It is a well-known fact that when students stay in the same school for the whole school year, there is more opportunity for the student to be academically successful. The Anchorage School District and School Board have worked for years to help parents understand the importance of keeping their children in the same school as long as possible. In the case of homeless students, and those in foster care or awaiting foster care placement, we feel strongly that we need to follow the requirements of the McKinney-Vento Act for homeless students, which requires us to provide transportation to and from the student's original school for the school year. In the case of foster children and those awaiting placement, we support the language in this proposed legislation as long as there is some funding for this requirement. The Anchorage School District provided \$150,000 to supplement federal funding for transportation last year and would anticipate an increase again this year.

I commend Representatives Gara, Crawford, and Kerttula for bringing this legislation forward and hope that you will support its passage.

Please feel free to contact me at comeau_carol@asdk12.org if you have need for more information.

Sincerely yours,

Carol Comeau
Superintendent

Crisis Center · Community Services Center · Transitional Living

Representative Les Gara and Senator Bettye Davis
State Capitol
Juneau, AK 99801

February 23, 2009

Dear Representative Gara and Senator Davis,

Thank you for introducing legislation to address the needs of foster care youth, both while they are in the state's custody and when they "age-out" of the current system. Providing resources and support to our foster care children decreases the need for long-term public assistance and criminal justice resources. Responding to research that clearly identifies proven strategies for assisting our youth to independent adulthood is not only compassionate, it is fiscally sound policy.

Between 35% and 50% of foster care youth become homeless after being released from care. Covenant House Alaska (CHA) serves the homeless and at-risk youth of our state through four main programs (50% of CHA youth have been involved in the foster care system). Our Crisis Center provides shelter, food, clothing, primary health care and support resources to homeless youth. Our Community Services Center is a drop-in center that provides case management, employment assistance, educational tutoring, counseling and substance abuse referrals and life skills training. Two different programs, Rights of Passage and Passage House help youth transition to independent living and self-sufficiency. Youth can participate in either program for 18 months with up to 12 months of additional aftercare.

Through these programs, CHA is certain that increased job training, educational opportunities, rental assistance and social worker visits will benefit children in foster care. Similarly, offering consistency whenever possible through maintaining one school for children despite changes in foster care placement is essential. CHA appreciates the multi-faceted approach HB 126 and SB 105 offers.

Thank you for sponsoring this legislation and providing a voice to youth in foster care.

Sincerely,

A handwritten signature in cursive script that reads "Deirdre Cronin".

Les Gara
Alaska State Legislator
AK State Capitol Rm 500
Juneau, AK 99801

Dear Representative Gara:

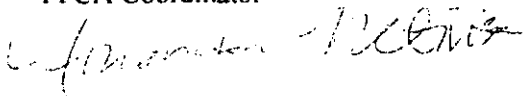

Your continued concern for Alaska's foster children and youth is admirable, and House Bill 126 demonstrates that concern.

As current and former foster youth of Alaska's child welfare system, we would like to thank you for your ongoing support in addressing the need for reform. Many of Alaska's foster children are being set up for failure due to a state system that is lacking many of the resources these young people need to succeed. Statistics show that youth who leave Alaska's foster care system become homeless at a rate of 40%, fall behind in their education, and have a high rate of adult incarceration. We wholeheartedly support your bill that creates opportunities for children and youth in foster care to succeed.

Thank you for your concern and your untiring pursuit to improve the lives of those who are less fortunate. You have our support.

Sincerely,

Amanda Metivier

Re: SUPPORT HB 126

Dear Representative Gara,

I am writing to express the support of Friends of Alaska CASA (FAC) for House Bill 126. This bill, as you know, will help foster youth transition more successfully from state care to independent living.

Currently 38% of foster youth aging out of the system end up homeless. This bill attempts to remedy this reality through several assistance measures, such as financial help for rent and other living expenses for up to a year after aging out, and tuition waivers for vocational or college education.

HB 126 will extend the applicability of transportation funding for foster youth so they can stay at the same school for an entire school year instead of transferring between different schools as is often the case. HB 126 will also require a quicker transfer of school records when kids do switch schools, thus easing the discomfort and disruption caused by the change.

Finally, HB 126 attempts to improve basic services within foster care. The most recent federal review of foster care in Alaska gave our state very low marks. HB 126 looks to set the bar higher by requiring the state meet federal once-a-month visit standards. Currently, some youth in care are only seen once every eight months, hardly sufficient to assist a young person with the myriad of difficult issues brought about by their unique circumstances.

Thank you for your consideration.

Sincerely,

Sallye Werner

March 11, 2009

To Members of the House Education Committee:

I am writing in support of CS for HB 126 (EDC) which relates to the education of students who are homeless or in foster care or awaiting foster care. As you know, we have a large and growing homeless population in our district; we also have a large and growing number of students awaiting placement in foster care or who are in foster care. One of the major challenges for these young people is finding stability in their lives, including being able to attend school on a regular basis.

It is a well-known fact that when students stay in the same school for the whole school year, there is more opportunity for the student to be academically successful. The Anchorage School District and School Board have worked for years to help parents understand the importance of keeping their children in the same school as long as possible. In the case of homeless students, and those in foster care or awaiting foster care placement, we feel strongly that we need to follow the requirements of the McKinney-Vento Act for homeless students, which requires us to provide transportation to and from the student's original school for the school year. In the case of foster children and those awaiting placement, we support the language in this proposed legislation as long as there is some funding for this requirement. The Anchorage School District provided \$150,000 to supplement federal funding for transportation last year and would anticipate an increase again this year.

I commend Representatives Gara, Crawford, and Kerttula for bringing this legislation forward and hope that you will support its passage.

Please feel free to contact me at comeau_carol@asdk12.org if you have need for more information.

POSITION PAPER

CONTACT: Valerie Davidson, Senior Director
Legal and Intergovernmental Affairs
Through Pat Jackson, State Liaison for Alaska Native Health
523-0363 – pajackson@anthc.org

DATE: April 8, 2009

RE: HB 168 – State certification and designation of trauma centers and creating the uncompensated trauma care fund
HB 169 – Appropriating \$5,000,000 to the uncompensated trauma care fund

POSITION: Support

ANTHC supports HB 168 and HB 169 as important steps in increasing the trauma care capacity in the state.

The Alaska Native Tribal Health Consortium (ANTHC) is a tribally controlled, non-profit statewide tribal health organization formed pursuant to federal law to provide a range of medical and community health services for more than 130,000 Alaska Natives. It is part of the Alaska Tribal Health System (ATHS), which is owned and managed by the 231 federally-recognized tribes in Alaska and by their respective regional health organizations.

ANTHC and Southcentral Foundation jointly manage the Alaska Native Medical Center (ANMC), the tertiary hospital of the ATHS located in Anchorage. ANMC is the only Level II Trauma Center in the Indian Health Service/tribal health system nationally. ANMC is also the only Level II Trauma Center in Alaska. The nearest Level I Trauma Center is in Seattle.

Trauma system development is a public health priority. A comprehensive system of trauma care is an essential part of the public safety net. Regionalized trauma systems based on a network of coordinated Trauma Centers designated at the appropriate level improves health outcomes and reduces costs. ANMC, as the highest level designated Trauma Center in the State of Alaska, is the lynchpin for the state's trauma system, and provides the foundation for continued statewide system development.

Trauma Center designations were created as a way to improve outcomes for patients who face extraordinary medical issues. On balance, early and appropriate medical attention to life-threatening health issues reduces overall length of stay in the hospital and reduced complications for many patients. Without trauma care, the costs of health care for trauma patients will be greater, including trauma patients who are Medicaid eligible.

The cost of providing trauma care at ANMC has more than doubled over the past four years and funding has not kept pace. ANMC's Trauma Center simply cannot be maintained at current revenue levels. If ANMC's Trauma Center designation is discontinued because funding levels have rendered the service unsustainable, the hospital faces reductions in staffing. Diversions of patients to non-tribal providers would increase, and because the federal government reimburses 100% of the cost of services provided for Native clients at Native facilities but a smaller percentage at non-tribal providers, there would be an increased cost to the state's general fund budget.

ANTHC supports HB 168 and HB 169 as important steps by the State to encourage and support appropriate trauma care options for Alaskans. Because we are Alaska's only Level II Trauma Center we recommend removing the language in section (d) on Page 2, Line 11, that limits appropriations to any one facility to 25%.

Thank you for your consideration.

-
- The primary intent with this bill is to help foster youth transition more successfully from state care to independent living. Currently between 30-40% of foster youth aging out of the system end up homeless. This bill attempts to remedy that through several assistance measures, such as financial help for rent and other living expenses for up to a year after aging out, and tuition waivers for vocational or college education.
- The bill also attempts to facilitate better academic success for foster youth, which has long term benefits through the transition out of care and into adulthood. HB126 will extend the applicability of transportation funding for foster youth so they can stay at the same school for an entire school year instead of bouncing around between different schools as is often the case. HB126 will also require a quicker transfer of school records when kids do switch schools, thus easing the discomfort and disruption caused by the change.
- The bill also attempts to improve basic services within foster care. The most recent federal review of foster care in Alaska gave our state very low marks. HB126 tries to set the bar higher by requiring the state meet federal once-a-month visit standards. Currently, some youth in care are only seen once every eight months, and this is hardly enough to know how a youth is coping with the myriad of difficult issues brought about by their unique circumstances.

Subject: HB 126

Dear Representative Keller,

I am writing today to let you know that I strongly support House Bill 126 which provides for necessary support to foster children making the transition from foster care to full adulthood. By definition, foster children have had many ups and downs in their lives under the best of conditions, and as a mother and an active member of my community in Kenai, I am well aware that the transition from teen to adult is a powerful, difficult, important, exciting and dangerous time for everyone regardless of circumstances. It is not the time for their support system to drop them and leave them to fend for themselves.

My own children are past this time, and still turn to their folks for strength and purpose in times of setbacks and questions. As guardians of these children, the State of Alaska has the privilege and duty to offer them support and guidance and in making the best choices available to these citizens. It'll not only give their lives more potential, but will strengthen our state and our nation now and for the next generations.

I urge you to vote yes on House Bill 126.

Representatives-

Please vote to support our foster kids with the benefits this bill will provide. I have been many hours over the years working with children; special needs, homeless and fostered kids there is great need for these kids of services.

Our state of Alaska is one that must do more to help those kids that are having a hard start in life and this is one of those ways. Providing the services that will allow them to transition into 'adulthood' with additional help its critical.

My husband and I, as residents of a 'bush' village are doing more each year to offer support where we can do children in our area.

This particular group of kids covered by this bill could see great benefits from just this small effort.

Please support passage of this bill.

Subject: HB126

Dear Members of the Health and Social Services Committee,

I am writing in support of the HB126 bill that is currently be reviewed and voted on this week. It is my understanding that approximately 40% of Alaska's foster youth end up homeless after coming out of foster care, and less than 10% end up going to college. This is not acceptable and we need to provide more support for those coming out of the foster care system. If we want productive, capable adults then let's help this group overcome the many obstacles that they face. Really the costs of this program will far outweigh the costs of doing nothing and putting this population in greater risk of ending up in the penal system or on social programs that will be much more costly over a lifetime. The loss of economic potential is enormous and we need to help these young adults become productive citizens of our state. Thank you for time and consideration of this legislation.

Sincerely,

Britteny A. Cioni

Subject: HB 126 Homeless Students

Dear Co-Chairs Herron and Keller, and Committee Members:

I am writing about CSHB 126 which will be heard by the House Health and Social Services Committee on Tuesday.

The Anchorage School District continues to support this bill, but some of the changes made by the Committee Substitute raise concerns.

1. The Committee Substitute added a provision requiring transportation during summer school. In the past, we have not provided transportation during summer school except for some of our Title I schools. Not all homeless students have a Title I school as their school of origin. In addition, not all schools of origin will be open during summer school. On its face, this language would require us to transport a homeless student to his or her school of origin even if the school of origin was closed for the summer.

Keeping a student in their school of origin during the regular school year is important. Keeping a student in the same school is less important during summer school because the teachers are different, the students in the school are different, and the curriculum is different. I ask that this new requirement be removed from the bill.

2. The Committee Substitute also removed a provision that currently exists in law and was in the original bill. That provision allowed for a waiver of the transportation requirement if the Superintendent found, in writing, that attending a different school was in the child's best interest. An example of when this waiver might be used is when a homeless child is living with relatives and the homeless student might be better off attending school with the other children in that household. A waiver could also be useful in a district like Kenai where it might not be in the student's best interest to be transported from Seward to the student's school of origin in Homer each day. Please re-insert the waiver provision that was in the original bill.

Thank you for your consideration.

REPRESENTATIVE PEGGY WILSON
HOUSE DISTRICT 2

SPONSOR STATEMENT House Bill 130

"An Act relating to questionnaires and surveys administered in the public schools."

HB 130 changes parental consent requirements for surveys in schools from active to passive for anonymous surveys. Written permission is still required for non-anonymous surveys. With this bill written denial of permission will be required for anonymous surveys.

School-based surveys are a reliable method for gathering valuable population-based information on youth that helps policy makers, educators, program planners and parents to better understand important health and social issues that affect their chances of program success.

Routine standardized surveys such as the national and state Youth Risk Behavior Survey track trends over time and help guide and evaluate important health and prevention programs. State and federal grant programs that rely on these surveys include tobacco prevention and control, obesity prevention, diabetes, heart disease and stroke, safe and drug free schools and other substance abuse prevention, injury prevention, including violence and suicide prevention, HIV and STD prevention, and more.

Current Alaska statute requires active parental consent on youth participation in surveys. Active parental consent requires written permission to participate in the survey. Active parental consent overburdens the school system and drastically increases the costs and labor involved in conducting student surveys.

Though research and experience suggests that the vast majority of parents would consent to their students participating in such surveys, many schools are unable to use the data they collect because there are not enough participants. Most of the research indicates parental failures to provide written permission are driven by apathy, oversight, or student error – not by refusal. With passive parental consent, the parent is notified and informed about the nature of the survey and allows for the parent to provide a written refusal to participate in the survey.

Notification of surveys and their content will still be sent to every parent of a child that is a candidate to participant in the survey. A parent will have the option of reviewing the entire survey and how it will be administered before it is administered. Any parent who doesn't want their child to participate will have the option to opt-out of the survey.

Sectional Analysis

House Bill 130

“An Act relating to questionnaires and surveys administered in public schools.”

Section 1. Requires a school district to get written permission to administer a questionnaire or survey. It exempts anonymous surveys. Surveys that concern public information are also exempted.

Section 2. Requires a school district to provide a parent or guardian the opportunity to deny permission to take an anonymous questionnaire or survey. Written permission is not required.

Section 3. Defines a 2 week time frame for school districts to notice parents of an upcoming questionnaire or survey so that they may either deny permission, for anonymous, or grant permission, for non-anonymous, surveys.

Section 4. Defines what a written notice must contain.

Section 5. Adds language to current statute that defines how a parent can deny permission for student to participate in an anonymous survey.

ANALYSIS: (Attach a separate page if necessary)

The Department of Education and Early Development is submitting a zero fiscal note for HB 130.

This legislation repeals and rewrites most of the initial language in AS 14.03.110 which deals in the approval process of administering questionnaires/surveys to students. It gives a parent or guardian the opportunity to submit a written denial of thier child to participate in the questionnaire/survey being administered by the principal or teacher.

Mayor Matt Claman

Health and Human Services Commission

Peggy Wilson, Representative
State Capitol, Room 408
Juneau, AK 99801-1182

March 11, 2009

Dear Representative Wilson,

I am writing to you as chair of the Municipality of Anchorage Health and Human Services Commission on behalf of our 15 members and the many health organizations we represent. We would like to thank you for all of your hard work and dedication to the state.

As the Health and Human Services Commission, our primary mission is to ensure the health and well-being of the Anchorage community. We rely on current information regarding the health and social status of the Anchorage community to determine our priorities and drive action. Critical to our mission is reliable community data including data about the health and well being of our City's youth.

The Municipality of Anchorage Health and Human Services Commission supports HB 130 "An Act relating to questionnaires and surveys administered in the public schools" to encourage greater participation in school-based surveys. Routine standardized surveys such as the national and state Youth Risk Behavior Survey track trends over time and help guide and evaluate important health and prevention programs. The overall statewide response rate to Youth Risk Behavioral Survey (YRBS) in 2005 was 55 percent, which did not meet the required response rate of 60 percent to make it a valid survey. The State was unable to use the data or publish the report since the data would not be representative of the high school population. Anchorage students are a critical sample for the success of YRBS because of they represent approximately 40% of all high school students in the state. The information gathered through school-based surveys is used to inform programs and initiatives about youth behavior that help drive prioritization of efforts to improve community health. An increase in survey participation improves the reliability and validity of survey responses significantly, which provides organizations like Municipality Department of Health and Human Services with critical, current information regarding the health and social status of youth in our community.

Again, thank you for your commitment to our state and its youth. I would appreciate the opportunity to talk with you on this matter at your convenience.

Sincerely,

Brian Saylor PhD MPH, Chair
Anchorage Health and Human Services Commission

Cc. Mayor Matt Claman
Diane Ingle, Director DHHS

textbook, advocates religion is not unconstitutional censorship. State statutes and regulations allowing local school boards to review and approve textbooks do not, on their face, violate the right of parents or students to freely exercise their religion. September 20, 2007 Op. Atty Gen.
Collateral references. Constitutionality of teaching or otherwise promoting secular humanism in public schools. 103 ALR Fed. 538.
 Constitutionality of regulation or policy governing prayer, meditation, or "moment of silence" in public schools. 110 ALR Fed. 211.
 Distribution or use of Bibles in public schools—modern case. 111 ALR Fed. 121.

Part-time school attendance. (a) Except as provided in (b) of this section, upon request, allow a child, including a child who is also a home-schooled student, or is being home schooled, to be a student in the district. A governing body may not discriminate and admit students or require that part-time students be enrolled until enrollment is completed.
 A governing body is not required to allow part-time enrollment if it would be denied even if the enrollee were a full-time student; or if it would result in an expenditure of public funds for the direct benefit of the student.
 Time spent under this section does not constitute attendance for the purposes of interscholastic or extracurricular student activities. 72 and 73 Op. Atty Gen. 120 SLA 1998.

and so long as the practice is not used by private schools on a widespread basis to provide the curriculum requirements of the private school. Enrollment in extracurricular activities is similarly neither prohibited nor required. June 24, 1993 Op. Atty Gen.

Use of school facilities. The governing body of a school district may use school facilities for any legal gatherings or assemblies. The governing body shall exercise reasonable and impartial use of the facilities.

Liability of public schools and institutions. Tort liability of public schools and institutions for injuries or property damage occurring during use of premises and equipment for other than school purposes. 35 ALR3d 712.
 Validity and construction of statute or ordinance forbidding unauthorized persons to enter upon or remain in school building or premises. 50 ALR3d 340.

Search of school lockers. (a) Subject to (b) of this section, a locker or storage container owned by the school or the school district may be searched

(c) Nothing in this section limits the ability of a peace officer, chief of police, or other appropriate person, acting in compliance with local, state, or federal law, to search a locker or other container provided in a public or private school district. (§ 5 ch 33 SLA 1995)

HB 1307

Sec. 14.03.110. Questionnaires and surveys administered in public schools.

(a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

- (1) how the questionnaire or survey will be administered to the student;
- (2) how the results of the survey or questionnaire will be used; and
- (3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students. (§ 1 ch 23 SLA 1979; am §§ 1, 2 ch 63 SLA 1999)

Opinions of attorney general. — AS 14.03.110 -- is long as survey questions are limited to the student's own activities and the survey does not ask the student questions about parents or other activities occurring within a student's home, the 1997 Youth

Behavior Risk Survey does not impermissibly invade the domain of the student's private 'family' affairs. September 28, 1998 Op. Atty Gen. (Issued before 1999 amendment to this section.)

Sec. 14.03.115. Access to school records by parent, foster parent, or guardian.

Upon request of a parent, foster parent, or guardian of a child under 18 years of age who is currently or was previously enrolled in a municipal school district or a school district that is a regional educational attendance area, the school district shall provide a copy of the child's record. This section does not apply to

(a) a record of a child who is an emancipated minor.

Planned Parenthood of the Great Northwest

March 9, 2009

The Honorable Peggy Wilson
Alaska State House Representative
State Capitol, Rm 403
Juneau, AK 99801-1182

Dear Representative Wilson:

On behalf of Planned Parenthood of the Great Northwest (PPGNW), I'm writing in support of House Bill 130, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Planned Parenthood relies on the results of the school-based Alaska Youth Behavior Risk Survey to determine where our efforts should be in terms of education and STI prevention programs. For accurate survey results it's critical to get as many survey responses as possible. Planned Parenthood recognizes that the current regulations of active parental consent for anonymous surveys decrease the response rate significantly.

House Bill 130 will increase the accuracy of the vital information Planned Parenthood and many other organizations rely on to serve Alaska's young people. Thank you for addressing this issue.

Sincerely,

Clover Simon
Vice President of Alaska
Planned Parenthood of the Great Northwest
(907) 770-9705

Pupil Rights Law Allows Parents to Opt Students Out of Surveys

[EMAIL THIS ARTICLE \[1-1\]](#)

In this issue

Disclosure of Health Information Sends School District to Court

A 1998 federal law, the Protection of Pupil Rights Amendment (PPRA), allows parents to inspect instructional materials used in connection with any U.S. Department of Education-funded "survey, analysis, or evaluation." The law, often called the "Hatch amendment" or the "Grassley amendment" for the members of Congress who introduced it, also requires schools to obtain written parental consent before minor students participate in Education Department-funded surveys that ask questions about personal or family matters.

Pupil Rights Law Allows Parents to Opt Students Out of Surveys

As the result of recent amendments to PPRA in the No Child Left Behind education law (Public Law 107-110, signed January 8, 2002), parents have additional rights to examine materials with regard to the surveying of minor students, even when the surveys are not Education Department-funded, and to opt their children out of surveys and certain non-emergency medical examinations.

Report Cites Effects on Communities When Families Lack Health Insurance

Worth Noting

The Family Policy Compliance Office (FPCO) in the U.S. Department of Education, which administers the Family Educational Rights and Privacy Act (FERPA), has responsibility for the expanded Protection of Pupil Rights law, also known as the "Tiahrt amendment."

Read comments from our readers

The original PPRA law required schools and contractors to make educational materials available for inspection by parents and provided a list of survey questions that would trigger the need for written parental permission. Those requirements remain in place. The trigger questions include inquiries about:

Feedback
Comments & questions

1. political affiliations or beliefs of the student or the student's parent;
2. mental and psychological problems of the student or the student's family;
3. sex behavior or attitudes;
4. illegal, anti-social, self-incriminating, or demeaning behavior;
5. critical appraisals of other individuals with whom students have close family relationships;
6. legally recognized privileged or analogous relationships, such as those with lawyers, physicians, and ministers;
7. religious practices, affiliations, or beliefs of the student or student's parent; or
8. income, other than that required by law to determine eligibility for participation in a program or for receiving financial assistance under such program.

Emerging issues

The PPRA compliance office in the U.S. Department of Education points out that these requirements apply when a survey is funded, at least in part, by any program administered by the U.S. Secretary of Education.

[Return to front page](#)

Under the Tiahrt amendment that took effect in 2002, additional requirements are now in place, and they apply as well to surveys funded by sources other than the U.S. Department of Education. The law now requires public elementary and secondary schools to "develop and adopt policies—in conjunction with parents," regarding:

1. the rights of parents to inspect, upon request, a survey created by a third party before the survey is administered or distributed by a school to students;
2. arrangements to protect student privacy in a survey if it includes any of the eight items noted above;
3. the right of parents to inspect any instructional materials used as part of the education curriculum;
4. administration of physical examinations or screenings that the school may administer to students;
5. collection, disclosure, or use of personal information collected from students for the purpose of marketing, selling;
6. the right of parents to inspect any instrument used in collecting information for marketing or selling.

Schools must notify parents of their PPRA policies at least once annually and must give parents ample opportunity to opt out (remove their child) from participation in surveys containing one or more of the eight items of information specified in the original law.

Parents are also allowed to remove their children from any non-emergency invasive physical examination or screening that is required for attendance or is not necessary to protect the immediate health and safety of the student or other students.

Explanation of the Protection of Pupil Rights Amendment is posted on the Education Department's Family Policy Compliance Office website at

<http://web.archive.org/web/20041030221359/http://www.ed.gov/offices/OM/fpco/ppra/index.html>. The compliance office indicates it will publish regs covering the new parts of the law.

ALASKA PUBLIC HEALTH ASSOCIATION

Committed To Advancing Alaska's Public Health Since 1978

ALPHA RESOLUTION 7-2008

Support for Passive Parental Consent for the Youth Risk Behavior Survey

Sponsor: Jayne Andreen

Whereas the Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1988 by the Centers for Disease Control and Prevention (CDC) to help monitor the prevalence of behaviors that put young people at risk for the most significant health and social problems that can occur during adolescence and adulthood.

Whereas the survey examines six categories of adolescent behavior including: 1) behaviors that result in unintentional and intentional injuries; 2) tobacco use; 3) alcohol and other drug use; 4) sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies; 5) dietary behaviors; and 6) physical activity.¹

Whereas Alaska's YRBS is a joint project between the Dept. of Education & Early Development and the Dept. of Health and Social Services and was established in Alaska in 1995.²

Whereas survey results are used at the national, state, and local level such as measuring progress towards the national Healthy People 2010 and the Healthy Alaskans 2010 health objectives.

Whereas, understanding the health risk behaviors of youth is critical for developing programs that address risk behaviors practiced and for measuring progress toward program goals.

Whereas Alaska's YRBS has been unable to collect reliable data consistently with the challenge of administering the survey under the active parental consent law AS 14.03.110, which requires written permission from all participating students' parents or legal guardians.²

Whereas employing active parental consent drastically increases costs and labor involved in conducting student surveys, and results in high failure rates for getting enough student responses to get usable data for larger surveys, and the potential for leading to inaccurate/misrepresentative data.³

ALPHA 7-2008
RESOLUTION 7

Whereas Alaska is one of only three states in the nation that has a school survey law requiring active parental consent for surveys of this type.³

Whereas most states employ passive parental consent when administering such surveys which involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.³

Whereas it is believed that the majority of parents consent to their students participating in such surveys and that most parental failures to provide active parental consent (written permission to participate) are driven by apathy, oversight, or student error, not by refusal.⁴

Whereas the survey is anonymous and voluntary.

Therefore be it resolved that the Alaska Public Health Association supports the content and the implementation of the Youth Risk Behavior Survey in Alaska with parental notification and passive parental consent

And be it further resolved that the Alaska Public Health Association supports changing the requirement for participation in the survey from active parental consent to passive parental consent.

Alaska BRFSS HIGHLIGHTS 2007

Behavioral Risk Factor Surveillance System

Introduction

Modification of risk behaviors that contribute to chronic disease, premature death and impaired quality of life is an important public health challenge. The Behavioral Risk Factor Surveillance System (BRFSS) collects information on risk factors, chronic disease prevalence and preventive practices that is essential for the development of chronic disease prevention and health promotion efforts aimed at modifying key risk factors. The BRFSS is conducted in all 50 states, the District of Columbia, Guam, Puerto Rico and the US Virgin Islands and is now the longest running and largest telephone health survey in the world. The State of Alaska began surveillance using the BRFSS in 1991 and has continued yearly since. The Alaska BRFSS is a collaborative project of the Centers for Disease Control and Prevention and the Alaska Division of Public Health.

Sarah Palin, Governor
State of Alaska

Karleen K. Jackson, Ph.D., Commissioner
Department of Health and Social Services

Beverly K. Wooley, Director
Division of Public Health

In 2007, 2,552 health interviews were conducted using a standardized BRFSS questionnaire. The interviews were conducted over the telephone from the Health Survey Lab in Juneau using randomly selected telephone numbers. Households were contacted and one adult 18 years of age or older per household was randomly selected to complete the survey. These data were weighted to represent the state's adult population. This report presents highlights from data collected in 2007.

Prevalence of Selected Risk Factors Among Alaskan Adults, 2007

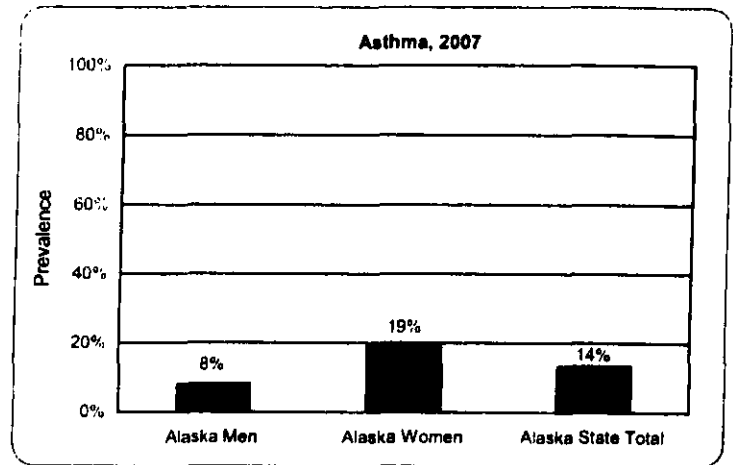

Diabetes

Diabetes increases the risk for heart disease and stroke and can result in blindness and renal disease. In 2007, 6% of Alaskan adults reported being told they have diabetes. There was no difference between men and women in the prevalence of diabetes.

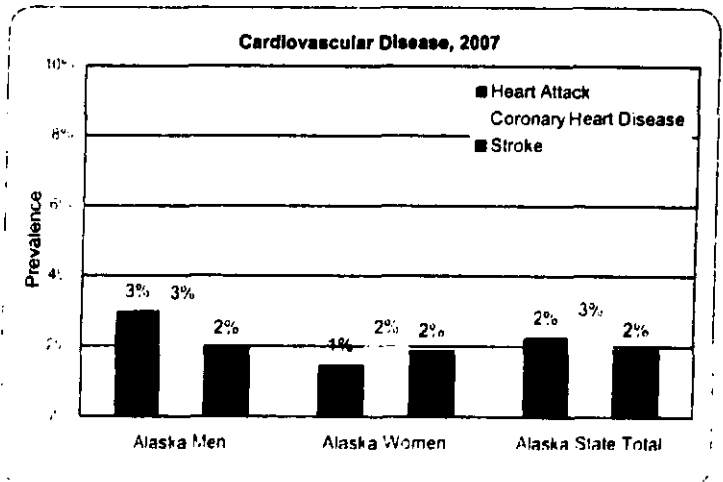

Asthma

Asthma is a leading cause of restricted activity. In 2007, 14% of Alaskan adults reported ever being told they have asthma. Significantly more women than men reported asthma.

Cardiovascular Disease

Heart disease is a leading cause of death in Alaska and the US as a whole. The BRFSS asks respondents if they have ever been told they have had a heart attack, been told they have coronary heart disease or been told they had a stroke. In 2007, 2% of Alaskan adults said they have had a heart attack, 3% said they have coronary heart disease and 2% said they have had a stroke.

Arthritis

In 2007, 25% of Alaskan adults reported being told by a doctor that they had arthritis. Arthritis covers a variety of different joint conditions and can affect people of all ages.

Risky teen behavior***State law compromises ability to assess how safe our kids are***

(06/03/08 23:28:47)

Everyone needs to know how safe Alaska teenagers are.

Fortunately, there's a way to find out.

An anonymous, scientific survey of young people sponsored by the federal Centers for Disease Control and Prevention shows trends in teens' behavior, from cigarette, alcohol and drug use to sex.

The Youth Risk Behavior Survey, just out for 2007, is a tested longtime report with controls for accuracy.

It tells adults how well they're addressing kids' problems within each state as well as nationally: Are anti-tobacco programs aimed at Alaska kids working? Are we sending an effective message about declining to ride with an impaired driver on prom night?

But trend information on Alaska kids is spotty because the state has erected unreasonable hurdles to getting students to participate.

In 2001 and 2003, because of those hurdles, Anchorage failed to get enough responses for a valid local version of the study. In 2005, the state didn't get enough responses back.

It's time to get rid of the obstacles.

It used to be that districts had to notify parents and give them a chance to opt out of the survey. Any student who wanted to could opt out on his own.

That worked well. State and local districts were able to survey randomly selected students and know that they represented a larger group.

In 1999, responding to parental complaints that the survey is too invasive and personal, the Legislature passed a law saying school districts must get written permission from parents in advance before a student may participate in even an anonymous survey that asks personal questions.

Alaska has to get at least 60 percent of the statewide students chosen in a random sample to participate before the survey results are usable -- before they can be deemed representative of all Alaska students.

Anchorage, to get valid local results, has to do the same.

Both the state and Anchorage achieved it this year, but only by spending tremendous effort and money. The state gave \$70,000 to districts to help them get the responses and still came up with

GUIDELINES FOR PASSIVE CONSENT

Based on recent change to state law,¹ CDE has determined that under certain circumstances LEAs conducting the California Healthy Kids Survey (CHKS) have the option of using passive parental consent, rather than active (written) consent as previously required.² Under passive-consent procedures, parents/guardians inform the school only if they *don't want* their child to participate in a study (opt out).³ To adopt passive consent, the following conditions must be met:

- The survey is limited to grades 7 through 12. Passive consent cannot be used below grade 7.⁴
- It is anonymous, confidential, and voluntary. Active consent must still be used if respondent data are linked to a respondent's name in any form or manner, such as in longitudinal tracked surveys.
- The school board formally adopts, in consultation with parents, a written passive consent policy for the administration of the CHKS (and any other survey or test) consistent with California Education Code sections 51513 and 51938(b) and the federal Protection of Pupil Rights Act (PPRA), 20 USC 1232h.
- Parents/guardians are notified in writing at the beginning of the school year about the survey and when it is to be administered, and given a reasonable opportunity to review the survey and to decline their child's participation (opt out).
- Parents/guardians are notified of any substantive changes in survey policies, dates, or content that occur after the initial notification.
- The parental notice contains all the required elements specified in the CHKS Guidebook for protection of human subjects and in the federal Protection of Pupil Rights Act.
- Questions are not added to the survey that elicit reports of parental attitudes or behaviors or any other category that requires active consent under Ed Code 51513 but not exempted under Ed Code 51938.

The following guidelines are designed to help you determine whether you should switch from written to passive consent and the steps you should take if you decide to make the change.

Benefits of Passive Consent

- Passive consent involves less cost and labor, particularly for the classroom teacher.
- If you have *not* been successful in meeting your target sample using written consent, passive consent will likely increase your response rates.
- Research also suggests that passive consent will result in a more representative sample, as many hard-to-reach subgroups, including groups at high-risk of substance use and other problem behaviors, are underrepresented in written consent surveys.⁵

¹ See Education Code 51938(b), which stipulates: "Notwithstanding Section 51513, anonymous, voluntary, and confidential research and evaluation tools to measure pupils' health behaviors and risks, including tests, questionnaires, and surveys containing age appropriate questions about the pupil's attitudes concerning or practices relating to sex may be administered to any pupil in grades 7 to 12, inclusive, if the parent or guardian is notified in writing that this test, questionnaire, or survey is to be administered and the pupil's parent or guardian is given the opportunity to review the test, questionnaire, or survey and to request in writing that his or her child not participate."

² Written consent requirements and strategies are detailed in the CHKS Guidebook, available online at www.wested.or.hks

³ As described in the CHKS Guidebook, under active-consent procedures parents must confirm in writing that they consent or not, usually by signing and returning a form. If a form is not returned, it must be assumed that parental permission is not granted.

⁴ Education Code 51938(b) authorizes passive consent only for grades 7 through 12 (see note 1)

Considerations for Changing from Active to Passive Consent

- **Written consent provides extra protection** against surveying a student whose parents did not receive notification or did not approve of participation but failed to inform the school. This extra protection may be important if risk behavior surveys are a sensitive issue in your community.
- If passive consent reduces the burden on the classroom teacher, **schools must take special precautions** to demonstrate that they made every reasonable effort possible to inform parents about the survey (and any subsequent changes) and to give them opportunities to opt out.
- If your sample changes (e.g., becomes more representative), it will **complicate interpretation of current trends**. Did student behavior change or the sample? Most research suggests reported AOD use will increase. WestEd will provide talking points to address this issue.
- **If you have been meeting your target response rates using written consent**, you might want to continue using it to avoid the issues listed above, especially if your district will still need to use written consent with 5th grade.

Recommendations for Passive Consent Implementation

Survey procedures must ensure that parents receive the consent materials, pay attention to them, and have sufficient time and opportunities to refuse participation. To assure PPRA compliance and reduce the risk of inadvertently surveying a child without parent permission, we recommend the following:

- **Stress that survey participation is voluntary in all communications.** This is a key requirement for the use of passive consent procedures in the PPRA. Notify students in writing and verbally (before survey administration) that they have the right to decline participation and to not answer any question that makes them uncomfortable. Make sure nothing is done that might cause a student to feel uncomfortable if he doesn't want to participate.
- **Send all consent information and forms via a method that guarantees receipt**, such as by mail. Preferably, use a method that documents receipt. For example, the information can be put into a parent handbook that the parent signs for.
- **Use multiple contact techniques.** Do everything possible to insure parents receive notification.
- **Make sure all materials are language appropriate** for parents with limited English reading ability.⁹
- **Make disapproval notification convenient.** Again, use multiple venues: a written form that can be turned into a teacher, a phone number to call, or email address. Each channel should reach a single person or office, identified in district policies, responsible for monitoring consent. This will help avoid parent refusals from slipping through the cracks.
- **Document** all your efforts to notify parents.

*For more information about consent procedures,
call your regional CHKS advisor at 888.841.7536.*

⁹ The application of active consent procedures to among no is voluntary surveys with rigorous data safeguards and minimal risks to students—such as the CHKS—has been criticized for jeopardizing access to essential information by imposing overly rigid, time-consuming consent procedures.

FAQs - Conducting In-School Surveys Written by Tasha Snyder, Agricultural Sciences

The school setting is an optimal location to survey large numbers of students for research projects. Before planning a data collection study, however, it is important to be aware of federal guidelines and policies that contain regulations relevant for researchers conducting in-school studies of youth. These guidelines have implications for sampling, the informed consent process, and survey content.

Q: What federal regulations should I be aware of before planning an in-school study of youth?

A: The two key federal regulations you need to be familiar with are the Family Education Rights and Privacy Act (FERPA) and the Protection of Pupil Rights Amendment (PPRA). Both federal regulations apply to any institution receiving funds from the U.S. Department of Education.

FERPA

Initially signed into law in 1974, FERPA regulations are periodically updated, most recently under the No Child Left Behind Act of 2001. The main function of FERPA is to protect parent's rights regarding inspection and modification of their child's educational records. Under FERPA regulations parents have the right to inspect their child's educational records, request a correction to any errors in those records, and **parent's written permission must be sought before releasing their child's educational records**. Schools may release limited contact information for students (name, address, phone number, attendance record, date and place of birth, honors and awards) without written parental permission, but parents must be notified of these requests and given the opportunity to request that their child's information not be released.

PPRA

Part of the FERPA and No Child Left Behind legislation, PPRA is designed to protect parent's and pupil's rights regarding inspection of any materials - as part of the instructional curriculum or study instruments - to which students are exposed. Instructional and survey materials must be made available for parents to review, and **schools must obtain written parental consent before their minor students participate in any study that asks about the following:**

- political affiliations or beliefs of the student or student's parents;
- mental and psychological problems that are potentially embarrassing to the student and/or his or her family;
- sexual behaviors and attitudes;
- illegal, antisocial, self incriminating and demeaning behavior;
- critical appraisals of family members;
- legally protected relationships, such as those with lawyers, clergy and physicians;
- religious practices or beliefs of the student or student's parents; or
- income

acceptance rather than being synonymous with refusal. Thus, the active written parental consent process that is required by PPRA could result in an unnecessarily large non-response rate, preventing students from participating in studies.

Regarding sample bias, Esbensen et al. (1999) provide strong evidence that the characteristics of the students whose parents did not respond were different from those whose parents responded, thus introducing bias into their sample. Comparing the pre-test sample with the sample of responders to the active parental consent, including those who allowed their children to participate and those who did not, revealed that the sample of responders was more likely to be white, to come from intact homes (two married parents), and to have parents with more than a high school education. In addition, parents of "at-risk" youth (positive attitudes towards and engagement in delinquent behaviors) were less likely to return consent forms at all. This study documents a selection bias introduced by the active parental consent procedure, and recommends that a mailing be sent home to parents notifying them of the study, and that the parents be given 2-3 weeks to deny their child's participation in the study, after which time period the consent is implied.

More recently, similar findings were reported when Henry et al. (2002) conducted an in-school study of 7th grade students in nine school districts in rural Pennsylvania. Active written parental consent was required for all students participating in their study, however, the project was able to access secondary data on several student characteristics for all eligible students--including GPA and absence from school--which allowed them to determine whether and how their sample was biased on these important characteristics. This study further made comparisons between the consent, non-consent, and non-response groups and determined not only if bias was introduced into their sample, but whether it originated from the non-consent group, the non-response group, or both. Findings revealed that the students whose parents declined their consent did not differ significantly from those whose parents provided consent, but that the students with non-responding parents did differ significantly from those who consented on two key educational variables. The students whose parents provided consent had fewer days of school absence and higher grade point averages compared to the students with non-responding parents. Thus, comparisons of the three groups (consenters, decliners, and non responders) find that the students eliminated from the study because of the lack of permission due to non-responders is the source of sample bias, not the presence of decliners. The result is that the Henry et al. (2002) sample represents students who are less "at-risk" for poor outcomes, thus introducing sample bias.

Both of these studies employed the numerous strategies suggested to increase return rates for active written parental consent. **These strategies include designing effective informational and consent forms, working with key school personnel, multiple mailings to parents, providing rewards for classrooms that have high return rates (such as pizza or ice cream parties), and following up with non-responders** (Esbensen et al., 1999; Fletcher and Hunter, 2003; Henry et al., 2002). Even though these strategies were implemented, both studies report biased samples due to the high degree of non-response associated with written active parental consent procedures.

Q: Yikes! So, what's a child and youth researcher planning to use in-school data collection to do?

A: Well, there really isn't much you can do to completely avoid sampling bias with in-school youth surveys of sensitive topics where active written parental consent is required. The FERPA and PPRA regulations were developed and instituted with the goal of protecting the rights and privacy of parents and students, not to promote easier access to students for research purposes.

Following the suggestions outlined above will help reduce bias in your study. Also keep in mind that sampling bias is an issue for most primary data collection studies.

acceptance rather than being synonymous with refusal. Thus, the active written parental consent process that is required by PPRA could result in an unnecessarily large non-response rate, preventing students from participating in studies.

Regarding sample bias, Esbensen et al. (1999) provide strong evidence that the characteristics of the students whose parents did not respond were different from those whose parents responded, thus introducing bias into their sample. Planned Parenthood of the Great Northwest

March 9, 2009

The Honorable Peggy Wilson
Alaska State House Representative
State Capitol, Rm 403
Juneau, AK 99801-1182

Dear Representative Wilson:

On behalf of Planned Parenthood of the Great Northwest (PPGNW), I'm writing in support of House Bill 130, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Planned Parenthood relies on the results of the school-based Alaska Youth Behavior Risk Survey to determine where our efforts should be in terms of education and STI prevention programs. For accurate survey results it's critical to get as many survey responses as possible. Planned Parenthood recognizes that the current regulations of active parental consent for anonymous surveys decrease the response rate significantly.

House Bill 130 will increase the accuracy of the vital information Planned Parenthood and many other organizations rely on to serve Alaska's young people. Thank you for addressing this issue.

Sincerely,

Clover Simon
Vice President of Alaska
Planned Parenthood of the Great Northwest
(907) 770-9705

Mayor Matt Claman

Health and Human Services Commission

Peggy Wilson, Representative
State Capitol, Room 408
Juneau, AK 99801-1182

March 11, 2009

Dear Representative Wilson,

I am writing to you as chair of the Municipality of Anchorage Health and Human Services Commission on behalf of our 15 members and the many health organizations we represent. We would like to thank you for all of your hard work and dedication to the state.

As the Health and Human Services Commission, our primary mission is to ensure the health and well-being of the Anchorage community. We rely on current information regarding the health and social status of the Anchorage community to determine our priorities and drive action. Critical to our mission is reliable community data including data about the health and well being of our City's youth.

The Municipality of Anchorage Health and Human Services Commission supports HB 130 "An Act relating to questionnaires and surveys administered in the public schools" to encourage greater participation in school-based surveys. Routine standardized surveys such as the national and state Youth Risk Behavior Survey track trends over time and help guide and evaluate important health and prevention programs. The overall statewide response rate to Youth Risk Behavioral Survey (YRBS) in 2005 was 55 percent, which did not meet the required response rate of 60 percent to make it a valid survey. The State was unable to use the data or publish the report since the data would not be representative of the high school population. Anchorage students are a critical sample for the success of YRBS because of they represent approximately 40% of all high school students in the state. The information gathered through school-based surveys is used to inform programs and initiatives about youth behavior that help drive prioritization of efforts to improve community health. An increase in survey participation improves the reliability and validity of survey responses significantly, which provides organizations like Municipality Department of Health and Human Services with critical, current information regarding the health and social status of youth in our community.

Again, thank you for your commitment to our state and its youth. I would appreciate the opportunity to talk with you on this matter at your convenience.

Sincerely,

Brian Saylor PhD MPH, Chair
Anchorage Health and Human Services Commission

Cc. Mayor Matt Claman
Diane Ingle, Director DHHS

Community, Security, Prosperity

Youth Risk Behavior Survey Background

The Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1988 by the Centers for Disease Control and Prevention (CDC). Its purpose is to help monitor the prevalence of behaviors that put young people at risk for the most significant health and social problems that can occur during adolescence and adulthood. It is an anonymous school-based survey of high school students and it is administered on the national and state level every other year. The survey examines six categories of adolescent behavior:

- behaviors that result in unintentional and intentional injuries;
- tobacco use;
- alcohol and other drug use;
- sexual behaviors that can result in HIV infection, other sexually transmitted diseases (STD's) and unintended pregnancies;
- dietary behaviors; and
- physical activity.

Value of the YRBS

The YRBS is the largest and most respected source of data of its kind in the US. Survey results have tremendous value at the national, state, and local level such as measuring progress towards the national Healthy People 2010 and the state Healthy Alaskans 2010 health objectives. Results allow health and educational professionals to track the prevalence of youth risk behaviors over time, to compare their state to other states or to the nation, and when conducted on the local level it allows local communities to measure themselves compared to the rest of the state.

Understanding the health risk behaviors of youth is critical for developing programs that address risk behaviors practiced in their jurisdiction and for measuring progress toward program goals.

YRBS in Alaska

Alaska's YRBS is a joint project between the Dept. of Education & Early Development and the Dept. of Health and Social Services. Alaska first participated in the YRBS in 1995 and has attempted to conduct the survey most every other year since then, with varying degrees of success. Alaska has produced statewide reports in 1995, 1999 (without Anchorage), and in 2003.

Typically 42 schools (approximately 20 districts) in Alaska are scientifically selected from among the high schools in Alaska to participate in the statewide survey. With their cooperation, classrooms from within each school are randomly selected to participate in the survey which generally results in just over 2,000 high school students being eligible to participate. In addition, school districts are given the option to conduct a survey of their entire district in order to gain a better understanding and measure of risk behaviors in their communities. Up to 20 districts each survey year opt to take advantage of this opportunity with the service provided free of charge by the state. In total the YRBS program distributes approximately 12-13,000 surveys for this purpose. Strict precautions are in place to absolutely ensure student confidentiality and participation in the survey is completely voluntary. Students answer the multiple choice questions about their current and past risk behaviors, which are collected and sent to the state for processing. State results are then shared federally with CDC.

Response Rates

In order to ensure that the YRBS data are representative of high schools in Alaska, the majority of surveys need to be completed. Alaska sets a minimum overall response rate of 60% to be able to confidently report the results. The overall response rate is calculated by multiplying the rate of participation of schools with the student response rate. The higher the response rate the more accurate the results. In general, participation rates in Alaska have improved (more schools selected are cooperative) but the student response rate has declined and jeopardized the survey. In 1995, 82% of schools participated and 78% of students in those schools completed the survey resulting in an overall response rate of 64%. In 2005, 93% of the schools participated and 59% of students completed the survey resulting in a 55% overall response rate which was not adequate.

Barriers to Success

A major barrier to success has been the active parental consent law which went into effect at the end of 1999. Alaska's active parental consent law, AS 14.03.110, prohibits schools from administering surveys or questionnaires at public schools that inquire into personal or family affairs, or anything else that is not a matter of public record or readily observable in public (regardless of whether or not the surveys are anonymous and voluntary) without first getting written permission from all participating students' parents or legal guardians. Alaska is one of only two or three states in the nation that has a school survey law requiring active parental consent for surveys of this type. Most states employ passive parental consent when administering such surveys. Passive parental consent involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.

Advantages to active parental consent are greater parental involvement and less risk of students being included in surveys without parental approval. Disadvantages of active parental consent include the drastically increased costs and labor involved in conducting student surveys, the high failure rates for getting enough student responses to get usable data for larger surveys, and the potential for leading to inaccurate/misrepresentative data. Research and our experience suggests that the vast majority of parents consent to their students participating in such surveys and that most parental failures to provide written permission are driven by apathy, oversight, or student error, not by refusal.

Costs

In recent years (since the enactment of active parental consent) more and more resources (time and money) have been spent on YRBS. Since the process of active parental consent places more of a burden on the school administrators and staff, the EED has offered financial incentives to participating schools since 2003 and costs have more doubled. This money has helped schools implement the survey but has not guaranteed its success as far as student response rates. This does not include the basic expense of operating the YRBS, such as the costs for supplies, copying, shipping and staff time.

Support for YRBS in Alaska

The YRBS in Alaska is endorsed by:

- Association of Alaska School Boards
- Alaska Action for Healthy Kids
- All Alaska Pediatric Partnership
- American Heart Association, Pacific/Mountain Affiliate
- American Lung Association of Alaska
- American Cancer Society, Alaska
- Alaska Health Education Consortium
- Alaska Tobacco Control Alliance
- Alaska Native Tribal Health Consortium

For more information on YRBS[®] system visit <http://www.cdc.gov/healthyyouth/yrbs/index.htm> or <http://www.hss.state.ak.us/dph/chronic/school/YRBS.htm> or contact Patty Owen, YRBS Coordinator, DHSS, Division of Public Health, 465-2768 or Patty_Owen@health.state.ak.us

Subject: RE: HB 130 & HB 215

I apologize for taking the easy way out on these bills, but I agree with School Board President Friedman on these issues. I would hope that some discussions during the interim would involve some serious looking at all aspects of a second count, or alternately, a separate fund like a grant for extra enrollment.

Thanks very much,
Carol

Subject: HB 130 & HB 215

Dear Chair Seaton and Committee Members:

These two bills will be heard by the House Education Committee on Friday.

The Anchorage School Board is in favor of HB 130. We believe we need the flexibility to administer anonymous surveys without going to the expense of attempting to get parental permission from enough parents so the data collected is valid. It isn't that parents tend to object, it's just that the permission form sometimes gets lost along the way. We would still be required to notify parents so they had an opportunity to refuse permission. Parents who do object to these surveys tend to be well informed and get their objections in. The data from these surveys, when valid, helps us address serious social problems such as teen pregnancy and illegal drug use.

HB 215 is fairly new, and the Anchorage School Board has not had time to take a position on this bill. Our administration has noted some potential concerns. First, count periods cost money and time. Conducting a second count will divert resources from the classroom to various administrative functions in our Records, IT, Accounting, and other departments.

Second, there may not be sufficient time between submitting the second count on March 15 for DEED to do its OASIS verification before making its April 15 payment to districts.

This could result in double payments to districts for the same child.

A second count period certainly has some advantages. However, it must be remembered that most schools issue contracts to staff through the end of a school year. If we hire an aide in August to assist a special education student, we can not terminate that aide simply because the special education student moved to Palmer in February. On the other hand, the Mat-Su district can't get additional funding to hire an aide of its own when that student moves without a second count period. That is why ASD previously suggested a small discretionary fund within DEED that districts could apply for when students moved during the year. That might be a more equitable way to handle the movement of some of these more expensive children during the school year.

HB 215 is complex, and may have many consequences, both intended and unintended. I hope the committee takes time to analyze this bill thoroughly and gives districts time to weigh in on this over the interim before the bill moves on.

These risk behaviors among high school students' ...

Unintentional Injuries and Violence

- 7% Rarely or never wore a seat belt
- 24% Rode with a driver who had been drinking alcohol, during the past month
- 24% Carried a weapon during the past month
- 29% Were in a physical fight during the past year
- 11% Attempted suicide during the past year

Alcohol and Other Drug Use

- 40% Drank alcohol during the past month
- 26% Reported episodic heavy drinking during the past month²
- 21% Used marijuana during the past month
- 8% Ever used cocaine
- 14% Ever used inhalants

Sexual Behaviors

- 45% Ever had sexual intercourse
- 13% Had sexual intercourse with ≥ 4 people
- 31% Had sexual intercourse during the past three months
- 39% Did not use a condom during last sexual intercourse³

Tobacco Use

- 53% Ever tried cigarette smoking
- 18% Smoked cigarettes during the past month
- 7% Smoked cigarettes on ≥ 20 days during the past month
- 10% Used smokeless tobacco during the past month
- 10% Smoked cigars during the past month

Dietary Behaviors

- 84% Ate fruits and vegetables < 5 times/day during the past 7 days
- 22% Drank soda or pop one or more times a day during the past 7 days (not including diet soda or pop)

Physical Activity

- 58% Did not meet currently recommended levels of physical activity⁴
- 53% Did not attend physical education class
- 82% Did not attend physical education class daily

Overweight

- 16% Were overweight⁵
- 11% Were obese⁶

... contribute to these leading causes of death⁷

Youth Aged 10-24 Years

Adults Aged 25 Years and Older

¹ High school students grades 9-12 in Alaska excluding alternative schools and boarding schools, weighted data.

² Students who had five or more drinks of alcohol in a row within a couple of hours on at least 1 day during the past 30 days

³ Among students who had sexual intercourse during the past 3 months.

⁴ Students who were not physically active for a total of at least 60 minutes per day on 5 or more days of the past 7 days.

⁵ Students who were at or above the 85th percentile but below the 95th percentile for body mass index by age and sex.

⁶ Students who were at or above the 95th percentile for body mass index by age and sex.

⁷ 2003-2005 Alaska mortality data, Centers for Disease Control and Prevention.

The Alaska Youth Risk Behavior Survey is a joint project between the Department of Health and Social Services and the Department of Education & Early Development in cooperation with the Centers for Disease Control and Prevention

2009 Alaska Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to develop better health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When you are finished, follow the instructions of the person giving you the survey.

Thank you very much for your help.

Directions

- Use a #2 pencil only.
- Make dark marks.
- Fill in a response like this: A B ● D.
- If you change your answer, erase your old answer completely.

1. How old are you?
 - A. 12 years old or younger
 - B. 13 years old
 - C. 14 years old
 - D. 15 years old
 - E. 16 years old
 - F. 17 years old
 - G. 18 years old
 - H. 19 years old or older

2. What is your sex?
 - A. Female
 - B. Male

3. In what grade are you?
 - A. 9th grade
 - B. 10th grade
 - C. 11th grade
 - D. 12th grade
 - E. Ungraded or other grade

4. Are you Hispanic or Latino?
 - A. Yes
 - B. No

5. What is your race? (Select one or more responses.)
 - A. American Indian or Alaska Native
 - B. Asian
 - C. Black or African American
 - D. Native Hawaiian or Other Pacific Islander
 - E. White

6. How tall are you without your shoes on?

Directions: Write your height in the shaded blank boxes. Fill in the matching oval below each number.

Example

Height	
Feet	Inches
5	7
③	⑩
④	①
●	②
⑤	③
⑦	④
	⑤
	⑥
	●
	⑧
	⑨
	⑩
	⑪

7. How much do you weigh without your shoes on?

Directions: Write your weight in the shaded blank boxes. Fill in the matching oval below each number.

Example

Weight Pounds		
1	5	2
①	⑩	⑪
●	①	①
②	②	●
③	③	③
	④	④
	●	⑤
	⑥	⑥
	⑦	⑦
	⑧	⑧
	⑨	⑨

8. During the past 12 months, how would you describe your grades in school?
- A. Mostly A's
 - B. Mostly B's
 - C. Mostly C's
 - D. Mostly D's
 - E. Mostly F's
 - F. None of these grades
 - G. Not sure

E. 6 or more times

The next 4 questions ask about safety.

9. **When you rode a bicycle during the past 12 months, how often did you wear a helmet?**
- A. I did not ride a bicycle during the past 12 months
 - B. Never wore a helmet
 - C. Rarely wore a helmet
 - D. Sometimes wore a helmet
 - E. Most of the time wore a helmet
 - F. Always wore a helmet
10. How often do you wear a seat belt when **riding** in a car driven by someone else?
- A. Never
 - B. Rarely
 - C. Sometimes
 - D. Most of the time
 - E. Always
11. During the past 30 days, how many times did you **ride** in a car or other vehicle **driven by someone who had been drinking alcohol?**
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times
12. During the past 30 days, how many times did you **drive** a car or other vehicle **when you had been drinking alcohol?**
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times

The next 10 questions ask about violence-related behaviors.

13. During the past 30 days, on how many days did you carry a **weapon** such as a gun, knife, or club?
- A. 0 days
 - B. 1 day
 - C. 2 or 3 days
 - D. 4 or 5 days
 - E. 6 or more days
14. During the past 30 days, on how many days did you carry a **gun**?
- A. 0 days
 - B. 1 day
 - C. 2 or 3 days
 - D. 4 or 5 days
 - E. 6 or more days
15. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club **on school property**?
- A. 0 days
 - B. 1 day
 - C. 2 or 3 days
 - D. 4 or 5 days
 - E. 6 or more days
16. During the past 30 days, on how many days did you **not** go to school because you felt you would be unsafe at school or on your way to or from school?
- A. 0 days
 - B. 1 day
 - C. 2 or 3 days
 - D. 4 or 5 days
 - E. 6 or more days
17. During the past 12 months, how many times has someone threatened or injured you with a weapon such as a gun, knife, or club **on school property**?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or 7 times
 - F. 8 or 9 times

- G. 10 or 11 times
- H. 12 or more times

18. During the past 12 months, how many times were you in a physical fight?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or 7 times
 - F. 8 or 9 times
 - G. 10 or 11 times
 - H. 12 or more times
19. During the past 12 months, how many times were you in a physical fight in which you were injured and had to be treated by a doctor or nurse?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times
20. During the past 12 months, how many times were you in a physical fight on school property?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or 7 times
 - F. 8 or 9 times
 - G. 10 or 11 times
 - H. 12 or more times
21. During the past 12 months, did your boyfriend or girlfriend ever hit, slap, or physically hurt you on purpose?
- A. Yes
 - B. No
22. Have you ever been physically forced to have sexual intercourse when you did not want to?
- A. Yes
 - B. No

The next question asks about bullying. **Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.**

23. During the past 12 months, have you ever been bullied on school property?
- A. Yes
 - B. No

The next 5 questions ask about sad feelings and attempted suicide. **Sometimes people feel so depressed about the future that they may consider attempting suicide, that is, taking some action to end their own life.**

24. During the past 12 months, did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?
- A. Yes
 - B. No
25. During the past 12 months, did you ever seriously consider attempting suicide?
- A. Yes
 - B. No
26. During the past 12 months, did you make a plan about how you would attempt suicide?
- A. Yes
 - B. No
27. During the past 12 months, how many times did you actually attempt suicide?
- A. 0 times
 - B. 1 time
 - C. 2 or 3 times
 - D. 4 or 5 times
 - E. 6 or more times

28. **If you attempted suicide** during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
- A. **I did not attempt suicide** during the past 12 months
 - B. Yes
 - C. No

The next 13 questions ask about tobacco use.

29. Have you ever tried cigarette smoking, even one or two puffs?
- A. Yes
 - B. No
30. How old were you when you smoked a whole cigarette for the first time?
- A. I have never smoked a whole cigarette
 - B. 8 years old or younger
 - C. 9 or 10 years old
 - D. 11 or 12 years old
 - E. 13 or 14 years old
 - F. 15 or 16 years old
 - G. 17 years old or older
31. During the past 30 days, on how many days did you smoke cigarettes?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
32. During the past 30 days, on the days you smoked, how many cigarettes did you smoke **per day**?
- A. I did not smoke cigarettes during the past 30 days
 - B. Less than 1 cigarette per day
 - C. 1 cigarette per day
 - D. 2 to 5 cigarettes per day
 - E. 6 to 10 cigarettes per day
 - F. 11 to 20 cigarettes per day
 - G. More than 20 cigarettes per day

33. During the past 30 days, how did you **usually** get your own cigarettes? (Select only **one** response.)
- A. I did not smoke cigarettes during the past 30 days
 - B. I bought them in a store such as a convenience store, supermarket, discount store, or gas station
 - C. I bought them from a vending machine
 - D. I gave someone else money to buy them for me
 - E. I borrowed (or bummed) them from someone else
 - F. A person 18 years old or older gave them to me
 - G. I took them from a store or family member
 - H. I got them some other way
34. During the past 30 days, on how many days did you smoke cigarettes **on school property**?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
35. Have you ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days?
- A. Yes
 - B. No
36. During the past 12 months, did you ever try **to quit** smoking cigarettes?
- A. I did not smoke during the past 12 months
 - B. Yes
 - C. No
37. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip**, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits, or Copenhagen?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
38. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip on school property**?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
39. During the past 30 days, on how many days did you smoke **cigars, cigarillos, or little cigars**?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days
40. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
 - G. 6 days
 - H. 7 days

41. How much do you think people risk harming themselves (physically or in other ways), if they smoke one or more packs of cigarettes per day?
- A. No risk
 - B. Slight risk
 - C. Moderate risk
 - D. Great risk

The next 7 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes.

42. During your life, on how many days have you had at least one drink of alcohol?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 9 days
 - D. 10 to 19 days
 - E. 20 to 39 days
 - F. 40 to 99 days
 - G. 100 or more days
43. How old were you when you had your first drink of alcohol other than a few sips?
- A. I have never had a drink of alcohol other than a few sips
 - B. 8 years old or younger
 - C. 9 or 10 years old
 - D. 11 or 12 years old
 - E. 13 or 14 years old
 - F. 15 or 16 years old
 - G. 17 years old or older
44. During the past 30 days, on how many days did you have at least one drink of alcohol?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days

45. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 to 5 days
 - E. 6 to 9 days
 - F. 10 to 19 days
 - G. 20 or more days

46. During the past 30 days, how did you **usually** get the alcohol you drank?
- A. I did not drink alcohol during the past 30 days
 - B. I bought it in a store such as a liquor store, convenience store, supermarket, discount store, or gas station
 - C. I bought it at a restaurant, bar, or club
 - D. I bought it at a public event such as a concert or sporting event
 - E. I gave someone else money to buy it for me
 - F. Someone gave it to me
 - G. I took it from a store or family member
 - H. I got it some other way

47. During the past 30 days, on how many days did you have at least one drink of alcohol **on school property**?
- A. 0 days
 - B. 1 or 2 days
 - C. 3 to 5 days
 - D. 6 to 9 days
 - E. 10 to 19 days
 - F. 20 to 29 days
 - G. All 30 days

48. How much do you think people risk harming themselves (physically or in other ways), if they have one or two drinks of an alcoholic beverage (beer, wine, or liquor) nearly every day?
- A. No risk

- B. Slight risk
- C. Moderate risk
- D. Great risk

The next 5 questions ask about marijuana use. Marijuana also is called grass or pot.

- 49. During your life, how many times have you used marijuana?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 to 99 times
 - G. 100 or more times

- 50. How old were you when you tried marijuana for the first time?
 - A. I have never tried marijuana
 - B. 8 years old or younger
 - C. 9 or 10 years old
 - D. 11 or 12 years old
 - E. 13 or 14 years old
 - F. 15 or 16 years old
 - G. 17 years old or older

- 51. During the past 30 days, how many times did you use marijuana?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times

- 52. During the past 30 days, how many times did you use marijuana on school property?
 - A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times

- 53. How much do you think people risk harming themselves (physically or in other ways), if they smoke marijuana regularly?
 - A. No risk
 - B. Slight risk
 - C. Moderate risk
 - D. Great risk

The next 9 questions ask about other drugs.

54. During your life, how many times have you used **any** form of cocaine, including powder, crack, or freebase?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
55. During the past 30 days, how many times did you use **any** form of cocaine, including powder, crack, or freebase?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
56. During your life, how many times have you sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
57. During your life, how many times have you used **heroin** (also called smack, junk, or China White)?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times

58. During your life, how many times have you used **methamphetamines** (also called speed, crystal, crank, or ice)?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
59. During your life, how many times have you used **ecstasy** (also called MDMA)?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
60. During your life, how many times have you used a needle to inject any **illegal** drug into your body?
- A. 0 times
 - B. 1 time
 - C. 2 or more times
61. During your life, how many times have you taken a **prescription drug** (such as OxyContin, Percocet, Vicodin, Adderall, Ritalin, or Xanax) without a doctor's prescription?
- A. 0 times
 - B. 1 or 2 times
 - C. 3 to 9 times
 - D. 10 to 19 times
 - E. 20 to 39 times
 - F. 40 or more times
62. During the past 12 months, has anyone offered, sold, or given you an illegal drug **on school property**?
- A. Yes
 - B. No

The next 7 questions ask about sexual behavior.

63. Have you ever had sexual intercourse?

- A. Yes
- B. No

- 64. How old were you when you had sexual intercourse for the first time?
 - A. I have never had sexual intercourse
 - B. 11 years old or younger
 - C. 12 years old
 - D. 13 years old
 - E. 14 years old
 - F. 15 years old
 - G. 16 years old
 - H. 17 years old or older

- 65. During your life, with how many people have you had sexual intercourse?
 - A. I have never had sexual intercourse
 - B. 1 person
 - C. 2 people
 - D. 3 people
 - E. 4 people
 - F. 5 people
 - G. 6 or more people

- 66. During the past 3 months, with how many people did you have sexual intercourse?
 - A. I have never had sexual intercourse
 - B. I have had sexual intercourse, but not during the past 3 months
 - C. 1 person
 - D. 2 people
 - E. 3 people
 - F. 4 people
 - G. 5 people
 - H. 6 or more people

- 67. Did you drink alcohol or use drugs before you had sexual intercourse the **last time**?
 - A. I have never had sexual intercourse
 - B. Yes
 - C. No

- 68. The **last time** you had sexual intercourse, did you or your partner use a condom?

- A. I have never had sexual intercourse
- B. Yes
- C. No

69. The **last time** you had sexual intercourse, what **one** method did you or your partner use to **prevent pregnancy**? (Select only **one** response.)
- A. I have never had sexual intercourse
 - B. No method was used to prevent pregnancy
 - C. Birth control pills
 - D. Condoms
 - E. Depo-Provera (injectable birth control)
 - F. Withdrawal
 - G. Some other method
 - H. Not sure

The next 4 questions ask about body weight.

70. How do **you** describe your weight?
- A. Very underweight
 - B. Slightly underweight
 - C. About the right weight
 - D. Slightly overweight
 - E. Very overweight
71. Which of the following are you trying to do about your weight?
- A. **Lose** weight
 - B. **Gain** weight
 - C. **Stay** the same weight
 - D. I am **not trying to do anything** about my weight
72. During the past 30 days, did you **exercise** to lose weight or to keep from gaining weight?
- A. Yes
 - B. No
73. During the past 30 days, did you **eat less food, fewer calories, or foods low in fat** to lose weight or to keep from gaining weight?
- A. Yes
 - B. No

The next 9 questions ask about food you ate or drank during the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

74. During the past 7 days, how many times did you drink **100% fruit juices** such as orange juice, apple juice, or grape juice? (Do **not** count punch, Kool-Aid, sports drinks, or other fruit-flavored drinks.)
- A. I did not drink 100% fruit juice during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
75. During the past 7 days, how many times did you eat **fruit**? (Do **not** count fruit juice.)
- A. I did not eat fruit during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
76. During the past 7 days, how many times did you eat **green salad**?
- A. I did not eat green salad during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
77. During the past 7 days, how many times did you eat **potatoes**? (Do **not** count french fries, fried potatoes, or potato chips.)
- A. I did not eat potatoes during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
78. During the past 7 days, how many times did you eat **carrots**?
- A. I did not eat carrots during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
79. During the past 7 days, how many times did you eat **other vegetables**? (Do **not** count green salad, potatoes, or carrots.)
- A. I did not eat other vegetables during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day

80. During the past 7 days, how many times did you drink a **can, bottle, or glass of soda or pop**, such as Coke, Pepsi, or Sprite? (Do **not** include diet soda or diet pop.)
- A. I did not drink soda or pop during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
81. During the past 7 days, how many times did you drink a **can, bottle, or glass of a sugar sweetened drink**, such as sports drinks, sweetened energy drinks, Snapple, fruit punch, Kool-Aid, Tang, or Capri-Sun? (Do **not** include soda or pop, diet drinks, or 100% fruit juice.)
- A. I did not drink sugar sweetened drinks during the past 7 days
 - B. 1 to 3 times during the past 7 days
 - C. 4 to 6 times during the past 7 days
 - D. 1 time per day
 - E. 2 times per day
 - F. 3 times per day
 - G. 4 or more times per day
82. During the past 7 days, how many **glasses of milk** did you drink? (Include the milk you drank in a glass or cup, from a carton, or with cereal. Count the half pint of milk served at school as equal to one glass.)
- A. I did not drink milk during the past 7 days
 - B. 1 to 3 glasses during the past 7 days
 - C. 4 to 6 glasses during the past 7 days
 - D. 1 glass per day
 - E. 2 glasses per day
 - F. 3 glasses per day

The next 6 questions ask about physical activity.

83. During the past 7 days, on how many days were you physically active for a total of **at least 60 minutes per day**? (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
 - G. 6 days
 - H. 7 days
84. On an average school day, how many hours do you watch TV?
- A. I do not watch TV on an average school day
 - B. Less than 1 hour per day
 - C. 1 hour per day
 - D. 2 hours per day
 - E. 3 hours per day
 - F. 4 hours per day
 - G. 5 or more hours per day
85. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Nintendo, Game Boy, PlayStation, Xbox, computer games, and the Internet.)
- A. I do not play video or computer games or use a computer for something that is not school work
 - B. Less than 1 hour per day
 - C. 1 hour per day
 - D. 2 hours per day
 - E. 3 hours per day
 - F. 4 hours per day
 - G. 5 or more hours per day

86. In an average week when you are in school, on how many days do you go to physical education (PE) classes?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
87. During an average physical education (PE) class, how many minutes do you spend actually exercising or playing sports?
- A. I do not take PE
 - B. Less than 10 minutes
 - C. 10 to 20 minutes
 - D. 21 to 30 minutes
 - E. 31 to 40 minutes
 - F. 41 to 50 minutes
 - G. 51 to 60 minutes
 - H. More than 60 minutes
88. During the past 12 months, on how many sports teams did you play? (Include any teams run by your school or community groups.)
- A. 0 teams
 - B. 1 team
 - C. 2 teams
 - D. 3 or more teams

The next 3 questions ask about other health-related topics.

89. Have you ever been taught about AIDS or HIV infection in school?
- A. Yes
 - B. No
 - C. Not sure
90. Has a doctor or nurse ever told you that you have asthma?
- A. Yes
 - B. No
 - C. Not sure
91. Do you still have asthma?

- A. I have never had asthma
- B. Yes
- C. No
- D. Not sure

The next 8 questions ask about other health topics.

- 92. How often does one of your parents talk with you about what you are doing in school?
 - A. Never
 - B. Less than once a month
 - C. About once or twice a month
 - D. About once or twice a week
 - E. About every day

- 93. Do you agree or disagree that your teachers really care about you and give you a lot of encouragement?
 - A. Strongly agree
 - B. Agree
 - C. Not sure
 - D. Disagree
 - E. Strongly disagree

- 94. Besides your parents, how many adults would you feel comfortable seeking help from if you had an important question affecting your life?
 - A. 0 adults
 - B. 1 adult
 - C. 2 adults
 - D. 3 adults
 - E. 4 adults
 - F. 5 or more adults

- 95. During an average week, how many hours do you spend helping or volunteering at school or in the community (such as helping elders or neighbors; watching young children; teaching or tutoring; peer helping; mentoring; or helping out at local programs, health clinics, faith organizations, tribal organizations, or environmental organizations)?
 - A. 0 hours
 - B. 1 hour
 - C. 2 hours
 - D. 3 to 5 hours
 - E. 6 to 10 hours
 - F. 11 or more hours

96. During an average week, on how many days do you take part in organized after school, evening, or weekend activities (such as school clubs; community center groups; music, art, or dance lessons; drama; church; or cultural or other supervised activities)?
- A. 0 days
 - B. 1 day
 - C. 2 days
 - D. 3 days
 - E. 4 days
 - F. 5 days
 - G. 6 days
 - H. 7 days
97. Do you agree or disagree that you feel alone in your life?
- A. Strongly agree
 - B. Agree
 - C. Not sure
 - D. Disagree
 - E. Strongly disagree

98. Do you agree or disagree that in your community you feel like you matter to people?
- A. Strongly agree
 - B. Agree
 - C. Not sure
 - D. Disagree
 - E. Strongly disagree
99. Do you agree or disagree that your school has clear rules and consequences for behavior?
- A. Strongly agree
 - B. Agree
 - C. Not sure
 - D. Disagree
 - E. Strongly disagree

**This is the end of the survey.
Thank you very much for your help.**

Pupil Rights Law Allows Parents to Opt Students Out of Surveys

[EMAIL THIS ARTICLE](#)

In this issue

Disclosure of Health Information Sends School District to Court

A 1998 federal law, the Protection of Pupil Rights Amendment (PPRA), allows parents to inspect instructional materials used in connection with any U.S. Department of Education-funded "survey, analysis, or evaluation." The law, often called the "Hatch amendment" or the "Grassley amendment" for the members of Congress who introduced it, also requires schools to obtain written parental consent before minor students participate in Education Department-funded surveys that ask questions about personal or family matters.

Pupil Rights Law Allows Parents to Opt Students Out of Surveys

Report Cites Effects on Communities When Families Lack Health Insurance

As the result of recent amendments to PPRA in the No Child Left Behind education law (Public Law 107-110, signed January 8, 2002), parents have additional rights to examine materials with regard to the surveying of minor students, even when the surveys are not Education Department-funded, and to opt their children out of surveys and certain non-emergency medical examinations.

Worth Noting

The Family Policy Compliance Office (FPCO) in the U.S. Department of Education, which administers the Family Educational Rights and Privacy Act (FERPA), has responsibility for the expanded Protection of Pupil Rights law, also known as the "Tiahrt amendment."

Readers respond
Read comments from our readers

The original PPRA law required schools and contractors to make educational materials available for inspection by parents and provided a list of survey questions that would trigger the need for written parental permission. Those requirements remain in place. The trigger questions include inquiries about:

The PPRA compliance office in the U.S. Department of Education points out that these requirements apply when a survey is funded, at least in part, by any program administered by the U.S. Secretary of Education.

[Return to front page](#)

Under the Tiahrt amendment that took effect in 2002, additional requirements are now in place, and they apply as well to surveys funded by sources other than the U.S. Department of Education. The law now requires public elementary and secondary schools to "develop and adopt policies—in conjunction with parents," regarding:

1. the rights of parents to inspect, upon request, a survey created by a third party before the survey is administered or distributed by a school to students;
2. arrangements to protect student privacy in a survey if it includes any of the eight items noted above;
3. the right of parents to inspect any instructional materials used as part of the education curriculum;
4. administration of physical examinations or screenings that the school may administer to students;
5. collection, disclosure, or use of personal information collected from students for the purpose of marketing, selling;
6. the right of parents to inspect any instrument used in collecting information for marketing or selling.

Schools must notify parents of their PPRA policies at least once annually and must give parents ample opportunity to opt out (remove their child) from participation in surveys containing one or more of the eight items of information specified in the original law.

Parents are also allowed to remove their children from any non-emergency invasive physical examination or screening that is required for attendance or is not necessary to protect the immediate health and safety of the student or other students.

Explanation of the Protection of Pupil Rights Amendment is posted on the Education Department's Family Policy Compliance Office website at

<http://web.archive.org/web/20041030221359/http://www.ed.gov/offices/OM/fpco/ppra/index.html>. The compliance office indicates it will publish regs covering the new parts of the law.

Brain Booster —

A sundial is said to be the timepiece with the fewest moving parts. What is the timepiece with the most moving parts?

2007 Alaska YRBS – Weighted Data

In 2003 Alaska became the first state with active parent consent required for participation in school surveys like the YRBS to ever collect enough responses to yield usable data on a statewide level, and with your help we did it again in 2007! Alaska needed 60% of all students selected for the survey to actually participate in the survey to achieve usable (representative) data and 60% is exactly what Alaska managed to collect. Had any of the participating schools chosen not to participate, or had the participating schools not worked so hard to collect signed permission slips, Alaska would have fallen short in its efforts. The YRBS represents Alaska's most comprehensive and reliable source of information on the prevalence of risk behaviors in Alaska's youth that contribute to the leading causes of death and disease in Alaskans. Countless health agencies, families, and school districts rely on the YRBS data when applying for competitive grants and also to measure whether or not their current intervention and prevention programming is working. Alaska now has usable data from 2007, 2003, and 1995 which allows it to understand and measure trends in youth risk behaviors across more than a decade. Great work!

Alaska YRBS Comparison & Trends

The 2007 Alaska YRBS results are very similar to the results of the 2003 Alaska YRBS. This is not surprising since changes are usually gradual. Over the last 12 years the prevalence of many risk behaviors has decreased. The prevalence of smoking cigarettes, drinking alcohol, using marijuana, and physical fighting seem to be going down. The percent of students that have ever had sexual intercourse or reported having sexual intercourse in the past three months has stayed about the same. Percentage of students taught about AIDS or HIV infection in schools has gone down.

The 2007 Alaska YRBS results are very similar to the national YRBS data from 2005 (which is the last available data – 2007 national survey results will be released next summer). Fewer students in Alaska reported being in a physical fight in the past 12 months compared to the national results (29.2% vs. 35.9%) but more students in Alaska reported being hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend in the past 12 months (12.4% vs. 9.2%). The percent of Alaskan high school students attending daily PE is lower than the national average with only 17.7% of high school students attending daily PE in Alaska compared to 33% of those in the national 2005 YRBS survey.

Leading Causes of Death and YRBS Results

Suicide is the leading cause of death of Alaska youth (ages 15-19). The Alaska YRBS data indicates that 14.1% have made a plan about how they would attempt suicide and 10.7% actually attempted suicide one or more times in the past 12 months. Motor vehicle crashes are the second leading cause of death among Alaska youth. 23.5% of Alaska youth report having driven in a car by someone who had been drinking and 9.7% reported driving a car when they had been drinking.

Key Findings

The survey asked students to report certain risky behaviors. Key findings are listed below.

Alcohol and drug use:

- ❖ 39.7 percent of high school students had consumed alcohol within the past 30 days;
 - Compared to 38.7 percent in 2003 and 47.5 percent in 1995;
- ❖ 20.5 percent of high school students reported using marijuana in the past 30 days;
 - Compared to 23.9 percent in 2003 and 28.7 percent in 1995; and
- ❖ 25.1 percent of students were offered, sold or given an illegal drug by someone on school property during the past 12 months;
 - Compared to 28.4 percent in 2003 and 34.1 percent in 1995.

Violence and suicide:

- ❖ 29.2 percent of high school students had been in a physical fight during the past year;
 - Compared to 27.1 percent in 2003 and 35.8 percent in 1995;
- ❖ 12.4 percent had been physically hurt by a boyfriend or girlfriend in the past year;
 - Compared to 10.8 percent in 2003 (1995 numbers were not available); and
- ❖ 10.7 percent reported attempting suicide in the past 12 months;
 - Compared to 8.1 percent in 2003 and 9.4 percent in 1995.

Obesity:

The obesity epidemic in Alaska and the nation contributes to the risk of heart disease, stroke, diabetes, and other chronic diseases. Health habits such as good nutrition and being physically active are the key to maintaining a healthy weight.

- ❖ 84.3% of high school students do not eat the recommended daily servings of fruits and vegetables.
- ❖ 57.5% did not get the recommended 60 minutes of physical activity per day for most days of the week.
- ❖ 82.3% did not attend daily PE classes.
- ❖ 27.3 percent were overweight or at risk of being overweight.

Other behaviors that increase the risk of health problems:

- ❖ 45.1 percent of high school students have had sexual intercourse;
 - Compared to 39.6 percent in 2003 and 47.2 percent in 1995; and
- ❖ 17.8 percent of high school students smoked in the past 30 days;
 - Compared to 19.2 percent in 2003 and 36.5 percent in 1995.

Fact Sheet

COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE: Nov. 19, 2007

Fact Sheet: 2007 Youth Risk Behavior Survey (YRBS)

What is the Youth Risk Behavior Survey (YRBS)?

The Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1990 by the Centers for Disease Control and Prevention (CDC). It was developed to monitor health risk behaviors that contribute markedly to the leading causes of death, disability, and social problems among youth and adults in the United States. These behaviors, often established during childhood and early adolescence, include:

- Tobacco use;
- Unhealthy dietary behaviors;
- Inadequate physical activity;
- Alcohol and other drug use;
- Sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, including HIV infection; and
- Behaviors that contribute to unintentional injuries and violence.

What are the purposes of the YRBS?

- Determine the prevalence of health risk behaviors;
- Assess whether health risk behaviors increase, decrease, or stay the same over time;
- Provide comparable national, state and local data;
- Provide comparable data among subpopulations of youth; and
- Monitor progress toward achieving the Healthy People 2010 objectives and other program indicators.

How long has Alaska participated in the YRBS?

The YRBS high school survey was first implemented at the national level in 1990. Since that time CDC has sponsored national surveys from 1991 to the present on an every-other-year basis. Alaska first participated in the YRBS in 1995 and obtained representative statewide data. Due to external factors, the YRBS was not administered in 1997. It was administered in 1999; however the Anchorage School District did not participate. Without Anchorage the data were not representative of the state as a whole. The survey was administered in 2001, but unfortunately low student response rates rendered the data unusable. A major obstacle in 2001 was the constraint of the active parental consent law that had just gone into effect. In 2003 the survey was administered statewide with active parental consent and representative data were obtained, making this

the first statewide YRBS representative sample since 1995. The survey was again administered in 2005, however the response rate fell just below the target and the data was not used. In 2007, the survey was administered and achieved an adequate response rate, yielding important survey results.

What is the difference between active and passive consent?

Alaska's active parental consent law, AS 14.03.110, prohibits public schools from administering surveys or questionnaires that ask about personal or family affairs, or anything else that is not a matter of public record or readily observable in public, without first getting written permission from all participating students' parents or legal guardians. This law holds regardless of whether the surveys are anonymous and voluntary. Alaska is one of only a few states in the nation that has a school survey law requiring active parental consent for surveys of this type. Most states employ passive parental consent when administering such anonymous surveys. Passive parental consent involves notifying and informing the parents about the survey and assuming that students will participate unless the parent provides a written refusal to opt out of the survey.

How was the YRBS conducted?

A two-stage sample design was used to select the actual students for participation. The first stage consisted of selecting schools. Schools were selected with probability proportional to the size of their enrollment. Once a school was selected, classes were selected as the second stage. Eligible classes were those where a student would be enrolled in one and only one class at a time. For example second period or required English. This gave each student an equal opportunity of being selected. At any time a school district, an individual school, a student's parents, or a specific student had the opportunity to decline participation.

At the classroom level, teachers were given a script to read to students that established guidelines for student privacy and anonymity and the importance of the survey. Each student was given an unmarked envelope in which to seal his or her survey before turning it in. These survey envelopes remained sealed until received at a central state collection site. The Centers for Disease Control and Prevention and a CDC contractor analyzed the state survey data.

A national YRBS also was conducted in 2007, however, the results will not be available until early summer 2008. As a result, 2005 National YRBS results are being used for comparison purposes.

Who participated in the survey?

Forty one high schools from 19 districts were scientifically selected to be included in the survey. Thirty-eight (88 percent) schools participated and 1,318 (68 percent) students completed the survey resulting in an overall response rate of 60 percent. The CDC has determined that the overall response rate must be 60 percent or greater in order for the data to represent the high school population of the state. Therefore, these survey results represent 34,399 students grades 9 through 12 in public high schools (excluding private, alternative, boarding and correctional schools).

How are the data used?

The results of the YRBS are used to detect changes in risk behaviors over time and provide an important piece of program planning and evaluation, curriculum development and decision-making regarding the use of available resources. The information from the YRBS can be used to help schools and communities identify strengths and weaknesses in current programs and services. Additionally the results can be used by schools and communities when applying for grant funding to initiate or maintain programs that serve youth.

Who supported the YRBS in Alaska?

The YRBS in Alaska is a cooperative effort between the state departments of Health and Social Services and Education and Early Development. The survey is also endorsed by the following groups and boards:

- Association of Alaska School Boards
- Alaska Action for Healthy Kids
- All Alaska Pediatric Partnership
- American Heart Association, Pacific/Mountain Affiliate
- American Lung Association of Alaska
- American Cancer Society, Alaska
- Alaska Health Education Consortium
- Alaska Tobacco Control Alliance
- Alaska Native Tribal Health Consortium

REPRESENTATIVE JOHN COGHILL

Sponsor Statement HB 141

"An Act relating to the Interstate Compact for Juveniles; relating to the State Council for Interstate Adult Offender Supervision; amending Rules 4 and 24, Alaska Rules of Civil Procedure; and providing for an effective date."

This bill would enact the new Interstate Compact for Juveniles into law. This would replace the old compact which was created in 1955. The purpose of the Compact is to ensure the supervision of juvenile offenders and the return of runaways, escapees and absconders. The Compact provides the procedural means to regulate the movement of juveniles who are under court supervision across state lines. The Association of Compact Administrators estimates that the Interstate Compact on Juveniles is used in 20,000 to 30,000 transfer and supervision cases annually.

The new Compact ensures that all states will have identical language in their statutes which would help with compliance issues. The new Compact provides procedures for enforcement which the old Compact lacked. The Interstate Compact for Juveniles also provides for the collection of standardized information and information sharing systems.

This is a chance for the states to have the means to deal with state problems and enforce state solutions without having any federal intervention. 35 states have already passed this compact. If Alaska chooses not to enact this Compact the state would have to deal with every other state on a case-by-case basis which would cost the state more money than it would cost to implement the Compact.

The compact provides for the safety of the juvenile offender and the state as a whole. The importance of this compact cannot be overstated. This legislation is necessary to ensure the public safety and security of Alaskans. It will help ensure that Alaska receives notification about juveniles who are relocated or traveling to Alaska before they arrive here, and will expedite Alaska's ability to send juveniles from here to other jurisdictions.

SECTIONAL

HB 141

"An Act relating to the Interstate Compact for Juveniles; relating to the State Council for Interstate Adult and Juvenile Offender Supervision; amending Rules 4 and 24(b), Alaska Rules of Civil Procedure; and providing for an effective date."

Section 1: AS 33.36.140 State Council:

- (a) Adds the words **and Juvenile** to the State Council for Interstate Offender Supervision. Adds a reference to the repealed and reenacted statute AS 47.15.010.

Section 2: AS 33.36.140

- (b) changes the number of council members from seven to **nine**.
(6) adds the position of **the commissioner of health and social services** and provides that the commissioner may appoint a designee to serve in his/her capacity.
(7) adds the position of the **compact administrator appointed under AS 47.15.020**.

Section 3: AS 44.21.410(a)

- (a) (5) deletes the word [UNIFORM], adds the word **for** and deletes the word [ON] in order to change the name of the Compact to the Interstate Compact for Juveniles.

Section 4: AS 47.15.010

The Execution of interstate compact is repealed and reenacted.

Section 5: AS 47.15.020

Changes the designator of the compact administrator from the Governor to the commissioner of health and social services and adds a comma to ensure proper grammar.

Section 6: AS 47.15

Adds a new section: AS 47.15.025 which designates the State Council for Interstate Adult and Juvenile Offender Supervision to serve as the state council under AS 47.15.010.

Section 7: AS 47.15

Adds a new section: AS 47.15.035 which allows the Department of Health and Social Services to adopt regulations to implement the provisions of this chapter.

Section 8: AS 47.15.070

Cleanup of section for clarity.

Section 9: AS 47.15.080

States that the short title of this chapter may be cited as the Interstate Compact for Juveniles.

Section 10: AS 47.15.050

Appointment of attorney or guardian provision is covered in AS 47.12.090.

Section 11: The uncodified law of the State of Alaska is amended by adding a new section:

- (1) Changes the name of the Compact to the Interstate Compact for Juveniles in Rule 4 in Alaska Rules of Civil Procedure.
- (2) Changes the name of the Compact to the Interstate Compact for Juveniles in Rule 24(b) in the Alaska Rules of Civil Procedure.

Section 12: The uncodified law of the State of Alaska is amended by adding a new section:

This section applies the old Compact to the states who do not opt to join the new Compact.

Section 13: The uncodified law of the State of Alaska is amended by adding a new section:

Court rule changes only take effect if it is approved by 2/3 of the majority of each house.

Section 14: The uncodified law of the State of Alaska is amended by adding a new section:

The Compact takes effect only if at least 34 other states ratify the Interstate Compact for Juveniles.

Section 15: Setting the effective date as either the day after the date on which the commissioner

of health and social services or the commissioner's designee notifies the revisor of statutes that at least 34 other states have ratified the new Compact or July 1, 2009 whichever is later.

ANALYSIS: (Attach a separate page if necessary)

Since 1960, the Interstate Compact on Juveniles has provided states, including Alaska, with the procedural means to regulate the movement of court-supervised juveniles across state lines. Approximately 160 juveniles under the supervision of the Department of Health and Social Services leave or enter Alaska each year. This bill would place a new, extensively revised compact into Alaska statute replacing the current compact. The new compact seeks to correct deficiencies in the existing compact that have been identified at the national level with regard to administration, rules, enforcement procedures, financial management, communications and data sharing.

(continued on next page)

Prepared by: Stephen F. McComb Phone 907-261-4335
Division: Juvenile Justice Date/Time 3/2/09 12:00 AM

Approved by: Alison Elgee, Assistant Commissioner Date 3/4/2009
DHSS Finance & Management Services

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. HB 141

ANALYSIS CONTINUATION

Participation in the new compact requires that the state council implement and oversee compact functions. However, because some of the membership requirements for the juvenile compact council are the same as those required for the Alaska State Council for Interstate Adult Offender Supervision, the state intends to have a single state council oversee both compacts. Combining the two responsibilities under the authority of a single council will save the state the effort and duplication of creating and managing two councils with similar functions.

Being part of the new compact will create additional costs to the division. Costs include the following:

- \$13.0 Travel associated with membership participation, including travel to required meetings by staff
- \$27.0 Membership Dues, teleconferences, overhead costs that include chargeback, etc.
- \$ 5.0 Supplies for staff and required meetings

Dues to participate in the current compact are \$400 per year. Dues to participate in the new compact are expected to be \$14,000 per year.

The cost estimates for the participation in the state council only reflect those anticipated for the operations for the juvenile justice compact and do not include operational and other costs associated with the ongoing adult council activities. The existing adult council has not had in-person meetings for several years, and at least initially the division anticipates that such meetings will be necessary to address the added juvenile justice functions. The travel costs reflected in this fiscal note are again only intended to portray the costs for the juvenile compact activities. The travel costs also reflect the intent that council members represent all areas of the state.

A possible one-time additional cost to the division may also be incurred by adoption of this bill. The new compact will require use of a national database management system that may need to communicate with the division's MIS. The national system is still under development. Without knowing when the new system will be available, or how difficult it will be to link the two systems, we are not prepared to estimate a cost at this time. The division may need to make a specific request to meet this cost at some point in the future.

In addition, the division will be monitoring the amount of additional staff time required to participate in the new compact. At some point an increment request may be needed to fund a position if absorption of these duties is too challenging for our existing staff. The division needs to ensure we do not hamper our ability to research, apply for, and successfully win grants, such as the federal Re-Entry and Gang Prevention grants that have been invaluable in improving public safety and helping the state monitor and improve its response to gang issues. If the increase in workload forces staff to spend less time involved in the management of existing programs (these include the federal Juvenile Justice and Delinquency Prevention Formula Program, the Enforcing Underage Drinking Laws program, Title V, Juvenile Accountability Block Grants, Bureau of Justice Assistance grant management, and Youth Court earmark) current federal funding that the division receives could be at risk.

List of People to Testify on HB 141

- Barb Murray or Anthony Newman
- Carol Brenkle
- Barb Tyndall
- Michael Jeffery

Departments Affected

- Department of Corrections: They will be sharing the duties of administering the interstate council

**RESOLUTION OF THE
AMERICAN PROBATION AND PAROLE ASSOCIATION**

“Interstate Compact for Juveniles”

Whereas, The Interstate Compact on Juveniles was established in 1955 and is the primary compact addressing the needs of juveniles within the justice system who move between states and has not been sufficiently amended in its 47-year existence; and

Whereas, This compact is the only vehicle for the controlled movement of juveniles released from custody or on probation across state lines; and

Whereas, The complexities of the compact have become more difficult to administer, and many jurisdictions have expanded supervision expectations to include currently unregulated practices such as victim input, victim notification requirements and sex offender registration; and

Whereas, After national surveys and a detailed study by a task force appointed by the Office of Juvenile Justice and Delinquency Prevention, the overwhelming recommendation has been to amend the document to bring about an effective management capacity that addresses public safety concerns, offender accountability and effective treatment needs.

BE IT THEREFORE RESOLVED, That the Board of Directors of the American Probation and Parole Association hereby endorses and recommends adoption of the amended and newly titled Interstate Compact for Juveniles by the 50 states and affected territories of the United States of America.

January 5, 2003

CSG GOVERNING BOARD/EXECUTIVE COMMITTEE

RESOLUTION ON

THE INTERSTATE COMPACT FOR JUVENILES

WHEREAS, The Interstate Compact on Juveniles was established in 1955 and is the compact addressing the needs of juveniles within the juvenile justice system who move between states and has not been sufficiently amended in its forty-seven (47) year existence; and

WHEREAS, This compact is the only vehicle for the interstate supervision of juvenile offenders, the return of absconders and escapees, and runaways; and

WHEREAS, The complexities of the compact have become more difficult to administer, and many jurisdictions have expanded supervision and program expectations to include currently unregulated practices such as victim input and notification requirements, sex offender registration, and age related issues; and

WHEREAS, After exhaustive research and detailed study, the Office of Juvenile Justice and Delinquency Prevention and The Council of State Governments convened an Advisory Group and Drafting Team to formulate recommendations and implement changes to the compact language to better address public safety, enforcement, accountability and communication concerns.

NOW THEREFORE BE IT RESOLVED, That The Council of State Governments hereby endorses and recommends adoption of the new compact entitled, "Interstate Compact for Juveniles" by the fifty (50) states, the District of Columbia, Puerto Rico and effected territories of the United States of America.

Adopted this 8th Day of December, 2002 at the
CSG Annual State Trends and Leadership Forum
In Richmond, Virginia

**Resolution of the
Association of Juvenile Compact Administrators**

“Interstate Compact for Juveniles”

Whereas, The Interstate Compact on Juveniles was established in 1955 and is the compact addressing the needs of juveniles within the juvenile justice system who move between states and has not been sufficiently amended in its forty-seven (47) year existence; and

Whereas, This compact is the only vehicle for the interstate supervision of juvenile offenders, the return of absconders and escapees, and runa ways; and

Whereas, The complexities of the compact have become more difficult to administer, and many jurisdictions have expanded supervision and program expectations to include currently unregulated practices such as victim input and notification requirements, sex offender registration, and age related issues; and

Whereas, After national surveys and a detailed study by a task force appointed by the Office of Juvenile Justice and Delinquency Prevention, the recommendation has been to rewrite the document to bring about an effective management capacity that addresses public safety concerns and juvenile accountability.

Be it therefore resolved, That the Association of Juvenile Compact Administrators hereby endorses and recommends adoption of the new compact entitled “Interstate Compact for Juveniles” by the fifty (50) states, the District of Columbia, and affected territories of the United States of America.

Adopted this 10th day of August, 2002.

Office of the President

National District Attorneys Association
99 Canal Center Plaza, Suite 510, Alexandria, Virginia 22314

February 19 , 2003

Mr. Daniel M. Sprague
Executive Director
The Council of State Governments
P.O. Box 11910
Lexington, KY 40578-8001

Dear Mr. Sprague:

On behalf of the Board of Directors of the National District Attorneys Association I want to offer our support for the Interstate Compact for Juveniles. Our Board unanimously voted to support your effort during our recent meeting in Texas.

As local prosecutors we have to work daily with juveniles that require the attention of our court system and we recognize the need for interstate supervision of juvenile offenders and for the return of those who have escaped, run away or fail to live up to release expectations.

We also recognize that the changes in the complexities of our society have made many of the provisions of the compact badly out dated. Ideas such as community corrections, sexual predator registrations and victims rights provisions all impact on the how states must relate to each other in dealing with criminal offenders and in this instance, juveniles.

The Board of Directors considered the importance of addressing consistent treatment of juveniles in need of both consequences and treatment. The proposed Compact language provides states with the means of accomplishing these goals.

Sincerely,

Daniel M. Alsobrooks
District Attorney General, 23rd Judicial District, Tennessee
President, National District Attorneys Association

Mr. Daniel M. Sprague
Executive Director
The Council of State Governments
Headquarters Office
P.O. Box 11910
Lexington, Kentucky 40578-8001

Dear Mr. Sprague:

The National Center for Missing & Exploited Children (NCMEC) is pleased to support the proposed Interstate Compact Initiative for Juveniles. As an organization that provides services to runaway youth and their families, we are pleased that this enhanced initiative will ensure consistent use of those policies governing the Compact.

Although, primarily designed to assist those organizations working within the juvenile justice, and social service systems, the Compact will assist NCMEC in it's work to bring children back home by providing law enforcement professionals with clear guidelines and procedures once a missing youth is recovered.

As you work to implement this initiative throughout the 50 states, please do not hesitate to let us know if we can be of further assistance in this most important venture.

Sincerely,

Ernie Allen
President & CEO
NCMEC

Dear Mr. Foster:

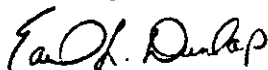

As one of participating entities, the National Juvenile Detention Association (NJDA) has been actively involved in the review and update of the Interstate Compact on Juveniles, originally established in 1955. The two-year effort to modernize the Compact has been thorough and comprehensive and has engaged the efforts of many practitioners from the juvenile justice field. The process addressed a multiplicity of issues regarding the Compact that have been identified as problematic or outdated in an effort to develop a document that meets the current needs of stakeholders in the signatory states.

The nation's detention centers deal with the Compact frequently as the entities responsible for housing juveniles found to be in violation of placement agreements or of state laws in the receiving states. The proposed modifications to the Compact should address many of the issues that have created problems for detention centers and will offer assistance to them in dealing with both sending and receiving states.

As the association serving juvenile detention nationally, NJDA supports the proposed changes to the Compact. The changes are designed to address the needs of the states, of the agencies within the states, and of the public in ensuring that placement agreements are complied with and community safety is ensured.

We are happy to offer assistance to you in your efforts to achieve adoption of the revised Interstate Compact for Juveniles.

Sincerely,

Earl L. Dunlap, Executive Director
National Juvenile Detention Association

The Alaska Juvenile Justice Advisory Committee (AJJAC) held an in-person meeting in Juneau on March 2-3, 2009. At the meeting Division of Juvenile Justice (DJJ) presented information on HB 141, which included the benefits of passing this legislation as well as the potential public safety issues if HB 141 does not pass.

After discussion, the AJJAC voted unanimously on March 2, 2009 to support HB 141, the Interstate Compact for Juveniles.

Please feel free to contact me if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads "Carol Brenckle".

CS FOR HOUSE BILL NO. 168(HSS)

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:

Referred:

Sponsor(s): REPRESENTATIVES COGHILL, Kerttula

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to state certification and designation of trauma centers; creating the**
2 **uncompensated trauma care fund to offset uncompensated trauma care provided at**
3 **certified and designated trauma centers and including a portion of the tax levy on**
4 **alcohol as a source of money that may be appropriated to the trauma care fund; and**
5 **providing for an effective date."**

6 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

7 *** Section 1.** AS 18.08.082 is amended by adding a new subsection to read:

8 (c) The commissioner shall establish special designations in regulation for
9 varying levels of trauma care provided by a certified trauma center that shall be used
10 to set compensation eligibility and amounts under AS 18.08.085. The designations
11 shall be based on nationally recognized standards and procedures.

12 *** Sec. 2.** AS 18.08 is amended by adding a new section to read:

13 **Sec. 18.08.085. Uncompensated trauma care fund; creation.** (a) The

1 uncompensated trauma care fund is created. The purpose of the fund is to compensate
2 certified trauma centers in the state that receive a special designation under
3 AS 18.08.082(c) for care uncompensated by the person receiving the care or by any
4 other source.

5 (b) The fund consists of money appropriated to it by the legislature, including
6 donations, recoveries of or reimbursements for awards made from the fund, income
7 from the fund, and other program receipts from activities under this chapter.
8 Appropriations to the fund do not lapse.

9 (c) The commissioner shall administer the fund in accordance with the
10 provisions of this chapter. The commissioner shall spend money from the
11 uncompensated trauma care fund for the purpose established in (a) of this section. The
12 commissioner may establish and seek the advice of a special committee for review of
13 statewide trauma care and compensation standards.

14 (d) The commissioner may not provide more than 25 percent of the total
15 assets, including earnings, of the fund in a fiscal year to one trauma center.

16 * **Sec. 3.** AS 43.60 is amended by adding a new section to read:

17 **Sec. 43.60.055. Disposition of proceeds; availability for appropriation to**
18 **the uncompensated trauma care fund.** The portion of the tax collected under
19 AS 43.60.010 that is not separately accounted for under AS 43.60.050(a) may be
20 appropriated to the uncompensated trauma care fund (AS 18.08.085). Nothing in this
21 section creates a dedicated fund.

22 * **Sec. 4.** This Act takes effect immediately under AS 01.10.070(c).

AMENDMENT

OFFERED IN THE HOUSE
TO: HB 168

BY REPRESENTATIVE HERRON

1 Page 1, line 3, following "centers":

2 Insert "**and including a portion of the tax levy on cigarettes as a source of money**
3 **for that fund**"

4

ALASKA STATE HOUSE OF REPRESENTATIVES

SENATOR JOHN COGHILL

HB 168 Certification and Designation of Trauma Centers

Sponsor Statement

This legislation would create a trauma care fund which could reimburse trauma centers for uncompensated or undercompensated services. The bill would create incentives for becoming a certified trauma center but does not force facilities to become certified trauma centers.

Trauma is the leading cause of death for Alaskans between the age of one and forty-four and more than 800 Alaskans are hospitalized each year for spinal cord and brain injuries.

There is a "golden hour" after the injury during which proper treatment and appropriate interventions will potentially save a patient's life and prevent further damage to an injured person. Personal trauma is any bodily injury from an external force including car crashes, shootings, falls, snow machine crashes, and stabbings.

A good trauma system is an organized multidisciplinary response to managing treatment of severely injured people and it spans the full spectrum from prevention and emergency care to recovery and rehabilitation. A trauma system enhances the chance of survival by making sure patients are brought to the most appropriate facility in the most efficient manner and that optimal care is delivered every step of the way. Alaska has many good parts to our trauma response but we must do better.

SENATOR JOHN COGHILL

HB 168 Designate Trauma Centers and the Uncompensated Trauma Care Fund

Sectional

Section 1. AS 18.08.082 currently prescribes by regulation criteria for training programs and for personnel involved in emergency medical services. This section adds a requirement for the commissioner of Health and Social Services establish special designations for varying levels of services offered by a certified trauma center.

Section 2. Establishes a trauma care fund to be used to compensate certified trauma centers for uncompensated trauma care. The fund can accept money appropriated by the legislature, which can include donations, income from the fund, and of the other designated receipts. The commissioner is given authority to establish a special committee for review of the program and limits are set on the distribution of the funds.

Section 3. The bill has an immediate effective date.

SENATE BILL NO. 168

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE HEALTH AND SOCIAL SERVICES COMMITTEE BY REQUEST

Introduced: 3/27/09

Referred: Health and Social Services, Finance

A BILL

FOR AN ACT ENTITLED

1 "An Act relating to state certification and designation of trauma centers; creating the
2 uncompensated trauma care fund to offset uncompensated trauma care provided at
3 certified and designated trauma centers; and providing for an effective date."

4 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

5 * **Section 1.** AS 18.08.082 is amended by adding a new subsection to read:

6 (c) The commissioner shall establish special designations in regulation for
7 varying levels of trauma care provided by a certified trauma center that shall be used
8 to set compensation eligibility and amounts under AS 18.08.085. The designations
9 shall be based on nationally recognized standards and procedures.

10 * **Sec. 2.** AS 18.08 is amended by adding a new section to read:

11 **Sec. 18.08.085. Uncompensated trauma care fund; creation.** (a) The
12 uncompensated trauma care fund is created. The purpose of the fund is to compensate
13 certified trauma centers in the state that receive a special designation under

ANALYSIS: (Attach a separate page if necessary)

HB 168 establishes a mechanism to provide a financial incentive for hospitals to become designated as certified trauma centers in order to encourage their participation in a statewide trauma system, with the goal of improving delivery of trauma care in the Alaska medical system. This bill establishes a fund for reimbursement of trauma care for uninsured or underinsured patients, and allows designated trauma centers to apply for compensation of claims that are otherwise uncompensated by insurance or other funds.

The Department proposes to manage this fund using existing staff resources.

Trauma-Emergency Medical Services System in Alaska

Background:

Alaska's Trauma-EMS System is a work in progress. A great deal has been accomplished since 1992 when the state received the first year of a three-year federal grant specifically targeted toward trauma care system development. Since federal funding has been re-instated, there has been further momentum in enhancing our system.

We currently have a committee the Alaska Trauma System Review Committee that assists the State in the development, enhancement, and evaluation of our Trauma-EMS System.

In 1993 Alaska passed enabling legislation for trauma care system development and accompanying regulations, ([AS 18.08.010-015](#), and [AAC 26.710-745](#)) were adopted in 1996.

Trauma Center Designation:

An important component of Alaska's trauma care system is certified trauma centers. Trauma centers provide an organized and timely response to traumatic injury. What this means in Alaska is:

- The hospital has demonstrated commitment to providing the best trauma care possible by allowing experts to review staffing and qualifications, procedures, protocols and resources;
- The hospital meets state and national standards for providing timely and optimal care for the trauma patient, and;
- The hospital is prepared to treat and transport trauma patients according to Alaska's system-wide plan.

There are four levels of trauma center designation/certification. Alaska has adopted the criteria set forth by the American College of Surgeons Committee on Trauma (ACSCOT). Prior to applying for state certification, Level I, II, and III

American College of Surgeons recommendations for a trauma system:

- [ACS Recommendations Presentation](#)

Trauma Training:

Continuing education training in trauma care for healthcare providers is an important component of a Trauma-EMS System.

Advanced Trauma Life Support (ATLS) Courses are offered periodically throughout the year in Anchorage at the Alaska Native Medical Center (ANMC) and occasionally in other areas of the state. For more information on the ATLS courses at ANMC, contact [Mary Leemhuis, RN](#) at (907) 729-2729; or [Casie Williams, RN](#) at (907) 729-2936. In addition, Providence Alaska Medical Center is providing ATLS courses. Contact [Jeanne Molitor, RN](#) for information.

Basic Trauma Life Support (BTLS) Courses are offered periodically through the EMS Regional offices. [Contact the nearest office](#) for more information.

Trauma Nursing Core Course (TNCC) and Emergency Nursing Pediatric Course (ENPC) are other courses available around the state. For more information contact [Jeanne Molitor, RN](#). For TNCC only contact [Mary Leemhuis, RN](#) or [Margaret \(Rocky\) Carlson, RN](#).

Trauma care continuing medical education training is often available at the State and Regional EMS Symposia. Click [HERE](#) for more information.

Alaska Trauma Registry:

Alaska is very fortunate to have a great

trauma centers must complete an application to ACSCOT and have a verification visit by a team from ACSCOT. Using ACSCOT criteria, Level IV trauma centers are verified by a state team, appointed by the Alaska Division of Public Health.

- **Level I – Regional Resource Center** – Level I Trauma Centers generally serve large cities or population-dense areas. A Level I Trauma Center is responsible for providing leadership in research, professional and community education. There are no Level I Trauma Centers in Alaska because, there are no trauma research and teaching facilities in Alaska.

- **Level II – Regional Trauma Centers** – A Level II Trauma Center provides comprehensive trauma care and serves as a lead trauma facility for a geographical area. A Level II Trauma Center provides educational outreach and prevention programs and assumes responsibility for trauma system leadership. There are emergency physicians and nurses in-house to initiate resuscitation and stabilization, with surgical teams on call and promptly available.

- **Level III – Area Trauma Center** – The Level III Trauma Center provides assessment, resuscitation, emergency surgery, and stabilization and, for the most critically injured patients, arranges for transfer to a Level I or Level II trauma center that can provide further definitive care. A general surgeon must be promptly available and the facility must be involved with prevention and have an active outreach program for its referring communities.

- **Level IV – Local Trauma Stabilization Center** – Level IV Trauma Centers are small rural facilities that provide initial evaluation and assessment of injured patients prior to transfer to a larger referral facility.

For more information, you can download a brochure about [Trauma Center Certification in Alaska](#).

Below are documents/links to assist hospitals interested in seeking Trauma Center Designation.

For the American College of Surgeons, Committee on Trauma (ACSCOT) Level I, II, III verification program visit:

alaska brain injury network

Every 15 seconds someone sustains a traumatic brain injury (TBI) in the U.S.

Thirty years ago, only half of all people with brain injury survived; now 78% survive. This means that many individuals now live with significant disability requiring a full range of services.

Every year the Alaska Department of Health & Social Services reports about 800 traumatic brain injury (TBI) cases resulting in hospitalization or fatality. The Alaska TBI rate is 28% higher than the national average. The TBI rate in rural Alaska is one of the highest in the nation.

It is estimated that at least 10,000 Alaskans are living with brain injury today. The number keeps accumulating. Brain Injury can be a life-long disability

The Alaska Brain Injury Network, Inc. (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury.

ABIN's Board of Directors represent all regions of Alaska and the extended brain injury community – survivors, family members, service providers, health educators, researchers and those who write laws and policy.

ABIN works with the Alaska Mental Health Trust Authority, Department of Health and Social Services, and partner boards to advocate for policy changes, programs, and facilities to better serve the brain injury population.

ABIN connects survivors and family members with others. Please contact us to learn about brain injury programs in your region.

The goal for every brain injury survivor is the best possible recovery for a fulfilling and productive life. Achieving that goal requires full range of services close to home. This includes...

- Prevention
- Early identification and intervention
- Access to skilled specialists
- Community-based post injury services
- Continuing rehabilitation
- Brain injury support groups and in-state resources

What you can do...

- **Be aware of the fiscal and social burden of brain injury nationally and to the state of Alaska**
- **Become familiar with ABIN Priorities in the Governor's FY09 GF/MH Budget: Brain Injury Training for Providers.**
- **Support the Housing Trust, www.akhousingtrust.com**
- **Join Alaska Brain Matters listserve to meet Alaskans who have been touched by traumatic brain injury.**

ABIN Priorities

In-state rehab facility – many Alaskans are left in a hospital setting because there is no post-acute rehabilitation option in the State. Others are sent out of State. It is time for Alaskans to have treatment for their brain injury. Research shows outcomes improve with quality rehabilitation.

Brain Injury Waiver - recommendations for the current Medicaid waiver system to accommodate the services needed by brain injury survivors: neuropsychological assessment, cognitive and functional therapy, case management, counseling, home modifications, transportation, respite care, and more.

www.alaskabraininjury.net
3745 Community Park Loop, Ste 240
Anchorage, AK 99508
(907) 274-2824

Alaska Brain Injury Network, Inc. helps identify, develop, implement, and sustain needed programs and resources that promote prevention and expand treatment and service delivery to Alaskans who experience TBI and their families.

You KNOW us ...

The Public Health Burden of Brain Injury (prevalence)

5.3 million Brain Injuries

- 5 million persistent Mental Illness
- 4 million Alzheimer's
- 3 million Stroke
- 2 million Epilepsy
- 900,000 HIV/AIDS
- 500,000 Cerebral Palsy
- 400,000 Spinal Cord Injury

Brain injury accounts for more years of lost productivity than any other injury.

The Financial Burden of Brain Injury

- It is estimated that over a lifetime, it can cost between \$600,000 and \$1,875,000 to care for a survivor of severe TBI.
- Direct medical costs and indirect costs of TBI such as lost productivity totaled an estimated 60 billion dollars in the United States in 2000. (*Centers for Disease Control and Prevention*)
- Every dollar used for brain injury rehabilitation saves up to \$35 in future medical costs. (Rhode Island Brain Injury Association)

Prevention is the only cure for Brain Injury

- The three leading causes of brain injury nationally and in Alaska are:
1) motor vehicle crashes 2) falls and 3) assaults.
- One-third of all TBIs recorded in the Alaska Trauma Registry were alcohol related.
- The use of safety belts is the single most effective measure to prevent traumatic brain injuries.
- Helmets are estimated to be 37% effective in preventing fatal injuries to motorcyclists. (*National Highway Traffic Safety Administration*)
- Bicycle helmets are 85-88 percent effective in mitigating head and brain injuries. Every dollar spent on a bike helmet saves \$40 in direct medical costs and other costs to society. (*National Highway Traffic Safety Administration*)
- 60-67% of injured U.S. soldiers sent from Iraq to Walter Reed Army Medical Center have a TBI from blasts, severe falls and motor vehicle accidents. (*United Press International, July 2004*). These soldiers are now returning home to Alaska for continuing treatment and rehabilitation.

Traumatic Brain Injury is a beneficiary group participating in the Alaska Mental Health Trust Authority "You Know Me" Anti-Stigma Campaign.

Representative Coghill
Juneau, Alaska

Representative Coghill,

Trauma is any bodily injury from an external force. Trauma puts a tremendous burden on families and communities in Alaska. An average of 400 Alaskans die each year from trauma. For every death, 11 people are hospitalized. One in four hospital admissions is uncompensated which puts an additional burden on the State's health care system. HB 168 is offered to assist in this dilemma.

House Bill 168 provides the DHSS Commissioner authority to establish special designations in regulation for varying levels of trauma care so that a 'Certified Trauma Center' would be eligible to recoup expenses as a result of uncompensated care being rendered. The purpose of the fund is to reimburse certified trauma centers in the state for care uncompensated by the person receiving the treatment or by any other source. HB 169 would then set up the uncompensated trauma care fund that would help cover some of the losses suffered by the trauma center rendering the care.

The Alaska Council on EMS seeks your support for a fully functioning trauma system, including funding for the development of trauma centers and legislation addressing the issue of incentives for trauma center designation and uncompensated care of trauma patients. The added benefit of HB 168, we believe, would be an incentive for more hospitals in the state to become 'Certified Trauma Centers' thereby assisting in the development in a state wide trauma care system.

The American College of Surgeons met 11/08 in Anchorage to assess the States trauma system. The passage of HB 168 & 169 would provide support to address some of the areas that were noted in the report.

Thank you for your support of this critical issue.

DATE: April 8, 2009

RE: HB 168 – State certification and designation of trauma centers and creating the uncompensated trauma care fund
HB 169 – Appropriating \$5,000,000 to the uncompensated trauma care fund

POSITION: Support

ANTHC supports HB 168 and HB 169 as important steps in increasing the trauma care capacity in the state.

The Alaska Native Tribal Health Consortium (ANTHC) is a tribally controlled, non-profit statewide tribal health organization formed pursuant to federal law to provide a range of medical and community health services for more than 130,000 Alaska Natives. It is part of the Alaska Tribal Health System (ATHS), which is owned and managed by the 231 federally-recognized tribes in Alaska and by their respective regional health organizations.

ANTHC and Southcentral Foundation jointly manage the Alaska Native Medical Center (ANMC), the tertiary hospital of the ATHS located in Anchorage. ANMC is the only Level II Trauma Center in the Indian Health Service/tribal health system nationally. ANMC is also the only Level II Trauma Center in Alaska. The nearest Level I Trauma Center is in Seattle.

Trauma system development is a public health priority. A comprehensive system of trauma care is an essential part of the public safety net. Regionalized trauma systems based on a network of coordinated Trauma Centers designated at the appropriate level improves health outcomes and reduces costs. ANMC, as the highest level designated Trauma Center in the State of Alaska, is the lynchpin for the state's trauma system, and provides the foundation for continued statewide system development.

Trauma Center designations were created as a way to improve outcomes for patients who face extraordinary medical issues. On balance, early and appropriate medical attention to life-threatening health issues reduces overall length of stay in the hospital and reduced complications for many patients. Without trauma care, the costs of health care for trauma patients will be greater, including trauma patients who are Medicaid eligible.

The cost of providing trauma care at ANMC has more than doubled over the past four years and funding has not kept pace. ANMC's Trauma Center simply cannot be maintained at current revenue levels. If ANMC's Trauma Center designation is discontinued because funding levels have rendered the service unsustainable, the hospital faces reductions in staffing. Diversions of patients to non-tribal providers would increase, and because the federal government reimburses 100% of the cost of services provided for Native clients at Native facilities but a smaller percentage at non-tribal providers, there would be an increased cost to the state's general fund budget.

ANTHC supports HB 168 and HB 169 as important steps by the State to encourage and support appropriate trauma care options for Alaskans. Because we are Alaska's only Level II Trauma Center we recommend removing the language in section (d) on Page 2, Line 11, that limits appropriations to any one facility to 25%.

Thank you for your consideration.

Attracting doctors

Legislature can raise Alaska's stake in competition for docs

Published: March 10th, 2009 06:54 PM
Last Modified: March 10th, 2009 06:54 PM

Alaska's shortage of primary care doctors has been described as grim. A study two years ago found **we needed 400 more doctors to provide the same level of care as is available elsewhere in the country**. One result is that few doctors will accept the low rates paid by Medicare, the government insurance for those 65 and older. **It's a horrible situation for Alaska's senior citizens.**

Two bills introduced during this legislative session would help relieve the shortage of doctors and other health care workers, and both are worth passing.

Senate Bill 18 would increase the number of state-subsidized medical students in each class of the WWAMI program operated through the University of Washington. Alaska WWAMI students spend their first year of study at UAA.

These students offer an excellent return -- according to the Alaska Physician Supply Task Force study in late 2006, half of Alaska WWAMI students end up practicing in the state, and a few WWAMI students from other states join them.

The state raised the number of Alaska WWAMI students in each class to 20 in 2007.

SB 18 would increase the number by a modest amount, to 24. That's the most UAA can accommodate without incurring expensive overhead costs, said Sen. Bill Wielechowski of Anchorage, the bill's sponsor.

Adding the four students would cost the state little to no money the first year. But by the fourth year, when we would have an additional 16 Alaska students in med school, the state cost is estimated at \$550,000 per year.

A second bill, SB 139 [by Sen. Donny Olson], calls for the state to pay financial incentives to already-qualified doctors, nurses or other health workers if they take certain jobs in Alaska.

The bill, with a bipartisan group of sponsors, would carry out a plan developed by a group of health care professionals including representatives of the Alaska Primary Care Association and the Alaska State Hospital and Nursing Home Association.

The state would offer financial incentives to as many as 90 workers, from physicians to nurses, to come work in Alaska. Those who take hard-to-fill jobs, or treat a share of uninsured patients or those on Medicare or Medicaid, would get priority.

3/12/2009

Each person would be guaranteed the incentive for three years as long as they kept working here.

The state would either repay part of their student loans or, if the health worker didn't have loans, simply pay them directly. The individual payments would range from \$20,000 per year for nurses, physicians assistants and some others, to \$35,000 for doctors, pharmacists and dentists, to \$47,000 for doctors who accept the hardest-to-fill positions.

The state's cost for three years' worth of incentives would be \$7.5 million.

That sum is large enough to cause concern this year, with a big drop in state revenues anticipated.

But consider this: Forty-four of the 50 states already offer financial incentives to lure health workers. Alaska is not competitive for health care jobs, and people are suffering because of it.

BOTTOM LINE: The Legislature should pass two bills to relieve a critical shortage of health care workers in Alaska.

Not now

Obama right to nix mileage tax

States and the federal government rightly worry that they'll see less revenue to pay for road work as Americans turn to more fuel-efficient vehicles and future technology takes us further from the internal combustion engine.

One solution is a mileage tax, whereby vehicles would be equipped with GPS tracking devices and people would be taxed according to the miles they drive rather than the gallons of gasoline they purchase.

Oregon has already run a pilot program for such a tax, and a federal mileage tax has gained favor in the Democratic Congress despite the opposition of President Obama.

Concerns for revenue and how to pay for road building and maintenance are valid. But the mileage tax is the wrong solution, at least for now.

First, a major shift in transportation tax policy shouldn't be done on the fly in the middle of an economic crisis. There are too many unanswered questions. Among them:

- Is the ability to track people's driving one we want governments to have?
- How does such a tax encourage the use of higher-mileage vehicles? Is the owner of a hybrid getting 35 mpg going to pay the same tax as the owner of a gas-guzzling Hummer?
- Do we really want to charge people more for miles driven during rush hours, a premium that's been suggested in some states?

Raise the gasoline tax if necessary, but let's not be talking about a mileage tax until we've done a lot more research.

BOTTOM LINE: Mileage tax? Maybe down the road. Maybe.

More Funding Needed To Fight Brain Injuries In Alaska

By Corey Allen-Young, CBS 11 News Reporter
KTVA

Posted:02/26/2009 05:34:33 PM AKST

Known as the silent epidemic, traumatic brain injury here in Alaska is the highest in the country. That's why partnerships are being made statewide to come up with solutions. The key word is solutions as leaders are looking for a permanent fix to decreasing traumatic brain injuries in Alaska. Experiencing a traumatic brain injury can change a life forever. "The recovery process after traumatic brain injury is journey that happens daily and it will continue," said Jill Hodges, of the Alaska Brain Injury Network. With 800 Alaskans being hospitalized or dying and over 10,000 Alaskans currently living with traumatic brain injuries, the consequences could be devastating.

"Yeah it will change your life and everybody else's around you," said Frank Box, who experienced a traumatic brain injury. "It can happen to you while you are walking across the street, you can fall and slip on the ice, or if you are playing a sport or riding a bicycle especially without a helmet, you can also suffer traumatic brain injury," said Christie Artuso, who is the director of the Providence Neuroscience Center. "My brother was a such a vibrant, outgoing person, and for this to happen to him is just unreal," said Duain White, whose brother suffered a traumatic brain injury in an ATV accident.

Taking into account that traumatic brain injuries are the leading cause of death and disability among children and young adults in Alaska, the need to be aware of what exactly can cause an injury is crucial. "We can't do that without the prevention needed and the education needed of our population to tell them about TBI (traumatic brain injury) and to also tell them on how to be healthy," said Don Kashevaroff, who is the CEO of the Alaska Native Tribal Health Consortium. "What we don't have in the state of Alaska is an effective rehabilitative program for people who have been afflicted with a traumatic brain injury can be helped with cognitive therapies, thru rehabilitative therapies to return to a normal functioning life," said Artuso.

Thirty years ago, one half of people who experienced a brain injury survived. Now the number has increased to 78 percent. But officials say the problem in our state is that traumatic brain injury survivors are not getting the services needed for life long living. While people who are victims of traumatic brain injuries do receive initial help there are many questions of what happens next for them. And with money in low supply to provide any additional support, officials say other agencies could be feeling the burden.

With over 10,000 Alaskans currently living with traumatic brain injuries, getting additional care and support is badly needed. "We were just released from the hospital and that was it there was no long term therapy, there was no where to go to offer cognitive therapy, long term physical therapy," said White. "We want to help them maintain their relationships, maintain their families, maintain their lifestyles," said Artuso. "What we need are community and governmental support to do that because currently there is no resources."

Adding more resources is what folks are banking on in helping their loved ones live normal functioning lives. "Is that all we can offer him, is that the best he's going to be doing the rest of his life, its very frustrating," said White. "Treatment, rehabilitation services are essential, they are the key to recovery and sometimes eventual abilities for our brothers or sisters, and family members," said Hodges. With no programs in place to offer continuous follow up service, studies show traumatic brain survivors are more likely to be substance abusers or become jobless or homeless straining other state and city services.

Alaska Statewide Trauma System

Fact Sheet

What is Trauma?

Trauma is any bodily injury from external force. Although many people think of trauma as "accidents", it is better thought of as a disease. Like heart disease and cancer, trauma has identifiable causes and risk factors; and like these conditions, prevention is the best strategy. However, even with the best prevention efforts we still need to be able to take care of the seriously injured. We need to show the same commitment that we brought to cardiac and cancer treatment to trauma care. The seriously injured require timely diagnosis and treatment by health care professionals who are appropriately trained and provided with the necessary resources to reduce the risk of death or permanent disability.

Impact of Trauma in Alaska

Trauma is a tremendous burden on families and communities. In the 1990s, nearly 5,000 Alaskans died from trauma.

- For Alaskans, ages 1 to 44, trauma is the leading cause of death.
- On average, more than 400 Alaskans die from trauma each year. For every injury death, eleven people are hospitalized for trauma-related injuries. For every trauma death that occurs in the hospital, there are an estimated 3 people discharged with permanent disability.
- On average, more than 800 Alaskans are hospitalized each year for central nervous system injury (spinal cord and brain injuries).
- In 2004, motor vehicles were the leading cause of injury death (117), followed by firearm-related injuries (116).
- In 2004, the economic cost of hospital stay alone for trauma patients in Alaska was estimated at over \$73 million. One in four hospital admissions were uncompensated.

Years of Potential Life Lost to Trauma

Death from trauma is tragic at any age. Society's loss is especially great because so many young people die from trauma. The impact can be measured in "years of potential life lost:" the number of years between early death from injury and the average age of death at age 70. Using years of potential life lost, trauma is the leading cause of potential life lost for all Alaskans followed by cancer and heart disease.

What is a Trauma System?

A trauma system is a predetermined, organized, multidisciplinary response to managing the care and treatment of severely injured people. It spans the full spectrum of care; from prevention and emergency care to recovery and rehabilitation. Best practice standards guide each stage of care to ensure that injured patients are promptly transported to and treated at facilities appropriate to their severity of injury and that they receive optimal care at each stage of their treatment.

A statewide trauma system also provides a framework for disaster preparedness and response. As part of its activities, a trauma system coordinates and monitors the

movement and care of severely injured people. Ideally, the trauma system identifies the needs and resources available at any moment and responds to insure optimal care.

Why Have a Trauma System?

For a severely injured person, the time between an injury and receiving definitive care is the most important predictor of survival—the “golden hour.” The chance of survival diminishes with time, despite of the availability of resources and modern technology. A trauma system enhances the chance of survival by making sure that patients are brought to the most appropriate facility in the most efficient manner and that they receive optimal care each step of the way. Trauma systems benefit everybody regardless of income, race, party affiliation or locale. States with mature, comprehensive statewide trauma systems have experienced:

- A 9 percent decrease in motor vehicle crash deaths.
- A 15-20 percent increase in the survival rates of seriously injured patients.
- An increase in productive working years.
- An improvement in statewide disaster preparedness.

Disaster Preparedness

Trauma systems play a vital role in the community response to natural disasters or manmade incidents. Despite concerns over bioterrorism, experience has shown that the vast majority of terrorist attacks will involve explosive devices. We also do know that Alaska will experience major earthquakes in the future. A functioning trauma system is the framework for developing an organized coherent response to these incidents

Alaska's Trauma System

In 1990, state authority for designating trauma centers was created in Alaska. Under this statute hospital participation is entirely voluntary. Criteria were established and the process for designation at Levels I-IV outlined. Since the original legislation there have been only three hospitals that have been designated by the state. One level II and four level IV centers. Clearly to fully realize the benefits of a trauma system more widespread participation is needed. Alaska's trauma system is ideally an inclusive system, recognizing the vital role that rural communities, hospitals and health care professionals play in the care and management of the trauma patient. Wide-scale involvement is critical to get optimal outcomes for the seriously injured.

Review of Alaska Trauma Care by the American College of Surgeons November 2008

The Alaska Department of Health and Social Services (DHSS) recently contracted with the Committee on Trauma of the American College of Surgeons to review trauma care in Alaska. The full report is available on the DHSS website (www.chems.alaska.gov). It notes our strengths and weaknesses and makes recommendations for improving trauma care in our state.

Strengths include: well established injury prevention programs; extensive and creative networks for ground and air medical transport; medical subspecialty availability at three

Anchorage hospitals; and a good relationship with Harborview Medical Center (Level I trauma center) in Seattle.

Deficiencies include the lack of an additional Level II trauma center in Anchorage and the existence of two patterns of trauma care, one for Alaska natives that follows national standards and one for the rest of the state. The review team members noted that among the nontribal hospitals " few of the facilities serving the majority population have made a similar commitment to achieving nationally recognized standards of trauma care". They also noted that there is no statewide trauma plan and no incentive or requirements for hospitals to participate in the system. Additionally, there are few resources at the state level for trauma system management and coordination. Perhaps as important as any of the above, they noted that there seemed to be very little public awareness of trauma system issues.

The review team made 15 priority recommendations. Several involve better organization of state resources and development of a comprehensive statewide trauma plan. The most sweeping recommendation was that all acute care hospitals be required to become designated trauma centers at a level appropriate to their resources and size within two years. They further stated that there should be a second level II trauma center in Anchorage as soon as possible. In addition, an assessment of pediatric trauma care needs should be completed with the goal of developing at least one pediatric trauma center of excellence.

The Alaska Trauma Systems Review Committee oversees the statewide trauma system in Alaska. The system addresses four primary components: trauma hospital designation criteria; trauma registry (monitors system performance and provides feedback for improvement); EMS/pre-hospital triage and transport guidelines; and inter-facility (hospital to hospital) transfer guidelines.

Where To Go From Here

- Increased hospital participation is necessary for the statewide trauma system to function optimally.
- There need to be incentives for hospitals to provide the staff and resources required for trauma center designation.
- Legislation to cover the cost of uncompensated trauma care and to limit the medical liability for care given at designated trauma centers are two incentives that have been successful in other states.

House Bills 168 and 169 have been introduced by John Coghill to encourage hospitals to participate in the trauma system by covering some of the cost of uncompensated trauma care when it is given at designated trauma centers.

The goal of the statewide trauma system is to see every hospital in Alaska designated at an appropriate level.

- *Surveys show that the general public overwhelmingly supports having a hospital in their community that is prepared for and capable of effectively managing a seriously injured patient—and are willing to pay for it!

*2005 Harris Interactive poll, "The American Public's Views of and Support for Trauma Systems: A Congressional Briefing."

- ## Goals
- Trauma as a public health problem here in the US and Alaska.
 - Trauma systems- Treating the severely injured.
 - American College of Surgeons Review: Trauma Care in Alaska.
 - The Future.

Introduction

"If a disease were killing our children at the rate unintentional injuries are, the public would be outraged and demand that this killer be stopped."

C. Everett Koop M.D., ScDC, ScD
Former US Surgeon General
Former General Chairman, The National SafeKids Campaign

- ## Introduction
- Injury is a major public health problem
 - Leading cause of death in 1st 4 decades of life
 - Leading cause of loss of productivity
 - Despite the magnitude little public focus
 - The "neglected disease" since 1966
 - Significant progress in individual patient care
 - Trauma systems shown to save lives

- ## Trauma in Alaska
- Second highest trauma mortality in the US
 - Leading cause of death age 1-44.
 - 400-500 Alaskans die each year.
 - Over 5000 hospital admissions.
 - Over 1000 with permanent disability.

All Cause Mortality Alaska

Trauma Mortality in Alaska

Trauma in Alaska

- Motor vehicle crashes leading cause of death.
- Firearm related injuries, second.
- 2004 hospital cost for Alaska trauma patients over \$73 million.
- ~ 25% over trauma admissions uncompensated.

Trauma Systems

- Wounded in the remote jungle or rice paddy of Vietnam, an American citizen has a better chance for quick definitive surgical care by board certified specialists than were he hit on a highway near his home in the continental United States. Even if he were struck immediately outside the emergency room of most United States hospitals rarely would he be given such prompt, expert operative care as routinely is furnished from the site of combat wounding in Vietnam.

Eiseman, Journal of Trauma, 1967

Trauma Systems

- A trauma system consists of hospitals, personnel, and public service agencies with a preplanned response to caring for the injured patient.

Death from Trauma

Trauma Systems: Military Experience

- "The only victor in war is medicine"
Mayo brothers WWII

Vietnam and Iraq development of systems of care to ensure optimal care from injury to rehab.

Trauma Systems

"Getting the right patient to the right place in the right amount of time."

- ◆ Facilities (trauma center designation)
- ◆ Personnel (training)
- ◆ Patient transport
- ◆ Triage

Facilities-Trauma Centers

- Level I -Definitive subspecialty care, research.
- Level II – Definitive subspecialty care, surgery, orthopedics, neurosurgery.
- Level III- General surgery, orthopedics, no neurosurgery
- Level IV- Stabilization, limited or no surgical capacity

Trained Personnel

- ATLS

Trauma Systems and the Public

- 2004 Harris poll to assess public Knowledge and perceptions on trauma and trauma care.
- Most Americans are not aware that injury is the leading cause of death for children, youth, and adults under the age of 34.

Harris Poll

- After hearing a description of a trauma center, almost all Americans feel it is extremely or very important to be treated at a trauma center in the event of a life-threatening injury.

Harris Poll

- Almost 9 out of 10 of Americans feel that having a trauma center nearby is as important as or more important than having a Fire Department or Police Department.

Harris Poll

- At the time of the survey although 75% thought there was a trauma system where they lived only about 20% actually lived in an area covered by a trauma system.
- Nearly all Americans *believe* that if they had a serious or life-threatening injury, they *would* be taken to the hospital that is best equipped to handle their specific injury in less than 1 hour.

Harris Survey- Conclusions

- The majority of the public thinks it is important to have a trauma system. (It is a nonpartisan issue.)
- Most people think they have it already.
- Many who think they are covered by a regional system are not.

Alaska Trauma System

- 1993 statute- EMS authority for designating trauma centers created.
- Hospital participation voluntary.
- Standards for trauma center designation follow American College of Surgeons criteria.

Alaska Trauma System

Verification of compliance by outside reviewers for Level I, II, III

- ◆ In-state review for Level IV

Current Status -16 Years Later

-24 hospitals in Alaska

Verified / Certified

- 1 Level II ANMC
- 4 Level IV centers- NSH -MEH - YKHC -SCH
- 9 other facilities with reviews or consultations.

Non-Verified

- 2 centers providing care for multiple trauma patients
- 6 centers that provide surgical capabilities
- 2 military hospitals

Alaska Trauma Facilities

- Alaska -Only state without a designated Level I or II trauma center that serves the majority of the population.
- Anchorage is the largest city in the US without a designated Level I or II center for the majority of the population.

