23, 2009 — Full text](#)]

[[Prior Poverty Guidelines and Federal Register References Since 1982](#)]

[[Frequently Asked Questions \(FAQs\)](#)]

[[Further Resources on Poverty Measurement, Poverty Lines, and Their History](#)]

[[Computations for the 2009 Poverty Guidelines](#)]

There are two slightly different versions of the federal poverty measure:

- The poverty thresholds, and
- The poverty guidelines.

The **poverty thresholds** are the original version of the federal poverty measure. They are updated each year by the **Census Bureau** (although they were originally developed by Mollie Orshansky of the Social Security Administration). The thresholds are used mainly for **statistical** purposes — for instance, preparing estimates of the number of Americans in poverty each year. (In other words, all official poverty population figures are calculated using the poverty thresholds, not the guidelines.) Poverty thresholds since 1980 and weighted average poverty thresholds since 1959 are available on the Census Bureau's Web site. For an example of how the Census Bureau applies the thresholds to a family's income to determine its poverty status, see "[How the Census Bureau Measures Poverty](#)" on the Census Bureau's web site.

The **poverty guidelines** are the other version of the federal poverty measure. They are issued each year in the *Federal Register* by the **Department of Health and Human Services (HHS)**. The guidelines are a simplification of the poverty thresholds for use for **administrative** purposes — for instance, determining financial eligibility for certain federal programs. The *Federal Register* notice of the 2009 poverty guidelines is available.

The poverty guidelines are sometimes loosely referred to as the "federal poverty level" (FPL), but that phrase is ambiguous and should be avoided, especially in situations (e.g., legislative or administrative) where precision is important.

Key differences between poverty thresholds and poverty guidelines are outlined in a table under [Frequently Asked Questions \(FAQs\)](#). See also the [discussion of this topic](#) on the Institute for Research on Poverty's web site.

The 2009 Poverty Guidelines for the 48 Contiguous States and the District of Columbia

Persons in family	Poverty guideline
1	\$10,830

SOURCE: *Federal Register*, Vol. 74, No. 14, January 23, 2009, pp. 4199-4201

The separate poverty guidelines for Alaska and Hawaii reflect Office of Economic Opportunity administrative practice beginning in the 1966-1970 period. Note that the poverty thresholds — the original version of the poverty measure — have never had separate figures for Alaska and Hawaii. The poverty guidelines are not defined for Puerto Rico, the U.S. Virgin Islands, American Samoa, Guam, the Republic of the Marshall Islands, the Federated States of Micronesia, the Commonwealth of the Northern Mariana Islands, and Palau. In cases in which a Federal program using the poverty guidelines serves any of those jurisdictions, the Federal office which administers the program is responsible for deciding

whether to use the contiguous-states-and-D.C. guidelines for those jurisdictions or to follow some other procedure.

The poverty guidelines apply to both aged and non-aged units. The guidelines have never had an aged/non-aged distinction; only the Census Bureau (statistical) poverty thresholds have separate figures for aged and non-aged one-person and two-person units.

Programs using the guidelines (or percentage multiples of the guidelines — for instance, 125 percent or 185 percent of the guidelines) in determining eligibility include Head Start, the Food Stamp Program, the National School Lunch Program, the Low-Income Home Energy Assistance Program, and the Children's Health Insurance Program. Note that in general, cash public assistance programs (Temporary Assistance for Needy Families and Supplemental Security Income) do NOT use the poverty guidelines in determining eligibility. The Earned Income Tax Credit program also does NOT use the poverty guidelines to determine eligibility. For a more detailed list of programs that do and don't use the guidelines, see the [Frequently Asked Questions \(FAQs\)](#).

The poverty guidelines (unlike the poverty thresholds) are designated by the year in which they are issued. For instance, the guidelines issued in January 2009 are designated the 2009 poverty guidelines. However, the 2009 HHS poverty guidelines only reflect price changes through calendar year 2008; accordingly, they are approximately equal to the Census Bureau poverty thresholds for calendar year 2008. (The 2008 thresholds are expected to be issued in final form in August 2009; a preliminary version of the 2008 thresholds is now available from the Census Bureau.)

The [computations for the 2009 poverty guidelines](#) are available.

The poverty guidelines may be formally referenced as "the poverty guidelines updated periodically in the *Federal Register* by the U.S. Department of Health and Human Services under the authority of 42 U.S.C. 9902(2)."

RE: SB 13 (Davis)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support SB 13, authored by Senator Bettye Davis, and co-sponsored by Senators Paskvan, Ellis, Wielcchowski, and French as well as Representatives Gruenberg and Tuck.

AARP is the world's largest organization of grandparents. We are concerned about health insurance coverage for everyone's grandchildren.

SB 13 will return the Denali KidCare program to the former eligibility levels at 200% of the federal poverty level. We think this is an excellent plan and should provide comprehensive and preventive health coverage for many more young Alaskans and pregnant women.

In addition, we have many retired grandparents who are raising their grandchildren. Currently there are over 5,500 grandparents responsible for raising over 8,200 young Alaskan grandchildren. Very often these grandparents are retired and dependent on Medicare for their health coverage. Denali KidCare, in many cases, is the only health insurance they can secure for their grandchildren. If these grandparents are not able to secure insurance coverage for their grandchildren, some of the children will have to leave this caring family environment and become wards of the state. We hope you realize how important Denali KidCare coverage is to these extended families that are now in one household. These grandparents are trying to provide the best care for their grandchildren. They need Denali KidCare.

Many AARP members have coverage through Medicare or their employer and they understand how important health insurance is to them; we support the efforts of this bill to provide coverage to other Alaskans who need it.

A healthy future for our children should be something everyone can agree on.

AARP requests an "AYE" vote on SB 13.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator
AARP Capital City Task Force

March 5, 2010

Representative Wes Keller
Alaska State Capital Room 13
Juneau, Alaska 99801

Dear Representative Keller,

I am writing to request your support of SB 13, which will increase the income eligibility guidelines for Denali KidCare from 175% to 200% of Alaska's federal poverty level. This change would make approximately 1,300 children and 225 pregnant women eligible for health care services.

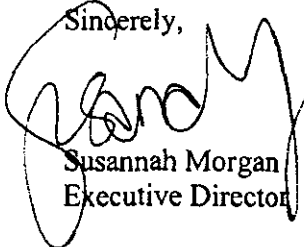

The eligibility level for Denali KidCare is currently set at 175% of federal poverty level. This means that Alaska has one of the most restrictive eligibility criteria for child health insurance programs in the nation. 48 states and the District of Columbia now cover children at or above 200% of the federal poverty level.

Food Bank of Alaska cares about health care for children because our research shows that health care and hunger are inextricably linked. 30% of food assistance clients have no health insurance, and 58% of food assistance clients have unpaid medical bills. 35% of food assistance clients choose between paying for food and paying for health care or medication.

Providing health insurance to more Alaskan children would mean that fewer families face the agonizing choice between feeding their kids and taking them to the doctor. It is also a sound investment; research shows that children and pregnant women with preventive care, such as that received through Denali KidCare, are four times less likely to use expensive emergency room care for medical treatment. Also, the State of Alaska will be able to leverage more federal dollars, since the federal government covers almost 65% of the entire cost of Denali KidCare.

Please help Alaska join the rest of the nation in supporting health care for children and pregnant women by reestablishing Alaska legislature's original level of Denali KidCare at 200% of federal poverty level.

Sincerely,

Susannah Morgan
Executive Director

Mat-Su Health Foundation Resolution in Support of Increased Denali KidCare Income Eligibility Level

WHEREAS the Mat-Su Health Foundation's mission is to enhance the health of Alaskans living in Mat-Su, and where health is in part determined by access to primary, behavioral, and dental care and preventive services;

WHEREAS the provision of health insurance is a key component of healthcare access;

WHEREAS the Mat-Su Borough is the fastest growing area of Alaska, growing from 5,188 in 1960 to 82,515 in 2008 due to both positive birth and in-migration rates; and the AK Department of Labor projects that all Mat-Su age groups will continue to grow through 2020;ⁱ

WHEREAS in 2006, of the 22,868 children in Mat-Su, approximately 12.9% or 2,949 were uninsured;ⁱⁱ

WHEREAS in 2006, approximately 19.5% or 1,530 children in Mat-Su living at or below 200% Federal Poverty Level (FPL) were uninsured;ⁱⁱⁱ

WHEREAS the Average Monthly Medicaid Enrollment *decreased* from 12,073 in 2006 to 11,671 in 2007 in Mat-Su despite a *rising* rate of uninsured coupled with significant population growth;^{iv}

WHEREAS in Mat-Su nearly a quarter (23.5%) of all female headed households fell below the poverty level, 51.9% of those with children under 5 years of age were living in poverty compared to 32% of similar households in AK;^v

WHEREAS 11.3% of families with related children in Mat-Su and 11.2% of families with related children in AK have lived below the poverty level in the last 12 months;^{vi}

WHEREAS 37% of Mat-Su Borough School District students ages five to 17 live in households receiving Public Assistance;^{vii}

WHEREAS Mat-Su Regional Medical Center, the sole community acute care provider in Mat-Su, supplied \$339,554,984 in uncompensated care from 2007 through 2009 and saw uncompensated care rates rise 10% between 2007 and 2008 and 5% between 2008 to 2009;

WHEREAS the rate of uninsured children under age 18 in Alaska is increasing—from 8.4% in 2005 to 10.3% in 2006 to 11.4% in 2007 to 13.2% in 2008;^{viii}

WHEREAS results of the 2007 National Survey of Children's Health 2007 reflect that

- 46% of Alaska's children live at or below 200% FPL as compared to 40.6% nationwide;
- 12.8% of Alaskan children under age 18 were uninsured at the time of the survey versus 9.1% nationwide; and only four states have lower rates than AK
- 18% of Alaskan children under age 18 were currently uninsured or had periods of no coverage during the year versus 15.1% nationwide
- 21% of Alaskan children living at or below 99% FPL were uninsured at the time of the survey versus 15% nationwide
- 28.8% of Alaskan children living at or below 99% FPL had periods of no coverage during the year versus 24.2% nationwide

- 17% of Alaskan children living at or below 199% FPL had no coverage at the time of the survey versus 13.9% nationwide
- 25.1% of Alaskan children living at or below 199% FPL had periods of no coverage during the year versus 24.3% nationwide;^{ix}

WHEREAS approximately 10,000 Alaskan children 18 years or younger and below 200% FPL are uninsured,^x and 36,000 Alaskan children 19 years or younger and below 200% FPL rely on government health insurance to provide access to health care services;^{xi}

WHEREAS Alaska has seen a 31% decline in the number of children covered by private health insurance in the past decade;^{xii}

WHEREAS the cost of caring for uninsured children is passed on to other Alaskans and businesses, raising premiums and out-of-pocket expenses for everyone;^{xiii}

WHEREAS uninsured children are nine times less likely to have a regular doctor, four times more likely to be taken to emergency rooms, and 25% more likely to miss school than insured children;^{xiv}

WHEREAS the Denali KidCare upper income eligibility guideline was decreased in 2007 to 175% FPL from 200% FPL;

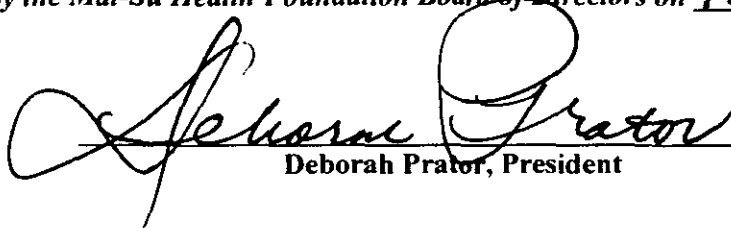

WHEREAS increasing Denali KidCare income eligibility levels to at least 200% FPL will increase health care access for children and families that meet this criterion;

WHEREAS expanding the Denali KidCare income eligibility levels would result in improved public health and overall health outcomes throughout the state for Alaskan children;

WHEREAS the Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) reauthorized and expands the State Children's Health Insurance Program of 1997 to allow states to implement coverage up to 300% FPL and also provides for Performance Bonuses for states enrolling additional children in Medicaid;

BE IT THEREFORE RESOLVED that the Mat-Su Health Foundation supports and advocates for the Denali KidCare income eligibility level to be increased to *at least* 200% FPL and that a cost-sharing option is considered between 200% and 300% FPL.

Approved by the Mat-Su Health Foundation Board of Directors on February 15, 2010 (date)

Representative Bob Herron
Representative Wes Keller
Co-Chairs, Health and Social Services Committee
State Capitol
Juneau, AK 99801-1182

Dear Representatives Herron and Keller:

Please ensure passage of SB 13, Medical Assistance Eligibility, as quickly as possible. The Department of Health and Social Services estimates that raising the income eligibility limit to 200% of the Federal Poverty Level (FPL) can provide health care to 1,277 Alaskan children currently without health insurance.

As you can see from the attached map, Alaska is one of only three states in the country that limit income eligibility for the State Child Health Insurance Program to less than 200% of the FPL. Twenty states have 200% FPL limits and all other states have eligibility above 200% FPL.

As Alaskans who consider our children as our future, we should be leading the nation in providing quality health care to them, not lagging so far behind. Let's join those states that place a greater emphasis on helping working families take care of their children! The clock is ticking. Don't make those 1,277 children wait any longer—pass SB 13 this month!

Sincerely,

Brad Ohs, President

SB 13

Thurs 3/9/10

Testimony in Support of Senate Bill 13

March 8, 2010

Dear Representatives Keller and Herron and other members of the Health and Social Services Committee,

My name is Dr. Monica Gross. I am a board certified pediatrician who has practiced in Alaska since 1993. I am here in support of Senate Bill 13. This bill will strengthen Alaskan families by increasing Denali Kid Care coverage.

When children have medical insurance the entire health care emphasis changes to one that strengthens the family. Medical care is shifted from crisis-oriented care to well child and preventative care. This shift has ramifications not only for children's health, but also for family and community health.

When families don't have medical insurance kids are brought to the doctor when they are very sick and parents are really scared. Doctors respond in emergency mode- tests are ordered, drugs are prescribed and parents admonished for "waiting too long". The role of parents as the primary caregiver for their child is undermined.

When kids have medical insurance they are brought in for well child checkups and preventative care. The whole medical model shifts. Parents and doctors are a team working together to keep children healthy and prevent disease. Parents are empowered, and the important job they are doing is validated. Time is available to answer questions and counsel about age appropriate health promotion and illness prevention. This exchange sets the stage for families where children can develop and grow and become productive and healthy members of their community.

Please support Senate Bill 13.

Monica Gross, M.D.

Banner Health

Tanana Valley Clinic

1001 Noble Street
Fairbanks, AK 99701
Phone 907-459-3500
Fax 907-459-3583

Representative Keller,

I am writing in support of the Denali Kid Care Funding Increase that is currently being debated in the Alaska Legislature. As a pediatrician in the Fairbanks community for over 25 years, I have seen first-hand the impact of healthcare costs on hard-working families in our state.

Although my primary role as a pediatrician is to care for the health and well-being of children, it is also imminently important that I respect the concerns of parents and consider the welfare of entire families. Many of the exams, procedures and treatments that I provide put a heavy financial burden on families, producing a mountain of medical bills to be paid out of pocket. I am repeatedly faced with this ethical dilemma and must work to reconcile the necessity of treatment with the economic consequences of my decisions. Denali Kid Care alleviates much of the financial burden on families and, in turn, enables me to effectively administer a child's medical care without the added concern of a family's hardship.

Currently, I am caring for an infant who has been producing bloody stools every few days. His parents are understandably concerned, and I have been performing tests to rule out common problems that may cause this reaction. At this point it would be appropriate for the infant to be seen by a Pediatric Gastroenterologist; however, due to the cost of seeing a specialist, the family is unable to move forward.

By increasing the eligibility percentage from 175% to 200%, Senate Bill 13 would give over 1,200 children health insurance coverage. This new eligibility standard would significantly relieve families who must compromise their children's standard of care due to financial constraints. At Tanana Valley Clinic alone, there are at minimum 40 families, in both the pediatric and OB/GYN departments, who would benefit from this increase. For many hard-working men and women who are currently just beyond the income cap to qualify for Denali Kid Care, this new bill would mean the difference between making ER visits only in dire situations and scheduling preventative visits that ultimately create healthier children. Children who receive preventative care are four times less likely to visit the emergency room; this in turn reduces the long-term cost of healthcare to the state.

When I set out to practice medicine, I did not imagine that on a daily basis my conscience would be saddled with financial concerns when caring for a sick child. However, it is the current reality. Denali Kid Care alleviates many of these concerns not only for me as a pediatrician, but more importantly for families who qualify for this service. As the economy continues to struggle and employees are laid off or faced with reduced hours and benefits, it is important that Alaska responds. This is an opportunity to extend care to over 1,200 families who would be otherwise unable to afford the healthcare that their children deserve.

Sincerely,

J. Timothy Foote, MD

Acknowledgments

The authors would like to extend our deep appreciation to the many Medicaid and SCHIP officials throughout the country who participated in this survey and so generously shared their time and expertise with us. We are grateful for their willingness to explain recent program developments -- from the broadest policy change to the most detailed program rule. Their important contribution to improving the health of children and families deserves recognition and our thanks. We also would like to thank our colleagues at the Center on Budget and Policy Priorities, particularly Matthew Broaddus, for their assistance and helpful suggestions as we prepared this report. We also appreciate the assistance of the Center for Children and Families at Georgetown University's Health Policy Institute.

Executive Summary

Medicaid and SCHIP have been instrumental in covering more low-income uninsured children over the last decade. While much progress has been made, nine million children remain uninsured. As SCHIP reauthorization approached in 2007, states were poised to move forward with efforts to cover more uninsured children. However, federal obstacles, including the Medicaid citizenship documentation requirements, the issuance of a CMS-directive on August 17th 2007 limiting state expansions, and the failure to reauthorize SCHIP have hampered progress. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the fiscal year starting July 1, 2008, many were able to include funding for children's coverage expansions. Later, the severity of the unfolding fiscal crisis became clearer and state budget shortfalls are now expected to total \$350 billion for the remainder of FY 2009 and through 2011. States face mounting pressure to cut Medicaid and SCHIP just as the need for coverage rises due to climbing unemployment and loss of health coverage. In the last downturn, some states implemented restrictive enrollment procedures and reported dramatic declines in children's enrollment as a result. States may soon feel pushed to take such steps. Key findings from the annual KCMU survey of state Medicaid and SCHIP policies for children and parents that were implemented or authorized between January 2008 and January 2009 in the 50 states and D.C. include:

- **States continued to make progress on improving access to health coverage, particularly for children, but several significant setbacks warn about impending problems.** One-third of states (19) increased access to health coverage, while ten states enacted at least one measure to restrict coverage. The most common restriction was imposing new or higher premiums in SCHIP, but two states also restricted eligibility. California increased the frequency of renewal, a change estimated to affect more than 260,000 children as well as large numbers of parents.
- **The economic crisis is widespread and serious healthcare cuts are looming, but the commitment to children is still strong.** States continued to enact eligibility expansions for children, and state officials in several of those states plan to go forward even though they are facing significant budget shortfalls. Federal constraints, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused some states to put expansions on hold temporarily. Others are using state funds to pay for coverage precluded by the directive.
- **Parent coverage is still more difficult to obtain than children's coverage.** The median income at which children qualify for coverage is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. However, for unemployed parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, \$601 per month for a family of three in 2008. Jobless parents who need coverage may find that unemployment payments put them over the income limit for Medicaid.
- **Outreach budgets were increased in a number of states, however, some are beginning to report that these funds are being curtailed.** Outreach, including community-based application assistance, is critical in a recession, since newly eligible families may be unfamiliar with public programs. But in light of budget shortfalls, some states expressed skepticism for conducting aggressive outreach. About half the states are using technology to implement or develop online applications and to develop more efficient enrollment and renewal systems.

As the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that not only reverse coverage gains, but intensify the hardships that many families are already facing as a result of losing their jobs and their health insurance. Congress is currently considering SCHIP reauthorization and an economic recovery package that would provide additional federal Medicaid matching funds. These would help states to maintain vital coverage for low-income families, support state efforts to enroll more eligible children, and make program improvements. Strengthening Medicaid and SCHIP in these ways is an essential precursor to the larger task of enacting broad health care reform.

I. Introduction

A commitment to providing health coverage for uninsured children has inspired nationwide efforts that began in earnest with enactment of the State Children's Health Insurance Program (SCHIP) in 1997. Like Medicaid, the chief source of health coverage for low-income families, SCHIP finances coverage through a partnership between the federal and state governments. State measures to expand eligibility and adopt streamlined enrollment procedures in Medicaid and SCHIP have strengthened both of these programs, and they have been instrumental in reducing the percentage of low-income uninsured children by one-third over the last decade.¹ Notably, the number of low-income uninsured parents increased over the same period, since eligibility levels and resources for addressing their health coverage needs do not approach those related to children.

While considerable progress has been made, nine million children in the United States remain uninsured, with nearly two-thirds of them eligible for Medicaid and SCHIP. In 2007, with relatively robust state budgets and the reauthorization of SCHIP at hand, across the country, states came forward to reaffirm their commitment to closing this gap. That year, state efforts to expand children's health coverage represented the most aggressive steps forward since the early years of SCHIP. Of the 20 states that expanded eligibility for children, 12 raised or authorized raising SCHIP income limits to 300 percent of the federal poverty line, more than doubling the number of states that previously had eligibility set at this level. States also made progress on adopting simplified enrollment and renewal procedures in both Medicaid and SCHIP, emphasizing strategies that reduce paperwork and jump-start enrollment.²

Despite this burst of activity, efforts to advance children's coverage met unanticipated federal obstacles. The Medicaid citizenship documentation requirement, enacted in 2006 as part of the Deficit Reduction Act, sent state simplification efforts backwards by requiring U.S. citizens applying for Medicaid to present original documents proving their citizenship and identity. States reported that this new rule ushered a deep decline in the enrollment of eligible U.S. citizens, especially children.

The expected reauthorization of SCHIP also encountered roadblocks. Congress passed two versions of legislation to reauthorize SCHIP and President Bush vetoed each of them. And, on August 17, 2007, as SCHIP reauthorization was proceeding, the Centers for Medicare and Medicaid Services (CMS) issued a directive that impeded states' ability to expand coverage.³ The year ended with these problems unresolved, meaning states were without the infusion of funds they were anticipating, and the new tools to bolster outreach and enrollment did not materialize. A temporary extension provided funds for SCHIP through March 31, 2009.

When states adopted their budgets for the state fiscal year starting July 1, 2008, they were able to include funding for children's coverage expansions. Later, the economy began to show signs of trouble, but it was not until September 2008 that the breadth and depth of the unfolding fiscal crisis became clear as financial markets collapsed and unemployment started to rise sharply. States are now facing an extremely threatening fiscal situation, with state budget shortfalls expected to total \$350 billion for the remainder of FY 2009 and through 2010 and 2011.⁴

So far, most states have managed to maintain existing eligibility levels and procedural improvements. For example, despite serious financial pressures, states that enacted earlier children's coverage expansions, such as Iowa and New York, have reiterated their intentions to go forward. But, there are warning signs that this will become more and more difficult.

As in past economic downturns, states will continue to struggle with the mounting pressure to cut health coverage programs just at the time that an increasing number of people need the vital services they provide. Many states have already implemented or announced major cuts to health programs, mainly in the area of provider rates and benefits, which have a significant impact on access and the quality of care. States that have not yet expanded are likely to be deterred from increasing coverage because of the dire economic environment.

Medicaid enrollment and spending growth peaked in 2002 at the same time state revenues dropped sharply. In response, states adopted an array of cost containment strategies to control spending growth. Then federal fiscal relief was made available to states through the Jobs and Growth Tax Relief Reconciliation Act of 2003, increasing the federal share of Medicaid costs, and lifting some of the burden states were carrying. The legislation restricted states from lowering Medicaid eligibility between September 2003 and June 2004, as a condition of receiving relief funds. Thus, no state retracted Medicaid eligibility during this time period. SCHIP eligibility also remained relatively constant, with only a few states cutting back.

However, because they were still grappling with budget shortfalls, nearly half the states put in place enrollment procedures that made it more difficult for children and parents to secure and retain health coverage between April 2003 and July 2004.⁵ Some states reported dramatic declines in children's enrollment as a result of these budget-driven changes, and children who were most likely *eligible* for existing programs became uninsured. For example, in Texas, SCHIP enrollment dropped by more than 149,000 children (a 29 percent decline), in large measure, due to reducing continuous coverage from 12 months to six months. Washington state also repealed the guarantee of 12 months of coverage and required parents to renew their child's eligibility every six months as well as report changes in the interim. This, along with other procedural changes, led to a dramatic caseload reduction of more than 40,000 children. In Wisconsin's BadgerCare program, establishing more rigorous documentation requirements resulted in an enrollment decline of 13,000 children and parents in just the first four months of implementation. Several states also froze SCHIP enrollment. In addition to turning away children who qualified for coverage under SCHIP, this strategy adversely affected Medicaid-eligible children not subject to the freeze. Eligible applicants' path to coverage was limited when states stopped taking joint Medicaid/SCHIP applications or because families mistakenly interpreted news reports to mean that all coverage programs were closed to new applicants.⁶

Coming out of the last economic downturn, states worked to eliminate SCHIP enrollment freezes and reverse some of the enrollment barriers they had imposed. This enabled caseloads to recover somewhat. An important lesson learned, however, is that the problematic effects of changing administrative procedures can endure if such changes send conflicting messages to prospective and current program participants.

As this report goes to press, two major developments are within reach. Congress has taken up SCHIP reauthorization once again and is working towards passing a bill that will likely be one of the first pieces of legislation to be presented to the nation's new president, Barack Obama. Next will come a significant economic recovery package that will contain substantial state fiscal relief in the form of enhanced federal matching funds for Medicaid that will reduce the share of the costs states will have to contribute for the program. Passage of both these bills would provide needed relief, as well as the support to move forward on enrolling more eligible, uninsured children. These measures would also help reinforce the federal/state partnership that is fundamental to the viability of health coverage programs. Strengthening Medicaid and SCHIP by making sure they are in a position to provide coverage to more

low-income uninsured individuals, is also an essential precursor to the larger task of enacting broad health care reform.

II. About this Survey

This report presents the findings of a survey of eligibility rules, enrollment and renewal procedures, and cost-sharing practices in Medicaid and SCHIP for children and families that were implemented or authorized between January 2008 and January 2009 in the 50 states and the District of Columbia. These policies have a large influence on how effectively Medicaid and SCHIP can deliver health coverage to the eligible children, pregnant women and parents who rely on the vital services these programs provide. They are the driving forces behind efforts to reduce the number of low-income people who lack adequate insurance but cannot afford to pay for it on their own.

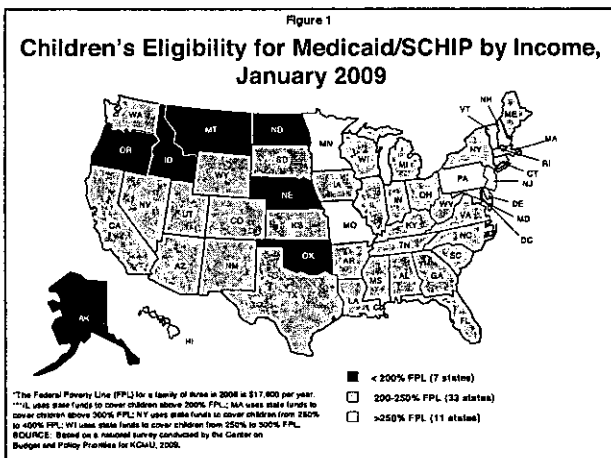

This study, the eighth annual survey conducted by the Center on Budget and Policy Priorities for the Kaiser Commission on Medicaid and the Uninsured, was carried out in the summer and early fall of 2008, through extensive telephone interviews with state Medicaid and SCHIP program administrators. Detailed follow-up interviews proceeded through the end of the year. The findings reflect policies and procedures in effect in the states in January 2009, as well as coverage expansions that were authorized, but were not implemented, by states during the survey period.

III. Key Survey Findings – Current Status of Coverage for Children and Parents

States continue to make progress on improving access to health coverage for low-income families. As of January 2009, income eligibility levels are as follows:

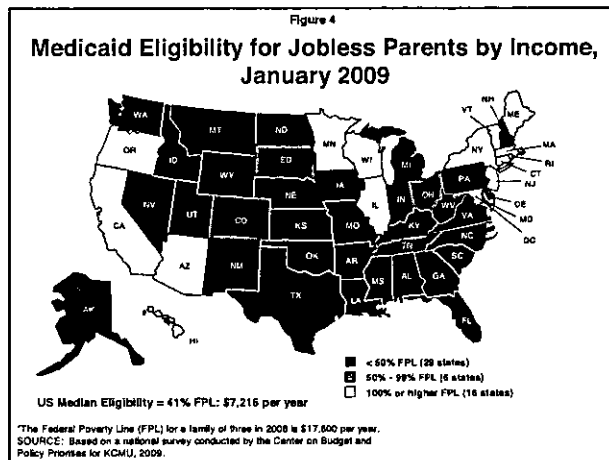

States provide health coverage for children and pregnant women under Medicaid or SCHIP as follows (Figures 1 & 2):

- 44 states, including DC, cover children in families with income at 200% FPL or higher. (\$35,200 for a family of three in 2008).
- 33 states cover children in families with income between 200% and 250% FPL. (200%: \$35,200 for a family of three in 2008; 250% FPL: \$44,000 for a family of three in 2008).
- 19 states, including D.C., cover children in families with income at 250% FPL or higher. 10 of these states cover children in families with income at 300% FPL or higher. (\$52,800 per year for a family of three in 2008).
- 40 states, including DC, cover pregnant women with income 185% FPL or higher. (\$32,560 for a family of three in 2008).

States provide health coverage for parents under Medicaid as follows (Figures 3 & 4):

- In 12 states, family income must be less than half the federal poverty line for a working parent to qualify for Medicaid (\$8,700 per year for a family of three in 2008).
- In 29 states, family income must be less than half the federal poverty line for a jobless parent to qualify for Medicaid (\$8,700 per year for a family of three in 2008).
- 18 states, including the District of Columbia, cover parents in families with income at 100 percent of the federal poverty line or higher (\$17,600 per year for a family of three in 2008).
- In 28 states, a parent in a family of three, working full-time at the minimum wage, earning on average, \$1,092 per month, cannot qualify for Medicaid.

It continues to be more difficult for a low-income parent to qualify for health coverage than for a child (Figure 5). The median income at which children qualify for Medicaid or SCHIP is 200 percent of the federal poverty line, but is much lower — 68 percent of the federal poverty line — for working parents. For jobless parents, the median income eligibility for Medicaid is just 41 percent of the federal poverty line, \$601 per month for a family of three in 2008. In an economic downturn, this low income limit can take a serious toll on families. For many individuals who have lost their jobs and also their health insurance, COBRA coverage is likely to be prohibitively expensive or may not be available, and parents may turn to public programs for coverage. However, they may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. (Since unemployment compensation is unearned income, “earnings disregards” that are designed to help working families qualify do not apply.) Jobless parents may eventually become eligible, but in the interim they are subject to health risks and financial exposure that can have deleterious consequences for themselves and their families.

IV. Key Survey Findings – State Actions During 2008

Overall, states continued to make progress on improving access to health coverage, but a few setbacks warn about impending problems (Figure 6).

- More than one-third of the states (19 states) took steps to increase access to health coverage for low-income children, pregnant women and parents. Fifteen(15) states authorized or implemented coverage expansions (CO, LA, IN, KS, LA, MD, MT, ND, NJ, NY, OK, OR, SC, TN, WI); 11 states reduced procedural barriers (AZ, CO, LA, KY, LA, MD, MT, NV, OR, SC, UT) and three states reduced financial barriers to Medicaid and SCHIP (TN, WA, WI).

- Ten states (10 states) enacted at least one measure to restrict coverage. The most common restriction was to increase financial barriers such as new or higher premiums in SCHIP programs. Eight states (GA, LA, MN, MO, NJ, NV, PA, RI) went in this direction. Rhode Island and South Carolina restricted eligibility, the former cutting income eligibility for parents, and the latter establishing a three-month waiting period in its new separate SCHIP program, during which children must remain uninsured before they can enroll. California, increased the frequency with which parents and children are required to renew coverage.

The actions taken by Rhode Island and California, among the first states to feel the effects of the economic downturn, raise concerns about where other states could be headed if their fiscal pressures go unaddressed. The premium increases in Rhode Island are steep, coming at a time when families are likely to be financially strapped. Premiums of \$45 per child per month are now required for children in families with incomes as low as 133 percent of the federal poverty line (\$23,467 for a family of three in 2008), as compared to the previous starting point, 150 percent of the federal poverty line. Premiums for other children range from \$86 per month to \$114 per month, representing an increase of up to \$29 per month for some.

California's retraction of 12-month continuous eligibility for children withdraws the guarantee of full-year coverage, which is critical for children with ongoing medical needs. In addition, the state will

now require children and parents on Medicaid to comply with a semi-annual reporting procedure that is likely to cause otherwise avoidable gaps in coverage for eligible families. It will also create unnecessary and costly administrative burdens, since eligible families dropped from the program are likely to reapply within a short period of time. These changes could result in more than 260,000 children losing coverage by 2011. A large number of parents would be affected as well.⁷

The economic crisis is widespread, and serious health care and other cuts are looming, but states are demonstrating a steadfast commitment to covering children (Figure 7). States continued to enact eligibility expansions for children, and state officials in several of those states, such as *Iowa* and *New York*, plan to go forward even though they are facing significant budget shortfalls. Federal constraints that have dampened states' ability to expand, such as the unresolved reauthorization of SCHIP and the August 17th directive, have caused several states to put expansions on hold or scale back temporarily. Others, such as *Wisconsin* and *New York*, are using state funds to pay for children whose coverage is precluded by the August 17th directive.

- **One-third of the states (17 states) increased access to coverage for children.** Ten (10) states implemented or authorized eligibility expansions for children. *Iowa* and *Montana* raised children's coverage (scheduled to begin later this year), to 300 percent of the federal poverty line and 250 percent of the federal poverty line, respectively; *Kansas* implemented a children's coverage expansion to 250 percent of the federal poverty line. If the August 17th directive remains in place, these states will be subject to the strict conditions it imposes. Eligibility increases were also implemented, but to more modest levels in *Colorado*, *North Dakota* and *South Carolina*. *New York* adopted the option to allow children leaving foster care upon reaching age 18 to keep their Medicaid coverage.

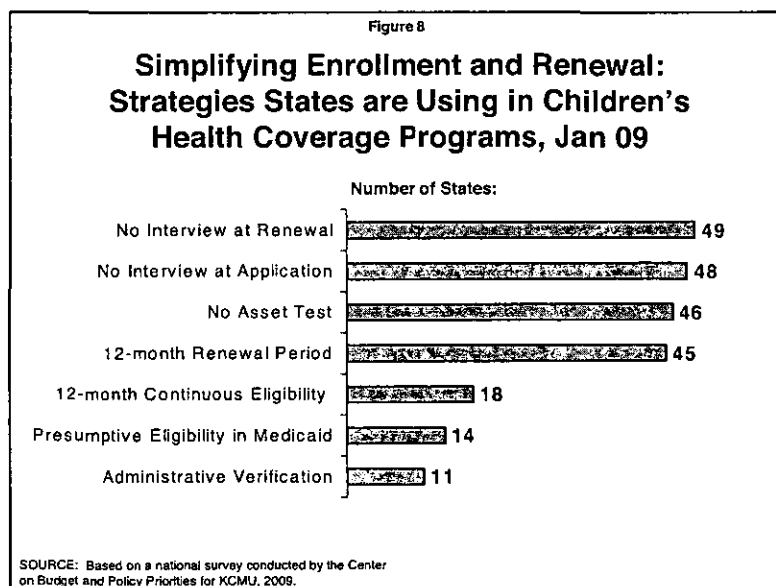

Of the ten states that expanded coverage for children, four were implementing expansions that were authorized last year, but which had been held back by the August 17th directive or by the uncertainty surrounding SCHIP reauthorization. *Louisiana* and *Indiana* increased eligibility to 250 percent of the federal poverty line, rather than 300 percent. *Wisconsin* and *New York* chose to move forward with their full expansions, funding coverage over 250 percent of the federal poverty line with state funds only. *Illinois* has been funding its expansion using state dollars. Planned expansions in five additional states (*NC*, *OH*, *OK*, *WA*, and *WV*) remain stalled.

Iowa Children Get A Coverage Boost

Buoyed by a groundswell of public support for covering children, Iowa Governor Chet Culver, along with state legislators, remain strong in their pledge to expand health insurance to more of the state's uninsured children. In the last legislative session, state legislators passed an expansion of hawk-i, the state's SCHIP program, to 300 percent of the federal poverty line, which will be implemented in July 2009, and cover an estimated 5,000 new children. Program improvements have already proceeded. The state now guarantees children a full 12 months of continuous coverage and is pursuing ways to ease premium payment policies. For example, families new to the program will not have to pay premiums for the first two months of enrollment. Outreach is expected to go forward as well, but may possibly be scaled back. Like many other states, Iowa is in a severe budget crunch, with an expected shortfall of more than \$600 million in the coming year. Major spending cuts are being planned, but it appears that the children's coverage expansion will go forward. Senate Majority Leader, Mike Gronstal (D) stated recently, "We committed to providing access to affordable coverage to every kid in the state of Iowa. I'm not interested in backing up on that commitment."

* "Health Promises Persist: Iowa lawmakers reconcile health care goals, budget" The Hawkeye, January 15, 2009.

- **Eleven (11) states took steps to reduce procedural barriers to coverage for children (Figure 8).** *Arizona, Kentucky, and Utah* no longer require families to participate in face-to-face interviews to obtain health coverage for their children, and *Colorado* adopted "administrative verification and renewal," meaning the state no longer requires families to provide paper documentation of their income and eligibility workers use existing databases to verify the information families provide on the application. *Maryland, Montana, Louisiana, South Carolina and Utah* have revised their applications to allow parents to apply using the same simplified forms that are used for children, a change that benefits both children and parents. *Iowa, North Dakota and Oregon* now guarantee 12 months of continuous eligibility, considered to be one of the most effective tools for keeping children covered for as long as they qualify. One serious setback, the changes to the renewal procedures in *California*, was discussed earlier.

States Explore the Use of Technology to Facilitate Enrollment

Emergence of Online Applications

About half the states reported that they are implementing, or are in the process of designing, on-line applications. Several of these states also report allowing the use of electronic signatures, so that a follow-up signature page does not have to be printed and mailed in. (Other states appear unsure about the permissibility of electronic signatures and point to the lack of clear federal guidance on this subject.) Some states at the forefront of using on-line applications also report that their applications currently interface with existing eligibility systems (or will in the future), so that information from the on-line application does not have to be re-entered by eligibility workers and an eligibility determination can move forward more rapidly.

Database Usage

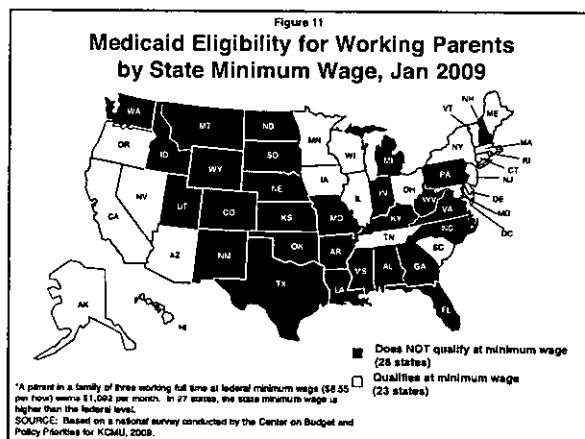

Eleven states (12 states at renewal) report using technology to streamline the enrollment and renewal process. States report conducting matches with existing databases to verify income and other information, as well as eliminating rules requiring families to submit pay stubs or other paper documentation. This procedure is referred to as "administrative verification and renewal." Many states also are conducting data matches with their Vital Records departments to help families comply with the Medicaid citizenship documentation requirement, however, the technological capacity to do this efficiently varies considerably. Finally, states are exploring the use of technology to target outreach, for example, by conducting data matches with existing databases to identify children and parents who are likely to qualify for health coverage but who are not enrolled. States report using matches with food stamp databases for this purpose, and have expressed interest in using state tax system databases.

- **Outreach budgets in a number of states were increased in 2008, however, some states are beginning to report that these funds are being curtailed.** Several states reported increases in outreach funding in 2008, sometimes associated with new expansions, but also for ongoing promotional activities and community-based application assistance. In recent follow-up interviews, some state officials indicated that their outreach budgets have now been cut; others expressed skepticism for conducting aggressive outreach in light of budget shortfalls. Still others said their outreach activities would go forward, with some indicating that activities would emphasize renewal assistance so that already enrolled children do not lose coverage.
- **A few states reduced financial barriers to children's coverage, eliminating or lowering premiums for some children, while other states increased premiums (Figure 9).** *Tennessee, Washington* and *Wisconsin* either reduced premiums or eliminated them for some children. *Georgia, Minnesota, Missouri, Nevada, New Jersey, Pennsylvania* and *Rhode Island* increased premiums for children, with two of these states showing significant increases. *Minnesota* premiums increased by up to \$14 per month for some children. Premium increases in *Rhode Island*, discussed earlier, represented the most severe increases for children this year. New premiums implemented in *Louisiana*, apply to the state's new expansion group (children with incomes between 200 percent and 250 percent of the federal poverty line).
- **Co-payments for health services were adopted in one state and increased in two states (Figure 10).** Currently, 24 states charge co-payments for children's health services. *Wisconsin* adopted new co-payments, and *West Virginia* and *Utah* increased co-payments for prescription drug coverage. Only one state, *Montana* decreased co-payment amounts.

Low-income parents applying for Medicaid coverage continue to face substantially restricted income eligibility and access as compared to their children (Figure 11 and 12).

- A few states took steps to boost coverage and simplify procedures for parents. Three states — *New Jersey, Maryland, and Wisconsin* — implemented parent coverage expansions. Still, in 28 states, parents working full time at minimum wage cannot qualify for Medicaid. One state, *Rhode Island*, cut parent coverage. *Maryland* also stopped counting assets in determining eligibility for parents, a step that fewer than half the states have taken. Given the restrictive income eligibility levels for parents in most states, the majority of parents applying are not likely to have substantial bank accounts, multiple vehicles of significant value, or other resources that would disqualify them. The burdensome and intrusive paperwork associated with proving that one does not exceed the asset limit often deters eligible parents from completing the application process. Other measures were implemented to reduce procedural barriers for parents, including eliminating interviews and reducing the frequency of renewal (*AZ, MD, UT*), but these practices are still more prevalent in children's coverage programs.

Maryland Expands Medicaid Eligibility for Low-Income Parents

Access to health coverage increased measurably for thousands of low-income Maryland parents this year when an income eligibility expansion and a package of procedural improvements were implemented on July 1, 2008. The state boosted parent eligibility from about 30 percent of the federal poverty line to 116 percent. The state also eliminated the asset test and no longer requires parents to have a face-to-face interview at the Medicaid office. This streamlined the process for parents and also aligned procedures for parents and children to a greater extent so that they can apply using the same simplified application form. Since its implementation, 29,682 adults have enrolled as a result of the expansion.

To achieve this early success, a logical first step was to identify children already in Medicaid whose family income is below 116 percent of the federal poverty line and enroll the parents when they renew their child's coverage. Traditional outreach efforts including TV, print and radio publicity, as well as activities with the Baltimore Ravens football team, also have done much to inform families about the new coverage opportunity. In addition, the Medicaid and revenue agencies coordinated on a new initiative that used the tax system to identify 150,000 people who were potentially eligible. They were sent a letter from the state Comptroller inviting them to call a toll-free number for an application. Between December 1 and December 12, 2008, nearly 1,800 hotline callers were sent applications. Others obtained applications on-line and through other avenues.

Enrollment continues to increase and the recession is apparently a driving force: there were more approvals of parents in the expansion group during the first two weeks in December than there have been since it was implemented in July and state officials say they are seeing people who previously had secure jobs and are seeking help, perhaps for the first time. The budget is tight in Maryland, but in two rounds of cuts, the expansion has not been targeted.

*Conversations with Maryland State Officials, January 2009.

- **Income eligibility for pregnant women remained stable with nearly half the states covering pregnant women at 185 percent of the federal poverty line.** Two states, *Tennessee* and *Wisconsin*, increased eligibility for pregnant women to 250 percent and 300 percent of the federal poverty line respectively. *Oklahoma* and *Oregon* both adopted the option to use SCHIP funds to cover unborn children of pregnant women.

V. Discussion

Recession Jeopardizes States' Ability to Maintain and Advance Coverage for Low-Income Children and Parents

States have made substantial progress in reducing barriers to health coverage for low-income children and families. They continued to do so during the first half of 2008 by further expanding eligibility and streamlining enrollment and renewal procedures. Now, as the economic crisis deepens, states will be under major pressure to contain costs. This may lead them to take steps that would not only reverse critical coverage gains, but would intensify the hardships so many families are already facing as a result of losing their jobs and their health insurance. In the last economic downturn, federal fiscal relief was successful in helping states address budget shortfalls, avoid deeper Medicaid cuts, and preserve eligibility, which was a condition of receiving enhanced federal funds. However, to deal with tight budgets, many states made procedural changes to their programs which blocked eligible children and parents from obtaining coverage at a time when they could least afford health care on their own.

Easing Eligibility and Simplifying Procedures Are Especially Important During an Economic Downturn

Individuals who have lost health coverage due to unemployment need a smooth path to Medicaid and SCHIP.⁸ Any period of time without insurance could cause ongoing medical conditions to escalate if it is not possible for families to find or pay for needed medication or other treatment on their own. Parents who are recently unemployed may find that the unemployment compensation payments they receive put them over the income limit for Medicaid. States can choose to disregard these payments or a portion of them in determining eligibility for jobless parents. States can eliminate their SCHIP waiting periods or at least ensure that a job-loss exemption is available. Minimizing documentation requirements and rescinding face-to-face interviews also are important since complicated, burdensome forms and procedures often discourage families from completing the process. Enrolling children for a full 12 months and simplifying renewal helps ensure beneficiaries remain covered for as long as they qualify. In addition to protecting children and families, taking such steps also saves administrative costs by reducing the workload on eligibility workers. Eligibility staff may have been cut at the same time application volume has increased.

Premium Payment Policies Matter

It also is important to ensure that unreasonable out-of-pocket costs do not keep eligible children from obtaining coverage and needed care. When a family has lost income or a job, it will be more difficult to keep up with premium payments on top of regular living expenses. Numerous studies show that premiums for low-income individuals can depress enrollment in health coverage programs.⁹ Similarly, burdensome co-payments can be an obstacle to getting needed care or medication. Programs should also avoid imposing strict payment timeframes after which children are disenrolled from SCHIP, as well as lock-out periods that bar children from returning to SCHIP if the lack of a premium payment forces them to lose coverage.

Outreach Is Critical During Economic Downturns

In tight budget times, it may appear sensible to cut outreach funds as states seek ways to contain the costs associated with expanding caseloads. Conducting outreach may also seem counterintuitive when hiring freezes and lay-offs mean there are fewer eligibility workers to process a larger volume of applications. However, families that previously had stable jobs with health insurance are likely to have little or no experience navigating the public benefits system. They may not know where to turn for help when they become jobless, nor are they likely to know much about Medicaid and SCHIP or realize that they may qualify. Community-based organizations and institutions can play a vital role in alerting families to the availability of free or low-cost coverage and in assisting families with application procedures.

States are attempting to balance these competing pressures. For example, although New Mexico has had to make significant cuts to its Medicaid budget, the state will continue to reach out and enroll more uninsured children, a goal Governor Richardson has prioritized. A state Medicaid official explained that, while available funding will continue to be used for outreach, "the state does not have funds to do anything very aggressive or costly. It's difficult to justify spending on outreach when we're cutting elsewhere, however we will conduct some data matches to identify eligible but unenrolled children."¹⁰ Given the demands that outreach generates and the limitations created by personnel cuts, adopting simplified procedures are more important than ever. Streamlining renewal, in particular, protects the investment in outreach since it guards against eligible children and parents losing coverage unnecessarily.

Federal Legislation May Provide Needed Help for States

Two major pieces of legislation are being considered in Congress as this report is being written. Both are critical to addressing the challenges states are facing as they report mounting deficits and also attempt to assist the growing demand for health coverage among families that are suffering the effects of the weakening economy. The first is reauthorization and extension of SCHIP legislation, which is currently operating with temporary funding through March 2009. This legislation would provide the additional funds to maintain coverage for children currently enrolled and cover additional uninsured children. It would also provide bonus payments designed to encourage states to enroll more eligible children under Medicaid.

The second piece of legislation is the economic recovery package. In this recession, with substantial state deficits, one form of assistance the federal government could provide is an increase in the federal share of financial assistance for the Medicaid program (FMAP). The amount of funding for the enhanced FMAP, the duration of the relief, the distribution of the funds across states, and the conditions or maintenance of effort requirements related to eligibility are critical issues in the design of a recovery package. In 2003, one of the conditions for states receiving an increased FMAP was that they were prohibited from reducing eligibility levels in order to qualify for this financial assistance. Congress could also consider requiring states to maintain enrollment procedures to qualify for federal assistance and additional provisions to extend temporary Medicaid coverage to individuals affected by the economic downturn.

The SCHIP reauthorization and economic recovery plan could provide an essential boost that would enable states to sustain the coverage gains they have achieved and give families hard-hit by the recession the confidence that assistance with health coverage will be available.

Juneau AK, 99801-1182

Representative Bob Herron, Co-chairman
House Health & Social Services Committee
State Capitol, Room 415
Juneau, AK 99801-1182

Dear Representatives ^{Wes} ~~Keller~~ and ^{Bob} ~~Herron~~:

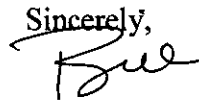

I am writing on behalf of the Governor to respectfully request a hearing for Senate Bill 13 in the House Health & Social Services Committee.

Senate Bill 13 increases the income level for covering children and pregnant women under Denali KidCare to 200 percent of the federal poverty guidelines, up from the current level of 175 percent.

Senate Bill 13 would allow approximately 1,277 more uninsured children and 225 pregnant women to access health insurance. Early intervention and preventative care under SB 13 will significantly improve the health of Alaska children's by addressing problems before they result in more costly conditions that must be treated later in life. Early care can also result in savings to the state and public and private sector hospital emergency rooms by reducing the need to treat indigent and uninsured patients for non-emergencies.

Although we believe there is merit in several other proposals introduced this year to implement cost sharing provisions along with an increase in eligibility, we believe that providing essential care for those up to 200 percent of poverty level is more important than pursuing those options this year.

Thank you for consideration of this request.

Sincerely,

William H. Hogan
Commissioner

Crisis Center • Community Services Center • Transitional Living

Governor Sarah Palin
State Capitol
Third Floor
Juneau, AK 99801

April 9, 2009

Dear Governor Palin,

Senator Bettye Davis and Representative Les Gara introduced legislation providing transitional assistance and care for foster care youth leaving the state's care (SB 105 and HB 126). The Alaska State Legislature is currently reviewing these proposed bills.

Covenant House Alaska (CHA) provides shelter, food, healthcare and transitional living assistance to Alaska's homeless youth. CHA strongly supports SB 105 and HB 126.

The proposed legislation provides access to educational, housing and life skills support that is vital for young people to successfully transition to adulthood. Nearly 50% of CHA youth have been involved with the foster care system at some point in their lives. They arrive on our door step with a plastic bag full of a few belongings. Many of these youth survive for a few months after being released from care, but find at the young age of 18 they don't have the resources and life skills required to live completely independently on their own. After living traumatized lives, they are faced with a new trauma and a new set of dangers that homelessness presents.

This legislation is fundamentally about providing to our foster care youth the resources we would naturally provide to our own children. Youth still require assistance with educational, occupational and housing needs past the age of 18. This bill ensures that while we cannot completely erase the trauma endured by foster care children, we can lessen it. We can actively take steps to help them in a responsible, reasonable fashion.

Thank you for your consideration of this letter and the proposed legislation. Please contact me with any questions you may have.

Sincerely,

Deirdre A. Cronin

To: Rep. Wes Keller; Rep. Bob Herron
Subject: in support of SB 13 and Denali Kidcare

March 10, 2010

Dear Representatives Keller and Herron, and members of the House HSS committee,

I am writing in support of SB 13, which has been worked over for 2 years now. SB 13 represents a classic opportunity to demonstrate the wisdom of "a stitch in time, saves nine." Helping children, single mothers and low-income workers get the health care they need BEFORE they land in the emergency department will SAVE money, not to speak of time lost at work, heart-ache, pain and suffering.

This bill is not designed to waste money on those who could actually afford premium health insurance plans. We have all heard about Medicare loopholes in which billionaires get discounted drugs. This bill is about helping people who really need the help. The federal poverty limit for a family of 4 this year is less than \$1000/month per person. This level of income, which represents many hours of hard work in a lower-paying job, may pay rent, cold weather clothing and basic food. It will not allow for opportunities for self-advancement, nor savings, nor debt reduction, in particular if one or more of the family members has health issues. Even at 200% of poverty level, many families will struggle to pay health care insurance premiums, deductibles and co-pays. As you know, the single largest line item for personal debt in the US (Alaska included) is medical bills. Some families lose their homes over choosing to provide needed, yet expensive, care for their cherished children or siblings or parents.

Alaska is the wealthiest state in the nation. Please let us help raise up people in this great country from such a level of struggle. It is shameful to refuse a small part of our \$40 billion bank account to care for our own people. Health, ultimately, is absolutely the most precious resource for every individual. Without health, any amount of money or fame is trivial. Please, invest in the health of all Alaskan people, and let Alaska lead the way in taking care of its own.

Sincerely,

Dr. Emily A. Kane
Juneau AK

SB 13 AMENDMENTS:

It seems to me that its unfair for the chronically disabled to be penalized when they are trying so hard to become productive members of the community. It also seems unfair to penalize working poor families by denying them extra assistance until they are able to solve their financial situation. What I would like to talk to you about is my solutions to these situations:

- Please consider raising the federal poverty rate to 200% across all programs (i.e. Childcare Assistance, Adult Public Assistance, Denali Kid Care). Through this change, not only will it allow more families to qualify for services, but also it might give them the boost they need to stabilize their current situation.
- Create an exemption process for working families that fall slightly over income limits. This would give families the ability to receive assistance and continue working. From personal experience, I know that if my family had had the benefit of just a little extra assistance we would be able to take care of our family and be productive in work, which ultimately helps the State of Alaska.
- Establish a transportation assistance fund for elders and people experiencing disabilities. When I lived in New York, the state ran a program that provided free transportation for elders and people experiencing disabilities through establishing a general transportation assistance fund to the state budget. From my research, I noticed that the Alaska Commission on Aging advocated to get this discussed during the last legislative session. Unfortunately, the proposal did not get passed. As a person who experiences issues with affording public transportation, I strongly urge you to please give their proposal more consideration. If I was able to fully access transportation, I could focus on receiving treatment to help me better handle my symptoms. As I see it, this small change will assist me on my way to achieving my goal of gainful employment and safety/security for my family.

I thank you in advance for your time and consideration in reading my letter. Please know that I welcome the opportunity to speak with you or one of your aides personally about my situation and ways I'm willing to help to create solutions to benefit all Alaskans. My contact information is listed above. Please feel free to contact me at your earliest convenience.

Sincerely,

Michael Markovich

SB 13 AMendments :

Ways to decrease spending so that the Federal Poverty Level could be raised to 200%:

- Eliminate 6 - month reviews for people already on Adult Public Assistance. The paperwork so is cumbersome for workers that cases have to be shipped to other offices to be processed. Personally, I live in Anchorage, but my paperwork is processed in the Kenai office. From my research, Alaska is one of a few states that still do 6-month reviews. The majority of other states conduct reviews yearly. Imagine the time and money saved if paperwork was reviewed yearly.
- Limit benefits for people with major criminal offences or history of chronic drug or alcohol use. When applying for benefits, ask people for proof of any criminal or substance abuse history. If they comply, ask them to sign a release so that history can be verified and case managers working with the person can provide feedback on progress. If the person is in a rehabilitation program, they should be allowed on the program as long as they are actively working on staying out of jail or getting clean and sober. People who do not comply with the program or sanctions taken if they have a "bump in the road to recovery" should be removed from the program. The way I see it, if people are actively engaged in trying to get more self-sufficient, funding spent of fighting crime and homelessness would decrease, which will reduce the crime rate, cut spending on policing the State and save the State of Alaska money overall.
- Create a buy in program for Medicaid and Child Care Assistance programs. If a person doesn't quite fit the requirements for assistance due to income (for example if he or she is financially over by a few hundred dollars) allow them the option to partial pay for Medicaid or Child Care assistance based on what they can afford. This would assist people to get medical assistance as well as childcare so that they are healthy and able to find gainful employment, which helps them create a plan for self-sufficiency. A timetable would need to be set in place to ensure that participants work towards coming off the program. People who do not show compliance in working themselves off the program would be removed from the program after a year.

Sincerely,

Michael Markovitch

Alaska State Legislature

Please enter into the record my testimony to the House H&SS
committee name

committee on SB 13 - Increase Denali KidCare dated 3/9/2010
bill/subject

Catholic Social Services provides help & creates hope for nearly 19,000 individuals a year through a variety of social services programs that focus on self sufficiency. Many people seeking assistance at Catholic Social Services are the working poor - people that are just getting by, struggling each day to pay their bills and feed their families.

SB 13 is important legislation because it will increase the income eligibility guidelines for Denali KidCare from 175% to 200% of Alaska's federal poverty level (FPL). As you know, this change would restore eligibility to 1,300 children and 225 pregnant women.

Increasing eligibility to 200% of the federal poverty level is not only a good thing to do for Alaska's low-income families but reflects sound fiscal policy as research shows that preventive care, such as that received through Denali KidCare, has a positive return on investment. For example, children and pregnant women without access to health care are four times more likely to use expensive emergency room care for medical treatment. The federal government covers almost 65% of the entire cost of Denali KidCare. Therefore, compared to the long term expenses the State of Alaska will most likely incur if these vulnerable children and pregnant women continue to be denied access to health care, the financial expenditure associated with a return to 200% of FPL is nominal.

Thank you for giving Catholic Social Services an opportunity to speak out on this important issue! We strongly believe that Denali KidCare helps parents raise healthy kids and we are all strengthened by a healthy community.

Representative Keller,

I am writing in support of the Denali Kid Care Funding Increase that is currently being debated in the Alaska Legislature. As a pediatrician in the Fairbanks community for over 25 years, I have seen first-hand the impact of healthcare costs on hard-working families in our state.

Although my primary role as a pediatrician is to care for the health and well-being of children, it is also imminently important that I respect the concerns of parents and consider the welfare of entire families. Many of the exams, procedures and treatments that I provide put a heavy financial burden on families, producing a mountain of medical bills to be paid out of pocket. I am repeatedly faced with this ethical dilemma and must work to reconcile the necessity of treatment with the economic consequences of my decisions. Denali Kid Care alleviates much of the financial burden on families and, in turn, enables me to effectively administer a child's medical care without the added concern of a family's hardship.

Currently, I am caring for an infant who has been producing bloody stools every few days. His parents are understandably concerned, and I have been performing tests to rule out common problems that may cause this reaction. At this point it would be appropriate for the infant to be seen by a Pediatric Gastroenterologist; however, due to the cost of seeing a specialist, the family is unable to move forward.

By increasing the eligibility percentage from 175% to 200%, Senate Bill 13 would give over 1,200 children health insurance coverage. This new eligibility standard would significantly relieve families who must compromise their children's standard of care due to financial constraints. At Tanana Valley Clinic alone, there are at minimum 40 families, in both the pediatric and OB/GYN departments, who would benefit from this increase. For many hard-working men and women who are currently just beyond the income cap to qualify for Denali Kid Care, this new bill would mean the difference between making ER visits only in dire situations and scheduling preventative visits that ultimately create healthier children. Children who receive preventative care are four times less likely to visit the emergency room; this in turn reduces the long-term cost of healthcare to the state.

When I set out to practice medicine, I did not imagine that on a daily basis my conscience would be saddled with financial concerns when caring for a sick child. However, it is the current reality. Denali Kid Care alleviates many of these concerns not only for me as a pediatrician, but more importantly for families who qualify for this service. As the economy continues to struggle and employees are laid off or faced with reduced hours and benefits, it is important that Alaska responds. This is an opportunity to extend care to over 1,200 families who would be otherwise unable to afford the healthcare that their children deserve.

Sincerely,

Timothy Foote, MD

April 15, 2010

To: Members of the Alaska House of Representatives

RE: SB 13 (Davis)—Support

On behalf of the members of AARP in Alaska, we encourage you to support SB 13, authored by Senator Bettye Davis, and co-sponsored by Senators Paskvan, Ellis, Wielechowski, and French as well as Representatives Gruenberg, Tuck, Kawasaki, Crawford, Herron, Munoz, Holmes and Kerttula.

AARP is the world's largest organization of grandparents. We are concerned about health insurance coverage for everyone's grandchildren.

SB 13 will return the Denali KidCare program to the former eligibility levels at 200% of the federal poverty level. We think this is an excellent plan and should provide comprehensive and preventive health coverage for many more young Alaskans and pregnant women.

In addition, we have many retired grandparents who are raising their grandchildren. Currently there are over 5,400 grandparents responsible for raising over 8,200 young Alaskan grandchildren. Very often these grandparents are retired and dependent on Medicare for their health coverage. Denali KidCare, in many cases, is the only health insurance they can secure for their grandchildren. If these grandparents are not able to secure insurance coverage for their grandchildren, some of the children will have to leave this caring family environment and become wards of the state. We hope you realize how important Denali KidCare coverage is to these extended families that are now in one household. These grandparents are trying to provide the best care for their grandchildren. They need Denali KidCare.

Many AARP members have coverage through Medicare or their employer and they understand how important health insurance is to them; we support the efforts of this bill to provide coverage to other Alaskans who need it.

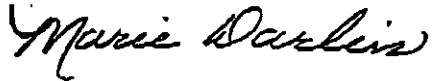

A healthy future for our children should be something everyone can agree on.

AARP requests an "AYE" vote on SB 13.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Letter in Support of Increasing Denali KidCare Income Eligibility Levels

Name: Katrina Letner

Address:

12254 Keystone Place

Eagle River, AK, 99577

Phone Number: 720-7449

During the 2009 State Legislature, Senate Bill 13 and 87 have been introduced to increase the eligibility income level for Denali KidCare. These very important bills would increase Denali KidCare from 175% of Alaska's federal poverty level to 200%. These bills would allow thousands of additional Alaskan children and pregnant women to be eligible for medical assistance. Along with Governor Palin, I support an increase in Denali KidCare and encourage the Alaska State Senate to do the same. Here are my reasons why:

Providing health and dental insurance for more children will prevent major health issues and save money in the long run. Prevention is the key. Uninsured children are 25% more likely to miss school than insured children. Continued illness affects school performance and work force participation.

Thank you for taking my thoughts into consideration. If you have any questions, please call me at the above number. Please do all that you can to support these important pieces of legislation.

Alaskan Families Can't Wait - Support Denali KidCare Today!

Please call Your Alaska State Senator today!

Take Action on this Issue
Send this message to:

- Senator Con Bunde
Senator Fred Dyson
Senator Thomas Wagoner
Your State Senator (if you live in Alaska)

Tell your Senator to Vote YES on Denali KidCare, Senate Bill 13, this Monday, April 6!

Senate Bill 13 would increase the eligibility rate for Alaska's Denali KidCare program to 200% of the Federal Poverty level and would immediately help support children and pregnant women in these hard economic times.

Health care for children and pregnant women shouldn't be hostage to other bills; there is no time for political games. Senate Bill 13 needs to move to the Senate Floor for a vote - and we need your help to get it there! Alaskan families can't wait.

Talking Points

Alaskan Families Can't Wait!

Talking Points:

- 1. Even in these hard economic times, a Denali KidCare income eligibility increase is good policy for the health and economics of our state -

An increase in Denali KidCare eligibility to 200% of the federal poverty level reflects sound fiscal policy as research shows that preventive care, such as that received through Denali KidCare, has a positive return on investment. For example, children and pregnant women without access to health care are four times more likely to use expensive emergency room care for medical treatment. Since the federal government covers almost 65% of the entire cost of Denali KidCare the additional financial exposure associated with a return to 200% of federal poverty level is nominal compared to the long term expenses the State of Alaska will most likely incur if these vulnerable children and pregnant women continue to be denied access to health care.

- 2. The people of Alaska and Governor Palin support this important increase -

Governor Palin has publicly committed her support of this change which would restore eligibility to 1,300 children and 225 pregnant women.

- 3. Increasing Denali KidCare to 200% of Alaska's federal poverty level simply brings it back up to its original level approved by the legislature in 1999 -

Denali KidCare was authorized by the Alaska Legislature in 1999. The program was modeled after

similar programs around the country with an eligibility level set at 200% of federal poverty level. In 2004, the legislature changed the way Alaska calculated maximum eligibility for Denali KidCare; instead of basing eligibility on a percentage of federal poverty level, maximum eligibility was changed to a fixed income limit that essentially froze eligibility rates at the 2003 level. Over time, this approach has cut children of working families and pregnant women out of the program. By 2007, the maximum Denali KidCare eligibility level had essentially fallen to 153% of the federal poverty level.