Insanity

"Insanity is doing the same thing in the same way and expecting a different outcome"

- Old Chinese Proverb

State of Alaska DHSS
Trauma System Consultation

| • Drexdal Pratt, CEM | State EMS Director |
| • Nels Sanddal, PhD, REMT-B | ACS Consultant |
| • James D. Upchurch, MD | Emergency Physician |

Objective

- To help promote a sustainable effort in the graduated development of an inclusive trauma system for Alaska
- Multidisciplinary review of the trauma system
- 17 states have been reviewed

Executive Summary

Advantages & Assets

- Committed individuals who use their time and expertise every day to serve Alaska citizens
- Extensive networks for transport
- 3 large medical centers with extensive subspecialty expertise within the state
- Large Level I trauma center in Seattle which freely accepts adult and pediatric trauma patients

Advantages & Assets

- One center maintains ACS Level II verification standards and others have obtained consultations and are working toward verification.
- Alaska Trauma Registry- all 24 acute care hospitals provide data.
- Injury prevention activities are well established.
- Initial efforts at legislative change.

Challenges and Vulnerabilities

- No trauma system plan
- Geography / Weather / Remote and isolated communities
- No standards for scene trauma triage or trauma inter-facility transfers
- Trauma system issues have limited visibility within state government.

Challenges and Vulnerabilities

Public not aware of trauma system issues.

Limited human resources.

Few incentives for hospitals to participate.

No statewide evaluation of system performance.

Trauma Care in Alaska 2009

- "There are two healthcare systems for injured patients. One for Alaska natives that adheres to national standards and another for the majority of the population"

ACS-COT Alaska Trauma Systems Review
11/2008

Executive Summary

- "Several Alaska Native facilities have sought and achieved verification and designation as trauma centers. To date few of the facilities serving the majority population have made a similar commitment to achieving nationally recognized standards of trauma care."

ACS-COT Alaska Trauma Systems Review
11/2008

Recommendations: Coalition Building and Community Support

- Develop and disseminate public information about the challenges in providing trauma care and the status of the trauma system in the state for all Alaskans.

Recommendations: Definitive Care Facilities

- Establish, as soon as practical, a second Level II Trauma Center in Anchorage in accordance with ACS criteria to meet the existing volume and acuity demands.
- Mandate participation of all acute care hospitals in the trauma system within a 2 year time frame with trauma center designation appropriate to their capabilities.

Recommendations: Definitive Care Facilities

- Study pediatric trauma care needs and establish one or more in-state centers of excellence in pediatric trauma care.
- Determine a method of providing financial support for hospitals designated/certified by the state as trauma centers to assist with uncompensated care and the cost of readiness

Recommendations: System Coordination and Patient Flow

- Implement standardized prehospital triage and trauma activation protocols customized to the three response areas (Anchorage, Southeast, and the bush).

Recommendations: Financing

- Provide state funding to hire a fulltime trauma system manager.
- Determine a method of providing financial support for hospitals designated/certified by the state as trauma centers to assist with uncompensated care and the cost of readiness.

Themes

- You are closer than you think – many of the components are already in place.
- Alaska is a unique environment different from anywhere else
- You have developed innovative solutions to your unique challenges.
- Despite differences amongst stakeholders, all agree with the need for a consensus developed and integrated trauma system.

ACS Recommendations- Actions

- Commitment by DHSS to create a trauma manager position and develop a statewide trauma plan.
- Trauma Systems Review Committee working to develop metrics to measure trauma system performance.
- Legislation to create incentives for facilities to participate.

Alaska Trauma Systems Review Committee

- MDs, nurses, administrative, and prehospital representation
- Oversight- Trauma Registry
 - Level IV Trauma verification
 - EMS triage and interfacility transfer guidelines
 - Trauma system performance improvement.

Alaska Trauma System: Facility Participation

- Increasing facility participation is essential.
- "Carrots and/or sticks"
- ACS recommends both
- Mandatory participation and payment for uncompensated care.

House and Senate Bills 168 and 169

- Introduced by Representative John Coghill(R) and Senator Bettye Davis(D) March 2009.
- Creates a fund to pay for uncompensated trauma care given at designated trauma centers.

Barriers

- Hospital Administration concerns
- Extra cost especially at Level IIs
 - Lack of physician support.
 - Lack of demand from the community.
- Provider Concerns
- Not needed " we do fine"
 - No financial incentive to do it.
 - More rules and regulations.

Social Change

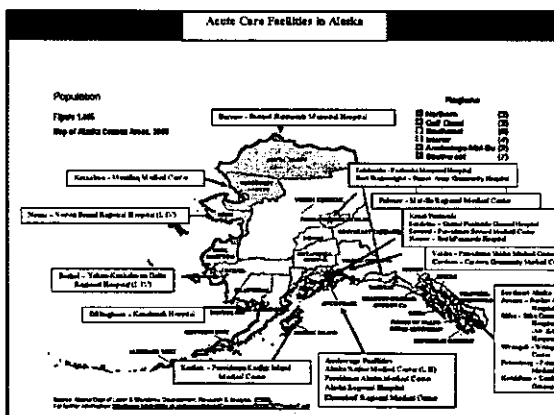

- **Pearl Harbor:** A sudden crisis causes fundamental change.
- **The Tipping Point:** Pressure builds to an inflection point of change.
- **Glacial Erosion:** A steady growth or pressure that is hard to resist or ignore.

Ian Morrison-Author: Futurist

How can you help?

The Tipping Point

- Letters/emails to your legislators H.B. and S. 168 and 169.
- Letters/emails to your your hospital administration
- Ballot initiative?. (ie Arizona)

Vision

- An integrated system that addresses trauma from injury prevention through acute care and rehabilitation.

The Future: Alaska Trauma System(s)

Why is this important?

Because it makes a difference and it is the care you want for your family and neighbors if they are seriously injured.

COMPASS: Other points of view

Emergency trauma care needs improvement in Alaska

BY MARK S. JOHNSON and FRANK SACCO, M.D.
Imagine you and your family driving across Anchorage. As you pass through a major intersection, a drunk driver runs a red light and hits your vehicle broadside. In an instant, you and your passengers face a life-or-death situation. If you're still conscious, you may think, thank God this happened in Anchorage. Where we have state-of-the-art emergency medical services.

Johnson

Sacco

Johnson

...has excellent injury prevention programs, extensive and creative networks for ground and air medical transport medical specialists in Anchorage and a good relationship with Harborview Trauma Center (Level I) in Seattle.

...The Anchorage Fire Department has exceptional ambulance services staffed with well-trained paramedics. Local hospitals have sophisticated emergency departments staffed 24 hours a day with qualified emergency medicine physicians, nurses and support personnel.

...The Alaska Department of Health and Social Services recently contracted with the Committee on Trauma of the American College of Surgeons (ACS) to review Alaska's trauma care. That review notes Alaska's emergency medical services have been verified by the American College of Surgeons and certified by the State of Alaska as a trauma center (Level II). Neither Providence nor Alaska Regional Hospital has achieved this national standard.

...The Alaska Department of Health and Social Services recently contracted with the Committee on Trauma of the American College of Surgeons (ACS) to review Alaska's trauma care. That review notes Alaska's emergency medical services have been verified by the American College of Surgeons and certified by the State of Alaska as a trauma center (Level II). Neither Providence nor Alaska Regional Hospital has achieved this national standard.

...We hope the scenario above never happens to you but, if it does, let's make sure that the care we expect for our loved ones is available for all Alaskans when we need it.

...Though Alaskans die from injury at the second highest rate in the U.S., there is no state-wide system of trauma care. In Anchorage, only the Alaska Native Medical Center

OPINION

COMPASS: Points of view from the community

Alaska needs a better trauma system

By FRANK SACCO and MARK S. JOHNSON

Alaska is much safer than it was a generation ago. From 1980 to 2004, the unintentional injury death rate dropped more than 50 percent. Without this improvement, an additional 300 Alaskans would have died in 2004. However, Alaska's 2004 rate remained 30 percent above the national average.

We are all aware of the terrible toll of cancer and cardiovascular diseases, but the leading cause of death for people younger than 44 is injury. It remains a major cause of death and disability for all age groups. For every death approximately three people are left with permanent disabilities.

As with other diseases, prevention is preferable to treatment. Alaska's dramatic reduction in injury deaths is largely attributable to prevention, including use of child restraints and safety belts, reduced rates of drunken driving, and increased use of personal flotation devices. Though prevention is paramount, we also must be prepared to provide the best possible care for those who become injured.

A trauma system is an organized, state-coordinated effort to deliver the full spectrum of care to injured people. The integration of EMS systems, public safety agencies, air medical services and health care facilities ensures that patients receive the most efficient, effective care possible from time of injury through rehabilitation. Trauma systems have been shown to reduce death from injury by as much as 25 percent and are recognized as an integral part of a state's EMS and disaster response system.

According to a 2004 Harris poll, most people want a comprehensive trauma system in their area. Throughout the United States, 83 percent of those surveyed felt a trauma system was as essential as having a fire department and 80 percent were willing to pay extra for it. Interestingly, though 75 percent thought there was a trauma system in their state, only eight states have fully functioning systems and 15 states have

Sacco

Alaska is blessed with exceptional physicians and quality medical resources, but lack of an organized trauma system means that access to timely, quality care cannot be assured.

Johnson

no system.

Where do we stand? In 1993, the Alaska Legislature provided authority to the Department of Health and Social Services to verify and certify trauma centers. The statute does not require, or provide incentives for, hospital participation. It does state that no hospital can represent itself as a trauma center unless certified by the state.

Regulations adopted in 1996 require trauma centers to meet standards developed by the American College of Surgeons. Four levels are recognized, from Level I (highest) to Level IV (trauma stabilization facility). There are adequate medical resources to establish Level II trauma centers in Anchorage. In addition, it is feasible to establish Level III and IV centers throughout the state. Because of long transport times, centers of all levels are essential for improving outcomes.

Since the statute and regulations were enacted, only three of 24 eligible hospitals have successfully completed the verification and certification process. (Alaska Native Medical Center — Level II, Yukon-Kuskokwim Regional and Norton Sound Regional Hospitals — Level IV).

Alaska is blessed with exceptional physicians and quality medical resources, but lack of an organized trauma system means that access to timely, quality care cannot be assured. In recent years there have been

times when critical specialties such as neurosurgery and vascular surgery have been unavailable for emergencies, necessitating transfer of some critical patients to Seattle.

Here are four steps to improve trauma care in Alaska.

1. Residents need to let legislators know that quality trauma care is important.
 2. The Legislature should put teeth and incentives in the current statute. Successful approaches in other states include requiring trauma center certification at some level as a condition for hospital licensing and limiting medical liability for injuries treated at trauma centers.
 3. Tertiary hospitals should ensure availability of critical sub-specialists 24 hours a day, seven days a week.
 4. Local EMS and medical providers should organize regional trauma systems and integrate them with the statewide system.
- Developing a comprehensive statewide trauma system, and expanding injury prevention efforts, will make Alaska a safer, healthier place to live.

■ Dr. Frank Sacco is chief of surgery at the Alaska Native Medical Center and chairman of the Alaska Chapter of American College of Surgeons Committee on Trauma. Mark S. Johnson was chief of Emergency Medical Services in the Department of Health and Social Services from 1979 until he retired in 2004.

Trauma System Consultation
State of Alaska
Anchorage, Alaska

November 2nd -5th, 2008
American College of Surgeons
Committee on Trauma

PRIORITY RECOMMENDATIONS AMERICAN COLLEGE OF SURGEONS ALASKA TRAUMA SYSTEM REVIEW

November 2-5 2008

Definitive Care Facilities

- Establish, as soon as practical, a second Level II Trauma Center in Anchorage in accordance with American College of Surgeons Committee on Trauma (ACS-COT) verification criteria to meet the existing volume and acuity demands.
- Mandate participation of all acute care hospitals in the trauma system within a 2 year time frame with trauma center certification/designation appropriate to their capabilities.
 - Facilities should seek trauma center designation at a level appropriate for their capabilities.
 - Other facilities, such as remote health care clinics, should participate with rapid patient assessment and stabilization and by following guidelines for trauma triage and transfer.
- Study pediatric trauma care needs with the goal of establishing one or more centers of excellence in pediatric trauma care.

Coalition Building and Community Support

- Develop and disseminate public information about the challenges in providing trauma care and the status of the trauma system in the state for Alaskans.

Lead Agency and Human Resources Within the Lead Agency

Develop an appropriate position classification and duty statement for a 1.0 full time equivalent (FTE), permanent trauma system manager that specifies education as a health professional, experience in trauma or emergency health care, and the administrative skills and clinical understanding necessary to support trauma system development.

Trauma System Plan

- Develop a comprehensive trauma system strategic plan consistent with the Health Resources and Services Administration (HRSA) *Model Trauma System Planning and Evaluation* document.

Coalition Building and Community Support

- Develop and disseminate public information about the challenges in providing trauma care and the status of the trauma system in the state for Alaskans.

System Integration

- Ensure that the Injury Prevention and Emergency Medical Services

(
(
(IPEMS) Section is engaged in planning with disaster preparedness, emergency management, and public health functions for integration of the trauma system.

Financing

- Provide state funding to hire a fulltime trauma system manager.

Emergency Medical Services

- Develop a central coordination center for statewide air medical resources that will maintain an updated registry of all medical aircraft to include medical services and flight characteristics (e.g., load capacity, instrument rating, landing requirements, etc); and to monitor the availability and location of air resources in near real-time.

System Coordination and Patient Flow

- Implement standardized prehospital triage and trauma activation protocols customized to the three response areas (Anchorage, Southeast, and the bush).

Disaster Preparedness

- Integrate all components of the trauma system into state and local disaster planning activities.

System-wide Evaluation and Quality Assurance

- Develop an initial set of 3-5 statewide system performance indicators from among the list of nine provided in the Pre-Review Questionnaire.

Trauma Management Information Systems

- Ensure that all elements considered essential to system development, evaluation and performance improvement in the State of Alaska are included and functional in the new trauma registry and are consistent with the National Trauma Data Standard definitions.

Statutory Authority and Administrative Rules

System Leadership

- Form an Alaska Technical Advisory Committee (ATAC) and task it with providing the Alaska Council on Emergency Medical Services (ACEMS) with recommendations regarding the following functions: data systems, trauma system planning, system-wide performance improvement and patient safety, trauma education (Advanced Trauma Life Support [ATLS], Trauma Nurse Core Curriculum [TNCC], Prehospital Trauma Life Support [PHTLS], etc), trauma center review and certification, injury prevention and control, public policy, and research.

• Enact legislation to expand the membership of the ACEMS to represent the trauma system and to include the following members appointed as follows:

- One member, appointed by the Governor, shall represent the Alaska Chapter of the American College of Surgeons Committee on Trauma.
- One member, appointed by the Governor, shall be a general surgeon who routinely participates in the care of injured patients.
- One member, appointed by the Governor, shall represent the Alaska Chapter of the American Academy of Pediatrics.
- One member, appointed by the Alaska Legislature, upon the recommendation of the Speaker of the House of Representatives.
- One member, appointed by the Alaska Legislature, upon the recommendation of the President of the Senate.

Objectives and Methodology

- The Coalition for American Trauma Care commissioned Harris Interactive to conduct a survey of the public's views of and support for trauma systems.
- Telephone interviews were conducted with a nationally representative sample of 1000 adults aged 18 and over, between November 3rd and 14th, 2004.
- Final data were weighted by age, education, gender, income, and region, where necessary, using 2003 Current Population Survey data to adjust for sampling biases, if any.
- With 1,000 respondents, the sampling error is +/- 3%.

Key Topics

- Knowledge about leading causes of death
- Perceived value of and expectations about trauma centers
- Perceived value of and expectations about trauma systems
- Willingness to support funding of trauma centers and systems
- Disaster preparedness and trauma systems

Harris Interactive Ground Rules For Publicly Released Surveys

- Harris Interactive Inc. has very strong ground rules for surveys which may be publicly released. No other survey firm has stronger rules.
- Our **Five Rules** ensure that our surveys are never used to lead or mislead policymakers or the public. We do not do “hired gun surveys.”
 1. **The survey must be fair, balanced and comprehensive.**
 2. **If the survey is publicly released, the full survey report must be released.**
 3. We will not include questions for possible publication about our clients' company or their products or brand names, or the names of their competitors. (The one exception: we sometimes do readership surveys or audience measurement surveys which ask about our clients.)
 4. **The survey must not be used to mislead the public, the media, policymakers or anyone else.**
 5. **We need to review the information that is being released prior to its release in order to check for accuracy.**

Overview

- Most Americans are not aware that injury is the leading cause of death for children, youth, and adults under the age of 34.
- After hearing a description of a trauma center, Americans value them highly and appreciate the importance of having one within easy reach.
 - Almost all Americans feel it is extremely or very important to be treated at a trauma center in the event of a life-threatening injury.
 - Nearly nine in ten Americans think it is extremely or very important for an ambulance to take them to a trauma center in the event of a life-threatening injury, even if it is not the closest hospital.
 - Nearly all Americans *believe* that if they had a serious or life-threatening injury, they *would* be taken to the hospital that is best equipped to handle their specific injury in less than 1 hour.
- Majorities of Americans feel that having a trauma center nearby is as important as or more important than having a Fire Department or Police Department.

REPRESENTATIVE JOHN COGHILL

HB 168 Certification and Designation of Trauma Centers

Sponsor Statement

Trauma injuries can within moments take a person from perfect health to a critical life threatening condition. Trauma is any bodily injury from an external force including car crashes, shootings, falls, snow machine crashes, and stabbings. There is a "golden hour" after the injury during which proper treatment and appropriate interventions will potentially save a trauma patient's life and prevent further damage to the injured person.

Trauma is the leading cause of death for Alaskans between the age of one and forty-four and more than 800 Alaskans are hospitalized each-year for spinal cord and brain injuries.

A trauma system is an organized multidisciplinary response to managing treatment of severely injured people and it spans the full spectrum from prevention and emergency care to recovery and rehabilitation. A trauma system enhances the chance of survival by making sure patients are brought to the most appropriate facility in the most efficient manner and that optimal care is delivered every step of the way.

Texas, Oklahoma, California, Alabama, Washington and Mississippi have implemented programs to address uncompensated trauma services. This legislation would recreate a trauma care fund which could reimburse trauma centers for uncompensated or undercompensated services. The bill would create an incentive for becoming a certified trauma center but does not force facilities to become certified trauma centers.

Designate Trauma Centers and the Uncompensated Trauma Care Fund

Sectional

Section 1. AS 18.08.082 currently prescribes by regulation criteria for training programs and for personnel involved in emergency medical services. This section adds a requirement for the commissioner of Health and Social Services establish special designations for varying levels of services offered by a certified trauma center.

Section 2. Establishes a trauma care fund to be used to compensate certified trauma centers for uncompensated trauma care. The fund can accept money appropriated by the legislature, which can include donations, income from the fund, and of the other designated receipts. The commissioner is given authority to establish a special committee for review of the program and limits are set on the distribution of the funds.

Section 3. The bill has an immediate effective date.

ANALYSIS: (Attach a separate page if necessary)

HB 168 establishes a mechanism to provide a financial incentive for hospitals to become designated as certified trauma centers in order to encourage their participation in a statewide trauma system, with the goal of improving delivery of trauma care in the Alaska medical system. This bill establishes a fund for reimbursement of trauma care for uninsured or underinsured patients, and allows designated trauma centers to apply for compensation of claims that are otherwise uncompensated by insurance or other funds.

The Department proposes to manage this fund using existing staff resources.

Statewide Planning: Data

Solution: Case Management	Challenge: Why manage rehabilitation services if they do not exist in state?	Attempt: \$150.0 MHTAAR \$50.0 GF/MH NOT funded	Need Rehabilitation
---------------------------	------------------------------------------------------------------------------	----------------------------------------------------	----------------------------

Post Acute Rehabilitation

Solution: Post-acute and Residential Rehabilitation	Why build programs if there is not a FUNDING source to pay for the services?	Community providers want to develop brain injury programs	Need FUNDING
-----------------------------------------------------	------------------------------------------------------------------------------	-----------------------------------------------------------	---------------------

On-Going Support: Funding

Solution: Medicaid Waiver or General Fund	Can't develop waiver application without DATA	Providers cannot build programs without funding source beyond private pay	Need DATA
-------------------------------------------	-----------------------------------------------	---------------------------------------------------------------------------	------------------

-With no programs in place to offer continuous follow up service, studies show traumatic brain survivors are more likely to be substance abusers or become jobless or homeless straining other state and city services.

Solution: Action	The existence of brain injury waivers supports the growth of community non-profit brain injury agencies.	Case management can be paid through waivers or designating TBI as a targeted population	Data is available through other State's experiences (Rutger's Study)
------------------	----------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------	----------------------------------------------------------------------

alaska brain injury network

Every 15 seconds someone sustains a traumatic brain injury (TBI) in the U.S.

Thirty years ago, only half of all people with brain injury survived; now 78% survive. This means that many individuals now live with significant disability requiring a full range of services.

Every year the Alaska Department of Health & Social Services reports about 800 traumatic brain injury (TBI) cases resulting in hospitalization or fatality. The Alaska TBI rate is 28% higher than the national average. The TBI rate in rural Alaska is one of the highest in the nation.

It is estimated that at least 10,000 Alaskans are living with brain injury today.

The Alaska Brain Injury Network, Inc. (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury.

ABIN's Board of Directors represent all regions of Alaska and the extended brain injury community – survivors, family members, service providers, health educators, researchers and those who write laws and policy.

ABIN works with their Alaska Mental Health Trust Authority partner boards to advocate for policy changes, programs, and facilities to better serve the brain injury population.

ABIN's staff focuses on early identification, connecting brain injury survivors with services, providing support and education for families, and bringing professional training to Alaska.

The goal for every brain injury survivor is the best possible recovery for a fulfilling and productive life. Achieving that goal requires full range of services close to home. This includes...

- Prevention
- Early identification and intervention
- Access to skilled specialists
- Community-based post injury services
- Continuing rehabilitation
- Brain injury support groups and in-state resources

What you can do...

- **Be aware of the burden of brain injury nationally and to the state of Alaska**
- **Support a TBI Resolution for Brain Injury Awareness Month.**
- **Become familiar with ABIN Priorities in the GF/MH Budget; Prevention, Training, and Resource Navigation**

Upcoming ABIN Priorities

In-state rehab facility – for neurobehavioral beneficiaries.

Brain Injury Waiver - recommendations for the current Medicaid waiver system to accommodate the services needed by brain injury survivors: neuropsychological assessment, cognitive and functional therapy, case management, counseling, home modifications, transportation, respite care, and more.

TBI Screening and early intervention – promotes better recovery and saves money.

(907) 465-3027

April 9, 2009

Representative Coghill
Juneau, Alaska

Representative Coghill,

Trauma is any bodily injury from an external force. Trauma puts a tremendous burden on families and communities in Alaska. An average of 400 Alaskans die each year from trauma. For every death, 11 people are hospitalized. One in four hospital admissions is uncompensated which puts an additional burden on the State's health care system. HB 168 is offered to assist in this dilemma.

House Bill 168 provides the DHSS Commissioner authority to establish special designations in regulation for varying levels of trauma care so that a 'Certified Trauma Center' would be eligible to recoup expenses as a result of uncompensated care being rendered. The purpose of the fund is to reimburse certified trauma centers in the state for care uncompensated by the person receiving the treatment or by any other source. HB 169 would then set up the uncompensated trauma care fund that would help cover some of the losses suffered by the trauma center rendering the care.

The Alaska Council on EMS seeks your support for a fully functioning trauma system, including funding for the development of trauma centers and legislation addressing the issue of incentives for trauma center designation and uncompensated care of trauma patients. The added benefit of HB 168, we believe, would be an incentive for more hospitals in the state to become 'Certified Trauma Centers' thereby assisting in the development in a state wide trauma care system.

The American College of Surgeons met 11/08 in Anchorage to assess the States trauma system. The passage of HB 168 & 169 would provide support to address some of the areas that were noted in the report.

Thank you for your support of this critical issue.

RE: HB 168 – State certification and designation of trauma centers and creating the
uncompensated trauma care fund
HB 169 – Appropriating \$5,000,000 to the uncompensated trauma care fund

POSITION: Support

ANTHC supports HB 168 and HB 169 as important steps in increasing the trauma care capacity in the state.

The Alaska Native Tribal Health Consortium (ANTHC) is a tribally controlled, non-profit statewide tribal health organization formed pursuant to federal law to provide a range of medical and community health services for more than 130,000 Alaska Natives. It is part of the Alaska Tribal Health System (ATHS), which is owned and managed by the 231 federally-recognized tribes in Alaska and by their respective regional health organizations.

ANTHC and Southcentral Foundation jointly manage the Alaska Native Medical Center (ANMC), the tertiary hospital of the ATHS located in Anchorage. ANMC is the only Level II Trauma Center in the Indian Health Service/tribal health system nationally. ANMC is also the only Level II Trauma Center in Alaska. The nearest Level I Trauma Center is in Seattle.

Trauma system development is a public health priority. A comprehensive system of trauma care is an essential part of the public safety net. Regionalized trauma systems based on a network of coordinated Trauma Centers designated at the appropriate level improves health outcomes and reduces costs. ANMC, as the highest level designated Trauma Center in the State of Alaska, is the lynchpin for the state's trauma system, and provides the foundation for continued statewide system development.

Trauma Center designations were created as a way to improve outcomes for patients who face extraordinary medical issues. On balance, early and appropriate medical attention to life-threatening health issues reduces overall length of stay in the hospital and reduced complications for many patients. Without trauma care, the costs of health care for trauma patients will be greater, including trauma patients who are Medicaid eligible.

The cost of providing trauma care at ANMC has more than doubled over the past four years and funding has not kept pace. ANMC's Trauma Center simply cannot be maintained at current revenue levels. If ANMC's Trauma Center designation is discontinued because funding levels have rendered the service unsustainable, the hospital faces reductions in staffing. Diversions of patients to non-tribal providers would increase, and because the federal government reimburses 100% of the cost of services provided for Native clients at Native facilities but a smaller percentage at non-tribal providers, there would be an increased cost to the state's general fund budget.

ANTHC supports HB 168 and HB 169 as important steps by the State to encourage and support appropriate trauma care options for Alaskans. Because we are Alaska's only Level II Trauma Center we recommend removing the language in section (d) on Page 2, Line 11, that limits appropriations to any one facility to 25%.

Thank you for your consideration.

Executive Summary

American College of Surgeons Trauma System Consultation Visit Alaska Department of Health and Social Services November 2nd-5th, 2008

The American College of Surgeons, Trauma Systems Evaluation and Planning Committee (TSEPC) is honored to have been invited to the largest state in the nation and to have listened as the state's impassioned health care providers and public servants discussed their success and remaining challenges. We are pleased to provide this report and to encourage you to implement the key recommendations to improve the system of trauma care for all Alaskans and visitors, regardless of where that injury may occur.

It is clear that Alaska recognizes the significance of its injury problem as witnessed both by epidemiological descriptions of fatal and non-fatal injury and by the extensive focus on injury prevention programs across the state. Alaska's current trauma system is a testament to the adage that "necessity is the mother of invention". Clearly the "Last Frontier" is challenged with issues of geography, remoteness, inclement weather and limited health care resources. State and regional leaders, along with a wide ranging cadre of health care providers are to be congratulated for their efforts to achieve the trauma system mantra of "getting the right patient to the right place in the right amount of time". Whether this has involved training a hunting buddy to be an Emergency Trauma Technician, or a local aviation service has figured out how to carry a litter in a small aircraft, or a rural Critical Access Hospital has strived to become certified or designated as a Level IV trauma center, clear progress has been demonstrated toward the betterment of trauma care in Alaska.

The achievements to date have largely been unplanned with limited coordination. As a result, incongruity exists within the current trauma system. Several Alaska Native facilities have sought and achieved verification/designation as trauma centers. These facilities are to be commended for their dedication and commitment to trauma care and the trauma system. To date, few of the facilities serving the majority population have made a similar commitment to achieving nationally recognized standards of trauma care.

The current leadership of the Alaska Department of Health and Social Services recently made a commitment to trauma system development by making this a priority project in the 2009 work plan. This represents an opportunity to begin the process to coordinate, systematize and institutionalize these efforts so that, regardless of where someone is injured in Alaska or what their racial and ethnic heritage might be, all have equal access to optimal trauma care. Alaska must make a commitment of resources, both fiscal and human, to achieve the recommendations outlined in this document. The consultation team encourages the state to retain the opportunity for system ingenuity when addressing the challenges that Alaska's geography and environment impose when increasing the standardization of trauma system processes.

Advantages and Assets of the Alaska Trauma System

- The lead agency for trauma is identified. Statute designates the Alaska Council on EMS (ACEMS) as an advisory group with responsibility for trauma.
- The state has very committed individuals who use their time and expertise every day to serve Alaska citizens.
- The state has extensive and creative networks for transport.
- Three large medical centers with extensive subspecialty expertise exist within the state.
- A large Level I trauma center in Seattle freely accepts adult and pediatric trauma patients.
- One medical center maintains ACS Level II verification standards and other facilities have obtained consultation and are working toward verification.
- All 24 acute care hospitals provide data to the Alaska trauma registry.
- Injury prevention activities are well established.
- The EMS Goals document categorizes communities by size and remoteness and identifies the resources that should be available for health care and trauma care.
- The state created the Emergency Trauma Technician program to prepare community members to provide initial trauma care.

- Initial efforts have been made to obtain legislative change.

Challenges and Vulnerabilities of the Alaska Trauma System

- The state has many challenges due to geography, weather, and remote and isolated communities.
- No trauma system strategic plan has been developed.
- No standards exist for scene trauma triage or trauma inter-facility transfers.
- Trauma system issues receive limited attention by the Alaska Council on EMS, and thus little visibility within the Department of Health and Social Services.
- The general public is not aware of trauma system issues.
- The state has limited human resources for the provision of trauma care. The lead agency also has limited human resources for trauma system management.
- The ACEMS has no formal trauma representatives.
- There are two healthcare systems for trauma care, one for Native Alaskans and one for other Alaskans.
- Few incentives exist for hospitals to participate in the trauma system.
- No statewide evaluation of system performance is conducted.
- The trauma registry data are not current.

Priority Recommendations Summary

This report contains more than seventy recommendations. Of these, the TSEPC team felt that the following were the most critical to the system's short and long-term success.

Statutory Authority and Administrative Rules

- **Enact legislation to expand the membership of the ACEMS to represent the trauma system and to include the following members appointed as follows:**
 - **One member, appointed by the Governor, shall represent the Alaska Chapter of the American College of Surgeons Committee on Trauma.**
 - **One member, appointed by the Governor, shall be a general surgeon who routinely participates in the care of injured patients.**
 - **One member, appointed by the Governor, shall represent the Alaska Chapter of the American Academy of Pediatrics.**
 - **One member, appointed by the Alaska Legislature, upon the recommendation of the Speaker of the House of Representatives.**
 - **One member, appointed by the Alaska Legislature, upon the recommendation of the President of the Senate.**
- **Require participation of all acute care hospitals in the trauma system within a 2 year time frame.**
 - **Facilities should seek trauma center designation at a level appropriate for their capabilities.**
 - **Other facilities, such as remote health care clinics, should participate with rapid patient assessment and stabilization and by following guidelines for trauma triage and transfer.**

System Leadership

- **Form an Alaska Technical Advisory Committee (ATAC) and task it with providing the Alaska Council on Emergency Medical Services (ACEMS) with recommendations regarding the following functions: data systems, trauma system planning, system-wide performance improvement and patient safety, trauma education (Advanced Trauma Life Support [ATLS], Trauma Nurse Core Curriculum [TNCC], Prehospital Trauma Life Support [PHTLS], etc), trauma center review and certification, injury prevention and control, public policy, and research.**

Coalition Building and Community Support

- **Develop and disseminate public information about the challenges in providing trauma care and the status of the trauma system in the state for Alaskans.**

Lead Agency and Human Resources Within the Lead Agency

Develop an appropriate position classification and duty statement for a 1.0 full time equivalent (FTE), permanent trauma system manager that specifies education as a health professional, experience in trauma or emergency health care, and the administrative skills and clinical understanding necessary to support trauma system development.

Trauma System Plan

- **Develop a comprehensive trauma system strategic plan consistent with the Health Resources and Services Administration (HRSA) *Model Trauma System Planning and Evaluation* document.**

System Integration

- **Ensure that the Injury Prevention and Emergency Medical Services (IPEMS) Section is engaged in planning with disaster preparedness, emergency management, and public health functions for integration of the trauma system.**

Financing

- **Provide state funding to hire a fulltime trauma system manager.**

Emergency Medical Services

- **Develop a central coordination center for statewide air medical resources that will maintain an updated registry of all medical aircraft to include medical services and flight characteristics (e.g., load capacity, instrument rating, landing requirements, etc); and to monitor the availability and location of air resources in near real-time.**

Definitive Care Facilities

- **Establish, as soon as practical, a second Level II Trauma Center in Anchorage in accordance with American College of Surgeons Committee on Trauma (ACS-COT) verification criteria to meet the existing volume and acuity demands.**
- **Mandate participation of all acute care hospitals in the trauma system within a 2 year time frame with trauma center certification/designation appropriate to their capabilities.**
- **Study pediatric trauma care needs with the goal of establishing one or more centers of excellence in pediatric trauma care.**

System Coordination and Patient Flow

- **Implement standardized prehospital triage and trauma activation protocols customized to the three response areas (Anchorage, Southeast, and the bush).**

Disaster Preparedness

- **Integrate all components of the trauma system into state and local disaster planning activities.**

System-wide Evaluation and Quality Assurance

- **Develop an initial set of 3-5 statewide system performance indicators from among the list of nine provided in the Pre-Review Questionnaire.**

Trauma Management Information Systems

- **Ensure that all elements considered essential to system development, evaluation and performance improvement in the State of Alaska are included and functional in the new trauma registry and are consistent with the National Trauma Data Standard definitions.**

Trauma System Assessment

Injury Epidemiology

Purpose and Rationale

Injury epidemiology is concerned with the evaluation of the frequency, rates, and pattern of injury events in a population. Injury pattern refers to the occurrence of injury-related events by time, place, and personal characteristics (for example, demographic factors such as age, race, and sex) and behavior and environmental exposures, and, thus, it provides a relatively simple form of risk-factor assessment.

The descriptive epidemiology of injury among the whole jurisdictional population (geographic area served) within a trauma system should be studied and reported. Injury epidemiology provides the data for public health action and becomes an important link between injury prevention and control and trauma system design and development. Within the trauma system, injury epidemiology has an integral role in describing the root causes of injury and identifying patterns of injury so that public health policy and programs can be implemented. Knowledge of a region's injury epidemiology enables the identification of priorities for directing better allocation of resources, the nature and distribution of injury prevention activities, financing of the system, and health policy initiatives.

The epidemiology of injury is obtained by analyzing data from multiple sources. These sources might include vital statistics, hospital administrative discharge databases, and data from emergency medical services (EMS), emergency departments (EDs), and trauma registries. Motor-vehicle crash data might also prove useful, as would data from the criminal justice system focusing on interpersonal conflict. It is important to assess the burden of injury across specific population groups (for example, children, elderly people and ethnic groups) to ensure that specific needs or risk factors are identified. It is critical to assess rates of injury appropriately and, thus, to identify the appropriate denominator (for example, admissions per 100,000 population). Without such a measure, it becomes difficult to provide valid comparisons across geographic regions and over time.

To establish injury policy and develop an injury prevention and control plan, the trauma system, in conjunction with the state or regional epidemiologist, should complete a risk assessment and gap analysis using all available data. These data allow for an assessment of the "injury health" of the population (community, state, or region) and will allow for the assessment of whether injury prevention programs are available, accessible, effective, and efficient.

An ongoing part of injury epidemiology is public health surveillance. In the case of injury surveillance, the trauma system provides routine and systematic data collection and, along with its partners in public health, uses the data to complete injury analysis, interpretation, and dissemination of the injury information. Public health officials and trauma leaders should use injury surveillance data to describe and monitor injury events and emerging injury trends in their jurisdictions; to identify emerging threats that will call for a reassessment of priorities and/or reallocation of resources; and to assist in the planning, implementation, and evaluation of public health interventions and programs.

OPTIMAL ELEMENTS

I. There is a thorough description of the epidemiology of injury in the system jurisdiction using population-based data and clinical databases. **(B-101)**

- a. There is a through description of the epidemiology of injury mortality in the system jurisdiction using population-based data. **(I-101.1)**
- b. There is a description of injuries within the trauma system jurisdiction, including the distribution by geographic area, high-risk populations (pediatric, elderly, distinct cultural/ethnic, rural, and others), incidence, prevalence, mechanism, manner, intent, mortality, contributing factors, determinants, morbidity, injury severity (including death), and patient distribution using any or all the following: vital statistics, ED data, EMS data, hospital discharge data, state police data (data from law enforcement agencies), medical examiner data, trauma registry, and other data sources. The description is updated at regular intervals. **(I-101.2)**
Note: Injury severity should be determined through the consistent and system-wide application of one of the existing injury scoring methods, for example, Injury Severity Score (ISS).
- c. There is comparison of injury mortality using local, regional, statewide, and national data. **(I-101.3)**
- d. Collaboration exists among EMS, public health officials, and trauma system leaders to complete injury risk assessments. **(I-101.4)**
- e. The trauma system works with EMS and public health agencies to identify special at-risk populations. **(I-101.7)**

II. Collected data are used to evaluate system performance and to develop public policy. **(B-205)**

- a. Injury prevention programs use trauma management information system data to develop intervention strategies. **(I-205.4)**

III. The trauma, public health, and emergency preparedness systems are closely linked. **(B-208)**

- a. The trauma system and the public health system have established linkages, including programs with an emphasis on population based public health surveillance and evaluation for acute and chronic traumatic injury and injury prevention. **(I-208.1)**

IV. The jurisdictional lead agency, in cooperation with the other agencies and organizations, uses analytic tools to monitor the performance of population based prevention and trauma care services. **(B-304)**

- a. The lead agency, along with partner organizations, prepares annual reports on the status on injury prevention and trauma care in the state, regional, or local areas. **(I-304.1)**
- b. The trauma system management information system database is available for routine public health surveillance. There is concurrent access to the databases (ED, trauma, prehospital, medical examiner, and public health epidemiology) for the purpose of routine surveillance and monitoring of health status that occurs regularly and is a shared responsibility. **(I-304.2)**

CURRENT STATUS

Injury is the leading cause of death for Native Alaskans of all ages. Injury is the third leading cause of death for all Alaskans. Like the remainder of the United States, injury is the leading cause of death for the population between 1 and 44 years of age. Leading mechanisms for unintentional injury include the following: motor vehicle crash, falls, airplane crash, fire, all terrain vehicles, snow machine, and firearms. Suicide is a leading cause of injury death for ages 15 to 64 years. Injury mortality is significantly higher in Alaska than in the remainder of the United States where injury is the fifth leading cause of death; however it was reported that the state's injury mortality rate has decreased significantly over the last 30 years.

Healthy Alaskans 2010 describes significant injury prevention objectives for the state, with indicators identified for unintentional injury, occupational fatalities, attempted suicide, nonfatal, hospitalized traumatic brain injury, prenatal physical abuse, population using seatbelts, and households keeping firearms locked and loaded. A strategic plan for addressing these injury prevention objectives was not identified.

A dedicated staff working on epidemiology is assigned to the Department of Health and Social Services (DHSS) Injury Prevention and EMS (IPEMS) Section to coordinate the data analysis for various injury focus areas. Additionally, the Native Alaska Epidemiology Center analyzes data related to injury among the native population. A report on Native Alaskan injury morbidity and mortality was published in 2008.

Access to numerous population-based databases (e.g., vital statistics, fatal analysis reporting system, public safety information system, civilian fire fatality statistics, uniform crime reporting, medical examiner case database, and hospital discharge data system) are readily available for study of the injury problem.

Funding from grants and other state agencies has been obtained and creatively used to support injury surveillance. The state has many population-based injury databases used to describe the injury problem. Numerous injury surveillance activities are ongoing, such as the violent deaths reporting, occupational injuries, motor vehicle crashes, and traumatic brain injuries. The Alaska trauma registry which has data from all 24 acute care hospitals has been used extensively to describe the patterns of injury in the state.

The state had a State and Territorial Injury Prevention Directors Association (STIPDA) assessment conducted in 2003. Work was reported to be still in progress to address many of the recommendations included in the report.

The state has a wealth of data about the injury problem. Primary injury prevention has been the priority focus of information shared with the public and members of the injury coalition. The data have been used to compete successfully for numerous federal grants and state agency projects.

The state website has fairly recent information and reports about injury trends for selected injuries, particularly regarding injury mechanisms for which the state has grant funding. Several publications were reported to be in draft stage related to grant funded activities, but no general description of the injury problem in the state has been published since *Healthy Alaskans 2010*.

No apparent linkage has been made between injury prevention and injury control, which would integrate secondary and tertiary prevention (or the care provided after the patient is injured) in the injury epidemiology focus. Alaskans have not been informed about the injury problem, its relationship to trauma care, and the need for a trauma system.

RECOMMENDATIONS

- Develop fact sheets for public education regarding injuries that require hospitalization and a trauma system.
- Expand the focus of injury epidemiology to report on trauma patient outcomes and the relationship to the trauma system.

Indicators as a Tool for System Assessment

Purpose and Rationale

In the absence of validated national benchmarks, or norms, the benchmarks, indicators and scoring (BIS) process included in the Health Resources and Services Administration's *Model Trauma System Planning and Evaluation* document provides a tool for each trauma system to define its system-specific health status benchmarks and performance indicators and to use a variety of community health and public health interventions to improve the community's health status. The tool also addresses reducing the burden of injury as a community-wide public health problem, not strictly as a trauma patient care issue.

This BIS tool provides the instrument and process for a relatively objective state and sub-state (regional) trauma system self-assessment. The BIS process allows for the use of state, regional, and local data and assets to drive consensus responses to the BIS. It is essential that the BIS process be completed by a multidisciplinary stakeholder group, most often the equivalent of a state trauma advisory committee. The BIS process can help focus the discussion on various system strengths and weaknesses, can be used to set goals or benchmarks, and provides the opportunity to target often limited resources and energies to the areas identified as most critical during the consensus process. The BIS process is useful to develop a snapshot of any given system at a moment in time. However, its true usefulness is in repeated assessments that reveal progress toward achieving various benchmarks identified in the previous application of the BIS. This process further permits the trauma system to refine goals to be attained before future reassessments using the tool.

OPTIMAL ELEMENT

- I. Assurance to constituents that services necessary to achieve agreed-on goals are provided by encouraging actions of others (public or private), requiring action through regulation, or providing services directly. **(B-300)**

CURRENT STATUS

In early 2007, the Benchmark, Indicators and Scoring (BIS) document from the *Model Trauma System Planning and Evaluation* document was distributed to the Trauma System Review Committee (TSRC). Seven of the sixteen members completed the BIS scoring. Results were compiled and means were calculated for each indicator. Those summary scores were presented to the TSRC at their May, 2007, meeting. The TSRC selected benchmarks 205, 206 and 208 for improvement over the succeeding year.

Specifically, the TSRC identified three tactics to improve scores for identified benchmarks. These tactics included:

1. Select three measures of patient care that can be reviewed by the committee.
2. Compare and contrast transfers from designated Level IV facilities with those from non-designated facilities.
3. Review deaths in transport and deaths within 24 hours of admission.

When queried about the status of these tactical objectives, the TSRC members noted that little progress has been made in completing those processes. Initial data were reviewed from the state trauma registry to begin the process. However, the consensus was that the data needed additional cleaning, so the project was placed on hold and has not been revisited.

Those who had participated in the BIS review relayed some frustration about the process, stating that they did not have sufficient information to answer each of the indicators. Other states that have completed the BIS process in the same individual process have had similar experiences; however, when states have completed the BIS in a facilitated group process, individuals from across the trauma system spectrum learn a great deal about other areas of the trauma system. These facilitated processes have been conducted in many different formats, including audio teleconferencing, segmentation of the BIS by section, and in face-to-face retreats.

When participants were asked about whether the BIS might be revisited, little enthusiasm was expressed for undertaking the process, probably due to the frustration associated with the initial process and the low perceived value of the outcome.

RECOMMENDATIONS

- Select and complete one of the three tactical objectives identified in the May, 2007, TSRC meeting.
- Secure funding to support a facilitated trauma system assessment utilizing the Benchmark, Indicators and Scoring (BIS) process with the newly formed Alaska Trauma Advisory Committee (ATAC) and other trauma system stakeholders and state partners.
- Repeat the BIS process at regular intervals (e.g., every two years) as a means of establishing and monitoring system benchmarks

Trauma System Policy Development

Statutory Authority and Administrative Rules

Purpose and Rationale

Reducing morbidity and mortality due to injury is the measure of success of a trauma system. A key element to this success is having the legal authority necessary to improve and enhance care of injured people through comprehensive legislation and through implementing regulations and administrative code, including the ability to regularly update laws, policies, procedures, and protocols. In the context of the trauma system, comprehensive legislation means the statutes, regulations, or administrative codes necessary to meet or exceed a predescribed set of standards of care. It also refers to the operating procedures necessary to continually improve the care of injured patients from injury prevention and control programs through post injury rehabilitation. The ability to enforce laws and rules guides the care and treatment of injured patients throughout the continuum of care.

There must be sufficient legal authority to establish a lead trauma agency and to plan, develop, maintain, and evaluate the trauma system during all phases of care. In addition, it is essential that as the development of the trauma system progresses, included in the legislative mandate are provisions for collaboration, coordination, and integration with other entities also engaged in providing care, treatment, or surveillance activities related to injured people. A broad approach to policy development should include the building of system infrastructure that can ensure system oversight and future development, enforcement, and routine monitoring of system performance; the updating of laws, regulations or rules, and policies and procedures; and the establishment of best practices across all phases of intervention. The success of the system in reducing morbidity and mortality due to traumatic injury improves when all service providers and system participants consistently comply with the rules, have the ability to evaluate performance in a confidential manner, and work together to improve and enhance the trauma system through defined policies.

OPTIMAL ELEMENTS

- I. Comprehensive state statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight, and future development. **(B-201)**
 - a. The legislative authority states that all the trauma system components, emergency medical services (EMS), injury control, incident management, and planning documents work together for the effective implementation of the trauma system (infrastructure is in place). **(I-201.2)**

- b. Administrative rules and regulations direct the development of operational policies and procedures at the state, regional, and local levels. **(I-201.3)**

II. The lead agency acts to protect the public welfare by enforcing various laws, rules, and regulations as they pertain to the trauma system. **(B-311)**

- a. Laws, rules, and regulations are routinely reviewed and revised to continually strengthen and improve the trauma system. **(I-311.4)**

CURRENT STATUS

The IPEMS Section has served as the administrative unit for trauma and emergency medical services (EMS) since 1977. The Alaska State Statutes (AS 18.08.010), related to EMS and Trauma as revised in 1993, provide the agency with authority for the development, implementation, and maintenance of a statewide comprehensive EMS system. Historically the IPEMS has provided leadership with dedicated individuals who have committed themselves to the improvement of trauma and emergency care for the state. Leadership within the IPEMS has experienced changes beginning in 2004 due to the retirement of its Chief and reorganization within the DHSS.

A significant strength for the IPEMS Section is that it currently has support from the senior leadership within the DHSS to provide for the development and regulatory oversight of the state's EMS and trauma system. The statutory authority and departmental support provide an opportunity for the IPEMS Section to identify and collaborate with the numerous stakeholders for trauma and EMS to include the Alaska Hospital Association, the Native Alaskan healthcare providers, prehospital provider organizations, health professional organizations, and numerous governmental and non-governmental entities.

The Alaska Council on Emergency Medical Services (ACEMS) was established in statute (AS 18.08.020). The council has eleven members appointed by the Governor, and it is charged with advising the Commissioner of DHSS and Governor regarding the planning and implementation of a statewide EMS system. Membership of the council includes prehospital professionals, other healthcare professionals, an EMS administrator, a hospital administrator and members of the public. The ACEMS currently has no required surgical, pediatric, or legislative representation on the council.

The Trauma System Review Committee (TSRC) is appointed by the Commissioner of DHSS. It is comprised of physicians and other healthcare professionals tasked to review the trauma system data. The committee is a legal medical review organization under statute AS 18.23.010-070, and membership is approved by the State Medical Board.

The TSRC's work in reviewing the trauma registry data and monitoring the care being delivered to the state's citizens and visitors is provided confidentiality and liability protection in statute AS 18.23.020. This represents another significant strength in the state's EMS and trauma system. The committee's role beyond the review of trauma registry data is not clearly defined and no direct connection to the ACEMS currently exists.

Recently the TSRC proposed a legislative effort titled the Alaska Trauma Improvement Act, but insufficient legislative support was obtained for passage in the last (2006) legislative session. The efforts and success of the TSRC to promote improvements in trauma care for all Alaskans is commendable and can be attributed to the vision and leadership provided by its chair Dr. Frank Sacco and to the dedication of its membership. Currently hospital participation in the statewide trauma system is voluntary and no incentives are provided to promote participation. For an inclusive trauma system approach and to improve trauma care statewide all hospitals should be required to participate, not only by submission of trauma data, but at some level of trauma system participation.

The state EMS medical director's current role does not include medical oversight of the trauma system. The state does not have a trauma medical director or advisor identified to provide the IPEMS Section with guidance in the development and oversight of the trauma system. The designation of a trauma surgeon to such a role would increase the state's ability to fully integrate all phases of care, including prehospital, into a statewide inclusive trauma system.

RECOMMENDATIONS

- **Enact legislation to expand the membership of the ACEMS to represent the trauma system and include the following members appointed as follows:**
 - **One member, appointed by the Governor, shall represent the Alaska Chapter of the American College of Surgeons Committee on Trauma.**
 - **One member, appointed by the Governor, shall be a general surgeon who routinely participates in the care of injured patients.**
 - **One member, appointed by the Governor, shall represent the Alaska Chapter of the American Academy of Pediatrics.**
 - **One member, appointed by the Alaska Legislature upon the recommendation of the Speaker of the House of Representatives.**
 - **One member, appointed by the Alaska legislature upon the recommendation of the President of the Senate.**
- **Require participation of all acute care hospitals in the trauma system within a 2 year time frame.**

- **Facilities should seek trauma center designation at a level appropriate for their capabilities.**
- **Other facilities, such as remote health care clinics, should participate with rapid patient assessment and stabilization and by following guidelines for trauma triage and transfer.**
- Require all hospitals and clinics to submit data to the state trauma registry.
- Amend the Alaska Administrative Code (AAC) to give the IPEMS Section responsibility for development of a statewide plan for the implementation and monitoring of an inclusive trauma system.

System Leadership

Purpose and Rationale

In addition to lead agency staff and consultants (for example, trauma system medical director), there are other significant leadership roles essential to developing mature trauma systems. A broad constituency of trauma leaders includes trauma center medical directors and nurse coordinators, prehospital personnel, injury prevention advocates, and others. This broad group of trauma leaders works with the lead agency to inform and educate others about the trauma system, implements trauma prevention programs, and assists in trauma system evaluation and research to ensure that the right patient, right hospital, and right time goals are met. There is a strong role for the trauma system leadership in conveying trauma system messages, building communication pathways, building coalitions, and collaborating with relevant individuals and groups. The marketing communication component of trauma system development and maintenance begins with a consensus-built public information and education plan. The plan should emphasize the need for close collaboration between coalitions and constituency groups and increased public awareness of trauma as a disease. The plan should be part of the ongoing and regular assessment of the trauma system and be updated as frequently as necessary to meet the changing environment of the trauma system.

When there are challenges to providing the optimal care to trauma patients within the system, the leadership needs to effect change to produce the desired results. Broad system improvements require the ability to identify challenges and the resources and authority to make changes to improve system performance. However, system evaluation is a shared responsibility. Although the leadership will have a key role in the acquisition and analysis of system performance data, the multidisciplinary trauma oversight committee will share the responsibility of interpreting those data from a broad systems perspective to help determine the efficiency and effectiveness of the system in meeting its stated performance goals and benchmarks. All stakeholders have the responsibility of identifying opportunities for system improvement and bringing them to the attention of the multidisciplinary committee or the lead agency. Often, subtle changes in system performance are noticed by clinical care providers long before they become apparent through more formal evaluation processes.

Perhaps the biggest challenge facing the lead agency is to synergize the diversity, complexity, and uniqueness of individuals and organizations into a finely tuned system for prevention of injury and for the provision of quality care for injured patients. To meet this challenge, leaders in all phases of trauma care must demonstrate a strong desire to work together to improve care provided to injured victims.

OPTIMAL ELEMENTS

- I. Trauma system leaders (lead agency, trauma center personnel, and other stakeholders) use a process to establish, maintain, and constantly evaluate and improve a comprehensive trauma system in cooperation with medical, professional, governmental, and other citizen organizations. **(B-202)**
- II. Collected data are used to evaluate system performance and to develop public policy. **(B-205)**
- III. Trauma system leaders, including a trauma-specific statewide multidisciplinary, multiagency advisory committee, regularly review system performance reports. **(B-206)**
- IV. The lead agency informs and educates state, regional, and local, constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control. **(B-207)**

CURRENT STATUS

The IPEMS Section of the DHSS is the lead agency charged with development, implementation, and maintenance of a statewide comprehensive EMS system, including trauma care. The DHSS has identified the development of a statewide trauma system as one of its 2009 priorities. Both the DHSS Commissioner and Chief Medical Officer were supportive of obtaining an American College of Surgeons (ACS) Trauma Systems Consultation, and both attended. Alaska has not established a clear process for developing, maintaining and continually evaluating a comprehensive trauma system, and this, in part, was the impetus for this consultative visit.

The Alaska Trauma Registry Review Committee was created to review registry data, provide guidance for trauma registry improvement, and review and approve requests for release of registry data. The TSRC role has broadened over the years to include reviewing trauma registry data, making recommendations for trauma system improvement, and reviewing facilities for Level IV trauma center designation. The name has also changed, to become the Trauma Systems Review Committee (TSRC). The TSRC has multidisciplinary membership appointed by the IPEMS Section and approved by the Alaska Medical Board. The chairperson of the Alaska Chapter of the American College of Surgeons Committee on Trauma (ACS-COT) is currently a member of the TSRC.

The TSRC has been attempting to effect change by conducting selected studies from the trauma registry to evaluate trauma care, and then developing care guidelines, such as the head injury management guidelines for rural facilities.

Recommendations from the TSRC that have been transmitted to the lead agency have not always resulted in action or change, and the TSRC is not empowered to make changes in the trauma system. Individuals from the committee are also active in proposing new trauma system improvement legislation.

By statute the ACEMS is charged with advising the Governor and the Commissioner of DHSS with regard to the planning and implementation of a statewide EMS system that by definition includes trauma. From a review of ACEMS minutes, this council has primarily addressed prehospital issues with little focus on issues related to the broader trauma system. The Chair of the Alaska Chapter of the ACS-COT regularly attends meetings of ACEMS, and he has reported trauma system issues and advances to the council. The Alaska COT has been active in proposing trauma system improvements and change.

While the surgeons of the Alaska Native Healthcare System are very active in trauma systems development and performance improvement, other community surgeons in Anchorage are not as actively engaged. The trauma nurse coordinators from the hospitals throughout the state appear to be experienced, knowledgeable, and active in trying to improve the trauma system.

The state does not have a group of multidisciplinary trauma stakeholders; however the large number of participants present at the trauma system consultation (TSC) demonstrates that the state has interested stakeholders. No forum exists for trauma system problem resolution. A state trauma advisory body that serves as a subcommittee of the ACEMS is a recommended strategy for giving stakeholders an opportunity to participate in trauma system development.

RECOMMENDATIONS

- **Form the Alaska Trauma Advisory Committee (ATAC) and task it with providing the Alaska Council on Emergency Medical Services (ACEMS) with recommendations regarding the following functions of the trauma system: trauma system planning, data systems, systemwide performance improvement and patient safety, trauma education (Advanced Trauma Life Support [ATLS], Trauma Nurse Core Curriculum [TNCC], Prehospital Trauma Life Support [PHTLS], etc), trauma center review and designation, injury prevention and control, public policy, and research.**
- Ensure that the Alaska Trauma Advisory Committee (ATAC) has a broad multidisciplinary membership that might include legislative personnel and representation from the Alaska Native Healthcare System, the public sector hospital systems, the Alaska Hospital Association, emergency nurses, prehospital providers, and the media.
- Develop trauma stakeholder discussion groups (e.g., trauma medical directors, trauma coordinators, trauma registrars) to provide direction and

broad-based, multidisciplinary and multi-committee support for trauma system development.

- Make the existing TSRC a subcommittee of the ATAC, sanctioned by the Alaska Medical Board and narrow its focus to specifically concentrate on issues of system performance and improvement.

Coalition Building and Community Support

Purpose and Rationale

Coalition building is a continuous process of cultivating and maintaining relationships with constituents (interested citizens) in a state or region who agree to collaborate on injury control and trauma system development. Key constituents include health professionals, trauma center administrators, prehospital care providers, health insurers and payers, data experts, consumers and advocates, policy makers, and media representatives. The coalition of key constituents comprises the trauma system's stakeholders. The involvement of these key constituents is important for the following:

- Trauma system plan development
- Regionalization: promoting collaboration rather than competition between trauma centers
- System integration
- State policy development: authorizing legislation and regulations
- Financing initiatives
- Disaster preparedness

The coalition should be effectively organized through the formation of multidisciplinary state and regional advisory groups to coordinate trauma system planning and implementation efforts. Constituents also communicate with elected officials and policy leaders regarding the development and sustainability of the trauma system. Information and education are needed by constituents to be effective partners in policy development for trauma system planning. Regular communication about the status of the trauma system helps these key partners to recognize needs and progress made with trauma system implementation.

One of the most effective ways to educate elected officials and the public is through an organized public information and education effort that may involve a media campaign about the burden of injury in the state and the need for trauma system development. Information and education are important to reduce the incidence of injury in all age groups and to demonstrate the value of an effective trauma system when a serious injury occurs.

OPTIMAL ELEMENT

- I. The lead agency informs and educates state, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control. **(B-207)**

CURRENT STATUS

Alaska does not currently have a coalition of trauma stakeholders who meet or communicate about the trauma system. It was reported that a prior trauma stakeholder group, associated with federal grant funding, had met but was disbanded when federal funding ended. This trauma system consultation was one of the first opportunities for health professionals, acute care facility administrators, state agency representatives, prehospital providers, and data managers to meet and focus on aspects of the trauma system.

The most significant barrier to sustaining a trauma stakeholder group was identified as geography and the high cost associated with travel to a central location. Alternate mechanisms of communication such as an electronic listserv or web-based conferencing have not been investigated. Another barrier is the lack of a state trauma manager with adequate time to facilitate communication among stakeholders interested in trauma care issues.

Developing a trauma system has only recently become a priority goal of the DHSS. It was reported that Alaskans have an expectation that they will be cared for in the event of injury, and they believe the resources of a trauma system are in place. No public education regarding trauma care and the need for a trauma system has yet been initiated. Some education of elected state officials has been initiated, but it may be challenging to make the trauma system a priority without strong public support.

RECOMMENDATIONS

- **Develop and disseminate public information about the challenges in providing trauma care and the status of the trauma system in the state for Alaskans.**
- Establish a mechanism of communication (e.g., electronic listserv or discussion group) for stakeholders with an interest in trauma system development.
 - Ensure that information about planning meetings is posted and accessible to stakeholders in a timely manner.
- Identify mechanisms for interested individuals to participate in trauma system planning from remote locations (e.g., web-based teleconferencing).

Lead Agency and Human Resources within the Lead Agency

Purpose and Rationale

Each trauma system (state, regional, local, as defined in state statute) should have a lead agency with a strong program manager who is responsible for leading the trauma system. The lead agency, usually a government agency, should have the authority, responsibility, and resources to lead the planning, development, operations, and evaluation of the trauma system throughout the continuum of care. The lead agency, empowered through legislation, ensures system integrity and provides for program integration with other health care and community-based entities, namely, public health, EMS, disaster preparedness, emergency management, law enforcement, social services, and other community-based organizations.

The lead agency works through a variety of groups to accomplish the goals of trauma system planning, implementation, and evaluation. The ability to bring multidisciplinary, multiagency advisory groups together to accomplish trauma system goals is essential in developing and maintaining the trauma system and is part of providing leadership to evolving and mature systems.

The lead agency's trauma system program manager coordinates trauma system design, the adoption of minimum standards (prehospital and in-hospital), and provides for overall system evaluation through performance indicator assessment and assurance. In addition to a trauma program manager, the lead agency must be sufficiently staffed to actively participate in each phase of development and in maintaining the system through a clearly defined structure for decision making (policies and procedures) and through proactive surveillance and evaluation. *Minimum* staffing usually consists of a trauma system program manager, data entry and analysis personnel, and monitoring and compliance personnel. Additional staff resources include administrative support and a part-time commitment from the public health epidemiology service to provide system evaluation and research support.

Within the leadership and governance structure of the trauma system, there is a role for strong physician leadership. This role is usually fulfilled by a full- or part-time trauma medical director within the lead agency.

OPTIMAL ELEMENTS

- I. Comprehensive state statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight, and future development. **(B-201)**
 - a. The legislative authority (statutes and regulations) plans, develops, implements, manages, and evaluates the trauma system and its component parts, including the identification of the lead agency and the designation of trauma facilities. **(I-201.1)**
 - b. The lead agency has adopted clearly defined trauma system standards (for example, facility standards, triage and transfer guidelines, and data collection standards) and has sufficient legal authority to ensure and enforce compliance. **(I-201.4).**
- II. Sufficient resources, including financial and infrastructure-related, support system planning, implementation, and maintenance. **(B-204)**

CURRENT STATUS

The role of the IPEMS Section in trauma system development is clearly stated in state statutes; however, better definition of how the agency integrates trauma care into the overall EMS program is needed, such as through the development of a statewide trauma strategic plan (See Trauma System Plan).

The trauma system is currently managed by a trauma system manager (0.2 full-time equivalent [FTE]) and a trauma registrar (1.0 FTE). The trauma registrar is supported by two contracted positions. The trauma registrar also has computer and epidemiology support from the National Institute for Occupational Safety and Health (NIOSH) Field Station staff. The IPEMS Section also has an impressive injury prevention program and staffing. However, the lead agency is not adequately staffed to meet the demands of developing and maintaining a statewide trauma system through trauma program assessment, policy development, and performance improvement activities.

The present job classification for the trauma manager is a Public Health Specialist II position which does not specify any education or experience requirements related to emergency health care. The present job description identifies the additional duties and responsibilities for the state trauma manager to include serving as the state Emergency Medical Services for Children (EMSC) program manager and the manager of grants for the state rural automated external defibrillator program. Additional duties and responsibilities for this position include analyzing the continuing education needs and soliciting

educational sessions for the annual EMS Symposium. It was reported that the EMSC responsibilities have now been shifted to another position. However, the remaining responsibilities would significantly impact the individual's ability to focus on trauma system development.

Staffing is currently insufficient within the lead agency to encourage and support trauma stakeholders in building a statewide inclusive trauma system. A qualified trauma manager is needed to facilitate the development of a statewide trauma system plan. As the position is currently vacant, the timing is optimal to revise the job description and job classification to enable recruitment of an individual who is a health professional (e.g., nurse with a BSN or MSN) with experience in trauma or emergency health care.

Additionally, the trauma system has no designated physician to provide medical oversight. The IPEMS Section has a designated emergency physician serving as the State EMS Medical Director, but this individual has no responsibilities for trauma system medical control and oversight. If a Trauma Medical Director can not be recruited and hired, potentially a Trauma Medical Oversight Subcommittee of the ATAC could be created to fulfill this responsibility and support the State EMS Medical Director.

RECOMMENDATIONS

- **Develop an appropriate position classification and duty statement for a 1.0 full time equivalent (FTE), permanent trauma system manager that specifies education as a health professional, experience in trauma or emergency health care, and the administrative skills and clinical understanding necessary to support trauma system development.**
- Recruit a trauma manager.
- Develop a mechanism for trauma system medical oversight (e.g., hire a Trauma Medical Director, develop a subcommittee of the Alaska Trauma Advisory Committee).
- Ensure that the trauma system has trauma medical direction.

Trauma System Plan

Purpose and Rationale

Each trauma system, as defined in statute, should have a clearly articulated trauma system planning process resulting in a written trauma system plan. The plan should be built on a completed inventory of trauma system resources identifying gaps in services or resources and the location of assets. It should also include an assessment of population demographics, topography, or other access enhancements (location of hospital and prehospital resources) or barriers to access. It is important that the plan identify special populations (for example, pediatric, elderly, in need of burn care, ethnic groups, rural) within the geographic area served and address the needs of those populations within the planning process. A needs assessment (or other method of identifying injury patterns, patient care review/preventable death study) should also be completed for initial trauma system planning and updated periodically as needed to assess system changes over time.

The trauma system plan is developed by the lead trauma agency based on the results of a needs assessment and other data resources available for review. It describes the system design, integrated and inclusive, with adopted standards of care for prehospital and hospital personnel and a process to regularly review the plan over time. The plan is built on input from trauma advisory committees (or stakeholder groups) that assist in analyzing data, identifying resources, and developing system standards of care, including system policies and procedures and overall system design. Ideally, although every stakeholder group may not be satisfied with the plan or system design, the plan, to the extent possible, should be based on consensus of the advisory committees and stakeholder groups. These advisory groups should be able to review the plan before final adoption and approve the plan before it is submitted to the lead agency with authority for plan approval.

The trauma system plan is used to guide system development, implementation, and management. Each component of the trauma system (for example, prehospital, hospital, communications, and transportation) is clearly defined and an established service level identified (baseline) with goals for enhancement (benchmark). Within the plan are incorporated other planning documents used to ensure integration of similar services and build collaboration and cooperation with those services. Service plans for emergency preparedness, EMS, injury prevention and control, public health, social services, and mental health are examples of services for which the trauma system plan should include an interface between agencies and services.

OPTIMAL ELEMENT

I. The state lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness, and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders. **(B-203)**

- a. The trauma system plan clearly describes the system design (including the components necessary to have an integrated and inclusive trauma system) and is used to guide system implementation and management. For example, the plan includes references to regulatory standards and documents and includes methods of data collection and analysis. **(I-203.4)**

CURRENT STATUS

In 1993, Alaska secured funding from HRSA to develop a statewide trauma system plan. A task force was created to draft a trauma plan within the existing *Alaska EMS Goals* document. The 1992 Health Resources and Services Administration (HRSA) *Model Trauma Care System Plan* draft was utilized as the basis for the development of this trauma system plan. The grant funding also enabled the state to develop two additional documents: Trauma Triage, Transport and Transfer Guidelines and a Guide on Rehabilitation Services. No mention was made of work performed during federal trauma grant funding from 2002 to 2004.

The *Alaska EMS Goals* document is a guide for the development of EMS and trauma systems by categorizing communities throughout the state by remoteness and resources that should be available. The document identifies specific challenges that Alaska communities face such as access and availability of care, limited road access, availability of training, and recruitment and retention of EMS volunteers. The classifications of communities can also be used to identify levels of care and capabilities to manage the trauma patient.

The *Alaska EMS Goals* document provides a brief overview of EMS system needs in Alaska and lists the state's priorities for grant funding. The integration and consideration of special organizations such as rural health networks, critical incident stress management teams, community injury prevention organizations and local emergency preparedness councils are reflected in the document, along with topics such as seasonal impacts, special populations, hazardous materials, injury prevention, air medical transportation, communications, trauma care, and quality assurance.

An assessment tool called the EMS Community Checklist is available to communities in order to determine their current status in meeting EMS and Trauma system goals within a specified community classification. It is unclear if the data from the assessment tools have been collated and utilized for state system planning.

The community classification in the goals document references classification levels from rural to urban using a 1-5 numbering system. This numbering system is inconsistent with the ACS standards for level of trauma center verification which are in reverse order by facility capabilities.

The TSRC has adopted the *ACS Resources for Optimal Care of the Injured Patient for Acute Care Facilities*, as the standard for trauma center certification (the term used by Alaska for designation). The *Alaska EMS Goals* document clearly specifies the adoption of these standards within each community categorization. The document also promotes the utilization of the various triage and treatment guidelines for the trauma patient. In addition, the guide specifies the importance of establishing an inclusive trauma system and the utilization of trauma registry data to assess the effectiveness of the system.

The *Alaska EMS Goals* document was last updated in 2003, making it consistent with planning and evaluation standards of the time. The guide does not incorporate the 2006 *HRSA Model Trauma System Planning and Evaluation* document that promotes a public health approach to trauma system development.

Overall, the *Alaska EMS Goals* document provides the necessary and comprehensive guidelines for the development and enhancement of the components of a state trauma system. A state assessment to determine at what level the communities have met the goals, has not been accomplished to determine the current needs or trauma resources and assets available.

The IPEMS Section has established five reasonable goals for the trauma system with the limited state resources that are available. Though the goals appear to be achievable, it is unclear how the needs for these goals were determined and how they will be measured and accomplished.

The state has seven EMS regions and EMS Councils. Specific areas of the *Alaska EMS Goals* document recognize the importance of these regional and local assets. However, utilization of these resources for trauma system assessment and strategic planning has not been clearly demonstrated.

RECOMMENDATIONS

- **Develop a comprehensive trauma system strategic plan based on the Health Resources and Services Administration (HRSA) *Model Trauma System Planning and Evaluation* document.**
- Consider revising the *Alaska EMS Goals* document by reversing the community classification numbering system to be consistent with the American College of Surgeons Committee on Trauma (ACS-COT) trauma center verification levels (e.g., urban is 1 and isolated community is 5).
- Ensure that the comprehensive trauma system plan is integrated and made consistent with the 2003 *Alaska EMS Goals* document, the state health plan, the injury prevention plan, the rural health plan and disaster preparedness plans.

System Integration

Purpose and Rationale

Trauma system integration is essential for the daily care of injured people and includes such services as mental health, social services, child protective services, and public safety. The trauma system should use the public health approach to injury prevention to contribute to reducing the entire burden of injury in a state or region. This approach enables the trauma system to address primary, secondary, and tertiary injury prevention through closer integration with community health programs and mobilizing community partnerships. The partnerships also include mental health, social services, child protection, and public safety services. Collaboration with the public health community also provides access to health data that can be used for system assessment, development of public policy, and informing and educating the community.

Integration with EMS is essential because this system is linked with the emergency response and communication infrastructure and transports severely injured patients to trauma centers. Triage protocols should exist for treatment and patient delivery decisions. Regulations and procedures should exist for online and off-line medical direction. In the event of a disaster affecting local trauma centers, EMS would have a major role in evacuating patients from trauma centers to safety or to other facilities or to make beds available for patients in greater need.

The trauma system is a significant state and regional resource for the response to mass casualty incidents (MCIs). The trauma system and its trauma centers are essential for the rapid mobilization of resources during MCIs. Preplanning and integration of the trauma system with related systems (public health, EMS, and emergency preparedness) are critical for rapid mobilization when a disaster or MCI occurs. The extensive impact of disasters and MCIs on the functioning of trauma centers and the EMS and public health systems within the affected region or state must be considered, and joint planning for optimal use of all resources must occur to enable a coordinated response to an MCI. Trauma system leaders need to be actively involved in emergency management planning to ensure that trauma centers are integrated into the local, regional, and state disaster response plans.

OPTIMAL ELEMENTS

I. The state lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness, and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders. **(B-203)**

- a. The trauma system plan has established clearly defined methods of integrating the trauma system plan with the EMS, emergency, and public health preparedness plans. **(I-203.7)**

II. The trauma, public health, and emergency preparedness systems are closely linked. **(B-208)**

CURRENT STATUS

The two groups involved with EMS and trauma are the ACEMS and the TSRC. Membership on the ACEMS is dictated in statute and consists of two physicians with experience in either emergency medicine or trauma, emergency nurses, prehospital providers, an EMS administrator, a hospital administrator, and consumers. Currently the only formal trauma involvement is the Chair of the ACS-COT who serves in a liaison capacity. TSRC membership includes a trauma registrar, epidemiologist, surgeon, emergency physician, hospital administrator, hospital trauma director, all Anchorage trauma nurse coordinators, two prehospital EMS personnel, a pediatrician, and six other miscellaneous members.

Little apparent integration occurs between other trauma stakeholders. Even with EMS representation on the TSRC and a trauma liaison on ACEMS, an EMS participant reported continuing issues regarding communications with the hospitals providing trauma care in Anchorage. Issues were said to involve diversion status and availability of specialty care providers, stemming from the differing level of commitment to trauma care by the facilities.

No integration was reported between the state trauma system and other related services, such as public safety or law enforcement agencies, mental health services, and social services. While psychiatric and social services consultations are available within the verified trauma care center and remaining two hospitals providing trauma care, there was no evidence of ongoing discussions regarding ways to improve interactions or for planning better system integration in the future.

Integration with the Office of Rural Health to support trauma education across the state was described. Integration with numerous other agencies was demonstrated by the transfer of funds for specific program support (see the Financing Section).

The membership of the future ATAC should include representation from fire, law enforcement, social services, injury prevention, mental health, and protective services, in addition to health professionals involved in trauma care. Having a consumer of trauma care or their family member would also bring the public perspective to issues. Legislative representatives would bring much needed insight into legal methods of change. Agencies that could also be included as formal or liaison members include the Office of Rural Health, the Alaska Native Healthcare System, and disaster preparedness agencies. The broader the representation working on the trauma system, the broader the attack base for resolution.

RECOMMENDATIONS

- **Ensure that the Injury Prevention and Emergency Medical Services (IPEMS) Section is engaged in planning with disaster preparedness, emergency management, and public health functions for integration of the trauma system.**

Financing

Purpose and Rationale

Trauma systems need sufficient funding to plan, implement, and evaluate a statewide or regional system of care. All components of the trauma system need funding, including prehospital, acute care facilities, rehabilitation, and prevention programs. Lead agency trauma system management requires adequate funding for daily operations and other important activities such as advisory committee meetings, development of regulations, data collection, performance improvement, and public awareness and education. Adequate funding to support the operation of trauma centers and their state of readiness to care for seriously injured patients within the state or region is essential. The financial health of the trauma system is essential for ensuring its integrity and its improvement over time.

The trauma system lead agency needs a process for assessing its own financial health, as well as that of the trauma system. A trauma system budget should be prepared, and costs should be reported by each component, if possible. Routine collection of financial data from all participating health care facilities is encouraged to fully identify the costs and revenues of the trauma system, including costs and revenues pertaining to patient care, administrative, and trauma center operations. When possible, the lead agency financial planning should integrate with the budgets and costs of the EMS system and disaster, rehabilitation, and prevention programs to enable development of a comprehensive financial health report.

Trauma system financial planning should be related to the trauma plan outcome measures (for example, patient outcome measures such as mortality rates, length of stay, and quality-of-life indicators). Such information may demonstrate the value added by having a trauma system in place.

OPTIMAL ELEMENTS

- I. Sufficient resources, including financial and infrastructure-related, support system planning, implementation, and maintenance. **(B-204)**
 - a. Financial resources exist that support the planning, implementation, and ongoing management of the administrative and clinical care components of the trauma system. **(I 204.2)**
 - b. Designated funding for trauma system infrastructure support (lead agency) is legislatively appropriated. **(I-204.3)**

- c. Operational budgets (system administration and operations, facilities administration and operations, and EMS administration and operations) are aligned with the trauma system plan and priorities. **(I-204.4)**

II. The financial aspects of the trauma systems are integrated into the overall performance improvement system to ensure ongoing fine tuning and cost-effectiveness. **(B-309)**

- a. Collection and reimbursement data are submitted by each agency or institution on at least an annual basis. Common definitions exist for collection and reimbursement data and are submitted by each agency. **(I-309.2)**

CURRENT STATUS

Although Alaska has no designated state funding for the development and maintenance of a statewide trauma system, the IPEMS Section has been creative in leveraging funding to support various aspects of the trauma system. The IPEMS Section receives significant funding from several sources (primarily federal grants and other state allocations) that is being used to support the state's efforts to maintain the trauma system. However, many of these funding sources will only provide short term assistance. The current funding sources include the following:

- Community Health Grants to support Community Health Aide Training and medical supervision of the community health aides throughout the state based on a formula defined in AS 18.28.010.
- Rural Health Flexibility Funding is used to provide trauma training to Critical Access Hospitals and emergency services.
- The state provides capital project funding to support the communication needs of emergency responders for the maintenance and replacement of communications equipment.
- HRSA's Emergency Medical Services for Children program funding pays a portion of the salary support for the individual filling the part-time trauma manager position.
- Centers for Disease Control (CDC) Disaster Preparedness funds were used to pay for the ACS-COT trauma system consultation visit.
- NIOSH provides funding for one FTE and two contractors to support the trauma registry.

- Federal Emergency Preparedness Grants are pass-through funds used to develop and implement fire and burn injury prevention strategies. Recipients include the Municipality of Anchorage, the Alaska Native Tribal Health Consortium, and the Alaska State Hospital and Nursing Home Association.
- The state also provides funding to local agencies from the Code Blue Project Funds to provide EMS equipment and ambulances for local communities. With the assistance of the Department of Agriculture (USDA), the Rasmusson Foundation, and the Denali Commission, approximately \$14 million was received to provide new EMS equipment in 2008. A local match is required for the foundation funding and is key to the success of the project.
- The state also provides resources to regional EMS agencies to develop a comprehensive EMS system as outlined in the Alaska EMS Goals document.

Currently, the state does not employ either the State EMS Medical Director or a Trauma Medical Director. However, they contract with an MD, on a part-time basis to, serve as the State EMS Medical Director. State funding to support EMS and trauma system medical direction is critical to the development and maintenance of a statewide inclusive trauma system.

The state does not charge fees for the designation of trauma center site visits. However, charging a fee for trauma center certification/designation would likely go directly to the state general fund due to the state's constitutional requirement prohibiting dedicated funds for program support. In addition, given the fact that trauma center certification/designation is currently voluntary, charging fees may be an impediment to implementing the state's inclusive trauma system.

Levels I-III trauma centers are verified by the ACS after which the state certifies/designates them as trauma centers at these levels. Level IV certifications/designations are conducted by the IPEMS based on meeting the criteria of the ACS Committee on Trauma. No state funding is available to support trauma center readiness or uncompensated care.

The trauma registry includes a mechanism to collect financial data regarding trauma patients, and all the hospitals participate in the registry. The data are not submitted from all hospitals in a timely manner, and the information is not currently being used for financial planning or evaluation of the statewide system.

RECOMMENDATIONS

- **Provide state funding to hire a fulltime trauma system manager.**
- Provide state funding to ensure sufficient medical direction for the trauma and EMS programs.
- Determine a method of providing financial support for hospitals certified/designated by the state as trauma centers to assist with uncompensated care and the cost of readiness.
- Encourage the use of FLEX grant funding for the preparation of eligible facilities to become certified/designated as Level IV trauma centers.

Trauma System Assurance

Prevention and Outreach

Purpose and Rationale

Trauma systems must develop prevention strategies that help control injury as part of an integrated, coordinated, and inclusive trauma system. The lead agency and providers throughout the system should be working with business organizations, community groups, and the public to enact prevention programs and prevention strategies that are based on epidemiologic data gleaned from the system.

Efforts at prevention must be targeted for the intended audience, well defined, and structured, so that the impact of prevention efforts is systemwide. The implementation of injury control and prevention requires the same priority as other aspects of the trauma system, including adequate staffing, partnering with the community, and taking advantage of outreach opportunities. Many systems focus information, education, and prevention efforts directly to the general public (for example, restraint use, driving while intoxicated). However, a portion of these efforts should be directed toward emergency medical services (EMS) and trauma care personnel safety (for example, securing the scene, infection control). Collaboration with public service agencies, such as the department of health is essential to successful prevention program implementation. Such partnerships can serve to synergize and increase the efficiency of individual efforts. Alliances with multiple agencies within the system, hospitals, and professional associations, working toward the formation of an injury control network, are beneficial.

Activities that are essential to the development and implementation of injury control and prevention programs include the following:

- A needs assessment focusing on the public information needed for media relations, public officials, general public, and third-party payers, thus ensuring a better understanding of injury control and prevention
- A needs assessment for the general medical community, including physicians, nurses, prehospital care providers, and others concerning trauma system and injury control information
- Preparation of annual reports on the status of injury prevention and trauma care in the system
- Trauma system databases that are available and usable for routine public health surveillance

OPTIMAL ELEMENTS

I. The lead agency informs and educates state, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control. **(B-207)**

- a. The trauma system leaders (lead agency, advisory committees, and others) inform and educate constituencies and policy makers through community development activities, targeted media messaging, and active collaborations aimed at injury prevention and trauma system development. **(I-207.2)**

II. The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytic tools to monitor the performance of population based prevention and trauma care services. **(B-304)**

- a. The lead agency, along with partner organizations, prepares annual reports on the status of injury prevention and trauma care in state, regional, or local areas. **(I-304.1)**

III. The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area. **(B-306)**

- a. The trauma system is active within its jurisdiction in the evaluation of community based activities and injury prevention and response programs. **(I-306.2)**
- b. The effect or impact of outreach programs (medical and community training and support and prevention activities) is evaluated as part of a system performance improvement process. **(I-306.3)**

CURRENT STATUS

The state is to be commended for recognizing the significant problem and impact of injury on Alaskans. The IPEMS Section within DHSS is the primary focus area for injury epidemiology and injury prevention in the state. Numerous programs and sources of funding from other agencies and from grant funding (e.g., NIOSH, Maternal and Child Health, Department of Highway Safety, Medicaid, and CDC) support injury program efforts. Documents provided to the consultant team identified an injury program manager and 8 additional staff members in IPEMS.

The state has numerous groups with which it works successfully to implement injury prevention programs. The Alaska Native Tribal Health Consortium Injury Prevention Program works to develop and disseminate culturally appropriate injury prevention programs. Acute care facilities were reported to be implementing brief alcohol screening and intervention programs.

The Alaska Injury Prevention Center is an example of a coalition formed to promote injury prevention outreach by the Anchorage acute care facilities. This center has progressed beyond its original Anchorage outreach focus to become a nonprofit organization that can develop, implement, and evaluate injury program interventions across the entire state.

The state has been an acknowledged leader in the development of injury prevention programs, such as the Kids Don't Float program that has reduced drowning deaths among children. This program is now sustained through partnerships with the Coast Guard and SafeKids. The state often serves as a facilitator for injury program implementation through its many partnerships, such as Injury Prevention in a Bag with EMTs in small communities. Information about 16 injury mechanisms, their prevention strategies, and resources for injury prevention programs are available on the IPEMS website.

Several state agencies collaborate with IPEMS in conducting injury surveillance and in implementing injury prevention strategies, such as the Alaska Marine Safety and Education Association, Alaska Highway Safety Office, Alaska Division of Fire and Life Safety.

The EMS Goals document describes the importance of implementing injury prevention programs in all communities across the state. Injury prevention education is targeted to prehospital providers during the annual EMS conference, and continuing medical education units are provided. Prehospital providers have been engaged in implementing the Injury in a Bag program as well as other injury prevention programs.

The focus of the state and its extensive programming for primary injury prevention is exemplary. Injury prevention is an important component of the trauma system. An opportunity now exists to expand the primary injury prevention focus to the broader concept of injury control so that this emphasis can be integrated with the future state trauma system.

RECOMMENDATIONS

- Ensure representation of an injury prevention representative on the Alaska Trauma Advisory Council (ATAC).
- Incorporate the concept of "injury control" into the prevention activities to raise awareness of the need for a comprehensive and integrated trauma system.

Emergency Medical Services

Purpose and Rationale

The trauma system includes, and/or interacts with, many different agencies, institutions, and systems. The EMS system is one of the most important of these relationships. EMS is often the critical link between the injury-producing event and definitive care at a trauma center. Even though at its inception the EMS system was a very broad system concept, over time, EMS has come to be recognized as the prehospital care component of the larger emergency health care system. It is a complex system that not only transports patients, but also includes public access, communications, personnel, triage, data collection, and quality improvement activities.

The EMS system medical director must have statutory authority to develop protocols, oversee practice, and establish a means of ongoing quality assessment to ensure the optimal provision of prehospital care. If not the same individual, the EMS system medical director must work closely with the trauma system medical director to ensure that protocols and goals are mutually aligned. The EMS system medical director must also have ongoing interaction with EMS agency medical directors at local levels, as well as the state EMS for Children program, to ensure that there is understanding of and compliance with trauma triage and destination protocols.

Ideally, a system should have some means of ensuring whether resources meet the needs of the population. To achieve this end, a resource and needs assessment evaluating the availability and geographic distribution of EMS personnel and physical resources is important to ensure a rapid and appropriate response. This assessment includes a detailed description of the distribution of ground ambulance and air medical locations across the region. Resource allocations must be assessed on a periodic basis as needs dictate a redistribution of resources. In communities with full-time paid EMS agencies, ambulances should be positioned according to predictable geographic or temporal demands to optimize response efficiencies. Such positioning schemes require strong prehospital data collection systems that can track the location of occurrences over time. Periodic assessment of dispatch and transport times will also provide insight into whether resources are consistent with needs.

Each region should have objective criteria dictating the level of response (advanced life support [ALS], basic life support [BLS]), the mode of transport, and the disposition of the patient based on the location of the incident and the severity of injury. A mechanism for case-based review of trauma patients that involves prehospital and hospital providers allows bidirectional information sharing and continuing education, ensuring that expectations are met at both ends. Ongoing review of triage and treatment decisions allows for continuing quality improvement of the triage and prehospital care protocols. A more detailed discussion of in-field (primary) triage criteria is provided in the section titled: System Coordination and Patient Flow.

Human Resources

Periodic workforce assessments of EMS should be conducted to ensure adequate numbers and distribution of personnel. EMS, not unlike other health care professions, experiences shortages and misdistribution of personnel. Some means of addressing recruitment, retention, and engagement of qualified personnel should be a priority. It is critical that trauma system leaders work to ensure that prehospital care providers at all levels attain and maintain competence in trauma care. Maintenance of competence should be ensured by requiring standards for credentialing and certification and specifying continuing educational requirements for all prehospital personnel involved in trauma care. The core curricula for First Responder, Emergency Medical Technician (EMT) Basic, EMT-Intermediate, EMT Paramedic, and other levels of prehospital personnel have an essential orientation to trauma care for all ages. However, trauma care knowledge and skills need to be continuously updated, refined, and expanded through targeted trauma care training such as Prehospital Trauma Life Support®, Basic Trauma Life Support®, and age-specific courses. Mechanisms for the periodic assessment of competence, educational needs, and education availability within the system should be incorporated into the trauma system plan.

Systems of excellence also encourage EMS providers to go beyond meeting state standards for agency licensure and to seek national accreditation. National accreditation standards exist for ground-based and air medical agencies, as well as for EMS educational programs. In some states, agency licensure requirements are waived or substantially simplified if the EMS agency maintains national accreditation.

EMS is the only component of the emergency health care and trauma system that depends on a large cadre of volunteers. In some states, substantially more than half of all EMS agencies are staffed by volunteers. These agencies typically serve rural areas and are essential to the provision of immediate care to trauma patients, in addition to provision of efficient transportation to the appropriate facility. In some smaller facilities, EMS personnel also become part of the emergency resuscitation team, augmenting hospital personnel. The trauma care system program should reach out to these volunteer agencies to help them achieve their vital role in the outcome of care of trauma patients. However, it

must be noted that there is a delicate balance between expecting quality performance in these agencies and placing unrealistic demands on their response capacity. In many cases, it is better to ensure that there is an optimal BLS response available at all times rather than a sporadic or less timely response involving ALS personnel. Support to volunteer EMS systems may be in the form of quality improvement activities, training, clinical opportunities, and support to the system medical director.

Owing to the multidisciplinary nature of trauma system response to injury, conferences that include all levels of providers (for example, prehospital personnel, nurses, and physicians) need to occur regularly with each level of personnel respected for its role in the care and outcome of trauma patients. Communication with and respect for prehospital providers is particularly important, especially in rural areas where exposure to major trauma patients might be relatively rare.

Integration of EMS Within the Trauma System

In addition to its critical role in the prehospital treatment and transportation of injured patients, EMS must also be engaged in assessment and integration functions that include the trauma system and also public health and other public safety agencies. EMS agencies should have a critical role in ensuring that communication systems are available and have sufficient redundancy so that trauma system stakeholders will be able to assess and act to limit death and disability at the single patient level and at the population level in the case of mass casualty incidents (MCIs). Enhanced 911 services and a central communication system for the EMS/trauma system to ensure field-to-facility bidirectional communications, interfacility dialogue, and all-hazards response communications among all system participants are important for integrating a system's response. Wireless communications capabilities, including automatic crash notification, hold great promise for quickly identifying trauma-producing events, thereby reducing delays in discovery and decreasing prehospital response intervals.

Further integration might be accomplished through the use of EMS data to help define high-risk geographic and demographic characteristics of injuries within a response area. EMS should assist with the identification of injury prevention program needs and in the delivery of prevention messages. EMS also serves a critical role in the development of all-hazards response plans and in the implementation of those plans during a crisis. This integration should be provided by the state and regional trauma plan and overseen by the lead agency. EMS should participate through its leadership in all aspects of trauma system design, evaluation, and operation, including policy development, public education, and strategic planning.

OPTIMAL ELEMENTS

I. The trauma system is supported by an EMS system that includes communications, medical oversight, prehospital triage, and transportation; the trauma system, EMS system, and public health agency are well integrated. **(B-302)**

- a. There is well-defined trauma system medical oversight integrating the specialty needs of the trauma system with the medical oversight for the overall EMS system. **(I-302.1)**
- b. There is a clearly defined, cooperative, and ongoing relationship between the trauma specialty physician leaders (for example, trauma medical director within each trauma center) and the EMS system medical director. **(I-302.2)**
- c. There is clear-cut legal authority and responsibility for the EMS system medical director, including the authority to adopt protocols, to implement a performance improvement system, to restrict the practice of prehospital care providers, and to generally ensure medical appropriateness of the EMS system. **(I-302.3)**
- d. The trauma system medical director is actively involved with the development, implementation, and ongoing evaluation of system dispatch protocols to ensure they are congruent with the trauma system design. These protocols include, but are not limited to, which resources to dispatch, for example, ALS versus BLS, air ground coordination, early notification of the trauma care facility, pre-arrival instructions, and other procedures necessary to ensure that resources dispatched are consistent with the needs of injured patients. **(I-302.4)**
- e. The retrospective medical oversight of the EMS system for trauma triage, communications, treatment, and transport is closely coordinated with the established performance improvement processes of the trauma system. **(I-302.5)**
- f. There is a universal access number for citizens to access the EMS/trauma system, with dispatch of appropriate medical resources. There is a central communication system for the EMS/trauma system to ensure field- to-facility bidirectional communications, interfacility dialogue, and all-hazards response communications among all system participants. **(I-302.7)**
- g. There are sufficient and well-coordinated transportation resources to ensure that EMS providers arrive at the scene promptly and expeditiously transport the patient to the correct hospital by the correct transportation mode. **(I-302.8)**

II. The lead trauma authority ensures a competent workforce. **(B-310)**

- a. In cooperation with the prehospital certification and licensure authority, set guidelines for prehospital personnel for initial and ongoing trauma training, including trauma-specific courses and courses that are readily available throughout the state. **(I-310.1)**
- b. In cooperation with the prehospital certification and licensure authority, ensure that prehospital personnel who routinely provide care to trauma patients have a current trauma training certificate, for example, Prehospital Trauma Life Support or Basic Trauma Life Support and others, or that trauma training needs are driven by the performance improvement process. **(I-310.2)**
- c. Conduct at least 1 multidisciplinary trauma conference annually that encourages system and team approaches to trauma care. **(I-310.9)**

III. The lead agency acts to protect the public welfare by enforcing various laws, rules, and regulations as they pertain to the trauma system. **(B-311)**

- a. Incentives are provided to individual agencies and institutions to seek state or nationally recognized accreditation in areas that will contribute to overall improvement across the trauma system, for example, Commission on Accreditation of Ambulance Services for prehospital agencies, Council on Allied Health Education Accreditation for training programs, and American College of Surgeons (ACS) verification for trauma facilities. **(I-311.6)**

CURRENT STATUS

The lead agency for Alaska EMS is the IPEMS Section under the authority of the DHSS. The EMS system is comprised of seven EMS regions that span a huge geographic area with extreme terrain and weather variations. These regions receive varying degrees of funding from the state. The state has approximately 3,300 Emergency Medical Technicians (EMTs), 175 Mobile Intensive Care Paramedics (MICPs) and unknown numbers of first responders.

When injured or ill patients require treatment not available locally, they may be transported by ground (ambulance, privately owned vehicle, snow machine, dog sled), by water (U.S. Coast Guard, fishing boat) or air (rotor or fixed wing, medical private or commercial). EMS ground services in Alaska include five BLS, 39 ALS with occasional BLS, and 33 ALS services. Air medical services include eight Medevac and 10 Critical Care Air Ambulance services with one service also certified as a Perinatal Specialty Air Medical Transport Service. Each of the regional hub cities has at least one air medical service. There are approximately

180 certified and uncertified first responder services across the state, however not all communities are covered.

EMT levels are as follows:

- EMT I (EMT Basic, 1994 U.S. Department of Transportation (DOT) National Standard Curriculum (NSC) with medication module but not manual defibrillation or advanced airway module);
- EMT II (EMT I plus 50 additional hours of training; exceeds EMT Intermediate 85, can administer intravenous fluids (5% dextrose in water, crystalloid volume-replacement solutions) and selected medications (50% dextrose in water and naloxone hydrochloride);
- EMT III (EMT I plus EMT II plus 50 hours of additional training; can administer EMT II medications plus lidocaine, atropine, morphine, and epinephrine 1:1000/1:10,000; apply electrodes, monitor cardiac activity and provide countershock for ventricular fibrillation and pulseless ventricular tachycardia).
- Defibrillator Technician training is available for EMT I and II levels that allows them to perform manual defibrillation.

EMT levels II and III function under direct or indirect supervision of a physician, and if they do not have a medical director they must function at the EMT I level. EMT I, II and III personnel are certified by the IPEMS Section. The local medical director may expand the scope of an EMT I, II or III after approval by the IPEMS Section and submission of a training and evaluation plan. The local medical director is responsible for the expanded care provided.

The Mobile Intensive Care Paramedic (MICP) is licensed by the Alaska State Medical Board which requires completion of training that follows the U.S. DOT NSC for paramedics, successful completion of the National Registry paramedic examination, and obtaining a physician sponsor approved by the Alaska State Medical Board.

First Responders are not certified by the state, including the Alaska Emergency Trauma Technician (ETT). The ETT is trained via a 44 hour course developed by the Public Safety Academy to cover emergency trauma care, medical communication, and Medevac preparations.

Most isolated communities have Community Health Aids (CHA) who are trained and function as the primary care provider either under the distant supervision of a physician or the direct supervision of a nurse practitioner or physician assistant located in the community. CHA's are First Responder or ETT trained with many at the EMT I level or higher. Due to the limited access to roads and a transportation system that depends on air or water and good weather, the injured

patient may be in the care of the CHA for up to 72 hours. It is essential that these communities have optimal communications capabilities for access to physicians and regional medical facilities. Due to the high turnover rate of the CHAs, the state will need to continue to make training programs available so this level of care can continue to be provided in these isolated communities.

The state contracts with an emergency physician on an as needed basis to perform selected duties of the state EMS medical director, and a federally-funded Alaska Native Health Service Medical Director oversees the Indian Health Service/Public Health Service medical directors. Regional and local physician medical directors are largely volunteers. A regional or local medical director for state certified EMT II or III personnel, training programs or courses (EMT II, EMT III or manual defibrillator technician training) or for a service (basic life support (BLS), advanced life support (ALS) or air medical) must be an Alaska licensed physician or a physician working in the regular medical service of the U.S. Armed Services or the U.S. Public Health Service. The medical director must participate in an orientation provided by the IPEMS Section within one year after accepting the responsibility of medical direction. Medical directors of an ALS ground service or air medical service have additional requirements.

Medical director responsibilities for the certified EMT include the following:

- supervise the medical care,
- establish and annually review treatment protocols,
- approve advanced life support standing orders for each state-certified EMT,
- provide quarterly critiques of patient care,
- schedule quarterly on-site supervision, and
- approve a program of continuing medical education for each state-certified EMT supervised.

The licensed MICP functions under a physician sponsor as noted above. While the responsibilities of the medical director of an MICP service are defined, the responsibility of the physician sponsor for the individual MICP is not. The IPEMS Section suggests that the MICP physician sponsor should follow the guidelines outlined for medical directors of certified EMTs. Local and regional EMS medical directors are provided liability coverage for their EMS duties, but their time is not compensated by the state.

Resources for regional and local EMS medical directors include an Alaska Medical Director's Handbook, a physician track during the annual State EMS Symposium, and an EMS Medical Directors' meeting during the symposium, both facilitated by the state EMS medical director.

Online medical direction for EMS providers in rural and remote locations is provided by the hospital or clinic in that region via phone (some locations have limited telemedicine capability). Often the communications system is solely dependent on satellite access. The regional facility will decide on patient disposition and help arrange transport to the most appropriate health care facility. Patient transport may involve multiple transfers requiring various modes of travel.

Alaska's 27 largest communities have Enhanced 911 services. Wireless E-911 is available in Anchorage and Juneau with limited availability in Fairbanks and Kenai. The service is Phase II compliant (Phase II rules require wireless carriers to begin providing more precise Automatic Location Identification). Alaska has uniform minimum standards for training and certification of Emergency Medical Dispatchers.

RECOMMENDATIONS

- **Develop a central coordination center for statewide air medical resources that will maintain an updated registry of all medical aircraft to include medical services and flight characteristics (i.e. load capacity, instrument rating, landing requirements, etc); and to monitor the availability and location of air resources.**
- Continue to support the Emergency Trauma Technician training and maximize course availability.
- Develop a program of prehospital continuing education for trauma that includes special populations such as geriatrics and pediatrics.
- Develop a medical director's listserv as a method to disseminate information in a timely manner and encourage interaction among medical directors.
- Continue to develop a National EMS Information System (NEMSIS) - compliant electronic EMS database to support evaluation of the EMS system and as a quality improvement tool for patient care.

Definitive Care Facilities

Purpose and Rationale

Inclusive trauma systems are the systems that include all acute health care facilities, to the extent that their resources and capabilities allow and in which the patient's needs are matched to hospital resources and capabilities. Thus, as the core of a regional trauma system, acute care facilities operating within an inclusive trauma system provide definitive care to the entire spectrum of patients with traumatic injuries. Acute care facilities must be well integrated into the continuum of care, including prevention and rehabilitation, and operate as part of a network of trauma-receiving hospitals within the public health framework. All acute care facilities should participate in the essential activities of a trauma system, including performance improvement, data submission to state or regional registries, representation on regional trauma advisory committees, and mutual operational agreements with other regional hospitals to address interfacility transfer, educational support, and outreach. The roles of all definitive care facilities, including specialty hospitals (for example, pediatric, burn, severe traumatic brain injury [TBI], spinal cord injury [SCI]) within the system should be clearly outlined in the regional trauma plan and monitored by the lead agency. Facilities providing the highest level of trauma care are expected to provide leadership in education, outreach, patient care, and research and to participate in the design, development, evaluation, and operation of the regional trauma system.

In an inclusive system, patients should be triaged to the appropriate facility based on their needs and facility resources. Patients with the least severe injuries might be cared for at appropriately designated facilities within their community, whereas the most severe should be triaged to a level I or II trauma center. In rural and frontier systems, smaller facilities must be ready to resuscitate and initiate treatment of the major injuries and have a system in place that will allow for the fastest, safest transfer to a higher level of care.

Trauma receiving facilities providing definitive care to patients with other than minor injuries must be specifically designated by the state or regional lead agency and equipped and qualified to do so at a level commensurate with injury severity. To assess and ensure that injury type and severity are matched to the qualifications of the facilities and personnel providing definitive care, the lead agency should have a process in place that reviews and verifies the qualifications of a particular facility according to a specific set of resource and quality standards. This criteria-based process for review and verification should be consistent with national standards and be conducted on a periodic cycle as determined by the lead agency. When centers do not meet set standards, there should be a process for suspension, probation, revocation, or dedesignation.

Designation by the lead agency should be restricted to facilities meeting criteria or statewide resource and quality standards and based on patient care needs of the regional trauma system. There should be a well-defined regulatory relationship between the lead agency and designated trauma facilities in the form of a contract, guidelines, or memorandum of understanding. This legally binding document should define the relationships, roles, and responsibilities between the lead agency and the medical leadership from each designated trauma facility. The number of trauma centers by level of designation and location of acute care facilities must be periodically assessed by the lead agency with respect to patient care needs and timely access to definitive trauma care. There should be a process in place for augmenting and restricting, if necessary, the number and/or level of acute care facilities based on these periodic assessments. The trauma system plan should address means for improving acute care facility participation in the trauma system, particularly in systems in which there has been difficulty addressing needs.

Human Resources

The ability to deliver high-quality trauma care is highly dependent on the availability of skilled human resources. Therefore, it is critical to assess the availability and educational needs of providers on a periodic basis. Because availability, particularly of subspecialty resources, is often limited, some means of addressing recruitment, retention, and engagement of qualified personnel should be a priority. At this time, there are no fellowship trained trauma surgeons in Alaska. Periodic workforce assessments should be conducted. Maintenance of competence should be ensured by requiring standards for credentialing and certification and specifying continuing educational requirements for physicians and nurses providing care to trauma patients. Mechanisms for the periodic assessment of ancillary and subspecialty competence, educational needs, and availability within the system for all designated facilities should be incorporated into the trauma system plan. The lead trauma centers in rural areas will need to consider teleconferencing and telemedicine to assist smaller facilities in providing education on regionally identified needs. In addition, lead trauma centers within the region should assist in meeting educational needs while fostering a team approach to care through annual educational multidisciplinary trauma conferences. These activities will do much to foster a sense of teamwork and a functionally inclusive system.

Integration of Designated Trauma Facilities Within the Trauma System

Designated trauma facilities must be well integrated into all other facets of an organized system of trauma care, including public health systems and injury surveillance, prevention, EMS and prehospital care, disaster preparedness, rehabilitation, and system performance improvement. This integration should be provided by the state and/or regional trauma plan and overseen by the lead agency.

Each designated acute care facility should participate, through its trauma program leadership, in all aspects of trauma system design, evaluation, and operation. This participation should include policy and legislative development, legislative and public education, and strategic planning. In addition, the trauma program and subspecialty leaders should provide direction and oversight to the development, implementation, and monitoring of integrated protocols for patient care used throughout the system (for example, TBI guidelines used by prehospital providers and nondesignated transferring centers), including region specific primary (field) and secondary (early transfer) triage protocols. The highest level trauma facilities should provide leadership of the regional trauma committees through their trauma program medical leadership. These medical leaders, through their activities on these committees, can assist the lead agency and help ensure that deficiencies in the quality of care within the system, relative to national standards, are recognized and corrected. Educational outreach by these higher level centers should be used when appropriate to help achieve this goal.

OPTIMAL ELEMENTS

I. Acute care facilities are integrated into a resource efficient, inclusive network that meets required standards and that provides optimal care for all injured patients. **(B-303)**

- a. The trauma system plan has clearly defined the roles and responsibilities of all acute care facilities treating trauma and of facilities that provide care to specialty populations (for example, burn, pediatric, SCI, and others). **(I-303.1)**

II. To maintain its state, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes. **(B-307)**

- a. The trauma system engages in regular evaluation of all licensed acute care facilities that provide trauma care to trauma patients and of designated trauma hospitals. Such evaluation involves independent external reviews. **(I-307.1)**

III. The lead trauma authority ensures a competent workforce. **(B-310)**

- a. As part of the established standards, set appropriate levels of trauma training for nursing personnel who routinely care for trauma patients in acute care facilities. **(I-310.3)**
- b. Ensure that appropriate, approved trauma training courses are provided for nursing personnel on a regular basis. **(I-310.4)**

- c. In cooperation with the nursing licensure authority, ensure that all nursing personnel who routinely provide care to trauma patients have a trauma training certificate (for example, Advanced Trauma Care for Nurses, Trauma Nursing Core Course, or any national or state trauma nurse verification course). As an alternative after initial trauma course completion, training can be driven by the performance improvement process. **(I-310.5)**
- d. In cooperation with the physician licensure authority, ensure that physicians who routinely provide care to trauma patients have a current trauma training certificate of completion, for example, Advanced Trauma Life Support® (ATLS®) and others. As an alternative, physicians may maintain trauma competence through continuing medical education programs after initial ATLS completion. **(I-310.8)**
- e. Conduct at least 1 multidisciplinary trauma conference annually that encourages system and team approaches to trauma care. **(I-310.9)**
- f. As new protocols and treatment approaches are instituted within the system, structured mechanisms are in place to inform all personnel about the changes in a timely manner. **(I-310-10)**

CURRENT STATUS

Facilities

Alaska has an inclusive, voluntary trauma system. There are 24 hospitals, two of which are military facilities. Five hospitals are certified/designated trauma centers:

- Level II trauma center: Alaska Native Medical Center
- Level IV trauma centers : Norton Sound Regional Hospital
Yukon Kuskokwim Delta Regional Hospital
Mt. Edgecumbe Hospital
Sitka Community Hospital

Harborview Medical Center in Seattle, WA is the Level I trauma center that supports Southeast Alaska, and often patients from other areas of the state.

The hospitals caring for the largest volume of trauma patients are concentrated in Anchorage:

- Alaska Native Medical Center (certified/designated Level II)
- Providence Alaska Medical Center (not designated), private not-for-profit
- Alaska Regional Hospital (not designated), for-profit

The only other community with more than one hospital is Sitka (Sitka Community Hospital and Mt. Edgecumbe Hospital, both level IV trauma centers).

Large portions of the state are in remote, austere areas with low population, no roads and minimal health care availability. These areas are essentially isolated in periods of bad weather and must rely on local resources for emergency care for extended periods of time.

For purposes of health care delivery, the two distinct populations in Alaska (not including the military), are Native Alaskans and all other Alaskans. Native Alaskans generally receive care via the Alaska Tribal Health System/Alaska Native Tribal Health Consortium, an integrated network of facilities and providers that deliver care to defined beneficiaries. At the local level, community clinics staffed by Community Health Aides or mid-level providers are sources of healthcare in small communities. These clinics are part of an established referral relationship that includes mid-level providers, physicians, regional hospitals, and the Alaska Native Medical Center (Level II trauma center), providing the entire spectrum of acute trauma care. The community clinics and Community Health Aides/mid-level providers assume a significant role for the stabilization and early management of trauma patients prior to transport, and when patients cannot be transported out to larger facilities because of weather or other conditions.

Perception of incentives for hospitals to become certified/designated as trauma centers vary. The Alaska Tribal Health System/ Alaska Native Tribal Health Consortium has recognized the burden of injury on Native Alaskans, leading to the support of trauma center certification/designation of the Alaska Native Medical Center and some level IV facilities. Despite the financial costs associated with verification and certification, participants reported collateral benefits of trauma center certification/designation, including contributing to an overall elevation of the quality of care at that institution and providing service to their community. Although the private non-profit hospitals that serve Alaskans recognize that trauma care is an important contribution to the community, these facilities are reluctant to pursue certification/designation without the support of their medical staffs.

Human Resources

Human resources are limited, and significant problems exist for recruitment and retention of physicians and nurses. The shortages of physicians and nurses will likely worsen in the coming years (Alaska Physician Supply Task Force report, 2006). Since Alaska has no medical school, the option of "growing our own" which has been somewhat successful for other states, will not work without strong collaboration with the University of Washington's WWAMI program, partnership between the University of Washington School of Medicine and the states of Wyoming, Alaska, Montana, and Idaho. For example, there are currently no trauma fellowship trained general surgeons in the state, in any facility. There are surgeons who do trauma surgery. Alaska Native Medical

Center has 3 surgery residents rotating from Phoenix. Providence Alaska Medical Center has family practice residents on rotation.

Several surgical specialties are in jeopardy including pediatric surgery and vascular surgery. One of 2 pediatric surgeons in the state has recently retired, prompting the remaining pediatric surgeon to make tentative plans to leave Alaska. The situation for neurosurgery and orthopedics appears more stable with sufficient numbers in Anchorage to support current volumes. Patients requiring re-implantation and many requiring burns are transported to centers outside Alaska. Among general surgeons taking emergency department call in non-designated hospitals with significant trauma volumes, participants expressed concern regarding the burden of trauma call and identified emerging requests for financial support for taking trauma call.

Among nurses, high turnover rates and staffing with travelers are commonplace challenges. Given the national outlook for nursing shortages, this will likely worsen with time. Critical care nurse staffing levels are especially low and contribute to bypass decisions.

Integration of Designated Trauma Facilities Within the Trauma System

Diversion or inability to accept trauma patients reportedly occurs regularly and appears most often due to emergency department capacity issues, ICU bed availability, or the lack of staffed beds secondary to nursing shortages. On occasion, all 3 emergency departments in Anchorage have closed for trauma at the same time, which prompts the automatic re-opening of all the facilities and trauma patient transports in rotation. No state data are available to describe the frequency of such closings. The impact on EMS has been significant by their report, and this is compounded by challenges in communication about the rotation schedule.

Nondesignated hospitals provide the majority of trauma care in Alaska. Significant concerns were expressed by Fire and EMS crews regarding challenges they have faced when delivering patients to high-volume, nondesignated hospitals in Anchorage. Among these concerns expressed were that the nondesignated hospitals do not have the "system" in place to bring in the personnel resources needed for optimal care in a timely and efficient manner.

RECOMMENDATIONS

- **Establish, as soon as practical, a second Level II Trauma Center in Anchorage in accordance with American College of Surgeons Committee on Trauma (ACS-COT) verification criteria to meet the existing volume and acuity demands.**

- **Require participation of all acute care hospitals in the trauma system within a 2 year time frame with trauma center designation appropriate to their capabilities.**
- **Study pediatric trauma care needs with the goal of establishing one or more centers of excellence in pediatric trauma care.**
- Develop a memorandum of understanding between certified/designated hospitals and the state lead agency describing mutual roles and responsibilities.
- Support designated trauma center and affiliated physician readiness/standby costs and uncompensated trauma care costs through an identified state funding mechanism.
- Establish a mechanism to routinely track data on emergency department closures or bypass, and develop notification plans that include EMS and hospital stakeholders.
- Pursue a focused, well-funded strategy to recruit trauma surgeons and trauma prepared nurses to the state.
- Increase the number of physician resident positions at Alaska hospitals to encourage potential candidates to relocate to the state.

System Coordination and Patient Flow

Purpose and Rationale

To achieve the best possible outcomes, the system must be designed so that the right patient is transported to the right facility at the right time. Although on the surface this objective seems relatively straightforward, patients, geography, and transportation systems often conspire to present significant challenges. The most critically injured trauma patient is often easy to identify at the scene by virtue of the presence of coma or hypotension. However, in some circumstances, the patients requiring the resources of a Level I or II center may not be immediately apparent to prehospital providers. Primary or field triage criteria aid providers in identifying which patients have the greatest likelihood of adverse outcomes and might benefit from the resources of a designated trauma center. Even if the need is identified, regional geography or limited air medical (or land) transport services might not allow for direct transport to an appropriate facility.

Primary triage of a patient from the field to a center capable of providing definitive care is the goal of the trauma system. However, there are circumstances (for example, airway management, rural environments, inclement weather) when triaging a patient to a closer facility for stabilization and transfer is the best option for accessing definitive care. Patients sustaining severe injuries in rural environments might need immediate assessment and stabilization before a long-distance transport to a trauma center. In addition, evaluation of the patient might bring to light severe injuries for which needed care exceeds the resources of the initial receiving facility. Some patients might have specific needs that can be addressed at relatively few centers within a region (for example, pediatric trauma, burns, severe TBI, SCI, and reimplantation). Finally, temporary resource limitations might necessitate the transfer of patients between acute care facilities.

Secondary triage at the initial receiving facility has several advantages in systems with a large rural or suburban component. The ability to assess patients at non-designated or level III to V centers provides an opportunity to limit the transfer of only the most severely injured patients to level I or II facilities, thus preserving a limited resource for patients most in need. It also provides patients with lesser injuries the possibility of being cared for within their community.

The decision to transfer a trauma patient should be based on objective, prospectively agreed-on criteria. Established transfer criteria and transfer agreements will minimize discussions about individual patient transfers, expedite the process, and ensure optimal patient care. Delays in transfer might increase mortality, complications, and length of stay. A system with an excess of transferred patients might tax the resources of the regional trauma facility. Conversely, inappropriate retention of patients at centers without adequate

facilities or expertise might increase the risk of adverse outcomes. Given the importance of timely, appropriate interfacility transfers, the time to transfer, as well as the rates of primary and secondary overtriage and undertriage, should be evaluated on a regular basis, and corrective actions should be instituted when problems are identified. Data derived from tracking and monitoring the timeliness of access to a level of trauma care commensurate with injury type and severity should be used to help define optimal system configuration.

A central communications center with real-time access to information on system resources greatly facilitates the transfer process. Ideally, this center identifies a receiving facility, facilitates dialogue between the transferring and receiving centers, and coordinates interfacility transport.

To ensure that the system operates at the greatest efficiency, it is important that patients are repatriated back to community hospitals once the acute phase of trauma care is complete. The process of repatriation opens up the limited resources available to care for severely injured patients. In addition, it provides an opportunity to bring patients back into their local environment where their social network might help reintegrate patients into their community.

OPTIMAL ELEMENTS

I. The trauma system is supported by an EMS system that includes communications, medical oversight, prehospital triage, and transportation; the trauma system, EMS system, and public health agency are well integrated. **(B-302)**

- a. There are mandatory systemwide prehospital triage criteria to ensure that trauma patients are transported to an appropriate facility based on their injuries. These triage criteria are regularly evaluated and updated to ensure acceptable and system-defined rates of sensitivity and specificity for appropriately identifying a major trauma patient. **(I-302.6)**
- b. There is a universal access number for citizens to access the EMS/trauma system, with dispatch of appropriate medical resources. There is a central communications system for the EMS/trauma system to ensure field-to-facility bidirectional communications, interfacility dialogue, and all-hazards response communications among all system participants. **(I-302.7)**
- c. There is a procedure for communications among medical facilities when arranging for interfacility transfers, including contingencies for radio or telephone system failure. **(I-302.9)**

II. Acute care facilities are integrated into a resource-efficient, inclusive network that meets required standards and that provides optimal care for all injured patients. **(B-303)**

- a. When injured patients arrive at a medical facility that cannot provide the appropriate level of definitive care, there is an organized and regularly monitored system to ensure that the patients are expeditiously transferred to the appropriate system-defined trauma facility. (I-303.4)

CURRENT STATUS

In Alaska, prehospital trauma care and patient triage is highly variable and dependent on location of injury, regional resources and local protocols. As stated in the PRQ:

"There are no statewide protocols for prehospital triage. The Trauma Triage, Transport & Transfer Guidelines developed by the Trauma System Planning and Development Task Force in 1993 and revised in 2002, offers guidelines to assist local EMS agencies and hospitals in developing local protocols. The protocols themselves are developed locally and approved by their medical director."

Trauma care delivery (as most health care in Alaska) is closely tied to geographic location which dictates resources, communication, and transportation. At least three distinct areas are identified based on models of trauma care delivery:

- *Bush area:* these remote areas are geographically isolated and have unique challenges including weather, no roads, and basic health care capabilities with few hospitals.
- *Anchorage area:* this urban environment is the major population center of the state and has several acute care hospitals, advanced infrastructure, and system redundancy in several segments. It is the primary health care referral area for the state for all Alaskans.
- *Southeast:* this area has intermediate capabilities compared to the 2 areas listed above and has a special relationship with Harborview Medical Center (Level I trauma center) in Seattle.

In addition to the geographic differentiation mentioned above, Alaska health care delivery can also be viewed in the context of populations (excluding the military):

- *Native Alaskans:* health care delivery to this population occurs across all geographic regions and is organized and administered by Alaska Tribal Health System/ Alaska Native Tribal Health Consortium, an integrated network of facilities and providers that deliver care to Native Alaskans as defined beneficiaries.

- Alaskans: health care delivery to this population occurs along more typical lines and involves a variety of hospitals and providers in varying density dependent on location and funding source.

Care to Native Alaskans and other Alaskans in the bush is overlapping, as many Alaskans receive primary and emergency care in Alaska Native clinics and hospitals when they are the only resources available. To a degree, some overlapping of trauma care for Native Alaskans and other Alaskans occurs within the Anchorage hospitals when by-pass or diversion causes a trauma patient to be directed to Alaska Native Medical Center or one of the non-certified/designated hospitals.

Many remote areas of the state are faced with unique challenges in the provision of trauma care. Providers and facilities have demonstrated creativity and resourcefulness in their attempt to overcome the problems of distance, limited resources, and communication challenges. This innovation and flexibility is to be commended, and it has been valuable and necessary.

In the more urban regions, such as Anchorage, the transition to more organized, efficient and coordinated systems of patient flow has not been complete. This has been reflected in frustrations expressed by local EMS services, referring physicians from outlying facilities, and members of the local physician provider community. Physicians described the problem of making multiple calls for transfer of a patient to an Anchorage hospital. In some cases Anchorage is by-passed and the patient is sent to Seattle. While there are two pediatric intensive care units in Anchorage hospitals, beds are sometimes unavailable, and children are sometimes sent to Seattle as well.

The situation is further complicated by the co-existence in the Anchorage area of a higher level of organized trauma care at the Alaska Native Medical Center (including a pediatric ICU), while the private not-for-profit hospitals (Providence Alaska Medical Center and Alaska Regional Hospital) maintain non-certified/designated trauma care facilities. All three hospitals serve as regional referral facilities for large areas of the state with Providence Alaska Medical Center receiving the largest volume of patients, including pediatrics. Local EMS as well as referring facilities throughout the state are faced with at least two differing sets of referral guidelines and triage criteria (for Native Alaskans and other Alaskans), as well as varying abilities to provide care to special populations (including burns, pediatrics, and vascular surgery).

In addition to the lack of statewide triage protocols, the flow of patients within the major treating facilities varies greatly. Available trauma registry data from 2006 show that at the designated Level II hospital, Alaska Native Medical Center, the majority of patients are admitted to surgical services. In contrast, at hospitals serving Alaskans, such as Providence Alaska Medical Center, which has the largest trauma patient volume, substantial numbers of patients are admitted to

non-surgical services. With the increase in hospital-based medical specialists (e.g., hospitalists), these trends are likely to have become pronounced. The care of trauma patients on non-surgical services without an organized trauma service is inconsistent with national guidelines, and it likely contributes to inferior outcomes such as longer ICU and hospital stays, higher complication and mortality rates, lower patient and provider satisfaction scores, and increased costs.

Significant divergence of opinion is apparent among providers at the private nonprofit hospitals in Anchorage regarding the need for, and value of, trauma center certification/designation and an organized trauma system. Emergency physicians expressed the opinion that they are able to deliver all aspects of initial care and obtain prompt surgical support, as well as the opinion that there were significant deficiencies in the availability and involvement of surgical specialists. As noted above, EMS services and referring physicians at outlying facilities participating in the TSC supported the latter perspective. Surgeons also expressed divided opinions regarding trauma center designation – surgeons at designated trauma centers are supportive while those at the non-designated facilities expressed serious concerns. Participants indicated that the provision of financial support for on-call responsibilities would facilitate the participation of private surgeons in meeting the certification/designation standards. The support of these groups of physicians would likely facilitate improvements in system coordination and patient flow.

It is recognized that Harborview Medical Center in Seattle provides important referral care for Alaska, especially for special populations (e.g., pediatrics, burns, reimplantation, and rehabilitation). Patient flow to Harborview appears to be relatively straightforward thanks to significant efforts by the receiving facility to treat Alaska patients preferentially and by the placement of fixed-wing aircraft in Southeast Alaska.

Within the state there are 79 ground ambulance units, 19 primarily fixed-wing air services, as well as civilian, Coast Guard, and military helicopters. Many of these units function under very difficult circumstances and succeed because of experience and innovation. No central coordinating agency or mechanism to manage these resources exists, and no easily accessible resource describing runways and equipment that can be used in each location is available.

Repatriation rarely occurs in this system, particularly for patients treated in Seattle.

RECOMMENDATIONS

- **Implement standardized prehospital triage and trauma activation protocols customized to the three response areas (Anchorage, Southeast, and the bush).**

- Preserve the flexibility and encourage the innovation for trauma care that exists in the remote regions of the state.
- Develop an online resource describing available patient transport resources across the state.
- Encourage the adoption of standardized, evidence-based, in-hospital trauma team activation protocols.
- Develop inter-facility transfer criteria to ensure that patients with specialized needs are sent to facilities with matching resources.
- Maintain the existing effective relationship with Harborview Medical Center and develop strategies to improve Medicaid funding for transfers.

Rehabilitation

Purpose and Rationale

As an integral component of the trauma system, rehabilitation services in acute care and rehabilitation centers provide coordinated care for trauma patients who have sustained severe or catastrophic injuries, resulting in long-standing or permanent impairments. Patients with less severe injuries may also benefit from rehabilitative programs that enhance recovery and speed return to function and productivity. The goal of rehabilitative interventions is to allow the patient to return to the highest level of function, reducing disability and avoiding handicap whenever possible. The rehabilitation process should begin in the acute care facility as soon as possible, ideally within the first 24 hours. Inpatient and outpatient rehabilitation services should be available. Rehabilitation centers should have CARF (Commission of Accreditation of Rehabilitation Facilities) accreditation for comprehensive inpatient rehabilitation programs, and accreditation of specialty centers (SCI and TBI) should be strongly encouraged.

The trauma system should conduct a rehabilitation needs assessment (including specialized programs in SCI, TBI, and for children) to identify the number of beds needed and available for rehabilitation in the geographic region. Rehabilitation specialists should be integrated into the multidisciplinary advisory committee to ensure that rehabilitation issues are integrated into the trauma system plan. The trauma system should demonstrate strong linkages and transfer agreements between designated trauma centers and rehabilitation facilities located in its geographic region (in or out of state). Plans for repatriation of patients, especially when rehabilitation centers across state lines are used, should be part of rehabilitation system planning. Feedback on functional outcomes after rehabilitation should be made available to the trauma centers.

OPTIMAL ELEMENTS

- I. The lead agency ensures that adequate rehabilitation facilities have been integrated into the trauma system and that these resources are made available to all populations requiring them. **(B-308)**
 - a. The lead agency has incorporated, within the trauma system plan and the trauma center standards, requirements for rehabilitation services, including interfacility transfer of trauma patients to rehabilitation centers. **(I-308.1)**

- b. Rehabilitation centers and outpatient rehabilitation services provide data on trauma patients to the central trauma system registry that include final disposition, functional outcome, and rehabilitation costs and also participate in performance improvement processes. **(I-308.2)**
- II. A resource assessment for the trauma system has been completed and is regularly updated. **(B-103)**
- a. The trauma system has completed a comprehensive system status inventory that identifies the availability and distribution of current capabilities and resources. **(I-103.1)**

CURRENT STATUS

While rehabilitation resources are available in Alaska, they are relatively limited in scope and capacity. The 20 inpatient rehabilitation beds in Alaska are all in the Anchorage (10 at Alaska Regional Hospital and 10 at Providence Alaska Medical Center). No pediatric rehabilitation beds for children under age 14 years exist in the state. Limited individual outpatient rehabilitation programs exist to support defined patient groups (e.g., traumatic brain injury [TBI]) at hospitals and in the community.

Patients with traumatic brain injury (adult and children 14 years and older) commonly utilize these rehabilitation beds in Anchorage, while most patients with spinal cord injury (SCI) are sent to spinal cord rehabilitation facilities in the lower 48 states. It was reported that patients wait approximately two days for an inpatient rehabilitation bed for TBI, and about 20 days for SCI; however this varies by patient status and availability of a funding source.

Harborview Medical Center in Seattle, WA provides significant support for rehabilitation services to injured patients from Alaska, including pediatric patients. This relationship is longstanding and well-developed, especially with acute care facilities in the Southeastern Alaska. Because Alaska Medicaid reimbursement rates are reportedly lower than Washington Medicaid rates, much of the care provided to patients with Alaska Medicaid transferred to Seattle is uncompensated or undercompensated.

Repatriation of patients transferred to rehabilitation centers is difficult and complicated by many variables (e.g., the cost of travel home, finding a physician to assume care responsibility). It was reported that patients transported out-of-state for rehabilitation frequently do not return to Alaska and that patients who are brought to Anchorage for rehabilitation services are likely to remain in the area.

No state data are available to evaluate the status of rehabilitation in Alaska. No needs assessment has been conducted to identify the rehabilitation needs of trauma patients in the state. Few data describe utilization, ultimate outcomes and dispositions of trauma patients requiring rehabilitation services. It is not clear that efforts are being made to include rehabilitation data and patient outcomes in the state trauma registry.

No rehabilitation specialist (physiatrist) sits on the TSRC.

RECOMMENDATIONS

- Include rehabilitation outcomes in the trauma registry.
- Perform a needs assessment for rehabilitation of trauma patients in Alaska.
- Develop a comprehensive plan to provide a continuum of rehabilitation services from acute care settings to inpatient rehabilitation to outpatient services, especially for traumatic brain injury, spinal cord injury, and pediatric trauma.
- Appoint a rehabilitation specialist to membership in the newly formed Alaska Trauma Advisory Committee (ATAC).
- Encourage rehabilitation centers to attain CARF (Commission of Accreditation of Rehabilitation Facilities) accreditation.
- Evaluate repatriation options for patients transferred to Anchorage or out-of-state.

Disaster Preparedness

Purpose and Rationale

As critically important resources for state, regional, and local responses to MCIs, the trauma system and its trauma centers are central to disaster preparedness. Trauma system leaders need to be actively involved in public health preparedness planning to ensure that trauma system resources are integrated into the state, regional, and local disaster response plans. Acute care facilities (sometimes including one or more trauma centers) within an affected community are the first line of response to an MCI. However, an MCI may result in more casualties than the local acute care facilities can handle, requiring the activation of a larger emergency response plan with support provided by state and regional assets.

For this reason, the trauma system and its trauma centers must conduct a resource assessment of its surge capacity to respond to MCIs. The resource assessment should build on and be coupled to a hazard vulnerability analysis. An assessment of the trauma system's response to simulated incident or tabletop drills must be conducted to determine the trauma system's ability to respond to MCIs. Following these assessments, a gap analysis should be conducted to develop statewide MCI response resource standards. This information is essential for the development of an emergency management plan that includes the trauma system.

Planning and integration of the trauma system with plans of related systems (public health, EMS, and emergency management) are important because of the extensive impact disasters have on the trauma system and the value of the trauma system in providing care. Relationships and working cooperation between the trauma system and public health, EMS, and emergency management agencies support the provision of assets that enable a more rapid and organized disaster response when an event occurs. For example, the EMS emergency preparedness plan needs to include the distribution of severely injured patients to trauma centers, when possible, to make optimal use of trauma center resources. This plan could optimize triage through directing less severely injured patients to lower level trauma centers or nondesignated facilities, thus allowing resources in trauma centers to be spared for patients with the most severe injuries. In addition, the trauma system and its trauma centers will be targeted to receive additional resources (personnel, equipment, and supplies) during major MCIs.

Mass casualty events and disasters are chaotic, and only with planning and drills will a more organized response be possible. Simulation or tabletop drills provide an opportunity to test the emergency preparedness response plans for the trauma system and other systems and to train the teams that will respond. Exercises must be jointly conducted with other agencies to ensure that all aspects of the response plan have the trauma system integrated.

OPTIMAL ELEMENTS

I. An assessment of the trauma system's emergency preparedness has been completed, including coordination with the public health agency, EMS system, and the emergency management agency. **(B-104)**

- a. There is a resource assessment of the trauma system's ability to expand its capacity to respond to MCIs in an all-hazards approach. **(I-104.1)**
- b. There has been a consultation by external experts to assist in identifying current status and needs of the trauma system to be able to respond to MCIs. **(I-104.2)**
- c. The trauma system has completed a gap analysis based on the resource assessment for trauma emergency preparedness. **(I-104.3)**

II. The lead agency ensures that its trauma system plan is integrated with, and complementary to, the comprehensive mass casualty plan for natural and manmade incidents, including an all-hazards approach to planning and operations. **(B-305)**

- a. The EMS, the trauma system, and the all-hazards medical response system have operational trauma and all-hazards response plans and have established an ongoing cooperative working relationship to ensure trauma system readiness for all-hazards events. **(I-305.1)**
- b. All-hazards events routinely include situations involving natural (for example, earthquake), unintentional (for example, school bus crash), and intentional (for example, terrorist explosion) trauma-producing events that test the expanded response capabilities and surge capacity of the trauma system. **(I-305-2)**
- c. The trauma system, through the lead agency, has access to additional equipment, materials, and personnel for large-scale traumatic events. **(I-305.3)**

CURRENT STATUS

Alaska has an active geological environment with frequent earthquakes, extensive volcano eruptions, huge avalanches, periodic flooding and large expanses of fresh and salt water, all of which invite potential disaster. Two-thirds of Alaska is without roads and Alaskans are dependent on air travel for routine and emergent travel. Communication capabilities and disaster resources decrease as distance from population centers increases.

The lead agency for disaster preparedness is the Division of Emergency Services which resides within the Department of Military and Veterans Affairs, Division of Homeland Security and Emergency Management. The DHSS has primary functional responsibility for mass casualty events. Both agencies recognize the need for an effective trauma system as an integral component of disaster capability.

A recent full scale exercise, Alaska Shield/Northern Edge 2007 demonstrated strengths that included effective local interoperable communications equipment. However this interoperability does not necessarily transfer to the majority of the state. Weaknesses identified were lack of coordination of air transports and local/state/military resources, as well as lack of interagency coordination for resource requests and allocation during mass casualty events.

The state has no registry for volunteer medical providers, except for the Alaska Board of Nursing that maintains a registry of nurses who would volunteer to respond to a disaster. There are two Medical Reserve Corps in Alaska, but they are not functional due to lack of funding.

Some EMS providers have received disaster training, but they are not required to obtain or maintain such training.

RECOMMENDATIONS

- **Integrate all components of the trauma system into state and local disaster planning activities.**
- Perform a detailed statewide communication assessment.
- Provide basic all-hazards disaster training for all prehospital providers that can be delivered via a variety of formats.

Systemwide Evaluation and Quality Assurance

Purpose and Rationale

The trauma lead agency has responsibility for instituting processes to evaluate the performance of all aspects of the trauma system. Key aspects of systemwide effectiveness include the outcomes of population based injury prevention initiatives, access to care, as well as the availability of services, the quality of services provided within the trauma care continuum from prehospital and acute care management phases through rehabilitation and community reintegration, and financial impact or cost. Intrinsic to this function is the delineation of valid, objective metrics for the ongoing quality audit of system performance and patient outcomes based on sound benchmarks and available clinical evidence. Trauma management information systems (MISs) must be available to support data collection and analysis.

The lead agency should establish forums that promote inclusive multidisciplinary and multiagency review of cases, events, concerns, regulatory issues, policies, procedures, and standards that pertain to the trauma system. The evaluation of system effectiveness must take into account the integration of these various components of the trauma care continuum and review how well personnel, agencies, and facilities perform together to achieve the desired goals and objectives. Results of customer satisfaction (patient, provider, and facility) appraisals and data indicative of community and population needs should be considered in strategic planning for system development. System improvements derived through evaluation and quality assurance activities may encompass enhancements in technology, legislative or regulatory infrastructure, clinical care, and critical resource availability.

To promote participation and sustainability, the lead agency should associate accountability for achieving defined goals and trauma system performance indicators with meaningful incentives that will act to cement the support of key constituents in the health care community and general population. For example, the costs and benefits of the trauma system as they relate to reducing mortality or decreasing years of productive life lost may make the value of promoting trauma system development more tangible. A facility that achieves trauma center verification/designation may be rewarded with monetary compensation (for example, ability to bill for trauma activation fees) and the ability to serve as a receiving center for trauma patients. The trauma lead agency should promote ongoing dialog with key stakeholders to ensure that incentives remain aligned with system needs.

OPTIMAL ELEMENTS

- I. The trauma MIS is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system, including a cost-benefit analysis. **(B-301)**
 - a. The lead trauma authority ensures that each member hospital of the trauma system collects and uses patient data, as well as provider data, to assess system performance and to improve quality of care. Assessment data are routinely submitted to the lead trauma authority. **(I-301.1)**
- II. The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytic tools to monitor the performance of population based prevention and trauma care services. **(B-304)**
- III. The financial aspects of the trauma system are integrated into the overall performance improvement system to ensure ongoing fine tuning and cost-effectiveness. **(B-309)**
 - a. Financial data are combined with other cost, outcome, or surrogate measures, for example, years of potential life lost, quality-adjusted life years, and disability adjusted life years; length of stay; length of intensive care unit stay; number of ventilator days; and others, to estimate and track true system costs and cost- benefits. **(I-309.4)**

CURRENT STATUS

According to the PRQ, the TSRC is charged with "ongoing monitoring and evaluating of the trauma system". Even though the actions of the TSRC are exempt from discovery, it is unclear that the TSRC has truly been empowered or authorized to perform its system evaluation and quality improvement functions. No clear line of authority could be identified in provided documentation for the TSRC to recommend or impose system change. The PRQ illustrates this challenge in the following statement:

"The TSRC has reported findings to the Lead Agency, ACEMS and liaisons, EMS regional coordinators, and trauma care providers via the Annual EMS Symposium... In special circumstances, such as the advancement of a Trauma System Improvement Act, members of the TSRC have shared information with legislators... The TSRC may make recommendations to the Lead Agency and constituent members of the trauma system".

The uncertainty of lines of authority is further exacerbated by the fact that the TSRC formally operates under the aegis of the Alaska State Medical Board.

When asked about specific evaluation and quality assurance processes, the stakeholders present acknowledged that they have neither determined Alaska's preventable mortality rate nor quantified the opportunities for improvement by phase of care.

The TSRC has made significant contributions to the standardization of care through the development of documents such as "Guidelines for the Management and Transfer of Head Injury Patients in Remote and Rural Alaska". However, the impact of this and other guidelines has not been monitored, and adherence to the guidelines was reported as variable. There has not been "loop closure" on these efforts.

The TSRC identified nine indicators of interest and initiated efforts to examine the data necessary to determine the status of those indicators. However, during the first pass of the data, it was reported that the data were of insufficient quality to answer the questions posed by the indicator. Additional data cleaning was needed.

While it was reported that a major impediment to system evaluation and quality assurance was either the lack or quality of data, the ACS team was able to request and receive trauma registry data (2006) that was sufficiently detailed to engage in rudimentary evaluation processes, e.g., stratification of trauma patients by facility and by ISS. While the data are aging, these data serve as a fundamental building block of a system evaluation process.

RECOMMENDATIONS

- **Develop an initial set of 3-5 statewide system performance indicators from among the list of 9 provided in the Pre-Review Questionnaire (PRQ).**
- Examine available data points and definitions, and develop indicators for performance improvement that can be determined on the basis of those data points.
- Formally review the data associated with each indicator on a quarterly to annual basis and start a benchmarking process.
- Report the results of all evaluation and quality assurance processes in an annual report that is presented to all system stakeholders, including the new Alaska Trauma Advisory Committee (ATAC) and Alaska Council on Emergency Medical Services (ACEMS).

Trauma Management Information Systems

Purpose and Rationale

Hospital-based trauma registries developed from the idea that aggregating data from similar cases may reveal variations in care and ultimately result in a better understanding of the underlying injury and its treatment. Hospital-based registries have proven very effective in improving trauma care within an institution but provide limited information regarding how interactions with other phases of health care influence the outcome of an injured patient. To address this limitation, data from hospital-based registries should be collated into a regional registry and linked such that data from all phases of care (prehospital, hospital, and rehabilitation) are accessible in 1 data set. When possible, these data should be further linked to law enforcement, crash incident reports, ED records, administrative discharge data, medical examiner records, vital statistics data (death certificates), and financial data. The information system should be designed to provide systemwide data that allow and facilitate evaluation of the structure, process, and outcomes of the entire system; all phases of care; and their interactions. This information should be used to develop, implement, and influence public policy.

The lead agency should maintain oversight of the information system. In doing so, it must define the roles and responsibilities for agencies and institutions regarding data collection and outline processes to evaluate the quality, timeliness, and completeness of data. There must be some means to ensure patient and provider confidentiality is in keeping with federal regulations. The agency must also develop policies and procedures to facilitate and encourage injury surveillance and trauma care research using data derived from the trauma MIS. There are key features of regional trauma MISs that enhance their usefulness as a means to evaluate the quality of care provided within a system. Patient information collected within the management system must be standardized to ensure that noted variations in care can be characterized in a similar manner across differing geographic regions, facilities, and EMS agencies. The composition of patients and injuries included in local registries (inclusion criteria) should be consistent across centers, allowing for the evaluation of processes and outcomes among similar patient groups. Many regions limit their information systems to trauma centers. However, the optimal approach is to collect data from all acute care facilities within the region. Limiting required data submission to hospitals designated as trauma centers allows one to evaluate systems issues only among patients transported to appropriate facilities. It is also important to have protocols in place to ensure a uniform approach to data abstraction and collection. Research suggests that if the process of case abstraction is not routinely calibrated, practices used by abstractors begin to drift.

Finally, every effort should be made to conform to national standards defining processes for case acquisition, case definition (that is, inclusion criteria), and registry coding conventions. Two such national standards include the National Highway Traffic Safety Administration's National Emergency Medical Services Information System (NEMSIS), which standardizes EMS data collection, and the American College of Surgeons National Trauma Data Standard, which addresses the standardization of hospital registry data collection. Strictly adhering to national standards markedly increases the value of state trauma MISs by providing national benchmarks and allowing for the use of software solutions that link data sets to enable a review of the entire injury and health care event for an injured patient.

To derive value from the tremendous amount of effort that goes into data collection, it is important that a similar focus address the process of data reporting. Dedicated staff and resources should be available to ensure rapid and consistent reporting of information to vested parties with the authority and vision to prevent injuries and improve the care of patients with injuries. An optimal information reporting process will include standardized reporting tools that allow for the assessment of temporal and/or system changes and a dynamic reporting tool, permitting anyone to tailor specific "views" of the information.

OPTIMAL ELEMENTS

I. There is an established trauma MIS for ongoing injury surveillance and system performance assessment. **(B-102)**

- a. There is an established injury surveillance process that can, in part, be used as an MIS performance measure. **(I-102.1)**
- b. Injury surveillance is coordinated with statewide and local community health surveillance. **(I-102.2)**
- c. There is a process to evaluate the quality, timeliness, completeness, and confidentiality of data. **(I-102.4)**
- d. There is an established method of collecting trauma financial data from all health care facilities and trauma agencies, including patient charges and administrative and system costs. **(I-102.5)**

II. The trauma MIS is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system, including a cost-benefit analysis. **(B-301)**

- a. The lead trauma authority ensures that each member hospital of the trauma system collects and uses patient data, as well as provider data, to assess system performance and to improve quality of care. Assessment data are routinely submitted to the lead trauma authority. **(I-301.1)**

- b. Prehospital care providers collect patient care and administrative data for each episode of care and not only provide these data to the hospital, but also have a mechanism to evaluate the data within their own agency, including monitoring trends and identifying outliers. (I-301.2)
- c. Trauma registry, ED, prehospital, rehabilitation, and other databases are linked or combined to create a trauma system registry. (I-301.3)
- d. The lead agency has available for use the latest in computer/technology advances and analytic tools for monitoring injury prevention and control components of the trauma system. There is reporting on the outcome of implemented strategies for injury prevention and control programs within the trauma system. (I-301.4)

CURRENT STATUS

The State of Alaska has worked diligently over several decades to develop, maintain, and improve a systemwide trauma registry. This has meant an evolutionary process involving at least two vendors and substantial challenges in linking disparate computer languages that exist in the Native Alaskan and other Alaskan record keeping systems. The State is to be commended for its persistence in this regard.

The lead agency maintains a full-time trauma registrar which represents, in fact, the most significant personnel commitment dedicated to the trauma program. Funds to support this position come from external sources (NIOSH).

Currently all hospitals contribute to the statewide trauma registry. For the larger facilities, this involves electronic data transfer. However, for the smaller facilities, the process involves on-site abstraction of records, completion of a data abstract summary, and manual input into the system. A contract employee is assigned the responsibility of facilitating this process. She described multiple challenges at some of the smaller hospitals, such as limited personnel resources for abstracting, enormous travel distances and costs for her to visit the hospitals, a reluctance by the hospitals to ask for or accept consultative help, and persistent turnover of data registrars at the hospitals. These challenges result in a significant delay (up to 2 years) in acquiring trauma data from all acute care facilities. In some cases, the consultant performs data abstraction at some of the smaller hospitals in an effort to get data submission caught up.

A second contract employee is used to clean and validate the data. She demonstrated significant adeptness with the system registry data by fulfilling several requests of the ACS team during their deliberations. For example, she was able to easily stratify injury severity by hospital and track transfers in an out of each facility. The contract employees are responsible for an annual training of trauma registrars.

During the discussion of the management information system, it was revealed that recently a new trauma registry vendor has received the Alaska contract. There was substantial discordance with the manner in which the vendor was selected, with the end-users (e.g., registrars, trauma managers, trauma directors, and the TSRC) having little to no input into the process. While data input into the new system is tentatively scheduled to begin January 1, 2009, concern was expressed by participants that during the transition period there was the potential for data to be delayed or, perhaps, even lost. Several participants suggested that they might maintain their current system in lieu of using the newly acquired system.

One of the perceived advantages of the new trauma system is that it can, and will, be linked with electronic prehospital data since the same vendor holds a single contract for the provision of both systems. The effectiveness of this linkage could not be fully ascertained at the time of the ACS visit since the systems were only then "coming on-line". However, it is important to note that similar efforts by other states to link the trauma registry and prehospital data systems have not been universally successful, even when the same vendor has been used for each system. The IPEMS Section will need to work closely with the vendor to monitor progress in meeting contract expectations. The state is to be commended for obtaining a grant that will enable the lead agency to perform additional linkage with other, free standing, data sets such as the traffic crash database.

Alaska has a data rich environment. Numerous other databases exist and have been used for epidemiologic and prevention activities. However, they have only been used in a limited capacity to help steer and manage the trauma system.

Specific policies and procedures have been developed by the TSRC concerning the release of trauma registry data. Several researchers have accessed the data system following these guidelines.

RECOMMENDATIONS

- **Ensure that all elements considered essential to system development, evaluation and performance improvement in the State of Alaska are evident and working in the new trauma registry and are consistent with the National Trauma Data Standard (NTDS) definitions.**
 - This should be tasked to a peer review protected subcommittee, (e.g. the Trauma System Review Committee) of the Alaska Technical Advisory Committee (ATAC), in collaboration with the trauma registrar, trauma registrar contract employees, and the vendor.
- Safeguard the legacy data by maintaining the current software system separately and discretely from the new system until a legacy data transfer has occurred and validation queries have been completed.

- Minimize gaps and delays in data during the trauma registry transition process by maintaining dual systems until the transfer of legacy and concurrent data has been completed and validated.
- Establish mechanisms for capturing data from remote facilities in a timely manner, e.g., provide scanners and/or encrypted methods of electronic transmission of records in lieu of travel to each facility.
- Submit statewide trauma registry data to the National Trauma Data Bank (NTDB) on an annual basis.
- Achieve linkage and integration with other data sets, specifically, prehospital and hospital discharge data (UB 92/04).
- Use existing data, beginning immediately, for system development and quality improvement activities, in spite of its acknowledged imperfections.
- Provide reports on at least a quarterly basis to all stakeholders.

Research

Purpose and Rationale

Overview of Research Activity

Trauma systems are remarkably diverse. This diversity is simply a reflection of authorities tailoring the system to meet the needs of the region based on the unique combination of geographic, economic, and population characteristics within their jurisdiction. In addition, trauma systems are not fixed in their organization or operation. The system evolves over years in response to lessons learned, critical review, and changes in population demographics. Given the diversity of organization and the dynamic nature of any particular system, it is valuable when research can be conducted that evaluates the effectiveness of the regional or statewide system. Research drives the system and will provide the foundation for system development and performance improvement. Research findings provide value in defining best practices and might alter system development. Thus, the system should facilitate and encourage trauma-related research through processes designed to make data available to investigators. Competitive grants or contracts made available through lead authorities or constituencies should provide funds to support research activities. All system components should contribute to the research agenda. The extent to which research activities are required should be clearly outlined in the trauma system plan and/or the criteria for trauma center designation.

The sources of data used for research might be institutional and regional trauma registries. As an alternative, population-based research might provide a broader view of trauma care within the region. Primary data collection, although desirable, is expensive but might provide insights into system performance that might not be otherwise available.

Trauma Registry-based Research

Investigators examining trauma systems can use the information recorded in trauma registries to great advantage to determine the prevalence and annual incidence rate of injuries, patterns of care that occur to injured patients in the system's region, and outcomes for the patients. These data can be compared with standards available from other trauma registries, such as the NTDB. Such comparisons can then enable investigators to determine if care within their region is within standards and can allow for benchmarking. Initiating and sustaining injury prevention initiatives is a vital goal in mature trauma systems. Investigators can take a leadership role in performing research using trauma registry data that identify emerging threats and instituting public health measures to mitigate the threats. For example, a recent surge in death and disability related to off-road

vehicles can be identified and the scope of the problem defined in terms of who, where, and how riders are injured, and then, through presentations and publications, the public can be informed of a new threat.

Trauma system administrators have a responsibility to control investigators' access to the registry. The integrity and reliability of data in a trauma systems registry are essential if accurate research and valid conclusions are to be reached using the data. Trauma system administrators should have a process that screens data entered into the system's composite registry from individual institutions. There should be a mechanism that ensures that the information is stored in a secure manner. Investigators who seek access to the trauma registry must follow a written policy and procedure that includes approval by an authorized institutional review board. Trauma registry data may include unique identifiers, and system administrators must ensure that patient confidentiality is respected, consistent with state and federal regulations.

Population-based Trauma System Research

A major disadvantage of using only trauma registry data to conduct research that evaluates injured patients in a region is the bias resulting from missing data on patients not treated at trauma centers. Specifically, most registry data are restricted to information from hospitals that participate in the trauma system. Although ideally all facilities participate in the form of an inclusive system, many systems do not attain this goal. Thus, a population-based data set provides investigators with the full spectrum of patients, irrespective of whether they have been treated in trauma centers or nondesignated centers or were never admitted to the hospital owing to death at the scene of incident or because their injuries were insufficiently severe to require admission. The state and national hospital discharge databases are examples of population-based data. These discharge databases contain information that was abstracted from medical records for billing purposes by hospital employees who enter these data into an electronic database. For investigators seeking a wider perspective on the care of injured patients in their region, these more inclusive data sets, compared with registries, are essential tools. Other population based data that may be of help include mortality vital statistics data recorded in death certificates. Selected regions might have outpatient data to capture patients who are assessed in the ED and then released.

Investigators can use these population-based data to study the influence of a regional trauma system on the entire spectrum of patients within its catchment area.

Participation in Research Projects and Primary Data Collection

Multi-institutional research projects are important mechanisms for learning new knowledge that can guide the care of injured patients. Investigators within trauma systems can participate as co-investigators in these projects. Investigators can participate by recruiting patients into prospective studies, being leaders in the design and administration of grants, and preparing manuscripts and reports. Evidence of this collaboration is that investigators within a trauma system are recognized in announcements of grants or awards. Lead agency personnel should identify and reach out to resources within the system with research expertise. These include academic centers and public health agencies.

Measures of Research Activity

Research can be broadly defined as hypothesis-driven data analysis. This analysis leads the investigators to a conclusion, which might become a recommendation for system change. Full manuscripts published in peer reviewed research journals are an exemplary form of research activity. Research reported in annual reviews or in public information formats intended to inform the trauma system's constituency can also be considered legitimate research activity.

OPTIMAL ELEMENTS

- I. The trauma MIS is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system, including a cost-benefit analysis. **(B-301)**
 - a. The lead agency has available for use the latest in computer/technology advances and analytic tools for monitoring injury prevention and control components of the trauma system. There is reporting on the outcome of implemented strategies for injury prevention and control programs within the trauma system. **(I-301.4)**

- II. The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area. **(B-306)**
 - a. The trauma system has developed mechanisms to engage the general medical community and other system participants in their research findings and performance improvement efforts. **(I-306.1)**

 - b. The effect or impact of outreach programs (medical community training/support and prevention activities) is evaluated as part of a system performance improvement process. **(I-306.3)**

- III. To maintain its state, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes. **(B-307)**

- a. The trauma system implements and regularly reviews a standardized report on patient care outcomes as measured against national norms. (I-307.2)

CURRENT STATUS

A specific research agenda has not been developed for the Alaska trauma system. However, a reasonable representation of trauma-related literature can be found using an electronic medical literature search. Several articles use the trauma registry as a basis of data. Unfortunately, most of the articles are aging. Several are published in *Alaska Medicine*, which reportedly is changing from a quarterly publication to an annual publication.

A wealth of scientific and technical publications has been produced in the Alaska injury prevention literature. Again several of these publications use trauma registry data, at least partially, as a basis for the publications.

The University of Alaska – Anchorage currently offers a Master of Public Health (MPH) degree within its Department of Health Sciences. Linkages between the MPH program and the trauma system were not discussed. The lead agency has direct access to a staff epidemiologist.

RECOMMENDATIONS

- Establish a collaborative relationship between the University of Alaska-Anchorage's public health program and the lead agency's epidemiologist and the Alaska Trauma Advisory Committee (ATAC).
- Develop, jointly, a research agenda that can build on the current trauma registry data and expand to include more rigorous research projects.
- Attempt to minimize Institutional Review Board approval challenges while still maintaining full protection of any/all subjects.

Focus Questions

1. How can Alaska attain full participation of hospitals in the statewide trauma system?

Trauma centers and trauma systems have been demonstrated to decrease mortality following injury.^{1,2,3} All of the acute care hospitals in Alaska are currently providing care for injured patients. However; trauma patients in Alaska who are not Native Alaskans do not have routine access to a verified/designated Level I or II trauma center. A trauma system will fully attain the benefits of improved patient care and superior outcomes only when all facilities institute and follow evidence-based guidelines to decrease variability in care and deviations from the standard of care. Central to this evolution is the implementation of a rigorous, multidisciplinary performance improvement program. A coordinated system of trauma care within acute care facilities accomplishes the following:

- improved communications,
- streamlined coordination of care issues,
- increased physician satisfaction,
- a sense of pride in trauma care providers throughout the facility, and
- the community is reassured that everything possible is being done to provide them state-of-the art trauma care.

Trauma systems have been well studied, and these studies form the basis for the recommendations and guidelines found in the ACS-COT *Resources for Optimal Care of the Injured Patient* document.

Hospitals, healthcare providers, and physicians in Alaska are already providing trauma care. The adoption of an inclusive trauma system with verified/designated trauma centers would enable facilities in the state to provide trauma care to all Alaskans with less variability in care, better patient outcomes, lower resource utilization, and higher patient and provider satisfaction. In many cases, trauma care within an organized and verified trauma center also results in lower costs as evidence-based practice replaces less efficient practice patterns.

Only five hospitals are currently verified/designated trauma centers in Alaska. Reasons expressed by participants for not becoming verified and designated are varied but fall into two main categories:

- Administrator's concerns regarding increased costs to be borne by the hospital and the potential impact on the medical staff
- Lack of broad physician support

Administrators' concerns

Administrators' concerns involve a number of issues related to trauma center verification:

- Multi-system trauma patients require an organized system of care for optimal outcomes which increases institutional readiness costs.
- "Poor" uninsured case mix of trauma patients.
- Effect on hospital operations such as disruption of operating room schedules, filling ICU beds, etc.
- Physicians tend to be reluctant to participate and may elect to abandon a hospital that seeks designation.

Lack of physician support

Medical staff support for trauma center verification tends to be lukewarm at private hospitals for a number of reasons:

- Trauma patients have higher rates of uncompensated care than "elective" patients.
- Trauma patients are more likely to sue a physician (unfounded).
- The care of trauma patients imposes undue burdens including night and weekend work, and this care is generally disruptive of elective practices.

To address the above mentioned concerns, a number of issues should be openly discussed by key representatives of the identified groups, and a variety of solutions should be considered. It is likely that no one answer fits every situation and a combination of flexibility and transparency is needed.

While it is true that verification/designation as a trauma center requires commitment by administration and medical staffs, the benefits in improved patient outcomes, decreased complication rates and length of stay, and increased patient and provider satisfaction can outweigh the costs. In the case of the hospitals and physicians in Alaska who are already providing trauma care, an inclusive trauma system would likely make trauma care easier and less costly.

The cost of readiness is significant in trauma centers and may be addressed through several means. The recently introduced trauma activation fees using the 68x designation on the UB 92/UB 04 form can relieve a significant portion of these costs. Trauma activation fees can only be submitted if the center is verified/designated. A number of states have provided financial support to their trauma centers through legislation or appropriations. State financial support for trauma care is usually linked to trauma center verification/designation and continued participation in an organized trauma system. Trauma center verification/designation carries important benefits to hospitals in terms of disaster

preparedness, and this may be especially relevant in Alaska given its unique geography and circumstances.

The issues of poor case mix and disruption of hospital operations are best addressed by considering the impact of verification/designation on hospital functions. For a hospital that is already caring for trauma patients, the introduction of a trauma system will likely mean an overall increase in the efficiency of caring for these patients, secondary to improvements required in the verification process. Decreased ICU and hospital length of stay, lower resource consumption and lower rates of complications will improve hospital bottom lines while increasing patient and provider satisfaction.

Physician concerns should be carefully addressed as a functional trauma system requires broad physician support. This is especially true for the specialties of general surgery (including pediatric surgery), orthopedic surgery, neurosurgery, anesthesia and emergency medicine. The Anchorage area hospitals have ample physician specialization to provide optimal care with the following estimated numbers:

- 30 surgeons, many sub-specialized.
- 40 orthopedists
- 6 neurosurgeons
- 4 cardiac surgeons
- 2 pediatric surgeons

Education can alleviate the concerns that trauma patients are more litigious than average.

The concerns regarding reimbursement and work hours are real and require more focused solutions. Trauma patients do, in fact, have higher rates of uncompensated care than elective patients in almost all regions of the United States. They are also more likely to arrive during evening and night hours.⁴ The specific concerns of physicians should be acknowledged and actions should be taken to address them. For hospitals, actions may include one or more of the following options:

- Provide an on-call stipend to cover the perceived burden of trauma call. This would include high volume specialists who are not ordinarily in-house and who agree to participate in the activities of the trauma center, including performance improvement and continued medical education (CME). Most frequently this would include general surgery, orthopedics, and neurosurgery.

- Recruit one or more trauma/surgical critical care specialists to provide the core trauma care functions. Such individuals would support the private physicians and decrease their burden by providing back-up, assuming the care of patients admitted to the hospital, and taking responsibility for organizing the requisite activities for verification. By providing an actual trauma service with a specialized team led by a trauma/surgical critical care boarded specialist, the community surgeon can transfer patient care the following morning and feel confident the patient will receive state-of-the-art care. This frees the private physician to continue with his/her surgical practice. The specialist-led trauma service would improve care by decreasing variability, complications, length of stay and dissatisfaction.
- Support the private physicians through CME expenses, liability coverage, or a fund to cover a portion of uncompensated care exposure.

While this will require substantial financial support from hospital administration initially, the improvement in outcomes and the increase in patient and provider satisfaction should return at least a portion of the investment. Additional revenue through activation fees and state support would also contribute to deferring any start-up and readiness costs. Providing hospitals and physicians with financial support as part of a proposed inclusive trauma system plan will likely facilitate the adoption of trauma center verification/designation.

In addition, the implementation of an inclusive trauma system in Alaska with broad hospital participation would provide a critical element in disaster preparedness.⁵ The vital role of trauma centers in support of disaster management should also be a central part of any funding requests to the legislature.

RECOMMENDATIONS:

- Verify/designate all the medical facilities in Anchorage who wish to provide trauma care at levels commensurate with these resources and commitment
- Develop city-wide trauma triage guidelines for Anchorage with further application to the needs of in-coming transfer patient.
 - Establish a predetermined plan that accounts for subspecialty needs of the patient matched with the hospitals' capabilities.
 - Establish trauma diversion guidelines with back-up plans.

- Develop evidence-based trauma team activation criteria
 - Use the “status 1” only when there is prehospital physiologic evidence that the patient requires an immediate surgical response.
 - Start tracking surgical response times for “status 1” patients from time of notification. Benchmark to the ACS verification guideline of a surgeon being present on arrival of patient or within 15 minutes of notification. The threshold is to meet this 80% of the time.
 - Study outcomes associated with used of the criteria to further refine them for optimal patient outcomes with minimal physician encumbrance.
- Identify physician leadership – trauma champions
 - Encourage Level II trauma centers (or hospitals that seek to become Level II trauma centers) to consider recruiting a trauma/surgical critical care specialist who can provide a knowledgeable back-up for sub-specialized surgeons who may or may not be comfortable with caring for a multi-system critically injured patient.
- Develop trauma chart forms
 - Establish standardized trauma patient admission orders. Establish automatic orders for glucose monitoring and control, peptic ulcer prophylaxis, deep vein thrombosis prophylaxis and surveillance, head injury protocols, etc.
 - Ensure that trauma history and physical forms have prompts for problem documentation areas such as Glasgow Coma Scale scores, procedures performed, notification and arrival times, critical care times, etc.
- Address finance issues
 - Encourage medical facilities to invest in the trauma service to obtain and maintain verification/designation.
 - Recruit and retain trauma/critical care specialists.
 - Initiate discussions with general surgeons to identify their needs to be able to provide the call coverage and to identify patient care issues.
 - Track costs that can be recouped by improved patient length of stay, decreased cost of care, and the value of improved medical staff satisfaction.
 - Charge trauma activation fees (can only be charged by verified/designated centers).
 - Seek legislation to include assistance for uncompensated care and readiness fees for verified/designated trauma centers.

2. How can Alaska better coordinate resources, especially air medical, for every day trauma responses, as well as disaster response?

Assessment:

Alaskans depend on aircraft for routine travel and medical transport, especially those who reside in the isolated two-thirds of the state without roads. At any given place or time, local providers are familiar with local resources available, but may not know about back-up resources available in the region. Local providers may then be challenged to make multiple calls when their primary local air medical resource is not available.

Coordinating trauma care resources in the state of Alaska requires current knowledge of the status of those resources, e.g., personnel, equipment, communication, facilities. To date, a comprehensive needs or resource assessment of the trauma system has not been conducted. While some of this information is available, such as for facilities, it is lacking for other aspects of the trauma system, such as air medical resources.

Policy Development:

Once an air medical resource assessment has been completed, information collected about all trauma system resources (including military, National Guard, and Coast Guard) should be organized by region and made available to users in an easily retrieved format. A central coordination center could then be created to track the air medical assets available and in use throughout the state, and this information could potentially be available on-line. Likewise, the EMS regions could develop and maintain a regional resource information database that could be updated regularly.

The next step could be the establishment of a regional "one call does all" service. Such services could assist a referring provider to obtain the aircraft that matches the patient's need and local landing restrictions. The regional service could also help direct community-based air medical resources to available and appropriate facilities and assist in the coordination of ramp transfers. The "one call does all" concept includes the identification of the receiving trauma facility that best matches the patient's needs.

The regional centers would feed information about the aircraft deployed to the central coordination hub. This coordination hub would be useful in a state disaster, and could potentially be maintained by the state's emergency management system. This type of statewide system status coordination hub would need to be operable and accessible at all hours and be updated in near real-time.

Another problem that the state faces is the lack of comprehensive guidelines for the indications of air medical transport. The reality is that urgent or even routine, non-emergent medical care not available in the local community may require air

travel. Development of guidelines will help ensure the optimal use of the air resources in a safe and efficient manner.

Assurance:

This service could optimize resource utilization locally and statewide on a continuous basis. Performance improvement could be conducted using trauma registry data to determine changes in time to transfer, and appropriateness of facility selection.

Recommendations

- Decrease patient transfer times by developing a central coordination center for statewide air medical resources that will maintain an updated registry of all medical aircraft to include medical services and flight characteristics (e.g., load capacity, instrument rating, and landing requirements).
 - Monitor the availability and location of air resources.
 - Provide availability status to users.
 - Coordinate air medical resources in a disaster situation.
- Develop regional system status databases of current trauma resources that are utilized to provide a 'one call does all' service for referring providers and support a statewide trauma resources data bank.
- Develop a state registry for disaster volunteers, similar to the Emergency System for Advanced Registration of Volunteer Health Professionals.
- Update and keep current the Trauma Triage, Transport and Transfer Guidelines.
- Use the Guidelines for the Management of Head Injuries in Remote and Rural Alaska as a template to develop other transport guidelines to optimize resources.
- In more populated areas with more than one healthcare facility, develop a tracking system of real time bed capacity for time sensitive diseases (trauma, ST elevated myocardial infarction [STEMI], stroke, etc.) and share that information with EMS dispatch in order to prevent delays or mistakes in patient destination (right patient to right facility).

Acronyms and Glossary

AAC - Alaska Administrative Code
ACEMS - Alaska Council on Emergency Medical Services
ACS – American College of Surgeons
ACS-COT- American College of Surgeons Committee on Trauma
ALS – advanced life support+
ATAC - Alaska Trauma Advisory Committee
ATLS – Advanced Trauma Life Support

BIS – Benchmarks, Indicators, and Scoring
BLS – basic life support

CARF - Commission on Accreditation of Rehabilitation Facilities
CDC – Centers for Disease Control
CHAs – Community health aides
CME – continuing medical education

DHSS – Department of Health and Social Services
DOT – US Department of Transportation

EMS – Emergency Medical Services
EMSC – Emergency Medical Services for Children
EMTs – Emergency medical technicians

FTE – full-time equivalent

HRSA - Health Resources and Services Administration

ICU – intensive care unit
IPEMS – Injury Prevention and Emergency Medical Services Section

MICPs – Mobile intensive care paramedics
MPH – Master of Public Health degree

NEMSIS – National EMS Information System
NIOSH - National Institute for Occupational Safety and Health
NSC – National Standard Curriculum for EMTs
NTDB – National Trauma Data Bank
NTDS – National Trauma Data Standard

PHTLS – Prehospital Trauma Life Support

SCI – spinal cord injury
STEMI - ST-Segment Elevation Myocardial Infarction
STIPDA – State and Territorial Injury Prevention Directors Association

TBI – traumatic brain injury
TNCC – Trauma Nurse Core Curriculum
TSC – Trauma system consultation
TSRC - Trauma System Review Committee

Alaska Council on Emergency Medical Services **(ACEMS)**

The mission of the Emergency Medical Services program in Alaska is to reduce both the human suffering and economic loss to society resulting from premature death and disability due to injuries and sudden illness. The Governor's Alaska Council on Emergency Medical Services, also known as "ACEMS," provides the Commissioner of the Department of Health and Social Services and the Governor with recommendations related to all aspects of EMS, including distribution of funding, and policy development. The Council:

- brings together technical resources, experience, and knowledge to assist and advise on the continued development of the EMS and trauma system in Alaska;
- advises the state EMS staff and EMS regional directors regarding public education and generation of broad community support for the goals of the EMS program;
- provides recommendations regarding EMS program policy and priorities; and
- reviews EMS or EMS-related program proposals on request of the Commissioner of the Department of Health and Social Services, the Director of the Division of Public Health, and Section of Injury Prevention and EMS staff.

ACEMS was established by Alaska Statute 18.08 and meets two times a year to take action on issues affecting EMS in Alaska.

Alaska Council on Emergency Medical Services
As of 9/2008

Appendix A: Site Visit Team Biographical Sketches

REGINALD A BURTON, MD, FACS- TEAM LEADER

Dr. Burton started his Trauma career while in high school when he got his first EMT certification. He worked as an EMT throughout college and medical school to offset his tuition. He and his wife, Dr. Snyder, moved to Ohio after finishing his residency in Surgery in 1992.

Dr. Burton was very active in the establishment of the Trauma System in Ohio. He developed and was the Trauma Director of the first ACS verified level III trauma center in Ohio, while continuing to participate in trauma call at the Level I trauma center in Dayton. He gave numerous lectures throughout the state on trauma center development, trauma center Performance Improvement programs, and EMS/Hospital integration of trauma plans. He became the medical director for the Fire/EMS services in two surrounding cities and sat on the regional EMS Council. He was the Co-Chairman of the Southwest Ohio Regional Trauma System from 1997 until 2002. He was the Chairman of the Region 2 Physician Advisory Board to the Ohio State Trauma Board for 5 years until he moved to Nebraska. He sat on the Data Committee of the Ohio Trauma Board during the statewide trauma registry development, and helped work out many issues enabling it to start functioning 2000.

Dr. Burton took a sabbatical and did a Trauma/Surgical Critical Care Fellowship at the renowned R. Adams Cowley Shock Trauma Center in Baltimore Maryland in 2006-7, and is currently the Director of Trauma and Surgical Critical Care at Bryan LGH Medical Center in Lincoln, Nebraska. He is a Clinical Associate Professor in Surgery at the University of Nebraska. He is the Medical Director of Region 2 in the Nebraska Statewide Trauma System, Chair of the Nebraska Statewide Trauma Data and Performance Improvement Committee, and the author of the Nebraska Trauma Performance Improvement training workshop. His team developed a web-based trauma registry reporting system that has enabled small critical access hospitals in rural Nebraska to report their trauma data to the Nebraska Statewide Trauma Registry, and thus also to the National Trauma Data Bank.

Dr. Burton has been a site visitor for the ACS Verification Committee since 2000. He became the Chairman of the Nebraska ACS Committee on Trauma in 2002, and is the current Regional Chief of Region 7 (Nebraska, Kansas, Missouri, and Iowa). Dr. Burton was also involved in the ACS Political Action Taskforce briefing on trauma issues to state senators and congressmen in Washington, D.C. in March, 2005. He was the ACSCOT representative to the National EMS Workforce Stakeholders Meeting and the HHS State Trauma Leadership meeting in 2006. He represented rural trauma physicians in the National Rural Health Association's meeting with federal partners in Washington, D.C. this year. Dr. Burton has always been an outspoken advocate for Trauma System Development.

JANE W. BALL, RN, DRPH

Dr. Jane W. Ball served as the Director of the National Resource Center (NRC) at the Children's National Medical Center in Washington, D.C. from 1991 through 2006. The NRC provided support to two Federal Programs in the U. S. Department of Health and Human Services' Health Services and Resources Administration (HRSA): the Emergency Medical Services for Children (EMSC) Program and the Trauma-Emergency Medical Services Systems Program. As director of the NRC, she coordinated the support provided to the Federal Program Directors as well as the provision of technical assistance to state grantees. Support to the Federal Program Directors often included meeting facilitation, preparation of special reports (such as the Model Trauma Systems Evaluation and Planning document), and consultation on Program issues. Technical assistance often included strategic planning, providing guidance in securing funding, developing and implementing grants, developing injury prevention plans and programs, building coalitions, shaping public policy, conducting training, and producing educational resource materials.

Dr. Ball has authored numerous articles and publications as well as several health care textbooks, including Mosby's Guide to Physical Examination (6 editions), Child Health Nursing (first edition), Pediatric Nursing: Caring for Children (4 editions), Maternal and Child Nursing (2 editions), and Pediatric Emergencies: A Manual for Prehospital Care Providers (2 editions). One of these texts, Pediatric Nursing: Caring for Children, received the 1999 and 2001 Robert Wood Johnson Foundation Last Acts Coalition Outstanding Specialty Book Award. As an expert in the emergency care of children, Dr. Ball has frequently been invited to join committees and professional groups that address the unique needs of children.

Dr. Ball recently completed her term as the President of the National Academies of Practice, an organization composed of distinguished health care practitioners from 10 disciplines that promote education, research, and public policy related to improving the quality of health care for all through interdisciplinary care. She currently serves as the organization's Immediate Past President.

Dr. Ball graduated from the Johns Hopkins Hospital School of Nursing. She obtained her master's degree and doctorate in Public Health from John Hopkins University School of Hygiene and Public Health. She is a Certified Pediatric Nurse Practitioner.

SAMIR M. FAKHRY, MD, FACS

Dr. Fakhry graduated from the American University of Beirut, School of Medicine in 1981. He completed his residency in general surgery and his fellowship in critical care and trauma at the University of North Carolina at Chapel Hill and North Carolina Memorial Hospital, Chapel Hill, N.C. in 1987.

From 1988 until 1991 he led the trauma program as Director for Trauma Services at George Washington University Medical Center in Washington D.C. In 1991, he accepted a position as Director, Surgical Critical Care Services at UNC Hospitals in Chapel Hill, NC. While at UNC, he rose to the rank of Associate Professor of Surgery with Tenure and was awarded several teaching awards by the medical students and the surgical residents. He remained there until 1997 when he was recruited to the Inova Regional Trauma Center at Inova Fairfax Hospital in Falls Church, Virginia as the Chief of Trauma Services.

Since 1997 he has held the position of Chief, Trauma and Surgical Critical Care Services at the Inova Regional Trauma Center. Additionally, he holds the positions of Associate Chair for Research and Education, Department of Surgery; Medical Director for the Inova Regional Trauma Center Injury Prevention Program; Professor of Surgery, VCU, Inova Campus; Clinical Professor of Surgery at Georgetown University School of Medicine; and is the immediate past Chair of the American College of Surgeons Washington DC Committee on Trauma.

Dr. Fakhry has been heavily involved in trauma and surgical critical care research. He has numerous peer-reviewed publications, abstracts and book chapters to his credit. He is a member of many national societies and serves on several national committees and boards. He is a frequent speaker locally as well as nationally.

Dr. Fakhry maintains a high interest in all aspects of trauma. He has been Principal Investigator (PI) for the Crash Injury Research and Engineering Network (CIREN) Center at Inova Fairfax Hospital since May, 2000. With injury prevention as a goal he has worked closely with The National Highway Traffic Safety Administration (NHTSA), automobile manufacturers and bio-engineers to help produce safe vehicles. In addition to the CIREN project, he has been awarded funding for numerous projects in areas of injury prevention, surgical critical care and trauma. These include medical informatics applications, head trauma, intestinal injury, aggressive driving, teen DUI prevention and surgical education.

DREXDAL PRATT

Chief Drexdal Pratt heads the Office of Emergency Medical Services in the Division of Health Service Regulation of the North Carolina Department of Health and Human Services. His agency manages Emergency Medical Services and Trauma and the Assistant Secretary for Preparedness and Response (ASPR) Hospital Preparedness Cooperative Agreement.

Mr. Pratt is a graduate of the Institute of Government at the University of North Carolina at Chapel Hill, the EMS Management Institute at the University of North

Carolina at Charlotte, and Forsyth Technical Community College. He is also a Certified Emergency Manager (CEM) and a Certified Public Manager (CPM).

Mr. Pratt joined the North Carolina Office of Emergency Medical Services in 1987 as a Regional Coordinator. He was promoted through the ranks, first to Regional Supervisor, and then to Chief of the agency in 1999.

Mr. Pratt served two terms as Chair of the Region I EMS Advisory Council. He received the National Association of County Commissioner's Achievement Award for coordinating the development of the Stokes County NC computer-aided dispatch program.

Currently, Chief Pratt serves as a Commissioner on the Governor's State Emergency Response Commission and serves as Chairman of the Commission's Homeland Security Medical Committee. In addition, Mr. Pratt serves as Chairman of the NC Hospital Preparedness Committee.

NELS D. SANDDAL, MS, REMT-B

Mr. Sanddal is currently the president of the Critical Illness and Trauma Foundation (CIT), in Bozeman, Montana. CIT is a non-profit organization dedicated to improving the outcomes of people who are injured in rural America through programs of prevention, training, and research. He recently completed a detachment as the Director of the Rural EMS and Trauma Technical Assistance Center which was funded by the Department of Health and Human Services, Health Resources and Services Administration. Mr. Sanddal worked as the training coordinator for the EMS and Injury Prevention Section of the Montana Department of Public Health and Human Services in the late 1970's. He has served as the Chairperson of the National Council of State EMS Training Coordinators and as the lead staff member for that organization, as well as the National Association of EMT.

Mr. Sanddal has been a co-investigator for six state or regional rural preventable trauma mortality studies and has conducted research in the area of training for prehospital and nursing personnel as well as in rural injury prevention and control. He is a core faculty member for the NHTSA Development of Trauma Systems course and has conducted several statewide EMS assessments for NHTSA. Mr. Sanddal served on the IOM Committee on the Future of Emergency Care in the U.S.

He received his EMT training in Boulder, Montana, in 1973 and has been an active EMT with numerous volunteer ambulance services since that time. He currently responds with the Gallatin River Ranch Volunteer Fire Department where he serves as the Medical Officer and Assistant Chief.

He completed his undergraduate work at Carroll College, received his Master's degree in psychology from Montana State University and is currently completing his doctorate in Health and Human Behavior from Walden University.

JIM UPCHURCH, MD, MA, REMTP

Dr. Upchurch began his medical career in 1971 as a Special Forces Medic courtesy of the US Army. He graduated from the University of Texas Medical Branch at Galveston in 1982 and completed a Family Practice residency from the University of Oklahoma in 1985. Since 1985, he has served as an Indian Health Service (IHS) Physician on the Crow Indian Reservation in Montana. The majority of his clinical practice involves emergency medicine (EM), Emergency Medical Services (EMS), surgery and obstetrics. He maintains current National Registry certification and state licensure as a paramedic. In 2003, he completed a masters degree in educational technology from George Washington University.

Dr. Upchurch is a long-standing member of the National Association of EMS Physicians and the American College of Emergency Physicians. Since 1986, he has functioned as EMS medical director for Big Horn County in Montana and guided their basic care program to the advanced life support level, including critical care interfacility transport. He also provides EMS medical direction for Big Horn Canyon National Park and the Incident Medical Specialist Program, US Forest Service, Region I.

Dr. Upchurch is director of a small non-profit organization, EMS Education & Training. They offer distance and face-to-face educational opportunities to rural and frontier EMS personnel in Montana who desire to advance their level of care. He is an active ACLS, ACLS EP, ATLS and PHTLS instructor. Recently, he authored the Geriatric chapter for the sixth edition of *Nancy Caroline's Emergency Care in the Streets*, released in 2007.

Although Montana has no recognized state EMS medical director, Dr. Upchurch has served in that function for many years and represents Montana on the National Council of State EMS Medical Directors of the National Association of State EMS Officials. He functions at the IHS national level as a consultant on EM and EMS issues. He also sits on the Montana Board of Medical Examiners and on the board for the Critical Illness and Trauma Foundation.

JOLENE R. WHITNEY, MPA

Jolene R. Whitney has worked with the Bureau of Emergency Medical Services, Utah Department of Health for 27 years. She spent the first 6 years of her career as a regional EMS consultant. She became Assistant Training Coordinator in 1986. She has been a program manager for EMS systems and trauma system development since 1991. She is currently a Deputy Director for the Bureau of EMS and Preparedness, which includes Trauma System Development, Chemical

Stockpile Emergency Preparedness, Hospital Disaster Planning, ED, Trauma and Pre-hospital databases, EMS Licensing and Operations, CISM, and EMS for Children.

She spent 250 hours in the Olympic Command Center, serving as an EMS liaison for the 2002 Winter Olympics in Salt Lake City, Utah. She has been involved with all aspects of EMS including ambulance licensure, EMS councils, certification and training, computer testing, and curricula development. She has experience in statute and rule development, grant writing, system plan development, coalition building, and disaster preparedness. She has served on several national committees and teams, including a state EMS system assessment for NHTSA, reviewing rural trauma grant applications, developing the HRSA model trauma system plan and the NASMESO trauma system planning guide, and the NHTSA curriculum for an EMT refresher course.

Jolene has a Masters in Public Administration from Brigham Young University and a B.S. in Health Sciences, with an emphasis in Community Health Education from the University of Utah. She was certified as an EMT-Basic in 1979. She also obtained certification as an EMT instructor and became certified as an EMT III (Intermediate) in 1983. She has attended numerous conferences, courses, and workshops on EMS, trauma and disaster planning and response. She also completed a course for investigator training from CLEAR. Jolene is a co-author of three publications on domestic violence and hospital surge capacity planning.

She is the current Chair for the National Council of State Trauma System Managers/NASEMSO. She is a member of the American Trauma Society, previous member of the National Association of State EMS Training Coordinators.

In 2005, she was nominated by her staff and received a Utah Manager of the Year Nominee Award from the Governor. She also received recognition from the Utah Association of Emergency Medical Technicians in 2006.

TESTIMONY ON HOUSE BILL 168
February 8, 2010

ASHNHA represents 27 private, federal, state, and tribal health care facilities located throughout Alaska. The testimony presented here has been approved by ASHNHA's general membership (see detailed member list at bottom of testimony).

ASHNHA's membership supports **HB 168**.

This incentive based approach to increasing trauma treatment capability in Alaska is well reasoned and addresses one key barrier that discourages facilities from seeking trauma designation. A key barrier not addressed by HB 168 is the availability and cost associated with assuring certain physician specialties are on hand to deal with trauma cases. This barrier will continue to limit the ability of hospitals to achieve optimal trauma designation levels unless it too is addressed. In order to solve this problem Alaska's physician community will have to be included in the discussion.

A possible approach might be to broaden Section 18.08.085 to allow the Commissioner of DHSS discretion to use the 'fund' to help offset costs incurred to meet physician staffing requirements necessary to achieve trauma designation. We understand other states are deploying innovative strategies to address the physician staffing challenge which Alaska could possibly learn from and incorporate into this incentive based program if the language of Section 18.08.085 were broader.

ASHNHA supports **HB 168** and urges its passage from House HSS to the next committee of referral at the earliest possible time. Thank you for the opportunity to present this testimony.

This Testimony is on Behalf of the Following Alaska Health Care Facilities

Alaska Regional Hospital, Alaska Native Medical Center, Bartlett Regional Hospital, Central Peninsula General Hospital, Cordova Community Medical Center, Denali Center Nursing Home, Fairbanks Memorial Hospital, Heritage Place Nursing Home, Kakanak General Hospital, Ketchikan General Hospital, Maniilaq Health Center, Mt. Edgecumbe Hospital SEARHC, Norton Sound Regional Hospital, Petersburg Medical Center, Providence Alaska Medical Center, Providence Extended Care Center, Providence Kodiak Island Medical Center, Providence Seward Medical & Care Center, Providence Valdez Medical Center, Sitka Community Hospital, South Peninsula Hospital, St. Elias Specialty Hospital, Wrangell Medical Center, Yukon Kuskokwim Delta Regional Hospital, North Star Behavioral Health, Wildflower Court Nursing Home.

CS FOR HOUSE BILL NO. 168(HSS)

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVES COGHILL, Kerttula

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to state certification and designation of trauma centers; creating the**
2 **uncompensated trauma care fund to offset uncompensated trauma care provided at**
3 **certified and designated trauma centers and including a portion of the tax levy on**
4 **alcohol as a source of money that may be appropriated to the trauma care fund; and**
5 **providing for an effective date."**

6 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

7 *** Section 1.** AS 18.08.082 is amended by adding a new subsection to read:

8 (c) The commissioner shall establish special designations in regulation for
9 varying levels of trauma care provided by a certified trauma center that shall be used
10 to set compensation eligibility and amounts under AS 18.08.085. The designations
11 shall be based on nationally recognized standards and procedures.

12 *** Sec. 2.** AS 18.08 is amended by adding a new section to read:

13 **Sec. 18.08.085. Uncompensated trauma care fund; creation.** (a) The

1 uncompensated trauma care fund is created. The purpose of the fund is to compensate
2 certified trauma centers in the state that receive a special designation under
3 AS 18.08.082(c) for care uncompensated by the person receiving the care or by any
4 other source.

5 (b) The fund consists of money appropriated to it by the legislature, including
6 donations, recoveries of or reimbursements for awards made from the fund, income
7 from the fund, and other program receipts from activities under this chapter.
8 Appropriations to the fund do not lapse.

9 (c) The commissioner shall administer the fund in accordance with the
10 provisions of this chapter. The commissioner shall spend money from the
11 uncompensated trauma care fund for the purpose established in (a) of this section. The
12 commissioner may establish and seek the advice of a special committee for review of
13 statewide trauma care and compensation standards.

14 (d) The commissioner may not provide more than 25 percent of the total
15 assets, including earnings, of the fund in a fiscal year to one trauma center.

16 * **Sec. 3.** AS 43.60 is amended by adding a new section to read:

17 **Sec. 43.60.055. Disposition of proceeds; availability for appropriation to**
18 **the uncompensated trauma care fund.** The portion of the tax collected under
19 AS 43.60.010 that is not separately accounted for under AS 43.60.050(a) may be
20 appropriated to the uncompensated trauma care fund (AS 18.08.085). Nothing in this
21 section creates a dedicated fund.

22 * **Sec. 4.** This Act takes effect immediately under AS 01.10.070(c).

MEMORANDUM

DATE: January 28, 2010

TO: Rep. Wes Keller, Co-Chair
Rep. Bob Herron, Co-Chair
House Health and Social Services Committee

FROM: Rep. Pete Petersen

RE: Changes in the draft Committee Substitute for HB 187

The draft Committee Substitute I am submitting contains the following changes from the original bill.
Thank you for your consideration.

- The definition of "medically necessary" was moved to sec. 21.42.397(e) to clarify that the requirement that covered treatment be medically necessary applies to the whole bill. The phrase "medically necessary" was also added to subsection (b)(5) to clarify that treatment coordinated with education plans would only be covered if they are medically necessary.
- The definition of "autism service provider" was expanded to be more specific. This new language was taken from Colorado statutes.
- The date in the effective date, and the date for inflation adjustment was changed to reflect the fact that this bill did not pass last year.

CS FOR HOUSE BILL NO. 187()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES PETERSEN, Dahlstrom, Peggy Wilson, Gruenberg, Muñoz, Kerttula, Gara, Kawasaki, Johansen

A BILL
FOR AN ACT ENTITLED

1 **"An Act requiring insurance coverage for autism spectrum disorders, describing the**
2 **method for establishing a treatment plan for those disorders, and defining the treatment**
3 **required for those disorders; and providing for an effective date."**

4 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

5 *** Section 1.** AS 21.42 is amended by adding a new section to read:

6 **Sec. 21.42.397. Coverage for autism spectrum disorders.** (a) Except for a
7 fraternal benefit society, a health care insurer that offers, issues for delivery, delivers,
8 or renews a health care insurance plan in this state shall provide coverage for the costs
9 of the diagnosis and treatment of autism spectrum disorders. Coverage for the cost of
10 treatment required by this subsection must cover the treatment of the disorders
11 prescribed by a licensed physician or psychologist and provided by an autism service
12 provider as identified in a treatment plan developed following a comprehensive
13 evaluation. A treatment plan developed under this subsection must identify the
14 medically necessary pharmacy care, psychiatric care, psychological care, rehabilitative

1 care, and therapeutic care required. In this subsection,

2 (1) "rehabilitative care" means professional counseling, guidance
3 services, and treatment programs, including applied behavior analysis necessary to
4 develop, restore, and maintain the functioning of an individual to the maximum extent
5 practicable; in this paragraph, "applied behavior analysis" means the design,
6 implementation, and evaluation of environmental modifications, using behavioral
7 stimuli and consequences, including direct observation, measurement, and functional
8 analysis of the relationship between environment and behavior, to produce socially
9 significant improvement in human behavior or to prevent the loss of an attained skill
10 or function;

11 (2) "therapeutic care" means services provided by or under the
12 supervision of a speech-language pathologist licensed under AS 08.11 or an
13 occupational therapist or physical therapist licensed under AS 08.84.

14 (b) Coverage under this section

15 (1) is required to be provided only to individuals under 21 years of
16 age;

17 (2) must provide a maximum benefit of \$36,000 a year, adjusted
18 annually, beginning January 1, 2012, by the percentage change in the Consumer Price
19 Index for all urban consumers compiled by the United States Department of Labor,
20 Bureau of Labor Statistics; payments made by an insurer on behalf of a covered
21 individual for treatment of a medical condition unrelated to the individual's autism
22 spectrum disorder may not be applied toward the maximum benefit established in this
23 paragraph;

24 (3) may not limit the number of visits to an autism service provider for
25 treatment;

26 (4) is subject to copayment, deductible, and coinsurance provisions,
27 and other general exclusions or limitations included in a health insurance policy to the
28 same extent as other health care services covered by the policy; and

29 (5) must cover medically necessary treatment that is coordinated with
30 an education program, but may not be contingent on the coordination of treatment
31 with an education program.

1 (c) This section does not limit benefits that are otherwise available to an
2 individual under a health care insurance plan.

3 (d) A health care insurer may not terminate, refuse to deliver, execute, issue,
4 amend, or renew coverage to an individual because the individual is diagnosed with or
5 received treatment of autism spectrum disorders.

6 (e) In this section,

7 (1) "autism service provider" means an individual who provides direct
8 services to a person with autism spectrum disorder, is licensed, certified, or registered
9 by the applicable state licensing board or by a nationally recognized organization, and
10 who qualifies under one of the following:

11 (A) has received a doctoral degree with a specialty in
12 psychiatry, medicine, or clinical psychology, is actively licensed in the
13 specialty, and has one year of direct experience in behavioral therapies that are
14 consistent with best practice and research on effectiveness for people with
15 autism spectrum disorders;

16 (B) has received a doctoral degree in behavioral or health
17 sciences and has completed one year of experience in behavioral therapies that
18 are consistent with best practice and research on effectiveness for people with
19 autism spectrum disorders;

20 (C) has received a master's degree or higher in behavioral
21 sciences and is nationally certified as a board certified behavior analyst or
22 certified by a similar nationally recognized organization;

23 (D) has received a master's degree or higher in behavior or
24 health sciences, is licensed as a physical therapist, occupational therapist, or
25 speech-language pathologist, and has completed one year of directly
26 supervised experience in behavioral therapies for people with autism spectrum
27 disorders;

28 (E) has received a baccalaureate degree or higher in behavioral
29 sciences and is nationally certified as a board certified associate behavior
30 analyst or certified by a similar nationally recognized organization;

31 (2) "autism spectrum disorders" are those defined by the current

edition of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, including autistic disorder, Asperger's disorder, and pervasive developmental disorder not otherwise specified;

(3) "health care insurance plan" has the meaning given in AS 21.54.500;

(4) "health care insurer" has the meaning given in AS 21.54.500;

(5) "medically necessary" means any care, treatment, intervention, service, or item prescribed by a licensed physician or psychologist in accordance with accepted standards of practice that will, or is reasonably expected to,

(A) prevent the onset of an illness, condition, injury, or disability;

(B) reduce or ameliorate the physical, mental, or developmental effects of an illness, condition, injury, or disability;

(C) assist in achieving or maintaining maximum functional capacity in performing daily activities;

* Sec. 2. The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. AS 21.42.397, enacted by sec. 1 of this Act, applies to a health insurance policy that is offered, issued for delivery, delivered, or renewed on or after January 1, 2011.

* Sec. 3. This Act takes effect immediately under AS 01.10.070(c).

The Council for Affordable Health Insurance's ISSUES & ANSWERS

Solutions for Today's Health Policy Challenges

No. 152

March 2009

The Growing Trend Toward Mandating Autism Coverage

Autism and treatment for its various complications is becoming one of the most discussed and demanded state benefit mandates. But there is a growing debate over whether, and to what extent, autism is a health-related condition as opposed to a behavioral condition or educational challenge. While health insurance does and should cover health-related aspects of autism, policymakers who want to ensure that families facing the real financial and other challenges posed by autism should develop safety net programs that meet their needs, rather than trying to impose autism-related costs on health insurance.

Mental Health or Habilitative Services? Currently, health insurance does and should cover physical medical conditions faced by those with autism. In addition, it will often cover many mental health-related conditions. However, autism advocates want to require health insurance to cover therapies more accurately described as educational.

One problem is how to categorize autism treatment: Does it fall under mental health or habilitative services? If autism is a mental health condition, it is more likely to be covered by health insurance. If under habilitative services, then it should be considered long term care.

A mental health benefit mandate provides for the payment of mental health evaluation and treatment, but sometimes at a higher out-of-pocket cost for the patient, or limitations are imposed on the coverage. Historically, mental health services have higher patient cost-sharing and shorter visit limits than services for physical illness or injury. Mental health parity laws try to minimize or eliminate this difference by requiring the same limitations and cost-sharing for mental health as for traditional medical care.

Habilitative services treatments, by contrast, include occupational, physical and speech therapies for children with a congenital or genetic birth defect, including autism. The goal of such services is to enhance the child's ability to function.

Coverage for Autism. Under a federal law passed in 2004, the Individuals with Disabilities Education Act, or IDEA, public early intervention and special education programs must provide related services and treatments to children with autism. However, only roughly 3 percent of autistic children's needs are met under IDEA, and President Obama has expressed support for even more comprehen-

State legislatures traditionally have grouped autism in the broader category of mental health, but one of the latest state legislative trends is to pass an autism mandate separately from mental health benefit mandates.

Autism support groups want mandate legislation that provides for evaluation and treatment of autism, as well as specific services such as school mainstreaming.

Which States Cover Autism? The question of whether autism is a mental health condition covered under health insurance varies from state to state. One of the problems is that scientists and doctors are not certain what causes autism, and so historically treatment differs from one person to the next. Plus autism-coverage advocates often vary in how they interpret existing laws.

- For example, Autism Speaks reports eight states with health insurance autism benefits.
- However, several autism blogs report a higher figure and point to a Connecticut Office of Legislative Research (OLR) report dated December 2006 that says 17 states have some level of coverage for autism, including 10 that require coverage for autism through their laws mandating mental illness coverage. Six of those states have specific autism laws.
- In July 2008, the Connecticut OLR came out with an additional report that broke down the autism mandate differently. Researchers reported that 22 states besides Connecticut mandate some amount of coverage for the treatment of autism — which is consistent with CAHI's own tracking of the autism mandate. Of these, eight require coverage for behavioral treatment services for autism (Arizona, Florida, Indiana, Kentucky, Louisiana, Pennsylvania, South Carolina and Texas) and five plus Connecticut require other coverage related to autism (Colorado, Georgia, Maryland, New York and Tennessee). Nine states and Connecticut include autism in their mental health mandate laws (California, Illinois, Iowa, Kansas, Maine, Montana, New Hampshire, New Jersey and Virginia).

The Autism Society of America is more consistent with the Connecticut OLR report and several autism blogs. The Society's scope is broader than Autism Speaks, and it includes all types of coverage that addresses autism benefits,

CAHI has tracked 39 states that have mental health benefit mandates on their books (of which 30 specifically include autism), 47 that have state mental health parity laws and at least three have habilitative services for children.

There was additional autism-mandate activity during the 2008 legislative session. For example, Arizona, Connecticut, Florida, Illinois, Louisiana, Pennsylvania and South Carolina now have state mandate laws. And Hawaii adopted a resolution that requests a study of the social and financial impact of adding an autism mandate to health insurance coverage.

Even so, states are increasingly looking to insurers to cover more — or all — of the costs of caring for autistic children. Not because health insurers have any particular expertise in, or even responsibility for, autism. Legislators want insurers to cover more of the costs simply so the state doesn't have to.

The Push for Expanded Autism Coverage. Autism is a serious problem in the country, and we still don't understand the causes or the cure. The Centers for Disease Control reported in 2007 that one in 150 children has this disorder. And there is a growing recognition that autism should be identified early and treated — hence the American Academy of Pediatrics' recent recommendation that all U.S. children be formally screened for autism twice by the age of two.

We do know these children need significant amounts of care. That's why Wisconsin's approach, which set up the Children's Long-Term Care Community-Based Waiver (or CTLS) to provide a range of services to qualifying individuals, makes the most sense. It provides more integrated care than could possibly be provided by health insurance.

In addition, autism support groups and their families are looking for more financial relief from and coverage for Applied Behavior Analysis and other therapies which, according to proponents, contain some of the most effective forms of treatment, best outcomes and long term economic benefits. Proponents believe that health insurance companies should assume the financial burden — typically in the range of \$50,000 per year per child — for autistic children that families and school districts have borne.

Insurance carriers argue that most medically related treatments are already covered for autism. In addition, they note that autism is an individually based disorder, and so there is often no clear standard of care to determine the appropriate therapy. Further, some see behavioral therapy not as a medical benefit but an educational one. For example, "play therapies" can require up to 10 separate interactions per day, ensuring the child remains focused on the world around him. The therapy may be provided by unlicensed care providers (and/or parents) who can be trained to use the methods very effectively. Some of the other

therapies address developmental delays, which are not typically covered under health insurance.

While various educational therapies for autism may be beneficial, and while we recognize that many families struggle under the related financial burdens associated with autism, we question whether some of these therapies are within the scope of traditional health insurance.

The Cost of Autism Coverage. CAHI's actuarial working team estimates that an autism mandate increases the cost of health insurance by about 1 percent. But they caution us that figure may be rising for two reasons. The incidence of autism appears to be growing, and there is a trend to cover more services, which will drive up the cost of each covered individual. If these trends continue, as we expect, the cost of mandating coverage will move into the 1-to-3 percent range.

Conclusion. Private health insurance, with companies and individuals frequently changing plans or health care networks, doesn't provide the consistent care autistic children need. If legislators want to help these families, they should create programs specifically targeted to meet their needs and properly fund them from general revenues — better than Congress did under the IDEA program — rather than try to force the costs onto health insurance, which will just increase everyone's premiums.

HB 187 Questions

Note: Answers provided by the Governor's Council on Disabilities & Special Education with assistance from the Division of Public Health, Section on Women, Children and Family Health, the Center for Human Development at the University of Alaska Anchorage and Jim Boudier

1. **Who will do the recruitment, training and deployment? What has been done to date? Are there any specific strategies for recruitment, training, deployment?**

Presently, there are four coordinated initiatives to prepare personnel to more effectively serve infant, toddlers, children and youth with Autism. The first 3 are being conducted through one state funded project – Capacity Building for Autism Interventions Project, through the UAA Center for Human Development (CHD). They also directly relate to services provided through insurance funding. The fourth, more targeted, is being funded through the AK Part C Program.

- (1) A total of 15 **Autism Specialists**, (i.e., advanced graduate professional responsible for planning, implementation and monitoring of intensive services), are being trained through a 2-year program of study. Eight are beginning their studies through the CHD project, cooperatively delivered with Northern Arizona University. Seven others are at least ½-way through their programs and are closing on the required 1500 clock hours of supervised field work. One Alaskan professional is currently nationally credentialed in this manner (i.e., Board Certified Applied Behavior Analysts – BCBA- through the international division of A.B. A., of the American Psychological Association), though she soon will be retiring. Based on the current population size, Alaska has need for at least 30 of these BCBA specialists.

It is anticipated that a new cohort of at least 6 graduate students will begin their 2-year studies fall 2010. Students who already have Master's degrees must take the 5 graduate courses, complete the intensive 1500 hr field experience, and pass the national examination before becoming certified. Recruitment takes place through the numerous professional and parent Autism groups (e.g., CAII, Autism Alliance, state/local chapters of Autism Speaks and ASA) along with state and private Behavioral Health, Developmental Disability, Education and Infant Learning agencies.

- (2) **Certified direct service personnel**, both on an undergraduate degree and paraprofessional basis, are needed to implement the services designed by the Autism Specialist. An Occupational Endorsement certificate program is currently being designed and submitted for approval by the Capacity Building for Autism Interventions Project of CHD, in cooperation with the UAA Department of Human Services. This 6 course, 18-credit program is being designed to (a) stand alone as an Occupational Endorsement, or

(b) partially fulfill A.A. or B.A. degree requirements. Initial recruitment will be through similar markets as the Autism Specialist training, as well as conventional UAA channels, with the program anticipated in starting by fall 2010.

- (3) **Ongoing Autism professional and paraprofessional training** through a regular week-long Summer Institute was begun by the Capacity Building for Autism Interventions Project the summer of 2009. A total of 42 professionals and paraprofessionals from state and private DD and Infant Learning Program agencies participated. Topics are limited to specific interventions directly relevant to the provision of intensive intervention services. The 2009 Institute focused solely on the needs of infants, toddlers and young children. Plans for 2010 training are to broaden the scope to include strategies for serving teens and young adults with ASD, with special relevance to those youth with Autism, targeted by BTKH for return to Alaska.
- (4) **Training of Infant Learning Provider staff.** Beginning the summer of 2010, specialized training is being provided by the Part C Program to ILP staff. This 3-day training will take place in Fairbanks and will focus on the evidenced-based strategies to promote social and communication skill acquisition by very young children.

2. Have there been any projections of how much money would be spent for travel and lodging compared to how much would be spent for actual treatment?

At this time, the only travel and lodging associated with the ASD services from the bill potentially relate to those costs associated obtaining a diagnosis when parents chose out-of-state services, as opposed to obtaining that determination here in Alaska. It is anticipated however that most families will already have a diagnosis and not need special travel. Workers who are being prepared to serve with these youth are receiving training primarily either via distance-based delivery systems or coordinated Institutes or Conferences here in Alaska.

Insurance companies do not generally cover the cost of travel and lodging although individual providers who travel to deliver services may build these costs into their indirect rate.

3. What is the projected cost per insured at a prevalence of 1:100?

- With an average of 11,000 births in Alaska a year (2) an estimated 111 children (1) will receive an autism diagnosis this year.
- Direct annual average costs related to the medical/behavioral interventions for an autism diagnosis is approximately \$48,000
- These 111 children will cost the State of Alaska \$3.3 million annually for each year of their life [*if they do not receive treatment that provides them a reasonable independent lifestyle*] (3)

- (1) American Academy of Pediatrics (2009)
- (2) State of Alaska Bureau of Vital Statistics (2008)
- (3) Ganz, M Understanding autism: from basic neuroscience to treatment

According to a recent report (Brief Report: Quantifying the Impact of Autism Coverage on Private Insurance Premiums by James N. Boudier, Stuart Spielman, David S. Mandell), **“Our analyses imply that the percentage increases in healthcare premiums changed linearly based on changes in assumptions in annual costs and treated prevalence. It is important to note, however that the treated prevalence and the per-child expenditures may interact. That is, as treated prevalence increases, the proportion of children with less intensive medical needs may increase, thereby reducing the average per-child expenditure.”** (Page 4, column 2, paragraph 2).

Only about 10% of children with ASD diagnoses in the Pennsylvania Medicaid system expend more than \$36,000 per year (**Note:** \$36,000 is the private insurance cap in Pennsylvania). Given the higher cost of health services in Alaska, it may make sense to bump the cap to \$50,000 because the additional impact on premiums will be negligible.

4. **How much actual total premium increases are we talking about in Alaska? How many children total and how many of them would require coverage?**

The total premium increase is estimated to be no more than \$3.60 per member per month. This estimate is consistent with findings in other states. Alaska currently has 1,512 children and youth under the age of 21 who have autism; approximately 454 or 30.2% need significant clinical treatment.

5. **Please describe the “Applied Behavior Analysis Treatment.” Is any physician or psychologist qualified to administer this treatment?**

Applied Behavioral Analysis (ABA) describes a number of empirically validated strategies and interventions that are used to promote learning and/or change or reduction of behavior. These methods have been authenticated through hundreds of empirical studies that have demonstrated that new behaviors will happen more frequently if they are regularly reinforced, while previously demonstrated behaviors or skills will diminish if they are not. These ABA interventions achieve these outcomes by systematically responding to a child’s needs through a process of rigorous data collection and analysis. Recently, the 30 member team of National Autism Standards Project (National Autism Center, <http://www.nationalautismcenter.org/>) developed criteria and resource lists of evidence-based interventions, suggested from over 950 studies conducted with child, youth and adults with autism. All of those assessed by this national body as being “established” empirically validated treatments were ones that were ABA-based interventions.

Applied Behavior Analysis is often employed within a highly structured context and in an intensive manner (i.e., 1:1 or small group), relying heavily on the determination of the function of behaviors or skills as a first step to selection of a specific package of interventions. Key to the child's success is s/he developing the ability to recognize (discriminate) when and how to behave (respond). For a young child with Autism, this typically first means responding consistently, correctly and quickly to simple prompts, cues or directions given by an adult. It requires teaching the child, on a 1:1 basis, to attend or jointly attend with the adult, to specific objects or actions. The interventionist chooses and delivers cues, directions or actions precisely, and consistently uses positive reinforcement to strengthen and shape the child's correct responses. Doing so increases the child's ability to participate in typical social, home, and school settings as a function of his/her regular demonstration of those skills or behaviors that are contextually applicable or appropriate there. Progress is monitored through data collected on each target skill or behavior, with performance graphed over time.

There are a large number of tested interventions based on the principles of Applied Behavioral Analysis. While many have been validated for use with children with challenging behaviors and/or autism, others have been developed for behavior change by different populations, such as for parenting, weight loss, cessation of smoking, and other major life issues or behaviors. An effective Behavior Analyst systematically selects from different ABA assessment, data analysis, and planning methods as tools in the delivery of services, so as to ensure that the match between the interventions, schedule of service activities, the delivery of services and the child's home, school and community environments are optimal for learning. While many practitioners employ ABA methods, quality is controlled through a national process of certification, through the Behavior Analyst Certification Board, Inc, (BACB), an organization with roots within the Association for Behavior Analysis, International. The graduate level certification standards and credentialing from BACB is endorsed by the Association of Professional Behavior Analysts, the Association for Behavior Analysis International and Division 25 (Behavior Analysis) of the American Psychological Association.

Typically, ABA is provided by OT/PT staff or other master-prepared staff. Physicians and psychologists do NOT typically provide this intensive therapeutic intervention.

6. Please describe the approved screening process/practice. (no biological markers)

A flow chart that outlines the screening process/practice used in Alaska is attached.

In FY09, 105 children were referred to the pediatric neurodevelopmental outreach clinics for screenings; 85 were actually scheduled for appointments 34 of whom were presenting autism symptoms. 17 of the 34 (50%) were referred for a full diagnostic workup at Providence Autism Diagnostic Network; 9 were placed in a "watchful waiting" status.

Additionally, 128 children received a full diagnostic workup at the Providence Autism Diagnostic Network. Of the 128 children, 57 (44.3%) were diagnosed with an Autism Spectrum Disorder and an additional 5 (3.9%) were diagnosed with Asperger's Syndrome. 9 (7%) were diagnosed with a mental health diagnosis and 57 (44.3%) were diagnosed with other neurological disorders.

During the most recent quarter (10/1-12/31/09), 97% of children referred were referred suspecting Autism Spectrum Disorder or Asperger's Syndrome. 56% received a final diagnosis of autism or Asperger's; 44% have a diagnosis of another neurological disorder or mental health condition.

A word of caution: these numbers should not be used as a proctor to calculate prevalence or incidence. They are only what the outreach clinics and the Providence Autism Diagnostic Network are experiencing. Many kids referred with a suspected autism diagnosis or "looking like autism" are not screening positive definitely and some of the younger kids screened at the outreach clinics are placed in a "watchful waiting" status – a conservative approach but in their best interests.

Additionally, without a surveillance system, we do not know how many children are being diagnoses by other providers in-state nor the number who move to the state of Alaska who were diagnosed in other states.

7. How does the education mandate apply? What percentage of children with autism qualify as special education students – intensive needs students? Would there be a duplication of services?

Special education services and related services (e.g., occupational therapy, speech therapy) are provided to children with a disability whose disability is interfering with their ability to receive an education. The presence of a disability is not sufficient to establish eligibility for special education. The disability must result in an educational deficit that requires specially designed instruction (special education). Special education services are provided according to each student's Individualized Education Plan during the child's school day.

On October 1, 2008, 607 children were receiving specialized education services based on a diagnosis of autism. Because the current definition of autism is restrictive, the majority of these children is on the severe end of the autism spectrum and most likely qualifies as special education intensive needs students. Children with less severe autism often receive special education services based on other categories (e.g., multiple disabilities, other health impaired, emotional disturbances, learning disabilities).

Many children with autism, particularly those who need significant clinical intervention, require services beyond the school day; these are the services that would be covered through health insurance. Ideally, both education and health insurance services are coordinated so that they are complementary of one another, build upon what each system covers, are not duplicative and ensure that the individualized needs of each child are met.

The goals of special education and the goals of health care are not one and the same. The goal of special education is to enable a child with a disability to access the regular education curriculum to the maximum extent appropriate. The goals of health care are to relieve pain, cure disease, and improve functioning. There is no Federal mandate (or state mandate I'm aware of) that requires schools to treat the symptoms of a child's disability – this remains the domain of health care. In the case of children with autism, educational benefit can be realized as a result of treating and ameliorating the varied symptoms of autism. For the most part, clinicians are generally better trained to address the clinical needs of children with autism than special educators. This is not to say that quality special education programs are not important or beneficial – but clinical services delivered under a medical model of care are necessary for many children with autism and, especially when delivered in cooperation with special education, will improve the child's overall outcome.

To sum up, clinical applications of ABA are aimed at improving the functioning of people with autism, whereas special education aims at enabling the child to make meaningful educational progress. I believe these are distinct goals, but the first certainly effects the second. Also, ABA is a psychological discipline with a broad array of applications, including (not surprisingly) clinical applications.

ABA-BASED INTERVENTIONS FOR YOUNG CHILDREN WITH AUTISM SPECTRUM DISORDERS

As research and services are evolving relative to understanding and meeting the needs of young children with autism, several practices have emerged as being key to success. First, rarely do methods other than those that are evidence-based work with these children (i.e., shown effective with this population of children and then replicated through additional rigorous research). Second, when one examines the body of strategies that have been scientifically validated, one sees that the vast majority of these interventions have one common characteristic – each has been designed on, and to later adhere to, core principles of Applied Behavior Analysis, or ABA. A large number of ABA-based strategies have been developed, tested and employed, with some designed to have a generalized impact on the child's functioning, while other methods intended to address specific language, social or behavioral needs of these children. Lastly, evidenced-based methods have generally been shown to be far more effective the sooner and more intensively they are employed.

ABA is a scientifically-driven and validated approach to learning and/or change of behavior. The core ABA principles are based on Operant Learning Theory, which states that new behaviors will happen more frequently if they are regularly reinforced, while previously demonstrated behaviors or skills will diminish if they are not. Applied Behavior Analysis is often employed within a highly structured context and in a systematic manner, relying heavily on the regular observation of overt behaviors as a first step to individualization of intervention. Key to the child's success is s/he developing the ability to discriminate (recognize) when and how to respond (behave). For a young child with ASD, this typically first means responding consistently and quickly to simple cues and directions provided by an adult. This requires teaching the child, on a 1:1 basis, to attend or jointly attend with the adult, to specific objects or actions. The interventionist chooses and delivers cues, directions or actions precisely, and consistently uses positive reinforcement to strengthen and shape the child's correct responses. Doing so increases the child's ability to participate in typical social, home, and school settings as a function of his/her regular demonstration of those skills or behaviors that are contextually applicable or appropriate there. Progress is monitored through data collected on each target skill or behavior, with performance graphed over time.

While a Behavior Analyst who uses ABA tends not to speculate on the non-overt, internalized changes taking place with children with autism, the fact is that successful intervention often results in increased fluency and duration of responding to both verbal and visual cues (i.e., natural characteristics of an object, item or setting such as the shape of a letter, color of a ball, or correspondence of a top button to a top button hole). Doing so increases the probability of independent performance by the child in the future (maintenance of acquired skills), and tends to promote his/her use of these acquired skills in new and different settings (generalization).

There are a large number of tested interventions based on the principles of Applied Behavioral Analysis. While many have been validated for use with children with challenging behaviors and/or autism, others have been developed for behavior change by different populations, such as for parenting, weight loss, cessation of smoking, and the such. An effective Behavior Analyst systematically selects from different ABA assessment, data analysis, and planning methods as tools in the delivery of services, so as to ensure that the match between the interventions, schedule of service activities, the delivery of services and the child's home, school and community environments are optimal for learning. While many practitioners employ ABA methods, quality is controlled through a national process of certification, through the Behavior Analyst Certification Board, Inc. (BACB), an organization with roots within the Association for Behavior Analysis, International. The graduate level certification standards and credentialing from BACB is endorsed by the Association of Professional Behavior Analysts, the Association for Behavior Analysis International and Division 25 (Behavior Analysis) of the American Psychological Association.

Service delivery and workforce development needs

Autism Spectrum Disorders impacts each child uniquely. Age of onset, intensity of intervention and turn-around time between the date that the child is diagnosed and when services are initiated may response to intervention or the level of care needed. However, in most cases, the child him/herself will be the primary barometer to determine intensity and scope of services. For example, most children with autism discontinue

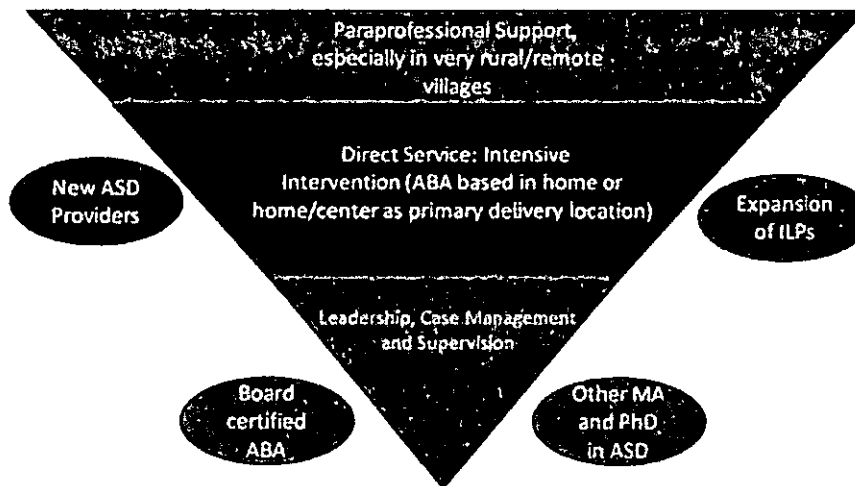

using all oral language, while some toddlers do not lose any ability to communicate whatsoever. The same variation can be said about the disorder's impact on social or behavioral functioning. It is truly a spectrum disorder, with some children demonstrating immediate benefit from conventional Early Intervention services (in Alaska, Infant Learning Programs), while others in need a highly structured daily routine of 1:1 intervention-based services, provided at home and/or in a center-based program, for up to 40 hours a week.

Professionals must guide and oversee the quality and continuity of services for these young children. Typically, Board Certified Behavior Analysts (BCBA) are employed to provide that leadership role. However, those children who require the most intense early intervention may also need services from several types of professionals beyond just those that provide daily intervention. For example, the Kansas Medicaid Waiver for young children with Autism specifies the following services:

1. Determination of eligibility (evaluation by state or contracted provider, called a *Functional Eligibility Specialist*, to determine Level of Care Determination);
2. Intensive Early Intervention, based on an annual plan of care is developed by the *Autism Specialist* (master's level) and implemented by full and part time *Behavior Specialists*
3. Respite Care
4. Consultative Clinical and Therapeutic Services by the Autism Specialist
 - Case management
 - Training and oversight of direct service staff
 - Monitoring and reporting of progress
5. *Parent Support and Training Provider* (the peer-to-peer KS equivalent to Parent Navigation and Training Services now provided through Stone Soup, Inc)
6. *Family Adjustment Counseling* – services for parents and siblings

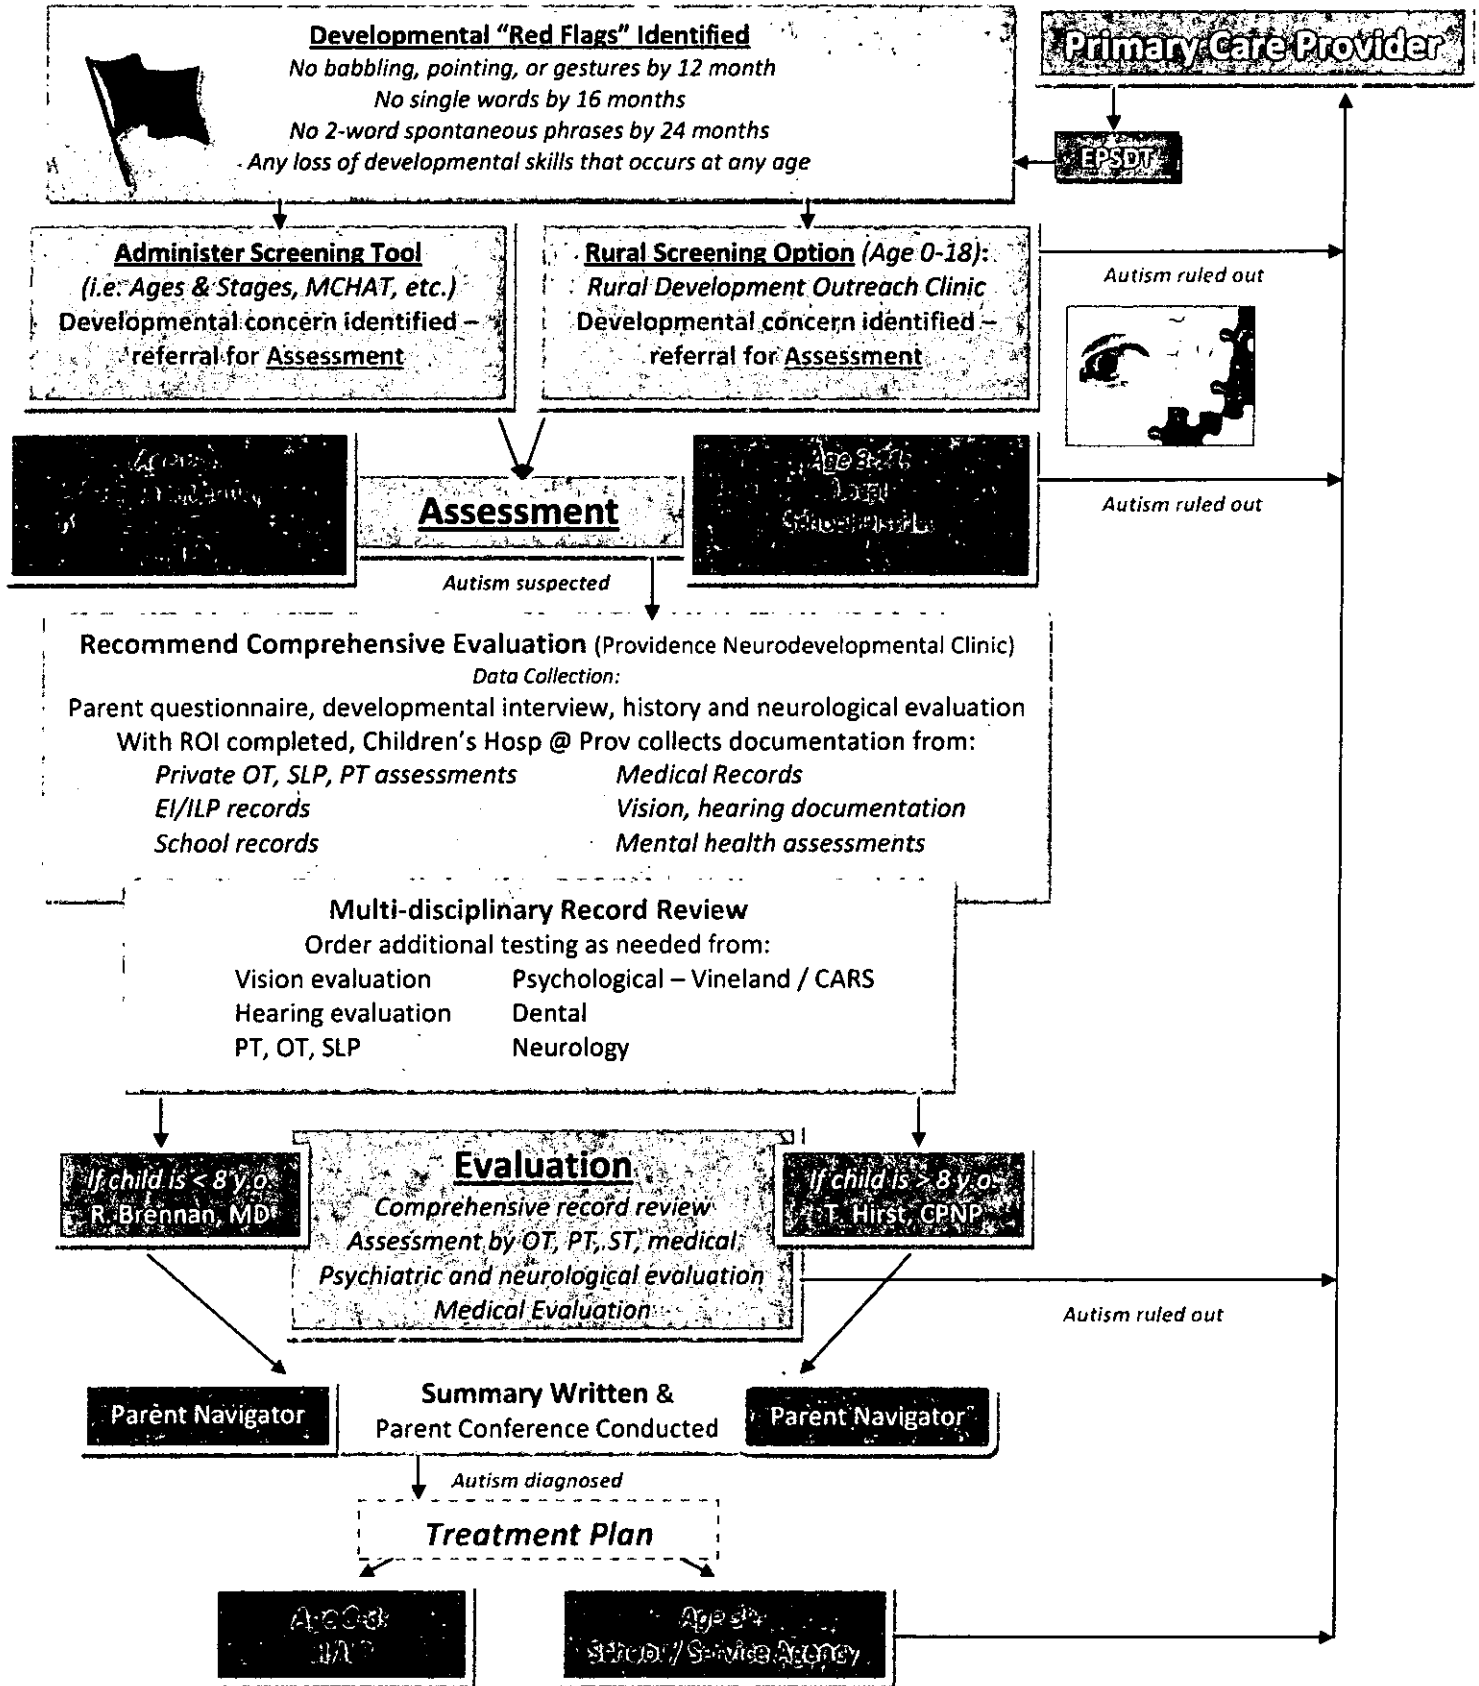

Four of the six services (i.e., #1, 2, 4, and 6) potentially require a credentialing review prior to their delivery. Intensive intervention (2) is planned and supervised by a BCBA, and implemented either by a bachelor's level full time behavior specialist (certification not required) or a part-time paraprofessional in that same capacity. Other disciplines, including professionals who provide Speech and Language Therapy, Occupational Therapy and Social Work are often needed for these support services.

Intensive Early Intervention Workforce Development Needs

Alaska's Goals in Response to Autism

2009

Brief Report: Quantifying the Impact of Autism Coverage on Private Insurance Premiums

James N. Boudier · Stuart Spielman ·
David S. Mandell

© Springer Science+Business Media, LLC 2009

Abstract Many states are considering legislation requiring private insurance companies to pay for autism-related services. Arguments against mandates include that they will result in higher premiums. Using Pennsylvania legislation as an example, which proposed covering services up to \$36,000 per year for individuals less than 21 years of age, this paper estimates potential premium increases. The estimate relies on autism treated prevalence, the number of individuals insured by affected plans, mean annual autism expenditures, administrative costs, medical loss ratio, and total insurer revenue. Current treated prevalence and expenditures suggests that premium increases would approximate 1%, with a lower bound of 0.19% and an upper bound of 2.31%. Policy makers can use these results to assess the cost-effectiveness of similar legislation.

Introduction

Empirical studies of healthcare expenditures find that those of children with autism spectrum disorders (ASD) range from three to ten times those of other children, depending on the sample and methods (Croen et al. 2006; Leslie and Martin 2007; Liptak et al. 2006; Mandell et al. 2006). Synthetic estimates find even higher increases in relative expenditures, especially when categories such as educational expenditures and labor force participation are taken into account (Ganz 2006; Jarbrink and Knapp 2001). Relative to costs associated with other health conditions that manifest in childhood, the healthcare costs associated with ASD are disproportionately borne by families (Fujiura et al. 1994; Jarbrink 2007; Jarbrink et al. 2003; Krauss et al. 2003) and, in the United States, by the Medicaid system (Krauss et al. 2003), regardless of family income (Birenbaum et al. 1990; Braddock 2002; Walsh et al. 1997).

The dramatic increase in the number of children and adults diagnosed with ASD (Centers for Disease Control and Prevention 2007; Fombonne 2003, 2005), combined with the high cost of their care, has caused many states to consider other alternatives to pay for this care (Shattuck and Grosse 2007). Some states have increased the public contribution to these services. For example, Colorado, Indiana, Kansas, Maine, Maryland, Pennsylvania and Wisconsin, have or are considering Medicaid waivers, which would allow states to use Medicaid funds to pay for services not included in their Medicaid plan, or to cover individuals that otherwise would not be Medicaid eligible. Other states have increased the private contribution to these services. Many private insurance companies severely limit coverage of behavioral health services for individuals with autism or exclude coverage altogether. In response,

Arizona, California, Indiana, Kentucky, Louisiana, Mississippi, Pennsylvania, South Carolina, Texas, West Virginia and Wisconsin all recently considered legislation that would mandate private insurance companies to pay for autism-related healthcare services. This legislation has met with varying degrees of success, with legislation not passing in Mississippi, West Virginia or Wisconsin. Successful legislation has varied tremendously in the ages of covered individuals, the types and quantity of covered services, and annual caps on associated expenditures. As of this writing, many other states, including Connecticut, Florida, Illinois, Michigan, Missouri, and Oklahoma, recently have introduced similar legislation.

A major challenge to these insurance mandates has been the concern that they will result in increased premiums for policy holders. Since most policy holders are employers, increases in premiums may be passed onto employees in the form of a net loss of wages or loss of employment, although the effect of mandates on both has been debated in the literature (Collins et al. 2005; Hopkins and Zweifel 2005; Klerman and Goldman 1994; Sommers 2005; Wolaver et al. 2003). Insurance companies therefore have argued that an autism insurance mandate would result in a burdensome rate increase. Autism advocates, on the other hand, have argued that the burden associated with a rate increase would be outweighed by the benefits to individuals with autism and their families.

To help inform the debate surrounding autism insurance mandates, one of the authors (JB) developed an equation to estimate the effect of mandates on premiums, using information easily available on the Internet. In the following, we present the general equation and rationale, and use data from Pennsylvania, which has recently passed legislation, House Bill (HB) 1150, as an example. HB 1150 requires insurance companies to cover healthcare services for children with autism, from birth up to age 21. Specifically mentioned in HB 1150 are behavioral interventions such as applied behavior analysis. Annual per capita expenditures are capped at \$36,000.

Methods

Percentage rate impact (%RI) was calculated as a function of the prevalence of autism, which we calculated using a range based on reports of community and treated prevalence. This was multiplied by the number of insured children in Pennsylvania, the average annual medical expenditure for children with autism, which we derived from published studies (see Table 1), and the cost to insurance companies of administering this new mandate. The product of these four numbers was divided by the proportion of revenues from health insurance premiums

spent on medical services covered by the plan. This number was then divided by the total revenue to private insurance companies in Pennsylvania. More specifically, we used the formula:

$$\%RI = \frac{\left(\frac{f}{sf} \times F\right) \times (\bar{x} \times A) \div MLR}{PR}$$

where f is number of children in the state with autism, ages 2–20 years. This number was estimated using several strategies, ranging from the treated prevalence observed in recent studies using private insurance billing data (2 per 1,000) to the CDC-estimated prevalence (6.7 per 1,000).

Sf is number of all children in state, ages 2–20 years. This number was abstracted from US Census data.

F is number of insured children in Commonwealth, ages 2–20 years, with non-ERISA exempt healthcare insurance coverage. This number was derived from the percentage of uninsured children and youth living in Pennsylvania as reported by the Centers for Disease Control and Prevention (Cohen and Martinez 2007) and from the percentage of private-sector enrollees that are enrolled in self-insured plans at business firms offering health insurance in Pennsylvania, as reported in the Medical Expenditure Panel Survey (*Medical Expenditure Panel Survey-Insurance Component* 2005). Using these sources, the number of children and youth between the ages of 2 and 20 living in Pennsylvania and covered under state-regulated insurance plans, was estimated at 1.37 million.

\bar{x} is mean annual per capita expenditure for autism-related services. This number was estimated from existing studies of healthcare utilization, and ranged from the \$2,900 found by (Croen et al. 2006) to the \$36,000 cap proposed by the Pennsylvania legislation. Only estimated annual expenditures of \$10,000 and higher are presented here. A summary of this literature is presented in the table.

A is assumed load factor for the first year's administrative and incidental costs associated with the mandate. This number was obtained from insurer comments filed with the Pennsylvania Health Care Cost Containment Council in regard to the implementation of new insurance mandates, and assumed to be 10% of total provider payments attributable to the mandated benefits.

MLR is medical loss ratio. The MLR refers to the proportion of revenues from health insurance premiums spent on medical services covered by the plan. The MLR was calculated by dividing the total medical losses incurred by total premium revenue collected by insurers. The MLR is used to convert increased medical/clinical costs to a revenue requirement needed to encompass both the hard and soft costs attributable to administering health care coverage. An MLR of 85%, considered the industry standard, was used for these calculations (Robinson 1997).

Table 1 Summary of cost and expenditure studies for individuals with autism; all monetary amounts converted to 2006 \$^a

	Data source	Treated prevalence	Sample	Grand total	Medical					
					Total	Inpatient	Meds	Other	School	Other
(Mandell et al. 2006)	Allegheny County, PA Medicaid data 1994–1999	2.0/1,000	334 Children with autism diagnosis	\$12,000	\$12,000	\$8,300	–	\$3,700	–	–

^a All studies present average per person annual expenditures, with the exception of Ganz (2007) and Jarbrink and Knapp (2001), which present average per person lifetime expenditures

Fig. 1 Estimated increase in healthcare insurance premiums as a result of an insurance mandate requiring coverage of autism treatment

PR is total health insurer premium revenue, which was obtained from an October 2007 publication of the Pennsylvania Health Care Cost Containment Council (*Critical Condition. The State of Health Care In Pennsylvania 2007*), which aggregated premium revenue data that Pennsylvania insurers report on their annual NAIC filings. This sum was adjusted to reflect premium revenue derived from plans subject to HB 1150, as it was originally submitted for review to the Pennsylvania Health Care Cost Containment Council. This adjustment produces a total of \$18.44 billion in premium revenue collected for plans subject to HB 1150.

Results

The figure presents the results of this formula based on different assumptions regarding autism prevalence and associated healthcare expenditures. The x-axis presents annual expenditures ranging from \$10,000 to \$36,000. Estimated increases in healthcare premiums ranged from 0.19% (assuming a treated prevalence of 2 per 1,000 children and annual expenditures of \$10,000), to 2.31% (assuming a treated prevalence of 6.7 per 1,000 children and annual expenditures of \$36,000; Fig. 1).

Discussion

The results of this analysis suggest that even dramatic increases in the treated prevalence of autism and associated annual healthcare expenditures would result in relatively small increases to healthcare insurance premiums. The average family healthcare insurance plan in the United States costs \$1,009 per month, of which families pay an average of 28% (Kaiser/HRET Survey of Employer-Sponsored Health Benefits, 1999–2005, 2007). Our

analysis suggests that, using current treated prevalence estimates and an annual expenditure for children with autism of \$10,000, the average family would pay an additional \$0.54 a month, or \$6.44 a year. If current treated prevalence were to double as a result of the new benefit and annual expenditures rose to \$20,000, families' annual increased contribution would be \$26.10. Even in the unlikely event that treated prevalence were to rise to the accepted community prevalence of 1 in 150 children, and per capita expenditures rose to \$36,000 per year, the increase in the family contribution would reach \$6.53 a month, or \$78.31 per year.

Our analyses imply that the percentage increases in healthcare premiums changed linearly based on changes in assumptions in annual costs and treated prevalence. It is important to note, however that the treated prevalence and the per-child expenditures may interact. That is, as treated prevalence increases, the proportion of children with less intensive medical needs may increase, thereby reducing the average per-child expenditure.

Two study limitations should be noted. First is that these calculations were based on data from existing literature. Dramatic changes in payment available for services to individuals with ASD may affect the treated prevalence and on the provider market. While we attempted to model changes in prevalence up to the accepted community prevalence (Centers for Disease Control and Prevention 2007), we did not model any changes to the provider market. Second, estimated changes to healthcare insurance premiums were based on total costs for children with ASD, not incremental increases, because there is little information on current expenditures for children with ASD not associated with an ASD diagnosis per se (Leslie and Martin 2007; Mandell et al. 2006). Many children with ASD may receive services that are associated with a different diagnosis, as clinicians may assign diagnoses that result in a higher probability of reimbursement. To that extent, the estimates presented here may overestimate actual increases to premiums, given that some healthcare expenditures would remain the same but now would be associated with an ASD diagnosis.

Despite these limitations, the estimates present here offer an important starting point for discussion among policy makers considering the impact of changing insurance regulation. The Pennsylvania legislation upon which these calculations were based has been described as the most generous insurance mandate in the country, in terms of the age group and scope of services covered, as well as the annual expenditure cap. The more limited legislation proposed in other states should be considered in this light, weighing the relatively minimal impact on all insurance premium payers against the potential benefit for children with ASD and their families.

January 25, 2010

Representative Wes Keller
Alaska State Capitol – Room 13
Juneau, AK 99801

Jack C. McRae
Senior Vice President

Dear Representative Keller:

On behalf of Premera Blue Cross Blue Shield of Alaska, I am writing to you to express our concerns with HB 187 which mandates coverage for autism spectrum disorders (ASD).

We, too, are concerned with the challenges faced by children with autism and their families. We want to approach this issue in a manner that is in their best interest as well as all of the members we serve.

Of serious concern to us is the cost impact for employers and families already struggling to afford healthcare coverage. Our analysis of this mandate projects a rate increase of at least 3 % to our Alaska members.

Every benefit mandate adds to the overall cost of healthcare and insurance premiums. And, during a time when we are collectively looking to make healthcare more affordable, we believe employers should be able to determine their own benefit plans without additional state mandates. Financial impacts must be strongly considered for any benefit mandate proposal, especially given the current economic conditions, and the fact that many families and employers already face difficulties in affording coverage. Furthermore, this mandate will not impact self-funded plans in Alaska, which are not regulated by the state.

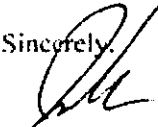

While the proposed mandate would provide some financial relief to families impacted by ASD whose employers can continue to afford coverage, there will be an unfortunate tradeoff for those families who would no longer be able to afford medical coverage at all, including families with ASD affected children. With an increasing load of mandates, employers may be forced to drop health insurance benefits altogether.

Also of particular concern is potentially requiring medical plan coverage for services that are essentially educational in nature, such as Applied Behavior Analysis (ABA) therapy. These services are provided by individuals with backgrounds and training in the field of education, not medical or mental health. We also question the appropriateness of mandating educational services, designed to assist with behaviors such as getting dressed, eating meals, brushing teeth, or sitting still during classes, to be included as part of medical program coverage. This would establish an inappropriate precedence. In addition, numerous reviews of ABA therapy by objective parties have concluded that evidence for the effectiveness of ABA therapy is contradictory, and at best, modest. We would recommend not mandating this therapy in the benefit.

To ensure quality treatment and patient safety, it is important that any person or entity providing treatment of ASD be licensed or certified. The definition of an ASD provider included in HB 187 is overly broad to include any person, entity, or group that provides treatment of ASD. We would recommend that providers treating ASD demonstrate specific training and experience, and that ABA therapy be provided by behavior specialists who are board certified, such as by the Behavior Analyst Certification Board.

Thank you for considering our concerns on this issue.

Sincerely,

Jack C. McRae
Senior Vice President

Background

Employee health insurance is a major business and political issue. Virtually everyone agrees that restraining the rate of health care cost (and resultant health insurance price) increases as well as expanding health insurance coverage are pressing matters. The disagreement occurs over the means to reach those objectives. Small businesses are near the center of this controversy. Their employee health insurance costs are rising much faster than inflation. Further, their health insurance dollar purchases relatively fewer benefits. One result is that small employers are less likely to purchase employee health coverage than large employers or public entities. Recent trends only exacerbate these problems, raising serious question about the long-term viability of the entire employer-based health insurance system. Purchasing Health Insurance is a key background component to the employer-based system of employee health insurance and the subject of this issue of the *National Small Business Poll*.

It is well known that about half of employing small businesses offer employee health insurance and the other half does not. It is also well known that provision of employee health insurance is tied to employee size of business, even within the small business population. The data from this survey reflect both. Forty-seven (47) percent of small employers offer employee health benefits and 52 percent do not (Q#1). Those employing 20 or more people are more than twice as likely to offer employee health benefits as those with fewer than 10. Further, 36 percent offer the benefit to *all* or *most* full-time employees and another 5 percent offer it to *some* or a *few*. However, provision of employee health insurance is not synonymous with provision of

employee health benefits. About one in 10 small employers who offer employee health benefits (6%) offer premium reimbursement for health insurance purchased by employees on their own rather than through the business.

[back to top](#)

Dropping Insurance or Never Buying It

Good employees are difficult to attract and keep. Provision of benefits is one method small employers use to compete for them. So, most are reticent to antagonize employees by eliminating a benefit or privilege once given; it is much better for morale to have not given the benefit or privilege in the first place. At the same time, small firms experience considerable turmoil in their early years. They often experience cash flow problems and are reluctant to incur marginally necessary expenses. Just short of half survive the first five years, though the odds of exit in any one year decline progressively as businesses age. These two seemingly unrelated facts lead to the hypothesis that stagnation and/or decline in the number of small businesses offering employee health insurance stems not so much from some small employers dropping insurance altogether as from newcomers introducing the benefit relatively late or not at all. The evidence gathered here suggests that the hypothesis is correct.

Twenty (20) percent of small firms offering employee health insurance started offering the benefit in the last three years (Q#1a). The proportion initiating it compared to those already offering it declines as businesses age even though the total percentage offering rises. Unfortunately, we have no benchmark to compare these numbers over time. The data cannot tell us, therefore, if small employers are introducing employee health insurance as a benefit later at the present time than they did in the past. However, 9 percent of those not now offering health insurance (5% of all employing, small businesses) offered it within the last three years (Q#1b). About one third (34%) of those dropping it moved to premium reimbursement rather than eliminating the health benefit altogether. The remainder eliminated the benefit entirely. The consequence is about 3 – 4 percent of all small employers dropped employee health insurance in the last three years (or 1 – 2% a year). One percent annually means virtually no small businesses drop employee health insurance, though they may increase the cost share, etc. If virtually no firm drops employee health insurance and the trend in its provision is stable to lower, new small firms are likely to be slower on the uptake than in the past.

The importance of this point is that it exhibits rising small employer resistance to offering the benefit. As the small business population turns over (and assuming the trend continues), the share of small employers adopting this view will grow. Growing reluctance to initially offer will reduce the pool of potential employees from which to choose, dampening the trend. But, a shrinking pool will also direct small business recruiting efforts toward people who are willing to trade relatively higher wages (or premium reimbursement) for health insurance. This situation is not beneficial to either the small employer or their employees, but it represents the direction current conditions are driving them.

[back to top](#)

Shopping for Health Insurance

The overwhelming majority of small employers think that the cost of health insurance is a serious business problem. The logical consequence is that large numbers should be out shopping for a new or different plan, a better buy, or just certainty that they enjoy the best in a series of bad alternatives. Yet, aggressive shopping is not necessarily occurring, particularly among owners of the smallest businesses. Forty-eight (48) percent of all small employers indicate that they or someone on their behalf shopped for employee health insurance in the last three years (Q#2). Owners of the smallest (1 – 9 employees) shopped in only 43 percent of cases compared to 78 percent among the largest (20 – 250 employees).

Not all small employers with insurance shopped nor did all small employers without insurance not shop. Still, the trend was strongly in that direction. Seventy-five (75) percent offering insurance to *all* or *most* full-time employees shopped, compared to 68 percent offering health insurance to *some* or *a few*. Sixty-one (61) percent offering premium reimbursement shopped, but only 26 percent offering neither did. The reason 61 percent of non-shoppers offering insurance gave for not exploring options was that they simply renewed the policy or plan they had (Q#2a). Apparently, they were satisfied or thought they couldn't do any better. Another 29 percent did not shop because they were locked into a longer term commitment. The latter group seems to have avoided the problem of cost uncertainty, a major concern of small employers.

The two principal reasons small-business owners shopped were to look for a lower per employee cost (45%) and just to see what was available (42%) (Q#4). Only 5 percent searched for a different benefit package and 1 percent a different provider network. Three percent searched specifically to cut administrative cost and hassle. The two major reasons for shopping, one

specific and one general, were associated with offers of insurance. Over 60 percent of those offering health insurance shopped for a lower per employee cost, while over 60 percent of those offering premium reimbursement or not offering were looking to see what was available.

[back to top](#)

a. Who Shops

The most frequent shopper is the business owner or manager. He or she was the shopper on the firm's behalf in 46 percent of cases (Q#3). This was particularly common among owners of the smallest (52%) though much less so among owners of the largest (28%). Still, half engaged either an employee (23%) or an agent or broker (27%) on their behalf. The largest employers were much more likely to use them (an employee, 33% - an agent or broker, 36%) for the task than the smallest (an employee, 23% - an agent or broker, 27%).

The amount of time small employers spend shopping for employee health insurance (including learning about different plans, analyzing options, making inquiries, and determining employee needs) is limited. The median is about six hours (Q#3a). However, 26 percent spend two hours or less while 13 percent spend 16 hours (2 full days) or more. While the number of respondents is thin, shoppers offering health insurance appear to shop longer than shoppers not offering it and owners of larger firms appear to spend more time than owners of smaller firms. Still, it seems odd that small employers spend so relatively little time on a major cost item with which they are generally displeased. It also challenges the idea that small employers are better consumers of employee health insurance than is the employee him/herself.

The search time data do not account for the time employees or outside agents spend shopping for employee health insurance on the firm's behalf. That means the calculation is dominated by the smallest employers. As a result, the calculation is not equivalent to the total time spent searching for employee health insurance.

[back to top](#)

b. Exploring Options

Small employers searching for employee health insurance can investigate a broad variety of information sources to help them. One of the most accessible and intriguing is the Internet. Yet, relatively few small employers use the Internet to explore their options for purchasing employee health insurance. Just 24 percent used the Internet for that purpose in the last three years (Q#5). Reversing the typical distribution of Internet use, shoppers from the smallest firms (employing 1 - 9 people) used the Internet more frequently than did others. Twenty-nine (29) percent of owners with the smallest businesses explored the Internet for information on their employee health insurance options compared to 12 percent of owners with the largest. These numbers are somewhat deceptive since owners of larger firms more often delegate responsibility for shopping. Survey respondents may not be familiar with the agent's search process in those instances.

Another area of potential search is directly with a network of health care providers, such as an HMO. Contacting Kaiser directly is an example. Nearly half (48%) took this step in the search process (Q#6). Differing from the Internet, employee size-of-business was not associated with these contacts. But while making this contact twice as frequently as searching the Internet, few small employers actually purchase their health insurance from a provider network.

State governments have increasingly become active in efforts to help small employers obtain employee health insurance. They range from matching services, such as in Maryland, to subsidized products, such as in Tennessee. These activities appear to be generating interest. Sixteen (16) percent of small employers explored options in a government-organized or sponsored small-business health insurance program (Q#7), though a very small percentage participate as will be seen later.

The survey asked those who did not explore the potential government option, why they had not done so. The most common answer (60%) was that they did not know of any (Q#7a). This response reflects the limited help that most states provide; it does not constitute out-of-hand rejection of them. Twenty-one (21) percent do reject them. These owners say that they would not participate in a government program. Nine percent did not explore such options because they believed better options exist in the commercial market and 6 percent think they are not eligible to participate.

Another source of employee health insurance might be a business trade organization or association. About half of all small employers belong to such organizations. Legislation was recently impeded by the Congress that would have allowed associations of small businesses to broaden insurance pools, effectively giving them greater market access. Still, many

business groups have arrangements with insurers to sell small employers employee health insurance. Thirty-four (34) percent of small employers explored the trade association option the last time they shopped for health insurance (Q#8).

[back to top](#)

c. Agents and Brokers

The insurance agent or broker dominates the insurance knowledge base and insurance transactions of most small employers when they shop for employee health insurance. Eighty-seven (87) percent of those who either have employee health insurance or who have shopped for it in the last three years have discussed their options with an insurance agent or broker (Q#9). The employee size of the employer's enterprise is unrelated to the likelihood of discussing options with these insurance professionals.

Most small employers speak with a limited number of agents or brokers. Thirty-one (31) percent discuss their options with a single agent or broker, though discussions with two (27%) or three (26%) are common (Q#9a). Few shop with more. Owners currently covering all or most full-time employees constitute the group most likely to consult only one.

The relationship between agents/brokers and small employers vary, though the former is obviously always a potential vendor and the latter is always a potential customer. Asymmetric information and a lack of competition can influence and even effectively change those roles, however. Such changes appear more than hypothetical. The small employer appears to dominate the relationship in 15 percent of cases, telling the agent/broker what he/she wanted and giving him/her a budget within which to work (Q#10). Another 22 percent simply told the agent/broker what he wanted. These situations are what one would expect in a vendor/customer relationship except under conditions of scarcity. Save the 3 percent who offered another answer or did not know, the agent/broker appeared to dominate the relationship in the remainder of cases. Twenty-four (24) percent had the agent/broker simply explain the available options. A plurality (35%) had the agent/broker explain the available options and make a recommendation. The result is that in 37 percent of cases, the small employer told the agent/broker what he/she wanted. In 59 percent of cases, the agent/broker told the small employer what was available.

The presence of Health Savings Accounts (HSAs) in discussions of potential employee health insurance puts dominance in the relationship in perspective. Health Savings Accounts (HSAs) are an insurance option that is attractive to some, though not all, small employers. It offers them the prospect of considerable cost saving and the possibility of offering some employee health insurance coverage when they otherwise might not. So, HSAs should be at least a topic for discussion between agents/brokers in their role of advisor and their small-business customers. That often does not happen. Forty-six (46) percent of small employers report that in such discussions, the topic never arose; HSAs were not mentioned (Q#11). Still, 30 percent thoroughly discussed HSAs and another 18 percent mentioned them. Among the 48 percent who discussed HSAs, however, small employers were the party who raised the subject in one of three cases (Q#11a). Thus, agents/brokers did not raise the HAS option 59 percent of the time; raised it in 29 percent of cases; and, no information is available on the remaining 12 percent. Since agents/brokers have little financial incentive to sell HSAs compared to traditional insurance, the failure of almost three in five to mention the HSA option suggests the agent/broker role is more a role of vendor than a role of advisor/information provider.

Insurance is not the only industry where asymmetric information puts the vendor in an advantageous business position. The vendor is often, if not usually, more likely to know more about the product or service than the customer, particularly when the purchase is infrequent, small or both. The cost of employee health insurance argues that the owner or a designee should not be in a position where the information asymmetries are not as great as they currently appear to be.

[back to top](#)

d. Employee Input

A majority of small employers (55%) asked for employee input when shopping for or making decisions about employee health insurance (Q#12). Forty-five (45) percent did not.

According to small employers who engage their employees, employees were more likely to express concern about cost than any other aspect of health insurance. Half (50%) of the small employers who asked for employee input got the general sense that employees most wanted low out-of-pocket costs (Q#12a). They, therefore, preferred things like minimal cost sharing, modest deductibles and co-pays, etc. Another 20 percent wanted substantial benefits in their plan. The word substantial is open

to interpretation, but it is clear this segment of employees focused on the benefit package. Eleven (11) percent just wanted some health insurance coverage. Presumably, this group wanted to be covered in case of a financially consequential event. Such a preference was typically expressed by employees in firms without coverage. Eight percent of small employers discovered no discernable employee consensus in benefit preference. That number appears modest given the diversity of employees in many small businesses, e.g., young and old, and the inability to offer no more than one plan. Another 7 percent reported that their inquiries yielded little or no employee interest in health insurance. Only 2 percent volunteered other interests with a different provider network scarcely ever mentioned.

The reasons small employers gave for not gathering employee input, when they did not, varied much more than the small employer summation of employee preferences. The most frequent response, though registered by only 12 percent, is that they did not want employee input (Q#12b). To paraphrase one employer comment, I pay for it so I decide what it will be. Another 12 percent reported that they did not ask employees because they did not want to raise employee hopes when it was not yet clear what they would do, i.e., have a plan or not. Eight percent thought employees would not know what they wanted (so, why ask?); another 8 percent cited various cost issues; 7 percent believed the decision time was too short to ask; 6 percent were concerned that employees would have different preferences and the business could only offer a single option; and, another 6 percent had a plan and presumably did not want to change it. The remaining reasons created a groaning smorgasbord as 30 percent were clumped in the "Other" category with no single component constituting even 5 percent.

[back to top](#)

Purchasing Health Insurance

Seven of 10 (71%) small employers offering employee health insurance purchased their coverage through an insurance agent or broker (Q#13). The next most frequent source was directly from an insurer, not over the Internet. Still, just 11 percent purchased their employee health insurance in that manner. Through a business organization or trade group was the third most frequent (8%) followed by direct purchase from an association of providers (5%). Finally, only 1 percent purchased theirs directly from an insurer over the Internet.

Though nearly 12 percent of small employers explored government options when searching for employee health insurance, few purchases either directly or indirectly involved government. Just 2 percent of purchases involved some government program such as sponsoring or organizing a program, matching businesses with private insurers, etc. (Q#13a).

While the present focus is on the purchase of employee health insurance, some small employers purchase other forms of employee health care and wellness. Thirteen (13) percent of small employers, including 23 percent employing more than 20 people, provide full-time employees health benefits other than health insurance or premium reimbursement (Q#14). These benefits usually are over-and-above the health insurance or premium reimbursement already given rather than in lieu of them. In other words, they are not substitutes, but complements to the more conventional health benefits offered.

The specific additional health benefits offered vary notably. Various types of reimbursements head the list of the largest share (57%), followed by health club memberships (18%), and paid physicals or screenings, e.g., blood pressure, cholesterol (9%) (Q#14a).

[back to top](#)

The Magic 7.5 Percent of Payroll

Some authority apparently suggested that 7.5 percent of payroll is the "right" amount for an employer to spend on employee health care benefits. Though entirely arbitrary and arguable, the 7.5 percent figure has found its way into legislative ideas and proposals. So, the question for present purposes becomes: how much are small businesses spending for employee health care?

Forty-three (43) percent of small businesses offering employee health insurance or premium reimbursement spend 7.5 percent or more of payroll on employee health benefits (Q#15). Thirteen (13) percent do not know, underscoring the artificiality of the number. But assuming those not offering either health insurance or premium reimbursement do not have employee health care spending that reaches that magic number, no more than 20 percent of small, employing businesses pass the spending litmus test. Twenty-seven (27) percent of those spending at least 7.5 percent of payroll or about one in 20 small employers actually spend 15 percent or more of payroll on employee health benefits (Q#15a).

Reaching the 7.5 percent spending level is not associated with providing employee health insurance to *all* or *most*, rather than

some or few, of one's full-time employees. But it is associated with premium reimbursement. Those who offer premium reimbursement have proportionally fewer who reach the 7.5 percent threshold than those who offer insurance regardless of the proportion of full time employees covered.

Treatment of part-time employees and their share of payroll can exercise an enormous influence on calculating the 7.5 percent. Part-time employees can be included, included on a pro-rata basis or excluded. The choice is significant in numerous ways given that 47 percent of small employers not offering employee health insurance currently have part-time employees only (Q#16). These firms accounted for one-third of the employees (full-time and part-time) within small businesses that do not offer health insurance. The figures presented here intuitively seem high. The apparently large percentage could be explained by allowing the respondent to define the term "part-time" and the difference in the concepts of currently having part-time employees only and having only part-time employees throughout the year. Regardless, there is no doubt part-time employees are staples in many small businesses. Keeping the survey numbers and excluding firms currently with part-time employees only, means that the proportion of small employers affected by a 7.5 percent of payroll mandate falls from about 80 percent of the population to between 60 and 65 percent.

The survey asked small employers not offering either employee health insurance or premium reimbursement or whose firms do not consist entirely of part-time employees their reaction to two basic legislative approaches to increasing health care coverage. The first involved requiring small employers to spend at least 7.5 percent of payroll on employee health benefits or pay a tax amounting to 7.5 percent of payroll. The idea would apply to full-time employees only. The term of art for the generic proposal is "pay or play."

The most frequently mentioned reaction (25%) to a pay or play proposal (7.5% of payroll qualifies as playing) is to shift some full-time employees to part-time work (Q#17). The purpose of shifting an employee(s)' status would be to avoid counting them either for insurance or tax purposes thereby eliminating new payroll costs. The second most frequent reaction (20%) to the pay or play proposal is to increase payroll and health benefits to 7.5 percent of payroll as proponents of such a proposal hope. But, 13 percent indicate that they will eliminate some employees altogether; 13 percent more indicate that they would not increase payroll costs, but would pay for the 7.5 percent in health care by shifting non-health benefits and/or wages into health; and 10 percent would pay the tax. Six percent volunteered other reactions, though they did not include offering health insurance. Still, another 10 percent were not certain what they would do and 4 percent volunteered they would have to close. Those figures sum to 33 percent who would likely institute health coverage and 57 percent who likely would not (10% undecided). They also sum to 30 percent who expect to directly increase their costs in the short term and 54 percent who expect to directly shift the cost to their employees (in the form of less employment and/or reallocated compensation) in the short term (6% not clear and 10% undecided). While it is doubtful those expected compensation shifts could always be made immediately, they will likely be made on an expedited schedule with employees paying the bill sooner rather than later.

Some small employers may combine their first course of action with a second. But in this instance, 48 percent who identified a course of action to the pay or play proposal indicate that they would use only the first one they selected (Q#18). Another 9 percent were undecided. The remaining responses were scattered, but more often focused on eliminating employees and/or shifting hours than paying the tax or increasing insurance offerings.

A variant of the prior pay or play proposal would require small employers to offer employee health insurance and pay a specified minimum, in this case 60 percent of the premium, or pay a tax, in this case 7.5 percent of payroll. The choice was presented small employers not offering either employee health insurance or premium reimbursement, or whose firms consist entirely of part-time employees. No option to adjust was included; the choice was simply to buy insurance or pay the tax. Thirty (30) percent selected the purchase health insurance option of which half said they would do so definitely (Q#19). Thirty-six (36) percent chose to pay the tax, 13 percentage points said they would do so definitely. Again, 11 percent did not know what they would do under the circumstances and 5 percent created alternatives to the direct choice. But 20 percent, one in five, volunteered that neither was possible; they could not do either; they would be forced out of business. That is 20 percent of the number who do not already offer or whose firms do not currently consist exclusively of part-time employees. Still, the figure is in the high single digits (6 - 9%) of the small employer population.

[back to top](#)

Final Comments

A small, but likely growing, segment of the small-business population is moving toward a defined contribution-type funding mechanism for their employee health insurance. The current survey shows about 6 percent of the population (almost 13 percent of those funding insurance) adopt this course. Some analysts think the practice may not be legal under HIPPA, but without a

definitive legal ruling to the contrary the practice will continue and grow. As a practical matter in addition, the practice is almost impossible to regulate as premium reimbursement could appear in an infinite variety of forms. The lack of a tax exclusion for employees (differing from those obtaining insurance through their employer) is a financial handicap, limiting use of the option. Equalizing the tax treatment of health insurance through private purchase would change the incentive structure both for employers and employees to encourage greater use of it and create more equitable treatment for those exercising the option. But this development, coupled with new firms being more reluctant to introduce the benefit, argues that market conditions are pushing small employers in new and different directions in their relationship to employee health insurance.

Shopping for employee health insurance is infrequent (48% shopped over the last three years) and limited (the median shopping time for owners being about five to six hours) considering the significant costs involved. These responses to a real problem are counter-intuitive. The question then becomes: why? Why is it that small employers do not spend more time and effort shopping when the cost for employee health insurance is so high? There are two likely answers, neither of which is encouraging. The first is that insurance is so complicated and the owner is so busy that they cannot allocate enough time to become sufficiently knowledgeable. One manifestation is that the owner designates someone to shop on the firm's behalf. In 30 percent of cases that person is not associated with the firm and is almost always a vendor. The second is that there is effectively no difference in plans. They all provide about the same benefits and at very high prices. There is no choice, no competition. And, in fact, the small group market in many states has a limited number of competitors and is all but dictated by a Blues monopoly. So, why shop?

The relationship between small-business owners and their insurance agents or brokers, many of which are small-business owners themselves, is curious and not necessarily healthy. Small-business owners typically lack knowledge about insurance and do not help themselves by avoiding that readily available on the Internet to neutralize the information asymmetry. Still, insurance professionals often provide valuable information not unlike other professionals in their specialties. So, the question becomes: when is the agent working in the client's best interests and when is he working in his own? There is no good answer. But the small-business owner must understand enough insurance to suspect he knows the answer in his particular case.

Finally, pay or play legislative proposals are likely to encounter the law of unanticipated consequences, at least for many proponents. When presented a choice that they might face under such proposals, comparatively few small employers chose the insurance option and comparatively many chose the employment reduction (hours or people) option. Moving people to part-time work is a particularly attractive option. In fact, the treatment of part-time employees will have an enormous influence on the response of small-businesses to any pay or play proposal. The treatment of these employees will alter relative costs in one direction or the other, providing small employers' strong relative incentive to change employment among the two groups. If part-time employees are included, small employers have an incentive to eliminate as many part-time employees as possible and spread a fixed health care cost over full-time employees. If part-time employees are excluded, small employers have an incentive to curb full-time employment and transform them into part-time positions. The capacity to eliminate full-time employees and substitute part-timers was illustrated earlier by the number of firms that currently have no full-time employees. This trade-off raises an interesting policy dilemma, one that has drawn little attention to date. But the idea that pay or play will yield huge new numbers of covered employees or vast sums to pay to cover the uninsured is likely a panacea.

Sponsor Statement

HB 187 INSURANCE COVERAGE FOR AUTISM SPECTRUM DISORDERS

Autism is a devastating disorder affecting at least 1 in 100 children, accounting for 1% of America's youth and 1 in 58 boys, according to the most recent study by the Center for Disease Control and Prevention. Despite being treatable, many children diagnosed with an Autism Spectrum Disorder (ASD) never receive the treatment they need. Families go bankrupt mortgaging their future, trying to provide their children with the treatment to ameliorate their condition. Families are forced to dig into their savings, retirement funds, and their other children's college savings because ASD is not covered by insurance plans. In fact, most insurance plans explicitly exclude the treatment of ASD, even when the service is otherwise covered by the health plan.

HB 187 would require insurance coverage for autism spectrum disorders, including the behavior therapies that after 30 years of study have shown to be the only effective treatment of these disorders. Treatment has been shown to improve the symptoms of ASD and in some cases even eliminate the need for special education services for a child with ASD. The cost savings in special education alone would amount to approximately \$208,500 per capita during the school years. This number rises to over \$1.08 million over the autistic person's lifespan.

The incremental societal cost of not treating autism has been estimated by Michael Ganz, a Harvard economist, to be approximately \$3.2 million per capita. The cost to policy holders to implement such coverage is minimal: estimated at less than a 1% increase in their premiums, or \$3.60 per member per month.

Furthermore, President Obama has stated the coverage of treatment and other types of funding for ASD would be a priority of his administration. Sens. Durbin, Casey and Menendez introduced the Autism Treatment Acceleration Act of 2009 in April, mandating the insurance coverage of ASD. While the federal legislation is currently pending, HB 187 allows Alaska to start this process on our own terms, and gives the state the needed time to meet the demands created in HB 187.

Implementing this legislation in Alaska before a federal mandate is enacted would bring well-paying healthcare jobs to the state and bring those interested in this field to Alaska. It is in the best interest of Alaska and autistic Alaskans to have this implemented as soon as possible.

Since HB 187 was introduced in March of 2009, 11 states have passed legislation regarding mandatory insurance coverage of treatment for ASD, with 8 states having enacted legislation prior to March of 2009. The District of Columbia, Puerto Rico and 19 additional states currently have similar legislation pending. These enacted and pending bills and the pending Autism Treatment Acceleration Act demonstrate the nationwide need for relief for families of autistic individuals. Autism is not a state- or region-specific condition. Families burdened with the costs of autism are unlikely to relocate to one of those 11 states that require insurance companies to cover the cost of ASD treatment. Families of any state should not be burdened with the great cost of treating a disorder they could not prevent or predict; they should not find themselves a victim of discrimination by health insurance companies.

Insurance coverage of ASD would not only provide a much needed service to those families burdened with the effects of a child with autism, but also save the state and taxpayers exponentially over the lifespan of those diagnosed with autism. Though there is no cure for ASD, this legislation would help significantly to treat those suffering from these disorders. In addition, a state that covers ASD treatment will be desirable to those in the field and will bring jobs and professionals in the field to Alaska. It will also allow more flexibility for families with autistic children who wish to move to Alaska to do so. Prompt passage of this legislation would allow the state to reap the health and economic benefits that would result from being among the first states to cover ASD.

I respectfully ask for your careful consideration and support of HB 187.

MEMORANDUM

TO: Members of the House Health & Social Services Committee

FROM: Representative Pete Petersen

DATE: January 18, 2010

RE: Redistribution of April 3, 2009, memo regarding hearing held March 24, 2009

The following information pertains to questions received during the (H) HSS meeting held on March 24, 2009:

1. RE: Age of covered participants. The bill allows those under the age of 21 to access services for Autism Spectrum Disorders (ASD). This age is consistent with both Medicaid coverage in Alaska, and is a reasonable age in regards to private insurance coverage. Many plans cover dependent children up to a certain age, generally through the college years. Therefore 21 is a reasonable age at which to discontinue these services.
2. RE: out-of-state coverage. If services rendered out-of-state were not available in Alaska, yes, insurance companies would have to cover those out-of-state services—just like they cover those services not available here in Alaska for any number of other health related issues. However, the claims cap would still remain at \$36,000 per year per child. As noted by many of the parents who testified, even the \$36,000 doesn't always cover the needs of the child. Seeking services outside of Alaska would raise the cost for services, and that \$36,000 would not go very far. In addition, except for children who require hospitalization care, ABA is best delivered in the child's own environment which could include home or school. Behavioral treatment sought outside of Alaska would likely be for the most severe cases, including aggression and self-injury, that could not be managed in facilities in the state. Moreover, it is unlikely these more costly forms of treatment would be sought out-of-state due to the nature of such treatment. While ABA

professionals may have to come into the state from outside for the initial treatment plan prescription, the 1-on-1 services are customarily given by someone in the child's immediate community. The treatment is then monitored by the ABA professional, a process that could be done utilizing telemedicine.

3. RE: Sustainable market for ASD service providers. There was a question posed as to whether the percentage of Alaskans covered by this legislation would be enough to sustain the industry of autism service providers. For this question I think it is important to refer to the pie chart provided by Linda Hall at the Division of Insurance (attached). This chart identifies the types of insurance held by Alaskans. The original report containing this breakdown of Alaska's population was done in 2003. However, the division has adjusted the numbers for the 2008 population. I will discuss each section beginning with the Self-Insured at the top of the key:
 - a. Self-Insured plans are not currently subject to state mandates. They are protected, as was stated in the committee, by Federal ERISA preemption. There is a Federal ERISA mandate that was filed on April 2, 2009, that made this 32% of Alaskans subject as well, and allow those families to access services.
 - b. Insured/State Regulated are the plans that are directly affected by HB 187. This 23% is very close to the 25.3% projected by the cost analysis done by Jim Boudier. His figure of 45.5% was in reference to group-insured Alaskans, which fall under HB 187, and contains about 25.3% of the total population of Alaska—not far off from the 23% cited by the Division of Insurance.
 - c. Medicaid in Alaska currently provides some treatment for ASD. It is the primary method by which Alaskan families access these services, however limited the coverage might be. Many families, as we heard, are fully insured, but don't have coverage for the treatments their children need. These families persistently apply for Medicaid waivers to access these funds, but the waiting list can be years, which is not time that autistic children have to spare. In addition, insured families are adding stress to what is already an overburdened system.
 - d. Medicare would likely not be a significant contributor to or drawer from any of these services.
 - e. Military families already have access to some ASD treatments, including ABA as provided in the federal TRICARE ECHO program for families with children with disabilities.
 - f. IHS, or Indian Health Services, is a benefits program for American Indians and Alaskan Natives. IHS draws funds to cover treatment, for those who qualify, from several different sources including Medicaid and private health insurance. The issue of coverage for the treatment of ASD has not come up with IHS due to the fact that they currently draw from places like Medicaid and private insurance to cover other services and it is likely they would do the same for services requested to treat ASD.
 - g. HB 187 would not affect the uninsured group of Alaskans.

Health Coverage of Alaska Population

CDC survey finds higher incidence of autism 1 in 100 8-year-olds in U.S. diagnosed

By Trine Tsouderos
October 05, 2009

About 1 in 100 8-year-old children in the U.S. have been diagnosed with autism spectrum disorder, according to U.S. Centers for Disease Control and Prevention researchers who will be releasing details of their study later this year.

The rate – significantly higher than the government's 2007 estimate of 1 in 150 – is sure to make waves in the world of autism and beyond, prompting advocates and researchers to call for more research and more funding for services.

Calling autism "an urgent public health concern," CDC Deputy Director Dr. Ileana Arias said the agency considers the disorder "a significant issue that needs immediate attention."

But researchers cautioned that the higher rate might not mean that more kids have autism spectrum disorder.

"It is not entirely clear what (the) increase is due to," said Dr. Thomas Insel, director of the National Institute of Mental Health. "It is not clear more children are affected rather than just changes in our ability to detect."

The rate, calculated by reviewing records in communities across the U.S., echoes findings of a national telephone survey of parents that is being published Monday in the journal *Pediatrics*.

The survey, conducted by the CDC and the Health Resources and Services Administration, asked parents of 78,000 children ages 3 to 17 whether a health care worker or doctor had ever told them their child had autism spectrum disorder.

Parents of 1 in 91 children said yes and also said their child currently has the disorder. For boys, the figure was 1 in 58.

Dr. Steven Goodman, an epidemiologist with Johns Hopkins Bloomberg School of Public Health, said he agrees prevalence is higher than years ago and merits concern, but warned against panic.

"This has the tremendous potential to scare people," Goodman said. "It is very unlikely that there has been an explosive increase in the way that has been portrayed in the media."

Autism has no known cause and no cure. Scientists think it may be many distinct problems that manifest themselves similarly. Children afflicted often have trouble communicating and socializing, and can exhibit repetitive, rigid behavior.

Diagnosing autism relies on observation, behavioral checklists and expert assessment rather than lab tests or X-rays, making it hard to determine how common it is.

Interpreting data can be a thicket too. Growing awareness, wider screening and a push to identify children earlier accompany the rise in the rate, but scientists have not figured out whether other factors are also at play.

Advocates in the autism community called for more funding for research.

"We have this amazing terrible national health crisis on our hands at this moment," said Lee Grossman, president of the Bethesda, Md.-based Autism Society and the father of a child with autism. "We have millions of people affected by this, and the services and supports available to them are inappropriate and inadequate and in some cases a detriment."

The grandfather of a child with autism, Bob Wright, co-founder of New York City-based Autism Speaks, said: "We are trying desperately to have the health and research assets to be aligned with the prevalence of autism and so far they are way behind."

ttsouderos@tribune.com

Doing the math

The researchers' new estimate would mean about 673,000 U.S. children have autism. Previous estimates put the number at about 560,000.

But figuring out how many children have autism is difficult because diagnosis is based on behavior, said Dr. Susan Levy of the Children's Hospital of Philadelphia and the American Academy of Pediatrics subcommittee on autism.

"As of yet, there's no consistent biologic marker we can use to make the diagnosis of autism," Levy said.

President Barack Obama has made autism a priority for research, said Dr. Thomas Insel, director of the National Institute of Mental Health. Federal stimulus money has been earmarked for autism.

And before Obama took office, a 2006 law pumped millions in federal money into research, screening and treatment. For more information on autism go to:

ON WORLD AUTISM DAY, DURBIN, CASEY, MENENDEZ INTRODUCE BILL TO ESTABLISH A NATIONAL COMPREHENSIVE AUTISM STRATEGY

Legislation would require insurers to cover autism diagnosis and treatment

April 2, 2009

WASHINGTON, DC- On a day designated by the United Nations to highlight the growing global health crisis of autism, Assistant Senate Majority Leader Dick Durbin (D-IL) and U.S. Senators Bob Casey (D-PA) and Robert Menendez (D- NJ) today introduced legislation that would create a comprehensive strategy to address the needs of families affected by autism spectrum disorder. The Autism Treatment Acceleration Act requires health insurers to provide coverage for the diagnosis and treatment of autism and authorizes federal funding for a wide range of service, treatment, support and research initiatives.

"Almost 26,000 families in Illinois struggle with autism," said Durbin. "Because the cost of autism-related services is so overwhelming for these families, Illinois passed legislation last year requiring health plans to provide coverage for the diagnosis and treatment of autism. It's time now for the federal government to renew and build upon the commitments it has already made in helping the millions of families across the nation struggling with autism. Our legislation would do that."

"Children and adults with autism spectrum disorders and their families have long struggled to get the services and treatment they need to lead rich and productive lives," said Casey. "Today, we launch a momentous effort to change an unacceptable status quo for the 18,500 children who are diagnosed in Pennsylvania each year with autism spectrum disorders and the hundreds of thousands of additional individuals across the country. This bill will help children get the services and treatment they need for the most positive life outcomes, for young adults and adults to have the support they need for satisfying and independent lives, and for families to have the peace of mind to provide and afford the proven treatments that will allow their children and loved ones to reach their fullest

potential."

"With the growing reach of this disorder, millions of families are personally affected by autism and millions more new families are wondering if they will be too. Nowhere is this felt more than in my home state of New Jersey, where we have the highest rate of autism in the country at an astounding one in every 94 children. We badly need a national strategy that will ensure families affected by autism not only have a strong support structure but also are not left to drown in the financial costs of caring for their loved ones. From services to insurance coverage to public awareness, this legislation would make a real difference in the lives of these families, and we are hopeful that we can get it passed into law," said Menendez.

Today's legislation builds on the Combating Autism Act, signed into law in December 2006. That bill called on the federal government to increase research into the causes and treatment of autism, and to improve training and support for individuals with autism and their caretakers. This bill demonstrated the commitment of Congress to begin to delve deeper into this critically important issue for millions of families.

The Centers for Disease Control (CDC) estimate that approximately 1 in 150 people in the United States has autism or autism spectrum disorder. Individuals with autism often need assistance in the areas of comprehensive early intervention, health, recreation, job training, employment, housing, transportation, and early, primary, and secondary education. Greater coordination within these service delivery systems will enable individuals with autism and their families to access the best and most current treatment, services and research for their individualized needs - and to do so throughout the lifespan of individuals.

The Autism Treatment Acceleration Act aims to meet the comprehensive needs of, and improve the quality of life for, individuals with autism and their families by:

- Requiring that insurers provide coverage for the diagnosis and treatment of autism including Applied Behavioral Analysis therapy and assistive communication devices;

- Creating a demonstration project to develop Autism Care Centers. These centers would provide a full array of medical, behavioral, mental health, educational and family care services to individuals and families in a single location. These comprehensive treatment facilities would increase access to quality health care services and communication among health care providers, educator and other providers of services;

- Creating a demonstration project to provide a full array of services to adults with autism to improve their quality of life and enable them to live as independently as possible;

- Establishing a voluntary population-based autism case registry to help understand the root causes, rates, and trends of autism;

- Developing a national multi-media campaign to increase public education and

awareness about healthy developmental milestones and autism throughout the lifespan;

- Establishing an Interdepartmental Coordinating Committee - consisting of representatives from relevant governmental agencies, researchers and the public - to coordinate government activities relating to autism;

- Establishing a national autism network to strengthen linkages between research and service initiatives at the federal, regional, state and local levels and facilitate the translation of research on autism into services and treatments that will improve the quality of life for individuals with autism and their families;

- Creating a national training initiative on autism and a technical assistance center to develop and expand interdisciplinary training and continuing education on autism.

"Autism Speaks is proud to have worked with Senators Durbin, Casey and Menendez on this legislation, which represents a remarkable leap forward in the federal government's commitment to addressing the challenges faced by individuals with autism and their families," said Elizabeth Emken, Autism Speaks vice president of Government Relations. "The insurance reform section of the bill, in particular, will have an enormous impact by finally requiring insurers to cover therapies that are literally causing families across the country to go broke as they try to provide their children with the services they need and deserve."

"This is the bill we have been waiting for for generations," said Lee Grossman, President and CEO of the Autism Society of America. "The adult services focus, care centers, national teacher training, and insurance components of this bill will complement and strengthen the important research currently underway. Moreover, this bill creates opportunities for states to develop solutions that are locally driven and relevant. As an advocate, and as a father, my heartfelt thanks to Senators Durbin, Casey, and Menendez for their efforts to help the millions of Americans affected by autism today."