Subject: -
Please Vote YES on SB 13 - Alaskan Fa

Dear [Decision Maker],

(Edit Letter Below)

Alaskan families can't wait. Please vote YES on SB 13!

As an Alaskan resident and voter, I think it is critical to increase the income eligibility guidelines for Denali KidCare from 175% to 200% of Alaska's federal poverty level.

Please do not play politics with the health of Alaska's children! Vote YES on Senate Bill 13.

In these hard economic times, a Denali KidCare income eligibility increase is good policy for the health and economics of our state. Children and pregnant women without access to health care are four times more likely to use expensive emergency room care for medical treatment.

Sincerely,
[Your name]

February 24, 2009

The Honorable Reggie Joule, Chair
House Finance Sub-Committee
State Capitol, Room 502
Juneau, AK 99801-1182

Dear Representative Joule:

In response to your questions on February 23, 2009 from the House Finance Sub-committee closeout hearing, please see our response below:

➤ *What does the childhood obesity initiative buy? Is it possible to do something for less?*

See Attachment A for an overview of the childhood obesity initiative and five major program components:

- community coalitions, \$42,600
- obesity prevention media campaign, \$190,000
- development and training, \$235,500
- data gathering and evaluation pilot program, \$69,000
- program management and staff, \$386,000

➤ *Describe the program impact of reducing the subsidized adoption and guardian assistance increment by 50%?*

The OCS incremental request is to increase existing adoption subsidy levels using the foster care base rates that went into effect July 1, 2008 as the cap for negotiated rates. The request included retroactive adjustments back to FY 2006 which captures most of the adoptions in the pipeline. While this is the approach that provides the majority of adoptive parents equitable subsidies, statute does not require retroactive adjustments. The statute does, however, require departmental review of the appropriateness of subsidy amounts upon request of the person caring for the child.

If a 50% general fund reduction is required, retroactive adjustments would begin January 1, 2007 rather than July 1, 2005. All subsidies negotiated from January 1, 2007 through June 30, 2008 would be retroactively adjusted. This results in a 703.6 GFM reduction to the current request.

- ***Sexual Offender increment added by the Sub-committee – What information does the department have to show that the McLaughlin Youth facility program actually works?***

Evidence that the McLaughlin Youth Center (MYC) Sex Offender Treatment program is effective was recently provided in a study of the program conducted by Tonie Quaintance, a PhD candidate in the Clinical-Community Psychology Program at the University of Alaska-Anchorage. In her 2008 report (see Attachment b) Ms. Quaintance found that the overall recidivism rate for 107 juvenile sex offenders released over the past 9 years was 17.8%--significantly lower than the state average of 29% recidivism for all juvenile offenders released from juvenile institutions statewide in FY05. Most significantly, 0 of the 107 juveniles had committed another sex offense. Recidivism was defined as offenses that resulted in a new juvenile adjudication or adult conviction, or a probation violation resulting in a new institutional order.

While there may be elements of the MYC program that could be used to inform and improve sex offender management around the state, it would be difficult to replicate the MYC Sex Offender Treatment program in rural areas. A more effective approach would be to deploy the "Village-based Sex Offender Treatment Program" that served the small, remote communities around Nome between 1997-2005 and was recognized by the National Partnership for Juvenile Services as a "Promising Practice" (see Attachment C). In this culturally sensitive and community-based approach to juvenile sex offender management, a team of 8-20 people in a community agree to support a juvenile while a clinician would provide on-site, intensive sex offender management every 3 weeks. The juvenile is expected to complete a curriculum in sex offender treatment while also learning social skills, respect, and empathy from local team members. The youth's juvenile probation officer facilitates meetings, reviews progress, and works with the team to determine consequences for any violations the youth commits while on probation supervision.

This program demonstrated preliminary success in the Norton Sound region but ended when the local clinician position was not funded due to budget constraints. The first step in returning this program to rural areas would be to enlist the services of a mental health clinician skilled in juvenile sex offender management and consistently available to rural areas. Such individuals could be employed by the Division of Juvenile Justice, local or regional health providers, or could work on a contractual basis as needed.

- ***Please clarify DJJ's front line staffing needs from last year to this year. Why are they being presented differently than in the past, what has changed? What is the impact of no new staffing increments in FY2010?***

The division's front-line staffing request has shifted as planning has moved from a 4-year period to a 10-year period. In FY09 DJJ was presenting their 2nd year staffing needs within a 4-year plan, as requested by Representative Hawker. In FY2010, while DJJ was preparing its 3rd-year requests in this 4-year plan, the department was directed to develop a 10-year plan. This required the division to adjust its 4-year plan to fit a much longer framework, which may explain why the request is being presented differently from the past. Several DJJ facilities are still staffed at levels below what is recommended both nationally and by the state's own calculation to ensure safety and security for both workers and residents. The staffing shortfall has been temporarily covered by using overtime and non-perms. Funding for these expenses has only been made possibly due

to the vacancy factor built into the budget, and delaying recruitment by a minimum of 30 days to cover those expenses.

When overtime and non-perms are used to cover shifts on a regular basis an unsafe situation is created by having either overworked or tired staff monitor the youth activities. Inexperienced individuals there are basically tasked with maintaining order, similar to a substitute teacher; little work in rehabilitation and restoration can be accomplished by these temporary, fill-in workers. Having an adequate number of permanent staff ensure that we are able to provide a safe and consistent environment that has a well developed structure and plan for these youth that ensures that they learn to behave safely around others, learn the discipline and self-control needed to complete school work and resist negative peer influences, and ultimately take responsibility for themselves so that they are able to succeed once they are released back to the community.

- *Please provide information on the number of abortions and amount paid by state and those paid by Medicaid for the second half of FY08 and first half of FY09.*

The state paid \$418.2 general funds for abortions or abortion-related Medicaid services incurred in the last half of FY2008 and the first half of FY2009 for 783 individuals based on claims paid in calendar year 2008. This isn't necessarily the number of abortions performed, but rather the number of individuals receiving abortions or abortion-related services. There were no abortions paid by federal Medicaid during that period.

- *A significant portion of DPA's General Relief Assistance (GRA) funds go to funeral and burial expenses of indignant deceased persons in Alaska. Please provide detailed information about these costs. For instance, what exactly does the state pay for in this regard?*

Expense	Annual Total	Monthly Average	Percent of Total	Average Pmt
Rent	\$115.1	\$9.6	8.0%	\$160.90
Burial	\$1,266.4	\$105.5	88.1%	\$2,125.22
Utilities	\$44.2	\$3.7	3.1%	\$288.75
Misc.	\$11.0	\$.9	0.8%	\$315.64

The GRA program pays for limited assistance for the burial of indigent persons. A maximum of \$1,250 can be paid for basic funeral and burial services which include:

- preparation and embalming,
- an inexpensive casket,
- a chapel service at the funeral providers place of business,
- use of a hearse, and
- use of funeral provider's facilities and equipment.

Payment of other burial related services (above the \$1,250 allowed for basic services) may also be allowed. These include:

- a cemetery plot where the deceased is going to be buried,
- the cost of opening and closing the grave,
- the cost of cremation if requested by next of kin,
- the cost of hermetic sealer, oversized casket, clothing, extraordinarily lengthy storage,

- the cost of transporting the deceased from the place of death to the place of burial payment,
- a processing fee of 10% for a funeral provider pays directly to a cemetery or a transportation vendor for any of the items listed above.

The chart below shows the 10 year history of burial costs only of the General Relief Assistance.

Burial Costs - 10 Year History

Fiscal Year	Annual Total	Monthly Average	Total FY Caseload	Average Payment
FY1996	\$541,782	\$45,149	353	\$1,534.79
FY1997	\$563,428	\$46,952	361	\$1,560.74
FY1998	\$578,691	\$48,224	354	\$1,634.72
FY1999	\$593,177	\$49,431	347	\$1,709.44
FY2000	\$645,067	\$53,756	387	\$1,666.84
FY2001	\$707,820	\$58,985	402	\$1,760.75
FY2002	\$832,412	\$69,368	448	\$1,858.06
FY2003	\$907,686	\$75,641	508	\$1,786.78
FY2004	\$969,390	\$80,783	475	\$2,040.82
FY2005	\$1,041,913	\$86,826	524	\$1,988.38
FY2006	\$1,029,992	\$85,833	505	\$2,039.59

The GRA program is a last resort. Assistance is granted only if there are not other resources available (including relatives) to meet the persons need for burial costs, or when the court has ordered the burial of an unclaimed body. The department advises families of the obligation to repay funeral and burial costs and sometimes receives payment from the family or estate. The applicable statute is AS 47.25.230.

- *The Legislature has assumed a lower case load for the senior benefits program in FY2010 and reduced funding an additional (\$933.0). Please review projections and let us know the impact of this reduction.*

The Senior Benefits Program component request of \$19,859.4 for FY2010 includes the total costs to administer this program. Unlike many of our other budget components, it includes the personnel costs to determine eligibility and provide benefits (\$697.1), as well as the cost for the benefit payments (\$19,162.3). The benefit cost reflects the \$500.0 decrement already proposed by the Department. We project benefits for FY2010 will total an estimated \$18,926.4, which leaves a small balance to cover unanticipated increases to benefit costs. The projection for FY2010 provides for an estimated 6% increase in the caseload from FY2009, which will result from increased program outreach and growth in the population age 65 and over.

We assume that a reduction in funding of an additional \$933.0 would need to be taken from the program benefits line, so that staff could be retained to administer the program. Such a reduction would result in our inability to pay benefits for all of FY2010. Following is a chart illustrating the effect on benefits if this reduction were to occur:

Benefit projections with additional
proposed decrement of (\$933.0)

	Monthly Cost	Running Balance
	Beginning Balance	\$18,229.3
July	\$1,553.3	\$16,676.0
Aug	\$1,562.7	\$15,113.3
Sep	\$1,570.5	\$13,542.8
Oct	\$1,576.8	\$11,966.1
Nov	\$1,583.1	\$10,383.0
Dec	\$1,589.4	\$8,793.6
Jan	\$1,594.2	\$7,199.4
Feb	\$1,597.4	\$5,602.1
Mar	\$1,599.0	\$4,003.1
Apr	\$1,600.6	\$2,402.6
May	\$1,602.2	\$800.4
Jun	\$1,603.8	(\$803.4)

- *For the Bring The Kids Home program, what is the impact of postponing increments? What is the base level funding already in the budget?*

BTKH has implemented performance measures to monitor progress. These measures verify the decreasing utilization and cost of out-of-state RPTC care. Between FY 2007 and 2008 Out-of-State Medicaid expenditures for Residential Psychiatric Treatment Centers decreased by \$9.89 million. In-State RPTC Medicaid expenditures essentially remained at 2007 levels. However, Alaska still spent a total of \$47.7 M on RPTC care (in-state + out-of-state) for 847 children. A large amount of Medicaid resources continue to support the most restrictive level of treatment for a small number of children with severe emotional disturbances. The BTKH goal is to serve children and families earlier, and in less intensive programs.

The BTKH funding strategy relies on investing Alaska Mental Health Trust funds and State General funds into the in-state services and supports needed to keep children from moving into out-of-state residential psychiatric treatment centers. This will reduce the cost of out-of-state residential care and allow those resources to support an in-state continuum of care. This moves funding from intensive services for a few children to less intensive services for a larger number of children and families.

BTKH success to date reflects the development of some of the required in-state services: enough for *some* kids and in *some* locations. It also reflects the development of in-state RPTC care. However, BTKH has not yet established the basic building blocks needed to make the system sustainable, to serve children statewide, and to build the services to keep children out of RPTC care. The additional BTKH funding requested for FY2010 is for basic building blocks required for a system that serves fewer children in residential care.

Funding these BTKH increments will develop:

- Flexible services that reach into the home first to keep kids and families intact
- Immediate access to services – or treatment on demand - when the child and family reach out
- Strong families and healthy communities
- Resilient children

I. BTKH Community BH Outpatient Services

FY09 base GF =

\$1,000,000	“BTKH Outpx & Emergency Services & Training”
\$250,000	“BTKH Home & Community-Based Start-Up Grants”

This funding is developing community-based and in-home service capacity in new areas of the State and is addressing gaps that result in children moving into residential care. As noted above, this goal is only partially accomplished. Without additional funding we anticipate increased use of residential care resources, for the children who are remaining in Alaska. While in-state RPTC may help to address this issue, long-term success depends upon our ability to divert more children from residential placements.

Remaining gaps include services for children with severe emotional disturbances who have difficult presentations: children who are suicidal, aggressive, psychotic, or are frequent runaways. These children require programs with specific training and expertise to be stabilized in a home or community setting. Many agencies in Alaska still have limited capacity to serve children with these presentations. BTKH data continues to show that children with these challenges move into out-of-state care.

Another gap is in training and expertise for children with both a developmental disability and a severe emotional disturbance (SED): children with autism disorders, traumatic brain injury, fetal alcohol spectrum disorders, and an SED. These children may not benefit from traditional mental health counseling and lack of appropriate services often precipitates a negative spiral resulting in movement into acute or residential care. Unless the residential care is specifically tailored to their needs, it may also fail.

DHSS can remediate some of these gaps through technical assistance, training and support (see BTKH Technical Assistance, below), however new programs require start-up funding to hire and train staff, ramp up service delivery, implement Medicaid billing, and implement new programs. Between FY06 and FY009 BTKH outpatient grants went to 22 agencies working in the following communities/regions:

- Anchorage
- Fairbanks - Interior
- MatSu - Wasilla
- Juneau - Southeast
- Seward
- Kenai Peninsula
- Bethel Area
- Kotzebue
- Prince of Wales Island
- Sitka

- Ketchikan
- Metlakatla

These agencies developed expertise and expanded services to additional children and families or to children with more challenging needs. BTKH grants are all targeted towards children with severe emotional disturbance and towards those children who will move from a community setting into a more restrictive level of care.

Each year, the BTKH solicitation is targeted toward specific geographic areas, towards the populations of children who continue to be underserved, and towards best practices to maintain children in-state. Below are examples of activities that BTKH Community BH outpatient funds support:

- Metlakatla Indian Community developed mental health services and Medicaid billing capacity. MIC was able to serve more than 40 children with severe emotional disturbances in FY08 rather than having those children leave the village to seek care elsewhere.
- Central Peninsula General Hospital developed mental health services and Medicaid billing capacity in a new outpatient support program for adolescents with co-occurring SA and MH disorders. The target population was youth at highest risk of movement into more restrictive care. In FY08 the program served more than 36 children, at least three of these children would otherwise have moved into an RPTC.
- Family Centered Services of Alaska developed respite and crisis respite care in Fairbanks in order to support children to remain in community placements. In FY08 the program served 100 children. At least two of these children were diverted from an acute care setting. Movement into an acute setting generally requires that the child be flown from Fairbanks to the Alaska Psychiatric Institute or Northstar Hospital in Anchorage. Most children who move into out-of-state care do so from acute care settings.
- Denali Family Services in Anchorage developed intensive wraparound services for sexually reactive children. The program started in March of FY08 and served 4 children in its first quarter of operation. It will serve more children per quarter in FY09. This is a population of children for whom in-state services are extremely limited.
- DHSS has applied for a FY2010 Federal grant that will provide up to \$1.5 M in Federal dollars per year for six years. If the federal funding is awarded, we intend to use BTKH grant funding to match it and to sustain the system that is developed through the grant. The project would target families involved in multiple systems (juvenile justice, developmental disabilities, children's services), with children who experience both severe emotional disturbances AND problems at school. These are families who will otherwise impact multiple state systems and funding streams.

II. BTKH Individualized Services Agreements (ISA) FY09 base GF = \$950K

The individualized services funding is used to divert children from moving into residential care, and to help children to move out of residential care. Without additional funding, the ISA funding can only be used to divert children within the fairly narrow existing parameters, and at the current level of service.

During FY08, individualized service agreements supported 196 recipients to remain in community placements. This general funding is only used for services for which there is no other funding source and which are identified in a treatment plan developed by the child's individualized treatment team and signed off on by a master's level clinician. During FY08 and FY09 several areas were identified for which additional funding is required. These include:

- Immediate need - Expanding to additional MH providers: As the resource becomes better understood, its use is expanding. Some providers are using ISA funding appropriately to divert children from residential care, others are not. For FY08, 23 providers signed on to coordinate ISA services.
- However, during the first and second quarters of FY09 there were no ISA used in the entire Northern Region. Unfortunately, this was not because children from the Northern Region were not moving into residential care. During the same time period there were only 17 children from the entire Interior Region who used ISA. There is a continued need for outreach and training around use of ISA which will expand the need for funding. In addition, DHSS continues to develop management strategies to make ISA funding accessible and easy for providers to use but to also ensure that the funding is appropriately used when other funds are not available and when it will help create/salvage a non-residential placement for a child with a severe emotional disturbance.
- Immediate need - Diverting children in the services of the Office of Children's Services or Division of Juvenile Justice: During FY08 and FY09 DHSS began piloting use of ISA for children with a severe emotional disturbance at risk of movement into residential care or moving out of residential care who involved with juvenile justice or protective services. This strategy has been highly effective at building transitions for children with mental health disorders moving back into the community from a juvenile justice setting. These children are at very high risk for recidivism to residential care or a justice setting. The strategy has also been effective to maintain foster care placements and to help children with severe emotional disturbances remain in their homes/communities.
- Immediate need - Diverting children with a primary diagnosis of substance abuse: Currently, ISA can only be used for children with a primary diagnosis of severe emotional disturbance. However, children with primary diagnoses of substance abuse often have a co-occurring severe emotional/behavioral disorder and also move into residential mental health services. It would be strategic to expand ISA funding to this population in order to reduce the use of residential care.
- Possible strategy - Diverting additional populations of children: Several other populations of children also move into MH residential care when a co-occurring severe emotional/behavioral disorder is identified and when community-based services fail. These include children with a primary diagnosis of an autistic disorder, a fetal alcohol spectrum disorder or a traumatic brain injury. It may be strategic to identify when an ISA could stop this progression.

III. BTKH Technical Assistance

No current funding

This funding is necessary to help in-state providers improve business practices (such as expanding Medicaid billing) and to train in and implement clinical best practices in order to improve outcomes. In-state providers must expand their capacity to treat children with complex

needs. There continue to be populations of children for whom in-state services are still extremely scarce. These include services for very difficult presentations such as suicidal ideation/attempts, extreme aggressiveness or psychotic symptoms. There also continue to be significant differences in the capacity of providers to use Medicaid effectively to deliver in-home and community services. Without these services children cannot be safely diverted from RPTC.

During FY2009, DHSS used BTKH funding to begin training for children's mental health workers in Brief Strategic Family Therapy, wraparound and other best practices for serving children in their family setting. This FY2010 funding request will support continued training for practices such as BSFT. It will also support training and support to providers to improve business practices and become sustainable via Medicaid and existing grant funding. To date, DHSS has not requested a single additional position to oversee the BTKH grant program (described below). To date, this grant program has been absorbed by existing staff. The funding capacity within DHSS to provide or contract technical assistance MUST be increased in order to support providers to expand capacity.

IV. BTKH EARLY CHILDHOOD MENTAL HEALTH

We need a qualified early childhood mental health workforce and early childhood professionals who can support positive social emotional development.

Alaska is plagued by a lack of mental health practitioners experienced in early childhood mental health (ECMH) issues and intervention. Parents, teachers, child care providers, mental health clinicians, health providers and others often lack the training necessary to meet the needs of young children with mental health and social emotional concerns.

Two of the approaches we are taking to bring up workforce expertise in this area are:

- 1) A "Learning Network" for mental health clinicians and early interventionists, and
- 2) ECMH Consultation for wider array of professionals working with young children

The budget request was to continue and expand the work of both of these approaches.

Early Childhood MH Learning Network:

No current funding through BTKH – limited funding through Federal ECCS and Title V.

The budget request was to enhance a training and support network for early childhood mental health clinicians and other ECMH specialists. It included a position for an ECMH Leader/Coordinator with a high level of expertise in early childhood mental health, a statewide network of part-time early childhood mental health trainers, travel, training costs, monthly "Learning Network" conference calls and the annual Early Childhood Mental Health Institute.

If this cannot be funded in its entirety, at a minimum it would be helpful to support continuation of the monthly "Learning Network" conference calls (\$15,000) and the Early Childhood Mental Health Institute (\$27,700).

ECCS Grant - Mental Health Consultation:

FY09 base GF = \$0

FY09 MHTAAR = \$75K "Early Childhood Comprehensive Systems Grant" (MH Consultation)

This budget request was to continue and expand ECMH consultation to early care and learning providers, Infant Learning Providers, and others who work with young children. Specific skills are needed to identify mental health problems and to serve children with these issues in their natural environments. The goal is to help young children remain in stable settings with qualified

and nurturing caregivers and prevent the development of serious emotional disturbance (SED). The current funding (\$75,000) is being used to support two ECMH consultation projects. The expanded funding request for FY' 10 was to bring on additional projects in other areas of the state.

If this cannot be fully funded, we request minimum funding to continue the FY09 projects (\$75,000).

FROM THE EXPERTS:

The following points are taken from: *Mental Health Problems in Early Childhood Can Impair Learning and Behavior for Life, Working Paper 6*, developed by the National Scientific Council on the Developing Child, Center on the Developing Child, Harvard University,

- The foundations of many mental health problems that endure through adulthood are established early in life. Early mental health problems disrupt the typical pattern of developing brain architecture and impair emerging capacity for learning and relating to others.
- There are indications that early intervention can have a profound positive effect on the trajectory of emotional or behavioral problems as well as improve outcomes for children with serious disorders, be they psychological or genetic in origin.
- Persistent poverty, threatening neighborhoods, and very poor child care conditions elevate the risk of serious mental health problems

WHAT SCIENCE TELLS US:

- Significant adversity early in life can damage the architecture of the developing brain and increase the likelihood of significant mental health problems that may emerge either early or years later.
- Much impairment in mental health arises as a result of the interaction between a child's genetic predisposition and his or her exposure to significant environmental adversity.
- **The behaviors and characteristics associated with mental health problems in the earliest years of life are often different from those seen in older children and adults with psychological difficulties.**
- **If young children are not provided appropriate help, emotional difficulties that emerge early in life can become more serious disorders over time.**
- Some individuals demonstrate remarkable resilience in the face of early, persistent maltreatment, trauma, and emotional harm, but there are limits to the capacity of young children to recover psychologically from such adversity.
- Serious developmental disabilities can also be associated with significant mental health impairments that are affected by experience and amenable to intervention.
- The powerful influences of early relationship illustrate how much the emotional well-being of young children is directly tied to the emotional functioning of their caregivers and the families in which they live.

- For many providers of child health services and early care and education who are faced with children who present problematic behavior, the question of "when to worry" is paramount, yet little evidence exists to answer that question definitively.

POPULAR MISREPRESENTATIONS OF SCIENCE:

- **Contrary to popular belief, young children can and do experience serious emotional problems that are comparable in severity to what we observe in older children and adults, and can have lasting effects.**
- Contrary to popular belief, young children living in highly disadvantaged environments can be protected from serious emotional or behavioral consequences.

THE SCIENCE-POLICY GAP:

- **Professionals who are regularly involved in the lives of infants, toddlers, and preschoolers often lack the knowledge and skills that would help them identify the early signs of mental health problems as well as fully understand the consequences of family difficulties and parent mental health problems for young children's development.**
- In most communities, mental health services for young children and their families are often limited, of uneven quality, and difficult to access, and there are few well-trained professionals with expertise in early childhood mental health.
- There has been a dramatic increase in the use of psychoactive drugs for young children with behavioral or mental health problems, despite the fact that neither the efficacy nor safety or many of these medications has been studied specifically in children at these early ages.

IMPLICATIONS FOR POLICY AND PROGRAMS:

- Because young children's emotional well-being is tied so closely to the emotional status of their parents and non-family caregivers, the emotional and behavioral needs of infants, toddlers, and preschoolers are best met through coordinated services that focus on their full environment of relationships.
- Therapeutic help for a young child with emotional or behavioral problems can be provided through a combination of home- and center-based services involving parents, extended family members, home visitors, providers of early care and education, and/or mental health professionals
- Mental health services for adults who are parents of young children would have broader impact if they routinely included attention to the needs of the children as well.
- **Physicians and providers of early care and education would be better equipped to understand and manage the behavioral problems of young children if they had more appropriate professional training in this area and easier access to child mental health professionals when they are needed.**
- A better coordinated infrastructure for funding mental health services for young children could provide a more stable and efficient vehicle for assuring access to effective prevention and treatment programs.
- Cultural differences in attitudes and beliefs about behavior and mental health require sensitivity and respect for diversity as well as specialized intervention skills.

- *For the therapeutic court increment of \$653.0 GF, exactly what is being maintained and what is being enhanced? What services would be eliminated if this increment is not received?*

This increment will continue funding the Anchorage Alcohol Safety Action Program (ASAP) at its current level of service, providing direct services to clients for screening, referral, monitoring and supervision of Anchorage-based clients. All clients are referred to ASAP through the Anchorage court system; referrals are made to both the misdemeanor ASAP program and the felony Therapeutic Court ASAP program. All adult ASAP services in the Anchorage area are provided by DHSS, Behavioral Health staff, housed at the Boney Court House (space is provided free of charge by the Alaska Court System, in support of the ASAP program). ASAP services are identified as a critical component of a comprehensive program for treatment of alcohol and other drugs as defined in AS 47.37.045(210); AS 47.37.130 (5) and as a critical court referral for services as identified in AS 28.035.028(f) and AS 28.035.030(h).

Background

In FY07 and FY08, Behavioral Health received \$750,000 per year in grant funds from the Alaska Highway Traffic Safety Office (AHTSO) at the Department of Transportation. Among other things, these funds supported 3.5 Adult Probation Officer positions and 4 administrative positions in the Anchorage ASAP office.

In FY09, we were informed by DOT that we would not receive an award because they had changed their focus for the use of the federal funds. After much discussion and negotiation, we eventually received a reduced award of \$400,000 with the understanding that these grant funds will end effective September 30, 2009.

Prior to Fiscal year 2007 when we first received these DOT grant funds, all ASAP positions were covered by state alcohol tax funds, receipt supported services (generated by ASAP fees) and limited state general funds. In an effort to maintain our ASAP program at full staffing, DOT grant funds were applied for to provide more stability than receipt supported services funds, which fluctuate depending on client payments. At the time we applied for funding, there was no indication the focus of these funds would change in the next three years.

Program Overview

The Alcohol Safety Action Program (ASAP) including the Therapeutic Courts operate as neutral links between the justice and the health care delivery systems and are responsible for service to Adult, Juvenile and all of the different Therapeutic Court's program participants who have alcohol or drug related offenses. The ASAP program operates in eleven communities (Anchorage, Kenai, Homer, Wasilla, Dillingham, Fairbanks, Ketchikan, Kotzebue, Juneau, Kodiak, and Seward). All programs except for the Anchorage Adult ASAP program are offered by community-based agencies with funding from Behavioral Health. Due to the size of the Anchorage Court, referral and education/treatment system, the Anchorage Adult program is operated by Behavioral Health with a coordinated, cross-discipline service system in place to meet the large volume of referrals to ASAP. The FY10 increment of \$653,000 is to maintain Adult ASAP services in the Anchorage community.

Individuals referred for ASAP services include both first time offenders (most often misdemeanants) and repeat offenders (more often felony-level offenses). As an example the Alaska Division of Motor Vehicles reported 5888 Drinking Under the Influence (DUI) offenses in 2008. Of the 5888 DUI offenders, 4047 were first time offenders and had not yet participated in an ASAP program. Most first time offenders are referred to ASAP for services as are many repeat offenders. In 2008, 44% or 2,582 of these DUI offenses were committed in Anchorage.

Impact

The requested increment enables the ASAP Probation Officers to screen, refer, monitor and supervise 5,552 new Adult ASAP cases, 8,000 open and ongoing cases, and the over 200 Therapeutic Court participants that require a much higher level of management and supervision each year. Without this increment to support 3.5 ASAP Probation Officers we will lose the ability to screen, refer, monitor and supervise 60% or 3,331 of our 5552 new Adult cases per quarter and about 4,800 of our 8,000 other open cases per year. Of the 2,582 Anchorage DUI offenders reported by DMV, the ASAP office would only be able to serve 1,032 of those DUI offenders, leaving 1,549 DUI offenders without the intervention that ASAP offers, leaving them ill-equipped to make the informed choices and behavioral changes that might prevent further contact with the justice system, the treatment system, and damage to the offender, their family and their community (e.g. continued driving under the influence of alcohol, alcohol-related violence, alcohol-related accidents, etc.). Without these funds the Anchorage Adult ASAP office will be left with two (2) ASAP Probation Officer, 2.5 ASAP Therapeutic Court Probation Officers and one (1) administrative support staff person.

Without the requested increment about 40 of our most vulnerable offenders with mental health disabilities or substance addictions would not have the opportunity to participate in the Therapeutic Courts, a proven effective and cost saving program. According to a recent study, researchers found that the Therapeutic Court participants were 13% less likely to be re-arrested, 34% less likely to be re-convicted and 24% less likely to be re-incarcerated than those offenders with substance abuse or mental health issues that were not afforded the opportunity to participate in a Therapeutic Court (Rhodes et al., 2006)¹. Because each Therapeutic Court is staffed by a single Probation Officer, without the requested increment we lose the ability to serve one Therapeutic Court project such as the Mental Health, Felony DUI or Felony Drug Courts entirely, decreasing that population's opportunity for a proven and effective intervention.

Without this increment four (4) of the five (5) ASAP administrative positions will be eliminated, further impacting our ability to provide timely and adequate client services. Our support staff assist all ASAP and the Therapeutic Courts activities; the loss of these funds will immediately decrease by 80% our ability to bill clients and generate revenue that helps sustain our programming. This loss will decrease by 80% our ability to research prior client offenses through local and national databases to inform and help direct the client's optimum intervention. It will decrease our ability to send assessment and treatment assignment information to clients, request client's treatment status reports from providers, communicate client's treatment status with the courts, and maintain records of clients, all of which must be done in a timely manner for the program to be effective and successful. In reality, the one remaining administrative support staff would only be available for reception duties—answering the phone and greeting clients who

¹ Rhodes, W., Kling, R., & Shively, M. (2006). *Suffolk County Court Evaluation*. Cambridge, MA: Abt Associates.

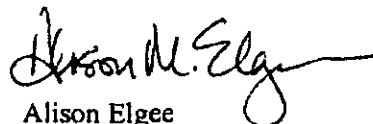

come for appointments. All support activities identified above would become the responsibility of the remaining Adult Probation Officers, in addition to their direct client services.

Currently Anchorage ASAP clients are screened and referred to an education or treatment program within 30-60 days after their offense, depending on how quickly they come into the ASAP office. With the projected reduction in Probation Officers and support staff, services for offenders would be delayed to 240-360 days from the time they come to the ASAP office. Clients would be placed on a "wait list" until staff could process their paperwork and schedule appointments for assessment and referrals. Without the assistance of the administrative staff to inform, gather and disburse the client's past criminal and treatment history to providers and the courts, create and maintain files, answer questions for clients and family members, this process will be greatly hampered, less effective, and greatly decrease the number of clients served.

Substance use, abuse and dependency is a critical social problem in Alaska, with heavy and binge drinking responsible for much of the criminal behavior, health care emergencies, preventable accidents, injuries and deaths that we experience. ASAP provides an opportunity to reach referred individuals early, before the addiction and disease of alcoholism have taken control. ASAP provides early intervention, education, treatment and consequences for adults who are in the early stages of alcohol dependency. Without this program, many of these individuals will continue to enter and re-enter the criminal justice revolving door, ever increasing the damage of alcohol use to themselves, their families and their communities. Data indicates that participating in the ASAP and Therapeutic Court programs reduce both criminal and substance use recidivism. In a 2007 legislative audit of the ASAP program 9% of ASAP clients were reported receiving a new alcohol/drug criminal offense within 42 months after their initial offense compared to the 1999 study that report 35% of ASAP clients received new alcohol/drug criminal offenses within 36 months of their initial offense. It is clear this program works and increases the health and well-being on our citizens and our communities.

COMMENTARY

Expanding SCHIP Beyond Poor Is Wrong Approach

By Grace-Marie Turner

Few issues generate more political emotion than the need to provide health insurance for children.

It is much less expensive to cover children than adults, and healthy children have the best chance of becoming healthy adults. But that does not mean the government must provide the insurance.

Nonetheless, the new Congress is poised to act on President Barack Obama's campaign promise to provide government-run coverage for children. With the State Children's Health Insurance Program (SCHIP) due to expire March 31, Congress is expected to use renewal of the program as a vehicle to require all children have health insurance.

Pushing Past the Poor

But expanding SCHIP to cover all children would be a mistake, for four reasons.

First, Congress should make sure poorer, uninsured children are covered first. At least two-thirds of the nation's uninsured children already are eligible for SCHIP or Medicaid but aren't enrolled. If SCHIP were expanded to cover children in higher-income families, their parents would rush to the head of the line to get the taxpayer-subsidized coverage. When a "free" government plan is offered, it's nearly impossible to resist. Poorer children would be left behind as states focused on enrolling higher-income kids.

Second, expanding the program would "crowd out" the private insurance many higher-income kids already have. Hawaii offers proof. Earlier this year, the state created a new taxpayer-financed program to fill the gap between private and public insurance in an effort to provide universal coverage for children. But state officials found families were dropping private coverage to enroll their children in the government plan.

When Gov. Linda Lingle saw the data, she pulled the plug on funding. With Hawaii facing budget shortfalls, she said it was unwise to spend public money to replace private coverage children already had.

Third, putting many millions of children on a government program will quickly lead to restrictions on access to care. A young boy died in Baltimore not long ago from an untreated tooth infection, even though he was enrolled in SCHIP. The boy's mother couldn't find

a dentist to see him. Situations like that happen because the program's reimbursement rates are so low that few dentists can afford to take SCHIP patients.

In Massachusetts's move toward universal health coverage, more people have insurance, but they are finding physicians' practices are often filled, with waits for a new patient appointment.

"If SCHIP were expanded to cover children in higher-income families, ... [p]oorer children would be left behind as states focused on enrolling higher-income kids."

ment at 100 days and counting. Putting more children on SCHIP will add to the program's financial pressures, making it harder for poorer kids to get care.

Finally, government insurance means politicians and bureaucrats, not parents, make decisions about the care children receive and what services will or won't be covered.

A Better Way

There is a better way to help the uninsured become insured.

Lower- and moderate-income uninsured families, not just children, need help to afford health insurance. But right now, the deck is stacked against them. They make too much money to qualify for public programs, such as Medicaid, but don't have good, higher-paying jobs that come with health insurance.

"A young boy died in Baltimore not long ago from an untreated tooth infection, even though he was enrolled in SCHIP. The boy's mother couldn't find a dentist to see him. ...

[T]he program's reimbursement rates are so low that few dentists can afford to take SCHIP patients."

They need help in purchasing policies, and that help could be provided through refundable tax credits, which enable people to get the money even if they owe little or nothing in taxes.

Also, 12 million more people would be able to buy affordable health insurance if Congress were to allow people to buy insurance across state lines. And market fixes could help people with preexisting conditions get private insurance.

Providing Powerful Incentives

None of these reforms requires turning our health care system upside down or turning it over to the government, and all would provide powerful incentives for families with children to get health insurance they can own and keep with them.

So when the debate over universal coverage for children begins tugging at the nation's heartstrings this year, it will be wise to consider the costs and consequences and look at alternatives that put parents, instead of politicians, in charge of choosing the right health care for children.

Grace-Marie Turner (galen@galen.org) is president of the Galen Institute.

U.S. House Votes to Expand SCHIP Program

Continued from page 1

the maximum income allowed for enrollment, and more than 10 percent of the 6 million enrollees nationwide were over the age of 18, according to the Department of Health and Human Services (HHS). SCHIP and Medicaid together now insure 45 percent of all children in America, according to HHS.

Funding in Doubt

"This coverage is critical [and] it is fully paid for," said then-President-elect Barack Obama in a statement. Congressional estimates put the cost of the program's expansion at \$32.3 billion, but others say it will be higher and the expansion, funded by an increase of 61 cents per pack in the federal cigarette tax, is not "fully paid for."

Supporters of the legislation are overlooking the problem created by using a tobacco tax increase as the sole funding source, said Rep. Dave Camp (R-MI), ranking Republican on the House Ways and Means Committee.

"The problem is that the percentage of Americans who smoke has been dropping for decades. Research and logic both show that raising the prices of cigarettes will lead to less smoking, and less smoking will lead to less and less money being collected by the federal government to pay for an expansion of SCHIP," Camp said.

A study conducted by The Heritage Foundation concluded 22.4 million non-smoking Americans will have to begin consuming tobacco products in order for the SCHIP expansion to maintain its funding level.

Hurting the Working Poor

Experts say the use of a tobacco tax to fund the SCHIP expansion will place a greater burden on those the program was designed to help.

According to the Centers for Disease Control and Prevention, undereducated and lower-income Americans are more likely to smoke than their better-paid, more highly educated peers. "Given such data," said Camp, "it is hard to imagine a more regressive policy, disproportionately targeting such disadvantaged groups for higher taxes."

"At a time when the last thing we need is an even weaker small business community," said Grover Norquist, president of Americans for Tax Reform, "a tax increase on tobacco products will not only hurt consumers and scapegoat a segment of the American population for using a legal product, but will also hurt small businesses, many of which often lean on tobacco sales to stay in business. "Furthermore," said Norquist, "such

"Research and logic both show that raising the prices of cigarettes will lead to less smoking, and less smoking will lead to less and less money being collected by the federal government to pay for an expansion of SCHIP."

DAVE CAMP, U.S. REPRESENTATIVE - MICHIGAN

a tax increase follows the absurd rationale of discouraging a behavior on the one hand while at the same time relying on its continuance as a revenue stream. Funding an expansion of SCHIP on an already-declining revenue stream is irresponsible and dangerous policy."

State-Level Failures

Experts say legislators should have paid

House Resolution 2: <http://thomas.loc.gov/cgi-bin/query/z?c111:H.R.2>

closer attention to recent state-level attempts to expand taxpayer-funded programs, which have been derailed by soaring costs and a "crowding-out" of private health insurers.

Grace-Marie Turner, president of the Galen Institute, cited "Hawaii's hard-learned lesson in health care economics," referring to the Aloha State's Keiki Care program established in 2008 to provide coverage to children whose parents couldn't afford private insurance but whose income was too great to qualify for other public programs.

"Hawaii officials learned that, if you offer people insurance for free, they'll quickly drop other coverage to enroll.

After seven months of operation, during which 85 percent of Keiki enrollees were former private policyholders, [Gov. Linda Lingle (R)] was forced to eliminate the program altogether," Turner noted.

"People who were already able to afford health care began to stop paying for it so they could get it for free," said Dr. Kenny Fink of Hawaii's Department of Human Services in a release.

Unpopular Program

Congress attempted to expand SCHIP in 2007, but legislation was twice vetoed by then-President George W. Bush, who objected to relaxing the program's eligibility requirements when nearly two-thirds of the nation's uninsured children were already eligible to enroll.

In addition, according to the Centers for Medicare and Medicaid Services (CMS), 42 percent of that eligible uninsured population were actually enrolled in a state SCHIP or Medicaid program in 2007, but declined to renew their enrollment—an indication that SCHIP and other taxpayer-funded programs were not as popular as their proponents claim.

Reform Efforts Rebuffed

In 2008 CMS, at Bush's behest, issued a directive tightening SCHIP eligibility requirements, forcing states to limit the program to children whose family income was 2.5 times the federal poverty level or less. Families making \$44,000 per year or more were to be removed from the SCHIP rolls and held out of the program until their state had enrolled 95 percent of its eligible uninsured in the program.

Bush rescinded the directive after pressure from state governments wishing to continue offering SCHIP benefits to people ineligible under federal guidelines.

At press time, the SCHIP resolution was still pending in the Senate. Congressional observers expect the House version of the measure ultimately to be signed into law by President Obama.

Jeff Emanuel (jmanuel@heartland.org) is research fellow for health care policy at The Heartland Institute and managing editor of Health Care News.

Children in Alaska

Income Guidelines (effective March 2009)

Household Size	Children with other Health Insurance	Children with no Health Insurance and Pregnant Women with or without Health Insurance
	Monthly Income (150% FPG)*	Monthly Income (175% FPG)*
1	1,692	1,974
2	2,277	2,656
3	2,862	3,339
4	3,447	4,021
5	4,032	4,704
6	4,617	5,386
7	5,202	6,069
8	5,787	6,751
each additional	585	683

Note: An unborn child of a pregnant woman is counted in the household size for pregnant woman coverage.

Key Points

- » Income figures are gross income (before taxes are taken out).
 - » Income eligibility is determined based on biological or adoptive parent income.
 - » Permanent Fund dividends are not counted as income.
 - » A standard deduction per month for expenses related to employment may apply.
 - » A standard deduction per month for dependent care expense may apply.
 - » Child support payments may be allowed as a deduction.
 - » Income records and proof of deductions must be submitted with application.
 - » Anyone may apply for her/himself or on behalf of a child or teen.
 - » Children with other health insurance may still be eligible.
 - » Children, teens and pregnant women covered by Indian Health Service benefits may be eligible.
- » ***Not sure if you're eligible?
The only way to know for sure is to apply!***

ANSWERS TO HOUSE HSS COMMITTEE QUESTIONS ON SB 13 Prepared by: Dept. of Health and Social Services 3-16-2010

Answers to 3/10/10 email from Rep. Keller:

How many of the projected 1300 children projected to be qualified with SB 13 are already insured?

All 1300 children covered under SB13 would be uninsured at the time of application. A child cannot be insured under another plan as a condition of eligibility for Denali KidCare. It is possible that a child could obtain insurance at some point during his/her year of eligibility, but the child would be found ineligible at the annual renewal.

Can you put together a "bell curve" that puts number of Alaska children on the vertical axis and the income level (before dividends) on the horizontal? If that cannot be done, please replace the number of children with the number of Alaska households and provide the average number of children per household in Alaska. I would like to provide a 'visual' to the committee of the children addressed by SB 13 including a vertical line at 175% and a vertical line at 200%. Please include the table that is used to build the graph --- or just send us the table so we can build the bell curve.

We are unable to provide the specific information that you requested, although we do have information that addresses the questions you raise. Below is a table of insured and uninsured children through age 18 broken out by income as a percentage of poverty. The income measured includes the PFD. It should also be noted that the source survey does not use the same income calculation and household composition rules that Medicaid uses in determining eligibility. We have also provided two graphic representations of the data.

Uninsured and Insured Alaska Children through age 18, estimates based on U.S. Bureau of the Census Current Population Survey administered in 2007, 2008 and 2009 (Note: PFD amounts are included in household income)

Income-to-Poverty Ratio in 2006 to 2008 (using the federal poverty guidelines for Alaska)	Insured	Uninsured
Below 50%	8498	2101
50% to <100%	12509	3172
100% to <150%	23477	3971
150% to < 175%	6615	1461
175% to <200%	11217	2598
200% to 240%	13083	1894
240% and above	92233	8242

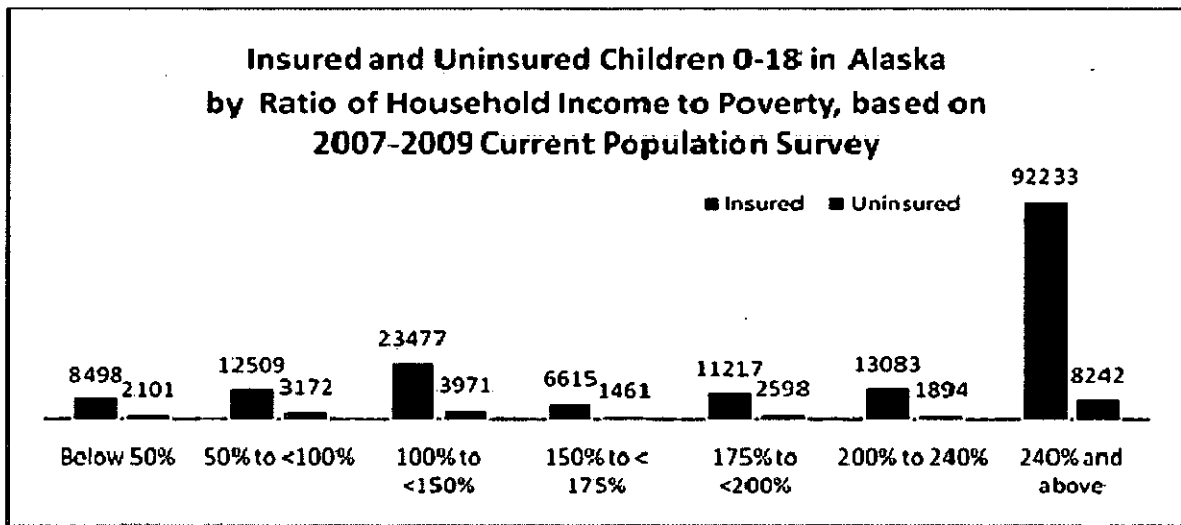

Table and Charts prepared by Health Planning & Systems Development, Div. of Health Care Services, AKDHSS ajr 3/10/2010

Matt Johnson's questions:

1. Of the 1,277 kids who would be eligible for DKC under an increase to 200%, how many are currently on regular Medicaid?

The fiscal note represents our expectations for the net impacts on the program. All of the kids we project adding under SB 13 would be net increases to the CHIP categories. We always have people coming and going and moving between regular Medicaid and CHIP. We do not assume that we would see a net decrease in the regular Medicaid categories, though there may be individual cases where children move from one category to another. We don't anticipate reducing any spending under regular Medicaid categories, so there would be no net savings.

2. Is the ADN article reporting 11,000 more children enrolled in Medicaid in the last 18 months accurate?

Children's enrollment from July 2008 to January 2010 went from 58,028 to 69,117, for a total increase of 11,089. It changes from month to month.

TITLE 42. THE PUBLIC HEALTH AND WELFARE
 CHAPTER 7. SOCIAL SECURITY ACT
 TITLE XXI. STATE CHILDREN'S HEALTH INSURANCE PROGRAM

Go to the United States Code Service Archive Directory

42 USCS § 1397cc

§ 1397cc. Coverage requirements for children's health insurance

(a) Required scope of health insurance coverage. The child health assistance provided to a targeted low-income child under the plan in the form described in paragraph (1) of section 2101(a) [42 USCS § 1397aa(a)] shall consist, consistent with paragraphs (5), (6), and (7) of subsection (c), of any of the following:

(1) Benchmark coverage. Health benefits coverage that is at least equivalent to the benefits coverage in a benchmark benefit package described in subsection (b). ?

(2) Benchmark-equivalent coverage. Health benefits coverage that meets the following requirements:

(A) Inclusion of basic services. The coverage includes benefits for items and services within each of the categories of basic services described in subsection (c)(1).

(B) Aggregate actuarial value equivalent to benchmark package. The coverage has an aggregate actuarial value that is at least actuarially equivalent to one of the benchmark benefit packages.

(C) Substantial actuarial value for additional services included in benchmark package. With respect to each of the categories of additional services described in subsection (c)(2) for which coverage is provided under the benchmark benefit package used under subparagraph (B), the coverage has an actuarial value that is equal to at least 75 percent of the actuarial value of the coverage of that category of services in such package.

(3) Existing comprehensive State-based coverage. Health benefits coverage under an existing comprehensive State-based program, described in subsection (d)(1).

(4) Secretary-approved coverage. Any other health benefits coverage that the Secretary determines, upon application by a State, provides appropriate coverage for the population of targeted low-income children proposed to be provided such coverage.

(b) Benchmark benefit packages. The benchmark benefit packages are as follows:

(1) FEHBP-equivalent children's health insurance coverage. The standard Blue Cross/Blue Shield preferred provider option service benefit plan, described in and offered under section 8903(1) of title 5, United States Code.

(2) State employee coverage. A health benefits coverage plan that is offered and generally available to State employees in the State involved.

(3) Coverage offered through HMO. The health insurance coverage plan that--

(A) is offered by a health maintenance organization (as defined in section 2791(b)(3) of the Public Health Service Act [42 USCS § 300gg-91(b)(3)]), and

(B) has the largest insured commercial, non-medicaid enrollment of covered lives of such coverage plans offered by such a health maintenance organization in the State involved.

42 USCS § 1397cc

(c) Categories of services; determination of actuarial value of coverage.

(1) Categories of basic services. For purposes of this section, the categories of basic services described in this paragraph are as follows:

- (A) Inpatient and outpatient hospital services.
- (B) Physicians' surgical and medical services.
- (C) Laboratory an-ray services.
- (D) Well-baby and well-child care, including age-appropriate immunizations.

(2) Categories of additional services. For purposes of this section, the categories of additional services described in this paragraph are as follows:

- (A) Coverage of prescription drugs.
- (B) Vision services.
- (C) Hearing services.
- (D) [Redesignated]

(3) Treatment of other categories. Nothing in this subsection shall be construed as preventing a State child health plan from providing coverage of benefits that are not within a category of services described in paragraph (1) or (2).

(4) Determination of actuarial value. The actuarial value of coverage of benchmark benefit packages, coverage offered under the State child health plan, and coverage of any categories of additional services under benchmark benefit packages and under coverage offered by such a plan, shall be set forth in an actuarial opinion in an actuarial report that has been prepared--

- (A) by an individual who is a member of the American Academy of Actuaries;
- (B) using generally accepted actuarial principles and methodologies;
- (C) using a standardized set of utilization and price factors;
- (D) using a standardized population that is representative of privately insured children of the age of children who are expected to be covered under the State child health plan;
- (E) applying the same principles and factors in comparing the value of different coverage (or categories of services);
- (F) without taking into account any differences in coverage based on the method of delivery or means of cost control or utilization used; and
- (G) taking into account the ability of a State to reduce benefits by taking into account the increase in actuarial value of benefits coverage offered under the State child health plan that results from the limitations on cost sharing under such coverage.

The actuary preparing the opinion shall select and specify in the memorandum the standardized set and population to be used under subparagraphs (C) and (D).

(5) Dental benefits.

(A) In general. The child health assistance provided to a targeted low-income child shall include coverage of dental services necessary to prevent disease and promote oral health, restore oral structures to health and function, and treat emergency conditions.

(B) Permitting use of dental benchmark plans by certain states. A State may elect to meet the requirement of subparagraph (A) through dental coverage that is equivalent to a benchmark dental benefit package described in subparagraph (C).

(C) Benchmark dental benefit packages. The benchmark dental benefit packages are as follows:

(i) FEHBP children's dental coverage. A dental benefits plan under chapter 89A of title 5, United States Code [5 USCS §§ 895] et seq., that has been selected most frequently by employees seeking dependent coverage, among such plans that provide such dependent coverage, in either of the previous 2 plan years.

(ii) State employee dependent dental coverage. A dental benefits plan that is offered and generally available to State employees in the State involved and that has been selected most frequently by employees seeking dependent coverage, among such plans that provide such dependent coverage, in either of the previous 2 plan years.

(iii) Coverage offered through commercial dental plan. A dental benefits plan that has the largest insured commercial, non-medicaid enrollment of dependent covered lives of such plans that is offered in the State involved.

(6) Mental health services parity.

(A) In general. In the case of a State child health plan that provides both medical and surgical benefits and mental health or substance use disorder benefits, such plan shall ensure that the financial requirements and treatment limitations applicable to such mental health or substance use disorder benefits comply with the requirements of section 2705(a) of

42 USCS § 1397cc

the Public Health Service Act [42 USCS § 300gg-5(a)] in the same manner as such requirements apply to a group health plan.

(B) Deemed compliance. To the extent that a State child health plan includes coverage with respect to an individual described in section 1905(a)(4)(B) [42 USCS § 1396d(a)(4)(B)] and covered under the State plan under section 1902(a)(10)(A) [42 USCS § 1396(a)(10)(A)] of the services described in section 1905(a)(4)(B) [42 USCS § 1396d(a)(4)(B)] (relating to early and periodic screening, diagnostic, and treatment services defined in section 1905(r) [42 USCS § 1396d(r)]) and provided in accordance with section 1902(a)(43) [42 USCS § 1396(a)(43)], such plan shall be deemed to satisfy the requirements of subparagraph (A).

(7) Construction on prohibited coverage. Nothing in this section shall be construed as requiring any health benefits coverage offered under the plan to provide coverage for items or services for which payment is prohibited under this title [42 USCS §§ 1397aa et seq.], notwithstanding that any benchmark benefit package includes coverage for such an item or service.

(8) Availability of coverage for items and services furnished through school-based health centers. Nothing in this title [42 USCS §§ 1397aa et seq.] shall be construed as limiting a State's ability to provide child health assistance for covered items and services that are furnished through school-based health centers (as defined in section 2110(c)(9) [42 USCS § 1397j(c)(9)]).

(d) Description of existing comprehensive State-based coverage.

(1) In general. A program described in this paragraph is a child health coverage program that--

- (A) includes coverage of a range of benefits;
- (B) is administered or overseen by the State and receives funds from the State;
- (C) is offered in New York, Florida, or Pennsylvania; and
- (D) was offered as of the date of the enactment of this title [enacted Aug. 5, 1997].

(2) Modifications. A State may modify a program described in paragraph (1) from time to time so long as it continues to meet the requirement of subparagraph (A) and does not reduce the actuarial value of the coverage under the program below the lower of--

- (A) the actuarial value of the coverage under the program as of the date of the enactment of this title [enacted Aug. 5, 1997], or
- (B) the actuarial value described in subsection (a)(2)(B), evaluated as of the time of the modification.

(c) Cost-sharing.

(1) Description; general conditions.

(A) Description. A State child health plan shall include a description, consistent with this subsection, of the amount (if any) of premiums, deductibles, coinsurance, and other cost sharing imposed. Any such charges shall be imposed pursuant to a public schedule.

(B) Protection for lower income children. The State child health plan may only vary premiums, deductibles, coinsurance, and other cost sharing based on the family income of targeted low-income children in a manner that does not favor children from families with higher income over children from families with lower income.

(2) No cost sharing on benefits for preventive services or pregnancy-related assistance. The State child health plan may not impose deductibles, coinsurance, or other cost sharing with respect to benefits for services within the category of services described in subsection (c)(1)(D) or for pregnancy-related assistance.

(3) Limitations on premiums and cost-sharing.

(A) Children in families with income below 150 percent of poverty line. In the case of a targeted low-income child whose family income is at or below 150 percent of the poverty line, the State child health plan may not impose--

- (i) an enrollment fee, premium, or similar charge that exceeds the maximum monthly charge permitted consistent with standards established to carry out section 1916(b)(1) [42 USCS § 1396o(b)(1)] (with respect to individuals described in such section); and
- (ii) a deductible, cost sharing, or similar charge that exceeds an amount that is nominal (as determined consistent with regulations referred to in section 1916(a)(3) [42 USCS § 1396o(a)(3)], with such appropriate adjustment for inflation or other reasons as the Secretary determines to be reasonable).

(B) Other children. For children not described in subparagraph (A), subject to paragraphs (1)(B) and (2), any premiums, deductibles, cost sharing or similar charges imposed under the State child health plan may be imposed on a sliding scale related to income, except that the total annual aggregate cost-sharing with respect to all targeted

42 USCS § 1397cc

low-income children in a family under this title [42 USCS §§ 1397aa et seq.] may not exceed 5 percent of such family's income for the year involved.

(C) Premium grace period. The State child health plan--

(i) shall afford individuals enrolled under the plan a grace period of at least 30 days from the beginning of a new coverage period to make premium payments before the individual's coverage under the plan may be terminated; and

(ii) shall provide to such an individual, not later than 7 days after the first day of such grace period, notice--

(I) that failure to make a premium payment within the grace period will result in termination of coverage under the State child health plan; and

(II) of the individual's right to challenge the proposed termination pursuant to the applicable Federal regulations.

For purposes of clause (i), the term "new coverage period" means the month immediately following the last month for which the premium has been paid.

(4) Relation to medicaid requirements. Nothing in this subsection shall be construed as affecting the rules relating to the use of enrollment fees, premiums, deductions, cost sharing, and similar charges in the case of targeted low-income children who are provided child health assistance in the form of coverage under a medicaid program under section 2101(a)(2) [42 USCS § 1397aa(a)(2)].

(f) Application of certain requirements.

(1) Restriction on application of preexisting condition exclusions.

(A) In general. Subject to subparagraph (B), the State child health plan shall not permit the imposition of any preexisting condition exclusion for covered benefits under the plan.

(B) Group health plans and group health insurance coverage. If the State child health plan provides for benefits through payment for, or a contract with, a group health plan or group health insurance coverage, the plan may permit the imposition of a preexisting condition exclusion but only insofar as it is permitted under the applicable provisions of part 7 of subtitle B of title I of the Employee Retirement Income Security Act of 1974 [29 USCS §§ 1181 et seq.] and title XXVII of the Public Health Service Act [42 USCS §§ 300gg et seq.].

(2) Compliance with other requirements. Coverage offered under this section shall comply with the requirements of subpart 2 of part A of title XXVII of the Public Health Service Act [42 USCS § 300gg-51] insofar as such requirements apply with respect to a health insurance issuer that offers group health insurance coverage.

(3) Compliance with managed care requirements. The State child health plan shall provide for the application of subsections (a)(4), (a)(5), (b), (c), (d), and (e) of section 1932 [42 USCS § 1396u-2] (relating to requirements for managed care) to coverage, State agencies, enrollment brokers, managed care entities, and managed care organizations under this title in the same manner as such subsections apply to coverage and such entities and organizations under title XIX [42 USCS §§ 1396 et seq.].

STATE OPTION FOR ALTERNATIVE PREMIUMS AND COST SHARING

Sec. 1916A. [42 U.S.C. 1396o-1] (a)(1) In general.— Notwithstanding sections 1916 and 1902 (a)(10)(B), but subject to paragraph (2), a State, at its option and through a State plan amendment, may impose premiums and cost sharing for any group of individuals (as specified by the State) and for any type of services (other than drugs for which cost sharing may be imposed under subsection (c) and non-emergency services furnished in a hospital emergency department for which cost sharing may be imposed under subsection (e)), and may vary such premiums and cost sharing among such groups or types, consistent with the limitations established under this section. Nothing in this section shall be construed as superseding (or preventing the application of) subsection (g) or (i) of section 1916.

(2) Exemption for individuals with family income not exceeding 100 percent of the poverty line.—

(A) In general.—Paragraph (1) and subsection (d) shall not apply, and sections 1916 and 1902 (a)(10)(B) shall continue to apply, in the case of an individual whose family income does not exceed 100 percent of the poverty line applicable to a family of the size involved.

(B) Limit on aggregate cost sharing.—To the extent cost sharing under subsections (c) and (e) or under section 1916 is imposed against individuals described in subparagraph (A), the limitation under subsection (b)(1)(B)(ii) on the total aggregate amount of cost sharing shall apply to such cost sharing for all individuals in a family described in subparagraph (A) in the same manner as such limitations apply to cost sharing and families described in subsection (b)(1)(B)(ii).

(3) Definitions.—In this section:

(A) Premium.—The term “premium” includes any enrollment fee or similar charge.

(B) Cost sharing.—The term “cost sharing” includes any deduction, copayment, or similar charge.

(b) Limitations on Exercise of Authority.—

(1) Individuals with family income between 100 and 150 percent of the poverty line.—In the

case of an individual whose family income exceeds 100 percent, but does not exceed 150 percent, of the poverty line applicable to a family of the size involved—

(A) no premium may be imposed under the plan; and

(B) with respect to cost sharing—

(i) the cost sharing imposed under subsection (a) with respect to any item or service may not exceed 10 percent of the cost of such item or service; and

(ii) the total aggregate amount of cost sharing imposed under this section (including any cost sharing imposed under subsection (c) or (e)) for all individuals in the family may not exceed 5 percent of the family income of the family involved, as applied on a quarterly or monthly basis (as specified by the State).

(2) Individuals with family income above 150 percent of the poverty line.—In the case of an individual whose family income exceeds 150 percent of the poverty line applicable to a family of the size involved—

(A) the total aggregate amount of premiums and cost sharing imposed under this section (including any cost sharing imposed under subsection (c) or (e)) for all individuals in the family may not exceed 5 percent of the family income of the family involved, as applied on a quarterly or monthly basis (as specified by the State); and

(B) with respect to cost sharing, the cost sharing imposed with respect to any item or service under subsection (a) may not exceed 20 percent of the cost of such item or service.

(3) Additional limitations.—

(A) Premiums.—No premiums shall be imposed under this section with respect to the following:

(i) Individuals under 18 years of age that are required to be provided medical assistance under section 1902(a)(10)(A)(i), and including individuals with respect to whom child welfare services are being made available under part B of title IV on the basis of being a child in foster care and individuals with respect to whom adoption or foster care assistance is made available under part E of such title, without regard to age.

(ii) Pregnant women.

(iii) Any terminally ill individual who is receiving hospice care (as defined in section 1905(o)).

(iv) Any individual who is an inpatient in a hospital, nursing facility, intermediate care facility for the mentally retarded, or other medical institution, if such individual is required, as a condition of receiving services in such institution under the State plan, to spend for costs of medical care all but a minimal amount of the individual's income required for personal needs.

(v) Women who are receiving medical assistance by virtue of the application of sections 1902(a)(10)(A)(ii)(XVIII) and 1902(aa).

(vi) Disabled children who are receiving medical assistance by virtue of the application of sections 1902(a)(10)(A)(ii)(XIX) and 1902(cc).

(B) Cost sharing.—Subject to the succeeding provisions of this section, no cost sharing shall be imposed under subsection (a) with respect to the following:

(i) Services furnished to individuals under 18 years of age that are required to be provided medical assistance under section 1902(a)(10)(A)(i), and including services furnished to individuals with respect to whom child welfare services are being made available under part B of title IV on the basis of being a child in foster care or and individuals with respect to whom adoption or foster care assistance is made available under part E of such title, without regard to age.

(ii) Preventive services (such as well baby and well child care and immunizations) provided to children under 18 years of age regardless of family income.

(iii) Services furnished to pregnant women, if such services relate to the pregnancy or to any other medical condition which may complicate the pregnancy.

(iv) Services furnished to a terminally ill individual who is receiving hospice care (as defined in section 1905(o)).

(v) Services furnished to any individual who is an inpatient in a hospital, nursing facility, intermediate care facility for the mentally retarded, or other medical institution, if such individual is required, as a condition of receiving services in such institution under the State plan, to spend for costs of medical care all but a minimal amount of the individual's income required for personal needs.

(vi) Emergency services (as defined by the Secretary for purposes of section 1916(a)(2)(D)).

(vii) Family planning services and supplies described in section 1905(a)(4)(C).

(viii) Services furnished to women who are receiving medical assistance by virtue of the application of sections 1902(a)(10)(A)(ii)(XVIII) and 1902(aa).

(ix) Services furnished to disabled children who are receiving medical assistance by virtue of the application of sections 1902(a)(10)(A)(ii)(XIX) and 1902(cc).

(C) Construction.—Nothing in this paragraph shall be construed as preventing a State from exempting additional classes of individuals from premiums under this section or from exempting additional individuals or services from cost sharing under subsection (a).

(4) Determinations of family income.—In applying this subsection, family income shall be determined in a manner specified by the State for purposes of this subsection, including the use of such disregards as the State may provide. Family income shall be determined for such period and at such periodicity as the State may provide under this title.

(5) Poverty line defined.—For purposes of this section, the term "poverty line" has the meaning given such term in section 673(2) of the Community Services Block Grant Act^[109] (42 U.S.C.

9902(2)), including any revision required by such section.

(6) Construction.—Nothing in this section shall be construed—

(A) as preventing a State from further limiting the premiums and cost sharing imposed under this section beyond the limitations provided under this section;

(B) as affecting the authority of the Secretary through waiver to modify limitations on premiums and cost sharing under this section; or

(C) as affecting any such waiver of requirements in effect under this title before the date of the enactment of this section with regard to the imposition of premiums and cost sharing.

(c) Special Rules for Cost Sharing for Prescription Drugs.—

(1) In general.—In order to encourage beneficiaries to use drugs (in this subsection referred to as “preferred drugs”) identified by the State as the most (or more) cost effective prescription drugs within a class of drugs (as defined by the State), with respect to one or more groups of beneficiaries specified by the State, subject to paragraph (2), the State may—

(A) provide cost sharing (instead of the level of cost sharing otherwise permitted under section 1916, but subject to paragraphs (2) and (3)) with respect to drugs that are not preferred drugs within a class; and

(B) waive or reduce the cost sharing otherwise applicable for preferred drugs within such class and shall not apply any such cost sharing for such preferred drugs for individuals for whom cost sharing may not be imposed under subsection (a) due to the application of subsection (b) (3)(B).

(2) Limitations.—

(A) By income group.—In no case may the cost sharing under paragraph (1)(A) with respect to a non-preferred drug exceed—

(i) in the case of an individual whose family income does not exceed 150 percent of the poverty line applicable to a family of the size involved, the amount of nominal cost sharing (as otherwise determined under section 1916); or

(ii) in the case of an individual whose family income exceeds 150 percent of the poverty line applicable to a family of the size involved, 20 percent of the cost of the drug.