Children and adults with autism spectrum disorders can show difficulties in verbal and nonverbal communication, social interactions, and sensory processing. Symptoms and behaviors may range from mild to significant, and require varying degrees of support from friends, families, service providers, and communities. There is strong consensus within the research community that intensive treatment as soon as possible following diagnosis not only can reduce the cost of lifelong care by two-thirds, but also yields the most positive life outcomes for children with autism spectrum disorders. These individuals have a right to live lives that are as full, productive and independent as possible - and with the right services, support, and treatments, they can do just that.

FROM: Representative Petersen

DATE: 3 March 2009

RE: HB 187

Thank you for considering HB 187 Insurance Coverage: Autism Spectrum Disorders. The following information for the House Committee on Health & Social Services pertains to questions received in the March 24th, 2009 hearing on HB 187. I have a diagnostic model forthcoming, to help explain the process of diagnosis. Please contact me or my aide Ashley Rousson 465-4939, if you have any further questions or concerns. We would be happy to work with members on this important piece of legislation.

1. Regarding the age of covered participants. The bill allows those under the age of 21 to access services for Autism Spectrum Disorders (ASDs). This age is consistent with both Medicaid coverage in Alaska, and is a reasonable age in regards to private insurance coverage. Many plans cover dependant children up to a certain age generally through the college years. Therefore, 21 is a reasonable age at which to discontinue these services.
2. Regarding out of state coverage. The answer to whether insurance companies would have to cover services out of state, if those services were not available in Alaska is, yes—just like they cover those services not available here in Alaska for any number of other health related issues. However, the claims cap would still remain at \$36,000 per year per child. Seeking services out of state would raise the cost for services, and that \$36,000 would not go very far. In addition, except for children who require hospitalization care ABA is best delivered in the child's own environment which could include home or school. Behavioral treatment sought outside AK would likely be for the most severe cases including aggression and self-injury that could not be managed in facilities in the state. Moreover, it is unlikely that these more costly forms of treatment would be sought out of state, due to the nature of such treatment. While ABA professionals may have to come into the state from outside for

the initial treatment plan prescription, the 1 to 1 services are customarily given by someone in the child's immediate community. The treatment is then monitored by the ABA professional; a process that could be done utilizing telemedicine.

3. Regarding a sustainable market for ASD service providers. There was a question posed as to whether the percentage of Alaskans covered by this legislation would be enough to sustain the industry of autism service providers. For this question I think it is important to refer to the pie chart provided by Linda Hall at the Division of Insurance. This chart identifies the types of benefits by percentage that Alaskans draw from. The report that contained this breakdown of Alaska's population is from 2003 however the division has adjusted the numbers for the 2008 population. I will discuss each section beginning with the self-insured at the top of the key.
 - Self-insured plans are not currently subject to state mandates. They are protected, as was stated in the committee, by Federal ERISA preemption. There is a Federal ERISA mandate that has been filed just this Thursday that would make this 32% of Alaskans subject as well, and allow those families to access services.
 - Insured/state regulated are the plans that are directly affected by HB 187. This 23% is very close to the 25.3% projected by the cost analysis done by Jim Boudier. His figure of 45.5% which he cited, was in reference to group-insured Alaskans. 45.5% of group-insured Alaskans fall under HB 187, which is about 25.3% of the total population of Alaska—not far off from the 23% cited by the Division of Insurance.
 - Medicaid in Alaska currently provides some treatment for ASDs. It is the primary method by which Alaskan families access these services, however limited the coverage might be. Many families, as we heard, are fully insured, but don't have coverage for the treatments their children need. These families resort to applying for Medicaid waivers to access these funds, but the waiting list can be years. Time that these kids don't have. In addition, insured families are adding stress to what is already an overburdened system.
 - Medicare would likely not be a significant contributor to, or drawer from any of these services.
 - Military families already have access to some ASD treatments including applied behavior analysis (ABA) as provided for in the Federal Government's TRICARE ECHO program for military families who have children with disabilities.
 - IHS or Indian Health Services is a benefits program for American Indians and Alaskan Natives. IHS draws funds to cover treatment, for those who qualify, from several different pots including Medicaid, and private health insurance. The issue of coverage for the treatment of ASD has not come up with IHS, however, due to the fact that they currently draw from places like Medicaid and private insurance to cover other services, it is likely they would do the same for services requested to treat ASDs.
 - Uninsured is the category that unfortunately we have no bearing on.

Health Coverage of Alaska Population

What is ABA?

ABA is a science devoted to the understanding and improvement of human behavior, and has been used effectively as a treatment for the symptoms of Autism for more than 20 years. ABA focuses on shaping behavior systematically, often in a highly structured environment. Every skill a child with autism does not demonstrate - from relatively simple responses like looking at others to more complex acts like spontaneous communication and social interaction - is broken down into small steps. Successful completion of each step is rewarded to encourage its mastery and data is carefully taken and evaluated to ensure the fastest rate of skill acquisition. Problematic behavior, such as tantrums, self-injury, and withdrawal, are analyzed to determine what functions they serve and plans are developed to replace the challenging behavior with more functional, contextually appropriate behavior. By tailoring reinforcement to each child, and by teaching replacement skills, many problem behaviors can be reduced or eliminated and many new skills gained.

RE: House Bill 187

Dear Representative Petersen,

On behalf of the National Federation of Independent Business/Alaska, I wish to express our opposition to House Bill 187. The National Federation of Independent Business is the largest small-business advocacy group in Alaska.

Health-care costs have been the No. 1 issue facing small-business owners since 1986, and those concerns are growing, according to NFIB's members. As health-care costs go through the roof, small-business owners have very few choices when selecting insurance coverage for their employees. The tipping point is here, and small businesses are begging for solutions to rising health-care costs, lack of access and other issues.

For many small employers in Alaska insurance premiums for small groups or single coverage have increased by more than 82 percent since 2000, a jaw-dropping statistic. This is completely unsustainable over the long-term. Much of the increase is driven by the additions to coverage by state mandates

Unfortunately HB 187 mandates coverage for autism spectrum disorders that may not fit employee's needs but for which small employers providing health insurance bear the cost. Increased mandates force employers to consider whether they can afford to continue coverage or are forced by increased prices to eliminate health

**National Federation of Independent Business — ALASKA

Page 2

insurance for their employees. Mandates prevent small employers from providing affordable insurance programs tailored to its specific work force.

HB 187 is discriminatory against small employers as the mandate applies to those who provide coverage regulated by state insurance statutes, but not programs offered by the state and other governmental entities, unions, or large employers who typically offer ERISA programs. Thus it creates a less fair business environment for small employers.

Sincerely yours,

Dennis L. DeWitt

Sponsor Statement

HB 187 INSURANCE COVERAGE FOR AUTISM SPECTRUM DISORDERS

Autism is a devastating disorder affecting at least 1 in 150 children. Despite being treatable, many children diagnosed with an Autism Spectrum Disorder (ASD) never receive the treatment they need. Families go bankrupt, mortgaging their future, trying to provide their children with the treatment to ameliorate their condition; paying down their savings, retirement funds, and college savings plans for their other children because ASDs are not covered by insurance plans. In fact, most insurance plans explicitly exclude the treatment of ASDs, even when the service is otherwise covered by the health plan.

HB 187 would require insurance coverage for autism spectrum disorders, including the behavior therapies that after 30 years of study have shown to be the only effective treatment of these disorders. Treatment has been shown to improve, sometimes significantly, the symptoms of ASD and in some cases even eliminate the need for special education services for a child with ASD. The cost savings in special education alone, during the school years, amounts to approximately \$208,500 per capita. This number rises to over \$1.08 million over the autistic person's lifespan.

As well, the incremental societal cost of not treating autism has been estimated by Michael Ganz, a Harvard economist to be approximately \$3.2 million per capita.

The cost to policy holders to implement such coverage is minimal; estimated at less than a 1% increase in their premiums, or \$3.60 per member per month. That's less than the cost of a latte, per month to allow coverage for ASDs.

Furthermore, it has been stated by President Obama, that coverage of treatment, and other types of funding for ASDs would be a priority of his administration. It is likely that we will see a Federal law mandating the coverage of ASDs. This legislation allows Alaska to start this process on our own terms, and gives the state the needed time to build capacity within our state to meet the

demands created HB 187. Establishing this legislation in Alaska before a possible Federal mandate, would bring well paying jobs to the state, and bring those interested in this area of the health field to Alaska as well. The Governor has already included funding in her budget for programs at the University level to help establish a greater field of masters level autism service providers that would help to meet the need, should HB 187 be passed.

Coverage of ASDs by insurers would not only provide a needed service to those families suffering directly from the affects of a child with autism, but saves the state, and taxpayers exponentially over the lifespan of those diagnosed with autism. Though there is no cure for ASDs, this legislation would help significantly to treat those suffering from these disorders. In addition, a state that covers ASDs treatment will be desirable to those in the field and will bring jobs, and professionals in the field to Alaska. Prompt passage of this legislation would allow the state to reap the health and economic benefits that would result from being among the first few states to cover ASDs.

Therefore, I respectfully ask for your careful consideration and support of HB 187.

Sectional Analysis HB 187 Insurance Coverage: Autism Spectrum Disorders

Sec. 1: Amends current insurance statute (AS 21.42) to include coverage for autism spectrum disorders.

- Must cover treatment of the disorders as prescribed by a licensed physician or psychologist.
- The treatment will be provided by an autism service provider.
- The treatment will be outlined in a treatment plan (prescribed by the physician or psychologist) following a comprehensive evaluation
- Treatment includes: medically necessary pharmacy care, psychiatric care, psychological care, rehabilitative care, and therapeutic care

Coverage includes those under the age of 21 years, and there is a maximum yearly benefit of \$36,000, adjusted annually for inflation.

Sec. 2: Regarding applicability: applies to policies issued on or after January 1, 2010.

VIA FIRST CLASS MAIL

**RE: Cost Analysis – Alaska House Bill 187 pertaining to Insurance
Coverage for Autism Diagnosis and Treatment**

Dear Representative Petersen:

I thank you for the opportunity to complete an analysis of the likely effect of insuring the treatment of autism on commercial insurance rates in the State of Alaska. I am pleased to provide you with this information to assist you and your colleagues in making an informed public policy decision with regard to this proposed legislation. As you are aware, autism is a serious developmental disability that affects approximately 1 in 150 children across the United States. The cause is uncertain, but a significant research base indicates that the most debilitating symptoms of autism can be remediated using intensive services based on the principles of Applied Behavior Analysis (“ABA”). If enacted, House Bill 187 would require insurance policies to provide coverage for the diagnosis and treatment of autism spectrum disorder (“autism” or “ASD”), including coverage for behavioral therapy.

Based on my review of the available data and literature, I estimate that the likely effect on commercial insurance rates in Alaska will be approximately 0.92% or \$3.60 per member per month (“pmpm”). This estimate is consistent with my findings in other states and with the actuarial findings pertaining to similar legislation recently enacted or pending in Pennsylvania, Arizona, Georgia, Louisiana, Maryland, and Virginia. A detailed narrative describing my findings is set forth below.

Also, as requested, I assessed the likely claims increase that could be expected should Alaska extend this coverage to children of Alaska state employees. I found that the State of Alaska could expect approximately \$543,000 in additional claims, which translates into approximately \$3.02 per government employee per month.

Again, I thank you for this opportunity. Should you require copies of any studies cited, please do not hesitate to contact me. I hope you find this information helpful. If you have any questions or would like additional information, please feel free to contact me at (717) 808-9910 or by email at jbouder@ptd.net.

With Kind Regards,

James N. Bouder, MPA

Cc: The Honorable Nancy Dahlstrom

Cost Analysis – Alaska Autism Insurance Coverage

James N. Boudier, MPA

- ⌘ **Autism** is a devastating disorder affecting at least 1 in 150 children, with approximately 1 in 500 requiring significant clinical treatment;
- ⌘ **Autism is treatable** – with treatment, 30 years of research has shown us that many children overcome the severe symptoms of their disorder, but most private insurance policies specifically exclude coverage for treating autism, even when the service is otherwise covered by the health plan;
- ⌘ The coverage of autism treatment in Alaska will enable many children to access services they need;
- ⌘ The maximum likely cost of such coverage to the private insurance ratepayer is approximately **0.92%** or **\$3.60** per policyholder per month;
- ⌘ If the State of Alaska chooses to extend this coverage to dependents of state employees, this will likely result in an increase in claims costs of approximately **\$3.02** per government employee per month;
- ⌘ **Other States Confirm this Finding:** The Pennsylvania Insurance Department found that similar legislation will result in a rate impact of **at or less than 1%**; in **Arizona**, an independent actuary forecasted a cost impact of **0.501%**; in **Louisiana**, the consulting actuaries for the **Louisiana Office of Group Benefits** forecast a cost impact of **less than 0.50%**; in Oklahoma, the **Oklahoma State Education Employees Group Insurance Board** estimated a cost impact between **one-third of 1% and 1%**; and in the most comprehensive actuarial report on autism coverage to date, **Mercer** reported to the **Maryland Health Care Commission** an estimated premium increase of approximately **0.85%**
- ⌘ With treatment, Alaska can save approximately **\$208,500 per capita** in avoided special education costs during the school years alone and **\$1.08 million per capita** during the autistic person's lifespan;
- ⌘ The incremental societal cost of not treating autism has been estimated by Michael Ganz, a Harvard economist, to be **approximately \$3.2 million per capita**.

Section 1. Private Insurance Premium Rate Impact

The likely, maximum premium impact of autism coverage will be less than 1%, amounting to approximately \$3.60 per member per month (pmpm) for single policy rates and \$9.49 pmpm for family rates.

Number of Eligible Beneficiaries of Autism Coverage in Alaska

My first task in estimating the likely cost of extending treatment to Alaskans with autism is to determine how many people in Alaska are eligible for and likely to utilize the benefits mandated by the bill.

According to estimates provided by the U.S. Census Bureau, there are approximately 190,947 persons living in Alaska between the ages of 2 and 20 who could be eligible for the benefits under the House Bill 187.¹ It is also estimated that approximately 66.6% of children with special health care needs living in Alaska under the age of 18 have private health insurance and approximately 55.9% of such children living in Alaska are insured under group health insurance plans.² The number of persons living in Alaska between the ages of 2 and 20 who are insured under group plans, therefore, is approximately 106,664.

Based on information published by the Medical Expenditures Panel Survey ("MEPS"), 54.6% of private-sector enrollees working in Alaska are enrolled in self-insured plans (MEPS 2005 Report, p. 1).³ The potential pool of beneficiaries between age 2 and 20, therefore, after accounting for ERISA preemption and the uninsured, is approximately 48,425.

Treated Prevalence Rate of Children with Autism in Alaska

Actuarial analyses and insurer criticisms of bills similar to the bill contemplated for Alaska often utilize the CDC's statistic on community prevalence in pricing such bills, notwithstanding actual treated prevalence rates within existing systems or present in the research record. Recently, the Commonwealth of Pennsylvania Insurance Department utilized the 1 in 150 statistic in deriving their estimated rate impact of approximately 1.1%, with regard to very similar legislation introduced in that state.

While the latter example reports an estimated rate impact that is very low, utilizing a 1 in 150 prevalence rate demonstrates a lack of understanding of the range of symptom severity exhibited by people with ASD, and thus overstates the

¹ U.S. Bureau of the Census, "Table DP-1. Profile of General Demographic Characteristics: 2006 Population Estimates."

³ See The Kaiser Family Foundation State Health Facts Website:
<<http://www.statehealthfacts.org/profileind.jsp?ind=236&cat=4&rgn=50>>

number of persons with autism likely to require and seek significant clinical treatment.

Several examinations of health care utilization and expenditures associated with treating autism have been published in recent years that call into question the appropriateness of using epidemiological prevalence data to forecast the magnitude of health care utilization resulting from passage of House Bill 187. In 2007, Douglas L. Leslie and Andres Martin compiled data from the Thomson/Medstat MarketScan database, "which compiles claims information from private health insurance plans of large employers ... across the United States ... [with] covered individuals includ[ing] employees, their dependents, and early retirees" (Leslie, p. 351).⁴ Leslie et al. note that the *treated prevalence* of autism in the claims database was 19.2 per 10,000 (*i.e.*, 1 in 520.83) (p. 352). Independently, Gregoral S. Liptak et al. obtained data from three national surveys and identified a treated prevalence of autism of 21 in 10,000 (*i.e.*, 1 in 476.19) (Liptak et al., p. 872).⁵ Similarly, in a previous article, David S. Mandell et al. reported a treated prevalence rate of youth diagnosed with autism in Allegheny County, PA of 0.2% (*i.e.*, 1 in 500) (Mandell et al., p. 477).⁶ More recently, Shimabukuro et al.'s examination of MarketScan® data found a treated prevalence rate of 1.9 per 1,000 (or approximately 1 in 526) (p. 549).⁷ Most recently, the nationally recognized actuarial firm, Mercer, completed an evaluation of Maryland's proposed autism insurance mandate, which is substantively similar to House Bill 187, but has a \$50,000 annual cost cap.⁸ Mercer included both treated prevalence rates and cost per treated child estimates broken down by age bands to establish low, mid, and high estimates of premium impact, resulting in a mid-range estimate of 0.85%.

These findings are consistent with other medical conditions, which present with a treated prevalence rate much lower than the community prevalence rate. The consistency of these data suggest that the treated prevalence of autism is a better measure to apply to premium impact analyses because, unlike community prevalence data, which simply report the number of persons satisfying the diagnostic criteria for Autism Spectrum Disorders, treated prevalence accounts for those persons with autism actually seeking and consuming health care services related to their disorder.

Assumptions

While much of the data included in this analysis was derived from primary sources, some assumptions were necessary due to my inability to independently confirm certain data elements from primary sources or required statistical calculations to forecast future sums. These assumptions are set forth below.

- Using data published by the Alaska Division of Insurance, I estimate a premium base of \$346.0 million in 2009.⁹
- Based on claims history of insurers in Alaska, I assumed an 85% Medical Loss Ratio, which is considered an industry standard. The Medical Loss Ratio was used to convert cost effect to revenue requirement.
- 45.4% of health insurance plans offered by private firms in Alaska that are not subject to ERISA preemption remains an accurate figure, as reported by the MEPS for 2005 (cited above).
- In order to produce a conservative estimate, 100% of likely, increased costs attributable to services provided under House Bill 187 will be passed on to private insurance ratepayers participating in eligible plans (*i.e.*, private insurers will choose not absorb any additional costs).
- Calculations assume an adequate provider network is in place on the legislation's effective date to meet the demand for services.

Cost Analysis

The next step in my cost analysis is to establish the likely cost of covering these services and their potential rate effect. In the interest of providing a range of rate impact resulting from the coverage of services contemplated for Alaska autism coverage, I have provided calculations based on a number of variables. I attempted to do so using credible data available to the general public. For your convenience, attached is a spreadsheet detailing the likely range of impact the covered services will have on private insurance ratepayers in Alaska (**See Exhibit "A" attached**).

The most likely scenarios are derived in part from peer-reviewed research evaluating real-life data concerning the treated prevalence of autism and average expenditures per treated person with autism and prevalence rates assumed by Mercer in their actuarial estimate of increased costs associated with a similar bill pending in Maryland (cited above). Persons living with autism present with varied symptoms requiring differing levels of attention based on the severity of symptoms. The more severe symptoms requiring intensive behavioral health and other clinical interventions are not necessarily present in every person diagnosed with an Autistic Spectrum Disorder, especially when those less severely affected reach the school age. This is evidenced by the treated prevalence rates reported in Mandell et al (2006), Leslie et al. (2007), Liptak et al. (2007), and Shimabukuru et al. (2008) noted and cited above, which consistently report a treated prevalence rate of

⁹ Report of the Alaska Division of Insurance (2008), retrieved from <<http://www.commerce.state.ak.us/insurance/>>

approximately 1 in 500 (or 0.20%). One should expect, therefore, that actual utilization rates will track more closely along treated prevalence rates noted in the abovementioned reviews of actual health care utilization data than community prevalence rates reported from epidemiological studies such as the recent report of the CDC.

While I was unable to locate any Alaska-specific data on average treatment costs, the findings of the Mercer actuaries in Maryland are instructive. Relying on the research of Harvard economist Michael Ganz, Mercer recognized that the heaviest utilization of services would fall in the preschool years, and drop considerably as the child reaches school age and approaches adulthood. Mercer assumed a cost per treated child between the ages of 18 and 20 to be from \$2,525 to \$3,500, as the biggest cost drivers for adult services are vocational support and supported housing (i.e., non-medical expenses).¹⁰

Three possible expenditure scenarios are included in my cost analysis, establishing Low, Mid, and High Estimates, using the treated prevalence rates and cost per treated child estimates similar to those Mercer relied upon in Maryland. Overall, the treated prevalence rates for Low, Mid, and High estimates were 1:400, 1:325, and 1:250, respectively.

Table 1 below illustrates the likely utilization rates and cost per treated person by age band. Based on these assumptions, the percentage increase in premium costs for Alaska falls in the 0.57% to 1.49% range, with a mid-range estimate of 0.92% (see attached **Exhibit "A"** attached for more detail).

¹⁰ Ganz, Michael L. (2007). "The Lifetime Incremental Societal Costs of Autism." *Archives of Pediatric and Adolescent Medicine*. Vol. 161, Apr. 2007, pp. 343-349.

TABLE 1: Treated Prevalence and Cost per Treated Person Assumptions.

<u>Low Estimate</u>		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.25%	\$30,000
5 to 9	0.35%	\$19,660
10 to 14	0.25%	\$6,758
15 to 19	0.20%	\$2,525
20 years	0.20%	\$2,525
Premium Increase % of Premium		0.57%
<u>Mid Estimate</u>		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.30%	\$36,000
5 to 9	0.45%	\$26,200
10 to 14	0.30%	\$9,000
15 to 19	0.25%	\$3,500
20 years	0.20%	\$3,500
Premium Increase % of Premium		0.92%
<u>High Estimate</u>		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.45%	\$36,000
5 to 9	0.67%	\$30,500
10 to 14	0.35%	\$12,000
15 to 19	0.30%	\$3,500
20 years	0.25%	\$3,500
Premium Increase % of Premium		1.49%

Based on statistical data published by the Kaiser Family Foundation reporting average annual single and family policy rates in 2008, single policy rates will likely experience an increase no greater \$3.60 per member per month (pmpm) and \$9.49 pmpm for family rates as a result of implementing coverage provided by the proposed legislation.¹¹

¹¹ As cited above, see the *Kaiser Family Foundation and Health Research and Educational Trust* publication, "Employer Health Benefits - 2008 Annual Survey," which reports that the average annual total premium cost for single coverage in the Western United States is \$4,683 and \$12,351 for family coverage.

Section 2. State Employee Cost Impact

The likely, cost impact of autism coverage for dependents of state workers will be approximately \$554,000, which is less than 1% over current claims experience.

Not all state employees in Alaska receive health insurance coverage through the state's health care plan (Select Benefits), but rather through self-funded union trust plans ("Union Plans") that are primarily funded through state contributions. While I was not able to obtain copies of financial statements for the various Union Plans, I was able to obtain claims and census data for the Select Benefits plan and determine the total number of full-time government employees from the 2008 Comprehensive Annual Financial Report to be approximately 15,000.¹² Together, this information provided me with sufficient data to estimate the total added claims that the State of Alaska could anticipate if it decided extend coverage mandated by House Bill 187 to dependents of state employees.

According to the State of Alaska, Department of Administration, Division of Retirement and Benefits, approximately 40% of Alaska's +/- 15,000 state employees are insured under the Select Benefits plan, which includes approximately 6,000 employees. The Division of Retirement and Benefits also provided me with the numbers of insured children by age band between the ages of 2 and 20 as follows:

TABLE 2: # of Children by Age Band (Aged 2 to 20) Participating in Select Benefits¹³

Insured Dependents by Age Band	%	# Children
2 to 4 years	9.68%	428
5 to 9 years	20.90%	924
10 to 14 years	27.65%	1,222
15 to 19 years	35.34%	1,562
20 years	6.43%	284
TOTAL		4,420

Based on data provided by the Division of Retirement and Benefits, I was able to determine that the average household of employees participating in the State of Alaska's Select Benefits plan has 0.74 children (derived from the estimated 6,000 employees participating in the plan and 4,420 dependents between the ages of 2 and 20 who are also covered). Additionally, according to the Division of Retirement and Benefits, total claims paid by the Select Benefits plans in 2008 were \$62.4 million.

This data provides a sufficient sample to estimate the likely number of dependents between the ages of 2 and 20 who are insured by either the Select Benefits or Union Plans as follows:

¹² 2008 Alaska Comprehensive Annual Financial Report, p. 252.

¹³ Source: Personal Correspondence with the Division of Retirement and Benefits.

TABLE 3: Estimated # Children Insured Under Both Select Benefits and Union Plans

Insured Dependents by Age Band	%	# Children
2 to 4 years	9.68%	1,070
5 to 9 years	20.90%	2,310
10 to 14 years	27.65%	3,055
15 to 19 years	35.34%	3,905
20 years	6.43%	710
TOTAL		11,050

Additionally, knowing that 40% of state employees and their dependents are enrolled in the Select Benefits plan, it is reasonable to assume that approximately 40% of claims funded by state contributions are paid for claims incurred by enrollees in the Select Benefits plan. Therefore, I estimate total claims paid for both Select Benefits and Union Plans in 2008 were approximately \$155.9 million.

With this data and prevalence and per capita expenditure assumptions used to estimate the rate effect of House Bill 187 in **Section 1** above (See **Table 1**), I estimate the total increased claims for all state employees in **Table 4** below (see also **Exhibit "B"** attached for more detail). This fiscal impact translates into approximately \$1.86 to \$4.86 per government employee per month, with a mid-range estimate of \$3.02 per government employee per month.

TABLE 4: Total Estimated Claims by Age Band

Low Estimate		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.25%	\$30,000
5 to 9	0.35%	\$19,660
10 to 14	0.25%	\$6,758
15 to 19	0.20%	\$2,525
20 years	0.20%	\$2,525
Total Increased Claims		\$334,990
Mid Estimate		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.30%	\$36,000
5 to 9	0.45%	\$26,200
10 to 14	0.30%	\$9,000
15 to 19	0.25%	\$3,500
20 years	0.20%	\$3,500
Total Increased Claims		\$543,384

High Estimate		
Age Band	ASD Treated Prevalence for Age Band	Cost per Treated Person
2 to 4	0.45%	\$36,000
5 to 9	0.67%	\$30,500
10 to 14	0.35%	\$12,000
15 to 19	0.30%	\$3,500
20 years	0.25%	\$3,500
Total Increased Claims		\$875,452

Section 3. Long Term Considerations

The long-term savings attributable to effectively treating children with autism is significant, with cost-benefit peer review studies estimating a per capita avoided special education cost savings of \$208,500 and over \$1 million in total avoided human service cost savings per person over the lifespan.

In April 2007, Michael L. Ganz published an article in *Archives of Pediatric and Adolescent Medicine* entitled "The Lifetime Distribution of the Incremental Societal Costs of Autism," which sets forth his findings in describing "the age-specific and lifetime incremental societal costs of autism in the United States" (p. 343).¹⁴ Ganz determined that the "lifetime per capita incremental societal cost of autism is \$3.2 million" and that "[l]ost productivity and adult care are the largest components of costs" (p. 343). Based on the extant literature demonstrating the efficacy of behavioral interventions, we believe that the "lifetime per capita incremental societal cost of autism" can be mitigated substantially by services included in House Bill 187. In short, autism left untreated will result in substantial financial consequences for both public agencies and families with loved ones diagnosed with autism.

Regarding the cost-benefit of intensive ABA services, two analyses, one completed in Pennsylvania and the other in Texas, examined the future cost savings to government units resulting from investment in intensive behavioral interventions for people with autism.

The first such work, completed by John W. Jacobson, James A. Mulick, and Gina Green in 1998, notes that an abundance of research demonstrates the efficacy of early, intensive behaviorally-based interventions to enable substantial numbers of children with autism to "attain intellectual, academic, communication, social, and daily living skills within the normal range" (p. 201).¹⁵ Using representative costs

¹⁴ Ganz, Michael L. (2007). "The Lifetime Incremental Societal Costs of Autism." *Archives of Pediatric and Adolescent Medicine*. Vol. 161, Apr. 2007, pp. 343-349.

¹⁵ Jacobson, John W., James A. Mulick, and Gina Green (1998). "Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism - General Model and Single State Case." *Behavioral Interventions* 13, 201-226.

from Pennsylvania, including costs for special educational and adult special needs services, they found that, "At varying rates of effectiveness and in constant dollars, this model estimates that cost savings range from \$187,000 to \$203,000 per child for ages 3-22 years, and from \$656,000 to \$1,082,000 per child for ages 3-55 years (Jacobson, et al., p. 201).

More recently, Gregory S. Chasson, Gerald E. Harris, and Wendy J. Neely compared the costs of early intensive behavioral intervention ("EIBI") and special education for children with autism (cited above). Alluding to recent comparison studies that strongly suggest that "eclectic" special education programs are materially ineffective for many children with autism, the authors note that the human cost of failing to provide EIBI services is considerable. Consistent with Jacobson's et al.'s findings, Chasson et al. found that "the state of Texas would save \$208,500 per child across eighteen years of education with EIBI" (p. 401). Based on their estimate that the average annual cost associated with EIBI is approximately \$22,500, and the average duration of service is three years (see p. 402), the return on the health care investment would be 308% in avoided special education costs to the local and state taxpayer during the education years alone. It is important to note that, without treatment, persons with autism will grow to become adults dependent on publicly-funded services for their lifespan. For another third of those receiving such services early, the intensity of publicly-funded services needed in adulthood would be considerably reduced. For just less than half of those children receiving intensive EIBI services early, opportunities to be gainfully employed contributors to the tax base will only increase the return on that initial three-year investment. As Chasson et al. put it, "By implementing EIBI with all children with autism, as a way to prevent the need for special education, the investment not only produces a sizeable savings after 18 years, but it maximizes the likelihood that most of these children will return a profit long after maturation" (p. 410).

Chasson et al. posit that, "For this reason, it would behoove policy makers to reconsider the role of educational services with children with developmental disabilities. Indeed, it may mean a minimization of the education system's role in providing services and a maximization of population-specific treatment implementation by mental health practitioners. Following from this, special education would then have expanded resources to serve children who failed to mainstream into typical education despite implementation of appropriate interventions" (p. 411). "The bottom line," they write, "is that a simple change in policy could drastically improve functioning and quality of life for thousands of children with autism in Texas. As a bonus, the taxpayers could potentially save over \$2 billion across 18 years (p. 412).

Applying similar assumptions to the population served by the proposed legislation indicates that Alaska's taxpayers could save millions in avoided special education costs during the school years alone and hundreds of millions in avoided human services costs over the autistic person's lifespan.

Section 4. Other State Cost Estimates Associated with Similar Legislation

While a number of factors unique to individual states can influence the cost effect of legislation that is similar to House Bill 187, a review of cost estimate findings in states where similar legislation has been enacted, offered by proponents, opponents, and neutral sources, can reveal a useful trend to lawmakers in Alaska. During the past two years, several states have enacted legislation similar to House Bill 187, including South Carolina, Arizona, Florida, Louisiana, and Pennsylvania. Additionally, numerous other states with sophisticated mandate review processes have examined the likely cost effect resulting from mandating similar coverage. These states include Maryland, Virginia, and Oklahoma.

Due to differences in coverage criteria (e.g., ages of those covered and annual and lifetime limits), cost estimates in other states would not be directly comparable to Alaska's House Bill 187. The cost analyses completed for Pennsylvania, Maryland, and Virginia would be most instructive due to similar age limitations, amount of annual benefit limitation, and the lack of a lifetime limit, although South Carolina's costs would also be similar to Alaska's due to the relatively low per capita expenditure expected for children with autism age 16 and over. A consistent theme emerging from proponents, opponents, and independent sources, including nationally trusted actuarial firms such as Mercer, Aon, and Oliver Wyman, is that the likely cost of insuring the treatment of children with autism is relatively low, and is consistently reported to be at or below 1%. (See TABLE 5 and TABLE 6 below).

TABLE 5: Rate and/or Cost Effect of Similar Mandates Enacted in Other States

Conclusion

Based on my review of House Bill 187, Alaska's commercial premium and claims data and state employees' health benefits data, I believe it is reasonable to conclude that the likely cost impact of mandating coverage for the diagnosis and treatment of autism will be less than 1%, even after a sufficient provider network is established to meet the demands for services. Furthermore, given significant evidence concerning the efficacy of Applied Behavior Analysis in treating the varied symptoms of autism, Alaska can expect significant future savings in avoided special education and human services costs. Lastly, expected premium and cost impacts relating to the Alaska House Bill 187 are consistent with similar legislation enacted or pending in at least 10 other states.

Please note that my cost analysis assumes that a provider network capable of meeting the needs of all children with autism who require and seek treatment is prepared to deliver services during the first year of implementation of House Bill 187. As a practical matter, however, it takes time for providers to recruit, train, and deploy professionals, especially in markets that lack a pre-existing provider base like Florida and Pennsylvania, which the Behavior Analyst Certification Board ("BACB") reports have approximately 1,800 and 300 Board Certified Behavior Analysts ("BCBA"), respectively. By comparison, the BACB reports that the State of Alaska has two (2) BCBA's. The existence of alternative funding streams in the former two states encouraged the aggressive proliferation of Behavior Analysts, and the same can be expected in Alaska once a reliable funding stream is established. Therefore, it could be several years before Alaska experiences the full cost impact associated with House Bill 187.

It is also important to note that other factors may further reduce first year claims. House Bill 187 is currently written to require coverage for plans offered, issued for delivery, delivered, or renewed in Alaska on or after January 1, 2010. Assuming open enrollment trends in Alaska are similar to those in other states, approximately 80% of health plans renew on January 1. This could also translate into a lower claims experience during the first year of implementation.

MEMORANDUM

DATE: March 30, 2010
FROM: Rep. Pete Petersen
TO: Rep. Wes Keller
RE: Coverage of autism spectrum disorders under new federal health care reform

According to our research and consultations with health policy experts, the Health Care Education and Affordability Reconciliation Act of 2010 improves accessibility of treatment for autism spectrum disorders, **but not for the majority of families**. As such, HB 187 is still necessary to allow families not affected by the new Act to receive adequate coverage, which would save hard-earned money for themselves *and* the State.

Here are some of the problems the Act has in providing treatment for autism spectrum disorders:

- There is no specific mention of or guidelines for “autism” or “autistic spectrum disorders” or “pervasive developmental disorders” in the Act. Anywhere it says “behavioral health treatment,” it is assumed it *may* apply to autism spectrum disorders.
- The pool of insurers obligated to offer the “behavioral health treatments” mandated by the Act is small: it does not cover “large group plans” - that is, families whose insurance plans are provided by employers of 50 or more people.
- Discrimination against treating autism spectrum disorders is not rectified. While discrimination against “pre-existing conditions” may now be addressed, this doesn’t matter to the families whose insurance coverage will not cover treatment for autism spectrum disorders and are not required to do so under the new Act.
- Individuals and small-businesses can purchase insurance plans that offer specific coverage for autism which are exchanged over state lines, but this does not take effect until 2014. This is also assuming the appropriate legislation has passed and guidelines have been established to allow Alaskan families and small businesses to participate in these exchanges.
- While some families affected by autism will be able to receive health insurance coverage for behavioral health treatments, the majority of families will remain without this coverage. Those who can receive it may not be able to take advantage of it for several more years and then miss that window of opportunity for early intervention.

Attached are a few of our sources and supplements to this information. Please feel free to contact me or my staff with any additional questions. Thank you for your consideration.

It's time for lawmakers to listen.

Health Care Reform: What does it mean for the Autism Community?

Families caring for a child with autism often have health insurance, but most of these plans explicitly exclude coverage of the treatments their child needs. Since 2007, Autism Speaks has been working with grassroots partners on autism insurance reform in states across the country with the goal of enacting legislation that would end marketplace discrimination on the basis of an autism diagnosis. To date, 15 states have passed reform measures that specifically require insurers to provide coverage of evidence-based, medically necessary treatments including behavioral therapies, such as Applied Behavioral Analysis (ABA). Similar legislation is pending in about two dozen additional states.

From the beginning we knew that passage of state laws was only a first step – albeit a critical one – and that true autism insurance reform would demand a federal law requiring all types of health plans to cover autism treatments. President Obama even made a campaign pledge during the 2008 election that he would support a federal mandate requiring coverage of autism treatments.

With today's historic signing of health care reform legislation by President Obama, people are asking "What does this mean for autism insurance reform?" As many know, Autism Speaks, the autism grassroots community, and our supporters in Congress, especially Congressman Mike Doyle (PA) in the House and Senators Robert Menendez (NJ) and Chris Dodd (CT) in the Senate, worked very hard during the past year to include in health care reform legislation language that would address the insurance inequities many families have endured for decades. This language makes behavioral health treatments a part of the essential health benefits that must be included in certain health plans.

There are many questions about what health care reform WILL and WON'T do to help your family cover the cost of the medically necessary, evidence-based behavioral therapies. Let's consider where things stand.

Will health care reform directly benefit the autism community?

The new health care reform law will curb abusive practices like pre-existing condition exclusions, excessive waiting periods for coverage, and rescissions of coverage. Some insurers will be limited in their ability to set lifetime or annual limits on the dollar value of benefits. This may affect caps on autism insurance benefits in some states.

Does it apply to all insurers?

While the new health care reform law will extend autism insurance reform to some families, not all insurance plans will be required to cover behavioral health treatment. That's because only certain types of health plans will be required, beginning in 2014, to cover the list of essential benefits, including behavioral health treatment. The types of plans included under this provision are: (1) plans offered by state-based exchanges, through which individuals and small businesses can purchase coverage; and (2) plans offered in the individual and small group markets outside the exchange. Existing coverage, plans offered in the large group market outside exchanges, and self-insured plans (plans under which an employer assumes direct financial responsibility for the costs of enrollees' medical claims, or sometimes referred to as "ERISA plans") will not be required to provide the essential benefits package. This last exception is especially significant because 57% of workers who are currently covered by their employers' health benefits are enrolled in a plan self-insured by the employer.

How does health care reform impact the state autism insurance reform effort?

Autism Speaks is committed to autism insurance reform that includes coverage of all medically necessary, evidence-based treatments for all people living with autism spectrum disorders. While passage of health care reform will bring some relief to families caring for a child with autism, there is still much work to be done in state legislatures and in Congress to make effective health care coverage a reality for the autism community and to bring about an end to discrimination of individuals with autism by the insurance industry.

We all know families who have gone to extreme measures, including mortgaging their homes and the futures of other children, in order to provide the best possible services for their child with autism. According to research, families living with autism have far greater medical expenditures and out-of-pocket costs and are far less likely to report that health insurance meets their child's needs when compared to families living without autism. Health care reform will not end these problems, but it may lessen their severity. That's why Autism Speaks will continue its efforts to make autism insurance reform a reality for all Americans living with autism.

U.S. HOUSE PASSES HEALTH CARE REFORM BILL CONTAINING PROVISION FOR AUTISM INSURANCE

25 March , by *Christine Kennedy*

Autism Speaks, the nation's largest autism science and advocacy organization, today pledged to continue the battle to end insurers' discrimination against individuals with autism at both the state and federal levels. While praising elements of the Health Care Education and Affordability Reconciliation Act of 2010 - passed over the weekend by the U.S. House - that could result in improved access to care for individuals with autism and their families, the bill still falls short of eliminating marketplace discrimination for coverage of medically necessary autism treatments. The reconciliation bill will now move to the Senate for consideration.

Through the efforts of Autism Speaks, the autism grassroots community and supporters in Congress, especially Congressman Mike Doyle (PA) in the House and Senators Robert Menendez (NJ) and Chris Dodd (CT) in the Senate, behavioral health treatment is included as part of the essential health benefits package required in certain health plans. Behavioral health treatments were added to ensure that people with autism are provided with insurance coverage of medically necessary, evidence-based behavioral treatments, such as applied behavior analysis (ABA) therapy.

While the Health Care and Education Affordability Reconciliation Act will extend autism insurance reform to some families, not all health plans will be required by the bill to cover behavioral health treatment. The reconciliation bill will require the following health plans to offer at least the essential benefits package: (1) plans offered by state-based exchanges, through which individuals and small businesses can purchase coverage; and (2) plans offered in the individual and small group markets outside the exchange.

Therefore, while some families affected by autism will be able to receive health insurance coverage for behavioral health treatments, the majority of families will remain without this crucial coverage.

"We are grateful to our supporters in Congress who fought so hard to make sure that families dealing with autism are a part of larger

health care reform," said Peter Bell, Autism Speaks executive vice president for programs and services. "Though passage of this bill does not end autism insurance discrimination for all families, Autism Speaks will continue to work for autism insurance reform in state legislatures and in Congress until all those touched by autism no longer face discrimination from the insurance industry."

Recent healthcare reform dictates that we intensify state mandate efforts for ABA therapy

Filed under: [Obama Initiative](#) — admin @ 6:59 pm

The following is a message from Autism Speaks...

Families caring for a child with autism often have health insurance, but most of these plans explicitly exclude coverage of the treatments their child needs. Since 2007, Autism Speaks has been working with grassroots partners on autism insurance reform in states across the country with the goal of enacting legislation that would end marketplace discrimination on the basis of an autism diagnosis. To date, 15 states have passed reform measures that specifically require insurers to provide coverage of evidence-based, medically necessary treatments including behavioral therapies, such as Applied Behavioral Analysis (ABA). Similar legislation is pending in about two dozen additional states.

From the beginning we knew that passage of state laws was only a first step – albeit a critical one – and that true autism insurance reform would demand a federal law requiring all types of health plans to cover autism treatments. President Obama even made a campaign pledge during the 2008 election that he would support a federal mandate requiring coverage of autism treatments.

With today's historic signing of health care reform legislation by President Obama, people are asking "What does this mean for autism insurance reform?" As many know, Autism Speaks, the autism grassroots community, and our supporters in Congress, especially Congressman Mike Doyle (PA) in the House and Senators Robert Menendez (NJ) and Chris Dodd (CT) in the Senate, worked very hard during the past year to include in health care reform legislation language that would address the insurance inequities many families have endured for decades. This language makes behavioral health treatments a part of the essential health benefits that must be included in certain health plans.

There are many questions about what health care reform WILL and WON'T do to help your family cover the cost of the medically necessary, evidence-based behavioral therapies. Let's consider where things stand.

Will health care reform directly benefit the autism community?

The new health care reform law will curb abusive practices like pre-existing condition exclusions, excessive waiting periods for coverage, and rescissions of coverage. HB 187 INSURANCE COVERAGE FOR AUTISM SPECTRUM DISORDERS

Autism is a devastating disorder affecting at least 1 in 100 children, accounting for 1% of America's youth and 1 in 58 boys, according to the most recent study by the Center for Disease Control and Prevention. Despite being treatable, many children diagnosed with an Autism Spectrum Disorder (ASD) never receive the treatment they need. Families go bankrupt mortgaging their future, trying to provide their children with the treatment to ameliorate their condition. Families are forced to dig into their savings, retirement funds, and their other children's college savings because ASD is not covered by insurance plans. In fact, most insurance plans explicitly exclude the treatment of ASD, even when the service is otherwise covered by the health plan.

HB 187 would require insurance coverage for autism spectrum disorders, including the behavior therapies that after 30 years of study have shown to be the only effective treatment of these disorders. Treatment has been shown to improve the symptoms of ASD and in some cases even eliminate the need for special education services for a child with ASD. The cost savings in special education alone would amount to approximately \$208,500 per capita during the school years. This number rises to over \$1.08 million over the autistic person's lifespan.

The incremental societal cost of not treating autism has been estimated by Michael Ganz, a Harvard economist, to be approximately \$3.2 million per capita. The cost to policy holders to implement such coverage is minimal: estimated at less than a 1% increase in their premiums, or \$3.60 per member per month.

Furthermore, President Obama has stated the coverage of treatment and other types of funding for ASD would be a priority of his administration. Sens. Durbin, Casey and Menendez introduced the Autism Treatment Acceleration Act of 2009 in April, mandating the insurance coverage of ASD. While the federal legislation is currently pending, HB 187 allows Alaska to start this process on our own terms, and gives the state the needed time to meet the demands created in HB 187.

Implementing this legislation in Alaska before a federal mandate is enacted would bring well-paying healthcare jobs to the state and bring those interested in this field to Alaska. It is in the best interest of Alaska and autistic Alaskans to have this implemented as soon as possible.

Since HB 187 was introduced in March of 2009, 11 states have passed legislation regarding mandatory insurance coverage of treatment for ASD, with 8 states having enacted legislation prior to March of 2009. The District of Columbia, Puerto Rico and 19 additional states currently have similar legislation pending. These enacted and pending bills and the pending Autism Treatment Acceleration Act demonstrate the nationwide need for relief for families of autistic individuals. Autism is not a state- or region-specific condition. Families burdened with the costs of autism are unlikely to relocate to one of those 11 states that require insurance companies to cover the cost of ASD treatment. Families of any state should not be burdened with the great cost of treating a disorder they could not prevent or predict; they should not find themselves a victim of discrimination by health insurance companies.

Insurance coverage of ASD would not only provide a much needed service to those families burdened with the effects of a child with autism, but also save the state and taxpayers exponentially over the lifespan of those diagnosed with autism. Though there is no cure for ASD, this legislation would help significantly to treat those suffering from these disorders. In addition, a state that covers ASD treatment will be desirable to those in the field and will bring jobs and professionals in the field to Alaska. It will also allow more flexibility for families with autistic children who wish to move to Alaska to do so. Prompt passage of this legislation would allow the state to reap the health and economic benefits that would result from being among the first states to cover ASD.

I respectfully ask for your careful consideration and support of HB 187.

Arguments in Support of Private Insurance Coverage of Autism-Related Services

AUTISM SPEAKS™
It's time to listen.

Eight arguments defining the
justification for autism insurance
reform legislation

February 2009

Contents

Page 4	Executive Summary
Page 5	About Autism Speaks
Page 5	About Autism
<i>Arguments in favor of a legislative mandate for coverage of autism:</i>	
Page 6	<i>Argument 1:</i> Mandated private health insurance coverage will provide services that are desperately needed by children with autism, who have greater health care needs than children without autism.
Page 7	<i>Argument 2:</i> Treatments for autism are difficult to access, often inadequate, and frequently delayed. Denied coverage by private group health insurance companies, parents are often forced either to pay out-of-pocket or forego the treatments their children need.
Page 10	<i>Argument 3:</i> Mandated private insurance coverage will bring effective autism services within the reach of children who need them. The efficacy of Applied Behavior Analysis (ABA), the centerpiece of this legislative mandate's benefits, has been established repeatedly.
Page 12	<i>Argument 4:</i> Government and scientific organizations have endorsed Applied Behavior Analysis (ABA) and other structured behavioral therapies.
Page 14	<i>Argument 5:</i> To combat the difficulty many families face in accessing Applied Behavior Analysis (ABA) and other structured behavioral treatments through public insurance, three states have passed autism insurance mandates that specifically require private insurance companies to provide coverage of these therapies, thus creating a public-private partnership for the provision of care.
Page 16	<i>Argument 6:</i> The costs of this insurance reform are small and will have very little impact on the cost of health insurance premiums for the individual consumer.

- Page 17** ***Argument 7:*** By improving outcomes for children with autism, mandated private insurance coverage will decrease the lifetime costs of treating and providing services and will actually result in an overall cost savings in the long-run.
- Page 19** ***Argument 8:*** Without passage of legislation requiring private health insurance coverage for autism, the costs associated with autism will continue not only to affect families, but will have far reaching social effects as well.
- Page 21** **Conclusion**
- Page 22** **References**

Executive Summary

Autism is a complex neurobiological disorder and is the fastest-growing serious developmental disability in the U.S. The Centers for Disease Control estimates that 1 in 150 children have autism. These children require extensive services from medical professionals. Early intervention is critical to gain maximum benefit from existing therapies. Most private health insurance plans do not provide coverage for Applied Behavioral Analysis (ABA) and other autism-related services.

This document contains eight arguments in favor of requiring private health insurance policies to cover the diagnosis and treatment of autism spectrum disorders for individuals under the age of 21. These arguments are based on epidemiological, social, and economic studies of the children and families affected by autism and prove the significant long-term financial and public health benefits of this requirement.

We first point out that children with autism have substantial medical needs and have a difficult time accessing necessary treatments through Medicaid and private health insurance. Most insurance policies contain specific exclusions for autism. This is a hardship for many families, who are often forced to cope with delayed, inadequate, and fragmented care through the Medicaid system. Often, families must pay for costly treatments out-of-pocket or forego them.

We then review some of the many studies and reports that document the effectiveness of intensive behavioral therapies in the treatment of autism. An autism insurance mandate should specifically target coverage of Applied Behavior Analysis (ABA) and other structured behavioral therapies, which are the most effective forms of treatment and have the best outcomes, both in human costs and in long-term economic benefits.

We then comment on the experiences of several states with insurance reform. Their experiences show that the policy holder costs resulting from the passage of legislation requiring comprehensive autism services have been relatively small.

Finally, we point out that the mandate offers hope that children with autism will need less intensive care in the future. They will, in short, have a better chance at a normal life.

What is Autism Speaks?

Autism Speaks is an organization dedicated to increasing awareness of autism spectrum disorders, to funding research into the causes, prevention, treatments, and cure for autism, and to advocating for the needs of affected families. The organization was founded in February 2005 by Suzanne and Bob Wright, the grandparents of a child with autism. Bob Wright is Vice Chairman, General Electric, and served as chief executive officer of NBC for more than twenty years. Autism Speaks has merged with both the National Alliance for Autism Research (NAAR) and Cure Autism Now (CAN), bringing together the nation's three leading autism advocacy organizations.

What is Autism?

Autism is a complex neurobiological disorder that typically lasts throughout a person's lifetime. It is part of a group of disorders known as autism spectrum disorders (ASD). Today, 1 in 150 individuals is diagnosed with ASD, making it more common than pediatric cancer, diabetes, and AIDS combined. It occurs in all racial, ethnic, and social groups and is four times more likely to strike boys than girls. Autism impairs a person's ability to communicate and relate to others. It is also associated with rigid routines and repetitive behaviors, such as obsessively arranging objects or following very specific routines. Symptoms can range from very mild to quite severe.

Argument 1: Mandated private health insurance coverage will provide services that are desperately needed by children with autism, who have greater health care needs than children without autism.

Children with autism have a tremendous need for services from trained medical professionals. These children are at risk for a range of other medical conditions, including behavioral or conduct problems, attention-deficit disorder or attention-deficit/hyperactivity disorder, stuttering, stammering, and other speech problems, depression and anxiety problems, bone, joint, or muscle problems, ear infections, hearing and vision problems, allergies (especially food allergies), and frequent and severe headaches. These problems greatly affect their overall health and their need for and use of health care services.

A recent study by James G. Guerney and others¹ highlights the broad medical needs of children with autism. Using data from the National Survey of Children's Health, Guerney showed that relative to children without autism, children with autism require more services for physical, occupational, and speech therapy. Children with autism are also much more likely to have poor health, to require medically necessary care for behavioral problems, and to be using medications. As evidenced in the chart below taken from the study, parents of children with autism were more likely to report the presence of a variety of concurrent medical conditions and the need for more visits to a range of medical service providers than parents of children without autism.

Table 2. Parental Description of Health Status and Therapy and Services Use, From the National Survey of Children's Health

Variable	Children With Autism (n = 324 000)*	Children Without Autism (n = 11 100 000)*	OR (95% CI)†
Would you say your child's health is:			
Excellent	33.7	60.2	1.0
Very good	22.9	22.5	1.0 (1.2-2.7)
Good	32.7	12.0	5.0 (3.0-8.1)
Fair	7.4	2.0	7.7 (4.3-13.6)
Poor	3.5	0.4	21.1 (0.3-47.0)
Does the child use more medical care, mental health, or educational services than is usual for most children of the same age?	88.6	11.8	32.8 (24.7-40.4)
Is the child limited or prevented in the ability to do the things most children the same age can do?	68.6	5.7	35.2 (24.9-52.6)
Does the child get special therapy, such as physical, occupational, or speech therapy?	76.0	6.3	44.4 (21.9-61.8)
Does the child have any emotional, developmental, or behavioral problem for which she needs treatment or counseling?	75.4	7.0	35.0 (23.7-53.1)
Does the child currently need or use medicine prescribed by a doctor, other than vitamins?	54.7	21.1	3.5 (2.6-4.7)
If yes, is this for a condition expected to last 12 mo or longer?	31.4	14.5	11.0 (1.6-76.0)

Abbreviations: CI, confidence interval; OR, odds ratio.

*Data are given as the percentage of each group and are based on sampling fractions and weighted extrapolation from parent report of 453 children with autism and 84 797 children without autism.

†Data are adjusted for sex, primary language, age, insurance, and household educational attainment.

This reform of private health insurance coverage will address the broad medical needs of children with autism. It will ensure that these children will receive the full range of therapies necessary to ameliorate their condition.

Argument 2: Treatments for autism are difficult to access, often inadequate, and frequently delayed. Denied coverage by private group health insurance companies, parents are often forced either to pay out-of-pocket or forego the treatments their children need.

Children with autism face barriers in accessing early intensive behavioral treatments and other therapies. According to the Institute of Medicine, the term “access” is defined as “the timely use of personal health services to achieve the best possible health outcomes.”² For a child with autism, lack of access to services can be the cause of inconsistent and uncoordinated care. Children with autism often experience barriers to access with even greater frequency than children with other special health care needs. In fact, one study found that “over one-third of the children with autism were reported to have experienced an access problem with respect to specialty care from a medical doctor in the preceding 12 months.”³ A study of the Tennessee Medicaid system, TennCare, found that for children with autism, “the rate of service use was only one tenth what should be expected based on prevalence rates.” The chart below illustrates these results and the significantly lower rates of service access for children with autism.

Fig. 1. Estimated incidence rates vs. service rates of autism spectrum disorders (ASDs) in TennCare for children ages 0-17 years, by quarter.

Within the Medicaid system, the amount of public money spent for services for developmental disabilities including autism is now eight times the rate of spending just a few decades ago.⁴ Medicaid accounts for 75% of all funding for services for the developmentally disabled, making it the largest single public payer of behavioral health services.⁵ Children with disabilities comprise a significant portion (15%) of all Medicaid recipients, and an even more significant portion (31%) of disabled children use the Medicaid system as their primary insurer.

Medicaid suffers from very low reimbursement rates that make it difficult for many locations to retain service providers. Moreover, services that can be accessed through the Medicaid system are often inadequate at meeting the specific needs of a child with autism. The system operates as a short-term service provider, tending to push children through treatment as quickly as possible. The success of the Applied Behavior Analysis, however, depends in part, on the amount of time the child with autism spends with the provider of the therapy.⁶

The failings of Medicaid point to the importance of the private health care system in providing services to children with autism. But nationwide there are very few private insurance companies or other employee benefit plans that cover Applied Behavior Analysis and other behavioral therapies. Most insurance companies designate autism as a diagnostic exclusion, "meaning that any services rendered explicitly for the treatment of autism are not covered by the plan, even if those services would be covered if used to treat a different condition."⁷ A 2002 study by Pamela B. Peele and others of 128 behavioral health plans administered by one of two large managed behavioral health organizations found that all the plans had some type of limit on benefits for behavioral therapies – over half of the plans had limits on the number of annual outpatient sessions and 65 percent of the plans imposed limits on the number of inpatient days covered per year.⁸

Families that refuse to allow their children to suffer through the inadequate Medicaid system and are denied coverage by their private health insurance carriers often end up paying for therapies out of their own pockets. For these families, the financial burden is immense. Without the negotiating powers of an insurance company behind them, out-of-pocket prices are extremely high. Parents can often spend upwards of \$50,000 per year on autism-related therapies, often being forced to wager their own futures and the futures of their non-autistic children to pay for necessary autism-related therapies. Children whose parents cannot afford to pay for behavioral and other therapies and who cannot access adequate therapies through the Medicaid system simply go without these interventions.

Argument 3: Mandated private insurance coverage will bring effective autism services within the reach of the children who need them. The efficacy of Applied Behavior Analysis (ABA), the centerpiece of this legislative mandate's benefits, has been established repeatedly.

Private health insurance coverage of autism services will allow children with autism to access Applied Behavior Analysis (ABA), a proven treatment for their condition. Several studies have shown that as many as 47 percent of the children that undergo early intensive behavioral therapies achieve higher education placement and increased IQ levels. A significant portion of children who receive ABA are placed into mainstream educational settings. Children who begin their treatment with minimal IQ levels end treatment with substantially higher levels of intellectual functioning. These results have been shown to last well beyond the end of treatment. As such, the effectiveness of ABA therapy has allowed many children to forego costly intensive special education in the future.

Lovaas:

The most famous study of the effectiveness of behavioral modification treatments was conducted in 1987 by O. Ivar Lovaas.⁹ Lovaas's study showed that when compared with other treatment programs that provide minimal therapy, Applied Behavior Analysis is extremely effective in helping many children struggling with autism, providing gained capacity for intellectual functioning and allowing a child to progress educationally.

Lovaas conducted his study of the effectiveness of behavioral modification treatments on very young children affected by autism. For his study, Lovaas split his 38 subjects into two groups: 19 subjects were put into an intensive-treatment experimental group that received more than 40 hours of one-to-one treatment per week, and 19 subjects were placed in a minimal-treatment control group that received 10 hours or less of one-to-one treatment per week. Both groups were identical at intake in terms of intellectual functioning abilities, and both received their assigned treatment for 2 or more years.

Upon follow-up at age 7, the experimental group attained significantly higher results on education placement and IQ levels than the control group. According to the results of Lovaas's study, the 19-subject experimental group showed nine children (47%) who successfully passed through normal first grade in a public school and obtained an average or above average score on IQ tests.

McEachin:

Lovaas's landmark 1987 study was followed in 1993 by another study of these same 38 subjects. The objective of John J. McEachin's study was to discover the long-term effects of Lovaas's early intensive behavioral treatment and to find out if the results of the experimental group were preserved over time.¹⁰

For this study, Lovaas's original subjects were evaluated at a mean age of eleven-and-a-half years. The study was presented in two parts: the first examined whether the experimental group had maintained its treatment gains, the second part focused on the nine subjects who had achieved the greatest gain in the original study and examined the extent to which they "could be considered free of autistic symptomology."

McEachin's follow-up resulted in findings in three different categories: school placement, intellectual functioning, and presence of adaptive and maladaptive behaviors. In terms of class placement, the study found that "the proportion of experimental subjects in regular classes did not change from the age 7 evaluation (9 of 19, or 47%). In the control group, none of the 19 children were in a regular class, as had been true at the age 7 evaluation." (McEachin, *supra* note 10) In terms of intellectual functioning, the study found that "the experimental group at follow-up had a significantly higher mean IQ than did the control group... indicating that the experimental group had maintained its gains in intellectual functioning between age 7 and the time of the current evaluation." Finally, in terms of presence of adaptive and maladaptive behaviors, "the findings indicate that the experimental group showed more adaptive behaviors and fewer maladaptive behaviors than did the control group." (McEachin, *supra* note 10)

Based on these findings, the effectiveness of ABA and other structured behavioral programs, as provided by the proposed benefit, would be experienced in the short-term as well as the long-term.

Argument 4: Government and scientific organizations have endorsed Applied Behavior Analysis (ABA) and other structured behavioral therapies.

ABA is the treatment of choice for autism. Its efficacy has been recognized in a number of prominent reports, including the following:

- ❖ **The 2001 U.S. Surgeon General's Report on Mental Health**, which states, "Among the many methods available for treatment and education of people with autism, applied behavior analysis (ABA) has become widely accepted as an effective treatment. Thirty years of research demonstrated the efficacy of applied behavioral methods in reducing inappropriate behavior and in increasing communication, learning, and appropriate social behavior."¹¹
- ❖ **The New York State Department of Health** assessed interventions for children ages 0-3 with autism, and recommended that "behavioral interventions for reducing maladaptive behaviors be used for young children with autism when such behaviors interfere with the child's learning or socialization or present a hazard to the child or others."¹²
- ❖ **The Maine Administrators of Services for Children with Disabilities** notes in their report that "There is a wealth of validated and peer-reviewed studies supporting the efficacy of ABA methods to improve and sustain socially significant behaviors in every domain, in individuals with autism. Importantly, results reported include 'meaningful' outcomes such as increased social skills, communication skills academic performance, and overall cognitive functioning. These reflect clinically-significant quality of life improvements. While studies varied as to the magnitude of gains, all have demonstrated long term retention of gains made."¹³
- ❖ **The National Institute of Mental Health** reports, "The basic research done by Ivar Lovaas and his colleagues at the University of California, Los Angeles, calling for an intensive, one-on-one child-teacher interaction for 40 hours a week, laid a foundation for other educators and researchers in the search for further effective early interventions to help those with ASD attain their potential. The goal of behavioral management is to reinforce desirable behaviors and reduce undesirable ones."¹⁴
- ❖ **The National Institute of Child Health and Human Development** lists Applied Behavior Analysis among the recommended treatment methods for Autism Spectrum Disorders.¹⁵
- ❖ **The National Research Council's** 2001 report on Educating Children with Autism acknowledged, "There is now a large body of empirical support for more contemporary behavioral approaches using naturalistic teaching methods that demonstrate efficacy for teaching not only speech and language, but also communication."¹⁶

- ❖ **The Association for Science in Autism Treatment** recommends ABA-based therapies, stating, “ABA is an effective intervention for many individuals with autism spectrum disorders.”¹⁷

Argument 5: To combat the difficulty many families face in accessing Applied Behavior Analysis (ABA) and other structured behavioral treatments through public insurance, three states have passed autism insurance mandates that specifically require private insurance companies to provide coverage of these therapies, thus creating a public-private partnership for the provision of care.

While there are several states that have passed autism specific private insurance mandates, very few states specifically mandate coverage for ABA and other structured behavioral therapy programs. Without coverage of these crucial, medically necessary, evidence based therapies, the effectiveness of most mandates is severely diminished. For this reason, we have concluded that only the following states have passed autism insurance legislation:

South Carolina:

Senate Bill 20, better known as Ryan's Law, was passed by both the South Carolina House of Representatives and Senate on May 31, 2007.¹⁸ The bill was then vetoed by Governor Mark Sanford on June 6. On June 7, the bill was brought back to the House and Senate floors, and unanimous votes in both chambers overrode the Governor's veto. This law goes into effect in July 2008.

Coverage Includes: Treatments, including behavioral therapies, which are prescribed by the individual's treating medical doctor in accordance with a treatment plan.

Age Range: An individual must be diagnosed with autistic spectrum disorder at age eight or younger. The coverage must be provided to any eligible person less than sixteen years of age.

Dollar Cap: Coverage for behavioral therapy is subject to a \$50,000 maximum benefit per year.

Texas:

On June 15, 2007, Texas enacted House Bill 1919, effective September 1, 2007.¹⁹ While the Texas bill limits the ages for children who can benefit from coverage, it goes further than some other states in spelling out exactly what kinds of services are covered. The bill's text specifically cites which kinds of autism-related services are examples of treatments that must be covered.

Coverage Includes: Evaluation and assessment services, A BA, behavior training and behavior management, speech therapy, occupational therapy, physical therapy, medication or nutritional supplements used to address symptoms of autism spectrum disorder.

Age Range: An individual must be between ages three and five to receive this

coverage.

Dollar Cap: Same as afforded to physical illnesses

Indiana:

In 2001, the Indiana enacted House Bill 1122, requiring insurers that issue accident and sickness insurance policies on an individual basis to provide coverage for the treatment of autism spectrum disorders.²⁰

Coverage Includes: Treatment that is prescribed by the insured's treating physician in accordance with a treatment plan. The statute thus allows many different professionally accepted therapies, such as ABA, speech therapy, occupational therapy, physical therapy, and medications to address symptoms of autism.

Age Range: All ages are allowed coverage

Dollar Cap: Same as afforded to physical illnesses

Argument 6: The costs of the proposed benefit are small and will have very little impact on the cost of health insurance premiums for the individual consumer.

Earlier this year, The Council for Affordable Health Insurance, a research and advocacy association of insurance carriers, released its annual report on state health insurance mandates, *Health Insurance Mandates in the States 2007*.²¹ The report defined a mandate as “a requirement that an insurance company or health plan cover (or offer coverage for) common – but sometimes not so common – health care providers, benefits and patient populations.” (Bunce, *supra* note 21) Using this definition, the report identified legislative mandates for autism benefits in ten states: Colorado, Delaware, Georgia, Iowa, Indiana (which, as we have noted, provides comprehensive benefits), Kentucky, Maryland, New Jersey, New York, and Tennessee. The report assessed the incremental cost of state mandated benefits for autism in these ten states *as less than one percent*.

The Council’s modest estimate of incremental premium costs is consistent with state government estimates across the country. Prior to enactment of Indiana’s sweeping legislation, the Indiana Legislative Services Agency estimated additional premium costs as ranging from \$.44 per contract per month to \$1.67 per contract per month.²² In vetoing Ryan’s Law in South Carolina, Governor Mark Sanford estimated that the bill, with its \$50,000 maximum yearly benefit for behavioral therapy, would add \$48 annually to insurance policies.²³ And in Wisconsin, where pending Assembly Bill 417 would provide the same broad coverage Indiana’s statute mandates, the Department of Administration estimates policy increments of between \$3.45 and \$4.10 per month – about the same as Governor Sanford’s estimate for Ryan’s Law.²⁴

The cost estimates for Indiana, South Carolina, and Wisconsin – all states whose legislation allows a maximum benefit that can be considered high – suggest that an average autism insurance coverage mandate will cost approximately \$50 annually per policy holder. For only a modest effect on premium cost, this insurance reform holds the promise of significantly improving the lives of thousands of children.

Argument 7: By improving outcomes for children with autism, mandated private insurance coverage will decrease the lifetime costs of treating and providing services and will actually result in an overall cost savings in the long-run.

A 1998 study by John W. Jacobson and others titled, *Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case*, examined the cost/benefit relationship of early intensive behavioral intervention treatment at varying levels of treatment success.²⁵ The study used estimates of costs for early intensive behavioral interventions (EIBI) from childhood (age three) through adulthood (age 55) based on prices in the Commonwealth of Pennsylvania and compared these costs with the expected amount of income the child would earn later in life to arrive at an estimated cost savings.

With a success rate of 47 percent for early intensive behavioral intervention therapy (as determined by Lovaas), Jacobson's study found that cost savings per child served are estimated to be from \$2,439,710 to \$2,816,535 to age 55.

Table 6. Financial benefits at different levels of effectiveness, age 3–55 years, per 100 children served and per child served—Pennsylvania model

	<i>Inflated total</i>	<i>1996 \$ total</i>	<i>Inflated/ student</i>	<i>1996 \$/ student</i>

50 norm range vs. partial effect	240,213,000	91,636,000	4,804,260	1,832,720
40 partial vs. minimal effect	41,440,520	16,562,360	1,036,013	414,059
10 minimal effect	0	0	0	0
Net	281,653,520	108,198,360	2,816,535	1,081,984

Note: This table presents a comparison of financial benefits at different levels or rates of achievement of normal skills or functioning achieved by EIBI, for people ages 3–55 years, ranging from 20% of children achieving normal range skills or functioning (an assumed minimal rate) to 50% of children. At each level of effectiveness, differing rates of normal range functioning, as well as partial benefit are estimated. Costs are shown in terms of the aggregate of 100 children served, and averages per person served, with inflation and in 1996 dollars.

The study also accounts for the initial investment in early intervention by concluding that, with an initial annual cost of \$32,820, the total cost-benefit savings of EIBI services per

child with autism or PDD for ages 3-55 years averages from \$1,686,061 to \$2,816,535 with inflation.

According to a 2005 Government Accounting Office (GAO) report, "the average per pupil expenditure for educating a child with autism was more than \$18,000 in the 1999-2000 school year. This amount was almost three times the average per pupil expenditure of educating a child who does not receive any special education services."²⁶ With this insurance reform in place, more children would be able to access the early intervention services they need. That investment will, in the long run pay benefits, both economic and social, to the greater population.

Argument 8: Without passage of legislation requiring private health insurance coverage for autism, the costs associated with autism will continue not only to affect families, but will have far reaching social effects as well.

The cost of autism is borne by everyone. Michael L. Ganz's study of the societal costs of autism, *The Lifetime Distribution of the Incremental Societal Costs of Autism*, examined how the large financial burdens of autism affect not only families with an autistic child but society in general.²⁷

Ganz broke down the costs associated with autism into two distinct categories, direct costs and indirect costs. Direct costs include direct medical costs, such as physician, outpatient, clinic services, dental care, prescription medications, complementary and alternative therapies, behavioral therapies, hospital and emergency services, allied health, equipment and supplies, home health, and medically related travel, as well as direct nonmedical costs, such as child care, adult care, respite and family care, home and care modification, special education, and supported employment. Indirect costs include productivity losses for people with autism (calculated by combining standard average work-life expectancies for all men and women with average income and benefits and estimated age and sex specific labor force participation rates).

According to Ganz's study, direct medical costs reach their maximum during the first five years of life, averaging around \$35,000. As the child ages, direct medical costs begin to decline substantially and continue to decline through the end of life to around \$1,000. Ganz goes on to report, "The large direct medical costs early in life are driven primarily by behavioral therapies that cost around \$32,000 during the first 5-year age group and decline from about \$4,000 in the 8-to 12-year age group to around \$1,250 for the 18- to 22-year age group." (Ganz, *supra* note 27)

In terms of direct medical costs "the typical American spends about \$317,000 over his or her lifetime in direct medical costs, incurring 60% of those costs after the age of 65 years. In contrast, people with autism incur about \$306,000 in incremental direct medical costs, which suggests that people with autism spend twice as much as the typical American over their lifetimes and spend 60% of those incremental direct medical costs after age 21 years." (Ganz, *supra* note 27)²⁷

The study also found the indirect costs of autism to be significant as well. While in the first 22 years of life, indirect costs are mostly associated with lost productivity for the parents of a child with autism, the costs from age 23 on are associated with lost productivity of the actual individual with autism as depicted in the chart below taken from the study. The impact of this lost productivity can have enormous ramifications for the tax base of an entire society and the future of the older generation as their children with autism transition into adult care.

Table 4. Age-Specific and Lifetime per Capita Incremental Societal Indirect Costs of Autism*

Age Group, y	Average per Capita Cost per Age Group	
	Direct Indirect	Net Direct Indirect
3-7	0	49056
8-12	0	41138
13-17	0	38453
18-22	0	36020
23-27	32,703	19036
28-32	32,620	3136
33-37	30,852	0
38-42	29,132	0
43-47	26,600	0
48-52	24,534	0
53-57	17,776	0
58-62	0	0
63-66	0	0
Total lifetime costs	221,072	104,526

*Costs presented in 2012 dollars. Costs for age 4 years and older are discounted to 2009 dollars using a discount rate of 3%. Life expectancy for men is age 65 years and for women, age 65 years.

Ganz posited that direct medical costs “combined with very limited to non-existent income for their adult children with autism combined with potentially lower levels of savings because of decreased income and benefits while employed, may create a large financial burden affecting not only those families but potentially society in general.”(Ganz, *supra* note 27)

Without the help of private insurance coverage, families affected by autism may never be able to pull their heads above water and provide their children with the medically necessary, evidence-based treatments that they need. It is to the advantage of these families, to the 1 in 150 children affected by autism, and to all of society that private health insurance coverage is provided for these services.

Conclusion

A legislative mandate for coverage of autism asks private insurance companies to make a limited, but significant, contribution to help pay for medically necessary, evidence-based treatments that have been established to be of the greatest impact in fighting this terrible disorder.

Unbelievably, it is not uncommon for insurance carriers to have line-item exclusions for treatment of individuals diagnosed with autism. Across the nation, children with autism are routinely denied insurance benefits for treatment of their disorder. We believe that private insurance companies must contribute their fair share and partner in the financial burdens with these families.

With every new child diagnosed with autism costing an estimated \$3 million over his or her lifetime, the current practices are both unfair and not cost effective in the long run for states and their citizens. Autism Speaks is confident that many more state governments will recognize the significant long-term cost benefits found in these legislative measures, will do what is right for their constituents, and will pass legislation requiring private health insurance coverage of autism services.

DSM-IV Definitions

Defining Autism Pervasive Developmental Disorder Learn the Signs Related Disorders
Facts and Statistics

Pervasive Development Disorders (PDD)

The term "PDD" is widely used by professionals to refer to children with autism and related disorders; however, there is a great deal of disagreement and confusion among professionals concerning the PDD label. Diagnosis of PDD, including autism or any other developmental disability, is based upon the *Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition (DSM-IV)*, published by the American Psychiatric Association (Washington, DC, 1994), and is the main diagnostic reference of mental health professionals in the U.S.

According to the *DSM-IV*, the term "PDD" is not a specific diagnosis, but an umbrella term under which the specific diagnoses are defined.

Diagnostic labels are used to indicate commonalities among individuals. The key defining symptom of autism that differentiates it from other syndromes and/or conditions is substantial impairment in social interaction (Frith, 1989). The diagnosis of autism indicates that qualitative impairments in communication, social skills, and range of interests and activities exist. As no medical tests can be performed to indicate the presence of autism or any other PDD, the diagnosis is based upon the presence or absence of specific behaviors. For example, a child may be diagnosed as having PDD-NOS if he or she has some behaviors that are seen in autism, but does not meet the full criteria for having autism. **Most importantly, whether a child is diagnosed with a PDD (like autism) or a PDD-NOS, his/her treatment will be similar.**

Autism is a spectrum disorder, with symptoms ranging from mild to severe. As a spectrum disorder, the level of developmental delay is unique to each individual. If a diagnosis of PDD-NOS is made, rather than autism, the diagnosticians should clearly specify the behaviors present. Evaluation reports are more useful if they are specific and become more helpful for parents and professionals in later years when reevaluations are conducted.

Ideally, a multidisciplinary team of professionals should evaluate a child suspected of having autism. The team may include, but may not be limited to, a psychologist or psychiatrist, a speech pathologist and other medical professionals, including a developmental pediatrician and/or neurologist. Parents and teachers should also be included, as they have important information to share when determining a child's diagnosis.

In the end, parents should be more concerned that their child find the appropriate educational treatment based on their needs, rather than spending too much effort to find the perfect diagnostic label. Most often, programs designed specifically for children with autism will produce greater benefits, while the use of the general PDD label can prevent children from obtaining services relative to their needs.

Also within each diagnosis is the ASA Panel of Professional Advisors' recommended definition of the autism spectrum and related syndromes and conditions, which is not to be used for research purposes but rather for defining the demographics of the ASA's membership. The ASA is not attempting to represent individuals with related syndromes or conditions who do not also have autism, but rather those where autism is present in related syndromes and conditions, and where autism is the defining syndrome (e.g., autism-Asperger's). The rationale for this position is due to the unique service needs that are imperative for individuals with autism that may not

be required of the cohort disability. (See also "General Standards of Care for Individuals with Autism Throughout the Lifespan.")

- Autistic Disorder (299.00 DSM-IV)
- Asperger's Disorder (299.80 DSM-IV)
- Rett's Disorder (299.80 DSM-IV)
- Childhood Disintegrative Disorder (299.10 DSM-IV)
- PDD-NOS (299.80 DSM-IV)

Autistic Disorder (299.00 DSM-IV)

The central features of Autistic Disorder are the presence of markedly abnormal or impaired development in social interaction and communication, and a markedly restricted repertoire of activity and interest. The manifestations of this disorder vary greatly depending on the developmental level and chronological age of the individual. Autistic Disorder is sometimes referred to as Early Infantile Autism, Childhood Autism, or Kanner's Autism (page 66).

A. A total of six (or more) items from (1), (2), and (3), with at least two from (1), and one each from (2) and (3):

1. Qualitative impairment in social interaction, as manifested by at least two of the following:
 - Marked impairment in the use of multiple nonverbal behaviors such as eye to-eye gaze, facial expression, body postures, and gestures to regulate social interaction .
 - Failure to develop peer relationships appropriate to developmental level
 - A lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest)
 - Lack of social or emotional reciprocity
2. Qualitative impairments in communication as manifested by at least one of the following:
 - Delay in, or total lack of, the development of spoken language (not accompanied by an attempt to compensate through alternative modes of communication such as gestures or mime)
 - In individuals with adequate speech, marked impairment in the ability to initiate or sustain a conversation with others
 - Stereotyped and repetitive use of language or idiosyncratic language
 - Lack of varied, spontaneous make-believe play or social imitative play appropriate to developmental level
3. Restricted repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:
 - Encompassing preoccupation with one or more stereotyped patterns of interest that is abnormal either in intensity or focus
 - Apparently inflexible adherence to specific, nonfunctional routines or rituals
 - Stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole-body movements)
 - Persistent preoccupation with parts of object

B. Delays or abnormal functioning in at least one of the following areas, with onset prior to age 3 years:

- Social interaction
- Language as used in social communication

- Symbolic or imaginative play

C. The disturbance is not better accounted for by Rett's Disorder or Childhood Disintegrative Disorder.

[Back to Top]

Asperger's Disorder (299.80 DSM-IV)

The essential features of Asperger's Disorder are severe and sustained impairment in social interaction and the development of restricted, repetitive patterns of behavior, interest, and activity. The disturbance must clinically show significant impairment in social, occupational, and other important areas of functioning. In contrast to Autistic Disorder, there are no clinically significant delays in language. In addition there are no clinically significant delays in cognitive development or in the development of age-appropriate self-help skills, adaptive behavior, and curiosity about the environment in childhood.

A. Qualitative impairment in social interaction, as manifested by at least two of the following:

- Marked impairment in the use of multiple nonverbal behaviors such as eye-to-eye gaze, facial expression, body postures, and gestures to regulate social interaction
- Failure to develop peer relationships appropriate to developmental level
- A lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest to other people)
- Lack of social or emotional reciprocity

B. Restricted repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:

- Encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus
- Apparently inflexible adherence to specific, non-functional routines or rituals
- Stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole-body movements)
- Persistent preoccupation with parts of objects

C. The disturbance causes clinically significant impairment in social, occupational, or other important areas of functioning.

D. There is no clinically significant general delay in language (e.g., single words used by age 2 years, communicative phrases used by age 3 years)

E. There is no clinically significant delay in cognitive development or in the development of age-appropriate self-help skills, adaptive behavior (other than in social interaction), and curiosity about the environment in childhood.

F. Criteria are not met for another specific Pervasive Developmental Disorder or Schizophrenia.

[Back to Top]

Rett's Disorder (299.80 DSM-IV)

The essential feature of Rett's Disorder is the development of multiple specific deficits following a period of normal functioning after birth. There is a loss of previously acquired purposeful hand skills before subsequent development of characteristic hand movement resembling hand wringing or hand washing. Interest in the social environment diminishes in the first few years after the onset of the disorder. There is also significant impairment in expressive and receptive language development with severe psychomotor retardation. (Page 71)

A. All of the following:

- Apparently normal prenatal and prenatal development
- Apparently normal psychomotor development through the first 5 months after birth
- Normal head circumference at birth

B. Onset of all of the following after the period of normal development:

- Deceleration of head growth between ages 5 and 48 months
- Loss of previously acquired purposeful hand skills between ages 5 and 30 months with the subsequent development of stereotyped hand movements (e.g., hand-wringing or hand washing)
- Loss of social engagement early in the course (although often social interaction develops later)
- Appearance of poorly coordinated gait or trunk movements
- Severely impaired expressive and receptive language development with severe psychomotor retardation

[[Back to Top](#)]

Childhood Disintegrative Disorder (299.10 DSM-IV)

The central feature of Childhood Disintegrative Disorder is a marked regression in multiple areas of functioning following a period of at least two years of apparently normal development. After the first two years of life, the child has a clinically significant loss of previously acquired skills in at least two of the following areas: expressive or receptive language; social skills or adaptive behavior; bowel or bladder control; or play or motor skills. Individuals with this disorder exhibit the social and communicative deficits and behavioral features generally observed in Autistic Disorder, as there is qualitative impairment in social interaction, communication, and restrictive, repetitive and stereotyped patterns of behavior, interests, and activities. (Page 73)

A. Apparently normal development for at least the first 2 years after birth as manifested by the presence of age-appropriate verbal and nonverbal communication, social relationships, play, and adaptive behavior.

B. Clinically significant loss of previously acquired skills (before age 10 years) in at least two of the following areas:

- Expressive or receptive language
- Social skills or adaptive behavior

- Bowel or bladder control
- Play
- Motor skills

C. Abnormalities of functioning in at least two of the following areas:

- Qualitative impairment in social interaction (e.g., impairment in nonverbal behaviors, failure to develop peer relationships, lack of social or emotional reciprocity)
- Qualitative impairments in communication (e.g., delay or lack of spoken language, inability to initiate or sustain a conversation, stereotyped and repetitive use of language, lack of varied make-believe play)
- Restricted, repetitive, and stereotyped patterns of behavior, interests, and activities, including motor stereotypes and mannerisms

D. The disturbance is not better accounted for by another specific Pervasive Developmental Disorder or by Schizophrenia.

[\[Back to Top\]](#)

PDD-NOS (299.80 DSM-IV)

The essential features of PDD-NOS are severe and pervasive impairment in the development of reciprocal social interaction or verbal and nonverbal communication skills; and stereotyped behaviors, interests, and activities. The criteria for Autistic Disorder are not met because of late age onset; atypical and/or sub-threshold symptomatology are present. (Page 77-78)

This category should be used when there is a severe and pervasive impairment in the development of reciprocal social interaction or verbal and nonverbal communication skills, or when stereotyped behavior, interests, and activities are present, but the criteria are not met for a specific Pervasive Developmental Disorder, Schizophrenia, Schizotypal Personality Disorder, or Avoidant Personality Disorder. For example, this category includes "atypical autism"-- presentations that do not meet the criteria for Autistic Disorder because of late age of onset, atypical symptomatology, or sub-threshold symptomatology, or all of these.

Biosketch

Gina Green received a PhD in Psychology (Analysis of Behavior) from Utah State University in 1986 following undergraduate and master's degree studies at Michigan State University. She has been a faculty member in Behavior Analysis and Therapy at Southern Illinois University; Director of Research at the New England Center for Children in Southborough, Massachusetts; Associate Scientist at the E.K. Shriver Center for Mental Retardation in Waltham, Massachusetts; and Research Associate Professor of Psychiatry and Pediatrics, University of Massachusetts Medical School. Dr. Green is currently the Executive Director of the Association of Professional Behavior Analysts, a consultant in private practice in San Diego, a lecturer in Special Education at San Diego State University, and an Adjunct Professor in the Department of Behavior Analysis, University of North Texas. She has authored numerous publications on the treatment of individuals with developmental disabilities and brain injuries, as well as the experimental analysis of behavior. Dr. Green co-edited the books *Behavioral Intervention for Young Children with Autism* and *Making a Difference: Behavioral Intervention for Autism*. She serves or has served on the editorial boards of several professional journals in developmental disabilities and behavior analysis. Dr. Green also serves on the Autism Advisory Group of the Cambridge Center for Behavioral Studies and the advisory boards of several autism programs and organizations. She is a Board Certified Behavior Analyst, former president of the Association for Behavior Analysis and the California Association for Behavior Analysis, a former member of the Board of Directors of the Behavior Analyst Certification Board, a founding Director of the Association of Professional Behavior Analysts, and a Fellow of the American Psychological Association and the Council for Scientific Medicine and Mental Health. *Psychology Today* named her "Mental Health Professional of the Year" in 2000. In 2005 she received an honorary Doctor of Science degree from The Queen's University of Belfast, Northern Ireland for her work in autism. Dr. Green lectures and consults widely on autism and related disorders, behavioral research, and effective interventions for people with disabilities.

Gina Green, PhD

San Diego, CA 92119

September 2, 2008

The Honorable S. Ward Casscells, MD
Assistant Secretary of Defense for Health Affairs
1200 Defense Pentagon, Room 3E1082
Washington, DC 20301-1200
Via FAX: 703-697-4197

Dear Dr. Casscells:

As a long-time autism researcher and practitioner, I am writing to offer some information in support of your efforts to make effective treatment more widely and easily accessible to military children with autism spectrum disorders (ASD). In addition to having worked in this field for more than three decades, it has been my privilege over the past couple of years to work with some extraordinary military families who are advocating for coverage of effective treatment for ASD by TRICARE. They have taught me a great deal and have won my everlasting admiration, so I am grateful to have this opportunity to help them by providing expert opinion on the efficacy and medical necessity of applied behavior analysis (ABA) treatment for ASD.

As you know, ASDs are neurodevelopmental conditions that affect virtually all aspects of everyday functioning to some degree. Difficulties are typically seen in communication, social interaction, intellectual functioning, play and leisure skills, academics, and self-care skills. Many individuals with ASD also exhibit behavior disorders that interfere with their acquisition of useful skills and put them and others at risk of physical harm. Without effective intervention to help them build the skills required for everyday living and to reduce problem behaviors, many people with ASD suffer needless injuries and illnesses, and require extensive – and expensive – specialized services throughout the lifespan. That takes an enormous toll on their families, on healthcare and human service systems, and on society as a whole. Fortunately, research has shown that much of that toll can be alleviated for people with ASD who receive competently delivered applied behavior analysis (ABA) intervention.

Behavior analysis is a natural science approach to understanding how behavior interacts with environmental variables. In this scientific discipline, “behavior” means anything done by living organisms (not just misbehavior), and “environment” includes all types of physical and social events that might change or be changed by an individual’s behavior. Like many other sciences, behavior

analysis has conceptual, experimental, and applied branches. The basic science focuses on discovering principles (that is, general laws) about how behavior works, or how learning takes place. For example, one principle of behavior analysis is positive reinforcement: When a behavior is followed by a consequence that is valued by the individual, that behavior is likely to be repeated in the future. Applied behavior analysis (ABA) is the use of the principles and methods derived from research to bring about meaningful changes in socially important behaviors. The applied component of the field was originally created by blending the experimental analysis of behavior – the basic science – with research on human development. Through nearly five decades of laboratory and field research, the discipline of behavior analysis has developed many techniques for increasing useful behaviors and reducing those that may be harmful or that interfere with learning. Some of the many areas in which this science has been applied fruitfully include developmental disabilities, education, brain and spinal cord injury rehabilitation, communication disorders, public health, substance abuse, business and industry, safety, child abuse and neglect, parenting, gerontology, and of course, ASD.

Numerous reviews of scientific research have identified ABA as a proven, safe, and effective approach to ASD intervention. Several of those reviews have cited the hundreds of published studies documenting the efficacy of a variety of ABA techniques for increasing a wide array of specific skills and decreasing a wide array of problem behaviors in people with ASD of all ages. In addition to those focused interventions, comprehensive, intensive early intervention programs using combinations of many ABA techniques have been shown to produce large improvements in multiple skill domains in many young children with ASD, more modest but still clinically important improvements in many other children. Those effects have been obtained when ABA intervention was designed and overseen by qualified professional behavior analysts. Among those who have recognized competently delivered ABA as an evidence-based approach to ASD intervention are the U.S. Surgeon General, New York State Department of Health, U.S. Department of Defense, American Academy of Pediatrics, Association for Science in Autism Treatment, and Autism Speaks.

I understand that in the course of deliberations about TRICARE policies, questions have arisen about the medical necessity of ABA intervention for ASD and whether that intervention is special education. I hope the following points of information will help ease concerns you and others may have about those issues.

ABA is medically necessary treatment for ASD

- Unfortunately, many people with ASD engage in behaviors that jeopardize their safety and health, such as self-injury, pica (ingesting inedible items), elopement (running away), flopping (throwing themselves on the ground), aggression, sleep disorders, and severely restricted eating. Several studies have found that such behaviors lead to disproportionate numbers of emergency room visits, hospitalizations, and prescriptions of psychotropic drugs for people with ASD, with the associated high costs. Extensive

research by behavior analysts has shown that those behaviors are often learned, and are triggered and reinforced by environmental events. Behavior analysis methods have proved effective not only for identifying those environmental events, but also for reducing problem behaviors and developing appropriate alternative behaviors, such as requesting help with a task instead of eloping or aggressing, eating a healthy diet, and sleeping through the night.

- Although some drugs can reduce some of the problem behaviors just mentioned, relatively few psychotropic medications have been tested adequately with children with ASD. Further, as the American Academy of Pediatrics noted recently, no drugs ameliorate the core symptoms of ASD, and many drugs that are prescribed for problem behaviors have negative side effects. For example, the only drug that has been approved by the FDA to date for the treatment of ASD – risperidone -- has been shown to reduce irritable and agitated behavior. But risperidone is not 100% effective, and its negative side effects include incontinence and weight gain, which increases the risk of diabetes and other health problems. ABA methods, on the other hand, can effectively reduce problem behaviors without adverse physical side effects.
- The behavioral excesses and deficits exhibited by people with ASD often hamper the delivery of health care services to this population. Communication difficulties and fearful responses to unfamiliar situations, for example, can make routine medical and dental checkups major ordeals for people with ASD and their families. Studies have shown that with ABA intervention, people with ASD can learn to communicate and cooperate with health care professionals, to comply with medical and dental care routines, and to undergo medical procedures like scans and EEGs.
- In a related vein, a variety of ABA techniques have proved effective for building self-care, hygiene, and personal safety skills in people with ASD, thus enhancing their health and reducing their risk of injury.
- Many people with ASD have difficulty recognizing and responding appropriately to situations that put them at risk of harm. Research has shown that ABA methods are effective for teaching people with ASD to be aware of and to avoid potentially hazardous situations, to seek help when necessary, and to communicate essential information to individuals who can assist them.
- In sum, ABA intervention for ASD is similar to certain treatments that are commonly provided to children and adults with other neurological disorders to develop or restore independent functioning. Those treatments are covered under many health insurance plans. With competently delivered ABA intervention, many people with ASD can enjoy safe and healthy lives. The earlier a child with ASD receives effective intervention, the more likely she is

to achieve large improvements in multiple skill areas, and the less likely it is that health-threatening problem behaviors will develop. Adolescents and adults with ASD can also benefit from ABA intervention. TRICARE insurance coverage to make this medically necessary treatment available to military children with ASD and their families will not only enhance the lives of those individuals, it will also reduce their need for health care services and the associated costs.

ABA is not special education

- Although ABA intervention methods are effective for building academic and other skills, and certainly could be used by properly trained teachers and other school personnel serving students with ASD, applied behavior analysis is increasingly recognized as a unique and distinct professional practice. In fact, in its 2007 report on autism, the U.S. Department of Defense described applied behavior analysis as an “emerging profession.” There is an accredited international certification program for practitioners, managed by the Behavior Analyst Certification Board (see www.BACB.com). Some Board Certified Behavior Analysts and Board Certified Assistant Behavior Analysts work in special education, but the BACB certification is not an education credential per se. University training in behavior analysis is provided in a wide range of academic departments (e.g., behavior analysis, psychology, human development, public health, criminal justice, education, special education). Unfortunately, however, most special education teacher certification programs provide little, if any, training in ABA; very few provide all of the didactic training and supervised practical experience that the discipline deems necessary to practice ABA at even a rudimentary level.
- ASDs affect multiple areas of functioning, not just the skill domains that are typically addressed by the education system. Further, schools typically serve students with ASD for just a few hours each weekday for 9 months of the year. As noted previously, many people with ASD have difficulties with eating, sleeping, self-care, and personal safety. Those difficulties are most salient – and are best addressed – in home and community settings. Indeed, the need for intervention to build crucial skills of all kinds and to reduce problem behaviors does not stop with the end of the school day, the school week, or the school year. Abundant research shows that in order to generalize learned skills, people with ASD need carefully planned, consistently delivered behavior analytic intervention throughout each day, 7 days a week, year around, in multiple environments. Behavior analysts have developed specific techniques for promoting skill generalization. Importantly, those techniques include training family members to prompt and reinforce functional skills and to manage problem behaviors in a variety of everyday settings. The education system unfortunately lacks the resources to provide that kind of intervention. Therefore, if the responsibility for treating ASD is placed entirely on the schools, most people with ASD will not receive effective treatment so will

require substantial and expensive health care and other services throughout their lives.

- To expand upon a previous point, ABA intervention for ASD parallels the intensive speech, occupational, and physical therapies that are provided to children and youths with other neurological disorders to build or rebuild communication, cognitive, self-care, academic, and other skills. Those therapies are often delivered in schools, yet they are not narrowly construed as "special education." On the contrary, they are deemed medically necessary, and are covered by most health insurance plans. ABA intervention should be granted the same status.

With effective treatment, military children and youths with ASD can lead happier and healthier lives than they would otherwise. ABA is an effective and safe treatment for ASD when it is designed and overseen by qualified professional behavior analysts. If this medically necessary treatment is delayed or is provided at suboptimal levels, the health and wellbeing of the child with ASD and his family will be affected negatively in both the short and the long run. Failure to cover ABA treatment under the basic TRICARE program will not only add to the already heavy burden carried by military families of children with ASD, it will also add to the costs of health care and other services for those military dependents for years to come. I urge you to head off those tragedies by correcting the Code of Federal Regulations and TRICARE policies to include coverage of ABA treatment for ASD.

Very respectfully,

Gina Green, PhD, BCBA

2

Applied behavior analysis

- Behavior (*not* "behavioral") analysis: a natural science approach to understanding and changing behavior; focus is on relations between behavior and environment
 - A scientific discipline with
 - Conceptual, experimental, and applied components
 - Unique research methodology
 - Professional journals and organizations
 - Professional credentialing program for practitioners
 - Managed by Behavior Analyst Certification Board (see www.BACB.com)
 - Accredited by National Commission for Certifying Agencies
- Applied behavior analysis (ABA): Application of scientific principles of behavior discovered through basic research (e.g., reinforcement) to improve socially significant behavior to a meaningful degree
 - *Many* applications in addition to autism
 - Based on the work of many researchers and practitioners

Copyright Gina Green 2009

3

ABA

- An approach comprising many evidence-based techniques or procedures for changing behavior
- Effective for building skills and reducing problematic behaviors in people of all ages, with and without disabilities
- Stresses positive reinforcement and scientific demonstrations of effectiveness
- Highly individualized
- Flexible and dynamic; intervention is adjusted continuously based on data
- Continuously evolving

Copyright Gina Green 2009

4

Behavior analysis research methods

- Direct observation and measurement of behavior, and single-case research designs
 - Intensive study of individual behavior interacting with environmental variables over time under control and treatment conditions
- Akin to methods used in other natural sciences, and by some medical researchers
- Focus is on *clinically important changes in individual behavior over time*, not statistical comparisons of group average scores
- Included in several protocols for developing evidence-based practice guidelines for behavioral interventions (e.g., American Psychological Association, National Association of School Psychologists) and for interventions for autism (e.g., New York State Department of Health Early Intervention Program, National Autism Center's National Standards Project, California Department of Developmental Services ASD Guidelines Project).

Copyright Gina Green 2009

5

ABA for autism: Research on focused interventions

- Hundreds of published studies document effectiveness of many ABA techniques for developing many important skills in people with autism *of all ages* (e.g., Matson et al., 1996; New York State Department of Health, 1999; Wolery, Barton, & Hine, 2005; *Journal of Applied Behavior Analysis*):
 - Learning to learn: looking, listening, imitating, following instructions, discriminating and matching stimuli, etc.
 - Communication: verbal and nonverbal; comprehension and production; from simple to complex
 - Social : simple reciprocal exchanges, playing with peers, sharing, expressing emotions, empathizing, dramatic play, etc.
 - Self-care: hygiene, personal safety, community living, dental and healthcare routines, etc.
 - Academics
 - Motor and leisure
 - Vocational
- Hundreds more document effectiveness of ABA methods for reducing problem behaviors (e.g., see Campbell, 2003)

Copyright Gina Green 2009

6

Early intensive ABA for autism: Treatment model

- *Early*: generally, children enter treatment before age 6
- *Intensive*: 25-40 hrs/wk, year around, 1- 4 yrs
- *Comprehensive*:
 - Addresses skills in all domains -- "learning to learn," communication, social, self-care (e.g., safety, hygiene, eating, sleeping), cognitive, preacademic, play -- broken down into small components or steps
 - Many evidence-based ABA techniques used to develop functional skills, reduce problem behaviors
- Usually started in home, but can be done in centers
- Highly individualized to child and family needs and characteristics
- Treatment program designed and overseen by professional behavior analyst with at least a master's degree and specific training in autism

Copyright Gina Green 2009

7

Early intensive ABA (cont'd)

- Each learner's strengths and weaknesses assessed by direct observation and measurement
- Each component skill developed via many carefully planned learning opportunities
 - in both structured and naturalistic situations
 - using written protocols
 - with lots of repetition and positive reinforcement
 - in 1-to1 format initially; gradually changed to small group
- Problem behaviors are not reinforced; appropriate alternative behaviors are
- Where possible, child makes gradual transition to regular preschool or elementary school program

Copyright Gina Green 2009

8

Early intensive ABA (cont'd)

- Behavior analyst
 - Designs treatment program (goals and objectives, intervention methods) in collaboration with parents and other team members
 - Trains parents and "tutors" or "therapists" to deliver most intervention, under close supervision
 - Reviews graphed data on every skill and problem behavior at least weekly, modifies intervention methods as needed
 - Determines when objectives have been obtained or need to be modified
- Treatment goal: help child develop skills that enable safe, successful, independent functioning, both in the short and the long run

Copyright Gina Green 2009

9

Research on early intensive ABA for autism

- Summaries that follow are drawn from published studies with
 - Treatment group that received ABA intervention *directed by qualified behavior analysts* and one or more comparison groups of similar children
 - Intensive ABA: 25 - 40 hrs/wk
 - Low-intensity ABA: less than 20 hrs/wk
 - Children in *all groups* had autism or PDD-NOS, average developmental rates of about .50 in most skill domains except motor skills pre-treatment
 - ABA intervention provided mainly by tutors, college students, paraprofessionals, and parents trained by the behavior analysts
 - Comparison groups received interventions (e.g., "eclectic" or mixed-method intervention, standard early intervention) from qualified professionals trained in autism

10

Research on early intensive ABA for autism

- Excluded: studies with other populations; single-group studies (e.g., Weiss, 1999); studies with "ABA" intervention directed by individuals with inadequate or unknown training in behavior analysis (e.g., Magiati, Charman, & Howlin, 2007; Sheinkopf & Siegel, 1998).
- Tables of effectiveness data show average gains [+] and losses [-] on standardized tests of developmental levels/cognitive skills, communication skills, social skills, and adaptive skills administered by independent evaluators in most studies
 - Several researchers also measured academic skills, educational placement, problem behaviors, autism characteristics, parental stress, etc. -- data not shown in tables

Between-groups studies of intensive ABA - UCLA model

Study	Group assignment	Tx Gp (Int ABA)	Comp Gp 1	Comp Gp 2

*Standard scores; NT = untestable

Main findings

- Professionally directed early intensive ABA (25-40 hrs/wk) produced larger improvements than typical EI/special ed, eclectic interventions, and low-intensity ABA in
 - Cognitive skills (full-scale and nonverbal IQ)
 - Communication skills (receptive and expressive)
 - Social skills
 - Play skills
 - Academic skills
 - Adaptive and self-care skills
 - Problem behaviors
 - Autism characteristics
 - Parental stress
- Just under 50% of children receiving early intensive ABA made large gains in multiple skill domains, achieved normal or near-normal functioning
 - ~ 40% made modest gains and ~10% made small gains as measured on standardized tests

Main findings

- Proportions of children who moved from delayed to normal range on IQ (all between-groups studies combined):
 - Intensive ABA: 61/133 = 46%
 - Typical special ed: 14/79 = 18%
 - Intensive eclectic: 4/28 = 14%
- Largest gains occurred when intervention was most intensive (≥ 30 hrs/wk)
- Parent-managed ABA (with consultation) produced mixed results

Copyright Gina Green 2009

19

Main findings

- Low-intensity ABA produced smaller gains than intensive ABA (not clinically significant), but larger than typical and eclectic intervention
- Other interventions produced negligible gains or losses in most studies
 - Eclectic intervention (mixture of developmental, TEACCH, sensory integration, speech therapy, PECS, and/or ABA methods) was largely ineffective *even when individualized and intensive*
 - *Intensity alone isn't sufficient; type of intervention matters*
- Several uncontrolled studies and case reports with objective measures corroborate effectiveness of early intensive ABA

20

Health insurance coverage of ABA treatment for autism: Rationale (Autism Speaks)

- Children with autism have greater health care needs than children without autism.
- Treatments are difficult to access, often inadequate and delayed; parents must pay out of pocket or children must go without needed treatment.
- Mandated insurance coverage will bring effective treatment to children who need it. ABA has proved effective.
- Several government and scientific organizations endorse ABA.
- Cost of insurance coverage of ABA is relatively small, will result in savings by improving outcomes for children and reducing lifetime cost of care.

Copyright Gina Green 2009

21

Health insurance coverage of ABA treatment for autism

- At least 20 self-insured companies provide ABA benefit, recognize Board Certified Behavior Analysts (BCBAs) as providers
 - Includes Microsoft, Home Depot, Intel, Cisco Systems, Eli Lilly, Mayo Clinic
- U.S. military's insurance (TRICARE) provides ABA benefit under a "demonstration program"
- Medicaid provides some coverage in some states, but typically inadequate for children to make meaningful improvements

Copyright Gina Green 2009

22

Health insurance coverage of ABA treatment for autism

- 8 states have legislation mandating private health insurance coverage of ABA
 - IN - dollar limits cannot be less favorable than those for physical illnesses
 - SC - up to \$50k per year through age 16
 - TX - up to \$50k per year, ages 3-6
 - FL - up to \$36k per year, \$200k lifetime
 - AZ - up to \$50k per year through age 8, \$25k per year ages 9-16
 - LA - up to \$36k per year, \$144k lifetime
 - PA - up to \$36k per year, no lifetime cap
 - IL - up to \$36k per year through age 21
 - Most place no limits on number of visits for ABA
- Bills planned for 26 states this year (see www.autismvotes.org)
- President-elect Obama has proposed federal mandate

Copyright Gina Green 2009

23

Summary and conclusions

- Contemporary ABA intervention for autism rests on more than 40 years of scientific research
 - At present, no other approach to autism intervention has comparable scientific support (Eikeseth, 2008; Myers et al/AAP, 2007; New York State Department of Health, 1999).
- Best available evidence indicates that *competently directed and delivered* early intensive ABA intervention is especially effective (Dawson, 2008; Eikeseth, 2008; Myers et al/AAP, 2007; New York State Department of Health, 1999; Rogers & Vismara, 2008; U.S. Department of Defense, 2007; U.S. Surgeon General, 1999).

Copyright Gina Green 2009

24

Summary and conclusions

- Estimated savings from investment in early intensive ABA:
 - At least \$2 million per individual in childhood and adult services costs combined [using 1996 Pennsylvania costs] (Jacobson, Mulick, & Green, 1998)
 - Millions in health care costs over the lifespan (e.g., Leslie & Martin, 2007; Mandell, 2007)
- Focused ABA interventions are also effective for building specific skills and reducing problem behaviors -- thereby reducing health care costs -- for people with autism of all ages

Mandates don't work against, but for, consumers

By Jeff Raymond

State view

March 13, 2009 04:30 pm

— It's practically an article of faith that mandates to cover specific conditions, drugs and treatments increase costs and lead to a greater number of uninsured.

What's often overlooked is that mandates may, in the long run, save money.

Oklahoma has required insurers to cover the cost of diabetic testing and treatment since 1996. The cost of covering diabetic supplies pales in comparison to the cost of caring for diabetics who haven't managed the condition.

Consider breast cancer: A mammogram costs \$50 to \$150. The average cost of breast cancer treatment is more than \$20,000, according to the National Cancer Institute. Catching tumors early saves considerable money later, not to mention women's lives.

In 2006, according to state Health Department data, 67.7 percent of Oklahoma women over age 40 reported having had a mammogram during the previous two years. In 1996, 59.5 percent reported having had a mammogram during previous two years. In 1988 the number was 42.9 percent.

Required coverage of mammograms has been on the books in Oklahoma since 1988.

The increase in mammography rates has come about because of many factors, including better education and increased availability. But we owe it to ourselves to consider the effect of requiring the procedure to be covered.

Oklahoma's mandate count, 36, falls in the middle. Requirements range from hearing aids to well child care. Interestingly, some states that have far more mandates have more affordable insurance and/or a lower rate of uninsured.

Opponents of mandates focus on their aggregate cost. Yet pinning down the cost of mandates is notoriously difficult. Estimates are unreliable, as the wildly varying estimates of the cost of autism coverage have shown. We should begin looking at mandates as a reflection on the high cost and disappointing quality of health care rather than their cause. If health insurance companies would serve policyholders rather than block the care they seek, average Oklahomans wouldn't seek redress through the legislative process.

Insurance companies' routine refusal to cover common-sense medical care, especially cost-saving preventative care, has led to mandates. It's time for Oklahomans to look at mandates as a way to improve health care for much less cost than ultimately caring for the sick.

The huge shift in political support for mental health parity illustrates this. Many researchers now accept that it's cheaper to treat someone for mental illness than suffer lost work and productivity.

The National Association of Health Underwriters claims the more groups demand specialized mandates, the more "the train gets a full head of steam" and can't be stopped. Disease- and condition-specific lobbies will queue up and demand coverage as well.

The organization slips into old scare tactics. With health care premiums for an Oklahoma family increasing by 62 percent from 2000-2007, requiring more in return isn't asking too much.

Because coming up quickly with tens of thousands of dollars is impossible for most of us, the end result of requiring insurance companies to do less is to shift the cost to taxpayers.

Opponents of mandates argue that nothing is free. They're right: Someone pays for health care. It's just a question of whom — taxpayers or insurance companies.

FOR IMMEDIATE RELEASE

AUTISM SPEAKS ENDORSES ALASKA AUTISM INSURANCE REFORM BILL

House Bill 187 Would End Health Care Discrimination Against Children with Autism by Requiring Coverage of Diagnosis and Treatment

Juneau, AK (March 19, 2009) – Autism Speaks, the nation's largest autism advocacy organization, today announced its support for House Bill 187, also known as the autism insurance reform bill. The legislation would require private health insurance companies to cover the diagnosis, testing and treatment of autism spectrum disorder (ASD). The maximum benefit would be \$36,000 per year.

Sponsored in the Alaska State House of Representatives by State Representative Pete Petersen (D-19) HB 187 includes coverage of Applied Behavior Analysis (ABA), an evidence-based, medically-necessary autism therapy.

"We applaud and thank Representative Petersen for his leadership on this issue of critical concern to thousands of Alaska families," said Elizabeth Emken, Autism Speaks Vice President of Government Relations. "Autism Speaks joins Alaska's autism community in calling on the legislature to pass HB 187 and join the growing number of states that have ended healthcare discrimination against children with autism."

Most states do not require private insurance companies to cover even essential autism treatments and services. In the absence of coverage, families often pay as much as they can out-of-pocket for services that can cost upwards of \$50,000 per year. In the process, many risk their homes and the educations of their unaffected children – essentially mortgaging their entire futures.

Eight states – Arizona, Florida, Louisiana, Illinois, Indiana, Pennsylvania, South Carolina and Texas -- have enacted autism insurance reform legislation. Several other state legislatures will vote on similar legislation during the current session.

To learn more about Autism Votes, an initiative of Autism Speaks focused on federal and state legislative advocacy, please visit www.autismvotes.org.

About Autism

Autism is a complex brain disorder that inhibits a person's ability to communicate and develop social relationships, and is often accompanied by behavioral challenges. Autism spectrum disorders are diagnosed in one in 150 children in the United States, affecting four times as many boys as girls. The prevalence of autism has increased tenfold in the last decade. The Centers for Disease Control and Prevention have called autism a national public health crisis whose cause and cure remain unknown.

About Autism Speaks

Autism Speaks is dedicated to increasing awareness of autism spectrum disorders, to funding research into the causes, prevention and treatments for autism, and to advocating for the needs of individuals with autism and their families. It was founded in February 2005 by Suzanne and Bob Wright, the grandparents of a child with autism. Bob Wright is Senior Advisor at Lee Equity Partners and served as vice chairman, General Electric, and chief executive officer of NBC and NBC Universal for more than twenty years. Autism Speaks merged with both the National Alliance for Autism Research (NAAR) and Cure Autism Now (CAN), bringing together the nation's three leading autism advocacy organizations. Background

Oliver Wyman Actuarial Consulting, Inc. (Oliver Wyman or We) has been engaged by Autism Speaks to develop a cost model in order to analyze and estimate the impact of mandated insurance benefits for Autism Spectrum Disorders (ASD) on insurance premiums. As part of this work, Oliver Wyman has developed a range of independent estimates of the impact on insurance premiums for the benefits mandated by Virginia HB 1588 offered January 14, 2009 which provides coverage for the diagnosis and treatment of autism spectrum disorder in individuals under the age of 21.

Oliver Wyman is a part of the Marsh & McLennan (MMC) family of companies. With over 60 members of the American Academy of Actuaries, Oliver Wyman is one of the largest actuarial practices in North America. Oliver Wyman's health practice, which has twelve credentialed actuaries, advises insurers, regulators, governments, interest groups, and others.

This report, along with its supporting analysis, was developed by Marc Lambright, a Principal and consulting health actuary in Oliver Wyman's Philadelphia office. Marc is a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries and is professionally qualified to analyze the cost impact of HB 1588 and provide the estimates shown in this report. As part of Oliver Wyman's quality assurance process, the underlying analysis and this report were independently peer reviewed by another credentialed Oliver Wyman actuary.

2

Scope and Limitations

The intent of this analysis is to provide a reasonable range of estimates for the insured costs of the mandated ASD benefits provided for in HB 1588 and the associated premium impact on the markets affected by HB 1588. This analysis makes no attempt to quantify potential offsetting cost savings associated with successful ASD treatment, nor does it include the any estimate of the potential reduction in other government expenditures associated with providing ASD services that might overlap with the benefits provided by this mandate. Therefore, the reader is cautioned that this report should only be considered a cost analysis, and not be misconstrued as a cost-benefit analysis when assessing the merit of HB 1588.

We note that cost estimates for autism mandates have varied widely. The JLARC analysis of the impact of Virginia HB 83 showed a range of per member per month (PMPM) group standard premium impact estimates made by 20 Virginia insurers that varied by a factor of 154¹. This variability of the cost estimates in the JLARC report is not entirely inconsistent with the variance in estimates for similar mandated autism benefits in other states. The reason for this variability is that the largest component of the increase in costs under the HB 1588 mandated ASD benefits is for Applied Behavior Analysis (“ABA”), which is almost universally excluded from health coverage, and therefore essentially no insured data exists for use in developing credible utilization and unit cost estimates for ABA.

¹ JLARC: *Evaluation of House Bill 83: Mandated Coverage of Autism Spectrum Disorders*. September 2008, p. 8.

The reader is cautioned that the ultimate cost of covering ABA benefits is uncertain; however, this analysis attempts to reflect the likely behavior of consumers, providers and insurers of ABA services in developing the assumptions underlying the cost estimates. Likewise, the additional costs for mandated medical services other than ABA are difficult to quantify. Insurance policies often cover some services for children diagnosed with an ASD, although the mandate could cause the costs for certain services to increase because ASD exclusions are common, and certain services that may have been denied or terminated following utilization review might be covered due to the mandate.

3

Description of Key HB 1588 Provisions and their Impact on Covered Benefits

Insurance Markets Covered by Mandate

Section F outlines which markets are excluded from the mandate, of particular note is F(iii) which notes the exclusion of *policies, contracts, or plans issued in the individual market or small group markets to employers with 25 or fewer employees*. In our modeling we are assuming that this means that the individual market would not be subject to this mandate, and that the statutory small group (2-50 employees) market would be covered by the mandate. Therefore, our analysis is based on the commercial insured market, which includes both the small group (2-50 employees) and large group (51+ employees) markets. We note that our estimates of the impact on premium are nearly identical for the large and small group markets.

Covered Benefits

The mandate provides *coverage for the diagnosis and treatment of autism spectrum disorder in individuals under the age of 21*. Treatment includes: (i) *habilitative or rehabilitative care*; (ii) *pharmacy care*; (iii) *psychiatric care*; (iv) *psychological care*; and (v) *therapeutic care*.

The definition of *habilitative or rehabilitative care* is especially important since it includes applied behavioral analysis (ABA). The coverage of ABA has the most significant impact on cost of any mandated service. ABA programs are marked by intensive therapy that may include 30-40 hours of therapy a week under the most intensive programs, though many programs would not utilize that level of resources. Key assumptions underlying our ABA cost estimates are outlined in Section 5.

Annual Maximum Benefit of \$36,000

The annual coverage maximum is important as it has the effect of capping costs for the heaviest users of ASD services. From a practical standpoint, this would generally apply to children whose therapy includes an intensive ABA program.

Medical Necessity and Treatment Review

The bill does allow for *undertaking of usual and customary procedures to determine the appropriateness of, and medical necessity for, treatment of autism spectrum disorder.*

This is important as insurers will develop protocols to review treatments and manage care which will limit unnecessary treatments if reviews are done appropriately.

Modeling Methodology

The following outlines the general modeling methodology used to develop the cost estimates. Estimates were developed both on a PMPM basis, and as a percentage of average annual premiums as shown in Section 6. Details of key assumptions are discussed in Section 5 and illustrated graphically in the exhibits shown in Appendix 1.

Modeling Perspective

In general, the model was developed to produce costs under the assumption that sufficient providers would be available to meet the demand for autism services, especially with regard to ABA services. It also assumes that there would be sufficient awareness of autism and motivation (primarily by parents) to seek treatment so that the diagnosis and treatment of ASDs would be more in line with the often cited CDC estimated prevalence of ASD of 1 in 150. We would expect that it would take at a minimum several years for both the supply of providers to meet the demand for mandated ASD services and for parents of autistic children to aggressively seek diagnosis and treatment of their children's disorders.

In spite of these real limitations that will likely limit short-term costs associated with mandated autism benefits, we feel that it is appropriate from a public policy perspective to look at the costs from a longer term perspective and assume that both awareness of ASDs will increase and that supply and demand for ASD services would eventually be in balance. We have developed our estimates with this in mind.

In the near term we would note that the supply of ABA service providers, specifically credentialed Board Certified Behavior Analysts (BCBAs) and Board Certified Associated Behavior Analysts (BCaBAs) would not be sufficient to meet the demand for ABA programs if ABA benefits are mandated. There are currently about 122² certified BCBAs and BCaBAs in Virginia, which translates to less than one therapist per 100 autistic

² BACB Certificant Registry: http://www.bacb.com/cues/frame_about.html, accessed January 2009.

children in Virginia assuming a 1 in 150 prevalence rate for autism. While it is true that not all autistic children will have an ABA program, it is also true that behavioral analysts provide services to individuals other than autistic children. It is reasonable to conclude that demand for ABA services, at least initially, would exceed supply should health care coverage similar to that mandated by HB 1588 become typical.

It is also instructive to look at some of the limited evidence available related to actual costs of ABA mandated benefits in other states. Aetna noted in December 2008 that it had tracked the cost of the autism mandate in Texas for its first year of existence and found that it increased costs for policyholders who filed autism-related claims by \$379 a month. A total of 235 policy holders had filed autism claims in the state as of the time the data was released. At that time, the company had not decided whether to pass those costs on to the policyholders because the cost of the mandate might change after the first year.³ While this is only first year experience for a single insurer, it illustrates that initial mandate costs are likely low. Aetna's Texas block of business is quite large (approximately \$1.5 - 2.0 billion in premium⁴), so the statistics provided indicate a mandate cost of less than 0.1% of premium.

General Modeling Process

The modeling process employed to develop our cost estimates was as follows:

1. Prevalence rates were developed so that overall ASD prevalence is equal to the CDC 1 in 150 ASD prevalence estimate for the United States.
2. Prevalence rates by diagnostic subtype (autistic disorder, PDD-NOS, Asperger's Syndrome) were estimated separately as diagnosis patterns and service utilization could reasonably be expected to vary by diagnostic subtype.
3. The percentage of children diagnosed by age for each diagnostic subtype was estimated so that the average age of diagnosis implicit in the modeling is consistent with publicly available age at diagnosis statistics⁵.
4. The percentage of diagnosed children who could be expected to have an ABA program was estimated for each age based on assumptions regarding how many children would start a program and typical program continuance.
5. A distribution of the number of annual hours for an ABA program was developed based on ABA provider input and an assumption that utilization review by insurers would impact utilization to some degree.
6. Based on the assumed treatment prevalence, likelihood of having an ABA program, assumed distribution of ABA program hours, and estimated ABA program cost per hour of therapy, ABA cost estimates by age were developed and adjusted to reflect the impact of the annual \$36,000 cap.

³ Lawmaker: Oklahoma autism bill has momentum. Associated Press. December 4, 2008. <http://newsok.com/article/3327594> accessed January 2009.

⁴ NAIC Annual Statements for 2007.

⁵ IAN database. <http://dashboard.ianexchange.org/StateStatsAdvanced.aspx?A1=VA&ADU=T>. Accessed January 2009.

7. Non-ABA costs were estimated based upon studies of medical costs for ASD children and judgment regarding the increase in costs that could be expected due to the mandated benefits.
8. Based on Census demographic data and the cost estimates for mandated ASD services by age as outlined in 1-7 above, an annual cost per covered individual was developed.
9. The cost of services was increased to reflect administrative and other insurer costs or profit charges.
10. The estimated size of the covered market was developed based on Census, Medical Expenditure Panel Survey (MEPS) enrollment and premium information for Virginia, and Kaiser Family Foundation coverage data. These assumptions are further documented in the following section.
11. The cost of the mandated services per covered person and as a percentage of premiums were calculated based on the model cost estimates and market data.

Summary of Key Assumptions

Key assumptions underlying the cost estimates for the mandated benefits are summarized in this section. Appendix 1 further illustrates these assumptions.

Treated Prevalence and Age at Diagnosis

Overall prevalence is based on a 2007 CDC⁶ study, with prevalence by diagnostic subtype estimated based on an academic study published in the American Journal of Psychiatry⁷.

As noted in the previous section, the percentage of children diagnosed by age for each diagnostic subtype was estimated so that the average age of diagnosis implicit in the modeling is consistent with publicly available age at diagnosis statistics.

The base model assumptions for Virginia are shown below:

<u>Diagnostic Subtype</u>	<u>Prevalence</u>	<u>Average Age at Diagnosis</u>
Autistic Disorder	1 in 450	3
PDD-NOS	1 in 300	3
Asperger's Syndrome	1 in 900	6
All ASD	1 in 150	

⁶ Centers for Disease Control. Morbidity and Mortality Weekly Report. February 9, 2007.

⁷ Fombonne, E. and S. Chakrabarti. American Journal of Psychiatry. June 2005.

ABA Program Utilization and Cost

ABA Program Utilization by Age

ABA programs require a significant commitment from affected children, as well as their families. It is likely that a significant number of ASD children will not have an ABA program regardless of the availability of a provider. For this reason, we have assumed that two-thirds of diagnosed children will begin an ABA program. ABA programs are generally geared towards addressing deficits in younger children and are generally not intended to be continued indefinitely. For this reason, we have assumed that no programs would terminate prior to school age, that a large percentage of ABA programs would terminate at ages six and seven when an autistic child could be expected to enter elementary school, and thereafter programs would terminate gradually until only a small percentage of children have ABA programs in their teenage years. Programs could be expected to terminate if a child has experienced sufficient progress so that a program is no longer necessary, or if the insurer or family sees no progress, as well as for other reasons.

The assumed percentage of children diagnosed with ASD that have an ABA program is shown in the table below:

% of Diagnosed Children with an ABA Program by Age	
6 and Under	66.7%
6	50.0%
7	33.3%
8	30.0%
9	26.7%
10	23.3%
11	20.0%
12	16.7%
13	13.3%
14	10.0%
15 and Over	6.7%

ABA Program Annual Number of Hours

In developing the assumed annual ABA program hours, we discussed typical ABA programming with ABA providers, and reviewed some benefit materials from one of the few large self-insured employers who offers ABA benefits. For three age bands, we developed a distribution of expected hours that resulted in the annual averages shown in the table below.

Average ABA Program Hours by Age	
Ages Under 8	1,509
Ages 8 to 12	781
Ages 13 to 20	401

The general assumption is that pre-school aged children will have programs for 20 to 40 hours a week, averaging about 30 hours a week. This time will be reduced by roughly half by age eight when children would be expected to be in school and the school system would be required to provide services during the school day, and then would be cut in half again at age 13 as the child ages and ABA programs would be expected to be less time consuming and address a smaller number of behavioral deficits.

Cost per Hour of ABA Service

In developing the costs per hour, we reviewed ABA program staffing information and ABA provider wage and overhead cost assumptions. We developed an average cost for the entire United States and then adjusted this for Virginia, based on Bureau of Labor Statistics⁸ health care wage data. The resulting average cost per hour of ABA therapy is \$45.45.

Other (than ABA) Medical Costs

Based on several studies⁹, we estimated that children with ASDs used approximately three times the non-inpatient medical services (other than ABA) under current benefit programs. It is also clear that the mandate would mean that services that an insurer could currently deny or exclude would now be covered. In our base estimate, we assumed that the mandate would result in additional insured medical costs equal to the current level of covered non-inpatient costs for services to children diagnosed with an ASD.

Administrative Costs

Typically, group medical claims costs could be expected to be 80 to 90% of premiums, meaning 10 to 20% of premiums are available for administration, profit, or other costs, often collectively referred to as "retention." We have estimated the incremental retention charge to be 15% of premium under our base cost assumption.

Virginia Market Data

The MEPS survey provides average premiums, enrollees, offer rates, take-up rates, and self-insured percentages by employer size for healthcare coverage sponsored by privately insured employers. From this data we can estimate the size of the privately insured small group, insured large group, and self-insured markets. State specific premium data for Virginia was available for 2006¹⁰, so we trended this based on average recent employer premium increases provided from the Kaiser Family Foundation HRET¹¹ survey to estimate the 2009 average annual premium per member necessary to compute the cost of mandated benefits as a percentage of annual premiums.

Cost Estimates

Base Cost Estimate

The table below summarizes the mandate costs and impact on small and large group premiums under the base assumptions outlined in Section 5. The base estimate is that the long-term cost of the mandated benefits provided by HB 1588 would be about 0.60% of insured premiums, though this cost would likely initially be lower in the years immediately following the passage of the mandate.

	Market		
	Small Group	Large Group	All
Covered Persons	649,000	1,061,000	1,710,000
Average Premium per Person	\$3,900	\$3,800	\$3,838
Annual Mandate Claim Cost per Covered Person	\$19.50	\$19.50	\$19.50
Claim Cost as a Percentage of Premium	0.50%	0.51%	0.51%
Estimated Premium Increase with Admin @ 15%	22.90	22.90	\$ 22.90
Premium Increase as a Percentage of Premium	0.59%	0.60%	0.60%

Scenario Estimates

As discussed in Section 1, very little insurance data exists that can be used to directly estimate the costs of ABA benefits mandated by HB 1588. This causes uncertainty in developing actuarial assumptions and cost estimates. Due to this uncertainty, it is useful to develop cost estimates for additional scenarios using more optimistic and pessimistic assumptions. A reasonable range of the long-term impact of the mandated HB 1588 benefits is that premiums would increase 0.45% to 0.75% with a \$36,000 annual benefit maximum, or cap. A reasonable estimate of the impact of mandated HB 1588 benefits assuming no annual cap is that premiums would increase 0.90%.

Letter of Endorsement -- HB 187

ASA strongly endorses Alaska House Bill 187 since this legislation offers clear and practical solutions that will enable Alaska families to have equal access to appropriate treatments and services that would be covered by private health insurance if it were not for the diagnosis of an autism spectrum disorder (ASD).

BACKGROUND

Autism is a complex neurodevelopmental disability that typically appears during the first two years of life and affects a person's ability to communicate and interact with others. ASA estimates the lifetime cost of care for an individual with autism at \$3.5 to \$4 million; with access to early diagnosis and intervention, these costs can be reduced by two-thirds. However, appropriate, effective and evidenced-based interventions are costly – upwards of \$50,000 a year – and frequently not covered by private health insurance plans. Many families simply cannot afford to give their children the treatments that could help affected individuals reach their fullest potential and enjoy a happy and productive life.

Although there is no known "cure", autism is treatable. According to the American Academy of Pediatrics (AAP), "early diagnosis resulting in early, appropriate, and consistent intervention" is "associated with improved long-term outcomes."

Autism Spectrum Disorder (ASD) includes three diagnoses as defined in the *Diagnostic and Statistical Manual (DSM IV)* of the American Psychiatric Association:

1. Autism: Difficulty in the developmental areas of communication, socialization and repetitive/restricted interests and behaviors.
2. Asperger's Syndrome: Similar characteristics to autism but do not have a significant delay in language.

3. Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS): This term is used when an individual displays developmental deficits but does not meet diagnostic criteria for the other two ASD diagnoses.

ASD is now the number one childhood developmental disability with 1 of every 150 children in the US being diagnosed (CDC 2007). 26,670 children born in the US this year will eventually be diagnosed with ASD (CDC, 2007), making the diagnoses more common than all types of pediatric cancer, AIDS, and diabetes combined. According to the American Academy of Pediatrics, 44% of primary care physicians reported that at least ten of their patients have ASD.

Males are four (4) times more likely to be diagnosed than females; in contrast, females are more likely to be severely impacted by autism when a diagnosis exists. Females are also more likely than males to have a co-diagnosis of mental retardation (58.2% and 41.8%, respectively [CDC, 2007]). Younger siblings of children diagnosed with an ASD are 20 times more likely to be diagnosed, resulting in families with up to five children known to be on the autism spectrum in the US. A recent study highlights the fact that relative to children without autism, children with autism are much more likely to have poor health, to require medically necessary care for behavioral problems, and to be using medications.

Societal Impact of ASD

ASD results in annual societal costs of \$35 billion per year, or over \$60,000 per person per year, for services, education and other publicly funded supports. (Ganz, 2006) Over the lifespan, the average societal cost of caring for one person with autism is \$3.2 million. (Harvard School of Public Health, 2006) Comprehensive intervention programs for preschool aged children with autism, including behavioral and speech therapies, may cost up to \$50,000 per year. (New York Times 2006) Comprehensive intervention programs for young children, including behavioral therapies, may cost up to \$100,000 per year.

Autism first became a special education classification under the Individuals with Disabilities Education Act (IDEA) in 1991. Between 1991 and 1999, the number of persons receiving special education services for autism increased 500% (CDC, 2007). In 2005, approximately 224,000 children were served under the autism classification in US schools. To describe the estimates of per pupil expenditures for educating children with autism, we reviewed data collected and analyzed by the Special Education Expenditure Project (SEEP). (GAO-05-220, Special Education Report to Congress 2005)

The average per pupil expenditure for educating a child with autism was estimated by SEEP to be over \$18,000 in the 1999-2000 school year, the most recent year for which data were available. This estimate was nearly three times the expenditure for a typical regular education student who did not receive special education services and was among the highest per pupil expenditures for school-age children receiving special

education services in public schools. In contrast, the cost of a typical child's education was \$5,000. (Senate Education Committee, 2006) Many, who are employed, tend to be underemployed in dead end or entry level positions. For the population with autism, the number of individuals unemployed has been estimated to be as high as 90% (New Jersey Autism Society). Without effective intervention, that means that of the 560,000 children currently living with autism, 504,000 may be unemployed in adulthood. This would obviously be a human tragedy.

Effective Treatment for ASD

Early Intervention

The CDC reports that "early identification and participation in intervention can improve the long term outcome for children with an ASD" (2007). The Harvard School of Public Health corroborates, writing that "improving behavioral and educational therapies for autistic children may not only lessen these costs but also improve quality of life" (Ganz, 2005).

The National Research Council report offered several key features of successful approaches to the education of children with autism, including early intervention soon after the diagnosis of autism, which can generally occur by the age of 3. The report also offered guidelines regarding educational objectives for children with autism, including the development of social skills and expressive and receptive language and communication skills. (GAO-05-220, Special Education Report to Congress 2005)

Despite the research supporting early intervention, the 2007 CDC study suggests a significant nationwide lag between the first sign of developmental delay and the receipt of an autism diagnosis and subsequent interventions, which may compromise children's potential progress, and increase their likelihood to require publicly funded supports over the lifetime. If such barriers can be eliminated, however, a child's prognosis improves dramatically. In many cases, by a certain age, children with an ASD diagnosis no longer require treatment, thereby reducing or eliminating associated costs to society.

Effective Therapeutic Interventions for ASD

While treatment plans for individuals with ASD are individually tailored to each person's unique needs according to the severity of their deficits and any co-occurring diagnoses, persons with ASD typically require a combination of medical, psychological, psychiatric, physical therapy (PT), occupational therapy (OT), speech therapy (ST), behavioral therapies (ABA) and other developmentally-based interventions. Individuals with ASDs should be engaged in functional and appropriate activities as much as possible. In 2001, the National Research Council Report recommended a minimum of 25 hours per week and the American Academy of Pediatrics recommends 20 hours or more of active engagement in evidence-based interventions. Behavioral therapy typically comprises the largest proportion of therapeutic hours, with children receiving between 10-35 hours per week in most cases. Other therapies, such as speech, PT, and OT, are generally

required for 1-2 hours per week per child. Michael L. Ganz's study of the societal costs of autism supports the fact that ASD treatment costs decline over time. According to Ganz, direct medical costs reach their maximum during the first five (5) years of life.

As the child ages, direct medical costs begin to decline substantially and continue to decline through the end of life. Ganz goes on to report, "The large direct medical costs early in life are driven primarily by behavioral therapies that cost [an average of] \$32,000 during the first 5-year age group and decline from about \$4,000 in the 8-to 12-year age group to around \$1,250 for the 18- to 22-year age group."

Behavioral Therapy

Behavioral therapies for ASD are derived from behavioral science, which is the examination of human and animal behavior using the principles of science, including observation, reproduction, testing, objectivity, etc. Behavioral therapy is also commonly known as, or otherwise includes, Lovaas therapy, early intensive behavioral intervention, applied behavior analysis (ABA), pivotal response treatment, or other similar terms.

ABA is the application of behavioral science in order to improve socially important behaviors and establish new skills. ABA-based procedures apply behavioral principles of skill development to increase or decrease a particular behavior, improve the quality of a behavior, stop an old behavior, or teach a new behavior.

Effective behavioral-based programs include intervention that is:

1. Implemented early (ideally, before school age)
2. Intensive with respect to the number of hours children are actively engaged
3. Provided in natural environments (i.e. home, school, community)
4. Actively involving of families.

Evidence Supporting Behavioral Therapy's Effectiveness with ASDs

Behavioral-based interventions are based upon decades of scientific investigation with individuals affected by a wide range of behavioral and developmental disorders, including autism. Specifically for children with autism, research demonstrates the efficacy of ABA in teaching complex communication, social, play, and self-help skills, and in reducing disruptive behaviors. The seminal article on this type of intervention was published by Ivar Lovaas at UCLA in 1987. This controlled, long-term study found that 47% of children with autism achieved normal intellectual educational functioning after treatment intensive behavioral treatment, compared to only 2% in the control group.

Since the Lovaas article was published, 20 years of research and over 500 studies continues to support the effectiveness of behavioral therapy for autism.

Lovaas's landmark 1987 study was followed in 1993 by another study of these same 38 subjects. The objective of John J. McEachin's study was to discover the long-term effects of Lovaas's early intensive behavioral treatment and to find out if the results of the experimental group were preserved over time. In terms of intellectual functioning, the study found that "the experimental group at follow-up had a significantly higher mean IQ than did the control group... indicating that the experimental group had maintained its gains in intellectual functioning between age 7 and the time of the current evaluation... [and] ... the experimental group showed more adaptive behaviors and fewer maladaptive behaviors than did the control group."

In another study, more than 50% of children with autism who participated in comprehensive treatment programs using ABA were successfully integrated into typical classrooms, with many requiring little ongoing treatment. (Harris and Handleman, 1994) Only four behavioral interventions are scientifically validated for the treatment of ASD, and all of these are derived from the principles of ABA, according to Simpson (2005).

Scientifically validated behavioral-based interventions for autism include:

1. Applied Behavior Analysis (ABA)
2. Discrete Trial Teaching (DTT)
3. Pivotal Response Treatment (PRT), and
4. Learning Experiences: An Alternative Program for Preschoolers & Parents (LEAP).

Reasons to support private health insurance coverage for ASD:

HB 187--Update of Coverage – less of a mandate

- It wasn't long ago that the medical community erroneously believed autism was untreatable. Today, research has proven otherwise. We are asking insurers to simply update their coverage to reflect the widely held belief in the scientific community that autism is treatable.

Reducing the financial burden on Alaskan Families

- Since insurance coverage is not available, families incur significant financial burdens to pay for necessary and appropriate services, sometimes as much as \$50,000 a year, if not more. No family can support this burden.
- In addition to the crushing financial burden placed on families affected by autism, the time, energy, stress and emotional commitment can become absolutely overwhelming and, if left unchecked, can adversely impact employment, health and the marriage.

Cost/Benefit Analysis

- Actuarial and economic studies done in Alaska and other State's indicate adding coverage would increase policy premium costs less than 1%
- A 1998 study by John W. Jacobson and others titled, *Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case*, examined the cost/benefit relationship of early intensive behavioral intervention treatment at varying levels of treatment success. The study used estimates of costs for early intensive behavioral interventions (EIBI) from childhood (age 3) through adulthood (age 55) based on prices in the Commonwealth of Pennsylvania and compared these costs with the expected amount of income the child would earn later in life to arrive at an estimated cost savings. The Jacobson's study found that cost savings per child served are estimated to be from \$2,439,710 to \$2,816,535 to age 55.
- The benefit to Alaskan taxpayers, families and the school system is clear—spend a little now or, spend a lot later.

Consequences for the Status Quo

Without treatment, the taxpayers of Alaska will certainly bear the enormous financial burden of a life-time of care for children who live a normal life span and often need round the clock care. In contrast, many children who receive effective, intensive and evidenced-based treatments require less support in school and go on to lead productive lives as taxpayers.

President Obama and Federal Policy

Autism is a National health care crisis. President Obama is committed to supporting Americans with ASDs, their families, and their communities. There are a few key elements to their support, which are as follows:

1. President Obama supports increased funding for autism research, treatment, screenings, public awareness, and support services. There must be research of the treatments for, and the causes of, ASD.
2. The Obama administration supports improving life-long services for people with ASD for treatments, interventions and services for both children and adults with ASD.
3. The Obama administration supports comprehensive autism services legislation, funding of the Combating Autism Act and working in a bi-partisan fashion with Congress, parents and ASD experts to determine how to further improve federal and state programs for ASD.
4. The Obama administration supports universal screening of all infants and re-screening for all two-year-olds, the age at which some conditions, including ASD, begin to appear. These screenings will be safe and secure, and available for

every American that wants them. Screening is essential so that disabilities can be identified early enough for those children and families to get the support and services they need.

Other States

- Ten (10) states specifically require insurers to provide coverage for the treatment of autism. Eight (8) states enacted such legislation during the 2007-2008 legislative sessions: Arizona, Connecticut, Florida, Illinois, Louisiana, Pennsylvania, South Carolina and Texas. Thirty-four (34) others have reform measures pending.

Thank you for your strong leadership. If I can be of further assistance, please feel free to contact me.

Sincerely,

Jeff Sell, Esq.
Vice President of Advocacy & Public Policy

ALTCS eligibility is determined according to a subjective determination of whether an individual is "at-risk for institutionalization." For autism, this criterion is not appropriate. The "PAS" tool, which ALTCS

administers during the screening process, is weighted to provide more emphasis on items such as feeding tubes; in fact, the tool provides ZERO points for a diagnosis of autism.

Approximately 50% of personal bankruptcy cases are due at least in part to medical costs. See "Too Great a Burden: Arizona's Families at Risk." Publication No. 07-112AZ. Families USA, December 2007.

The Honorable Pete Petersen
State Capitol Room 422
Juneau AK 99801-1182

Re: HB 187 Private Autism Insurance Coverage

Dear Representative Petersen,

The Governor's Council on Disabilities and Special Education appreciates your efforts to ensuring that children in Alaska who experience autism receive the supports they need to live productive lives. We wholeheartedly support HB 187, which mandates that private insurance companies cover autism spectrum disorders.

In Alaska today 1,512 children and young people have autism, of whom approximately 454 need significant clinical treatment. Thirty years of research demonstrates that with intensive early intervention, these children could gain a significant number of IQ points, and half of them could achieve normal functioning. With treatment, Alaska will see a savings of \$208,500 per capita in avoided special education costs and lifetime savings of \$1.08 million per capita. According to Michael Ganz, a Harvard economist, without treatment it is estimated it will cost the state \$3.2 million per capita. By requiring that private insurance policies include coverage for treating autism, we can help many children access the services they need and live more productive lives.

We appreciate your advocacy on behalf of Alaskan children with autism and look forward to continuing to work with you on this issue.

Respectfully,

A handwritten signature in black ink, appearing to read "Stacey Messerschmidt".

Subject: HB187

This letter is in support of HB 187.

As a pediatrician practicing in Anchorage for the past 33 years, I treat many children with Autism and I recognize the tremendous energy expended by these childrens' parents and the increased cost of medical care. I see HB 187 as a positive and needed approach and should facilitate the care for these children with very special needs.

BIOSKETCH

James N. Boudier graduated from The Pennsylvania State University with a Master of Public Administration, with course concentrations in budgeting, finance, and accounting. He is currently the Chief Operating Officer of The Vista School® and The Vista Foundation®, and serves as the Director of Collaboration and Development for the Central Pennsylvania Autism Regional Center. In 2004, he served as the Chairman of the Pennsylvania Autism Task Force's Funding Streams Subcommittee and was the principal author of the Subcommittee's *Final Recommendations*. He is also a principal author of Pennsylvania Act 62 of 2008 (House Bill 1150 of 2007) pertaining to private health insurance coverage for children with Autism Spectrum Disorders, which has become a national model for autism coverage across the United States. In 2007, Mr. Boudier developed an accurate cost model for estimating premium increases associated with mandating private insurance coverage for treating Autism Spectrum Disorders, which contributed to the Pennsylvania Health Care Cost Containment Council's finding that autism insurance coverage in Pennsylvania is cost effective. Since that time, he has completed cost analyses for autism insurance coverage legislation enacted in Pennsylvania, Louisiana, and Florida, has presented cost analysis testimony before legislative bodies in three states, and has also provided volunteer cost analysis services for autism insurance legislation pending in five other states. Mr. Boudier's work regarding the cost and benefit of private insurance coverage for autism diagnosis and treatment is published in the *Journal of Autism and Developmental Disorders* and the *Speaker's Journal* of the Pennsylvania House of Representatives.

Benefit-Cost Analysis of Alaska Insurance Coverage – H.B. 187

Jon Hockenyos
Resources for Hope

January 2010

Note: Pictures shown above were produced by children with autism, and are taken from the Autism Society website at <http://www.autism-society.org>

Executive Summary

- Although the Centers for Disease Control recently lowered the estimate of community prevalence of autism at 1 in 110 people, the actual rate of individuals who are treated is much lower. The assumption in this analysis relies on a midpoint estimate from an analysis conducted by Jim Boudier in March 2009 (Boudier analysis) of approximately 1 in 500 of the entire population (the equivalent 1 in 250 for eligible individuals covered by group insurance plans).
- Increased insurance premium costs associated with greater coverage under H.B. 187 were estimated at the midpoint by the Boudier analysis at 0.92 percent, the equivalent of \$3.60 per member per month.
- The majority of children with autism who receive appropriate intervention and treatment experience marked improvement – 47% recover “typical” function, 40% make significant improvement, and the remaining 13% make little progress.
- There are significant lifetime costs associated with autism related to direct medical expenses, direct non-medical expenses, and indirect expenses (lost productivity). These children and their lifetime costs can be divided into four distinct groups (“cohorts”):
 - Cohort 1: Children who receive treatment and recover to “typical” function = \$603,448
 - Cohort 2: Children who receive treatment and make significant improvement = \$1,926,790
 - Cohort 3: Children who receive treatment and make little progress = \$3,697,979
 - Cohort 4: Children who receive no treatment = \$3,439,065
- The blended weighted average cost of Cohorts 1, 2, and 3 (children who receive treatment) is \$1,535,074. This blended cost compared with the cost of Cohort 4 (children who receive no treatment) results in an overall benefit-cost ratio of 2.24.
- Under the midpoint assumptions, the Boudier analysis indicates that a total of 351 individuals will be covered by H.B. 187. The difference between the lifetime costs of children who receive no intervention (Cohort 4) and the blended weighted average of Cohorts 1-3 is \$1,903,991 per child. Multiplying these two figures together creates total social benefits in Alaska of \$667.7 million.

Benefit – Cost Analysis

Aside from moral and emotional concerns, policymakers are justified in asking what are the measurable longer-term costs and benefits associated with appropriate intervention to treat autism. Perhaps the most fundamental issue is related to outcomes – i.e., do children who receive appropriate treatment get better, and, if so, what does “getting better” actually entail? The results summarized in Chasson, et al. suggest that “getting better” is not only possible but likely and that the vast majority of children who receive appropriate intervention experience marked improvement.¹ In particular, the findings of Chasson and others indicate that approximately 47% of the children recover “typical” function; an additional 40% make “significant” improvement, although do not they do not reach “typical” function, and the remaining 13% make little progress. Clearly, this work provides strong justification for intervening as soon as possible.

A second question concerns the lifetime costs associated with autism. In April 2007, Ganz set forth his findings in describing “the age-specific and lifetime incremental societal costs of autism in the United States” (p. 343).² Ganz determined that the “lifetime per capita incremental societal cost of autism is \$3.2 million” and that “[l]ost productivity and adult care are the largest components of costs” (p. 343). These figures were expressed in \$2003; using the national Consumer Price Index, the figure rises to \$3.7 million in \$2008.

Based on the extant literature demonstrating the efficacy of behavioral interventions, we believe that the “lifetime per capita incremental societal cost of autism” can be mitigated substantially by services included in H.B. 187 pending before the Alaska State Legislature. In short, autism left untreated will result in unwelcome financial consequences for families with loved ones diagnosed with autism, public agencies, and society as a whole. The following outlines a methodology and findings that substantiate this claim.

Overall Cost-Benefit

Chasson and Ganz’s work can be adapted to calculate the overall cost benefit of appropriate intervention to treat autism. Ganz grouped costs into three broad categories: Direct Medical, Direct NonMedical, and Indirect. The items included in each category are as follows, along with the lifetime breakdown. Details as to the timing and level of annual costs are included in the Appendix.

Direct Medical:

- Physicians/dentists
- Pharmaceuticals
- Alternative therapies
- Behavioral interventions
- Emergency room/Hospital
- Home healthcare
- Travel

¹ Chasson, Gregory S., Harris, Gerald E., & Neely, Wendy J. (2007). “Cost Comparison of Early Intensive Behavioral Intervention and Special Education for Children with Autism.” *Journal of Child and Family Studies*. Vol 16, pp. 401-413.

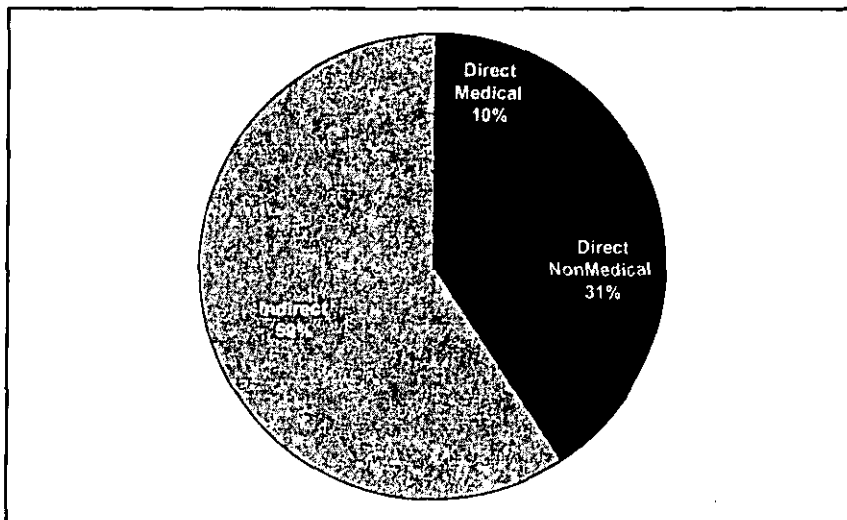

² Ganz, Michael L. (2007). “The Lifetime Incremental Societal Costs of Autism.” *Archives of Pediatric and Adolescent Medicine*. Vol. 161, Apr. 2007, pp. 343-349.

Direct Non-Medical:

- Childcare
- Adultcare
- Respite Care
- Home Improvement
- Special Education
- Supported Work
- Other

Indirect:

- Own lost productivity (wages)
- Caregiver/family lost productivity (wages)

Figure 1: Distribution of Lifetime Costs Associated With Autism

Source: Ganz, et al. and Hockenyos, et al.

The results from Chasson, et al. can be used to identify four cohorts within the overall autism designation: 1) those who recover to "Typical" status; 2) those who recover to "Improved" status; 3) those who see "Little Change" as a result of intervention; and 4) those who receive "No Intervention." The data from Ganz can be compared to the lifetime costs for each of these cohorts in turn. In essence, the cost of the direct medical interventions is the same for cohorts 1-3, although several interventions (such as behavioral) have been removed for cohort 4. The figure below shows the specific assumptions for each variable. A percent figure is shown in relation to the data outlined from Ganz in the Appendix; a figure of "<22" indicates 100% of Ganz until the age that precedes that figure (in this case, age 21). The impact is most pronounced in the timing, duration, and level of nonmedical and productivity (i.e., earnings) estimates, both for the child and his/her parents.

Table 1: Variable Adjustment Factors

	<i>Typical</i>	<i>Improved</i>	<i>Little Change</i>	<i>No Intervention</i>
	Cohort 1	Cohort 2	Cohort 3	Cohort 4
Direct Medical				
Physician/Dental	<22	<22	100%	100%
Drugs	<22	<22	100%	100%
Alt Therapies	<22	<22	100%	0%
Behavioral Therapies	100%	100%	100%	0%
Emergency/Hospital	<22	<22	100%	100%
Home Health	<22	<22	100%	0%
Travel	<22	<22	100%	0%
Direct Non-Medical				
Childcare	<8	<13	100%	100%
Adultcare	0%	0%	100%	100%
Respite Care	<8	<13	100%	100%
Home Improvement	<8	<13	100%	100%
Special Ed	<8	<13	100%	100%
Supported Work	0%	0%	100%	100%
Other	<8	<13	100%	100%
Indirect				
Own lost productivity	0%	at 50%	100%	100%
Other lost productivity	<8	at 75%	100%	100%

The results of this analysis are compelling. Cohort #1 had lifetime costs of \$603,448 (\$2008); Cohort #2 \$1,926,790; Cohort #3 \$3,697,979, and Cohort #4, the control group, \$3,439,065. Using the incidence percentages from Chasson, et al., the blended cost of Cohorts #1, #2, and #3 is \$1,535,074, creating a benefit-cost ratio of 2.24 as compared to Cohort #4, the control (No Intervention) group.

Table 2: Variation in Lifetime Costs by Cohort

	<i>Typical</i>	<i>Improved</i>	<i>Little Change</i>	<i>No Intervention</i>
	Cohort 1	Cohort 2	Cohort 3	Cohort 4
Lifetime Costs	\$603,448	\$1,926,790	\$3,697,979	\$3,439,065
Incidence	47%	40%	13%	
Blended Figure	\$283,621	\$770,716	\$480,737	\$1,545,074
Net Gain				\$1,903,991
Benefit-Cost Ratio				2.24

Application to Alaska

Selected information from the Boudier analysis is provided below. As shown, the midpoint estimates indicated that prevalence will vary by age band from 0.20 percent to 0.45 percent. Using these ranges in combination with an assumption of 55.9 percent Alaskan children being covered by group insurance and a specific estimate for state employees results in a mid-point figure of 351 total individuals who will receive coverage under H.B. 187. This yields a net benefit to society of \$667,708,307 (351 multiplied by the per capita net gain figure of \$1,903,991 above).

Table 3: Treated Prevalence Assumptions Under H.B. 187

Low Estimate

Focus on Education

Regarding the cost-benefit of intensive ABA services, two analyses, one completed in Pennsylvania and the other in Texas, examined the future cost savings to government units resulting from investment in intensive behavioral interventions for people with autism.

The first such work, completed by John W. Jacobson, James A. Mulick, and Gina Green in 1998, notes that an abundance of research demonstrates the efficacy of early, intensive behaviorally-based interventions to enable substantial numbers of children with autism to "attain intellectual, academic, communication, social, and daily living skills within the normal range" (p. 201).³ Using representative costs from Pennsylvania, including costs for special educational and adult special

³ Jacobson, John W., James A. Mulick, and Gina Green (1998). "Cost-Benefit Estimates for Early Intensive Behavioral Intervention for Young Children with Autism – General Model and Single State Case." *Behavioral Interventions* 13, 201-226.

needs services, they found that, "At varying rates of effectiveness and in constant dollars, this model estimates that cost savings range from \$187,000 to \$203,000 per child for ages 3-22 years, and from \$656,000 to \$1,082,000 per child for ages 3-55 years" (Jacobson, et al., p. 201).

More recently, Chasson, et al. compared the costs of early intensive behavioral intervention ("EIBI") and special education for children with autism.⁴ Alluding to recent comparison studies that strongly suggest that "eclectic" special education programs are materially ineffective for many children with autism, the authors note that the human cost of failing to provide EIBI services is considerable. Consistent with Jacobson's et al.'s findings, Chasson et al. found that "the state of Texas would save \$208,500 per child across eighteen years of education with EIBI" (p. 401). It is important to note that, without treatment, persons with autism will grow to become adults dependent on publicly-funded services for their lifespan. As Chasson et al. put it, "By implementing EIBI with all children with autism, as a way to prevent the need for special education, the investment not only produces a sizeable savings after 18 years, but it maximizes the likelihood that most of these children will return a profit long after maturation" (p. 410). "The bottom line," they write, "is that a simple change in policy could drastically improve functioning and quality of life for thousands of children with autism in Texas."

Conclusion

Appropriate interventions with autistic children create measurable results. Based on our analysis of the impact of Alaska H.B. 187, we anticipate that its passage and implementation would contribute to the creation of net social benefits to Alaska of approximately \$667.7 million.⁵ Separate analysis suggests that these benefits can be supported by an increase in insurance premiums of about 0.92 percent, a rate well in line with other states that will yield cost increases per member of \$3.60 monthly. Furthermore, given the abundance of evidence concerning the efficacy of Applied Behavior Analysis in treating the varied symptoms of autism, the State of Alaska can expect significant future savings in avoided special education and human services costs. Lastly, expected premium and cost impacts relating to H.B. 187 are consistent with similar legislation enacted or pending in at least 10 other states.

⁴ Chasson, Gregory S., Harris, Gerald E., & Neely, Wendy J. (2007). "Cost Comparison of Early Intensive Behavioral Intervention and Special Education for Children with Autism." *Journal of Child and Family Studies*, 16, 401-413.

⁵ It should be noted that the expenditures outlined to create the benefits described extend beyond that which likely will be covered entirely by insurance. However, the costs associated with many interventions, especially behavioral interventions, are large enough to be beyond the means of all but the most affluent families absent insurance coverage.

Exhibit A: Expenditures by Cohort

Cohort 1 - "Typical"

Direct Annual Medical Expenditures (\$2008)

Biosketch of Author

Jon Hockenyos has had a life-long interest in economics and public policy. Following stints as an aide to a member of the British Parliament and work on a Senatorial campaign in his home state of Illinois, Mr. Hockenyos founded TXP while attending the LBJ School of Public Affairs at the University of Texas at Austin in 1987. Since then, TXP has successfully completed hundreds of projects for a wide variety of clients, with a strong record of on-time, on-budget delivery.

Along with serving as President of the firm, Mr. Hockenyos makes numerous public presentations and speeches, has served as a resource witness on a variety of issues for a large number of city councils, state legislatures, and the U.S. Congress, and is widely quoted by both print and electronic media.

Mr. Hockenyos received a Bachelor of Arts in Philosophy from the University of Illinois and Masters of Public Affairs from the LBJ School of Public Affairs, where he has taught as an Adjunct Professor. He also served on Board of Directors for Capital Metro (the Austin area transit authority), is the current President of the Board of Directors of Hyde Park Theatre in Austin, and is a member of the Advisory Board of American Bank of Commerce. *Resources for Hope* is the recently founded not-for-profit created by Jon Hockenyos and Rebecca Yerly to provide analytical support to autism insurance reform.

Cost Benefit Analysis

Contents:

- Effect on Commercial Insurance Rates
- Effect on State Employee Claims if Legislature Extends Benefits to Dependents of State Workers
- Long-Term Considerations
- Other State Estimates

Summary of HB 187

Bill Summary:

- Requires private insurance coverage for diagnosis and treatment of autism, up to \$36,000 annually
- Provides for coverage of medically necessary, evidence-based services
 - Speech, Occupational, and Physical Therapy
 - Psychological and Psychiatric Care
 - Pharmacy Care
 - Rehabilitative Care, including Applied Behavior Analysis

3

Commercial Insurance Cost Estimate

Assumptions:

- Approximately 48,425 Alaskans between the ages of 2 and 20 are insured under plans subject to HB 187, based on census estimates, adjustments for uninsured, and for ERISA preemption
- A treated prevalence rate between 1 in 250 to 1 in 400, to reflect the number of children satisfying the diagnostic criteria for autism who will require and seek treatment once coverage is available
- Highest expenditures experienced during early childhood years, tapering downward as child approaches adulthood

4

Commercial Insurance Cost Estimate

Assumptions (cont'd):

- 85% Medical Loss Ratio (Industry Standard) to convert claims increase to premium revenue requirement
- Estimated premium base of \$345,975,000 for 2009, based on 2008 Report of the Alaska Division of Insurance
- Average Annual Individual Policy cost of \$4,683 and Family Policy cost of \$12,351 (Kaiser Family Foundation)
- An adequate provider network will be in place on the legislation's effective date

5

How Many?

Eligible Beneficiaries

Total Aged 2-20 Yrs (Census '06 Est.)	190,947
% with Group Health Insurance	55.9%
Total Group Insured Aged 2-20	106,664
% Non-ERISA Plans (MEPS)	45.4%
Total Non-ERISA Aged 2-20	48,425

6

How Many?

Treated Prevalence Assumptions

- Prevalence children w/ autism seeking and requiring significant levels of treatment
 - Shimabukuru et al. (2008): 1 in 526
 - Leslie et al. (2007): 1 in 520
 - Liptak et al. (2006): 1 in 476
 - Mandell et al. (2006): 1 in 500
- Based on literature, 1 in 500 (0.20%) of children with autism seek and require significant levels of treatment
 - This statistic has remained stable since 1999
- For purposes of this cost analysis, I have assumed a treated prevalence ranging from 1 in 250 to 1 in 400

7

How Much?

Low Estimate (Treated Prevalence 1 in 400):

Age Band	# Children	Treated Prevalence	Cost per Person	Total \$ Cost
2 to 4	7,573	0.25%	\$30,000	\$567,999
5 to 9	11,962	0.35%	\$19,660	\$823,127
10 to 14	12,861	0.25%	\$6,758	\$217,292
15 to 19	13,346	0.20%	\$2,525	\$67,400
20 years	2,682	0.20%	\$2,525	\$13,543
Total	48,425			\$1,689,361
% PMPM (w/ 85% MLR)				0.57%
\$ PMPM (w/ 85% MLR)				\$2.24

8

How Much?

Mid Estimate (Treated Prevalence 1 in 325):

Age Band	# Children	Treated Prevalence	Cost per Person	Total \$ Claims
2 to 4	7,573	0.30%	\$36,000	\$817,918
5 to 9	11,962	0.45%	\$26,200	\$1,410,357
10 to 14	12,861	0.30%	\$9,000	\$347,256
15 to 19	13,346	0.25%	\$3,500	\$116,782
20 years	2,682	0.20%	\$3,500	\$18,773
Total	48,425			\$2,711,085
% PMPM (w/ 85% MLR)				0.92%
\$ PMPM (w/ 85% MLR)				\$3.60

9

How Much?

High Estimate (Treated Prevalence 1 in 250):

Age Band	# Children	Treated Prevalence	Cost per Person	Total \$ Claims
2 to 4	7,573	0.45%	\$36,000	\$1,226,877
5 to 9	11,962	0.67%	\$30,500	\$2,444,498
10 to 14	12,861	0.35%	\$9,000	\$540,176
15 to 19	13,346	0.30%	\$3,500	\$140,138
20 years	2,682	0.25%	\$3,500	\$23,466
Total	48,425			\$4,375,156
% PMPM (w/ 85% MLR)				1.49%
\$ PMPM (w/ 85% MLR)				\$5.81

10

Short-Term Cost Estimates

Estimated % and \$ PMPM Increase by Year:

Estimated % Increase in Premiums by Year				
Scenario	Year 1	Year 2	Year 3	Year 4 and Beyond
Low	0.14%	0.29%	0.43%	0.57%
Mid	0.23%	0.46%	0.69%	0.92%
High	0.37%	0.75%	1.02%	1.49%

Estimated \$ Increase PMPM by Year				
Scenario	Year 1	Year 2	Year 3	Year 4 and Beyond
Low	\$0.55	\$1.13	\$1.67	\$2.24
Mid	\$0.90	\$1.79	\$2.69	\$3.60
High	\$1.44	\$2.92	\$3.97	\$5.81

11

State Fiscal Impact

(Hypothetical)

Fiscal Impact if State Plans Included in HB 187:

Scenario	Annual \$ Total	\$ Cost Per Employee Per Month
Low	\$334,990	\$1.86
Mid	\$543,384	\$3.02
High	\$875,452	\$4.86

- Assumed same prevalence rates and costs per age band as with Commercial Insurance Estimate
- Based on census and claims data provided by the Division of Retirement and Benefits

12

Future Savings

Access to Treatment Reduces Future Costs

- Avoided human service system costs very high
 - Jacobson et al. (1999) – \$2 million per person over lifespan
 - Chasson et al. (2007) – \$208,500 per capita savings during school years alone
- Ganz (2007) – Incremental societal cost for not treating autism approximately \$3.2 million per person
 - Adult care and lost productivity comprise the largest component of this cost
 - Also, lost productivity for primary caregivers a significant contributor to the societal cost

13

Other State Findings

Cost Analyses in Other States

SEE ATTACHMENT "A"

14

Conclusion

HB 187 Will Cost Little, But Save Much

- After an adequate provider network is in place, Alaskan insurance ratepayers can expect premium increases ranging from 0.57% to 1.49%
- Alaska can save approx. \$208,500 per child in avoided special education costs during the school years alone
- Alaska can save approx. \$2.0 million in avoided, lifetime human service costs per child who receives treatment
- **Conclusion:** Based on my review of the data and extant literature, the cost of providing effective treatment to children with autism is low, but the future savings from providing such treatment is significant

Diagnostic Criteria

The American Psychiatric Association's Diagnostic and Statistical Manual-IV, Text Revision (DSM-IV-TR) 1 provides standardized criteria to help diagnose ASDs.

Diagnostic Criteria for 299.00 Autistic Disorder

- Six or more items from (1), (2), and (3), with at least two from (1), and one each from (2) and (3):
 - qualitative impairment in social interaction, as manifested by at least two of the following:
 - marked impairment in the use of multiple nonverbal behaviors such as eye-to-eye gaze, facial expression, body postures, and gestures to regulate social interaction
 - failure to develop peer relationships appropriate to developmental level
 - a lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest)
 - lack of social or emotional reciprocity
 - qualitative impairments in communication as manifested by at least one of the following:
 - delay in, or total lack of, the development of spoken language (not accompanied by an attempt to compensate through alternative modes of communication such as gesture or mime)
 - in individuals with adequate speech, marked impairment in the ability to initiate or sustain a conversation with others
 - stereotyped and repetitive use of language or idiosyncratic language
 - lack of varied, spontaneous make-believe play or social imitative play appropriate to developmental level
 - restricted repetitive and stereotyped patterns of behavior, interests, and activities, as manifested by at least one of the following:
 - encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity or focus
 - apparently inflexible adherence to specific, nonfunctional routines or rituals
 - stereotyped and repetitive motor manners (e.g., hand or finger flapping or twisting, or complex whole-body movements)
 - persistent preoccupation with parts of objects
- Delays or abnormal functioning in at least one of the following areas, with onset prior to age 3 years: (1) social interaction, (2) language as used in social communication, or (3) symbolic or imaginative play.
- The disturbance is not better accounted for by Rett's Disorder or Childhood Disintegrative Disorder.

Diagnostic Criteria for 299.80 Asperger's Disorder

- Qualitative impairment in social interaction, as manifested by at least two of the following:
 - marked impairment in the use of multiple nonverbal behaviors such as eye-to eye gaze, facial expression, body postures, and gestures to regulate social interaction
 - failure to develop peer relationships appropriate to developmental level
 - a lack of spontaneous seeking to share enjoyment, interests, or achievements with other people (e.g., by a lack of showing, bringing, or pointing out objects of interest to other people)
 - lack of social or emotional reciprocity
- Restricted repetitive and stereotyped patterns of behavior, interests and activities, as manifested by at least one of the following:
 - encompassing preoccupation with one or more stereotyped and restricted patterns of interest that is abnormal either in intensity of focus
 - apparently inflexible adherence to specific, nonfunctional routines or rituals
 - stereotyped and repetitive motor mannerisms (e.g., hand or finger flapping or twisting, or complex whole-body movements)
 - persistent preoccupation with parts of objects
- The disturbance causes clinically significant impairment in social, occupational, or other important areas of functioning.
- There is no clinically significant general delay in language (e.g., single words used by age 2 years, communicative phrases used by age 3 years).
- There is no clinically significant delay in cognitive development or in the development of age-appropriate self-help skills, adaptive behavior (other than in social interaction), and curiosity about the environment in childhood.
- Criteria are not met for another specific Pervasive Developmental Disorder or Schizophrenia.

299.80 Pervasive Developmental Disorder Not Otherwise Specified (Including Atypical Autism)

This category should be used when there is a severe and pervasive impairment in the development of reciprocal social interaction associated with impairment in either verbal or nonverbal communication skills or with the presence of stereotyped behavior, interests, and activities, but the criteria are not met for a specific Pervasive Developmental Disorder, Schizophrenia, Schizotypal Personality Disorder, or Avoidant Personality Disorder. For example, this category includes "atypical autism" - presentations that do not meet the criteria for Autistic Disorder because of late age at onset, atypical symptomatology, or subthreshold symptomatology, or all of these.

Diagnostic Criteria for 299.80 Rett's Disorder

- All of the following:
 - apparently normal prenatal and perinatal development
 - apparently normal psychomotor development through the first 5 months after birth
 - normal head circumference at birth
- Onset of all of the following after the period of normal development:
 - deceleration of head growth between ages 5 and 48 months
 - loss of previously acquired purposeful hand skills between 5 and 30 months with the subsequent development of stereotyped hand movements (e.g., hand-wringing or hand washing)
 - loss of social engagement early in the course (although often social interaction develops later)
 - appearance of poorly coordinated gait or trunk movements
 - severely impaired expressive and receptive language development with severe psychomotor retardation

Diagnostic Criteria for 299.10 Childhood Disintegrative Disorder

- Apparently normal development for at least the first 2 years after birth as manifested by the presence of age-appropriate verbal and nonverbal communication, social relationships, play, and adaptive behavior.
- Clinically significant loss of previously acquired skills (before age 10 years) in at least two of the following areas:
 - expressive or receptive language
 - social skills or adaptive behavior
 - bowel or bladder control
 - play
 - motor skills
- Abnormalities of functioning in at least two of the following areas:
 - qualitative impairment in social interaction (e.g., impairment in nonverbal behaviors, failure to develop peer relationships, lack of social or emotional reciprocity)
 - qualitative impairments in communication (e.g., delay or lack of spoken language, inability to initiate or sustain a conversation, stereotyped and repetitive use of language, lack of varied make-believe play)
 - restricted, repetitive, and stereotyped patterns of behavior, interest, and activities, including motor stereotypes and mannerisms
- The disturbance is not better accounted for by another specific Pervasive Developmental Disorder or by Schizophrenia

HB 187 – Autism Insurance Reform

WHAT:

- **HB 187 will require insurance coverage for autism spectrum disorders.**
- **Autism is a disorder affecting at least 1 in 150 children with approximately 1 in 500 requiring significant clinical treatment.** Alaska currently has 1,512 children and youth under the age of 21 who have autism; approximately 454 need significant clinical treatment.

WHY:

- **Because Alaska law does not require insurance coverage for autism services, families that do not qualify for DHSS services pay out of pocket, often as much as \$50,000 per year or more; in some instances, bearing this burden results in divorce or bankruptcy.** Families that cannot afford to do so, go without crucial intervention.
- **Autism is treatable.** 30 years of research shows that with treatment, many children overcome the severe symptoms of their disorder.
 - ✓ About half the children who receive intensive early intervention achieve normal functioning after 2-3 years of treatment.
 - ✓ There is an average gain of 22 IQ points.
 - ✓ 1/3 gained 45 IQ points.
 - ✓ Nearly 50% of those receiving intensive early intervention do not require lifelong services and supports.
- **The earlier the diagnosis, the more effective treatment is.** The diagnostic process involves a comprehensive assessment (neurodevelopmental pediatrics, psychology, speech, occupational and physical therapy, ophthalmology, audiology) by a multidisciplinary team. Only those children who meet specific medical criteria are diagnosed with autism.
- **Treatment equals savings.** With treatment, Alaska will see savings of \$208,500 per capita in avoided special education costs and lifetime savings of \$1.08 million per capita. Treatment may include the following medically necessary services.
 - ✓ Pharmacy, psychiatric, psychological, rehabilitative and therapeutic care.
 - ✓ Rehabilitative care includes applied behavior analysis (the design, implementation and evaluation of environmental modifications to produce socially significant improvement in human behavior or to prevent the loss of an attained skill or function.

(Continued on back side)

HB 187 – Autism Insurance Reform

- **Without treatment it is estimated that it will cost the state \$3.2 million per capita. (Michael Ganz, Harvard economist)**
- **Coverage of medically necessary autism treatment in Alaska will enable many children to access the services they need and live more productive lives.**
- **Most private insurance policies specifically exclude coverage for treating autism, even when the services are otherwise covered by the health plan.**
- **HB 187 requires private insurance policies (approximately 23% of all insurance plans) to provide a maximum coverage of \$36,000 a year for the diagnosis and treatment of autism spectrum disorders, including but not limited to applied behavior analysis.**
 - ✓ **Must be prescribed by a licensed physician, psychologist or advanced nurse practitioner.**
 - ✓ **Must be provided by an autism service provider as identified in a treatment plan developed following a comprehensive evaluation.**
 - ✓ **Must identify the medically necessary pharmacy care, psychiatric care, psychological care, rehabilitative care and therapeutic care.**
- **The maximum likely cost of such coverage to the private insurance ratepayer is approximately 0.92% or \$3.60 per policyholder per month.**

Diagnosis of Autism Spectrum Disorders

Autism Spectrum Disorders (ASD) covers a wide range of symptoms from very mild to severe. ASD affects social skills, communication and cognitive development. ASD affects the individual's ability to convey or interpret others' emotions. Children may engage in restricted and/or repetitive play and have unusual attachments to objects. People with ASD might not seem interested in other people and prefer to be alone. People with ASD might not seem interested in other people and prefer to be alone. Some children with ASD do not like to be held or cuddled, and many do not make eye contact with others. Individuals with ASD also show varied degrees in impairment in their verbal and nonverbal communication. Some individuals with ASD may be nonverbal, while others may not have any difficulty speaking. Some repeat something previously heard or use stock phrases or learned scripts to communicate. Cognitively, individuals with ASD develop differently from others. Many people with ASD have difficulty processing sensory stimuli and verbal input, and this affects their understanding of the world around them.

It is important to note that some people without an ASD might also have some of these symptoms. But for people with an ASD, the impairment is bad enough to make life very challenging in terms of interacting with others, communicating, learning or holding down a job.

The Governor's Council on Disabilities recommended that the state establish universal screening for ASD during well-child exams to identify children who have behaviors that could indicate a disorder. The American Academy of Neurology recommends immediate referral for a diagnostic evaluation for any of the following:

- No babbling by 12 months
- No gesturing by 12 months
- No single words by 16 months
- No 2 word spontaneous phrases by 24 months
- Any loss of any language or social skills at any age

ASD screenings identify those children who require a comprehensive assessment across developmental and physical domains. Professionals from multiple disciplines then conduct a complete assessment (i.e. neurodevelopmental pediatrics, psychology, speech, occupational and physical therapy, ophthalmology, audiology). For young children, it is especially critical to conduct a differential diagnosis to rule out any other possible genetic or medical disorders.

The diagnosis focuses on determining to what extent the child has:

- Irregularities and impairments in communication
- Engagement in repetitive activities and stereotyped movements
- Resistance to environmental change or change in daily routines

Provided By: Millie Ryan 5 April 2009
The Governor's Council on Disabilities and Special Education

- Unusual responses to sensory experiences

In order to receive a diagnosis of ASD, the child must show qualitative impairment in reciprocal social interaction, qualitative impairment in communication and repetitive, stereotypical behaviors that interfere with his or her ability to develop, communicate and learn compared to typically developing peers.

In order to qualify for special education with an ASD, a child must

- exhibit a developmental disability significantly affecting verbal and non-verbal communication and social interaction, generally evident before age three, that adversely affects educational performance; and
- require special facilities, equipment, or methods to make the child's educational programs effective; and
- be diagnosed as having an autism spectrum disorder by a psychiatrist, physician, licensed psychologist or advanced nurse practitioner; and
- be certified by a group consisting of qualified professional and a parent of the child as qualifying for and needing special education services

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB 188

ANALYSIS CONTINUATION

Bill Language:

Alaska levies a tax on other tobacco products (OTP) at the rate of 75% of the wholesale cost. OTP includes any product containing tobacco that is not a cigarette. Moist snuff is one of many tobacco products upon which the OTP tax is currently levied. This bill will change the tax on moist snuff from an ad valorem tax (tax based on value) to a tax based on weight. All other tobacco products will continue to be taxed at the rate of 75% of the wholesale cost. Moist snuff will be taxed at the rate of \$1.88 per ounce. Moist snuff is defined as any finely cut, ground, or powdered tobacco that is not intended to be smoked or placed in the nasal cavity.

Revenues:

If Alaska had levied a tax on moist snuff at the rate of \$1.88 during fiscal year 2008 and consumption was not affected by the tax increase, total tobacco products tax revenue would have been approximately \$1.1 million more than what was collected. Historically, Alaska and other states have seen a drop in consumption of taxable cigarettes and other tobacco products when the tax rate is increased. This drop is due to a decrease in consumption as product price increases (price elasticity) and a decrease in taxable consumption as consumers turn to the Internet, mail order, or other means to purchase non-taxed product. The OTP tax is not levied on tobacco products, including moist snuff, that is imported into the state for personal consumption. It is legal for an individual to purchase other tobacco products off the Internet or through the mail without paying the tobacco products tax.

Based on an analysis of tax returns, the wholesale price of the most popular lower-priced brands in FY 2008 averaged \$1.03 per ounce. The average tax under the current tax structure in FY 2008 was \$.77 per ounce for a total average cost of \$1.80. Under the proposed weight-based tax, the total average cost would be \$2.91 per ounce, a 61% increase. Lower cost moist snuff products have an approximate 35% market share in Alaska. This market share has been increasing over the last few years as consumers continually look for cheaper products. It is expected that many of these consumers will turn to the Internet for moist snuff once the price of the product increases due to the increase in tax. This will, in turn, reduce the amount of revenue expected from this tax increase. Due to price elasticity and the unknown number of consumers who will turn to tax free Internet product, it is difficult to determine the change in revenues as a result of this legislation.

Expenditures:

This bill would require the Department of Revenue to add an additional tax program requiring a new tax return and license for other tobacco products. Collections, examination and compliance can be handled using existing staff. We anticipate requiring one-quarter of an Analyst Programmer IV (Range 20) for reprogramming and maintenance of the related aspects of our tax database system. There will also be \$185,000 in one-time startup expenses: \$175,000 for adding the new program to our tax examination and licensing system, and \$10,000 for education and communication with stakeholders as we implement the new tax program.

Sponsor Statement

House Bill 188: Taxation on Moist Snuff Tobacco (CS HB 188 (HSS) version 0714\N)

It is the Sponsor's intention that this bill will have two results:

- Provides a disincentive for Alaskans (particularly young Alaskans) to start using moist snuff tobacco products; and
- Increases the amount of tax on such products collected by the State.

Currently in state law, cigarettes are taxed at 10 cents per cigarette (\$2 a pack) and all other tobacco products (OTP) are taxed *ad valorem* at 75% of their wholesale price. Moist snuff tobacco (more commonly called "dipping tobacco") presently falls under the OTP tax regime.

HB 188 distinguishes between two types of moist snuff tobacco (MST): spitless MST and all other MST. The former are light-weight products that come in teabag-like pouches and obviate the need for expectoration. HB 188 taxes these dangerous new light-weight products that are being targeted towards youth at 100% *ad valorem*. All other MST will be taxed on a weight-based system of \$1.88 per ounce. All other OTPs remain taxed at an *ad valorem* rate of 75%.

Taxing MST (excluding spitless MST) at a \$1.88 per ounce is designed to reduce the price disparity between discount and premium MST products. \$1.88 per ounce is currently roughly equal to what the premium brands pay under the *ad valorem* system. The tax on discount brands will increase dramatically – the tax on premium brands will remain about the same; however, if the wholesale prices on these premium products increase over time (inflation), then the tax would not rise commensurately since it is by weight. The bill does include a sunset provision, whereby the \$1.88 per ounce tax on non-spitless MST products, barring further legislative action, would revert back to a 75% *ad valorem* rate after 3 years.

There is a nation-wide movement afoot to move to weight-based taxation systems for smokeless products (15 states currently use such a method, with 13 of those having changed to weight-based in the last 9 years).

This new taxation system will produce additional state revenue, by raising the taxes paid by discount MST brands. The Dept. of Revenue has estimated tax revenue would increase by \$1.1 million, although that's assuming the same amount of product is purchased as before the tax increase. Also, some popular MST companies lowered prices recently, having the net effect that this bill might result in as much as \$1.8 million in additional revenue.

According to the American Lung Association, "Increasing excise taxes on tobacco products is a proven way to reduce use, particularly among kids."

This bill also increases funding for the education and cessation fund by sending 25% of the annual tax revenue collected on MST to this fund, which may be used for tobacco education and cessation programs.

Currently, if you order cigarettes for personal use over the Internet, you must pay state taxes on those purchases. But in current state law, you do not have to pay taxes on any OTP products imported for personal use. This bill closes that loophole.

The bill also requires that cigars be sold in packages of at least five; that loose tobacco be sold in packages weighing at least one ounce; and that single dose units be sold in the original manufacturer's packaging.

MEMORANDUM

April 9, 2009

SUBJECT: Sectional Summary for CSHB 188(HSS), Draft Version "N"
(Work Order No. 26-LS0714\N)

TO: Representative Bob Herron
Co-Chair of the House Health and Social Services Committee
Attn: Rob Earl

FROM: 
Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends AS 37.05.580(a) to authorize the deposit of 25 percent of the annual revenue from the tax on moist snuff tobacco into the tobacco use education and cessation fund.

Section 2. Amends AS 43.50.070(b) to exclude a buyer required to be licensed under AS 43.50.320(a) (amended in sec. 7 of the bill) from the definition of "licensee."

Section 3. Amends AS 43.50.300 by adding additional situations in which the excise tax on tobacco products is levied. In addition to the situations in current law, the tax would be levied when a person ships a tobacco product to an individual in the state for personal consumption and when a person brings a tobacco a product into the state for personal consumption.

Section 4. Amends AS 43.50.300 by adding a new subsection that lists the tax rates for the excise tax on tobacco products. The rates are \$1.88 an ounce for moist snuff tobacco other than spitless moist snuff tobacco; 100 percent of the wholesale price on spitless moist snuff tobacco, and 75 percent of the wholesale price on other tobacco products.

Section 5. Amends AS 43.50.300(b), which would be enacted by sec. 4 of the bill, to tax moist snuff tobacco at the same rate as tobacco products other than spitless moist snuff

tobacco. Under sec. 19 of the bill, this section takes effect three years after the effective date of sec. 4 of the bill.

Section 6. Adds a new section, AS 43.50.305, that describes how certain tobacco products must be packaged for sale.

Section 7. Repeals and reenacts AS 43.50.320(a) to add the requirement that a person that brings tobacco products into the state for personal consumption must be licensed as a buyer. The section continues to require distributors to be licensed.

Section 8. Amends AS 43.50.320(b) to require the Department of Revenue to issue a license to a buyer after receiving an application and the payment of a fee of \$25.

Section 9. Amends AS 43.50.320(d) to require certain information to be stated on a distributor license.

Section 10. Amends AS 43.50.320(e) to provide for the renewal of a buyer license.

Section 11. Amends AS 43.50.330(a) to add additional reporting requirements. The new requirements require the disclosure of the wholesale or purchase price of the tobacco products, the tax imposed on moist snuff tobacco other than spitless moist snuff tobacco, and the tax imposed on spitless moist snuff tobacco. (After the effective date of sec. 5, a report of the tax on moist snuff tobacco, other than spitless moist snuff tobacco, would still be needed for the purpose of determining the amount of revenue to be deposited into the tobacco use education and cessation fund; a portion of all revenue from the tax on all moist snuff tobacco is to be deposited into that fund regardless of the tax rate applicable to the different categories of moist snuff tobacco.)

Section 12. Repeals and reenacts AS 43.50.350 to designate the allocation of the tax collected on moist snuff tobacco between the tobacco use education and cessation fund (25%) and the general fund (75%). The tax on other tobacco products continues to be deposited in the general fund.

Section 13. Amends AS 43.50.390(1) by amending the definition of "distributor" to include a person that ships a tobacco product into the state for personal consumption.

Section 14. Amends AS 43.50.390(2) to include a "buyer" in the definition of "licensee."

Section 15. Amends the definition for "tobacco product" in AS 43.50.390(4) by stating that snuff tobacco includes moist snuff tobacco, and by adding other products that contain tobacco or nicotine. Excludes from the definition certain approved products used as a tobacco use cessation or harm reduction product or for other medical purposes, so long as the product is being marketed and used solely for the approved purposes.

Representative Bob Herron
April 9, 2009
Page 3

Section 16. Amends AS 43.50.390 by adding definitions for "buyer," "moist snuff tobacco," "smokeless tobacco," and "spitless moist snuff tobacco."

Section 17. Amends AS 43.70.110 by adding a definition of "cigarette" for the purposes of the business license endorsement.

Section 18. Provides that secs. 1 - 4 and 6 - 17 of the Act are applicable on the first day of the month immediately following the effective date of the section. Provides that sec. 5 of the Act is applicable on the first day of the month immediately following the effective date of sec. 5. (Tobacco taxes are reported on a monthly basis.)

Section 19. Makes sec. 5 take effect three years after the effective date of sec. 4 of the Act.

Section 20. Except for sec. 19 of the Act, provides that the Act take effect immediately.

CS FOR HOUSE BILL NO. 188(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

Offered:

Referred:

Sponsor(s): REPRESENTATIVE HERRON

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to the taxation of moist snuff tobacco, including spitless moist snuff**
 2 **tobacco; including different types of moist snuff tobacco in the definition of 'tobacco**
 3 **product' in provisions levying an excise tax on those products; relating to licensing for**
 4 **and taxation of tobacco products, including tobacco products imported for personal use**
 5 **and consumption; relating to the deposit of revenue from the taxation of moist snuff**
 6 **tobacco into the tobacco use education and cessation fund; defining 'moist snuff**
 7 **tobacco'; relating to the business license endorsement for the sale of tobacco products;**
 8 **and providing for an effective date."**

9 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

10 *** Section 1. AS 37.05.580(a) is amended to read:**

11 (a) There is created as a special account in the general fund the tobacco use
 12 education and cessation fund into which shall be deposited 20 percent annually of the

1 revenue derived from the settlement of State of Alaska v. Philip Morris, Incorporated,
2 et al, No. 1JU-97-915 CI (Alaska Super. 1997) and 25 percent of the annual
3 revenue collected from the tax on moist snuff tobacco under AS 43.50.300 -
4 43.50.390. The purpose of the tobacco use education and cessation fund is to provide a
5 source to finance the comprehensive smoking education, tobacco use prevention, and
6 tobacco control program authorized by AS 44.29.020(a)(14). In this subsection,
7 "moist snuff tobacco" has the meaning given in AS 43.50.390.

8 * Sec. 2. AS 43.50.070(b) is amended to read:

9 (b) In this section, "licensee" means a person licensed under AS 43.50.010 -
10 43.50.180 or 43.50.300 - 43.50.390, except for a buyer required to be licensed
11 under AS 43.50.320(a)(2).

12 * Sec. 3. AS 43.50.300 is amended to read:

13 Sec. 43.50.300. Excise tax levied. (a) An excise tax is levied on tobacco
14 products in the state at the rate in (b) of this section [RATE OF 75 PERCENT OF
15 THE WHOLESALE PRICE OF THE TOBACCO PRODUCTS]. The tax is levied
16 when a person

17 (1) brings, or causes to be brought, a tobacco product into the state
18 from outside the state for sale;

19 (2) makes, manufactures, or fabricates a tobacco product in the state
20 for sale in the state; [OR]

21 (3) ships or transports a tobacco product to a retailer in the state for
22 sale by the retailer or to an individual for personal consumption; or

23 (4) brings or causes to be brought a tobacco product into the state
24 from outside the state for personal consumption.

25 * Sec. 4. AS 43.50.300 is amended by adding a new subsection to read:

26 (b) The excise tax rate on

27 (1) moist snuff tobacco, other than spitless moist snuff tobacco, is
28 \$1.88 multiplied by the number of ounces of moist snuff tobacco, including fractions
29 of an ounce;

30 (2) spitless moist snuff tobacco is 100 percent of the wholesale price;

31 (3) tobacco products other than moist snuff tobacco products subject to

1 the tax rates in (1) and (2) of this subsection is 75 percent of the wholesale price of the
2 tobacco product.

3 * Sec. 5. AS 43.50.300, as amended by sec. 4 of this Act, is amended to read:

4 (b) The excise tax rate on

5 (1) [MOIST SNUFF TOBACCO, OTHER THAN SPITLESS MOIST
6 SNUFF TOBACCO, IS \$1.88 MULTIPLIED BY THE NUMBER OF OUNCES OF
7 MOIST SNUFF TOBACCO, INCLUDING FRACTIONS OF AN OUNCE;

8 (2)] spitless moist snuff tobacco is 100 percent of the wholesale price;

9 (2) [(3)] tobacco products other than spitless moist snuff tobacco
10 products subject to the tax rate [RATES] in (1) [AND (2)] of this subsection is 75
11 percent of the wholesale price of the tobacco product.

12 * Sec. 6. AS 43.50 is amended by adding a new section to read:

13 **Sec. 43.50.305. Packaging of certain tobacco products for sale.** (a) Cigars,
14 except for cigars that are hand-rolled and wrapped in whole tobacco leaf, shall be sold
15 in packages containing at least five cigars.

16 (b) Smokeless tobacco sold

17 (1) as loose tobacco shall be sold in packages containing at least one
18 ounce;

19 (2) in single-dose units shall be sold only in original unaltered
20 manufacturer's packaging.

21 * Sec. 7. AS 43.50.320(a) is repealed and reenacted to read:

22 (a) Except as provided in (g) of this section, a person engaged in an activity
23 described in

24 (1) AS 43.50.300(a)(1) or (3) must be licensed by the department as a
25 distributor;

26 (2) AS 43.50.300(a)(4) must be licensed as a buyer.

27 * Sec. 8. AS 43.50.320(b) is amended to read:

28 (b) The department, upon application and payment of a fee of

29 (1) \$50, shall issue a license for one year to a person who applies for a
30 license as a distributor under (a)(1) of this section;

31 (2) \$25, shall issue a license for one year to a person who applies

1 **for a license as a buyer under (a)(2) of this section.**

2 * **Sec. 9.** AS 43.50.320(d) is amended to read:

3 (d) A license issued under **(b)(1) of** this section must include the name and
4 address of the licensee, the type of business to be conducted, and the year for which
5 the license is issued.

6 * **Sec. 10.** AS 43.50.320(e) is amended to read:

7 (e) The department may renew a license issued under

8 **(1) (b)(1) of** this section for a fee of \$50;

9 **(2) (b)(2) of this section for a fee of \$25.**

10 * **Sec. 11.** AS 43.50.330(a) is amended to read:

11 (a) On or before the last day of each calendar month, a licensee shall file a
12 return with the department. The return must state the number or amount of tobacco
13 products sold by the licensee during the preceding calendar month, the **wholesale**
14 **price or purchase** [SELLING] price of the tobacco products, and the amount of tax
15 imposed on

16 **(1) [THE] tobacco products other than moist snuff tobacco;**

17 **(2) moist snuff tobacco other than spitless moist snuff tobacco; and**

18 **(3) spitless moist snuff tobacco.**

19 * **Sec. 12.** AS 43.50.350 is repealed and reenacted to read:

20 **Sec. 43.50.350. Disposition of proceeds.** (a) The tax collected by the
21 department, other than the tax collected on moist snuff tobacco, shall be deposited in
22 the general fund.

23 (b) Of the tax collected by the department on moist snuff tobacco,

24 (1) 25 percent shall be deposited in the tobacco use education and
25 cessation fund established in AS 37.05.580; and

26 (2) 75 percent shall be deposited in the general fund.

27 (c) The annual estimated balance in the account maintained by the
28 commissioner of administration under AS 37.05.142 may be used by the legislature to
29 make appropriations for health care, health research, health promotion, and health
30 education programs.

31 * **Sec. 13.** AS 43.50.390(1) is amended to read:

- 1 (1) "distributor" means a person who
2 (A) brings, or causes to be brought, a tobacco product into the
3 state from outside the state for sale;
4 (B) makes, manufactures, or fabricates a tobacco product in the
5 state for sale in the state; or
6 (C) ships or transports a tobacco product to a retailer in the
7 state for sale by the retailer or to an individual for personal consumption;

8 * Sec. 14. AS 43.50.390(2) is amended to read:

- 9 (2) "licensee" means a distributor or buyer who is
10 (A) licensed under AS 43.50.320; or
11 (B) exempted by AS 43.50.320(g) from licensing under
12 AS 43.50.320;

13 * Sec. 15. AS 43.50.390(4) is amended to read:

- 14 (4) "tobacco product" means
15 (A) a cigar, including any roll of tobacco wrapped in leaf
16 tobacco;
17 (B) a cheroot;
18 (C) a stogie;
19 (D) a perique;
20 (E) snuff tobacco, including moist snuff tobacco, and snuff
21 flour;
22 (F) smoking tobacco, including granulated, plug-cut, crimp-cut,
23 ready-rubbed, and any form of tobacco suitable for smoking in a pipe or
24 cigarette;
25 (G) chewing tobacco, including cavendish, twist, plug, scrap,
26 and tobacco suitable for chewing; [OR]
27 (H) an article or product made of tobacco or a tobacco
28 substitute, but not including a cigarette as defined in AS 43.50.170; or
29 (I) any other product containing tobacco or nicotine that is
30 intended or expected to be consumed without being combusted unless it
31 has been approved by the United States Food and Drug Administration

1 **for sale as a tobacco use cessation or harm reduction product or for other**
2 **medical purposes and is being marketed and sold solely for the approved**
3 **purposes;**

4 * **Sec. 16.** AS 43.50.390 is amended by adding new paragraphs to read:

5 (6) "buyer" means a person who imports tobacco products for the
6 person's own consumption from any source other than licensee;

7 (7) "moist snuff tobacco" includes spitless moist snuff tobacco and
8 means any finely cut, ground, or powdered tobacco that is not intended to be

9 (A) smoked; or

10 (B) placed in the nasal cavity;

11 (8) "smokeless tobacco" means a tobacco product defined in (4)(E),
12 (G), (H), (I), and (9) of this section;

13 (9) "spitless moist snuff tobacco" means moist snuff tobacco that is
14 typically steam-pasteurized smokeless tobacco in a tea-bag-like pouch designed to be
15 placed between the cheek and gum and is manufactured to obviate the need for
16 spitting.

17 * **Sec. 17.** AS 43.70.110 is amended by adding a new paragraph to read:

18 (5) "cigarette" has the meaning given in AS 43.50.170.

19 * **Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to
20 read:

21 **APPLICABILITY.** (a) Sections 1 - 4 and 6 - 17 of this Act are applicable starting on
22 the first day of the month immediately following the effective date of this section.

23 (b) Section 5 of this Act is applicable starting on the first day of the month
24 immediately following the effective date of sec. 5.

25 * **Sec. 19.** Section 5 of this Act takes effect three years after the effective date of sec. 4 of
26 this Act.

27 * **Sec. 20.** Except as provided in sec. 19 of this Act, this Act takes effect immediately under
28 AS 01.10.070(c).

HB 188, Smokeless Tobacco – Rep. Bob Herron

Tax Table

<u>Tobacco Product</u>	<u>Tax Currently</u>	<u>Tax under HB 188 Version N</u>	<u>Change in Tax</u>
Cigarettes	10 cents per cigarette	10 cents per cigarette	No change
Moist Snuff (except Spitless)*	75% ad valorem	\$1.88 per ounce	Higher for most brands
Spitless Moist Snuff*	75% ad valorem	100% ad valorem	33% increase
Everything Else*	75% ad valorem	75% ad valorem	No change

*Note: These products currently all fall under Other Tobacco Products (OTP) and are taxed at 75% ad valorem

Tax Per Dose Calculation Sheet

Cigarettes

\$2.00 tax per pack / 20 = 10 cents tax per dose.

Spitless MST (For this example, Camel Snus specifically)

15 bags – total weight .32 ounces -- \$2.46 wholesale

- At 75%: Tax is \$1.85 / 15 doses = 12.3 cents per dose.
- **At 100%: \$2.46 / 15 doses = 16.4 cents per dose.**
- At \$1.88 per ounce tax x .32 oz = \$.60 / 15 doses = 4 cents per dose.

Moist Snuff Dipping Tobacco (excluding spitless):

Wholesale price about \$2.00 (ranges from \$1.45 – \$2.39)

- At 75%: \$1.50 tax / 20 doses = 7.5 cents per dose
- At 100%: \$2.00 tax / 20 doses = 10 cents per dose
- **At 1.88 per ounce x 1.2 oz = \$2.25 tax / 20 = 11.3 cents per dose.**

HB 188 does not affect the cigarette tax. All moist snuff tobacco (MST) is currently taxed at 75% of the wholesale price. As currently written, HB 188 would tax spitless MST at 100% of the wholesale price and all other MST at \$1.88 per ounce (in bold above). All Other Tobacco Products (except for the two types of MST) will remain taxed at 75% ad valorem.

"An Act relating to the taxation of moist snuff tobacco, and amending the definition of 'tobacco product' in provisions levying an excise tax on those products."

HB 188 changes the state tax methodology used for smokeless tobacco products to one that is more stable for state revenues and equal across similar weighted products regardless of price. The current ad valorem tax on smokeless products has the effect of increasing the price disparity between premium and discount brands. It can be argued, therefore, that discount products gain an unfair price advantage over premium products under an ad valorem tax regime. Already the federal government and 15 states now use the weight-based method for smokeless product taxation – 13 of those states have changed to weight-based in the last 9 years.

A weight-based taxation system will produce additional state revenue. Taxing all smokeless products at the equivalent that premium products are currently assessed will result in greater tax revenue for the state government. According to the National Association of Convenience Stores, "Evidence from a 2007 analysis documented that states that had converted to a weight-based method (New Jersey, Rhode Island, and Vermont) realized immediate gains averaging nearly 32 percent."

HB 188 levels the tax playing field. Under the current ad valorem rate, discount brands pay less in taxes for each unit, which is one of the reasons discount brands have grown their share from 4% to 36% of the market in the last four years. Under HB 188, these products would be taxed at the same rate as higher priced premium products.

Additionally, according to the American Lung Association, "Increasing excise taxes on tobacco products is a proven way to reduce use, particularly among kids."

Other consumer products are already taxed by a per unit method in the state, such as gasoline, alcohol and cigarettes. HB 188 would make the taxation of smokeless products consistent with these other consumer products, and close the existing tax loophole the state provides to discount products.

MEMORANDUM

March 19, 2009

SUBJECT: Sectional summary for CSHB 188(HSS), Draft Version "S"
(Work Order No. 26-LS0714/S)

TO: Representative Bob Herron
Co-chair of the House Health & Social Services Committee
Attn: Rob Earl

FROM: 
Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends AS 43.50.300 to acknowledge the rates of tax are moved to AS 43.50.300(b), a new subsection added by sec. 2 of the bill.

Section 2. Provides a tax rate on moist snuff tobacco of \$1.88 multiplied by the number of ounces, including fractions of an ounce. Continues the tax rate of 75 percent of the wholesale price on other tobacco products.

Section 3. Requires the monthly reporting of the number of ounces of moist snuff sold, the amount of tax imposed on moist snuff tobacco, and the amount of tax imposed on tobacco products other than moist snuff tobacco.

Section 4. Amends the definition of "tobacco product" in AS 43.50.390(4) to specifically include moist snuff tobacco.

Section 5. Adds a definition for "moist snuff tobacco" to AS 43.50.390.

Section 6. Makes secs. 1 - 5 of the Act applicable starting on the first day of the month immediately following the effective date of the Act.

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to the taxation of moist snuff tobacco by weight; including moist snuff**
2 **tobacco in the definition of 'tobacco product' in provisions levying an excise tax on those**
3 **products; and defining 'moist snuff tobacco.'"**

4 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

5 *** Section 1. AS 43.50.300 is amended to read:**

6 **Sec. 43.50.300. Excise tax levied.** An excise tax is levied on tobacco products
7 in the state at the rate in (b) of this section [RATE OF 75 PERCENT OF THE
8 WHOLESALE PRICE OF THE TOBACCO PRODUCTS]. The tax is levied when a
9 person

10 (1) brings, or causes to be brought, a tobacco product into the state
11 from outside the state for sale;

12 (2) makes, manufactures, or fabricates a tobacco product in the state
13 for sale in the state; or

14 (3) ships or transports a tobacco product to a retailer in the state for

1 sale by the retailer.

2 * Sec. 2. AS 43.50.300 is amended by adding a new subsection to read:

3 (b) The excise tax rate on

4 (1) moist snuff tobacco is \$1.88 multiplied by the number of ounces of
5 moist snuff tobacco, including fractions of an ounce;

6 (2) tobacco products other than moist snuff tobacco is 75 percent of the
7 wholesale price of the tobacco product.

8 * Sec. 3. AS 43.50.330(a) is amended to read:

9 (a) On or before the last day of each calendar month, a licensee shall file a
10 return with the department. The return must state the number or amount of tobacco
11 products including the number of ounces of moist snuff tobacco sold by the
12 licensee during the preceding calendar month, the selling price of the tobacco
13 products, [AND] the amount of tax imposed on [THE] tobacco products other than
14 moist snuff tobacco, and the amount of tax imposed on moist snuff tobacco.

15 * Sec. 4. AS 43.50.390(4) is amended to read:

16 (4) "tobacco product" means

17 (A) a cigar;

18 (B) a cheroot;

19 (C) a stogie;

20 (D) a perique;

21 (E) snuff tobacco, including moist snuff tobacco, and snuff
22 flour;

23 (F) smoking tobacco, including granulated, plug-cut, crimp-cut,
24 ready-rubbed, and any form of tobacco suitable for smoking in a pipe or
25 cigarette;

26 (G) chewing tobacco, including cavendish, twist, plug, scrap,
27 and tobacco suitable for chewing; or

28 (H) an article or product made of tobacco or a tobacco
29 substitute, but not including a cigarette as defined in AS 43.50.170;

30 * Sec. 5. AS 43.50.390 is amended by adding a new paragraph to read:

31 (6) "moist snuff tobacco" means any finely cut, ground, or powdered

1 tobacco that is not intended to be

2 (A) smoked; or

3 (B) placed in the nasal cavity.

4 * Sec. 6. The uncodified law of the State of Alaska is amended by adding a new section to
5 read:

6 APPLICABILITY. Sections 1 - 5 of this Act are applicable starting on the first day of
7 the month immediately following the effective date of this Act.

FISCAL NOTE

STATE OF ALASKA
2009 LEGISLATIVE SESSION

BILL NO. HB 188

ANALYSIS CONTINUATION

Bill Language:

Alaska levies a tax on other tobacco products (OTP) at the rate of 75% of the wholesale cost. OTP includes any product containing tobacco that is not a cigarette. Moist snuff is one of many tobacco products upon which the OTP tax is currently levied. This bill will change the tax on moist snuff from an ad valorem tax (tax based on value) to a tax based on weight. All other tobacco products will continue to be taxed at the rate of 75% of the wholesale cost. Moist snuff will be taxed at the rate of \$1.88 per ounce. Moist snuff is defined as any finely cut, ground, or powdered tobacco that is not intended to be smoked or placed in the nasal cavity.

Revenues:

If Alaska had levied a tax on moist snuff at the rate of \$1.88 during fiscal year 2008 and consumption was not affected by the tax increase, total tobacco products tax revenue would have been approximately \$1.1 million more than what was collected. Historically, Alaska and other states have seen a drop in consumption of taxable cigarettes and other tobacco products when the tax rate is increased. This drop is due to a decrease in consumption as product price increases (price elasticity) and a decrease in taxable consumption as consumers turn to the Internet, mail order, or other means to purchase non-taxed product. The OTP tax is not levied on tobacco products, including moist snuff, that is imported into the state for personal consumption. It is legal for an individual to purchase other tobacco products off the Internet or through the mail without paying the tobacco products tax.

Based on an analysis of tax returns, the wholesale price of the most popular lower-priced brands in FY 2008 averaged \$1.03 per ounce. The average tax under the current tax structure in FY 2008 was \$.77 per ounce for a total average cost of \$1.80. Under the proposed weight-based tax, the total average cost would be \$2.91 per ounce, a 61% increase. Lower cost moist snuff products have an approximate 35% market share in Alaska. This market share has been increasing over the last few years as consumers continually look for cheaper products. It is expected that many of these consumers will turn to the Internet for moist snuff once the price of the product increases due to the increase in tax. This will, in turn, reduce the amount of revenue expected from this tax increase. Due to price elasticity and the unknown number of consumers who will turn to tax free Internet product, it is difficult to determine the change in revenues as a result of this legislation.

Expenditures:

This bill would require the Department of Revenue to add an additional tax program requiring a new tax return and license for other tobacco products. Collections, examination and compliance can be handled using existing staff. We anticipate requiring one-quarter of an Analyst Programmer IV (Range 20) for reprogramming and maintenance of the related aspects of our tax database system. There will also be \$185,000 in one-time startup expenses: \$175,000 for adding the new program to our tax examination and licensing system, and \$10,000 for education and communication with stakeholders as we implement the new tax program.

8. Youth Smokeless Tobacco Use

Percentage of High School Students Who Use Smokeless Tobacco,
by Sex and Year
Alaska, 1995 & 2003

Source: Alaska Youth Risk Behavior Survey

- Overall, use of smokeless tobacco among high school students dropped from 15.6% in 1995 to 11.2% in 2003; this was largely due to the decline in boys' use of smokeless tobacco during this time.
- In 2003, nearly 4,400 high school students used smokeless tobacco.

**Percentage of High School Students Who Use Smokeless Tobacco,
by Race and Year
Alaska, 1995 & 2003**

Source: Alaska Youth Risk Behavior Survey

- The largest drop in youth smokeless tobacco rates between 1995 and 2003 was seen among White students.

The Effect of Federal Tobacco Tax Increases on Alaska's Tobacco Taxes

Prepared by: Johanna Bales

Alaska levies an excise tax on cigarettes and on other tobacco products (OTP). The tax rates, tax calculation, and how the tax is levied differ between cigarettes and OTP. The following outlines those differences and the effect of recent federal tobacco tax increases on Alaska tobacco taxes:

Cigarette Tax

Alaska's cigarette tax is levied on each cigarette. The tax is currently 10 cents per cigarette or \$2.00 per pack of twenty cigarettes. The tax is levied when cigarettes are brought into the state for sale or personal consumption. What this means is that if an individual buys cigarettes over the Internet or has friends or family ship cigarettes to them through the mail, they are liable to pay the Alaska tax. The federal tax was 39 cents per pack, but is now \$1.01 per pack of twenty. The increase in the federal tax does not affect Alaska's tax rate. However, it can and probably will affect revenue as people either quit smoking or cut back due to the higher cost of cigarettes that will result from the federal increase. We also expect smuggling to increase in all states, including Alaska, which will also cut into Alaska's cigarette tax revenue.

Other Tobacco Products (OTP)

Alaska's OTP tax is levied at the rate of 75% of the wholesale price of the tobacco product. OTP includes little cigars, cigars, pipe tobacco, chewing tobacco, snuff, roll-your-own tobacco, etc. Basically, anything other than a cigarette that has tobacco in it. The tax is levied when OTP is brought into the state for sale. It is important to note, the OTP tax is not levied when OTP is brought into the state for personal consumption. The wholesale price is defined in statute as the "established price for which a manufacturer sells a tobacco product to a distributor . . ." This is basically the manufacturer's list price.

The federal law increased many OTP products significantly. For example, the tax on little cigars increased from 4 cents per pack to \$1.01 per pack of twenty. Chewing tobacco increased from 19.5 cents to 50.33 cents per pound and roll-your-own tobacco increased from \$1.0969 to \$24.78 per pound. The federal tax is paid by the manufacturer. Therefore, the manufacturer's list price will increase to reflect the increases in the federal tax. Even though our tax rate of 75% of the wholesale cost remains the same, the amount upon which the 75% is multiplied will be significantly higher. As such, Alaska's tax on OTP will also increase.

Will people start buying roll-your-own and other OTP from states without a tax? Most states have a tax, but if the product is exported from the state that state's tax doesn't apply. The question should be, "will people start buying roll-your-own and other OTP from Internet sellers?" The answer is, "yes." When Alaska increased the tax on OTP in 1997 from 25% to 75% of the wholesale cost, we did see an increase in people buying OTP through the mail. It is perfectly legal for them to do so since the OTP tax is only levied when OTP is imported or brought into the state for sale. With the increase in the federal tax and resultant increase in the Alaska tax, we will definitely see individuals and possibly even businesses purchasing OTP from Internet sites and through the mail. This will result in lost revenue to the state.

When Alaska increased its cigarette tax during a special legislative session in the summer of 2004, a couple of legislators tried to insert language that made it so the OTP tax was levied on individuals who imported OTP for personal consumption. Their concern was that local businesses which sell OTP were unable to compete with Internet sellers because it was legal for individuals to buy through the mail and

Internet without paying Alaska's tax, but the local retailer had to pay the tax. I think this will be even more of an issue now that the federal tax has significantly increased and the Alaska tax will be even more.

Alaska's cigarette and OTP tax rates are set in statute. The Department of Revenue has no authority to change the tax rates.

One other thing to note is that the federal law provides for a floor stock tax. What this means is that every distributor and retailer in the state must identify their inventory as of April 1, 2009 and pay the difference between the new and old federal tax rates to the federal government by August 1, 2009. Alaska does not have a floor stock tax. Even though distributors and retailers must remit the higher tax on their inventory to the federal government, the Alaska tax on OTP will be based on the manufacturer's list price at the time the product was imported into the state for sale.

Attached is the new federal language with a chart showing the changes in the federal tax rates by product.

**THE BEST WAY TO TAX SMOKELESS TOBACCO
IS WITH A PERCENTAGE-OF-PRICE TAX
[Weight-Based Taxes Hurt State Revenues and Increase Youth Use]**

The most common practice among the states is to tax smokeless tobacco, cigars, pipe tobacco, and the various other tobacco products besides cigarettes at a percentage of their wholesale price (sometimes referred to as the manufactures price). These state flat taxes on other tobacco products (OTPs) range as high as 90 percent of wholesale price (in Massachusetts), with 26 states having non-cigarette tobacco tax rates of 20 percent of wholesale price or more.

A few states tax smokeless or moist snuff tobacco products on a per-weight basis. This approach has been pushed aggressively by UST, the largest U.S. smokeless tobacco manufacture, primarily to reduce the effective tax rates on the higher-priced premium products it sells – while raising the effective tax rates on the lower-priced smokeless products primarily sold by UST's competitors.¹ But UST's best-selling premium products (Copenhagen, Skoal) are also smokeless tobacco products most popular with youth; so reducing their taxes and prices would directly increase youth smokeless tobacco initiation and use, dooming even more kids to a lifetime of tobacco addiction, related harms, and premature death.²

Beyond the fact that establishing a per-weight tax for smokeless tobacco would favor UST, harm its competitors, and increase youth use, taxing all OTPs or all smokeless at a percentage of price is not only easier to administer but also better for state revenues.

- A single percentage-of-price tax rate treats all OTPs the same. In sharp contrast, it is impossible to have a single weight-based tax rate that could equitably apply to all OTPs or even just to all smokeless tobacco or moist snuff because of all of the different types, sub-types, styles, and weights per dose of the products and brands in each category. Consequently, establishing a per-weight system just for smokeless tobacco or just for moist snuff smokeless still entails figuring out different tax rates by weight for each different sub-type or style – and such new rates would have to be established whenever another new type, sub-type or style of tobacco product entered the smokeless or moist snuff market.
- Failing to have different weight-based tax rates for each different type or style of product within the smokeless or moist snuff categories would end up grossly under taxing lighter-weight products. Most importantly, the newest trend in smokeless moist snuff products is toward spit-less pre-packed single-dose tablets or pouches, such as Ariva and Stonewall lozenges, RJR's Camel Snus, Philip Morris's Marlboro Snus and UST's Skoal Dry. This new generation of smokeless moist snuff tobacco products weigh as little as one-tenth per dose compared to the standard moist snuff that comes in a can. Any switch to a weight-based tax would allow these emerging products to pay to almost nothing as they gain increasingly larger shares of the smokeless moist snuff market, thereby sharply reducing state revenues.
- Weighing each product to apply a weight-based tax accurately and equitably would also entail significant new costs. Alternatively, relying on the stated weights provided by manufacturers would open the door to potential abuses – and require periodic checks to confirm the accuracy of the stated weights. In contrast, the prices used by a percentage-of-price tax are clear, publicly available, and easy to confirm quickly.

¹ See American Lung Association, *Taxation of Smokeless Tobacco: Percentage of Price vs. Net Weight*, April 20, 2001, <http://tobaccofreekids.org/research/factsheets/pdf/0175.pdf>.

² Substance Abuse & Mental Health Services Admin., *Results from the 2005 National Survey on Drug use and Health*, Table 7.67B, <http://oas.samhsa.gov/NSDUH/2k5nsduh/tabs/Sect7peTabs58to67.pdf>.

- Unlike weight-based taxes, percentage-of-price tax rates automatically increase with inflation and other tobacco product price increases, thereby protecting the state's tax rate and revenues from being eroded over time. UST often packages its weight-based proposals so that they will purportedly bring in more revenues in the next couple of years. But the fixed monetary tax rate in a weight-based system will inevitably erode over time as inflation and product prices increase, producing substantially less state revenues than a parallel percentage-of-price tax. Accordingly, if a state wants more revenue from its smokeless or OTP taxes – over both the short and long term – it should simply raise its percentage-of-price rate or establish a reasonable minimum tax to reach those tobacco products with bargain-basement or predatory prices.
- Since most states tax non-cigarette tobacco products by percentage-of-price, having such a tax system for all OTPs allows a state to make quick and accurate comparisons against other states' OTP tax rates and related revenues. In addition, a single percentage-of-price tax for all OTPs establishes and maintains tax equity by ensuring that all OTPs pay the same flat tax rate. If smokeless moist snuff pays taxes by weight while other OTPs pay by price, tax inequities are certain to develop over time if not immediately.
- The percentage-of-price tax is a flat tax that applies the exact same percentage tax rate to each and every tobacco product and brand of tobacco product other than cigarettes. Just like with sales taxes, the actual tax amount paid on higher priced products will be larger than the amount for lower priced products. But the percentage tax rate on each product will stay exactly the same. In other words, those products priced to bring in the most revenues and profits will pay more per product than cheaper versions that bring in less revenue and profits. But each will pay the same flat percentage-of-price rate.

UST argues that a change to a weigh-based system is necessary to raise the effective tax rates on cut-rate smokeless tobacco products sold by their competitors. But predatory pricing and other below-market pricing practices could be addressed more effectively and appropriately through adding a minimum tax to a percentage-of-price tax and establishing smokeless tobacco product minimum price laws.³

UST's only legitimate claim about operating under a competitive disadvantage comes from UST currently being the only smokeless tobacco company that has signed onto the smokeless tobacco Master Settlement Agreement (STMSA). That competitive disadvantage could be eliminated, to the benefit of the states, by new state laws that penalize non-participating smokeless tobacco manufacturers that do not sign onto the STMSA, paralleling the state laws that do the same thing regarding nonparticipating manufacturers (NPMs) and the cigarette MSA. Such laws would level the playing field and either produce new payments to the states or get more smokeless manufacturers to sign onto the STMSA and comply with its various payment requirements and other requirements designed to reduce tobacco use by kids.⁴

Campaign for Tobacco-Free Kids, February 19, 2008 / Eric Lindblom

Hi Bob. Attached is a brief write up that our Director of Community Health and Wellness, Wole Fadahunsi draft about the potential change to the smokeless tobacco tax. Good luck.

Jack Robert

Smokeless Tobacco Tax Policy

There is a current debate as to how best to tax smokeless tobacco products and currently two policies are practiced by the different states in the US. The majority tax these tobacco products by a system referred to as ad valorem while the rest tax by a per unit basis inline with what obtains at the Federal level. Alaska as a state currently taxes Moist Snuff Tobacco (MSF) products at a rate of 75% of wholesale price -- a ad valorem tax policy.

In order to answer the question about what the appropriate practice should be regarding the tax policy to be adopted it would be better to do this within a framework. There are a couple questions to be answered to arrive at a reasonable answer and these are:

1. Should smokeless tobacco be taxed at all,
2. What method should be adopted in taxing this product,
3. What is the appropriate level of taxation?

Should Smokeless Tobacco be Taxed?

The use of tobacco products has been shown to cause harm to the individual and other people around. This is quite evident with the issue of second hand smoke (SHS). But working from the framework that government is there to protect individuals from harming one another, and not necessarily to protect an individual from harming him/herself it can be argued that government has no business taxing MSF.

However, there are other costs that tobacco use imposes on the society as a whole and the most commonly cited are: increased healthcare burden to other taxpayers, the unattractiveness of witnessing someone use chew tobacco, and message children receive viewing adults use tobacco. Therefore, to the extent that tobacco use has a burden on the society as a whole these products should be taxed.

What method should be adopted in taxing MSF?

As earlier mentioned there are two methods of taxation for MSF currently in use. The ad valorem tax system places a tax on these products based on the sale price of these products. The per unit tax system places a tax on these products based on the standard unit of the product.

Those who have worked in the area of setting tax policy for smoke tobacco products understand that a unit of cigarette (one stick) does the same amount of damage (to the individual and society) notwithstanding the cost (premium or regular) of this stick of cigarette. As a result, smoked tobacco products are taxed on a per unit basis. As with MSF, the same is true- a unit weight of this product will do the same amount of damage to the individual and society without regard to its 'premium or regular status'.

Another argument in favor of taxation on a per unit basis is: when you tax ad valorem what obtains is that premium brands get more expensive relative to the cheaper products and this can be seen as government giving undue advantage to the cheaper products because what simply happens is that consumers of the product simply shift to using the cheaper products. But with a per unit taxation all tobacco products, without regards to

their premium or regular class, are taxed evenly since they will cause the same amount of damage to individual and society. True to Jefferson's core principles, states should not be in the business of picking winners and losers, but should let the market decide free of discriminatory government intervention.

What is the appropriate level of taxation?

As a tax on MSF is designed to equalize the cost differential between the societal cost of use of the product and the individual cost a per unit basis of taxation should be adopted. The appropriate tax level should balance up these costs if the societal cost is greater than the individual cost. The problem policy makers have to solve before they can set the appropriate level of taxation is figuring out what these costs are (i.e. the societal and individual cost).

Altria

Altria Client Services Inc. (ALCS) Supports a Weight-Based Method of Taxation for MST

This legislation will:

- **Tax MST consistently with other consumer products.**
- **Align Alaska's tax methodology with that of the federal government and 16 other states.**
- **Establish tax equity for MST products.**
- **Generate additional state MST tax revenues.**
- **Create a stable and predictable stream of MST tax revenue for the state.**
- **Reduce complexity and administrative burden on the state, wholesalers and retailers.**

Information provided by Altria Client Services Inc. on behalf of
Philip Morris USA Inc. and US Smokeless Tobacco Company

A Weight-Based Tax is Consistent with State Excise Taxes on Other Products

An ad valorem tax method on consumer products is unusual. Unlike a sales tax, which is applied to the price of the product, an excise tax is a consumption tax. Its intent is to tax all like products uniformly. Product categories such as cigarettes, beer, wine and gasoline are taxed based upon unit, weight or volume. When taxing under a weight-based system, a state does not consider price points – the weight of the product determines the excise tax liability.

Information provided by Altria Client Services Inc. on behalf of Philip Morris USA Inc. and US Smokeless Tobacco Company

A Weight-Based Tax Methodology Establishes Tax Equity for MST Products

An ad valorem system of taxation results in large variations in excise taxes:

- The current ad valorem excise tax rate in Alaska is 75%.
- MST products of equal tobacco weight are priced differently throughout the smokeless tobacco category leading to large differences in taxes paid per unit.
- The current system, in effect, creates a tax break for lower-priced brands, resulting in an unfair advantage.

A weight-based method of taxation does not favor one brand over another.

	Premium	Discount
Current Tax/1.2 oz. can	\$2.39 * 75% = \$1.79	\$0.98 * 75% = \$0.74
Weight-Based Tax/1.2 oz. can	\$1.88/oz. * 1.2 oz. = \$2.26	\$1.88/oz. * 1.2 oz. = \$2.26

Source: Copenhagen was used as the premium brand and Longhorn was used as the discount brand. Effective March 29, 2009, the price of Copenhagen will be \$2.39. As of March 11, 2009, the wholesale price of Longhorn was \$0.98.

Under an Ad Valorem Methodology, Down Trading Means Less Revenue for the State

In 2008 Tier 3 share of market continued to grow. The state receives as much as \$1.05 less revenue per can every time an adult consumer down-trades from a Tier 1 MST product to a Tier 3 product under the current ad valorem system.

Alaska left an estimated \$1.16 million on the table in 2008 due to down-trading.

Note: \$1.16 million MST excise tax revenue gain based on estimated sales from USSTC RAD database and share trends in 2008. The revenue model was run on a rate of \$1.88 per oz.

Taxing Moist Smokeless Tobacco

State excise taxes levied on Moist Smokeless Tobacco (MST) is unique amongst excise taxes levied across the United States. For most products, excise taxes are levied based on the number of units sold or quantity. Gasoline excise taxes are levied in cents per gallon. Beer, wine, and spirits excise taxes are levied in cents per gallon. Cigarette excise taxes are levied on a per pack basis. Even the federal government taxes MST based on the product's weight.

Many states (39 in all), on the other hand, tax MST based on the price of the product, see Table 1. This divergence from the standard method of levying excise taxes is inefficient and creates problems for states that tax MST on the basis of price. Consequently, MST taxation can be improved by switching MST taxation from a price-based system to a quantity-based tax system. There are two methods for taxing MST by quantity: levying the tax based on the weight of the product and levying the tax based on the number of units sold. Most states that use a quantity excise tax choose a tax on the weight of the product.

Table 1
State Tax Rate on Moist Smokeless Tobacco (MST) DIFFERENTIATE WEIGHT VERSUS UNIT BASE 2008¹

<u>State</u>	<u>Rate</u>	<u>Type of Tax</u>
Alabama	\$0.02 per ounce	Weight-based
Alaska	75% of wholesale price	Ad Valorem
Arizona	\$0.123 per ounce	Weight-Based
Arkansas	32% of manufacturers price	Ad Valorem
California	46.76% of wholesale price	Ad Valorem
Colorado	40% of manufacturers price	Ad Valorem
Connecticut	\$0.40 per ounce	Weight-based
Delaware	\$0.54 per ounce	Weight-based
Florida	25% of wholesale price	Ad Valorem
Georgia	10% of wholesale price	Ad Valorem
Hawaii	40% of wholesale price	Ad Valorem
Idaho	40% of wholesale price	Ad Valorem
Illinois	18% of wholesale price	Ad Valorem
Indiana	24% of wholesale price	Ad Valorem
Iowa	\$1.19 per ounce	Weight-based
Kansas	10% of wholesale price	Ad Valorem
Kentucky	\$0.095 per unit	Per Can
Louisiana	20% of manufacturers price	Ad Valorem
Maine	78% of wholesale price	Ad Valorem
Maryland	15% of wholesale price	Ad Valorem
Massachusetts	90% of wholesale price	Ad Valorem
Michigan	32% of wholesale price	Ad Valorem
Minnesota	70% of wholesale price	Ad Valorem

Oregon	65% of wholesale price	Ad Valorem
Pennsylvania	No	-----
Rhode Island	\$1.00 per ounce	Weight-based
South Carolina	5% of manufacturers price	Ad Valorem
South Dakota	35% of wholesale price	Ad Valorem
Tennessee	6.6% of wholesale price	Ad Valorem
Texas	40% of manufacturers price	Ad Valorem
Utah	\$0.75 per ounce	Weight-based
Vermont	\$1.49 per ounce	Weight-based
Virginia	10% of wholesale price	Ad Valorem
Washington	75% of wholesale price	Ad Valorem
West Virginia	7% of wholesale price	Ad Valorem
Wisconsin	\$1.31 per ounce	Weight-based
Wyoming	20% of wholesale price	Ad Valorem

Issues of Tax Equivalency

Price-based taxes, or ad valorem taxes, are levied as a percentage of the product's price. With respect to MST, these taxes are typically levied as a percentage of the wholesale price. For instance, in Idaho the tax on MST is 40% of the wholesaler's price. Consequently, for MST products that wholesale for \$3 per can, the 40% tax would impose an excise tax of \$1.20. For MST products that wholesale for \$1 per can, the 40% tax would impose an excise tax of \$0.40.

From an equivalency perspective, any ad valorem tax can be set at a level such that it imposes the same burden on MST as a weight-based or unit-based tax. In other words, any ad valorem tax can be converted into a unit-based or weight-based tax with the same equivalent tax burden.

Table 2 illustrates this principle based on Florida's current ad valorem MST excise tax. Looking at the premium category, currently, the state levies a tax that is 25% of the wholesale price. Based on a wholesale price of \$3.00 per 1.2 ounce can, the state could switch their ad valorem tax to a quantity tax of \$0.75 per unit or \$0.63 per ounce. In either scenario, the effective tax burden would be the same under all three scenarios – a 75-cent per can tax. Rows 3 & 4 illustrate the impact of the equivalency calculation on the Price Value and Deep Discount categories. While an ad-valorem tax provides a tax

Page 2 This document was prepared by Arduin, Laffer & Moore Econometrics on behalf of Altria Client Services Inc. It is intended for ALCS employees and consultants for educational purposes. It is not intended for third party distribution.

break for the lower-priced categories, both the unit-based and weight-based taxes levy the same dollar tax – the same dynamic that occurs when states (and the federal government) levies excise taxes on every other product subject to excise taxes.

Table 2
Premium Equivalency
Ad valorem, Per Can, and Per Ounce MST Taxes
for 1.2 ounce MST Products
In Florida
 (Based on 2008 Ad valorem Tax)

Wholesale Price	Ad Valorem	Unit-Based	Weight-Based (per ounce)
Premium (\$3.00/can)	\$0.75	\$0.75	\$0.75
Price Value (\$2.00/can)	\$0.50	\$0.75	\$0.75
Deep Discount (\$1.00/can)	\$0.25	\$0.75	\$0.75

The example in Table 2 is often referred to as a “pure” weight-based method. Below is language from the 2008 Utah House Bill 356, a “pure” weight-based bill.

- (4) The rate of the tax under this section is:
 - (a) for tobacco products except for moist snuff, 35% of the manufacturer’s sales price;
 - (b) subject to Subsection (5), for moist snuff, \$.75 per ounce.
- (5) (a) The tax under this section on moist snuff shall be imposed on the basis of the net weight of the moist snuff as listed by the manufacturer.
 - (b) If the net weight of moist snuff is in a quantity that is a fractional part of one ounce, a proportionate amount of the tax described in Subsection (4)(b) is imposed on that fractional part of one ounce.

The equivalency rates in Table 2 assume a constant can size – 1.2 ounces. However, MST products are sold in different sized cans (e.g., low-weight MST products). As the name implies, a weight-based tax method would result in a lower tax for lower-weight products of the same price. Unit-based taxes would not.

Currently, only Kentucky imposes a MST excise tax per unit, although Washington State considered replacing its current ad valorem tax with a per unit tax. Because MST products come in different size cans (i.e., 1.5 oz, 1.2 oz, and 0.12 oz), per unit tax proposals will typically include a “band” where the smaller-sized containers are taxed at the same rate as the standard containers.

A per unit tax with this feature is often referred to as a “banded” tax. Tax bands establish a tax floor such that the tax on lower-weight products is the same as the tax on standard-weight products. And proportionally larger per unit taxes are levied on larger sized cans such that the tax burden is not

Page 3 This document was prepared by Arduin, Laffer & Moore Econometrics on behalf of Altria Client Services Inc. It is intended for ALCS employees and consultants for educational purposes. It is not intended for third party distribution.

minimized by marketing larger products. Below is language from the 2008 Washington House Bill 2288, a "banded" bill.

Two dollars and thirty-five cents per ounce of moist snuff with a proportionate tax at the like rate on all fractional parts of an ounce thereof, provided that cans or packages of moist snuff with a net weight of less than one and two-tenths ounces shall be taxed at the equivalent rate of packages or cans weighing one and two-tenths ounces. Such tax on moist snuff shall be computed based on the net weight as listed by the manufacturer.

Table 3 illustrates the tax equivalency calculation based on Tier 1 products that are *banded* up to cans of 1.2 ounces.

Table 3
Equivalent Ad valorem, Per Can, and Per Ounce MST Taxes
By MST Product Size, for Tier 1 MST Products
In Florida
(Based on 2008 Ad valorem Tax, All products cost \$3.00)

Wholesale Price	Ad Valorem	Unit-Based	Weight-Based (per ounce)
1.5 ounces	\$0.75	\$0.94	\$0.94
1.2 ounces	\$0.75	\$0.75	\$0.75
0.12 ounces	\$0.75	\$0.75	\$0.08

The tax rates in Table 3 show that a unit-based (or banded) tax creates a tax floor of \$0.75 per can for all products, including those of a lower weight. Therefore, even though there is tax equivalency for products with a weight of 1.2 ounces and above, similar products with less weight will have a higher tax burden than under ad valorem or weight-based tax methods.

What MST Wholesale Price?

An important difficulty arises for ad valorem taxation: How does the ad valorem excise tax statute define *wholesale price*? The retail chain varies depending upon many factors. In some instances, MST is distributed from the manufacturer, to a wholesaler, then to a retailer and finally the customer. In this case, defining the wholesale price is straightforward.

Oftentimes the retail chain is longer than this example. In circumstances where there are two (or more) wholesalers, defining the wholesale price becomes more complex. This complexity creates problems. For instance,

Page 4 This document was prepared by Arduin, Laffer & Moore Econometrics on behalf of Altria Client Services Inc. It is intended for ALCS employees and consultants for educational purposes. It is not intended for third party distribution.

A company that distributes smokeless tobacco products to retailers in Florida filed a lawsuit against the Department of Business & Professional Regulation (DBPR), claiming a refund of more than \$14 million dollars in Other Tobacco Products Taxes over a five-year period. The core of the argument was what constitutes the "wholesale sales price."

The distributor contended the taxable wholesale sales price was the lower price a smokeless tobacco company's sales and marketing subsidiary paid to its manufacturing subsidiary for the product the distributor later purchased. The distributor had been taxed on the price it paid to the sales and marketing subsidiary.

In March 2005, the Court approved a settlement under which DBPR gave the distributor a \$6.2 million credit against future taxes. The Court retained jurisdiction for one year. The potential for other such claims exists.²

Standard industry discounting actions also impact tax revenues from ad valorem taxes. Oftentimes, manufacturers promote their products by offering "buy 1, get 1 free" or "buy 2, get 1 free" specials. Because the price is \$0 for a product that is given away, ad valorem taxes do not levy a tax on promotional products under an ad valorem tax system.

Quantity-based taxes avoid both of the problems discussed above. Under a quantity-based tax system the definition of the tax base is straightforward and not subject to differences in interpretation. The same logic applies to the promotional problem. With per unit or weight-based taxes, the manner in which products are promoted are irrelevant. Quantity taxes include both purchased products and promotional products as part of the tax base. These features create significant advantages for state governments that levy per unit or weight-based MST excise taxes instead of an ad valorem MST excise taxes.

Weight-based or Unit-based Taxes Are More Stable and Easier to Forecast

Related to the issue of price variability is the added difficulty state revenue forecasters face forecasting ad valorem MST taxes compared to quantity-based MST taxes.

Forecasting a quantity-based MST tax only requires the forecaster to track overall volume trends. Any changes in expected prices will impact consumption, and consequently tax revenues. However, the price impacts affect tax revenues only through their impact on the quantity sold – the changes in price do not directly increase or decrease the total tax revenues. Furthermore, price differentials across different

² Wenner Kurt R. and Turcotte John (2006) "Legislature Should Consider a Unit-Based Tobacco Products Tax" *Florida TaxWatch Briefings*, April.

types of products do not matter for tax revenue forecasts for quantity-based MST taxes, only the overall price trends. These features lead to a more stable, and consequently easier to forecast, tax revenue source from per unit or weight-based taxes.

Forecasting an ad valorem excise tax requires forecasters to track both price and volume trends. In addition, it is not just the overall price and volume trends that matter. Total MST ad valorem excise tax revenues will vary depending upon the price and volume trends by price category. Consequently, in states that impose MST ad valorem excise taxes, forecasters must predict the average MST price for all three MST price tiers, the changes in price differentials across the price tiers, and then predict how these changes in absolute and relative prices will impact expected volumes for each price tier. These complexities make accurately forecasting MST tax revenues from ad valorem excise taxes much more difficult than forecast MST tax revenues from per-unit excise taxes – it also can create a more variable excise tax revenue source.

Prices That Go Up Can Also Come Down

Proponents of ad valorem taxes on MST claim ad valorem taxes provide automatic protection against inflation. As the argument goes, when inflation increases, MST prices will increase in step, therefore tax revenues will be protected against inflation. Such arguments overlook the complexity of actual pricing decisions made by consumers and manufacturers.

Manufacturers often engage in price discounts in order to gain/protect market share. When the MST excise tax is based on the wholesale price of the product, then state government revenues are directly impacted by manufacturer's competitive actions. These impacts are compounded when one manufacturer's price discounts turn into an all out pricing war. The lower prices on all products lower the state excise tax revenues from the entire category. Such pricing actions may or may not occur during periods of high inflation.

Consequently, there is no guarantee that MST prices will increase in line with inflation. In fact, between 2000 and 2007, total OTP tax revenues in those states that impose a per unit tax on MST (either weight-based or based on the number of cans) grew more than total OTP tax revenues in those states that impose an ad valorem tax on MST, see Figure 1.

Consumers can also impact government revenues by their purchasing decision. Because most excise taxes are imposed on a quantity-basis, the type of product a consumer chooses is irrelevant to the government. For instance, gasoline excise taxes are levied on cents per gallon. Consequently, whether gasoline consumers choose regular or premium gasoline does not matter from the state government's perspective. State gasoline tax revenues are precisely the same. This is not the case for states that

Page 6 This document was prepared by Arduin, Laffer & Moore Econometrics on behalf of Altria Client Services Inc. It is intended for ALCS employees and consultants for educational purposes. It is not intended for third party distribution.

impose ad valorem MST taxes. State revenues change depending upon which product category a consumer chooses when states impose ad valorem MST taxes. This dynamic creates unexpected revenue declines if consumers change their product choice. In fact, this dynamic is taking place:

Data from Citigroup shows that sales of MST grew 6.4% nationwide in 2005 and that while Tier 3 grew by 28.8%, sales of Tier 1 products fell by 2.8%.³

Figure 1
Compound Annual Growth Rate in Per Unit and Ad Valorem OTP Taxes
2000 - 2007⁴

More troubling for state governments, consumer price sensitivity increases during more difficult economic times. Consumers will be looking toward economizing on their costs and may be more willing to purchase lower priced products. Manufacturers, aware of this dynamic, will be more sensitive to consumers' price consciousness and will be more willing to forgo price increases and perhaps even cut prices. As a result, both consumer and manufacturer actions will work toward limiting price increases during difficult economic times, and may even push actual average prices down.

Not surprisingly, state tax revenues are generally under pressure during the same tough economic times, see Figure 2. The gray shaded areas in Figure 2 represent recessions. The gray dotted line represents

³ Wenner Kurt R. and Turcotte John (2006) "Legislature Should Consider a Unit-Based Tobacco Products Tax" *Florida TaxWatch Briefings*, April.

⁴ Source: Orzechowski Bill and Walker Rob (2008) *The Tax Burden on Tobacco* vol. 42. In order to ensure comparability across time, only those states that levied an MST tax throughout the entire period were included in the analysis.

Page 7 This document was prepared by Arduin, Laffer & Moore Econometrics on behalf of Altria Client Services Inc. It is intended for ALCS employees and consultants for educational purposes. It is not intended for third party distribution.

the average growth in real state tax revenues, which has been 3.5% between 1978 and 2007. State tax revenue growth was well below the average state tax revenue growth rate during and following all four official recessions since 1978. Recently, 2007 state tax revenues have fallen below average, and the quarterly data from the U.S. Census shows that tax revenues will likely fall even further in 2008 – consistent with the declining economy.

Figure 2
Percent Change in Inflation Adjusted Total State Tax Revenues
1978 - 2007⁵

Ad valorem MST taxes are determined by both the price of the product and the quantity sold. Due to pressure on MST prices (driven either by manufacturers or consumers) during a slowing economy, ad valorem MST taxes will under-perform state tax revenue needs at the precise time when states need revenues the most. Quantity based MST taxes avoid this problem by being determined by the quantity sold alone.

Equity Considerations

According to the National Conference of State Legislatures, tax equity "has two primary components – horizontal equity and vertical equity. Horizontal equity means that taxpayers with similar economic

⁵ Source: U.S. Census, www.census.gov.

circumstances have similar tax burdens. Vertical equity refers to the distribution of tax burdens among taxpayers with different economic circumstances.⁶

The issue of horizontal equity is the most relevant with respect to ad valorem MST taxation. Ad valorem excise taxes create an artificial market advantage for the lower-priced MST products. As illustrated in the example above, in a state with a 40% ad valorem tax on the wholesale price of the product (and assuming that the wholesale price can be clearly defined), the actual dollar tax paid on a product that wholesales for \$3 per can (\$1.20) will be 300% more than the actual dollar tax paid on a product that wholesales for \$1 per can (\$0.40).

Because the tax burden is levied on the product not the individual, ad valorem MST taxes vary the tax burden on individuals that is not based on the individual's ability to pay. The ad valorem system, consequently, violates the horizontal equity consideration defined by the National Conference of State Legislatures.

Conclusion

Most states levy an ad valorem tax on MST products. Not only is this atypical for excise taxation in the U.S., but it is also less efficient. The evidence shows that tax revenues in those states that rely on ad valorem taxes do not necessarily grow faster than those states that levy a per unit MST tax. In fact, between 2000 and 2007, revenues in the states that levied a per unit tax grew at a faster rate than revenues in the states that levied an ad valorem tax.

Ad valorem taxation also creates unnecessary complexity in the tax code, which makes it more difficult to forecast tax revenues and exposes the state's tax revenues to unnecessary volatility. For all of these reasons, taxing Moist Smokeless Tobacco on a per unit basis is more efficient than an ad valorem tax.

Recent MST Price Reductions Will Result in Revenue Loss in Ad Valorem States

On Tuesday, March 10, 2009, Conwood Company LLC announced a price reduction on Kodiak and Hawken. On Wednesday, March 4, 2009, US Smokeless Tobacco Company announced a price reduction on Copenhagen, Skoal and Red Seal and a price increase on Husky. The table below shows these price changes.

	Current Wholesale Price	New Wholesale Price	Price Change
Kodiak	\$3.11	\$2.39	(\$0.72)
Hawken	\$3.11	\$2.39	(\$0.72)
Copenhagen	\$3.01	\$2.39	(\$0.62)
Skoal	\$3.01	\$2.39	(\$0.62)
Red Seal	\$2.02	\$1.75	(\$0.27)
Husky	\$1.35	\$1.55	\$0.20

In states that use an ad valorem excise tax methodology for MST, price reductions will result in an immediate reduction in MST excise tax revenues. The Alaska ad valorem rate is 75%. The annual revenue reduction is estimated in the chart below.¹

	Price Change Per Can	Cans Sold	Revenue Change
Kodiak and Hawken	(\$0.72)	183,000	(\$99,000)
Copenhagen and Skoal	(\$0.62)	1.45 million	(\$676,000)
Red Seal	(\$0.27)	12,000	(\$2,000)
Husky	\$0.20	100,000	\$15,000
Total			(\$762,000)

If Alaska converted to a weight-based taxation methodology, state revenues would not be dependent on the pricing decisions in the marketplace, including manufacturer discounts or promotions. However, because Alaska taxes MST based on price, rather than on weight, the state will lose an estimated \$762,000 in excise tax revenue per year.

Weight-based taxes protect states from loss of revenue that can follow price reductions or promotional activity in ad valorem states. With an ad valorem tax, the state's revenues depend not only on the volume of sales, but also on pricing decisions of the manufacturers – which leads to less stability in tax revenue collections. Under a weight-based methodology, every 1.2 ounce can pays the same excise tax to the state, regardless of pricing.

A weight-based MST tax methodology creates a stable and predictable stream of MST tax revenue for the state.

¹ USSTC RAD sales database. Cans sold is an estimate based on wholesaler reporting. It covers 2008. The revenue loss was estimated by multiplying the price reduction per can, the volume of cans for the affected brands and the ad valorem tax rate. We assume no changes in volume for 2009 for purposes of this estimate.

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

ALEC

ISSUE ALERT

To: Alaska ALEC House Member
From: Michael Hough, Task Force Director
Re: House Bill 188
Date: March 24, 2009

The Alaska House is considering **HB 188**, which would change the current tax on moist smokeless tobacco (MST) from an ad valorem basis (percentage tax based on price) to a weight-based system. **The American Legislative Exchange Council (ALEC) fully supports this concept.** Changing the current tax on moist smokeless tobacco to weight-based system is sound tax policy that provides tax fairness and fits squarely within the Jeffersonian Principles of free market enterprise and fair commerce.

In fact, ALEC recently passed a model resolution and statement of principles explaining the importance of implementing this needed change in tax law. We have attached the resolution, *Resolution on the Enhancement of Economic Neutrality, Commercial Efficiency, and Fairness in the Taxation of Moist Smokeless Tobacco Products* to this Issue Alert.

ALEC believes that all like products would be taxed the same and there should be no tax preference for inexpensive products that could harm state revenues. Additionally, such a tax change would simplify and ease compliance for retailers and state tax administrators and would erase the tax-conferred market advantage that some products have enjoyed in recent years, while restoring the principles of sound tax policy.

Proponents' claim that taxes based upon price discourages consumption, especially among teenagers. To the contrary, an ad valorem tax merely shifts demand from one product to the next. Proponents also suggest that this is no different than a consumer who pays higher taxes for a more expensive car than a cheaper alternative. This confuses an excise tax with a sales tax rate; sales taxes are solely intended to tax the price or value of a product while excise taxes are intended to tax actual consumption. Automobiles are not consumable items and therefore this argument is without merit.

Regardless of the politics or perceived social benefits, sound tax policy should still apply to excise taxes. ALEC does not believe any state should support a tax policy which creates a preference for one product over another, nor should the state interfere with the invisible hand of the free market by encouraging the use of one product over another. True to Jefferson's core principles, states should not be in the business of picking winners and losers, but rather let the market decide free of discriminatory government intervention.

Finally, ALEC does not believe this legislation should be used for a revenue enhancer and do not support the idea of raising taxes during these tough economic times. While we fully support the concept of **replacing the ad valorem tax with a weight-based tax, we do not support the overall tax increase that results from this legislation.**

If you should have any questions please contact ALEC's Commerce, Insurance and Economic Development Task Force Director, Michael Hough at 202-742-8530 or mhough@alec.org.

Tax Policy: A Fair Deal for Smokeless Tobacco

ALEC resolution calls on 40 states to change tax structure and adopt fair excise tax policy for smokeless tobacco products.

By Michael Keegan

In December 2006, ALEC fully approved a resolution and statement of principles calling for states to change their tax treatment of smokeless tobacco products — and any other consumer products taxed in a similar way — from an ad valorem basis (percentage tax based upon price) to a weight- or unit-based system. This change would ensure that all like products would be taxed at the same rate, it would eliminate a tax preference for inexpensive products that could harm state revenues and it would align smokeless tobacco products with all other consumer products subject to an excise tax. Additionally, such a tax change would simplify and ease compliance for retailers and state tax administrators, and it would erase the tax-conferred market advantage that some products have enjoyed in recent years, while restoring the principle of sound tax policy.

The cornerstone of excise tax policy is simply to tax the consumption of a product. The federal and state governments impose excise taxes on a range of products, including gasoline, beer, alcohol and tobacco products. In all instances, state excise taxes are based upon the unit or weight of a product (i.e., a gallon of gasoline, a liter of alcohol, a pack of cigarettes).

The beneficial result of an excise tax based upon unit or weight is that like products are taxed equally regardless of price, and the tax is spread evenly. For example, a gallon of 87-octane gasoline is taxed at the same rate

as a gallon of 93 octane, a pack of premium cigarettes is taxed at the same rate as a pack of generic cigarettes and the same holds true across the line for many other products.

In 40 states, however, moist smokeless tobacco (MST) is taxed as a percentage of its price, not its weight. A tax based upon price not only creates the effect of a double sales tax (as these products are also subject to a sales tax based upon price) but worse, it distorts consumer behavior by taxing similar products in a very dissimilar

manner. The result of ad valorem taxation is that certain products are subject to a much higher tax than similar less expensive products.

This policy creates a glaring market distortion as the tax treatment of the more expensive products artificially shifts demand toward lower priced products by

exacerbating the price difference between the two. As highlighted by Americans for Tax Reform, “Excise taxes based upon price are taxes on autopilot, which creates a double and triple taxation effect and hides the real tax burden.”

Although proponents claim that taxes based upon price discourage consumption — especially among teenagers — the reality is that an ad valorem tax merely shifts demand from one product to the next. Supporters of this disparate tax system also suggest that it is no different than when consumers pay higher taxes for a more expensive car than for a cheaper alternative. This argument confuses an excise tax with a sales tax.

ALEC POLICY FORUM

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

The difference is that sales taxes are solely based on the price or value of a product while excise taxes are generally fixed-fee and can be imposed at the point of production, importation or sale. They are intended to both raise revenue and to discourage particular behavior.

Regardless of the politics or perceived social benefits, sound tax policy should still apply to excise taxes. ALEC does not believe any state should support a tax policy that creates a preference for one product over another, nor should the state interfere with the invisible hand of the free market by encouraging the use of one product over another. True to Jefferson's core principles, states should not be in the business of picking winners and losers, but should let the market decide free of discriminatory government intervention.

It is with these guiding principles relating to tax equity, tax fairness, free market economy and commerce without discriminatory interference by government that ALEC encourages all policymakers in states that currently tax smokeless tobacco on price (ad valorem) to support and adopt legislation that taxes all consumer products — including smokeless tobacco products — fairly, based upon the weight of a can.

This chart indicates states that currently tax smokeless tobacco products on an ad valorem basis and shows the wide discrepancies in the state excise tax rates on smokeless tobacco products.

ALEC POLICY FORUM

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

Resolution on the Enhancement of Economic Neutrality, Commercial Efficiency and Fairness in the Taxation of Moist Smokeless Tobacco (MST) Products

WHEREAS, excise taxes are levied by individual states on the distribution of a variety of consumer products in the United States.

WHEREAS, excise taxes are levied at various points or transactions during the distribution of these consumer products having a compounding effect on all other taxes levied further along the distribution chain, including sales taxes.

WHEREAS, levy of excise taxes should be equally applied to all products of a like nature or category, as to not create a tax policy that benefits one product and penalizes another of the same nature or category.

WHEREAS, state tax policy should not create preferences among products of a like nature or category.

WHEREAS, taxes that create a consumer preference within a product category impede free market commerce.

WHEREAS, excise taxes levied on the basis of value or price "ad valorem" at any point during the distribution of any products greatly aggravate the compounding effect on taxes and prices between products and distort consumer preference between similar products.

WHEREAS, MST products are all of a like nature and category, and packaging is distinguishable only by volume, weight or labeling.

WHEREAS, ad valorem excise taxes on MST creates a tax preference for inexpensive MST products, thereby artificially disrupting free market consumer dynamics.

WHEREAS, ad valorem excise taxes on MST result in automatic tax increases or decreases **without** legislative oversight or action, and negatively impact consumers and producers while denying them any legislative recourse.

WHEREAS, ad valorem excise tax statutes are subject to differing interpretations as to the appropriate point or transaction to apply the tax, creating compliance problems for producers and state tax administrators.

WHEREAS, excise taxes on MST based on volume or weight eliminate the possibility of market distortions and manipulations, tax preferences for lower priced products and aggravation of the compounding nature of an excise tax levied during distribution.

WHEREAS, virtually all other products on which excise taxes are levied carry a tax based on volume or weight, ensuring that manufacturers and consumers face a level marketplace based on freedom of consumer choice.

NOW, THEREFORE BE IT RESOLVED, THAT the American Legislative Exchange Council (ALEC) will support efforts to change or convert state excise taxes levied on MST from ad valorem or price based to weight or volume based.

NOW, THEREFORE BE IT FURTHER RESOLVED THAT ALEC shall support the following statement of principles.

Statement of Principles Regarding State Ad Valorem Taxes on Consumer Products

The Problem: Ad Valorem Excise Taxes on Consumer Products

- Ad valorem taxes give less expensive products a tax preference, which encourages consumers to switch to those products, thus artificially distorting the market and influencing consumer behavior.
- Market distortions created by ad valorem taxes erode and destabilize state revenues over time.
- Ad valorem excise taxes lack neutrality. Products with identical weights and packaging can have widely different tax burdens, harming commercial activity and artificially distorting the dynamics of the marketplace.
- Ad valorem excise taxes are not consistent with virtually all other consumer product excise taxes that tax solely on the basis of the amount of the product purchased and consumed, and do not discriminate on price.
- Ad valorem state excise taxes amount to a tax on top of a tax because a portion of the price basis for applying the excise tax is attributable to any existing federal excise tax.
- Ad valorem excise taxes result in automatic tax increases and decreases **without** legislative oversight or action.

ALEC POLICY FORUM

AMERICAN LEGISLATIVE EXCHANGE COUNCIL

- Ad valorem excise tax statutes are subject to differing interpretations regarding the appropriate tax base and payer; this increases complexity and compliance problems for manufacturers, distributors and state tax administrators.

The Solution: Weight-Based Excise Taxes

- Under a weight-based tax structure, not a state tax system that arbitrarily gives a preference to one product over another, consumer products compete fairly in the marketplace on the basis of product attributes and price.
- Weight-based excise taxes eliminate the market distortions and revenue erosion caused by ad valorem excise taxes.
- Like products should carry identical taxes. All products and taxpayers are treated fairly and equally under a weight-based tax system.
- A weight-based excise tax would equalize the tax treatment of all like consumer products in the states and eliminate an economic disincentive that hinders commercial activity.
- A weight-based excise tax on MST eliminates the possibility of a tax on tax.
- A weight-based excise tax eliminates automatic tax increases, and requires specific legislative action to increase or decrease taxes.
- Weight-based taxes are easy for taxpayers to understand and for tax administrators to support and enforce.

Conclusion

Adherence to the principles of sound tax policy, economic neutrality, fairness, simplicity, efficiency and fiscal stability should lead state legislators in states that currently tax consumer products on an ad valorem basis to replace that method of taxation with one that taxes products on a per unit, weight or volume basis.

Adopted by the Commerce, Insurance and Economic Development Task Force on July 21, 2006, and approved by the ALEC Board of Directors in December 2006.

Michael Keegan is the former director of the ALEC Commerce, Insurance and Economic Development Task Force. For additional information please view the resolution and Statement of Principles on the ALEC Web site or contact Jonathan Shore at jshore@alec.org

The Effect of Federal Tobacco Tax Increases on Alaska's Tobacco Taxes

Prepared by: Johanna Bales

Alaska levies an excise tax on cigarettes and on other tobacco products (OTP). The tax rates, tax calculation, and how the tax is levied differ between cigarettes and OTP. The following outlines those differences and the effect of recent federal tobacco tax increases on Alaska tobacco taxes:

Cigarette Tax

Alaska's cigarette tax is levied on each cigarette. The tax is currently 10 cents per cigarette or \$2.00 per pack of twenty cigarettes. The tax is levied when cigarettes are brought into the state for sale or personal consumption. What this means is that if an individual buys cigarettes over the Internet or has friends or family ship cigarettes to them through the mail, they are liable to pay the Alaska tax. The federal tax was 39 cents per pack, but is now \$1.01 per pack of twenty. The increase in the federal tax does not affect Alaska's tax rate. However, it can and probably will affect revenue as people either quit smoking or cut back due to the higher cost of cigarettes that will result from the federal increase. We also expect smuggling to increase in all states, including Alaska, which will also cut into Alaska's cigarette tax revenue.

Other Tobacco Products (OTP)

Alaska's OTP tax is levied at the rate of 75% of the wholesale price of the tobacco product. OTP includes little cigars, cigars, pipe tobacco, chewing tobacco, snuff, roll-your-own tobacco, etc. Basically, anything other than a cigarette that has tobacco in it. The tax is levied when OTP is brought into the state for sale. It is important to note, the OTP tax is not levied when OTP is brought into the state for personal consumption. The wholesale price is defined in statute as the "established price for which a manufacturer sells a tobacco product to a distributor . . ." This is basically the manufacturer's list price.

The federal law increased many OTP products significantly. For example, the tax on little cigars increased from 4 cents per pack to \$1.01 per pack of twenty. Chewing tobacco increased from 19.5 cents to 50.33 cents per pound and roll-your-own tobacco increased from \$1.0969 to \$24.78 per pound. The federal tax is paid by the manufacturer. Therefore, the manufacturer's list price will increase to reflect the increases in the federal tax. Even though our tax rate of 75% of the wholesale cost remains the same, the amount upon which the 75% is multiplied will be significantly higher. As such, Alaska's tax on OTP will also increase.

Will people start buying roll-your-own and other OTP from states without a tax? Most states have a tax, but if the product is exported from the state that state's tax doesn't apply. The question should be, "will people start buying roll-your-own and other OTP from Internet sellers?" The answer is, "yes." When Alaska increased the tax on OTP in 1997 from 25% to 75% of the wholesale cost, we did see an increase in people buying OTP through the mail. It is perfectly legal for them to do so since the OTP tax is only levied when OTP is imported or brought into the state for sale. With the increase in the federal tax and resultant increase in the Alaska tax, we will definitely see individuals and possibly even businesses purchasing OTP from Internet sites and through the mail. This will result in lost revenue to the state.

When Alaska increased its cigarette tax during a special legislative session in the summer of 2004, a couple of legislators tried to insert language that made it so the OTP tax was levied on individuals who imported OTP for personal consumption. Their concern was that local businesses which sell OTP were unable to compete with Internet sellers because it was legal for individuals to buy through the mail and

Internet without paying Alaska's tax, but the local retailer had to pay the tax. I think this will be even more of an issue now that the federal tax has significantly increased and the Alaska tax will be even more.

Alaska's cigarette and OTP tax rates are set in statute. The Department of Revenue has no authority to change the tax rates.

One other thing to note is that the federal law provides for a floor stock tax. What this means is that every distributor and retailer in the state must identify their inventory as of April 1, 2009 and pay the difference between the new and old federal tax rates to the federal government by August 1, 2009. Alaska does not have a floor stock tax. Even though distributors and retailers must remit the higher tax on their inventory to the federal government, the Alaska tax on OTP will be based on the manufacturer's list price at the time the product was imported into the state for sale.

Attached is the new federal language with a chart showing the changes in the federal tax rates by product.

Product	Current Tax Rates	Senate SCHIP Tax Rates
Cigarettes	39¢ per pack	\$1.01 per pack
Large Cigars	20.719% of manufacturer's price; cap of 4.875¢/cigar	52.75% of manufacturer's price; cap of 40.26 cents per cigar
Little Cigars	4¢ per pack	\$1.01 per pack:
Pipe Tobacco	\$1.0969 per pound	\$2.8311 per pound
Chewing Tobacco	19.5¢ per pound	50.33¢ per pound
Snuff	58.5¢ per pound	\$1.51 per pound
RYO; Cigar Wrappers	\$1.0969 per pound	\$24.78 per pound
Cigarette Paper	1.22¢ per 50 papers	3.15¢ per 50 papers
Cigarette Tubes	2.44¢ per 50 tubes	6.30¢ per 50 tubes

H.R.2

Children's Health Insurance Program Reauthorization Act of 2009 (Engrossed Amendment as Agreed to by Senate)

SEC. 701. INCREASE IN EXCISE TAX RATE ON TOBACCO PRODUCTS.

(a) *Cigars-* Section 5701(a) of the Internal Revenue Code of 1986 is amended--

(1) by striking '\$1.828 cents per thousand (\$1.594 cents per thousand on cigars removed during 2000 or 2001)' in paragraph (1) and inserting '\$50.33 per thousand',

(2) by striking '20.719 percent (18.063 percent on cigars removed during 2000 or 2001)' in paragraph (2) and inserting '52.75 percent', and

(3) by striking '\$48.75 per thousand (\$42.50 per thousand on cigars removed during 2000 or 2001)' in paragraph (2) and inserting '40.26 cents per cigar'.

(b) *Cigarettes-* Section 5701(b) of such Code is amended--

(1) by striking '\$19.50 per thousand (\$17 per thousand on cigarettes removed during 2000 or 2001)' in paragraph (1) and inserting '\$50.33 per thousand', and

(2) by striking '\$40.95 per thousand (\$35.70 per thousand on cigarettes removed during 2000 or 2001)' in paragraph (2) and inserting '\$105.69 per thousand'.

(c) *Cigarette Papers-* Section 5701(c) of such Code is amended by striking '1.22 cents (1.06 cents on cigarette papers removed during 2000 or 2001)' and inserting '3.15 cents'.

(d) Cigarette Tubes- Section 5701(d) of such Code is amended by striking `2.44 cents (2.13 cents on cigarette tubes removed during 2000 or 2001)' and inserting `6.30 cents'.

(e) Smokeless Tobacco- Section 5701(e) of such Code is amended--

(1) by striking `58.5 cents (51 cents on snuff removed during 2000 or 2001)' in paragraph (1) and inserting `\$1.51', and

(2) by striking `19.5 cents (17 cents on chewing tobacco removed during 2000 or 2001)' in paragraph (2) and inserting `50.33 cents'.

(f) Pipe Tobacco- Section 5701(f) of such Code is amended by striking `\$1.0969 cents (95.67 cents on pipe tobacco removed during 2000 or 2001)' and inserting `\$2.8311 cents'.

(g) Roll-Your-Own Tobacco- Section 5701(g) of such Code is amended by striking `\$1.0969 cents (95.67 cents on roll-your-own tobacco removed during 2000 or 2001)' and inserting `\$24.78'.

(h) Floor Stocks Taxes-

(1) IMPOSITION OF TAX- On tobacco products (other than cigars described in section 5701(a)(2) of the Internal Revenue Code of 1986) and cigarette papers and tubes manufactured in or imported into the United States which are removed before April 1, 2009, and held on such date for sale by any person, there is hereby imposed a tax in an amount equal to the excess of--

(A) the tax which would be imposed under section 5701 of such Code on the article if the article had been removed on such date, over

(B) the prior tax (if any) imposed under section 5701 of such Code on such article.

(2) CREDIT AGAINST TAX- Each person shall be allowed as a credit against the taxes imposed by paragraph (1) an amount equal to \$500. Such credit shall not exceed the amount of taxes imposed by paragraph (1) on April 1, 2009, for which such person is liable.

(3) LIABILITY FOR TAX AND METHOD OF PAYMENT-

(A) LIABILITY FOR TAX- A person holding tobacco products, cigarette papers, or cigarette tubes on April 1, 2009, to which any tax imposed by paragraph (1) applies shall be liable for such tax.

(B) METHOD OF PAYMENT- The tax imposed by paragraph (1) shall be paid in such manner as the Secretary shall prescribe by regulations.

(C) TIME FOR PAYMENT- The tax imposed by paragraph (1) shall be paid on or before August 1, 2009.

Recent MST Price Reductions Will Result in Revenue Loss in Ad Valorem States

On Tuesday, March 10, 2009, Conwood Company LLC announced a price reduction on Kodiak and Hawken. On Wednesday, March 4, 2009, US Smokeless Tobacco Company announced a price reduction on Copenhagen, Skoal and Red Seal and a price increase on Husky. The table below shows these price changes.

	Current Wholesale Price	New Wholesale Price	Price Change
Kodiak	\$3.11	\$2.39	(\$0.72)
Hawken	\$3.11	\$2.39	(\$0.72)
Copenhagen	\$3.01	\$2.39	(\$0.62)
Skoal	\$3.01	\$2.39	(\$0.62)
Red Seal	\$2.02	\$1.75	(\$0.27)
Husky	\$1.35	\$1.55	\$0.20

In states that use an ad valorem excise tax methodology for MST, price reductions will result in an immediate reduction in MST excise tax revenues. The Alaska ad valorem rate is 75%. The annual revenue reduction is estimated in the chart below.¹

Estimated Ad Valorem MST Tax Revenue Reduction for 2009			
	Price Change Per Can	Cans Sold	Revenue Change
Kodiak and Hawken	(\$0.72)	.183,000	(\$99,000)
Copenhagen and Skoal	(\$0.62)	1.45 million	(\$676,000)
Red Seal	(\$0.27)	12,000	(\$2,000)
Husky	\$0.20	100,000	\$15,000
Total			(\$762,000)

If Alaska converted to a weight-based taxation methodology, state revenues would not be dependent on the pricing decisions in the marketplace, including manufacturer discounts or promotions. However, because Alaska taxes MST based on price, rather than on weight, the state will lose an estimated \$762,000 in excise tax revenue per year.

Weight-based taxes protect states from loss of revenue that can follow price reductions or promotional activity in ad valorem states. With an ad valorem tax, the state's revenues depend not only on the volume of sales, but also on pricing decisions of the manufacturers – which leads to less stability in tax revenue collections. Under a weight-based methodology, every 1.2 ounce can pays the same excise tax to the state, regardless of pricing.

A weight-based MST tax methodology creates a stable and predictable stream of MST tax revenue for the state.

¹ USSTC RAD sales database. Cans sold is an estimate based on wholesaler reporting. It covers 2008. The revenue loss was estimated by multiplying the price reduction per can, the volume of cans for the affected brands and the ad valorem tax rate. We assume no changes in volume for 2009 for purposes of this estimate.

Alaskans for Tobacco-Free Kids

March 24, 2009

Statement for House Bill 188: Taxation on Moist Snuff Tobacco

Alaskans for Tobacco-Free Kids is a coalition of organizations committed to reducing tobacco's effects on youth. Our coalition membership includes AARP, the American Cancer Society Cancer Action Network, the American Heart Association, and the American Lung Association of Alaska. We support efforts and strategies to reduce tobacco use, especially among our youth.

Smokeless tobacco use causes serious harm, including gum disease, and a substantially increased risk of oral cancer. Even more tragic, use during youth can lead to a lifetime of addiction to smokeless tobacco, or, frequently, to cigarettes, as nicotine addiction created by smokeless use can ultimately lead to habitual smoking.

We applaud efforts to keep tobacco products away from youth and know that tobacco taxes are one of the most effective ways to reduce the number of youth who ever start using tobacco. That said, our coalition has serious concerns with the specific provisions of House Bill 188. Primarily, weight-based taxes have been shown to increase youth use and over time, will hurt state revenues.

Weight-based taxation has been promoted by manufacturers of premium moist snuff products as a strategy to reduce the effective tax on their products, particularly the new generation of ultra low-weight products. At the same time, weight-based taxation systems increase the effective tax on lower-priced brands. This is particularly harmful to Alaskans as the vast majority of youth who use smokeless tobacco use the higher-priced premium brands. By lowering the price on the smokeless tobacco products most popular with youth, shifting to a weight-based tax could increase smokeless tobacco use among youth.

Taxing by weight also provides a massive tax break to the new generation of smokeless tobacco products that can weigh as little as one-tenth as much as the standard smokeless products.

Over time, shifts to a weight-based tax dramatically reduce the portion of state revenues gained from the smokeless tax. Fixing the monetary tax rate in a weight-based system will erode over time as inflation and product prices increase.

Unlike weight-based taxes, our current ad valorem tax rate automatically increases with inflation and other tobacco products price increases which protect the state's tax rate and revenue from eroding over time.

Alaskans for Tobacco-Free Kids supports and advocates the best way to tax smokeless tobacco is with our current ad valorem system. If Alaska wants more revenue from its smokeless tobacco products, we should simply raise our percentage-of-price rate.

CS FOR HOUSE BILL NO. 188(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVE HERRON

A BILL

FOR AN ACT ENTITLED

1 "An Act relating to the taxation of moist snuff tobacco, including spitless moist snuff
 2 tobacco; including different types of moist snuff tobacco in the definition of 'tobacco
 3 product' in provisions levying an excise tax on those products; relating to licensing for
 4 and taxation of tobacco products, including tobacco products imported for personal use
 5 and consumption; relating to the deposit of revenue from the taxation of moist snuff
 6 tobacco into the tobacco use education and cessation fund; defining 'moist snuff
 7 tobacco'; relating to the business license endorsement for the sale of tobacco products;
 8 relating to the offense of selling tobacco to a minor; and providing for an effective date."

9 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

10 * Section 1. AS 11.76.100(a) is amended to read:

11 (a) A person commits the offense of selling or giving tobacco or nicotine to a
 12 minor if the person

1 (1) negligently sells a cigarette, a cigar, tobacco, or a product
2 containing tobacco or nicotine to a person under 19 years of age;

3 (2) is 19 years of age or older and negligently exchanges or gives a
4 cigarette, a cigar, tobacco, or a product containing tobacco or nicotine to a person
5 under 19 years of age;

6 (3) maintains a vending machine that dispenses cigarettes, cigars,
7 tobacco, or products containing tobacco or nicotine; or

8 (4) holds a business license endorsement under AS 43.70.075 and
9 allows a person under 19 years of age to sell a cigarette, a cigar, tobacco, or a product
10 containing tobacco or nicotine.

11 * Sec. 2. AS 37.05.580(a) is amended to read:

12 (a) There is created as a special account in the general fund the tobacco use
13 education and cessation fund into which shall be deposited 20 percent annually of the
14 revenue derived from the settlement of State of Alaska v. Philip Morris, Incorporated,
15 et al, No. 1JU-97-915 CI (Alaska Super. 1997) and 25 percent of the annual
16 revenue collected from the tax on moist snuff tobacco under AS 43.50.300 -
17 43.50.390. The purpose of the tobacco use education and cessation fund is to provide a
18 source to finance the comprehensive smoking education, tobacco use prevention, and
19 tobacco control program authorized by AS 44.29.020(a)(14). In this subsection,
20 "moist snuff tobacco" has the meaning given in AS 43.50.390.

21 * Sec. 3. AS 43.50.070(b) is amended to read:

22 (b) In this section, "licensee" means a person licensed under AS 43.50.010 -
23 43.50.180 or 43.50.300 - 43.50.390, except for a buyer required to be licensed
24 under AS 43.50.320(a)(2).

25 * Sec. 4. AS 43.50.300 is amended to read:

26 **Sec. 43.50.300. Excise tax levied.** (a) An excise tax is levied on tobacco
27 products in the state at the rate in (b) of this section [RATE OF 75 PERCENT OF
28 THE WHOLESALE PRICE OF THE TOBACCO PRODUCTS]. The tax is levied
29 when a person

30 (1) brings, or causes to be brought, a tobacco product into the state
31 from outside the state for sale;

1 (2) makes, manufactures, or fabricates a tobacco product in the state
2 for sale in the state; [OR]

3 (3) ships or transports a tobacco product to a retailer in the state for
4 sale by the retailer or to an individual for personal consumption; or

5 (4) brings or causes to be brought a tobacco product into the state
6 from outside the state for personal consumption.

7 * Sec. 5. AS 43.50.300 is amended by adding a new subsection to read:

8 (b) The excise tax rate on

9 (1) moist snuff tobacco, other than spitless moist snuff tobacco, is
10 \$1.88 multiplied by the number of ounces of moist snuff tobacco, including fractions
11 of an ounce;

12 (2) spitless moist snuff tobacco is 100 percent of the wholesale price;

13 (3) tobacco products other than moist snuff tobacco products subject to
14 the tax rates in (1) and (2) of this subsection is 75 percent of the wholesale price of the
15 tobacco product.

16 * Sec. 6. AS 43.50.300, as amended by sec. 5 of this Act, is amended to read:

17 (b) The excise tax rate on

18 (1) [MOIST SNUFF TOBACCO, OTHER THAN SPITLESS MOIST
19 SNUFF TOBACCO, IS \$1.88 MULTIPLIED BY THE NUMBER OF OUNCES OF
20 MOIST SNUFF TOBACCO, INCLUDING FRACTIONS OF AN OUNCE;

21 (2)] spitless moist snuff tobacco is 100 percent of the wholesale price;

22 (2) [(3)] tobacco products other than spitless moist snuff tobacco
23 products subject to the tax rate [RATES] in (1) [AND (2)] of this subsection is 75
24 percent of the wholesale price of the tobacco product.

25 * Sec. 7. AS 43.50 is amended by adding a new section to read:

26 **Sec. 43.50.305. Packaging of certain tobacco products for sale.** (a) Cigars,
27 except for cigars that are hand-rolled and wrapped in whole tobacco leaf, shall be sold
28 in packages containing at least five cigars.

29 (b) Smokeless tobacco

30 (1) sold as loose tobacco shall be sold in packages containing at least
31 one ounce;

1 (2) in single-dose units shall be sold only in packages of not less than
2 10 units and in original unaltered manufacturer's packaging.

3 * **Sec. 8.** AS 43.50.320(a) is repealed and reenacted to read:

4 (a) Except as provided in (g) of this section, a person engaged in an activity
5 described in

6 (1) AS 43.50.300(a)(1) or (3) must be licensed by the department as a
7 distributor;

8 (2) AS 43.50.300(a)(4) must be licensed as a buyer.

9 * **Sec. 9.** AS 43.50.320(b) is amended to read:

10 (b) The department, upon application and payment of a fee of

11 (1) \$50, shall issue a license for one year to a person who applies for a
12 license **as a distributor** under (a)(1) of this section;

13 (2) \$25, shall issue a license for one year to a person who applies
14 for a license as a buyer under (a)(2) of this section.

15 * **Sec. 10.** AS 43.50.320(d) is amended to read:

16 (d) A license issued under (b)(1) of this section must include the name and
17 address of the licensee, the type of business to be conducted, and the year for which
18 the license is issued.

19 * **Sec. 11.** AS 43.50.320(e) is amended to read:

20 (e) The department may renew a license issued under

21 (1) (b)(1) of this section for a fee of \$50;

22 (2) (b)(2) of this section for a fee of \$25.

23 * **Sec. 12.** AS 43.50.330(a) is amended to read:

24 (a) On or before the last day of each calendar month, a licensee shall file a
25 return with the department. The return must state the number or amount of tobacco
26 products sold by the licensee during the preceding calendar month, the wholesale
27 price or purchase [SELLING] price of the tobacco products, and the amount of tax
28 imposed on

29 (1) [THE] tobacco products **other than moist snuff tobacco;**

30 (2) **moist snuff tobacco other than spitless moist snuff tobacco; and**

31 (3) **spitless moist snuff tobacco.**

1 * **Sec. 13.** AS 43.50.350 is repealed and reenacted to read:

2 **Sec. 43.50.350. Disposition of proceeds.** (a) The tax collected by the
3 department, other than the tax collected on moist snuff tobacco, shall be deposited in
4 the general fund.

5 (b) Of the tax collected by the department on moist snuff tobacco,

6 (1) 25 percent shall be deposited in the tobacco use education and
7 cessation fund established in AS 37.05.580; and

8 (2) 75 percent shall be deposited in the general fund.

9 (c) The annual estimated balance in the account maintained by the
10 commissioner of administration under AS 37.05.142 may be used by the legislature to
11 make appropriations for health care, health research, health promotion, and health
12 education programs.

13 * **Sec. 14.** AS 43.50.390(1) is amended to read:

14 (1) "distributor" means a person who

15 (A) brings, or causes to be brought, a tobacco product into the
16 state from outside the state for sale;

17 (B) makes, manufactures, or fabricates a tobacco product in the
18 state for sale in the state; or

19 (C) ships or transports a tobacco product to a retailer in the
20 state for sale by the retailer or to an individual for personal consumption;

21 * **Sec. 15.** AS 43.50.390(2) is amended to read:

22 (2) "licensee" means a distributor or buyer who is

23 (A) licensed under AS 43.50.320; or

24 (B) exempted by AS 43.50.320(g) from licensing under
25 AS 43.50.320;

26 * **Sec. 16.** AS 43.50.390(4) is amended to read:

27 (4) "tobacco product" means

28 (A) a cigar, including any roll of tobacco wrapped in leaf
29 tobacco;

30 (B) a cheroot;

31 (C) a stogie;

- 1 (D) a perique;
- 2 (E) snuff tobacco, including moist snuff tobacco, and snuff
- 3 flour;
- 4 (F) smoking tobacco, including granulated, plug-cut, crimp-cut,
- 5 ready-rubbed, and any form of tobacco suitable for smoking in a pipe or
- 6 cigarette;
- 7 (G) chewing tobacco, including cavendish, twist, plug, scrap,
- 8 and tobacco suitable for chewing; [OR]
- 9 (H) an article or product made of tobacco or a tobacco
- 10 substitute, but not including a cigarette as defined in AS 43.50.170; or
- 11 (I) any other product containing tobacco or nicotine that is
- 12 intended or expected to be consumed without being combusted unless it
- 13 has been approved by the United States Food and Drug Administration
- 14 for sale as a tobacco use cessation or harm reduction product or for other
- 15 medical purposes and is being marketed and sold solely for the approved
- 16 purposes;

17 * Sec. 17. AS 43.50.390 is amended by adding new paragraphs to read:

18 (6) "buyer" means a person who imports tobacco products for the

19 person's own consumption from any source other than licensee;

20 (7) "moist snuff tobacco" includes spitless moist snuff tobacco and

21 means any finely cut, ground, or powdered tobacco that is not intended to be

22 (A) smoked; or

23 (B) placed in the nasal cavity;

24 (8) "smokeless tobacco" means a tobacco product defined in (4)(E),

25 (G), (H), (I), and (9) of this section;

26 (9) "spitless moist snuff tobacco" means moist snuff tobacco that is

27 typically steam-pasteurized smokeless tobacco in a tea-bag-like pouch designed to be

28 placed between the cheek and gum and is manufactured to obviate the need for

29 spitting.

30 * Sec. 18. AS 43.70.110 is amended by adding a new paragraph to read:

31 (5) "cigarette" has the meaning given in AS 43.50.170.

1 * **Sec. 19.** AS 11.76.100(e) is repealed.

2 * **Sec. 20.** The uncodified law of the State of Alaska is amended by adding a new section to
3 read:

4 **APPLICABILITY.** (a) Sections 2 - 5 and 7 - 18 of this Act are applicable starting on
5 the first day of the month immediately following the effective date of this section.

6 (b) Section 6 of this Act is applicable starting on the first day of the month
7 immediately following the effective date of sec. 6.

8 * **Sec. 21.** Section 6 of this Act takes effect three years after the effective date of sec. 5 of
9 this Act.

10 * **Sec. 22.** Except as provided in sec. 21 of this Act, this Act takes effect immediately under
11 AS 01.10.070(c).

Rep. Keller
3/23/2010
HB 188

March 22, 2010

Re: HB 188 - Taxation on Moist Snuff

To Whom It May Concern:

I am working with a group people to educate the public about strategies used by tobacco companies to lure young people to use their products and the dangers of tobacco use. Many of the teens admit they have used smokeless tobacco. One of the reasons they gave for not using more was because it costs too much. HB 188 could potentially prevent snuff from being purchased by young people.

Research shows that snuff is often a "gateway" product that leads to smoking cigarettes. It also shows a correlation between snuff and an increased likelihood of also using alcohol or other drugs according to *Other Substance Use Among High School Students Who Use Tobacco*, Journal of Adolescent Health, November 1998.

Needless to say, HB 188 has my full support!

REGINA ANGRAK

Student

March 22, 2010

To Whom It May Concern:

I am a 16-year-old student and know many people who use tobacco. Many of these people are my peers. I, too, have used it in the past and it continues to be a struggle to leave behind. For many young people, the biggest obstacle to using tobacco is finding someone to buy it for you. The second biggest obstacle is paying for it. Most kids have very limited incomes because they don't work yet. If the cost for tobacco were increased, it would definitely make it harder for young people to buy it. I support any efforts to keep tobacco out of peoples' hands.