(B) Limitation to nominal for exempt populations.—In the case of an individual who is not subject to cost sharing under subsection (a) due to the application of paragraph (1)(B), any cost sharing under paragraph (1)(A) with respect to a non-preferred drug may not exceed a nominal amount (as otherwise determined under section 1916).

(C) Continued application of aggregate cap.—In addition to the limitations imposed under subparagraphs (A) and (B), any cost sharing under paragraph (1)(A) continues to be subject to the aggregate cap on cost sharing under subsection (a)(2)(B) or applied under paragraph (1) or (2) of subsection (b), as the case may be.

(3) Waiver.—In carrying out paragraph (1), a State shall provide for the application of cost sharing levels applicable to a preferred drug in the case of a drug that is not a preferred drug if the prescribing physician determines that the preferred drug for treatment of the same condition either would not be as effective for the individual or would have adverse effects for the individual or both.

(4) Exclusion authority.—Nothing in this subsection shall be construed as preventing a State from excluding specified drugs or classes of drugs from the application of paragraph (1).

(d) Enforceability of Premiums and Other Cost Sharing.—

(1) Premiums.—Notwithstanding section 1916(c)(3) and section 1902(a)(10)(B), a State may, at its option, condition the provision of medical assistance for an individual upon prepayment of a premium authorized to be imposed under this section, or may terminate eligibility for such medical assistance on the basis of failure to pay such a premium but shall not terminate eligibility of an individual for medical assistance under this title on the basis of failure to pay any such premium until such failure continues for a period of not less than 60 days. A State may apply the previous sentence for some or all groups of beneficiaries as specified by the State and may waive payment of any such premium in any case where the State determines that requiring such payment would create an undue hardship.

(2) Cost sharing.—Notwithstanding section 1916(e) or any other provision of law, a State may permit a provider participating under the State plan to require, as a condition for the provision of care, items, or services to an individual entitled to medical assistance under this title for such care, items, or services, the payment of any cost sharing authorized to be imposed under this section with respect to such care, items, or services. Nothing in this paragraph shall be construed as preventing a provider from reducing or waiving the application of such cost sharing on a case-by-case basis.

(e) State Option for Permitting Hospitals To Impose Cost Sharing for Non-Emergency Care Furnished in an Emergency Department.—

(1) In general.—Notwithstanding section 1916 and section 1902(a)(1) or the previous provisions of this section, but subject to the limitations of paragraph (2), a State may, by amendment to its State plan under this title, permit a hospital to impose cost sharing for non-emergency services furnished to an individual (within one or more groups of individuals specified by the State) in the hospital emergency department under this subsection if the following conditions are met:

(A) Access to non-emergency room provider.—The individual has actually available and accessible (as such terms are applied by the Secretary under section 1916(b)(3)) an alternate non-emergency services provider with respect to such services.

(B) Notice.—The hospital must inform the beneficiary after receiving an appropriate medical screening examination under section 1867 and after a determination has been made that the individual does not have an emergency medical condition, but before providing the non-emergency services, of the following:

(i) The hospital may require the payment of the State specified cost sharing before the service can be provided.

(ii) The name and location of an alternate non-emergency services provider (described in subparagraph (A)) that is actually available and accessible (as described in such subparagraph).

(iii) The fact that such alternate provider can provide the services without the imposition of cost sharing described in clause (i).

(iv) The hospital provides a referral to coordinate scheduling of this treatment.

Nothing in this subsection shall be construed as preventing a State from applying (or waiving) cost sharing otherwise permissible under this section to services described in clause (iii).

(2) Limitations.—

(A) Individuals with family income between 100 and 150 percent of the poverty line.—In the case of an individual described in subsection (b)(1) who is not described in subparagraph (B), the cost sharing imposed under this subsection may not exceed twice the amount determined to be nominal under section 1916, subject to the percent of income limitation otherwise applicable under subsection (b)(1)(B)(ii).

(B) Application to exempt populations.—In the case of an individual described in subsection (a)(2)(A) or who is not subject to cost sharing under subsection (b)(3)(B) with respect to non-emergency services described in paragraph (1), a State may impose cost sharing under paragraph (1) for care in an amount that does not exceed a nominal amount (as otherwise determined under section 1916) so long as no cost sharing is imposed to receive such care through an outpatient department or other alternative health care provider in the geographic area of the hospital emergency department involved.

(C) Continued application of aggregate cap; relation to other cost sharing.—In addition to the limitations imposed under subparagraphs (A) and (B), any cost sharing under paragraph (1) is subject to the aggregate cap on cost sharing under subsection (a)(2)(B) or applied under paragraph (1) or (2) of subsection (b), as the case may be. Cost sharing imposed for services under this subsection shall be instead of any cost sharing that may be imposed for such services under subsection (a) or section 1916.

(3) Construction.—Nothing in this section shall be construed—

(A) to limit a hospital's obligations with respect to screening and stabilizing treatment of an emergency medical condition under section 1867; or

(B) to modify any obligations under either State or Federal standards relating to the application of a prudent-layperson standard with respect to payment or coverage of emergency services by any managed care organization.

(4) Definitions.—For purposes of this subsection:

(A) Non-emergency services.—The term “non-emergency services” means any care or services furnished in an emergency department of a hospital that do not constitute an appropriate medical screening examination or stabilizing examination and treatment required to be provided by the hospital under section 1867.

(B) Alternate non-emergency services provider.—The term “alternative non-emergency services provider” means, with respect to non-emergency services for the diagnosis or treatment of a condition, a health care provider, such as a physician's office, health care clinic, community health center, hospital outpatient department, or similar health care provider, that can provide clinically appropriate services for the diagnosis or treatment of a condition contemporaneously with the provision of the non-emergency services that would be provided in an emergency department of a hospital for the diagnosis or treatment of a condition, and that is participating in the program under this title.

ALASKA STATE LEGISLATURE

State Representative Bob Herron

Official Business

State Capitol
Juneau, Alaska
99801-1182

MEMORANDUM

TO: House Health & Social Services Committee

FROM: Representative Herron

DATE: March 10, 2009

RE: SB 13 – Medical Assistance Eligibility

A handwritten signature in black ink, appearing to read "Bob Herron".

For your reference, I have attached the report "Implementation of the State Children's Health Insurance Program: Synthesis of State Evaluations." Mathematica Policy Research, Inc completed this report in 2003 as background for Congress.

There are a range of different methods used by States when implementing SCHIP programs including: premiums, copayments, deductibles, and enrollment fees. According to this report, Alaska utilized copayments to charge 18 year olds 5% of the outpatient hospital visit.

I want to emphasize that Table IV.1 is an old snapshot of the various ways states have used cost sharing as a way to control the cost and utilization of services provided under the SCHIP program.

SOURCE: Mathematica Policy Research analysis of the title XXI State Evaluations, Sections 3.2.1, 3.3.1, and 3.3.7 of the State Evaluation Framework.

NOTE: The type of SCHIP program is as of March 31, 2001. The state evaluations generally present program characteristics as of September 30, 1999.

^a For detailed premium information, see Table IV.2.

^b In the Alabama S-SCHIP program, children between 100 and 150 percent of poverty have no cost sharing. For children between 151 and 200 percent of poverty there is no deductible and a \$5 copay on some services in addition to a \$50 per year premium with a premium maximum of \$150 per family per year. In the M-SCHIP program, only 18 year olds are subject to copayments.

^c Applies only to S-SCHIP program.

^d Applies to both S-SCHIP and M-SCHIP program.

^e In Alaska, only 18 year olds are subject to copayments.

^f Arizona applies copays only to emergency room use.

^g California's S-SCHIP program has a cap on copays of \$250 per family per year.

^h In Colorado's S-SCHIP program, copayments vary by income. There are no copayments for families with income under 101 percent of poverty. Families between 101 and 150 percent of poverty pay a smaller copay than families between 151 and 185 percent of poverty.

ⁱ Florida has three S-SCHIP programs: Healthy Kids, CMS, and MediKids. Healthy Kids is the only program with copayments.

^j In Illinois, the annual copayment maximum per family is \$100. Families with children who are American Indian or Alaska Natives do not pay premiums or copays. S-SCHIP cost sharing varies based on program: KidCare Share covers children greater than 133 to 150 percent of poverty; KidCare Premium covers children between 151 and 185 percent of poverty. Copayments vary by service and income level; premiums vary by income level.

^k Massachusetts has three S-SCHIP programs: Family Assistance Direct Coverage (FADC), Family Assistance Premium Assistance (FAPA), and CommonHealth (CH). CH has no cost sharing. FADC has no copayments, although it does have premiums. FAPA has premiums; copayments are in accordance with the individual ESI policy, subject to limitations under title XXI.

^l In Mississippi, there are no cost-sharing requirements for families with income below 150 percent of poverty or for American Indian/Native Alaskan children. Families in the S-SCHIP program, with incomes between 150 and 175 percent of poverty have copays on certain services and pay a maximum out of pocket of \$800 per calendar year. Families with incomes between 176 percent and 200 percent of poverty have higher copays on certain services and pay a maximum out of pocket of \$950 per calendar year. There is no copay for preventive services.

^m Families with incomes between 226 and 300 percent of poverty must pay a premium for the Missouri M-SCHIP program. Copayments also vary by income: families with incomes between 186 and 225 percent pay smaller copayments than families with incomes between 226 and 300 percent of poverty.

ⁿ Montana S-SCHIP has copayments for those with family incomes greater than 100 percent of poverty.

^o New Jersey has three S-SCHIP programs: Plans B, C and D. Plan B offers coverage to children in families with gross incomes between 133 and 150 percent of poverty; Plan C covers children between 151 and 200 percent of poverty; and Plan D covers children between 201 and 350 percent of poverty. Only Plans C and D have any form of cost sharing.

^p In New Mexico M-SCHIP, copayments only apply to those between 185 and 235 percent of poverty.

^q In North Carolina, copayments only apply to those with incomes greater than 151 percent of poverty.

^r In Rhode Island, cost sharing is only for families with income in excess of 185 percent of poverty if they elected a coinsurance rather than a premium option.

^s In Utah, cost sharing varies by plan. Plan A applies to enrollees at or below 150 percent of poverty. Plan B enrollees have family incomes between 151 and 200 percent of poverty. Plan B has higher copayments than Plan A (although Plan A cost sharing applies only to those between 101 and 150 percent of poverty).

^t Washington has no cost sharing for American Indians/Native Alaskans. Annual maximum out-of-pocket costs are \$300 for one child, \$600 for two children, and \$900 for three or more children.

^u Wisconsin copayments are only for non-pregnant adults in Medicaid FFS.

Page 7 - includes this cover.

To the Member of the House, Health and Social Services Comm.

Please pass SB 13 out of your committee so that it might pass the full House and Senate and become law. I'm fortunate enough to have health insurance through my job so that my three kids can receive adequate health care without putting me into debt. I have friends, families that are on the fringe of the current income requirement of 175% of the poverty line. By providing Seneca KidCare health insurance to kids whose parents earn up to 200% of the poverty line, the state will allow families of moderate means the ability to see that their kids receive adequate health care. We will join 46 other states that have an income threshold of 200% or higher, and we will provide health care to kids at a very reasonable cost to their state. After all, the federal government matches ^{every} around 20 cents of state monies with 70 cents.

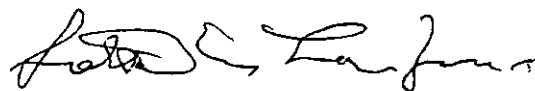

In these rough economic times, please help more working families provide health care to their children.

Sincerely, Greg Bidwell of Anchorage Alaska
3301 Paradise Street 99508

To the Members of the House Health and Social Services
Comm.,

I ask you to pass SB13, funding for children, for
the benefit of Alaskan children, and Alaska people,
~~our~~ our children are our investment of our past.

Sincerely,
RICHARD LYNKY JUNIOR
3722 PARSONS AVE
ANCHORAGE, AK. 99508

4/19/09

To the Members of the House Health and Social Services Comm

Please support the Denali KidCare Program
to 200% of the Federal Poverty Line.

Health insurance is a basic human
right to which I believe all, especially
children, are entitled.

Sincerely,

CLIFFORD MARVIN

201 EAST 16th AVENUE

ANCHORAGE AK 99501

House Health and Social Services Committee
Juneau, AK.

Dear Committee Members:

1. I urge you to pass the bill which covers health care for Alaskan Children. We must restore the standard which existed Twelve years ago when the Denali Kid Care Program was based at 200% of the Federal Poverty Level.
2. It is distressing that Alaska is one of our wealthiest states but we are one of only five states which funds this program below this level.
3. Early intervention and preventive care are essential for the well being of our children and will yield substantial savings to state, and private sector health based institutions.
4. Thank you for your cooperation and I look forward to seeing your support of this bill.

Lane M. Garrett
3701 Winterset Dr
Anchorage, 99508

4/19/09.

Dear Members of the House Health +
Social Services Committee —

I am writing to urge you to please pass
House Bill 61 - which covers health care for
Alaskan children whose families are at the
200% of federal poverty level.

It amazes me that our state is one
of the most wealthy, yet 45 states
do better than we do re: covering children's
health care needs.

Families at this level of poverty are
stretched, stressed + vulnerable; if health
care takes a back seat - family fall
apart. It is crazy to think we cannot
help support a basic need as this.

Again I urge you to support this
house bill - our state needs a
better future for ~~you~~ our children to
be a part of.

Thank you,

Sincerely,

Maureen Johnson, OT

CONCEPTIONAL AMENDMENT #

OFFERED IN THE HOUSE
TO: SB 13

BY REPRESENTATIVE KELLER

SPONSOR(s): SENATOR(S) DAVIS, Ellis, Paskvan, Wielechowski, French REPRESENTATIVE(S) Gruenberg

SHORT TITLE: MEDICAL ASSISTANCE
ELIGIBILITY

STATUS DATE: 04/07/09

Conceptional Amendment 1

AS 47.07.020(b) is amended to read:

02 (13) persons under 19 years of age who are not covered under (a) of
03 this section and whose household income does not exceed 210 [200] [175] percent of the
04 federal poverty line as defined by the United States Department of Health and Human
05 Services and revised under 42 U.S.C. 9902(2);

06 (14) pregnant women who are not covered under (a) of this section and
07 whose household income does not exceed 210 [200] [175] percent of the federal poverty line
08 as defined by the United States Department of Health and Human Services and revised
09 under 42 U.S.C. 9902(2);

10 (15) persons who have been diagnosed with breast or cervical cancer
11 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII).

12 * **Sec. 2.** AS 47.07.042(d) is amended to read:

13 (d) In addition to the requirements established under (a) and (b) of this section,
14 the department may require premiums or cost-sharing contributions from recipients
15 who are eligible for benefits under AS 47.07.020(b)(13) and whose household income
16 is between [150] 185 and 210 [175] percent of the federal poverty line. If the department
17 requires premiums or cost-sharing contributions under this subsection, the department

18 (1) shall adopt in regulation a sliding scale for those premiums, [or]
19 contributions, or co-pay based on household income;

20 (a) 185.1% to 190% co-pay of 10%

21 (b) 190.1% to 195% co-pay of 20%

22 (c) 195.1% to 200% co-pay of 30%

23 (d) 200.1% to 205% co-pay of 40%

24 (e) 205.1% to 210% co-pay of 50%

25 (2) may not exceed the maximums allowed under federal law; and

26 (3) shall implement a system by which the department or its designee
27 collects those premiums, [or] contributions, or co-pays.

Conceptional Amendment 2

01 * **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

02 CONTINGENT EFFECT. AS 47.07.020(b)(13 & 14), and 47.07.042(d),
03 added in secs. 2, of this Act, take effect only if, before July 1, 2011, the United States
04 Department of Health and Human Services has approved the changes and provided sufficient
05 funding for the changes.

06 * **Sec. 6.** If AS 47.07.020(b)(16), 47.07.020(o), and 47.07.042(g), added in secs. 2, 3, and 4
07 of this Act, take effect, they take effect on the date that the revisor of statutes receives notice
08 from the commissioner of health and social services that the United States Department of
09 Health and Human Services has approved the changes and provided sufficient funding for the
10 additions.

MEMORANDUM

March 16, 2010

SUBJECT: Title change necessitated by adding co-payment provisions
(SB 13; Work Order No. 26-LS0076\A.9)

TO: Representative Wes Keller
Chair of the House Health and Social Services Committee
Attn: Matthew Johnson

FROM: Jean M. Mischel
Legislative Counsel 

As in amendment A.5 of the above bill, the addition of copayment provisions modifies the Senate-passed bill to add new material that necessitates a change in the bill title. This is a bill title change in the measure's second ("other") house. The limitation of Uniform Rule 41(b) applies:

(b) An amendment to a bill introduced in the other house is not in order if the amendment requires a change of the bill title other than a clerical or technical change.

In submitting the committee report for SB 13, the House Finance Committee should also introduce a companion concurrent resolution waiving the application of the appropriate uniform rules in order to accommodate the amendments and the related bill title addition.

If I may be of further assistance, please advise.

AMENDMENT

OFFERED IN THE HOUSE

BY REPRESENTATIVE KELLER

TO: SB 13

1 Page 4, line 23:

2 Delete all material and insert:

3 **** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to
4 read:

5 CONTINGENT EFFECT; NOTIFICATION OF FEDERAL APPROVAL. (a)
6 AS 47.07.020(b)(13), as amended by sec. 1 of this Act, takes effect only if, before July 1,
7 2011, the United States Department of Health and Human Services has approved the change
8 and included sufficient funding in the federal budget to provide for the change in the fiscal
9 year immediately following the passage of this Act by the Alaska State Legislature.

10 (b) AS 47.07.020(b)(14), as amended by sec. 1 of this Act, takes effect only if, before
11 July 1, 2011, the United States Department of Health and Human Services has approved the
12 change and included sufficient funding in the federal budget to provide for the change in the
13 fiscal year immediately following the passage of this Act by the Alaska State Legislature.

14 (c) AS 47.07.042(d), as amended by sec. 2 of this Act, takes effect only if, before
15 July 1, 2011, the United States Department of Health and Human Services has approved the
16 change and included sufficient funding in the federal budget to provide for the change in the
17 fiscal year immediately following the passage of this Act by the Alaska State Legislature.

18 (d) The commissioner of health and social services shall notify the revisor of statutes
19 of the federal approval and funding provided for in (a) - (c) of this section.

20 *** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to
21 read:

22 CONTINGENT EFFECTIVE DATES. (a) If AS 47.07.020(b)(13), as amended by
23 sec. 1 of this Act, takes effect under sec. 3(a) of this Act, it takes effect on the day after the

1 day that the revisor of statutes receives notice from the commissioner of health and social
2 services that the United States Department of Health and Human Services has approved the
3 change and provided sufficient federal funding to provide for the change as provided in sec.
4 3(a) of this Act.

5 (b) If AS 47.07.020(b)(14), as amended by sec. 1 of this Act, takes effect under sec.
6 3(b) of this Act, it takes effect on the day after the day that the revisor of statutes receives
7 notice from the commissioner of health and social services that the United States Department
8 of Health and Human Services has approved the change and provided sufficient federal
9 funding to provide for the change as provided in sec. 3(b) of this Act.

10 (c) If AS 47.07.042(d), as amended by sec. 2 of this Act, takes effect under sec. 3(c)
11 of this Act, it takes effect on the day after the day that the revisor of statutes receives notice
12 from the commissioner of health and social services that the United States Department of
13 Health and Human Services has approved the change and provided sufficient federal funding
14 to provide for the change as provided in sec. 3(c) of this Act."

MEMORANDUM

March 17, 2010

SUBJECT: Descriptive Title (SB 13; Work Order No. 26-LS0076\A.11)

TO: Representative Wes Keller
Co-chair of the House Health and Social Services Committee
Attn: Matthew Johnson

FROM: Jean M. Mischel
Legislative Counsel 

As we discussed by telephone and as presented in a previous memorandum on this subject, the addition of specific cost-sharing requirements for medical assistance recipients by the above-referenced amendment may not be clear from the title of the bill, which only refers to eligibility requirements. Sec. 3, added by this amendment, requires the addition of premium payments by some medical assistance recipients. While the amendment at page one inserts a new category of eligibility relating to those recipients and the premium requirement is linked to eligibility, the payment of the premium may not be made until eligibility is first determined on the basis of income.

The bill title without the amendment may also be misleading in the sense that the cost sharing limits are amended by sec. 2 on the basis of the income adjustments made for eligibility.

If I may be of further assistance, please advise.

Sponsor(s): SENATORS DAVIS, Ellis, Paskvan, Wielechowski, French
REPRESENTATIVE Gruenberg

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to eligibility requirements for medical assistance for certain children**
2 **and pregnant women; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1. AS 47.07.020(b) is amended to read:**

5 (b) In addition to the persons specified in (a) of this section, the following
6 optional groups of persons for whom the state may claim federal financial
7 participation are eligible for medical assistance:

8 (1) persons eligible for but not receiving assistance under any plan of
9 the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act,
10 Supplemental Security Income) or a federal program designated as the successor to the
11 aid to families with dependent children program;

12 (2) persons in a general hospital, skilled nursing facility, or
13 intermediate care facility, who, if they left the facility, would be eligible for assistance
14 under one of the federal programs specified in (1) of this subsection;

15 (3) persons under 21 years of age who are under supervision of the
16 department, for whom maintenance is being paid in whole or in part from public

1 funds, and who are in foster homes or private child-care institutions;

2 (4) aged, blind, or disabled persons, who, because they do not meet
3 income and resources requirements, do not receive supplemental security income
4 under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not
5 receive a mandatory state supplement, but who are eligible, or would be eligible if
6 they were not in a skilled nursing facility or intermediate care facility to receive an
7 optional state supplementary payment;

8 (5) persons under 21 years of age who are in an institution designated
9 as an intermediate care facility for the mentally retarded and who are financially
10 eligible as determined by the standards of the federal program designated as the
11 successor to the aid to families with dependent children program;

12 (6) persons in a medical or intermediate care facility whose income
13 while in the facility does not exceed \$1,656 a month but who would not be eligible for
14 an optional state supplementary payment if they left the hospital or other facility;

15 (7) persons under 21 years of age who are receiving active treatment in
16 a psychiatric hospital and who are financially eligible as determined by the standards
17 of the federal program designated as the successor to the aid to families with
18 dependent children program;

19 (8) persons under 21 years of age and not covered under (a) of this
20 section, who would be eligible for benefits under the federal program designated as
21 the successor to the aid to families with dependent children program, except that they
22 have the care and support of both their natural and adoptive parents;

23 (9) pregnant women not covered under (a) of this section and who
24 meet the income and resource requirements of the federal program designated as the
25 successor to the aid to families with dependent children program;

26 (10) persons under 21 years of age not covered under (a) of this section
27 who the department has determined cannot be placed for adoption without medical
28 assistance because of a special need for medical or rehabilitative care and who the
29 department has determined are hard-to-place children eligible for subsidy under
30 AS 25.23.190 - 25.23.210;

31 (11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title

1 XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom
2 a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title
3 XVI, Social Security Act) because they meet all of the following criteria:

4 (A) they are 18 years of age or younger and qualify as disabled
5 individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

6 (B) the department has determined that

7 (i) they require a level of care provided in a hospital,
8 nursing facility, or intermediate care facility for the mentally retarded;

9 (ii) it is appropriate to provide their care outside of an
10 institution; and

11 (iii) the estimated amount that would be spent for
12 medical assistance for their individual care outside an institution is not
13 greater than the estimated amount that would otherwise be expended
14 individually for medical assistance within an appropriate institution;

15 (C) if they were in a medical institution, they would be eligible
16 for medical assistance under other provisions of this chapter; and

17 (D) home and community-based services under a waiver
18 approved by the federal government are either not available to them under this
19 chapter or would be inappropriate for them;

20 (12) disabled persons, as described in 42 U.S.C.
21 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under
22 applicable federal regulations or guidelines, is less than 250 percent of the official
23 poverty line applicable to a family of that size according to the United States
24 Department of Health and Human Services, and who, but for earnings in excess of the
25 limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be
26 individuals with respect to whom a supplemental security income is being paid under
27 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is
28 not eligible under another provision of this section shall pay a premium or other cost-
29 sharing charges according to a sliding fee scale that is based on income as established
30 by the department in regulations;

31 (13) persons under 19 years of age who are not covered under (a) of

1 this section and whose household income does not exceed 200 [175] percent of the
2 federal poverty line as defined by the United States Department of Health and Human
3 Services and revised under 42 U.S.C. 9902(2);

4 (14) pregnant women who are not covered under (a) of this section and
5 whose household income does not exceed 200 [175] percent of the federal poverty line
6 as defined by the United States Department of Health and Human Services and revised
7 under 42 U.S.C. 9902(2);

8 (15) persons who have been diagnosed with breast or cervical cancer
9 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII).

10 * Sec. 2. AS 47.07.042 is amended by adding a new subsection to read:

11 (g) In addition to the requirements established under (a) and (b) of this section,
12 the department shall require annual premiums from recipients who are eligible for
13 benefits under AS 47.07.020(b)(13) and (14) and whose household income is more
14 than 175 percent of the federal poverty line. The department shall

15 (1) adopt in regulation a sliding scale, providing for a premium that

16 (A) is not less than two percent of the recipient's household
17 income; and

18 (B) meets the maximums allowed under federal law; and

19 (2) implement a system for collection of the premium.

20 * Sec. 3. This Act takes effect immediately under AS 01.10.070(c).

FOR AN ACT ENTITLED

1 **"An Act relating to eligibility requirements for medical assistance for certain children**
2 **and pregnant women; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.07.020(b) is amended to read:

5 (b) In addition to the persons specified in (a) of this section, the following
6 optional groups of persons for whom the state may claim federal financial
7 participation are eligible for medical assistance:

8 (1) persons eligible for but not receiving assistance under any plan of
9 the state approved under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act,
10 Supplemental Security Income) or a federal program designated as the successor to the
11 aid to families with dependent children program;

12 (2) persons in a general hospital, skilled nursing facility, or
13 intermediate care facility, who, if they left the facility, would be eligible for assistance
14 under one of the federal programs specified in (1) of this subsection;

15 (3) persons under 21 years of age who are under supervision of the
16 department, for whom maintenance is being paid in whole or in part from public

1 funds, and who are in foster homes or private child-care institutions;

2 (4) aged, blind, or disabled persons, who, because they do not meet
3 income and resources requirements, do not receive supplemental security income
4 under 42 U.S.C. 1381 - 1383c (Title XVI, Social Security Act), and who do not
5 receive a mandatory state supplement, but who are eligible, or would be eligible if
6 they were not in a skilled nursing facility or intermediate care facility to receive an
7 optional state supplementary payment;

8 (5) persons under 21 years of age who are in an institution designated
9 as an intermediate care facility for the mentally retarded and who are financially
10 eligible as determined by the standards of the federal program designated as the
11 successor to the aid to families with dependent children program;

12 (6) persons in a medical or intermediate care facility whose income
13 while in the facility does not exceed \$1,656 a month but who would not be eligible for
14 an optional state supplementary payment if they left the hospital or other facility;

15 (7) persons under 21 years of age who are receiving active treatment in
16 a psychiatric hospital and who are financially eligible as determined by the standards
17 of the federal program designated as the successor to the aid to families with
18 dependent children program;

19 (8) persons under 21 years of age and not covered under (a) of this
20 section, who would be eligible for benefits under the federal program designated as
21 the successor to the aid to families with dependent children program, except that they
22 have the care and support of both their natural and adoptive parents;

23 (9) pregnant women not covered under (a) of this section and who
24 meet the income and resource requirements of the federal program designated as the
25 successor to the aid to families with dependent children program;

26 (10) persons under 21 years of age not covered under (a) of this section
27 who the department has determined cannot be placed for adoption without medical
28 assistance because of a special need for medical or rehabilitative care and who the
29 department has determined are hard-to-place children eligible for subsidy under
30 AS 25.23.190 - 25.23.210;

31 (11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title

1 XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom
2 a supplemental security income is being paid under 42 U.S.C. 1381 - 1383c (Title
3 XVI, Social Security Act) because they meet all of the following criteria:

4 (A) they are 18 years of age or younger and qualify as disabled
5 individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

6 (B) the department has determined that

7 (i) they require a level of care provided in a hospital,
8 nursing facility, or intermediate care facility for the mentally retarded;

9 (ii) it is appropriate to provide their care outside of an
10 institution; and

11 (iii) the estimated amount that would be spent for
12 medical assistance for their individual care outside an institution is not
13 greater than the estimated amount that would otherwise be expended
14 individually for medical assistance within an appropriate institution;

15 (C) if they were in a medical institution, they would be eligible
16 for medical assistance under other provisions of this chapter; and

17 (D) home and community-based services under a waiver
18 approved by the federal government are either not available to them under this
19 chapter or would be inappropriate for them;

20 (12) disabled persons, as described in 42 U.S.C.
21 1396a(a)(10)(A)(ii)(XIII), who are in families whose income, as determined under
22 applicable federal regulations or guidelines, is less than 250 percent of the official
23 poverty line applicable to a family of that size according to the United States
24 Department of Health and Human Services, and who, but for earnings in excess of the
25 limit established under 42 U.S.C. 1396d(q)(2)(B), would be considered to be
26 individuals with respect to whom a supplemental security income is being paid under
27 42 U.S.C. 1381 - 1383c; a person eligible for assistance under this paragraph who is
28 not eligible under another provision of this section shall pay a premium or other cost-
29 sharing charges according to a sliding fee scale that is based on income as established
30 by the department in regulations;

31 (13) persons under 19 years of age who are not covered under (a) of

1 this section and whose household income does not exceed 200 [175] percent of the
2 federal poverty line as defined by the United States Department of Health and Human
3 Services and revised under 42 U.S.C. 9902(2);

4 (14) pregnant women who are not covered under (a) of this section and
5 whose household income does not exceed 200 [175] percent of the federal poverty line
6 as defined by the United States Department of Health and Human Services and revised
7 under 42 U.S.C. 9902(2);

8 (15) persons who have been diagnosed with breast or cervical cancer
9 and who are eligible for coverage under 42 U.S.C. 1396a(a)(10)(A)(ii)(XVIII).

10 * **Sec. 2.** AS 47.07.042(d) is amended to read:

11 (d) In addition to the requirements established under (a) and (b) of this section,
12 the department shall [MAY] require premiums or cost-sharing contributions from
13 recipients who are eligible for benefits under AS 47.07.020(b)(13) and (14) and
14 whose household income is between 150 and 200 [175] percent of the federal poverty
15 line. The department shall [IF THE DEPARTMENT REQUIRES PREMIUMS OR
16 COST-SHARING CONTRIBUTIONS UNDER THIS SUBSECTION, THE
17 DEPARTMENT]

18 (1) [SHALL] adopt in regulation a sliding scale for those premiums or
19 contributions based on household income that [;]

20 (i) [(2)] may not exceed the maximums allowed under
21 federal law; and

22 (ii) may not be less than two percent of the
23 recipient's household income; and

24 (2) [(3) SHALL] implement a system by which the department or its
25 designee collects those premiums or contributions.

26 * **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

SENATOR JOHNNY ELLIS
SENATE MAJORITY LEADER

MEMORANDUM

DATE: April 6, 2009

TO: Representative Bob Herron
Representative Wes Keller
Co-Chairs, House Health and Social Services Committee

FROM: Senator Johnny Ellis

RE: Hearing Request for SB 32 – Medicaid: Home/Community Based Services

I am requesting that Senate Bill 32, "An Act relating to medical assistance payments for home- and community-based services and provision of personal care services in a recipient's home; and providing for an effective date" be scheduled for a hearing in the Senate Finance Committee at your earliest convenience. The bill passed the Senate on a unanimous vote, and I am joined by nine co-sponsors from both parties and all regions of the state.

This bill includes the providers of home- and community-based services to Alaska's senior and developmentally disabled populations in the regular rate review process afforded to providers of institutional care. Alaska has made great strides in reforming our network of support for seniors as well as for children and adults with developmental disabilities. Our long-standing state policy is to promote the least restrictive and most cost-effective forms of care, and SB32 does that by providing an equitable review process to home- and community-based service providers.

Included in this packet:

- A current version of CSSB 32 (FIN) – 26-LS0218\M
- Fiscal Notes
- Sponsor Statement
- Letters of Support
- Background Information

Thank you for your consideration. Please contact my staff Max Hensley with any questions.

SPONSOR STATEMENT – SENATE BILL 32

AN ACT RELATING TO MEDICAL ASSISTANCE PAYMENTS FOR HOME- AND COMMUNITY-BASED SERVICES

Senate Bill 32 creates a mechanism for regular Medicaid rate review for providers of home- and community-based services to Alaska's elderly and developmentally disabled citizens. Institutional service providers receive regular reviews in order to bring rates in line with costs.

However, home and community-based services (HCBS) have been conclusively proven to lower overall long-term Medicaid costs. One recent study in the academic journal *Health Affairs* found that states with long-established high proportions of HCBS spending saw a 3% overall decrease in long-term care spending between 1995 and 2005 as opposed to a 14.5% increase in low-HCBS states. The study concluded:

“Justifications based on financial constraints can no longer be credibly offered as reasons for forcing such people [seniors and persons with developmental disabilities] into nursing homes and other institutions. HCBS programs may be one instance in which offering people greater choice also helps reduce costs.”¹

Over the last few years, however, rates for home- and community-based services have been frozen. During that time, not only have costs increased, the medical environment – including regulations, technology, and client expectations – has shifted dramatically. These shifts threaten the continued viability of the hundreds of HCBS providers, primarily private businesses that employ thousands of Alaskans in every region of the state.

Home and community based services are the key to helping our seniors and those living with developmental disabilities live their lives as productive members of our communities while controlling the growth of health care costs. Without the regular review process in Senate Bill 32, many providers will be forced out of business and HCBS services will be taken away from thousands of Alaskans across the state.

ANALYSIS: (Attach a separate page if necessary)

The proposed legislation amends AS 47.07 to add payment rate provisions for Medicaid providers of personal care services and home and community-based services. This legislation would require the Department to review rates annually and set rates considering periodic cost surveys and the Centers for Medicare and Medicaid Services' home health agency inflation rate. The effective date is July 1, 2011.

Approved by: Alison Elgee, Assistant Commissioner Date 3/19/2009
DHSS Finance & Management Services

FISCAL NOTE # 3

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. CSSB 32(FIN)

ANALYSIS CONTINUATION

Under this legislation, the Department would periodically survey providers to obtain cost information. There are approximately 350 home and community-based service providers , including assisted living homes, and an additional 50 personal care providers. Beginning in FY2010, the Department would need to begin developing cost surveys and providing training and technical assistance to providers as they modify their accounting systems to be able to respond to the surveys. The department needs to be able to provide this assistance to providers, so there is clear understanding of the information needed and clear definitions of cost centers; otherwise, it is likely that providers will be unable to provide accurate survey responses.

The Department would also perform some review and inspection of survey information to ensure accuracy before using survey data to set rates. Staff positions would be necessary to oversee the surveys and conduct rate setting operations. The department requires one of these position to be a supervisory level auditor to supervise staff in carrying out, and ensuring the integrity and accuracy of the new processes required by statute.

The legislation would also require the Department to prepare an annual report on the medical assistance rate payments under the new rate setting methodology through FY2014. This report would be prepared by the new rate setting staff at no additional cost.

Assumption:

Annual Personal Services:

2 Internal Auditor III positions and 1 Internal Auditor IV in the Office of Rate Review for cost surveys and rate setting - \$309.3

Annual Travel for audit staff to provide technical assistance and training to providers and receive training required by Government Auditing Standards - \$5.0 per FTE

Annual Contractual:

Office space, phones, etc. - \$12.8 per FTE

Annual Supplies - \$0.6 per FTE

FISCAL NOTE # 4

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. CSSB 32(FIN)

ANALYSIS CONTINUATION

This statute would affect approximately 350 businesses who are providers of home and community based services (HCBS), including residential living services. These services are delivered under four Medicaid waivers: Adults with Disabilities, Children with Complex Medical Conditions, Mental Retardation/Developmental Disabilities, and Older Alaskans. Expenditures for these waivers in FY2008 were \$141.5 million. This bill would also affect an estimated 52 businesses not included above that provide personal care services. Expenditures for personal care services in FY2008 were \$72.3 million. Total costs in FY2008 that would be subject to the rates is \$213.8 million.

HCBS and personal care providers currently have their rates or rate methodologies established in regulation. Since FY2004 all of those rates have been frozen (some longer), up until Y2009, when the legislature approved a 4-6% increase. This statute will require the Department to adjust Medicaid payment rates to HCBS and personal care providers to consider data from periodic cost surveys and the home health agency inflation rate.

ESTIMATED RATE ADJUSTMENT

This fiscal note assumes that rates are set under section 47.07.069(b)(3) applying the home health agency inflation rate (2.8%). FY2009 projected benefits of \$219.7 million (FY2008 actual costs plus 2.8%) are the baseline used to calculate the incremental costs in the fiscal note. Annual inflation adjustments of 2.8%, beginning in FY 2012, increase benefit costs by \$6.2 million the first year of implementation. By FY2015, costs increase \$25.7.

The Department has no way of estimating the impact of considering the periodic cost survey data on rates set under this bill as it does not have reliable cost survey data from providers upon which to base such an estimate. Therefore, this fiscal note does not reflect any increased or decreased cost from factoring in the cost survey data.

FUND SOURCE

Costs are eligible for the federal medical assistance percentage which is projected to be 50% in FY2012 and beyond.

* -- The legislation would not require rates increases in FY2010 or FY2011; however, any rate increases funded in those years could reduce the amount of new expenditures required to implement the bill.

Seniors helping Seniors

February 11, 2009

The Honorable Senator Johnny Ellis
Alaska State Legislature
State Capitol Building, Room #103
Juneau, Alaska 99801-1182

Dear Senator Ellis:

The Palmer Senior Citizens Center, Inc. (PSCC) wanted to express our sincere appreciation for your support and commitment to the seniors in the state of Alaska. PSCC supports your efforts to pass SB32 which will put into statute a regular review of home and community based waiver rates.

Thank you for making the time to meet with Kenneth Anderson, PSCC Board President, and Rachel Greenberg, Office Manager, on Tuesday, January 10th at 2:00.

The Palmer Senior Citizens Center, Inc. hopes that your busy schedule will allow time for you or your staff to visit us. Thank you again.

With Best Regards,

Kenneth A. Anderson

Kenneth A. Anderson
Board President

Richard G. Tubbs

Richard G. Tubbs
Executive Director

The Honorable Senator Johnny Ellis
State Capitol
Juneau, Alaska 99801-1182

Dear Senator Ellis;

I am writing in support of SB 32 on behalf of the membership of the Alaska Behavioral Health Association. The issues of rates and the mechanism and frequency of adjusting those rates are the primary issue for our membership this year.

We support the effort to put into place rate setting mechanisms for the home and community based services and that this model will be applied to the other providers that contract with the State of Alaska to deliver services. It is difficult to manage a business that is focused on delivering health care services when the cost for reimbursement does not keep pace with inflation and cost of living. Fixed costs don't go away and agencies have been trying to meet their grant obligations while keeping the business solvent. Employers are not able to offer competitive wage and benefit packages because of insufficient reimbursement rates.

Please let me know what else our members can do to support your legislation.
Thank you.

In Health,

Steve Horn
Executive Director

February 3, 2009

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 32-Ellis--Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 32, authored by your Committee colleague Senator Johnny Ellis and co-sponsored by you.

SB 32 would allow annual rate reviews of all home and community based services similar to the process for hospitals. Rates for HCBS services under Medicaid have remained the same for several years, discouraging needed providers from entering the field and forcing current providers to reduce their services and cut back on clients.

As we age, many of us would prefer to stay at home or with our families but sometimes we need extra help to do so. With the growing numbers of older people who need support to live on their own, private and public organizations now offer many different options to allow us to "age in place" in our homes and communities. These options form the continuum of home and community based services, ranging from meals on wheels to adult day care. In addition to meeting our personal preferences to remain home and in our communities, HCBS services are much less expensive than institutional care.

Younger persons with disabilities are also primary users of HCBS services to allow them to continue their education, work and participate as full citizens in their communities and with their families.

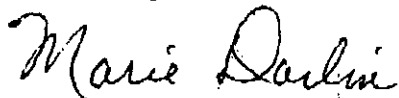

We cannot expect the providers of HCBS to continue to operate on rates often set years ago. It makes sense to review HCBS rates every year just as we do with hospitals.

AARP requests an "AYE" vote on SB 32.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-752-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator
AARP Capital City Task Force

Senator Joe Thomas
Senator Fred Dyson

Establish a Regular and Periodic Schedule of Rate Reviews for Home and Community-Based Services

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse and the Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority, the Alaska Brain Injury Network and the Alaska Suicide Council, have identified the establishment of a regular and periodic schedule of rate reviews for home and community based services one of their four legislative priorities for 2009. Regular and periodic rate reviews, for both Medicaid and grant-funded services, are imperative to maintaining the systems of care that serve Alaska's most vulnerable populations. The provisions for this legislation are in SB 32, sponsored by Senator Ellis.

- Before last year's rate rebasing for FY09, most home and community-based services providers had been over a decade without a rate review or increase. This resulted in an erosion of the system, as frozen rates resulted in a diminishing pool of resources – reducing the quality and availability of services.
- In FY07, home and community based services were provided to nearly 57,000 people who would have otherwise been served by costly institutional or nursing home care.
- In order for the Department of Health and Social Services (DHSS) and the State of Alaska to create and maintain a 10-year fiscal plan that adequately budgets for the costs of home and community-based services, a schedule of rate reviews is necessary.
- Our system of care for Alaskans with special needs is based on a network of non-profit providers. Without adequate funding, our providers cannot continue to provide quality services. Without our providers, we have no system of care.

Overview

Home and community-based services include a wide range of Medicaid and grant-funded services for Trust beneficiaries and other vulnerable Alaskans. Mental health care, infant learning, personal care attendant services, assisted living services, senior care, substance abuse counseling, and services for Alaskans with developmental disabilities are all examples of services provided at home or in our communities. These services maintain individuals' quality of life and reduce the need for more costly institutional, emergency and nursing home care.

For more that 10 years, providers have struggled to meet the demand for services while maintaining an acceptable quality of service because there has been no structure for reviewing the rates paid for those

Senator Thomas, member - Senate Finance Committee

I am writing this letter in support of SB32, a bill which I believe will strengthen Home and Community Based (HCB) Providers like Access Alaska and many others. We HCB providers form the backbone of Alaska's long-term care system. We HCB providers are not only the current backbone, but given our cost-effectiveness and desirability – consumers want to age in place – we are the state's answer to the long-term care dilemma.

Like hospitals and nursing homes, we are businesses with actual costs – we pay rent or mortgages, insurance, and personnel. As these costs have grown while reimbursement rates stay flat, our ability to pay workers a living wage has decreased to the point that in many communities, direct service workers can earn more working at a fast food restaurant than they can helping to care for our elders. This has limited our ability to attract workers and in some cases is creating a crisis in the long-term care system.

This is but one example of the ravages of the current rate-setting regime.

In the larger view, it is important to keep in mind that a strong HCB provider system is critical to the state's ability to meet the coming wave of long-term care users. Policy groups from the National Conference of State Legislatures to the AARP have all recommended states rebalance their Medicaid spending in favor of HCB and take advantage of new waiver and partnership opportunities, in order to meet the growing demand for Medicaid long-term care services. In many cases, Alaska has not taken advantage of these opportunities.

Alaska has the enviable position of being one of the top states in the nation in terms of balanced spending between institutional (nursing home) care and HCB care. However, the system has been strained to the point of breaking over the last several years, primarily because of the inattention to Medicaid reimbursement rates. Therefore, it makes sense that the state should do everything it can to strengthen the system.

I believe SB32 goes a long way toward doing just that. We greatly appreciate your leadership on this issue and stand ready to support its passage and implementation.

Sincerely,

Jim Beck

February 3, 2009

Senator John Ellis
Senator Bettye Davis
via email

Dear Senator Ellis and Senator Davis,

I am writing to support SB 32, which establishes periodic rate reviews for home and community-based services. Ensuring consistent rate increases for providers enables less expensive care for the elderly and develops a workforce aimed at the medical field.

As the second largest provider of in-home care services, we are intimately familiar with the associated challenges. The cost of doing business has increased while rates have been flat. Without entrepreneurial incentive, providing direct care may rest on the more expensive option; state-managed assisted living facilities and state-managed skilled nursing facilities

Workforce development for the medical field starts with our in-home care staff. Our Personal Care Assistants (PCA's) can receive certification and provide low level care for the elderly. Many family members and college-age PCA's get their first glimpse at the medical field.

Thank you for your support of SB 32. Please contact me with any questions. My direct line is extension 104 at (907) 336-3365.

Best regards,

A handwritten signature in black ink, appearing to be "BR", written over a circular scribble.

Chief Executive Officer

CENTER FOR COMMUNITY

700 Katlian Street, Suite B

Sitka, AK 99835

Phone: 907-747-6960

Senator Johnny Ellis
Alaska State Legislature
P.O. Box
Juneau, AK 99811

RE: Support on behalf of constituents in Sitka, Yakutat, Hoonah, Kake, Angoon, Wrangell, and Ketchikan, for SB 32, "An act relating to medical assistance payments for home and community-based services."

Center for Community is a non-profit organization that provides personal care and home and community based services throughout the services throughout South East Alaska: with clients and employees in nearly every community from Yakutat to Metlakatla. In these communities, we employ a total of 71 Southeast residents and serve 113 Southeast clients at the current time (not counting Juneau).

Senate Bill 32 will cure a long-standing problem in Alaska's Medicaid system for long term care of our seniors and other children and adults with disabilities of all kinds. SB 32 will finally ensure that the Legislature and the Administration regularly receive information about the true cost of providing care to Alaskans--at home--who are trying to avoid more expensive institutionalized long term care. SB 32 gives everyone the information necessary to make both short term budgetary and long term policy choices.

Thank you for your introduction of Senate Bill 32. If we can do anything to further legislative support for passage of SB 32, please call upon us.

Sincerely

Connie J. Sipe, Executive Director
Center for Community

AGENET'S 2009 Legislative Priorities

The Association of Alaska's Providers of Services to Older Alaskans

Contact Information: Marianne Mills (463-6154) or Ken Duff (262-6331)

1. Support legislation, such as SB 32, which would put into statute a regular review of Home and Community-Based Medicaid Waiver rates similar to the process for institutions (hospitals, nursing homes).

- Services available to persons eligible for the Home and Community-Based (HCB) waiver program include meals, transportation, chore, respite, care coordination, adult day services, specialized medical supplies/equipment and home modifications.
- These services are provided for a fraction of the cost of institutionalized care to older Alaskans in their own homes and traditional communities.
- Investing in home and community-based care is the most cost effective way to provide long-term care while supporting local communities throughout the state.
- Regular rate reviews will provide parity with hospitals and nursing homes which have had a similar statute in place since 1999.
- Regular rate reviews will provide a good management tool for the Department of Health and Social Services to determine program costs, budget adequately, and create a 10-year fiscal plan.

2. Work with the legislature to adjust grant rates with a \$2 million increment for Family Caregivers, Nutrition, Transportation & Support Services grants.

- Senior grants help pay for home and community-based services for senior citizens who are not eligible for the HCB Medicaid Waiver program, services such as meals, rides, adult day, chore, respite, care coordination, and health promotion.
- Investing in senior grants upfront save millions of dollars the State would otherwise pay for expensive institutional care (nursing homes). In Alaska, the cost of one month's stay in a nursing home is \$10,000-\$20,000 per senior (compare this to a package of grant services for only \$61 to \$83 per month).
- Alaska's long term care policy is aimed at allowing Older Alaskans to remain at home for as long as possible; these grants help them remain at home, saving the state money, and also support the unpaid work of their family caregivers, work which has been valued at \$534 million in Alaska.
- In July 2009, a regional funding formula will shift senior grant monies out of seven (of nine) regions of the State, jeopardizing local communities from providing much-needed services; this shift will happen even though senior populations in all regions are still increasing and as the costs for food, fuel and workers increase.
- The proposed \$2 million increase in senior grants will help ensure that all regions of the State receive adequate funding to continue senior grant services so that seniors may remain in their traditional communities.

March 2, 2009

Senators Stedman & Hoffman,

The Alzheimer's Disease Resource Agency of Alaska (ADRAA) formally requests your support of the CS for Senate Bill 32 which has just been referred to the Senate Finance Committee and is currently awaiting a hearing date. As you are aware, CSSB 32 would regulate rate review for medical assistance payments for home and community based (HCB) personal care services for providers working in personal and assisted living homes. Currently, no such review is regularly mandated for HCB or Assisted Living Care, although facility based providers such as nursing homes are reviewed regularly to keep up with the growing population served and accurate information regarding cost of care.

The Alzheimer's Resource of Alaska provides in home care services for individuals affected by Alzheimer's disease and related dementias and for frail elders. In FY08, we provided 57,452 hours of services statewide. The services provided include personal care, respite for family caregivers, and household chores such as meal preparation, snow shoveling, and chopping wood. It is the work of unpaid family caregivers as well as professional in home workers that allows elders to remain in their homes, and their communities rather than being placed in full time nursing care at great cost to the state.

ADRAA thanks the bill's sponsor and co-sponsors for their foresight on this issue and for their continued support of seniors across Alaska. We enthusiastically support SB 32 which would strengthen the existing infrastructure of home and community based services and would allow for the best possible outcome for both our clients and employees.

Sincerely,

Dulce Nobre
Executive Director

Alaska's developmental disabilities providers look for allies in the state government

By Brendan Joel Kelley

THIS COMING SATURDAY, on his Fox News program *Geraldo at Large*, Geraldo Rivera is devoting the show to the long waiting lists where people with developmental disabilities languish while waiting to receive services.

"The waiting list is, in essence, the new institution," Rivera told a Pennsylvania blogger associated with The Arc, a national network of service providers for the developmentally disabled. "It's imprisoning in some ways, handicapping the families of the developmentally disabled, really handcuffing them in ways that put tremendous stress and strain on their lives."

Though it's doubtful that Alaska will be mentioned on the show, our state also maintains a list of developmentally disabled people who are eligible for services but aren't receiving them due to inadequate funding. Each year the Department of Health and Social Services prepares a report on this list, and the report for 2008 is due any day now. When the last annual report was released last December, there were 943 individuals on the waiting list. They've been waiting for services an average of 3.7 years.

At the beginning of December, a couple of weeks before Republican Governor Sarah Palin released her budget, state Senator Johnny Ellis (D-Anchorage) wrote Palin a letter asking her to address the waiting list, known officially as the Developmental Disabilities Registry.

"During your time on the campaign trail with Senator John McCain as the Vice Presidential nominee, I was very pleased to hear you speak on multiple occasions about the problems faced by special needs children in our country," Ellis wrote. He then pointed out that as of October 1, the registry contained 993 individuals, mostly between the ages of 4 and 17. "I respectfully request that you do your very best to provide the funding necessary to fully eliminate the Waitlist," Ellis continued, before asking Palin to include funding recommended by the governor's Ad

Hoc Committee, on the DD Registry in her budget.

But that money wasn't included in the budget that Palin released on December 15. And for service providers in the developmental disabilities community, the waiting list is far from the only problem. Organizations like The Arc of Anchorage, Hope Community Resources, and many other home and community-based service providers are barely afloat financially, because the rates at which they're reimbursed aren't commensurate with the actual costs.

Ellis is hoping to change that with a bill he'll introduce in the next legislative session. The bill would evaluate reimbursement rates for home and community-based service providers annually.

"THE NUMBER ONE THING we want [the legislature] to do is establish a regular rate review process for how they pay us," says Gwendolyn Lee, executive director of The Arc of Anchorage. "The current system is not equitable."

Even if the waiting list were eradicated by sufficient funding from the state, Lee says, it would bring those people to a service provider system "that's weakened in its ability to deliver high quality services, and can't find the workers to meet the needs of the existing people."

At The Arc, which offers a large variety of services to those with developmental disabilities, under-funding has resulted in high turnover despite cost-cutting measures. "We have deferred maintenance; we have cut health insurance; we do not give raises; we ask people to do more," Lee says. "We are stretched; the rubber band is truly stretched."

Simply put, The Arc can only afford to hire workers at the lowest possible wages, making for high turnover and training costs. This means that the person with a disability has a constant revolving door of people coming and going from their life, each one having to learn the individual's critical issues, health issues, and personality nuances. "It's really depressing for the staff who are trying to deliver quality if they're constantly hiring and retraining people to do the very basics," Lee says.

There's a real danger to not addressing the financial concerns of home and community-based

"... this would be a real opportunity for Sarah Palin and myself and other legislators from both sides of the aisle to work together and put our money and our commitment where our mouths are. And I expect that she will, I just hope that we do enough to help those people that need the help the most."

—State Senator Johnny Ellis

rates were as low as 9 percent, while only a couple categories gathered responses from over 50 percent of the providers, due to the complexity of the audits.

Meanwhile, hospitals and nursing homes are reimbursed for their costs based on an annual rate review, which is what the home and community-based developmental disabilities providers are asking for. The difference between the two groups, Ellis says, is that "frankly, hospitals and nursing homes have powerful lobbyists in Juneau. These community-based services have never been joined together in a really organized group and have never really had effective lobbyists to get what they need.

"I'm going to put this bill in to the legislature, but it's a really difficult bill to get through, to do what the service providers want—regular rate review and adjustment. I've said to them that they need to create a coalition of people all over the state, clients and service providers and workers to say, 'we need the same thing that the hospitals and nursing homes have.' I think maybe the time has come."

IT'S NOT JUST GERALDO RIVERA that's put the spotlight on the issues the developmental disabilities community faces.

Gwendolyn Lee, Executive Director of The Arc of Anchorage: "It all comes down to how we think about our fellow human beings."

these community services no longer provide these services because they can't afford to, based on the poor reimbursement from the state and/or the feds under Medicaid, then there will be people without services in the community who will have to be institutionalized at greater public expense and more human tragedy."

"It all comes down to how we think about our fellow human beings," Lee says. "Do we have an attitude that the least of these is the most important, and everyone is entitled to fair access to basic community life?"

SIX YEARS AGO, THE STATE realized that the system for reimbursing service providers was flawed and froze the reimbursement rates while studying the issue. Last year, for the first time, the legislature granted an increase in rates, which varied according to the type of services provided. But there is still no mechanism in place for rates to keep up with inflation and cost of living increases.

To study the problem, the state hired an auditing firm, Myers and Stauffer, which attempted to analyze the service providers' costs versus reimbursements. The technique that the firm used, however, was unwieldy for many of the smaller sized organizations that provide services for the developmentally disabled.

"I don't think they got great participation," Ellis says. Indeed, some of the provider response

president, telling families with special needs children that they would find an ally in her, while she held her baby boy Trig, who has Down syndrome.

"I understand that statement," Lee says. "As a parent of a new child with disabilities, it's easy to say 'I feel your pain, I understand your situation, I'll work to improve it.' It's easier said than done to really be an advocate. She is in a very different position than a lot of our families that may not have the circle of support that she has. I think that every family that heard that statement is watching now. We are now anxious to work with her to make that her legacy. It's an incredible opportunity for her, but she has to be willing to do it."

"This morning I heard Governor Palin say that we need to tighten our belts," says Ann WingQuest, The Arc of Anchorage's director of public affairs. "We're beyond tightened anymore. It frightens me when I hear her say that, because we have been so weakened and so stretched. She did say that we're not supposed to look to the government to make us healthy; the problem with our population is that their health care needs are not something that they elected. It wasn't like they were smoking and drinking and becoming obese. These are genetic or birth defects or whatever, and they need help."

Ellis is also looking to the governor to stand by what she campaigned on. "[Palin] got a lot of acclaim on the campaign trail as an advocate for kids with disabilities, not just kids with Down syndrome, but kids with disabilities. Now it's time to live up to that, and I'm hoping and inviting the governor to work with me to pare down the waiting list for DD services, to consider the bill on rate adjustment for DD providers and other community-based service providers. So this would be a real opportunity for Sarah Palin and myself and other legislators from both sides of the aisle to work together and put our money and our commitment where our mouths are. And I expect that she will, I just hope that we do enough to help those people that need the help the most."

There's still a chance that agencies such as The Arc and their advocates in the legislature might get their wishes. Governor Palin's communications director Bill McAllister says, "all of this is pending. The Department of Law is evaluating the rate re-basing issue. And the wait list is under review in the [Department of Health and Social Services] commissioner's office." ♦

bjk@anchoragepress.com

STATE OF ALASKA

DEPT. OF HEALTH & SOCIAL SERVICES

Alaska Commission on Aging

December 8, 2009

Representative Wes Keller
600 East Railroad, Suite 1
Wasilla, AK 99654

Dear Representative Keller:

The Alaska Commission on Aging (ACoA) is pleased to present to you our FY2011 legislative priorities for the upcoming session. These top issues were identified with input from older Alaskans, family caregivers, providers, and senior advocates statewide. The ACoA is a state agency under the Department of Health and Social Services, established in 1982. Our charge is to plan, educate and advocate on behalf of all older Alaskans (persons aged 60 years and older) through inter-agency collaboration so that Alaska seniors/elders may lead useful and meaningful lives with dignity and independence and have access to quality services when seniors need them to remain safely in their homes and chosen communities for as long as possible.

- 1. Establish a regular and periodic schedule of rate reviews for home- and community-based services** that serve persons who are Medicaid-eligible and meet nursing home level of care. This measure will promote ongoing awareness of the true costs of providing services. SB 32, sponsored by Senator Johnny Ellis, passed the Senate and the House Health and Social Services Committee last session and waits to be scheduled for a hearing in House Finance. ACoA encourages passage of this legislation.
- 2. Eliminate, or alternatively, adjust the cap on adult dental services reimbursed by Medicaid** to provide program benefits that keep pace with higher health care costs due to inflation, and **allow Medicaid patients access to two-years program benefits in a single year** to permit scheduling of treatment around the oral health care needs of the patient. The current law places a statutory \$1,150 limit on dental health care expenditures per eligible client. When the Medicaid Adult Dental program was created in 2005, this amount was sufficient to pay for one half of a set of dentures, either an upper or lower, with the idea that a patient who needed dentures could have both sets if the treatment was scheduled around the turn of the fiscal year. Although health care costs continue to rise, the cap has not been increased in three years. Allowing Medicaid patients access to two years of program benefits in a single year furnishes Alaskans and their dentists the flexibility needed to provide treatment addressing oral health emergencies that can occur at any time.
- 3. Provide increased operating and capital funding to establish an Alaskan Public Transportation Fund for operations of local coordinated transportation systems** which the State can use to leverage additional federal funds to improve accessible, affordable transportation for older Alaskans, persons with disabilities, low-income individuals, youth and others without access to transportation so that Alaskans with special needs may have greater access to employment and community participation opportunities. According to the Governor's Coordinated Transportation Task Force Report (2009), Alaska is one of only three states in the nation that does not provide any specific state funding for public transportation.
- 4. Provide operating funding to enhance the Aging and Disability Resource Centers**, administered under the Division of Senior and Disabilities Services, to streamline access to more efficient information and referral services by providing eligibility screening, options counseling, and assessments so that Alaskans can make informed decisions and have access to long-term care services through a "one-stop shop," reducing confusion and program fragmentation.

SEAN PARNELL, GOVERNOR

P.O. BOX 110693
JUNEAU, ALASKA 99811-0693
PHONE: (907) 465-3250
FAX: (907) 465-1398

Mat
Keep in file
SB 32
HSS hearings

5. Return to the original wording of AS 47.07.020 (b) (6), the Medicaid statute establishing income eligibility for persons requiring nursing home level of care, referencing 300% of the maximum Supplemental Security Income (SSI) benefit rate rather than the current frozen dollar amount (\$1,656 a month) to reflect changes in cost of living so that seniors and other Medicaid-eligible persons will not be disqualified for services, including home- and community-based waiver services, due to small increases to their Social Security and other benefits. The amount of \$1,656 is the monthly amount of 300% of SSI in 2003. The 2009 income equivalent is \$2,022 monthly.

We also want to take this opportunity to share with you highlights from the Alaska Elder/Senior Community Forums that we hosted in Kotzebue (August) and Anchorage (December) to increase understanding about the issues that are of most importance to older Alaskans and to identify unmet needs. These forums, to be held in other locations statewide in the coming year, are being conducted to gather public input that will be used to develop the next Alaska State Plan for Senior Services, FY2012-2016. This document, prepared every four years, provides the State with a guide for delivering senior services and meets the requirement of the U.S. Administration on Aging for the state to access funding from the Older Americans Act which provides federal funding for a range of senior programs. Although these forums will be ongoing, Anchorage and Kotzebue participants identified the following issues as the most important:

- Provide improved access to quality and affordable health care, long-term supports that include home- and community-based services in communities where older Alaskans live, and promote disease prevention and wellness programs;
- Promote financial security, increase affordable senior housing, and improve elder safety;
- Provide safe, dependable, and affordable coordinated community transportation services so that seniors/elders can get to medical appointments and remain actively engaged in their communities;
- Enhance information and assistance services to help individuals access long-term support services and make informed decisions regarding their care.

Upon retirement, more seniors are choosing Alaska as their lifelong home to be close to family, friends and the unique Alaskan lifestyle. For the first time, Alaska is now the state with the fastest growing senior population, according to the U.S. Administration on Aging (2008), replacing Nevada, which held that position for many years. Alaska is home to approximately 80,000 persons aged 60 years and older who comprise about 12% of the state's population (Alaska Department of Labor). Alaska's senior population is expected to increase by four to six percent each year through 2020, as baby boomers become of age, by which time the total number of seniors will grow by almost 64 percent. The oldest Alaska seniors, 85 and older, are expected to triple during the next 25 years, vastly increasing the number of Alaskans living with Alzheimer's disease and related disorders.

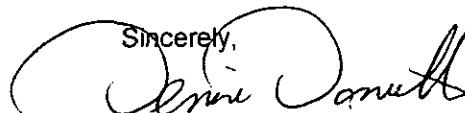

Please feel free to contact Denise Daniello, ACoA's executive director (465-4879 or denise.daniello@alaska.gov) for additional information about these issues or with any questions concerning Alaska's senior population.

The Alaska Commission on Aging will be meeting in Juneau February 10th-12th, 2010 and hopes to schedule a meeting with you to discuss our priorities in person. We look forward to working with you this legislative session. We appreciate your consideration of these advocacy priorities and thank you for your support of services for older Alaskans.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello
ACoA Executive Director

*Matt
file SB 13/32*

Alaska Native Health Board
1840 Bragaw Street, Suite 220 | Anchorage, AK 99508
www.anhb.org

The Alaska Native Health Board (ANHB) represents 25 tribal health organizations serving approximately 130,000 Alaska Native and American Indian individuals. These priorities will be the focus of ANHB state advocacy for Fiscal Year 2011.

EXECUTIVE SUMMARY OF ANHB 2011 STATE PRIORITIES

- Full funding for Village Safe Water (VSW) projects.
 - More than 6,000 homes in rural Alaska don't have safe drinking water.
 - Lack of safe water and sanitation creates major health problems, including higher rates of respiratory tract infections, meningitis, pneumonia, and serious ear and blood infections.
 - The State should fund its share of VSW projects at last year's budgeted level.
- Strengthen Medicaid, Denali Kidcare and related programs.
 - Tribal long-term care and behavioral health projects will serve Alaska Native Medicaid beneficiaries at the 100% federal payment percentage. It makes financial sense for the State to invest in these tribal projects and to set reasonable payment rates for them.
 - S.B.13 will raise Denali Kidcare eligibility to 200% of federal poverty level (FPL) for certain children and pregnant women. Alaska is one of only five states with SCHIP eligibility levels below 200% of the FPL. This will bring Alaska in line with national standards.
 - S.B. 32 will require annual review of Medicaid Home & Community Based Services (HCBS) and Personal Care Attendant (PCA) rates. Medicaid rates for services to Alaska Native Elders and vulnerable persons should be at a level that covers actual costs.
- Strengthen domestic violence, sexual assault, and child abuse/neglect programs. Alaska Natives suffer high rates of domestic violence, sexual assault and child abuse/neglect.
 - Alaska's reported rate of forcible rape is over two and a half times the national average.
 - The rate of sexual assaults against Alaska Native women in Anchorage for 2000-2003 was over 7 times greater than for White women.
 - In Alaska State Trooper cases, predominantly in rural areas with a high percentage of Alaska Natives, 94% of all sexual assault victims are 15 years of age or younger.
- Strengthen behavioral health and substance abuse programs.
 - Alaska's suicide death rate is nearly twice the national average. The suicide death rate for Alaska Natives is over three times greater than for Alaska Whites.
 - Alaska's binge and heavy drinking rates are among the highest in the nation. However, there is no statistical difference between the rates for Alaska Natives and non-Natives.
 - Over 40% of Alaska Natives smoke, which is twice the rate for non-Natives, and Alaska Natives are disproportionately represented among the 600 Alaskans who die each year from the effects of tobacco use or secondhand smoke, e.g. lung cancer and heart disease. Thus there is a great need for tobacco program and funding support for tribal health providers.
- Strengthen healthcare workforce development initiatives.
 - S.B. 139 will create a healthcare loan repayment & employment incentives program.
 - Other health workforce initiatives are needed, including strengthening WWAMI, the State visa waiver program, and the Nat'l Health Service Corp loan repayment program.

SUMMARY OF ALASKA TRIBAL HEALTH CHALLENGES

WATER AND SANITATION.