STACI M. ALOROLREA

March 22, 2010

Dear Representative Herron,

I appreciate that you are sponsoring a bill to increase taxes on chewing tobacco. While researching the effects of various types of tobacco for a community service project, I found that having 8 – 10 chews per day is equal to smoking 30 – 40 cigarettes per day. Anything that can be done to keep people from chewing must be done! If chew costs more, kids are less likely to be able to afford it, or at least not be able to buy as much because they don't have that much money.

THOMAS KILANAK

A handwritten signature in cursive script that reads "Thomas Kilanak".

Student
Bethel Alternative Boarding School

March 22, 2010

To Whom It May Concern:

According to an article published in *Nicotine & Tobacco Research*, August 2003, "... evidence shows that adolescent boys who use smokeless tobacco products have a higher risk of becoming cigarette smokers within four years." A report released by the US Department of Health & Human Services, *Preventing Tobacco Use Among Young People: A Report of the Surgeon General*, 1994, found that, "Among all high school seniors who have ever used spit tobacco," in their study, "almost three-fourths began by the ninth grade."

Higher taxes on smokeless tobacco products would make it more difficult for adolescents to buy these products, thus decreasing the numbers who eventually start smoking cigarettes. I urge you to put measures in place to increase the cost of tobacco.

Rep. Herron,

Attached are the letters of support from BABS students you requested. We are excited to be involved! Thank you for your support with Kick Butts Day, too. We plan to have a place at our carnival where others can write letters to support for HB 188. They won't be available for Tuesday, but you might need them in the future. Thanks for all you do for our youth!

CS FOR HOUSE BILL NO. 190()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES FAIRCLOUGH, Hawker, Holmes, V. 2008

A BILL
FOR AN ACT ENTITLED

1 **"An Act amending the Alaska children's trust."**

2 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

3 *** Section 1.** AS 37.14.200 is amended by adding a new subsection to read:

4 (d) The legislature may appropriate annually an amount that is equivalent to
5 five percent of the market value of the unencumbered balance of the trust income and
6 principal, taking into account administrative expenses, as a grant to a named recipient
7 under AS 37.05.316 subject to terms and conditions set by the board under
8 AS 37.14.250.

9 *** Sec. 2.** AS 37.14.225 is amended to read:

10 **Sec. 37.14.225. Trust board established.** The Alaska Children's Trust Board
11 is established in the Office of the Governor. The board is composed of

- 12 (1) the governor or a designee of the governor;
- 13 (2) the commissioner of health and social services or the
14 commissioner's designee;
- 15 (3) the commissioner of education and early development or the

1 commissioner's designee; [AND]

2 (4) four public members appointed by the governor [; IN
3 APPOINTING THE PUBLIC MEMBERS, THE GOVERNOR SHALL GIVE A
4 PREFERENCE TO PERSONS] who have experience and expertise in

5 (A) children's or prevention programs; [OR]

6 (B) private sector finance;

7 (C) sexual assault; or

8 (D) domestic violence.

9 * Sec. 3. AS 37.14.230 is amended to read:

10 **Sec. 37.14.230. Powers and duties of the board.** The [WHEN ACTING AS
11 ADMINISTRATOR OF THE TRUST, THE] board shall

12 (1) hold regular and special meetings it considers necessary; the board
13 may hold meetings by teleconference;

14 (2) award a grant to a named recipient in an amount that is
15 appropriated under AS 37.14.200(d) under conditions [GRANTS FROM THE
16 NET INCOME OF THE TRUST TO COMMUNITY-BASED PROGRAMS AND
17 PROJECTS] that the board finds will aid in the prevention of child abuse and neglect;

18 (3) monitor approved subgrants made by the named recipient
19 [PROGRAMS AND PROJECTS] for compliance with AS 37.14.200 - 37.14.270 and
20 specified grant conditions;

21 (4) [BEFORE PROVIDING ASSISTANCE TO A PROGRAM OR
22 PROJECT,] approve written findings of the named recipient on the subgrant
23 program or project that include a consideration of the means of measuring the
24 effectiveness of the program or project;

25 (5) apply for, and use net income from the trust to obtain, private and
26 federal grants for the prevention of child abuse and neglect;

27 (6) solicit contributions, gifts, and bequests to the trust;

28 (7) keep audio tape recordings of each meeting of the board to be made
29 available on request; and

30 (8) submit to the governor and make available to the legislature by
31 February 1 each year a report describing

1 (A) the child abuse and neglect prevention services that were
2 provided by the programs and projects to which the named recipient
3 [BOARD] awarded grants; and

4 (B) the annual level of contributions, income, and expenses of
5 the trust.

6 * Sec. 4. AS 37.14.240 is repealed and reenacted to read:

7 **Sec. 37.14.240. Fund utilization.** (a) Five percent of the market value of the
8 unencumbered balance of the trust income and principal may be appropriated for
9 awarding a named recipient grant by the board under AS 37.14.250.

10 (b) Up to \$150,000 a year may be appropriated from the unencumbered
11 balance of the trust income and principal for the administrative expenses of the board
12 relating to AS 37.14.200 - 37.14.270, including obtaining private and federal grants
13 for the trust and soliciting contributions, gifts, and bequests for the trust.

14 * Sec. 5. AS 37.14.250 is repealed and reenacted to read:

15 **Sec. 37.14.250. Named recipient grant.** (a) A named recipient grant may only
16 be awarded to a nonprofit entity that is established for the purpose of enhancing the
17 mission of the Alaska Children's Trust and raising funds for the prevention of child
18 abuse and neglect.

19 (b) Before a grant to a named recipient is awarded or renewed by the board,
20 the Department of Commerce, Community, and Economic Development shall prepare
21 and execute an agreement under AS 37.05.316(a) with the named recipient that
22 describes grant conditions that include the following:

23 (1) a portion of the Alaska children's trust grant may be held in and
24 managed as a permanent endowment fund;

25 (2) the grantee may maintain a reserve to finance grants and grant
26 administration operations at a consistent level from year to year;

27 (3) the grantee may provide for the distribution of amounts from the
28 interest on an endowment fund established under (1) of this subsection for the
29 charitable purpose of preventing child abuse and neglect; and

30 (4) the grantee shall annually report the investment performance of an
31 endowment established under (1) of this subsection to the board.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Bill 190

"An Act privatizing the Alaska children's trust as a separate endowment fund; providing for an administrator for the assets of the former trust; establishing conditions for a grant of the balance of the former Alaska children's trust; designating certain receipts as available for grants to the trust's successor; and providing for an effective date."

House Bill 190 would re-create the Alaska Children's Trust (ACT) as a 501(c)(3) non-profit entity, managed by a board of directors, including the Commissioners of the Departments of Health and Social Services and Education and Early Development, four (4) additional members appointed by the Governor, and three (3) members appointed by the Commissioners and the Governor's appointees. The nine (9) member board would have many of the same duties and obligations required by current statute.

It would preserve the present revenue sources of license plates and birth and marriage certificates for a grant to a named recipient to hold in trust for child abuse and neglect prevention activities and programs.

HB 190 would transfer the balance of the Alaska Children's Trust to a named recipient organized for charitable purposes to hold in trust as a permanent endowment fund for child abuse and neglect prevention programs. The ACT board has entered into an agreement with the Alaska Community Foundation to serve as this trustee, while the ACT board (re-created as a non-profit entity) would direct the Foundation on grant-making.

In summary, HB 190 would allow the legislature to use the estimated balance of the account maintained by the Commissioner of Revenue to make a named recipient grant to the Alaska Community Foundation to be governed by the non-profit ACT board, the majority of whom will be appointed by the Governor. With the Alaska Community Foundation as trustee, the ACT board will have greater flexibility to create a more stable, streamlined and simplified administrative structure that would greatly enhance the Trust's ability to pursue its mission efficiently and effectively.

The Trustees of the Alaska Children's Trust, with the support of the Friends of the Alaska Children's Trust, have recommended to the Governor and the Alaska Legislature that the Alaska Children's Trust be privatized.

I urge your support on this piece of legislation.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Bill 190

"An Act privatizing the Alaska children's trust as a separate endowment fund; providing for an administrator for the assets of the former trust; establishing conditions for a grant of the balance of the former Alaska children's trust; designating certain receipts as available for grants to the trust's successor; and providing for an effective date."

Sectional Analysis

Section 1. Amends AS 18.50.225(d)

Allows the legislature to annually appropriate funds generated from birth certificates suitable for display to the endowment fund held by the charitable named recipient grantee.

Section 2. Amends AS 18.50.272(e)

Allows the legislature to annually appropriate funds generated from heirloom marriage certificates suitable for display to the endowment fund held by the charitable named recipient grantee.

Section 3. Amends AS 28.10.181(t)

Renames the Alaska Children's Trust license plates to call them Alaska children's endowment fund plates.

Section 4. Amends AS 28.10.421(d)(14)

Allows legislature to appropriate the fee for the children's fund special license plates to the endowment fund held by the charitable named recipient grantee.

Section 5. Amends AS 37.05.146(c)(20)

Allows the birth certificates suitable for display, the heirloom marriage certificates and special request children's fund license plates to be accounted for separately, and appropriations from these program receipts are not made from the unrestricted general fund.

Section 6. Amends AS 37.14 by adding a new section 37.14.205

Allows the legislature to transfer the balance of the Alaska Children's Trust to a charitable named recipient grantee to be held as a permanent endowment fund for child abuse and neglect prevention activities and programs.

The transfer of assets is subject to the terms of an agreement between the Department of Commerce, Community and Economic Development and the named recipient grantee.

The grantee shall provide the interest on the endowment fund to the corporate grant administrator for the purpose of prevention of child abuse and neglect.

Should the grantee ceases to exist or become unable to fulfill the purposes of the grant agreement, the balance of the grant is to revert to the state to be used for child abuse and neglect prevention programs.

Section 7. Amends AS 37.14 by adding a new section 37.14.215

Creates a corporate grant administrator independent from the named grant recipient.

The grant administrator solicits and evaluates grant proposals from organizations working to prevent child abuse and neglect, and awards grants from the interest on the endowment fund obtained from the named recipient grantee.

The board of the grant administrator is made up of nine members, six of which are appointed by the governor.

The grant administrator is also responsible for soliciting contributions, gifts and bequests to the endowment fund.

Section 8. Clean up language

Repeals current Alaska Children's Trust statutes.

Section 9. Amends the Uncodified law of the State of Alaska

Explains that this Act is contingent on the appropriation of the Alaska Children's Trust funds to a named recipient grantee.

Section 10. Effective date clause

Explains that the effective date of the act is the date of appropriation of the funds to the named recipient grantee.

MEMORANDUM

March 30, 2009

SUBJECT: Alaska Children's Trust Reference After Repeal of the Trust
(Amendment E.1 to HB 190 (Work Order No. 26-LS0502\E.1))

TO: Representative Anna Fairclough
Attn: Crystal Koeneman

FROM: Jean M. Mischel
Legislative Counsel 

I have made the changes you requested that retain the references to the Alaska Children's Trust in the provisions for special request license plates and fees. As previously discussed, referencing a repealed trust, particularly for purposes of fee collection, creates an unenforceable provision in codified law. While the nonprofit grantee may intend to use the former trust's name, such references must exist and be defined in codified law. In the meantime, if the amendment and the bill pass, the fees will be paid and collected under a false impression that the trust continues to exist as a state fund.

MEMORANDUM

February 9, 2009

SUBJECT: Draft bill for an Act to substitute private management of the Alaska Children's Trust for the state's governmentally-administered endowment trust fund (Work Order No. 26-LS0502\A)

TO: Representative Anna Fairclough

FROM: Jack Chenoweth
Assistant Revisor 

This memo accompanies the draft of a bill proposing to substitute private management of the Alaska Children's Trust for the state's governmentally-administered endowment trust fund. The draft draws upon text that your office submitted with the work order request.¹

DRAFTING CONSIDERATIONS:

The text of the material submitted did not suggest a bill title, so we prepared one based on the apparent content of the proposal.

In the accompanying draft, the material in bill sections 1 - 5 draws on substantially similar amendments set out in the material submitted with the work order. These are conforming changes made so as to alter references to the current trust where they appear in certain of sources authorized for appropriation into the fund: AS 18.50.255(d) [certain birth certificate receipts], AS 18.50.272(e) [certain heirloom certificates of marriage], and AS 28.10.181 [special request license plates].² Bill section 8 repeals the various sections

¹ Under AS 37.14.200 - 37.14.270, proposed to be repealed in the bill, the Alaska Children's Trust Fund was established as a separate endowment trust of the state, consisting of legislative appropriations and private contributions. In addition, proceeds from specialized birth and marriage certificates, as well as license plate sales, are deposited into the general fund for the purpose of contributing to the trust fund or for any other public purpose.

² Each of these provisions adds reference to "a grant to a named recipient under AS 37.05.316." That section, functionally the state appropriation process's equivalent of a federal "carmark" -- the term was defined by recent federal legislation as "a provision or report language included primarily at the request of a Member [of Congress] . . . providing, authorizing, or recommending a specific amount of discretionary budget

that comprise the current Alaska Children's Trust, AS 37.14.200 - 37.14.270 inclusive. Again, the repeal provisions follow direction provided in the suggested text.

The critical substantive provisions of the bill appear in proposed AS 37.14.205, added by bill section 6, and AS 37.14.215, added by bill section 7. I have drawn from the language that was supplied, reversing the suggested subject matter order (reference to the corporate grant administrator in the draft follows the provisions for the trust management mechanism, rather than preceding it).

authority, credit authority, or other spending authority for a contract, loan, loan guarantee, grant, loan authority, or other expenditure with or to an entity, or targeted to a specific State, locality or Congressional district, other than through a statutory or administrative formula-driven or competitive award process." -- authorizes the legislature to identify by operation of law grantees that are not public entities:

(a) When an amount is appropriated or allocated to a department as a grant under this section for a named recipient that is not a municipality, the department to which the appropriation or allocation is made shall promptly notify the named recipient of the availability of the grant and request the named recipient to submit a proposal to provide the goods or services specified in the appropriation act for which the appropriation or allocation is made. A grant agreement must be executed within 60 days after the effective date of the appropriation or allocation unless the department determines that an award of the grant would not be in the public interest.

Significantly, while AS 37.05.316 establishes a mechanism by which the legislature may identify the recipient of what the section surely contemplates to be a single or one-time-only grant, in the draft accompanying this memo, amendments proposed to AS 18.50.225(d) [certain birth certificate receipts], to AS 18.50.272(e) [certain heirloom certificates of marriage], and to AS 28.10.421(d)(14) [special request license plates] operate so that these sources continue to be available to support annual grants to the named recipient. In other words, these may be considered permanent sources for the support of the revised trust fund subject to the likelihood of annual legislative appropriation.

Reliance on the artifice that the transfer will be handled as a grant is open to challenge. The legislation's proponents may regard the transfer as a grant -- because the transfers would occur annually, they are probably better viewed in context as an unlimited or open ended series of grants -- but, in fact, the form of the product that is transferred is a trust corpus or permanent endowment. No court would mistake the legislature's attempts to disguise the transfer of a trust corpus by calling it something that it is not in order to take advantage of the "grant to a named beneficiary" statute, AS 37.05.316.

These two sections identify two different entities.

The first, taken from AS 37.14.229 in the material provided and proposed to be codified in AS 37.14.205 in the accompanying draft, identifies a prospective trust manager, referred to in the material transmitted with the work order as the "charitable trustee" [page 4, line 7]. In the language of the material supplied, the "charitable trustee" has the status of a grantee, responsible for management of the transferred trust assets, transferred in the form of a grant. Subsection (b) of this section sets important sidebars on use of the grant of the transferred trust assets through use of an agreement,³ while subsection (c) -- as I have opted to redraft it -- directs a reversion to the state of "the balance of the grant" in the event the charitable trustee breaches the agreement. I have more to say about this entity and its operations below.

The other -- derived from AS 37.14.227 in the material provided and reworked as AS 37.14.215 in the accompanying draft -- is identified as the corporate grant administrator, comprising a board composed of state commissioners serving ex officio, other appointees of the governor, and persons collectively appointed by these other board members. As to the corporate grant administrator set out in AS 37.14.215, there are some omissions that deserve your attention before a new draft is prepared for introduction:

-- the terms of the seven board members serving other than ex officio are not specified or set;

³ Notably, the sidebar or standards provisions proposed do not carry forward specific direction concerning the manner of trust administration. As a public trust, AS 37.14.210(4) directs the commissioner of revenue to "invest and reinvest the assets of the trust as provided in this section and as provided for the investment of funds under AS 37.14.170." Under the latter provision, that public official is charged to "invest the money in the fund on the basis of probable total rate of return to promote the long-term generation of income," and, as well, that

In managing the trust fund, the commissioner shall

- (1) consider the status of the fund's capital and the income generated on both a current and a probable future basis;
- (2) determine the appropriate investment objectives;
- (3) establish investment policies to achieve the objectives;

and

- (4) act only in regard to the financial interests of the fund's beneficiaries.

By contrast, the draft bill omits specific standards and does not propose any alternative standards; it directs that the private manager -- the charitable trustee -- shall hold the transferred former trust assets in and manage them "as a permanent endowment trust fund." See proposed AS 37.14.205(b)(2).

-- there is no provision for organization, for convening and holding meetings (chair; support services), or for coverage or reimbursement for travel or per diem;

-- since this appears to be or to function as, at least in my judgment, an executive branch board or commission, the selection of the three members not serving ex officio or at the behest or pleasure of the governor is constitutionally questionable as a violation of the governor's appointing authority spelled out in article III of the state constitution.

POTENTIALLY SIGNIFICANT CONSTITUTIONAL CONSIDERATIONS:

This draft constitutes a reworking of an idea from the 25th Legislature, introduced as SB 206, "An Act repealing the Alaska children's trust; and providing for an effective date." In that bill, as in this draft, the legislation proposed to transfer management of the trust assets of the former Alaska Children's Trust to a specific named recipient. Section 3 of SB 206 provided:

CONTINGENT EFFECT. This Act is contingent on passage by the Second Regular Session of the Twenty-Fifth Alaska State Legislature and enactment into law of a bill appropriating an amount equal to the unencumbered balance of the funds described in sec. 2 of this Act as a grant to The Alaska Community Foundation, a nonprofit organization, for community activities and programs.

In short, the proposal offered during the 25th Legislature would have eliminated the Alaska Children's Trust as a public trust and provided for transfer of its money assets to a specified nonprofit organization. It was not at all clear whether the designated recipient would have been required to maintain and manage the transferred money assets in accordance with trust principles.

At the time, we were concerned that the legislature's ability to "privatize" management of a "former" public fund might encounter significant obstacles under state constitutional provisions applicable to the prohibition against dedicated funds⁴; the requirement of spending the money only for a public purpose⁵; and the risk of an equal protection

⁴ The prohibition appears in article IX, sec. 7:

Dedicated Funds. The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

⁵ The so-called public purpose clause is set out in article IX, sec. 6:

violation by directing public funds to a private entity or pursuit.⁶ Moreover, the corpus of the Alaska children's trust, then, as now, included both money derived from public revenue sources and private contributions.⁷ Given that mix, in the event of a challenge brought to the proposal, it was not clear to us how a court would view the transfer of the responsibility for the trust's management from public oversight to a private entity.

We have considered those concerns as they might arise in the context of the accompanying draft.

Does the transfer of responsibility for trust management implicate a dedicated funds violation? While the possibility that the Alaska children's trust fund as originally constituted might be found invalid as a dedicated fund,⁸ the transfer of trust management responsibility into private hands probably does not significantly change that likelihood.

Public Purpose. No tax shall be levied, or appropriation of public money made, or public property transferred, nor shall the public credit be used, except for a public purpose.

⁶ State equal protection considerations derive from a clause of article I, sec. 1:

Inherent Rights. This constitution is dedicated to the principles that all persons have a natural right to life, liberty, the pursuit of happiness, and the enjoyment of the rewards of their own industry; *that all persons are equal and entitled to equal rights, opportunities, and protection under the law;* and that all persons have corresponding obligations to the people and to the State.

⁷ See AS 37.14.200(b):

(b) The principal of the [Alaska children's] trust consists of
(1) legislative appropriations to the trust; and
(2) *gifts, bequests, and contributions of cash or other assets from a person.*

⁸ See, Inf. Op. Atty. Gen'l (April 12, 1988):

... [T]he section on "fund utilization" ... provides that capital gains from investment of the fund become part of the principal. That provision raises a question of validity under art. IX, sec. 7, of the Alaska Constitution, which prohibits dedicated funds. As mentioned in 1982 A. G. Opinion No. 13 (J66-785-81 and J66-649-80; Nov. 30), at page 17, we will defend such a provision in court, but the issue is not free from doubt. Related to this issue is proposed AS 37.14.240(b)'s attempt to limit[] appropriations of fund income to certain purposes. An attempt to so limit a future legislature is invalid.

Does the transfer to private management implicate the public purpose clause? Again, probably not. Article IX, sec. 6 of the state constitution allows the legislature to appropriate funds for any public purpose. The Alaska Supreme Court has held that "where the legislature has found that a public purpose will be served by the expenditure or transfer of public funds or the use of the public credit, this court will not set aside the finding of the legislature unless it clearly appears that such finding is arbitrary and without any reasonable basis in fact." *DeArmond v. Alaska State Development Corp.*, 376 P.2d 717, 721 (Alaska 1962) citing *In re Opinion of the Justices*, 177 A.2d 205 (Del. 1962). The test of whether a public purpose is being served does not depend on the entity that will operate the use, but upon the character of the use to which the property will be put.⁹ The attorney general's office appears to be of the view that the public purpose clause permits use of public money "to pay state debts, support current services, or protect state assets," further subject to the caution that

... expenditure of [an] appropriation generally ... has to be done in accordance with an underlying statutory authority for [an agency] to provide the services which the [grantee or contractor] will provide or to otherwise assist the [grantee or contractor] for a public benefit. A mere authorization to provide for the public welfare will not suffice.

Inf. Op. Att'y Gen'l., September 22, 1980. If private management of the trust assets will assist the state in providing a public benefit, then the assignment of management responsibility to a private entity subject to appropriate standards and sidebars should survive a public purpose-based challenge.¹⁰

⁹ See *Weber v. Kenai Peninsula Borough*, 990 P.2d 611, 614 (Alaska 1999), citing *Milheim v. Moffat Tunnel Improvement District*, 67 L.Ed. 1994 (1923), and *Lien v. City of Ketchikan*, 383 P.2d 721 (Alaska 1963).

¹⁰ Looking to other jurisdictions, the courts of South Carolina have developed a fairly comprehensive jurisprudence on whether contractual arrangements that yield a perceived private benefit are constitutionally suspect, and have concluded that, in general, they are not. Summarized, the courts have reached the conclusion:

[T]he public character of an agency's purpose is not diminished or altered by the nature of the transaction used to accomplish it. Were that the case, no leasing transaction could ever be used to accomplish a legitimate public goal. Private benefit to the lessee is always present. Where the purpose is clearly public in nature, we have consistently held this "incidental" private benefit does not convert the public purpose to a private purpose.

South Carolina Public Service Authority v. Summers, 282 S.C. 148, 152-153 (S.C. 1984). I think this is a fair statement of the view held by the courts of this state on this issue.

Would the management transfer of the trust corpus raise a question under the equal protection principle? Legislative designation of a named recipient grantee under AS 37.05.316, while surely providing the designee an unfair advantage to the exclusion of any other private party that might have wished to have bid for the management agreement, is an arrangement presumably to be entered into for reasons of administrative efficiency. In and of itself, the designation does not implicate any suspect classification, nor does it present any obstacle to interstate migration, deny to anyone the necessities of life, penalize a person for having migrated to Alaska, or interfere with any other fundamental right that would require examination of the proposal under the standards of strict scrutiny. The compelling state interest test does not apply; the courts should apply a more deferential test, one that would consider whether the legislation bears a 'fair and substantial relationship' to legitimate purposes." *State v. Lewis*, 559 P.2d 630, 642 (Alaska 1977). The equal protection clause should not impose an obstacle.

Does the bill impermissibly violate the principle against nondelegation of a power exercisable by one branch of the government to another? In identifying a "named recipient under AS 37.05.316," the legislature may be substituting its authority for that of executive branch officials, who traditionally have had responsibility for selection of successful vendors and oversight of contract management in programs that significantly affect the public.

Let me explain.

The doctrine of nondelegation is at least implicit in constitutions that provide for or impose a separation of powers.¹¹ Delegation questions most often arise when legislative or law-making powers are assigned to executive branch agencies or officials. However, the doctrine operates universally and may apply as well to questions of improper delegations of legislative powers to judicial officials, improper delegations of judicial powers to legislative or executive officials, improper delegations of executive powers to legislative or judicial officials, improper delegations of legislative or judicial powers to subordinates within their branches, improper delegations of legislative, judicial, or executive powers to private parties, or improper delegations of private powers to public officials.

In this instance, the question appears to me to be one involving the delegation of an executive function to the legislature. To be sure, AS 37.05.316 is part of the statutory process applicable to appropriations, part of the state's Fiscal Procedures Act, AS 37.05.

¹¹ The Alaska Supreme Court has determined that the doctrine of the separation of powers is implicit in the Alaska constitution. *Public Defender Agency v. Superior Court, Third Judicial Dist.*, 534 P.2d 947 (Alaska 1975); *Bradner v. Hammond*, 553 P.2d 1, 5 (Alaska 1976).

There can be no doubt that the making of appropriations, including the designation of a party or entity to receive and expend the appropriation, is properly a matter for the legislature. But, except as to appropriations specifically made to the legislative and judicial branches, the executive, subject to applicable law, determines the specifics of how the direction given by the legislature is to be executed or implemented -- in other words, how the amount that is made in the appropriation is to be expended.

The management and investment of surplus state revenue is fundamentally a responsibility of the executive branch of government, assigned by law to the appropriate commissioner, board, or commission to make relevant decisions. Often, the party charged with responsibility for management and investment will enter into contracts with third parties to discharge those responsibilities. In this draft, the legislature anticipates substituting its judgment by identifying, in law, through the mechanism of the "grant to a named recipient under AS 37.05.316," the third party who would make those investment decisions. The legislature may, as part of its law-making function, conclude that certain services that are routinely the responsibility of the executive branch should be privatized and may also determine how the management of money appropriated for a purpose that is clearly an executive function ("child abuse and neglect treatment and prevention activities and programs," clearly an executive obligation under article VII, secs. 4 and 5, directing that the state "provide for the promotion and protection of public health" and "provide for public welfare") is to be managed -- for example, internally by a state agency or externally by contract with a private management service. While the legislature may generally prescribe the manner of money or fund management, the legislature may not at the same time also identify the entity that is to do that without at least raising the argument that it has intruded on a power reserved to the executive branch.¹²

¹² In addition, because the draft relies on AS 37.05.316, giving direction for an appropriation, an appropriation made subject to that section is subject to the confinement clause, the second sentence of art. II, sec. 13 of the Alaska Constitution (emphasis added):

Form of Bills. Every bill shall be confined to one subject unless it is an appropriation bill or one codifying, revising, or rearranging existing laws. *Bills for appropriations shall be confined to appropriations.* The subject of each bill shall be expressed in the title. The enacting clause shall be: "Be it enacted by the Legislature of the State of Alaska."

With respect to a measure subject to the confinement clause, the court has determined:

The superior court wrote that to satisfy the confinement clause, the qualifying language must be the minimum necessary to explain the Legislature's intent regarding how the money appropriated is to be spent. *It must not administer the program of expenditures.* It must not enact law or amend existing law. It must not extend beyond the life of the

Two federal decisions lend support for my concern.

Bowsher v. Synar, 478 U.S. 714, 106 S.Ct. 3181, 92 L.Ed.2d 583 (U.S. 1986), presented the question of Congressional control of matters committed to the executive branch, and more specifically whether the assignment by Congress to the Comptroller General of the United States of certain functions under the Balanced Budget and Emergency Deficit Control Act of 1985 violates the doctrine of separation of powers.. Under the Act, popularly known as the Gramm-Rudman-Hollings Act, Congress authorized the Comptroller General, an officer of the legislative branch, based upon economic forecasts proposed by the Office of Management and Budget (OMB) and the Congressional Budget Office (CBO), to specify the spending reductions necessary to keep the budget deficit within the limits set by Congress. The Act provided that the Comptroller General was to use independent judgment in making the determination, showing "due regard" for the OMB-CBO forecasts. The Act directed the President then to issue a sequestration order "provid[ing] for reductions in [a] manner . . . consistent with [the Comptroller General's] report in all respects."

The United States Supreme Court rejected Congress's attempt through its agent to implement or execute the law and determined that there was a violation. Within "execution of the laws," it included the Comptroller General's administrative duties under the Act because those duties involved determining "precisely what budgetary calculations are required." The majority made it clear that "once Congress makes its choice in enacting legislation, its participation [and those of its agents] ends. Congress can thereafter control the execution of its enactments only indirectly -- by passing new legislation."

Congress of course initially determined the content of the Balanced Budget and Emergency Deficit Control Act; and undoubtedly the content of the Act determines the nature of the executive duty. However, as [*Immigration and Naturalization Service v. Chadha* [, 462 U.S. 919, 103 S. Ct. 2764, 77 L. Ed. 2d 317 (U.S. 1982) (striking down a one house "legislative veto" provision by which each house of Congress retained the power to reverse a decision Congress had expressly authorized the Attorney General to make)] makes clear, once Congress makes its choice

appropriation. Finally, the language must be germane, that is appropriate, to an appropriations bill.

We find the authority the superior court . . . persuasive, and we approve the . . . formulation as a non-exclusive test for deciding whether an appropriation violates the confinement clause.

Alaska Legislative Council v. Knowles, 21 P.3d 367, 377 (Alaska 2001) (emphasis added).

Representative Anna Fairclough
February 9, 2009
Page 10

in enacting legislation, its participation ends. Congress can thereafter control the execution of its enactment only indirectly -- by passing new legislation. *Chadha*, 462 U.S., at 958. By placing the responsibility for execution of the Balanced Budget and Emergency Deficit Control Act in the hands of an officer who is subject to removal only by itself, Congress in effect has retained control over the execution of the Act and has intruded into the executive function. The Constitution does not permit such intrusion.

Bowsher v. Synar, 478 U.S. 714, 733-734 (U.S. 1986).

Lear Siegler, Energy Prods. Div. v. Lehman, 842 F.2d 1102, 1111 (9th Cir. Cal. 1988), rev'd on other grounds, 893 F.2d 205 (9th Cir. 1989) (en banc), involved a claim by a bid contractor after it had made an unsuccessful bid for a contract with the defendant, the Secretary of the Navy. The Navy exercised its discretion and waived a penalty provision of the Buy American Act; the plaintiff then filed a bid protest with the Government Accounting Office. Although the bid award was stayed during the protest under the Competition in Contracting Act of 1984 (CICA), the Navy disregarded the stay. Plaintiff filed an action to compel the Navy to comply with the provisions of the Act requiring the stay and sought review of the bid award. The United States Senate, United States House of Representatives, and Government Accounting Office intervened, seeking injunctive and declaratory relief to uphold the constitutionality of CICA. The district court upheld the constitutionality of CICA.

On appeal, the court affirmed, holding that the Act's stay provisions were constitutional. The court reached the conclusion on the basis of this formulation:

The appropriate formal test must instead be derived from reading the principles of *Chadha* and *Bowsher* in light of the facts of those cases. Such a reading suggests improper congressional action to be the exercise of ultimate authority over an executive official, or a final disposition of the rights of persons outside the legislative branch. Put another way, the critical issue is whether Congress or its agent seeks to control (not merely to "affect") the execution of its enactments without respect to the Article I legislative process. See *Bowsher*, 106 S. Ct. at 3192. If Congress "in effect has retained control," its action and the statutory provision on which it is based is unconstitutional.

Lear Siegler, Inc. v. Lehman, 842 F.2d 1102, at 1108 (9th Cir. 1988). In the case of the draft, it is clear that the legislature, by making a choice of fund manager, seeks to control, not just to "affect," the manner of execution of the remainder of the proposed enactment.

MEMORANDUM

February 9, 2009

SUBJECT: Legislative Delegation of Spending Authority to a Quasi-public Corporation (Work Order No. 26-LS0502\A)

TO: Representative Anna Fairclough

FROM: Jean M. Mischel
Legislative Counsel

In addition to the considerations raised in a memorandum from Jack Chenoweth that accompanies the above referenced work draft, the draft raises the question of whether the attempt to privatize an existing state trust fund and to appropriate state money for use by a private non-profit entity under a named recipient grant while retaining a "corporate administrator" that is comprised of public officials is an improper delegation of legislative authority. Art. II, sec. 1 of the state constitution vests the legislative power, including the appropriation power, in the legislature, and art. IX, sec. 13 of the state constitution requires an appropriation before money can be withdrawn from the state treasury and an authorization for any obligation for the payment of money. In this draft, a public asset (the Children's Trust Fund) is to be transferred out of the state treasury and given to a private entity with little direction on how and when the money is to be withdrawn and spent.

Alaska's Supreme Court has taken a fairly strict view of the legislature's appropriation power. In State v. Fairbanks North Star Borough, 736 P.2d 1140 (Alaska 1987), the court held that a statute allowing the governor to withhold or reduce appropriations when anticipated revenues would not cover appropriations was an unconstitutional delegation of the legislature's appropriation power. In McAlpine v. University of Alaska, 762 P.2d 81 (Alaska 1988), the court held that a provision of an initiative requiring the university to transfer property to the community college system established by the initiative, was an appropriation that could not constitutionally be accomplished by initiative. The court noted that the reason for prohibiting appropriation by initiative was "to ensure that the legislature, and only the legislature, retains control over the allocation of state assets among competing needs." McAlpine v. University of Alaska, 762 P.2d 81 at 88 (Alaska 1988) (emphasis in original).

In the context of legislative delegation of its powers to a state agency, the Alaska Supreme Court has set some ground rules. In Alaska Public Interest Research Group v. State of Alaska, 167 P.3d 27 (Alaska 2007), the court held that delegation of power to an administrative agency is more likely to be found constitutional if the grant of power

minimizes agency discretion. In Alaska Legislative Council v. Knowles, 21 P.3d 367 (Alaska 2001), the court limited item vetoes by the governor to those that included a specified sum of money for a defined purpose, holding that the governor's power over the state budget was limited to the power to reduce or strike sums of money. The court summarized the distinction between the executive function and the legislative powers over state assets in this way: "[t]he governor can delete and take away, but the constitution does not give the governor power to add to or divert for other purposes the appropriations enacted by the legislature." Id. at 368.

In my opinion, allowing private trustees to spend money recovered from the Children's Trust without express authorization for each expenditure may violate art. II, sec. 1, art. VII, secs. 4 and 5, or art. IX, sec. 13, of the state constitution. This conclusion is based on the following considerations.

First, the Alaska cases in this area are based on the premise that control over state assets and finances is vested in the legislature and only the legislature. The court was unwilling to "bend" that principle, even in the face of the fiscal emergency in the Fairbanks North Star Borough case. It has also refused, in the McAlpine case, to limit the appropriation power to cover only money.

Second, the possibility that other parts of the state budget would be affected by spending the money may well apply here. If trust fund money is to be spent on certain child protection programs, that fact may affect other programs of the state Department of Health and Social Services. If trust fund money is spent on programs that use state employees, that may also affect the state budget. The constitution -- art. VII, secs. 4 and 5 -- requires the legislature to provide for the public health and welfare, but this bill would delegate a portion of that duty to a private entity. Finally, if the trustees are themselves public employees acting as a "corporate administrator," that may also affect the long-term fiscal obligations of the state.

Some of the cases outside of Alaska holding that money is not subject to appropriation have been based on the fact that the money was being held by the state in trust for another political entity authorized to spend it. E.g. Navajo Tribe v. Arizona Dept. of Admin., 528 P.2d 623 (Ariz. 1974) (Tribe and cities); State ex rel Sego v. Kirkpatrick, 524 P.2d 975 (N.M. 1974) (University). On the other hand, in cases in which money was held not to be subject to appropriation, the money was coming to the state as a gift or grant from either the federal government or a third party not as here from the state treasury.

For all of the reasons discussed above, it may be that the state constitution requires legislative appropriation before the trust money can be spent. The bill draft provides no guidelines on how and when it is to be spent by the named recipient grantee.

The use of a "corporate administrator" to advise on the expenditure of the trust funds held by a private entity, it seems to me, does not settle the issue. It is unclear from this draft whether the administrator is subject to state laws that govern public bodies such as the

Representative Anna Fairclough

open meetings and public records laws or whether the administrator enjoys state immunity for its actions.

If I may be of further assistance, please advise.

To: Rep. Fairclough

Re: The Children's Trust Bill

Date: February 23, 2009

The week before last, you shared with us the draft bill that you received from legal services, and two memos outlining some concerns about the bill. We believe that the constitutional and technical concerns outlined in the two memos are not significant, and can be addressed. We do, however, believe that the bill draft needs to be altered in several ways that will, among other things, help ensure that the bill is in line with IRS rules. Those proposed edits are attached as "2-9-09Work Draft Revision FINAL 2-23-09", and we would request that the work draft dated 2/9/09 be amended to include these proposed changes.

As for the drafters' concerns, both memos are based on theoretical constitutional issues that have not been directly decided by the Alaska Supreme Court (this is, of course, the job of legislative counsel – to warn clients about any possible issue that may affect the validity of the bill).

The memo by Jack Chenoweth raises a series of potential constitutional issues, and largely concludes that the constitutional problems are likely inconsequential. Chenoweth considers and rejects the ideas that the transfer of funds is a violation of dedicated funds, that the transfer implicates the public purpose clause, or that the bill raises equal protection issues. Chenoweth is concerned about a possible impermissible delegation of powers, and also asks several largely technical questions unrelated to the delegation issue. For clarity, we call the memo by Mr. Chenoweth "Memo #1". The memo by Ms. Jean Mischel, called here "Memo #2", raises a different problem with the delegation of powers issue: essentially that the legislature must retain control over state assets. We consider each of these issues below.

Does the bill impermissibly direct the delegation of a nondelegable power from one branch of the government to another?

Memo #1 argues that it appears that the legislature is delegating the executive's power to invest and administer state funds. Our intent is very

different. We consider the legislature to represent the settlor and trustee of the Alaska Children's Trust (ACT) and as settlor and trustee it has the ability to select a new custodian. Under established trust law a trustee is permitted to invade an existing trust and appoint assets to another trust. AS 13.36.157. According to AS 13.36.157(d) the appointed trust must hold the assets of the invaded trust under "substantially identical terms." The Department of Revenue (DOR) was designated to act on behalf of the state by statute, and now, by statute, the legislature would be setting up a process to establish a private trustee and "trust" in the form of a permanent endowment fund. If the governor does not agree with the transfer to a private nonprofit, she can veto the bill and strike the designated grant appropriation.

The bill sets up a process to grant, or give away, the ACT on the condition that it continue to be used for existing purposes and administered in way that is consistent with public purposes. The bill gives substantial power to DOR in making the grant agreement with the grantee and then gives substantial oversight power over the grantee's endowment fund administration to avoid a nondelegation doctrine problem. The fact that the governor's appointees control a majority of the grant administration entity is also a factor that rebuts any delegation problem.

Do we need to specify the terms of board members?

No, we presume that the articles of incorporation of the non-profit corporate grant administrator would set these terms, as is usual for articles of incorporation.

Do we need trust administration standards?

These could be added to the bill, but the plan is to let the Alaska Community Foundation apply its own fiduciary standards, subject to review by DOR. If we apply the standards cited by Mr. Chenoweth (which are in existing law), then ACT possibly could not adopt a POMV concept, which allows spending a percentage of market value. As the goal is to get more money flowing into worthy child abuse prevention programs, while at the same time preserving the endowment fund, we want to maintain the greatest level of flexibility.

Can the board itself appoint additional members?

We believe that the board can appoint additional members. The impetus of this question arises from the fact that Memo #1 considers the non-profit to be functionally a state agency. This was not intended. Our intent is to create a private charity that will attract private donors who are willing to give to private causes. To achieve this environment it was intended that the grant administrator would be a private nonprofit corporation that would be carrying out a public purpose. We do not believe that there can be any infringement on the governor's executive power of appointment if the board is private.

Does the bill violate the confinement rule?

Memo #1 raises the issue that appropriation bills must be confined to appropriations. Unlike in Congress, the legislature cannot log roll substantive legislation into appropriation bills. Memo #1 argues that the designation of the grantee in the accompanying appropriation bill, (which we have not yet submitted) adds something to the bill beyond mere appropriation matter. He believes that the bill could be interpreted to be executing the law by directing the management of state money. This issue has never been decided by the Alaska Supreme Court, although when Justice Carpeneti was on the Superior Court, he decided that the designation of a grantee was nothing more than specifying the purpose for an appropriation and that the executive was free to go through the notification and solicitation process to determine if the named recipient would in fact become the grantee. This issue has not been decided by the Alaska Supreme Court and therefore, the statutes authorizing designated grants remain valid and enforceable.

Additionally, we chose the designated grant approach so that the legislature would have a hand in suggesting the grantee.

Does the bill impermissibly allow the legislature to delegate control over a state asset?

Memo #2 raises a different concern about delegation. It argues that the legislature cannot transfer the trust out of the state treasury "with little direction on how and when the money is to be withdrawn and spent." We do not agree with the premise of this argument: that the state constitution may require additional, specific legislative appropriations before the trust money can be spent.

First, the requirements of the ACT board in the bill are carefully modeled on existing law, and specify how and when the board is to make grants. Second, each year the legislature currently appropriates money from the trust to be used at the discretion of the existing ACT board – the only change in the bill is that the appropriation is for the trust *res* and thereafter the legislature would have nothing available to appropriate, other than the license revenues that annually become available – and that is, of course, purely discretionary. Finally, it is important to note the safeguards built into the bill, including the duties to maintain the funds as a permanent endowment fund, the duty to report on investment performance, the duty of the ACT board to annually report to the legislature the prevention services that were funded and the annual level of contribution, income and expenses of the fund, and – significantly – the section that allows the endowment fund to revert back to the state should the grantee cease to exist or is unable to fulfill the purposes of the grant agreement between the grantee and the Department of Commerce, Community, and Economic Development. For these reasons, we do not believe that the legislature appropriating the trust causes an impermissible delegation of legislative power.

ALASKA CHILDREN'S TRUST

Kids. You gotta love 'em!

March 26, 2009

Representative Anna Fairclough
Alaska State Legislature
State Capitol, Room 421
Juneau, AK 99801-1182

Dear Representative Fairclough:

Please accept this letter as an indication of the ACT board's support of **HB 190, CHILDREN'S TRUST GRANT FOR ENDOWMENT**. As Trustees for the Alaska Children's Trust (ACT), it is our belief that transitioning management of the ACT fund into an endowment model capitalizes on the best practices in the endowment world, and will result in greater performance and growth of the ACT fund over time. Additionally, privatization of the ACT will allow for ethical fundraising and for private sector funds to be used for dedicated purposes.

There are two small changes that we would like to request in HB 190 as follows:

In Sec.3. AS 28.10.181(t) and Sec. 4. AS 28.20431(d)(14), the Trustees would like to retain the name, **Alaska Children's Trust** plates;

In Sec. 7.37.14.215: The Trustees would like to retain the name, the **Alaska Children's Trust**.

We have been known as the Alaska Children's Trust since 1988 and keeping our name would allow us to maintain our established identity across the state as the only entity solely dedicated to the prevention of child abuse and neglect.

We truly appreciate your support of our ongoing efforts to eliminate child abuse and neglect in the State of Alaska. Please feel free to contact the ACT's executive director, Panu Lucier if you have any questions about the Alaska Children's Trust. She can be reached at 907-248-7676.

Sincerely,

A handwritten signature in cursive script that reads "Kaye M. Saxon".

MEMORANDUM

March 30, 2009

SUBJECT: Alaska Children's Trust Reference After Repeal of the Trust
(Amendment E.1 to HB 190 (Work Order No. 26-LS0502\E.1))

TO: Representative Anna Fairclough
Attn: Crystal Koeneman

FROM: Jean M. Mischel
Legislative Counsel 

I have made the changes you requested that retain the references to the Alaska Children's Trust in the provisions for special request license plates and fees. As previously discussed, referencing a repealed trust, particularly for purposes of fee collection, creates an unenforceable provision in codified law. While the nonprofit grantee may intend to use the former trust's name, such references must exist and be defined in codified law. In the meantime, if the amendment and the bill pass, the fees will be paid and collected under a false impression that the trust continues to exist as a state fund.

ANALYSIS: (Attach a separate page if necessary)

The Committee Substitute Bill is an amendment to the the Alaska Children's Trust statute which would divest funds from the existing ACT Income fund managed by Treasury and transfer them to a 501(c)3 entity. Treasury would continue to invest the assets of the ACT Principal fund and would calculate 5% of market valu of the Principal fund balance for appropriation to the new 501(c)3 entity. No operating appropriation is required as implementation will be carried out through existing personal services and custodial resources. The effect this bill will have on investment performance is unknown.

6 **Procedure; and providing for an effective date."**

7 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

8 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
9 to read:

10 **DEFINITION OF "STATE"; LEGISLATIVE INTENT.** (a) It is the intent of the
11 legislature that in order to bring Alaska into conformity with the nationwide Uniform
12 Interstate Family Support Act (UIFSA), as approved by the American Bar Association on
13 February 9, 1993, and as in effect on August 22, 1996, including any amendments officially

1 adopted as of that date by the National Conference of Commissioners on Uniform State Laws,
2 it is necessary to amend AS 25.25.101 to include "an Indian tribe" and "the United States
3 Virgin Islands" in the definition of "state."

4 (b) The proposed changes made in AS 25.25.101(19) under sec. 3 of this Act are
5 conforming amendments that will result in procedural changes in Alaska for enforcement and
6 modification of child support orders from other jurisdictions. UIFSA does not determine the
7 authority of an Indian tribe to enter, modify, or enforce a child support order. In Alaska, the
8 scope of tribal authority to enter, modify, or enforce a child support order is an unsettled legal
9 question, due in part to the lack of Indian country in most of the state. In adopting UIFSA
10 conforming amendments, the legislature does not intend to grant or restrict tribal jurisdiction
11 to enter, modify, or enforce child support orders, and the amendments are not intended, either
12 directly or impliedly, to acknowledge, expand, or restrict tribal jurisdiction.

13 * Sec. 2. AS 11.51.122(a) is amended to read:

14 (a) A person commits the crime of aiding the nonpayment of child support in
15 the second degree if the person knows that an obligor has a duty under an
16 administrative or judicial order for periodic payment of child support, for cash
17 medical support, or for the provision of health care coverage for a child under a
18 medical support order or a cash medical support order, or both and

19 (1) being a person with a statutory duty to disclose information to a
20 child support enforcement agency intentionally withholds the information when it is
21 requested by a child support enforcement agency;

22 (2) being an employer of the obligor, intentionally withholds
23 information about the residence or employment of the obligor, the eligibility of the
24 obligor's children for coverage under the employer's health insurance plan, or the cost
25 of the coverage of the children under the plan, when that information is requested by a
26 child support enforcement agency or when the employer is required by state or federal
27 law to report the information without a request by a child support enforcement agency;
28 or

29 (3) intentionally participates in a commercial, business, employment,
30 or other arrangement with the obligor, knowing at the time that the arrangement is
31 made that it will allow the obligor to avoid paying all or some of the support when it is

1 due or to avoid having a lien placed on assets for the payment of delinquent support;
2 receipt of a substantial asset for less than fair market value from an obligor after the
3 obligor's support order has been established constitutes a rebuttable presumption that
4 the person receiving the asset knew that the transfer would allow the obligor to avoid
5 paying all or some of the support or to avoid having a lien placed on the asset.

6 * Sec. 3. AS 25.25.101(19) is amended to read:

7 (19) "state" means a state of the United States, the District of
8 Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, or
9 any territory or insular possession subject to the jurisdiction of the United States; the
10 term "state" includes an Indian tribe and a foreign jurisdiction that has enacted a law
11 or established procedures for issuance and enforcement of support orders that are
12 substantially similar to the procedures under this chapter or under the Uniform
13 Reciprocal Enforcement of Support Act or the Revised Uniform Reciprocal
14 Enforcement of Support Act;

15 * Sec. 4. AS 25.27.060(c) is amended to read:

16 (c) In a court or administrative proceeding where the support of a minor child
17 is at issue, the court or agency, as applicable, may order either parent or both parents
18 to pay the amount necessary for support, maintenance, nurture, and education of the
19 child. Regardless of whether a support order for periodic payments is issued, the court
20 or agency shall issue a medical support order, a cash medical support order, or
21 both. The medical support order shall require health care insurance coverage for the
22 child if health care insurance coverage is available to either parent or both parents for
23 the child at a reasonable cost. The court or agency shall consider whether the child is
24 eligible for services through the Indian Health Service or other insurance coverage
25 before ordering either parent or both parents to provide health care coverage through
26 insurance, cash medical support, or other means or a combination of insurance,
27 cash medical support, or other means. The court or agency shall allocate equally the
28 cost of health care insurance for the child between the parents unless there is good
29 cause to allocate the costs unequally. If the obligor has the duty to make periodic
30 payments for non-medical child support, the obligor's periodic payments shall be
31 decreased by the amount of the other parent's portion of payments for health insurance

1 ordered by the court or agency and actually paid by the obligor. If the obligor has a
2 duty to make periodic payments for non-medical child support, the periodic payments
3 shall be increased by the obligor's portion of payments for health insurance if the other
4 parent is ordered to and actually does obtain and pay for insurance. The court or
5 agency shall allocate equally between the parents the cost of reasonable health care
6 expenses not covered by private insurance unless there is good cause to allocate the
7 costs unequally. One parent shall reimburse the other parent for the first parent's share
8 of the uncovered expenses paid by the parent within 30 days after receipt by the first
9 parent of the bill for the health care, payment verification, and, if applicable, a health
10 insurance statement indicating what portion of the cost is uncovered. The medical
11 support order must meet the requirements of AS 25.27.063. Upon a showing of good
12 cause, the court may order the parents required to pay support to give reasonable
13 security for payments.

14 * Sec. 5. AS 25.27.160(c) is amended to read:

15 (c) If the agency is establishing only [A] medical support [ORDER], the
16 notice and finding of financial responsibility must state

17 (1) that health care insurance shall be provided for the child to whom
18 the duty of support is owed if health care insurance is available to the alleged obligor
19 at a reasonable cost and that the alleged obligor and the other parent shall share
20 equally the cost of the health care insurance and the costs of reasonable health care
21 expenses not covered by insurance;

22 (2) the sum of periodic payments of cash medical support for
23 which either parent or both parents are found to be responsible under this
24 chapter;

25 (3) the name of the alleged obligee and the obligee's custodian;

26 (4) [(3)] that the alleged obligor may appear and show cause in a
27 hearing held by the agency why the finding is incorrect, should not be finally ordered,
28 and should be modified or rescinded, because

29 (A) no duty of support is owed;

30 (B) health care insurance for the child is not available to the
31 alleged obligor at a reasonable cost;

1 (C) adequate health care is available to the child through the
2 Indian Health Service or other insurance coverage; or

3 (D) there is good cause to allocate the costs of health insurance,
4 cash medical support, or uninsured health care expenses unequally between
5 the parents;

6 (5) [(4)] that, if the person served with the notice under this subsection
7 does not request a hearing within 30 days, a copy of the medical support order will be
8 sent to the person's employer under AS 25.27.063(b) without further notice or hearing
9 for inclusion of the child in family health coverage if it is available through the
10 person's employer.

11 * Sec. 6. AS 25.27.193 is amended to read:

12 **Sec. 25.27.193. Periodic review or adjustment of support orders.** As
13 necessary to comply with 42 U.S.C. 666, the agency, by regulation, shall provide
14 procedures and standards for the modification, through a three-year cycle of
15 [PERIODIC] review or adjustment, of a support order. Regulations adopted under this
16 section must include procedures for periodic notice of the right to request review,
17 procedures for hearings, and standards for adjustments regarding future periodic
18 support payments. A modification under this section may be made without a showing
19 of a material change in circumstances.

20 * Sec. 7. AS 25.27.195(a) is amended to read:

21 (a) A clerical mistake in an administrative order issued by the agency or an
22 error arising from an oversight or omission by the agency may be corrected by the
23 agency at any time [ON THE MOTION OF AN OBLIGOR].

24 * Sec. 8. AS 25.27.195(b) is amended to read:

25 (b) The [UPON THE MOTION OF AN OBLIGOR, THE] agency may, at any
26 time, vacate an administrative support order issued by the agency under AS 25.27.160
27 that was based on a default amount rather than on the obligor's actual ability to pay.

28 * Sec. 9. AS 25.27.900(2) is repealed and reenacted to read:

29 (2) "arrearage" means a debt that is past due and equal to at least one
30 monthly obligation under the support order for one or more of the following:

31 (A) monetary support;

- 1 (B) cash medical support;
- 2 (C) payment of health care costs or maintenance of health
- 3 insurance;
- 4 (D) reimbursement of related costs;
- 5 (E) payment of attorney fees and legal costs and other fees;
- 6 (F) penalty, interest, and other relief as required by a support
- 7 order;

* Sec. 10. AS 25.27.900(12) is amended to read:

(12) "support order" means any judgment, decree, or order that is issued by a tribunal for the support and maintenance of a child or of a parent with whom the child is living; "support order" includes a judgment, decree, or order

(A) on behalf of a child who has reached the age of majority if the judgment, decree, or order was lawfully issued; and

(B) for any or all of the following:

(i) monetary support, including arrearages;

(ii) payment of health care costs or maintenance of health insurance;

(iii) payment of cash medical support;

(iv) [(iii)] reimbursement of related costs;

(v) [(iv)] payment of attorney fees and legal costs and other fees; or

(vi) [(v)] penalty, interest, and other relief as required by a tribunal;

* Sec. 11. AS 47.07.025(b) is amended to read:

(b) Through the child support services agency or on its own behalf, the department may garnish the wages, salary, or other employment income of a person who

(1) is required by a medical support order, **cash medical support order, or both,** under AS 25.27.060(c) to provide **insurance or cash** coverage of the costs of medical care to a child who is eligible for medical assistance under this chapter;

1 (2) has received payment from a third party for the costs of the
2 services; and

3 (3) has not used the payments to reimburse, as appropriate, the other
4 parent or custodian of the child, the provider of the services, or the department.

5 * **Sec. 12.** AS 47.27.200(o) is amended to read:

6 (o) The applicability of AS 25.27 in the case of a recipient under an Alaska
7 Native family assistance program includes the following:

8 (1) an obligor is liable to the Alaska Native family assistance program
9 in the amount of the family assistance provided by the program to a child to whom the
10 obligor owes a duty of support except that, if a support order has been entered, the
11 liability of the obligor for assistance provided by an Alaska Native family assistance
12 program may not exceed the amount of support provided for in the support order, and,
13 if a medical support order, cash medical support order, or both, [ORDER OF
14 SUPPORT] has been entered, the liability of the obligor for assistance granted under
15 AS 47.07 may not exceed the amount of support provided for in the medical support
16 order, cash medical support order, or both, [ORDER OF SUPPORT]; the child
17 support services agency shall send notice of accruing liability under this paragraph in
18 the same manner as required under AS 25.27.120(c), and, if the agency fails to comply
19 with the notice requirement of this paragraph, interest does not accrue on the liability
20 to the Alaska Native family assistance program unless a support order or medical
21 support order, or cash medical support order, as applicable, has been entered;

22 (2) the child support services agency may appear in an action
23 authorized under AS 25.27.045 at the agency's own discretion if an obligor under
24 AS 25.27 is liable to the Alaska Native family assistance program under (1) of this
25 subsection;

26 (3) an Alaska Native family assistance program to which the child
27 support services agency erroneously disburses an overpayment of child support under
28 an income withholding order is liable to the state for the amount disbursed, plus
29 interest at the rate imposed under AS 25.27.062(l)(1);

30 (4) when the right to receive child support has been assigned to an
31 Alaska Native family assistance program, an agreement under AS 25.27.065(a) that

1 has not been adopted as an administrative order of the child support services agency is
2 not effective during a period when the obligee is receiving assistance under an Alaska
3 Native family assistance program;

4 (5) the child support services agency, on behalf of an Alaska Native
5 family assistance program, shall take all necessary action permitted by law to enforce
6 child support orders entered under AS 25.27, including petitioning the court for orders
7 to aid in the enforcement of child support;

8 (6) if an obligor under AS 25.27 is liable to an Alaska Native family
9 assistance program under (1) of this subsection, the state is subrogated to the rights of
10 the obligee to take actions authorized under AS 25.27.130(a);

11 (7) notwithstanding AS 25.27.130(c), the recovery of an amount for
12 which an obligor under AS 25.27 is liable that exceeds the total assistance granted
13 under AS 47.07 and this chapter shall be paid to the obligee;

14 (8) except as provided in AS 25.27.130(f), if an obligee under
15 AS 25.27 is not receiving assistance under AS 47.07 or this chapter at the time the
16 state recovers money in an action under AS 25.27.130(d) or (1) of this subsection, the
17 recovery of any amount for which the obligor is liable shall be distributed to the
18 obligee for support payments, including medical support payments, that had become
19 due and unpaid since the termination of assistance under AS 47.07 or this chapter
20 under a support order in favor of the obligee;

21 (9) after payment to the obligee under (8) of this subsection, the state
22 may retain an amount not to exceed the total unreimbursed assistance paid on behalf
23 of the obligee under AS 47.07 or this chapter;

24 (10) if an alleged obligor is liable to an Alaska Native family
25 assistance program under (1) of this subsection, and a support order has not been
26 entered, the child support services agency may, at its own discretion, undertake an
27 action to establish paternity and a duty of support using the procedures prescribed in
28 AS 25.27 and may enforce a duty of support using the procedures prescribed in
29 AS 25.27; the agency may also institute administrative proceedings to determine the
30 paternity of a child born out of wedlock upon application of an Alaska Native family
31 assistance program; the agency may not recover costs of genetic tests required under

1 this paragraph from a person who is a recipient of assistance under an Alaska Native
2 family assistance program;

3 (11) when a hearing officer makes a determination under
4 AS 25.27.170(d), the hearing officer shall, in addition to the factors described in
5 AS 25.27.170(e), consider the amount of the alleged obligor's liability to an Alaska
6 Native family assistance program under (1) of this subsection;

7 (12) notwithstanding AS 25.27.255(a), the child support services
8 agency may not pay to an obligee any money that has been assigned to an Alaska
9 Native family assistance program.

10 * **Sec. 13.** The uncodified law of the State of Alaska is amended by adding a new section to
11 read:

12 **INDIRECT COURT RULE AMENDMENT.** AS 25.27.060(c), amended by sec. 4 of
13 this Act, has the effect of changing Rule 90.3, Alaska Rules of Civil Procedure, by changing
14 standards for issuance of medical and other support orders by the court.

15 * **Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to
16 read:

17 **APPLICABILITY.** This Act applies to actions filed on or after the effective date of
18 this section and to motions filed on or after the effective date in proceedings filed before, on,
19 or after the effective date of this section.

20 * **Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to
21 read:

22 **TRANSITION: REGULATIONS.** The Department of Revenue may proceed to adopt
23 regulations necessary to implement this Act. The regulations take effect under AS 44.62
24 (Administrative Procedure Act), but not before July 1, 2009.

25 * **Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to
26 read:

27 **NO CONDITIONAL EFFECT.** Because Rule 90.3, Alaska Rules of Civil Procedure,
28 is a substantive rule, sec. 4 of this Act takes effect even if sec. 13 of this Act fails to receives a
29 two-thirds majority vote of each house.

30 * **Sec. 17.** Section 15 of this Act takes effect immediately under AS 01.10.070(c).

31 * **Sec. 18.** Except as provided in sec. 17 of this Act, this Act takes effect July 1, 2009.

CS FOR HOUSE BILL NO. 192()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVE COGHILL

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to nonpayment of child support; relating to certain judicial and**
2 **administrative orders for medical support of a child; relating to periodic review and**
3 **adjustment of child support orders; relating to relief from administrative child support**
4 **orders; relating to child support arrearages; relating to medical support of a child and**
5 **the Alaska Native family assistance program; amending Rule 90.3, Alaska Rules of Civil**
6 **Procedure; and providing for an effective date."**

7 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

8 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
9 to read:

10 DEFINITION OF "STATE"; LEGISLATIVE INTENT. The amendment made to the
11 definition of "state" in AS 25.25.101(19) under sec. 3 of this Act is intended to conform state
12 law to recent recommendations made for the Uniform Interstate Family Support Act. The
13 change is not intended to alter or expand in any way the governmental relationship between

1 federally recognized tribes and the state.

2 * Sec. 2. AS 11.51.122(a) is amended to read:

3 (a) A person commits the crime of aiding the nonpayment of child support in
4 the second degree if the person knows that an obligor has a duty under an
5 administrative or judicial order for periodic payment of child support, for cash
6 medical support, or for the provision of health care coverage for a child under a
7 medical support order or a cash medical support order, or both and

8 (1) being a person with a statutory duty to disclose information to a
9 child support enforcement agency intentionally withholds the information when it is
10 requested by a child support enforcement agency;

11 (2) being an employer of the obligor, intentionally withholds
12 information about the residence or employment of the obligor, the eligibility of the
13 obligor's children for coverage under the employer's health insurance plan, or the cost
14 of the coverage of the children under the plan, when that information is requested by a
15 child support enforcement agency or when the employer is required by state or federal
16 law to report the information without a request by a child support enforcement agency;
17 or

18 (3) intentionally participates in a commercial, business, employment,
19 or other arrangement with the obligor, knowing at the time that the arrangement is
20 made that it will allow the obligor to avoid paying all or some of the support when it is
21 due or to avoid having a lien placed on assets for the payment of delinquent support;
22 receipt of a substantial asset for less than fair market value from an obligor after the
23 obligor's support order has been established constitutes a rebuttable presumption that
24 the person receiving the asset knew that the transfer would allow the obligor to avoid
25 paying all or some of the support or to avoid having a lien placed on the asset.

26 * Sec. 3. AS 25.25.101(19) is amended to read:

27 (19) "state" means a state of the United States, the District of
28 Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, or
29 any territory or insular possession subject to the jurisdiction of the United States; the
30 term "state" includes an Indian tribe and a foreign jurisdiction that has enacted a law
31 or established procedures for issuance and enforcement of support orders that are

1 substantially similar to the procedures under this chapter or under the Uniform
2 Reciprocal Enforcement of Support Act or the Revised Uniform Reciprocal
3 Enforcement of Support Act;

4 * Sec. 4. AS 25.27.060(c) is amended to read:

5 (c) In a court or administrative proceeding where the support of a minor child
6 is at issue, the court or agency, as applicable, may order either parent or both parents
7 to pay the amount necessary for support, maintenance, nurture, and education of the
8 child. Regardless of whether a support order for periodic payments is issued, the court
9 or agency shall issue a medical support order, a cash medical support order, or
10 both. The medical support order shall require health care insurance coverage for the
11 child if health care insurance coverage is available to either parent or both parents for
12 the child at a reasonable cost. The court or agency shall consider whether the child is
13 eligible for services through the Indian Health Service or other insurance coverage
14 before ordering either parent or both parents to provide health care coverage through
15 insurance, cash medical support, or other means or a combination of insurance,
16 cash medical support, or other means. The court or agency shall allocate equally the
17 cost of health care insurance for the child between the parents unless there is good
18 cause to allocate the costs unequally. If the obligor has the duty to make periodic
19 payments for non-medical child support, the obligor's periodic payments shall be
20 decreased by the amount of the other parent's portion of payments for health insurance
21 ordered by the court or agency and actually paid by the obligor. If the obligor has a
22 duty to make periodic payments for non-medical child support, the periodic payments
23 shall be increased by the obligor's portion of payments for health insurance if the other
24 parent is ordered to and actually does obtain and pay for insurance. The court or
25 agency shall allocate equally between the parents the cost of reasonable health care
26 expenses not covered by private insurance unless there is good cause to allocate the
27 costs unequally. One parent shall reimburse the other parent for the first parent's share
28 of the uncovered expenses paid by the parent within 30 days after receipt by the first
29 parent of the bill for the health care, payment verification, and, if applicable, a health
30 insurance statement indicating what portion of the cost is uncovered. The medical
31 support order must meet the requirements of AS 25.27.063. Upon a showing of good

1 cause, the court may order the parents required to pay support to give reasonable
2 security for payments.

3 * Sec. 5. AS 25.27.160(c) is amended to read:

4 (c) If the agency is establishing only [A] medical support [ORDER], the
5 notice and finding of financial responsibility must state

6 (1) that health care insurance shall be provided for the child to whom
7 the duty of support is owed if health care insurance is available to the alleged obligor
8 at a reasonable cost and that the alleged obligor and the other parent shall share
9 equally the cost of the health care insurance and the costs of reasonable health care
10 expenses not covered by insurance;

11 (2) the sum of periodic payments of cash medical support for
12 which either parent or both parents are found to be responsible under this
13 chapter;

14 (3) the name of the alleged obligee and the obligee's custodian;

15 (4) [(3)] that the alleged obligor may appear and show cause in a
16 hearing held by the agency why the finding is incorrect, should not be finally ordered,
17 and should be modified or rescinded, because

18 (A) no duty of support is owed;

19 (B) health care insurance for the child is not available to the
20 alleged obligor at a reasonable cost;

21 (C) adequate health care is available to the child through the
22 Indian Health Service or other insurance coverage; or

23 (D) there is good cause to allocate the costs of health insurance,
24 cash medical support, or uninsured health care expenses unequally between
25 the parents;

26 (5) [(4)] that, if the person served with the notice under this subsection
27 does not request a hearing within 30 days, a copy of the medical support order will be
28 sent to the person's employer under AS 25.27.063(b) without further notice or hearing
29 for inclusion of the child in family health coverage if it is available through the
30 person's employer.

31 * Sec. 6. AS 25.27.193 is amended to read:

1 **Sec. 25.27.193. Periodic review or adjustment of support orders.** As
2 necessary to comply with 42 U.S.C. 666, the agency, by regulation, shall provide
3 procedures and standards for the modification, through a three-year cycle of
4 [PERIODIC] review or adjustment, of a support order. Regulations adopted under this
5 section must include procedures for periodic notice of the right to request review,
6 procedures for hearings, and standards for adjustments regarding future periodic
7 support payments. A modification under this section may be made without a showing
8 of a material change in circumstances.

9 * **Sec. 7.** AS 25.27.195(a) is amended to read:

10 (a) A clerical mistake in an administrative order issued by the agency or an
11 error arising from an oversight or omission by the agency may be corrected by the
12 agency at any time [ON THE MOTION OF AN OBLIGOR].

13 * **Sec. 8.** AS 25.27.195(b) is amended to read:

14 (b) The [UPON THE MOTION OF AN OBLIGOR, THE] agency may, at any
15 time, vacate an administrative support order issued by the agency under AS 25.27.160
16 that was based on a default amount rather than on the obligor's actual ability to pay.

17 * **Sec. 9.** AS 25.27.900(2) is repealed and reenacted to read:

18 (2) "arrearage" means a debt that is past due and equal to at least one
19 monthly obligation under the support order for one or more of the following:

20 (A) monetary support;

21 (B) cash medical support;

22 (C) payment of health care costs or maintenance of health
23 insurance;

24 (D) reimbursement of related costs;

25 (E) payment of attorney fees and legal costs and other fees;

26 (F) penalty, interest, and other relief as required by a support
27 order;

28 * **Sec. 10.** AS 25.27.900(12) is amended to read:

29 (12) "support order" means any judgment, decree, or order that is
30 issued by a tribunal for the support and maintenance of a child or of a parent with
31 whom the child is living; "support order" includes a judgment, decree, or order

1 (A) on behalf of a child who has reached the age of majority if
2 the judgment, decree, or order was lawfully issued; and

3 (B) for any or all of the following:

4 (i) monetary support, including arrearages;

5 (ii) payment of health care costs or maintenance of
6 health insurance;

7 (iii) payment of cash medical support;

8 (iv) [(iii)] reimbursement of related costs;

9 (v) [(iv)] payment of attorney fees and legal costs and
10 other fees; or

11 (vi) [(v)] penalty, interest, and other relief as required
12 by a tribunal;

13 * Sec. 11. AS 47.07.025(b) is amended to read:

14 (b) Through the child support services agency or on its own behalf, the
15 department may garnish the wages, salary, or other employment income of a person
16 who

17 (1) is required by a medical support order, cash medical support
18 order, or both, under AS 25.27.060(c) to provide insurance or cash coverage of the
19 costs of medical care to a child who is eligible for medical assistance under this
20 chapter;

21 (2) has received payment from a third party for the costs of the
22 services; and

23 (3) has not used the payments to reimburse, as appropriate, the other
24 parent or custodian of the child, the provider of the services, or the department.

25 * Sec. 12. AS 47.27.200(o) is amended to read:

26 (o) The applicability of AS 25.27 in the case of a recipient under an Alaska
27 Native family assistance program includes the following:

28 (1) an obligor is liable to the Alaska Native family assistance program
29 in the amount of the family assistance provided by the program to a child to whom the
30 obligor owes a duty of support except that, if a support order has been entered, the
31 liability of the obligor for assistance provided by an Alaska Native family assistance

1 program may not exceed the amount of support provided for in the support order, and,
 2 if a medical support order, cash medical support order, or both, [ORDER OF
 3 SUPPORT] has been entered, the liability of the obligor for assistance granted under
 4 AS 47.07 may not exceed the amount of support provided for in the medical support
 5 order, cash medical support order, or both, [ORDER OF SUPPORT]; the child
 6 support services agency shall send notice of accruing liability under this paragraph in
 7 the same manner as required under AS 25.27.120(c), and, if the agency fails to comply
 8 with the notice requirement of this paragraph, interest does not accrue on the liability
 9 to the Alaska Native family assistance program unless a support order or medical
 10 support order, or cash medical support order, as applicable, has been entered;

11 (2) the child support services agency may appear in an action
 12 authorized under AS 25.27.045 at the agency's own discretion if an obligor under
 13 AS 25.27 is liable to the Alaska Native family assistance program under (1) of this
 14 subsection;

15 (3) an Alaska Native family assistance program to which the child
 16 support services agency erroneously disburses an overpayment of child support under
 17 an income withholding order is liable to the state for the amount disbursed, plus
 18 interest at the rate imposed under AS 25.27.062(l)(1);

19 (4) when the right to receive child support has been assigned to an
 20 Alaska Native family assistance program, an agreement under AS 25.27.065(a) that
 21 has not been adopted as an administrative order of the child support services agency is
 22 not effective during a period when the obligee is receiving assistance under an Alaska
 23 Native family assistance program;

24 (5) the child support services agency, on behalf of an Alaska Native
 25 family assistance program, shall take all necessary action permitted by law to enforce
 26 child support orders entered under AS 25.27, including petitioning the court for orders
 27 to aid in the enforcement of child support;

28 (6) if an obligor under AS 25.27 is liable to an Alaska Native family
 29 assistance program under (1) of this subsection, the state is subrogated to the rights of
 30 the obligee to take actions authorized under AS 25.27.130(a);

31 (7) notwithstanding AS 25.27.130(c), the recovery of an amount for

which an obligor under AS 25.27 is liable that exceeds the total assistance granted under AS 47.07 and this chapter shall be paid to the obligee;

(8) except as provided in AS 25.27.130(f), if an obligee under AS 25.27 is not receiving assistance under AS 47.07 or this chapter at the time the state recovers money in an action under AS 25.27.130(d) or (1) of this subsection, the recovery of any amount for which the obligor is liable shall be distributed to the obligee for support payments, including medical support payments, that had become due and unpaid since the termination of assistance under AS 47.07 or this chapter under a support order in favor of the obligee;

(9) after payment to the obligee under (8) of this subsection, the state may retain an amount not to exceed the total unreimbursed assistance paid on behalf of the obligee under AS 47.07 or this chapter;

(10) if an alleged obligor is liable to an Alaska Native family assistance program under (1) of this subsection, and a support order has not been entered, the child support services agency may, at its own discretion, undertake an action to establish paternity and a duty of support using the procedures prescribed in AS 25.27 and may enforce a duty of support using the procedures prescribed in AS 25.27; the agency may also institute administrative proceedings to determine the paternity of a child born out of wedlock upon application of an Alaska Native family assistance program; the agency may not recover costs of genetic tests required under this paragraph from a person who is a recipient of assistance under an Alaska Native family assistance program;

(11) when a hearing officer makes a determination under AS 25.27.170(d), the hearing officer shall, in addition to the factors described in AS 25.27.170(e), consider the amount of the alleged obligor's liability to an Alaska Native family assistance program under (1) of this subsection;

(12) notwithstanding AS 25.27.255(a), the child support services agency may not pay to an obligee any money that has been assigned to an Alaska Native family assistance program.

* Sec. 13. The uncodified law of the State of Alaska is amended by adding a new section to read:

1 INDIRECT COURT RULE AMENDMENT. AS 25.27.060(c), amended by sec. 4 of
 2 this Act, has the effect of changing Rule 90.3, Alaska Rules of Civil Procedure, by changing
 3 standards for issuance of medical and other support orders by the court.

4 * **Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to
 5 read:

6 **APPLICABILITY.** This Act applies to actions filed on or after the effective date of
 7 this section and to motions filed on or after the effective date in proceedings filed before, on,
 8 or after the effective date of this section.

9 * **Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to
 10 read:

11 **TRANSITION: REGULATIONS.** The Department of Revenue may proceed to adopt
 12 regulations necessary to implement this Act. The regulations take effect under AS 44.62
 13 (Administrative Procedure Act), but not before July 1, 2009.

14 * **Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to
 15 read:

16 **NO CONDITIONAL EFFECT.** Because Rule 90.3, Alaska Rules of Civil Procedure,
 17 is a substantive rule, sec. 4 of this Act takes effect even if sec. 13 of this Act fails to receives a
 18 two-thirds majority vote of each house.

19 * **Sec. 17.** Section 15 of this Act takes effect immediately under AS 01.10.070(c).

20 * **Sec. 18.** Except as provided in sec. 17 of this Act, this Act takes effect July 1, 2009.

Sponsor Statement

HB192 – Child Support Enforcement Amendments

Civil Rule 90.3, the child support guidelines, was enacted by the Alaska Supreme Court in 1987. Civil Rule 90.3 is substantive law and should have been passed by the legislature. The courts decide individual cases and enact procedural rules. This bill will enact the current rule as a statute and correct a long-standing deficiency.

Additionally this bill amends existing statute to conform to the new medical support regulations set by the federal government in July 2008 that require how one or both parents will provide healthcare needs for their child.

It gives a tribunal the authority to order either or both parents to pay cash medical support. CSSD will now review support orders on a three-year cycle rather than periodically. The definition of arrearage and support now includes cash medical support.

Finally the bill removes language limiting who may request a clerical mistake correction on an administrative order or vacating an administrative order based upon a default income.

RE: HB 192

Dear Ms. Moss:

As per your request, following is a sectional analysis of HB 192:

Section 1. Adds reference to cash medical support to the crime of aiding the nonpayment of child support in the second degree.

Section 2. Amends order of support provision to include both parents, medical support, and insurance.

Section 3. Adds medical support to provision authorizing the initiation of administrative action to establish a duty of support.

Section 4. Amends periodic reviews of support orders to require a three year cycle of review.

Section 5. Deletes motion requirement for correcting an administrative mistake in a support order.

Section 6. Deletes motion requirement for vacating a support order that is based on a default amount.

Section 7. Redefines "arrearage" for child support purposes.

Section 8. Amends the definition of "support order" to include cash medical support.

Section 9. Amends garnishment provision to include insurance and cash medical support.

Section 10. Amends the Alaska Native family assistance program to include obligations for cash medical support.

Section 11. Provides for an indirect court rule amendment to Rule 90.3, Alaska Rules of Civil Procedure for changes made in the bill.

HB 192
March 26, 2009

Section 12. Makes bill changes applicable to child support actions filed on or after the bill's effective date.

Section 13. Authorizes the Department of Revenue to proceed to adopt regulations needed under the bill.

Section 14. Provides for a conditional effect for the court rule amendment in sec. 11 only for two-thirds majority vote.

Section 15. Makes sec. 13 effective immediately.

Section 16. Provides for a July 1, 2009 effective date for all other bill sections.

Let me know if you have any questions concerning this analysis.

Thank you,

Sincerely,

John Mallonee
Director

March 20, 2009

The Honorable John Coghill
Chair, House Rules Committee
Alaska State Legislature
State Capitol, Room 214
Juneau, AK 99801

Dear Representative Coghill;

The Department of Revenue, with support of the Governor asked you to introduce legislation regarding Child Support Services needs for legislative change to their statutes. Thank you for sponsoring this legislation and introducing HB 192 last week. This letter outlines the need for the legislation to pass during this legislative session both for content of the bill and fiscal impact to the citizens of the state.

The Alaska Child Support Services Division (CSSD) needs to amend state law on three issues.

1. The requirement for cash medical support
2. The three year review cycle
3. The change of the definition of state in UIFSA

The first two amendments are less controversial and only require that child support orders include a provision for obligors to pay cash medical assistance to the custodial parent to help with health costs when insurance is not provided for that child, and that the division performs regular reviews of its cases.

The third amendment could be considered more sensitive. The Uniform Interstate Family Support Act (UIFSA) contains a definition of "state." Under federal law, all states must adopt the uniform act's definition of "state" that includes "the United States Virgin Islands" and "an Indian tribe." For Alaska, the impact of adopting a definition that would include Indian tribes, means Indian tribes can issue and serve income-withholding orders on employers. The obligor would be entitled to contest the jurisdiction of the tribe to issue the order and the usual rights to contest the validity or enforcement of an order by an obligor would still apply. The change would also affect the process for state recognition of tribal orders. A tribal child support order would be registered in the Alaska state courts under the UIFSA procedures instead of a comity process. These changes are consistent with the purpose of UIFSA. The purpose of UIFSA is to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws.

One question raised by the changes required by UIFSA is whether the tribal amendment would result in an expansion of tribal authority. The Department of Law has examined this question and came to the

following conclusion:

“UIFSA’s underlying purpose is not to define jurisdiction. Nor does the state have the ability to define tribal jurisdiction. The overall purpose of UIFSA is simply to unify state laws relating to child support orders, to provide efficient procedures for collecting child support in interstate cases, and to eliminate multiple support orders that were permitted under prior child support laws. These purposes do not trigger broader jurisdictional concerns.”

Intent language could be included in the introduced child support legislation (SB 96) to ease concerns of legislators who are not comfortable with issues related to Indian tribes. Or a letter of intent could be attached as a separate letter to the bill. I might suggest the following as an amendment:

LEGISLATIVE FINDINGS AND INTENT. (a) The legislature finds that

(1) failure to bring AS 25.25.101 into compliance with the federal Social Security Act Title IV-D could result in the loss of approximately \$17,000,000 in administrative funding;

(2) of the 33 states that have federally recognized tribes, Alaska is the only state that has not yet passed conforming legislation; and

(3) to bring Alaska into conformity with UIFSA, the legislature finds that it is necessary to amend AS 25.25.101 to include “an Indian tribe” and “the United States Virgin Islands” in the definition of “state.”

(b) It is the intent of the legislature that this Act not alter or expand in any way the governmental relationship between federally recognized tribes and the state.

A zero fiscal note accompanies the legislation because passage of the bill would result in no additional impact to the Department of Revenue, Child Support Services Division. The fiscal impact to non-passage of SB96, or another like bill, could be detrimental to 62,000 Alaska’s children under age 19. If the state remains out of compliance after this legislative session, CSSD could lose nearly the entire operating budget required to operate the child support activities mandated by state and federal law and could jeopardize the entire TANF block grant received by the Department of Health and Social Services, Division of Public Assistance. (The division currently has a budget of \$174,000 General Funds.)

\$11,000,000	Federal receipts paid through Title IV-D of the Social Security Act for child support services.
\$12,708,403	Each year CSSD collects funds from families who also receive state benefits through the State’s TANF (Temporary Assistance for Needy Families) program. The collections received on behalf of the children receiving funding through TANF are retained by CSSD and used as match to obtain additional federal funding for child support, \$6,070,137 state match, and \$6,638,266 to be used as part of the total federal receipts to be paid to CSSD for its services. *FY08 totals

\$ 1,025,761	Annual collections from obligors whose children are in state foster care are sent to the Department of Health and Social Services to help pay for foster care costs. *FY08 totals
\$ 860,560	Annual collections from obligors whose children are institutionalized are sent to the Department of Health and Social Services to help pay for non-federal foster care. *FY08 totals
\$60,000,000	Federal TANF Block Grant is part of the Social Security Act. If any part of the Act is not in compliance, the State would risk losing the entire block grant. The majority of this funding is appropriated in the Department of Health and Social Services. Action Transmittal OCSE-AT-97-05 dated April 28, 1997 describes that CSSD funding would be lost and that non-compliance could also put at risk Title IV-A funding. The language from this Action Transmittal follows:

AUTHORITY:Section 455(a)(1)(A) of the Act specifies that funds appropriated under title IV-D shall be paid to States with approved State IV-D plans. There is no authority to expend Federal funds under title IV-D of the Act for the operation of a Child Support Enforcement program unless such State has an approved State IV-D plan.

Section 466 of the Act requires that all States, as a condition for approval of their State IV-D plan, must have in effect laws requiring the use of mandatory procedures to increase the effectiveness of their Child Support Enforcement programs. As a condition for State plan approval, section 454(20) of the Act provides that, to the extent required by section 466, States must have laws in effect and implement the procedures prescribed in or pursuant to such laws.

Section 454 of the Act sets the statutory requisites for the State IV-D plan. In addition, regulations at 45 CFR 301.10 define the State IV-D plan as a comprehensive statement submitted by the IV-D agency describing the nature and scope of its program. The State IV-D plan contains all the information necessary for the Office of Child Support Enforcement (OCSE) to determine whether the plan can be approved, as a basis for Federal financial participation in the State IV-D program.

Section 452(a)(3) of the Act requires that OCSE review and approve State plans for Child Support Enforcement programs under title IV-D of the Act. The authority to approve State plans is delegated to the Regional Office, but OCSE retains authority for determining that a State IV-D plan is not approvable.

As stated above, a determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. If a State is dissatisfied with OCSE's decision, reconsideration may be requested pursuant to 45 CFR 301.14. Withholding of Federal payments cannot be stayed pending reconsideration.

Section 402(a)(2) of the Act (as amended by PRWORA) provides that the chief executive officer of a State must certify that it will operate a child support enforcement program under an approved IV-D plan as a condition of eligibility for a TANF block grant under title IV-A of the Act. Therefore, States should be aware that TANF funds may also be at risk.

CSSD Federal Compliance Impact Letter

March 20, 2009

Page 4 of 4

In conclusion:

1. Monthly distribution of child support payments to custodial parents averages \$9,350,000.
2. One out of six citizens (approximately 125,000 people) in Alaska are somehow involved in a child support case.
3. If this legislation does not pass in the next 30 days, Alaska risks losing its entire child support services program and could lose its state TANF block grant that serves low-income citizens in every community.

Thank you for working with us on this issue.

Sincerely,

Ginger Blaisdell
Director

DEPARTMENT OF HEALTH & HUMAN SERVICES

Administration for
Children and Families

2201 Sixth Avenue, RX-70
Seattle, WA 98121

MAR 27 2009

Mr. John Mallonee, Director
Child Support Services Division
550 West 7th Avenue, Suite 310
Anchorage, AK 99501

Dear Mr. Mallonee:

This is in response to your request for clarification of the potential Federal consequences if a State fails to enact laws to meet the State plan requirements with section 466(f) of the Social Security Act (the Act). The Act mandates that on and after January 1, 1998, each State must have in effect the Uniform Interstate Family Support Act (UIFSA), as approved by the American Bar Association on February 9, 1993, and as in effect on August 22, 1996, including any amendments officially adopted as of such date by the National Conference of Commissioners on Uniform States Laws. Specifically, Alaska State's UIFSA does not include Indian tribes in the definition of 'State'.

In order for a State to receive Federal funding for the operation of its child support enforcement program, it must have an approved State IV-D plan which meets the requirements of section 454 of the Social Security Act (the Act). One of those requirements, specified at section 454(20)(A), is that the State must have in effect all of the laws required by section 466.

When a State fails to comply with any statutory requirement, its plan is subject to disapproval by the Office of Child Support Enforcement (OCSE). In accordance with sections 452(a)(3) and 455(a)(1)(A) of the Act, there would then be no authority to expend Federal funds under Title IV-D to operate the State's child support enforcement program.

Therefore, a determination that a State IV-D plan is disapproved may result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. This suspension includes the Federal share of administrative expenditures as well as any performance based incentive payments to the State.

In addition, in order to be eligible for a block grant for Temporary Assistance to Needy Families (TANF), section 402(a)(2) of the Act requires a State to certify that it will operate a child support enforcement program under the State plan approved under part D. Therefore, Alaska should be aware that TANF funds may also be at risk if the State does not enact conforming child support legislation.

Page 2 - Mr. John Mallonee

In Federal Fiscal Year (FFY) 2008, the Federal share of Alaska's IV-D expenditures was \$14,657,800 and the State's TANF award amount was \$46,732,590. In addition, Alaska received \$1,794,516 in child support incentives for FFY 2007 (the latest year with available data).

We trust this statement of requirements and penalties clarifies our position. We are attaching our Action Transmittal 97-05 issued April 28, 1997 which outlines our procedures for determining that a State IV-D Plan is disapproved. Due to the gravity of the consequences that may result, we urge you to take all necessary steps to have the required UIFSA legislation enacted and implemented as soon as possible.

If you have any questions, please contact John Cheng at (206) 615-2566.

Sincerely,

Linda Gillett

Regional Program Manager, Region 10
Office of Child Support Enforcement

THE OFFICE OF CHILD SUPPORT ENFORCEMENT

Giving Hope and Support to America's Children

PROGRAM INSTRUCTION

ACTION TRANSMITTAL

OCSE-AT-97-05

April 28, 1997

TO: STATE AGENCIES ADMINISTERING CHILD SUPPORT ENFORCEMENT PLANS APPROVED UNDER TITLE IV-D OF THE SOCIAL SECURITY ACT AND OTHER INTERESTED INDIVIDUALS

SUBJECT: Procedures for Determining That a State IV-D Plan is Disapproved

BACKGROUND: Title III of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA), P.L. 104-193, made a number of amendments to sections 454 and 466 of the Social Security Act (the Act), requiring States to either establish new, or modify existing, procedures effective either October 1, 1996, March 1, 1997 or October 1, 1997. For States which require legislation in order to conform their State IV-D plans to the revised statute, section 395(b)(2) of PRWORA provides a grace period until not later than the 1st day of the 1st calendar quarter beginning after the close of the 1st regular session of the State legislature that begins after the date of enactment of PRWORA (August 22, 1996). In cases which require that the State constitution be amended, section 395(c) of PRWORA provides a grace period until one year after the effective date of the State constitutional amendment, but no later than five years after the date of enactment of PRWORA.

CSE is tracking the progress of each of the States in enacting the new State plan requirements and mandatory laws, and is noting the date when each State's 1997 legislative session ends in order to ascertain when these laws are required to be in effect and when the State must submit new or amended State plan material for approval by OCSE in order to operate a Child Support Enforcement program according to the requirements of title IV-D of the Act. If a State fails to submit the necessary State plan amendments, OCSE will have to determine that the State does not have an approvable State plan. A determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE.

STATUTORY

AUTHORITY: Section 455(a)(1)(A) of the Act specifies that funds appropriated under title IV-D shall be paid to States with approved State IV-D plans. There is no authority to expend Federal funds under title IV-D of the Act for the operation of a Child Support Enforcement program unless such State has an approved State IV-D plan.

Section 466 of the Act requires that all States, as a condition for approval of their State IV-D plan, must have in effect laws requiring the use of mandatory procedures to increase the effectiveness of their Child Support Enforcement programs. As a condition for State plan approval, section 454(20) of the Act provides that, to the extent required by section 466, States must have laws in effect and implement the procedures prescribed in or pursuant to such laws.

Section 454 of the Act sets the statutory requisites for the State IV-D plan. In addition, regulations at 45 CFR 301.10 define the State IV-D plan as a comprehensive statement submitted by the IV-D agency describing the nature and scope of its program. The State IV-D plan contains all the information necessary for the Office of Child Support Enforcement (OCSE) to determine whether the plan can be approved, as a basis for Federal financial participation in the State IV-D program.

Section 452(a)(3) of the Act requires that OCSE review and approve State plans for Child Support Enforcement programs under title IV-D of the Act. The authority to approve State plans is delegated to the Regional Office, but OCSE retains authority for determining that a State IV-D plan is not approvable.

As stated above, a determination that a State IV-D plan is disapproved will result in immediate suspension of all Federal payments for the State's child support enforcement program, and such payments will continue to be withheld until the State IV-D plan can be approved by OCSE. If a State is dissatisfied with OCSE's decision, reconsideration may be requested pursuant to 45 CFR 301.14. Withholding of Federal payments cannot be stayed pending reconsideration.

Section 402(a)(2) of the Act (as amended by PRWORA) provides that the chief executive officer of a State must certify that it will operate a child support enforcement program under an approved IV-D plan as a condition of eligibility for a TANF block grant under title IV-A of the Act. Therefore, States should be aware that TANF funds may also be at risk.

Although it is not required under Title IV-D of the Act, OCSE will give States an advance notice of "Intent to Disapprove" a previously approved State IV-D plan. The State will then be permitted the opportunity to waive reconsideration of the OCSE's final decision and to exercise, prior to the State plan approval/disapproval decision, the right to a hearing under the procedures set forth in 45 CFR Part 213. If the State elects to pursue its hearing rights prior to issuance of OCSE's decision, no further administrative appeal will be allowed.

Anne F. Donovan

Acting Deputy Director

Office of Child Support Enforcement

Instructions for State Plan Disapproval

I. Notice of Intent to Disapprove

OCSE will issue a Notice of Intent to Disapprove a State Plan to the State umbrella agency head when it has been determined that either of the following situations exist:

Pursuant to the requirements at 45 CFR 301.13(d) the State IV-D plan no longer meets the requirements for an approved State plan based on relevant Federal statutes and guidelines.

Pursuant to the requirements at 45 CFR 301.13(e) or (f) the State IV-D plan or amendment submitted for approval does not meet the requirements under title IV-D of

the Act and regulations issued pursuant to the Act.

II. Notice Of Opportunity For Hearing

The Notice of Intent to Disapprove will provide opportunity for the State to request a hearing prior to the issuance of the final decision if the State waives its right to a reconsideration of OCSE's decision under 45 CFR 301.14. The State must request a hearing within 60 days of the date of the Notice of Intent to Disapprove. If the State does not request a hearing, OCSE shall proceed according to the procedures set forth under Determination to Withhold outlined below.

Upon request of the State for a hearing, OCSE will issue a Notice of Hearing which will state the time and place of the hearing, the issues which will be considered, and shall be published in the Federal Register. The hearing procedures contained in regulations at 45 CFR Part 213 shall apply to these proceedings.

III. Negotiations

As provided in regulations at 45 CFR 213.1(b) the hearing process does not preclude or limit negotiations between OCSE and the State, whether before, during or after the hearing to resolve the issues which are, or otherwise would be, considered at the hearing. Such negotiations and resolution of the issues are not part of the hearing, and are not governed by the hearing procedures, except as expressly provided for in such procedures.

IV. Determination to Withhold

If OCSE concludes that the State does not have an approved State IV-D plan under section I of these instructions, it will notify the State that further Federal payments under title IV-D of the Act will not be made to the State until a State IV-D plan is submitted and approved. Until a State IV-D plan is approved, no further Federal payments under title IV-D will be made to the State for any child support enforcement activities. Pursuant to 45 CFR 213.33, the effective date for the withholding of Federal funds shall not be earlier than the date of OCSE's decision and shall not be later than the first day of the next calendar quarter following such decision.

V. Reconsideration

Any State which has not waived its right to reconsideration and is dissatisfied with OCSE's decision that the State does not have an approvable State plan may request reconsideration of the decision pursuant to regulations at 45 CFR 301.14. Funding, however, will be suspended and may not be restored unless OCSE subsequently determines that the original decision to withhold Federal IV-D funding was incorrect.

CHILD SUPPORT LEGISLATION IN 104TH CONGRESS

TIMETABLE OF EFFECTIVE DATES FOR STATE REQUIREMENTS

Based on Dates in Text of Title III of PL 104-193

Personal Responsibility and Work Opportunity Reconciliation Act of 1996

Section 395 states that, except as specifically provided in the legislation, the effective date for provisions of PL 104-193 is 10/1/96 for provisions under "454 & 466 of the Act. Section 395 allows a grace period for State law changes and State constitutional amendments. For State law changes, the grace period is until the effective date of the State implementing provisions, but no later than the first day of the first quarter after the close of the first regular legislative session that begins after enactment of PL 104-193. For State constitutional amendments, the grace period is until one year after the effective date of the State constitutional amendment, but no later than five years after enactment of PL 104-193.

Requirements Effective 10/1/96

Income withholding ['314] -- '466(a)(1) and (b)

Locator networks; access to motor vehicle and law enforcement data ['315] -- '466(a)(12)

SSNs on applications for professional, commercial drivers, occupational and marriage licenses; on records of divorce decrees, support orders, and paternity determinations; and death records & certificates ['317] -- '466(a)(13)

Administrative enforcement in interstate cases ['323] -- '466(a)(14)

State laws providing expedited procedures, including:

Ordering genetic testing for paternity establishment; Issuing subpoenas for information and impose penalties for failure to respond; Requiring all entities in a State to promptly respond to inquiries by State agency and sanction failure to respond; Obtaining access to records of other State and local government agencies and records held by private entities including public utilities and financial institutions; Changing payee in cases subject to an assignment; Ordering income withholding; Securing assets to satisfy arrearages by intercepting or seizing periodic or lump-sum payments from a State or local agency and judgments, settlements, and lotteries; attach assets held by financial institutions; attach retirement funds; and impose liens; Increasing the amount of monthly support payments to include amounts for arrearages; Filing of information on location/identity of parties in State case registry upon entry of order; Statewide jurisdiction over orders and transfer of cases between local jurisdictions without additional filing; and Using of automated system to maximum extent feasible to implement expedited administrative procedures ['325] -- "466(c) & 454A(h)

State laws concerning paternity establishment, including:

Establish paternity before age 21 (retroactive to 8/16/84); Genetic tests in contested cases upon request w/sworn affidavits; Payment for genetic testing; Provide for a simple civil process for voluntarily acknowledging paternity with prior explanation/written notice to parents; Birth record agency must offer voluntary paternity establishment services, and other may; Name of father included on birth record only if both mother and father have signed an acknowledgment, or court or administrative authority has adjudicated paternity; Development of affidavit for voluntary acknowledgment of paternity which must be given full faith and credit in any other State; Procedures where voluntary acknowledgments and adjudication of paternity are filed with the State registry of birth records for comparison with State case registry; Admissibility of test results if performed by accredited laboratory; Rescission timeframe of 60 days for signed voluntary paternity acknowledgments; Elimination of judicial/administrative ratification proceedings on unchallenged paternity acknowledgments; Default orders; No right to jury trial in paternity cases; Issuance of temporary support orders in paternity cases; Evidentiary treatment of birth expenses/bills; and Opportunity for putative fathers to initiate paternity proceedings ['331(a)] -- '466(a)(5)

State plan requirements for paternity outreach activities ['332] -- '454(23)

Cooperation/good cause ['333] -- '454(29)

State use of definitions for collecting & reporting data ['343(b)] -- '454(30)

Simplified review & adjustment process ['351] -- '466(a)(10)

Voiding of fraudulent transfers ['364] -- '466(g)

Work requirement for persons owing child support ['365] -- '466(a)(15)

Reporting arrearages to credit bureaus ['367] -- '466(a)(7)

Liens on real/personal property by operation of law; full faith and credit to liens without registration of order ['368] -- '466(a)(4)

State law authorizing the suspension of licenses ['369] -- '466(a)(16)

International CSE -- State treatment of international requests ['371(b)] -- '454(32)

Financial Institution data matches ['372] -- '466(a)(17)

Enforcing orders against grandparents in cases of minors ['373] -- '466(a)(18)

State cooperative agreements with Indian Tribes ['375(a)] -- '454(33)

Enforcement of orders for health care coverage ['382] -- '466(a)(19)

Explicit statutory requirement that Title IV-D services be provided to nonresident applicants; enforce child support & support due on behalf of child's custodian ['301(a)] -- "454(4)&(6)

Continuation of IV-D services for former recipients of IV-A assistance [301(b)] -- '454(25)

Requirements Effective 3/1/97

Use of forms by States in interstate cases ['324(b)] -- '454(9)(E)

Requirements Effective 10/1/97

Annual State self-reviews & reports ['342(a)] -- '454(15)

Data submitted on compliance with Federal performance requirements ['342(a)] --'454(15)

State privacy safeguards ['303(a)] -- '454(26)

State procedures-notices & copies of orders ['304(b)] -- 454(12)

State directory of new hires ['313] -- 454 (28)

ADP systems meeting all IV-D requirements enacted on or before Family Support Act ['344] -- '454(24)

Denial/restriction/revocation of passport if arrears greater than \$5000 ['370] -- "452(k) & 454(31)

Requirements Effective 1/1/98

Adoption of UIFSA (with modifications) ['321] -- '466(f)

Requirements Effective 10/1/98

All support orders established or modified on or after 10/1/98 included in State central registry, which must be in place by 10/1/2000 ['311 and '344(a)(2)] -- '454A

Centralized automated unit for collections and disbursements ['312] -- '454(27)

Collection through State centralized collection unit of orders under wage withholding['312] -- '454B

State new hire reporting systems in existence prior to P.L. 104-193 must meet rest of new requirements ['313] -- '454(28)

Requirements Effective 10/1/99

End of optional exception period for local court collection of child support in lieu of State centralized collection unit ['312] -- '454B

Requirements Effective 10/1/2000

ADP systems must meet all IV-D requirements enacted on or before this law (with additional time tied to regulation issuance) ['344(A)(4)] -- '454(24)

Sponsor Statement

This bill has been filed in response to an urgent issue brought forward by four of Alaska's Residential Psychiatric Treatment Centers in Anchorage and Fairbanks. The Legislation intends to advance and accelerate the efforts to bring our most troubled Alaskan children home through the *Bring the Kids Home Project*. Existing DHSS regulations 7 AAC50.815 Qualifications of Caregiver Staff require that a majority of treatment staff in these facilities, namely the caregivers, be held to a higher qualification standard than Federal Medicaid laws and other states' currently housing Alaska's children. The current qualifications are as follows: 1) bachelors degree; 2) an associate degree and two years work experience in a RPTC; or 3) four years work experience in a RPTC. This proposed legislation remedies the current situation by requiring that each facility have at least one staff member with a bachelor degree on each shift to oversee caregivers. Additionally, caregivers will be required to meet strict training standards as authorized or approved by the Department as a condition of employment. The committee urges swift passage of this legislation.

SECTIONAL

CSHB 223(HSS)

“An Act relating to the qualifications for residential psychiatric treatment center caregiver staff; and providing for an effective date.”

Section 1: Title 47.32 Centralized Licensing and Related Administrative Procedures

Adds a new section AS 47.32.055 which expands the acceptable alternative qualifications for caregiver staff in a residential psychiatric treatment center under 7 AAC 50.815 by incorporating the existing standards and adding a fourth alternative. In the fourth alternative a person would be a qualified caregiver if he or she has at least a high school diploma or general educational development diploma, completes a training course provided or approved by the Department of Health and Social Services, and works only during hours when a person with a bachelor’s degree in a human services related field or who satisfies one of the other alternatives is also on duty.

Section 2: Providing that the new section will take effect immediately.

April 6, 2009

Representative Wes Keller, Co-Chair House HESS
Capitol Building
Juneau, Alaska 99811

Re: Qualifications for Caregivers in Residential Treatment Centers

Dear Representative Keller:

Thank you for your service to the State of Alaska and for your support of Alaska's families in need. Southcentral Foundation serves thousands of children and their families in our primary care center, residential treatment home for young men, therapeutic family group homes, and many other programs.

As you may know, Southcentral Foundation is partnering with the State of Alaska, the Denali Commission and the Alaska Mental Health Trust Authority to bring the kids home by building a culturally appropriate 44-bed Residential Psychiatric Treatment Center (RPTC). Our RPTC is a Level V and is in the design phase. We anticipate starting construction in June 2009, with an expected opening date in fall 2010. One of the challenges of this project is ensuring successful recruitment of the more than 80 FTEs necessary to provide quality treatment at this level of care. More specifically, it will be a challenge to recruit and train qualified staff with a bachelor's degree, associate degree with at least two years experience in residential treatment, or a high school diploma and four years experience in residential treatment.

Southcentral Foundation strives to employ Alaska Native and American Indian people as customer/owners of our health care system. We envision being able to train our own employees to work for and with our Alaska Native and American Indian customer/owners. Regulation 47 AAC 50.815 presents challenges to Southcentral Foundation's ability to "train our own" to provide the highest levels of quality and culturally appropriate care to those that need RPTC services. If the language is amended to allow for "department provided or approved training," our people will gain the experience they need to serve their community and Southcentral Foundation will be able to staff its RPTC.

Southcentral Foundation supports the proposed amendments to AS 47.32.030 regarding the qualifications for residential psychiatric treatment center caregiver staff and also supports the retroactive date. Again, thank you for your support.

April 2, 2009

Dear Committee,

As Chairman of the Boys and Girls Home of Alaska Board of Directors, I've had firsthand knowledge of the fine work our agency is doing. The services we offer have been absent in our community and are a welcome relief. It is essential that these services continue.

Part of our struggle in Fairbanks is around folks having enough credentials to meet the present Medicaid standards. It is our hope that you will support the proposed Bill before you, in order for us to continue to deliver the services to children and their families while ensuring quality of care. We know that we are not alone in this process and that other Level V organizations around the state would also welcome this relief.

I look forward to meeting with you and I am hopeful that we can move this Bill forward.

Sincerely,

A handwritten signature in cursive script that reads "Boddy".

April 3, 2009

The Honorable Johnny Ellis
Alaska State Senate
Juneau, AK

Re: Qualifications of Caregivers in Residential Treatment Centers

Dear Senator Ellis:

To begin, thank you for your support of mental health related issues that have allowed North Star Behavioral Health System to provide needed services for the children of our state. As a provider in a vast continuum of care, it is essential that we be able to continue to meet the needs of children and adolescents. Our ability to offer appropriate care that improves the lives of youth and families is often impacted by issues decided in the legislative arena.

One such issue is the Regulation 7AAC50.815, related to the qualifications of caregivers in Residential Psychiatric Treatment Centers. This regulation requires that a front line care giver (mental health aide) must either have a Bachelor's degree and/or an Associate's degree with at least two years experience in residential treatment, or a high school diploma and four years experience in residential treatment.

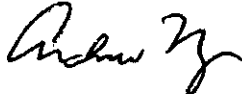

While the intent of the requirement is to ensure that front line caregivers are qualified and trained, this places an undue burden on providers. Clearly, one cannot gain experience without a degree, when the regulations require one have experience in order to be hired. Thus, only employees who could be "grand fathered" or come from state's that do not have such a requirement (out of state residents) would become eligible for hire. Given the rural nature of our state, this limits potential hires and thus can limit needed care in more rural communities. Given the state's push toward "Bringing our Children Home" for care, this appears conflicted with this purpose.

Currently, all facilities train and orient staff in addition to conducting back ground checks for safety. Annual training is required by the state, which acknowledges the need for continued training in addition to orientation curriculum. While I would understand and support reviewing this criteria every few years, until we reach a more qualified training pool, I would ask adjustments to be considered. Alternatives might include an increased amount of training required when hiring non-degreed candidates. In this way there is no

must invest at least that amount of dollars in additional training to meet new training requirements for hiring lesser trained employees. Certainly I would be willing to work with other providers in making such recommendations to the state or the state could decide such issues to ensure continued protection of our children. With that said, all residential facilities are reviewed for compliance by numerous agencies, and I see little danger in non-compliance with such changes.

In closing, I appreciate your consideration of this request and would be happy to answer any questions related to my comments.

Sincerely,

Dr. Andrew Mayo, CEO
North Star Behavioral Health System

Alaska Children's Services

March 31, 2009

The Honorable Johnny Ellis
Alaska State Senate
Juneau, AK

RE: Qualifications for Caregivers in Residential Treatment Centers

Dear Senator Ellis:

First, I want to thank you for your long-standing support of Alaska Children's Services and for Alaska's families in need. Thousands of Alaska children are enjoying a much more positive life because of your service to the state.

I want to call your attention to a serious issue that is impacting the ability of Alaska Children's Services and other intensive treatment programs to provide the quality of treatment that is necessary to assist children to become successful. Specifically, I am referring to Regulation 7AAC50.815 – "Qualifications of Caregivers in Residential Psychiatric Treatment Centers." This regulation requires that a caregiver in a program such as ACS must either have a Bachelor's degree, and Associate's degree with at least two years experience in residential treatment, or a high school diploma and four years experience in residential treatment.

While this regulation is intended to ensure that only the most qualified caregivers provide care and treatment to the most fragile and disturbed youth, it falls far short of that. First, the degree requirement is generic; therefore, a person with an accounting degree and no childcare experience is eligible for employment while a much more qualified person without a degree is not. Furthermore, the regulation establishes a classic "Catch 22" in that a non-degreed person with requisite experience can be hired, but the regulation does not allow any provision for a person to gain that experience.

For many years Alaska has been experiencing serious workforce issues and there are myriad workforce development projects currently sponsored by both state and private entities. Over five years ago, Alaska Children's Services, with the support of a federal Administration for Children and Families grant, developed a *Competency-Based Program for Training Childcare Workers*. It is both rural and urban appropriate and has been used by dozens of agencies. I am not advocating for our specific program; however, I am asking for support as the three Level 5 RTC's – ACS, North Star, and Boys and Girls Home of Alaska – work with the Department in efforts to change this regulation.

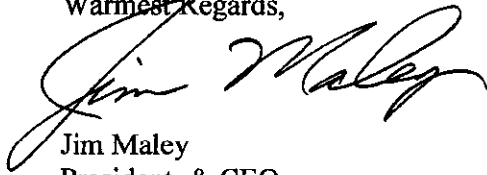

4600 Abbott Road, Anchorage, Alaska 99507-4314 • (907) 346-2101 • Fax (907) 348-9230
email: akchild@ak.net • www.acs.ak.org

A Christian mission of American Baptist Churches USA, Evangelical Lutheran Church in America, and the United Methodist Church. A United Way agency, ACS is accredited by the Joint Commission on Accreditation of Healthcare Organizations.

Again, thanks so much for your support and please advise if there is any way we can assist you in your efforts.

Warmest Regards,

A handwritten signature in cursive script that reads "Jim Maley". The signature is written in black ink and is positioned above the printed name and title.

Subject: Boys & Girls Home follow up
Importance: High

I wanted to follow up on our meetings with you regarding the Alaska Boys & Girls Home with a few more points that have come to light since we met. The Department of Law has raised additional concerns because the legislation appears to be an attempt to alter existing law that is at the center of the on-going licensing investigation into practices at the Boys & Girls Home. As such, the legislation is an indirect attempt to resolve an adverse licensing action. We have also heard that it has been represented to you that the department plans to shut down the home. That is not our intent, we are actively working with the home to bring it into compliance and continue providing an important service to emotionally disturbed youth of Alaska.

We are available to meet with you at any time if you would like further explanation. Please do not hesitate to call.

Tom and Matt, I believe the legislation that you are interested in introducing is identical to a bill that was provided to us this morning by Sen. Paskvan. Below see our very quick analysis of the legislation. We do not believe this is in the best interest of the children in residential care in the state. Please let me know if I can arrange a meeting with Rep. Keller or Sen. Davis to go over our concerns. Thank you very much for the heads up. We appreciate the chance to provide feedback.

Jake,

Commissioner Hogan sent me a copy of the bill that came from the Boy's and Girl's Home agency. We have not had time for the more appropriate comprehensive review of this bill by LAW and our Licensing section as well as by many of the affected Divisions. Given the limits of the timeframe however, I would like to offer you these constructs:

-We must comply with Federal requirements for Residential Psychiatric Facilities and we have not been able to review these proposed changes in light of those requirements. It is entirely possible that they would not meet these requirements

-We have questions as to why the bill is to be put into statutes. Specifically, AS 47.32.030 pertains to 16 entities (such as hospitals, ambulatory surgical centers) and I believe that placing it in this section of the statutes is not meant to affect all 16 entities. The more appropriate place to modify the qualifications of staff who work in residential psychiatric treatment centers would be in regulation or administrative code.

-the use of the words "caregiver staff", to which the proposed changes are meant to apply, is not definitive. Does this apply to medical, professional or paraprofessional staff?

-the training leading to certification reference in (d)(1) is problematic. We do not currently know if there is an adequate amount of this training available to provide all statewide staff who may need this training. This training and certification may also need to be expanded if it is meant to be the "ticket" that would allow a person to work in an RPTC. Again, we have not had time today to review this matter.

-Section (d) (2) (a) notes that a "caregiver staff" would be supervised by someone with a bachelors degree. There is no definition of the type of bachelors degree or the type of experience that this staff would need to have to oversee the "caregiver" staff. Clearly a person who has a bachelor's degree in public accounting would not be suitable for this responsibility. A degree in and of itself is not an adequate qualifying criteria for oversight of staff.

-Lines 15 and 16 which reference that DHSS would somehow review the education and experience of individuals for their "education or experience" of staff to be hired is problematic. We should not be reviewing each and every applicant for positions in these provider agencies who may not meet the bachelor's requirement as this would be an administrative burden that is inappropriate for DHSS.

Again, I regret that we have simply not had time to thoroughly review this bill. It would affect the Behavioral Health Division, The Office of Children's Services, and the Office of Juvenile. As noted above we have NOT had time for LAW, Licensing or our Medicaid office to review it for its' implications.

I can say that we do not support this proposed bill in its current form. We would also be willing to meet with you to discuss the bill. Thanks for the opportunity to provide you with a hurried review. Patrick Hefley, Deputy Commissioner, DHSS

HOUSE BILL NO.

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION**

BY REPRESENTATIVE KELLER

**Introduced:
Referred:**

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to the qualifications for residential psychiatric treatment center**
2 **caregiver staff; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.32 is amended by adding a new section to read:

5 **Sec. 47.32.055. Residential psychiatric treatment caregiver qualifications**
6 **and training.** (a) In addition to the other requirements of this chapter, an applicant for
7 a license or renewal of a license to operate a residential psychiatric treatment center
8 must comply with the standards set out in this section relating to training and
9 scheduling of caregivers.

10 (b) A caregiver employed by a residential psychiatric treatment center must
11 have

- 12 (1) a bachelor's degree;
13 (2) completed not less than two years of work experience in the
14 treatment of severely emotionally disturbed children and

1 (A) an associate's degree; or
 2 (B) not less than two years of full-time course work toward a
 3 bachelor's degree; or

4 (3) completed not less than four years of work experience as a
 5 caregiver of severely emotionally disturbed children and

6 (A) a high school diploma or general educational development
 7 diploma; and

8 (B) is assigned to work at the center only during hours in which
 9 an individual is on duty at the center who has a bachelor's degree in a human
 10 services-related field or who meets the requirement of (b)(1) or (2) of this
 11 section.

12 (c) The department shall provide or approve mandatory training for caregivers
 13 employed by a residential psychiatric treatment center in the state.

14 (d) In this section, "caregiver" means an individual employed by a residential
 15 psychiatric treatment center to provide direct care and supervision of children admitted
 16 to the center and who is not a physician, registered nurse, or mental health
 17 professional.

18 * **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to
 19 read:

20 **TRANSITION.** Applications approved or renewed by the Department of Health and
 21 Social Services for licensing of a residential psychiatric treatment center before the effective
 22 date of this Act shall be reviewed for compliance with this Act, and a notice shall be mailed to
 23 licensees notifying the licensees of the requirements under AS 47.32.055.

24 * **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

HOUSE BILL NO.
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY REPRESENTATIVE KELLER

Introduced:
Referred:

A BILL
FOR AN ACT ENTITLED

1 **"An Act relating to the qualifications for residential psychiatric treatment center**
2 **caregiver staff; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.32 is amended by adding a new section to read:

5 **Sec. 47.32.055. Residential psychiatric treatment caregiver qualifications**
6 **and training.** (a) In addition to the other requirements of this chapter, an applicant for
7 a license or renewal of a license to operate a residential psychiatric treatment center
8 must comply with the standards set forth in this section relating to training and
9 scheduling of caregivers.

10 (b) A caregiver employed by a residential psychiatric treatment center must
11 complete the training required under (c) of this section and be assigned to work at the
12 center only during hours in which an individual is on duty at the center who has

- 13 (1) a bachelor's degree in a mental health-related field; or
14 (2) education or experience that the department has determined is

1 equivalent to a bachelor's degree in a mental health-related field.

2 (c) The department shall provide or approve mandatory training for caregivers
3 employed by a residential psychiatric treatment center in the state.

4 (d) The department may not require a residential psychiatric caregiver to
5 obtain a postsecondary degree.

6 (e) In this section, "caregiver" means an individual employed by a residential
7 psychiatric treatment center who provides care to patients admitted to the center.

8 * **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to
9 read:

10 TRANSITION. Applications approved or renewed by the Department of Health and
11 Social Services for licensing of a residential psychiatric treatment center before the effective
12 date of this Act shall be reviewed for compliance with this Act and a notice shall be mailed to
13 licensees notifying the licensees of the requirements under AS 47.32.055.

14 * **Sec. 3.** This Act takes effect immediately under AS 01.10.070(c).

MEMORANDUM

April 14, 2009

SUBJECT: Drafting Issues (CSHB 223(HSS), Draft Version "T")
(Work Order No. 26-LS0842\T)

TO: Representative Wes Keller
Attn: Matt Johnson

FROM: Jean M. Mischel
Legislative Counsel

I have done what I can logically and structurally with the new changes suggested. This version, as requested, repeals all of the statutory changes within three years so that the entire bill is now in uncodified law. The assistant revisor correctly pointed out that since those changes take effect immediately, the transitional section allowing rulemaking to occur immediately, even if inconsistent with the temporary law, is unnecessary. The department has existing and very broad authority to adopt regulations. That authority has been relied upon in the past to adopt regulations in the area the bill covers. The proposed transition section does nothing to otherwise encourage a regulation change or to delay implementation of regulations that are either consistent or inconsistent with the temporary law as proposed. Regulations that are inconsistent with statutory authority cannot be adopted until the repeal of that authority. For these reasons, the transitional section is not included as requested in this version.

In addition, the rewrite requested two of the qualification categories to be restructured. The first of two subheadings cannot include three options in one subparagraph that must also accommodate another qualification requirement for that same category. Those have been organized as subparagraphs for structural reasons so that they make sense in the context used, as optional experience levels, added to required educational backgrounds. Lumping the options in one paragraph both confuses the structure and loses the ability to add another mandate. Instead, I have added the word "treatment" to two of the three optional experience levels which appeared to me to be the only substantive difference in the proposed draft and the bill draft. I do not know why the request otherwise includes a structural change since the problems related to that have been previously discussed. The change should, as previously advised, include definitions, rather than focus on non-substantive organizational issues. I do not know, for example, what "long-term inpatient treatment" means.

The addition of a ratio and supervision of mentorship under qualification category four also creates some confusion. I don't know how the ratio will be evaluated at the point of license application review or how it will be enforced. I also don't know from this request what "supervision or mentorship" means.

CS FOR HOUSE BILL NO. 223(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to the qualifications for residential psychiatric treatment center**
2 **caregiver staff; and providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section
5 to read:

6 **RESIDENTIAL PSYCHIATRIC TREATMENT CAREGIVER QUALIFICATIONS**
7 **AND TRAINING.** (a) In addition to the other requirements of AS 47.32, an applicant for a
8 license or renewal of a license to operate a residential psychiatric treatment center must
9 comply with the standards set out in this section relating to training and scheduling of
10 caregivers.

11 (b) A caregiver employed by a residential psychiatric treatment center must
12 (1) have a bachelor's degree;
13 (2) have
14 (A) completed not less than two years of work experience in the

1 treatment of

- 2 (i) severely emotionally disturbed children;
3 (ii) children in a residential treatment facility; or
4 (iii) children in a long-term inpatient treatment facility; and

5 (B) completed

- 6 (i) an associate degree; or
7 (ii) not less than two years of full-time course work toward a
8 bachelor's degree;

9 (3) have

10 (A) completed not less than four years of work experience as a
11 caregiver of

- 12 (i) severely emotionally disturbed children;
13 (ii) children in a residential treatment facility; or
14 (iii) children in a long-term inpatient treatment facility; and

15 (B) satisfied one of the following:

- 16 (i) earned a high school diploma or a general educational
17 development diploma; or
18 (ii) completed the training provided or approved under (c) of
19 this section; or

20 (4) satisfy or comply with all of the following:

21 (A) have earned a high school diploma or a general educational
22 development diploma;

23 (B) have completed the training provided or approved under (c) of this
24 section; and

25 (C) be assigned to work at the center only during hours in which one
26 individual who has a bachelor's degree in a human-services-related field or who meets
27 the requirements of (2) or (3) of this subsection is on duty to provide supervision or
28 mentorship for not more than six caregivers at the center who are qualified only under
29 this paragraph.

30 (c) The department shall provide or approve training in residential child care for
31 caregivers employed by a residential psychiatric treatment center in the state.

1 (d) In this section, "caregiver" means an individual employed by a residential
2 psychiatric treatment center to provide direct care and supervision of children admitted to the
3 center and who is not a physician, registered nurse, or mental health professional.

4 * **Sec. 2.** Section 1 of this Act is repealed.

5 * **Sec. 3.** Section 1 of this Act takes effect immediately under AS 01.10.070(c).

6 * **Sec. 4.** Section 2 of this Act takes effect April 15, 2010.

Members of the Health and Social Services Committee:

After reviewing HB 223 with 14 parents whose children have been admitted at least one time into residential treatment, these are their experiences:

1. There is a high turnover in staff in residential psychiatric treatment facilities and the better workers are not always those who have Bachelor degrees in the field.
2. Many workers with no degrees, no work experience but similar personal experience establish positive rehabilitative relationships with children and youth in the treatment setting.
3. The best workers are those individuals that are non-judgmental, able to not create "Power plays" with children and family members and able to facilitate positive dialogue. These workers would be more likely to remain in their jobs if they could earn more than a barely livable wage.

These are their recommendations:

1. This legislation allows more flexibility in the type and amount of formal education workers hold; however, it equates formal education and "approved training" with competence. Such pairing is not necessarily reasonable when professional competencies are a more viable measure for the outcomes needed.
2. This legislation does not set any standard about the level of knowledge or competence to positively engage with children and youth and their families. Among issues it does not address: understanding of resiliency or wellness, de-escalation or feeling management without restraint, positive communication, cultural competence, minimizing of stigma associated with mental illness, understanding of the interplay between physical and mental health and positive engagement of family members in a family/youth driven manner.
3. This bill is premature because there are workforce development committees working with the Alaska Mental Health Trust, the Department of Health and Social Services, the University of Alaska, behavioral health providers and family members currently developing standards of care and learning objectives for psychiatric treatment staff. It makes more sense to complete the committee work this year with the input of providers, consumers and educators before enacting a law that is likely to need different provisions.

PURPOSE: 7 AAC 10.9500. Purpose and applicability

PROCEDURE:

7 AAC 10.9510. Request for a general variance. An entity seeking a general variance under 7 AAC 10.9500 – 7 AAC 10.9535 must submit to the department, on a form supplied by the department, a request for a general variance as required by this section. A request must contain the following:

- (1) the requirement from which the variance is sought;
- (2) the reasons why the entity is unable to comply with the requirement, a description of how the entity is not in compliance, and the extent to which compliance with the requirement will impose any substantial economic, technological, programmatic, legal, or medical hardship on the entity or recipients of services;
- (3) the period of time for which the variance is requested;
- (4) the proposed alternative means of satisfying the purpose of the requirement for which the variance is sought;
- (5) a statement as to how the health, safety, and welfare of recipients of services will be protected during the period of the variance;
- (6) the plan for achieving compliance before the variance expires;
- (7) assurance that the conditions at the entity do not present an imminent danger to the health, safety, or welfare of recipients of services;
- (8) if the request for a variance involves fire safety or another state or municipal requirement, evidence that the request has been reviewed by the appropriate authority;
- (9) for a licensed entity, the names of the recipients of services who would be affected by the variance, and the names and addresses of any representatives of those recipients of services; the requirements of this paragraph do not apply to a child care facility subject to 7 AAC 57 unless this information is requested by the department;
- (10) for an assisted living home, assurance that the notice requirements of 7 AAC 10.9515 will be met;
- (11) any additional information requested by the department to determine the effect of a variance on the health, safety, and welfare of recipients of services. (Eff. 6/23/2006, Register 178)

7 AAC 10.9520. Evaluation of a request for a general variance

7 AAC 10.9525. Grant or denial of a general variance. (a) The department's decision to grant or deny a request for a general variance will be issued in writing and will be delivered to the person who made the request.

7 AAC 10.9530. Posting of a general variance. (a) If the department grants a request for a general variance, the entity shall post a copy of the general variance decision in a conspicuous place, with the entity's license as required by AS 47.32.080, during the period the variance is in effect, and shall make it available to any person who wishes to review it. A general variance remains in effect for the duration stated, unless the department revokes the variance

STATE OF ALASKA

DEPARTMENT OF HEALTH & SOCIAL SERVICES

DIVISION OF BEHAVIORAL HEALTH

SARAH PALIN, GOVERNOR

3601 C Street, Suite 878
ANCHORAGE, ALASKA 99503

PHONE: (907) 269-3600
FAX: (907) 269-3623

March 31, 2009

Robert Sheehan, CEO
Boys and Girls Home of Alaska, Inc.
3101 Lathrop
Fairbanks, AK 99701-7426

Dear Mr. Sheehan,

The State of Alaska's Department of Health and Social Services conducted an integrated site review of the Boys and Girls Home of Alaska (BGHA) on the dates of January 12-14, 2009. As part of this review, Behavioral Health conducted a compliance review of Medicaid regulations governing Residential Psychiatric Treatment Centers. A copy of these regulations (7AAC 43.550 - 7 AAC 43.580) is attached for your review.

The January 12-14, 2009 site review identified the following deficiencies:

1. BGHA did not have the qualified staff required to participate as members of the Inpatient Interdisciplinary Team (IIT) (7AAC 43.552(f)) including a licensed psychological associate, a licensed occupational therapist, or a licensed clinical social worker. The resulting Plan of Improvement outlined in the Site Review Report directed BGHA to verify the employment status of the required staff no later than March 1, 2009. The department did not receive documented proof the BGHA had employed or contracted with the appropriate staff until March 25, 2009.
2. The medical necessity chart review conducted on Jan. 12-14, 2009, identified that the clinical documentation did not consistently meet the regulatory requirements specified in 7 AAC 43.552 and 7 AAC 43.555 or the criteria described in the State of Alaska's Inpatient Psychiatric Review Provider Manual.¹ The Medical Necessity Clinical Chart Review Plan of Improvement (POI) requires clinical documentation to be in compliance with regulatory and policy standards by May 1, 2009.

3/31/2009

Page 2

Failing to correct deficiencies in provider operations after receiving written notice of these deficiencies from either the division of public assistance, the division of public health, or the division of mental health (7AAC 43.950 (18)) is a breach of the terms of the Medicaid provider agreement and provider certification on the Medicaid claims form (7AAC 43.950 (7)). As a result of the above deficiencies, the following sanction is invoked:

1. Attendance in provider education classes under 7 AAC 43.955(6). Behavioral Health staff will contact you to schedule the Education classes. Despite now having qualified staff, this training must be completed by May 15, 2009. Additionally, Behavioral Health staff will be conducting periodic follow-up reviews through December 2009. At that time the need for on-going reviews will be reassessed. Additionally, BGHA is required to inform Behavioral Health staff, no later than the next business day, if staffing levels fall below the minimum requirements set forth in 7 AAC 43.755.

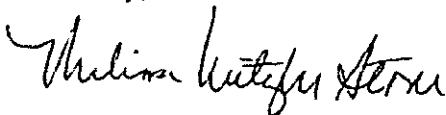

You should be fully aware that failure to comply with this sanction or to correct the documentation deficiencies noted in #2 above may result in further sanctions including but not limited to withholding of Medicaid payments, or suspension or termination from the Medicaid program.

The sanctions noted herein are effective 30 days after the date of this notice. If you choose to appeal these sanctions you may do so by submitting a notice within in 30 days of the date of this notice by submitting in writing a statement or statements that outline your appeal and all supporting documentation which shows you are in compliance with the Medicaid regulations to:

Commissioner Bill Hogan
Department of Health and Social Services
PO Box 110601
Juneau, AK 99811-1061

If you have questions or require further clarification in regards to this letter, please contact Teri Keklak or Pam Miller, Behavioral Health Program Administrators, at 269-3600.

Sincerely,

Melissa Witzler-Stone

Alaska Children's Services

March 31, 2009

The Honorable Johnny Ellis
Alaska State Senate
Juneau, AK

RE: Qualifications for Caregivers in Residential Treatment Centers

Dear Senator Ellis:

First, I want to thank you for your long-standing support of Alaska Children's Services and for Alaska's families in need. Thousands of Alaska children are enjoying a much more positive life because of your service to the state.

I want to call your attention to a serious issue that is impacting the ability of Alaska Children's Services and other intensive treatment programs to provide the quality of treatment that is necessary to assist children to become successful. Specifically, I am referring to Regulation 7AAC50.815 – "Qualifications of Caregivers in Residential Psychiatric Treatment Centers." This regulation requires that a caregiver in a program such as ACS must either have a Bachelor's degree, and Associate's degree with at least two years experience in residential treatment, or a high school diploma and four years experience in residential treatment.

While this regulation is intended to ensure that only the most qualified caregivers provide care and treatment to the most fragile and disturbed youth, it falls far short of that. First, the degree requirement is generic; therefore, a person with an accounting degree and no childcare experience is eligible for employment while a much more qualified person without a degree is not. Furthermore, the regulation establishes a classic "Catch 22" in that a non-degreed person with requisite experience can be hired, but the regulation does not allow any provision for a person to gain that experience.

For many years Alaska has been experiencing serious workforce issues and there are myriad workforce development projects currently sponsored by both state and private entities. Over five years ago, Alaska Children's Services, with the support of a federal Administration for Children and Families grant, developed a *Competency-Based Program for Training Childcare Workers*. It is both rural and urban appropriate and has been used by dozens of agencies. I am not advocating for our specific program; however, I am asking for support as the three Level 5 RTC's – ACS, North Star, and Boys and Girls Home of Alaska – work with the Department in efforts to change this regulation.

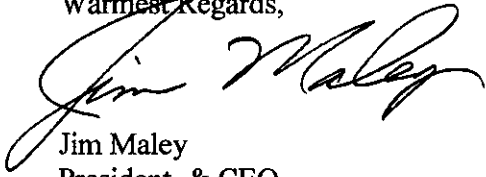

4600 Abbott Road, Anchorage, Alaska 99507-4314 • (907) 346-2101 • Fax (907) 348-9230
email: akchild@ak.net • www.acs.ak.org

A Christian mission of American Baptist Churches USA, Evangelical Lutheran Church in America, and the United Methodist Church. A United Way agency, ACS is accredited by the Joint Commission on Accreditation of Healthcare Organizations.

Again, thanks so much for your support and please advise if there is any way we can assist you in your efforts.

Warmest Regards,

A handwritten signature in black ink that reads "Jim Maley". The signature is written in a cursive style with a large, sweeping initial "J".

Jim Maley
President & CEO
Alaska Children's Services, Inc.

Justification for Rejecting the Fiscal Note to CSHB 223

The new section regarding qualifications of residential psychiatric treatment center caregivers will sunset in only one year. The Department already provides training so it would not need to develop a new training curriculum. The bill permits the Department to approve training, rather than provide it itself. The CEO of Alaska Children's Services, one of Alaska's oldest and most highly regarded providers of child residential care services, including RPTC services, testified before this Committee that it has developed comprehensive training for residential caregivers and will make that training available for free.

Subject: Caregiver standards in RCCF & Fed standards

Pat,

As I mentioned yesterday, I have researched both of these questions. Here are my findings. If you discover I have missed something or you think my conclusions are incorrect or misleading, please let me know.

What are the qualifications for caregiver staff in a RCCF?

7 AAC 50.210(i) A caregiver in a RCCF must have a high school diploma or GED.

7 AAC 50.230. An "associate administrator" must have 30 semester hours of college credit in a human services field.

7 AAC 50.240. Supervision requirements:

(a) A facility with one or more employees must ensure that an inexperienced caregiver is monitored by an experienced caregiver until the inexperienced caregiver is able to safeguard the health and safety of the children in care.

(b) An RCCF must have at least monthly conferences between supervisor and caregiver re: needs and treatment plans of specific children.

7 AAC 50.250. Orientation and training.

(a) Orientation: must begin at onset of employment, be completed within 8 weeks and include employer policies & procedures, including caregiver responsibilities; satisfying special needs of specific children, where appropriate; and emergency procedures and health and safety measures.

(d) Training. Each caregiver must receive a minimum of 15 hours of training a year exclusive of orientation.

7 AAC 50.410. Caregiver ratio. Awake: 1/6 and Sleep: 1/12

Is the newly proposed RPTC caregiver qualification lower than the standards for RCCF?

No.

Does the newly proposed caregiver qualification satisfy Federal requirements?

Yes. Psychiatric residential treatment facilities must satisfy the requirements of 42 C.F.R. Subpart D—Inpatient Psychiatric Services for Individuals Under Age 21 in Psychiatric Facilities or Programs (42 C.F.R. §§ 441.151 through 441.182) and Subpart G—Condition of Participation for the Use of Restraint or Seclusion in Psychiatric Residential Treatment Facilities Providing Inpatient Psychiatric Services for Individuals Under Age 21 (42 C.F.R. §§ 483.350 through 483.376). These set out no specific requirements for caregiver staff. With regard to staffing qualifications, they focus only on professional staff and training regarding restraints.

More on other matters later, perhaps.

Please call if talking will help us address the underlying issues driving this legislation and achieve better results for children.

Deputy Director Pat Hefley: April 3, 2009

Response to Munson draft bill (citations will differ from introduced versions, however, issues raised by DHSS may remain)

Commissioner Hogan sent me a copy of the bill that came from the Boy's and Girl's Home agency. We have not had time for the more appropriate comprehensive review of this bill by LAW and our Licensing section as well as by many of the affected Divisions. Given the limits of the timeframe however, I would like to offer you these constructs:

-We must comply with Federal requirements for Residential Psychiatric Facilities and we have not been able to review these proposed changes in light of those requirements. It is entirely possible that they would not meet these requirements

Response: Attorney Myra Munson has researched this issue thoroughly. An RPTC must satisfy the requirements of 42 CFR Subpart D –Inpatient Psychiatric Services for Individuals Under Age 21 in Psychiatric Facilities or Programs (42 C.F.R. §§ 441.151 through 441.182) and Subpart G–Condition of Participation for the Use of Restraint or Seclusion in Psychiatric Residential Treatment Facilities Providing Inpatient Psychiatric Services for Individuals Under Age 21 (42 C.F.R. §§ 483.350 through 483.376). There are no specific requirements for caregiver staff. The requirements focus only on professional staff.

-We have questions as to why the bill is to be put into statutes. Specifically, AS 47.32.030 pertains to 16 entities (such as hospitals, ambulatory surgical centers) and I believe that placing it in this section of the statues is not meant to affect all 16 entities. The more appropriate place to modify the qualifications of staff who work in residential psychiatric treatment centers would be in regulation or administrative code.

Response: DHSS responded that they could pursue emergency regulations. It has been determined that legal limitations exist that will not allow justification for DHSS to pursue emergency regulations. Further, the standard regulation process will require months of non-compliance for those RPTC's who cannot now meet their standards. A Statutory remedy is the most expeditious and efficient way to keep the RPTC's in compliance and fully operational.

-the use of the words "caregiver staff", to which the proposed changes are meant to apply, is not definitive. Does this apply to medical, professional or paraprofessional staff?

Response: "Caregiver staff" is a term taken directly out of current regulations (7 AAC 50.990(4)). This legislation includes a definition of this term for clarification. This definition excludes professional staff.

-the training leading to certification reference in (d)(1) is problematic. We do not currently know if there is an adequate amount of this training available to provide all statewide staff who may need this training. This training and certification may also need to be expanded if it is meant to be the "ticket" that would allow a person to work in an RPTC. Again, we have not had time today to review this matter.

Response: Currently, RPTC's are required to implement the training. The legislation proposes that the DHSS MAY provide a training program or APPROVE a training program to be implemented by the provider. Currently, providers implement approved training programs for levels 1-3 as well as the more intensive Level 4 care. The legislation proposes the similar implementation for Level 5 care.

-Section (d) (2) (a) notes that a "caregiver staff" would be supervised by someone with a bachelors degree. There is no definition of the type of bachelors degree or the type of experience that this staff would need to have to oversee the "caregiver" staff. Clearly a person who has a bachelor's degree in public accounting would not be suitable for this responsibility. A degree in and of itself is not an adequate qualifying criteria for oversight of staff.

Response: Current DHSS regs do not define bachelors degree and therefore allow an individual with a public accounting degree to meet qualifications. The bill adds language to provide that an individual with a bachelor degree in human services related field be scheduled on every shift rather than require that all caregivers hold a bachelor degree in any field.

-Lines 15 and 16 which reference that DHSS would somehow review the education and experience of individuals for their "education or experience" of staff to be hired is problematic. We should not be reviewing each and every applicant for positions in these provider agencies who may not meet the bachelor's requirement as this would be an administrative burden that is inappropriate for DHSS.

Response: Again, current regulations and this legislation require the RPTC's to guarantee education and experience of individual staff, not the Department. DHSS retains the authority to review for compliance. There is no change from current practice and no additional burden to DHSS.

Again, I regret that we have simply not had time to thoroughly review this bill. It would affect the Behavioral Health Division, The Office of Children's Services, and the Office of Juvenile. As noted above we have NOT had time for LAW, Licensing or our Medicaid office to review it for its' implications.

I can say that we do not support this proposed bill in its current form. – DHSS Deputy Commissioner Pat Hefley

Since the April 3 communication, the Department has also raised other concerns, which are addressed below:

1) Is this bill being proposed to interfere with adverse licensing actions?

No. It will have prospective application only. It will provide a means for RPTCs to achieve full compliance with caregiver staffing.

2) Do the proposed caregiver qualifications for level V RPTC fall below those required for lower level residential child care facilities (RCCF).

No. The only educational requirement for a caregiver in an RCCF (other than in an RPTC) is a high school diploma or GED. 7 AAC 50.210(i). The supervision requirements for the caregivers are only that inexperienced caregivers must be monitored by an experienced caregiver until the inexperienced one is able to safeguard the health and safety of children in care and that there be at least monthly conferences between the supervisor and caregiver. 7 AAC 50.240(a) and (b). Orientation is allowed to occur within the first 8 weeks of employment and there are no specific hour requirements. Otherwise the caregiver is required to have only 15 hours of additional training a year. 7 AAC 50.250(a) and (d). The caregiver to child ratio is 1/6 during awake hours and 1/12 during sleep hours. 7 AAC 50.410. These are all lower than the requirements provided for in the bill.