- Over 6,000 (mostly Alaska Native) homes in rural Alaska don't have safe drinking water.
- Infants in Alaska Native villages with limited water service are hospitalized for pneumonia at 11 times the rate for all U.S. infants.
- Southwest Alaska suffers some of the highest rates of meningitis, pneumonia and serious ear and blood infections in the world, primarily associated with lack of in-home water.

VILLAGE BUILT CLINICS.

- The IHS' Village Built Clinic (VBC) Lease Program is designed to fund rent, utilities, insurance, janitorial, and maintenance costs of healthcare facilities in over 150 rural Alaska communities. Despite the dramatic increase in the costs of providing fuel, utilities and other necessities, funding has not materially increased since 1996.
- In 2007, VBC lease payments covered less than 60% of village clinic operating costs, which have continued to skyrocket in rural Alaska, mostly due to heating and utility costs.
- Without adequate funding, Tribes have had to cannibalize funding from critical health programs, defer maintenance and repairs, reduce clinic operations and lay off health staff.

DOMESTIC VIOLENCE, SEXUAL ASSAULT, AND CHILD ABUSE AND NEGLECT.

- 75% of Alaska Native women are physically and/or sexually assaulted during their lifetime.
- Alaska has the highest reported rate of sexual assault in the United States. Within Alaska, Alaska Natives are victimized 3 to 4 times more frequently than others.
- Alaska's child sexual assault rate is 6 times the national average.
- In Alaska State Trooper cases, which are mostly in rural areas with a high percentage of Alaska Natives, 94% of sexual assault victims are 15 years of age or younger.

BEHAVIORAL HEALTH AND SUBSTANCE ABUSE.

- Alaska's statewide suicide death rate is nearly twice the national average.
- Within Alaska, the Alaska Native suicide death rate is three times greater than for Whites.
- Alaska's binge and heavy drinking rates are among the highest in the nation. Alaska's rate of alcohol-related deaths is three times the national average.
- Alaska ranks second in the nation in use of illicit drugs for those 12 years of age and older.

HEALTH WORKFORCE RECRUITMENT AND RETENTION.

- The Alaska health workforce vacancy rate is over 10% and growing, particularly for hard-to-fill positions in rural areas, almost all of whom are "safety net" providers that deliver care primarily to Medicaid, CHIP, and Medicare beneficiaries, and to the uninsured.
- Tribal health program vacancy rates exceed statewide rates across the board, typically by 150-200%. The average time it takes for a Tribal health provider to fill a physician vacancy is 14 months, at an average cost \$131,000 (including locum tenens costs).

CANCER.

- Cancer is the leading cause of death among Alaska Natives.
- Contributing factors are late diagnosis and poor access to both screening and treatment.
- The Alaska Native five-year cancer survival rate is just over half the overall U.S. survival rate.
- Alaska Native women have the highest cancer death rate of all U.S. racial and ethnic groups.

The Alaska Native Health Board (ANHB) represents 24 Tribes and tribal health organizations, which serve approximately 130,000 Alaska Native customer-owners.

**Alaska Tribal Health Talking Points for the November 5, 2009
WHITE HOUSE TRIBAL NATIONS CONFERENCE**

INDIAN HEALTH CARE IMPROVEMENT ACT. The best way to strengthen tribal health is to reauthorize the Indian Health Care Improvement Act (H.R. 2706 and S. 1790). We urge the Administration to fully support IHCIA reauthorization. The new bills contain the tools needed by tribal health programs to narrow Alaska Native health disparities gaps through improvements or authorization in the areas of:

- Access to Medicaid, SCHIP and Medicare resources
- Long-term care, elder care and chronic disease care
- Health facility and water & sanitation projects
- Domestic violence, sexual assault, and child abuse prevention
- Behavioral health and substance abuse prevention
- Health profession and health workforce development

HEALTHCARE REFORM. First and foremost, the Administration should honor the trust responsibility to Tribes. In healthcare reform, this means (1) assuring that reform legislation fully supports and protects the Indian health delivery system; (2) assuring that tribal health programs have full opportunity to participate in and benefit from reform; and (3) acknowledging and respecting Tribes as sovereign governments. We urge the Administration's support for:

- The Indian-specific provisions contained in the Senate Finance Committee bill
- The Indian-specific provisions prepared by the House Natural Resources Committee Chair
- General provisions in both the House and Senate bills that will benefit tribal health with regard to improving sustainability, strengthening public health and preventive services, and strengthening the tribal health workforce

INDIAN HEALTH SERVICE APPROPRIATIONS. We urge the Administration's continued support for critical tribal health needs, including:

- The Indian Health Service Village-Built Clinic lease program
- The Alaska Dental Health Aide Therapy (DHAT) program
- Tribal Self-Governance contract support cost shortfalls
- Construction of basic water & sanitation infrastructure and healthcare facilities
- Domestic violence, sexual assault, and child abuse & neglect programs
- Behavioral health and substance abuse programs
- Staffing packages for the new Nome and Barrow hospitals

NON-INDIAN HEALTH APPROPRIATIONS THAT IMPACT TRIBAL HEALTH. Because of years of inadequate IHS funding, tribal health programs have had to seek support for basic programs from non-IHS agencies, for which we urge the Administration's full support:

- Denali Commission partners with Tribes on sanitation, energy, and facility projects
- HRSA Community Health Center programs support many village health clinics
- Department of Agriculture Rural Water & Waste Disposal and High Energy Cost programs support basic water and sanitation and energy needs in many Alaska Native villages
- EPA American Indian Environmental Office supports many tribal environmental projects

The Alaska Native Health Board (ANHB) represents 25 tribal health organizations serving approximately 130,000 Alaska Native and American Indian individuals. These priorities will be the focus of ANHB federal advocacy for Fiscal Year 2011.

EXECUTIVE SUMMARY OF ANHB 2011 FEDERAL PRIORITIES

- Permanent reauthorization of the Indian Health Care Improvement Act. We urge the Administration and Congress to support permanent IHCA reauthorization, which will empower and advance tribal health programs in the following areas:
 - Alternate resource systems, including payor of last resort provisions; Medicaid and SCHIP enrollment, coverage and payment; and Veterans Affairs support for tribal health providers.
 - Authorization for tribal long-term care, elder care and chronic disease programs.
 - Workforce development programs and Indian health professions.
 - Long-term care, Elder care, and chronic disease programs.
 - Facilities and sanitation programs, including maintenance & improvement.
 - Domestic violence, sexual assault, and child abuse & neglect programs.
 - Behavioral health and substance abuse and prevention programs.
- Healthcare reform. We urge the Administration and Congress to support the provisions in the House and Senate reform bills that will help tribal health programs narrow the Alaska Native/American Indian health disparities gaps. First and foremost, the government should honor the trust responsibility to Tribes. In the context of healthcare reform, this means:
 - Assuring that reform legislation fully supports and protects the Indian health system.
 - Assuring that tribal health programs fully participate in and benefit from reform.
 - Acknowledging and respecting Tribes as sovereign governments.
- Full funding for Indian Health Service appropriations. We urge the Administration and Congress to use Self-Governance as the preferred tribal funding mechanism for the following critical needs:
 - The Indian Health Service Village-Built Clinic lease program.
 - The Dental Health Aide Therapy (DHAT) program.
 - Tribal Self-Governance contract support costs.
 - Construction of basic water & sanitation infrastructure and healthcare facilities.
 - Behavioral health and substance abuse programs.
 - Domestic violence, sexual assault, and child abuse & neglect programs.
 - Staffing packages for the new Nome and Barrow hospitals.
- Non-Indian Health Service appropriations that greatly impact tribal health. Because of inadequate IHS funding, tribal health programs have sought support from certain non-IHS programs. We urge the Administration and Congress to fully support the:
 - Denali Commission, which partners with Tribes on sanitation, energy, and facility projects.
 - HRSA Community Health Center program, which supports tribally-operated village clinics.
 - Department of Agriculture Rural Water & Waste Disposal and High Energy Cost programs, which support basic water, sanitation and energy needs for Tribes.
 - EPA American Indian Environmental Office, which supports tribal environmental projects.
- "Title VI" legislation will extend the efficiencies and flexibilities of Tribal Self-Governance to all of Department of Health & Human Services. We urge support for Title VI legislation.

Senator Bettye Davis

Senate Bill 101, 26-LS0524\A

"An Act relating to questionnaires and surveys administered in the public schools."

Sponsor Statement

SB 101 will provide for more student participation in school questionnaires and surveys administered or required by Alaska school districts and the Department of Education and Early Development, while at the same time constitutionally protecting the privacy rights of parents and students and also complying with the federal Protection of Pupil Rights Amendment (PPRA), 20 U.S.C., section 1322h.

With the exception the anonymous Youth Risk Behavior Survey noted in new subsection AS 14.03.110(g) which has been administered biennially since 1991 by the United States Centers for Disease Control and Prevention, SB 101 provides that a school district may not administer a survey, anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is first obtained from the student's parent or legal guardian. SB 101 provides in AS 14.03.110(e) that a student may still "refuse to answer specific questions" or to participate in the survey.

SB 101 changes subsection AS 14.03.110(e) by requiring that parents who do not want their children to participate in an anonymous survey, must "opt out" or "actively dissent" to participation with written denial of permission submitted to the teacher or principal. SB 101 effectively changes parental consent to anonymous surveys under the current statute from "active" to "passive" consent, *i.e.*, implied consent without written objection. Notice, however, is still required and permission for anonymous surveys can be obtained by school districts annually under the unchanged provision of AS 14.03.110(b).

The 2-week notice requirements under AS 14.03.110(b),(c) remain unchanged, but revised subsection AS 14.03.110(d) under SB 101 requires more information in the notice than current provisions in recognition of the need for more attention to constitutional due process in matters of student privacy. Changes require more information about the nature and content of the survey, the date, sponsor, school contacts, and opportunity to refuse participation in a questionnaire or survey.

Changes under SB 101 comport with the original legislative intent of the school survey statute before it was changed in 1999. The current statute, which requires "active" parental consent for youth to participate in anonymous school surveys requires that parents must acknowledge both permission and denial in writing. SB 101 requires only that parents deny permission in writing to anonymous surveys. Surveys which are not anonymous or that delve into personal or private matters still require parental written consent for permission for students to participate with the exception of AS 14.03.110(g) regarding the Youth at Risk Behavior Survey noted above. The need for statutory changes under SB 101 follow:

It has been found that "active" parental consent overburdens the public school system and drastically increases the costs and labor involved in conducting student surveys. Moreover, "active" consent greatly reduces overall participation by students, because many parents simply are non-responsive. While studies have found that the vast majority of parents would consent to students participating in school surveys, non-response is more often due to apathy, oversight, and student omission or error, rather than parental refusal. Many districts are unable to use the data they collect because there are not enough participants for statistical validation. Some surveys such as the Youth Risk Behavior Survey cannot be validated with less than 60% participation, as occurred in Alaska in 2005. Lack of participation may also reduce federal funding.

School surveys provide reliable and valuable measures of population-based information on youth which helps policy makers, educators, program planners, and parents to better understand health and social issues that affect students' prospects for program success. Standardized surveys such as the Youth Risk Behavior Survey track trends over time and help guide and evaluate important health and prevention programs. State and federal grant programs which rely on these surveys include tobacco prevention and control, obesity prevention, diabetes, heart disease and stroke, safe and drug free schools and other substance abuse prevention, injury prevention, including violence and suicide prevention, HIV and STD prevention, and more.

AMENDMENT

OFFERED IN THE HOUSE
TO: SB 101

BY REPRESENTATIVE SEATON

- 1 Page 2, lines 23 - 24:
- 2 Delete "guardian notice of the survey"
- 3 Insert "legal guardian notice of the survey as provided under (d) of this section at least
- 4 two weeks before the survey is administered"

Senator Betty Davis

Senate Bill 101, 26-LS0524A

"An Act relating to questionnaires and surveys administered in the public schools."

Sectional Summary

Note: this sectional summary should not be considered an authoritative interpretation of the bill, as the bill itself is the best statement of its contents.

Section 1. Amends AS 14.03.110(a) to require a school district to obtain written permission to administer a questionnaire or survey, anonymous or not, with the exception of the Youth Risk Behavior Survey, as provided in Section 4 in new subsection AS 14.03.110(g).

Section 2. Repeals and reenacts AS 14.03.110(d) to require a school district provide to a student's parent or legal guardian written notice of a questionnaire or survey with detailed information as to the date, contents, sponsor, contacts at the school district, opportunity to review the questionnaire or survey, description of how to submit written permission or denial of permission to participate, including an anonymous or specific questionnaire or survey.

Section 3. Amends AS 14.03.110(e) to allow a student to participate but to refuse to "answer specific questions." Subsection (e) also requires that a parent or legal guardian may refuse to allow the student to participate in a specific questionnaire or survey "by submitting to the teacher or school principal a written denial of permission for the student's participation."

Section 4. Adds a new subsection AS 14.03.110(g) which provides that if a school district administers the Youth Risk Behavior Survey provided by the United States Centers for Disease Control and Prevention, written permission of the student's parent or legal guardian is not required, but the school district shall provide parents notice of the survey and the opportunity to submit to the teacher or school principal a written denial of permission to take the survey.

Note: Subsections AS 14.03.110(b) and (c) remain unchanged as to annual permission and two weeks notice for anonymous surveys under (b), and written permission and two weeks notice for surveys which are not anonymous under (c).

Sec. ▶14.03.110◀. Questionnaires and surveys administered in public schools.

(a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

- (1) how the questionnaire or survey will be administered to the student;
- (2) how the results of the survey or questionnaire will be used; and
- (3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students.

Fact Sheet

COMMISSIONER'S OFFICE

January 7, 2010

FOR IMMEDIATE RELEASE:

Fact Sheet: 2009 Alaska Youth Risk Behavior Surveys

What is the Youth Risk Behavior Survey (YRBS)?

The Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1990 by the federal Centers for Disease Control and Prevention (CDC). It was developed to monitor health risk behaviors among youth that contribute markedly to the leading causes of death, disability, and social problems of youth and adults in the United States. These behaviors are often established during childhood and early adolescence:

- Tobacco use;
- Unhealthy dietary behaviors;
- Inadequate physical activity;
- Alcohol and other drug use;
- Sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, including HIV infection; and
- Behaviors that contribute to unintentional injuries and violence.

What is the purpose of the YRBS?

- Determine the prevalence of health-risk behaviors;
- Assess whether health-risk behaviors increase, decrease, or stay the same over time;
- Provide comparable national, state and local data;
- Provide comparable data among subpopulations of youth; and
- Monitor progress toward achieving national and state health goals and other program indicators.

How long has Alaska participated in the YRBS?

The YRBS high school survey was first implemented at the national level in 1990. Since that time, the CDC has sponsored national surveys from 1991 to the present on an every-other-year basis. Alaska first participated in the YRBS in 1995 and obtained representative statewide data. Due to external factors, the YRBS was not administered in 1997. It was administered in 1999; however the Anchorage School District did not participate. Without Anchorage the data were not representative of the state as a whole. The survey was administered in 2001, but unfortunately low student response rates rendered the data unusable. Districts indicated that the new requirement for signed (active) parental permission in 2001 was the primary reason for the low response rate. In 2003 the survey was administered statewide with active parental consent and representative data were obtained,

making this the first statewide YRBS representative sample since 1995. The survey was again administered in 2005, however the response rate fell just below the target and the data was not used. In 2007 and in 2009, the survey was administered and achieved an adequate response rate, yielding important survey results.

What is the difference between active and passive consent?

Alaska's active parental consent law, AS 14.03.110, prohibits public schools from administering surveys or questionnaires that ask about personal or family affairs, or anything else that is not a matter of public record or readily observable in public, without first getting written permission from all participating students' parents or legal guardians (opt in). This law holds regardless of whether a survey is anonymous or not. Alaska is one of a few states in the nation that has a school survey law requiring active parental consent for surveys of this type. Most states employ passive parental consent when administering such anonymous surveys. Passive parental consent involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.

Two statewide surveys were conducted in 2009:

Traditional High Schools - The YRBS survey of regular (traditional) public high schools (excluding private schools, boarding schools, alternative schools and correctional facilities) was conducted as usual. A two-stage sample design was used to select the actual students for participation. The first stage consisted of selecting schools. Schools were selected with probability proportional to the size of their enrollment. Once a school was selected, classes were selected as the second stage. Eligible classes were those where a student would be enrolled in one and only one class at a time – second period or required English, for example. This gave each student an equal opportunity of being selected. A school district, individual school, student, or student's parent could decline participation at any time.

This YRBS survey was completed by 1,373 students from 43 traditional high schools that were scientifically selected to be included in the survey. The school response rate was 91 percent and the student response rate was 64 percent, resulting in an **overall response rate of 62 percent**. The CDC has determined that the overall response rate must be 60 percent or greater in order for the data to represent the high school population of the state. Therefore, these survey results represent 33,271 students from grades 9 through 12 in traditional public high schools.

Alternative High Schools - For the first time, a statewide YRBS survey of high school students in Alaska's alternative schools was conducted. Fifteen alternative schools were chosen to be included in the survey and 1,020 students completed the survey. The school response rate was 100 percent and the student response rate was 71 percent, resulting in an overall response rate of 71 percent.

Alternative schools serving at-risk students are excluded from traditional statewide YRBS surveys per CDC guidelines. Although one national Alternative School YRBS was conducted in 1998, revealing significantly elevated risk behavior among this population, no further national YRBS surveys of alternative schools have been conducted. Since Alaska's Department of Education and Early Development (EED) presently manages several federal grants that require it to direct services and resources to Alaska's most at-risk student/youth populations, it became essential to conduct a statewide alternative schools YRBS to determine if our state's alternative schools profiled consistently with the national alternative schools. Our data indicates Alaska alternative schools report similar levels of risk behavior to the National Alternative Schools Survey of 1998. The results

of this survey provides EED with the credible data it needs to best direct its at-risk initiatives, to determine the level of risk behaviors present in this student population, to advocate for needed supports, and to measure any progress made in decreasing student risk behaviors as a result of its interventions. It is anticipated these data will also be invaluable to Alaska's alternative schools on a local level as they seek to provide empirical evidence for any needed additional resources.

How was the survey administered?

The YRBS survey is voluntary and anonymous. For all classes, teachers or proctors were given a script to read to students that established guidelines for student privacy and anonymity and the importance of the survey. Each student was given an unmarked envelope in which to seal his or her survey before turning it in. These survey envelopes remained sealed until received at a central state collection site. The CDC and a CDC contractor analyzed the state survey data for both the traditional high schools and the alternative high schools.

A national YRBS is also conducted every other year. The 2009 national results will not be available until early summer 2010. As a result, 2007 National YRBS results are being used for comparison purposes.

How are the data used?

The results of the YRBS are used to detect changes in risk behaviors over time and provide an important piece of program planning and evaluation, curriculum development and decision-making regarding the use of available resources. The information from the YRBS can be used to help schools and communities identify strengths and weaknesses in current programs and services. Additionally, the results can be used by schools and communities when applying for grant funding to initiate or maintain programs that serve youth.

Who supported the YRBS in Alaska?

The YRBS in Alaska is a cooperative effort between the state departments of Health and Social Services and Education and Early Development. The survey is also endorsed by the following groups and boards:

- Association of Alaska School Boards
- Alaska Parent Teacher Association (PTA)
- Alaska Action for Healthy Kids
- All Alaska Pediatric Partnership
- American Heart Association, Pacific/Mountain Affiliate
- American Lung Association of Alaska
- American Cancer Society, Alaska
- Alaska Health Education Consortium
- Alaska Tobacco Control Alliance
- Alaska Native Tribal Health Consortium

###

Response to questions during HHSS hearing 2/11/10 on SB 101 – Questionnaires and Surveys in Public Schools.

1. Copy of 1995 YRBS Survey (See attached) *(in back of packet)*

2. Cost to School Districts to reach the minimum of 60% validity threshold for representative data.

There is no direct cost to school districts to reach the validity threshold, other than contribution of staff time and often copying and postage. School districts receive incentive funding, depending on their size, between \$800 and \$30,000 per district. The total state expenditure in 2009 was approximately \$90,000 (which included the special Alternative School Survey). In addition, some districts receive supplemental money from their community coalitions. The \$90,000 was made up of a combination of federal funding from the YRBS grant and a special contribution of \$20,000 from the Division of Behavioral Health and \$50,000 as a one-time contribution from the Alaska Mental Health Trust.

3. Impact on grants of failure to meet the minimum of 60% statistical validity.

We do not have evidence of loss of federal funding for inadequate response rate to YRBS. What we can provide is examples of the program and grant dollar amounts used at the state level that rely on YRBS data.

- DHSS/Division of Public Health/CDC Tobacco Program funding : approximately \$1.6 million per year
- Dept. of Education & Early Development (DEED)/CDC HIV Prevention funding: \$275,000 per year
- DEED/Federal funding: Up until recently, the Title IV Safe and Drug-Free Schools and Community Program funds (formerly \$1.7 million) relied on YRBS – however, this program has been eliminated. It is anticipated that it will be replaced with a new program (focusing on Positive School Climate) which will likely be competitive and it would be difficult to compete with other states without YRBS data with the majority of states that do have YRBS data.
- DHSS/Division of Behavioral Health Programs/Federal Funding:
 - Federal Substance Abuse Prevention and Treatment Block Grant (\$4.8 million approx. per year) has required national outcome measures using YRBS
 - Alaska Youth Suicide Prevention Project, US Dept. of Health and Human Services, Substance Abuse and Mental Health Services Administration (SAMHSA). \$500,000 per year x 3 years (1.5 million)
 - SAMHSA's Strategic Prevention Framework State Incentive Grant, five-year, \$11.5 million grant
- Comprehensive Mental Health Plan: \$106,000 from the Alaska Mental Health Trust

Other programs/efforts that rely on the YRBS data:

- Overall tracking progress on State Health Plan (Healthy Alaskans 2010) – approximately 16 measures.
- DEED/No Child Left Behind (NCLB) requirements to collect data captured in the YRBS remain in place and DEED has no other established mechanism to gather this data. Building a new instrument would be costly and labor intensive, and DEED presently lacks the infrastructure to accomplish this and would no doubt run in to the same challenges as YRBS faces.
- Alaska’s Plan to Reduce and Prevent Underage Drinking - without the YRBS data we will lose our baseline data to show we are making change.
- DHSS State Epidemiological Outcomes Workgroup contract deliverables relies heavily on YRBS data.
- Alaska Obesity Prevention Plan

Other large community grants:

- 7 SAMSHA grants directly to community coalitions

District level grants:

- One of the eligibility requirements for school districts to apply for state Tobacco Prevention Grants (\$800,000) is to collect local YRBS data.
- A query is in process to determine how else school districts have used the data to leverage additional funding. Responses so far have mentioned being able to get grant funding for school counselors to address the needs identified by YRBS.

MEMORANDUM

March 12, 2009

SUBJECT: Written denial of permission (SB 101;
Work Order No. 26-LS0524\A)

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel 

Eddy Jeans asked about the necessity of sec. 3 in the above referenced bill. Section 3 amends existing law in AS 14.03.110(e) to require written denial of permission by a parent or guardian for a student survey. Without the addition of written denial in subsection (e), existing law would be inconsistent with the new subsection (g) that requires written denial of permission for the Youth Risk Behavior Survey (YRBS) contained in sec. 4.

If I may be of further assistance, please advise.

JMM:ljw
09-153.ljw

(c) Nothing in this section limits the ability of a peace officer, chief administrative officer, or other appropriate person, acting in compliance with local, state, or federal laws, to search a locker or other container provided in a public or private school by the school district. (§ 5 ch 33 SLA 1995)

Sec. 14.03.110. Questionnaires and surveys administered in public schools.

(a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

- (1) how the questionnaire or survey will be administered to the student;
- (2) how the results of the survey or questionnaire will be used; and
- (3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students. (§ 1 ch 23 SLA 1979; am §§ 1, 2 ch 63 SLA 1999)

Opinions of attorney general. — AS 14.03.110 — Behavior Risk Survey does not impermissibly invade the domain of the student's private 'family' affairs. September 28, 1998 Op. Att'y Gen. (Issued before 1999 amendment to this section.)

Sec. 14.03.115. Access to school records by parent, foster parent, or guardian.

Upon request of a parent, foster parent, or guardian of a child under 18 years of age who is currently or was previously enrolled in a municipal school district or a school district that is a regional educational attendance area, the school district shall provide a copy of the child's record. This section does not apply to

- (1) a record of a child who is an emancipated minor; or
- (2) record information that consists of the child's address if the school district determines that the release of the child's address poses a threat to the health or safety of the child. (§ 1 ch 36 SLA 1999)

Sec. 14.03.120. Education planning; reports. (a) A district shall annually file with the department, and make available to the public, a report that

- (1) establishes district goals and priorities for improving education in the district;
- (2) includes a plan for achieving district goals and priorities; and

Subject: FW: SB 101

Here is our question for SB102. 101

What is the intent of section 3? Since the ability for students to refuse is already covered in section 2 (8) and families to opt out/opt in to other surveys is covered in section 2 (7) we think it is unnecessary. (Written denial is also covered in section 4 which is specific to YRBS.)

Here are the responses to the questions at the hearing.

Statistics on parental consent for YRBS:

Data from the statewide survey from the last time the YRBS was administered (2007) showed that (after intense efforts to collect forms), in general 69-70% of parents provided written permission, 10-11% of parents declined permission, the remaining 20% of parents did not respond. (It is the non-responders that affect the survey the most). These rates vary by school and district – contact individual school districts for more information on their local YRBS survey experience.

How is the student identity protected?

The YRBS survey is an anonymous and voluntary survey. The survey has been designed to protect each student's privacy. Students do not put their name or any other identifier, or the name of their class or school on the survey. The teacher or proctor is given special instructions and a script to follow and are also required to sign an *Assurance of Confidentiality Form* which is returned to the Department of Health and Social Services.

When students finish the survey, they place their answer sheet in a privacy envelope and seal it shut. The envelopes are then placed in a big box or envelope for returning to the state.

Just another FYI:

The Protection of Pupil Rights Amendment only applies to "required" surveys. (See CDC Parental Permission and the YRBS, 2006)

Let me know if you need any more information.

These risk behaviors among high school students¹ ...

Unintentional Injuries and Violence

- 12% Rarely or never wore a seat belt
- 21% Rode with a driver who had been drinking alcohol, during the past month
- 20% Carried a weapon during the past month
- 28% Were in a physical fight during the past year
- 9% Attempted suicide during the past year

Alcohol and Other Drug Use

- 33% Drank alcohol during the past month
- 22% Reported episodic heavy drinking during the past month²
- 23% Used marijuana during the past month
- 7% Ever used cocaine
- 10% Ever used inhalants
- 21% Ever used prescription drugs without prescription

Sexual Behaviors

- 44% Ever had sexual intercourse
- 11% Had sexual intercourse with ≥ 4 people
- 30% Had sexual intercourse during the past three months
- 5% Did not use a condom during last sexual intercourse³

Tobacco Use

- 48% Ever tried cigarette smoking
- 16% Smoked cigarettes during the past month
- 5% Smoked cigarettes on ≥ 20 days during the past month
- 14% Used smokeless tobacco during the past month
- 10% Smoked cigars during the past month

Dietary Behaviors

- 83% Ate fruits and vegetables < 5 times/day during the past 7 days
- 20% Drank soda or pop one or more times a day during the past 7 days (not including diet soda or pop)

Physical Activity

- 58% Did not meet currently recommended levels of physical activity⁴
- 54% Did not attend physical education class
- 82% Did not attend physical education class daily

Overweight

- 14% Were overweight⁵
- 12% Were obese⁵

... contribute to these leading causes of death⁷

Youth Aged 10-24 Years

Adults Aged 25 Years and Older

- ¹ High school students grades 9-12 in Alaska excluding alternative schools and boarding schools, weighted data.
- ² Students who had five or more drinks of alcohol in a row within a couple of hours on at least 1 day during the past 30 days
- ³ Among students who had sexual intercourse during the past 3 months.
- ⁴ Students who were not physically active for a total of at least 60 minutes per day on 5 or more days of the past 7 days.

- ⁵ Students who were at or above the 85th percentile but below the 95th percentile for body mass index by age and sex.
- ⁶ Students who were at or above the 95th percentile for body mass index by age and sex.
- ⁷ 2004-2006 Alaska mortality data, Centers for Disease Control and Prevention.

Sample-Questions

2009 Alaska Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to develop better health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When you are finished, follow the instructions of the person giving you the survey.

Thank you very much for your help.

8. During the past 12 months, how would you describe your grades in school?
- A. Mostly A's
 - B. Mostly B's
 - C. Mostly C's
 - D. Mostly D's
 - E. Mostly F's
 - F. None of these grades
 - G. Not sure

E. 6 or more times

The next 4 questions ask about safety.

9. **When you rode a bicycle during the past 12 months, how often did you wear a helmet?**
- A. I did not ride a bicycle during the past 12 months
 - B. Never wore a helmet
 - C. Rarely wore a helmet
 - D. Sometimes wore a helmet
 - E. Most of the time wore a helmet
 - F. Always wore a helmet
10. How often do you wear a seat belt when riding in a car driven by someone else?
- A. Never
 - B. Rarely
 - C. Sometimes
 - D. Most of the time
 - E. Always
11. During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times
12. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times

18. During the past 12 months, how many times were you in a physical fight?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or 7 times
 - F. 8 or 9 times
 - G. 10 or 11 times
 - H. 12 or more times
19. During the past 12 months, how many times were you in a physical fight in which you were injured and had to be treated by a doctor or nurse?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times
20. During the past 12 months, how many times were you in a physical fight on school property?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or 7 times
 - F. 8 or 9 times
 - G. 10 or 11 times
 - H. 12 or more times
21. During the past 12 months, did your boyfriend or girlfriend ever hit, slap, or physically hurt you on purpose?
- A. Yes
 - B. No
22. Have you ever been physically forced to have sexual intercourse when you did not want to?
- A. Yes
 - B. No

The next question asks about bullying. **Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.**

23. During the past 12 months, have you ever been bullied on school property?
- A. Yes
 - B. No

The next 5 questions ask about sad feelings and attempted suicide. **Sometimes people feel so depressed about the future that they may consider attempting suicide, that is, taking some action to end their own life.**

24. During the past 12 months, did you ever feel so sad or hopeless almost every day for **two weeks or more in a row** that you stopped doing some usual activities?
- A. Yes
 - B. No
25. During the past 12 months, did you ever **seriously** consider attempting suicide?
- A. Yes
 - B. No
26. During the past 12 months, did you make a plan about how you would attempt suicide?
- A. Yes
 - B. No
27. During the past 12 months, how many times did you actually attempt suicide?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times

33. During the past 30 days, how did you usually get your own cigarettes? (Select only one response.)
- A. I did not smoke cigarettes during the past 30 days
 - B. I bought them in a store such as a convenience store, supermarket, discount store, or gas station
 - C. I bought them from a vending machine
 - D. I gave someone else money to buy them for me
 - E. I borrowed (or bummed) them from someone else
 - F. A person 18 years old or older gave them to me
 - G. I took them from a store or family member
 - H. I got them some other way
34. During the past 30 days, on how many days did you smoke cigarettes on school property?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
35. Have you ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days?
- A. Yes
 - B. No
36. During the past 12 months, did you ever try to quit smoking cigarettes?
- A. I did not smoke during the past 12 months
 - B. Yes
 - C. No
37. During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits, or Copenhagen?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
38. During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip on school property?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
39. During the past 30 days, on how many days did you smoke cigars, cigarillos, or little cigars?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
40. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
 - G. 6 days
 - H. 7 days

- B. Slight risk
- C. Moderate risk
- D. Great risk

The next 5 questions ask about marijuana use. Marijuana also is called grass or pot.

- 49. During your life, how many times have you used marijuana?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 to 99 times
 - G. 100 or more times

- 50. How old were you when you tried marijuana for the first time?
 - A. I have never tried marijuana
 - B. 8 years old or younger
 - C. 9 or 10 years old
 - D. 11 or 12 years old
 - E. 13 or 14 years old
 - F. 15 or 16 years old
 - G. 17 years old or older

- 51. During the past 30 days, how many times did you use marijuana?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times

- 52. During the past 30 days, how many times did you use marijuana on school property?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times

- 53. How much do you think people risk harming themselves (physically or in other ways), if they smoke marijuana regularly?
 - A. No risk
 - B. Slight risk
 - C. Moderate risk
 - D. Great risk

- A. Yes
- B. No

- 64. How old were you when you had sexual intercourse for the first time?
 - A. I have never had sexual intercourse
 - B. 11 years old or younger
 - C. 12 years old
 - D. 13 years old
 - E. 14 years old
 - F. 15 years old
 - G. 16 years old
 - H. 17 years old or older

- 65. During your life, with how many people have you had sexual intercourse?
 - A. I have never had sexual intercourse
 - B. 1 person
 - C. 2 people
 - D. 3 people
 - E. 4 people
 - F. 5 people
 - G. 6 or more people

- 66. During the past 3 months, with how many people did you have sexual intercourse?
 - A. I have never had sexual intercourse
 - B. I have had sexual intercourse, but not during the past 3 months
 - C. 1 person
 - D. 2 people
 - E. 3 people
 - F. 4 people
 - G. 5 people
 - H. 6 or more people

- 67. Did you drink alcohol or use drugs before you had sexual intercourse the last time?
 - A. I have never had sexual intercourse
 - B. Yes
 - C. No

- 68. The last time you had sexual intercourse, did you or your partner use a condom?

The next 9 questions ask about food you ate or drank during the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

74. During the past 7 days, how many times did you drink **100% fruit juices** such as orange juice, apple juice, or grape juice? (Do not count punch, Kool-Aid, sports drinks, or other fruit-flavored drinks.)
- A. I did not drink 100% fruit juice during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
75. During the past 7 days, how many times did you eat **fruit**? (Do not count fruit juice.)
- A. I did not eat fruit during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
76. During the past 7 days, how many times did you eat **green salad**?
- A. I did not eat green salad during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
77. During the past 7 days, how many times did you eat **potatoes**? (Do not count french fries, fried potatoes, or potato chips.)
- A. I did not eat potatoes during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
78. During the past 7 days, how many times did you eat **carrots**?
- A. I did not eat carrots during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
79. During the past 7 days, how many times did you eat **other vegetables**? (Do not count green salad, potatoes, or carrots.)
- A. I did not eat other vegetables during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day

The next 6 questions ask about physical activity.

83. During the past 7 days, on how many days were you physically active for a total of **at least 60 minutes per day**? (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
 - G. 6 days
 - H. 7 days
84. On an average school day, how many hours do you watch TV?
- A. I do not watch TV on an average school day
 - B. Less than 1 hour per day
 - C. 1 hour per day
 - D. 2 hours per day
 - E. 3 hours per day
 - F. 4 hours per day
 - G. 5 or more hours per day
85. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Nintendo, Game Boy, PlayStation, Xbox, computer games, and the Internet.)
- A. I do not play video or computer games or use a computer for something that is not school work
 - B. Less than 1 hour per day
 - C. 1 hour per day
 - D. 2 hours per day
 - E. 3 hours per day
 - F. 4 hours per day
 - G. 5 or more hours per day

86. In an average week when you are in school, on how many days do you go to physical education (PE) classes?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
87. During an average physical education (PE) class, how many minutes do you spend actually exercising or playing sports?
- A. I do not take PE
 - B. Less than 10 minutes
 - C. 10 to 20 minutes
 - D. 21 to 30 minutes
 - E. 31 to 40 minutes
 - F. 41 to 50 minutes
 - G. 51 to 60 minutes
 - H. More than 60 minutes
88. During the past 12 months, on how many sports teams did you play? (Include any teams run by your school or community groups.)
- A. 0 teams
 - B. 1 team
 - C. 2 teams
 - D. 3 or more teams

The next 3 questions ask about other health-related topics.

89. Have you ever been taught about AIDS or HIV infection in school?
- A. Yes
 - B. No
 - C. Not sure
90. Has a doctor or nurse ever told you that you have asthma?
- A. Yes
 - B. No
 - C. Not sure
91. Do you still have asthma?

96. During an average week, on how many days do you take part in organized after school, evening, or weekend activities (such as school clubs; community center groups; music, art, or dance lessons; drama; church; or cultural or other supervised activities)?

- A. 0 days
- B. 1 day
- C. 2 days
- D. 3 days
- E. 4 days
- F. 5 days
- G. 6 days
- H. 7 days

97. Do you agree or disagree that you feel alone in your life?

- A. Strongly agree
- B. Agree
- C. Not sure
- D. Disagree
- E. Strongly disagree

98. Do you agree or disagree that in your community you feel like you matter to people?

- A. Strongly agree
- B. Agree
- C. Not sure
- D. Disagree
- E. Strongly disagree

99. Do you agree or disagree that your school has clear rules and consequences for behavior?

- A. Strongly agree
- B. Agree
- C. Not sure
- D. Disagree
- E. Strongly disagree

**This is the end of the survey.
Thank you very much for your help.**

Planned Parenthood[®] of the Great Northwest

March 9, 2009

The Honorable Bettye Davis
Alaska State Senate
State Capitol, Rm 30
Juneau, AK 99801-1182

Dear Senator Davis:

On behalf of Planned Parenthood of the Great Northwest (PPGNW), I'm writing in support of Senate Bill 101, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Planned Parenthood relies on the results of the school-based Alaska Youth Behavior Risk Survey to determine where our efforts should be in terms of education and STI prevention programs. For accurate survey results it's critical to get as many survey responses as possible. Planned Parenthood recognizes that the current regulations of active parental consent for anonymous surveys decrease the response rate significantly.

Senate Bill 101 will increase the accuracy of the vital information Planned Parenthood and many other organizations rely on to serve Alaska's young people. Thank you for addressing this issue.

Sincerely,

Clover Simon
Vice President of Alaska
Planned Parenthood of the Great Northwest
(907) 770-9705
clover.simon@ppgnw.org

Planned Parenthood of the Great Northwest
Alaska Administrative Office - 4001 Lake Otis Pkwy
Anchorage, AK 99508

**Position Statement on SB 101
Relating to Questionnaires and Surveys in Public Schools**

AASB member districts need school-by-school data to increase student achievement and accurately assess the effectiveness of current programs. Since passage of HB 70 in 1999, schools have been unable to obtain an adequate sample of student information to provide reliable information. AASB supports modifying the requirements for parental or legal guardian permission for a student to participate in a questionnaire or survey administered in a public school.

YRBS - Nationally

The Youth Risk Behavior Survey (YRBS) is the largest and most respected source of data on the youth risk behaviors that contribute to the leading causes of mortality, morbidity, and social problems in the US. The YRBS was created by the Division of Adolescent School Health, Center for Disease Control, and representatives from more than 800 local, state, and federal health agencies in 1990. The YRBS measures behaviors that fall into the following 6 categories: Behaviors that result in unintentional injuries and violence, tobacco use, alcohol and other drug use, sexual behaviors that result in HIV infection, other STDs, and unintended pregnancies, dietary behaviors, physical activity.

YRBS - How Can This Short Survey Collect the Vital Behavioral Information We Need?

Amazingly, nationally 71% of all deaths for persons 10-24 years of age are due to only 4 causes: motor vehicle crashes, other unintentional injuries, homicide, and suicide. In addition, 800,000-900,000 teenaged girls become pregnant each year and an estimated 3 million STDs occur among persons ages 10-19. A limited number of behaviors usually established during youth contribute substantially to these causes of mortality and morbidity. These behaviors include: carrying a weapon, physical fighting, attempting suicide, drinking or using drugs while operating a motor vehicle, lack of seatbelt use while riding in a motor vehicle, lack of helmet use while riding a bicycle, and unprotected sexual intercourse that results in HIV infection, other STDs, or unintended pregnancies.

The Youth Risk Behavior Survey also surveys youth on the leading causes of adult morbidity and mortality as many individuals initiate the risk behaviors that lead to problems as adults in their adolescence. Among adults in the US aged 25 and older, 63% of deaths are due to only 2 causes: cardiovascular disease and cancer. A limited number of causes contribute to these health problems. These behaviors include: use of tobacco, unhealthy dietary behaviors, and physical inactivity.

YRBS - How it Works

The YRBS is administered in a collection of randomly drawn sample schools from nearly every state every other year. The survey is administered to high school aged students in a single class period and is completely anonymous. Some school districts choose to survey all of their high school students to better understand and measure risk behaviors in their communities. Strict precautions are in place to absolutely insure student confidentiality and participation in the survey is completely voluntary. Students answer the multiple choice questions about their current and past risk behaviors, which are collected and sent to the state for processing. State results are then shared federally with CDC.

YRBS - The Value

The YRBS results have tremendous value at the national, state, and local level. Results allow health and educational professionals to track the prevalence of youth risk behaviors over time, to compare their state to other states or to the nation, and even to empower local communities to measure themselves compared to the rest of the state. Understanding the extent to which youth practice health risk behaviors is critical for developing programs that address risk behaviors practiced in their jurisdiction and for measuring progress toward program goals. YRBS results also help with focusing school health education teacher training and instructional programs, supporting health-related legislation, and seeking funding for school health programs.

Alaska's YRBS

Alaska managed to collect enough student responses to the YRBS to get usable data twice since it began administering the survey in 1995. CDC determined that at least 60% of students in the selected sample must complete the survey for it to accurately represent student behavior across the entire state. Alaska was able to get 60% or more responses in 1995 and in 2003. In 2005, Alaska missed achieving an adequate response rate and was unable to use the data. Every effort is being made for a successful survey in 2007.

Here is a sample of Alaska 2003 YRBS data:

- 11.8% of high school boys reported carrying a weapon to school in the last 30 days
- 38.7% of high school students reported drinking alcohol in the last 30 days
- 47.5% of high school students reported having ever used marijuana
- 1 in 4 high school students reporting driving in a vehicle with a driver who drank alcohol in the last 30 days
- 1 in 5 high school girls reported seriously considering suicide in the last 12 months

For more information visit <http://www.hss.state.ak.us/dph/chronic/school/pubs/YRBSreport2003.pdf>.

DEAR PAT,

I am a health teacher who recently heard that Alaska has a law that requires parental consent for youth health surveys at school. I occasionally utilize classroom surveys with my students and now am concerned if I am following protocol. Is this true, and if so, what should I do?
Signed, Alarmed in ABC School

Dear Alarmed in ABC School,

Alaska has had a law, AS 14.03.110, since 1999 that prohibits schools from administering surveys or questionnaires at public schools that inquire into personal or family affairs, or anything else that is not a matter of public record or readily observable in public (regardless of whether or not the surveys are anonymous and voluntary) without first getting written permission from all participating students' parents or legal guardians. This type of requirement is known as active parental consent.

According to the Centers for Disease Control Alaska is one of two or three states in the nation that has a school survey law requiring active parental consent for surveys that are anonymous and voluntary. Most states employ passive parental consent when administering such surveys. Under this system, written notice is sent out to parents informing them of the upcoming survey and the types of questions it will ask, and then permission to participate is assumed unless parents or students indicate otherwise. With passive parental consent all students and parents can decline to participate at any point in the process.

Classroom teachers need to be aware of this law as it applies to small informal surveys teachers may want to include in their instruction as well as to national surveys like the YRBS. Many teachers are surprised to learn of this law and its requirements, and are forced to revisit some of their current instructional assignments and practices to avoid violations. Teachers should check with their school administrators for further guidance.

Addressing active consent is a controversial topic. Advantages to active parental consent are greater parental involvement and less risk of students being included in surveys without parental approval. Disadvantages of active parental consent include the drastically increased costs and labor involved in conducting student surveys, the high failure rates for getting enough student responses to get usable data for larger surveys, the potential for leading to inaccurate/misrepresentative data, the research suggesting that the vast majority of parents consent to their students participating in such surveys, and that most parental failures to provide written permission are driven by apathy, oversight, or student error, not by refusal.

As a health teacher you can do several things to support collections of important health data for local, state and national use. First you can communicate with your site administrator to see if consent for surveys is built into your school's annual parental enrollment packet. Second, you can incorporate lessons on the YRBS into your curriculum, highlighting its findings and its importance. Student health projects could focus on raising community awareness and support for the YRBS and other youth risk behavior surveys. Finally, some students could choose to research Alaska's law around surveys in schools and its current effects on Alaska's youth risk behavior data collection efforts.

***Much of the information in this edition comes from CDC's 2005 Handbook for Conducting YRBS Surveys.

Subject: SB 101

Dear Vice Chair Davis and Education Committee Members:

I am writing to urge your support for SB 101 which relates to questionnaires and surveys.

SB 101 returns Alaska Schools to an opt out procedure for conducting the Youth Risk Behavior Survey from the United States Centers for Disease Control and Prevention. This is a completely anonymous survey that helps asses the emotional and physical health of our children. Parents are still informed of the survey and may choose not to allow their children to participate. Students who take the survey are notified of their right to refuse to answer any question they don't want to answer.

Under current law, school districts can not permit the administration of this survey without specific parent consent. Many parents don't object, they just don't follow through with ensuring that their child gets the permission form back to school. The Anchorage School District has gone to great expense and effort to obtain returned permission forms and most of the returned forms do give permission. With the opt out system proposed by the amendments in SB 101, parents who do object will be given lots of notice of their right to object and plenty of opportunity to do so. This is a good compromise between the need to get adequate data about the health of our children and the interests of those parents who believe this anonymous survey is detrimental in some way.

: Anchorage School Board supports making the changes proposed in SB 101.

Protection of Pupil Rights Amendment (PPRA)

The Protection of Pupil Rights Amendment (PPRA) (20 U.S.C. § 1232h; 34 CFR Part 98) applies to programs that receive funding from the U.S. Department of Education (ED). PPRA is intended to protect the rights of parents and students in two ways:

- It seeks to ensure that schools and contractors make instructional materials available for inspection by parents if those materials will be used in connection with an ED-funded survey, analysis, or evaluation in which their children participate; and
- It seeks to ensure that schools and contractors obtain written parental consent before minor students are required to participate in any ED-funded survey, analysis, or evaluation that reveals information concerning:
 1. Political affiliations;
 2. Mental and psychological problems potentially embarrassing to the student and his/her family;
 3. Sex behavior and attitudes;
 4. Illegal, anti-social, self-incriminating and demeaning behavior;
 5. Critical appraisals of other individuals with whom respondents have close family relationships;
 6. Legally recognized privileged or analogous relationships, such as those of lawyers, physicians, and ministers; or
 7. Income (other than that required by law to determine eligibility for participation in a program or for receiving financial assistance under such program).

Parents or students who believe their rights under PPRA may have been violated may file a complaint with ED by writing the Family Policy Compliance Office. Complaints must contain specific allegations of fact giving reasonable cause to believe that a violation of PPRA occurred.

For additional information or technical assistance, you may call (202) 260-3887 (voice). Individuals who use TDD may call the Federal Information Relay Service at 1-800-877-8339. Or you may contact us at the following address:

Model Notification of Rights Under the Protection of Pupil Rights Amendment (PPRA)

PPRA affords parents certain rights regarding our conduct of surveys, collection and use of information for marketing purposes, and certain physical exams. These include the right to:

• *Consent* before students are required to submit to a survey that concerns one or more of the following protected areas ("protected information survey") if the survey is funded in whole or in part by a program of the U.S.

Department of Education (ED)–

1. Political affiliations or beliefs of the student or student's parent;
2. Mental or psychological problems of the student or student's family;
3. Sex behavior or attitudes;
4. Illegal, anti-social, self-incriminating, or demeaning behavior;
5. Critical appraisals of others with whom respondents have close family relationships;
6. Legally recognized privileged relationships, such as with lawyers, doctors, or ministers;
7. Religious practices, affiliations, or beliefs of the student or parents; or
8. Income, other than as required by law to determine program eligibility.

• *Receive notice and an opportunity to opt a student out of–*

1. Any other protected information survey, regardless of funding;
2. Any non-emergency, invasive physical exam or screening required as a condition of attendance, administered by the school or its agent, and not necessary to protect the immediate health and safety of a student, except for hearing, vision, or scoliosis screenings, or any physical exam or screening permitted or required under State law; and
3. Activities involving collection, disclosure, or use of personal information obtained from students for marketing or to sell or otherwise distribute the information to others.

• *Inspect*, upon request and before administration or use –

1. Protected information surveys of students;
2. Instruments used to collect personal information from students for any of the above marketing, sales, or other distribution purposes; and
3. Instructional material used as part of the educational curriculum.

These rights transfer to from the parents to a student who is 18 years old or an emancipated minor under State law.

[School District will/has develop[ed] and adopt[ed]] policies, in consultation with parents, regarding these rights, as well as arrangements to protect student privacy in the administration of protected information surveys and the collection, disclosure, or use of personal information for marketing, sales, or other distribution purposes. [School District] will directly notify parents of these policies at least annually at the start of each school year and after any substantive changes. [School District] will also directly notify, such as through U.S. Mail or email, parents of students who are scheduled to participate in the specific activities or surveys noted below and will provide an opportunity for the parent to opt his or her child out of participation of the specific activity or survey. [School District] will make this notification to parents at the beginning of the school year if the District has identified the specific or approximate dates of the activities or surveys at that time. For surveys and activities scheduled after the school year starts, parents will be provided reasonable notification of the planned activities and surveys listed below and be provided an opportunity to opt their child out of such activities and surveys. Parents will also be provided an opportunity to review any pertinent surveys. Following is a list of the specific activities and surveys covered under this requirement:

- Collection, disclosure, or use of personal information for marketing, sales or other distribution.
- Administration of any protected information survey not funded in whole or in part by ED.
- Any non-emergency, invasive physical examination or screening as described above.

Parents who believe their rights have been violated may file a complaint with:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, D.C. 20202-5901

OR CALL 800-CDC-INFO (800-232-4636).

The Protection of Pupil Rights Amendment (PPRA)

This federal law provides parents with important rights relative to surveys and certain nonemergency physical examinations conducted by schools that receive federal funds from the Dept. of Education.

The Protection of Pupil Rights Amendment (PPRA) is a statute originally enacted in 1978 that provides parents with important rights regarding surveys performed by schools. Such surveys may be overly intrusive and personal or may collect information for purposes other than those represented. The PPRA and a second federal law known as FERPA are enforced by the Family Policy Compliance Office (FPCO) of the US Dept. of Education. Complaints regarding PPRA violations, including non-notification (failing to annually notify parents of their rights under the PPRA), must be filed by mail to the FPCO. Questions regarding the PPRA can be addressed to the FPCO by phone at (202) 260-3887 or by e-mail at ppra@ed.gov (we have found them to be very friendly, helpful and responsive).

The PPRA applies to any school that receives funds from the US Dept. of Education.

A summary of the PPRA is located here. In 2002, Phyllis Schlafly of the Eagle Forum made the observation that compliance with the law has been spotty ever since its inception.

The PPRA statute as it existed prior to January 2002 is available here.

The law as amended in January 2002 (the No Child Left Behind Act of 2001) has significantly strengthened the rights of parents, as follows:

- It now requires written parental consent prior to administering ED-funded surveys that include questions falling into any of the following eight categories:
 1. political affiliations or beliefs of the student or the student's parent;
 2. mental and psychological problems of the student or the student's family;
 3. sex behavior or attitudes;
 4. illegal, anti-social, self-incriminating, or demeaning behavior;
 5. critical appraisals of other individuals with whom respondents have close family relationships;
 6. legally recognized privileged or analogous relationships, such as those of lawyers, physicians, and ministers;
 7. religious practices, affiliations, or beliefs of the student or student's parent; or
 8. income (other than that required by law to determine eligibility for participation in a program or for receiving financial assistance under such program).
- It now provides for the first time rights regarding surveys *not funded by the US Dept. of Education*. Schools are required to develop and adopt policies - *in conjunction with parents* - regarding the following -

1. The right of parents to inspect, upon request, a survey created by a third party before the survey is administered or distributed by a school to students.
 2. Arrangements to protect student privacy in the event of the administration of a survey to students, including the right of parents to inspect, upon request, the survey, if the survey contains one or more of the same eight items of information noted above.
 3. The right of parents to inspect, upon request, any instructional material used as part of the educational curriculum for students.
 4. The administration of physical examinations or screenings that the school may administer to students.
 5. The collection, disclosure, or use of personal information collected from students for the purpose of marketing or selling, or otherwise providing the information to others for that purpose.
 6. The right of parents to inspect, upon request, any instrument used in the collection of information, as described in number 5.
- Local educational agencies (LEAs) must "directly" notify parents of these policies and, at a minimum, shall provide the notice at least annually, at the beginning of the school year--a sample notification and consent/opt-out examples are provided here. The LEA must also notify parents within a reasonable period of time if any substantive change is made to the policies.
 - In the notification, the LEA shall offer an opportunity for parents to opt out of (remove their child) from participation in the following activities:
 1. Activities involving the collection, disclosure, or use of personal information collected from students for the purpose of marketing or for selling that information, or otherwise providing that information to others for that purpose.
 2. The administration of any third party (non-Department of Education funded) survey containing one or more of the above described eight items of information.
 3. Any non-emergency, invasive physical examination or screening that is: 1) required as a condition of attendance; 2) administered by the school and scheduled by the school in advance; and not necessary to protect the immediate health and safety of the student, or of other students.
 - In the notification, the LEA shall notify parents the specific or approximate dates during the school year when these activities are scheduled.

The Wisconsin Dept. of Public Instruction prepared these instructions/guidelines on surveys and the PPRA for school officials in January 2003.

Surveys in Public Schools--Application of the PPRA

To better understand what might constitute a violation of PPRA, here are several recent examples where surveys have been given or are planned to be given in public schools:

School Survey in Virginia--2003 This site discusses a survey to be given to Fairfax County, Virginia high school students in April 2003. Although Fairfax County Attorney David Bobzien ruled that no federal funds are involved in the survey and that it is therefore "a local initiative not requiring

informed parental consent," the survey would likely violate the PPRA as amended in January 2002 if students were not allowed to opt out of taking it.

Alleged Violation of PPRA in Minnesota--2002 This site describes what appears to be a recent violation of the PPRA that occurred at the Mahtomedi, Minnesota High School in September 2002. Freshmen were shown two videos on homosexuality, then assigned to complete an "assessment" (translation--survey) to determine if they "harbored hidden biases toward straight people, or against gay people." The survey is posted at tolerance.org.

Alleged Violation of PPRA in Ohio--2000 Parents sued an Ohio school district after their children were given an intrusive survey--although their original PPRA complaint was dismissed because the survey in question was not federally funded, the parents and the school board reached a settlement while the case was on appeal. Note that since passage of the NCLB Act, the PPRA now applies to *all surveys*, not just those performed using DOE funds.

Intrusive Survey in Connecticut--2000 The New Milford, Connecticut, school district gave students as young as 11 the "Youth Risk Behavior Survey". Administrators claim they complied with the PPRA (which requires parental consent for federally-funded surveys) by sending a letter home advising parents that they could opt their children out of the survey, but the letter gave no warning that some questions would be explicit and many parents claim they never saw it. Under the new provisions of the NCLB Act, the schools would now require "active consent" from parents prior to administering such a survey.

Survey in New York State This site details the chronology of events during 1999 and 2000 after it was decided that a "Youth Risk Behavior Survey" would be given to local students in grades 7 through 12. The survey included questions related to sex, drugs and alcohol.

Violation of PPRA in New Jersey--1999 This rather extensive site documents what happened after an intrusive anonymous survey was given in the Ridgewood, NJ School District in 1999 using Dept. of Education funds. The FPCO ruled that the PPRA had been violated and the incident ultimately resulted in the passage of a NJ state law that provides even more protection for the rights of NJ students than guaranteed by the PPRA. In June 2004 a Federal District Court held that students' and parents' rights were not violated because the survey was "voluntary and anonymous", but an appeal was filed in September 2004 claiming the survey was not in fact administered in a strictly voluntary and anonymous manner.

Violation of PPRA in Texas--1999 This site summarizes a case brought against the San Antonio School District for violation of the PPRA that occurred when high school students were given an intrusive psychological survey that asked personal questions such as "Do you ever wish you were a boy or girl instead of what you are?"

What You Should Do

Parents--talk to your kids, and find out if they are being given surveys that ask questions that fall into any of the categories listed above. Students--if you're given surveys, even anonymous ones, that you feel are too personal or intrusive, tell your parents. Let's keep the schools focused on education!

Last updated October 2004

February 11, 2010

The Honorable Wes Keller
Alaska State House Representative
State Capitol Room 13
Juneau, Alaska 99801

Dear Representative Keller:

The Leadership Team of Anchorage United for Youth is writing again to request your support for Senate Bill 101, *"An act relating to questionnaires and surveys administered in the public schools."*

Over the past three years, we have been able to energize an entire community around supporting our youth to help them graduate from high school and transition to a healthy and successful adulthood. To guide the planning process for this initiative, and to track its progress in order to remain accountable to ourselves, our community, our funders, and our young people, Anchorage United for Youth has drawn upon the vital information gleaned from the YRBS. When our community saw that almost 20% of our youth reported being physically hurt on purpose by a boyfriend or girlfriend in 2005, it was clear that this was a number we could not accept or allow to continue. Alaska already has one of the highest rates of domestic violence per capita in the nation. Our collaborative effort and our partners are determined to provide a better future for our children.

When our community saw that over 40% of our youth were drinking alcohol and almost 30% were binge drinking, we knew that we must come together to help our kids reject alcohol use in order to keep them safe. Tracking this data over time tells us if we are succeeding and where there is more to be done to bolster our youth.

One of the programs borne of this community effort was the Mountain View Photovoice project that provided the opportunity for at-risk youth to come together in a safe environment, learn a form of artistic expression, think critically about their surroundings, and talk with their peers and supportive adults about issues that were important in their lives. An excerpt from the narrative report at the culmination of this project is below:

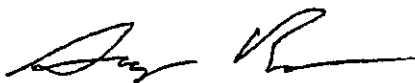

"A 17-year-old, 300-pound young Samoan man, who had spoken earlier about fighting as a regular activity and who tended to sit in the back and disengage, related [his] photo to the colorlessness and emptiness of life in his adolescence and began to speak of his pain, his loss, his nightly drinking. His eyes got wet as he spoke of the deaths he has suffered. And as we listened and spoke, his eyes grew wider open and he sat closer to us...Even as they shared, and even as the 17-year-old young man was desperately asking for help, we could tell that he was reticent about getting professional help. He spoke of cruelty, of fighting, of drinking, and I knew I couldn't push too hard but had to respond. So I found out about treatment services for teens and spoke to him about them quietly. He came back on Wednesday saying that he and his sister had quit drinking, and on Friday that they are going to AA meetings together. Over a month later, he is still clean even though his sister has begun drinking again and even after suffering the murder of his 15-year-old cousin. This young man even wrote that we should stop violence in Mountain View....[The photographer] has since then gone to hang out and shoot photos with him, keeping him engaged through this art form for which he shows almost a preternatural ability, and keeping him connected to a non-violent adult who cares for him."

This is but one of many projects and programs being conducted in our community in an effort to strengthen and support our youth and their families. We measure the success of this combined effort through the data collected from the YRBS.

We recognize and support the important role of parents in choosing what's best for their children. We support Senate Bill 101 because it maintains and strengthens current parent notification provisions. It ensures that parents are informed that the survey will be given, provides for the opportunity to review survey content, and allows parents to choose not to allow their children to participate. This bill supports both parental involvement and the ability to better serve our youth.

We thank you for your commitment to youth in the state of Alaska and ask for your support of Senate Bill 101.

Sincerely,

Greg Razo, CIRI Corporation
Chair, Anchorage United for Youth Leadership Team

Anchorage United for Youth Leadership Team

ALASKA YOUTH RISK BEHAVIOR SURVEY ANOTHER "THAT'S INCREDIBLE AWARD"

I harbor a dated concept that schools should teach reading, writing, arithmetic, history and geography (now morphed into “social studies”), music, art and yes, even vocational education. There may be other subjects (dare I say “home economics?”) worthy of curriculum inclusion, but surely you get my point. Please notice I didn’t mention “behavior surveys.”

Question: So why am I bringing up this up in today’s blog? Answer: House Bill 207, entitled “An Act relating to Questionnaires and Surveys Administered in Public Schools,” came before a committee this week. I voted “Do Not Pass.”

According to the bill’s Sponsor Statement, HB 207 changes parental consent requirements for “anonymous” school surveys from an active to passive consent. That means an opt-out instead of opt-in for your parental permission to conduct an “Anonymous” School Surveys on your kid. And what survey does the bill contemplate? – I hear you cry. It’s the invasive 99 question “Anonymous” School Survey called “The Alaska Youth Risk Behavior Survey (hereinafter in the blog to be called AYBS).”

Currently the AYBS cannot be given to students without signed parental consent. Good. That means a consent form to the parent via the child, returned to the school by the child: that’s called “active consent.” Unfortunately, HB207 would change it so “consent” occurs if the school doesn’t receive back a non-consent form from the parent. Come on now . . . I can tell you, both as a parent and retired teacher, that notes don’t always make it home, and all notes from home don’t make it back to school. This isn’t rocket science.

So what's included in the 99 question invasive "Anonymous" Survey? If you want to see for yourself, check out www.asd.k12.ak.us/surveys/YRBS/2005/2005_YRBS.pdf. I don't make this stuff up.

Let me report some of the more salacious questions (If I heard someone ask some of these questions to a kid selling lemonade from a sidewalk stand, I'd call the cops).

Question 1: How old are you? Response A is 12 years old or younger. Response F is 17 years old. Comment: If a child taking the survey wasn't 12 years old or younger, pray tell what would be the purpose of Question 1?

Question 25: During the last 12 months, did you ever seriously consider attempting suicide?

Question 26: . . . did you make a plan about how you would attempt suicide?

Question 27: . . . how many times did you actually attempt suicide?

Possible answers are: 0, 1,2 or 3, 4 or 5, 6 or more times.

Comment: Well, if a kid hadn't thought of suicide already, the survey takes care of that.

Question 47: Have you ever used marijuana? Answers range from 0 to 100 or more.

Questions 48 through 58 ask the same question about a plethora of other drugs the kids may not have even known about.

Comment: Hopefully, a kid who answers 0 on questions 47 to 58 doesn't think of themselves an under-achiever. That would be bad for self-concept.

Now, the questions blog readers have been waiting for:

Question 60: Have you ever had sexual intercourse? Answer: Yes or No.

Question 61: How old were you when you had sexual intercourse for the first time?

Answers: I have never had sexual intercourse, 11 years old or younger, 12, 13, 14, 15, 16, 17.

Question 62: . . . with how many people have you had sexual intercourse? Answers range

from 0, to 6 or more.

Question 65: . . . did you or your partner use a condom?

Question 66: The last time you had sexual intercourse what method did you or your partner use to prevent pregnancy (select only one response) Answers: none, birth control pills, condoms, Depo-Provera, withdrawal, some other method, not sure.

Suggestion: How about adding a possible response to questions 60-66 of "None of your flipping (to use Governor Murkowski's innocent word) business" after Yes or No?

Question 92: How often does one of your parents talk with you about what you're doing in school? Comment: Here's another opportunity for the answer "none of your flipping business."

After taking this survey, it would be logical for a student to conclude that illegal and immoral conduct is normal and, if they answered with "low scores" on sexual activity, etc., think they are "abnormal," or at least a nerd. No kid (or adult) wants to be abnormal. The ABYS is almost like peer pressure by survey.

It's amazing to me that so many folks stridently call the Patriot Act and the Real ID Act "invasions of privacy," but think nothing about assaults on privacy of our children and parents with surveys like the AYBS.

There are also other dangers to the ABYS. If parents refuse permission for the survey, what happens to the excused kids? Do they sit in a corner of the room, go to a study hall? Whatever, I'm sure kids who don't take the survey will be singled out. Knowing kids like I do, the excluded children will suffer cruel ridicule from the other kids. Shouldn't happen. But it will.

The survey is supposed to be "anonymous." Good. But anonmunity is easily subverted by anyone who would want to. If the survey is administered in a small class – maybe one to five – it's even easier to discover identities.

Consider this: would you take a similar "anonymous" survey from your employer? Now here's an interesting thought: would legislators submit themselves to an "anonymous"

ABYS type "at risk" survey, if constituents approved?

Why do the schools want to give such surveys? Let's be positive. Many good teachers and school administrators want to help "at risk" kids, and envision the ABYS survey as one way to do it. There's probably no bad intent. They mean well, but they simply haven't thought it through. Can some good come from such surveys? Sure. But, like most things, there can be both intended and unintended consequences. For me, the surveys are (as one commentator put it) "a sociological strip search" of children, and whatever good may result could be outweighed by the bad.

There's also another reason schools want to change permission for the surveys from active to passive. Some state and federal grant programs require a certain percentage of surveys to be conducted to qualify. Grants can seduce districts into using surveys to interrogate students just to get the money. As we say in politics, "Follow the money."

HB207 passed out of the committee today (but not with my vote), and continues its journey through the legislature. Win Some. Lose some.

Anchorage School District

IMPORTANT RIGHTS FOR PARENTS CONCERNING STUDENT SURVEYS

The Federal Protection of Pupil Rights Amendment (PPRA), 20 U.S.C § 1232h, requires the Anchorage School District to notify you and obtain consent to allow your child to participate in certain school activities. These activities include a student survey, analysis or evaluation that concerns one or more of the following eight areas ("protected information surveys"):

1. Political affiliations or beliefs of the student or student's parent;
2. Mental or psychological problems of the student or student's family;
3. Sex behavior or attitudes;
4. Illegal, anti-social, self-incriminating, or demeaning behavior;
5. Critical appraisals of others with whom respondents have close family relationships;
6. Legally recognized privileged relationships, such as with lawyers, doctors, or ministers;
7. Religious practices, affiliations, or beliefs of the student or parents; or
8. Income, other than as required by law to determine program eligibility.

The Alaska State Statute and Anchorage School District Board policy also have requirements regarding surveys that require parental consent.

By Alaska State Statute, AS 14.03.110:

Parental permission is required for surveys that inquire into personal or private family affairs of the student not a matter of public record or subject to public observation.

- Parents/guardians may provide "blanket" permission, once per year, for their student to participate in anonymous surveys requiring parental consent.
- For any survey that is not anonymous and requires parental consent, the District will obtain the written permission from the student's parent or guardian at least two weeks before the survey is administered.
- In addition, for all surveys requiring permission, parents will be provided notice and an opportunity to review the survey at least two weeks in advance of the administration of the survey.

By District Board policy:

1. Each year, the District may seek the annual permission of each parent/guardian for their child to participate in anonymous surveys.
2. For those surveys that are not anonymous and require parental permission, the District shall provide a permission form to be returned by the parents/guardians and the permission form must be returned at least two weeks before the administration of the survey.

2009-2010 Surveys

For surveys that require notice to parents/guardians, the notice will be provided through your school newsletter, school Web site, emails, and/or other methods. At this time, one survey is planned that requires parental permission: the Aggressors, Victims and Bystanders Survey. This survey is anonymous.

1. Aggressors, Victims and Bystanders Survey (AVB)
Dates: August – December, 2009
Grade: Seven

By signing the following Annual Survey Permission Form, your student may participate in this survey. For surveys scheduled after the school year starts, the Anchorage School District will provide parents/guardians at least two weeks notice prior to the administration of the surveys. Notification will come to you through your school newsletter, school Web site, emails, and/or other methods and will advise you of your opportunity to review the surveys.

The following surveys do not require parental permission. The District will provide notice through your school newsletter, school Web site, emails, and/or other methods at least two weeks prior to the administration of the surveys.

1. Climate and Connectedness Student Survey
Dates: January 19 – February 10, 2010
Grades: Three through Twelve

2. OCR – Athletic Interest Survey
Dates: October 5 – 29, 2009
Grades: Eight through Twelve

ANNUAL SURVEY PERMISSION FORM
2009-2010 School Year

I understand that the Anchorage School District may administer, or be permitted to administer, anonymous surveys that require parental permission. I understand that as the parent or legal guardian of this student, I may review any of the survey instruments and determine the appropriateness of the survey in relation to my student. I can remove my student from the survey administration.

Printed name of student: _____

School: _____

Student ID: _____

Grade for 2009-2010 school year: _____

Printed name of parent/legal guardian: _____

Signature of parent/legal guardian: _____

I give my approval to administer anonymous surveys to my child this year. I understand that anonymous surveys may inquire into private matters, as explained in the Important Rights for Parents Concerning Student Surveys. I understand that I may review the survey to be given no less than two weeks prior to administration, and I may remove my child at that time if I wish. I further understand that I may revoke this annual permission at any time.

I do not give my approval to administer any anonymous survey that inquires into personal or private family affairs of the student to my child during the 2009-2010 school year.

Policy

BOARD OF EDUCATION JUNEAU SCHOOL DISTRICT

PROGRAM
1432/page 1

STUDENT ATHLETE MANDATORY DRUG TESTING

The Board of Education recognizes that drug abuse is a serious concern in the District's schools and in our community. Drug use by students is physically and emotionally harmful, interferes with the learning process and is detrimental to the welfare of all members of the school community. Further, drug use by students who participate in District athletic programs poses a direct threat to the health and safety of those students and the students with whom they compete.

Participation in extracurricular athletic activities is a privilege available to those students who are willing and able to comply with the requirements for participation in the activity. Some students have abused that privilege by using drugs while participating in athletic activities and by encouraging other students to use drugs. The measures the District has previously taken to prevent student drug abuse have not proven effective to stop that abuse. Consequently, the Board has decided to implement a random drug testing program as a condition of participation in competitive extracurricular athletic activities at the high school level.

The purposes of the program are to 1) help protect the health and safety of all students, 2) help counteract negative peer pressure by providing students with a reason to refuse drugs, and 3) encourage and assist students with drug problems to seek help in overcoming those problems.

As used in this policy and the accompanying regulations, the terms "drugs," "prohibited drugs" and "illegal drugs" include any controlled substance the use of which is prohibited by AS 11.71 in the absence of a valid prescription, tobacco and alcohol, to the extent that students have consumed any of these substances illegally.

Students who desire to participate in high school competitive extracurricular athletic activities shall be required to complete a form signed by the student, and by the student's parent or guardian if the student is a minor, authorizing the District to conduct drug testing on a random basis. The completed form must be submitted before the student may participate in any aspect of a covered activity.

The District's drug testing program shall incorporate procedures for drug testing consistent with applicable legal standards. The program shall include procedures that ensure the confidentiality of student test results and shall require all persons having access to those results to abide by those procedures.

The drug testing program shall also include appropriate consequences in the event of a positive test. Consequences shall be confined to exclusion from covered athletic activities and any applicable periods of exclusion required by the citizenship rules of the Alaska School Activities Association (ASAA); students shall not otherwise be excluded from activities. A positive test in response to random drug testing shall not result in suspension from school or any other academic consequence, nor shall positive test results be reported to law enforcement authorities.

Policy

BOARD OF EDUCATION JUNEAU SCHOOL DISTRICT

PROGRAM
1432/page 1

The Superintendent shall develop administrative regulations to implement the District's drug testing program. The District shall provide educational events for parents, guardians, students and the community on alcohol and other drug abuse and the district's policies, rules and regulations relating to drug testing and drug abuse, including the use of suspicion-based drug testing and when and why students may be referred for assessment.

The District will implement evidence-based, comprehensive K-12 educational programs and curricula to assist students in building skills to prevent alcohol and drug use/abuse in accordance with Board Policy # 5530, Drug Abuse. The Superintendent shall direct staff to work with other agencies to improve local support systems for students who are identified as needing intervention and assistance, and shall provide for the training of staff in the District's drug prevention, testing and intervention programs as outlined in Board Policy #5530, Drug Abuse and its accompanying regulations. In addition, the Superintendent shall provide for the periodic assessment of the effectiveness of the District's drug testing, prevention and educational programs.

Adopted 10/5/09

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 1

STUDENT ATHLETE MANDATORY DRUG TESTING

Drug testing, including testing for the presence of illegal drugs, tobacco and alcohol, will be required during the term of the athletic activity for students who participate in competitive high school extracurricular athletic activities. The term of the activity in which a student is subject to testing shall be determined as provided in Administrative Regulation 1430R, Student Activities. A complete list of covered activities is set out in Appendix A.

Consent

Prior to participating in any activity covered by this policy, a student and, if the student is a minor (under the age of eighteen), his or her parent will be required to complete and sign the District's Informed Consent Agreement. The agreement will state that the student, and his or her parent, if applicable, understands that by participation in the extra-curricular activity the student agrees to subject himself/herself to the district's drug testing policy. No student will be allowed to participate in practice or competition until this form is completed, signed and on file with the district. One signed form will be sufficient to authorize testing for all covered athletic activities a student participates in during a given school year.

Testing Procedure

Random testing will be conducted weekly during the term of each covered activity. Approximately 15% of the students participating at each school in each sports program that is in season will be tested each week. For purposes of calculating the number of students to be tested, boys' and girls' teams constitute separate programs. Co-ed teams constitute single programs. A program consists of all the teams (varsity, junior varsity, "C" teams, etc.) competing in a particular sport. Students shall be selected for testing by lottery drawing or other random means from a pool of all students participating in a given sport at the time of the drawing. The individual or agency in charge of selecting students for testing shall take all reasonable steps to assure the integrity, confidentiality and random nature of the selection process including, but not necessarily limited to, assuring that the names of all students currently participating in covered activities are included in the pool, assuring that the person drawing names has no way of knowingly choosing or failing to choose particular students for testing, assuring that the identity of students drawn for testing is not known to those involved in the selection process and assuring direct observation of the selection process by at least two adults.

Scope of Testing

Prohibited drugs include any controlled substance the use of which is prohibited by AS 11.71 in the absence of a valid prescription, alcohol and tobacco, to the extent that students have consumed any of these substances illegally. Testing will be performed for one or more prohibited drugs and/or their metabolites. A list of the substances for which testing may be performed is set out in Appendix B. Students shall not be tested for the presence of any substance other than a prohibited drug, nor shall they be tested for the existence of any physical condition other than drug intoxication and/or the presence of prohibited drugs in their systems.

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 2

Testing Protocol

The District will schedule all testing. District personnel shall designate a certain area in each high school building as the collection site. Initial screening tests will be conducted by personnel provided by an outside testing agency. Those personnel or "test administrators" shall be trained in appropriate procedures for administering the test, recognizing adulteration of samples and evaluating test results.

Specimen Collection

Students to be tested shall present verification of their identities to the test administrator, if the test administrator does not personally know them. In the absence of other verification, a school administrator may verify a student's identity to the test administrator.

1. Urine Collection

Students shall be asked to remove any jackets or coats and to wash and dry their hands prior to collection of the specimen. Students must leave their purses, packs, wallets and similar items outside the collection site to prevent access to adulterants. These procedures must be completed in the presence of the test administrator.

A student shall be given a choice of at least two sealed drug-testing kits. The student's selected kit shall be opened in full view of the student. The student shall then be directed to a private area for production of a urine specimen. All students providing urine samples shall be given the option of doing so alone in an individual stall with the door closed. The collection and testing process shall be performed in a manner that protects student privacy to the maximum extent consistent with ensuring the validity and accuracy of the test results.

After testing, the student must present the specimen to the test administrator prior to washing his/her hands or flushing the toilet. The specimen shall remain in the student's visual field while the test administrator conducts the following procedures. The test administrator shall measure the specimen and record its temperature. The test administrator shall then divide the specimen in half and shall conduct initial screening using one of the halves. If that screening yields a negative result, the entire specimen will be discarded. If the screening yields an inconclusive or presumptively positive result, the remaining half of the specimen shall be sealed and transmitted as a split specimen to a testing laboratory that has been certified or approved by the federal Substance Abuse and Mental Health Services Administration for confirmatory testing. The student shall be requested to initial and date a form identifying the specimen.

If a student is unable to produce a urine specimen at the time for testing, the student will be allowed to return to provide a specimen later that same day.

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 3

Confirmatory Testing

The testing laboratory shall conduct confirmatory testing using gas chromatography/mass spectrometry (GC/MS) techniques or other techniques that produce equally reliable results.

For substances other than alcohol or nicotine, tests shall not be considered positive unless the substance to be tested or its metabolite is present at a level equal to or greater than the cutoff level established by the United States Department of Health and Human Services for that substance in connection with federally-mandated workplace drug testing programs. For tobacco and alcohol, cutoff levels shall be set to exclude positive tests due to environmental exposure or incidental ingestion of those substances. See Appendix C for tobacco and alcohol cutoff levels.

A licensed physician or osteopath shall review all positive confirmatory test results. The physician or osteopath shall contact the student and a parent, if the student is a minor, within 48 hours of receiving a confirmatory positive test/result from the laboratory and offer an opportunity to discuss the test results. Students may be requested to provide verification of prescriptions or other relevant medical information. Test results that the physician or osteopath concludes are caused by medicine prescribed for the student or by the legal ingestion of any substance, including alcohol or tobacco, shall be reported as negative.

Notification of Testing

District personnel will make every reasonable effort to notify a parent of any minor student who has been tested that the student has been tested and the results of the initial screening within one school day following the initial screening. District personnel will also make every reasonable effort to notify students and at least one parent, if the student is a minor, of the results of confirmatory testing within one school day following the District's receipt of the results. If the confirmatory test is positive, then the consequences stipulated by these regulations will be enforced, except as provided below.

Requests for Re-test

An opportunity for re-test of a specimen following a confirmatory positive test shall be provided when it is technologically practicable and economically reasonable to do so. The student may request a re-test, using the split specimen initially provided to the lab, within three calendar days following notification of positive confirmatory testing results. The student will be required to pay the associated costs of re-testing in advance unless excused from the obligation to pay due to financial inability to pay, but the costs will be reimbursed if the result of the re-test is negative.

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 4

Appeal

Regardless of whether a student requests that a specimen be retested, the District shall provide an opportunity for the student and a parent, if the student is a minor, to comment on or explain a positive test result to the principal or designee in a confidential setting prior to taking any action to exclude the student from participation in an extra-curricular activity. A student shall have the right to appeal the principal's decision regarding an exclusion based on random drug testing results in accordance with the procedures established in Board Policy 5710, Student Grievance. Consequences for positive testing shall not be held in abeyance pending appeals past the principal's level unless the principal or Superintendent determines that unusual circumstances justify holding them in abeyance.

Right to Review Test Results

Students and the parents of minor or dependent students have the right to review any records the district maintains related to the student's testing. Written test results will be maintained for at least six months following testing. Students and the parents of minor or dependent students shall have the right to obtain a copy of the written results of the student's tests if they make a written request to the principal for those results within six months after the date of the test. If a student or parent requests written test results in connection with an appeal, the principal shall make every reasonable effort to provide the results within one school day of receiving the request, and shall provide them before the principal's meeting with the student and parent. Otherwise, the principal shall provide the written results to the student or parent within five working days of receiving a timely written request for test results.

Refusal to be Tested

Should a student and/or minor student's parent refuse to permit testing of the student when the student has been selected for random testing under this regulation, the student will be excluded from participation in covered athletic activities to the same extent the student would have been if the student had tested positive, and shall not be permitted to participate in covered athletic activities until the applicable period of exclusion has expired and the student has produced at least one negative drug test.

Alteration or Manipulation of Specimens

The use of substances and methods to alter the integrity of specimens or the validity of test results is prohibited. Examples of prohibited alteration or manipulation include catheterization, urine substitution or adulteration, and modification of renal excretion by the use of diuretics or masking substances or agents.

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 5

Violations

The following constitute violations for purposes of imposing consequences on students pursuant to these regulations:

- a. Positive test results;
- b. Refusal to take a drug test, unjustified delay in reporting for testing, or unjustified failure to produce a specimen for screening;
- c. Violation of testing protocols by student;
- d. Manipulating, altering or attempting to alter or manipulate the integrity of a specimen or the validity of the collection and testing process.

Positive test results will lead to consequences under both these regulations and the Alaska Student Activities Association's rules, where applicable, as provided below. The violations described in b. through d. above will lead to consequences only under these regulations.

Consequences for Violation

Students who test positive shall be required to complete a substance abuse assessment by a trained substance abuse counselor, and to provide a doctor's or osteopath's certification that the student has successfully completed a course of treatment or otherwise resolved any concerns relating to the student's use of prohibited drugs, in order to be eligible to participate in any future covered athletic activity. Students who violate the requirements of these regulations shall be excluded from participation in the athletic activity in which they are currently participating for the remainder of the season, and shall be excluded from all other athletic activities covered by this policy for a period of thirty days. The 30-day period of exclusion shall run from the first day of exclusion from the student's current activity. For example, a student who commenced serving a term of exclusion during one activity and 20 days prior to the start of another activity would be excluded from participation in the subsequent activity for the first 10 days of that activity. The period of exclusion may be reduced to ten days for athletic activities that have not yet commenced if the student completes a substance abuse assessment and provides medical certification of the student's successful participation in any needed intervention, as provided above. Regardless of whether a student's exclusion is due to a positive test, a refusal to submit to a test after being selected for random testing, or to a violation of the testing protocols, the student must produce at least one negative drug test prior to participating in future covered athletic activities. In addition, positive test results shall be reported to the Alaska School Activities Association (ASAA) as a violation of ASAA's citizenship rules and students who test positive shall be subject to any applicable period of exclusion required by ASAA rules, but shall not otherwise be excluded from activities. Students shall not be subject to any other form of discipline or penalized academically as a result of a violation of these regulations, nor shall positive test results be reported to law enforcement authorities.

Rules & Regulations

BOARD OF EDUCATION
JUNEAU SCHOOL DISTRICT

PROGRAM
1432R/Page 6

Confidentiality of Test Results

The District will limit disclosure of information acquired through drug testing to the student, the parent of a minor or dependent student, the test administrator, laboratory and medical review personnel, and district officials with a need to know, typically including the student's coach, principal, any counselor assisting the student in connection with intervention or rehabilitation services and any school official considering the student's appeal of consequences imposed for a violation of these regulations. The information reported to ASAA shall be restricted to the information required by ASAA for reporting violations of ASAA citizenship rules. Test results and other personal and confidential information regarding a student acquired as a result of the testing process shall not otherwise be released without the student's or minor student's parent's written consent, except where disclosure is compelled by law.

FORM #1432A**

STUDENT ATHLETE MANDATORY DRUG TESTING

Student Athlete, Parent/Guardian Informed Consent Agreement for the _____ School Year

I have read the attached Board Policy 1432 and Administrative Regulation 1432R on Student Athlete Mandatory Drug Testing for high school participants.

I understand that submission to drug testing is a condition of my participation in school sponsored competitive extra-curricular athletic activities. I understand the terms used in the policy and regulations and the process for conducting mandatory drug testing, including the penalties for violations.

I authorize Juneau School District and the individuals they contract with to conduct a test on a urine and/or saliva specimen that I provide to detect the presence of alcohol, tobacco or illegal drugs. I also authorize release of information concerning the results of such a test to school officials and to the individuals contracted with by the Juneau School District for drug testing and medical review of the testing results, as provided in Juneau School District Administrative Regulation 1432R.

This agreement shall be deemed consent pursuant to the Family Educational Rights and Privacy Act for the release of above information to the parties named above.

Student Signature

The Honorable Bob Herron
 Alaska State House Representative
 State Capitol Room 411
 Juneau, AK 99801

Dear Representative Herron,

I am writing to you as the Executive Director of Anchorage's Promise – the Alliance for Youth in support of Senate Bill 101, "An Act relating to questionnaires and surveys administered in the public schools."

The Youth Risk Behavior Survey (YRBS) is a tool used by multiple community-serving organizations, including Anchorage's Promise to monitor the health and well-being of Alaskan youth. YRBS data is a critical resource used by our organization to set and monitor performance measures that our agency is actively engaged in addressing. Additionally, the findings presented provide additional help in seeking funding for program services that focus on reducing health risk behaviors among youth.

Anchorage's Promise works to mobilize all sectors of our community to build the character and competence of Anchorage's children and youth by fulfilling *Five Promises; caring adults, safe places, healthy start, effective education, opportunities to help others.*

To successfully do this successfully, we require reliable and statistically valid community data. Routine standardized surveys such as the YRBS allows us to track trends over time and help guide and evaluate the important youth programs we implement to keep our youth on track to graduate from high school, avoid delinquency and reject substance use.

When determining your vote, please consider the following:

- The YRBS has a required response rate of 60% to make it statistically valid.
- Current legislation requires active parental consent which presents significant obstacles and costs to achieving this response rate.
- Approximately \$90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.
- SB 101 protects previously legislated parental rights to consent, parental rights to notification, and children's right to refuse participation.

We support SB 101 because it continues to provide these protections and respects the privacy of families, while removing the obstacles to obtaining this vital data that allows us to track and improve conditions for our youth. We ask for your support of this very important legislation.

Please contact me if I can provide any additional information about how critical this data is to our community's youth.

 Debbie Bogart

February 1, 2010

To Representatives Wes Keller and Bob Herron, co-chairs of the House Health and Humans Services Committee; and committee members:

I am writing to ask for your full support of SB101, legislation to change the Youth Risk Behavior Survey, to passive parental consent.

This may be a larger issue than you realize. The YRBS provides community level data that is absolutely critical to our community's ability to provide the services and support our youth need in order to be successful.

This data makes it possible for us to hold ourselves and the community ACCOUNTABLE for accomplishing what we say we want to accomplish. We use many points of data from the YRBS, such as substance use rates, weight, youth perception of sufficient supportive adults in their lives, youth perception of opportunities to engage in the community, and more. We actually have strategic community plans, with cross-sector participation and aligned planning and reporting to improve these community indicators – and we are measuring our work against these indicators from the YRBS.

It is therefore critical that this data be valid and reliable. But the active consent legislation that passed several years ago jeopardized that. And not only was the validity and reliability jeopardized, but the legislative action made it MUCH more expensive (approximately \$90,000 additional per year) to implement the survey. It's more expensive because the school districts have to turn back flips to get sufficient participation. And the irony of that is – the vast majority of the non-participation has nothing to do with parents wanting active consent. It's mostly apathy or paperwork hurdles.

I fully support parents' right to full consent, and parents have that with the passive consent legislation, whereby any parent can deny their child's participation, and in addition, any student can him/herself refuse to participate as well.

So, I ask that the committee support this legislation, which will cause a significant savings and enable communities to work in a "results accountability" manner. I am available if the committee would like more information about how Anchorage partners are using YRBS data to drive action plans that are accountable for results.

Sincerely,

A handwritten signature in cursive script that reads "June Sobocinski".

LIVE UNITED.

February 2, 2010

To: Representative Bob Herron
State Capitol Rm 411
Juneau, Ak 99801

Dear Representative Herron,

On the behalf of the Alaska Red Ribbon Coalition, I am writing in support of SB 101, "An Act relating to questionnaires and surveys administered in the public schools."

The Red Ribbon Coalition relies on data retrieved from the Youth Risk Behavior Survey to secure funding for prevention efforts. The information provided by the YRBS is imperative to understanding health and social issues of Alaska's youth. Accurate YRBS data enables the Coalition to implement youth substance abuse prevention strategies in the Anchorage community.

Senate Bill 101 will continue to protect the anonymity of survey participants, the right of parents to dissent permission, and require advance written notice of survey administration in schools. It will increase participation in the YRBS, increasing the accuracy of the data. This will also allow more cost-effective implementation for the school district.

This information is important to many local and statewide groups, who are actively supporting youth and families in Alaska. Thank you for taking the time to consider our support.

Sincerely,

A handwritten signature in black ink that reads "Sara Clark". The signature is written in a cursive style.

February 2, 2010

The Honorable Bob Herron
Alaska State House Representative
State Capitol Room 411
Juneau, AK 99801

Dear Representative Herron:

United Way of Anchorage and its 20-member business and community leader Board of Directors requests your support for Senate Bill 101, *"An Act relating to questionnaires and surveys administered in the public schools."*

United Way of Anchorage's mission is to advance the common good by making lasting, measurable changes in community conditions that improve lives. We have set a community goal to increase high school graduation rates through a series of proven strategies. Two critical strategies are to decrease youth delinquency and substance use. To do this, we rely on valid community data to help us understand where our youth need additional services and support. It is also critical that we remain accountable for our work by measuring many points of data to see where we are succeeding and where we have more work to do.

The Youth Risk Behavior Survey (YRBS) provides community level data that is central to the ongoing measurement of our work and the work of many of our service partners. Vital data collected through this tool include youth substance use rates, youth engagement in meaningful activities, youth perception of sufficient supportive adult relationships in their lives, and several risk factors including access to alcohol and engagement in risky behavior. This data informs the planning, implementation, investment in, and evaluation of a community-wide youth plan that serves tens of thousands Anchorage youth.

United Way of Anchorage supports Senate Bill 101 because passive parental consent removes the obstacles to acquiring statistically valid and reliable data about our youth while keeping safeguards in place for both parents and their children. Current legislation that requires active parental consent places an enormous logistical and financial burden on our schools and the state simply to get permission slips returned. Approximately \$90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.

We thank you for your commitment to our state and its youth and ask that you support SB101.

Sincerely,

Michele Brown
President and CEO
United Way of Anchorage

Committee on SB 101 Student questionnaires, dated 2-11-10
bill # / subject public hearing date

Dear HHSS Committee Members,

I support SB 101 for the following reasons:

1. It has an opt out provision for parents AND students as well as an opportunity for parents to read the survey ahead of time. It is difficult to get students to return forms. They are kids and don't always do what we want. Many forms end up in the bottom of backpacks or washed in the laundry. The administrative costs to have an opt in are high. As school board members we want to spend our money in classrooms, not on administrative costs. Students in individual classrooms certainly do return field trip forms but most field trips are sponsored by an individual teacher in an elementary classroom. This survey applies to high school students.
2. As school board members we prefer to supplement our programs with grants. The Youth Risk Behavior Survey requires a 60% participation state level.
3. School districts need this information for the safety of all children. This gives us data on obesity, diabetes, suicide prevention, violence/bullying as well as substance abuse. We need to know how students perceive these issues to better serve their needs. We want to provide the best and safest learning environment possible.

Thank you for your service.

Re: Letter of Support - SB 101

Dear Senator Davis:

Thank you for introducing SB 101, an Act relating to questionnaires and surveys in the public schools. The Alaska Network on Domestic Violence and Sexual Assault is committed to prevention efforts and serving victims of violence. This bill can help: SB 101 would provide an invaluable tool for domestic violence, teen dating violence and sexual violence prevention efforts to understand the prevalence and shared risks of youth experiencing violence.

The Centers for Disease Control and Prevention (CDC) Youth Risk Behavioral Survey (YRBS) is used nationally, and within Alaska, to determine risk behaviors among the Alaska high school student population. CDC-developed YRBS data is a credible data source that can be compared to national data. This survey covers a broad range of risk behaviors and streamlines information gathering/surveys in the schools. However, currently with our active consent YRBS policies, many communities, and sometimes our state, have struggled to have enough responses to consider the data as valid.

This information and data is essential to help educators, health workers, social services, victim service programs, and others better serve their communities. This data helps teachers working on prevention education to determine the best age to teach various skills and health topics in their classrooms. This data also helps organizations seeking resources to advocate for real needs in their communities as well as assisting health practitioners and others to determine how to best approach students with co-occurring risk behaviors.

Within the field of domestic and sexual violence prevention, current YRBS data indicates that in traditional high schools, more than 17% of 12th grade students have experienced physical violence in a dating relationship and more than 11.5% have been forced to have sexual intercourse. We also, know that in alternative schools these numbers are 22.6% and 21.9%. While these numbers are staggering they are incomplete. Many of our most vulnerable students are unlikely to turn in their parental permission forms and therefore will be unable to participate in this survey.

RE: SB101—Student Questionnaires and Surveys

Dear House HSS Committee:

The Mat-Su Substance Abuse Prevention Coalition is pleased to provide its support for SB 101, an Act relating to questionnaires and surveys administered in the public schools.

The Youth Risk Behavior Survey (YRBS) is vitally important for tracking the behaviors that affect health and well-being of our nation's youth. In addition, the YRBS data are an invaluable resource used by public and private organizations to set and monitor goals, develop health education programs and to seek funding for programs that focus on reducing the health risk behaviors among youth.

The Mat-Su Substance Abuse Prevention Coalition has committed to develop and implement a comprehensive multi-faceted plan leading to measurable per capita reductions in one or more substance abuse problems. Our work is a coordinated effort to maximize community resources and provide a more integrated approach to reduce substance abuse among youth and, over time, among adults by addressing the factors in our community that increase the risk of substance abuse and promoting the factors that minimize the risk of substance abuse.

Our Coalition members have agreed to participate at the agency level in the collection and assessment of data and to share that data with coalition members in order to define the problems, resources and readiness within the Matanuska-Susitna Borough to address needs and gaps with regard to the substance abuse issue. Our coalition is committed to developing a comprehensive, strategic and data-driven plan that includes policies, programs and practices to address problems identified through the assessment process.

The Alaska Youth Risk Behavior Survey is an important tool in understanding how many youth are engaged in substance abuse, what substances they are using, at what age they started and how they obtained the substance. Due to current State statute AS 14.03.110, the response rate of the 2005 YRBS was so low that the results could not be tallied or released to Mat-Su Borough school district officials. Our coalition could not examine the data or adjust our goals and objectives to implement evidence-based prevention programs, policies and practices in our community. We can't combat what we don't thoroughly understand or know.

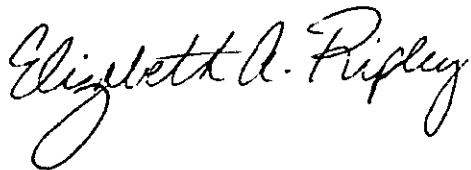

The current law, requiring signed permission slips for any student to participate, unnecessarily hinders data collection needed to design and evaluate risk prevention programs and services to protect our youth. The state spent about \$90,000 last year on incentives to support getting permission slips returned. This is in addition to extra staff time and costs incurred by local school districts. Over the last decade, the survey has had years of not meeting the necessary sample size to have valid data or has barely made the cut off for valid data, but with a higher margin of error than a larger sample size would have provided.

SB101 recognizes the need to keep parents informed and given opportunities for engagement. It balances this with the need to keep administrative burden to a minimum, resulting in a bill that supports both parental involvement and the ability to better serve our youth.

The language in SB 101 allows parents to opt out of the survey for their children, thereby providing those who object a fair and equitable way to prevent their children from participating in the survey. The Mat-Su Substance Abuse Prevention Coalition acknowledges that this opportunity to object is necessary and supports this measure. However, most of the research indicates that parental failures to provide a written permission are driven by apathy, oversight or student error, not by refusal. The current statute results in extremely low response by parents, an inadequate response rate for the survey, and therefore a statistically significant margin of error.

If the Mat-Su Substance Abuse Prevention Coalition succeeds in reducing substance abuse by youth in our community, everyone wins: every parent, child, school, business, neighborhood, and provider. To build this healthier community, we need access to valid and reliable anonymous data about our youth. We fully endorse SB 101 to this end. Many thanks for your efforts!

Sincerely,

A handwritten signature in cursive script that reads "Elizabeth A. Ripley". The signature is written in black ink and is positioned above the typed name and title.

Appendix A High School Questions and Responses

High School Questions and Responses

	Unweighted (N)	Weighted (Percent)
1. How old are you?		
12 years or younger	2	0.1
13 years	2	0.1
14 years	160	9.6
15 years	433	26.7
16 years	432	25.8
17 years	389	22.3
18 years or older	215	15.3
Total	1633	100.0
2. What is your sex?		
Female	807	47.6
Male	821	52.4
Total	1628	100.0
3. In what grade are you?		
9th grade	497	29.8
10th grade	383	25.8
11th grade	477	23.0
12th grade	269	21.0
Ungraded or Other	6	0.4
Total	1632	100.0
4. How do you describe yourself?		
White - not Hispanic	1147	68.3
Black - not Hispanic	87	5.2
Hispanic or Latino	53	3.3
Asian or Pacific Islander	75	4.3
American Indian or Alaskan Native	184	15.0
Other	62	3.9
Total	1608	100.0
5. How often do you wear a seat belt when riding in a car driven by someone else?		
Never	95	6.3
Rarely	196	13.2
Sometimes	271	17.6
Most of the time	497	29.4
Always	571	33.5
Total	1630	100.0
6. During the past 12 months, how many times did you ride a motorcycle?		
0 times	1191	73.8
1 to 10 times	291	17.9
11 to 20 times	51	3.2
21 to 39 times	16	0.9
40 or more times	69	4.2
Total	1618	10.0

	Unweighted (N)	Weighted (Percent)
7. When you rode a motorcycle during the past 12 months, how often did you wear a helmet?		
I did not ride a motorcycle during the past 12 months	1167	73.3
Never wore a helmet	129	8.5
Rarely wore a helmet	38	2.4
Sometimes wore a helmet	27	1.7
Most of the time wore a helmet	51	2.9
Always wore a helmet	183	11.1
Total	1595	100.0
8. During the past 12 months, how many times did you ride a bicycle?		
0 times	243	15.8
1 to 10 times	480	30.0
11 to 20 times	238	14.5
21 to 39 times	167	10.1
40 or more times	480	29.6
Total	1608	100.0
9. When you rode a bicycle during the past 12 months, how often did you wear a helmet?		
I did not ride a bicycle during the past 12 months	238	15.5
Never wore a helmet	1125	70.2
Rarely wore a helmet	77	4.5
Sometimes wore a helmet	58	3.5
Most of the time wore a helmet	49	2.8
Always wore a helmet	59	3.5
Total	1606	100.0
10. During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol?		
0 times	1100	68.1
1 time	176	11.1
2 or 3 times	199	11.6
4 or 5 times	49	2.7
6 or more times	105	6.5
Total	1629	100.0
11. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?		
0 times	1413	87.7
1 time	107	6.4
2 or 3 times	45	2.7
4 or 5 times	25	1.6
6 or more times	26	1.5
Total	1616	100.0

	Unweighted (N)	Weighted (Percent)
12. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club?		
0 days	1234	76.5
1 day	80	5.0
2 or 3 days	80	4.9
4 or 5 days	34	2.1
6 or more days	182	11.4
Total	1610	100.0
13. During the past 30 days, on how many days did you carry a gun?		
0 days	1475	90.9
1 day	63	3.9
2 or 3 days	34	2.1
4 or 5 days	13	0.8
6 or more days	34	2.2
Total	1619	100.0
14. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club on school property?		
0 days	1428	87.7
1 day	47	3.1
2 or 3 days	37	2.3
4 or 5 days	11	0.7
6 or more days	98	6.1
Total	1621	100.0
15. During the past 30 days, how many days did you not go to school because you felt you would be unsafe at school or on your way to or from school?		
0 days	1570	96.4
1 day	26	1.5
2 or 3 days	20	1.3
4 or 5 days	6	0.4
6 or more days	7	0.4
Total	1629	100.0
16. During the past 12 months, how many times has someone threatened or injured you with a weapon such as a gun, knife, or club on school property?		
0 times	1496	90.6
1 time	57	3.3
2 or 3 times	61	3.5
4 or 5 times	11	0.7
6 or 7 times	7	0.5
8 or 9 times	4	0.2
10 or 11 times	4	0.2
12 or more times	18	1.0
Total	1631	100.0

	Unweighted (N)	Weighted (Percent)
17. During the past 12 months, how many times has someone stolen or deliberately damaged your property such as your car, clothing, or books on school property?		
0 times	1032	64.2
1 time	243	14.7
2 or 3 times	240	14.5
4 or 5 times	54	3.3
6 or 7 times	23	1.3
8 or 9 times	9	0.5
10 or 11 times	6	0.4
12 or more times	19	1.1
Total	1626	100.0
18. During the past 12 months, how many times were you in a physical fight?		
0 times	1038	64.2
1 time	249	15.7
2 or 3 times	174	10.9
4 or 5 times	65	4.3
6 or 7 times	21	1.4

8 or 9 times	0	0.0
10 or 11 times	6	0.4
12 or more times	10	0.5
Total	1616	100.0

	Unweighted (N)	Weighted (Percent)
21. The last time you were in a physical fight, with whom did you fight?		
I have never been in a physical fight	671	41.5
A total stranger	137	8.6
A friend or someone I know	398	25.5
A boyfriend, girlfriend, or date	16	1.0
A parent, brother, sister, or other family member	167	9.8
Someone not listed above	135	8.1
More than one of the persons listed above	92	5.5
Total	1616	100.0
22. During the past 12 months, did you ever seriously consider attempting suicide?		
Yes	392	23.9
No	1237	76.1
Total	1629	100.0
23. During the past 12 months, did you make a plan about how you would attempt suicide?		
Yes	308	18.7
No	1320	81.3
Total	1628	100.0
24. During the past 12 months, how many times did you actually attempt suicide?		
0 times	1394	90.6
1 time	79	5.3
2 or 3 times	41	2.7
4 or 5 times	10	0.8
6 or more times	9	0.6
Total	1533	100.0
25. If you attempted suicide during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?		
I did not attempt suicide during the past 12 months	1389	90.6
Yes	41	2.9
No	98	6.6
Total	1528	100.0
26. Have you ever tried cigarette smoking, even one or two puffs?		
Yes	1142	72.1
No	467	27.9
Total	1609	100.0
27. How old were you when you smoked a whole cigarette for the first time?		
I have never smoked a whole cigarette	664	39.5
8 years or younger	119	7.8
9 or 10 years	123	7.7
11 or 12 years	239	15.2
13 or 14 years	287	18.0
15 or 16 years	159	9.8
17 years or older	30	1.9
Total	1621	100.0

	Unweighted (N)	Weighted (Percent)
28. During the past 30 days, on how many days did you smoke cigarettes?		
0 days	1041	63.5
1 or 2 days	94	5.8
3 to 5 days	51	3.2
6 to 9 days	43	2.7
10 to 19 days	59	3.7
20 to 29 days	79	5.1
All 30 days	235	16.0
Total	1602	100.0
29. During the past 30 days, on the days you smoked, how many cigarettes did you smoke per day?		
I did not smoke cigarettes during the past 30 days	1039	63.2
Less than 1 cigarette per day	78	5.0
1 cigarette per day	96	6.0
2 to 5 cigarettes per day	241	15.6
6 to 10 cigarettes per day	88	6.2
11 to 20 cigarettes per day	46	2.9
More than 20 cigarettes per day	18	1.1
Total	1606	100.0
30. During the past 30 days, how did you usually get your own cigarettes? (Select only one response.)		
I did not smoke cigarettes during the past 30 days	1032	62.9
I bought them in a store such as a convenience store, supermarket, or gas station	152	9.8
I bought them from a vending machine	11	0.7
I gave someone else money to buy them for me	142	9.7
I borrowed them from someone else	170	10.4
I stole them	32	1.9
I got them some other way	71	4.7
Total	1610	100.0
31. When you bought cigarettes in a store during the past 30 days, were you ever asked to show proof of age?		
I did not smoke cigarettes during the past 30 days	1013	61.6
I did not buy cigarettes in a store during the past 30 days	313	20.2
Yes, I was asked to show proof of age	85	5.7
No, I was not asked to show proof of age	191	12.5
Total	1602	100.0

	Unweighted (N)	Weighted (Percent)
32. During the past 30 days, on how many days did you smoke cigarettes on school property?

AMENDMENT

OFFERED IN THE HOUSE
TO: SB 101

BY REPRESENTATIVE SEATON

- 1 Page 2, lines 23 - 24:
- 2 Delete "guardian notice of the survey"
- 3 Insert "legal guardian notice of the survey as provided under (d) of this section at least
- 4 two weeks before the survey is administered"

SB

172

**HOUSE CS FOR CS FOR SENATE BILL NO. 172(HSS)
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): SENATORS OLSON, Davis, French, Kookesh, Paskvan, Ellis, Egan, Meyer, Thomas

A BILL

FOR AN ACT ENTITLED

1 **"An Act establishing the Alaska Health Care Commission in the Department of Health**
2 **and Social Services; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 18.05.010(b) is amended to read:

5 (b) In performing its duties under this chapter, AS 18.09, and AS 18.15.355 -
6 18.15.395, the department may

7 (1) flexibly use the broad range of powers set out in this title assigned
8 to the department to protect and promote the public health;

9 (2) provide public health information programs or messages to the
10 public that promote healthy behaviors or lifestyles or educate individuals about health
11 issues;

12 (3) promote efforts among public and private sector partners to
13 develop and finance programs or initiatives that identify and ameliorate health
14 problems;

1 (4) establish, finance, provide, or endorse performance management
2 standards for the public health system;

3 (5) develop, adopt, and implement

4 (A) a statewide health plan under AS 18.09 based on
5 recommendations of the Alaska Health Care Commission established in
6 AS 18.09.010; and

7 (B) public health plans and formal policies through regulations
8 adopted under AS 44.62 or collaborative recommendations that guide or
9 support individual and community public health efforts;

10 (6) establish formal or informal relationships with public or private
11 sector partners within the public health system;

12 (7) identify, assess, prevent, and ameliorate conditions of public health
13 importance through surveillance; epidemiological tracking, program evaluation, and
14 monitoring; testing and screening programs; treatment; administrative inspections; or
15 other techniques;

16 (8) promote the availability and accessibility of quality health care
17 services through health care facilities or providers;

18 (9) promote availability of and access to preventive and primary health
19 care when not otherwise available through the private sector, including acute and
20 episodic care, prenatal and postpartum care, child health, family planning, school
21 health, chronic disease prevention, child and adult immunization, testing and screening
22 services, dental health, nutrition, and health education and promotion services;

23 (10) systematically and regularly review the public health system and
24 recommend modifications in its structure or other features to improve public health
25 outcomes; and

26 (11) collaborate with public and private sector partners, including
27 municipalities, Alaska Native organizations, health care providers, and health insurers,
28 within the public health system to achieve the mission of public health.

29 * Sec. 2. AS 18 is amended by adding a new chapter to read:

30 **Chapter 09. Statewide Health Care.**

31 **Article 1. Alaska Health Care Commission.**

1 **Sec. 18.09.010. Alaska Health Care Commission.** The Alaska Health Care
2 Commission is established in the Department of Health and Social Services. The
3 purpose of the commission is to provide recommendations for and foster the
4 development of a statewide plan to address the quality, accessibility, and availability
5 of health care for all citizens of the state.

6 **Sec. 18.09.020. Composition; chair.** The commission consists of 13 members
7 as follows:

8 (1) 10 voting members appointed by the governor as follows:

9 (A) the state officer assigned the duties of medical director for
10 the department, who shall serve as chair;

11 (B) one member who represents the tribal health community in
12 the state;

13 (C) one member who represents a statewide chamber of
14 commerce who is not financially associated with the health care industry;

15 (D) one member who represents the Alaska State Hospital and
16 Nursing Home Association;

17 (E) one member who is a health care provider and

18 (i) engaged in the active practice of the health care
19 provider's profession in the state;

20 (ii) licensed to practice in the state;

21 (iii) not affiliated with the Alaska State Hospital and
22 Nursing Home Association;

23 (F) one member who represents the health insurance industry in
24 the state;

25 (G) one member who is a

26 (i) health care consumer;

27 (ii) resident of the state; and

28 (iii) not employed by and does not have a business
29 interest in the health care industry;

30 (H) one member who is a licensed primary care physician in
31 the state and who is in the active practice of family medicine, primary care

1 internal medicine, or pediatric medicine;

2 (I) one member who represents the Alaska Mental Health Trust
3 Authority;

4 (J) one member who represents community health centers in
5 the state; and

6 (2) three nonvoting members appointed as follows:

7 (A) one ex officio member from the house of representatives,
8 appointed by the speaker of the house of representatives;

9 (B) one ex officio member from the senate, appointed by the
10 president of the senate;

11 (C) an ex officio member representing the Office of the
12 Governor.

13 **Sec. 18.09.030. Public members' terms of office.** (a) Public members of the
14 commission serve for staggered terms of three years or until a successor is appointed.

15 (b) If a vacancy occurs in a public member's seat on the commission, the
16 governor shall make an appointment for the unexpired portion of that member's term.

17 (c) A public member may serve not more than two consecutive terms.

18 (d) In this section, "public member" means those members appointed under
19 AS 18.09.020(1)(B) - (J).

20 **Sec. 18.09.040. Executive director.** The commission may employ an
21 executive director, who may not be a member of the commission and who may be
22 current staff of the department. The executive director serves at the pleasure of the
23 commission. The commission shall establish the duties of the executive director. The
24 executive director is in the partially exempt service under AS 39.25 (State Personnel
25 Act).

26 **Sec. 18.09.050. Staff.** The department may assign employees of the
27 department to serve as staff to the commission. The commission shall prescribe the
28 duties of the commission staff.

29 **Sec. 18.09.060. Bylaws.** The commission, on approval of a majority of its
30 membership and consistent with state law, shall adopt and amend bylaws governing
31 proceedings and other activities, including provisions concerning

1 (1) a quorum to transact commission business and other aspects of
2 procedure;

3 (2) frequency and location of meetings;

4 (3) establishment, functions, and membership of committees; and

5 (4) conflicts of interest that require

6 (A) a member to declare a substantial financial interest in an
7 official action and to request to be excused from voting in that instance;

8 (B) a ruling by the chair on a request by a member to be
9 excused from voting;

10 (C) an opportunity to override a ruling by the chair on a
11 majority vote;

12 (D) filing of a written disclosure form with the department that
13 lists all potential conflicts of interest of a member valued at more than \$5,000
14 annually if the interest is related to health care system income affecting the
15 member or a member of the member's immediate family.

16 **Sec. 18.09.070. Duties of the commission.** (a) The commission shall serve as
17 the state health planning and coordinating body. Consistent with state and federal law,
18 the commission shall provide recommendations for and foster the development of a
19 statewide health plan containing the following:

20 (1) a comprehensive statewide health care policy;

21 (2) a strategy for improving the health of all residents of the state that

22 (A) encourages personal responsibility for disease prevention,
23 healthy living, and acquisition of health insurance;

24 (B) reduces health care costs by using savings from

25 (i) enhanced market forces;

26 (ii) fraud reduction;

27 (iii) health information technology;

28 (iv) management efficiency;

29 (v) preventative medicine;

30 (vi) successful innovations identified by other states;

31 and

1 (vii) other cost-saving measures;

2 (C) eliminates known health risks, including unsafe water and
3 wastewater systems;

4 (D) develops a sustainable health care workforce;

5 (E) improves access to quality health care; and

6 (F) increases the number of insurance options for health care
7 services.

8 (b) The commission may hold public hearings to gather information and
9 opinions from health care consumers on matters before the commission. Hearings
10 shall be conducted under AS 44.62.210, except that the commission shall provide
11 public notice of hearings not less than 15 days before the conduct of the hearing and
12 include not fewer than three notices published in the statewide news media.

13 (c) The commission shall submit to the governor and the legislature by
14 January 15 of each year an annual report regarding the commission's
15 recommendations and activities. The report shall include voting records, copies of
16 financial disclosures, and conflicts of interest statements.

17 **Sec. 18.09.080. Compensation, per diem, and expenses.** A member
18 appointed to the commission under AS 18.09.020(1) is entitled to per diem,
19 reimbursement for travel, and other expenses authorized by law for boards and
20 commissions under AS 39.20.180.

21 **Article 2. General Provisions.**

22 **Sec. 18.09.900. Regulations.** The department may adopt regulations under
23 AS 44.62 (Administrative Procedure Act) to carry out the purposes of this chapter.

24 **Sec. 18.09.990. Definitions.** In this chapter,

25 (1) "commission" means the Alaska Health Care Commission
26 established in AS 18.09.010;

27 (2) "department" means the Department of Health and Social Services.

28 * **Sec. 3.** AS 39.25.120(c)(7) is amended to read:

29 (7) the principal executive officer of the following boards, councils, or
30 commissions:

31 (A) Alaska Public Broadcasting Commission;

- 1 (B) Professional Teaching Practices Commission;
 2 (C) Parole Board;
 3 (D) Board of Nursing;
 4 (E) Real Estate Commission;
 5 (F) Alaska Royalty Oil and Gas Development Advisory Board;
 6 (G) Alaska State Council on the Arts;
 7 (H) Alaska Police Standards Council;
 8 (I) Alaska Commission on Aging;
 9 (J) Alaska Mental Health Board;
 10 (K) State Medical Board;
 11 (L) Governor's Council on Disabilities and Special Education;
 12 (M) Advisory Board on Alcoholism and Drug Abuse;
 13 (N) Statewide Suicide Prevention Council;
 14 (O) the State Board of Registration for Architect, Engineers,
 15 and Land Surveyors;

16 **(P) Alaska Health Care Commission;**

17 * Sec. 4. AS 44.66.010(a) is amended to read:

18 (a) Boards and commissions listed in this subsection expire on the date set out
 19 after each:

- 20 (1) Alcoholic Beverage Control Board (AS 04.06.010) - June 30, 2010;
 21 (2) Board of Parole (AS 33.16.020) - June 30, 2016;
 22 (3) Regulatory Commission of Alaska (AS 42.04.010) - June 30, 2011;
 23 (4) Alaska Commission on Aging (AS 47.45.200) - June 30, 2016;
 24 (5) Council on Domestic Violence and Sexual Assault (AS 18.66.010)
 25 - June 30, 2014;
 26 (6) special education service agency (AS 14.30.600) - June 30, 2013;
 27 (7) [REPEALED
 28 (8)] Statewide Suicide Prevention Council (AS 44.29.300) - June 30,
 29 2013;
 30 **(8)** [(9)] Alaska Seismic Hazards Safety Commission (AS 44.37.065) -
 31 June 30, 2012;

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Health and Social Services may proceed to adopt regulations necessary to implement the changes made by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory change.

* **Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKA HEALTH CARE COMMISSION. The members appointed to the Alaska Health Care Commission, established by Administrative Order No. 246 dated December 4, 2008, shall serve as the voting members of the Alaska Health Care Commission under AS 18.09.010, enacted by sec. 2 of this Act, for one-year to three-year staggered terms as determined by the governor according to AS 39.05.055.

* **Sec. 7.** This Act takes effect immediately under AS 01.10.070(c).

Senate Bill 172 Alaska Health Care Commission

Alaska is currently facing serious healthcare cost, access and quality issues. Between 1991 and 2005, health care expenditures in our state more than tripled from \$1.6 billion to \$5.3 billion. Costs are expected to double again by 2013 to over \$10 billion. All levels of government – state, local, and federal – are affected, and Alaska's economy cannot sustain this inflationary growth. The purpose of SB 172 is to establish in statute the Alaska Health Care Commission to address the need for health care reform in our state. This issue is complex and broad in scope, and cannot be dealt with adequately unless we have a permanent body to plan and follow through for long range comprehensive health care reform.

The two most recent groups to work on the issue of health care reform in Alaska, the Alaska Health Care Roundtable (2005) and the Alaska Health Care Strategies Planning Council (2007) both recommended that a permanent body be established to address the problem of health care reform. The Roundtable (which met for 2 years) and the Planning Council (which met for 6 months) recognized that the problem is too great to be effectively addressed through a short-term, ad-hoc body.

The Alaska Health Care Commission would be established in the Department of Health and Social Services, and would consist of a thirteen member body including public officials and private citizens. Representatives from both the executive and legislative branches of state government are included, as well as citizens representing the private business sector, the health care community, and consumers. Three members are to be ex officio appointees from the legislature and the governor's office. The composition and small size would enable efficient and effective teamwork and decision-making, while bringing a balance of viewpoints and perspectives.

The commission would provide its recommendations and support the development of a statewide plan to address the quality, accessibility, and availability of health care for all citizens of the State. A plan for reform will be based on education, sustainability, management efficiency, health care effectiveness, private-public partnerships, research, personal responsibility and individual choice.

Alaska's need for healthcare reform is pressing and must be dealt with thoroughly and efficiently, with a long range view towards meaningful and lasting change. The Alaska Health Care Commission would play an important role in this process, and it is essential that we make it a permanent component of the Department of Health and Social Services, so that present as well as future issues with Alaska's healthcare systems can be better anticipated, understood and addressed.

Sectional analysis: Alaska Health Care Commission Bill

Section 1

AS 18.05.010(b)- Establishes the Alaska Health Care Commission in the Department of Health and Social Services that will work toward recommendations for a statewide health plan under AS 18.09.

Statewide Health Care Section 2

Sec 18.09.010-This section is the basic language to establish the Commission and outline the commission's primary objectives.

Sec 18.09.020-Creates a 10 member Commission made up of Health Professionals and the public including three ex officio appointees from the legislature and the governors office.

Sec. 18.09.030- Members will serve three year staggered terms. Should an opening occur prior to the completion of the term the governor shall appoint a replacement.

Sec. 18.09.040- Creates the position of executive director as a partially exempt position appointed by the commission.

Sec. 18.09.050- Permits the Department to assign employees to work with the Commission as support staff.

Sec. 18.09.060- The commission shall submit internally by-laws for consideration by the full Commission. By laws will establish quorum requirements, time and locations for meetings, etc. The section also defines conflicts of interests when voting and annual reporting requirements

Sec. 18.09.070- This section defines the duties of the Commission, to include goals and language for input from the public through the public hearing process.

Sec. 18.09.080- Standard language that allows members to receive per diem and travel but no salary for serving on the commission.

Sec. 18.09.900- Authorizes the Department to promulgate the necessary regulations to maintain the commission

Sec 18.09.990- Defines the use of the words commission and department.

Section 3

AS 39.25.120 (c)(7)- adds the commissions executive director position to the list of existing executive directors serving other boards and commissions.

Section 4

AS 44.66.010 (a)- Sunset- the commission expires unless renewed by the legislature on June 30, 2014

Section 5

Uncodified language- Permits the department to begin the regulatory process which can not take effect until this bill is singed into law.

Section 6

Uncodified language- The members already serving on the commission shall continue in their positions based on the staggering of their terms.

Section 7

Effective date- Immediate effective date clause.

CS FOR SENATE BILL NO. 172(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE FINANCE COMMITTEE

Offered: 4/10/10

Referred: Rules

Sponsor(s): SENATOR OLSON

A BILL

FOR AN ACT ENTITLED

1 **"An Act establishing the Alaska Health Care Commission in the Department of Health**
2 **and Social Services; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 18.05.010(b) is amended to read:

5 (b) In performing its duties under this chapter, AS 18.09, and AS 18.15.355 -
6 18.15.395, the department may

7 (1) flexibly use the broad range of powers set out in this title assigned
8 to the department to protect and promote the public health;

9 (2) provide public health information programs or messages to the
10 public that promote healthy behaviors or lifestyles or educate individuals about health
11 issues;

12 (3) promote efforts among public and private sector partners to
13 develop and finance programs or initiatives that identify and ameliorate health
14 problems;

1 (4) establish, finance, provide, or endorse performance management
2 standards for the public health system;

3 (5) develop, adopt, and implement

4 (A) a statewide health plan under AS 18.09 based on
5 recommendations of the Alaska Health Care Commission established in
6 AS 18.09.010; and

7 (B) public health plans and formal policies through regulations
8 adopted under AS 44.62 or collaborative recommendations that guide or
9 support individual and community public health efforts;

10 (6) establish formal or informal relationships with public or private
11 sector partners within the public health system;

12 (7) identify, assess, prevent, and ameliorate conditions of public health
13 importance through surveillance; epidemiological tracking, program evaluation, and
14 monitoring; testing and screening programs; treatment; administrative inspections; or
15 other techniques;

16 (8) promote the availability and accessibility of quality health care
17 services through health care facilities or providers;

18 (9) promote availability of and access to preventive and primary health
19 care when not otherwise available through the private sector, including acute and
20 episodic care, prenatal and postpartum care, child health, family planning, school
21 health, chronic disease prevention, child and adult immunization, testing and screening
22 services, dental health, nutrition, and health education and promotion services;

23 (10) systematically and regularly review the public health system and
24 recommend modifications in its structure or other features to improve public health
25 outcomes; and

26 (11) collaborate with public and private sector partners, including
27 municipalities, Alaska Native organizations, health care providers, and health insurers,
28 within the public health system to achieve the mission of public health.

29 * **Sec. 2.** AS 18 is amended by adding a new chapter to read:

30 **Chapter 09. Statewide Health Care.**

31 **Article 1. Alaska Health Care Commission.**

1 **Sec. 18.09.010. Alaska Health Care Commission.** The Alaska Health Care
 2 Commission is established in the Department of Health and Social Services. The
 3 purpose of the commission is to provide recommendations for and foster the
 4 development of a statewide plan to address the quality, accessibility, and availability
 5 of health care for all citizens of the state.

6 **Sec. 18.09.020. Composition; chair.** The commission consists of 13 members
 7 as follows:

8 (1) 10 voting members appointed by the governor as follows:

9 (A) the state officer assigned the duties of medical director for
 10 the department, who shall serve as chair;

11 (B) one member who represents the tribal health community in
 12 the state;

13 (C) one member who represents a statewide chamber of
 14 commerce who is not financially associated with the health care industry;

15 (D) one member who represents the Alaska State Hospital and
 16 Nursing Home Association;

17 (E) one member who is a health care provider and

18 (i) engaged in the active practice of the health care
 19 provider's profession in the state;

20 (ii) licensed to practice in the state;

21 (iii) not affiliated with the Alaska State Hospital and
 22 Nursing Home Association;

23 (F) one member who represents the health care industry in the
 24 state;

25 (G) one member who is a

26 (i) health care consumer;

27 (ii) resident of the state; and

28 (iii) not employed by and does not have a business
 29 interest in the health care industry;

30 (H) one member who is a licensed primary care physician in
 31 the state and who is in the active practice of family medicine, primary care

1 internal medicine, or pediatric medicine;

2 (I) one member who represents the Alaska Mental Health Trust
3 Authority;

4 (J) one member who represents community health centers in
5 the state; and

6 (2) three nonvoting members appointed as follows:

7 (A) one ex officio member from the house of representatives,
8 appointed by the speaker of the house of representatives;

9 (B) one ex officio member from the senate, appointed by the
10 president of the senate;

11 (C) an ex officio member representing the Office of the
12 Governor.

13 **Sec. 18.09.030. Public members' terms of office.** (a) Public members of the
14 commission serve for staggered terms of three years or until a successor is appointed.

15 (b) If a vacancy occurs in a public member's seat on the commission, the
16 governor shall make an appointment for the unexpired portion of that member's term.

17 (c) A public member may serve not more than two consecutive terms.

18 (d) In this section, "public member" means those members appointed under
19 AS 18.09.020(1)(B) - (J).

20 **Sec. 18.09.040. Executive director.** The commission shall employ an
21 executive director, who may not be a member of the commission. The executive
22 director serves at the pleasure of the commission. The commission shall establish the
23 duties of the executive director. The executive director is in the partially exempt
24 service under AS 39.25 (State Personnel Act).

25 **Sec. 18.09.050. Staff.** The department may assign employees of the
26 department to serve as staff to the commission. The commission shall prescribe the
27 duties of the commission staff.

28 **Sec. 18.09.060. Bylaws.** The commission, on approval of a majority of its
29 membership and consistent with state law, shall adopt and amend bylaws governing
30 proceedings and other activities, including provisions concerning

31 (1) a quorum to transact commission business and other aspects of

1 procedure;

2 (2) frequency and location of meetings;

3 (3) establishment, functions, and membership of committees; and

4 (4) conflicts of interest that require

5 (A) a member to declare a substantial financial interest in an
6 official action and to request to be excused from voting in that instance;

7 (B) a ruling by the chair on a request by a member to be
8 excused from voting;

9 (C) an opportunity to override a ruling by the chair on a
10 majority vote;

11 (D) filing of a written disclosure form with the department that
12 lists all potential conflicts of interest of a member valued at more than \$5,000
13 annually if the interest is related to health care system income affecting the
14 member or a member of the member's immediate family.

15 **Sec. 18.09.070. Duties of the commission.** (a) The commission shall serve as
16 the state health planning and coordinating body. Consistent with state and federal law,
17 the commission shall provide recommendations for and foster the development of a
18 statewide health plan containing the following:

19 (1) a comprehensive statewide health care policy;

20 (2) a strategy for improving the health of all residents of the state that

21 (A) encourages personal responsibility for disease prevention,
22 healthy living, and acquisition of health insurance;

23 (B) reduces health care costs by using savings from

24 (i) enhanced market forces;

25 (ii) fraud reduction;

26 (iii) health information technology;

27 (iv) management efficiency;

28 (v) preventative medicine;

29 (vi) successful innovations identified by other states;

30 and

31 (vii) other cost-saving measures;

1 (C) eliminates known health risks, including unsafe water and
2 wastewater systems;

3 (D) develops a sustainable health care workforce;

4 (E) improves access to quality health care; and

5 (F) increases the number of insurance options for health care
6 services.

7 (b) The commission may hold public hearings to gather information and
8 opinions from health care consumers on matters before the commission. Hearings
9 shall be conducted under AS 44.62.210, except that the commission shall provide
10 public notice of hearings not less than 15 days before the conduct of the hearing and
11 include not fewer than three notices published in the statewide news media.

12 (c) The commission shall submit to the governor and the legislature by
13 January 15 of each year an annual report regarding the commission's
14 recommendations and activities. The report shall include voting records, copies of
15 financial disclosures, and conflicts of interest statements.

16 **Sec. 18.09.080. Compensation, per diem, and expenses.** A member
17 appointed to the commission under AS 18.09.020(1) is entitled to per diem,
18 reimbursement for travel, and other expenses authorized by law for boards and
19 commissions under AS 39.20.180.

20 **Article 2. General Provisions.**

21 **Sec. 18.09.900. Regulations.** The department may adopt regulations under
22 AS 44.62 (Administrative Procedure Act) to carry out the purposes of this chapter.

23 **Sec. 18.09.990. Definitions.** In this chapter,

24 (1) "commission" means the Alaska Health Care Commission
25 established in AS 18.09.010;

26 (2) "department" means the Department of Health and Social Services.

27 * **Sec. 3.** AS 39.25.120(c)(7) is amended to read:

28 (7) the principal executive officer of the following boards, councils, or
29 commissions:

30 (A) Alaska Public Broadcasting Commission;

31 (B) Professional Teaching Practices Commission;

- 1 (C) Parole Board;
 2 (D) Board of Nursing;
 3 (E) Real Estate Commission;
 4 (F) Alaska Royalty Oil and Gas Development Advisory Board;
 5 (G) Alaska State Council on the Arts;
 6 (H) Alaska Police Standards Council;
 7 (I) Alaska Commission on Aging;
 8 (J) Alaska Mental Health Board;
 9 (K) State Medical Board;
 10 (L) Governor's Council on Disabilities and Special Education;
 11 (M) Advisory Board on Alcoholism and Drug Abuse;
 12 (N) Statewide Suicide Prevention Council;
 13 (O) the State Board of Registration for Architect, Engineers,
 14 and Land Surveyors;

15 **(P) Alaska Health Care Commission;**

16 * Sec. 4. AS 44.66.010(a) is amended to read:

17 (a) Boards and commissions listed in this subsection expire on the date set out
 18 after each:

- 19 (1) Alcoholic Beverage Control Board (AS 04.06.010) - June 30, 2010;
 20 (2) Board of Parole (AS 33.16.020) - June 30, 2016;
 21 (3) Regulatory Commission of Alaska (AS 42.04.010) - June 30, 2011;
 22 (4) Alaska Commission on Aging (AS 47.45.200) - June 30, 2016;
 23 (5) Council on Domestic Violence and Sexual Assault (AS 18.66.010)
 24 - June 30, 2014;
 25 (6) special education service agency (AS 14.30.600) - June 30, 2013;
 26 (7) [REPEALED
 27 (8)] Statewide Suicide Prevention Council (AS 44.29.300) - June 30,
 28 2013;
 29 **(8) [(9)] Alaska Seismic Hazards Safety Commission (AS 44.37.065) -**
 30 **June 30, 2012;**
 31 **(9) Alaska Health Care Commission (AS 18.09.010) - June 30,**

1 **2014.**

2 * **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to
3 read:

4 TRANSITION: REGULATIONS. The Department of Health and Social Services may
5 proceed to adopt regulations necessary to implement the changes made by this Act. The
6 regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the
7 effective date of the statutory change.

8 * **Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to
9 read:

10 TRANSITION: ALASKA HEALTH CARE COMMISSION. The members appointed
11 to the Alaska Health Care Commission, established by Administrative Order No. 246 dated
12 December 4, 2008, shall serve as the voting members of the Alaska Health Care Commission
13 under AS 18.09.010, enacted by sec. 2 of this Act, for one-year to three-year staggered terms
14 as determined by the governor according to AS 39.05.055.

15 * **Sec. 7.** This Act takes effect immediately under AS 01.10.070(c).

ANALYSIS: (Attach a separate page if nece:

SB 172 establishes the Alaska Health Care Commission in DHSS to provide recommendations for and foster the development of a statewide plan to address the quality, accessibility, and availability of health care for all citizens of the state. The commission would be composed of 10 members. SB 172 closely parallels Administrative Order #246 of December 2008 establishing a health care commission to address Alaska's health care challenges.

The current Alaska Health Care Commission recently adopted a formal policy recommendation to establish a permanent health care commission in statute to address the need for health care reform in Alaska. The

FISCAL NOTE

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. SB172

ANALYSIS CONTINUATION

(Continued from Page 1)

The commission based this recommendation on the finding that the need for a plan to address health care cost, access and quality issues is greater than ever before. Health care expenditures in Alaska more than tripled between 1991 and 2005 from \$1.6 billion to \$5.3 billion. Costs are expected to double again, to over \$10 billion, by 2013. The Alaska economy cannot sustain this inflationary growth, and government (all levels - local, state, and fed) carries 64% of this cost burden between the cost for government health care programs and provision of health care insurance for government employees. (Data cited from "Alaska's \$5 Billion Health Care Bill - Who's Paying?" UA Research summary No. 6, Institute of Social and Economic Research, University of Alaska, March 2006.)

The two most recent groups to work on the issue of health care reform in Alaska, the Alaska Health Care Roundtable (2005) and the Alaska Health Care Strategies Planning Council (2007), both recommended that a permanent body be established to address the problem of health care reform. The problem is too great in scope and too complex to be able to plan and follow-through in just one or two years time through an ad-hoc body.

\$500.0 in state general funds is required for operations of the health care commission, as follows:

71000 Personal Services: The bill states that an Executive Director would staff the Commission; administrative support would be provided by existing DHSS staff. Personal services costs of \$134.5 is Range 23, Step F.

72000 Travel Travel and per diem for Commission staff and for 8 Commission members to conduct quarterly face-to-face public meetings. The two other members are legislators and would have per diem and travel covered.

73000 Contractual Professional services contracts will be needed to supplement staff research, and core service RSAs will be required to provide lease space, telecommunications, mainframe connectivity, postage, etc.