AMENDMENT

OFFERED IN THE HOUSE

TO: CSHB 223(HSS)

Page 1, line 14 - page 2, line 3:

Delete all material and insert:

“residential treatment for children, inpatient long-term treatment for children, or other treatment of severely emotionally disturbed children; and”

Page 2, lines 9 -13:

Delete all material and insert:

“(A) at least four years of increasingly responsible caregiver experience in residential treatment for children, inpatient long-term treatment of children, or treatment of severely emotionally disturbed children; and”

Page 2, line 26:

Following “of”:

Delete “(1),”

Following “(2)”:

Delete “,”

Page 2, line 28

Following “training”

Insert “in residential child care

Explanation:

Page 1, line 14 - page 2, line 3:

This amendment will make the statute conform exactly to current standards under 7 AAC 50.815(2).

Page 2, lines 9 -13:

This amendment will make the statute conform exactly to current standards under 7 AAC 50.815(3).

Page 2, line 26:

This amendment will ensure that caregivers who are qualified under the new standard in subsection (c) can only work when someone is on-duty who has at least a bachelor's degree in a human-service-related field or has experience in treatment of children.

Page 2, line 28:

This amendment will ensure that the training described in the statute will be the equivalent of that currently provided for by regulation at 7 AAC 50.815(3)(C).

ANALYSIS: (Attach a separate page if necessary)

The proposed legislation would amend AS 47.32 staff qualifications related to licensing and operation of residential psychiatric treatment centers (RPTC). Recommended changes would require a "department-provided training in residential child care" instead of the current regulation that provides this training in lieu of an academic diploma. This becomes a new state responsibility, requiring additional resources. Currently the division has a contract for behavioral rehabilitation certification within residential youth facilities that is a lower level of care. Based on the existing contract, the projected costs for certification of residential psychiatric treatment centers would be \$400,000 annually.

The proposed legislation would also require that Department of Health and Social Services (DHSS) provide

and/or approve training for RPTC staff and review the "education or experience" of RPTC applications to be hired. To develop and conduct training, certify other training as approved, and review the applications of RPTC staff to assure that caregivers meet the education/experience and training requirements, a Mental Health Clinician III would be required as well as an Administrative Clerk III to coordinate the paperwork and track staff trainings.

CS FOR HOUSE BILL NO. 259()
IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered: *
Referred:

Sponsor(s): REPRESENTATIVES KELLER AND GATTO, Kelly

A BILL
FOR AN ACT ENTITLED

1 **"An Act relating to citizenship requirements and an alcohol impairment and drug**
2 **testing program for applicants for and recipients of specified cash assistance."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.05 is amended by adding new sections to read:

5 **Article 4. Alcohol and Drug Testing.**

6 **Sec. 47.05.400. Alcohol impairment and drug testing; legislative findings**
7 **and purpose.** The legislature finds that a statewide threat to public safety exists with
8 regard to the use of cash assistance for the purchase of alcohol and illegal drugs. The
9 purpose of the testing program established under AS 47.05.400 - 47.05.500 is to
10 reduce that risk and to protect the residents of the state.

11 **Sec. 47.05.410. Alcohol impairment and drug testing for eligibility;**
12 **regulations; immunity.** (a) The department shall implement a program consistent
13 with AS 47.05.400 - 47.05.500 that provides for random and suspicion-based testing
14 of recipients of cash assistance for use of alcohol that impairs a recipient's ability to

1 work or to seek work and of applicants for and recipients of cash assistance for the use
 2 of illegal drugs. In this paragraph, a "recipient of cash assistance" does not include a
 3 care provider or a third party recipient, as defined by the department in regulation.

4 (b) The department shall adopt regulations to implement this section. The
 5 regulations must include testing policies consistent with AS 47.05.430 and specify the
 6 type of testing to be conducted and the illegal drugs to be included in the testing
 7 program. The drug tested must have a cutoff level that yields a positive test result

8 (1) for initial testing of urine, as follows:

SUBSTANCE	CUTOFF CONCENTRATION (nanograms in each milliliter)
Marijuana metabolites	50
Cocaine metabolites	300
Opiate metabolites	2,000
Phencyclidine	1,000
Amphetamines	1,000

9
 10
 11
 12
 13
 14
 15
 16 (2) for confirmatory testing of urine, as follows:

SUBSTANCE	CUTOFF CONCENTRATION (nanograms in each milliliter)
Marijuana metabolite	15
(Delta-9-tetrahydrocannabinol-9-carboxylic acid)	
Cocaine metabolite (Benzoylcegonine)	150
Opiates	
Morphine	2,000
Codeine	2,000
6-Acetylmorphine	10
(when morphine concentration exceeds 2,000 nanograms in each milliliter)	
Phencyclidine	25
Amphetamines	
Amphetamine	500
Methamphetamine	500

1 (when amphetamine concentration is
2 greater than or equal to 200 nanograms
3 in each milliliter)

4 (3) for testing of alternative specimens that is consistent with the
5 mandatory guidelines for the federal workplace drug testing program adopted by the
6 United States Department of Health and Human Services.

7 (c) Unless the department or an agent or employee of the department knew or
8 should have known that the results of a test conducted under this section were false
9 and took action that affected a person's eligibility for cash assistance based on the false
10 test results, a person may not bring an action for damages against the department or an
11 agent or employee of the department for

12 (1) good faith actions taken to conduct, or as a result of, alcohol
13 impairment or drug testing under this section;

14 (2) failure to test for alcohol impairment or drugs or for a specific
15 drug;

16 (3) failure to test, or if the test was undetected, failure to detect a
17 specific drug or medical or psychological condition or disorder;

18 (4) termination or suspension of an alcohol or drug prevention or
19 testing program or policy.

20 (d) In a claim for damages based on false test results,

21 (1) a rebuttable presumption exists that the test results were valid if the
22 department complied with this section and the regulations adopted under this section;
23 and

24 (2) the department may not be held liable for monetary damages for
25 good faith reliance and reasonable actions taken as a result of false test results.

26 (e) A person may not bring an action against the department based on the
27 failure of the department to establish a program or policy on substance abuse
28 prevention or to implement alcohol impairment or drug testing.

29 **Sec. 47.05.420. Confidentiality; liability.** (a) The results of a test conducted
30 under AS 47.05.410 are confidential, except that the results may be revealed to the
31 recipient of cash assistance who was tested and to agents and employees of the

1 department as required to determine eligibility for cash assistance.

2 (b) A person may not bring an action for defamation of character or reputation
3 as a result of disclosure of the results of an alcohol impairment or drug test under the
4 alcohol impairment or drug testing program established under AS 47.05.410 unless

5 (1) the results were disclosed to a person, other than an agent or
6 employee of the department for the purpose of the testing program or under court or
7 administrative order;

8 (2) the information disclosed included false test results;

9 (3) the information was negligently or intentionally disclosed; and

10 (4) the elements of the tort claim are met.

11 **Sec. 47.05.430. Testing policies and procedures.** (a) The department shall
12 adopt testing policies that include

13 (1) a list of substances tested;

14 (2) a description of the testing methods and collection procedures,
15 including on-site testing;

16 (3) a right to confirmatory testing and the procedures for confirmatory
17 testing;

18 (4) the consequences for refusal to test or retest that are consistent with
19 the provisions in AS 47.05.450;

20 (5) the right of an applicant for or recipient of cash assistance to
21 receive test results within five working days after the department receives the test
22 results or the written request, whichever is later, if a written request is made by the
23 applicant or recipient within six months after the test;

24 (6) the right of an applicant and a recipient, on the applicant's or
25 recipient's request, to receive, within 72 hours or before an adverse action is taken,
26 whichever occurs first, a confidential explanation of the applicant's or recipient's test
27 results;

28 (7) providing the department's confidentiality and testing policies to
29 applicants for and recipients of cash assistance not less than 30 days before initiating
30 testing on the applicant or recipient.

31 (b) The department shall pay the cost of testing and, if the testing is performed

1 at a location other than a location of the department, the cost of transportation to and
2 from the testing center.

3 (c) Sample collection and testing must

4 (1) comply with scientifically accepted methods and procedures;

5 (2) be performed at a location identified by the department and
6 analyzed by a laboratory approved or certified by the Substance Abuse and Mental
7 Health Services Administration or by the College of American Pathologists;

8 (3) be conducted under reasonable, sanitary, and private conditions
9 that are consistent with reliability;

10 (4) be properly controlled and samples must be properly labeled; and

11 (5) include relevant medical information.

12 (d) A positive drug test must be confirmed using a different analytical process
13 than was used in initial testing. A positive drug test must be reported as a negative
14 result if a licensed physician verifies that the test was affected by medication
15 prescribed for the applicant or recipient tested.

16 (e) The department may not rely on a positive test result without confirmatory
17 testing.

18 **Sec. 47.05.440. Training of test administrators.** (a) The department shall
19 ensure that not less than one designated employee of the department receives not less
20 than one hour of training on alcohol abuse and an additional one hour of training on
21 the use of controlled substances for the purpose of finding reasonable suspicion for
22 testing under AS 47.05.400 - 47.05.500.

23 (b) If the department provides on-site testing for alcohol impairment or illegal
24 drug use under AS 47.05.410, the department shall employ on-site administrators who

25 (1) have received training in person and written certification of the
26 training by the test manufacturer's representative on the proper procedure for
27 administering the test and on accurate analysis of the on-site test results; the training
28 must include recognition of adulteration of a sample collected on-site;

29 (2) agree in writing to maintain confidentiality under the testing
30 policies adopted by the department.

31 **Sec. 47.05.450. Consequences of confirmatory positive testing.** (a) Except as

1 provided in (b) of this section, the department shall deny or suspend cash assistance to
2 an applicant for or recipient of the assistance who, under AS 47.05.400 - 47.05.500,
3 has

4 (1) been tested and received a confirmatory positive result for alcohol
5 impairment or use of illegal drugs and fails to comply with a treatment program
6 approved by the department; or

7 (2) refused alcohol impairment or drug testing required by the
8 department.

9 (b) The department may provide cash assistance on behalf of an eligible
10 recipient who is subject to denial or suspension under (a) of this section if the
11 department has in place an option for third-party receipt of the cash assistance for
12 which the recipient or the recipient's family is otherwise eligible and the third party
13 provides care, shelter, or food to the recipient or the recipient's dependent children.

14 **Sec. 47.05.500. Definitions.** In AS 47.05.400 - 47.05.500, "cash assistance"
15 means money received under Alaska Temporary Assistance under AS 47.27.010 -
16 47.27.085, Alaska Native Family Assistance under AS 47.27.200, and regional public
17 assistance programs under AS 47.27.300.

18 * **Sec. 2.** AS 47.25.120 is amended by adding a new subsection to read:

19 (b) A person must be a citizen of the United States or a legal alien as described
20 in 8 U.S.C. 1181 - 1186 and not otherwise precluded from eligibility under state or
21 federal law to be eligible for assistance under AS 47.25.120 - 47.25.300.

MEMORANDUM

February 22, 2010

SUBJECT: Sectional Summary of CSHB 259(),
(Work Order No. 26-LS1126S)

TO: Representative Wes Keller
Chair of the House Health and Social Services Committee
Attn: Jim Pound

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Establishes a program within the Department of Health and Social Services that provides for random and suspicion-based testing of recipients of cash assistance, as defined, for use of alcohol that impairs a recipient's ability to work or to seek work and of applicants for and recipients of cash assistance for the use of illegal drugs. Requires the adoption of regulations to carry out the program and provides cutoff concentrations for drug testing and for specified testing and retesting procedures. Provides for confidentiality of test results and for limits on state liability.

Section 2. Requires a person to be a citizen of the United States or a legal alien to be eligible for specified cash assistance.

MEMO

To: Representative Wes Keller

Fm:  Jim Bond for Representative Wes Keller

Wes K

Cc: Representative Bob Herron

Date: January 19, 2010

Re: Request for hearing HB 259 (26-LS1126R)

Please consider this as a request for you to schedule HB 259- "Adult Public Assistance Eligibility" before the House Health and Social Services Committee. I have included a packet of information and will be glad to provide your committee staff a .pdf version if they so desire.

HB 259 will establish certain requirements for individuals receiving public assistance. The decisions on how to administer the requirements will be left to the experts in the Department. This bill will give the Department a valuable tool to work with public assistance recipients in returning to productive employed lives.

If you have any questions please feel free to contact my office.

The information contained in this memo is **CONFIDENTIAL** and/or privileged. This memo is intended to be reviewed initially by only the individual named above. If the reader of this page is not the intended recipient or a representative of the intended recipient, you are hereby notified that any review, dissemination, or copying of this memo or the information contained herein is prohibited. If you have received this memo in error, please immediately notify the sender by telephone and return this memo to the sender at the above address.

Thank you

REPRESENTATIVE WES KELLER DISTRICT 14

Sponsor Statement House Bill 259

“An Act relating to citizenship requirements and an alcohol impairment and drug testing program for applicants for and recipients of adult public assistance.”

The cost of substance abuse in Alaska is staggering. Crime, child abuse, broken homes, domestic violence, cost of business, auto and industrial accidents, poor productivity, chronic health problems all have a causal relationship with substance abuse. It is irrational to expect the government to provide compassionate assistance without giving it the ability to identify substance abuse problems.

When we apply for a job we must provide proof of citizenship and in some cases we may also be required to submit to drug and alcohol testing. We comply because it is part of ensuring that we are qualified to work and because it is part of the package that returns a paycheck. Transportation, public safety, civil service, construction workers, and children who participate in sports are regularly asked to submit to drug and alcohol testing. Arguments in the public square against requirements for drug testing do not stand up to the arguments for the need to ensure safety.

Our Department of Health and Social Services is mandated to provide public assistance to those who need it. It is not appropriate to simply provide assistance without knowing whether the assistance will actually be fueling an addiction problem. HB 259 gives the department a tool they need to determine if substance or alcohol abuse is part of the equation. HB 259 leaves the initiative with the Department regarding how to specifically respond to a person requesting aid according to best practices to restore them to a productive life in their community.

HOUSE BILL NO. 259

IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY REPRESENTATIVE KELLER

Introduced: 1/8/10
Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

1 "An Act relating to citizenship requirements and an alcohol impairment and drug
2 testing program for applicants for and recipients of adult public assistance."

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 * **Section 1.** AS 47.25.430(a) is amended to read:

5 (a) Financial assistance shall be given under AS 47.25.430 - 47.25.615, so far
6 as practicable under appropriations made by law, to every aged, blind, or disabled
7 needy resident who has not made a voluntary assignment or transfer of property to
8 qualify for assistance. In this subsection, "resident" means a person who is

9 (1) a citizen of the United States or a legal alien as described in 8
10 U.S.C. 1181 - 1186;

11 (2) living in the state voluntarily with the intention of making the state
12 the person's home; and

13 (3) [WHO IS] not living in the state for a temporary purpose.

14 * **Sec. 2.** AS 47.25.430(b) is amended to read:

1 (b) The department shall determine the amount of assistance with regard to the
 2 resources and needs of the person and the conditions existing in each case. Assistance
 3 shall be in an amount that will provide the applicant with reasonable subsistence
 4 compatible with decency and health in accordance with standards established by the
 5 department and with the standards established under 42 U.S.C. 1381 - 1383 (Title
 6 XVI, Social Security Act Supplemental Security Income Program). Direct payments
 7 for medical services and remedial care may not be considered in determining the
 8 maximum amount payable. When benefit amounts under 42 U.S.C. 1381 - 1383 are
 9 increased as a result of an increase in the cost of living, the state shall pass along the
 10 increase to recipients and, to the extent federal funds are provided for the federal
 11 benefit, shall increase the amount of the state contribution to recipients, other than
 12 those receiving a personal needs allowance, by a percentage of the state contribution
 13 equal to the percentage increase in the benefit amounts under 42 U.S.C. 1381 - 1383 if
 14 the legislature has appropriated money specifically for the purpose of increasing the
 15 state contribution because of an increase in federal benefit amounts under 42 U.S.C.
 16 1381 - 1383; this increase in the state contribution takes effect on the same day that
 17 the corresponding federal increase in benefits under 42 U.S.C. 1381 - 1383 takes
 18 effect.

19 * **Sec. 3.** AS 47.25 is amended by adding new sections to read:

20 **Sec. 47.25.461. Alcohol impairment and drug testing; legislative findings**
 21 **and purpose.** The legislature finds that a statewide threat to public safety exists with
 22 regard to the use of adult public assistance for the purchase of alcohol and illegal
 23 drugs. The purpose of the testing program established under AS 47.25.463 - 47.25.467
 24 is to reduce that risk and to protect the residents of the state.

25 **Sec. 47.25.463. Alcohol impairment and drug testing for eligibility;**
 26 **regulations; immunity.** (a) The department shall implement a program consistent
 27 with AS 47.25.463 - 47.25.467 that provides for random and suspicion-based testing
 28 of recipients of adult public assistance for use of alcohol that impairs a recipient's
 29 ability to work or to seek work and of applicants for and recipients of adult public
 30 assistance for the use of illegal drugs.

31 (b) The department shall adopt regulations to implement this section. The

1 regulations must include testing policies consistent with AS 47.25.465 and specify the
 2 type of testing to be conducted and the illegal drugs to be included in the testing
 3 program. The drug tested must have a cutoff level that yields a positive test result
 4 established, as of November 1, 2004, by the United States Department of Health and
 5 Human Services under 69 C.F.R. 19644.

6 (c) Unless the department or an agent or employee of the department knew or
 7 should have known that the results of a test conducted under this section were false
 8 and took action that affected a person's eligibility for adult public assistance based on
 9 the false test results, a person may not bring an action for damages against the
 10 department or an agent or employee of the department for

11 (1) good faith actions taken to conduct, or as a result of, alcohol
 12 impairment or drug testing under this section;

13 (2) failure to test for alcohol impairment or drugs or for a specific
 14 drug;

15 (3) failure to test, or if the test was undetected, failure to detect a
 16 specific drug or medical or psychological condition or disorder;

17 (4) termination or suspension of an alcohol or drug prevention or
 18 testing program or policy.

19 (d) In a claim for damages based on false test results,

20 (1) a rebuttable presumption exists that the test results were valid if the
 21 department complied with this section and the regulations adopted under this section;
 22 and

23 (2) the department may not be held liable for monetary damages for
 24 good faith reliance and reasonable actions taken as a result of false test results.

25 (e) A person may not bring an action against the department based on the
 26 failure of the department to establish a program or policy on substance abuse
 27 prevention or to implement alcohol impairment or drug testing.

28 **Sec. 47.25.464. Confidentiality; liability.** (a) The results of a test conducted
 29 under AS 47.25.463 are confidential, except that the results may be revealed to the
 30 recipient of adult public assistance who was tested and to agents and employees of the
 31 department as required to determine eligibility for adult public assistance.

1 (b) A person may not bring an action for defamation of character or reputation
 2 as a result of disclosure of the results of an alcohol impairment or drug test under the
 3 alcohol impairment or drug testing program established under AS 47.25.463 unless

4 (1) the results were disclosed to a person, other than an agent or
 5 employee of the department for the purpose of the testing program or under court or
 6 administrative order;

7 (2) the information disclosed included false test results;

8 (3) the information was negligently or intentionally disclosed; and

9 (4) the elements of the tort claim are met.

10 **Sec. 47.25.465. Testing policies and procedures.** (a) The department shall
 11 adopt testing policies that include

12 (1) a list of substances tested;

13 (2) a description of the testing methods and collection procedures,
 14 including on-site testing;

15 (3) a right to confirmatory testing and the procedures for confirmatory
 16 testing;

17 (4) the consequences for refusal to test or retest;

18 (5) the right of an applicant for or recipient of adult public assistance
 19 to receive test results within five working days after the department receives the test
 20 results or the written request, whichever is later, if a written request is made by the
 21 applicant or recipient within six months after the test;

22 (6) the right of an applicant and a recipient, on the applicant's or
 23 recipient's request, to receive, within 72 hours or before an adverse action is taken,
 24 whichever occurs first, a confidential explanation of the applicant's or recipient's test
 25 results;

26 (7) providing the department's confidentiality and testing policies to
 27 applicants for and recipients of adult public assistance not less than 30 days before
 28 initiating testing on the applicant or recipient.

29 (b) The department shall pay the cost of testing and, if the testing is performed
 30 at a location other than a location of the department, the cost of transportation to and
 31 from the testing center.

1 (c) Sample collection and testing must

2 (1) comply with scientifically accepted methods and procedures;

3 (2) be performed at a location identified by the department and
4 analyzed by a laboratory approved or certified by the Substance Abuse and Mental
5 Health Services Administration or by the College of American Pathologists;

6 (3) be conducted under reasonable, sanitary, and private conditions
7 that are consistent with reliability;

8 (4) be properly controlled and samples must be properly labeled; and

9 (5) include relevant medical information.

10 (d) A positive drug test must be confirmed using a different analytical process
11 than was used in initial testing. A positive drug test must be reported as a negative
12 result if a licensed physician verifies that the test was affected by medication
13 prescribed for the applicant or recipient tested.

14 (e) The department may not rely on a positive test result without confirmatory
15 testing.

16 **Sec. 47.25.466. Training of test administrators.** (a) The department shall
17 ensure that not less than one designated employee of the department receives not less
18 than one hour of training on alcohol abuse and an additional one hour of training on
19 the use of controlled substances for the purpose of finding reasonable suspicion for
20 testing under AS 47.25.463 - 47.25.466.

21 (b) If the department provides on-site testing for alcohol impairment or illegal
22 drug use under AS 47.25.463, the department shall employ on-site administrators who

23 (1) have received training in person and written certification of the
24 training by the test manufacturer's representative on the proper procedure for
25 administering the test and on accurate analysis of the on-site test results; the training
26 must include recognition of adulteration of a sample collected on-site;

27 (2) agree in writing to maintain confidentiality under the testing
28 policies adopted by the department.

29 **Sec. 47.25.467. Consequences of confirmatory positive testing.** The
30 department may deny or suspend adult public assistance to an applicant for or
31 recipient of the assistance who, under AS 47.25.463 - 47.25.467, has

- 1 (1) been tested and received a confirmatory positive result for alcohol
2 impairment or use of illegal drugs; or
3 (2) refused alcohol impairment or drug testing required by the
4 department.

Researchers estimate that the direct healthcare cost of obesity for the state of Alaska is \$157 million. If current obesity levels are maintained, in 10 years Alaska could save \$388 million off a projected \$2.938 billion healthcare bill. That's \$735 for every adult in the state.

Alaska (2009)

America's Health Rankings™

Ranking:

Alaska is 34th this year, it was 32nd in 2008.

Strengths:

Strengths include a low percentage of children in poverty at 9.8 percent of persons under age 18, low levels of air pollution at 6.9 micrograms of fine particulate per cubic meter, strong public health funding at \$171 per person and a low rate of deaths from cardiovascular disease at 235.8 deaths per 100,000 population.

Challenges:

Challenges include a high rate of uninsured population at 19.0 percent, a low high school graduation rate with 66.5 percent of incoming ninth graders who graduate within four years, high geographic disparity within the state at 19.4 percent, a high violent crime rate at 652 offenses per 100,000 population and a high occupational fatalities rate at 13.0 deaths per 100,000 workers. Alaska ranks lower for determinants than for health outcomes, indicating that overall healthiness may decline over time.

Significant Changes:

↑ to 62.4 discharges per 1,000 Medicare enrollees ↓ In the past five years, the rate of deaths from cardiovascular disease declined from 279.5 to 235.8 deaths per 100,000 population. ↓ In the past five years, the prevalence of smoking decreased from 26.2 percent to 21.5 percent of the population. ↑ In the past ten years, immunization coverage increased from 54.3 percent to 76.2 percent of children ages 19 to 35 months receiving complete immunizations.

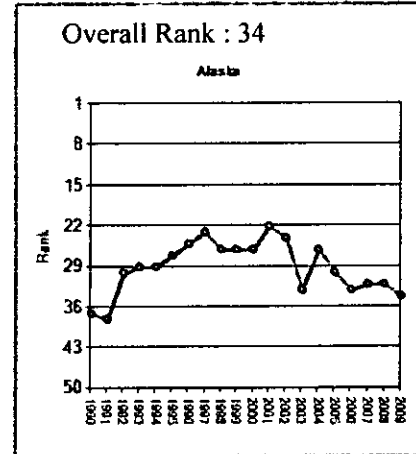

Health Disparities:

In Alaska, smoking is more prevalent among non-Hispanic American Indians and Alaskan Natives at 39.9 percent than non-Hispanic whites at 19.0 percent. Mortality rates vary considerably by race and ethnicity in Alaska, with 1,054.4 deaths per 100,000 population among American Indians and Alaskan Natives compared to whites, who experience 735.2 deaths per 100,000 population.

Influences on Substance Use in Alaska

Extensive national research spanning over fifty years¹⁻³⁰ has demonstrated a strong association between specific social conditions, personal experiences and the use of tobacco, alcohol and other drugs in adolescence. Most states track substance use by monitoring data on tobacco, alcohol and other drug consumption (e.g. 30 day use, binge use, ever use) or the consequences of use (e.g. drinking driving crashes, hospital visits, school suspensions.) Instead of tracking *consumption* and *consequence* data exclusively, Alaska must monitor research-based *influences that impact* substance use, as well. The more protective factors are increased (and risk factors reduced) the more likely substance abuse and suicide can be prevented. The priority influences on *adolescent* substance use are as follows (definitions and citations may be found on pages 4-6.)

Priority Factors	Alaska Data
Protective Factor Indicators	Protective Indicators with Baseline Data
Connection to Family	<i>Developmental Indicator Stage I</i>
Connection to School	33.4% of students agree that their school has a positive climate 9.5% of students are connected to their school <small>SCCS 2007</small>
Positive Connection to <i>Other</i> Adults	87% of students have a positive connection with at least <i>one other</i> adult outside of their home. <small>YRBS 2007</small>
Engagement in Meaningful Activities	51% of students are involved in volunteer and helping activities one or more times per week. <small>YRBS 2007</small>
Social, Emotional and Employability Skills	28.3% of students report they have social, emotional and employability skills. <small>SCCS 2007</small>
Cultural Identity	<i>Developmental Indicator Stage I</i> (<i>Loss of cultural identity can be a risk factor, see below</i>)
Risk Factor Indicators	Risk Indicators with Baseline Data
Experienced child abuse (neglect, physical, sexual abuse)	Alaska children are abused or neglected at a substantiated rate of 24.5 cases per 1,000 children, ages 0-17. <small>OCS new database 2007</small> Family violence rate: <i>Developmental Indicator Stage II</i>
Early initiation of substances	20.4% of students have used alcohol before the age of 13. <small>YRBS 2007</small>
Death by suicide of a family member	20.6 suicides were completed per 100,000 Alaskans <small>BVS 2007</small> Death rate of family members by suicide: <i>Developmental Stage II</i>
Availability of alcohol and other drugs	<i>Developmental Indicator Stage II</i>
Community norms and laws related to alcohol, drug use	<i>Developmental Indicator Stage II</i>
Loss of Cultural Identity	<i>Developmental Indicator Stage I</i>
<i>Developmental stage I: Indicator needs to be defined and measurement system put into place</i>	
<i>Developmental stage II: Potential indicator in place, existing data system needs further support and refinement</i>	
Note: The risk and protective factor indicators are state and population-based; the data may not be available for individual communities. Indicators may be modified for prevention programs and services, as performance measures.	

Influences of Substance Abuse in Alaska

Scope of project

In 2006 a State Epidemiological Outcomes Workgroup (SEOW) was created to collect, analyze, and report substance use incidence, prevalence and other related data. An "influences subcommittee" was created to: 1) identify and prioritize the factors that influence substance use and abuse, and 2) identify existing and recommend new indicators to monitor over time.

Process: The "influences subcommittee" began with the adolescent population while recognizing the significant need to look at younger and older populations as well. The risk and protective factor national research for adolescent substance use (and other risk behaviors) provided the working foundation. Additional factors were considered that had a strong research base of support. The priority factors were selected based on: 1) strength of the research; 2) relevance to Alaska; and 3) ability of a community /state partnerships to change that factor. To assure a comprehensive review, we examined factors across the social domains (family, community, school, and individual.) The availability of the data did not exclude a factor if it was considered to be of major significance to the Alaska population. For example, poverty is highly correlated with substance abuse, but not easily amenable to change.

Through this process five protective factors and five risk factors were prioritized. In addition, cultural identity or loss of culture was selected as factor that has tremendous influence on one's sense of self and subsequent behavior. Next the group turned to identifying population-based indicators for each of the selected factors. This process was divided into 1) factors with existing indicators and data; 2) factors with *some* indicators, but not reliable data at this point data; 3) factors that remain of high significance without indicators or data, at this time.

The *Influences on Substance Abuse in Alaska* was further reviewed by the data analyst for the Division of Behavioral Health as well as the full State Epidemiological Outcomes Workgroup.

This report is comprised of baseline data for the priority factors and their indicators. Three factors (family violence, availability of alcohol, community norms and laws) have indicators needing further refinement and/or support for data collection. Two factors (connection to family, cultural identity) do not have indicators at this time. The subcommittee urges the state to partner with interested organizations to further define indicators and develop accurate measurement tools for both of these factors.

Although the indicators are population-based Alaska measures, they are not meant to take precedent over community or program-based measures. This is important to note so that community planning efforts to deliver programs and services continue to be community-driven. The identified indicators reflect the need for a consistent source of population-based data that can be monitored over time across Alaska. Other community and program-based indicators continue to be developed and provide further support for advancing our efforts for data collection and evaluation in Alaska.

As noted previously, while the risk and protective factors identified in this report are based on research for adolescent substance use, many of the factors have implications for adult and older populations as well. A review of the literature was not conducted specifically for adults and may need additional scrutiny and peer review to determine both the availability and reliability of the research. Research on loss of culture and cultural identity was more thoroughly reviewed to apply across the lifespan, to children, youth and adults, and is cited here. Unfortunately, indicators in this area were difficult to locate, although promising as new measures are being developed.

In closing, two studies^{7, 30} found the presence of both protective factors: family support and school support in adolescents who have been physically abused, will reduce the likelihood of suicide attempts more than the mere removal of the risk factor of substance use (e.g. alcohol, drugs) regardless of gender. While communities must continue to reduce the factors that put children at risk, these studies point to the powerful impact protective factors can play in helping children cope with life experiences, they have no control over.

Risk and Protective Factor Definitions and their Indicators

The definition for each factor is derived from its research. Indicators are based on existing Alaska data sources that best match the definition. Some indicators are in a "developmental" stage, they have yet to be formalized. A brief summary of the developmental stage is offered.

Indicators of Protection

Connection to Family (bonding) - Family connectedness has several components. Connectedness refers to the feelings of warmth, love and caring children get from their parents. Children who feel support and connection report a high degree of closeness, feelings of being understood, loved, and wanted. A parental presence is related to connection; it refers to a parent being present during key times: before school, after school, dinner, bedtime and doing activities together. A "positive parenting style" involves high expectations, clear family rules, fair and consistent discipline practices and age appropriate supervision and monitoring of behavior, friends and whereabouts. The Add-Health study found this to be one of the strongest protective factors against all risk behaviors. ^{1,4,6,8,7,8,11,15, 21, 25}

Indicator Developmental Stage I: Indicator needs to be defined and measurement system put into place.

Status: Alaska does not collect population-based data related to parent/family connectedness. Indicators for this protective factor include: percent of families that - engage in regular routines (i.e. eating dinner together); participate in activities together; discuss current events/activities; or monitor children's behavior and set rules. **Recommendation:** The subcommittee urges the state to partner with interested organizations to further define family connectedness and develop indicators and measurement tools.

Connection to School - Students feel "connected" (attached or bonded) to their school based on their feelings about the people at school, both staff and other students. School connectedness is closely related to a caring positive school climate. School connectedness protects adolescents against many health risks, including smoking, alcohol, drug use, and early sexual initiation. Positive school climate and connectedness have been shown to contribute positively to academic achievement. ^{1,6,8,9,10,15,22 26}

Two Indicators: Percent of students agreeing that their school has a positive climate and percent of students that report being connected to their school. **Data source:** School Climate and Connectedness Survey 2007. (AASB)

Positive Connection to Other Adults - This factor refers to the student's perception that they receive support and caring in relationships with adults, other than family members i.e. neighbors, coaches, teachers, mentors or ministers. As children grow, they become involved in an expanded network of significant relationships. This enlarged network includes many adults who can provide regular contact, mentoring, support, and guidance. ^{1,3,4,5,9,10,11,13,14, 21,25}

Indicator: Percent of students who have a positive connection with at least one other adult outside of their home.

Data source: Youth Risk Behavior Survey 2007 (DEED/DHSS)

Engagement in Meaningful Activities - This refers to activities involving volunteering and helping others in community or peer-based programs, or service-learning projects. This protective factor is associated with the reduction of several risk-taking behaviors (alcohol, tobacco or drug use, delinquency, anti-social behaviors, teen pregnancy, school suspensions or school drop-out. Programs increase skills and positive development when youth are involved in all phases: planning, organizing, implementation and evaluation. ^{2,3,4,6,7,6,8,9,11,15, 25, 28, 27,29}

Indicator: Percentage of students are involved in volunteer and helping activities one or more times per week.

Data source: Alaska Youth Risk Behavior Survey 2007 (DEED/DHSS)

Social, Emotional and Employability Skills - This refers to the abilities that equip young people to make positive choices, maintain healthy relationships and succeed in life; the skills include: communication, conflict resolution, empathy, resistance, problem solving/decision making and cultural competence. ^{3,4,5,8,9,11}

Indicator: Percent of students who report they have social, emotional and employability skills.

Data source: School Climate and Connectedness Survey 2007 (AASB)

Indicators of Risk

Experienced Child Abuse (neglect, physical, sexual) or other family violence - Research suggests that children or youth who have been physically abused or neglected are more likely than others to commit violent crimes and/or become pregnant. Exposure to high levels of marital and family discord or conflict also appears to increase risk, as does antisocial or delinquent behavior by siblings and peers. ^{1,6,11,17,20}

Child Abuse Indicator Rate of substantiated child abuse and neglect per 1,000 children ages 0-17.

Definitions (continued)

Experienced Child Abuse (neglect, physical, sexual) or other family violence (continued)

Family Violence Indicator Developmental Stage II: Existing measurement system needs further support and refinement.

Status: The reporting of interpersonal violence remains incomplete. Victim services data, from the Council on Domestic Violence and Sexual Assault (CDVSA), is not representative of all incidents of family violence--only those who seek services. The CDVSA 2006 Annual Report identifies victim services data by total number, type of services (including age, gender and incident types) and by region. **Recommendation:** This indicator may become more representative if data collected from women's shelters and crisis centers are aggregated along with domestic violence reports from police and law enforcement records. This would not account for many rural and remote areas where there is no law enforcement or no reporting methods designed to collect this information. Furthermore, the addition of standardized questions about interpersonal violence to existing population-based surveys (e.g. PRAMS, YRBS, BHRFS) will enhance the development of a reliable indicator.

Early Initiation of Substances - The earlier young people begin using drugs, committing crimes, engaging in violent activity, dropping out of school and becoming sexually active, the greater the likelihood that they will have problems with these behaviors later on. For example, research shows that young people who initiate drug use before the age of 15 are at twice the risk of having drug problems as those who wait until after the age of 19. ^{6,8,18}

Indicator: Percent of students that have used alcohol before the age of 13. Data Source: Youth Risk Behavior Survey 2007(DHSS)

Availability of Alcohol and other Drugs - The more available alcohol and other drugs are in a community, the higher the risk that young people will use and abuse these substances. The perceived availability of drugs is also associated with greater risk of use. In schools where students believe drugs are more available, a higher rate of drug use occurs. ^{8,12,18}

Indicator Developmental Stage II: Existing measurement system needs further support and refinement.

Status: The Office of Public Safety, Alcoholic Beverage Control Board (ABC) conducts ongoing compliance checks (of sales to minors) of package stores, bars, lounges and restaurants across Alaska. The ABC board also collects data related to failure rates, but it has not consistently tracked this information until 2007. **Recommendation:** The data needs further analysis and the system of compliance checks needs additional support. *Other indicators related to access may need to be considered as well.*

Family History of Suicide or Attempts - Youth who have a suicide among any family member in the past 12 months are at greater risk for attempting suicide. ^{1,7,11}

Indicator: Completed suicide rate per 100,000 Alaskans (all ages) based on 2000-2004 data.

Data Source: Alaska Bureau of Vital Statistics, February 2007

Death rate of family members by suicide Indicator: Developmental Stage II. Vital Statistics is beginning to analyze mortality data and familial relationships.

Community Norms and Laws related to Alcohol and Drug Use - Community norms (the attitudes and policies a community holds about alcohol/drug use) are communicated in a variety of ways: through laws and written policies, informal social practices, and through the expectations parents and community members have of young people. (e.g. alcohol taxes, local option or drunk driving laws, perceptions of disapproval) ^{8,11,12,18}

Indicator Developmental Stage II: Existing measurement system needs further support and refinement.

Status: The Office of Public Safety, Alcoholic Beverage Control Board (ABC) has information on local alcohol laws and controls (e.g. licenses, sales and local option restrictions). The current and available data on social norms and attitudes of drug and alcohol use in Alaska, is collected through the *National Surveys on Drug Use and Health*. **Recommendation:** The statistics from the ABC board needs to be reviewed to identify if there is enough data to compile a statewide indicator related to alcohol control laws. The data from the *National Surveys on Drug Use & Health* need to be reviewed for its strength as a population-based Alaska indicator.

Loss of Cultural Identity (Protective Factor: Cultural Identity) - Alaska Native and American Indian people may face additional risks associated with alcohol and other drug use. The increased vulnerability may be due to marginalization, stigmatization, and loss or devaluation of language, culture, spiritual and traditional healing practices, and subsistence living. Another problem may be lack of access to culturally appropriate health care. Alaska Native and American Indian communities also experience higher levels of stress due to historical trauma and rapid cultural change. Other ethnic persons or groups may experience similar risk factors. ^{14,16,19,21}

Indicator: Developmental Stage I: Indicator needs to be defined and measurement system put into place.

Status: Information related to cultural identity such as percentage of Native language speakers and the number of rural households practicing subsistence lifestyles, exists primarily at the regional or local level. There are several ongoing research projects exploring the factors related to loss or preservation of cultural identity in Alaska. This research can assist in the development of stronger measures that may form the basis for future population-based and program-based indicators. **Recommendation:** The current indicators will require further analysis and represent only two elements of preservation or loss of cultural identity. The subcommittee urges the state to partner with interested organizations to further define cultural identity and develop indicators

PRESS RELEASE - For Immediate Release
November 29, 2001

SUBSTANCE ABUSE COSTS ALASKA \$614 MILLION A YEAR

New Study from McDowell Group Shows Economic Impacts

The negative economic impacts of alcohol and other drug abuse amount to about \$614 million a year in Alaska, according to a new study completed by the McDowell Group for the Governor's Advisory Board on Alcoholism and Drug Abuse (ABADA).

"This is a staggering blow to Alaska's economy, communities and families," said Advisory Board chair Eric Tomasino of Palmer. "Year after year, substance abuse and chemical dependency drain our human and economic resources."

The study looked at five basic ways in which alcohol and other drug abuse cost money: productivity losses, traffic crashes, criminal justice system and protective services, health care and public assistance. Alcohol abuse costs accounted for \$453 million per year, while other drug abuse costs were estimated at \$161 million annually.

"We have always known that alcohol and other drug abuse exacts a high human toll in Alaska," said Pam Watts, Executive Director of ABADA. "But until now, we had to rely on national studies to estimate the economic costs to our state. This report gives us strong, Alaska-specific data to use."

According to the study, lost worker productivity accounts for more than half of the annual economic impact, \$319 million per year. These losses occur when alcohol and other drug abuse results in premature death, reduced efficiency of workers through physical or mental impairment, incarceration for a criminal offenses, or inpatient treatment or hospitalization. Of the productivity losses, nearly half were due to premature death from alcohol and other drug abuse. The economic loss for 1999 for this cause alone was \$172 million, based on an annual average number of deaths related to alcohol and other drug abuse. Between 1994 and 1998, this was an average 224 deaths a year.

The Economic Costs of Alcohol and Other Drug Abuse in Alaska, Phase Two report was prepared for ABADA by McDowell Group, a research-based consulting firm in Juneau and Anchorage, with a grant from the Alaska Mental Health Trust Authority. The ABADA is appointed by the Governor to advise the Administration and Legislature on substance abuse issues.

Comprehensive Integrated Mental Health Plan: 2006-2011

Figure 2
U.S. and Alaska Alcohol Consumption Comparisons

Alcohol consumption rates reflect the prevalence and severity of alcohol related problems. The alcohol consumption rate in Alaska has been higher than the rate in the rest of the nation during each of the last 14 years, and is well above the *Healthy Alaskans 2010* goal of 2.2 gallons or less per person per year. Data from the National Institute on Alcohol Abuse and Alcoholism (NIAAA) indicates that Alaska remains in the highest group for alcohol consumption in the nation (per capita ethanol consumption per 10,000 people aged 14 and over). Consumption rates are calculated with in-state sales of alcoholic beverages and the state population of persons 14 years and older.

Alaska receives \$10.7 million for substance abuse prevention infrastructure

The Substance Abuse and Mental Health Services Administration (SAMHSA) awarded a five-year, \$10.7 million grant to DHSS, Division of Behavioral Health. The grant will focus on Alaska's ability to de-velop and promote community health and wellness by building regional and community prevention infra-structure and capacity, with a specific emphasis on prevention of substance use and abuse.

The state is required to utilize the five steps of the Strategic Prevention Framework – assessment, capacity building, planning, implementation and evaluation. The goal is to have the first three steps com-pleted by June 2010. Once the state's implementation plan has been approved by SAMHSA's Center for Substance Abuse Prevention, the state will solicit proposals from regional and/or community coalitions to develop a prevention infrastructure and capacity at the local level. These grant awards will not be for di-rect services, but for building sustainable infrastructure and capacity to prevent the consequences of alco-hol and other drug use at the community and regional level. Each sub-recipient will be required to also use the five steps of the SPF, and to develop strategies based on what the assessment data tells them—a true data driven process. Proposals will be accepted from regional/community coalitions with the ability to con-duct a thorough needs and capacity assessment; drawing on the input and commitment of the region/community at-large.

While direct program services will not be funded through these grant awards, we will encourage the utiliza-tion of environmental strategies that promote changing social and community norms, practices and policies.

We are very excited about the SPF SIG and the prevention opportunities these funds will provide to Alaska. Focusing on coalition building, community assessments, data-driven decision making, infrastruc-ture, capacity and sustainable systems change will enhance our overall prevention efforts and assist us in changing the trends of alcohol and drug use in Alaska and the devastating consequences that occur.

Working through and with coalitions is how we envision the fu-ture for community-driven prevention activities. The old way of doing business isn't getting us where we want to go—human and dollar re-sources are not abundant enough to allow individual agencies to work in isolation on a single issue. We know that social issues are intertwined, yet we continue to approach these problems as independent silos of activity.... By putting our energy and emphasis on building and sustaining community coalitions, the ability to promote healthy communities; to build strong protective factors; and to reduce risk factors will be greatly increased and the outcomes more positive and hopeful. We thank everyone who attended the training and look forward to following up with future training to continue building a strong coalition framework for

Family Risk Factors

Family history of the problem behavior - If children are raised in a family with a history of alcohol/ drug addiction, it increases the likelihood that children will also have alcohol and other drug problems. If children are raised in a family with a history of criminal activity, the risk of juvenile delinquency increases. Similarly, children who are raised by a teenage mother are more likely to become teen parents, and children of dropouts are more likely to drop out of school themselves.^{2,4,8,11,18}

Family management problems - Poor family management practices include lack of clear expectations for behavior, failure of parents to monitor their children – knowing where they are and whom they are with, and excessively severe or inconsistent punishment.^{8,18}

Family violence and conflict - Persistent, serious conflict between primary caregivers or between caregivers and children appears to increase children's risk for all of the problem behaviors. Whether the family consists of two biological parents, a single parent, or some other primary caregiver appears to matter less than whether the children experience much conflict in their families. For example, domestic violence in a family increases the likelihood that young people will engage in delinquent behaviors and substance abuse, as well as become pregnant or drop out of school.^{8,18}

Parental attitudes favorable to substance use and other problem behavior - Parental attitudes and behaviors toward drugs, crime, and violence influence the attitudes and behaviors of their children. Parental approval of young people's moderate drinking, even under parental supervision, increases the risk that the young person will use marijuana. Similarly, children of parents who excuse them for breaking the law are more likely to develop problems with juvenile delinquency. In families where parents display violent behavior, children are at greater risk of becoming violent.^{8,18}

The Advisory Board on Alcoholism and Drug Abuse, through the Alaska Department of Health and Social Services, contracted with McDowell Group in April 2005 to update a prior study on the economic costs of alcohol and other drug abuse in Alaska.

Alcohol and other drug abuse impacts the economy in many ways. Public safety, health care, and public assistance are among the areas impacted by alcohol and other drug abuse. The extent of these impacts is evident in the level of alcohol and other drug dependency and its associated cost on the Alaska economy. According to a 1998 study, 9.7 percent of Alaska's population is dependent upon or abuses alcohol (39,596 residents), while 1.5 percent is other drug dependent (14,238 residents). The total cost of this dependence to the Alaska economy is estimated to be \$738 million during 2003. Alcohol abuse costs accounted for \$525.5 million (71 percent). Other drug abuse costs were estimated at \$212.5 million (29 percent). Costs by category include:

- \$367 million from productivity losses.
- \$154 million from criminal justice and protective services.
- \$178 million from health care.
- \$35 million from traffic crashes.
- \$4 million from public assistance.

Public Assistance and Social Services

A portion of public assistance expenditures can be attributed to alcohol and other drug abuse. Alcohol and other drug-dependent persons may qualify for public assistance because of reduced income, inability to hold a job, or disability caused by substance abuse. Costs attributed to abuse (program administration costs only) were an estimated \$4.1 million in 2003.

Iditarod to drug test on the trail *BY TODD L. DISHER Frontiersman*

WASILLA — In a rule change that directly affects the event's three-time reigning champion, the governing body of the Iditarod Trail International Sled Dog Race will impose a strict drug testing policy on mushers starting in 2010.

Rule 29 now allows race officials to test mushers with or without cause, individually or as a group, and on a fixed or random schedule for the presence of prohibited drugs or alcohol.

The Iditarod Trail Committee Executive Director Stan Hooley said the rule change comes in response to a request from mushers.

“(The Iditarod Official Finishers’ Club) said to us, ‘We want you to implement a drug testing program to make sure no unfair advantage is gained. We are interested in the safety and the integrity of everyone in the race,’” Hooley said.

But for Lance Mackey, the musher who has dominated the sport for the last three years, the rule change is purely political.

“Some of the people who are pushing the issue are the people who can't beat me on the trail, so they are trying to beat me off it,” Mackey said.

Mackey survived a battle with throat cancer in 2001 and openly admits to using marijuana for what he says are medicinal purposes and with a doctor's approval.

“I have no taste buds and no real appetite,” Mackey said, as one of the purported benefits of marijuana is to improve food consumption. “It also helps me pay attention and focus on what I'm doing.”

It's that last part that irks fellow musher Ken Anderson. Anderson said he understands if Mackey uses marijuana to maintain his health, but if it really does help him stay focused, then it offers an unfair advantage.

“I guess that is a little bit troubling, that he was getting a leg up,” Anderson said. “And, that was against race rules.”

Anderson is referring to the rule that has been in place banning substances like marijuana even before the rule was recently changed. However, what the past rule lacked, Hooley said, was enforcement.

“There wasn't a protocol in place for (drug testing) that would stand up,” Hooley said. “You need to have professionals in place to carry out a program like that.”

After the request from the IOFC, Hooley said the rule became formalized with an agreement with WorkSafe Inc., a company that does drug testing for companies around the state. By offering WorkSafe a race sponsorship, the committee was able to get a contract for the tests at a reduced rate, he said.

The urine samples can be taken anywhere along the trail and flown to the testing facility in the Lower 48. Hooley said the turnaround time from sample taken to results should be about 48 hours, and the results will indicate levels of both illegal drugs and performance-enhancing substances.

As to why marijuana was included on the list of substances prohibited, Hooley said the committee was following federal guidelines. Alaska state law allows possession of up to 1 ounce of marijuana, but "by federal standards, marijuana is still an illegal drug," Hooley said.

What's more, marijuana is not eligible for the therapeutic exemption clause in the new rule. Hooley said marijuana only requires a physician's recommendation, not necessarily a prescription. Also, there is no regulated dispensing system that controls the dose because the federal government does not recognize marijuana as a medicine, Hooley said.

"Is marijuana considered performance-enhancing? I think most scientific folks would say no. But, it is an illegal drug that is not dispensed by the FDA through a prescription," Hooley said.

For his part, Mackey said he would not seek the therapeutic exemption even if it was offered, saying he does not want to use his medical marijuana card as a crutch. However, he said he still does not understand the reasoning behind the ruling.

"It's a dog race. They are the ones performing to get us to Nome. It didn't jeopardize their performance last year," Mackey said. "I finished with 15 of my 16 dogs and with a 12-hour lead in the toughest conditions the Iditarod has ever seen. It didn't do anything to hinder my outcome."

Asked if this means he used marijuana on the Iditarod trail last year, Mackey hesitated, but said yes.

"I wasn't dependent on it everyday. There was a little bit here and there. But it is irrelevant," he said.

What people don't understand, he said, is the effect cancer and the following chemotherapy and radiation treatment had on his body, and how marijuana alleviates this pain.

"I do not condone kids using pot. This is something I have had to deal with because of my medical history," Mackey said. "I don't know how to explain this. It seems like it is one of the reasons I'm still breathing."

Looking forward, Mackey said he is going to run a clean race in 2010 and likes his chances of becoming the first musher to win four Iditarod races in a row.

"I'm pretty confident. If I come in 50th this year, of course people are going to start pointing fingers," Mackey said. "But if they think my success in the past has been based on my marijuana use, they have more problems than me."

Social effects

The social problems arising from alcoholism can be massive and are caused in part due to the serious pathological changes induced in the brain from prolonged alcohol misuse and partly because of the intoxicating effects of alcohol.^{[17][22]} Alcohol abuse is also associated with increased risks of committing criminal offences including child abuse, domestic violence, rapes, burglaries and assaults.^[36] Being drunk or hung over during work hours can result in loss of employment, which can lead to financial problems including the loss of living quarters. Drinking at inappropriate times, and behavior caused by reduced judgment, can lead to legal consequences, such as criminal charges for drunk driving or public disorder, or civil penalties for tortious behavior. An alcoholic's behavior and mental impairment while drunk can profoundly impact surrounding family and friends, possibly leading to marital conflict and divorce, or contributing to domestic violence. This can contribute to lasting damage to the emotional development of the alcoholic's children, even after they reach adulthood. The alcoholic could suffer from loss of respect from others who may see the problem as self-inflicted and easily avoided.

Within the medical and scientific communities, there is broad consensus regarding alcoholism as a disease state. For example, the American Medical Association considers alcohol a drug and states that "drug addiction is a chronic, relapsing brain disease characterized by compulsive drug seeking and use despite often devastating consequences. It results from a complex interplay of biological vulnerability, environmental exposure, and developmental factors (e.g., stage of brain maturity)."

Drug abuse

Further information: Drug abuse

Unemployment, underemployment, and distance from rural areas are where most drug abuse occurs. Some results of drug abuse are stealing, killing, theft, assault, prostitution, poor grades in school, and poor conduct at work. Some poverty is caused by people who have abused drugs and have spent all of their money buying them. When they have no other way to support their addiction, they resort to other measures to obtain them. The urge for the drugs began to take over their lives. People lose their families, friends and homes leaving them alone and in poverty.

Neurobehavior Disinhibition in Childhood Predicts Substance Use Disorder in Young Adulthood

The development of substance use disorder (SUD) was prospectively investigated in 66 boys having fathers with SUD and 104 boys having fathers with no adult psychiatric disorder. Evaluations were conducted to determine the context in which neurobehavior disinhibition in relation to parental SUD, parental neglect of the child and child's social maladjustment culminated in a DSM-III-R diagnosis of SUD. A neurobehavior disinhibition latent trait

reflecting prefrontal cortex disturbance was derived using indicators of behavior undercontrol, affect dysregulation and executive cognitive functioning in the boys when they were 10-12 and again at 16 years of age. The data were analyzed to determine whether the score on the neurobehavior disinhibition construct mediates the association between father's and mother's SUD and son's SUD. Several key results emerged. First, SUD in the mother and father predicted neurobehavior disinhibition in the son. Second, the neurobehavior disinhibition score of the sons at ages 10-12 predicted SUD at age 19. Third, neurobehavior disinhibition, in conjunction with social maladjustment and drug use frequency, mediated the association between paternal and maternal SUD and son's SUD. Fourth, neurobehavior disinhibition was unrelated to neglect of the child by either the father or mother; however, paternal but not maternal neglect at age 10-12 predicted SUD at age 19. These findings suggest that prefrontal cortex dysfunction contributes to SUD liability. Tarter R.E., Kirisci L., Habeych M., Reynolds M. and Vanyukov M. Neurobehavior Disinhibition in Childhood Predisposes Boys to Substance Use Disorder by Young Adulthood: Direct and Mediated Etiologic Pathways. *Drug and Alcohol Dependence*, 73, pp. 121-132, 2004.

Testing the Effectiveness of a Public Health Approach to Treating Substance-Abusing Women on Welfare

Jonathan Morgenstern, Ph.D.

Substance abuse (SA) among disadvantaged, parenting women has long been identified as a major public health problem. However, as States move to implement welfare reform, efforts to effectively address this problem take on greater urgency. This report describes preliminary findings from a study currently in progress to test the effectiveness of a public health approach to intervening with this population. The report will (1) describe the study rationale, design, and interventions, (2) compare baseline characteristics of substance-abusing women on welfare with a nonaffected comparison group, and (3) report on SA treatment entry and retention data for an initial cohort of participants. A standardized battery was administered to women (N=220) recruited in a welfare setting who either met current DSM-IV substance-dependence criteria or did not meet criteria for a substance use disorder in the prior 5 years. Substance-dependent women had significantly greater employment, mental health, family, medical, and housing problems, suggesting they would experience substantially greater barriers to employability. Substance-dependent women were then randomly assigned to receive a referral either to SA treatment or to an intensive case management intervention (ICM). Women assigned to ICM had significantly higher rates of SA treatment entry and attendance. Overall, women who received a referral only to SA treatment had low rates of treatment attendance. Findings are discussed in the context of the current interface between substance abuse and welfare-to-work services.

National Institute on Drug Abuse

Science of Addiction

Nora Volkow, M.D.
Director of the National Institute on Drug Abuse (NIDA)
National Institutes of Health

When scientists first started to study drug abuse, people addicted to drugs were thought to be morally flawed and lacking in willpower. This view has shaped society's response to drug abuse, treating it as a moral failing rather than a health problem, resulting in punitive rather than preventative and therapeutic actions. Due to groundbreaking scientific discoveries, we now recognize drug addiction as a brain disease that can be successfully prevented and treated.

What is Drug Addiction?

Drug addiction is a chronic, relapsing brain disease characterized by compulsive drug seeking and use despite often devastating consequences. It results from a complex interplay of biological vulnerability, environmental exposure, and developmental factors (e.g., stage of brain maturity).

As with many other diseases, vulnerability to addiction stems partly from a person's genetic makeup. Scientists estimate that genetic factors account for 40–60 % of an individual's vulnerability to addiction, with environmental and developmental variables influencing whether and how particular genes are expressed. Additional factors, such as conditions at home, at school, or in the neighborhood, can heighten addiction vulnerability. Research also shows that early drug use increases the likelihood of addiction and that people with psychiatric disorders have a higher risk of drug abuse and addiction than the general population.

Research has improved our understanding of the biological mechanisms underlying drug abuse and addiction. All drugs of abuse directly or indirectly target the brain's reward system by flooding the circuit with dopamine—the neurotransmitter that regulates feelings of pleasure, as well as movement, emotion, cognition, and motivation. Overstimulation of this system produces the euphoric effects sought by people who abuse drugs and teaches them to repeat the behavior. Our brains are wired to repeat activities that bring us pleasure or reward (e.g., eating or having sex) as a way of ensuring our survival. Because taking drugs of abuse stimulates the same circuit, our brains urge repetition of the behavior, and thus people "learn" to abuse drugs without thinking about it. These intense impulses can overcome a person's willful intent not to take drugs, despite catastrophic consequences—which is really the essence of drug addiction.

Therefore, even though the initial decision to take drugs is mostly voluntary, once drugs take over, they cause brain changes that acutely impair a person's ability to exert self-control. Brain imaging studies of drug-addicted individuals have revealed physical changes in brain areas critical to judgment, decision-making, learning, memory, and behavior control, which may help explain the compulsive and destructive behaviors associated with drug addiction.

Preventing Drug Abuse

The National Survey on Drug Use and Health (NSDUH) estimated that 22.6 million persons (9.2 % of the U.S. population aged 12 or older) were classified with substance abuse or dependence in 2006 (based on criteria specified in the *Diagnostic and Statistical Manual of Mental Disorders*, 4th edition). Of these:

- 3.2 million abused or were dependent on both alcohol and illicit drugs;

- 3.8 million abused or were dependent on illicit drugs but not alcohol; and
- 15.6 million abused or were dependent on alcohol but not illicit drugs.

Data on teen drug use reflect both encouraging and troubling trends. Although statistics show a 23 % decline from 2001–2006 in past-month use of any illicit drug by students in 8th, 10th, and 12th grades, abuse of marijuana continues to be a problem with approximately 12 % of 8th graders, 25 % of 10th graders, and 32 % of 12th graders reporting use in the past year. Prescription painkillers also continue to be abused at unacceptably high levels, with 1 in 10 high school seniors reporting abuse in the past year. In addition, while past-year abuse of OxyContin was down among 12th graders, the rate nearly doubled among 8th graders between 2002 and 2006—going from 1.3 % to 2.6 %. Prescription drugs are easily accessible and are often obtained from a friend or relative for free. Moreover, there is a common misperception that, because they are prescribed by a doctor, prescription medications are safe, even when used in ways not intended.

Because early use of drugs increases a person's chance of more serious abuse and addiction, prevention is crucial. NIDA studies have shown that prevention programs backed by science (rationally designed and rigorously tested) can be effective in youth. Such programs work to boost protective factors, reduce risk factors for drug use, and help shape youths' perceptions about drug abuse risk.

Medical Consequences of Addiction

Illicit drug abuse causes 17,000 deaths annually in the United States and more than \$180 billion in annual economic costs. Abuse of nicotine, alcohol, and/or prescription drugs causes additional morbidity and mortality. Although some medical consequences of drug abuse and addiction are temporary and can be essentially reversed with treatment, others may be more persistent, diminishing the quality of individuals' health long after drug use has stopped. Whether short-lived or chronic, the many potential health effects from drug abuse and addiction underscore the fact that drug abuse does not exist in medical isolation—it causes a broad array of medical consequences throughout the body (<http://www.nida.nih.gov/consequences/>). A few examples follow:

- **Cardiovascular effects.** Researchers have found a connection between the abuse of most drugs and adverse cardiovascular effects, ranging from abnormal heart rate to heart attacks. Injection drug use can also lead to cardiovascular problems such as collapsed veins and bacterial infections of the blood vessels and heart valves. Use of marijuana, cocaine, methamphetamine, and inhalants can result in cardiovascular effects.
- **Neurological effects.** All drugs of abuse act in the brain to produce euphoric effects; however, some drugs also cause severe negative consequences in the brain such as seizures, stroke, and widespread brain damage that can impact all aspects of daily life. Drug use can also cause brain changes that lead to problems with memory, attention, and decision-making. Examples of drugs with neurological effects include cocaine, methamphetamine, inhalants, and ecstasy.
- **HIV, hepatitis, and other infectious diseases.** Drug abuse increases the spread of infectious diseases. Injection of heroin, cocaine, and methamphetamine causes more than a third of new AIDS cases and is a major contributor to the spread of hepatitis C. In addition, all drugs of abuse interfere with judgment and increase the likelihood of risky behaviors, which also contribute to the spread of HIV/AIDS and other sexually transmitted diseases.
- **Other health effects.** In addition to the effects various drugs of abuse may have on specific organs of the body, many drugs produce global body changes such as dramatic changes in appetite and increases in body temperature, which may impact a variety of health conditions. Withdrawal from drug use also may lead to numerous adverse health effects, including restlessness, mood swings, fatigue, muscle and bone pain, insomnia, cold flashes, diarrhea, and vomiting.

In addition to harmful effects for the addicted individual, drug abuse can result in serious health consequences for others. For example, while the full extent of the effects of prenatal drug exposure on a child is not known, studies show that various drugs of abuse may result in premature birth, miscarriage, low birth weight, and a variety of behavioral and cognitive problems in infants and children. Secondhand exposure to tobacco smoke is another example. According to the 2006 Surgeon General's Report, *The Health Consequences of Involuntary Exposure to Tobacco Smoke*, exposure to environmental tobacco smoke increases the risk of heart disease and lung cancer in persons who have never smoked by 25–30% and 20–30%, respectively. Exposure to tobacco smoke in the home increases severity of childhood asthma and has been associated with sudden infant death syndrome.

Treatment and Recovery

Discoveries about the science of addiction have led to advances in drug abuse treatments that enable people to counteract addiction's powerful effects on the brain and behavior and regain control of their lives. Despite the availability of many forms of effective treatment for addiction, the problem of relapse remains the major challenge to achieving sustained recovery. However, relapse rates for addiction are similar to those for other well characterized chronic medical illnesses such as diabetes, hypertension, and asthma, which also have both physiological and behavioral components. Treatment of chronic diseases involves changing deeply embedded behaviors, and relapse does not mean treatment failure. For the addicted patient, lapses back to drug abuse indicate that treatment needs to be reinstated or adjusted, or that alternate treatment is needed. For most individuals, combining medications with behavioral therapies is the most successful approach.

Different types of medications may be useful at different stages of treatment—during withdrawal to ease symptoms; during treatment to help people stay engaged; and following treatment to prevent relapse. Medications currently available include those used to treat:

- **Tobacco addiction.** Nicotine replacement therapies (patch, inhaler, gum), bupropion, varenicline.
- **Opioid addiction.** Methadone, buprenorphine.
- **Alcohol and drug addiction.** Naltrexone (helps prevent relapse to alcohol and heroin abuse), disulfiram (helps prevent relapse to alcohol abuse and is currently being tested for treating cocaine abuse), acamprosate (helps prevent relapse to alcohol abuse).

Behavioral treatments help people modify attitudes and behaviors related to drug abuse and increase their ability to handle stressful situations and environmental cues that may trigger intense craving for drugs and prompt relapse. For example,

- **Cognitive behavior therapy** helps people recognize, avoid, and cope with situations in which they are most likely to abuse drugs.
- **Motivational incentives treatment** uses positive reinforcements (i.e., rewards or privileges) to help people remain drug free.
- **Motivational interviewing** is conducted at treatment entry to stoke an individual's desire to fully participate in treatment and change his or her behaviors.
- **Group therapy** helps people face their drug abuse realistically, acknowledge the harm it can cause, and increase motivation to not use drugs.

Behavioral therapies can also enhance the effectiveness of medications and help people remain in treatment.

The process of recovery from drug abuse or addiction can be long and complex. When people enter treatment, addiction has often taken over their lives. The compulsion to find and use drugs may have disrupted their families, their professional lives, and their standing in the community. It also may have

made them vulnerable to other serious illnesses. Because the effects of drug abuse are far reaching, treatment must address the needs of the whole person to have the best chance for success. The most effective programs incorporate a variety of rehabilitation services to address a person's medical, psychological, social, vocational, and legal needs to enhance their recovery process.

At NIDA, we believe that a fuller understanding of the science of addiction will encourage adoption of research-based policies and programs to reduce drug addiction and will increase support for scientific research to improve the health of our citizens. Please visit our recently created Web site to access a wealth of resources designed to help physicians recognize, diagnose, and treat drug abuse and addiction: <http://www.nida.nih.gov/medstaff.html>. Together, we can continue to leverage the power of science against this devastating disease that causes so much suffering for individuals, communities, and society at large.

Rich vs. Poor: Drug Patterns Are Diverging

By **PETER KERR**

Americans generally appear to be turning away from the use of illegal drugs, but, at the same time, the poor face mounting deaths and an ever bleaker future because of drug abuse, according to Government statistics and interviews with drug experts.

What may be emerging, some experts believe, is a tale of two drug problems: one in middle-class America, which may be past the worst of a 20-year mass experiment with illegal drugs; the other in the America of the poor, where, amid hopelessness and lack of education, people will suffer the worst consequences of cocaine, heroin and AIDS.

"We are dealing with two different worlds here," said Dr. David F. Musto, a professor of psychiatry and history of medicine at Yale University who has written extensively on the history of drug-use epidemics. Incentives to Stop

"The question we must be asking now is not why people take drugs, but why do people stop," Dr. Musto said. "In the inner city, the factors that counterbalance drug use - family, employment, status within the community - often are not there. It is harder for people with nothing to say no to drugs."

In recent years, the focus of greatest concern among drug experts has been cocaine, for while the use of other drugs was dropping or remaining stable, cocaine grew widely in popularity throughout the nation in the late 1970's and early 1980's.

Findings from two major Federal studies on drug use in America show that in the last few years, better-educated young people have been reducing their use of cocaine and other drugs. Meanwhile, the least-educated have increasingly used cocaine.

Experts caution that their conclusions are tentative and that the rise of a new drug or the appearance of other unpredictable factors could easily upset current trends. And, whatever the trends, they say, drug use is so widespread that it will remain a problem in all sectors of society for years. A Mixed Message

However, they point to a newly emerging picture of drug use in America that, they say, carries a mixed message of hope for the well-off and despair for the poor. Among their major conclusions are these:

* With the exception of heroin and crack among the poor, the use of illegal drugs in the nation appears to have peaked, including the snorting of powdered cocaine.

* Federally financed studies show that the people turning away from drugs are the most educated and affluent. The poorest and least-educated have continued or increased their drug use.

* Crack, a smokable form of cocaine, has largely remained a poor people's drug. Its rise in the past two years has had devastating effects on poor neighborhoods, but it has failed to make the same inroads into the middle class.

* The most deadly impact of illegal drug use is probably yet to come, as tens of thousands of intravenous drug users, their sexual partners and their children contract acquired immune deficiency syndrome. Most of those people will be poor.

Several drug treatment experts voiced concern that as the casualties of drug abuse shift increasingly into the ghetto, the drug issue may become less visible to many Americans and receive less attention from government. Putting Pressure on Legislators

"In the heroin crisis of the late 1960's and again with crack in recent years it was the threat to the middle- and upper-middle-class kids that put pressure on legislatures and Congress," said Dr. Mitchell S. Rosenthal, the president of Phoenix House, the operator of drug treatment centers in New York and California. "There is a danger that if they feel less of a threat, the resources won't stay with the problem."

Some scholars say societies experience widespread drug use in historic cycles. From 1885 to 1920, the United States experienced an epidemic of narcotics and cocaine use. Dr. Musto argues that a similar epidemic began in about 1965, but that it took years for casualties to mount and for society to react against drugs.

Statistics indicate that outside of the poorest neighborhoods, the nation's 20-year affair with illegal drugs is on the decline.

According to the National Institute on Drug Abuse, marijuana use peaked in 1978, and by 1985, 7 out of 10 high school seniors believed marijuana use to be harmful. Young people's use of hallucinogens, like LSD and PCP, or "angel dust," has fallen since 1979. A Different Generation

In 1985, a national household survey conducted by the University of Kentucky for the National Institute on Drug Abuse asked 18-to-25-year-olds if they had smoked marijuana in the last month. It found that people who never graduated from high school were most likely to be using the drug. The better educated the young people were, the survey found, the less they were using marijuana.

Among an earlier generation of smokers - people 35 and over, who probably developed their attitudes toward marijuana in the late 60's and early 70's - the findings were just the reverse. It was the college-educated who were most likely to be smoking marijuana.

Another study found similar results. The survey, conducted for the National Institute on Drug Abuse by the University of Michigan Institute for Social Research, asked high school seniors whether they had used drugs other than marijuana in the previous year.

The survey found that in 1986, seniors of all economic backgrounds were using drugs less than seniors were in 1981. But the greatest change took place among students whose parents had some graduate education: a drop of 13 percentage points, to 23.7 percent, from 36.7 percent. The least change took place among students whose parents had never been to high school: a drop of 2.7 percentage points, to 22.7 percent, from 25.4 percent. Flooding Across the Border

What confused the situation last year was cocaine, which had been rising in use since the late 70's. By last year, the white powder was flooding across the nation's southern border and was suddenly appearing in urban areas in the new smokable form of crack; from 1982 to 1986, the number of deaths and emergency room reports involving cocaine quadrupled.

For a time, experts feared that the pellet form of cocaine, which is much more quickly addicting than cocaine powder, would spread to all segments of society, including the middle class and affluent, who were using powdered cocaine. But it now appears that the growth of crack has leveled off in New York and many other cities around the country, law-enforcement and treatment officials say.

"In general we believe that cocaine has reached its peak," said David L. LeRoy, the chief of domestic intelligence with the cocaine desk of the Federal Drug Administration. "It is going to take a few months to have the numbers to prove it, but we feel fairly optimistic about it." Tracing the Growth in Appetite

The amount of cocaine entering the country could still be rising, Mr. LeRoy said, but the number of users appears to have leveled off or may be dropping. In other words, he said, the most recent growth in America's cocaine appetite can be traced to its most severe addicts, many of them inner-city crack addicts.

According to the household survey of 18-to-25-year-olds, the people most likely to have used cocaine in the previous month in 1982 were those who graduated from college. The least likely to have used cocaine were those who never finished high school. Among college graduates, 13 percent said they had used cocaine in the past month, while among those without high school diplomas, only 4 percent had used cocaine.

But by 1985, the situation was just the opposite. Only 3 percent of college graduates said they used cocaine in the last month. But 10 percent of people who never finished high school said they used the drug. Since the survey did not include people without homes, it may have understated drug use among the poorest and least-educated, according to Prof. Harwin Voss of the University of Kentucky, who helped direct the study. Severe Consequences

There is still evidence of middle-class crack use with severe consequences for those who have become addicted. In addition, treatment experts say "freebasing," or smoking of powdered cocaine, which has the same effect as smoking crack, is popular in some circles of middle-class and affluent drug users.

Nonetheless, the New York State Division of Substance Abuse Services and the Los Angeles County office of Drug Abuse report that most crack users appearing at hospitals and treatment centers are poor members of minority groups.

Such observations about crack and the poor are echoed by other drug treatment experts around the nation.

"Crack seems to have become entrenched in the inner-city areas," said James Hall, the director of Up Front Drug Information Inc., a foundation based in Miami. "With cocaine we are going to see a shrinking number of users who are going to be at greater risk from the drug. They are the poorest, the least educated, who have the least access to information."

But perhaps the most dire vision of the future concerns the intravenous users of heroin, a drug that has remained predominantly the preserve of the inner-city poor. AIDS Through Shared Needles

While the number of addicts around the nation has remained relatively stable, there has been an alarming rise in the proportion of addicts exposed to the AIDS virus from the sharing of needles.

While only a comparatively small fraction of heroin addicts died from overdoses, each year between 20 and 100 percent of those exposed to AIDS are expected to die from the disease.

Among heroin addicts entering drug treatment in New York, more than 50 percent are now testing positive for exposure to the virus, said Dr. Beny J. Primm, the executive director of the Addiction Research and Treatment Corporation, a drug treatment program in New York.

Dr. Primm described his vision of the future for the poorest black neighborhoods in New York, where homelessness and family disintegration are already rife.

"Five years from now, those people who are alive then will find their ranks devastated by AIDS, and there will be a type of hopelessness that is hard to imagine now," Dr. Primm said. "I am hearing people already say, 'I am infected with the virus, I might just as well shoot up drugs.' People will be turning more and more to drugs for solace."

Frequently Asked Questions About Drug Testing in Schools

What is drug testing?

Some schools, hospitals, or places of employment conduct drug testing. There are a number of ways this can be done, including: pre-employment testing, random testing, reasonable suspicion/cause testing, post-accident testing, return to duty testing, and follow-up testing. This usually involves collecting urine samples to test for drugs such as marijuana, cocaine, amphetamines, PCP, and opiates.

Following models established in the workplace, some schools have initiated random drug testing and/or reasonable suspicion/cause testing. During random testing schools select, using a random process (like flipping a coin), one or more individuals from the student population to undergo drug testing. Currently, random drug testing can only be conducted among students who participate in competitive extracurricular activities. Reasonable suspicion/cause testing involves a school requiring a student to provide a urine specimen when there is sufficient evidence to suggest that the student may have used an illicit substance. Typically, this involves the direct observations made by school officials that a student has used or possesses illicit substances, exhibits physical symptoms of being under the influence, and has patterns of abnormal or erratic behavior.

Why do some schools want to conduct random drug tests?

Schools that have adopted random student drug testing are hoping to decrease drug abuse among students via two routes. First, schools that conduct testing hope that random testing will serve as a deterrent, and give students a reason to resist peer pressure to take drugs. Secondly, drug testing can identify adolescents who have started using drugs so that interventions can occur early, or identify adolescents who already have drug problems, so they can be referred for treatment. Drug abuse not only interferes with a student's ability to learn, but it can also disrupt the teaching environment, affecting other students as well.

Is student drug testing a stand-alone solution, or do schools need other programs to prevent and reduce drug use?

Drug testing should never be undertaken as a stand-alone response to a drug problem. If testing is done, it should be a component of broader prevention, intervention and treatment programs, with the common goal of reducing students' drug use.

If a student tests positive for drugs, should that student face disciplinary consequences?

The primary purpose of drug testing is not to punish students who use drugs but to prevent drug abuse and to help students already using become drug-free. The results of a positive drug test should be used to intervene with students who do not yet have drug problems, through counseling and follow-up testing. For students that are diagnosed with addiction, parents and a school administrator can refer them to effective drug treatment programs, to begin the recovery process.

Why test teenagers at all?

Teens are especially vulnerable to drug abuse, when the brain and body are still developing. Most teens do not use drugs, but for those who do, it can lead to a wide range of adverse effects on the brain, the body, behavior and health.

Short term: Even a single use of an intoxicating drug can affect a person's judgment and decisionmaking—resulting in accidents, poor performance in a school or sports activity, unplanned risky behavior, and the risk of overdosing.

Long term: Repeated drug abuse can lead to serious problems, such as poor academic outcomes, mood changes (depending on the drug: depression, anxiety, paranoia, psychosis), and social or family problems caused or worsened by drugs.

Repeated drug use can also lead to the disease of *addiction*. Studies show that the earlier a teen begins using drugs, the more likely he or she will develop a substance abuse problem or addiction. Conversely, if teens stay away from drugs while in high school, they are less likely to develop a substance abuse problem later in life.

How many students actually use drugs?

Drug use among high schools students has dropped significantly since 2001. In December, the 2007 Monitoring the Future study of 8th, 10th, and 12th graders showed that drug use had declined by 24 percent since 2001.

Despite this marked decline, much remains to be done. Almost 50 percent of 12th graders say that they've used drugs at least once in their lifetime, and 18 percent report using marijuana in the last month. Prescription drug abuse is high—with nearly 1 in 10 high school seniors reporting non-medical use of the prescription painkiller Vicodin in the past year.

What testing methods are available?

There are several testing methods available that use urine, hair, oral fluids, and sweat (patch). These methods vary in cost, reliability, drugs detected, and detection period. Schools can determine their needs and choose the method that best suits their requirements, as long as the testing kits are from a reliable source.

Which drugs can be tested for?

Various testing methods normally test for a "panel" of drugs. Typically, a drug panel tests for marijuana, cocaine, opioids, amphetamines, and PCP. If a school has a particular problem with other drugs, such as MDMA, GHB, or steroids, they can include testing for these drugs as well.

What about alcohol?

Alcohol is a drug, and its use is a serious problem among young people. However, alcohol does not remain in the blood long enough for most tests to detect recent use. Breathalyzers and oral fluid tests can detect current use. Adolescents with substance abuse problems are often polydrug users (they use more than one drug) so identifying a problem with an illicit or prescription drug may also suggest an alcohol problem.

How accurate are drug tests? Is there a possibility a test could give a false positive?

Tests are very accurate but not 100 percent accurate. Usually samples are divided so if an initial test is positive a confirmation test can be conducted. Federal guidelines are in place to ensure accuracy and fairness in drug testing programs.

Can students "beat" the tests?

Many drug-using students are aware of techniques that supposedly detoxify their systems or mask their drug use. Popular magazines and Internet sites give advice on how to dilute urine samples, and there are even companies that sell clean urine or products designed to distort test results. A number of techniques and products are focused on urine tests for marijuana, but masking products increasingly are becoming available for tests of hair, oral fluids, and multiple drugs.

Most of these products do not work, are very costly, are easily identified in the testing process and need to be on hand constantly, because of the very nature of random testing. Moreover, even if the specific drug is successfully masked, the product itself can be detected, in which case the student using it would become an obvious candidate for additional screening and attention. In fact, some testing programs label a test "positive" if a masking product is detected.

Is random drug testing of students legal?

In June 2002, the U.S. Supreme Court broadened the authority of public schools to test students for illegal drugs. Voting 5 to 4 in *Pottawatomie County v. Earls*, the court ruled to allow random drug tests for all middle and high school students participating in competitive extracurricular activities. The ruling greatly expanded the scope of school drug testing, which previously had been allowed only for student athletes.

Just because the U.S. Supreme Court said student drug testing for adolescents in competitive extracurricular activities is constitutional, does that mean it is legal in my city or state?

A school or school district that is interested in adopting a student drug testing program should seek legal expertise so that it complies with all federal, state, and local laws. Individual state constitutions may dictate different legal thresholds for allowing student drug testing. Communities interested in starting student drug testing programs should become familiar with the law in their respective states to ensure proper compliance.

What has research determined about the utility of random drug tests in schools?

There is not very much research in this area, and the early research shows mixed results. A study published in 2007 (Goldberg et al, *J. Adolesc Health*, 41: 421-29, 2007) found that student athletes who participated in randomized drug testing had overall rates of drug use similar to students who did not take part in the program, and in fact some indicators of future drug abuse increased among those participating in the drug testing program. Because of the limited number of studies on this topic more research is warranted.

Created September 2007

Explore Cost Benefits

Most interested parties agree that they seek to help patients become less destructive and more productive members of society. In our society, an individual's contribution often is measured in monetary terms -which is why transforming measures of effectiveness into measures of monetary benefits is so important, and why cost-benefit analysis can be so useful for decisionmakers.

According to research by Ball and Ross (1991) and Gerstein et al. (1994), substance abuse treatment can be expected to both save money and produce new income. In California, various drug treatments were estimated to save between \$245 million and \$1,284 million after subtracting the cost of treatment from cost savings and income generated in a single year in the early 1990s (Gerstein et al. 1994, p. 82). Of course, every treatment program differs in how much (and how quickly) this return on investment occurs, which is one reason to measure the benefits as well as the costs of individual programs.

Typical Benefits of Substance Abuse Treatment

New Income

Real income may be generated by substance abuse treatment due to increased productivity and employment of patients. This does not always occur, however. Researchers have found that employment prospects may not be as positive for former substance abusers as might be hoped (cf. Gerstein et al. 1994). This may be due to the stigma of being a former substance abuser as well as difficulties posed by criminal records. Also, the behavior patterns sometimes acquired in drug abuse lifestyles may need to change radically to meet expectations of potential employers (such as getting to work on time every day and following directives).

Cost Savings

Another benefit of substance abuse treatment is cost savings to society or taxpayers. These cost savings include -

- Funds that otherwise would have been spent in the illicit economy for drugs.
- Criminal justice services not required.
- Social and health services no longer required.

These cost-savings benefits are real and can be quite substantial. Substance abuse researchers (Langenbucher et al. 1993) have found profound reductions in a number of costly events after treatment, including the following decreases:

- Patients involved in driving while intoxicated/driving under the influence arrests decreased from 18 percent (pretreatment) to 3 percent (posttreatment).
- Patients involved in accidents decreased from 14 to 1 percent.
- Patients' families who sought counseling decreased from 31 to 5 percent.
- Patients' children who missed school decreased from 5 to 1 percent.
- Patients' spouses who missed work decreased from 10 to 1 percent.

Although different jurisdictions and different methods of assessment may provide different figures, the level of criminal activity patients exhibit can be expected to decrease by roughly two-thirds (Gerstein et al. 1994). Not every program produces a two-thirds reduction, however, so it is essential to measure how much criminal activity changes for each patient.

The reduction in criminal activity following substance abuse treatment may not produce a corresponding reduction in actual costs to society. Although costs to citizens drop in direct proportion to reductions in criminal acts perpetrated on those citizens, public expenses for criminal justice services may not decline in a similar manner. Typically, police, courts, and other components of the criminal justice system are on limited and fixed budgets, while the need for criminal justice services greatly surpasses the ability to deliver those services. For this reason, the impact of substance abuse treatment on criminal behaviors may not result in an actual reduction in criminal justice expenditures. Instead, criminal justice resources saved because of a reduction in crimes committed by former substance abusers may be diverted to other criminal justice services. The entire budget for criminal services probably will still be spent.

Similar problems may occur when cost savings benefits are measured for reduced health, mental health, and future drug treatment services. Because resources in these services typically are very limited, the actual reduction in expenditures may not be as much as might be expected from the reduction in patient use of services.

Nevertheless, transforming effectiveness findings into estimated cost savings still may have considerable value for a program evaluation. In particular, cost savings estimates can show the magnitude of criminal justice and treatment resources that are now available to help other drug abusers who previously could not be helped because of budget restrictions.

Crime-Related Cost Savings

Other research provides evidence for numerous cost savings that result from drug abuse treatment. For example, Rajkumar and French (1996) found that although total costs of crime averaged \$47,971 per patient in the year prior to treatment, that figure dropped to an average of \$28,657 per patient in the year following treatment. That drop of \$19,314 was far more than the cost of treatment, making cost savings in terms of crime alone worth the cost of treatment: \$2,828 for methadone maintenance, \$8,920 for residential treatment, and \$2,908 for outpatient treatment (Rajkumar and French 1996).

Employment- Related Cost Savings

French and associates (1990) found that drug treatment improved the employment and earning potential of drug abusers. Although only 31 percent of drug abusers were employed at the start of treatment, almost 45 percent were employed after treatment. There was a similar increase in the number of patients seeking work (from 9 to 13 percent). And, employed patients earned more after treatment. French and colleagues (1990) found that average personal earnings for employed patients rose from \$6,158 during the year before treatment to \$7,120 during the year after treatment.

The legality of employment and income also can be positively affected by drug treatment. French and Zarkin (1992) found that increasing time spent in methadone treatment by just 10 percent increases legal earnings by 1.5 percent and decreases illegal earnings by 3.2 percent. A 10-percent increase in time spent in residential programs increases legal earnings 2.4 percent and decreases illegal earnings 4.1 percent.

Health Service- Related Cost Savings

French and colleagues (1996) estimated the cost savings if one case of the following health problems could be avoided:

- \$1,100 for avoiding a case of severe venereal disease
- \$74,513 for avoiding a case of severe hypertension
- \$96,005 for avoiding a case of severe tuberculosis
- \$114,796 for avoiding a case of AIDS

Caveats on Benefit Assumptions and Calculations

Reductions in each of the above events are notable in their own right, as well as in terms of monetary savings to the individual and society. For your program, the average cost of each event can be requested from those providing criminal justice, health, or social services locally. It also may be possible to glean this cost information directly from records of expenditures of public funds. The cost savings benefit then can be calculated for each patient as the reduction directly experienced in these events.

Some important changes may be impossible to monetize. For example, patients who interrupted their education decreased from 12 to 4 percent. Although this is a substantial decrease, it is impossible to determine the monetary value of this reduction. Other changes may not occur during the time period used to collect outcome data. For example, patients' financial problems may continue to occur for years after treatment because of the length of time necessary to compensate victims and pay off accumulated debt.

Increased Expenditures From Outcomes

Substance abuse treatment can temporarily increase patients' use of social services, including welfare support, disability payments, and health services. Patients may become well enough to seek help for health problems and to seek financial support from licit as opposed to illicit sources.

According to the CALDATA study (Gerstein et al. 1994), enrollment and payments received from various social services (other than health services) increased 17 to 50 percent during treatment. Being in treatment also may increase eligibility to receive a variety of social support services.

These increases in expenditures need to be included in treatment outcome reports. They should not be excluded simply because they do not seem like benefits. They are monetary outcomes and must be considered. They will likely be canceled out by the cost savings and income generated after treatment.

A case in point: In the CALDATA study, the costs of health services decreased between 1-year periods prior and subsequent to treatment from a mean \$3,227 to a mean \$2,469 per person. Also, in a study reported by Holder and Hallan (1986), private health insurance costs dropped from approximately \$100 per month per patient in the 2 years preceding treatment to less than \$14 per month per patient in the fifth year following treatment (which is when most health sequelae of substance abuse should have subsided).

Cost savings and other benefits may vary considerably depending on the type of treatment. In the CALDATA study, residential treatment was associated with a 58-percent reduction in costs to taxpayers, whereas methadone discharge was associated with a 17-percent reduction in costs to taxpayers. Also, longer treatment generally corresponded to greater cost savings, although not for methadone maintenance.

Transform Effectiveness Findings Into Benefits

Effectiveness findings often can be transformed into benefit findings by multiplying effectiveness data by a cost value. For example, to estimate cost savings after treatment, the change in the number of thefts before versus after treatment can be multiplied by the average cost of drug-related thefts in terms of property loss, victim losses, and criminal justice expenses. Statistical analysis of data collected in an experimental design is the best way to determine whether these cost savings are significant and can be ascribed to treatment. Other research designs, including correlational methods, provide guidance and useful estimates. The transformation procedure for figuring benefits from effectiveness findings remains relatively straightforward.

The exact cost value used to transform effectiveness findings into benefit findings is ascertained by surveying local criminal justice and social and health service agencies. Ideally, you would find the cost of each criminal act, the cost of each health service used, and so on, for each patient individually. If you cannot get that information, you may be able to use estimates of average costs per patient for these effectiveness variables.

For example, suppose you know that the number of theft convictions for a patient dropped from three in the year preceding treatment to one in the year following treatment. Suppose, too, that the estimated cost of a theft totaled \$1,200 after adding costs of arrest, holding, and conviction to the cost to citizens of lost property and mental anguish. The total savings that could be attributed to treatment would be the cost of thefts during a period prior to treatment, minus the cost of thefts during a similar period following treatment. For this patient, that would be:

$$(3 \times \$1,200) - (1 \times \$1,200) = \$3,600 - \$1,200 = \$2,400 \text{ in cost savings.}$$

It would be more accurate to find the actual cost of each theft. It is conceivable that the one theft following treatment was quite minor compared to the thefts preceding treatment. On the other hand, that one theft after treatment could have cost more than all the thefts before treatment.

There also may be too much variation between jurisdictions (and over years) to allow a set cost for social services, health services, criminal justice services, and other cost items to be established for all drug treatment programs throughout the country for all time.

When cost savings and benefits involve health services, welfare, and other services for which cost data are available for individual patients, the cost for each patient needs to be contrasted for different periods of treatment. These services can vary greatly between patients; an estimate of the average health care cost per patient could result in over- or underestimation of cost-savings benefits.

Table 24 lists examples of the types of costs and potential cost savings that can be included in the survey. It is not meant to be complete. Note also that room for a range of estimates is provided, in recognition of the variability in costs of these services between patients and over time for the same patient. Costs of the specific criminal behaviors of individual patients then can be contrasted for the periods -

- Before versus after treatment.
- Before versus during treatment.
- During versus after treatment.

These costs can be examined separately for each category of potential cost savings or actual income produced and then summed across all categories to find the total benefit.

Table 24. Types of Costs and Potential Cost Savings

	Effectiveness measure	Effectiveness-benefit transformation	Benefit measures
Possible Cost Savings	Criminal acts not performed	Thefts at \$___ / misdemeanor \$___/ felony Assaults at \$___	Savings to potential victims due to income loss avoided, property not damaged or lost, and health and mental health services not needed
	Drugs not purchased	Opiates at \$___ to \$___/day Cocaine and crack at \$___ to \$___/day Other at \$___ to \$___/day	Money not spent on drug purchases
	Criminal justice services not used	Arrests at \$___/ arrest Jail at \$___/day Prosecution at \$___/ day	Expense of criminal justice services avoided
	Drug treatment no longer needed	\$__ per patient per day for the mixture of treatments provided	Cost of drug treatment no longer needed
	Welfare payments not provided	\$__ per patient per day in welfare payments	Amount of welfare payments not provided
	Disability payments not made	\$__ per patient per day in disability payments	Size of disability payments not made
	Health services not used	Sum health care cost use for 6 - 12 months before treatment and 6 - 12 months after treatment	Cost of health services not used
Possible Benefits Produced	Employment (licit)		Income earned from licit sources
	Entrepreneurship (licit)		New income (profit) from enterprise
	Income taxes paid on licit income		Amount of Federal, State, and local taxes paid on licit income
	Increased productivity in an existing job		Increased profit for employer, company, and sole proprietorship

Net Benefit

Cost-benefit analysis answers the question of whether the outcomes of a program are worth the costs by -

- Measuring outcomes in the same units -dollars, usually -as costs.
- Seeing whether the value of outcomes exceeds the value of costs (by subtracting total costs from total benefits, which is called the net benefit).

To calculate the total benefit per patient for a program, simply add up the benefit figures for each of the specific measures. Similarly, to calculate the total cost per patient for a program, add up the cost figures for each procedure. Then you can calculate the net benefit (total benefits minus total costs) for the patient. Add these up for all patients to find the net benefit for the treatment program.

To make cost-benefit analysis more specific, list the specific costs of achieving the benefits on each measure. Instead of adding up benefits for all measures for one patient, and then summing or averaging across patients, add up or average for all patients the benefits attained by a program for one measure.

Present-Value Benefits

Immediate positive outcomes are more valuable than delayed positive outcomes. Nonmonetary outcomes rarely are adjusted for the amount they are delayed, but monetary benefits often are. If costs and benefits are to be compared, monetary benefits delayed by more than a year from the time that costs occur can be adjusted for their delayed value.

The adjustment divides benefits by the sum of 1 plus a discount rate (often 0.08, 0.10, or 0.14). The discount rate closely resembles the interest rate that could be earned if the money spent on treatment were invested in another activity (such as a money market fund). Benefits delayed by 2 years are adjusted by dividing them by the result of multiplying the sum 1 + (discount rate) by itself once (squared). Benefits delayed by 3 years are adjusted by dividing them by the result of multiplying the sum 1 + (discount rate) by itself and then by itself again, and so on.

The result of applying net present value to delayed benefits can be striking. Consider, for example, a stream of cost-savings benefits of \$10,000 that occur at the end of the year for each of 3 years and a discount rate of 0.10. It is tempting simply to sum the benefits for a total of \$30,000. The net present value of the first end-of-the-year return is, however, $\$10,000 \div (1 + .10) = \$10,000 \div 1.10 = \$9,091$ following the calculation guidelines given above.

The net present value of the second year's cost-savings benefit is $\$10,000 \div [(1 + .10) \times (1 + .10)] = \$10,000 \div [1.10 \times 1.10] = \$10,000 \div 1.21 = \$8,264$. The net present value of the third year's cost-saving benefit is $\$10,000 \div [(1 + .10) \times (1 + .10) \times (1 + .10)] = \$10,000 \div [1.10 \times 1.10 \times 1.10] = \$10,000 \div 1.331 = \$7,513$. The total of these net-present-value benefits is far less than \$30,000. It is only \$24,868.

The resulting present-value benefits reflect the declining value of benefits that take longer to occur. The difficulties of making this adjustment are minor, although two to three discount rates (say, 0.08, 0.10, and 0.14) should be used. The resulting benefit adjustments provide a quantitative advantage of alternative procedures (and alternative treatment programs) that produce benefits more rapidly.

Time to Return on Investment

Net benefit is the result of subtracting costs from benefits. Present valuing benefits reduces the value of benefits. Using present-value benefits gives an appropriate advantage to programs that achieve their benefits sooner. Present valuing benefits still, however, gives an advantage (appropriately) to programs that take longer but achieve better benefits than programs that produce quick but small benefits.

Time to return on investment is the time at which investment equals monetary outcomes. The time it takes benefits to begin to exceed costs for substance abuse treatment is of concern to funders and other interest groups. Each patient can be monitored for the time actually elapsed before the monetary value of the outcomes achieved equals the monetary value of the resources used. The average time to return on investment then can be computed for all patients.

One way to do this is to keep each patient's figurative "bill" on a lined piece of paper or on a spreadsheet, such as the one shown in table 25. "Investment" is the cost of treatment services delivered. "Return on Investment" is the monetary or monetized benefit resulting from treatment services. "Cumulative Investment" is the running total of all treatment and other service costs. "Cumulative Return on Investment" is the continuous total of all benefits (monetary and monetized) resulting from treatment. "Net Benefit" is the result of subtracting the Cumulative Investment from the Cumulative Return on Investment. An advantage of keeping these data on a computer spreadsheet is that the cumulative total and the net benefit can be automatically updated by the computer each time you enter new cost (investment) or benefit data.

Table 25 could be completed just from the perspective of the present treatment program, or from the perspective of past as well as present treatments, or for society as a whole. In the "Return on Investment" column, one could add the patient's debt to society -restitution owed victims or the cost of criminal justice services. The balance unpaid from previous treatment programs also could be added here.

Table 25. Sample Cumulative Costs and Benefits and Net Benefit

Time	Investment	Return on investment	Cumulative investment	Cumulative return on investment	Net benefit
Date	Cost of treatment services delivered	Benefit to society, patient, or other individual	Running total of all treatment costs	Running total of all benefits of treatment	Cumulative return minus cumulative investment
1/3 start	\$376 (screening)		\$376	0	-\$376
1/5	\$145 (session)	\$21 (drug-free day)	\$521	\$21	-\$500
1/6		\$21 (drug-free day)	\$521	\$42	-\$479
1/8	\$95 (group)	\$21 (drug-free day)	\$616	\$63	-\$458
1/8	\$145 (session)		\$761	\$63	-\$698
1/9		\$124 (income for employed day)	\$761	\$187	-\$574
1/9		\$21 (drug-free day)	\$761	\$208	-\$553

Total investment in treatment expenses can be compared to the total monetary value of outcomes achieved for a cohort of patients (say, the first 100 patients entering the clinic following the first year of startup and operation).

Time to return on investment can be contrasted for different groups of patients, such as those receiving different procedures or exhibiting different processes. The cost-benefit of different procedures also can be compared by contrasting time to return on investment for patients treated by the different procedures.

Just as calculations of time to return on investment should include present-value benefits, more delayed costs also should be adjusted for present value. The latter procedure quantifies the judgment that programs that delay some costs are preferred over programs that require all expenditures up front.

Potential Problems With Cost-Benefit Analysis

Erroneous Assumptions of Linearity

The strength of cost-benefit analysis also is its weakness or, more accurately, its problem. Because ratios can be calculated very readily (since costs and outcomes are in the same monetary units in most cost-benefit analyses), funders may make all the erroneous assumptions noted earlier that are encouraged by cost-outcome ratios .

Net benefit and time to return on investment forms of cost-benefit analysis encourage similar, and similarly erroneous, assumptions. For example, funders may incorrectly assume that because the benefit for an investment of \$100,000 in a substance abuse treatment program is \$50,000, doubling the investment to \$200,000 will double the benefit to \$100,000.

The common pattern of diminishing returns on investment would diminish this anticipated benefit to less than double. It also is possible that increasing the initial investment so much would allow entirely different (and much more effective and beneficial) treatment procedures to be used.

Some funders also may believe that increasing the investment in treatment might yield a quicker return on investment, which might not occur given limitations on how rapidly current treatment technology can modify the behaviors, life skills, and lifestyles associated with substance abuse.

Overemphasis on Monetary and Monetized Outcomes

The major problem with all forms of cost-benefit analysis is that monetary outcomes are the only outcomes considered. Most service providers, many patients, and some other interested parties believe that the most important outcomes of substance abuse treatment can hardly be quantified, much less monetized (translated into monetary outcomes). To note that some nonmonetary outcomes, such as reduced crime, can be monetized does not eliminate, but only reduces, this problem. Many providers are unwilling to consider placing a monetary value on the outcomes of their services. These providers often resent attempts by persons outside the treatment program to monetize their outcomes.

Critics also note that cost-benefit analysis has been used to justify a number of decisions that proved to be not only erroneous but disastrously so. For example, cost-benefit analyses conducted by State mental health hospitals in the 1980s apparently were used to justify sudden deinstitutionalization without preparation of the patient or the community. This removal of many mental patients from hospitals and placement into communities that were not prepared to provide necessary services exacerbated homelessness and amounted to abandonment of some patients.

This unwise decision does not necessarily mean that cost-benefit analysis is itself unwise. Problems arise when only one perspective is considered; it is important to adopt multiple perspectives in cost-outcome analyses. For example, in the deinstitutionalization analysis, only the perspective of the State mental hospital was considered.

Resources for Cost-Benefit Analysis

Several good books discuss the value of using cost-benefit analysis to evaluate programs (Nas 1996; Thompson 1980). A classic cost-benefit analysis performed in mental health (deinstitutionalization of schizophrenic patients) is provided by Weisbrod (1983). The much-discussed CALDATA study (Gerstein et al. 1994) also deserves your attention, as it is directly related to substance abuse treatment.

States Consider Drug Tests for Welfare Recipients

Thursday , March 26, 2009

Associated Press

CHARLESTON, W.Va. —

Want government assistance? Just say no to drugs.

Lawmakers in at least eight states want recipients of food stamps, unemployment benefits or welfare to submit to random drug testing.

The effort comes as more Americans turn to these safety nets to ride out the recession. Poverty and civil liberties advocates fear the strategy could backfire, discouraging some people from seeking financial aid and making already desperate situations worse.

Those in favor of the drug tests say they are motivated out of a concern for their constituents' health and ability to put themselves on more solid financial footing once the economy rebounds. But proponents concede they also want to send a message: you don't get something for nothing.

"Nobody's being forced into these assistance programs," said Craig Blair, a Republican in the West Virginia Legislature who has created a Web site — notwithmytaxdollars.com — that bears a bobble-headed likeness of himself advocating this position. "If so many jobs require random drug tests these days, why not these benefits?"

Blair is proposing the most comprehensive measure in the country, as it would apply to anyone applying for food stamps, unemployment compensation or the federal programs usually known as "welfare": Temporary Assistance for Needy Families and Women, Infants and Children.

Lawmakers in other states are offering similar, but more modest proposals.

On Wednesday, the Kansas House of Representatives approved a measure mandating drug testing for the 14,000 or so people getting cash assistance from the state, which now goes before the state senate. In February, the Oklahoma Senate unanimously passed a measure that would require drug testing as a condition of receiving TANF benefits, and similar bills have been introduced in Missouri and Hawaii. A Florida senator has proposed a bill linking unemployment compensation to drug testing, and a member of Minnesota's House of Representatives has a bill requiring drug tests of people who get public assistance under a state program there.

A January attempt in the Arizona Senate to establish such a law failed.

In the past, such efforts have been stymied by legal and cost concerns, said Christine Nelson, a program manager with the National Conference of State Legislatures. But states' bigger fiscal crises, and the surging demand for public assistance, could change that.

"It's an example of where you could cut costs at the expense of a segment of society that's least able to defend themselves," said Frank Crabtree, executive director of the West Virginia chapter of the American Civil Liberties Union.

Drug testing is not the only restriction envisioned for people receiving public assistance: a bill in the Tennessee Legislature would cap lottery winnings for recipients at \$600.

There seems to be no coordinated move around the country to push these bills, and similar proposals have arisen periodically since federal welfare reform in the 1990s. But the appearance of a cluster of such proposals in the midst of the recession shows lawmakers are newly engaged about who is getting public assistance.

Particularly troubling to some policy analysts is the drive to drug test people collecting unemployment insurance, whose numbers nationwide now exceed 5.4 million, the highest total on records dating back to 1967.

"It doesn't seem like the kind of thing to bring up during a recession," said Ron Haskins, a senior fellow at the Brookings Institution. "People who are unemployed, who have lost their job, that's a sympathetic group. Americans are tuned into that, because they're worried they'll be next."

Indeed, these proposals are coming at a time when more Americans find themselves in need of public assistance.

Although the number of TANF recipients has stayed relatively stable at 3.8 million in the last year, claims for unemployment benefits and food stamps have soared.

In December, more than 31.7 million Americans were receiving food stamp benefits, compared with 27.5 million the year before.

The link between public assistance and drug testing stems from the Congressional overhaul of welfare in the 1990s, which allowed states to implement drug testing as a condition of receiving help.

But a federal court struck down a Michigan law that would have allowed for "random, suspicionless" testing, saying it violated the 4th Amendment's protections against unreasonable search and seizure, said Liz Schott, a senior fellow at the Center on Budget and Policy Priorities.

At least six states — Indiana, Massachusetts, Minnesota, New Jersey, Wisconsin and Virginia — tie eligibility for some public assistance to drug testing for convicted felons or parolees, according to the NCSL.

Nelson said programs that screen welfare applicants by assigning them to case workers for interviews have shown some success without the need for drug tests. These alternative measures offer treatment, but can also threaten future benefits if drug problems persist, she said.

They also cost less than the \$400 or so needed for tests that can catch a sufficient range of illegal drugs, and rule out false positive results with a follow-up test, she said.

CS FOR HOUSE BILL NO. 259()

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVES KELLER AND GATTO, Kelly

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to citizenship requirements and an alcohol impairment and drug**
2 **testing program for applicants for and recipients of specified cash assistance."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.05 is amended by adding new sections to read:

5 **Article 4. Alcohol and Drug Testing.**

6 **Sec. 47.05.400. Alcohol impairment and drug testing; legislative findings**
7 **and purpose.** The legislature finds that a statewide threat to public safety exists with
8 regard to the use of cash assistance for the purchase of alcohol and illegal drugs. The
9 purpose of the testing program established under AS 47.05.400 - 47.05.500 is to
10 reduce that risk and to protect the residents of the state.

11 **Sec. 47.05.410. Alcohol impairment and drug testing for eligibility;**
12 **regulations; immunity.** (a) The department shall implement a program consistent
13 with AS 47.05.400 - 47.05.500 that provides for random and suspicion-based testing
14 of recipients of cash assistance for use of alcohol that impairs a recipient's ability to

work or to seek work and of applicants for and recipients of cash assistance for the use of illegal drugs.

(b) The department shall adopt regulations to implement this section. The regulations must include testing policies consistent with AS 47.05.430 and specify the type of testing to be conducted and the illegal drugs to be included in the testing program. The drug tested must have a cutoff level that yields a positive test result

(1) for initial testing of urine, as follows:

SUBSTANCE	CUTOFF CONCENTRATION (nanograms in each milliliter)
Marijuana metabolites	50
Cocaine metabolites	300
Opiate metabolites	2,000
Phencyclidine	1,000
Amphetamines	1,000

(2) for confirmatory testing of urine, as follows:

SUBSTANCE	CUTOFF CONCENTRATION (nanograms in each milliliter)
Marijuana metabolite (Delta-9-tetrahydrocannabinol-9-carboxylic acid)	15
Cocaine metabolite (Benzoylecgonine)	150
Opiates	
Morphine	2,000
Codeine	2,000
6-Acetylmorphine	10
(when morphine concentration exceeds 2,000 nanograms in each milliliter)	
Phencyclidine	25
Amphetamines	
Amphetamine	500
Methamphetamine	500
(when amphetamine concentration is	

1 greater than or equal to 200 nanograms
2 in each milliliter)

3 (3) for testing of alternative specimens that is consistent with the
4 mandatory guidelines for the federal workplace drug testing program adopted by the
5 United States Department of Health and Human Services.

6 (c) Unless the department or an agent or employee of the department knew or
7 should have known that the results of a test conducted under this section were false
8 and took action that affected a person's eligibility for cash assistance based on the false
9 test results, a person may not bring an action for damages against the department or an
10 agent or employee of the department for

11 (1) good faith actions taken to conduct, or as a result of, alcohol
12 impairment or drug testing under this section;

13 (2) failure to test for alcohol impairment or drugs or for a specific
14 drug;

15 (3) failure to test, or if the test was undetected, failure to detect a
16 specific drug or medical or psychological condition or disorder;

17 (4) termination or suspension of an alcohol or drug prevention or
18 testing program or policy.

19 (d) In a claim for damages based on false test results,

20 (1) a rebuttable presumption exists that the test results were valid if the
21 department complied with this section and the regulations adopted under this section;
22 and

23 (2) the department may not be held liable for monetary damages for
24 good faith reliance and reasonable actions taken as a result of false test results.

25 (e) A person may not bring an action against the department based on the
26 failure of the department to establish a program or policy on substance abuse
27 prevention or to implement alcohol impairment or drug testing.

28 **Sec. 47.05.420. Confidentiality; liability.** (a) The results of a test conducted
29 under AS 47.05.410 are confidential, except that the results may be revealed to the
30 recipient of cash assistance who was tested and to agents and employees of the
31 department as required to determine eligibility for cash assistance.

1 (b) A person may not bring an action for defamation of character or reputation
2 as a result of disclosure of the results of an alcohol impairment or drug test under the
3 alcohol impairment or drug testing program established under AS 47.05.410 unless

4 (1) the results were disclosed to a person, other than an agent or
5 employee of the department for the purpose of the testing program or under court or
6 administrative order;

7 (2) the information disclosed included false test results;

8 (3) the information was negligently or intentionally disclosed; and

9 (4) the elements of the tort claim are met.

10 **Sec. 47.05.430. Testing policies and procedures.** (a) The department shall
11 adopt testing policies that include

12 (1) a list of substances tested;

13 (2) a description of the testing methods and collection procedures,
14 including on-site testing;

15 (3) a right to confirmatory testing and the procedures for confirmatory
16 testing;

17 (4) the consequences for refusal to test or retest that are consistent with
18 the provisions in AS 47.05.450;

19 (5) the right of an applicant for or recipient of cash assistance to
20 receive test results within five working days after the department receives the test
21 results or the written request, whichever is later, if a written request is made by the
22 applicant or recipient within six months after the test;

23 (6) the right of an applicant and a recipient, on the applicant's or
24 recipient's request, to receive, within 72 hours or before an adverse action is taken,
25 whichever occurs first, a confidential explanation of the applicant's or recipient's test
26 results;

27 (7) providing the department's confidentiality and testing policies to
28 applicants for and recipients of cash assistance not less than 30 days before initiating
29 testing on the applicant or recipient.

30 (b) The department shall pay the cost of testing and, if the testing is performed
31 at a location other than a location of the department, the cost of transportation to and

1 from the testing center.

2 (c) Sample collection and testing must

3 (1) comply with scientifically accepted methods and procedures;

4 (2) be performed at a location identified by the department and
5 analyzed by a laboratory approved or certified by the Substance Abuse and Mental
6 Health Services Administration or by the College of American Pathologists;

7 (3) be conducted under reasonable, sanitary, and private conditions
8 that are consistent with reliability;

9 (4) be properly controlled and samples must be properly labeled; and

10 (5) include relevant medical information.

11 (d) A positive drug test must be confirmed using a different analytical process
12 than was used in initial testing. A positive drug test must be reported as a negative
13 result if a licensed physician verifies that the test was affected by medication
14 prescribed for the applicant or recipient tested.

15 (e) The department may not rely on a positive test result without confirmatory
16 testing.

17 **Sec. 47.05.440. Training of test administrators.** (a) The department shall
18 ensure that not less than one designated employee of the department receives not less
19 than one hour of training on alcohol abuse and an additional one hour of training on
20 the use of controlled substances for the purpose of finding reasonable suspicion for
21 testing under AS 47.05.400 - 47.05.500.

22 (b) If the department provides on-site testing for alcohol impairment or illegal
23 drug use under AS 47.05.410, the department shall employ on-site administrators who

24 (1) have received training in person and written certification of the
25 training by the test manufacturer's representative on the proper procedure for
26 administering the test and on accurate analysis of the on-site test results; the training
27 must include recognition of adulteration of a sample collected on-site;

28 (2) agree in writing to maintain confidentiality under the testing
29 policies adopted by the department.

30 **Sec. 47.05.450. Consequences of confirmatory positive testing.** (a) Except as
31 provided in (b) of this section, the department shall deny or suspend cash assistance to

1 an applicant for or recipient of the assistance who, under AS 47.05.400 - 47.05.500,
2 has

3 (1) been tested and received a confirmatory positive result for alcohol
4 impairment or use of illegal drugs and fails to comply with a treatment program
5 approved by the department; or

6 (2) refused alcohol impairment or drug testing required by the
7 department.

8 (b) The department may provide cash assistance on behalf of an eligible
9 recipient who is subject to denial or suspension under (a) of this section if the
10 department has in place an option for third-party receipt of the cash assistance for
11 which the recipient or the recipient's family is otherwise eligible and the third party is
12 a legal guardian, public institution, or licensed health care facility that provides care,
13 shelter, or food to the recipient or the recipient's dependent children.

14 **Sec. 47.05.500. Definitions.** In AS 47.05.400 - 47.05.500, "cash assistance"
15 means general relief under AS 47.25.120 - 47.25.300 and Alaska Temporary
16 Assistance under AS 47.27.

17 * **Sec. 2.** AS 47.25.120 is amended by adding a new subsection to read:

18 (b) A person must be a citizen of the United States or a legal alien as described
19 in 8 U.S.C. 1181 - 1186 and not otherwise precluded from eligibility under state or
20 federal law to be eligible for assistance under AS 47.25.120 - 47.25.300.

CS FOR HOUSE BILL NO. 260(HSS)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE HEALTH AND SOCIAL SERVICES COMMITTEE

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVE KELLER

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to preventive care services for medical assistance recipients; and**
2 **providing for an effective date."**

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 *** Section 1.** AS 47.07 is amended by adding a new section to read:

5 **Sec. 47.07.047. Preventive care services.** (a) The department shall provide
6 services and opportunities to enable eligible medical assistance recipients to receive a
7 full range of preventive care services that are coordinated and that are provided in the
8 least restrictive and most home-like environment. The services must include

- 9 (1) coordination by a primary care provider;
- 10 (2) use of evidence-based practice guidelines;
- 11 (3) patient education;
- 12 (4) specialty referral and provider collaboration;
- 13 (5) routine health assessments;
- 14 (6) outcome assessment and measurement;

1 (7) other preventive services identified by the department in regulation.

2 (b) To implement (a) of this section, the department may contract with
3 qualified entities or providers to provide preventive care services that include medical
4 home-based services and programs of alternative care for the elderly.

5 (c) The department may provide services required under (a) of this section
6 under a waiver, in accordance with 42 U.S.C. 1396 - 1396p (Title IX Social Security
7 Act), this chapter, and regulations adopted under this chapter, if the department

8 (1) finds that providing the services under a waiver is the most cost-
9 effective and cost-efficient method of providing the services;

10 (2) receives appropriations allocated for that purpose; and

11 (3) receives approval from the federal government for the waiver.

12 (d) The department shall evaluate the projected and actual savings resulting
13 from implementation of this section and provide an annual report to the legislature
14 describing the services provided, participant outcomes, and savings.

15 * **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to
16 read:

17 **FEDERAL MEDICAL ASSISTANCE APPROVAL; NOTIFICATION.** (a) The
18 Department of Health and Social Services may apply for a waiver from the United States
19 Department of Health and Human Services to provide preventive services to medical
20 assistance recipients under AS 47.07.047, enacted by sec. 1 of this Act.

21 (b) On or before July 1, 2011, the commissioner of health and social services shall
22 notify the revisor of statutes of the approval or denial of a waiver applied for under this
23 section.

24 * **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to
25 read:

26 **PREVENTIVE CARE SERVICES; REGULATIONS.** The Department of Health and
27 Social Services may adopt regulations necessary to implement AS 47.07.047, enacted by sec.
28 1 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act) but
29 not before the effective date of sec. 1 of this Act.

30 * **Sec. 4.** Sections 2 and 3 of this Act take effect immediately under AS 01.10.070(c).

Sponsor Statement House Bill 260

“An Act relating to preventive care and disease management services for medical assistance recipients; and providing for an effective date.”

“An ounce of prevention is worth a pound of cure.” Those were words most of us heard from our mothers or fathers when we were young. Today, we have an opportunity to apply those words in a practical and economical sense. House Bill 260 will open the door for those receiving Medicaid to participate in preventative care and disease management programs.

Under the proposal, providers will be reimbursed for giving patients the option of learning and pursuing good health based on their personal history and risk factors. Often if a condition is dealt with early on, a cure can be as simple as a life style change. This could eliminate the need for extensive medical intervention later and will save money.

Preventative medicine is the basis for so much of our life style today from smoking cessation to reducing alcohol consumption. Currently, the Medicaid system does not permit, nor will it pay for preventative types of activity. House Bill 260 will give those using Medicaid the same opportunity to learn how to make changes in their lives that will help them live healthier.

ANALYSIS: (Attach a separate page if necessary)

HB 260 would require DHSS to develop a program of preventive care and disease management for Medicaid recipients. The department anticipates complying with this requirement by establishing a Program of All-Inclusive Care for the Elderly (PACE) and/or medical home program. This bill would not affect the total number of Medicaid recipients served, but would alter the mix of services that some individuals receive and, in some instances, how they receive it.

DHSS anticipates that actual provision of the preventive care and disease management would occur through PACE and primary care providers. However, it would be necessary to hire one new staff to develop and oversee these programs.

HB 260 would require DHSS to develop a program of preventive care and disease management for Medicaid recipients. The department anticipates complying with this requirement by establishing a Program of All-Inclusive Care for the Elderly (PACE) and/or medical home program. This bill would not affect the total number of Medicaid recipients served, but would alter the mix of services that some individuals receive and, in some instances, how they receive it.

PACE is an optional benefit under both the Medicare and Medicaid programs. It serves people over 55 years who meet the State's standards for nursing home care. PACE providers receive capitated payments from Medicare and Medicaid and assume the risk for all Medicare and Medicaid services. For most patients, a comprehensive service package permits them to continue living at home while receiving services, rather than be institutionalized. A team of doctors, nurses and other health professionals assess participant needs, develop care plans, and deliver all services, which are integrated into a complete health care plan. FISCAL NOTE

STATE OF ALASKA

BILL NO. HB260

2010 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

Starting a PACE program requires an agreement between the State Medicaid and the federal Medicare programs. It may take as long as 2 years to initiate a program including the possible need to obtain a Medicaid waiver, negotiating an agreement with Medicare to participate in a regional program, and securing the interest of a PACE organization. Initially, capitated Medicaid payments to the PACE provider would probably equal what the Medicaid program is currently paying for services for these clients. Eventually, with enough actuarial experience, capitated payments might be adjusted downward if the program successfully bends the cost curve.

Medicaid Medical home is a model of health care delivery in which a Medicaid recipient chooses a primary care provider (PCP) who is responsible for coordinating the participant's care. These plans provide participants a medical home and a relationship with a primary care provider to increase primary care and reduce the need for specialty and emergency department care. PCPs are paid a monthly fee for coordinating the participant's care on top of the payment for providing medical services reimbursed on a fee-for-service basis.

Considerable efforts on the part of HCS would be necessary in order to recruit primary care providers to participate in a medical program. One potential opportunity would be to enlist the participation and partnership of the Primary Care Association and a contracting relationship with specific Community Health Centers to develop medical home programs. Potential cost savings from the program would be depending on the level of fees necessary to attract adequate PCPs. Because of the uncertainty about the necessary level of the fee, DHSS does not project spending reductions by FY 2016. However, DHSS does believe that Primary Care case management would result in improved quality of care for Medicaid recipients.

Preventive Health Care: An Ounce of Prevention

by Eve B. Scheffenacker

When people talk about the dire state of health care in this country, fingers point in every direction. At hospitals and HMOs (health maintenance organizations) that make treatment decisions based on cost-benefit analysis. At drug companies whose profit margins have been described as obscene. At insurance companies that won't insure people who've been treated for depression or acid reflux.

Clearly, there's plenty of blame to go around. So let's not overlook another influential group--patients like you and me, especially the ones who have insurance. While thousands of Americans do without medical care that they need but can't afford, an even larger number of insured people ignore health services that will cost them a little and could save everyone a lot.

What's the story?

A recent study found that, of the people who have preventive care benefits available through their medical plans, only 10% actually use them. The other 90% don't get routine exams like mammograms and prostate screenings, don't get lab work to check their cholesterol and blood sugar, and don't get their children vaccinated. They don't enroll in an exercise class or a disease management program. Not even when their plans cover all or most of the costs.

A new MRI available in some areas can diagnose heart disease 10 years before the person is at risk for heart attack.

Some of these people may not know the benefits exist and don't think to ask. A lot of them, though, are in denial, believing that "it"--heart disease, cancer, diabetes, or stroke--won't happen to them. Some of them may be right, but the odds don't favor them. The U.S. spends \$240 billion a year treating diabetes, obesity, and tobacco-related diseases. That figure represents a lot of very sick people whose diseases could have been detected and managed by preventive care.

The pound of cure

These people may be making a risky and expensive mistake, because preventive care saves lives and money. So if you belong to the 90% majority that is choosing to go without preventive care, here are some reasons to consider joining the minority.

- *Preventive care is inexpensive long-term care* because it protects your future health. Medical and pharmaceutical advances have only a small effect on our overall health. In fact, 25 of the 30 years added to life expectancy in the past century are due to advances in preventive medicine and public health.

Only 10% of the people who have preventive care benefits through their medical plans use them.

Even when you're feeling well, the first signs of a critical disease may be present. Only blood tests, X-rays, and other procedures can detect those early signs. Doctors now are better educated about doing routine screening and knowing what to look for. In the meantime, advances in routine tests have made

them remarkably accurate. For example, a new type of MRI (magnetic resonance imaging; note that this test is not available everywhere) can diagnose heart disease as much as 10 years before the person is at risk for heart attack. Think how the death rate from heart attack might drop if more people took advantage of that one test.

Detecting a chronic or acute disease in its early stage puts you ahead of the curve. It also saves you a lot of money. Instead of working to combat an advanced disease and its complications, your doctor can focus on keeping a small symptom from becoming bigger. Usually, the earlier you start treating a condition, the better your chances of surviving. For example:

Detecting an acute disease in its early stages puts you ahead of the curve, medically and financially.

- When doctors can diagnose heart disease before symptoms occur, they can treat and even reverse the progress of most conditions with outpatient care--and patient compliance.
- Because colon polyps grow slowly, routine colonoscopies could prevent more than 90% of deaths from colon cancer.
- Several studies show that routine mammograms after age 40 lower a woman's risk of dying from breast cancer.
- *Regular preventive care means better overall care from your primary doctor.* When you receive regular preventive care, your doctor can track your health over a period of years. He or she then is more likely to notice small but telling changes in your weight or blood pressure, sleep patterns, or appetite. Your doctor also can help you manage behaviors that contribute to heart disease, diabetes, and cancer. Walking 20 minutes a day, cutting back on fat in your diet, or stopping smoking are manageable changes that literally can save your life.
- *Routine immunizations give you and your children immediate protection.* Pediatric vaccinations protect children from serious infections including polio, chicken pox, and meningitis. And among older Americans, the annual flu shot can prevent the flu and other, more serious complications including heart attack, pneumonia, and stroke.

Take care of yourself now and protect the health you hope to enjoy 10 years from now.

Bottom line--preventive care could lead the way to health-care reform

Everyone, including you, saves money when more people make an effort to stay well. And we could be talking about a lot of money. According to the National Congress on Pre-Symptom Medicine, regular use of preventive care by Americans could cut projected health-care costs by 50% over the next 10 years.

Think about what that means. If there's any truth in that statistic, a large part of the solution to the health-care crisis is in our control. The financial impact of the preventive care that you and your family members receive in the coming years can reach far beyond your paycheck. It can have a strong and salutary effect on the health-care industry and even the economy. With rising health-care costs undermining the profitability of businesses and the health of millions of people, that possibility is worth exploring and acting on.

A large part of the solution to the health-care crisis is in our control.

So find out what coverage your medical plan has for wellness and preventive care. Make an appointment now for a routine physical or a bone density test. Take your children in for their vaccinations, or get a flu shot at a health fair. Grit your teeth and schedule a mammogram, colonoscopy, or prostate exam. Take care of yourself now and protect the health you hope to enjoy 10 years from now. You'll save money that you can spend on more pleasant pastimes. You'll also be doing your part to resolve the health-care crisis.

It can only do you good!

Does Preventive Care Save Money? Health Economics and the Presidential Candidates

Joshua T. Cohen, Ph.D., Peter J. Neumann, Sc.D., and Milton C. Weinstein, Ph.D.

With health care once again a leading issue in a presidential race, candidates have offered plans for controlling spiraling costs while enhancing the quality of care. A popular component of

such plans involves greater promotion of preventive health measures. The first element in Hillary Clinton's plan is to "focus on prevention: wellness not sickness." John Edwards has stated that "study after study shows that primary and preventive care greatly reduces future health care costs, as well as increasing patients' health." Mike Huckabee has said that a focus on prevention "would save countless lives, pain and suffering by the victims of chronic conditions, and billions of dollars." Barack Obama has argued that "too little is spent on prevention and public health."

Indeed, some evidence does suggest that there are opportunities to save money and improve health through prevention. Preventable causes of death, such as to-

bacco smoking, poor diet and physical inactivity, and misuse of alcohol have been estimated to be responsible for 900,000 deaths annually — nearly 40% of total yearly mortality in the United States.¹ Moreover, some of the measures identified by the U.S. Preventive Services Task Force, such as counseling adults to quit smoking, screening for colorectal cancer, and providing influenza vaccination, reduce mortality either at low cost or at a cost savings.²

Sweeping statements about the cost-saving potential of prevention, however, are overreaching. Studies have concluded that preventing illness can in some cases save money but in other cases can add to health care costs.³ For example, screening costs will exceed the savings from

avoided treatment in cases in which only a very small fraction of the population would have become ill in the absence of preventive measures. Preventive measures that do not save money may or may not represent cost-effective care (i.e., good value for the resources expended). Whether any preventive measure saves money or is a reasonable investment despite adding to costs depends entirely on the particular intervention and the specific population in question. For example, drugs used to treat high cholesterol yield much greater value for the money if the targeted population is at high risk for coronary heart disease, and the efficiency of cancer screening can depend heavily on both the frequency of the screening and the level of cancer risk in the screened population.⁴

The focus on prevention as a key source of cost savings in health care also sidesteps the question of whether such measures are generally more promising and efficient

Distribution of Cost-Effectiveness Ratios for Preventive Measures and Treatments for Existing Conditions.

Data are from the Tufts–New England Medical Center Cost-Effectiveness Registry. QALY denotes quality-adjusted life-year.

than the treatment of existing conditions. Researchers have found that although high-technology treatments for existing conditions can be expensive, such measures may, in certain circumstances, also represent an efficient use of resources.⁵ It is important to analyze the costs and benefits of specific interventions.

A systematic review of the cost-effectiveness literature sheds light on these issues. We analyzed the contents of the Tufts–New England Medical Center Cost-Effectiveness Analysis Registry (www.tufts-nemc.org/cearegistry), which consists of detailed abstracted information on published cost-effectiveness studies through 2005. Each registry article estimates the cost-effectiveness of one or more interventions as the incremental costs (converted here to 2006 U.S. dollars) divided by the incremental health benefits quantified in terms of quality-adjusted life-years (QALYs). Low cost-effectiveness ratios are “favorable” because they indicate that incremental QALYs can be accrued inexpensively. An intervention is

“cost-saving” if it reduces costs while improving health. Poorly performing interventions can both increase costs and worsen health.

Our analysis was restricted to the 599 articles (and 1500 ratios) published between 2000 and 2005 that properly discounted future costs and benefits. We classified 279 ratios as preventive because they refer to interventions designed to avert disease or injury; all 1221 other ratios pertain to treatments, a category that includes both “tertiary” measures (designed to ameliorate the effects of a disease or condition) and “secondary prevention” measures (designed to reverse or retard progression of an existing condition), such as the use of implantable cardioverter-defibrillators in patients with myocardial disease.

The bar graph shows that the distributions of cost-effectiveness ratios for preventive measures and treatments are very similar — in other words, opportunities for efficient investment in health care programs are roughly equal for prevention and treatment, at least

as reflected in the literature we reviewed. Moreover, both distributions span the full range of cost-effectiveness. The table shows the cost-effectiveness ratios for selected interventions of various types.

These results are consistent with earlier reviews but cover a larger sample of studies and quantify benefits in terms of QALYs. Some preventive measures save money, while others do not, although they may still be worthwhile because they confer substantial health benefits relative to their cost. In contrast, some preventive measures are expensive given the health benefits they confer. In general, whether a particular preventive measure represents good value or poor value depends on factors such as the population targeted, with measures targeting higher-risk populations typically being the most efficient. In the case of screening, efficiency also depends on frequency (more frequent screening confers greater benefits but is less efficient). Third, as is the case for preventive measures, treatments can be relatively efficient or inefficient.

Of course, our review reflects a selected sample of studies in the peer-reviewed literature and does not cover all possible opportunities to spend resources to improve health. In addition, there may be inconsistency among the studies in terms of the methods used. Still, our analysis is based on a large and diverse set of studies that used recommended metrics for cost-effectiveness analysis, and we believe that it offers important lessons.

Our findings suggest that the broad generalizations made by many presidential candidates can be misleading. These statements convey the message that substantial resources can be saved through prevention. Although some preventive measures do save money, the vast majority reviewed in the health

Cost-Effectiveness of Selected Preventive Measures and Treatments for Existing Conditions (2006 Dollars). ^{*c}	
Intervention	Cost-Effectiveness Ratio
Preventive measures	
<i>Haemophilus influenzae</i> type b vaccination of toddlers	Cost-saving
One-time colonoscopy screening for colorectal cancer in men 60–64 years old	Cost-saving
Newborn screening for medium-chain acyl-coenzyme A dehydrogenase deficiency	\$160/QALY
High-intensity smoking-relapse prevention program, as compared with a low-intensity program	\$190/QALY
Intensive tobacco-use prevention program for seventh- and eighth-graders	\$23,000/QALY
Screening all 65-year-olds for diabetes as compared with screening 65-year-olds with hypertension for diabetes	\$590,000/QALY
Antibiotic prophylaxis (amoxicillin) for children with moderate cardiac lesions who are undergoing urinary catheterization	Increases cost and worsens health
Treatments for existing conditions	
Cognitive-behavioral family intervention for patients with Alzheimer's disease	Cost-saving
Cochlear implants in profoundly deaf children	Cost-saving
Combination antiretroviral therapy for HIV-infected patients	\$29,000/QALY
Liver transplantation in patients with primary sclerosing cholangitis	\$41,000/QALY
Implantation of cardioverter-defibrillators in appropriate populations, as compared with medical management alone	\$52,000/QALY
Left ventricular assist device, as compared with optimal medical management, in patients with heart failure who are not candidates for transplantation	\$900,000/QALY
Surgery in 70-year-old men with a new diagnosis of prostate cancer, as compared with watchful waiting	Increases cost and worsens health

* The cost-effectiveness ratio is the incremental costs divided by the incremental benefits, relative to a comparator. The comparator is omitted from the intervention's description if it was no treatment or current treatment or if the intervention was added to, rather than substituted for, another treatment. The cost-effectiveness estimates listed are point-estimate values from the original articles (a more detailed table appears in the Supplementary Appendix, available with the full text of this article at www.nejm.org). Preventive measures are those designed to avert the development of a condition. Treatments for existing conditions include both those designed to prevent the progression of a condition and those designed to ameliorate the effects of a disease or condition. QALY denotes quality-adjusted life-year. For more information see www.tufts-nemc.org/cearegistry.

economics literature do not. Careful analysis of the costs and benefits of specific interventions, rather than broad generalizations, is critical. Such analysis could identify not only cost-saving preventive measures but also preventive measures that deliver substantial health benefits relative to their net costs; this analysis could also identify treatments that are cost-saving or highly efficient (i.e., cost-effective).

In addition to determining which preventive measures and treatments are most efficient, it will be necessary to identify those that are not yet fully deployed and those that could serve a large population and bring about substantial aggregate improvements in health at an acceptable cost. Findings that some cost-saving or highly efficient measures are underused would in-

dicate that current practice is inconsistent with the efficient delivery of health care. Other services might be identified as overused, and such findings would underscore the importance of fashioning policies that provide incentives to shift practice toward more cost-effective delivery of health care. In the face of increasingly constrained resources, there is a realistic way of achieving better health results: conduct careful analysis to identify evidence-based opportunities for more efficient delivery of health care — whether prevention or treatment — and then restructure the system to create incentives that encourage the appropriate delivery of efficient interventions.

No potential conflict of interest relevant to this article was reported.

Representative Berta Gardner *House District 24*

Sponsor Statement- House Bill 265

HB 265 – An Act relating to a two year funding cycle for medical assistance coverage for dentures.

HB 265 makes a simple change to the Adult Medicaid Dental program that would allow patients who are approved for dentures to receive both the uppers and lowers in a single fiscal year. The bill would let patients access two years of funding in a single year, thereby allowing them and their dentists to schedule treatment around the oral health of the patient, rather than the bureaucratic ease of the state fiscal year.

Current law places a limit on expenditures per eligible client at \$1,150 per year. This number was designed to pay for ½ of a set of dentures, either uppers or lowers, in a single fiscal year. When the program was created, the idea was that a client who needed dentures could receive one set on June 30th, and the second on July 1st. Unfortunately, this has proven to be impractical. Dentists who are forced to pull teeth can't always do so on the state's fiscal calendar, and Alaskans shouldn't suffer needlessly because their medical emergency occurred in the fall rather than the summer.

Adult Medicaid Dental has been recognized across the political spectrum as a successful government health care program. Over the past three years, the state has saved substantial amounts of money – and poorer Alaskans have been saved immense pain and hardship – by allowing Medicaid to pay for exams, cleanings, fillings, root canals, and dentures before painful and expensive surgery became necessary. HB 265 will fix a small flaw in the cost-containment portion of the program and help protect this important state investment.

HOUSE BILL NO. 265

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY REPRESENTATIVES GARDNER, PETERSEN, AND GARA

Introduced: 1/8/10

Referred: Prefiled

A BILL

FOR AN ACT ENTITLED

1 "An Act providing for a two-year funding cycle for medical assistance coverage for
2 dentures."

3 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

4 * **Section 1.** AS 47.07.067(a) is amended to read:

5 (a) Subject to appropriation, the department shall pay for minimum treatment
6 and for preventative and restorative adult dental services provided under
7 AS 47.07.030(b) and under regulations adopted by the commissioner in conformity
8 with applicable federal requirements and this chapter. Regulations adopted under this
9 section must include the following:

10 (1) except as provided in (e) of this section, a maximum amount of
11 benefits for preventative and restorative adult dental services of \$1,150 for each
12 eligible recipient in a fiscal year; and

13 (2) specification of the scope of coverage for preventative and
14 restorative adult dental services.

1 * **Sec. 2.** AS 47.07.067 is amended by adding a new subsection to read:

2 (e) If the department authorizes or approves payment for complete or partial
3 dentures for an eligible recipient, the department may authorize the payment in one
4 fiscal year of the maximum payment amount for not more than two fiscal years. A
5 recipient is not eligible for additional benefits under this section for a two-year period.

HB 265 is meant to address limitations of coverage for upper and lower dentures within a given state fiscal year under the \$1,150 annual limit. The annual limit provides for expenditures that would typically cover only an upper or lower denture, thus requiring Medicaid recipients to wait until the subsequent fiscal year to obtain the opposing denture under the Medicaid program.

The bill would authorize the department to allow for provision of both an upper and lower denture within the same state fiscal year, however when these services are provided the adult recipient would not be eligible for additional services under Medicaid preventative and restorative dental for a two-year period.

Date: 2/9/2010

FISCAL NOTE

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB265

ANALYSIS CONTINUATION

The Division of Health Care Services estimates that it will need a total of 1 FTE to fully track expenditures and to authorize procedures up to the limit of the proposed legislation in the first year of the program, prior to modification of the claims payment system (MMIS) to permit automated tracking of expenditures.

Administrative Costs:

1 Medical Assistance Administrator II (Range 18), \$84,510; All personal services costs include benefits. Assumes \$9.6 per FTE annually for office space, phones, and other contractual costs; \$2.6 one time costs per FTE for computers and software; \$5.0 one time costs per FTE for office equipment; \$2.0 per FTE annually for supplies. GF portion of these expenses is 50%.

Medical Assistance Administrator II Duties

If legislation is passed and implemented to allow recipients the ability to utilize two fiscal year's annual cap for dentures (full sets and partials) during SFY2011, it will create a labor intensive process of tracking the service limits manually. Our current Medicaid Management Information System has the capability of applying service exceptions on an annual basis only. Combining two years' limits will initially require a manual work-around for tracking the 11 denture and partial procedure codes being utilized by approximately 4,400 recipients, and follow-up to ensure limits are not exceeded nor services duplicated at any point in the two year period. To authorize payment of individual dental claims, staff will have to research, review, and evaluate the recipients' claims and treatment history for the two year period in question. The division estimates the need for a Medical Assistance Administrator II to handle the increased workload until modifications can be made to the MMIS.

Modification of MMIS

DHSS estimates that it will cost \$50.0 in contractual to modify the present MMIS or enhance the new MMIS currently in development. Part of the development process involves ceasing all modifications to the current MMIS prior to conversion, to ensure that the new system can replicate the functionality of the present system. DHSS assumes that it will not be able to make the necessary modifications prior to the "freeze" of the current system, likely to occur early in the summer of 2010. If DHSS is able to make the modifications before the freeze, it will not fill the position requested. GF portion of the system modification is 25%.

FISCAL NOTE

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB265

ANALYSIS CONTINUATION

We estimate that the cost of denture services in the APD has grown at the same rate as all Health Care Services Medicaid Services costs (forecasted to be 6%) from FY 2009 to 2010. Medicaid growth for APD alone is forecasted to be 8.9% from FY 2010 to 2011 to reach a baseline cost of \$1,868.0 for denture services in FY 2011 with no changes to the program.

With the changes proposed in this bill and an expected effective date of July 1, 2010, we estimate the baseline costs noted above for denture services in FY 2011 will increase by 50%, assuming half of denture services recipients would be completing the denture process from FY2010 and the other half would be getting both their upper and lower dentures in FY 2011 for a total cost of \$2,803.0 (a difference of \$935.0 from baseline). We would still expect some increased costs over baseline in FY2012 as the number of people getting denture services has been growing each year as adults continue to learn about the APD program and this bill allows for them to be paid in one year. For FY2012, we estimate the need for increased funds to be half of the amount needed in FY 2011.

For subsequent years, we would expect the cost of denture services to level out to approximately what we would expect without the changes in this bill, the shift being not in cost but in how many recipients are receiving services.