74000 Supplies

In addition to day-to-day office supplies, FY11 includes start-up costs such as computers, office furniture, reconfiguring leased space, wiring needs for connectivity, printers, fax, and photocopier.

75000 Equipment

FY11 includes purchase of a server; in subsequent fiscal years provide technology upgrades and maintenance will be covered through the contractual line.

The bill becomes effective immediately upon the Governor's signature. This means there may be some limited costs in FY10 that will have to be absorbed by the Department of Health & Social Services.

Testimony List for SB 172, Alaska Health Care Commission

By Denise Liccioli, Staff to Senator Olson, 465-3880

These folks were asked to testify:

Ward Hurlburt, MD, Chair, Alaska Health Care Commission; Chief Medical Officer, DHSS; Director, Division of Public Health/DHSS 465-3090

Jeff Jessee, CEO, Ak Mental Health Trust Authority, 269-7963, cell 632-2561

Note: Deb Erickson had a family funeral and I'm not sure if she will be back and able to be able to testify, but just in case, here is her information:

Deborah Erickson, Executive Director, Alaska Health Care Commission 334-2474 or cell 602-0242

Note: Dr Stinson is sometimes scheduled for surgery at the time of the hearing, but just in case he is able, here is his information since we also asked him to testify:

Dr. Lawrence Stinson, MD, private physician (represented Alaska health care providers on the Commission) 278-2741 or cell 250-4607

I believe some or all of these people may sign up to testify:

Linda Hall, Director, Division of Insurance, DCCED (ex-officio member of Commission) 269-7900

Ryan Smith, CEO of Central Peninsula General Hospital (represented ASHNHA on the Commission) 714-4718

Wayne Stevens, CEO and President, Alaska State Chamber of Commerce (represented small business) 586-2010 or cell 486-6036

Keith Campbell, retired CEO of hospital in Seward and former AARP national chairperson (represented consumers) 362-1624 (cell)

Valerie Davidson, JD, Director of Legal and Intergovernmental Affairs for the Alaska Native Tribal Health Consortium (represented the tribal health system) 729-1908 or cell 350-0572

Jeff Davis, President, Premera Alaska (represented the health insurance industry) 677-2404 or cell 223-7950

Brian Saylor, PhD, currently a member of the Anchorage Health & Human Services Commission, recently retired UAA health policy professor, former official with state DHSS and Anchorage DHHS, also former health facility administrator. 258-1176 or cell 952-5478

Shelly Hughes, Govt Affairs Director, Ak Primary Care Assn. 929-2728, cell 841-1634

Rod Betit, ASHNA, 586-1790, cell 321-2461 (his plane will be landing at about the time Finance starts, but he plans to call in to the teleconference number when he lands)

In addition, there is likely to be interest from other groups who might like to call in for public testimony.

Principles, Elements and Specific Steps

Draft 8 August 29, 2007

Proposal by the Alaska Health Care Roundtable to help the Council achieve the goals it identified at its first meeting:

Health Care Strategies Planning Council Mission Statement (Approved at the June 11, 2007 meeting)

Develop strategies, including performance measures, to provide health care access for all Alaskans by 2014 with the goal of making Alaskans the healthiest population in the nation.

The definition of "access" includes: coverage, affordability, timely service, quality of care, prevention, managing chronic conditions, workforce issues and cost.

Roundtable recommendations are as follows:

Principles of reform — Guidelines for creating effective specific action steps

- Creating healthier people who consume less medical services is the only major sustainable strategy to slow growth of health care costs.
- Plans, programs and policies must encourage and support the principle of individual responsibility to maintain and protect each person's health.
- Dramatically improve value for every health care dollar.
 - Health services that effectively educate and motivate individuals underpin an effective, efficient health care system. Prevention and timely appropriate levels of care earn strong return on investment (ROI) for both employer and public programs. Examples are immunization programs, hypertension or HIV screening, promoting prenatal care, etc.
 - Organizational wellness programs, government or private, are starting to prove that improving employee health is a win/win for both employees and employers.
- Financially support carefully planned experimentation with different types of health delivery models and payment models. Alaska is a highly diverse state. The wide variety of community sizes, many in remote areas, with differing access to care and different prevailing payment systems argues towards creating a variety of solutions from which to choose. Employers are particularly concerned about quality.

- All Alaskans need quality, affordable health care that provides:
 - Physical access
 - Financial access
 - Information access

- Facilitate universal participation in the most appropriate fashion for each individual. Forms of coverage or care include:
 - Employer-based
 - Individual-based
 - Federal programs
 - Military programs
 - Alaska Native programs

- Rely on and develop the private insurance market in sectors where it is currently working and other sectors where it can be logically employed. Avoid creating costly state bureaucracies that duplicate private sector capabilities.

- “Grow our own” health care practitioners at all levels as much as possible.
 - In-state education and clinical training increases the likelihood of keeping graduates in Alaska.
 - In-state education stems the flow of education dollars Outside and helps generate a sustainable economy.
 - Create specialized programs to meet the needs of rural Alaska.

- Collaboration and cooperation is essential. The problem is larger than any one part of the system can solve. Areas to address are financing and insurance, workforce development, facilities and citizen education. Private, state, federal and Native resources will need to be coordinated so all can contribute to the solution.

- Generate sufficient information and research, both in Alaska and from best practices Outside, to support sound fact-based decision making.

- Provide sufficient and appropriate facilities where necessary around the state. Emphasize regional planning, coordination, cooperation and efficiency.

- Develop a statewide electronic health record network that is secure and interoperable with existing systems to improve quality of care and reduce waste by providing necessary medical information to providers.

Elements of reform — Building blocks for a better system

- The problem is huge and complex. Businesses, individuals and governments all must contribute to managing and financing a new Alaskan health care system for it to be sustainable.
- We must stem erosion of employer-sponsored insurance. Keep what works and reshape or fill in as necessary. Reform plans should build on and improve existing parts of the system that work without harming those who are already well served.
- Information to evaluate costs and alternatives before and after treatment is an essential building block of individual financial responsibility. Information access and transparency seems like a basic need, but is elusive. Technology and disclosure requirements will help.
- Encourage adequate federal Medicare reimbursement of provider's costs, but cobble together work-arounds until that happens. This can include creative use of Medicare and Medicaid waivers. Keep track of the changing federal health care environment to uncover opportunities and influence needed change.
- Electronic health records are the cornerstone to modernizing Alaska's health care. Build on existing private and state-level initiatives.
- Develop navigation aids and fail-safe systems to help people gain access to and deal with complexities of the system. Navigation aids must take into account the human, as well as the technological networks, which build healthy lives.
- Alaska has information gaps that need to be filled to chart an optimum path to progress. Fundamental research will enable policy-makers to make sound decisions based on facts: 1. Quantify and identify the source of Alaska cost differentials vs. Outside. 2. Understand who is not covered or insufficiently covered. 3. Continue to define work force development challenges across the full job spectrum.
- Build on the many Alaskan programs that have proven effective or show promise in the areas of quality, access and cost control.
- Monitor and learn from other state's experience in coverage and cost control.
- ★ Alaska will need an ongoing official state-wide group to monitor the ever-changing health care scene and find appropriate synergies.

Specific immediate steps to consider

- Establish an ongoing Alaska health care council/commission/board to coordinate public policy.
- Support and coordinate Alaska research and monitor national research and developments.
- Develop a variety of Alaska health care reform plans based on research to be able to compare and contrast their benefits, costs and impacts.
- Support the next step in development of Alaska electronic health records.
- Develop and monitor quantifiable health care goals for Alaska.
- Support workforce development capable of filling current and anticipated needs.
- Encourage primary care capability based on the “Medical Home” model which provides an ongoing health care point of contact. Examples are family physicians or community health centers.
- Monitor and improve liability and tort laws to help reduce malpractice insurance costs, encourage quality improvements and make Alaska a more attractive place to practice medicine.
- Encourage schools at all levels to foster healthy life styles and offer sports and exercise programs that build life long healthy habits.
- Work with the federal delegation and authorities to maximize federal support of Alaska projects and programs and to support national health care reform efforts that will benefit Alaskans.
 - E.g. Develop stand-alone Medicare clinics in major Alaska hubs via an open RFP process
- Identify pseudo-reform “myths”—things to avoid.

Pseudo-reform “myths” — Things to avoid

- Continued employer transfer of health care costs to employees.
- Assuming that “market forces” alone will make health care better and more efficient. Health Savings Accounts (HSAs) may be part of a total solution, but not the only solution. Even enlightened health care consumers do not have access to information they need to “shop around” for best value.
- Freezing or reducing state funding. The State of Alaska will need to make additional financial and programmatic investments as a full partner in a comprehensive solution.
- Reliance on the federal government to solve the problem. National solutions are necessary and hopefully will be forthcoming. However, in the interim, Alaska needs to do what it can to help itself.
- ✱ • Assuming, hoping or praying that the problem will solve itself and go away. Effective, creative coordination of every tool available within Alaska is the only chance for success. An ongoing, adequately resourced council, commission or board will need to continue the work of the Alaska Health Care Strategies Planning Council.

Why we need to act now

- As a small state with significant resources, Alaska has the elements it needs to improve the health of its citizens in the long-term.
- Guiding principles will focus the creativity and coordination needed to achieve this lofty, but basic human goal.
- Unchecked, current health trends will create the first generation in 100 years that can expect a shorter life span than their parents.
- Insufficient federal reimbursements are transferring a huge financial burden to the private sector which in turn is passing costs on to employees.
- A mandatory rational system based on the strongest elements already in place can provide basic care for all Alaskans enabling a shift of emphasis towards prevention.
- Investing in prevention and individual responsibility offer high “bang for the buck.” Healthy people feel better and place less financial demands on the system.
- The aging population will increase per capita costs of health. These increases can be mitigated by effective primary prevention and health promotion.
- Everyone and all parts of society need to be part of the solution—businesses, individuals and all levels of government.
- The health care system is not a goal in and of itself. The real goal is healthy Alaskans who know they will be properly cared for if they do get sick.

Background — An unsustainable deteriorating situation

- Many thanks to the Alaska Health Care Strategies Planning Council and key legislators for beginning a formal state dialogue.
- Businesses face annual double-digit increases in health care costs. This necessitates:
 - Cutting back coverage
 - Increasing employee financial contributions
 - Educating and empowering employees to develop healthier lifestyles
- The situation is bad and getting worse.
 - According to a July 2007 Commonwealth Fund report comparing states, Alaska ranks 26th overall, 36th for access and 49th in quality.
 - Medicare and Medicaid do not reimburse providers for their cost of doing business. This “pinch” is being passed on to businesses and insurers, creating an ever-escalating financial burden on them. Health care costs for businesses are a financial ball and chain not shared by international competitors.
 - Many Alaskans are without any health care coverage, or have inadequate coverage.
 - Over 90,000 Alaskans have no health care coverage—if living together, they would be the second largest city in Alaska.
 - Many more are under-insured.
 - Everyone has nominal access to some form of health care at the emergency room, but it is after-the-fact and expensive.
 - Many people in need do not know where to turn because of:
 - Lack of knowledge
 - Lack of money
 - Linguistic and cultural barriers
 - Crushing work and family schedules
 - Alaska is short 300 doctors today, with more needed to replace an aging work force. Similar shortages exist for nurses and other health practitioners.
 - Potential gas pipeline construction will further strain an already challenged Alaska health care system.
- The unhappy net result:
 - Alaska has the highest per capita state expenditures on health care in America (\$8,000 per person).
 - America has the highest per capital health care expenditures in the world (\$7,000 per person).
 - Alaska and America have poor health compared to other industrialized nations despite having greater expenditures on health care.
 - Alaskan and American businesses are becoming less competitive compared to international businesses in countries with public health care systems.
- A caring, humane and financially efficient society cannot continue this downward spiral. Serious national conversations and major state-level reform efforts are under way. Fortunately, Alaska has potential building blocks for a better system and guidelines to help use them.

ALASKA'S \$5 BILLION HEALTH CARE BILL— WHO'S PAYING?

By Mark Foster and Scott Goldsmith

March 2006

UA Research Summary No. 6

Institute of Social and Economic Research • University of Alaska Anchorage

Figure 1. Growth in Alaska Health-Care Spending, 1991-2005

Source: Authors' estimates

Spending for health care in Alaska topped \$5 billion in 2005. Just how big is \$5 billion? It is, for perspective, one-third the value of North Slope oil exports in 2005—a year of high oil prices. It's nearly one-sixth the value of everything Alaska's economy produced last year.

In 1991, health-care spending in Alaska was about \$1.6 billion. Even after we take population growth into account, spending for health care increased 176% per Alaskan in 15 years. These soaring costs are taking a growing share of family and government budgets, increasing labor costs, and putting businesses at a competitive disadvantage.

The \$5.3 billion in spending in 2005 was all for the 665,000 people who live in Alaska, but individuals didn't pay all the bills. They paid nearly 20% out of their pockets and through payroll deductions. Businesses (including non-profits) and governments paid about 80%. Of course, individual Alaskans and other Americans indirectly pay all these costs, because they buy goods and services, own businesses, and pay taxes.

What does health-care spending buy? Stays in the hospital, visits to doctors and dentists, prescription drugs, and more, as well as program administration and public health programs. Our estimates don't include capital expenditures.¹

Who pays the bills, and how has that burden shifted as spending increased?

- *Private and government employers spent about \$2 billion for employee health-care coverage in 2005. For comparison, they paid \$11.8 billion in wages in 2005. With rising costs, businesses and governments have become increasingly likely to pay health-care bills themselves—"self-insure"—rather than pay through insurance premiums.*

- *Alaska households spent just over \$1 billion for health care in 2005, up from \$361 million in 1991. That includes everything individual Alaskans spent—not only their out-of-pocket costs, but also what was deducted from their paychecks to help pay for health coverage through their employers.*

- *Governments spent \$2.2 billion for health care programs in 2005, up from \$736 million in 1991. Medicaid spending was almost \$1 billion.*

Health-care spending could double again by 2013, if current trends continue. Why are costs of medical care so high, and why are they increasing faster than everything else? Why have health-care costs in Alaska stayed higher than U.S. averages, even as other costs moved closer to national levels? Are we getting better care now? Who can't afford care?

We're starting to assemble data to help answer those questions. Alaskans face some hard choices about how to control costs but still have a health-care system that provides good care and is accessible to everyone. We hope to provide some useful insights.

This publication is the first step in ISER's research on the health-care industry. It starts with our new estimates of spending and of changes since 1991, when we last looked at health-care spending.² But cost alone is only one part of the complicated health-care story, and here we also begin looking at:

- Who are the most expensive patients? Our analysis of national data shows that the average "high-cost" patients aren't as expensive as you might think.
- Who is more likely to have health insurance provided through their jobs at a reasonable cost? Single people working for big companies.
- How does use of the health care system in the U.S. compare with use in other countries? Canadians and Australians seem to use their systems about as much.
- What is driving costs? Despite what many people think, there are no simple explanations: it's a puzzle with many pieces.

Figure 2. Who Pays The Bills?

(Total 2005 Spending: \$5.3 Billion)

ORGANIZATION OF SUMMARY

We first describe what health-care dollars buy—what shares go to doctors, hospitals, drugs, and other expenses. Then we look in more detail at our estimates of health-care spending in 2005 and the changes since 1991. We think our estimates are a good effort to update our previous work. But the health-care industry is complex, and tracking all the spending is difficult.

After we talk about spending, we give readers a glimpse of related health-care issues. In some cases we have no Alaska data and rely on national figures, which are still useful in illustrating important issues.

Pages 4, 5, and 6 discuss access to, use of, and benefits from the health-care system: who is uninsured; who has health-care coverage and how that coverage is provided; which patients get the costliest care; how Americans' use of medical care compares with use by people in other industrialized countries; and whether we've gotten healthier in exchange for more spending.

Page 7 summarizes what we know about how medical costs in Alaska differ from the U.S. average, and page 8 concludes with a discussion about the many things that may be driving health-care costs.

Keep in mind that population growth and general inflation account for part of the increase in health-care spending since 1991. Alaska's population increased from about 570,000 in 1991 to 665,000 by 2005. Also, prices for everything Americans buy also went up, by about 43% nationwide and 39% in Anchorage. But prices of medical care nearly doubled (Figure 3).

Figure 3. Increase in Consumer Price Index Anchorage and U.S., 1991-2005

*Measures price increases in a specific "market basket" that includes hospital care, visits to doctors and dentists, nursing home care, and medical supplies; also indirectly measures increases in health insurance premiums.

WHAT ARE WE BUYING?

Figure 4 shows that as of 2000, more than 70% of Alaska's health-care spending was for hospital care and visits to doctors. Prescription drugs accounted for about 9% and dental care 7%. The "other" category includes medical products, health care provided on the job and in schools, and Medicaid payments for in-home care.

Nursing home and home health care made up only 2% of health-care spending in 2000, far short of the U.S. average of 11%—and that share actually dropped between 1990 and 2000, despite fast growth in the number of Alaskans over 65. There has been a shift in how long-term care is provided in Alaska. A change in Medicaid allowed payment for in-home and assisted-living care for people who would otherwise have been cared for in nursing homes.

All types of health-care spending grew rapidly since 1990, but the fastest growth was in prescription drugs and the "other" category (described in the footnote to Figure 4).

HOW HAS SPENDING CHANGED?

Table 1 details who paid for health-care in 2005. Figures 5 and 6 show changes in levels and shares of spending from 1991 to 2005.

- Growth in government spending wasn't uniform. The federal government's share of spending increased (Figure 5). Costs for Medicare and Medicaid more than quadrupled and costs for the Indian Health Service doubled.

Figure 4. What Are We Buying?
(Alaska Health Care Spending, 2000)

*Includes, among other things, durable and non-durable medical products, direct services employers provide employees, government expenditures in schools, and Medicaid payments that allow people to be cared for at home instead of in institutions.

Source: Center for Medicare and Medicaid Services

- State government's share dropped, partly because the federal government paid a bigger share of Medicaid costs in 2005 than in 1991.³

- Local government is the smallest government spender, but the local share of spending increased, mostly because of growing costs for employee health coverage.

- Employers saw the fastest growth. Combined spending by private and government employers increased about 290% (Figure 6).

- Spending by individual Alaskans didn't go up as much—184%—but the \$1 billion they spent in 2005 was still more than the \$922 million businesses spent.

Figure 5. How Did Shares of Spending Change From 1991 to 2005, Among Those Who Buy Health Care?

*See endnote 3, page 8. Note: Totals may not add to 100% because of rounding.

Figure 6. How Did Spending Change From 1991 to 2005, Among Those Who Provide Coverage?

Source: Authors' estimates

Biggest Kinds of Changes

- Individual Alaskans have seen big increases not only in costs they notice most—how much they have to pay out of their own pockets—but also in less obvious costs: deductions from their paychecks to pay their share of employer-based insurance.
- Both private and government employers became much more likely to self-insure. Self-insurance costs made up about two-thirds of combined employer spending for insurance premiums and self-insurance in 2005, up from about one-third in 1991.
- Spending for Medicaid more than quadrupled (from \$215 million to \$970 million), so that in 2005 it alone made up nearly \$1 in every \$5 of health-care spending. Analysts attribute the fast growth of Medicaid nationwide to growing numbers of eligible Americans, including low-paid workers whose employers don't provide coverage and low-income seniors; to program expansion; to increasing prices of medical care; and to treatment of medical conditions at lower thresholds.

HEALTH-CARE COVERAGE

Most Alaskans—an estimated 87%—have some form of health-care coverage, either through private insurance or government programs.⁴ Some people have more than one kind of coverage, so the percentages in Figure 7 add to more than 100%.

Around 64% of Alaskans are covered by private insurance, 38% by government programs, and nearly 13% have no coverage. Nationwide, 68% of people are covered by private insurance, 30% by government programs, and close to 16% have no coverage.

Alaskans are more likely to have coverage through the military (reflecting the state's large number of active-duty and retired military); the Indian Health Service (because Alaska Natives make up 20% of the population); and Medicaid (the joint federal-state program mainly for low-income and disabled people). Fewer Alaskans are covered by Medicare, because fewer are over 65.

We don't know characteristics of the 13% of Alaskans with no health-care coverage, but we know that nationwide the uninsured are most likely to be young adults and to have annual incomes below \$25,000 (Figure 8).

Children in Alaska are more likely to have coverage than both adults in Alaska and children nationwide. Figure 9 shows that about 8% of children in Alaska had no coverage in 2003, compared with the U.S. average of nearly 12%.⁵ The smaller share of uninsured children in Alaska is probably due to the fact that Alaska Native children are eligible for care through the Indian Health Service, and also to the Denali KidCare program, an extension of Medicaid that provides coverage for low-income children without other coverage.

It's outside the scope of this summary to describe all the ways that families, communities, and governments are affected because millions of Americans lack health insurance. But a recent report by the National Academy of Sciences broadly summarized those effects. It found that the uninsured are in worse health; that uninsured children are more likely to have development delays; that the direct costs of caring for uninsured Americans fall heavily on local communities; and that governments pay hospitals large public subsidies to offset their costs for uncompensated care.⁶

The 64% of Alaskans with private insurance either pay for that coverage themselves (through individual policies) or are covered through their jobs and share the costs with their employers. Figures 10, 11, and 12 show how the rising costs of medical care have affected health-insurance coverage for Alaskans working for private industry.

- Health insurance in Alaska was already more expensive in the 1990s and still is. In 2003, insurance premiums for family coverage at private firms were about \$10,500 in Alaska and \$9,200 nationwide. By 2005, those premiums had jumped to an average of \$11,268 nationally (Figure 10).

- Premiums are higher in Alaska, but workers here pay a smaller share, as Figure 11 shows. As of 2003, employees at private firms in Alaska paid 11% of the premiums for single-person coverage and 17% for family coverage, compared with 17% for single-person coverage and 25% for family coverage nationwide. But employers, especially at small firms, have been shifting more insurance costs to workers. The 2005 UBA-Ingenix Health Plan Survey found that employees of businesses nationwide paid 43% of the premiums for family coverage.

Figure 7. Health-Care Coverage, Alaska and U.S., 2004

	Private Insurance	Medicaid	Medicare	Military	IHS only*	None
Alaska	63.5%	15.3%	7.3%	11.6%	4.2%	12.8%

• Small Alaska businesses are less likely to offer insurance coverage. Only about a third of those with fewer than 50 employees offer coverage, compared with 43% nationwide (Figure 12).

A lot of Alaskans work for small businesses. In 2003, about 91,500 of the state's 224,500 private-industry employees worked for businesses with fewer than 50 employees. That's more than 40% of all those with jobs in private industry.

WHO COSTS THE MOST AND THE LEAST?

We've talked about the costs of health care and of health-care coverage. Now we turn to the other side of the equation: who's getting the benefits of the spending?

Health-care spending in Alaska was close to \$8,000 per person in 2005. But not everyone is average. The cost of care for a few is significantly higher than average, but for many it's only a few hundred dollars a year.

As a first step toward understanding who gets the benefits of health-care spending, ISER analyzed national data on the characteristics of high- and low-cost patients. That data is from a federal panel survey—that is, a survey that follows households over time.

As Figure 13 shows, just 5% of patients nationwide account for almost half of all health-care spending in any given year, while at the other extreme 50% of patients account for just 3% of spending in a year.

A lot of Americans tend to think that the most expensive patients are probably very

old, or suffering from some catastrophic illness or injury, and are possibly uninsured.

The high-cost patients are older; health-care costs do go up as people age.⁷ But their average age is 57, and fewer than 40% are over 65. The average bill for high-cost patients in 2002, under \$20,000, doesn't reflect major illnesses or end-of-life care. Rather, it's for a few days in the hospital for surgery, several visits to doctors, and significant spending for prescription drugs. Few of the high-cost patients—2%—are uninsured.

The low-cost patients are mostly young, averaging 28 years old. They may see a doctor or a dentist once a year, and they pay almost half their modest medicals bills out of their pockets.

Many of the low-cost group—nearly 20%—are uninsured. The share of uninsured patients in this group tracks with what the National Academy of Sciences has reported: that the uninsured often don't have any medical costs at all in a year, and among those who do, their expenses are less than half the average for people under 65.⁸

Keep in mind that it's easy to go from being a low-cost patient in one year to a much costlier one the next—a car accident, the sudden onset of an illness, or a hundred other unpredictable events can push anyone into the ranks of the high-cost patients.

Figure 13. Who Are the High-Cost and the Low-Cost Patients in the U.S.?

DO WE USE MORE MEDICAL CARE?

Americans spend more on health care than anybody else. Do Americans increase health-care costs by getting more medical care than people in other developed countries? Or conversely, do countries with national health-care systems hold down costs by rationing care?

Figure 14 compares Americans with the British, Canadians, New Zealanders, and Australians on use of, access to, and satisfaction with their health-care systems. The comparison countries all have some form of national health-care system.

Overall, the comparisons show that residents of all four countries are almost equally likely to see doctors and have diagnostic tests, and that Americans are slightly more likely to take prescription drugs.

Americans are, however, more likely to skip medical tests because of cost and less likely to get appointments the same day they call. They also seem to be somewhat less satisfied with care they get from their doctors and in the emergency room.

ARE WE HEALTHIER?

Another important aspect of the health-care story is what we're getting in return for the high spending. Are Alaskans healthier than in 1990?

The answer seems mixed. In 2005 the United Health Foundation ranked Alaska as among the most improved states in health outcomes since 1990. Despite that improvement, the foundation still ranks Alaska somewhere in the mid-range of states on health measures—because 15 years ago Alaska was ranked toward the bottom.⁹ Figure 15 illustrates some of the improvements Alaska has made since 1990.

Rates of infectious disease (which include hepatitis, tuberculosis, and many more) went from far above the U.S.

Figure 14. Use of Medical Care, U.S. and Selected Countries, 2004
(Percent of Survey Respondents)

	U.S.	Great Britain	New Zealand	Canada	Australia
Saw at least one doctor in previous 2 years	97%	95%	97%	95%	98%
Regularly take prescription drugs	46%	44%	39%	43%	39%
Had blood tests, x-rays, or other diagnostic tests in past 2 years	84%	71%	82%	84%	83%
Able to get doctor's appointment same day when sick	33%	41%	60%	27%	54%
Skipped medical tests, treatment or follow-up because of cost	27%	2%	20%	8%	18%
Rate regular doctor's care excellent or very good	61%	64%	74%	68%	71%
Among those who used emergency room, share who rate emergency services fair or poor	34%	23%	27%	27%	23%

Source: Commonwealth Fund International Health Policy Survey, 2004

average in 1990 to significantly below by 2005. Infant mortality dropped in Alaska and throughout the country.

Declines in infectious disease and infant deaths in Alaska can be traced partly to public-health spending for immunizations, as well as for safe water and sewer systems, new housing, and better access to medical care in remote villages.¹⁰ In Alaska and nationwide, advances in treatment and technology have also reduced infant deaths.

With improved treatments for heart disease, the rate of death from heart disease

declined by 20% in Alaska since 1990, dropping slightly faster than the national rate.

Rates of smoking among Alaskans fell also, but Alaskans are still more likely to smoke than other Americans. Again, public-health campaigns to fight smoking likely contributed to the decline.

On the down side, Alaskans and other Americans are far more likely to be obese now than in 1990—and obese people are more likely to require treatment for diabetes and high blood pressure.

Figure 15. Are Alaskans Healthier Now Than in 1990?

Source: United Health Foundation, *America's Health Rankings 2005*

ALASKA AND U.S. COSTS

Years ago, everything cost more in Alaska, and costs still remain high in remote areas. But in Anchorage and other urban places, the historically high costs of many things have moved closer to U.S. averages in recent times, as the population grew, local markets got bigger, and infrastructure and transportation improved.

But costs of medical care haven't declined relative to U.S. averages. Overall medical costs are probably somewhere in the range of 25% higher in Alaska, but that cost difference varies quite a bit among services and procedures, and prices don't always reflect cost.

Alaska has fewer practicing doctors per capita than the nation as a whole, but somewhat more dentists—so how the supply of medical professionals may affect costs is not clear (Figure 16).

Figures 17 through 20 show some examples of cost differences, but it isn't a comprehensive picture.

- Overall costs of medical and surgical procedures in Alaska were about 18% above the U.S. average in 2001 and dental procedures 37% more (Figure 17).

- Average costs of a visit to a doctor's office were 30% higher in Alaska in 2001. But the average is a mix of private insurance

and government payments. A private insurer in Anchorage and Fairbanks paid nearly twice as much as Medicare for an office visit in 2001, as Figure 18 shows.

- Alaskans don't use as many prescription drugs as other Americans—mostly because there are fewer Alaskans over 65—but we pay more. In 2003, the average price of retail prescriptions was 25% higher in Alaska.

- Costs of hospital care went up faster in Alaska than nationwide from 2000 to 2003—so in 2003 average expenses for a day in an Alaska hospital were 42% above the U.S. average, compared with 30% in 2000.

Figure 21. What's Driving Health-Care Spending In Alaska?

Annual Growth, 1990-2005*
8.9%

*Authors' estimate

WHAT'S DRIVING COSTS? IT'S A PUZZLE

Spending for health care in Alaska increased an average of nearly 9% a year from 1990 to 2005—and that figure doesn't reflect the big capital costs for building hospitals and clinics in the state since 1990.

More people and general inflation together account for only about 40% of that growth. So what's driving the rest?

Just about everybody has an opinion about what's pushing up medical costs, here and nationwide. Alaska has some special conditions—mostly small markets and high costs in rural areas—but other possible contributors to high costs are common to Alaska and the rest of the country.

Some people think the big factors have to do with our system of delivering health care. Those include market forces—like lack of competition, for instance, and lack of incentives in many parts of the system to control costs—as well as inefficiencies created by the complexity of the U.S. system.

Other arguments related to the delivery system are that Americans get more medical care than they need, because most of the bills are still paid by health insurance. Others believe, by contrast, that costs of caring for uninsured people are responsible.

Others blame environmental factors, especially Americans eating too much and not exercising—leading to the spread of diabetes and other conditions requiring more care.

Still others say the growth has to do with changes in treatments and technology—treating conditions at lower thresholds (like the recent drop in the cholesterol level at which doctors recommend treatment); more effective but costlier treatments and prescription drugs; and more complex technology.

Other arguments have to do with changing demographics and a shift in the kinds of illnesses treated. Americans are getting older, and older people need more medical care. Also, some point out that decades ago, more of the illnesses treated were acute—like influenza—and the patient either got better or died in a fairly short time. Now, chronic illnesses and conditions—like high blood pressure—are common and require long-term treatment.

And many Americans link high costs to behavior of drug companies, the insurance industry, the medical and legal professions, and individual Americans. Such behavior would include, for instance, insurance and drug companies making high profits; doctors overbilling government programs; and patients filing lawsuits—causing doctors to practice "defensive medicine."

Probably there are other opinions we haven't discussed here. We're not endorsing any of them, but merely pointing out that many things could be contributing to rising costs—and it's a puzzle how all the pieces fit together. We will learn more as we study Alaska's health-care system. But for now, we want to emphasize that the answer to what is driving health-care costs is not simple, and finding solutions won't be simple either.

ENDNOTES

1. Our estimates are based on the Center for Medicare and Medicaid Services' definitions of personal health care spending. See http://www.cms.hhs.gov/NationalHealthExpend-Data/01_Overview.asp#TopOfPage. We have also included insurance costs, to capture the expenses paid by employers and employees.
2. ISER Research Summary No. 53, "The Cost of Health Care in Alaska," December 1992.

3. The decline in state share is expected to ameliorate somewhat beginning in FY 2006, due to a decision by the 9th District Appellate Court to disallow the Fair Share program that enabled tribal hospitals to receive a higher reimbursement than non-tribal hospitals for uncompensated care.
4. U.S. Census Bureau figures from the Current Population Survey classify Alaskans with coverage only through the Indian Health Service as "uninsured." We have adjusted those figures, separating those with IHS-only coverage from the uninsured. The adjustment is based on methods of the University of Minnesota's School of Medicine, State Health Access Data Center.
5. American Academy of Pediatrics figures for uninsured Alaska children are adjusted U.S. Census figures, separating children with IHS-coverage only from the "uninsured" category.
6. National Academy of Sciences, *Hidden Costs. Value Lost: Uninsurance in America*. Available at: <http://www.nap.edu/catalog/10719.html>. Public subsidies for uncompensated care are illustrated in the State of Alaska's FY 2007 budget request, which includes \$27 million to help Alaska hospitals pay for uncompensated care.
7. In 1999, for example, health-care spending for Americans 75 to 84 was seven times higher than for those 18 and under.
8. See note 6.

EXECUTIVE SUMMARY

Why Alaska health care issues must be addressed and solved

Health care is not a goal or end in itself. The ultimate goal of health care and of this study is health and wellness for Alaskans. Alaskans must identify and improve the aspects of health care that are under our control. Many health care issues are national, that Alaskans cannot affect. Therefore, it is even more important to address and solve issues we can do something about. Furthermore, the demographics of an aging population will put foreseeable pressure on all fronts.

ACCESS

- Approximately 110,000 Alaskans have no health insurance coverage.
- Many others have minimal or inadequate coverage.
- Thousands are turning to hospital emergency rooms as a source of primary health care, often without ability to pay.
- Adequate health care in remote areas is a significant logistical, financial and educational challenge.

QUALITY

- Based on the 2004 National Healthcare Quality Report, Alaska has low rankings in several key measures of cancer, heart disease, maternal and child health, respiratory diseases, and nursing and home health care.
- Many Alaskans are in high-risk health categories, many are not receiving adequate care.

COST

- Alaska health care costs are approximately 40% higher than Seattle (per Premera, corroborated by Providence and Alaska Regional)
- Medicaid costs to the State of Alaska are rising dramatically, to over \$1 billion in 2005. It is placing a strain on the state budget.
- Health care insurance premiums are also rising dramatically, creating a significant burden on employers and employees.
- Alaska hospitals are losing tens of millions of dollars from uncollectable accounts arising from excessive emergency room use and they are unable to reduce the amount of emergency room care provided due to Federal law.

What can we do?

There are four major interrelated factors driving primary healthcare in Alaska today:

1. Health and wellness of the population
2. Availability of care and insurance
3. Affordability of care and insurance
4. Financial health of the stakeholders, such as employers, providers and individuals

These drivers are currently interacting in a "cost spiral" that is creating a very serious situation nationally and in Alaska. The rate of increase in the cost of health care is unsustainable—if unchecked health care increases will price employers out of the market. Already industries such as automobiles are threatened. We need to avoid similar impacts in Alaska.

We believe that with focus and coordination Alaskans can impact this "cost spiral" positively through specific actions in the four areas mentioned above:

1. Lifestyle and prevention: Raise public awareness and increase personal responsibility for wellness
2. Access: Make services and insurance more widely available
3. Quality: Continue improving quality of care that is delivered
4. Costs: Reduce costs of service delivery and insurance to make them more affordable

There are many health care initiatives already underway in these areas by various governmental and non-governmental entities. Some have proven to be effective and cost-efficient. Others show significant promise. Health care reform is complex and controversial, with multiple players and competing interests. Inconsistent tracking and trending create significant factual disputes about healthcare systems. Any major reform has potential to create both winners and losers.

Given this environment, the Study Group came to three overarching conclusions:

1. The Study Group process itself has been enlightening, educational and productive.
2. Every aspect of health care is complex. Understanding the system and improving it is beyond the capacity of any one element within the system.
3. The Study Group recommends that an ongoing body be established to continue and deepen this Group's work.

The time to act is now. Involvement of Alaskans in the health care debate is vital. Reform of some sort is inevitable, and Alaskans should control it as much as possible to our own benefit. Since there is no single forum today where the disparate players can come together to agree on facts, share solutions and craft a win-win for our unique Alaskan conditions, this Study Group recommend formation of—

The Alaska Health Care Roundtable ("Roundtable")

The goals of the Roundtable are to continue communication and foster action among parties that have a long-term vested interest in health care reform. It must set a standard of credibility and create timely actionable ideas that can gather bipartisan support, get quick approval and become part of a long-term fiscal plan for Alaska. It would be a sounding board and facilitator for ideas and recommendations, with a focus on lifestyle and prevention, access, quality and cost.

The core membership in the Roundtable would be self-selecting, comprised of members with a long-term compelling interest in improving the Alaska health care system. Examples of core members would be major employers at risk, health care providers and local foundations. A wide variety of other potential members, resources and ad hoc participants could be included as needed. Funding would be by voluntary contributions by the participants and the community.

INTRODUCTION

The big picture: National background issues and the state of health in the U.S.

While the focus of this study is factors controllable in Alaska, it is important to understand the national context in which we operate. The United States spends more on health care than any other country, measured either as a percentage of gross domestic product, or in terms of money spent per person. The OECD, or Organization for Economic Cooperation and Development, is a group of industrialized nations that are an appropriate benchmark for U.S. expenditures and performance.

The National Situation - Spending

OECD—Organization for Economic Cooperation and Development

Per capita health care expenditures by country

Source: Commonwealth Fund

5/30/2005 2:27 PM

Heyman/Anderson Draft 8.0

5

Health care spending has risen dramatically in recent years, increasing from about 8 % of the gross domestic product in 1975 to over 16% today. The Commonwealth Fund, a private nonpartisan foundation that supports independent research on health and social issues, projects that by 2013 the U.S. will be spending 18% of GDP on health care.

Many factors contribute to these increases. Often cited are huge costs caring for the last three months of life, advertising driven consumerism, high cost of technology, defensive medicine practiced to avoid malpractice suits, malpractice insurance, a fractionated payment system and massive cost shifting to those able to pay caused by inadequate or no health insurance for many Americans (and Alaskans). The crushing cost of health care threatens whole industries and affects our worldwide ability to compete economically.

The National Spending Situation: Trend in Healthcare Costs as a % of GDP

Source: Commonwealth Fund

5/30/2005 2:11 PM

Heyman/Anderson Draft 8 0

4

The Commonwealth Fund is a foundation specializing in health care issues.

In terms of outcomes, the United States has obtained poor results from the massive amounts invested. By many measures, the U.S. trails other industrialized nations, as represented by Organization of Economic Cooperation and Development averages. We also have a higher percentage of uninsured than most advanced countries, which tend to have centralized health care systems.

6

A conceptual framework of four primary healthcare factors can help us understand how all the different factors are interrelated.

Four Primary Healthcare Factors and how they are interrelated

5/30/2005 3:20 PM

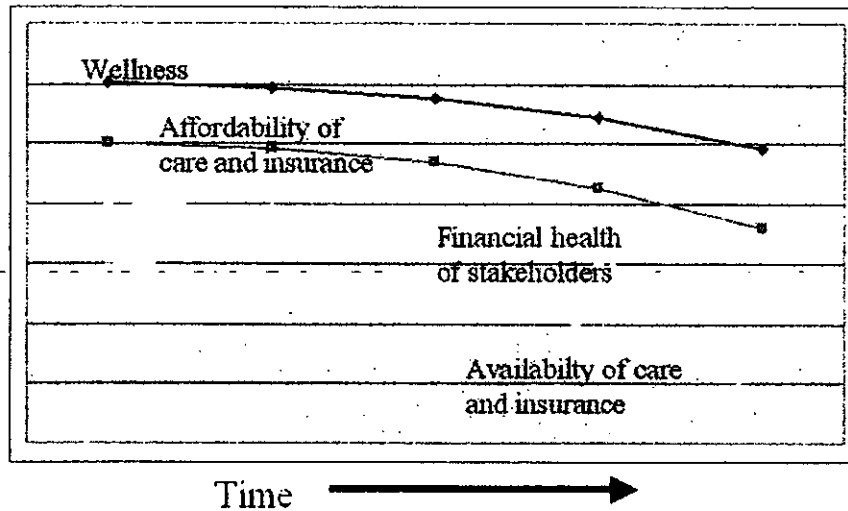

Heyman/Anderson Draft 8.0

- Wellness of the population
- Affordability, coordination and quality of care and insurance
- Availability of care and insurance
- Financial health of stakeholders including:
 - Health care providers (physicians, clinics, hospitals)
 - Companies, institutions and government

These factors are all part of a complete cycle. Each factor affects the other. Therefore they are portrayed in a circle.

As time goes on, each of these factors influences the others, with the ultimate result of either undermining or improving the health and wellness of our people.

The conceptual crux of the problem

5/30/2005 3:24 PM

Heyman/Anderson Draft 8 0

8

A significant problem is a de facto dynamic in our current U.S. health care policy.

The motto of a popular Alaska establishment embodies this unintended and unwanted de facto policy, to wit—

“We cheat the other guy and pass the savings on to you!”

This phenomenon has impacts both nationally and in Alaska, and Alaskans are not always the beneficiary, creating serious cost shifting and economic dislocations.

A SIGNIFICANT ISSUE FOR HEALTH CARE IN ALASKA

The focus of this study is what can be done in Alaska. It does not address national issues such as a single payer system, rationing of health care or national structural issues. However, the following conceptual illustration is both a national and Alaska problem.

It shows how the high cost of health care causes people to postpone needed care, which increases ultimate costs of treatment, frequently and reluctantly performed by practitioners at unneeded and inappropriate levels. Often the emergency room of a hospital becomes a highly expensive primary care facility. If treated earlier, medical conditions could have better outcomes at a lower cost.

Why even a non-compassionate insured should care about the uninsured

A federal law, the Emergency Medical Treatment and Active Labor Act ("EMTALA") requires that hospital emergency rooms treat and not turn away any patients who show up, regardless of ability to pay.

Emergency rooms are becoming primary care treatment centers for those without access to, or awareness of, alternatives. Current waits can be up to two hours, especially during high traffic times like early evenings or weekends. This creates inefficient use of specially trained staff and is enormously expensive. Many ER patients have no insurance coverage or other means to pay their bill. The financial burden then falls on the hospital to write off uncollectible accounts.

5/30/2005 3:49 PM

Heyman/Anderson Draft 8.0

12

Note: the numbers above are in thousands of dollars. E.g. 88,980 = \$88,980,000

5/30/2005 3:50 PM

Heyman/Anderson Draft 8.0

13

The financial impact on hospitals is even more acute than the slide above suggests. While the percentage of charity and bad debt compared to gross revenue has increased dramatically in recent years, the bottom line impact is significantly greater because actual hospital cash collections are much less than the gross revenue billings used in the chart above.

Hospitals are not the only ones affected. Individuals unable to pay medical expenses are filing for bankruptcy at staggering rates. Although Alaska data are not available, national data are noted below.

Personal Bankruptcies due to Health Care Costs-U.S.

- Between 1980 and 2001 medically driven bankruptcies increased 23 times
- 60% skipped doctors visits
- 47% skipped prescription medicines

5/30/2005 4:02 PM

Heyman/Anderson Draft 8.0

31

Source: American Medical Association 2/05 and a Harvard Law School/Medical School 2/05 studies.

70% of these debtors had some form of health insurance at the start.

Main factors cited for declaring bankruptcy were:

Hospital costs	42%
Prescription drug costs	21%
Doctor bills	20%

Cost: What do Alaskans pay? Why?

The impact of **bad debt** on the health care system has been clearly illustrated in the preceding charts.

Increasing Cost of Medical Care in Alaska

Anchorage CPI-U for selected components 1982-2001

5/30/2005 4:01 PM

Heyman/Anderson Draft 8.0

Source: Alaska Economic Trends June 2004

27

Premera, Alaska's largest health care insurer, reports that their **Alaska costs are about 40% higher than Seattle**. General observations by resource people have referenced a 40% differential overall, more in some specialties, less in others. Local hospitals have corroborated this differential. Other information points to even larger discrepancies on reimbursement rates for physicians. The Alaska Division of Medical Assistance Health Care Cost Analysis Report placed Alaska in the top five states in terms of the cost of medical and surgical procedures.

Small practices and increasing personnel costs contribute to the high cost of medicine in Alaska. Also there is general, but not substantiated, belief that the **Alaska population is too small to support HMOs**. Any discussion of managed care has been resisted by medical providers.

Dependence on "Fair Share" and other sources of federal dollars place about \$800 million potentially at risk, an important share of current health care funding to Alaska. Alaska also faces **competition from other states** for willing providers. Furthermore, **reimbursement**

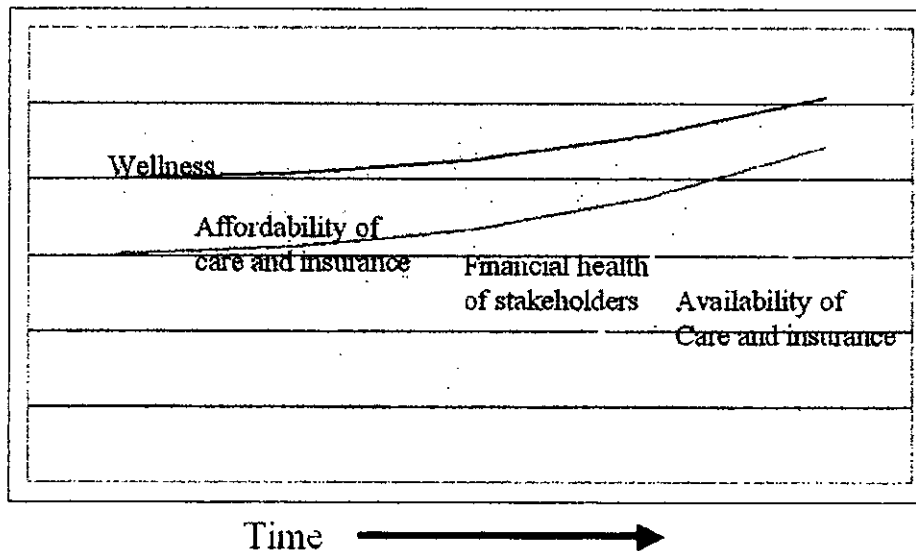

formulas are going down. The state is now paying over one billion dollars annually to pay Medicaid expenses.

Cost of health insurance—there is no public oversight of health care insurance rates by the Division of Insurance as there is in some other states. They are a result of negotiations between insurance companies and large groups.

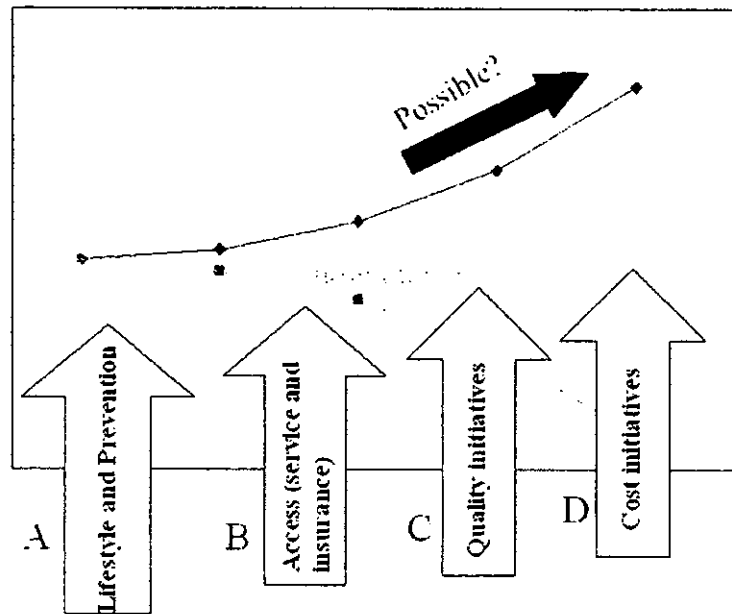

The **Certificate of Need** situation needs to be objectively analyzed and considered as a component in a comprehensive statewide health care plan. Critics of the Certificate of Need claim the process stifles competition and innovation. Supporters claim it prevents unnecessary duplication of facilities and allows more rational allocation of assets.

The impact of tort issues on health care. The cost of malpractice insurance and defensive medicine is hard to quantify, but is deemed to be substantial. OB/GYN liability insurance is \$60-65k/year. SB 67 puts a 250k cap on non-economic suffering. The California experience with a similar cap since 1975 has been positive. Alaska has only two traditional liability carriers. However, compared to U.S. averages, malpractice insurance costs in Alaska are middle of the pack.

Is a trend reversal possible in Alaska?

Perhaps, with coordinated and focused effort

5/30/2005 3:55 PM

Heyman/Anderson Draft 8 0

15

Quality of Alaska's health: Based on the 2004 National Health Care Quality Report of 100 measures of health care quality, Alaska is about average for the U.S. However, as the charts on page 7 indicate, the U.S. trails many other industrialized nations.

Unfortunately, Alaska mirrors poor National behavioral risk factors

Alaska Trends in major disease

Trends only—not incidence rates

5/30/2005 3:57 PM

Heyman/Anderson Draft 8.0

20

(Vertical axis is rates of disease, horizontal axis is time)

While progress has been made in heart and lung disease, obesity and diabetes have negative trends.

How is Alaska's health care being paid? What about those without coverage?

Currently about 110,000 Alaskans do not have health care insurance. Approximately 82% of Alaskans have some type of insurance coverage, as illustrated by the chart below. The column for private and state coverage includes state employees. Medicaid covers over 40,000 Alaska Natives, the remainder of which are covered under federal programs. Military and Medicare coverage rounds out the picture. However, an unquantified, but suspected to be substantial, number of people have inadequate insurance coverage.

24

Safety net providers

There are 34 federally sponsored Community Health Centers (CHCs) in Alaska. They see all patients and charge a sliding fee schedule based upon income. Although there are the Neighborhood Health Center in Anchorage and the Interior Community Health Center in Fairbanks (both federally sponsored CHCs), a large number of uninsured patients receive their care in the city's emergency rooms.

Under federal law, patients who visit the emergency rooms must be seen regardless of their ability to pay. This results in the uncompensated care that was referenced previously.

Although not safety net providers, the Alaska Native Health system provides care to an estimated 125,000 Alaska Natives through an extensive network of community health aid clinics, regional hospitals and a major referral center.

Healthcare Provider Shortages are Projected for Alaska

PERCENT OF PROVIDERS CURRENTLY MORE THAN 45 YEARS OF AGE

Sources: AK Department of Labor

5/30/2005 4:00 PM

Heyman/Anderson Draft 8.0

25

Shortage of doctors: ½ doctors in Alaska are over 50. Fewer doctors are practicing than are licensed. Compared to the rest of the U.S., Alaska has 17-30% fewer doctors per capita, partly because we have a relatively younger population. However Alaskans are aging, and the need will increase. Today Alaska needs 472 more doctors than it has. The shortage will increase in the future. Statewide Alaska has a 25-30% shortage of physicians. Physicians are practicing fewer hours and retiring younger than in past decades. As a result it may require more than one new physician to replace a retiring one. 70% of doctors in the lower 48 practice near where they did their residency. The rate of return on a medical education is diminishing compared to other professions. Medical students average \$100,000 of debt; specialties can be \$250,000 with an average of 8 years post-graduate education. Similarly, graduating dentists average nearly \$200,000 in debt. In contrast, graduating attorneys and MBA's begin earning money faster and with less debt.

Nurse Practitioners and Physician Assistants provide care to Alaskans in a wide variety of settings, including rural and urban primary care clinics, urban specialty practices, and remote critical access hospitals that were historically difficult to staff with other providers. There are over 200 physician assistants and 420 nurse practitioners working in Alaska. This gives Alaska one of the highest ratios of nurse practitioners per capita in the nation.

As in 25 other states nurse practitioners are licensed to practice autonomously. A recent Columbia University study (JAMA, 2000) and another from Yale University (1992), compared physician and nurse practitioner practice. They found that patients expressed a high degree of satisfaction with the care they received, that accuracy of diagnosis and health outcomes were equivalent, and that Nurse Practitioners provide quality, cost-effective care to their patients.

The role and extent of coverage of complementary and alternative medicine (chiropractic, acupuncture, etc.) in Alaska is undefined, but substantial. As of May 25, 2005, the Alaska Division of Occupational licensing listed the following numbers of active licenses for the following types of doctors:

Allopathic doctors (M.D.)	2,377
Chiropractic doctors (D.C.)	227
Osteopathic doctors (D.O.)	183
Podiatrist (D.P.M.)	20

SPECIFIC ALASKAN RECOMMENDATIONS FOR IMPROVEMENT

This Study Group has identified a continuum of challenges, many of which are interrelated to each other. While they may all be part of a whole, the Study Group identified discrete categories to more readily focus on how each recommendation may be best implemented. A chart below summarizes the recommendations and identifies which parties are affected by, or responsible for, each recommendation.

However, in the process of assessing health care in Alaska, and looking for improvements, the Study Group developed consensus on three overarching conclusions:

- 1. The Study Group process itself, which includes representatives of all key components of the health care system in Alaska, has been enlightening, educational and productive. For the first time in recent years, key players have been able to share experiences and ideas in a supportive and cooperative environment.**
- 2. Every aspect of health care is complex. Education, technology, funding, social and demographic factors, economics, federal and state laws and regulations all have many interrelated facets. Understanding the health care system, and improving it, are beyond the capacity of any one element within the system.**

- 3. Therefore, a fundamental recommendation of the Study Group is that an ongoing body be established to achieve multiple goals:**
 - a. Continue the communication process started by this Study Group among the key elements in the Alaska health care system and the broader Alaska community.**
 - b. Create a body that will have a long-term vested interest in understanding and improving the system. Some solutions are immediate, others will take generations. But without consistent advocacy, the system is unlikely to make needed fundamental changes.**
 - c. Through the quality of its participants, and the comprehensiveness and depth of its vision, the body will set a standard of credibility that will sustain its ongoing operations and facilitate implementation of its recommendations.**

In that spirit, this Study Group offers the “Yarmon Plan” as a starting point for structuring such a body.

The Roundtable Proposal (The Yarmon Plan)

5/30/2005 4:03 PM

Heyman/Anderson Draft 8.0

43

The Alaska Health Care Roundtable

Goals: a, b, c on the previous page. Create a timely, actionable package that will gather bipartisan political support, get quick approval, and become a significant part of a long-term fiscal plan for Alaska.

Focus: Access, quality and cost. Function as both a sounding board and facilitator for ideas and recommendations.

Structure: Create the "Alaska Health Care Roundtable"

Membership in the Roundtable: Self-selecting. Must have a core of members who have a long-term compelling interest in improving access, quality and cost of health care in Alaska. Examples of potential members would be:

- a. Major employers
- b. Providers
- c. Foundations
- d. Other participants as invited by the Roundtable

Funding: Voluntary contributions by the participants.

Strategic relationships: Form a research relationship with the **University of Alaska/Institute of Social and Economic Research (ISER)**. The Roundtable itself could focus on strategic policy and political analysis. UA would provide in-depth research as needed on a contract basis.

Tactics: Secure the support of major employers and secure their interest in funding such a Roundtable. There is no point in CWN issuing a major recommendation that will fall flat on its face. Get seven or more CEOs of major employers to make a financial commitment to the project and be present at its unveiling.

Create a package of recommendations that will be dynamic, compelling and politically impossible not to accept. Create a "win-win" atmosphere so all participants can claim victory.

Local or regional Roundtables can address "nuts and bolts" issues of cooperation, implementation, sharing and efficiency.

Potential resources, ad hoc participants or additional members: Business leaders of large businesses, business leaders of small businesses, Alaska Natives, labor, non-profit (Foraker Group), education, military, insurance industry, state government (legislature, administration), health care providers, Medicare, Medicaid

Summary table of recommendations with affected and responsible parties

The following chart summarizes various recommendations that were suggested in the course of our study. They are a starting point of menu items for the Roundtable to analyze and prioritize.

A = Parties affected by or benefiting from the listed Recommendation

R = Parties responsible for implementing the listed recommendation

Recommendation	Individuals	Legislature	Governor	Local Governments	Private Sector	Health Care Professionals & Institutions	Universities (or schools)	Insurance Companies
Lifestyle & Prevention

The impact of lifestyle and prevention

First and foremost, this is an issue of individual responsibility. This means that each of us is ultimately responsible for our own health, how we eat, exercise and live. Nevertheless, many collective societal educational and social efforts can help further acceptance of this individual responsibility through application of sound health maintenance principles.

Our society is not used to facing the facts of collective issues. They are not part of the national or state non-Native psyche. Currently, the health care industry plugs holes in the dike that are the result of unhealthy lifestyles. We need to go way upstream and focus on prevention.

Fortunately, we can learn from the positive example of reduction of smoking in America. Much remains to be done. Today's limited but meaningful success is the result of a long-term effort that lasted over a generation. Extensive public education, warning labels, laws banning smoking in public places and a consistent message from the health care community ultimately resulted in societal changes that now appear to have gained a self-reinforcing life of their own.

1. Plan a "walkable community."

- a. Land use designed to facilitate walking and biking can encourage cardiovascular health. Maintaining safe municipal trail systems, seasonal bike paths, and cleared wintertime walkways permit citizens to practice healthful life habits year around.
- b. Enlightened city planning and architecture can promote a more active lifestyle.
- c. As public demand for exercise opportunities grow, their inclusion in real estate development and city planning can improve property values.

2. The role of public health as community educator and provider. Municipal health departments need to serve many more people than those who seek care at the clinic. Promoting wellness and healthful living habits to the entire community is an essential part of the public health mission. This portion of the mission needs to be funded adequately in the budget.

3. The importance of physical education in the schools— (not a "frill") It is important to teach children about the relationship between health, diet and exercise. Not every child will want to join a sports team, but learning to be responsible for their own health by incorporating physical activity into their daily lives is an important health lesson that cannot be ignored.

4. Eliminate internal inconsistencies and conflicts between programs and objectives. For example, eliminate financial incentives in schools to promote unhealthy foods. Provide a financial alternative to schools that have come to rely upon income from selling junk foods in the schools.

5. **Incentivize healthy behaviors through workplace activities.** Convince the Top 49 Alaska businesses to educate their employees on healthy lifestyles and offer healthful workplace activities. The Top 49 businesses would represent a large percentage of the Alaska population not already covered by Federal or Alaska Native health care systems. Encourage a **Top 49 Health Summit** to facilitate understanding and participation of these large Alaska businesses.
6. Develop intervention programs for **promoting the traditional rural diet.**
7. **Reconsider rural access to dentistry as part of the study.** Many rural communities lack a sufficient population to support construction of a simple dental facility to house a full time dental practice. The investment required to maintain a facility for use by an itinerant dentist would likely need to be made by the community, possibly partnering with the state. Lack of roads prevents the use of mobile dental clinics that are used in other remote locations worldwide.
8. **Reduce the critical shortage of facilities for alcohol and drug detox, and psychiatric facilities. The lack of services these facilities provide can increase costs in the long run.** Persons affected by alcohol and drug use, and the accidents they cause, account for a significant portion of the population needing care in hospital emergency rooms and psychiatric facilities. Yet Alaska has too few beds to treat those in need of drug and alcohol recovery. As a result we are forced to tolerate that burden of higher healthcare costs. Detox beds make good economic and health policy sense.
9. Find ways to incorporate **U.S Task Force on Preventive Health** recommendations into medical practices, schools, work environments and homes.
10. **Continue the Institute of Circumpolar Health Studies** to analyze common problems and look for solutions that will work for all circumpolar peoples. Similar environments and cultures may result in shared knowledge that can benefit those in northern latitudes. Many health issues in Alaska relate to weather, the environment, subsistence food quantity and quality, potable water and sanitation issues. These are issues shared by other circumpolar peoples. Alliances with other circumpolar countries, and organizations like the Institute for Circumpolar Health Studies may provide new insights in resolving some of these issues.

Access improvement recommendations

1. **Workforce development issues**
 - a. **Expand the WWAMI program.** Improve the supply of primary care providers (family practice physicians, internists, nurse practitioners, physician's assistants), especially outside of Anchorage. Current or potential shortages can be identified in specific specialties.
 - b. **Market the Alaska lifestyle to Outside doctors.** JV with tourism, the State Medical Board, ASMA. Create a dog and pony show.

2. **Investigate and modify the factors that influence the cost of professional liability insurance**
3. **Reduce the number of uninsured Alaskans**— A non-government designed system is probably preferable to a government-operated system.
4. **Investigate pooling smaller companies a la the Foraker Group in an effort to reduce premium costs.**
5. **Promote lower cost models such as neighborhood health centers where appropriate**
6. **Educate the public and promote same day access to alternatives other than hospital emergency rooms.** This involves creation of more readily available and timely access to primary care. Alternatives could include increasing the number of primary care providers and clinics, establishing a variety of disincentives for visits for minor complaints, and establishing a system for care for the uninsured. Emergency rooms themselves may need to be reorganized and redesigned to separate life-threatening emergencies from routine medical needs.
7. **Examine uninsured models elsewhere; e.g. Utah, Maine and Florida.**
8. **Adjust the Medicare (GME) reimbursement formula for Family Practice Residency programs.**

9. **Ensure adequate government reimbursement to doctors, hospitals, community health centers, mid-level practitioners and community health aides without unreasonable bureaucratic burdens.**
10. **Consider making accepting Medicare patients a condition of licensure in Alaska. This has been done in Massachusetts.** Weigh the advantages of increased access for Medicare patients against the negative effect of attracting practitioners to Alaska.
11. **Consider public hearings for health care insurance and professional liability insurance rates** to facilitate price transparency. Currently insurance rates are largely negotiated between large institutional users and insurance carriers. As private contracts, the resulting rates are not disclosed. Individuals have little or no negotiating power and either have to accept or reject rates offered to them. The thought is that greater transparency could result in more favorable, or at least understandable, rates for individual consumers.

Quality improvement recommendations

1. **Promote and encourage primary prevention, early intervention, and evidence based practices by providers and payers of health care.**
2. **Use meaningful benchmarks; e.g. the Alaska 20/20 example.**
3. **Measure quality of service and make the information publicly available.**

Cost reduction recommendations

1. **Prevention through Public health education, and early intervention** Preventing illness will save more lives, more lost work time and more healthcare dollars than any other option available to us as a community. Consider the adage “the cheapest health insurance is healthcare you don’t need.” Measures include flu shots when they are recommended and vaccinations against common diseases. Encourage the following behaviors: weight control, regular exercise, avoiding cigarettes and excessive alcohol, fat, salt, and sugar, adequate water consumption, and controlling blood pressure.
2. Encourage and promote the establishment of an **Electronic Medical Record** with a common interface as a means to improved safety and efficiency of health care.
3. **Drug formularies**—utilize where appropriate and effective.
4. **Promote the strong interrelationship between cost of health care and a state fiscal plan** as a means of putting health and budget decisions in perspective.
5. **Fee and billing transparency.** Mandatory disclosure of fees in advance of treatment and “understandability” standards for medical billing.
6. Encourage **local cooperation and sharing of services and facilities.** Promote community by community dialogue on the cost of duplication
7. Analyze the possibility of saving money by **joint purchasing** by appropriate parties.
8. **Allocation and rationing** might be considered if other measures fail to stabilize health care costs.
9. **Suggest legislation to mandate fee transparency**
10. **Consider legislative solutions to tort and liability issues.** Quantify professional liability insurance, patient reimbursement and tort issues—are there legislative solutions? Look at tort reform experiences Outside, such as MICRA, for ideas that might apply to Alaska.

SUCCESS STORIES AND PROMISING PROGRAMS

Alaska has a number of programs that have proven to be successful:

Lifestyle and prevention

- The South Central Foundation Primary Care Clinics place great emphasis on prevention. This results in some of the best state data for immunization rates, colorectal screening, mammograms and other standard preventive health interventions.

Access

- Anchorage Neighborhood Health Center
- Other community health centers
- Health aides in rural Alaska
- South Central Foundation has programs that have established same day access. Utilization rates for emergency room use and specialty services have fallen dramatically. Utilization rates of primary care services have also had a modest decrease.

Quality

- Hospital quality control programs have been established in all the major hospitals in Alaska with excellent results. For example, Providence Hospital received national recognition for reducing surgical site infections after joining a national collaborative focus on this issue. Alaska Regional Hospital was recognized for reducing pneumonias after intubations. The Alaska Native Medical Center has developed a national reputation for quality improvement activities working in close association with the Institute for Health Care Improvement. All of our major hospitals have joined the national initiative known as the "100,000 Lives Campaign" to save this many lives in U.S. hospitals by June 2006.

Costs

- The Alaska Federal Health Care Partnership, consisting of the DOD, VA, Coast Guard and the Alaska Native Health System, have been able to reduce costs by bulk purchasing and the sharing of clinical resources.

Other programs show promise:

- The State of Alaska has developed benchmarks for population health improvement targets in a document called "Healthy Alaskans 2010."

Lifestyle and prevention

- The Anchorage Daily News and a growing number of businesses are discussing wellness incentives in an effort to reduce health care costs. Generally all of these approaches are similar. Employees who agree to join this effort receive personal health care improvement plans and personalized coaching on a regular basis. Some companies offer health care premium discounts as an incentive to participate.

Access

- Anchorage Project Access is a developing physician initiative in Anchorage (adopting a national model) to provide free care to uninsured individuals who meet certain low-income criteria. Almost all physicians and hospitals currently provide uncompensated care. By organizing this effort, other communities with this program have been able to efficiently provide more care to the uninsured.

Quality

- A new initiative in the U.S., public reporting of quality indicators in hospitals and nursing homes, is being required by the Center for Medicaid/Medicare Services (CMS). Hospital quality reports are now available on the Web under the title of "Hospital Compare." Both the federal government and insurance companies are instituting "pay for performance" programs to improve service quality by hospitals and doctors. Countries like Great Britain have already introduced these programs.

APPENDIX

Key ideas in the 1994 CWN study "Health Care: Finding an Alaskan Solution"

1. The health care reform debate is complex and controversial, with multiple players with competing interests.
2. There are significant factual disputes about the health care system.
3. Health care reform creates winners and losers.
4. The most important conclusion for Alaskans: Involvement of Alaskans in the health care debate is vital. Some type of reform is inevitable and Alaskans must work to ensure that reform is responsive to our unique Alaskan conditions.

James Yarmon	CEO, Yarmon Investments, Inc.

Duane Heyman Executive Director, Commonwealth North

The Charge

Alaska Primary Health Care – Opportunities & Challenges

Approved by the Commonwealth North Board on July 20, 2004

1. Questions to be addressed:

- a) How is primary health care currently being delivered to Alaskans?
- b) Are Alaskans receiving quality health care under the current scenario?
- c) What does the future hold for health care in Alaska?
- d) Are there ways to do a better job, such as by bridging the current multiple systems?

2. Scope of study:

The intention of this study is to focus on primary care – the need for Alaskans to receive basic health care. Recognizing there are a number of health care areas which merit similar attention such as long-term care, behavioral health, dental care, etc., the focus of this particular study is to address the past, present and future of primary health care in Alaska. The study will include an update/compilation of previous reports to provide a context.

- The study will briefly explore the historical delivery of health care and how that history impacts the present challenges Alaska faces. In providing this background, the study will also look at the health status of Alaskans – is it above/below that of other states or are we keeping pace?
- The study will explore the “drivers” behind the cost of health care in Alaska and will assess its impact, if any, upon economic development in the State. Access and quality of care/services are a critical determinant of cost within the various health systems in Alaska.
- This study will identify principal health care entities and look at the current multiple health systems – what are the benefits and challenges? Are they sustainable? What impact, if any, do these multiple systems have on the cost and quality of health care?
- There are a number of challenges facing health care providers and recipients: This study will identify those challenges and where possible, potential solutions.
- There are a number of examples where health care entities are collaborating. The study will highlight the best practices and identify additional areas of collaboration. The study will also take into account lessons learned from other states.

3. Nature of report to be issued (Technical, Analytical, or Opinion):

This report will analyze issues, identify a process for addressing them and suggest guiding principles. The report will provide background, current status and recommendations for change or further study. While the report will largely express opinions, it will address technical issues that are necessary aspects of the larger picture.

4. Conflict of interest standards:

The intent of the study is to represent a balance between the geographic, demographic, ethnic and economic interests in Alaska. It is expected that persons with interests in the outcome of the study will be members of the study group and will participate in its deliberations. Study group leaders should request that study group members identify their interests relative to specific points they advocate.

5. Measure of success:

This study will succeed by generating a greater understanding of and insight into health care issues in Alaska and areas in which health providers can work together for the mutual benefit of all Alaskans.

**The Alaska Health Care Strategies Planning Council
Final Report: Summary and Recommendations
December 23, 2007**

Executive Summary

On February 15, 2007, Governor Sarah Palin issued Administrative Order #232 establishing the Alaska Health Care Strategies Planning Council in the Office of the Governor. The purpose of the Council was to build the foundation for developing a statewide plan to identify both short-term and long-term strategies that effectively address issues related to access, cost and quality of health care for Alaskans. Members of the Council, all appointed by Governor Palin, are listed in Appendix C.

The Council interpreted its charge from Governor Palin broadly, to focus on the overall goal of improving the health of Alaskans. Within that broad charge, the Council considered health care to be an important component in improving the health of Alaskans. According to the Council, health care is a broadly defined term, relating to the prevention, treatment and management of illness, preserving mental, behavioral, physical health, and dealing with chemical dependency.

In accordance with the order, the Council reviewed and synthesized the extensive body of existing research on the subject, agreed upon the most salient facts, and identified the most significant health care issues in the state. Based on seven overarching healthcare challenges identified by the Council, members articulated the following seven comprehensive health care policy goals:

- *Personal responsibility and prevention in health care will be top priorities for government, the private sector, tribal entities, communities, families, and individuals;*
- *Health care costs for all Alaskans will consistently be below the national average;*
- *Alaska will have a sustainable health care workforce;*
- *All Alaskan communities will have access to clean and safe water and wastewater systems;*
- *Quality health care will be accessible to all Alaskans to meet their health care needs;*
- *Develop and foster the statewide leadership necessary to support a comprehensive statewide health care policy;*
- *Increase the number of Alaskans covered by health insurance and encourage employers to offer a range of health insurance options.*

Because of its short time frame, the Council was unable to address the Administrative Order's directive to present fiscal information to accompany each of the short- and long-term strategies. Unfortunately, with only 24 hours of face-to-face meeting time, identifying the fiscal impact of recommendations remains unaddressed, and must be a top priority in future consideration by this or subsequent bodies.

The Council's Vision and Long-term Goal

At its inaugural meeting on June 11, 2007, Council members articulated an overall vision of health care in Alaska – that *“Alaskans are the healthiest people in the nation.”* This vision led to development of a concrete mission statement describing the ultimate

outcome of the Council's work: *"To develop strategies, including performance measures, to provide health care access to all Alaskans by 2014."*

The "Fact-Based Process"

The work of the Council was facilitated through a "fact-based" process by Mr. Dennis McMillian, President and CEO of The Foraker Group, an Alaskan-based nonprofit corporation. Members were asked to review existing research and initiatives, and hear from subject-matter experts on the major issues in Alaska's health care system. Only those facts garnered from existing sources and/or presented to the Council at its meetings, and which were widely recognized by Council member as salient to the process, were allowed to remain in the conversation.

While time-consuming, the fact-based process allowed the development of a solid basis for discussing the issue of health care in Alaska, highlighting the major challenges with that system, and identifying realistic solutions to address those challenges.

Alaska's Health Care Challenges: A Strategic Plan for the Future

In the opinion of the Council, there are seven challenges requiring immediate and comprehensive attention in Alaska's health care system:

- *Prevention and personal responsibility don't play big enough roles in the health and health care of Alaskans;*
- *Receiving quality health care in Alaska is expensive, well above the national average, and increasing;*
- *There are significant shortages in the health care workforce across the state;*
- *Water and wastewater systems in many rural communities lead to health problems;*
- *Quality health care is difficult to access for many Alaskans, urban and rural;*
- *There must be consistent and focused state and local leadership to improve the health of Alaskans, and build a comprehensive health care system in Alaska;*
- *Health insurance is an important if as yet misunderstood part of comprehensive health and health care.*

Based on the vision of a healthy Alaska, a one-page "Alaska Health Care Action Plan" was developed by the Council. The plan appears in the following section, and includes a combination of long-term and short-term goals. Where applicable, the short-term strategies appear at the beginning of the relevant goals.

During its work the Council was able to generate dozens of possible solutions to address the challenges, much of that the result of "brain-storming." The identified solutions are presented in Appendix A. Most require development of implementation plans, which was considered beyond the scope of the Council's work, especially given the short window for completion of its tasks. Although they are not developed fully, the articulated solutions in the plan, and within Appendix A, present a real and actionable foundation for helping to meet the goals in the "Alaska Health Care Action Plan."

**Alaska's Health Care Action Plan: "Making Alaskans the healthiest people in the nation."
Long-Term Goals and Strategic Directions (2008 – 2014)**

Goal One: Health costs for all Alaskans will consistently be below the national average.

- Increase the place of consumerism in health care purchasing by giving people control over their health care dollar – the foundations are accessible, transparent, evidence-based price/quality information about providers and services (short-term)
- Create an easily accessible and constantly updated website containing evidence-based price and quality information about health care providers and services (short-term)
- Increase community-based health care services, both public and private sector
- Stabilize the costs of health care by reducing the rate of increase relative to other states (national increase is 6%, decrease Alaskan rate to 4% annual increase)

Goal Two: Alaska will have a sustainable health care workforce.

- Increase WWAMI seats to 50 per year, and increase seats in UA Nursing and Nurse Practitioner programs (short-term)
- Develop policies and systems to alleviate the health care worker shortage, and prevent it from recurring
- Implement a doctoral-level nursing program at the University of Alaska to meet the 2015 deadline for Nurse Practitioner education requirements

Goal Three: All Alaskan communities will have clean and safe water and wastewater systems.

- Improve adherence to the state's existing water and wastewater treatment "plan," through the Village Safe Water Program

Goal Four: Quality health care will be accessible to all Alaskans to meet their health care needs.

- Expand tele-health and electronic health record systems, taking the lead in pursuing matching FCC grant funds (short-term)
- Increase presence of the public health system, particularly public health nurses, especially in rural communities (short-term)
- Increase access of Alaskans to a primary care provider and behavioral health provider when they are needed
- Decrease the likelihood that Alaskans will use emergency rooms for primary care
- Reduce the impact of existing barriers to health care accessibility by exploring private enterprise incentives
- Improve primary and long-term health care options for elders, particularly with regard to Medicaid and Medicare

Goal Five: Personal responsibility and prevention in health care will be top priorities for government, the private sector, tribal entities, communities, families, and individuals.

- Decrease the impact of obesity, smoking, substance abuse and other lifestyle factors on the health of Alaskans, through intense public education with public and private partners (short-term)
- Improve the likelihood that every Alaskan will choose to live a healthy lifestyle and make healthy lifestyle choices
- Increase the place of personal responsibility in health care decision making for all Alaskans

Goal Six: Develop and foster the statewide leadership necessary to develop and support a comprehensive statewide health and health care policy.

- Create an ongoing, quasi-independent, non-partisan, volunteer "Alaska Health Care Commission" in statute (short-term)
- Elevate the discussion of health care to a statewide audience

Goal Seven: Increase the number of Alaskans covered by health insurance

- Raise the eligibility criteria for Denali KidCare from the current 175% to 200% of federal poverty limits (short-term)
- Reduce potential for financial impact from catastrophic loss by supporting new and innovative approaches to insurance for individuals, which would be consumer-owned, portable, and purchased with pre-tax dollars
- All Alaskans have at least a catastrophic, incentive-based insurance option (i.e., high deductible coverage)
- Encourage employers, through varied incentives, to offer a range of insurance options/choices to employees – to include at a minimum, high deductible plans

Alaska's Health Care Challenges: Discussion and Recommendations

The Council engaged in lengthy discussion of the seven main challenges facing Alaska's health care system, and generated the following discussion points related to each.

- *Defining the specific problem or problems*
- *Why addressing them through comprehensive state action is important*
- *What should be done about it – in other words, identifying desired outcomes*

In addition to discussing what should be done to address each problem, the Council generated possible solutions and solicited public comment on the Health Care Action Plan. A Strategic Implementation Table (Appendix A) list the many solutions generated by the Council, and sets the foundation for implementation of selected short and long-term strategies. The full text of public comment will be presented to Governor Palin under separate cover, but the overriding themes contained within those comments are summarized in Appendix B.

Goal One: The High Cost of Health Care in Alaska

What's the problem? *The costs of producing quality health care are high, and therefore it is quite expensive to be a consumer of that care. The costs of health care in Alaska are already well above the national average, and like the rest of the nation, are increasing.*

Why this is important: *A new approach to this problem must be embraced if there is to be long-term, positive reform in Alaska's health care system. If Alaska continues along the same path, the results will remain unchanged. Reducing the rate of increase in the costs of health care is a "must do" priority, and Alaskans need to get the best value for health care dollars spent. Every health care dollar must be spent wisely. Broadly stated, the high cost of health care is a barrier to many Alaskans getting the health care they need. The present system supports the high and increasing costs of health care and inefficient utilization of health care dollars.*

What should be done about it: *Decreasing the rate of growth in health care costs in Alaska will require development of a high-quality health care system that is evidence-based, consumer driven and market-responsive. With respect to lowering costs, insurance that is portable and consumer-owned plays a central role, and requires much more discussion at the state level. Overall, giving people more control over their health care dollar is a central component, as is providing appropriate, accessible, transparent, and evidence-based cost and quality information about health care providers and services. In the short-term, one of the most important goals should be state creation of an easily accessible and up-to-date website providing health care cost and quality information to Alaskans. These strategies alone are not sufficient to reduce the overall cost of health care in Alaska, nor to reduce the rate of growth. Closely related are the subjects of personal responsibility, access to health care, increasing the number of health care providers, and insurance.*

Goal Two: The Health Care Workforce

What's the problem? *There are significant shortages in the health care workforce across the state. Alaska needs more health care workers throughout the system, at all levels.*

Why this is important: *Without ample health care workers, the system will continue to falter – it is already showing signs of strain. Lack of a sustainable health care workforce is a primary factor in the increasing costs of health care, and also in the decreasing access of health care for Alaskans. In addition, significant access issues exist in both urban and rural areas, which will likely require expansion of the health care workforce.*

What should be done: *Statewide policy should enable the creation of a sustainable health care workforce that alleviates the current shortage and prevents it from recurring. A good start is to “grow more of our own” within Alaska, by presenting health care professions more prominently as viable career options, with students continually encouraged to build the skills and the interests necessary to pursue health care careers. In the short-term, to increase primary care providers in the state, the number of WWAMI seats should be increased to meet the projected need of 50 per year in the next decade. In concert with that, the University of Alaska nursing doctorate degree should be implemented as well. The number of resident positions in the Family Practice Residency Program should be increased, as should the number of graduates in both the UA Nursing and-Nurse-Practitioner-Programs.*

Goal Three: Sustainable Rural Water and Wastewater Systems

What's the problem: *Water and wastewater systems in many rural communities are inadequate, unsafe, or non-existent, and can be a major cause of health problems within those communities.*

Why this is important: *There is a strong correlation between the health of Alaska's rural residents, and water and wastewater safety. Building and operating clean drinking water and wastewater disposal systems is one of the most effective means for improving the health and wellness of rural Alaskans and rural communities.*

What should be done: *There is an active state program in place to bring sustainable and safe drinking water and wastewater disposal systems to all of Alaska's rural communities – the Village Safe Water Program. However, the real success of that program depends on the recognition by state policy makers that there is no “one size fits all” approach to bringing those systems to rural Alaska. What works in one community may not work in another. Efforts to provide infrastructure that the community can support in the future should continue. The state's long-term health care policy, therefore, should improve and ensure the state's adherence to the “plan” for bringing sustainable and appropriate safe water and wastewater systems to every Alaskan community.*

Goal Four: Access to Health Care

What's the problem? *Accessing quality health care is difficult for many Alaskans, both urban and rural. There is little consistency of access to health care for all Alaskans – some have it all the time, some have it some times, and some have it hardly at all. In Alaska's urban areas there is a lack of access to necessary specialized care and efficient "same-day" primary care. In rural communities, there is often no access at all to health care because of a variety of barriers, including costs, geography, transportation challenges, lack of providers and much more.*

Why this is important? *The lack of access to quality health care contributes to Alaskans' wellness challenges. Being able to guarantee timely access to primary care, in particular, presents significant challenges; but appropriate primary care is one of the most effective means for keeping Alaskans healthy. There was considerable discussion among members about the positive impact of Community Health Centers, and the state's public health nurses, in providing greater access to health and health care opportunities.*

There was agreement among Council members on two major points relevant to health care access. First, Community Health Centers (CHCs) are a valuable part of the "health care safety net" for Alaskans. Second, the state's public health nursing structure is one of the most important mechanisms for affording greater access to a wider range of health care. The problem with CHCs and public health nursing is that both programs are under-funded. Community Health Centers are federally funded, and most states provide supplemental financial assistance because CHCs are viewed as an important part of the overall health care system in those states. Partly due to the provision of health care services to the under-insured and uninsured, CHCs consistently face budgetary challenges. In Alaska, CHCs receive virtually no funding from the state. Similarly, the state's public health nursing system has been chronically under-funded for years. Ever-decreasing state dollars for the Public Health Division has meant that fewer and fewer public health nurses are able to do their important work improving the health of Alaskans.

What should be done: *Accessing health care should not be difficult for Alaskans, and broad policies that improve access to primary care and behavioral health care should be the focus of any state health care policy. Strategies should include: 1) the state becoming more actively engaged as an active investor in the Community Health Center system through supplemental funding and regulatory relief; 2) appropriate funding for and utilization of the state's Public Health Division, in particular the Public Health Nursing program; 3) building monetary and other incentives into the health care system which encourage Alaskans to more effectively utilize primary care opportunities; 4) leveraging information technologies such as tele-health and electronic health record systems which can improve access while reducing costs; and 5) reducing barriers to private clinicians practicing in underserved areas. In the very short term, the state could take the lead in guaranteeing that the required "match" associated with the current \$10 million Federal Communications Commission tele-health grant is made.*

Goal Five: Prevention and Personal Responsibility

What's the problem: *Prevention and personal responsibility play too small a role in health care, including maintaining and improving health. While Alaskans may understand the connection between their lifestyle choices and their individual health, for the most part they do not make a connection between personal choices, having a personal stake in their health, and the cost of their health care. Alaskans are not optimally encouraged and equipped to make the kinds of choices that improve health and subsequently decrease health care costs.*

Why this is important: *More healthy Alaskans translates into fewer sick Alaskans, and improved quality of life with resultant cost savings. A clear understanding of the role of personal choice in individual health status and the impact on health care costs, as well as the central role of government in supporting health choices, are critical components in developing long-term strategic health and health care policies.*

What should be done about it: *Solving this problem requires a two-pronged approach. First, Alaskans must be encouraged to play a much greater role in their own wellness by having both a personal and financial "stake" in their own health. Having a "stake" in their own health is the product of a personal investment in wellness, and realizing the financial benefits of saved dollars by maintaining healthy lifestyles. In the opinion of the Council, the most effective mechanism for increasing the personal health investment of Alaskans is incentivizing and supporting positive change.*

Second, governments, school districts, tribal entities and other employers are uniquely situated to be catalysts for positive change. These entities have the influence to help Alaskans understand and make healthy choices, while at the same time avoiding those lifestyle decisions that contribute to poor health.

Goal Six: Statewide Leadership

What's the problem: *A lack of consistent statewide leadership makes development of comprehensive statewide health and health care policy challenging.*

Why this is important: *Public leaders have a pivotal role as catalysts for positive change. Commitment at the executive and legislative levels to comprehensive and lasting change will effect health and health care in Alaska.*

What should be done about it: *The Council believes that government has an obligation to "jump start" healthy choices through incentives, and in addition build the necessary incentive structures for the future. Positive change will be the result of a concerted effort by the governor and the legislature, through partnering with local communities, in a long-term commitment to maintain positive momentum. The key is elevating the discussion of health and health care to the statewide level.*

One of the most effective mechanisms for solidifying that long-term commitment to bringing positive change to Alaska's health care system is to establish through statute a quasi-independent "Alaska Health Care Commission," which would seek to provide advice on innovative solutions, and act as a catalyst for positive change. The Commission would be responsible for advising state leaders on incentivizing positive lifestyle choices; fostering ongoing research; controlling health care costs; improving access, and ensuring a sustainable health care workforce.

Goal Seven: Health Insurance

What's the problem: *Over 100,000 Alaskans – including more than 14,000 children – are without health insurance at some time during any given year. When insurance is made available, there is often a misconception that it should cover everything, from routine and predictable events to catastrophic occurrences and long-term care; this misconception increases the cost of health insurance beyond the reach of many Alaskans.*

Why this is important: *Having access to health insurance coverage is one of the most significant determinants of access to appropriate health care. Alaskans who do not have health insurance are often unable to get the services they need to become healthy, and to maintain wellness.*

When uninsured Alaskans do seek health and health care services, it is often for expensive chronic conditions which could possibly have been avoided if they had had health insurance coverage, or access to appropriate primary care. When Alaskans who may not be eligible for Medicaid and Denali KidCare do access health care, they are often unable to pay and often seek care in a hospital emergency room, which is the most expensive and inefficient mechanism for receiving primary care. The costs of such access are borne across the whole health care system, which raises the overall costs of health care in Alaska. When the uninsured who are not eligible for Medicaid and Denali KidCare do pay for health and health care services, they often do so at significant personal and family financial impact.

Not having insurance is only part of the problem, and simply providing insurance under the current structure is not the answer. With the exception of preventative health services, comprehensive health insurance is not an efficient way to pay for routine and predictable care, such as the common cold, ear infections, hang nails, and sprained ankles. Whereas health insurance IS the most important tool for protecting people from unplanned catastrophic health events, it is an inefficient way to pay for routine expenditures. Therefore, the current system, which relies on insurance to pay for routine and predictable health care expenses, raises the costs of premiums above the reach of many Alaskans.

What should be done about it: *More Alaskans need to be covered by efficient health insurance plans. Increasing the number of Alaskans covered by efficient health insurance will be the result of several specific actions. In the short-term, the Council recommends that the state immediately pursue and support change in the Denali KidCare program to make Alaskan children in families at 200% of the federal poverty level eligible for coverage. While there was a majority vote among Council members regarding this expansion of Denali KidCare coverage, the role of that program within an efficient and effective system of health care coverage is worthy of continued debate at the statewide level, through the recommended "Alaska Health Care Commission."*

To most effectively cover the adults and remaining children without health insurance, bringing consumerism to the forefront of Alaska's health insurance structure is important. Alaskans should have access to choices, through a wide range of health insurance options, including at the very least high deductible coverage with a strong prevention component. The key to success is insurance that at least covers catastrophic care, so no Alaskan suffers from the extreme financial burden of catastrophic or unanticipated health events. Whereas some uninsured Alaskans are not working, most are working for employers who would like to, but cannot necessarily afford to, provide health insurance coverage for their employees. Therefore, through incentives, Alaskan employers should be encouraged to offer a wide range of coverage choices, to include at a minimum, high deductible coverage.

Consumerism is an essential component of bringing rationality to the health insurance structure in Alaska, and extending coverage to as many Alaskans as possible. The key to success is insurance that at least covers catastrophic care, so no Alaskan suffers from the extreme financial burden of catastrophic or unanticipated health events. In addition, insurance must be consumer-owned, market-responsive and portable; this recommendation has received attention elsewhere in this report. Coverage options debated in the Council's discussions, which are by no means exhaustive, include Health Savings Accounts, Health Opportunity Accounts, and high-deductible plans with a strong prevention component. This list provides a solid foundation from which to continue the ongoing discussion about expanding health care coverage for all Alaskans.

Summary and Conclusions

Resolving the health and health care issues in Alaska will not be the result of a single solution. Instead, bringing real and lasting change means working together in partnership. Many of the solutions presented within this report fall squarely within the purview of state government. But no matter how committed state government is, solutions will not be forthcoming without involving all stakeholders as partners for change – from individual Alaskans to families, nonprofit organizations and private sector employers and employees, communities and local governments, tribal entities, state government, the governor, the legislature, and the federal government.

**The Alaska Health Care Strategies Planning Council
Final Report: Summary and Recommendations
December 23, 2007**

The Council has deliberately not prioritized solutions for solving the problems it has identified with the health and health care system in Alaska. Indeed, all of the problems must be addressed concurrently if real, long-term change is to take place. Having said that, within those identified by the Council, one is definitely the larger-order problem, meaning if we can solve it, many of the other problems will be alleviated. That problem is the lack of prevention and personal responsibility.

By improving the place of prevention and personal responsibility in the health and health care decision-making rubric of Alaskans, costs of health care could be lower than they otherwise would be. With concentration on a wellness model of health care, as well as state support for the Community Health Center system and a robust public nursing program, the current access problems could be significantly reduced. Most Alaskans will have both the motivation and the means to maintain their own wellness. And with greater wellness, the composition of the health care workforce will likely change, decreasing the dependence on health care professionals who are the most difficult and most expensive to attract and retain.

Becoming the healthiest people in the nation is indeed a grand vision – but it is real and achievable.

Respectfully Submitted,

The Alaska Health Care Strategies Planning Council

Final Report: Summary and Recommendations
December 23, 2007**

Appendix A: Strategy Implementation Table

2008 / 2009 / 2010 / 2011 / 2012 / 2013 / 2014

Short-Term Strategies <i>(for implementation between 2008 and 2010)</i>	Action Required (Policy, Regulation, Statute)	Expense	Implementation Timeline
<ul style="list-style-type: none"> • Create an ongoing and quasi-independent "Alaska Health Care Commission." • Promote incentives for clinic use, rather than the use of emergency rooms for routine/primary care. • Promote the use and expansion of Community Health Centers throughout the state. • More effectively target recruitment of health care professionals by marketing Alaska to rest of nation/world as a great place to live, work, raise a family, enjoy nature, etc. • Conduct a comprehensive, statewide health care workforce assessment. • Continue to support Alaska Native Tribal Health Consortium's ongoing efforts to develop sustainable, community-specific water and wastewater capacity in all villages. • Increase quality of and access to Telemedicine, Community Health Aides/Practitioners, Community Mental Health Aides and Community Dental Health Aides. • Implement a prevention-focused "Fit for Life" social marketing program that is multigenerational and culturally aware. • Emphasize the role of the public health nurses in prevention and wellness – from well-baby checks on up to flu shots for elders. • Support programs to encourage employers to offer employees "time off" for making healthy lifestyle choices and maintaining wellness. • Institute "Silver Sneakers Programs" – for elders – to keep elders healthy. • Ensure public health immunization funding. • Fund free and/or low-cost clinics, keeping in mind uninsured Alaskans. • Incorporate a "Wellness Certificate" into the PFD program, and give a five percent boost in the dividend for maintaining a healthy lifestyle. • Foster a state culture through policy that rewards schools for wellness. • Provide financial incentives for "healthy schools." • Support the ongoing efforts to establish comprehensive health care insurance options to employees of Alaska's nonprofit sector. 			

**The Alaska Health Care Strategies Planning Council
Final Report: Summary and Recommendations
December 23, 2007**

- Pay the tuition – or forgive student loans – for residents from rural Alaska who are willing to practice – after graduation – in their home community.
- Institute student loan forgiveness for medical/health professionals and para-professionals who make a commitment to stay in Alaska.
- Provide grants for low-income vocational/tech students in Certified Nurses Assistant/Pharmacy Tech programs.
- Increase the presence of public health system, particularly public health nurses, especially in rural communities.
- Follow through on existing state plans for safe drinking water and wastewater, through the Village Safe Water Program and other efforts.
- Support and expand telemedicine and tele-behavioral medicine -- include education, maintenance and equipment upgrades.
- Increase behavioral health training and support,
- Increase available slots in Physician Assistant and Nurse Practitioner programs at the University of Alaska and with other academic partners.
- Increase number of Residents in Family Practice Residency Program.
- Create a greater awareness of the distinction between routine and predictable health care costs (less expensive) and unanticipated or catastrophic costs (more expensive).
- Promote Health Savings Accounts and high deductible insurance plans – for individuals and employers.
- Provide incentives for providers and consumers, with performance measures and rewards (for providers), based on evidence-based results.
- Foster better informed consumers through creation of a dynamic (continuously updated) website providing transparent quality and cost information about medical services, prescriptions, etc.
- Build teaching capacity in K-12 schools to excite young Alaskans about the physical sciences generally, and the health care field in particular.
- Increase penalties for selling alcohol to youth.

Long-Term Strategies <i>(for implementation between 2010 - 2014)</i>	Action Required (Policy, Regulation, Statute)	Expense	Implementation Timeline
<ul style="list-style-type: none"> • Support information technology improvements. • Promote insurance that is portable, consumer-focused and consumer owned, purchased with pre-tax dollars. • Increase Alaska WWAMI seats to 50 /year – the projected need to meet demand in the next 10 years. • Institute doctoral NP program at UAA. • Increase the availability of education programs for health care disciplines. 			

**The Alaska Health Care Strategies Planning Council
Final Report: Summary and Recommendations
December 23, 2007**

<ul style="list-style-type: none">• Expand State role in direct funding of and improving access to Community Health Centers.• Foster a consumer-directed health care approach to long-term care.• Encourage the implementation of a consumer-directed health care system.• Integrate "consumerism," encouraging people to shop around for the best quality and appropriate cost and consider personal responsibility.• Encourage formation of Tobacco Free communities, businesses and workplaces through Statewide Clean Indoor Air Act.• Institute/Increase Alcohol taxes.• Increase fluoride in drinking water.• Reduce barriers to establishing and running CHCs: (state and federal red tape).• Where establishing a CHC is difficult, encourage creation of public-private partnership in creating primary/urgent care clinics.			
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--	--

Appendix B: Summary of Public Comment Received by the Council

- Support the Community Health Centers as a way to improve access and decrease use of the emergency room for primary care.
- Improve e-health
- Increase workforce, specifically mid-level practitioners
- Incorporate incentives to attract and retain necessary health care workers, including loan forgiveness and other repayment incentives
- Make sure to get the mix right of what is needed in the health care workforce
- Recruitment programs are best done in state
- Build interest in the health care field at the middle and high school level
- Develop a statewide group with oversight responsibility for recruitment and retention – because it cost too much for individual organizations to do it
- Eliminate shortage of UA educators in health care professions
- Put fluoride in rural water systems
- Improve the place of preventative dental service in the health care continuum
- Prevention, collaboration and partnerships are the key to improving access
- Building existing programs makes the most sense, versus making new programs and the associated structures
- Remove bureaucratic barriers to effective health care access
- Examine innovative solutions that involve Medicaid reimbursement
- Acknowledge and build upon the work of public health nurses and the public health nursing program
- Include alternative treatments when talking about prevention and personal responsibility
- Improve worksite health as a cost-saver
- Most feel there should be basic, portable insurance coverage for all Alaskans
- Concentrate on preventing sickness rather than curing it
- Should be at least some mechanism to insure a minimum coverage for all Alaskans
- People with disabilities have real trouble finding primary care – the state should close the gap in those services
- Alaskans need a range of services that are affordable – maybe the state should subsidize those services
 - Don't forget the severely disadvantaged – Alaska's working poor
- Funding for substance abuse and mental health are effective preventative services, which lead to increase wellness
- State must support the e-health FCC grant
- State should not be shy about supplementing the loss of federal Medicaid dollars with state support
- Behavioral health in Alaska has taken huge cuts, and the system is on the verge of crisis
- The broadly stated goals of the Council really skip over the importance of behavioral health and substance abuse as preventative factors

**The Alaska Health Care Strategies Planning Council
Final Report: Summary and Recommendations
December 23, 2007**

- Oral health needs to play a more significant role in overall health
- Need more dental techs in the health care workforce
- Realize that turning 65 in Alaska means no more health care for most elders
- Make it easy for people to navigate the health care system – now it is really difficult
- Remove barriers that prevent Alaskans from receiving necessary primary care, and to get Denali KidCare after birth
- There **MUST** be a continued forum for addressing health care issues in the long term

Appendix C: Alaska Health Policy Council Members

The council is composed of 14 Alaskans appointed by the governor:

- Jeff Davis of Anchorage has served as president of Premera Blue Cross Blue Shield of Alaska for nine years, which provides insurance for 180,000 Alaskans statewide.
- Cathy Giessel of Anchorage is a registered nurse and advanced nurse practitioner whose career and experience spans more than 30 years.
- Dr. Derek Hagen of Anchorage is a doctor of osteopathy associated with Primary Care Associates, the largest private family practice in the state.
- Thomas Hendrix, PhD, of Anchorage is an assistant professor at the University of Alaska School of Nursing specializing in the policy, economics, assessment, and fundamentals of health care.
- Don Kashevaroff of Anchorage is the chair and president of the Alaska Native Tribal Health Consortium, and serves as the primary spokesman for the Consortium regarding state and federal funding, legislation, and regulatory issues.
- Brian Slocum of Fairbanks is the administrator at Tanana Valley Clinic, the largest multi-specialty, multi-site practice in Alaska.
- Dr. Michael Carroll of Fairbanks is a private practice physician, specializing in internal medicine and oncology.
- Donna Fenske of Homer served the State of Alaska as a public health nurse from 1979 to 2004 and most recently has provided community health aide services in Port Graham and Nanwalek clinics, and nursing services to K-12 students in rural communities in the Kenai Peninsula Borough School District.
- Steve Horn of Soldotna is the executive director of the Alaska Behavioral Health Association whose members are the businesses that provide direct services to recipients of behavioral health services throughout the state.
- Dr. Cathy Baldwin-Johnson of Wasilla is a private practice family physician and the 2002 National Family Physician of the Year from the American Academy of Family Physicians.
- Karen Rhoades of Wasilla is the owner and operator of Northern Living Centers, a five bed assisted-living home.
- Tim Joyce of Cordova is a three-term mayor of the City of Cordova who has dealt with escalating community medical costs, a constant turnover of medical center administrators and a community medical center that is continually in need of city assistance.
- Rod Betit of Juneau is the president and CEO of the Alaska State Hospital and Nursing Home Association (ASHNA), a not-for-profit association with members representing hospitals, nursing homes, and Native Alaska health care providers.
- Dr. Bob Urata of Juneau has served as a family physician for over 23 years, and has served on the Bartlett Regional Hospital Board of Directors.
- Commissioner Karleen Jackson managed the Health Council. Serving as ex-officio, non-voting members were Senator Bettye Davis and Representative Peggy Wilson, chairs of the Health, Education and Social Services committees in the Alaska State Legislature.

COMMONWEALTH
NORTH

Resolution 2009-3
In support of continuing the Alaska Health Care
Commission as proposed in Senate Bill 172
April 14, 2009

This resolution is based on the 2005 Commonwealth North study entitled "Alaska Primary Health Care: Opportunities and Challenges."

Commonwealth North:

Encourages the Alaska State Legislator to extend the life of the Alaska Health Care Commission

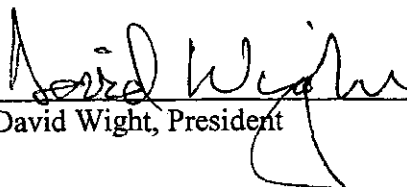

Requests all state legislators to approve authorizing legislation in Senate Bill 172; and

Forwards this resolution to all members of the Alaska State Legislature, Governor Sarah Palin, and Alaska's congressional delegation.

Resolved for the following reasons:

1. A body needs to be vested in the long term interest in understanding and improving the system; consistent advocacy is necessary make needed fundamental changes
2. Through the quality of its participants, and the comprehensiveness and depth of its vision, the body will set a standard of credibility that will sustain its ongoing operations and facilitate implementation of its recommendations

Approved by the Commonwealth North Board of Directors
April 14, 2009

David Wight, President

February 2, 2010

Senator Donald Olson
Alaska State Capitol, Room 514
Juneau, AK 99801-1182

Subject: Support for SB 172

Dear Senator Olson:

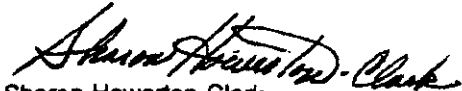

The Alaska Commission on Aging (ACoA) is pleased to offer our support of SB 172 authored by you to extend the life of the Alaska Health Care Commission in the Department of Health and Social Services until 2014 with responsibilities to plan and implement strategies related to health care reform for all Alaskans across the life span.

As you know, the Alaska Health Care Commission was first established by Governor Palin in December 2008 to develop a statewide health plan and provide recommendations to address the quality, accessibility, and availability of health care for all Alaskans. We agree with the Commission's findings that the high cost of health care and access to primary care present serious challenges for our state. ACoA supports establishment of a state commission to comprehensively examine the multitude of issues related to improving health care services including improving access to affordable primary care in addition to promoting strategies for preventative care and chronic disease management.

Older Alaskans represent one of the largest consumer groups of health care services of all age categories. Access to primary care is of utmost concern for many Alaska seniors insured by Medicare who are challenged to find a physician particularly if they live in Anchorage, Fairbanks or the Mat-Su Borough. Limited access to essential health care services for older individuals can put these persons at greater health risk who may postpone going to a provider for the care they need only when their medical conditions become serious. Workforce shortages of health care workers, particularly doctors and nurses, pose a serious problem that affects all Alaskans and has a critical impact on people 65 years and older. The ACoA is pleased that these issues were identified in the Alaska Health Care Commission Report (2009) and look forward to working with the Health Care Commission to implement the Commission's recommendations.

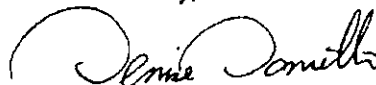

We support SB 172 to extend the Alaska Health Care Commission. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879) should you have questions or need additional information.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Mayor Dan Sullivan

SENIOR CITIZEN ADVISORY COMMISSION

February 9, 2010

The Honorable Donald Olson
State Capitol Room 506
Juneau AK, 99801

Dear Senator Olson,

RE: Letter of Support for SB 172

The Municipality of Anchorage Senior Citizens Advisory Commission strongly supports the passage of SB 172, which would extend the Alaska Health Care Commission until the year 2014.

Health care reform is an issue at the forefront of our country's executive and legislative agenda. Regardless of what shape national health care reform ultimately takes, Alaska will still have to address health care issues in our own state.

The Alaska Health Care Commission will recommend a statewide plan for addressing the availability, accessibility, and quality of health care for all Alaskans. We need an expert team to plan for long-term health care solutions in our state that is supported by our Legislature.

As Alaskans grow older and live longer, it is imperative that quality health care be available and accessible. The Commission supports SB 172 and urges passage of this important legislation.

Respectfully,

A handwritten signature in cursive script, appearing to read "Dawnia Clements".

March 17, 2010

Senator Donald Olson
Alaska State Senate
Room 514 – State Capitol
Juneau, AK 99811

Dear Senator Olson:

Alaska Physicians and Surgeons are appreciative of your efforts to establish a health care commission and would like to offer our support to Senate Bill 172.

Alaska has an aging population and a population that is as diverse culturally as it is geographically. It is difficult to pick up a newspaper or listen to a newscast without learning of Alaskans growing frustration with the health care delivery system. Seniors are having difficulty accessing care, businesses are struggling in their efforts to provide coverage for their workers, some with health insurance coverage believe they are being denied coverage for needed services, the large number of under and un-insured is having a significant impact on the economy and the list goes on. The establishment of a Health Care Reform Commission will allow Alaska's leaders to look at all aspects of health care and prioritize what issues need to be addressed.

In December of 2008, the Alaska Health Care Commission was created by Administrative Order. The Commission was charged to provide recommendations for and to foster the development of a statewide plan to address the quality, accessibility and availability of health care for all citizens of the state. The Commission did report their findings, but given the short existence of the Commission, we view this report as a good 'first step.' However, the establishment of a permanent Health Care Reform Commission, with a more robust stakeholder membership, is needed to continue to address the health care issues in our state.

Again, thank you for introducing this legislation and please let us know if you would like any information from our association.

Sincerely,

Mike Haugen, JD, MBA
Executive Director

The Honorable Bettye Davis, Chair
Senate Health and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 172 (Olson)—Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 172, authored by Senator Donald Olson.

As you know, Governor Palin appointed a Health Care Commission that took on this enormous responsibility in 2009. Senator Olson serves on that Commission.

SB 172 would basically extend the life of the Alaska Health Care Commission until 2014 and give it responsibility to develop, adopt and implement the recommendations the Commission comes up with.

Alaska and our entire country have entered a period during which many health issues are being and will continue to be considered. Not all decisions will be made in Washington. No matter what the White House and Congress do, it is evident that every state will have to make health care work for its citizens. Indeed, if Congress does not take significant action, Alaska and the other states will have even greater responsibility to determine how we will deal with our own future health care issues.

As we review the responsibilities of the Commission as outlined in SB 172, it is obvious to us that this will be one of the most important teams to address issues that touch every single Alaskan.

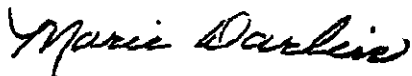

We believe that it is critical that SB 172 passes to allow the Commissioners to take on this responsibility, knowing that they will have the support of the Legislature for an extended period.

AARP requests an "AYE" vote on SB 172.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

RE: SB 172 (Olson)—Support

On behalf of the members of AARP in Alaska, we encourage you to support SB 172, authored by Senator Donald Olson and co-sponsored by Senators Davis, French, Kookesh, Paskvan, Ellis, Egan, Meyer and Thomas as well as Representatives Kawasaki and Gara.

As you know, Governor Palin appointed a Health Care Commission that took on this enormous responsibility in 2009. Senator Olson serves on that Commission as does Representative Keller.

SB 172 would basically extend the life of the Alaska Health Care Commission until 2014 and give it responsibility to develop, adopt and implement the recommendations the Commission comes up with.

Alaska and our entire country have entered a period during which many health issues are being and will continue to be considered. Not all decisions will be made in Washington. No matter what the White House and Congress have done, it is evident that every state will have to make health care work for its citizens.

As we review the responsibilities of the Commission as outlined in SB 172, it is obvious to us that this will be one of the most important teams to address issues that touch every single Alaskan.

We believe that it is critical that SB 172 passes to allow the Commissioners to take on this responsibility, knowing that they will have the support of the Legislature for an extended period.

AARP requests an "AYE" vote on SB 172.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

To: Members of the Alaska House of Representatives

RE: SB 10 (Davis)—Support

On behalf of the members of AARP in Alaska, we encourage you to support SB 10, authored by Senator Bettye Davis and co-sponsored by Senator Joe Paskvan and Representatives Bob Lynn, Bob Buch, Carl Gatto, Cathy Munoz, Pete Peterson, Charisse Millett, Les Gara, Chris Tuck and Lindsey Holmes.

SB 10 would require insurance programs, including Medicaid, to provide coverage for routine costs of cancer victims undergoing clinical trials just as they would if the individual was not in the trial. Research indicates that the costs for patient care in clinical trials are comparable to costs for care delivered in standard practice.

Most of our significant advances in cancer treatment that have become standard procedures began as clinical trials.

It makes no sense not to offer health insurance coverage for procedures that may be still considered experimental but offer some hope for the cancer victim. We purchase insurance (or the State provides it through Medicaid) so that we can have help with the costs that accompany a threatening disease. SB 10 is one of those bills that AARP believes makes sense, especially to a cancer victim and his/her family.

AARP recommends an "AYE" vote on SB 10.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

SENATE MAJORITY LEADER
JOHNNY ELLIS

SPONSOR STATEMENT – SENATE BILL 199

SB 199 – An Act relating to a two year funding cycle for medical assistance coverage for dentures.

SB 199 makes a simple change to the Adult Medicaid Dental program that would allow patients who are approved for dentures to receive both the uppers and lowers in a single fiscal year. The bill would let patients access two years of funding in a single year, thereby allowing them and their dentists to schedule treatment around the oral health of the patient, rather than the bureaucratic ease of the state fiscal year.

Current law places a limit on expenditures per eligible client at \$1,150 per year. This number was designed to pay for ½ of a set of dentures, either uppers or lowers, in a single fiscal year. When the program was created, the idea was that a client who needed dentures could receive one set on June 30th, and the second on July 1st. Unfortunately, this has proven to be impractical. Dentists who are forced to pull teeth can't always do so on the state's fiscal calendar, and Alaskans shouldn't suffer needlessly because their medical emergency occurred in the fall rather than the summer.

Adult Medicaid Dental has been recognized across the political spectrum as a successful government health care program. Over the past three years, the state has saved substantial amounts of money – and poorer Alaskans have been saved immense pain and hardship – by allowing Medicaid to pay for exams, cleanings, fillings, root canals, and dentures before painful and expensive surgery became necessary. SB 199 will fix a small flaw in the cost-containment portion of the program and help protect this important state investment.

ANALYSIS: (Attach a separate page if necessary)

This bill addresses limitations of coverage for upper and lower dentures within a given state fiscal year with the current \$1,150 annual limit. The annual limit provides for expenditures that would typically cover only an upper or lower denture, thus requiring Medicaid recipients to wait until the subsequent fiscal year to obtain the opposing denture under the Adult Preventive Dental (APD) program. The bill would authorize the department to allow for provision of both an upper and lower denture within the same state fiscal year, however when these services are provided the adult recipient would not be eligible for additional services under the APD program for a 2-year period.

In SFY 2009, the total cost of complete, partial and immediate denture claims was approximately \$1,620.0. (continued on page 2)

FISCAL NOTE # 2

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. SB199

ANALYSIS CONTINUATION

We estimate that the cost of denture services in the APD has grown at the same rate as all Health Care Services Medicaid Services costs (forecasted to be 6%) from FY 2009 to 2010. Medicaid growth for APD alone is forecasted to be 8.9% from FY 2010 to 2011 to reach a baseline cost of \$1,868.0 for denture services in FY 2011 with no changes to the program.

With the changes proposed in this bill and an expected effective date of July 1, 2010, we estimate the baseline costs noted above for denture services in FY 2011 will increase by 50%, assuming half of denture services recipients would be completing the denture process from FY2010 and the other half would be getting both their upper and lower dentures in FY 2011 for a total cost of \$2,803.0 (a difference of \$935.0 from baseline). We would still expect some increased costs over baseline in FY2012 as the number of people getting denture services has been growing each year as adults continue to learn about the APD program and this bill allows for them to be paid in one year. For FY2012, we estimate the need for increased funds to be half of the amount needed in FY 2011.

For subsequent years, we would expect the cost of denture services to level out to approximately what we would expect without the changes in this bill, the shift being not in cost but in how many recipients are receiving services.

For FY2011, we estimate 67% of APD services to be federally reimbursable, assuming ARRA FMAP increases are valid through all 4 quarters of FY 2011. For FY2012 we expect a FMAP of 50%. As some ADP services are IHS and reimbursed at 100%, we expect 57% of ADP costs to be federally reimbursable.

SENIOR VOICE

Serving Older Alaskans and Their Families Since 1978

A publication of *Older Persons Action Group, Inc.* 325 E. Third Ave., Suite 300, Anchorage, Alaska 99501

Vol. 32 No. 11 November, 2009

Desperate senior prompts denture legislation

By SEN. JOHNNY ELLIS

Late last summer, an elderly man walked into my office and threatened to commit suicide. Needless to say, it was a very tense and upsetting situation for me and my staff. This gentleman had come from the Medicaid Adult Dental office, where he had been told that he had a choice – he could receive either the upper half or the lower half of the dentures that he needed, but not both, at least not in the same year. Of course, this set of options was really no choice at all, seeing as how he had no teeth at all. The state's wholly inadequate response to this constituent's unfortunate situation set my office in motion, and I am prepared to introduce legislation this session with bipartisan support that will provide a common-sense fix to an otherwise successful and needed program.

Medicaid Adult Dental was created three years ago. Until that time, Medicaid only covered emergency dental services for low income Alaskans. By expanding the program to cover preventative care – exams, cleanings, root canals, fillings and dentures – the state has saved millions of dollars and patients have avoided painful surgeries as the need for emergency care declines. In addition, good dental health

I have worked with the Dept. of Health and Social Services to allow patients who qualify for dentures under the Medicaid Adult Dental program to receive their full set of dentures in one sitting.

is closely linked with decreased risk for diabetes, heart disease, cancer and other serious diseases. Last year, the legislature unanimously made this successful program permanent.

The program limits the care that can be paid for in a single year, which is intended as a cost-control measure, an important feature in these uncertain budgetary times. Unfortunately, these measures go beyond cost control and have impacted the function of the program by limiting patients to half of a set of dentures per year. In public testimony on these limits, it was suggested that a patient could receive the upper dentures on June 30, the final day of the state fiscal year, and the lower dentures on July 1. I don't believe that we should be punishing citizens who happen to require dental care in the fall or winter, and I don't believe that dentists should be forced to schedule the care their patients need to make things more convenient for bureaucrats. This is the kind of frustrating flaw in our

system that drives people crazy and gives government a bad name.

That's why I have worked with the Department of Health and Social Services to develop a way to allow patients who qualify for dentures under the Medicaid Adult Dental program to receive their full set of dentures in one sitting, without destroying the cost-control mechanisms currently in place. The bill will be introduced when the legislature goes back into session in January, and I am pleased to have received bi-partisan support from my colleagues in the Senate.

In fact, as I have continued to work on this issue, I have heard more and more about how much sense this small change makes. A dentist in Juneau told me about the patients he sees from all around Southeast Alaska. The state pays for them to fly to Juneau, pays for their lodging, and pays for one half of their dentures. Then, a little while later, public money is spent to do it all over again for the other half. Allowing him and other

dentists to consolidate the care they are giving into one session will make the program a more efficient use of public money and improve the quality of care received by patients.

State government can be a large and unwieldy bureaucracy, and change is hard to do and often happens slowly. Most of the attention goes to the big issues that attract press coverage or help generate campaign slogans. But sometimes, there are issues that require us to place people over politics and give a direct benefit to the neighbors and constituents we are privileged to serve. It's too late for the gentleman who threatened to kill himself in my office – we worked with him to get his dentures through the existing two-year process – but it's not too late for others in his situation. This may be a small bill, and it won't change the world, but it will improve the lives of a few senior citizens in need – and that's a job I'm glad to do.

Senator Johnny Ellis represents downtown and midtown Anchorage in the Alaska State Senate and serves as the Majority Leader of the Senate Bi-Partisan Working Group.

SB199/HB265 Medicaid Adult Dental Coverage

The Alaska Dental Society urges passage of SB199/HB265.

SB199 and its companion bill HB265 remedy an unintended consequence of the adult dental supplemental Medicaid coverage. Currently, under the maximum allowable benefit, a Medicaid recipient may receive either an upper or lower denture.

Unfortunately many Medicaid recipients need dentures for both the upper and lower jaws or dental arches. SB199/HB265 would allow a Medicaid recipient to combine two years worth of coverage so they could receive a full denture of both upper and lower dentures at the same time.

SB199/HB265 provides a benefit for everyone involved – the patient, the doctor and the Medicaid program:

- Medicaid recipients benefit from receiving both dentures at once, restoring their appearance, their ability to talk and chew, and most importantly their dignity.
- Providers benefit as they are no longer placed in the uncomfortable position of deciding which arch is in the worst condition. They can also work in a more efficient fashion constructing both sets of dentures simultaneously.
- The state benefits economically. The cost for both dentures, which would normally be borne over 2 years are now in one year but Medicaid recipients would still be limited to the same benefit total for 2 years. Denture patients frequently have to use travel benefits to reach a provider and for dentures this can be especially costly as dentures require multiple appointments. Providing both dentures at the same time would reduce the states travel expenses in half. Removing diseased and abscessed teeth would also save on costly ER and oral surgery visits.

L O G A N

D E N T A L

November 10, 2009

Senator Ellis
716 W. 4th Ave. Suite 500
Anchorage AK, 99501-2133

Dear Senator Ellis:

Thank you for sponsoring a bill to allow Medicaid recipients to use two consecutive years of supplemental benefits in the same year to receive upper and lower dentures at the same time. This will greatly help recipients as a single denture when you have no teeth to oppose it is of limited value. I believe it will ultimately lower costs for the Medicaid division, also, when travel benefits are factored in for this multi step procedure that must be repeated twice under the current system.

A case I did earlier this year may illustrate the problem providers' face. Due to HIPAA concerns I am not using names for this story.

I have a dental office in Juneau. Unfortunately, for a variety of reasons, dental offices in other Southeast communities do not usually accept new Medicaid patients. This patient had to travel over from Sitka and needed dentures, both upper and lower. He currently did not have either upper and lowers having lost both sets. The supplemental system for adult Medicaid benefits would cover a single denture, either the upper or lower. The patient, 78 years old and on fixed income, was unable to afford the second set even at reduced Medicaid fees. I wrote a letter Medicaid division, enclosed, outlining the problem and pointing out that travel costs associated with constructing the second set at a later date (when the new year's benefits kicked in) would ultimately cost more than the Medicaid fee for a denture. I received a reply from the division basically saying their hands were tied given the current statutes in place.

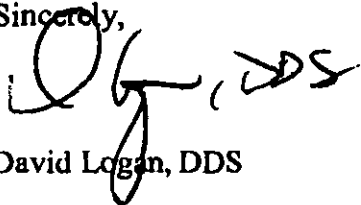

In the case of this patient I did a full set of dentures for the patient and absorbed the cost of construction of the second set. As I write this letter I saw two patients today in the same situation, one who lives here in Juneau that we are constructing an upper denture alone although he has no lower teeth. Currently are plan is construct the lowers after July

2237 N. Jordan Avenue, Juneau, AK 99801

Phone: (907) 780-6066 Fax: (907) 780-4274 info@juneausmiles.com

1, 2010. The second patient traveled here from Angoon and lost both his upper and lower dentures 2 weeks ago. His treatment will be further complicated as his old set was apparently ill fitting and led to a large tissue mass on the lower that will have to be removed prior to denture construction.

Sincerely,

A handwritten signature in black ink, appearing to read "DLG, DDS". The signature is stylized and written over the printed name below.

David Logan, DDS

Anchorage, AK 99524-0808

Re: [REDACTED]
Medicaid #: [REDACTED]

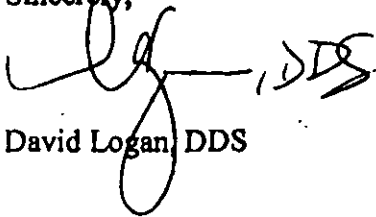

Dear Sirs:

Mr. [REDACTED] is currently edentulous (without teeth) upper and lower. We have previously preauthorized Mr. [REDACTED] for a lower denture (preauth [REDACTED]) - working with a Sitka Clinic we had not previously seen Mr. [REDACTED].

Mr. [REDACTED] has been without teeth for 6 years. One denture, the maximum allowed under the MEDS system, will provide little improvement for him. Mr. [REDACTED] will be traveling to our office from Sitka for completion of the denture. The travel costs will ultimately cost more than the fee for the denture given the number of appointments required to properly construct a denture.

I am requesting preauthorization for upper and lower dentures (included) for Mr. [REDACTED]. This is a case where everyone will benefit: the state will have less overall costs than a second round of travel costs to construct the other denture after July 1, Mr. [REDACTED] will have opposing dentures to eat with, and my overall costs will be less than repeating the same appointments come July 1.

Sincerely,

David Logan, DDS

ALASKA

PRIMARY CARE ASSOCIATION

The Honorable Senator Ellis
Alaska State Senate
State Capitol, Room 103
Juneau, Alaska 99801-1182

Re: Support for Medicaid Coverage for Dentures – SB 199

January 22, 2010

Dear Senator Ellis,

The Alaska Primary Care Association (APCA) represents 26 health care organizations and 142 non-profit Community Health Centers (CHCs), as well as other safety net providers throughout Alaska. In 2009, our sites provided primary healthcare to over 81,000 Alaskans from across the state. According to the Alaska Community Health Center Uniform Data System, Alaska's CHC provided dental services to 16,244 Alaskans and totaled 39,016 dental encounters in 2007.

The APCA supports providing a two-year funding cycle for Medicaid assistance coverage for dentures. The APCA knows that access to dental services improves health outcomes and reduces overall health care costs. Oral health is critical for overall health and adults in the Medicaid program receiving access to dental services reduces the likelihood that they will develop more expensive and acute dental problems.

We appreciate your hard work and service to Alaskans and support your efforts to expand access to health care for all Alaskans.

Respectfully,

Regan Mattingly
State Affairs Coordinator

Shelley S. Hughes
Government Affairs Director

Senator Johnny Ellis
Senate Majority Leader
Alaska State Legislature
716 W. 4th Ave
Anchorage, AK 99501
Fax: (907) 269-017

Dear Senator Ellis;

I am writing on behalf of the Alaska Public Health Association (ALPHA) to extend our support for and thank you for introducing a Bill that will allow Alaska's adult Medicaid recipients to receive a set of dentures within one fiscal year. This Act will meet the needs of patients and dental providers by providing two-years worth of dental benefits for dentures in a single year.

The ALPHA represents over 150 health professionals in Alaska; the primary mission of ALPHA is the enhancement of the public's health. In fulfilling our mission, we support systems that support patient-oriented health service delivery. ALPHA believes that the "Act providing for a two-year funding cycle for medical assistance coverage for dentures" establishes a system enabling patients to receive patient-oriented care.

Thank you for consulting ALPHA in developing this Bill. Please feel free to contact me if you have further questions.

Sincerely,

Karol Fink, MS, RD
ALPHA Health Policy Chair

January 23, 2010

Senator Johnny Ellis
Senate Health and Social Services Committee
Alaska State Capitol, Room 103
Juneau, AK 99801-1182

Subject: Support Letter for SB 199

Dear Senator Ellis:

The Alaska Commission on Aging (ACoA) is pleased to offer support for SB 199, a bill to provide access to Medicaid patients who are approved for dentures using a two-year funding cycle for medical assistance benefits to cover the costs for complete and partial dentures in a single fiscal year. This legislation is authored by you and co-sponsored by Senators Bettye Davis, Dennis Egan, Hollis French, Linda Menard, Donald Olson, Joe Paskvan, Joe Thomas, and Bill Wielechowski.

The Commission believes SB 199 provides a common sense solution that allows patients and their dentists the flexibility to schedule treatment around the oral health needs of the patient, which will improve the quality of care for older Alaskans and other qualifying recipients. Moreover, this legislation enhances the cost-effectiveness of the current Medicaid Adult Dental program by reducing the number of oral surgery visits, medical procedures, and related travel costs required for individuals who need a complete set of dentures but are limited to half of a set of dentures per fiscal year under the existing program. Anecdotally, we have learned that some individuals may even refuse partial extractions in one arch knowing that they could be without teeth for a prolonged period waiting for Medicaid to cover the cost of the other complete denture in the next fiscal year.

Good nutrition is vital for health and wellness across the life span and depends on oral health. Dental pain and missing or decaying teeth can affect dietary choices for seniors that may impact overall health and wellness. Vulnerable older Alaskans are at risk of developing dental infections that have been associated with periodontal disease, diabetes, pneumonia, and other chronic diseases including cardiovascular disease. Restorative dental care can help to prevent the progression of serious dental disease and discomfort which can result in more costly emergency care.

Older Alaskans utilize the Medicaid Adult Dental program. According to data based on Medicaid claims information for persons age 60 years and older for the period April 1, 2007 thru December 31, 2009, there were a total of 3,104 (unduplicated) seniors served by the Medicaid Adult Dental Program. The average cost for partial dentures for seniors ranges between \$1,085 (for a complete maxillary denture) to \$1,125 (for a complete mandibular denture). The approximate cost for a complete set of dentures is \$2,225. The current program cap is \$1,150 per year.

As we move forward, the Commission respectfully asks for your consideration of our recommendations below to enhance SB 199 and the Adult Dental Medicaid program for qualifying older Alaskans and other Medicaid recipients:

- Allow eligible patients access to two years of total funding as determined by the cost cap of the Medicaid Adult Dental program to permit individuals receiving partial dentures through the program the ability to access remaining benefits under the cost cap should they need additional denture services during the two-year period.
- Pending approval of SB 199, begin work with the Department of Health and Social Services to expand the two-year access of services to phase in other preventative and restorative services allowed under the Medicaid Adult Dental program in FY 2012.
- Adjust the annual cost cap for dental services (currently in statute for the last three years) to address the rising costs of dental care and encourage more participation of Medicaid dental providers.

Please accept our sincere appreciation for your efforts to improve the Medicaid Adult Dental program by allowing patients who qualify for dentures under the program to receive their full set of dentures according to a treatment schedule determined by the patient with their dentist. We believe that SB 199 will help to improve health and wellness for many older Alaskans who need dentures and we support passage of this legislation. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information. Thank you.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello

Alaska Mental Health Board

Adjust Cap on Adult Dental Services Reimbursed by Medicaid

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, and Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority and the Alaska Brain Injury Network, jointly support the developing a solution that will allow for the adjustment of the current cap on adult dental services reimbursed by Medicaid.

- Currently, the annual cap for dental services – such as cleanings, exams, crowns, root canals and dentures – is \$1,150 per individual. With the rising cost of dental care, this cap is proving not adequate yet the cap is set in statute and has not been increased in over three years.
- The American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs, and as former U.S. Surgeon General C. Everett Koop stated, "You're not healthy without good oral health."
- Trust beneficiaries continue to list dental services as a priority unmet health needs.
- The challenge this session is to find a current bill or to introduce a new bill that will create a method for adjusting the adult dental Medicaid cap on a regular basis or will at least increase the cap to cover the increase the cost of living increases over a 4 or five year period.

Therefore, we support a legislative solution that will allow for the adjustment of the current cap on adult dental services reimbursed by Medicaid.

Alaska State Capitol, Room 103
Juneau, AK 99801-1182

RE: Support Letter for SB 199

Dear Senator Ellis,

Alaska Brain Injury Network appreciates your leadership in sponsoring SB 199 to provide vulnerable Alaskans who are approved for dentures to use a two-year funding cycle for medical assistance benefits to cover the costs for complete and partial dentures in a single fiscal year. This is a common sense solution for all involved: Medicaid dental patients, dentists, and the state paying for the service.

Alaska has made strides since 2006 in providing Medicaid adult dental services and we appreciate your continued efforts to improve the needed dental benefits for our focus population of adults with traumatic brain injuries and acquired brain injuries. Preventative care we have in place lessens the need for painful surgery, emergency care, and also lowers the risk of dental infections effecting overall health.

Cost control measures are important to consider in good fiscal management. However, there are factors we ask you to please consider to better SB 199 and the Adult Dental Medicaid program as recommended by the Alaska Commission on Aging:

- Allow eligible patients access to two years of total funding as determined by the cost cap of the Medicaid Adult Dental program to permit individuals receiving partial dentures through the program the ability to access remaining benefits under the cost cap should they need additional denture services during the two-year period.
- Pending approval of SB 199, begin work with the Department of Health and Social Services to expand the two-year access of services to phase in other preventative and restorative services allowed under the Medicaid Adult Dental program in FY 2012.
- Adjust the annual cost cap for dental services (currently in stature for the last three years) to address the rising costs of dental care and encourage more participation of Medicaid dental providers.

We appreciate your continued efforts to improve the Medicaid Adult Dental Program and support the passage of SB 199. Thank you for your dedication.

Sincerely,

Jill Hodges, Executive Director

Alaska Brain Injury Network, Inc. mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for the survivors for traumatic brain injury and their families.

Subject: Support Letter for SB 199

Dear Senator Ellis:

The Anchorage Neighborhood Health Centers Dental Department is pleased to offer support for SB 199, a bill to provide eligible Medicaid adult recipients the opportunity to access a two-year funding cycle to cover the cost of a complete set of dentures or partial dentures in a single fiscal benefit year.

Attempting to provide a patient with one half of a needed set of dentures at the end of a fiscal benefit year and the second half at the beginning of the next fiscal year creates difficulty in providing quality care. Moreover it frustrates the patient and overloads the provider and the lab rendering it nearly impossible to meet the demand and is clearly a less than optimal way of providing an individual with dentures.

Passing SB 199 will allow eligible Medicaid adult recipients to receive a full set of dentures or partial dentures at the same time. It will allow providers to make and deliver a complete set of dentures/partial dentures anytime throughout the fiscal year. This will create better flow for both the provider and the labs and allow for improved quality of care to the patients.

Thank you for your efforts to improve the Adult Medicaid Dental program.

Sincerely,

Pamela Hawk, Dental Operations Manager

RE: SB 199 (Ellis)--Support

Dear Co-Chairs Hoffman and Stedman:

On behalf of the members of AARP in Alaska, we would like to urge your support for SB 199 to establish a two year funding cycle for the adult dental benefit in Medicaid. The bill is sponsored by your Committee colleague, Senator Johnny Ellis, and co-sponsored by twelve other Senators including your Committee members Senators Egan, Thomas, Olson and Huggins as well as Senators Davis, French, Menard, Paskvan, Wielechowski, Kookesh, Wagoner and McGuire.

SB 199 basically changes the benefit for dentures so that an adult Medicaid beneficiary would be able to use the funds available for two years to pay for dentures. This makes sense for both the client and the provider.

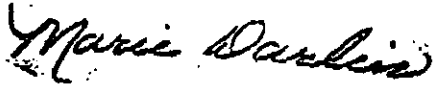

Older persons in need of dentures often have accompanying nutrition problems. These nutrition problems can cause other health issues and create an overall deterioration in health status. For those who need them, dentures are essential to quality health care. Two-year funding for dentures should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not need to be spent on more serious health care problems resulting from poor oral health status.

AARP recommends an "AYE" vote on SB 199.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

Alaska State Capitol, Rm 102
Juneau, AK 99801-1182

Dear Senator Ellis:

Sun'aq Tribe of Kodiak is in full support of SB 199, a bill to provide access to Medicaid patients who are approved for dentures using a 'two-year' funding cycle for medical assistance benefits to cover the costs for complete and partial dentures in a single fiscal year. We believe the bill would be beneficial to the elders among our 1,500 tribal citizens by allowing patients and their dentists the flexibility to schedule treatment around the oral health needs of the patient, while also enhancing the cost-effectiveness of the current Medicate Adult Dental Program by reducing the number of oral surgery visits, medical procedures, and related travel costs.

In addition, we also support the recommendations of the Alaska Commission on Aging, which we believe enhance S.B. 199. Those recommendations include allowing eligible patients access to two years of total funding and the ability to adjust the annual cost cap for dental services to address the rising costs of dental care and encourage more participation of Medicaid dental providers.

We believe that SB 199 will help improve health and wellness for many older Alaskans who need dentures and we whole heartedly support this legislation. We appreciate your efforts and SB 199's co sponsors to improve the Medicaid Adult Dental program.

Sincerely,

Brenda Schwantes

Re: Support for Medicaid Coverage for Dentures-SB199

Dear Senator Ellis:

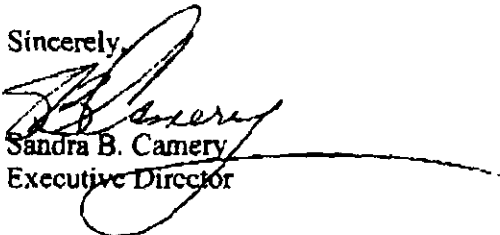

The Mabel T. Caverly Senior (Services) Center has worked with many individuals, ages 55 and over, who needed dental work. For those fortunate seniors who qualify for Medicaid, the additional of dental services to Medicaid was a life saver. Unfortunately, it has been a hardship for seniors and their dentists to schedule one denture in June and one the following month in July. A 2 year cycle for Medicaid dentures would alleviate this problem.

Oral health is now linked to physical health—particularly heart disease, diabetes, osteoporosis, and dementia. These conditions are prevalent in the senior population. A simple administrative change in the way dentures are funded would not only alleviate suffering, it would ultimately reduce Medicaid costs.

For seniors who don't qualify for Medicaid, but aren't able to afford dental work, this agency has had in place for over 10 years a program to issue income qualifying seniors \$900.00 grants for their dental work. This program has been funded by corporate donors, the Municipality of Anchorage, and, until 2008, by the Human Services Matching grant. If the HSMG is re-authorized, we hope our program will once again be chosen for funding by the local review panel. This program alleviates a great deal of suffering and ultimately reduces costs, too.

Thank-you for all your support for senior citizens. We appreciate your understanding and compassion.

Sincerely,

Sandra B. Camery
Executive Director

Senator Bettye Davis

SB 238 - "An Act amending the eligibility threshold for medical assistance for persons in a medical or intermediate care facility."

SPONSOR STATEMENT

This bill amends and restores the Medicaid income eligibility threshold for individuals who reside in a medical or intermediate care facility from a specified monthly income limit to 300% of the Social Security income benefit rate. This threshold is also used for people who receive home and community-based waiver services. In 2003 the Legislature fixed the Medicaid long-term services income eligibility limit for persons in medical or intermediate care facilities at \$1,656 per month which was 300% Supplemental Security Income (SSI) at that time. This change created an income ceiling for waiver eligibility, effectively freezing the eligibility limit for the last seven years, rather than allowing the limit to adjust annually in tandem with the SSI, the income equivalent of which in 2009 was \$2,022. The result was that small Social Security cost of living adjustments have disqualified many needy disabled people from the program.

Alternatives for preserving eligibility, particularly for those requiring lifetime or long-term care, include creation of a Medicaid qualifying income trust, also known as a Miller Trust. Trusts, however, have procedural drawbacks, including numerous responsibilities and restrictions, limited access to income, assistance of an attorney, and a trustee to manage trust assets.

As background, the Supplemental Security Income (SSI) program is a federal needs-based disability program for low income adults over age 65, blind, or disabled. For an adult, the SSI disability requirement is based on the ability to work. An adult is considered disabled if the person cannot do the work that he/she performed before the disability occurred or cannot do alternate work because of a severe physical or mental condition. For a child to be eligible, he/she must suffer from serious physical and/or mental problems. For both adults and children, the disability must last, or be expected to last for at least a year.

Medicaid services are critical to the well-being of Alaska's most vulnerable citizens. Supporting SB 238 will ensure that eligible Alaskans can continue to receive nursing home care and in-home services. It also will save the Legislature from amending statutes every year or two as the Federal Poverty Level guidelines and Supplemental Security Income levels increase with the cost of living.

MEMORANDUM

February 4, 2010

SUBJECT: Sectional Summary (SB 238 (Work Order No. 26-LS1362\A))

TO: Senator Bettye Davis
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the eligibility threshold for medical assistance applicants who are in a medical or intermediate care facility from a specified monthly income limit to 300 percent of the Social Security income benefit rate.

ANALYSIS: (Attach a separate page if necessary)
 This bill would increase the Medicaid income eligibility standard for individuals who reside in medical institutions, typically nursing facilities. This standard is also used for people who receive home and community-based waiver services. Currently, this standard is fixed at \$1,656 per month. The bill would increase the amount to 300 percent of the federal Supplemental Security Income (SSI) monthly benefit, which is currently \$674, adjusted for cost of living each year. Initially, the new standard for Medicaid nursing facility residents and waiver recipients would be \$2,022 per month.

 DHSS does not anticipate that increasing the monthly standard for this eligibility category will increase the number of Medicaid recipients receiving services. While this is contrary to DHSS expectations when the Legislature fixed the standard at a set dollar amount in 2003, experience shows that as individuals receive cost of living increases in pensions or Social Security payments that raise their incomes over \$1,656 per month, they use Medicaid qualifying income trusts to reduce their countable income below that amount and continue to qualify for Medicaid.
 (Continued on Page 2).

Prepared by: William J. Streur, Deputy Commissioner
 Division: DHSS Health Care Services

Phone: 269-7827
 Date/Time: 1/29/10 12:00 AM

Approved by: Alison Elgee, Assistant Commissioner
DHSS Finance & Management Services

Date: 1/29/2010

ANALYSIS CONTINUATION

Another consideration is that Medicaid recipients who qualify under this institutional income standard are required to make a contribution toward the cost of the Medicaid institutional or waiver services they receive if their countable income exceeds the personal needs allowance established for their living arrangement. The personal needs allowance for people on waivers has historically been set in regulation and the amount varies depending on the person's living situation, and is not linked to the institutional income standard. DHSS has not assumed an increase to the personal needs allowance. Therefore, DHSS does not anticipate an increase in Medicaid spending as a result of this legislation. If DHSS increased the personal needs allowance in conjunction with increasing the income eligibility standard, it would increase Medicaid expenditures.

Sec. 47.07.020. Eligible persons. (a) All residents of the state for whom the Social Security Act requires Medicaid coverage are eligible to receive medical assistance under 42 U.S.C. 1396 — 1396p (Title XIX, Social Security Act).

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under age 21 who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under age 21 who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 percent of the supplemental security income benefit rate under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act) but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under age 21 who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the Aid to Families with Dependent Children program;

(8) persons under age 21 and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under age 21 not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 — 25.23.220;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

Sec. 47.07.010. Purpose. It is declared by the legislature as a matter of public concern that the needy persons of this state who are eligible for medical care at public expense under this chapter should seek only uniform and high quality care that is appropriate to their condition and cost-effective to the state and receive that care, regardless of race, age, national origin, or economic standing. It is equally a matter of public concern that providers of services under this chapter should operate honestly, responsibly, and in accordance with applicable laws and regulations in order to maintain the integrity and fiscal viability of the state's medical assistance program, and that those who do not operate in this manner should be held accountable for their conduct. It is vital that the department administer this chapter in a manner that promotes effective, long-term cost containment of the state's medical assistance expenditures while providing medical care to recipients. Accordingly, this chapter authorizes the department to apply for participation in the national medical assistance program as provided for under 42 U.S.C. 1396 — 1396p (Title XIX, Social Security Act). (9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under age 21 not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 — 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

RE: SB 238 (Davis)—Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SB 238, which you authored.

SB 238 corrects a situation which occurred in 2003 when the Legislature changed eligibility for long-term care services in facilities from 300% of the SSI level to \$1,656 per month. Since then, each year some Alaskans would find themselves no longer eligible than when the 300% level was used.

Alaska has a long history of using home and community based services in preference to institutionalized care. SB 238 will allow our most frail and vulnerable citizens to remain in their homes and communities or in institutional settings, when appropriate.

The beneficiaries of SB 238 are not well off financially. They are at risk economically as well as from a health standpoint.

AARP recommends an "AYE" vote on SB 238.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator

HEALTH / FINANCES / CONNECTING / GIVING / ENJOYING

Jennie Chin Hansen, President
William D. Novelli, Chief Executive Officer

Senate Finance Committee – Testimony for SB 238
March 15, 2010

- Good Morning. My name is Denise Daniello, executive director for the Alaska Commission on Aging.
- We are pleased to offer our strong support for SB 238.
- This is an important piece of legislation for older Alaskans who receive small cost-of-living increases to their Social Security and other benefit amounts. The impact from this freeze has been that from 2003 forward, a small cost-of-living adjustment to Social Security can put a senior over the \$1,656 limit and in effect disqualifies them from receiving Medicaid long-term support services. These vulnerable individuals are at-risk both financially and with regards to their health.
- Our office became alerted to this issue around Christmastime in 2008 when many individuals on Social Security receiving waiver services were issued notice from the State that they would no longer be eligible for these services after the 2009 Social Security COLA went into effect. They were given the choice of either paying out-of-pocket for these services or establishing a Medicaid qualifying income trust, also known as a Miller Trust, to preserve their income eligibility. They were very distraught and called our office for help. Some called their legislators.
- (As has already been explained...) the Miller Trust reduces one's countable income below the income standard, which is now set at \$1,656, so that a person can continue to qualify for Medicaid.
- The Miller Trust is a useful tool for maintaining income eligibility but has some drawbacks:
 - First, it requires an individual to seek legal assistance from an attorney to establish the Trust and then to find a person they trust to manage their account. Some elderly Medicaid recipients have no friends or family they know who can serve as reliable trustees. They must either trust a stranger to manage their money or forego benefits. Some recipients risk their money by having less-than-trustworthy relatives serve as a trustee. Recently, we learned of a case involving an elder whose granddaughter left the state with the individual's trust account funds.
 - Secondly, trustees have a lot of legal responsibilities that include registering the trust with the court system, arranging for an identification number from the IRS, setting up a special account with the bank, arranging for direct deposits to that account through Social Security, and securing approval from the Division of Public Assistance for the Trust. Trustees are also responsible for properly managing the Trust that includes distributing the correct monthly allowance to the Medicaid recipient, making allowable expenses with Trust funds that are not clearly defined by law (which creates confusion for Trustees), tracking and documenting receipts, and passing an annual audit with Public Assistance.

- Thirdly, it costs money to establish the Trust – \$800 to \$1,200, according to estimates from Alaska Legal Services. This fee is paid for by the senior who is living on a fixed income.
- Fourth, a Miller Trust is irrevocable. In the rare event that a person's health turns around and they are no longer medically eligible for long-term services, they will not have access to the trust funds for their daily expenses.
- Finally, managing one's own expenses is a matter of personal dignity for many older Alaskans. Being forced to give up this right can be stressful and humiliating, as well as financially risky.
- The Alaska Commission on Aging supports SB 238. We believe that this legislation is good public policy that promotes more efficient use of public funds since fewer individuals will have the need to establish Miller Trusts in order to maintain their income eligibility for Medicaid services when they receive COLA adjustments to their Social Security and other public benefits.
- Passage of this legislation will also ensure that eligible Alaskans can continue to receive nursing home care and in-home services, which are critical to an elderly person's health and well-being.
- Thank you.

SPONSOR STATEMENT

SENATE BILL 307 *"An Act relating to residential shelters for runaway minors"*

SB307 would allow emergency residential shelters like Covenant House Alaska to continue competing for federal grant funding. Covenant House Alaska has five programs that include emergency shelter, healthcare, job and educational assistance and transitional living. Covenant House Alaska served nearly 3,000 Alaskan youth in FY2009 and has been in Alaska over 20 years – serving literally tens of thousands of youth.

In 2007, Covenant House Alaska was awarded the federal Basic Center Grant (BCG) through the Administration for Children and Families. This competitive federal grant supplied Covenant House Alaska with \$300,000 phased over three years to operate the Crisis Center - \$100,000 per year. Recently, the Administration for Children and Families recently notified Covenant House Alaska the Crisis Center is technically out of compliance with federal grant requirements stated in the Homeless and Runaway Youth Act. Established through the Act, federal regulation 45 CFR 1351.18 (d) states the Basic Center Grant (BCG) may be awarded to facilities with a shelter capacity of 20 beds or less. Covenant House Alaska holds 40 beds.

However, the Act at 42 U.S.C Section 5712(b)(2)(A) states the shelter can have "a maximum capacity of not more than 20 youth, **except where the applicant assures that the State where the center or locally controlled facility is located has a State or local law or regulation that requires a higher maximum to comply with license requirements for child and youth serving facilities.**" The Administration for Children and Families (ACF) concedes that states with statutes requiring them to operate a facility over 20 beds will meet the federal requirements. Supporting SB307 would allow a statutory change which would make it possible for emergency residential shelters like the Covenant House to continue competing for federal grants by operating under the terms of their license.

(3) award nonprofit corporations or municipalities grants for the establishment or operation of licensed programs for runaway minors;

(4) adopt regulations for the administration of AS 47.10.300 — 47.10.390, including regulations providing for the coordination of services to be provided by licensed programs for runaway minors and by the department. (§ 4 ch 144 SLA 1988; am § 35 ch 126 SLA 1994; am § 8 ch 107 SLA 1998)

Collateral references. — 47 Am. Jur. 2d, Juvenile Courts and Delinquent and Dependent Children, § 36.

Sec. 47.10.310. Licensing of programs for runaway minors. (a) A person may not operate a program for runaway minors in the state without a license issued under this section. A person who violates this subsection is guilty of a violation.

(b) The department may license a program for runaway minors under AS 47.10.300 — 47.10.390 only if the program

(1) is operated by a corporation or a municipality; and

(2) meets the requirements of (c) of this section.

(c) A program for runaway minors shall

(1) explain to a minor who seeks assistance from the program the legal rights and responsibilities of runaway minors and the services and assistance provided for runaway minors by the program and by the state or local municipality;

(2) upon admission of a minor to the program, attempt to determine why the minor is a runaway and what services may be necessary or appropriate for reuniting the minor with the minor's family;

(3) provide or help arrange for the provision of services necessary to promote the health and welfare of a minor in the program and, if appropriate, members of the minor's family; services may include, but are not limited to, the provision of food, shelter, clothing, medical care, and individual, group, or family counseling;

(4) within one state working day after admission of a minor to the program inform the department of a minor in the program

(A) who claims to be the victim of child abuse or neglect, as defined in AS 47.17.290;

(B) whom an employee of the program has cause to believe has been a victim of child abuse or neglect; or

(C) whom an employee of the program has reason to believe is evading the supervision of the department, the person to whom the department has entrusted supervision, or the minor's legal guardian;

(5) be operated with the goal of reuniting runaway minors with their families, except in cases in which reunification is clearly contrary to the best interest of the minor; and

(6) maintain adequate staffing and accommodations to ensure physical security and to provide crisis services to minors residing in a facility operated by the program; a program that, as determined by the department, regularly receives state money in an amount that exceeds one-fourth of the program's costs shall maintain semi-secure portions of its facilities in a proportion that meets regulations established by the department; residents under 18 years of age shall be segregated from residents who are 18 years of age or older.

(d) A program for runaway minors may provide services for the protection of the health and welfare of a person under 21 years of age who is in need of the services and who is without a place of shelter in which supervision and care of the person are available. (§ 4 ch 144 SLA 1988; am § 17 ch 33 SLA 1994; am § 8 ch 120 SLA 1996; am § 9 ch 107 SLA 1998)

ANALYSIS: (Attach a separate page if necessary)

This statutory change is designed to bring Covenant House Alaska (a shelter for homeless youth) into compliance with federal grant requirements in the Homeless Runaway Youth Act. Federal regulations have a capacity cap of 20 beds, and this will allow Covenant House to operate a 40-bed facility under the terms of their license without jeopardizing their grant. It does not create an increased workload for existing staff; therefore, the Department has determined this will have zero fiscal impact to state operations.

Covenant House Alaska

Crisis Center • Community Services Center • Transitional Living

The Honorable Bettye Davis
State Capitol
Juneau, AK 99801

March 1, 2010

Dear Senator Davis,

Thank you for your long-standing support of Covenant House Alaska (CHA). CHA is the only shelter in Alaska specifically designed for homeless youth. Throughout our five programs including emergency shelter, healthcare, job and educational assistance and transitional living, CHA served nearly 3,000 Alaskan youth in FY09. CHA has been in Alaska for over 20 years and served literally tens of thousands of youth.

CHA was awarded the Basic Center Grant (BCG) through the Administration for Children and Families (ACF) in 2007. This competitive, federal grant supplied CHA with \$300,000 phased over 3 years to operate the Crisis Center (\$100,000 per year). ACF recently notified CHA that the Crisis Center is technically out of compliance with federal grant requirements stated in the Homeless and Runaway Youth Act. CHA will not be competitive for the new grant cycle starting in September 2010 if Alaska's state statute is not amended to comply with federal requirements.

Established through the Act, federal regulation 45 CFR 1351.18 (d) states that the BCG will be awarded to facilities with a shelter capacity of 20 beds or less. CHA's Crisis Center holds 40 beds. ACF concedes that states with statute requiring them to operate a facility over 20 beds will override the federal requirements. Through consultation with an attorney, CHA proposes the following change in Alaska statute to satisfy ACF's request.

Amendment to AS 47.10.310 to add a new subsection (e):

- (e) A program for runaway minors, which operates a residential shelter in the State of Alaska for runaway or homeless minors and which is required to obtain a license to operate pursuant to AS 47.10.330 – 47.10.390, is required to provide a shelter with the capacity designated in the approved license.

Since CHA is licensed to operated a shelter with 40 beds, this amendment would effectively require CHA to operate a facility that houses over 20 youth.

As the Chair of the Senate Health, Education and Social Services Committee, CHA is seeking your assistance in changing Alaska's statute. Our goal is to have a committee bill introduced this session in order to comply with the federal regulations by September 2010. Please contact me for additional materials if necessary, including ACF's findings.

Thank you for your consideration. Please contact me with any questions.

Sincerely,

Deirdre A. Cronin

Although a change in regulations may satisfy federal requirements, CHA is pursuing a change in statute as a primary means to satisfy the grant requirements. Through consultation with an attorney, CHA proposes the following change in Alaska statute to satisfy ACF's request.

Amendment to AS 47.10.310 to add a new subsection (e):

- (e) A program for runaway minors, which operates a residential shelter in the State of Alaska for runaway or homeless minors and which is required to obtain a license to operate pursuant to AS 47.10.330 – 47.10.390, is required to provide a shelter with the capacity designated in the approved license.

Since CHA is licensed to operate a shelter with 40 beds, this amendment would effectively require CHA to operate a facility that houses over 20 youth. Our goal is to make this change to statute during the 2010 Legislative Session.

Similarly, CHA will be pursuing a change in regulations simultaneously. Pursuing a change in regulations will both compliment our legislative changes, as well as serve as a back-up if the statutory changes are not completed in the 2010 Legislative Session.

A change in regulation would likely be an addition to 7 AAC 57.030. A new subsection could be added to the end of 7 AAC 57.030 that stated something to the following effect:

Upon issuance of a license to a program for runaway minors authorizing operation of any type of residential shelter in the State of Alaska for runaway or homeless minors within the meaning of AS 47.10.330-47.10.390, the program receiving the license is required to provide a shelter with the capacity designated in the approved license.

As the Commissioner of Health and Social Services, CHA wants to ensure you are adequately briefed on our goals to amend Alaska's statute and/or regulations and actively pursue the BCG next fall. We hope you will be supportive of our efforts.

Thank you for your consideration. Please contact me with any questions.

Sincerely,

Deirdre A. Cronin
Executive Director

HHS publishes annually in the Federal Register a program announcement of grant funds available under the Runaway and Homeless Youth Program Act. The program announcement states the amount of funds available, program priorities for funding, and criteria for evaluating applications in awarding grants. The announcement also describes specific procedures for receipt and review of applications. An applicant should:

- (a) Obtain a program announcement from the Federal Register or from one of HHS's 10 Regional Offices in Boston, New York, Philadelphia, Atlanta, Chicago, Dallas, Kansas City, Denver, San Francisco, and Seattle;
- (b) Obtain an application package from one of HHS's Regional Offices; and
- (c) Submit a completed application to the Grants Management Office at the appropriate Regional Office.

[43 FR 55635, Nov. 28, 1978, as amended at 48 FR 29202, June 24, 1983]

§ 1351.18 What criteria has HHS established for deciding which Runaway and Homeless Youth Program grant applications to fund?

 top

in reviewing applications for a Runaway and Homeless Youth Program grant, HHS takes into consideration a number of factors, including:

- (a) Whether the application meets one or more of the program's funding priorities; (see §1351.12)
- (b) The need for Federal support based on the number of runaway or otherwise homeless youth in the area in which the runaway and homeless youth project is or will be located;
- (c) The availability of services to runaway or otherwise homeless youth in the area in which the runaway and homeless youth project is located;
- (d) Whether there is a minimum residential capacity of four and a maximum residential capacity not to exceed 20 youth with a ratio of staff to youth sufficient to assure adequate supervision and treatment;
- (e) Plans for meeting the best interests of the youth involving, when possible, both the youth and the family. These must include contacts with the families. This contact should be made within 24 hours, but must be made no more than 72 hours following the time of the youth's admission into the runaway and homeless youth project. The plans must also include assuring the youth's safe return home or to local government officials or law enforcement officials and indicate efforts to provide appropriate alternative living arrangements.
- (f) Plans for the delivery of aftercare or counseling services to runaway or otherwise homeless youth and their families;
- (g) Whether the estimated cost to the Department for the runaway and homeless youth project is reasonable considering the anticipated results;
- (h) Whether the proposed personnel are well qualified and the applicant agency has adequate facilities and resources;
- (i) Whether the proposed project design, if well executed, is capable of attaining program objectives;
- (j) The consistency of the grant application with the provisions of the Act and these regulations.

§ 1351.19 What additional information should an applicant or grantee have about a Runaway and Homeless Youth Program grant?

 top

(a) Several other HHS rules and regulations apply to applicants for or recipients of Runaway and Homeless Youth Program grants. These include:

- (1) The provisions of 45 CFR part 74 pertaining to the Administration of Grants;
- (2) The provisions of 45 CFR part 16, Departmental Grants Appeal Process, and the provisions of Informal Grant Appeal Procedures (Indirect Costs) in volume 45 CFR part 75;
- (3) The provisions of 45 CFR part 80 and 45 CFR part 81 pertaining to nondiscrimination under programs receiving Federal assistance, and hearing procedures;
- (4) The provisions of 45 CFR part 84 pertaining to discrimination on the basis of handicap;
- (5) The provisions of 45 CFR part 46 pertaining to protection of human subjects.

42 U.S.C.A. § 5712

Page 1

C

Effective: October 8, 2008

United States Code Annotated Currentness

Title 42. The Public Health and Welfare

Chapter 72. Juvenile Justice and Delinquency Prevention (Refs & Annos)

▣ Subchapter III. Runaway and Homeless Youth (Refs & Annos)

▣ Part A. Basic Center Grant Program (Refs & Annos)

→ § 5712. Eligibility; plan requirements

(a) Runaway and homeless youth center; project providing temporary shelter; counseling services

To be eligible for assistance under section 5711(a) of this title, an applicant shall propose to establish, strengthen, or fund an existing or proposed runaway and homeless youth center, a locally controlled project (including a host family home) that provides temporary shelter, and counseling services to youth who have left home without permission of their parents or guardians or to other homeless youth.

(b) Provisions of plan

In order to qualify for assistance under section 5711(a) of this title, an applicant shall submit a plan to the Secretary including assurances that the applicant--

(1) shall operate a runaway and homeless youth center located in an area which is demonstrably frequented by or easily reachable by runaway and homeless youth;

(2) shall use such assistance to establish, to strengthen, or to fund a runaway and homeless youth center, or a locally controlled facility providing temporary shelter, that has--

(A) a maximum capacity of not more than 20 youth, except where the applicant assures that the State where the center or locally controlled facility is located has a State or local law or regulation that requires a higher maximum to comply with licensure requirements for child and youth serving facilities; and

(B) a ratio of staff to youth that is sufficient to ensure adequate supervision and treatment;

(3) shall develop adequate plans for contacting the parents or other relatives of the youth and ensuring the safe return of the youth according to the best interests of the youth, for contacting local government officials pursuant to informal arrangements established with such officials by the runaway and homeless youth center and for providing for other appropriate alternative living arrangements;

MEMORANDUM

To: Representative Bob Herron
Co-Chair, House Health & Social Services Committee

From: Senator Lesil McGuire *LM*

Date: February 23, 2009

Re: Hearing Request: SCR 1: Brain Injury Awareness Month 2009

I respectfully request that SCR 1: Brain Injury Awareness Month 2009 be scheduled for a hearing *pending referral* in the House Health & Social Services Committee at your earliest convenience. SCR 1 is tentatively scheduled to be read across in the House and referred to HHSS this Friday, February 27th.

SCR 1 would make March of 2009 Brain Injury Awareness Month with the aim of raising awareness about traumatic brain injuries (TBI) and the impact they have on Alaskans and their families. Alaska has more TBIs per capita than any other state in the nation.

Attached you will find the most current version of the resolution, a sponsor statement, fiscal note, and all backup information.

I request that the hearing be teleconferenced so that a representative from the Alaska Brain Injury Network and one or two TBI survivors or survivor family members can give public testimony.

If you have any questions or concerns, please feel free to contact me personally or my staff, Trevor Fulton, at x3579. Thank you for your time and consideration.

SPONSOR STATEMENT

SCR 1: BRAIN INJURY AWARENESS MONTH: MARCH 2008

SCR 1 aims to raise awareness about traumatic brain injuries and the impact they have on Alaskans and their families.

A traumatic brain injury (TBI) is when a blow or jolt hits the head hard enough to cause the brain to move within the skull or the skull breaks and the brain is directly hurt. When this happens, the injury disrupts the normal functioning of the brain. A traumatic brain injury can result in both short-term and long-term problems that involve impairment of cognitive abilities, physical functioning, or both.

Brain injury is very complex because no two injuries are the same. How each person may react to the same type of trauma is unknown. The cause, location and severity also are factors in how a person will react to a brain injury.

The State of Alaska is number one per capita for brain injuries and TBI is one of the leading causes of death of young people in the state. Over 800 TBIs are reported annually and an estimated 12,000 Alaskans have suffered a TBI. It is unknown how many people suffer from traumatic brain injuries (TBI) who do not receive medical assistance.

These injuries are often life altering and consequently place a tremendous strain on TBI survivors and their families. Survivors often live with permanent disabilities and the tragedy of TBI is exacerbated by the fact that most TBIs are preventable.

The Brain Injury Association of America recognizes March of each year as Brain Injury Awareness Month. SJR 1 comports with national recognition by making March 2009 Traumatic Brain Injury Awareness Month in Alaska.

Because TBI incidence in Alaska is on the rise, raising TBI awareness is more important now than it has ever been. TBIs are one of the most common injuries incurred in military combat today and as injured military personnel return home to Alaska the rate of TBIs is increasing sharply -- with no signs of slowing.

According to a task force on traumatic brain injury created by the Army Surgeon General, as many as one in five U.S. combat troops who fought in Iraq or Afghanistan leave with signs they may have had a TBI. The Walter Reed Army Medical Center reports that 60% of arriving service members from Iraq have a TBI from blasts, severe falls, and motor vehicle accidents. TBI screening at the National Naval Medical Center shows that 83% of wounded Marines treated at that facility have some form of temporary or permanent brain damage.

Rising TBI rates in Alaska is another reason why it is so important to bring attention to this silent epidemic. So please join us in support of brain injury awareness, prevention, and treatment by supporting SCR 1.

February 10, 2009

Senator Lesil McGuire
Alaska State Legislature
Capitol Building
Juneau, Alaska

Dear The Honorable Lesil McGuire:

Thank you for your continued concern for safety for Alaskans, as well as prevention of injury and death. SCR 1 –Relating to establishing March 2009 as Brain Injury Awareness Month will help raise awareness about injuries to the brain and the effects brain injury has on the survivor, the family, the community and Alaska.

The Alaska Brain Injury Network is a non-profit 501 (c) 3 whose mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for survivors of traumatic brain injury and their families. Our vision begins with prevention.

There are 800 Alaskans each year hospitalized for more than 24 hours with a moderate to severe traumatic brain injury (Alaska Trauma Registry). There is an estimated 3000 Alaskans that visit the Emergency Department each year (CDC). Falls, motor vehicle crashes, assault, ATV/Snowmachine and bicycle crashes are the leading causes of traumatic brain injury in Alaska. The Alaska Brain Injury Network, "10 Year Plan for TBI in Alaska" highlights Prevention, Advocacy, and Public Awareness on pages 49-57 (http://www.alaskabraininjury.org/documents_akbrain/10%20Year%20TBI%20Plan.pdf) with a specific objective "Participate in March Brain Injury Awareness Month activities through resolutions, proclamations, press kits and so forth." (attachment).

Success

In 2003, the Alaska Legislature passed legislation for a primary seatbelt law. The TBI rate due to motor vehicle crashes on the highway has decreased 38% from 2001 to 2005 (attachment). The Alaska Brain Injury Network will continue to study the data to see if TBI-disability among children and adults increases or decreases.

Potential Challenges

It is important to recognize traumatic brain injury, especially since there are service - members returning from Iraq and Afghanistan with brain injury. Highest rates of brain injury in civilians are among rural Alaskans and Alaska Natives. Many national guardsmen/women live in rural Alaska. A risk factor for a brain injury is history of brain injury; i.e. A national guardsperson is in an IED blast in Afghanistan. He/she returns to Alaska and may have challenges with balance, memory, attention, etc. He is riding his snowmachine and crashes, no helmet or maybe even with a helmet, he sustains an additional brain injury. There is potential for an influx of brain injuries in the next 5-20 years; a coordinated TBI prevention program and service delivery system would benefit all Alaskans.

ABIN Activities Promoting March as Brain Injury Awareness Month

The ABIN works closely with the Alaska Native Tribal Health Consortium, State of Alaska -Department of Health and Social Services, and the Alaska Mental Health Trust Authority. We are coordinating press conferences, newspaper advertisements, television commercials, and awareness among youth through internet media. ABIN is also working with the Veterans Clinic in Anchorage to host a public forum on brain injury.

Thank you for your concern and your untiring pursuit of keeping Alaskans healthy. You have our support.

Sincerely,

Jill Hodges

ATTACHMENT 1:

(Alaska Brain Injury Network "10 year plan for TBI in Alaska p. 55
http://www.alaskabraininjury.org/documents_akbrain/10%20Year%20TBI%20Plan.pdf)

Goal I:

Alaskans have knowledge of traumatic brain injury in Alaska.

Objectives

A. To inform Alaskans about TBI, causes, effective prevention, extent and resulting problems through public education campaigns and materials.

B. Strengthen the TBI information sharing network across the state.

Recommendations

Years One-Ten

- Use injury surveillance data sets to describe TBI in Alaska.
- Provide TBI information through resources library, website, and conferences.
- Raise awareness of TBI through participation in the AMHTA Coordinated Communications Campaign.
- Participate in March Brain Injury Awareness Month activities through resolutions, proclamations, press kits and so forth.
- Recruit a self-advocate to put a face on TBI and serve as spokesperson.

ATTACHMENT 2:

Primary Enforcement Seatbelt Law

On May 1, 2003 Alaska passed a law to change their seat belt law from secondary enforcement to primary enforcement state, ie. a vehicle can be stopped solely for seat belt non-use by an occupant. A study of Alaska has seen a steady increase in seatbelt use in the last decade. In 2007 the percent use as seen in the annual observations study was 82.4%. The national rate is 82%. The NHTSA goal is 95% use.

Source: Alaska Highway Safety Office

States with primary seat belt laws on average had seat belt use rates about 10 percentage points higher than States without primary laws in 2005. Wearing a seat belt is the best defense for an occupant in a motor vehicle crash and the single most effective measure to prevent serious traumatic brain injury. 56% of Alaskans with TBI resulting from a motor vehicle crash on the highway were not wearing seat belts. If every state with a secondary seat belt law upgraded to primary enforcement, about 1,000 lives and \$4 billion in crash costs could be saved each year.

State of Alaska > Governor > News > News Details

The Office of the Governor
SARAH PALIN

Traumatic Brain Injury Awareness Month

WHEREAS, an estimated 5.3 million Americans currently live with disabilities resulting from traumatic brain injury (TBI). Every year, 80,000 individuals experience the onset of long-term disability following a brain injury.

WHEREAS, brain injury can affect a person cognitively, physically, emotionally, and behaviorally. Consequences can include short and long-term memory loss, double or low vision, headaches or migraines, fatigue, increased anxiety, depression and mood swings, and impulsive behavior.

WHEREAS, the three leading causes of brain injury are motor vehicle accidents, violence, and falls.

WHEREAS, the effects of brain injury are devastating emotionally and financially to families.

WHEREAS, the Alaska Department of Health and Social Services, Division of Behavioral Health, the lead state agency for TBI, in close collaboration with the Alaska Traumatic Brain Injury Advisory Network, the Division of Public Health, the Alaska Mental Health Trust Authority, the Alaska Mental Health Board, the Advisory Board on Alcoholism and Drug Abuse, the Governor's Council on Disabilities and Special Education, and the Alaska Commission on Aging are all working together toward the prevention, treatment, and rehabilitation of traumatic brain injury in Alaska.

WHEREAS, public awareness of the extent, consequences, and causes of brain injury is critical to the prevention of these injuries and will enhance the recovery process for persons with brain injury.

NOW, THEREFORE, I, Sarah Palin, Governor of the state of Alaska, do hereby proclaim March 2009 as:

Traumatic Brain Injury Awareness Month

in Alaska, and encourage everyone to remember those with brain injuries and to become more informed about traumatic brain injury.

Dated: February 24, 2009

Representative Bob Herron, Co-Chair
House HSS Committee

FROM: Senator Kevin Meyer 

DATE: February 16, 2010

RE: House HSS Committee Hearing Request for SCR 12

This is a request for a House HSS Committee hearing for SCR 12, "Proclaiming September 9, 2010, as Fetal Alcohol Spectrum Disorders Awareness Day."

The following documents are attached:

- Sponsor Statement
- Current version of the bill
- Fiscal Note
- Back up information
 - 10 Facts about FAS from the SOA, Office of Fetal Alcohol Syndrome website
 - Fetal Alcohol Spectrum Disorders, Pages 33-36 of the "Economic Costs of Alcohol and Other Drug Abuse in Alaska" 2005 Update prepared by the McDowell Group.
 - 4 Letters of Support
- Potential witnesses/testifiers (depending on schedule)
 - Michael Baldwin, Behavioral Health Clinician
 - A representative from Stone Soup Group
 - A representative from HSS or the Advisory Board on Alcoholism and Drug Abuse and the Alaska Mental Health Board
- Staff member assigned to the bill: Christine R. Marasigan, 465-6876

This resolution would observe FASD Awareness Day.

Please contact Christine if you have any questions regarding this legislation.

SENATOR KEVIN MEYER
SENATE DISTRICT O

SPONSOR STATEMENT FOR SCR 12

"Proclaiming September 9, 2010, as Fetal Alcohol Spectrum Disorders Awareness Day."

SCR 12 would proclaim September 9, 2010 as Fetal Alcohol Spectrum Disorders Awareness Day (FASD).

Alaska has the highest known incidence of FASD in the United States. This is a condition caused by prenatal exposure to alcohol, which can result in permanent brain damage, birth defects, learning disabilities, behavioral problems and most tragically, the loss of individual potential.

While FASD affects all racial and socioeconomic groups, it is a 100% preventable condition. FASD Awareness Day is observed internationally on September 9th. This serves as a reminder on the ninth day of the ninth month of the year that during the nine months of pregnancy a woman should abstain from alcohol.

SCR 12 would observe FASD Awareness Day by promoting the awareness of the effects of prenatal exposure to alcohol.

TEN THINGS YOU SHOULD KNOW ABOUT FAS

1. Drinking during pregnancy can cause permanent damage to a developing fetus.
2. FAS is one of the most common causes of mental retardation, and is the only cause that is entirely preventable.
3. According to recent State of Alaska DHSS surveillance data, more than 126 children are born at risk for FASD each year in Alaska.
4. Prenatal exposure to alcohol can cause brain damage and other permanent birth defects.
5. Obtaining an FAS diagnosis can improve an individual's ability to function in the world, and may reduce secondary disabilities like depression and school failure.
6. FASD is found in all races and all socio-economic groups – wherever women drink alcohol FASD exists.
7. There is no safe level of alcohol consumption during pregnancy.
8. Women should stop drinking prior to trying to conceive – alcohol can cause damage to a developing fetus even before a woman knows she is pregnant.
9. FASD is 100 percent preventable.
10. With the right diagnosis, support and understanding, many individuals with FASD are living happy and full lives.

Fetal Alcohol Spectrum Disorders

Prenatal exposure to alcohol can cause specific birth defects which may include physical, mental, behavioral, and learning disabilities. Many children with fetal alcohol disorders are not identified until they reach school age or later. Individuals with alcohol-related effects may have difficulties with attention, memory, and problem solving. Heart, liver, and kidney defects are also common, as well as vision and hearing problems.¹³ Alcohol-related effects that fall within the broad category of fetal alcohol spectrum disorders (FASD) include:

- fetal alcohol syndrome (FAS),
- partial FAS (PFAS),
- fetal alcohol effects (FAE),
- alcohol-related neurodevelopmental disorder (ARND),
- and other alcohol-related birth defects (ARBD).¹⁴

¹³ National Organization on Fetal Alcohol Syndrome, *What is FAS/FASD?*, www.nofas.org/faqs.aspx?id=9

¹⁴ US Department of Health and Human Services, SAMHSA Fetal Alcohol Spectrum Disorders Center for Excellence. *The Language of Fetal Alcohol Spectrum Disorders*.

Full report is available online:

http://www.hss.state.ak.us/abada/pdf/mcdowell_rept2005_091307.pdf

During the past ten years, a number of FAS prevalence rates have been established. Studies by the Centers for Disease Control and Prevention indicate a national rate from 0.2 to 1.5 cases per 1,000 births across various populations.¹⁵ Other studies, including those focusing on specific high-risk populations such as Native Americans, other minorities and families living in poverty have indicated rates from 0.5 to 5.0 per 1,000 live births. Clearly, the data is varied and limited.

In establishing a clear number of infants born each year in the United States with Fetal Alcohol Syndrome, the CDC estimates between 1,000 and 6,000 children will be born with FAS each year - a preventable birth defect and disability.

Beginning in 1997, Alaska was one of five states comprising the CDC's Fetal Alcohol Syndrome Surveillance Network (FASSNet), a program established to provide consistent and comparable FAS prevalence rates. Participating states included Arizona, Colorado, New York, Wisconsin and Alaska (however, FAS rates for Wisconsin are not available). At 1.5 per 1,000 live births, Alaska has a significantly higher rate of children born with FAS than other states in the FASSNet program. In addition, Alaska data showed an estimated FAS prevalence rate of 4.8 per 1,000 live births among Alaska Natives. CDC data indicates FAS prevalence rates ranging from 0.3 per 1,000 in Arizona and Colorado to 0.4 in New York.

CDC estimates that other prenatal alcohol-related conditions, such as ARND and ARBD, occur approximately three times as often as FAS.¹⁶ Within the wider category of FASD (which would include individuals with FAS), the US is estimated to have about 10 cases per 1,000 live births.¹⁷

Alaska's estimated rate of all births impacted by prenatal alcohol exposure is 16.3 cases per 1,000 births, based on the 1995 to 1999 birth years. While these alcohol-related effects are closely associated with FASD, these rates are not directly comparable to national FASD rates of 10 per 1,000 live births due to differences in diagnoses and reporting at the state and national levels. Based on 16.3 cases per 1,000 and the number of live births from 1995 to 1999, approximately 160 infants are born each year in Alaska with FAS and other effects from maternal alcohol use during pregnancy. Of those, approximately 15 are born with Fetal Alcohol Syndrome (FAS).

FAS vs. FASD

It is important to remember that the information being used to determine the economic costs of care and service delivery to individuals with Fetal Alcohol Syndrome is only a small portion of the overall impact of prenatal exposure to alcohol and the resulting birth defects and disabilities. Beginning in 2000, the State of Alaska began extensive efforts to improve and expand the ability to appropriately diagnose individuals prenatally exposed to alcohol. In 2005, Alaska has a broad and regionally diverse network of diagnostic teams across the state.¹⁸ Data collected from these teams indicate that from July 2000 through March 2005 teams have conducted

¹⁵ FAS: *Guidelines for Referral and Diagnosis*, CDC, 2004.

¹⁶ CDC, *Tracking Fetal Alcohol Syndrome*, www.cdc.gov/ncbddd/fas/fassurv.htm

¹⁷ National Organization on Fetal Alcohol Syndrome, *What are the Statistics and Facts about FAS and FASD?*, www.nofas.org/faqs.aspx?id=12

¹⁸ For information on available services go to <http://health.hss.state.ak.us/fas/teams/default.htm>.

Full report is available online:

http://www.hss.state.ak.us/abada/pdf/mcdowell_rept2005_091307.pdf

755 FASD diagnostic assessments. Of this number, 76 (10.0 percent) were diagnosed with FAS or atypical FAS; 378 (49.9 percent) were diagnosed with Static Encephalopathy; 251 (32.2 percent) were diagnosed with Neurobehavioral Disorder; and 50 (6.6 percent) were found to have no evidence of organic brain damage.

What this data indicates is that the costs associated with all alcohol-related births are much higher than those estimated just for individuals with FAS. And, as noted in the break-through research of Dr. Ann Streissguth in 1996 (*Understanding the Occurrence of Secondary Disabilities in Clients with Fetal Alcohol Syndrome [FAS] and Fetal Alcohol Effects [FAE]*), individuals with FAE (what is now referred to as FASD) are more likely to develop secondary disabilities and need more services than those with Fetal Alcohol Syndrome and the associated facial dysmorphism. For Alaska and the economic costs associated with all fetal alcohol spectrum disorders, the costs could be as much as 80 percent higher than indicated for FAS alone.

Economic Cost of Fetal Alcohol Syndrome

The cost of caring for and providing appropriate services to a person with FAS can be significant. These costs may include neonatal care for low birth weight to special speech therapy, behavioral management, or residential care for adults with FAS. Lifetime costs for care for children born in 2003 with FAS are estimated below. However, these costs are excluded from the total health care costs for 2003, as the component of that expenditure in 2003 alone cannot be determined.

Methodology

To estimate the economic costs from FAS, the research team first determined the number of live births with FAS in Alaska. The Alaska Department of Health and Social Services has closely monitored incidence of FAS in the state since 1998, as part of a U.S. Centers for Disease Control (CDC) monitoring program called the Fetal Alcohol Syndrome Surveillance Network (FASSNet), the ongoing Alaska FAS Surveillance Project and the Alaska Birth Defects Registry. The development of 13 community-based FASD diagnostic teams across Alaska has also assisted in the collection of data related to both FAS and other alcohol-related disabilities included in the FASD umbrella definition.

The Alaska FAS Surveillance Project data collection system is based on reports to the Alaska Birth Defects Registry, and uses medical chart data points to identify children with FAS or other prenatal alcohol-related conditions. DHSS staff consider the surveillance program to be highly rigorous. Alaska clinicians and case workers use a diagnostic process developed by researchers at the University of Washington Fetal Alcohol Syndrome Diagnostic and Prevention Network. Reporting of birth defects to the state registry is mandated by Alaska law. While Alaska's FAS surveillance system is believed to capture the majority of prenatal alcohol-related cases, it is possible that underreporting could make the incidence rate even higher.

For birth years 1995 to 1999, the incidence rate of FAS in Alaska is 1.5 per 1,000 live births.¹⁹ This was the highest rate of the five states that were involved in developing

¹⁹ Susan Merrick, FAS Surveillance Project Manager, Alaska Department of Health and Social Services, personal communication, July 2005.

Full report is available online:

http://www.hss.state.ak.us/abada/pdf/mcdowell_rept2005_091307.pdf

the CDC FASSNet system. (The lowest rate was 0.3 FAS cases per 1,000 births.) However, the incidence of all prenatal alcohol-related conditions, including such conditions as alcohol-related birth defects (ARBD) and alcohol-related neurodevelopmental disorder (ARND), as well as FAS, is 16.3 per 1,000 live births. This incidence rate is assumed to be consistent in birth year 2003.

To estimate FAS costs in Alaska, the research team relied on data published in Health Professions Education Partnership Act of 1998 (Senate Bill 1754). The cost of treating an individual with FAS over his or her lifetime was estimated to be at least \$1.4 million in 1995. These costs could include neonatal intensive care, medical and surgical services (not related to neonatal care), special speech therapy, behavioral management, and residential care. Medical and surgical service might include rectifying or monitoring hearing loss or cleft palate surgery. Residential services include special education, home care, speech therapy or institutional care. The 1995 data was adjusted for inflation using the Bureau of Labor Statistics Consumer Price Index for medical care. Additionally, costs of providing care were adjusted by the Alaska differential for cost of living (65 percent in 2003). The resulting total lifetime costs (in 2003 dollars) for providing services to an individual with FAS are estimated at \$3.1 million.

The total cost for providing services to an individual with FAS born in Alaska during 2003 was estimated by multiplying the lifetime costs by the number of FAS births during that period.

Results

Table 18 presents estimated costs for FAS births in Alaska during 2003. During that period, Alaska had about 15 FAS births. Total economic costs resulting from services to all individuals with FAS in Alaska totaled approximately \$47.0 million.

Table 18
Lifetime Costs of Medical and Residential Services
for Children Born with FAS in 2003

	Incidence and Costs
Alaska births in 2003	10,084
FAS incidence per 1,000 live births	1.5
FAS births	15
Lifetime FAS cost	\$47,037,000

Senator Kevin Meyer
Alaska State Capitol
Juneau, AK 99801-1182

February 8, 2010

RE: SCR 12 Fetal Alcohol Spectrum Disorders Awareness Day Proclamation

Dear Senator Meyer,

I am writing this letter in support of Senate Concurrent Resolution No. 12 proclaiming September 9, 2010, as Fetal Alcohol Spectrum Disorders Awareness Day. I was planning to provide testimony by phone, but unfortunately, I am unable to break away from work.

Over the past 22 years as a behavioral health clinician I have witnessed firsthand the devastating consequences of prenatal alcohol and FASD for Alaska's families and communities.

Alaska unfortunately has the highest known rates of FAS/FASD in the United States. As you know, Alaska also ranks high in many other statistics such as domestic violence, sexual assault, and suicide. One of the secondary consequences of prenatal alcohol is that those with an FASD without adequate support often experience significant mental health problems, are at greater risk for suicide, and are frequently exploited and victimized.

Your efforts towards keeping FASD awareness active, and on the forefront of people's minds, will make a difference for Alaska's families and communities. This will happen by communicating the importance of awareness and taking action to prevent future FASD, as well as provide interventions for those who are already impacted.

Thank you for your efforts. If I can answer any questions, or be of help, please let me know.

Respectfully,

Michael Baldwin

5340 Tudor Top Circle
Anchorage, AK 99507
907-250-7736

Anchorage Council on Fetal Alcohol Spectrum Disorders

The Anchorage Council on FASD is a cooperative network of individuals and organizations committed to advocacy for people impacted by prenatal alcohol exposure and to the prevention of FASD.

To the members of the Alaska State Senate HSS Committee,

I am writing on behalf of the agencies, programs and community members that participate in the Anchorage Council on FASD asking the committee to support passage of SRC 12, relating to FASD Awareness Day, September 12, 2010.

Our council has been involved in FASD prevention, education and support activities for many years. One of our most intensive community outreach activities has been the annual International FASD Awareness Day events taking place each year on September 9 at 9:09 am for the last 10 years.

With Alaska having the highest know rate of Fetal Alcohol Spectrum Disorders in the United States, we believe it is imperative that prevention activities such as that proposed in this resolution be actively encouraged whenever possible.

Each year, members of more Alaskan communities get together to plan and conduct FASD prevention and education events on September 9. It will be wonderful to have the support of our legislature as we continue our work on this serious health issue.

We look forward to joining many other Alaskan communities putting on community - based FASD educational activities next 9/9 and encourage the members of the Senate HSS committee to approve SRC 12.

Sincerely,

Cheri Scott, facilitator

Re: SCR 12 — FASD Day

Dear Senator Meyer,

The Advisory Board on Alcoholism and Drug Abuse and the Alaska Mental Health Board express their appreciation and support for your resolution declaring September 9, 2010 Fetal Alcohol Spectrum Disorders Day. As you know, fetal alcohol spectrum disorders are 100% preventable. Raising awareness and recognition of this fact will help prevent more Alaskan children from being born affected by prenatal alcohol exposure.

Even more importantly, it will raise awareness of the special, and often very individual, needs of individuals diagnosed with fetal spectrum disorders. Too often the services and supports they need to thrive – at home, at school, and in their communities – are not available. By designating a day to focus on the unique issues of fetal alcohol spectrum disorders and their impact on Alaska, we can not only support Alaskans with FASD but also prevent future Alaskans from experiencing FASD.

Thank you for your continued work on this important issue.

Sincerely,

Debi Keith, Chair
AMHB

James Duncan, Chair
ABADA

Supporting families who care for children and youth with special needs

February 8, 2010,

To the members of the Alaska State Senate HSS Committee,

I am writing to ask the members of the Senate HSS committee to support passage of SRC 12, relating to FASD Awareness Day, September 12, 2010.

I manage the FASD Family Support Program housed at Stone Soup Group. This program provides FASD focused training to family members and service providers, information and referral services and support to families of children and adults who experience FASD.

I am also the adoptive parent of a young man who was severely affected by prenatal exposure to alcohol. We are one of the lucky families – our son is so impaired that he qualifies for many services and supports. Many of my friends and the families I work with every day are not so lucky. Their children look typical and so the world expects them to be able to function as if they didn't have organic brain damage from their prenatal alcohol exposure.

Our family has been proud to be part of the annual International FASD Awareness Day events taking place each year in Alaska on September 9 at 9:09 am for the last 10 years. We see it as an excellent opportunity to help educate the community about the needs of individuals living with FASD and the importance of preventing prenatal damage to future members of our community.

As both a service provider that works with families dealing with the issues of FASD everyday and as the parent of a wonderful child with FAS, I want to encourage the members of the Senate HSS committee to approve SRC 12 proclaiming September 9, 2010 Fetal Alcohol Spectrum Disorders Awareness Day, and continue to identify ways to assist our state in combating this terrible disorder that impacts every area of our state budget in one way or another.

Best Wishes,

A handwritten signature in black ink that reads "Cheri Scott".

Ms. Tilton,

Thank you for the email. I will place a copy of your message on each of the House Health and Social Services Committee members' desks at the hearing this afternoon. That way they will all be able to see it as they listen to testimony and talk about SCR 12.

Sincerely,

Liz Clement

Liz,

I would like to be heard. I am currently a Foster Parent with a beautiful Cognitively Disabled 12 year old who has introduced me to FASD. I want to learn as much as I can & being able to attend public functions would be a safe cooperative to do just that. I am hoping this e-mail will be considered a voice as I have an appointment this afternoon and am unable to speak by phone.....

Thank you for your time & efforts involving this very important matter.

Sincerely,

Kathleen M. Tilton

Sponsor Statement

SCR 13

"Supporting senior caregivers and encouraging the Department of Health and Social Services to provide additional education on the effects of aging and the importance of senior caregivers."

Alaska's senior population is growing. The number of Alaskans 65 years of age or older is expected to increase by 155 percent in the next 20 years and the population of those 85 years or older is projected to double by 2050. Per capita, Alaska has the fastest growing 85 and over population in the entire nation.

While advances in medicine, technology, and assisted living practices are enabling seniors to live longer, more productive, and more comfortable lives than ever before, the fact remains that many of our aging loved ones will at some point require some form of caregiving. In fact, more than 25 percent of all seniors need some level of assistance with their daily activities.

It is critical that we as a state are prepared to meet and manage the needs of our aging population.

By supporting senior caregivers and encouraging the Department of Health & Social Services to provide additional education on the effects of aging and the importance of senior caregivers, SCR 13 draws attention to the changing demographics of aging in Alaska and highlights the critical role played by senior caregivers in helping meet the needs of our aging population.

The Honorable Bettye Davis, Chair
Senate Health, Education and Social Services Committee
Alaska State Capitol, Room 30
Juneau, AK 99801-1182

Subject: Support for SCR 13, Senior Caregivers

Dear Chair Davis:

The Alaska Commission on Aging (ACoA) supports SCR 13, a bill that recognizes the important role of family and professional caregivers who care for older Alaskans, some of whom have Alzheimer's disease and related dementias (ADRD), by providing the assistance they need to remain in their homes and communities for as long as possible. The number of older Alaskans with Alzheimer's disease and related disorders is projected to nearly double within the next decade, based on national age-based prevalence rates, and quadruple by 2030. Fifty-eight percent of residents at the Pioneer Home have ADRD (Pioneer Home, January 2010 report). SCR 13, authored by Senators Con Bunde and Lesil McGuire, also highlights Alaska's demographic aging transition.

For the second year in a row, Alaska is the state with the fastest growing population of older adults age 65 years and older. Between 1998 and 2008, the number of Alaska seniors grew by over 50%, which is more than four times the national average.

The growth of the older Alaskan population is occurring at both ends of the senior age continuum – among the youngest seniors (age 60 to 64 years) many of whom moved to Alaska during the 1970s pipeline era, and the "oldest old," those age 85 years and older who are the most frail, the most prone to Alzheimer's disease and related disorders, and most in need of long-term support services. The graying of Alaska's population is creating substantial shifts for workforce, particularly in the health care and long-term support service sectors as demand increases and providers are becoming of retirement age.

Alaska's emphasis on caregiving performed by family and professional home- and community-based (HCBS) providers has made a significant difference in seniors' ability to remain at home; this is apparent in the increased average age of admission to the Pioneer Homes from 76 in 1998 to 86 in 2008. As a result of caregiver efforts, older Alaskans are able to continue living at home and in their communities, where they most desire to be, and spend fewer years in nursing homes when this care is most appropriate. Rates for a semi-private room in a nursing home will rise by 192% over the next twenty years, increasing from \$187,815 (in 2008) to \$549,662 by 2030 (Genworth Financial 2008 Cost of Care Study).

The majority of caregiving for persons with ADRD is performed by loved ones. In Alaska, there are approximately 14,539 unpaid ADRD caregivers who have contributed an estimated 12,550,265 hours of unpaid care that is valued at \$139,307,943 (Alzheimer's Association 2009). Without family caregivers, the state would be paying far more for Medicaid long-term support services.

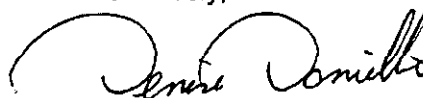

ACoA supports SCR 13 and its recommendations to regularly review state policies and programs to ensure they address the needs of Alaska seniors and their caregivers and for the Department of Health and Social Services to provide education about the aging process and the importance of senior caregivers. Please feel free to contact Denise Daniello, ACoA's executive director (465-4879), should you have any questions regarding our position. Thank you for your consideration.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

RE: SCR 13 (Bunde)--Support

Dear Chair Davis:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Health and Social Services Committee to support SCR 13, authored by Senator Con Bunde and co-sponsored by Senator Lesil McGuire.

SCR 13 puts a spotlight on the changing demographics of aging in Alaska and the critical role played by family caregivers.

The fastest growing age group in America is the eighty-five plus. Per capita, Alaska has the fastest growing eighty-five plus in the entire nation.

The eighty-five plus are the age group most likely to need some assistance with activities of daily living. The majority of this assistance is rendered by family caregivers.

Many Alaskan families will find themselves in a caregiving mode as our population ages. AARP supports the recommendation in SCR 13 that encourages the Department of Health and Social Services to provide education about caregiving to all of us and to support the efforts of family caregivers to take care of older relatives and friends.

Without family caregivers, government would face increasing demands for paid assistance for older citizens. This would significantly impact the Medicaid long term care program as well as the personal care attendant program.

Family caregivers don't "dump" their responsibilities on government. They step up to the plate and provide assistance as they are able. We often find caregivers in their 70's and 80's caring for older parents as well as frail spouses and siblings.

With a little help and support, Alaska can do much to help these caregivers continue to assist their family members. This is a legitimate and appropriate service for state and local government to render to those citizens who give so much of themselves.

We should shine a spotlight on these caregivers, recognize their efforts, and provide whatever education we can to help them maintain the independence of their family members and their own health and well-being.

AARP recommends an "AYE" vote on SCR 13.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Dear Senator Bunde,

On behalf of the Alzheimer's Resource of Alaska and the individuals we serve, I would like to thank you for introducing Senate Concurrent Resolution n.13 supporting caregivers of Alaska seniors.

Seniors choose to remain in their home and their community, with help from family, for as long as possible. Family caregivers are honoring their elder's wishes; more than 70% of people with Alzheimer's disease and related dementias (ADRD) live at home where they are cared for by family and friends. However, the demands of caregiving can come at a high cost to the caregiver's own physical and mental wellbeing. Caregiver stress is becoming a major health risk for caregivers.

Education and support services give caregivers tools and skills that enable them to maintain families' independence and are an effective mechanism for families to continue caring for a loved one in their own home and community. Families assume most of the responsibility for the care of the older family member while working, caring for children and holding other responsibilities. In the later stages, when some people with ADRD move to an assisted living facility or nursing home many family caregivers continue to assist with financial and legal affairs, medical care and emotional support. Some even continue to help with bathing, dressing and personal care needs.

Education for caregivers is a key component in the statewide *infrastructure* of senior care. Research shows that education and support services for the family caregivers can maintain this informal care longer and delay placement of the elder by an average of 1 1/2 years. State funding simply leverages the enormous contributions by families making education and support services highly cost-effective. We must increase our support of this informal, unpaid, caregiving network.

Thank you again for introducing SCR N. 13.

Sincerely,

Dulce Nobre
Executive Director

One Hundred Eleventh Congress
of the
United States of America

AT THE FIRST SESSION

*Begun and held at the City of Washington on Tuesday,
the sixth day of January, two thousand and nine*

Concurrent Resolution

Whereas 8,000 people in the United States turn 60 years old every day;

Whereas an estimated 35,900,000 people, 12.4 percent of the population, are 65 years of age and older;

Whereas the United States population age 65 and older is expected to more than double in the next 50 years to 86,700,000 in 2050;

Whereas the 85 and older population is projected to reach 9,600,000 in 2030 and double again to 20,900,000 in 2050;

Whereas it is estimated that 4,500,000 people in the United States have Alzheimer's disease today;

Whereas it is estimated that number will increase to between 11,300,000 and 16,000,000 by 2050;

Whereas 70 percent of people with Alzheimer's disease and other dementias live at home, and these individuals are examples of individuals who need assistance in their homes with their "activities of daily living";

Whereas currently over 25 percent of all seniors need some level of assistance with their "activities of daily living";

Whereas in order to address the surging population of seniors who have significant needs for in-home care, the field of senior caregiving will continue to grow;

Whereas there are an estimated 44,000,000 adults in the United States providing care to adult relatives or friends and an estimated 725,000 nonfamily private paid senior caregivers;

Whereas both unpaid family caregivers and paid caregivers work together to serve the daily living needs of seniors who live in their own homes;

Whereas the Department of Labor estimated that paid caregivers for the year 2006 worked a total of 835,000,000 hours, and the projected hours of paid senior caregivers are estimated to increase to 4,350,000,000 hours by 2025; and

Whereas the longer a senior is able to provide for his or her own care, the less burden is placed on public payment systems in State and Federal governments: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That Congress—

- (1) recognizes caregiving as a profession;
- (2) supports the private home care industry and the efforts of family caregivers nationwide by encouraging individuals to provide care to family, friends, and neighbors;

H. Con. Res. 59—2

- (3) encourages accessible and affordable care for seniors;
- (4) reviews Federal policies and supports current Federal programs which address the needs of seniors and their family caregivers; and
- (5) encourages the Secretary of Health and Human Services to continue working to educate people in the United States on the impact of aging and the importance of knowing the options available to seniors when they need care to meet their personal needs.

Attest:

Clerk of the House of Representatives.

Attest:

Secretary of the Senate.

Who are Family Caregivers?

What is Family Caregiving?

Caregiving Statistics

Surveys and Reports

Who are America's Family Caregivers?

[Suzanne Mintz on YouTube](#)

[Suzanne Mintz Interview on Women's Radio](#)

Rosalyn Carter said it best: "There are only four kinds of people in the world – those who have been caregivers, those who are currently caregivers, those who will be caregivers and those who will need caregivers". Caregivers are needed for family members of all ages. With appropriate information and support, family caregivers can help their loved ones across the lifespan.

So, who are family caregivers ... It's a complicated question and answers may vary depending upon whom you ask. Physicians may give an answer different from social workers and researchers may undoubtedly quote statistics. However, if you really want to know who America's family caregivers are, you need to ask them directly.

America's family caregivers are *family, friends, partners, and neighbors*. To better understand the experience and the meaning of being a family caregiver go to [The National Family Caregiver Story Project](#). The NFCA Story Project is a collection of first-person accounts by family caregivers. It is the gateway to becoming part of a growing group of family caregivers who have reached out to share their thoughts, feelings and find solace in the words of others. As you read the stories of America's family caregivers you may find yourself nodding in recognition and find the answers to [Who are America's Caregivers?](#)

Research and Statistics:

[NFCA Research and Reports](#) have focused largely, but not exclusively, on those family caregivers who provide significant levels of care. One aspect of our research has sought to better understand how to communicate effectively with family caregivers, since so many are uncomfortable with calling themselves anything other than a spouse, a parent, or a loving adult child.

There is an extensive body of family caregiver research available on many different aspects of the caregiving experience. You can find out more about the financial, physical and emotional impact of family caregiving as well as information on family caregivers at work and in the healthcare system in the [Caregiver Statistics](#) section of this site.

Senior Home Care Services

Everyone shares similar concerns about health care for our parents, grandparents and loved ones as they reach retirement age and beyond. Perhaps your mother gets confused and can't keep her doctor appointments and medications straight. Or your dad seems depressed and doesn't enjoy fishing anymore. Maybe your grandmother suffering from Alzheimer's needs regular attention while you're at work. That's when Home Instead Senior Care can come into the home and be the caregiver for you. [Learn more about how Home Instead Senior Care can help you care for the senior in your life.](#)

Are you seeing that your loved ones need home care as they age? Have you thought about a nursing home or assisted living facility but want to keep them in their home for as long as possible? Are you starting to wear out because of the impact the senior care you're providing is having at work and with your family members? Do you fear for a loved one's safety?

Home Instead Senior Care can help with compassionate, home senior care services delivered right in your loved one's home. Whether a few hours a day or long-term care 24 hours a day, a CAREGiver can assist you. All CAREGivers are thoroughly screened, extensively trained, insured and bonded, matched to your preferences, professional and reliable.

Senate Concurrent Resolution No. 13

My name is Kevin Turkington. I am the CEO of Senior Care of Alaska Inc, serving senior Alaskans since 2002, the board president of the Older Persons Action Group since 2003 and the newly formed Alaska Chapter of the National Private Duty Association, NPDA. The Alaska Chapter of the NPDA is result of four private, competing companies working together for those we feel a strong passion to serve and protect.

I am testifying in support of SCR13. I believe it can be the vehicle that brings a better balance to our states legislation and support for our ENTIRE senior population. So much of our resources appear to be focused on our low income seniors; and I agree that these senior individuals need that support. However, about 75 percent of the senior population are not eligible for most of these services.

The most profound statement of SCR13 is on line 11 and 12, which states: "*WHEREAS the longer seniors are able to provide for themselves, the less the public payment systems supported by state and federal governments are burdened*" I believe we as a state focus more on providing for low income persons; to the tune of about \$38,500¹ per person of the total 3676² recipients in the Medicaid Waiver program alone. These costs continue to rise as we increasingly throw more money into a system that over time seems to increase and even encourages dependence on it. There are providers³ who flat out tell seniors and their families that they need to get their loved ones into a 'spend-down' situation as soon as possible so as to use their services under Medicaid.

The recent Federal Audit and Moratorium of the Medicaid program in Alaska speaks loud and clear to the problems we as a state face, including the reality that the current system seems to pay for poor management and fraud, making serving the Medicaid system very lucrative for many. Ever wonder why about 90⁴ percent of agencies serving senior and disabled Alaskans are Medicaid providers? Guaranteed income! Add to that, it appears the state is even considering rewarding these organizations with more money through a review process if they find they aren't making enough profit providing services under Medicaid⁵.

I believe that the best way to serve seniors and lower the costs of doing so is by empowering both the senior and their providers whether by a family member or a professional caregiver. I believe that this can be accomplished best by filtering all current regulations and subsequent legislation through SCR13 and the powerful statement it makes on behalf of seniors and their families. I believe it says that we as a state really do care about our seniors, *all of them*.

I think that if we stay on a path we are currently on, throwing more and more of our resources towards a system that can't be sustained, we will not meet the challenge.

However, by recognizing seniors caregiving as a profession, by supporting the private duty home care industry and the efforts of family caregivers to provide care to family, friends and neighbors, by encouraging accessible and affordable care for ALL seniors, and provide the educational support on the effects of aging and the importance and availability of senior caregivers we will meet the challenge Alaska faces with the expected 157 percent⁶ growth of our senior population over the next 20 years.

I believe most of us really do care about those we propose to serve. I know I do. It's why I started my company and it's why I actively serve in the community with several organizations.

I believe that by providing a means, both in education and support for people to do for themselves and encourage less dependence on the State of Alaska will we be able to meet the challenges ahead. Medicaid was designed to help those individuals who just plain fall through the cracks, whether by choice or by no fault of their own. But widening the cracks isn't the answer.

I ask that you recommend passage of Senate Concurrent Resolution 13 and pledge to help support all of our seniors, making safe, affordable and professional care accessible, whether through family, friends or organizations. I can assure you that I will be doing so both through my company as well as through the organizations I serve with.

In service,

Kevin Turkington, CSA