For FY2011, we estimate 67% of APD services to be federally reimbursable, assuming ARRA FMAP increases are valid through all 4 quarters of FY 2011. For FY2012 we expect a FMAP of 50%. As some ADP services are IHS and reimbursed at 100%, we expect 57% of ADP costs to be federally reimbursable.

The Honorable Johnny Ellis
State Capitol, Rm 103
Juneau, AK 99801 + 1182

5 November 2009

Dear Senator Ellis:

Thank you for sponsoring the legislation to allow Medicaid recipients to utilize two years of benefits to receive a full set of dentures. This will provide a valuable service for Medicaid recipients and will improve the delivery of care for providers. In a true win-win solution this should lessen the overall costs for the Medicaid division when the additional travel costs for delivering the same service twice and the associated medical and dental costs for trying to retain non salvageable teeth during that interim year are factored in.

Respectfully yours

Gary A. Moeller, DDS
President

L O G A N
D E N T A L

November 10, 2009

Senator Ellis
716 W. 4th Ave. Suite 500
Anchorage AK, 99501-2133

Dear Senator Ellis:

Thank you for sponsoring a bill to allow Medicaid recipients to use two consecutive years of supplemental benefits in the same year to receive upper and lower dentures at the same time. This will greatly help recipients as a single denture when you have no teeth to oppose it is of limited value. I believe it will ultimately lower costs for the Medicaid division, also, when travel benefits are factored in for this multi step procedure that must be repeated twice under the current system.

A case I did earlier this year may illustrate the problem providers' face. Due to HIPAA concerns I am not using names for this story.

I have a dental office in Juneau. Unfortunately, for a variety of reasons, dental offices in other Southeast communities do not usually accept new Medicaid patients. This patient had to travel over from Sitka and needed dentures, both upper and lower. He currently did not have either upper and lowers having lost both sets. The supplemental system for adult Medicaid benefits would cover a single denture, either the upper or lower. The patient, 78 years old and on fixed income, was unable to afford the second set even at reduced Medicaid fees. I wrote a letter Medicaid division, enclosed, outlining the problem and pointing out that travel costs associated with constructing the second set at a later date (when the new year's benefits kicked in) would ultimately cost more than the Medicaid fee for a denture. I received a reply from the division basically saying their hands were tied given the current statutes in place.

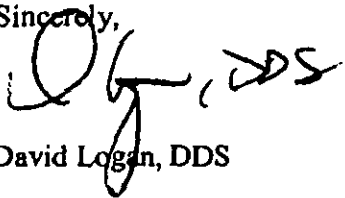

In the case of this patient I did a full set of dentures for the patient and absorbed the cost of construction of the second set. As I write this letter I saw two patients today in the same situation, one who lives here in Juneau that we are constructing an upper denture alone although he has no lower teeth. Currently are plan is construct the lowers after July

www.juneausmiles.com

1, 2010. The second patient traveled here from Angoon and lost both his upper and lower dentures 2 weeks ago. His treatment will be further complicated as his old set was apparently ill fitting and led to a large tissue mass on the lower that will have to be removed prior to denture construction.

Sincerely,

A handwritten signature in black ink, appearing to read "D Logan, DDS". The signature is stylized and includes the letters "DDS" at the end.

Re: [REDACTED]
Medicaid #: [REDACTED]

Dear Sirs:

Mr. [REDACTED] is currently edentulous (without teeth) upper and lower. We have previously preauthorized Mr. [REDACTED] for a lower denture (preauth [REDACTED]) - working with a Sitka Clinic we had not previously seen Mr. [REDACTED].

Mr. [REDACTED] has been without teeth for 6 years. One denture, the maximum allowed under the MEDS system, will provide little improvement for him. Mr. [REDACTED] will be traveling to our office from Sitka for completion of the denture. The travel costs will ultimately cost more than the fee for the denture given the number of appointments required to properly construct a denture.

I am requesting preauthorization for upper and lower dentures (included) for Mr. [REDACTED]. This is a case where everyone will benefit: the state will have less overall costs than a second round of travel costs to construct the other denture after July 1, Mr. [REDACTED] will have opposing dentures to eat with, and my overall costs will be less than repeating the same appointments come July 1.

Sincerely,

David Logan DDS

Alaska Mental Health Board

Adjust Cap on Adult Dental Services Reimbursed by Medicaid

The Governor's Council on Disabilities and Special Education, Alaska Mental Health Board, Advisory Board on Alcoholism and Drug Abuse, and Alaska Commission on Aging, in collaboration with the Alaska Mental Health Trust Authority and the Alaska Brain Injury Network, jointly support the developing a solution that will allow for the adjustment of the current cap on adult dental services reimbursed by Medicaid.

- Currently, the annual cap for dental services – such as cleanings, exams, crowns, root canals and dentures – is \$1,150 per individual. With the rising cost of dental care, this cap is proving not adequate yet the cap is set in statute and has not been increased in over three years.
- The American Dental Association recommends adult preventive and restorative dental services be included in all state Medicaid programs, and as former U.S. Surgeon General C. Everett Koop stated, "You're not healthy without good oral health."
- Trust beneficiaries continue to list dental services as a priority unmet health needs.
- The challenge this session is to find a current bill or to introduce a new bill that will create a method for adjusting the adult dental Medicaid cap on a regular basis or will at least increase the cap to cover the increase the cost of living increases over a 4 or five year period.

Therefore, we support a legislative solution that will allow for the adjustment of the current cap on adult dental services reimbursed by Medicaid.

SENIOR VOICE

Serving Older Alaskans and Their Families Since 1978

A publication of *Older Persons Action Group, Inc.* 325 E. Third Ave., Suite 300, Anchorage, Alaska 99501

Vol. 32 No. 11 November, 2009

Desperate senior prompts denture legislation

By SEN. JOHNNY ELLIS

Late last summer, an elderly man walked into my office and threatened to commit suicide. Needless to say, it was a very tense and upsetting situation for me and my staff. This gentleman had come from the Medicaid Adult Dental office, where he had been told that he had a choice – he could receive either the upper half or the lower half of the dentures that he needed, but not both, at least not in the same year. Of course, this set of options was really no choice at all, seeing as how he had no teeth at all. The state's wholly inadequate response to this constituent's unfortunate situation set my office in motion, and I am prepared to introduce legislation this session with bipartisan support that will provide a common-sense fix to an otherwise successful and needed program.

Medicaid Adult Dental was created three years ago. Until that time, Medicaid only covered emergency dental services for low income Alaskans. By expanding the program to cover preventative care – exams, cleanings, root canals, fillings and dentures – the state has saved millions of dollars and patients have avoided painful surgeries as the need for emergency care declines. In addition, good dental health

I have worked with the Dept. of Health and Social Services to allow patients who qualify for dentures under the Medicaid Adult Dental program to receive their full set of dentures in one sitting.

is closely linked with decreased risk for diabetes, heart disease, cancer and other serious diseases. Last year, the legislature unanimously made this successful program permanent.

The program limits the care that can be paid for in a single year, which is intended as a cost-control measure, an important feature in these uncertain budgetary times. Unfortunately, these measures go beyond cost control and have impacted the function of the program by limiting patients to half of a set of dentures per year. In public testimony on these limits, it was suggested that a patient could receive the upper dentures on June 30, the final day of the state fiscal year, and the lower dentures on July 1. I don't believe that we should be punishing citizens who happen to require dental care in the fall or winter, and I don't believe that dentists should be forced to schedule the care their patients need to make things more convenient for bureaucrats. This is the kind of frustrating flaw in our

system that drives people crazy and gives government a bad name.

That's why I have worked with the Department of Health and Social Services to develop a way to allow patients who qualify for dentures under the Medicaid Adult Dental program to receive their full set of dentures in one sitting, without destroying the cost-control mechanisms currently in place. The bill will be introduced when the legislature goes back into session in January, and I am pleased to have received bi-partisan support from my colleagues in the Senate.

In fact, as I have continued to work on this issue, I have heard more and more about how much sense this small change makes. A dentist in Juneau told me about the patients he sees from all around Southeast Alaska. The state pays for them to fly to Juneau, pays for their lodging, and pays for one half of their dentures. Then, a little while later, public money is spent to do it all over again for the other half. Allowing him and other

dentists to consolidate the care they are giving into one session will make the program a more efficient use of public money and improve the quality of care received by patients.

State government can be a large and unwieldy bureaucracy, and change is hard to do and often happens slowly. Most of the attention goes to the big issues that attract press coverage or help generate campaign slogans. But sometimes, there are issues that require us to place people over politics and give a direct benefit to the neighbors and constituents we are privileged to serve. It's too late for the gentleman who threatened to kill himself in my office – we worked with him to get his dentures through the existing two-year process – but it's not too late for others in his situation. This may be a small bill, and it won't change the world, but it will improve the lives of a few senior citizens in need – and that's a job I'm glad to do.

Senator Johnny Ellis represents downtown and midtown Anchorage in the Alaska State Senate and serves as the Majority Leader of the Senate Bi-Partisan Working Group.

Representative Berta Gardner
Representative Pete Petersen
Representative Les Gara
House Health and Social Services Committee
Alaska State Capitol - Rooms 424,422, 434
Juneau, AK 99801-1182

Subject: Support Letter for HB 265

Dear Representatives Gardner, Petersen and Gara:

The Alaska Commission on Aging (ACoA) is pleased to offer support for HB 265, a bill to provide access to Medicaid patients who are approved for dentures using a two-year funding cycle for medical assistance benefits to cover the costs for complete and partial dentures in a single fiscal year. Thank you for sponsoring this important legislation.

The Commission believes HB 265 provides a common sense solution that allows patients and their dentists the flexibility to schedule treatment around the oral health needs of the patient, which will improve the quality of care for older Alaskans and other qualifying recipients. Moreover, this legislation enhances the cost-effectiveness of the current Medicaid Adult Dental program by reducing the number of oral surgery visits, medical procedures, and related travel costs required for individuals who need a complete set of dentures but are limited to half of a set of dentures per fiscal year under the existing program. Anecdotally, we have learned that some individuals may even refuse partial extractions in one arch knowing that they could be without teeth for a prolonged period waiting for Medicaid to cover the cost of the other complete denture in the next fiscal year.

Good nutrition is vital for health and wellness across the life span and depends on oral health. Dental pain and missing or decaying teeth can affect dietary choices for seniors that may impact overall health and wellness. Vulnerable older Alaskans are at risk of developing dental infections that have been associated with periodontal disease, diabetes, pneumonia, and other chronic diseases including cardiovascular disease. Restorative dental care can help to prevent the progression of serious dental disease and discomfort which can result in more costly emergency care.

Older Alaskans utilize the Medicaid Adult Dental program. According to data based on Medicaid claims information for persons age 60 years and older for the period April 1, 2007 thru December 31, 2009, there were a total of 3,104 (unduplicated) seniors served by the Medicaid Adult Dental Program. The average cost for partial dentures for seniors ranges between \$1,085 (for a complete maxillary denture) to \$1,125 (for a complete mandibular denture). The approximate cost for a complete set of dentures is \$2,225. The current program cap is \$1,150 per year.

As we move forward, the Commission respectfully asks for your consideration of our recommendations below to enhance HB 265 and the Adult Dental Medicaid program for qualifying older Alaskans and other Medicaid recipients:

- Allow eligible patients access to two years of total funding as determined by the cost cap of the Medicaid Adult Dental program to permit individuals receiving partial dentures through the program the ability to access remaining benefits under the cost cap should they need additional denture services during the two-year period.
- Pending approval of HB 265, begin work with the Department of Health and Social Services to expand the two-year access of services to phase in other preventative and restorative services allowed under the Medicaid Adult Dental program in FY 2012.
- Adjust the annual cost cap for dental services (currently in statute for the last three years) to address the rising costs of dental care and encourage more participation of Medicaid dental providers.

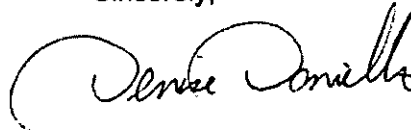

Please accept our sincere appreciation for your efforts to improve the Medicaid Adult Dental program by allowing patients who qualify for dentures under the program to receive their full set of dentures according to a treatment schedule determined by the patient with their dentist. We believe that HB 265 will help to improve health and wellness for many older Alaskans who need dentures and we support passage of this legislation. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information. Thank you.

Sincerely,

Sharon Howerton-Clark

November 19, 2009

Honorable Johnny Ellis
Majority Leader
Alaska Senate
716 W. 4th Avenue
Anchorage, AK 99501

Dear Majority Leader Ellis:

On behalf of the 97,000 members of AARP in Alaska, we would like to pledge our support for your bill to establish a two year funding cycle for the adult dental benefit in Medicaid.

We understand you are particularly interested in changing the benefit for dentures so that an adult Medicaid beneficiary would be able to use the funds available for two years to pay for dentures. This makes sense for both the client and the provider.

Older persons in need of dentures often have accompanying nutrition problems. These nutrition problems can cause other health issues and create an overall deterioration in health status. For those who need them, dentures are essential to quality health care. Two-year funding for dentures should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not need to be spent on more serious health care problems resulting from poor oral health status.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin, Coordinator
AARP Capital City Task Force

November 6, 2009

Senator Johnny Ellis
Senate Majority Leader
Alaska State Legislature
716 W. 4th Ave
Anchorage, AK 99501
Fax: (907) 269-017

Dear Senator Ellis;

I am writing on behalf of the Alaska Public Health Association (ALPHA) to extend our support for and thank you for introducing a Bill that will allow Alaska's adult Medicaid recipients to receive a set of dentures within one fiscal year. This Act will meet the needs of patients and dental providers by providing two-years worth of dental benefits for dentures in a single year.

The ALPHA represents over 150 health professionals in Alaska; the primary mission of ALPHA is the enhancement of the public's health. In fulfilling our mission, we support systems that support patient-oriented health service delivery. ALPHA believes that the "Act providing for a two-year funding cycle for medical assistance coverage for dentures" establishes a system enabling patients to receive patient-oriented care.

Thank you for consulting ALPHA in developing this Bill. Please feel free to contact me if you have further questions.

Sincerely,

Karol Fink, MS, RD
ALPHA Health Policy Chair

RE: HB 265 (Gardner, Peterson, Gara)—Support

Dear Co-Chairs Keller and Herron:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Health and Social Services Committee to support HB 265, to establish a two-year funding cycle in Medicaid for a very specific limited purpose. The bill is authored by Representatives Berta Gardner, Pete Peterson, and Les Gara.

HB 265 basically changes the benefit for dentures so that an adult Medicaid beneficiary would be able to use the funds available for two years to pay for dentures. This makes sense for both the client and the provider.

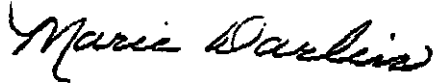

Older persons in need of dentures often have accompanying nutrition problems. These nutrition problems can cause other health issues and create an overall deterioration in health status. For those who need them, dentures are essential to quality health care. Two-year funding for dentures should be considered sensible prevention with the long term possibility of saving Medicaid funds that would not need to be spent on more serious health care problems resulting from poor oral health status.

AARP recommends an "AYE" vote on HB 265.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

ALASKA NATIVE MEDICAL CENTER

Dr. Thomas J. Kovaleski DDS
Dental Director
Southcentral Foundation
Anchorage, Alaska

To whom it may concern:

As Director of the Southcentral Foundation (SCF) Dental Program I am writing in support of HB265 (Medicaid Coverage for Dentures). This bill would address a flaw in the current system and allow Alaska's adult Medicaid recipients to receive a set of dentures within one fiscal year. This is a practical solution to a situation that has been difficult for patients and providers. SCF provides denture services for Medicaid recipients in our clinics at the Alaska Native Medical Center and the Fireweed Clinic in Anchorage. I thank you for your efforts on behalf of the adult Medicaid recipients.

Sincerely,

Dr. Thomas J Kovaleski DDS.

Senate & House HSS Committees

Senators and Representatives,

RE: SB199 & HB265 "An Act providing for a two-year funding cycle for medical assistance coverage for dentures."
I have an opportunity to travel way south to visit family that I haven't seen for a long time and will not be in contact to send a message when these bill(s) are heard. Please accept my advance testimony for this important legislation.

I had occasion to visit my dentist here in Fairbanks today and asked him what he thought of this legislation. This is a very experienced former military dentist who has seen everything. He, like so many of our local medical providers, is retirement age but sticking around to help his patients.

Dr. James A. Cerney DDS
4001 Geist Rd. Suite 5B
Fairbanks AK 99709
Ph: (907) 479-3326

Dr. Cerney's response to my question about this legislation was that it has been his experience that dentures fit better when both upper and lower plates are made at the same time, approximately anyway. He told me that he is willing to speak with any legislators that may want to contact him.

He has some days or part days that he may be out of the office, but has an answering service. Since he is willing to have me call after hours if I have a problem I know he would take your call anytime if at all possible. I believe he has been involved in issues through the state dental society, but I don't know who head's that organization to tell you.

I know how touchy dental issues are with me, only it is crowns instead of plates. I suspect there are those who have no other way to get dentures that have an experience of having to have repeat visits to the dentist because of fit problems with the current 1 plate/yr. set-up. I say "no other way" because I don't know anyone who would want the feeling of having to grovel to get one plate at a time and keeping the plate in a box someplace for a year as they wait for the time to pass before work can begin on the second plate.

I wonder if people choose the bottoms or the tops the first year now? I wonder how they make that decision? It is a curious situation that better efforts were not made to avoid this in the beginning.

Please do your best, and remember that the income has to be quite low, and the need quite great for anyone to jump through the hoops to get dentures through Medicaid.

Sincerely,

Doris Robbins
1281 Overhill Dr.
Fairbanks AK 99709
(907) 374-0597

Dear Representative Gardner,

I am writing this brief note to to urge you to support HB265 Medicaid Coverage for Dentures. As a practicing dentist with SEARHC in Juneau, AK, I see on a day to day basis the struggle many of our Alaskan Natives have with their dental care. For many of these patients, Medicaid funds are their only hope for dental care. In many cases, a patient that requires two dental appliances (upper and lower complete dentures), does not have enough funding to allow the patient to receive both denture plates in the same fiscal year under the current guidelines. This leaves many edentulous patients without one of their denture plates, making eating difficult for patients who in many cases are elderly.

Currently, SEARHC is looking into the possibility of fabricating dentures on site at smaller villages such as Hoonah and Angoon in Southeast Alaska. Many elderly patients find it difficult or impossible to come to Juneau for denture treatment, this bill would make this program economically feasible.

This is an important bill that would help many people in Alaska. I therefore hope that you will give your approval to this worthy legislation.

SB199/HB265 Medicaid Adult Dental Coverage

The Alaska Dental Society urges passage of SB199/HB265.

SB199 and its companion bill HB265 remedy an unintended consequence of the adult dental supplemental Medicaid coverage. Currently, under the maximum allowable benefit, a Medicaid recipient may receive either an upper or lower denture. Unfortunately many Medicaid recipients need dentures for both the upper and lower jaws or dental arches. SB199/HB265 would allow a Medicaid recipient to combine two years worth of coverage so they could receive a full denture of both upper and lower dentures at the same time.

SB199/HB265 provides a benefit for everyone involved – the patient, the doctor and the Medicaid program:

- Medicaid recipients benefit from receiving both dentures at once, restoring their appearance, their ability to talk and chew, and most importantly their dignity.
- Providers benefit as they are no longer placed in the uncomfortable position of deciding which arch is in the worst condition. They can also work in a more efficient fashion constructing both sets of dentures simultaneously.
- The state benefits economically. The cost for both dentures, which would normally be borne over 2 years are now in one year but Medicaid recipients would still be limited to the same benefit total for 2 years. Denture patients frequently have to use travel benefits to reach a provider and for dentures this can be especially costly as dentures require multiple appointments. Providing both dentures at the same time would reduce the states travel expenses in half. Removing diseased and abscessed teeth would also save on costly ER and oral surgery visits.

February 8, 2010

Representative Gardner
Alaska State Legislature

Dear Representative Gardner;

I am writing on behalf of the Alaska Public Health Association (ALPHA) to extend our support for and thank you for introducing a Bill that will allow Alaska's adult Medicaid recipients to receive dentures. This Act will meet the needs of patients and dental providers by providing two-years worth of dental benefits for dentures in a single year.

The ALPHA represents over 200 health professionals in Alaska; the primary mission of ALPHA is the enhancement of the public's health. In fulfilling our mission, we support systems that support patient-oriented health service delivery. ALPHA believes that the "Act providing for a two-year funding cycle for medical assistance coverage for dentures" helps establish a patient-oriented care system.

Please feel free to contact me if you have further questions.

Sincerely,

HB270 - Medicaid For Medical & Intermediate Care

"An Act amending the eligibility threshold for medical assistance for persons in a medical or intermediate care facility."

Status: PREFILE RELEASED >> (H) HSS : 2010-01-19

In 2003, the Legislature modified Alaska Statute to freeze the Medicaid long-term services income eligibility limit at that year's level (\$1,656). This change created a ceiling for waiver eligibility, rather than allowing the eligibility limit to adjust annually in tandem with the Supplemental Security Income maximum benefit amount. This meant that from 2003 on, a small Social Security cost of living adjustment could put a person over the \$1,656 limit, and in effect disqualify many people from the program.

The Supplemental Security Income (SSI) is a federal needs-based disability program for adults and children. For an adult, the SSI disability requirement is based on the ability to work. An adult is considered disabled if the person cannot do the work that they performed before the disability occurred or cannot do alternate work because of a severe physical or mental condition. For a child to be eligible, they must suffer from serious physical and/or mental problems. For both adults and children, the disability must last, or be expected to last for at least one year.

House Bill 270 will change the current income eligibility rate which is frozen at \$1,656 a month, or 300% of the 2003 SSI benefit rate, to 300% of the current SSI rate.

Near the end of 2008 many individuals received notices that they would no longer be eligible for the waiver after the 2009 Social Security COLA went into effect. Because the waiver eligibility limits no longer adjust with changes in the cost of living, it placed some people slightly over the \$1,656 monthly limit. While there are options available for preserving eligibility, such as with the creation of a Medicaid qualifying income trust, also known as a Miller trust, these options have drawbacks. To qualify for a Miller trust the individual must seek the assistance of an attorney and find a trusted individual to manage

their trust assets. In addition, the Miller trust has a number of responsibilities and restrictions that must be followed.

Medicaid services are critical to the well-being of Alaska's most vulnerable citizens. Lending support to this legislation will ensure that eligible Alaskans can continue to receive nursing home care and in-home services.

FAX: (907) 465-1398

January 30, 2010

Representative Cathy Muñoz
Alaska State Capitol, Room 409
Juneau, AK 99801-1182

Subject: Support Letter for HB 270

Dear Representative Muñoz:

The Alaska Commission on Aging (ACoA) is pleased to offer our support of HB 270, a bill to amend the income eligibility threshold for persons requiring nursing home level of care stated in AS 47.07.020(b)(6). This bill is authored by you and co-sponsored by Representatives Paul Seaton, Bob Herron, Max Gruenberg, and Les Gara.

ACoA supports returning the statutory income limit for this benefit from the current fixed dollar amount of \$1,656 per month to 300% of Supplemental Security Income (SSI), the previous statutory limit, in order to allow the eligibility limit to adjust annually with the Supplemental Security Income maximum benefit amount. This change will ensure that eligible Alaskans can continue to receive nursing home care and in-home services provided by the State's Medicaid program when they receive cost-of-living adjustments to their Social Security and other benefit amounts.

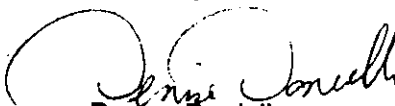

In 2003, the Alaska Legislature changed AS 47.07.020 (b) (6) to freeze the Medicaid long-term services income eligibility limit at that year's level (\$1,656). This change created a fixed ceiling for waiver eligibility, rather than allowing the eligibility limit to adjust annually in tandem with the SSI maximum benefit amount, which is tied to changes in the Consumer Price Index (CPI). The downstream impact of this freeze has been that from 2003 and into the future, a small Social Security cost-of-living adjustment could put a person over the \$1,656 limit, and in effect disqualify many people from the program. Most public assistance programs in Alaska are indexed to the Alaska poverty level or other guidelines which provide flexibility as incomes rise along with living costs.

We thank you for sponsoring HB 270 to ensure that eligible Alaska seniors and other vulnerable Alaskans can maintain their income eligibility and continue to receive home- and community-based services, despite small COLA increases to their Social Security and other benefit payments. Please feel free to contact Denise Daniello, ACoA's executive director, by phone (465-4879) or email (denise.daniello@alaska.gov) should you have questions or require additional information. Thank you.

Sincerely,

Sharon Howerton-Clark
Chair, Alaska Commission on Aging

Sincerely,

Denise Daniello
ACoA Executive Director

AGENET

Alaska Geriatric Exchange Network

Alaska's Association of Senior Service Providers

c/o 419 Sixth Street, Juneau, Alaska 99801

February 18, 2010

Representative Cathy Munoz
State Capitol, Room 409
Juneau, Alaska 99801-1182

Dear Representative Munoz:

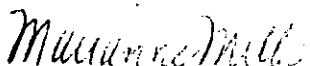

On behalf of the members of AGENET (the Alaska Geriatric Exchange Network), I am pleased to offer this letter of support for House Bill 270, "an act amending the eligibility threshold for medical assistance for persons in a medical or intermediate care facility". This bill will help older Alaskans continue their access to cost-effective home and community-based services which help them maintain their health and independent living in their own home and community.

Most seniors who receive Social Security benefits or retirement pensions receive a small annual cost of living adjustment (COLA) to their benefit amounts. Because the program income eligibility limits do not adjust with changes in the cost of living, each year some people receiving home and community-based (HCB) waiver services find that their adjusted incomes place them slightly over the \$1,656 monthly limit. They receive notice that they are no longer eligible for HCB waiver services, their services are suddenly cut off, and their health and independent living is threatened as a result.

House Bill (HB) 270 would correct the situation by changing income eligibility as the cost of living changes, instead of the current fixed amount of \$1,656 per month. The proposed change makes sense, especially since older Alaskans prefer remaining in their own homes for as long as possible rather than having to go to costly nursing homes when their health declines prematurely.

Thank you for introducing this bill and for your consistent support of services for older Alaskans. Feel free to contact me at 463-6154 if I may provide further assistance to promote passage of HB 270.

Sincerely,

Marianne Mills
AGENET President

QUESTIONS AND ANSWERS ON AS 47.07.020 (b)(6) PROPOSED CHANGE

❖ What is SSI?

SSI, or Supplemental Security Income, is a federal needs-based disability program for adults and children which provides cash benefits and automatic Medicaid eligibility.

❖ What are the eligibility requirements for SSI?

The person must:

- (1) Have limited income and resources;
- (2) Be an adult or a child who is blind or disabled, or an adult who is age 65 or older;
- (3) Live in the United States;
- (4) Be a U.S. citizen or an eligible non-citizen (including lawful permanent residents and some other categories...)

❖ What are the income and resource requirements for SSI eligibility?

Monthly benefits are calculated by subtracting certain excluded amounts from the individual's monthly income, and then subtracting the remainder from the maximum SSI benefit amount (currently \$674). The resulting amount will be the individual's monthly SSI benefit. In other words, an individual's income must be substantially below the poverty level (which is currently \$1,127.50 per month in Alaska).

Individuals may have up to \$2,000 in resources, or up to \$3,000 in resources for a couple.

❖ What is the SSI definition of disability?

For an adult, the SSI disability requirement is based on the ability to work. An adult is considered disabled if the person cannot do the work they did before and cannot do a different kind of work because of a severe physical or mental condition.

To be eligible for SSI, a child must suffer from serious physical and/or mental problems that prevent the child from living a normal life.

For both adults and children, the disability must last, or be expected to last, for at least a year, or to result in death.

❖ Is SSI different from Social Security Disability Insurance?

Yes. Both programs provide assistance for people with disabilities who meet certain medical criteria, and both are administered by the Social Security Administration. However, Social Security Disability Insurance is a program for individuals (and certain family members) who are "insured," that is, they have worked long enough in jobs where they paid Social Security taxes. SSI, on the other hand, is based solely on the financial need of the disabled individual, even if that person has little or no work history.

❖ **What is the current maximum monthly benefit amount for SSI?**

In both 2009 and 2010, the maximum monthly cash benefit amount for an individual on SSI is \$674 (or \$1,011 for a couple). This amount normally increases from year to year based on an automatic annual cost of living adjustment (COLA) which is calculated from changes in the Consumer Price Index (CPI). However, there were no increases in any of the Social Security programs' benefits this past year due to the very low rate of inflation.

❖ **Why did AS 47.07.020 originally key Medicaid waiver eligibility to an income level three times the maximum monthly SSI benefit rate? When did this statutory limit change?**

In most states, Medicaid financial eligibility rules are more liberal for people who require long-term services. Under federal law, a state may grant Medicaid eligibility to persons who have incomes as high as three times the basic benefit standard for the SSI program. In operating a HCBS waiver program, a state may employ the same financial eligibility rules to determine eligibility as it does for institutional services. Accordingly, before 2003, AS 47.07.020 set Alaska's Medicaid long-term care (including waiver services) financial eligibility at three times the maximum SSI amount. In 2003, that amount was \$552, so the income limit that year was \$1,656 (three times \$552).

In 2003, the Alaska Legislature changed AS 47.07.020 (b) (6) to freeze the Medicaid long-term services income eligibility limit at that year's level (\$1,656). This change created a ceiling for waiver eligibility, rather than allowing the eligibility limit to adjust annually in tandem with the SSI maximum benefit amount, which is tied to changes in the Consumer Price Index (CPI). This meant that from 2003 on, a small Social Security COLA could put a person over the \$1,656 limit, which no longer adjusted with the SSI rate.

Most public assistance benefits in Alaska are keyed to federal poverty guidelines or other income standards that are automatically adjusted annually.

❖ **If Alaska returns to the prior version of AS 47.07.020, what will the Medicaid waiver income eligibility limit be?**

The Medicaid waiver income eligibility limit for 2010 would be \$2,022 monthly, or three times the current maximum SSI monthly benefit (\$674). This would be an increase of slightly over 22 percent in the income limit, and would return waiver coverage to those earning slightly more than 175% of the federal poverty limit (FPL) for Alaska, versus the current 147% FPL.

Year	Waiver Limit	% of AK FPL	(AK FPL)
2003	\$1,656	177%	\$11,210
2009	\$1,656	147%	\$13,530
2010	\$2,022*	179%	\$13,530

*Result of proposed legislation

❖ **What problems have been created by the 2003 change to AS 47.07.020?**

Most individuals receiving Social Security retirement or disability benefits, or retiree pensions, receive a small annual cost of living adjustment (COLA) to their benefit amounts. Because the waiver eligibility limits no longer adjust with changes in the cost of living, each year some people receiving waiver services find that their adjusted incomes place them slightly over the \$1,656 monthly limit, thus ending their eligibility for the Medicaid waiver. People in this position have had to pay privately for nursing home care (thousands of dollars per month) or try to set up a Medicaid qualifying income trust, also known as a Miller trust.

Near the end of 2008, a panic ensued when dozens of individuals received notices that they would no longer be eligible for the waiver after the 2009 Social Security COLA went into effect. While they were told that they may be able to preserve their eligibility by implementing a Miller trust, this was not a workable solution for some recipients. [A Miller trust (or Medicaid qualifying income trust) makes Social Security and other income exempt from calculations of income and resources if the state is reimbursed from the trust for Medicaid expenses upon the recipient's death.]

New waiver applicants who are medically qualified for Medicaid long term services are disqualified for income reasons when they apply, even though their monthly incomes may be very modest, say, 150% of the federal poverty level.

❖ **What are the problems with obtaining a Miller trust to shelter excess income in order to continue Medicaid waiver eligibility?**

First, the disabled individual must locate an attorney who can assist them in creating a Miller trust (or qualified income trust). While free legal services are available, they are not readily accessible in every community in Alaska. The individual or their family must spend their time (generally around the end-of-year holidays) frantically trying to find affordable legal help. If the person is too disabled to be able to take the steps to create such a trust, and has not granted anyone else the financial power to do so, it will be necessary to go to court to obtain a conservatorship in order to create the Miller trust.

In order to create a Miller trust, the individual must have a trustworthy friend or family member whom they feel will manage the trust responsibly. Sadly, in today's world, attorneys tell us that this can be an issue – many Medicaid recipients do not know anyone they wish to put in charge of their finances. These people must either trust a stranger to manage their money or forego benefits. Other recipients risk their money by having less-than-trustworthy relatives serve as trustee. We are aware of a current case of an elder whose granddaughter has left the state with the individual's trust account funds.

Managing one's own finances is a matter of personal dignity for many older Alaskans. Being forced to give up this right can be stressful and humiliating, as well as financially risky.

Initial responsibilities of a trustee include obtaining a lawyer to draft the trust – sometimes within a 30-day window, registering the trust with the court system, obtaining an identification number from the IRS, setting up a special trust account with a bank (which not all banks will do), arranging direct deposits to that account through Social Security and other income sources, and securing approval for the trust from the Division of Public Assistance (DPA).

There are many additional details specific to management of the Miller trust, such as the requirement for the money to be placed in a non-interest-bearing account.

Once the account is set up, it is the trustee's responsibility to ensure that the trust distributes a monthly allowance to the Medicaid recipient equal to the monthly Medicaid income limit. The trustee must keep the remainder of the monthly income in the account, or purchase items on the recipient's behalf in accordance with certain restrictions. These restrictions are not always clearly spelled out under federal or state law, and are a large source of confusion for trustees. Diligent trustees often fear personal liability for spending trust money on items that turn out to be disapproved. Less-than-diligent trustees can jeopardize a recipient's Medicaid benefits by spending money without regard for the rules. Trustees also have to pass annual audits with DPA to ensure that the trusts are being managed correctly.

Money in the Miller trust can be used only for "allowable expenses," which do not include food or housing expenses. Generally, the individual has received a COLA on their Social Security or pension for the express purpose of keeping up with increased costs of food and housing. Being forbidden to use this extra money for its intended benefit places them at a disadvantage in meeting their basic needs.

Finally, a Miller trust is irrevocable. In the rare event that an individual's health improves to the degree that they are no longer medically eligible for long term services, they will not have access to the funds in the trust for their daily expenses.

Creation of a Miller trust should normally be considered a last resort when there are no other options available.

Sec. 25.23.020. Eligible persons. (a) Persons residing in the state for whom the Social Security Act requires Medicaid coverage are eligible to receive medical assistance under 42 U.S.C. 1396a — 1396p (Title XIX, Social Security Act).

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under age 21 who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resources requirements, do not receive supplemental security income under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under age 21 who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 percent of the supplemental security income benefit rate under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act) but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under age 21 who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the Aid to Families with Dependent Children program;

(8) persons under age 21 and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, if they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resources requirements of the federal program designated as the successor to the aid to families with dependent children program.

(10) persons under age 21 not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are hard-to-place children eligible for subsidy under AS 25.23.190 — 25.23.220;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 — 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382c(a) (Title XVI, Social Security Act);

(B) the department has determined that

Sec. 47.07.010. Purpose. It is declared by the legislature as a matter of public concern that the needy persons of this state who are eligible for medical care at public expense under this chapter should seek only uniform and high quality care that is appropriate to their condition and cost-effective to the state and receive that care, regardless of race, age, national origin, or economic standing. It is equally a matter of public concern that providers of services under this chapter should operate honestly, responsibly, and in accordance with applicable laws and regulations in order to maintain the integrity and fiscal viability of the state's medical assistance program, and that those who do not operate in this manner should be held accountable for their conduct. It is vital that the department administer this chapter in a manner that promotes effective, long-term cost containment of the state's medical assistance expenditures while providing medical care to recipients. Accordingly, this chapter authorizes the department to pay for participation in the national medical assistance program as provided for under 42 U.S.C. 1396 — 1396p (Title XIX, Social Security Act). (§ 1 ch 182 SLA 1972; am § 1 ch 66 SLA 2003)

Effect of amendments. The 2003 amendment, effective September 9, 2003, amended the first sentence to read: "The department shall administer the medical assistance program and in the last sentence substituted "department" for "Department of Health and Social Services."

NOTES TO DECISIONS

quoting *Garner v. State*, 63 P.3d 264 (Alaska 2003).

Sec. 47.07.020. Eligible persons. (a) All residents of the state for whom the Social Security Act requires Medicaid coverage are eligible to receive medical assistance under 42 U.S.C. 1396 — 1396p (Title XIX, Social Security Act).

(b) In addition to the persons specified in (a) of this section, the following optional groups of persons for whom the state may claim federal financial participation are eligible for medical assistance:

(1) persons eligible for but not receiving assistance under any plan of the state approved under 42 U.S.C. 1396a (Title XVI, Social Security Act, Supplemental Security Income) or a federal program designated as the successor to the aid to families with dependent children program;

(2) persons in a general hospital, skilled nursing facility, or intermediate care facility, who, if they left the facility, would be eligible for assistance under one of the federal programs specified in (1) of this subsection;

(3) persons under age 21 who are under supervision of the department, for whom maintenance is being paid in whole or in part from public funds, and who are in foster homes or private child-care institutions;

(4) aged, blind, or disabled persons, who, because they do not meet income and resource requirements, do not receive supplemental security income under 42 U.S.C. 1381 -- 1383c (Title XVI, Social Security Act), and who do not receive a mandatory state supplement, but who are eligible, or would be eligible if they were not in a skilled nursing facility or intermediate care facility to receive an optional state supplementary payment;

(5) persons under age 21 who are in an institution designated as an intermediate care facility for the mentally retarded and who are financially eligible as determined by the standards of the federal program designated as the successor to the aid to families with dependent children program;

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed \$1,656 a month but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility;

(7) persons under age 21 who are receiving active treatment in a psychiatric hospital and who are financially eligible as determined by the standards of the federal program designated as the successor to the Aid to Families with Dependent Children program;

(8) persons under age 21 and not covered under (a) of this section, who would be eligible for benefits under the federal program designated as the successor to the aid to families with dependent children program, except that they have the care and support of both their natural and adoptive parents;

(9) pregnant women not covered under (a) of this section and who meet the income and resource requirements of the federal program designated as the successor to the aid to families with dependent children program;

(10) persons under age 21 not covered under (a) of this section who the department has determined cannot be placed for adoption without medical assistance because of a special need for medical or rehabilitative care and who the department has determined are ward-to-place children eligible for subsidy under AS 25.23.190 -- 25.23.210;

(11) persons who can be considered under 42 U.S.C. 1396a(e)(3) (Title XIX, Social Security Act, Medical Assistance) to be individuals with respect to whom a supplemental security income is being paid under 42 U.S.C. 1381 -- 1383c (Title XVI, Social Security Act) because they meet all of the following criteria:

(A) they are 18 years of age or younger and qualify as disabled individuals under 42 U.S.C. 1382(a) (Title XVI, Social Security Act);

(B) the department has determined that

(i) they require a level of care provided in a hospital, nursing facility, or intermediate care facility for the mentally retarded;

(ii) it is appropriate to provide their care outside of an institution; and

(iii) the estimated amount that would be spent for medical assistance for their individual care outside an institution is not greater than the estimated amount that would otherwise be expended individually for medical assistance within an appropriate institution;

(C) if they were in a medical institution, they would be eligible for medical assistance under other provisions of this chapter; and

What is a Medicaid Waiver?

The Medicaid program is an enormously important source of money to pay for services and supports for people with developmental disabilities. About \$3 of every \$4 that states spend for developmental disabilities services comes by way of Medicaid. Once, Medicaid dollars only paid for institutional services. Today, Medicaid allows more diverse services and supports for individuals in the community, by "waiving" the need to get those same services in an institution.

This information is based on a Policy Brief of the National Center for Family Support. The entire brief can be found at www.familysupport-HSRI.org

Why is it important to learn all about Medicaid?

Advocates need to keep in mind that states have the ability to decide who gets funded for what services (criteria for eligibility and coverage). To realize many of the opportunities afforded by federal policy, a state must elect to include an "option" or change its current policies. Medicaid policy change at the state level means convincing policy makers (governors and legislators) to take advantage of key options if they have not done so already. This is why it is important for individuals, families and other stakeholders to be "at the table" when Medicaid policy is discussed.

The Way Medicaid Works

Federal law (Title XIX of the Social Security Act) and regulations spell out the requirements that a state must meet in operating its Medicaid program. If a state meets these requirements, then the federal government pays a percentage of money (called the Federal Medical Assistance Percentage (FMAP)) of the amount of money that the state spends for services to people who are eligible for Medicaid. The FMAP rate varies, depending on income levels in each state. The lowest FMAP for high-income states is 50%; the maximum rate allowed is 83%. The highest rate currently being paid is about 77% (Mississippi).

States must use their own or local tax dollars (called "matching dollars") to meet their share of Medicaid costs. In order to expand Medicaid services, a state must provide more of their own tax dollars to get more money from the federal government. In the federal budget, Medicaid is an "open-ended entitlement" program. This means that the federal government is required by law to pay its share of state Medicaid costs regardless of the total amount. Each state spells out what is available under its Medicaid program in a document called the "state plan." The state plan describes the groups of individuals who can receive Medicaid services and the services that the state will make available to them. A state can amend its plan to change its program. State plan amendments are subject to federal review and approval. Each state must designate one of its agencies (called the "single state Medicaid agency") to administer its Medicaid program. The Medicaid

agency may enter into agreements with other state agencies (e.g., the state developmental disabilities agency) to administer specific services.

The federal agency responsible for the Medicaid program is the Center for Medicaid and State Operations (CMSO), a branch of the Health Care Financing Administration (HCFA) in the Federal Department of Health and Human Services. HCFA issues regulations and other policy guidance concerning Medicaid. It also oversees state Medicaid program operations. There are ten HCFA Regional Offices located around the country that work with individual states concerning the operation of their Medicaid programs.

Key Requirements For States

There are key requirements with which a state's Medicaid program must comply. These basic requirements govern Medicaid programs nationwide. They include:

- A state must make services available to individuals on a *comparable* basis. With some exceptions, a state may not provide services that differ in amount or type to one group of beneficiaries than others.
- A state must guarantee that recipients have *free choice* in selecting from among qualified service providers when obtaining Medicaid services. That is, a state cannot require a person to obtain services from a specific provider to the exclusion of others.
- A state must make Medicaid services available *statewide* and provide that individuals have *ready access* to them.
- A state must accept and make a *prompt decision* concerning a person's application for Medicaid services.
- A state may not limit or ration services due to a funding shortfall. A state is obligated to provide services in its state plan to all eligible persons. If a state cannot afford to provide the services, it must change its state plan.
- A state also must permit individuals to appeal adverse decisions concerning their eligibility or the authorization of services. This is called the Fair Hearing process.

In some cases, a state may request *waivers* of some of these requirements. Medicaid home and community-based service waiver programs operate under such waivers. The HCBS waiver program will be discussed in more detail below. When a state decides to use a managed care arrangement to obtain services for individuals (thereby limit their freedom of choice), there are federal laws and regulations concerning how such arrangements must be set up in order to safeguard their interests. Medicaid services must be obtained from "qualified providers." A state must spell out the qualifications that an individual or agency must meet in order to furnish services. States have considerable latitude in specifying these qualifications. At a minimum, providers must meet requirements spelled out in state law. In addition, each provider must enter into a contract (called a "provider agreement") with the state in order to be paid for services it provides to beneficiaries.

Medicaid is a "vendor payment" program. Typically, states pay providers directly on a fee-for-service basis once the provider has furnished a service. Subject to federal requirements, a state may pay for Medicaid services through prepayment ("capitation") arrangements when services are provided by health maintenance organizations (HMOs) or similar organizations. States have broad discretion in determining the amount of payments for services. Federal law requires that payment rates must be

sufficient to attract enough providers so that recipients can access needed services.

Eligibility: The Portal to Medicaid Services

Medicaid services are available only to individuals determined eligible for a state's program. Eligibility is the "portal" through which people must pass in order to obtain Medicaid services. On the other side of this portal lie services that people can obtain.

There are two parts to Medicaid eligibility. One is *financial eligibility*. Medicaid is a *means-tested* program. To qualify for Medicaid, a person cannot have income or assets that exceed the amounts that the state has specified. *The second leg of eligibility is whether a person is a member of a "group" that recognized in federal law* (e.g., people with disabilities who receive federal Supplemental Security Income (SSI) benefits). In order to receive Medicaid services, a person has to meet both tests. "Mandatory" groups (e.g., individuals that all states must serve) essentially include SSI recipients and children who live in very low-income households. But, there are many options or "doors" available to states to widen Medicaid eligibility beyond the mandatory groups. People with developmental disabilities qualify for Medicaid by meeting financial eligibility tests and being members of recognized but broader groups (e.g., individuals with disabilities). It is important to understand that over the past fifteen years, federal Medicaid policy has changed to permit states to offer Medicaid services to more groups of individuals who do not actually receive public assistance payments. Medicaid no longer is closely tied to "welfare." Even though the program is still means-tested, new mandates and options have been added so that individuals and families who have income above the poverty line can pass through the portal.

There are certain eligibility options that can play an important role in enabling people with developmental disabilities to qualify for Medicaid services, even though these options are not reserved exclusively for such individuals. These options revolve around children and adults who do not qualify as members of a mandatory group, generally because their or the family's income prevents them from being eligible to receive an SSI or other public assistance payment. It is helpful to discuss these options in terms of those that are relevant to children, adults and those that cut across all ages.

- **Children.** Not all children and youth with severe disabilities can qualify for an SSI payment and, thus, Medicaid. In the case of children with severe disabilities who live with their families, SSI rules require that a portion of the family's income be counted as available ("deemed") to the child. Even in the case of low-to-moderate income families, this requirement can result in the child's not qualifying for an SSI payment and, thus, make the child ineligible for Medicaid. However, if the child were placed permanently out of the family home in an institutional setting, the family's income would not be counted and the child would qualify for Medicaid. In order to correct this problem, in 1982 Congress enacted the "Katie Beckett option" (also known as "TEFRA 134"). Under this option, a state can decide not to count the family's income when the child meets SSI disability criteria and would be eligible for Medicaid if s/he were in an institutional setting. Several states have adopted this option. One state where this option is used extensively is Wisconsin. See the _ for how to obtain more information about Wisconsin's Katie Beckett program.

- Children who do not receive SSI also can qualify for Medicaid in a variety of other ways. They can qualify as members of low and moderate income households (needy families). There can be other avenues available, depending on the state. The Vermont Parent-to-Parent Network has identified six ways (including the Katie Beckett option) that children with disabilities can obtain Medicaid eligibility in Vermont. See the _ for how to access this information.
- Congress is considering a bill (the Family Opportunity Act) that would give states still another option for extending Medicaid eligibility to children with disabilities who live in higher income households eligible for Medicaid services. We discuss this bill more in the final section.
- **Adults.** Family income does not play a role in Medicaid eligibility for adults with disabilities, including when the person lives with his/her family. Only the adult individual's own income and resources are considered. As noted previously, states must extend Medicaid eligibility to individuals who receive SSI payments. SSI program rules permit individuals to earn income up to a certain level and still qualify for SSI. Recently, these earning limits were raised to \$740/month. There also are special rules that continue SSI and Medicaid benefits for a period of time after a person exceeds the earned income ceiling. It is not true that having a job automatically disqualifies a person for Medicaid. But, problems can arise once the person's income climbs above levels that SSI permits.
- Not all adults with severe disabilities qualify for an SSI payment. People who receive "adult disabled child" Social Security benefits or who have other income (including employment income) that exceed SSI maximums can qualify for Medicaid under other options. A state can set higher income thresholds that permit more of these individuals to qualify even though they do not receive SSI. Many states also permit individuals to qualify as "medically needy." In a medically needy program, people who have income above the state's maximum qualify for Medicaid by "spending down" their income on health services until it reaches the state's maximum (e.g., if a state's maximum is \$600 per month and a person has income of \$800, the person will qualify once he or she spends \$200 on health services). Recently, HCFA issued new rules that give states more options to make it easier for people to qualify as medically needy and thus obtain Medicaid eligibility. In addition, starting in 1997, Congress has added more eligibility options that permit states to extend or continue Medicaid eligibility for adults with disabilities whose employment earnings would otherwise disqualify them for Medicaid. See the _ for how to obtain information on this new options (which some states already have adopted). The rules concerning Medicaid eligibility for adults with disabilities differ considerably from state to state with the exception of the requirement that states include SSI recipients. As with children, it is important to have solid information concerning the rules in your state.
- **Long-term Services Eligibility.** In most states, Medicaid financial eligibility rules are more liberal for people who require long-term services. For example, a state may grant Medicaid eligibility to such persons who have incomes as high as three-times the basic grant standard for the SSI program (i.e., as high as \$1,590 per month). In operating an HCBS waiver program, a state may employ the same financial rules to determine eligibility as it does for institutional services. For children, this yields the same result as the Katie Beckett option. However, the Katie Beckett option is broader since it

does not hinge on whether the child participates in a waiver program. In the case of adults, using institutional financial eligibility rules can make a big difference in enabling individuals to obtain Medicaid eligibility. But, again, these special provisions apply to people who qualify for long-term services.

Medicaid operates under a simple rule: no Medicaid card, no services. States have many options for widening the eligibility portal for both children and adults with disabilities beyond those who receive an SSI payment. Advocacy with respect to Medicaid eligibility centers on urging states broaden eligibility options to more children with severe disabilities who live with their families and adults who do not qualify for SSI.

Once a person successfully navigates through a Medicaid portal, the next question is what services they can obtain that would be valuable in meeting his or her needs? Answering this question revolves around "coverage" -- the collection of "services" or "benefits" a state offers to Medicaid beneficiaries.

Medicaid coverage also has two parts. Every state must provide all Medicaid recipients with a core set of *mandatory services* (e.g., hospital, physician, nursing facility, home health services). A state also may elect to provide additional *optional services* (e.g., personal assistance, home and community-based waiver services). See the _ for how to locate information about the all the services that a state must or may offer. States can operate Medicaid programs that have either wide or narrow benefits. Usually you can find out about all the services your state offers at the Medicaid agency's website (_). Like other health insurance programs, whether a person requires a service is based on "necessity" (medical or otherwise) criteria (e.g., does a person's condition require a treatment or service that is covered under the state plan?).

State-to-state, the basic services that are available depend on whether the person is a child or adult as well as the decisions that a state has made with respect to the services it offers. Everyone who has a Medicaid card can access the services that a state offers through its Medicaid state plan. Here, we describe some key "regular" Medicaid services (e.g., services that a state can provide without seeking special waivers). In the next section, we will discuss services that a state can offer through an HCBS waiver program.

There are differences in the services that a state must or may offer children and adults. In particular:

- **Children.** For more than a decade, Congress has focused on strengthening the role that the Medicaid program plays in ensuring that children (with or without disabilities) have access to health care. In 1989, Congress extensively revamped federal Medicaid law what are labeled "Early and Periodic Screening, Diagnosis and Treatment" (EPSDT) services. States must provide EPSDT services to all children who are eligible for the Medicaid program. It is one of the mandates that states must meet in operating a Medicaid program. Through EPSDT, children must be seen periodically by health care professionals. If the child is identified as having a medical condition, further diagnoses must be performed and a state must follow through to provide all necessary treatment services. However, needed services can be identified at any time by professionals other than the child's own physician. The 1989 law

changes required states to step up their performance in operating EPSDT programs. It also mandated that states furnish any necessary Medicaid service (including dental care) that a child requires – regardless of whether the state specifically covers the service as part of its regular Medicaid program or not. The EPSDT mandate, for example, means that Medicaid eligible children with severe disabilities who require therapeutic services must be provided them. A state cannot restrict the services that it provides under the EPSDT mandate; it must make all types of services available, including the services that children with severe disabilities or special health care needs require. Such services can include home health services and personal assistance. However, EPSDT services do not include services (like respite) that only can be furnished through an HCBS waiver program. It is this EPSDT mandate that potentially makes obtaining Medicaid eligibility so valuable for children with disabilities.

- **Adults.** Except for the mandatory services that all states must include in their Medicaid programs, states have latitude in terms of the types of services that they make available to adults with disabilities. With respect to adults, there is no equivalent to the EPSDT mandate. States vary considerably with respect to the optional services that they make available to adults. For example, states frequently make available only very limited dental services or restrict the provision of therapeutic services only to people who need such services to "restore function," a restriction that frequently results in persons with developmental disabilities not being able to obtain such services. In addition, often states impose restrictions on optional services that can narrow their scope considerably.

There are three "regular" Medicaid services that are especially relevant to meeting the needs of people with developmental disabilities:

- One is home health, which all states must offer in their Medicaid programs. Home health services are provided to individuals at their place of residence. Home health services must include part-time or intermittent nursing services, home health aide services, and certain medical supplies and equipment. Physical, occupational therapy and speech pathology and audiology services also may be provided on an optional basis. In some states, access to home health services has been restricted to "homebound" individuals. But in July 2000, HCFA issued a policy clarification that states cannot restrict the availability of these services to people whose condition prevents them from leaving the home. This is expected to increase access to home health services by individuals who live in the community.
- The second important "regular" Medicaid service coverage is personal care (a.k.a., "personal assistance" or "attendant care"). When this service is offered, workers can provide assistance to people with disabilities in a wide variety of ways (helping with activities of daily living, grocery shopping, or getting about in the community). Once, federal rules limited the provision of these services to the person's home and described them in "medical model" terms. In 1993, Congress changed federal law so that personal assistance could be provided out in the community and "demedicalized" them. In 1999, HCFA issued new guidelines that gave states increased flexibility in providing these services, including sanctioning the use of consumer-directed personal care services (____). A state may provide personal care/assistance services without obtaining a waiver from HCFA and people do not have a

demonstrate a "need for institutional services" in order to obtain these services. Personal care is a potentially very flexible benefit that states can make available to all beneficiaries. However, fewer than 30 states offer personal care under their regular Medicaid programs and many have imposed more stringent restrictions on them than federal policy requires. A few states (e.g., Washington) make personal assistance available relatively widely.

- Another service is "targeted case management." The service is labeled "targeted" because it is one of the few regular Medicaid services that a state can cover but limit to specific groups of individuals. Many states use this coverage to fund their service coordination systems for people with developmental disabilities. States can offer these services to one or many groups of beneficiaries. Targeted case management is designed to help Medicaid beneficiaries access any of a wide range of services -- including social and educational services -- not just health care services.

The "regular" services that a state offers through its Medicaid state plan make up a "core" benefit package available to all Medicaid beneficiaries. Federal policy is very liberal with respect to the range of benefits that states may offer. But, many states are reluctant to add more services to their Medicaid programs or loosen up the restrictions that apply to the services that they presently offer. It is not surprising that concerns about increased spending lie behind this reluctance. Once a service is included in the core benefit package, it becomes an entitled service that might be very costly to provide. Nonetheless, advocates should be vigilant for opportunities to urge states to take advantage of opportunities to add services that are important to people with disabilities or remove overly stringent restrictions.

What is a waiver?

Under Section 1915(c) of the Social Security Act, Medicaid law authorizes the Secretary of the U.S. Department of Health and Human Services to waive certain Medicaid statutory requirements. These waivers enable States to cover a broad array of home and community-based services (HCBS) for targeted populations as an alternative to institutionalization. Waiver services may be optional State Plan services which either are not covered by a particular State or which enhance the State's coverage. Waivers may also include services not covered through the State Plan such as respite care, environmental modifications, or family training.

The four basic types of 1915(c) HCBS waivers available for states based on the target population's level of alternative long-term institutional care are:

- intermediate care facility-mental retardation (ICF-MR) level of care for mentally retarded and/or developmentally disabled individuals;
- chronic or rehabilitative hospital level of care for individuals who are medically fragile, chronically ill, or severely disabled;
- psychiatric hospital level of care for individuals who are severely or chronically mentally ill; and
- nursing facility level of care for individuals who are elderly, physically disabled, and/or cognitively impaired.

To be a waiver participant, an individual must be medically qualified, certified for the waiver's institutional level of care, choose to enroll in the waiver as an alternative to institutionalization, cost Medicaid no more in the community under the waiver than he or she would have cost Medicaid in an institution, and be financially eligible based on their income and assets.

ANALYSIS: (Attach a separate page if necessary)

This bill would increase the Medicaid income eligibility standard for individuals who reside in medical institutions, typically nursing facilities. This standard is also used for people who receive home and community-based waiver services. Currently, this standard is fixed at \$1,656 per month. The bill would increase the amount to 300 percent of the federal Supplemental Security Income (SSI) monthly benefit, which is currently \$674, adjusted for cost of living each year. Initially, the new standard for Medicaid nursing facility residents and waiver recipients would be \$2,022 per month.

DHSS does not anticipate that increasing the monthly standard for this eligibility category will increase the number of Medicaid recipients receiving services. While this is contrary to DHSS expectations when the Legislature fixed the standard at a set dollar amount in 2003, experience shows that as individuals receive cost of living increases in pensions or Social Security payments that raise their incomes over \$1,656 per month, they use Medicaid qualifying income trusts to reduce their countable income below that amount and continue to qualify for Medicaid.

(Continued on Page 2).

Prepared by: William J. Streur, Deputy Commissioner
 Division: DHSS Health Care Services

Phone: 269-7827
 Date/Time: 2/3/10 12:00 AM

Approved by: Alison Elgee, Assistant Commissioner
DHSS Finance & Management Services

Date: 3/18/2010

ANALYSIS CONTINUATION

Another consideration is that Medicaid recipients who qualify under this institutional income standard are required to make a contribution toward the cost of the Medicaid institutional or waiver services they receive if their countable income exceeds the personal needs allowance established for their living arrangement. The personal needs allowance for people on waivers has historically been set in regulation and the amount varies depending on the person's living situation, and is not linked to the institutional income standard. DHSS has not assumed an increase to the personal needs allowance. Therefore, DHSS does not anticipate an increase in Medicaid spending as a result of this legislation. If DHSS increased the personal needs allowance in conjunction with increasing the income eligibility standard, it would increase Medicaid expenditures.

SPONSOR STATEMENT

House Bill 277

“An Act establishing a program in the Department of Health and Social Services to certify certain individuals to be issued a prescription to administer epinephrine and to possess and administer epinephrine in certain situations.”

House Bill 277 allows individuals who have passed a departmentally-approved program to purchase and administer epinephrine.

Epinephrine (adrenalin) is used in emergency situations to combat severe allergic reactions, anaphylactic shock and heart attacks.

It is difficult to foresee the possibility of an allergic reaction when an individual has no known allergies. A victim of an allergic reaction can go into anaphylactic shock and medical attention may not be readily available. During these situations, the administration of epinephrine could be necessary to save a victim's life. Under current statute, the administrator can be held personally liable.

The passage of this bill would increase access to this life-saving medication, maintain and increase available safety measures, and reduce personal liability for acts of good faith.

“An Act requiring the Department of Health and Social Services to approve training programs to certify individuals to possess epinephrine and to administer epinephrine in emergency situations; and authorizing certified individuals to obtain a prescription for, purchase, and possess epinephrine, and to administer epinephrine in emergency situations.”

Section 1:

- An individual who successfully completes training requirements may obtain a prescription for epinephrine, purchase it, and may in an emergency situation administer epinephrine either through epinephrine auto-injectors or ampules.
- Department of Health and Social Services shall approve a set of standards for the training of both epinephrine auto-injectors and ampules.
- Applicability does not apply to an authorized administrator or to someone already prescribed epinephrine.
- Outlines liability of the certified individual.
- Defines “certified individual,” “department,” and “emergency situations.”

2 **Sec. 17.22.020. Approval of training programs.** (a) The department shall
3 adopt standards for the approval of training and certification programs for the use of

4 (1) epinephrine auto-injectors; and

5 (2) epinephrine ampules.

6 (b) The department shall approve an auto-injector training and certification
7 program that meets standards adopted under (a)(1) of this section. The standards must
8 require an epinephrine auto-injector program to provide training and certification in

9 (1) techniques on how to recognize symptoms of severe asthmatic or
10 allergic reactions, including anaphylaxis;

11 (2) standards and procedures for the storage of epinephrine auto-
12 injectors and administration of epinephrine using auto-injectors; and

13 (3) emergency follow-up procedures.

14 (c) The department shall approve an epinephrine ampule training and
15 certification program that meets standards adopted under (a)(2) of this section. The
16 standards must require an epinephrine ampule program to provide training and
17 certification in

18 (1) techniques on how to recognize symptoms of severe asthmatic or
19 allergic reactions, including anaphylaxis;

20 (2) standards and procedures for the storage of epinephrine ampules
21 and administration of epinephrine using ampules; and

22 (3) emergency follow-up procedures.

23 **Sec. 17.22.030. Applicability.** This chapter does not apply to a person who is
24 authorized under another law to administer epinephrine or to a person who is
25 prescribed epinephrine for personal use.

26 **Sec. 17.22.040. Liability of certified individual.** A claim for relief may not be
27 brought against a certified individual for an act or omission relating to the
28 administration of epinephrine to another individual in an emergency situation if the
29 individual acted in good faith under the authority granted by this chapter.

30 **Sec. 17.22.090. Definitions.** In this chapter,

31 (1) "certified individual" means an individual certified by a training

- 1 program approved by the department under AS 17.20.020;
- 2 (2) "department" means the Department of Health and Social Services;
- 3 (3) "emergency situation" means a circumstance where an individual
- 4 experiences a severe asthmatic or allergic reaction, including anaphylaxis, that
- 5 requires the administration of epinephrine to avoid severe injury or death and where a
- 6 licensed health care provider authorized to administer epinephrine is not available.

EXECUTIVE SUMMARY

Introduction

In 1999 the Washington State Legislature passed the "Kristine Kastner Act" (SHB 1992) requiring the Department of Health, with the respective House and Senate Health Care Committees, to prepare a report on the statewide incidence of anaphylaxis (severe allergic reactions) and the training and care necessary to allow Emergency Medical Technicians (EMTs) to carry and administer epinephrine. This legislation was driven by the concern that EMTs are not currently trained to diagnose the need for epinephrine by emergency patients they encounter. Epinephrine, when appropriately administered to the patient experiencing anaphylaxis or severe allergic reaction, may be required to save the patient's life.

This report includes data on the incidence of anaphylaxis statewide, and information on a pilot training program to determine the training and care standards necessary for EMTs to carry and administer epinephrine. Also included is an estimate of costs to provide that training. Recommendations are provided on the identification of any mitigating circumstances such as age, patient care protocols and specific signs and symptoms required to determine whether to administer epinephrine.

Recommendations

Education and Training -

- Training EMTs to safely administer epinephrine to anaphylaxis patients less than 30 years old must:
 - include no less than two hours didactic time;
 - include department-approved educational objectives; and
 - include a written and practical assessment of each EMT by the instructor.
- Instructors of new epinephrine material must be recommended by the county EMS Medical Program Director (Physician responsible for oversight of EMS personnel in each county) and approved by DOH.
- To maintain effective quality assurance of EMT performance, medical program directors must evaluate and report to DOH every use of epinephrine by EMTs and any anaphylaxis death in their monthly report.
- To retain knowledge and skill competency, each EMT's required Continuing Medical Education must include the use of epinephrine for anaphylaxis during each certification period (3 years).

Supplies -

All licensed basic life support vehicles must carry at least one adult and one pediatric auto-injector of 1:1000 epinephrine for anaphylaxis.

Mitigating Factors -

Age Factors:

- Based upon the limits of the pilot program, for patients who do not have a prescription or parental request, we recommend epinephrine be administered to persons under the age of 30.

Signs & Symptoms:

- To ensure safe administration of epinephrine to persons, EMTs may only administer epinephrine when signs and/or symptoms of anaphylaxis include respiratory distress or hypoperfusion.

Medical Control

- Usual medical program director specific methods of on-line/offline medical control will be followed.

From: Mike Motti [mailto:mikemotti@mac.com]
Sent: Friday, January 22, 2010 9:06 AM
To: Rep. Peggy Wilson
Subject: HB 277

Rep Wilson: I fully support this bill. I have been involved in EMS in Alaska since 1973 and have been teaching wilderness medicine for 20 years. However, as currently written, the Department is going to attach a huge fiscal note to the bill. I respectfully suggest that the wording be changed to direct the Section of EMS and Emergency Preparedness to approve the TRAINING COURSES, and that anyone showing a current certification card for one of these courses be allowed to purchase epinephrine without a prescription.

Right now the State EMS Training Committee approves CPR courses. They meet 3 times a year, and could approve epi training courses during their meetings without any significant expense to the State.

Respectfully,

Mike Motti
Sitka, Alaska

From: messa@mtaonline.net

I am writing to ask that you have HB277 CERTIFY EMERGENCY USE OF EPINEPHRINE heard and voted on this session. I recently received my Wilderness First Responder (WFR) Certification. The reason I took the course is that I work in wilderness settings, for many years, as an outdoor educator with youth. I have been very fortunate to not have a trip go bad from an emergency stand point. I have come close a few times. A big worry I have is the need to treat Anaphylaxis or Severe Asthma in the field. Many of my clients have Epinephrine (Epi)prescribed to them and they carry it. There are other clients that may not know they have the predisposition to Anaphylaxis. The way the law is now I cannot administer Epi to this person because it is not prescribed to them. If I had a physicians order on hand I could, but in todays litigious society most physicians won't stick their neck out. I also subject my clients to stress, new environments and new natural vegetation (nature). These things can exacerbate Asthma to severe levels. Epi would give my Asthmatic clients a fighting chance if a severe attack occurs. I dread the day when, under the current law, I have to make a chance at life with the use of Epi or death because I am not allowed, by law, to administer the drug to my client. Please support HB277 and the many people who enjoy the wilds of Alaska. Thank You. Roger Gossett (907)746-3181.

Zip Code: 99645
Voter ID: I have one

The curriculum for training of people to deliver epi via epi pen has been developed by the American Heart Association, Wilderness Medical Society and the Red Cross. These plans are geared to the general public, are included with CPR instruction and would suit the requirements for training for the proposed bill.

I think that the Department should be able to review and endorse any or all of these nationally approved training modules to do the job.

If there are any other questions I can help with, let me know.

Bobbi Leichty, Director

MEMORANDUM

March 29, 2010

SUBJECT: Epinephrine: Immunity for responding to an emergency
(CSHB 277() ; Work Order No. 26-LS0951\5)

TO: Representative Peggy Wilson
Attn: Michael Dunning

FROM: Tamara Brandt Cook
Director *TBC*

You ask how the provision in CSHB 277() addressing immunity from suit differs from the general Good Samaritan statute.

Sec. 17.22.040 of the bill draft prevents a claim from being brought for an act or omission against a person who (1) has completed an approved training program for the use of epinephrine auto-injectors or epinephrine ampules; (2) administers epinephrine to another; (3) does so in an emergency situation; and (4) acts in good faith under the authority granted in AS 17.22. For purposes of (3) an "emergency situation" is defined in sec. 17.22.090 to mean:

a circumstance where an individual experiences a severe asthmatic or allergic reaction, including anaphylaxis, that requires the administration of epinephrine to avoid severe injury or death and where a certified or licensed health care provider authorized to administer epinephrine is not available.

This is a narrow grant of immunity that will not apply in some situations that involve the use of epinephrine to aid another person. For example, if the epinephrine is administered but the situation does not meet the definition of "emergency situation" because the victim's reaction is due to heart attack, stroke, diabetes, or some other cause, or the epinephrine turns out not to be required to avoid injury or death, the immunity provided in sec. 17.22.040 will not apply.

Some of those situations might still be covered by the general Good Samaritan statute that broadly applies to emergency aid found at AS 09.65.090. It provides:

(a) A person at a hospital or any other location who renders emergency care or emergency counseling to an injured, ill, or emotionally distraught person who reasonably appears to the person rendering the aid

Representative Peggy Wilson

March 29, 2010

Page 2

to be in immediate need of emergency aid in order to avoid serious harm or death is not liable for civil damages as a result of an act or omission in rendering emergency aid.

.....
(d) This section does not preclude liability for civil damages as a result of gross negligence or reckless or intentional misconduct.

Since cases involving liability or immunity for negligence are often fact specific, there may be some situations when a trained individual administers epinephrine but does not enjoy immunity under AS 17.22.040. In those situations, the individual might be granted immunity under AS 09.65.090. It does not appear that either statute precludes potential application of the other.

Note that Alaska statutes contain other provisions granting immunity or limited immunity in particular situations. AS 08.64.366 (liability for services rendered by a mobile intensive care paramedic) uses language somewhat similar to that in sec. 17.22.040. In addition to other specific grants of immunity in AS 09.65, examples are AS 18.08.086 (liability for services rendered by certain medical professionals); AS 14.30.325(b) (surrogate parents); AS 44.21.450 (volunteer guardians).

CS FOR HOUSE BILL NO. 282()

**IN THE LEGISLATURE OF THE STATE OF ALASKA
TWENTY-SIXTH LEGISLATURE - SECOND SESSION**

BY

**Offered:
Referred:**

Sponsor(s): REPRESENTATIVES MUÑOZ, Austerman

A BILL

FOR AN ACT ENTITLED

1 **"An Act relating to naturopaths and to the practice of naturopathy; establishing an**
2 **Alaska Naturopathic Medical Board; authorizing medical assistance program coverage**
3 **of naturopathic services; amending the definition of 'practice of medicine'; and**
4 **providing for an effective date."**

5 **BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:**

6 *** Section 1.** AS 08.01.010(26) is amended to read:

7 (26) Alaska Naturopathic Medical Board (AS 08.45.003)
8 [REGULATION OF THE PRACTICE OF NATUROPATHY UNDER AS 08.45];

9 *** Sec. 2.** AS 08.01.050(d) is amended to read:

10 (d) At the request of one of the following boards, the department may contract
11 with public agencies and private professional organizations to provide assistance and
12 treatment to persons licensed by the board who abuse alcohol, other drugs, or other
13 substances:

14 (1) Board of Social Work Examiners;

- 1 (2) Board of Dental Examiners;
- 2 (3) [REPEALED
- 3 (4)] State Medical Board;
- 4 (4) [(5)] Board of Nursing;
- 5 (5) [(6)] Board of Examiners in Optometry;
- 6 (6) [(7)] Board of Pharmacy;
- 7 (7) [(8)] State Physical Therapy and Occupational Therapy Board;
- 8 (8) [(9)] Board of Professional Counselors;
- 9 (9) [(10)] Board of Psychologist and Psychological Associate
- 10 Examiners;
- 11 (10) [(11)] Board of Veterinary Examiners;
- 12 (11) [AND (12)] Board of Marital and Family Therapy; and
- 13 (12) Alaska Naturopathic Medical Board.

14 * **Sec. 3.** AS 08.03.010(c) is amended by adding a new paragraph to read:

- 15 (23) Alaska Naturopathic Medical Board (AS 08.45.003) - June 30,
- 16 2015.

17 * **Sec. 4.** AS 08.45 is amended by adding new sections to read:

18 **Sec. 08.45.003. Board created; organization.** (a) There is created the Alaska
 19 Naturopathic Medical Board. The board consists of seven members appointed by the
 20 governor as follows:

- 21 (1) three members shall be naturopaths licensed under this chapter who
- 22 have been engaged in the practice of naturopathic medicine in the state for at least five
- 23 years immediately preceding appointment, at least one of whom lives outside the third
- 24 judicial district;
- 25 (2) one member shall be a licensed pharmacist;
- 26 (3) one member shall be a licensed physician;
- 27 (4) one member shall be a hospital administrator; and
- 28 (5) one member shall be a public member who may be a licensed
- 29 physician.

30 (b) The board shall select from among its members a chair and a secretary.
 31 The board shall meet at least twice a year, and additional meetings shall be held on

1 request of the chair or on request of the department.

2 (c) Notwithstanding AS 08.01.035, members of the board serve staggered
3 terms of three years unless removed by the governor for neglect of duty or other just
4 cause.

5 (d) Four members of the board constitute a quorum for the transaction of all
6 business properly before the board.

7 (e) When appointing naturopaths under (a) of this section, the governor may
8 consider licensed naturopaths who have been nominated by the Alaska Association of
9 Naturopathic Physicians.

10 (f) In the event of the death, resignation, or removal of a member, the vacancy
11 shall be filled for the unexpired portion of the term in the same manner as the original
12 appointment.

13 **Sec. 08.45.005. Duties of the board.** The board shall

14 (1) approve naturopathic medical programs;

15 (2) implement the continuing education requirements of AS 08.45.058;

16 and

17 (3) adopt regulations necessary to implement this chapter in a manner
18 that protects public health, including regulations that define a physician-patient
19 relationship for purposes of AS 08.45.045(6).

20 * **Sec. 5.** AS 08.45.030 is amended to read:

21 **Sec. 08.45.030. Issuance of license.** The board shall request that the
22 department [SHALL] issue, and the department may issue, a license to practice
23 naturopathy to an applicant who provides proof satisfactory to the board
24 [DEPARTMENT] that the applicant has received a degree from an accredited four-
25 year college or university, has paid the applicable fees, and

26 (1) on or before December 31, 1987, has graduated from a school of
27 naturopathy that required four years of attendance at the school and after graduation
28 has received a license in another state after passing an examination for licensure in
29 that state and is licensed by a state at the time of application; or

30 (2) after December 31, 1987, has

31 (A) graduated from a school of naturopathy that required four

1 years of attendance at the school and at the time of graduation the school was
2 accredited or a candidate for accreditation by the Council on Naturopathic
3 Medical Education or a successor organization recognized by the United States
4 Department of Education; and

5 (B) passed the Naturopathic Physicians Licensing Examination.

6 * Sec. 6. AS 08.45.035(a) is amended to read:

7 (a) The board shall request that the department [SHALL] issue, and the
8 department may issue, a temporary license to practice naturopathy to an applicant
9 who has applied for and is qualified to take the next Naturopathic Physicians
10 Licensing Examination offered after the date of application and provides proof
11 satisfactory to the board [DEPARTMENT] that the applicant

12 (1) has paid the applicable fees;

13 (2) meets the requirements of AS 08.45.030(2)(A); and

14 (3) [(2)] has not previously failed the Naturopathic Physicians
15 Licensing Examination.

16 * Sec. 7. AS 08.45 is amended by adding a new section to read:

17 **Sec. 08.45.045. Scope of practice as a naturopath.** A naturopath may

18 (1) use physical examinations consistent with naturopathic medical
19 education and training for diagnostic purposes;

20 (2) perform and administer therapies consistent with naturopathic
21 medical education and training, including intravenous delivery of dietetic substances;

22 (3) order or conduct medical imaging and laboratory examinations
23 consistent with naturopathic medical education and training;

24 (4) perform preemployment, school, and workplace health
25 examinations;

26 (5) perform minor surgery; in this paragraph, "minor surgery"

27 (A) means the use of

28 (i) operative, electrical, or other methods for surgical
29 repair and care incidental to superficial lacerations and abrasions or
30 superficial lesions and the removal of foreign bodies located in
31 superficial tissues; and

1 (ii) antiseptics and local anesthetics in connection with
2 methods authorized under (i) of this subparagraph;

3 (B) does not include use of general or spinal anesthetics,
4 surgery of the body cavities, or specialized surgery, such as plastic surgery,
5 surgery involving the eyes, or surgery involving tendons, ligaments, nerves, or
6 blood vessels; and

7 (6) subject to AS 08.45.050, administer and prescribe prescription
8 drugs, vaccines, hormones, and medical devices for a person with whom the
9 naturopath has a physician-patient relationship as defined by the board in regulations,
10 except a naturopath may not administer or prescribe a schedule IA, IIA, IIIA, IVA,
11 VA, or VIA controlled substance under state law or a schedule I, II, III, IV, or V
12 controlled substance under federal law.

13 * **Sec. 8.** AS 08.45.050 is amended to read:

14 **Sec. 08.45.050. Restrictions on practice of naturopathy.** A person who
15 practices naturopathy may not

16 (1) give, prescribe, or recommend in the practice

17 (A) a prescription drug, vaccine, or hormone, except as
18 authorized under AS 08.45.045(6);

19 (B) a controlled substance;

20 (C) a poison;

21 (2) engage in surgery, except minor surgery as authorized under
22 AS 08.45.045;

23 (3) use general or spinal anesthetics; or

24 (4) administer ionizing radioactive substances for therapeutic
25 purposes [USE THE WORD "PHYSICIAN" IN THE PERSON'S TITLE].

26 * **Sec. 9.** AS 08.45 is amended by adding a new section to read:

27 **Sec. 08.45.058. Continuing education requirements.** (a) For each biennial
28 license period, a person licensed to practice naturopathy under AS 08.45.030 shall
29 complete and submit to the board evidence of at least 35 hours of continuing
30 education, at least 15 of which are in pharmaceutical education. The 35 hours of
31 continuing education must be in training programs approved by the board.

1 (b) The department shall publish, on a regular basis, a listing of training
2 programs that may be used to satisfy the continuing education requirements of this
3 section.

4 * **Sec. 10.** AS 08.45.100 is amended to read:

5 **Sec. 08.45.100. Regulations.** The board and the department
6 [DEPARTMENT OF COMMERCE, COMMUNITY, AND ECONOMIC
7 DEVELOPMENT] shall adopt regulations to implement this chapter.

8 * **Sec. 11.** AS 08.45 is amended by adding a new section to read:

9 **Sec. 08.45.110. Fees.** The department shall set fees under AS 08.01.065 for
10 each of the following:

- 11 (1) a license issued under this chapter;
- 12 (2) a temporary license issued under this chapter;
- 13 (3) renewal of a license issued under this chapter.

14 * **Sec. 12.** AS 08.45.200 is amended by adding, a new paragraph to read:

15 (4) "board" means the Alaska Naturopathic Medical Board established
16 under this chapter.

17 * **Sec. 13.** AS 08.64.380(6) is amended to read:

18 (6) "practice of medicine" or "practice of osteopathy" means:

19 (A) for a fee, donation or other consideration, to diagnose,
20 treat, operate on, prescribe for, or administer to, any human ailment, blemish,
21 deformity, disease, disfigurement, disorder, injury, or other mental or physical
22 condition; or to attempt to perform or represent that a person is authorized to
23 perform any of the acts set out in this subparagraph;

24 (B) to use or publicly display a title in connection with a
25 person's name, including "doctor of medicine," "physician," "M.D.," or "doctor
26 of osteopathic medicine" or "D.O.," unless the designation additionally
27 contains the word "naturopathy" or "naturopathic" in the title, or to use
28 or publicly display a specialist designation, such as [INCLUDING]
29 "surgeon," "dermatologist," or a similar title, in such a manner as to show that
30 the person is willing or qualified to diagnose or treat the sick or injured;

31 * **Sec. 14.** AS 08.80.400 is amended to read:

1 **Sec. 08.80.400. Other licensees not affected.** This chapter does not affect the
2 practice of medicine by a licensed medical doctor and does not limit a licensed
3 medical doctor, osteopath, podiatrist, physician assistant, advanced nurse practitioner,
4 dentist, veterinarian, dispensing optician, naturopath, or optometrist in supplying a
5 patient with any medicinal preparation or article within the scope of the person's
6 license.

7 * **Sec. 15.** AS 47.07.030(b) is amended to read:

8 (b) In addition to the mandatory services specified in (a) of this section and the
9 services provided under (d) of this section, the department may offer only the
10 following optional services: case management and nutrition services for pregnant
11 women; personal care services in a recipient's home; emergency hospital services;
12 long-term care noninstitutional services; medical supplies and equipment; advanced
13 nurse practitioner services; naturopathic services; clinic services; rehabilitative
14 services for children eligible for services under AS 47.07.063, substance abusers, and
15 emotionally disturbed or chronically mentally ill adults; targeted case management
16 services; inpatient psychiatric facility services for individuals age 65 or older and
17 individuals under age 21; psychologists' services; clinical social workers' services;
18 midwife services; prescribed drugs; physical therapy; occupational therapy;
19 chiropractic services; low-dose mammography screening, as defined in
20 AS 21.42.375(e); hospice care; treatment of speech, hearing, and language disorders;
21 adult dental services; prosthetic devices and eyeglasses; optometrists' services;
22 intermediate care facility services, including intermediate care facility services for the
23 mentally retarded; skilled nursing facility services for individuals under age 21; and
24 reasonable transportation to and from the point of medical care.

25 * **Sec. 16.** AS 47.07.900 is amended by adding a new paragraph to read:

26 (20) "naturopathic services" means services that are furnished by a
27 person who is licensed to practice naturopathy under AS 08.45.030 or 08.45.035 and
28 that are within the person's scope of practice under AS 08.45.045.

29 * **Sec. 17.** The uncodified law of the State of Alaska is amended by adding a new section to
30 read:

31 **TRANSITION: REGULATIONS.** The Department of Commerce, Community, and

1 Economic Development may proceed to adopt regulations necessary to implement the
2 changes made by this Act. The regulations take effect under AS 44.62 (Administrative
3 Procedure Act), but not before the effective date under sec. 21 of this Act.

4 * Sec. 18. The uncodified law of the State of Alaska is amended by adding a new section to
5 read:

6 TRANSITIONAL PROVISIONS APPLICABLE TO ALASKA NATUROPATHIC
7 MEDICAL BOARD. Notwithstanding AS 08.45.003, as enacted in sec. 4 of this Act, the
8 terms of the first members of the Alaska Naturopathic Medical Board appointed by the
9 governor are as follows: (1) one licensed naturopath member, the licensed pharmacist
10 member, and the physician member shall be appointed for three-year terms; (2) one licensed
11 naturopath member and the public member shall be appointed for two-year terms; and (3) one
12 licensed naturopath member and the hospital administrator member shall be appointed for a
13 one-year term. The governor shall specify the term of office of each licensed naturopath
14 member appointed subject to this section.

15 * Sec. 19. The uncodified law of the State of Alaska is amended by adding a new section to
16 read:

17 TRANSITIONAL PROVISIONS AFFECTING EXISTING LICENSEES.
18 Notwithstanding AS 08.45.030, as amended by sec. 5 of this Act, and AS 08.45.035(a), as
19 amended by sec. 6 of this Act,

20 (1) a license issued under those provisions by the Department of Commerce,
21 Community, and Economic Development before the effective date of this section is valid for
22 the period issued until renewal under the provisions of this Act; and

23 (2) the Department of Commerce, Community, and Economic Development,
24 without prior approval of the Alaska Naturopathic Medical Board, may issue a license or
25 renew a license to practice naturopathy on or after the effective date of this section and until
26 the day before the effective date of the regulations initially adopted by the board setting out
27 procedures under which license applications and renewals are submitted for board review and
28 approval.

29 * Sec. 20. Section 17 of this Act takes effect immediately under AS 01.10.070(c).

30 * Sec. 21. Except as provided in sec. 20 of this Act, this Act takes effect July 1, 2010.

ANALYSIS: (Attach a separate page if necessary)

This legislation amends AS 08.45 to establish the Alaska Naturopathic Medical Board and expands the scope of practice of naturopaths.

The program is required to cover its costs with licensing fees under AS 08.01.065, and revenue generated from program fees must cover its full operating costs.

A detailed analysis of costs is attached.

FISCAL NOTE

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSHB 282 (L&C)

ANALYSIS CONTINUATION

Total PERSONAL SERVICES: \$28.3

- One (1) part-time Occupational Licensing Examiner position, Range 13, to staff the Board. A position is needed to support Board activities by keeping the official records and providing administrative support to the Board and the licensing program. The current licensing program is supported by a position that is assigned ten of the non-board licensing programs. Adding requirements to that position in support of a Board is not realistic.

Total TRAVEL: \$7.6

- The legislation establishes the Alaska Naturopathic Medical Board consisting of 7 members. In accordance with Section 4 of the bill, AS 08.45.003(b) requires the Board to meet at least twice a year. The estimated travel costs for 7 members and 1 staff will cover two meetings, assuming one is held in Anchorage and one is held in Juneau.

Total CONTRACTUAL: \$2.0

- Contractual costs include public notices of meetings, regulations, legal review of regulations, communications, and printing expenses.

Total SUPPLIES: \$0.5

- Supplies consists of standard operating desk top supplies (paper, etc.)

REVENUE: Revenue will be generated from license fees. A majority of the fees will be collected biennially during the biennial licensing renewal period. The bill is set to take effect immediately upon passage and current naturopath licenses are due to expire on March 31, 2010. Therefore, fees for existing licensees will be adjusted prior to the March 31, 2012 license renewal period.

Program costs average \$5.9 annually; \$11.8 biennially (representing the two-year licensing cycle). CSHB 282 (L&C) is expected to increase costs by \$38.4 annually, for a total annual program cost of \$44.3 (\$5.9 + \$38.4); \$88.6 over the biennial licensing cycle. Since fees are adjusted prior to the biennial license renewal, fees will need to cover the biennial licensing costs every other year.

At the end of FY09, there were 40 current licensees. For projection purposes, the 40 licensees can expect to pay license fees totaling \$2,215 for the biennium (\$88.6 divided by 40 = \$2,215), in comparison to the present biennial fee of \$470; an increase of \$1,745. Since the next renewal period will not occur until March 31, 2012, the fee analysis will be based on actual expenditure and revenue information.

HB282 - Naturopaths

"An Act relating to naturopaths and to the practice of naturopathy; establishing an Alaska Naturopathic Medical Board; authorizing medical assistance program coverage of naturopathic services; amending the definition of 'practice of medicine'; and providing for an effective date."

Status: PREFILE RELEASED >> (H) L&C : 2010-01-19

House Bill 282 creates a Naturopathic Medical Board for the purpose of expanding allowed practices and procedures of Naturopathic Doctors (NDs) and regulates the practice of naturopathic medicine. The board will consist of three naturopaths, one licensed pharmacist, and one public member. The board will work with the Division of Occupational Licensing to issue licenses, and will have authority to investigate and discipline as required. In addition, the state will authorize prescription endorsement which will be offered for the first time for NDs who have practiced for five years; participated in 60 hours of pharmacology education from an approved program; and met all the requirements relating to administration and prescription of drugs, vaccinations, hormones, and medical devices. The prescription endorsement must be renewed every two years. The bill mandates continuing medical education of 35 hours bi-annually, 15 of which must be in pharmacy education.

Prescribing authority will give flexibility to NDs to provide necessary medical treatment to patients. Prescription rights, which are already permitted for advanced nurse practitioners, will allow access to a range of commonly prescribed medicines that can be used in correlation with naturopathic treatment to improve patient care.

HB 282 will align the definition of a naturopathic physician with the U.S. Department of Labor which released a new definition of naturopathic physician to include job titles of "Naturopathic Doctor, Physician, and Doctor of Naturopathic Medicine." This is an important step in recognizing NDs as qualified doctors and primary care physicians.

Naturopathic doctors are highly trained medical professionals. NDs attend a four-year post-graduate professional naturopathic medical program and are educated in the same basic sciences as conventional medical students. Studies concentrate on holistic and traditional approaches to therapy with a strong emphasis on disease prevention and optimization of wellness. Naturopathic doctors take similar rigorous professional board exams for licensure and continue educational training each year.

As Alaska continues to face shortages in the healthcare professions, HB 282 provides an avenue to help fill the gap of primary care physicians. This bill will reasonably expand the services of naturopaths and follow the responsibilities set forth by the board while providing the important services for keeping Alaskans healthy.

ANALYSIS: (Attach a separate page if necessary)

This legislation amends AS 08.45 to establish the Alaska Naturopathic Medical Board and expands the scope of practice of naturopaths.

The program is required to cover its costs with licensing fees under AS 08.01.065, and revenue generated from program fees must cover its full operating costs.

A detailed analysis of costs is attached.

FISCAL NOTE #1

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSHB 282(L&C)

ANALYSIS CONTINUATION

Total PERSONAL SERVICES: \$28.3

- One (1) part-time Occupational Licensing Examiner position, Range 13, to staff the Board. A position is needed to support Board activities by keeping the official records and providing administrative support to the Board and the licensing program. The current licensing program is supported by a position that is assigned ten of the non-board licensing programs. Adding requirements to that position in support of a Board is not realistic.

Total TRAVEL: \$5.6

- The legislation establishes the Alaska Naturopathic Medical Board consisting of 5 members. In accordance with Section 3 of the bill, AS 08.45.003(b) requires the Board to meet at least twice a year. The estimated travel costs for 5 members and 1 staff will cover two meetings, assuming one is held in Anchorage and one is held in Juneau.

Total CONTRACTUAL: \$2.0

- Contractual costs include public notices of meetings, regulations, legal review of regulations, communications, and printing expenses.

Total SUPPLIES: \$0.5

- Supplies consists of standard operating desk top supplies (paper, etc.)

REVENUE: Revenue will be generated from license and endorsement fees. A majority of the fees will be collected biennially during the biennial licensing renewal period. The bill is set to take effect immediately upon passage and current naturopath licenses are due to expire on March 31, 2010. Therefore, fees for existing licensees will be adjusted prior to the March 31, 2012 license renewal period.

Program costs average \$5.9 annually; \$11.8 biennially (representing the two-year licensing cycle). HB 282 is expected to increase costs by \$36.4 annually, for a total annual program cost of \$42.3 (\$5.9 + \$36.4); \$84.6 over the biennial licensing cycle. Since fees are adjusted prior to the biennial license renewal, fees will need to cover the biennial licensing costs every other year.

At the end of FY09, there were 40 current licensees. For projection purposes, the 40 licensees can expect to pay license fees totaling \$2,115 for the biennium (\$84.6 divided by 40 = \$2,115), in comparison to the present biennial fee of \$470; an increase of \$1,645. Since the next renewal period will not occur until March 31, 2012, the fee analysis will be based on actual expenditure and revenue information.

ANALYSIS: (Attach a separate page if necessary)

This legislation would require the Medicaid program to cover naturopathy services. The Department does not anticipate increased expenditures of Medicaid services because naturopathy services would largely replace other covered services, and any increase in total covered services would be offset by payment of naturopaths at a lower rate than physicians. However, there would be a one-time cost to make system changes to the MMIS, the Department's Medicaid claims processing system. The Department is in the process of replacing its existing MMIS with a new system. Because this change would be made to the old system prior to replacement, it would not be eligible for matching federal reimbursement.

MEMORANDUM

March 22, 2010

SUBJECT: Sectional Summary of CSHB 282()
(Work Order No. 26-LS1208\C)

TO: Representative Cathy Muñoz
Attn: Kendra Kloster

FROM: Alpheus Bullard *AB*
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds the Alaska Naturopathic Board to the list of boards and professions to which AS 08.01 applies.

Section 2. Adds the Alaska Naturopathic Board (board) to a list of boards that may request that the Department of Commerce, Community, and Economic Development (department) provide assistance and treatment to the boards' licensees who abuse alcohol, drugs, or other substances.

Section 3. Provides that the board will terminate June 30, 2015.

Section 4. Adds new sections to AS 08.45 (Naturopaths).

Sec. 08.45.003. Provides for the establishment and organization of the Alaska Naturopathic Board.

Sec. 08.45.005. Provides the duties and powers of the board.

Section 5. Amends AS 08.45.030 to provide that the board shall request the department to issue a license to practice naturopathy to an applicant who has provided satisfactory proof of the applicant's educational qualifications and paid the applicable fees.

Section 6. Amends AS 08.45.035(a) to provide that the board shall request that the department, and that the department may, issue a temporary license to practice naturopathy to an applicant who has provided satisfactory proof to the board of the applicant's qualifications and paid the applicable fees.

Section 7. Adds a new section to AS 08.45 defining the scope of practice of naturopaths.

Section 8. Amends AS 08.45.050 (restrictions on the practice of naturopathy) to (1) allow a naturopath authorized under AS 08.45.056(6) to be able to prescribe and recommend certain substances, engage in minor surgery authorized under AS 08.45.045, and use the word "physician" in the person's title and (2) prohibit a naturopath from prescribing or recommending a vaccine or hormone (except as may be authorized under AS 08.45.045(6)), using general or spinal anesthetics, or administering ionizing radioactive substances for therapeutic purposes.

Section 9. Establishes continuing education requirements for naturopaths.

Section 10. Amends AS 08.45.100 to provide that both the department and the board shall adopt regulations to implement AS 08.45.

Section 11. Adds a new section that provides what fees may be charged by the department under AS 08.45.

Section 12. Adds a definition for "board" to AS 08.45.

Section 13. Amends the statutory definition of the "'practice of medicine' or 'practice of osteopathy'" in AS 08.64 to permit a practitioner of naturopathy to use or publically display a title in connection with that person's name that includes the words "doctor of medicine" or "physician," if the designation additionally contains the word "naturopathy" or "naturopathic" in the title.

Section 14. Adds naturopaths to the list of licensees whose practices are not limited by the statutes applicable to pharmacists in AS 08.80, as long as the naturopath is acting within the scope of the license or endorsement under AS 08.45.

Section 15. Adds naturopathic services to the list of services that are eligible for Medicaid reimbursement under state law.

Section 16. Provides a definition of naturopathic services for AS 47.07 (Medical Assistance for Needy Persons).

Section 17. Adds a provision to uncodified law allowing the department to adopt regulations necessary to implement the Act.

Section 18. Adds a provision to uncodified law that provides transitional provisions governing the terms of the first members of the Alaska Naturopathic Board.

Section 19. Adds a provision to uncodified law that provides for treatment of naturopathic licensees licensed before the effective date of the Act.

Section 20. Gives an immediate effective date to sec. 17 so that the regulations process can start before the rest of the bill takes effect (90 days after becoming law).

Section 21. Provides that the Act, except as provided in sec. 20, will take effect July 1, 2010.

The Future of Naturopathic Medicine: A Message from Karen E. Howard, Executive Director of the American Association of Naturopathic Physicians

Throughout 2010, the American Association of Naturopathic Physicians (AANP) celebrates its 25th Anniversary. Looking forward in this New Year, one must wonder what future the US Congress is divining as it struggles to reform our current healthcare system. It is likely that the Senate and House of Representatives will successfully complete a conference on healthcare reform legislation and send President Obama a bill to sign into law. Will this bill be good for patients, or has compromise forced decisions that will do little to effect change?

If you have a glass half-full mentality, you understand that the virtue of patience can yield amazing opportunities. This can be the first step on the road to reform. Perhaps forcing millions more into a failing system will accomplish two things. First, people will not be at risk for losing life savings, they will no longer avoid going to the doctor for life-threatening conditions, nor will they be forced to rely on their local emergency room for healthcare. Second, in the matter of a few short years, the experts who continue to assert that our system is unsustainable might be proven correct. It is likely we will witness a collapse that will force legislators into implementing true change. Regardless, the public is demanding ownership of their health and a return to wellness. A final vote in the House and Senate is not likely to quell their voice, nor will it fulfill the objectives of the American Association of Naturopathic Physicians (AANP).

The AANP's vision is to transform the healthcare system from disease management to health promotion by incorporating the principles of naturopathic medicine. The mission of the AANP is to serve our members by advancing the profession of naturopathic medicine and preserving its integrity. The question of how the AANP shows up in the world, with our long-term commitment to creating sustainable healthcare, lies at the heart of each naturopathic physician's practice and the work of the association itself.

While the number of licensed naturopathic physicians continues to grow, the AANP is working to further empower our public policy efforts by developing strong collaborative relationships with like-minded organizations representing practitioners, patients, products, and environmental interests. Our external partnerships are diverse in nature and universal in intent.

The power of the AANP's relationships enables pursuit of a broader agenda, one more fitting to the naturopathic philosophy. Working with likeminded groups adds voice to a larger, less parochial agenda. By teaming with this larger audience, we seek to establish a voice in the larger reform effort and the reengineering of healthcare reform proposals to embody a wellness model. In partnership with the associations in the natural products realm, the AANP actively advocates for passage of food stamp legislation and other public health initiatives aimed at significantly impacting health status for at-risk populations. As a leader in the Coalition for Patient Rights, whose membership of 35 organizations represents more than 3.3 million providers, the AANP is advancing a unified message to expand consumer choice and access to qualified providers.

Our purpose for engaging in partnership is to support the rights of consumers to access highly qualified practitioners of their choice. The AANP honors the credentials of each of our partners, and we are strong advocates for practitioners' rights to practice to the full extent of their abilities, education, qualifications, and legal authority. Our commitment to establishing standards for naturopathic medicine is evidenced by our work to gain licensure in all 50 states and our efforts to establish recognition at the federal level. This fall, the US Department of Labor released a new definition of "naturopathic physician" in its Occupational Information Network System (the replacement for the old Department of Labor Dictionary of Occupational Titles). The 2009 Department of Labor custom report for naturopathic physicians now defines members of our profession as people who:

"Diagnose, treat, and help prevent diseases using a system of practice that is based on the natural healing capacity of individuals. May use physiological, psychological or mechanical methods. May also use natural medicines, prescription or legend drugs, foods, herbs, or other natural remedies.

Sample job titles include Naturopathic Physician, Naturopathic Doctor, Physician, and Doctor of Naturopathic Medicine." (Occupational Information Network, 2009)

This is a monumental success for the naturopathic profession. The federal government now officially recognizes naturopathic medicine as one of 965 recognized occupations and defines the key features of this "occupation" by using a standardized, measurable set of variables. The outdated Department of Labor definition of "Naturopathic Doctor" is now null and void. This independent data will be updated on a regular basis for employers, prospective students, and educators. The new definition will stand as a cornerstone for our work to advance the profession in the following ways.

- Advocating for inclusion in all federal loan repayment programs, on par with graduates of conventional medical programs, to support naturopathic medical graduates as they pursue opportunities to support underserved populations. Legislation enumerating inclusion in the Indian Health Service loan repayment program is now moving forward in Congress.
- Advancement of state licensing efforts. Efforts in Pennsylvania, New York, Massachusetts, and a host of other states will continue in 2010 and beyond as we aggressively seek regulation in all 50 states.
- Expansion of Scope of Practice. In the past 2 years several licensed jurisdictions have been successful in expanding the naturopathic scope of practice, and these efforts will continue.
- Inclusion in employer-funded, state-sponsored, and federal healthcare programs. The expansion of Medicaid, creation of

state-based insurance programs with the pending insurance reform legislation, and the expansion of wellness programs by self-insured employers will create enormous demand for the skills of naturopathic physicians who are perfectly qualified to provide primary care and address the needs of people suffering from chronic disease.

Each of the individual professions in the field of integrative medicine has similarly worthy and essential legislative and regulatory agendas. And we now have a unique opportunity to pursue a parallel intention that reflects our interconnectedness and vision. If you see the glass as half empty on the eve of passage of "insurance reform" legislation, you might fear we've lost our chance for real reform where everyone has uniform, cost-effective coverage for services that will improve their health. While very far from perfect, this legislation sets the stage for creating the new paradigm we seek—over the long term. And while we have virtually no control over the result of this effort, one thing is absolutely certain: Each of us as individuals, our professional associations, and indeed the collective commitment of our united collaborations have an obligation to be the voice of sustainable healthcare and personal empowerment—for the sake of generations to come.

Karen E. Howard serves as the Executive Director for the American Association of Naturopathic Physicians (AANP). Howard is responsible for overseeing the AANP, the nation's only national professional organization representing licensed naturopathic physicians, and ensuring that it fulfills its mission. The AANP is committed to changing the current healthcare system from one that treats disease to one that promotes health.

In addition, the organization is actively engaged in state and national discussions with policy makers and industry experts to affect change. Howard has spent almost 25 years working with Congress, state legislatures and healthcare provider organizations to develop innovative healthcare policy and programs for public and private organizations. She has also served in a variety of executive positions and worked as a national lobbyist on Capitol Hill. Her policy experience is in mental health, managed care, integrative medicine, and natural medicine.

Overview of Naturopathic Regulation

Colorado Department of Regulatory Agencies
October 14, 2005

The legal status of naturopathy varies from state to state. In some states, the practice of naturopathy, though not regulated, is protected through court rulings or attorney general opinions. In most states, naturopathic physician status is unprotected or unclear. Two states, Florida and Nevada, have repealed regulation of this profession. Nevada ceased licensing naturopathic physicians in 1987 (in Nevada naturopathic physicians were required to be supervised by medical doctors). Although naturopathic licensing in Florida was discontinued in 1959, there are still laws and a board regulating those naturopaths still practicing. Florida allows naturopathic physicians licensed prior to program termination dates to continue to practice. In Tennessee and in South Carolina, the practice of naturopathy is illegal. Tennessee law, for example, provides that the practice of naturopathy is a Class B misdemeanor, but renders this prohibition inapplicable to "persons who comply with the regulatory laws of the state with respect to the practice of the various healing arts." Without a similar textual qualification, however, a South Carolina statute prohibits the practice of naturopathy and subjects offenders to a fine not to exceed \$500 or imprisonment for a period not exceeding one year, or both.

The multiplicity of therapies and techniques that typically comprise the statutory definition of naturopathy may often fall within the scope of practice for other professions. The Montana Naturopathic Practice Act expressly acknowledges this fact by recognizing that many of the therapies used by naturopathic physicians, such as the use of nutritional supplements, herbs, foods, homeopathic preparations, and such physical forces as heat, cold, water, touch, and light, are not the exclusive privilege of naturopathic physicians, and their use, practice, prescription, or administration by persons not licensed to practice naturopathic medicine is not prohibited by this practice act.

Currently, 15 states and the District of Columbia license naturopathic physicians: Alaska, Arizona, California, Connecticut, Florida, Hawaii, Idaho, Kansas, Maine, Montana, New Hampshire, Oregon, Utah, Vermont, and Washington. In several states, licensed naturopathic physicians must also qualify for a certificate to practice natural childbirth, acupuncture, or to dispense a natural substance or device. The following highlights the regulatory programs found in the 15 states.

Alaska

Alaska's law places several restrictions on the practice of naturopathy. A person who practices naturopathy may not prescribe a prescription drug, perform surgery, or use the word "physician" as a title. There are currently 36 licensed naturopathic doctors in Alaska.

Arizona

Arizona's Naturopathic Physicians Board of Medical Examiners (Arizona Board) was established in 1935. Arizona remains the state with the third highest number of licensed naturopathic physicians (400). The Arizona Board has the statutory authority to adopt rules for recognizing naturopathic specialties. The Arizona Board has approved training programs in four specialty areas and has issued certificates to at least 16 naturopaths in the specialty of family medicine. Additionally, the Arizona Board has assembled a formulary of more than 460 items that naturopathic physicians may dispense including both prescription drugs and some controlled substances. In 2000, the Arizona Board underwent a performance audit. The review concluded that terminating the Arizona Board would not significantly harm the public's health and safety since the practice of medicine would continue to be regulated by the Allopathic Board of Medical Examiners. Naturopaths could continue to perform many traditional activities, but would no longer be allowed to act as primary medical care providers. However, the review further stated that terminating the Arizona Board could harm the public's welfare by potentially limiting access to alternative medical care. Subsequently, there was no action taken by the Arizona legislature to repeal the Arizona Board.

California

California's Bureau of Naturopathic Medicine (Bureau) within the Department of Consumer Affairs was established to administer the Naturopathic Doctor's Act and was authorized to collect fees and receive license applications beginning January 1, 2004. This act authorizes the creation of an advisory committee comprised of three licensed naturopathic doctors, three licensed physicians, and three public members. The committee's first meeting was convened on December 13, 2004. Additionally, a naturopathic formulary advisory committee was formed and a naturopathic childbirth attendance advisory committee was created to issue recommendations concerning the practice of naturopathic childbirth attendance. The scope of practice for licensed naturopathic doctors includes diagnosis and treatment of patients, including the authority to order lab tests and prescribe most drugs subject to supervision of a medical or osteopathic physician. Licensed naturopathic doctors may perform minor procedures, such as treating lacerations and removing moles and growths. The program began accepting license applications in January 2005. Currently there are 129 licensed naturopathic doctors in California.

Connecticut

Connecticut's law, which was enacted in 1920, does not allow licensed naturopathic physicians to perform minor surgery, prescribe drugs, or practice obstetrics and gynecology. The statute requires that naturopathic physicians maintain professional liability insurance. There are currently 196 licensed naturopaths in Connecticut.

District of Columbia

In May 2004, final approval was given to the Naturopathic Medicine Licensing Amendment Act of 2004 to license naturopathic physicians as primary care providers. The act recognized naturopathic physicians who have completed four-years of naturopathic medical college training and successfully passed the NPLEX. Prior to the passage of this act, the District of Columbia had a registration program for naturopaths. A person registered to practice naturopathy was entitled to use the title "Doctor of Naturopathy." The only requirements for registration were that applicants must be at least 18 years of age and not have been convicted

of a crime of moral turpitude that bears directly on the applicant's fitness to be registered. The practice specifically excluded the use of x-rays, performing any surgical procedure, injecting any substance into a person by needle, or performing any invasive procedure. As of September 2005, the District of Columbia had not promulgated any rules or issued any licenses.

Florida

Florida's licensing authority for naturopathic physicians was abolished in 1959 and licensees who were licensed at that time were allowed to continue practicing naturopathic medicine. Draft legislation proposed by the Florida Naturopathic Physician Association was introduced in 2004 to reestablish regulation of naturopathic medicine through licensure and to create the Board of Naturopathic Medicine within the Department of Health. A 2004 Sunrise Report on Proposed Licensure of Naturopathic Physicians, by the Florida House of Representatives, Committee on Health Care, concluded that while there is evidence for support of licensure based on the existence of accredited training programs and licensure examinations, there is no documented evidence of substantial risk from not licensing naturopathic physicians. Moreover, there is potential risk from licensing naturopathic physicians and allowing them to provide a broad range of primary care services.

Hawaii

Hawaii has regulated naturopathic physicians since 1925. There are currently 81 licensed naturopaths. Originally, the Board of Health was responsible for conducting examinations and issuing licenses. In 1969, the regulation was transferred to the Department of Regulatory Agencies, now the Department of Commerce and Consumer Affairs. The regulation of naturopathy was reviewed in 1978 and 1985, with continued regulation recommended in both instances.

Idaho

Idaho became the 15th state in 2005 to create a licensure program for naturopathic physicians. The legislation is a full scope and title protection act. The law requires the creation of a formulary council to determine pharmaceutical privileges for naturopathic physicians.

Kansas

Kansas passed legislation during the 2002 legislative session to regulate the practice of naturopathic medicine. The bill, signed into law in May 2003, provides registration for naturopathic doctors, rather than licensing, yet requires educational and testing requirements. Naturopathic medicine is defined to include such procedures as venipuncture, naturopathic acupuncture, and minor office procedures. Naturopathic doctors may not perform surgery, practice obstetrics, administer ionizing radiation or prescribe, dispense or administer any controlled substances or any prescription-only drugs except those listed on the naturopathic formulary adopted by the Kansas board.

Maine

Maine's Board of Complimentary Health Care Providers regulates 19 naturopathic doctors. Naturopathic doctors have the exclusive right to the use of the terms "naturopathic doctors," "naturopathic," "naturopath," "doctor of naturopathic medicine," "Doctor of Naturopathy,"

"naturopathic medicine," "naturopathic health care," "naturopathy," and "N.D." Use of the term "physician" by a licensee is prohibited. Naturopathic Doctors have a limited scope of prescriptive authority.

Montana

Montana's Naturopathic Health Care Practice Act was enacted in 1991 to regulate lay midwives and naturopathic physicians. Naturopathic physicians are authorized to perform minor surgery, attend a natural childbirth if in possession of a certificate of specialty practice, and prescribe certain drugs as established by the natural substance formulary list. When the program first began there were only five licensed naturopathic physicians in the state, however, as of August 2005, there were 66.

New Hampshire

New Hampshire's Naturopathic Health Care Practice Act was enacted in 1994. Specialty certificates in naturopathic childbirth and acupuncture are offered. Doctors of naturopathic medicine with specialty certification in naturopathic childbirth are authorized to use oxytocin and pitocin. There are currently 36 licensed naturopathic physicians in New Hampshire.

Oregon

Oregon first began licensing naturopathic physicians in 1927, although they were able to practice before then under an exemption in the Osteopathic Practice Act. The total number of licensed naturopathic physicians in Oregon equals 636, ranking second for licensees in a state. Oregon also has the most encompassing law as practitioners are allowed to prescribe drugs, perform minor surgery, and practice natural childbirth with a certificate of special competency.

Utah

Utah's Naturopathic Physicians Licensing Board was created in 1996. The board currently issues five different categories of licenses: naturopath, naturopath including surgery/obstetrics, naturopathic physician, temporary naturopathic physician, and naturopathic controlled substance. In order to perform naturopathic childbirth, a licensee must satisfy the standards of the American College of Naturopathic Obstetricians or its successor.

Vermont

Vermont's licensed naturopathic physicians may order, prescribe, dispense, and administer certain medications of mineral, animal, or botanic origin and must adhere to the Naturopathic Physician Formulary Rules promulgated by the Vermont Department of Health. Licensees may not practice naturopathic childbirth unless they have obtained a special endorsement that requires specific education; training; passage of an examination; and actual childbirth assistance, participation, and observation.

Washington

Washington has regulated naturopathic physicians since 1919, as part of its law created to regulate professions engaged in "drugless healing." The law was substantially amended in 1988 to reflect the current practice of naturopathic physicians. The total number of licensed

naturopathic physicians in Washington is 650, ranking first for licensees in a state.

ref HB 282

Emily A. Kane, ND LAc

Naturopathic Doctor

Alaska License No 22

Licensed Acupuncturist

Alaska License No 18

March 3, 2010

The Honorable Kurt Olson
Chair, House Labor and Commerce
State Capitol Building, Room 24
Juneau AK 99801

Dear Representative Olson,

Thank you for your consideration in hearing HB 282, an act relating to naturopaths, with intent to promote improved access for all Alaskans to safe, effective, health promoting therapies. Naturopathic Medicine is continuously evolving, deeply wedded to evidence based practices, and built on a foundation of thoroughly trained health scientists.

I enclose for your review a document comparing MD/DO education and that of naturopathic doctors in the 21st century. Also attached is a book list for students enrolled in US DOE-accredited institutions of higher learning which offer the doctorate degree in Naturopathic Medicine.

As you may know, in 2006 the American Medical Association (AMA) undertook a massive, well funded, effort to restrict the scope of practice of 10 "ancillary" healthcare professionals, including PAs and ANPs. The SOPP document is especially vitriolic, and inaccurate, in discussing Naturopathic Medicine. I would like the opportunity to offer referenced corrections to many of the gross mischaracterizations of Naturopathic Medicine in the SOPP document which you recently received from Dr. Brion Beerle.

I mention Physician Assistants and Advanced Nurse Practitioners because both of these mid-level medical professionals have enjoyed expanded scope in Alaska, to no detriment to the wellbeing of Alaskans. Please note, moreover, that PAs capture their degree with 2 years of post-college training, and that ANPs also hold master's level degrees. This is in contrast to Naturopathic Doctors, who have doctorate level training (at least 4 years, plus a year of preceptorship - our word for residency) after achieving a bachelor's degree from an accredited 4-year undergraduate college. My intention is not to undermine the usefulness or training of my mid-level professional colleagues. It is to point out that Naturopathic Doctors are highly trained, and there already exist strict standards for our practice in Alaska. Further, there exists precedent for Naturopathic Physicians being registered with the federal Drug Enforcement Agency, and also for NDs to serve Medicaid patients.

418 Harris Street, Suite 329 Juneau, AK 99801

Phone: 907-586-3655 FAX: 907-586-4326 email: DoctorEm@aol.com

In Alaska, however, we are underutilized. Properly trained and licensed NDs (Alaskan law does not permit any of the ANMA-variety "traditional" naturopaths to practice here) are indeed part of the answer to our failing healthcare delivery system. We have deep and broad training in pharmacology not so much because we turn to drugs primarily for therapy – we have very effective and generally much safer, less expensive treatment modalities – but because we see patients taking multiple prescriptive medications daily. Many of these patients are unwell, and we are uniquely positioned to help them transition to less dependence on pharmaceuticals which may be undermining, not always supporting, their health. We employ the most effective and least harmful therapy to our patients at every encounter. Sometimes that means choosing legend drugs, and sometimes it means modifying drug use. Naturopathic physicians specialize not only in comprehensive and holistic approaches to medicine, but in individualized protocols for each and every patient. There is no "one size fits all" fix; each patient is considered in their entirety, with all their personal physical and psycho-social history.

Most of the licensed NDs in Alaska have been serving the constituents for at least a decade. I personally have been in practice in Juneau for over 15 years, with over 12 years of professional affiliation with our regional hospital. Integrated models of healthcare are burgeoning all over the country. The consumers are demanding it and in response many MD/DOs are actually practicing elements of naturopathic medicine with much less training than we receive! Just to be clear – at a national policy level, naturopathic physicians welcome integrative care. We share patients with MDs, DOs, ANPs, and chiropractors, acupuncturists, massage therapists, etc. One of the most important aspects of my job is to "case manage" or help integrate the care of my patients with their many providers.

Thank you for your attention. I look forward to further explaining my training and commitment to providing safe, effective, patient-centered, health-promoting protocols for all Alaskans.

Best wishes,

Dr. Emily A. Kane
Naturopathic Doctor
Licensed Acupuncturist

Assuring Safe Naturopathic Medical Practices for Alaskans

Appendix E: Comparison of Naturopathic and Major Medical Schools

	National	Bastyr	Southwest	John Hopkins	Yale	Stanford
Basic and Clinical Sciences:						
Anatomy, Cell Biology, Physiology, Pathology, Neuroscience, Clinical/Physical Diagnosis, Histology, Genetics, Biochemistry, Pharmacology, Lab Diagnosis, Pharmacognosy, Public Health, History, Philosophy, Ethics, Research and other coursework.	1548	1639	1419	1771	1420	1383
Clerkships (1) and Allopathic Therapeutics:						
Lecture and clinical instruction in Dermatology, Family Medicine, Psychiatry, Internal Medicine, Radiology, Pediatrics, Obstetrics, Gynecology, Neurology, Surgery (2), Ophthalmology and Clinical Electives.	2244	1925	1920	3391	2891	3897
Naturopathic Medicine:						
Advanced Naturopathic Therapeutics	-	44	20	-	-	-
Ayurvedic Medicine	-	22	20	-	-	-
Botanical Medicine	96	110	120	-	-	-
Therapeutic Nutrition (3)	144	132	130	-	-	-
Counseling (4)	144	143	100	-	-	-
Homeopathy	144	88	140	-	-	-
Hydrotherapy	48	39	40	-	-	-
Naturopathic Case Analysis/Management (5)	-	66	120	-	-	-
Naturopathic Manipulative Therapy	156	176	180	-	-	-
Naturopathic Philosophy	72	55	60	-	-	-
Oriental Medicine	72	33	200	-	-	-
Subtotals:	876	908	1130	0	0	0
Total Reported Hours:	4668	4472	4469	5162	(+Thesis) 4311	5280

- 1) Clerkships are estimated to be 40 hours of mixed lecture and clinical training.
- 2) Naturopathic physicians study minor surgery only.
- 3) No dedicated coursework in therapeutic nutrition appears in the college catalogs of Hopkins, Yale or Stanford; although they indicate that the subject is addressed in other courses.
- 4) Totals for Hopkins, Yale and Stanford included in psychiatry coursework.
- 5) Hours which also could be allocated to this category may be included elsewhere for some institutions because of terminology differences in the course.

Summary Report for: 29-1199.04 - Naturopathic Physicians

Diagnose, treat, and help prevent diseases using a system of practice that is based on the natural healing capacity of individuals. May use physiological, psychological or mechanical methods. May also use natural medicines, prescription or legend drugs, foods, herbs, or other natural remedies.

Sample of reported job titles: Naturopathic Physician, Naturopathic Doctor, Physician, Doctor of Naturopathic Medicine

View report: **Summary** Details Custom

[Tasks](#) | [Tools & Technology](#) | [Knowledge](#) | [Abilities](#) | [Work Activities](#) | [Work Context](#) | [Job Zone](#) | [Interests](#) | [Work Styles](#) | [Work Values](#) | [Wages & Employment](#)

Tasks

- Interview patients to document symptoms and health histories.
- Advise patients about therapeutic exercise and nutritional medicine regimens.
- Administer, dispense, or prescribe natural medicines such as food or botanical extracts, herbs, dietary supplements, vitamins, nutraceuticals, and amino acids.
- Document patients' histories, including identifying data, chief complaints, illnesses, previous medical or family histories, or psychosocial characteristics.
- Educate patients about health care management.
- Diagnose health conditions based on patients' symptoms and health histories, laboratory and diagnostic radiology test results, or other physiological measurements, such as electrocardiograms and electroencephalographs.
- Conduct physical examinations and physiological function tests for diagnostic purposes.

- Maintain professional development through activities such as post-graduate education, continuing education, preceptorships, and residency programs.
- Order diagnostic imaging procedures such as radiographs (x-rays), ultrasounds, mammograms, and bone densitometry tests, or refer patients to other health professionals for these procedures.
- Administer treatments or therapies, such as homeopathy, hydrotherapy, Oriental or Ayurvedic medicine, electrotherapy and diathermy, using physical agents including air, heat, cold, water, sound, or ultraviolet light to catalyze the body to heal itself.

[back to top](#)

Tools & Technology

Tools used in this occupation:

Electrotherapy combination units — Electrical stimulation equipment; Interferential electrical stimulation machines

Galvanic or faradic stimulators — High-voltage galvanic stimulation machines; Low-voltage galvanic stimulation machines

Microcentrifuges

Ophthalmoscopes or otoscopes or scope sets — Ophthalmoscopes; Otoscopes

Therapeutic heating or cooling pads or compresses or packs — Therapeutic cold packs; Therapeutic hot packs

Technology used in this occupation:

Accounting software — EZ-Zone Software Alternative Medical Billing

Information retrieval or search software — Online medical databases

Medical software — Enova eNatro; NaturaeMed OfficePro; Trigram Software AcuBase Pro; ZYTO LSA Pro

Point of sale POS software

Spreadsheet software — Microsoft Excel

[back to top](#)

Knowledge

Medicine and Dentistry — Knowledge of the information and techniques needed to diagnose and treat human injuries, diseases, and deformities. This includes symptoms, treatment alternatives, drug properties and interactions, and preventive health-care measures.

Biology — Knowledge of plant and animal organisms, their tissues, cells, functions, interdependencies, and interactions with each other and the environment.

Psychology — Knowledge of human behavior and performance; individual differences in ability, personality, and interests; learning and motivation; psychological research methods; and the assessment and treatment of behavioral and affective disorders.

Therapy and Counseling — Knowledge of principles, methods, and procedures for diagnosis, treatment, and rehabilitation of physical and mental dysfunctions, and for career counseling and guidance.

Customer and Personal Service — Knowledge of principles and processes for providing customer and personal services. This includes customer needs assessment, meeting quality standards for services, and evaluation of customer satisfaction.

English Language — Knowledge of the structure and content of the English language including the meaning and spelling of words, rules of composition, and grammar.

Chemistry — Knowledge of the chemical composition, structure, and properties of substances and of the chemical processes and transformations that they undergo. This includes uses of chemicals and their interactions, danger signs, production techniques, and disposal methods.

Education and Training — Knowledge of principles and methods for curriculum and training design, teaching and instruction for individuals and groups, and the measurement of training effects.

Administration and Management — Knowledge of business and management principles involved in strategic planning, resource allocation, human resources modeling, leadership technique, production methods, and coordination of people and resources.

Sales and Marketing — Knowledge of principles and methods for showing, promoting, and selling products or services. This includes marketing strategy and tactics, product demonstration, sales techniques, and sales control systems.

[back to top](#)

Abilities

Problem Sensitivity — The ability to tell when something is wrong or is likely to

go wrong. It does not involve solving the problem, only recognizing there is a problem.

Oral Comprehension — The ability to listen to and understand information and ideas presented through spoken words and sentences.

Inductive Reasoning — The ability to combine pieces of information to form general rules or conclusions (includes finding a relationship among seemingly unrelated events).

Oral Expression — The ability to communicate information and ideas in speaking so others will understand.

Deductive Reasoning — The ability to apply general rules to specific problems to produce answers that make sense.

Speech Clarity — The ability to speak clearly so others can understand you.

Written Comprehension — The ability to read and understand information and ideas presented in writing.

Information Ordering — The ability to arrange things or actions in a certain order or pattern according to a specific rule or set of rules (e.g., patterns of numbers, letters, words, pictures, mathematical operations).

Speech Recognition — The ability to identify and understand the speech of another person.

Category Flexibility — The ability to generate or use different sets of rules for combining or grouping things in different ways.

[back to top](#)

Work Activities

Getting Information — Observing, receiving, and otherwise obtaining information from all relevant sources.

Assisting and Caring for Others — Providing personal assistance, medical attention, emotional support, or other personal care to others such as coworkers, customers, or patients.

Making Decisions and Solving Problems — Analyzing information and evaluating results to choose the best solution and solve problems.

Documenting/Recording Information — Entering, transcribing, recording, storing, or maintaining information in written or electronic/magnetic form.

Updating and Using Relevant Knowledge — Keeping up-to-date technically and applying new knowledge to your job.

Identifying Objects, Actions, and Events — Identifying information by

categorizing, estimating, recognizing differences or similarities, and detecting changes in circumstances or events.

Establishing and Maintaining Interpersonal Relationships — Developing constructive and cooperative working relationships with others, and maintaining them over time.

Interpreting the Meaning of Information for Others — Translating or explaining what information means and how it can be used.

Performing for or Working Directly with the Public — Performing for people or dealing directly with the public. This includes serving customers in restaurants and stores, and receiving clients or guests.

Thinking Creatively — Developing, designing, or creating new applications, ideas, relationships, systems, or products, including artistic contributions.

[back to top](#)

Work Context

Telephone — How often do you have telephone conversations in this job?

Face-to-Face Discussions — How often do you have to have face-to-face discussions with individuals or teams in this job?

Freedom to Make Decisions — How much decision making freedom, without supervision, does the job offer?

Structured versus Unstructured Work — To what extent is this job structured for the worker, rather than allowing the worker to determine tasks, priorities, and goals?

Contact With Others — How much does this job require the worker to be in contact with others (face-to-face, by telephone, or otherwise) in order to perform it?

Indoors, Environmentally Controlled — How often does this job require working indoors in environmentally controlled conditions?

Deal With External Customers — How important is it to work with external customers or the public in this job?

Electronic Mail — How often do you use electronic mail in this job?

Frequency of Decision Making — How frequently is the worker required to make decisions that affect other people, the financial resources, and/or the image and reputation of the organization?

Physical Proximity — To what extent does this job require the worker to perform job tasks in close physical proximity to other people?

[back to top](#)

Job Zone

Title Job Zone Five: Extensive Preparation Needed

Education Most of these occupations require graduate school. For example, they may require a master's degree, and some require a Ph.D., M.D., or J.D. (law degree).

Related Experience Extensive skill, knowledge, and experience are needed for these occupations. Many require more than five years of experience. For example, surgeons must complete four years of college and an additional five to seven years of specialized medical training to be able to do their job.

Job Training Employees may need some on-the-job training, but most of these occupations assume that the person will already have the required skills, knowledge, work-related experience, and/or training.

Job Zone Examples These occupations often involve coordinating, training, supervising, or managing the activities of others to accomplish goals. Very advanced communication and organizational skills are required. Examples include librarians, lawyers, aerospace engineers, wildlife biologists, school psychologists, surgeons, treasurers, and controllers.

SVP Range (8.0 and above)

[back to top](#)

Interests

Interest code: **IS**

Investigative — Investigative occupations frequently involve working with ideas, and require an extensive amount of thinking. These occupations can involve searching for facts and figuring out problems mentally.

Social — Social occupations frequently involve working with, communicating with, and teaching people. These occupations often involve helping or providing service to others.

Artistic — Artistic occupations frequently involve working with forms, designs and patterns. They often require self-expression and the work can be done without following a clear set of rules.

[back to top](#)

Work Styles

Integrity — Job requires being honest and ethical.

Concern for Others — Job requires being sensitive to others' needs and feelings and being understanding and helpful on the job.

Self Control — Job requires maintaining composure, keeping emotions in check, controlling anger, and avoiding aggressive behavior, even in very difficult situations.

Dependability — Job requires being reliable, responsible, and dependable, and fulfilling obligations.

Initiative — Job requires a willingness to take on responsibilities and challenges.

Attention to Detail — Job requires being careful about detail and thorough in completing work tasks.

Analytical Thinking — Job requires analyzing information and using logic to address work-related issues and problems.

Independence — Job requires developing one's own ways of doing things, guiding oneself with little or no supervision, and depending on oneself to get things done.

Leadership — Job requires a willingness to lead, take charge, and offer opinions and direction.

Stress Tolerance — Job requires accepting criticism and dealing calmly and effectively with high stress situations.

[back to top](#)

Work Values

Relationships — Occupations that satisfy this work value allow employees to provide service to others and work with co-workers in a friendly non-competitive environment. Corresponding needs are Co-workers, Moral Values and Social Service.

Achievement — Occupations that satisfy this work value are results oriented and allow employees to use their strongest abilities, giving them a feeling of accomplishment. Corresponding needs are Ability Utilization and Achievement.

Independence — Occupations that satisfy this work value allow employees to work on their own and make decisions. Corresponding needs are Creativity, Responsibility and Autonomy.

AANP STATE LEGISLATIVE AFFAIRS
AMA Attempting to Restrict Access to Primary Care

March 10, 2010

Governor Sean Parnell
PO Box 110001
Juneau AK 99811-0001

The American Association of Naturopathic Physicians urges you to support **HB 282 and SB 70**, which would allow comprehensively trained medical professionals the ability to serve all Alaskans to the extent of their considerable training.

Access to quality healthcare is fundamental to the wants and needs of Americans. Patients are best served when they have a team of healthcare professionals who work together to ensure overall health and wellness. Currently there is a divisive and coordinated movement led by the American Medical Association to restrict valuable services provided by more than 3.3 million licensed healthcare professionals who are not DOs or MDs. Known as the Scope of Practice Partnership (SOPP), this campaign is designed to limit patient access to safe, high-quality and cost-effective healthcare.

What is a Naturopathic Physician? Naturopathic physicians are doctors trained to provide family healthcare and to emphasize the use of natural therapies to prevent and treat acute and chronic illnesses.

What training is required to become a Naturopathic Physician? Naturopathic physicians hold a doctorate in naturopathic medicine from a four-year, graduate-level, federally-recognized and accredited naturopathic medical school. These schools train physician-level practitioners in diagnosis and scientifically-based treatment with emphasis on natural therapies. There are currently five such schools in the United States and two in Canada.

The ND degree confers the title of Doctor of Naturopathic Medicine and provides a guarantee to the public that the doctor possesses the necessary training to practice naturopathic medicine. The doctorate degree prepares naturopathic doctors to offer qualified naturopathic medical care and to work together with other medical providers.

What therapies do Naturopathic Physicians employ for their patients? Naturopathic physicians use a variety of natural and non-invasive therapies, including clinical nutrition, herbal medicine, lifestyle counseling, homeopathy, physical medicine and hydrotherapy. Naturopathic physicians also have expertise in drug / herb / nutrient interactions. Many naturopathic physicians receive additional certification in disciplines such as midwifery, acupuncture and Oriental medicine.

Why are Naturopathic Physicians critical for so many patients in Alaska? Naturopathic physicians work in private practice or in integrated settings with other medical providers such as

conventional medical doctors and osteopathic physicians. The result is a patient-centered, comprehensive approach that provides the most appropriate treatment for an individual's needs. Naturopathic physicians educate patients about why they are unhealthy and provide them with the tools for achieving optimal health.

Naturopathic medicine affords a high degree of personalized care, a focus on disease prevention, lower costs and much lower incidences of harm or malpractice. We ask for your consideration in evaluating the outdated and inaccurate claims made by the Alaska branch of the American Medical Association. Please also consider that the large majority of MDs and DOs work effectively and cooperatively with all the mid-level healthcare professionals targeted by the AMA. It is only a few, politically motivated, physicians who insist on pulling outdated and inaccurate material to protect their "turf." If successful, the SOPP will place an enormous and unnecessary burden on the American healthcare system.

Naturopathic medicine is one of 10 professions selected for profiling by the AMA. The SOPP document, made available to legislators across the county, fails to appropriately define either the practice of naturopathic medicine or the training of naturopathic physicians. Following is the federal Department of Labor current definition of naturopathic medicine and the responsibilities of naturopathic physicians, based on their training.

DEFINITION NATUROPATHIC MEDICINE: U.S. DEPARTMENT OF LABOR 2009

Naturopathic Medicine: Diagnose, treat, and help prevent diseases using a system of practice that is based on the natural healing capacity of individuals. May use physiological, psychological or mechanical methods. May also use natural medicines, prescription or legend drugs, foods, herbs, or other natural remedies.

Sample of reported job titles: Naturopathic Physician, Naturopathic Doctor, Physician, Doctor of Naturopathic Medicine¹

Department of Labor further defines naturopathic medical practice in 5 areas that follow:

1. Professional and Public Health Obligations

- Conduct periodic public health maintenance activities such as immunizations and screenings for diseases and disease risk factors.
- Monitor updates from public health agencies to keep abreast of health trends.
- Report patterns of patients' health conditions, such as disease status and births, to public health agencies.
- Maintain professional development through activities such as post-graduate education, continuing education, preceptorships, and residency programs.

¹ Occupational Information Network. (2009). 29-1199.04 - Naturopathic Physicians. Retrieved December 1, 2009, from the Occupational Information Network website: <http://online.onetcenter.org/link/details/29-1199.04#Education>

2. Patient Intake and Diagnosis

- Document patients' histories, including identifying data, chief complaints, illnesses, previous medical or family histories, or psychosocial characteristics.
- Interview patients to document symptoms and health histories.
- Conduct physical examinations and physiological function tests for diagnostic purposes.
- Diagnose health conditions based on patients' symptoms and health histories, laboratory and diagnostic radiology test results, or other physiological measurements, such as electrocardiograms and electroencephalographs.
- Order diagnostic imaging procedures such as radiographs (x-rays), ultrasounds, mammograms, and bone densitometry tests, or refer patients to other health professionals for these procedures.

3. Patient Education/Advocacy

- Educate patients about health care management.
- Advise patients about therapeutic exercise and nutritional medicine regimens.
- Administer, dispense, or prescribe natural medicines such as food or botanical extracts, herbs, dietary supplements, vitamins, nutraceuticals, and amino acids.

4. Naturopathic Medical Practice

- Administer treatments or therapies, such as homeopathy, hydrotherapy, Oriental or Ayurvedic medicine, electrotherapy and diathermy, using physical agents including air, heat, cold, water, sound, or ultraviolet light to catalyze the body to heal itself.
- Naturopathic physicians consistently consult with other health professionals to provide optimal patient care, referring patients to traditional health care professionals as necessary.
- Obtain medical records from previous physicians or other health care providers for the purpose of patient evaluation.
- Perform minor surgical procedures, such as removing warts, moles, or cysts, sampling tissues for skin cancer or lipomas, and applying or removing sutures.
- Prescribe synthetic drugs under the supervision of medical doctors or within the allowances of regulatory bodies.

5. Naturopathic Prescribing Practice

It is well known that overuse of pharmaceuticals has led to thousands of preventable deaths as well as antibiotic resistance. While naturopathic doctors preferentially choose natural therapies to treat disease, they are also trained to utilize pharmaceutical drugs when in the best interest of the patient. This practice is reflected in the Survey data from the Department of Labor.

"While no naturopathic physicians reported prescribing on an hourly basis, 32% prescribe on a daily or weekly basis, and 54% prescribe more than once a month."

According to the Institute for Medicine (IOM) an estimated 15 million adults take herbal remedies or high-dose vitamins along with prescription drugs. Naturopathic doctors are the **only** physicians trained in the contraindications of herbs and botanicals with pharmaceuticals.

PRIMARY CARE EDUCATION AND TRAINING

The U.S. Secretary of Education recognizes CNME as the national accrediting agency for programs leading to the Doctor of Naturopathic Medicine (ND or NMD) or Doctor of Naturopathy (ND) degree. The program is a resident course of at least 4 years and 4620 hours of study. Clinical education requirements for, as mandated by accreditation agencies, include a minimum of 1200 clock hours in direct patient contact. All licensed naturopathic physicians have matriculated from the CNME approved schools, and successfully passed a national exam administered by the North American Board of Naturopathic Examiners (NABNE).

Both the Department of Education and the Carnegie Institute classify the ND degree under "doctorate-professional" (clinical) on par with the MD and DO degrees.

State Legislatures Address Primary Care Shortage

Six state legislatures designate NDs as primary care givers: Alaska, California, Montana, New Hampshire, Utah, and Vermont. Across the country legislatures are expanding scope and access to naturopathic medicine.

- Arizona, Hawaii, Oregon and Washington allow NDs full prescriptive authority.
- Vermont utilizes NDs in its Medicaid program.
- Hawaii expanded naturopathic scope of practice to include IV Therapy and minor surgery, in addition to prescribing authority.

States are acting to improve health status of its citizens by accessing science and evidenced-based medicine of highly educated and trained (non-MD and DO) providers of primary care.

State of Oregon	Naturopathic Physicians	Family Nurse Practitioners
Scope of Practice	Can diagnose and treat any condition	Can diagnose and treat any condition
Drugs Controlled Drugs	Can prescribe "Legend" drugs Schedule II-V	Can prescribe "Legend" drugs Schedule II-V
Basic and Clinical Sciences	224.50 credits	64 credits
Supervised Clinical Practice	1548 hours	760 hours
Pharmacology	72 hours	45 hours

The doctor shortage in Alaska and nationwide is no secret; this problem will only increase as the population ages. Naturopathic physicians are highly skilled, rigorously trained, licensed health care professionals who stand ready to meet the unmet needs of consumers in urban, rural, and underserved areas.

Sincerely,

Karen Howard,
Executive Director, American Association of Naturopathic Physicians

Re: Support SB 70 and HB 282

Dear Legislator,

At the same time Alaska faces a healthcare crisis with a serious deficit in primary care physicians there are at least 40 competent doctors already in Alaska eagerly waiting to provide care to this underserved population. Naturopathic doctors are trained at 4 year accredited medical schools an in most other Northwest states are board certified primary care providers. They are proficient in all the basic sciences, conventional diagnostics, and management of disease in both Western allopathic treatments as well as naturopathic treatment modalities (botanicals, physical medicine, etc). This training includes 1 year of pharmacology, minor surgery, and complete physical exam and assessment.

A major challenge in delivering primary care to Alaska is that naturopathic doctors are not licensed to practice their full scope of training including prescriptive privileges and minor surgery - including mole removals, biopsies, and superficial laceration repairs. To be able to provide the most effective and efficient primary care to Alaska's diverse patient population, naturopathic doctors must be able to prescribe antibiotics if indicated and suture wounds when needed.

As more mid-levels, such as nurse practitioners, are licensed to prescribed medications in Alaska, access to healthcare as well as patient outcomes across the state have improved. Naturopathic doctors have been licensed to practice medicine in Alaska since 1986, but the legal scope of practice has not kept up with other Pacific Northwest states who regulate the same physicians. Granting naturopathic doctors the legal ability to practice their full scope will increase the number of practitioners able to travel to remote villages, increase availability to specialists when they are needed, decrease undue burden on emergency rooms, increase access to education, prevention and primary care, and a likely decrease overall statewide healthcare costs.

The majority of the Westerns states have already passed legislation allowing naturopathic doctors to practice their full scope including prescriptive privileges and minor surgery. Alaska must act now to pass SB 70 and HB 282 to increase the quality and accessibility to healthcare.

Thank you for your time and I hope you consider endorsing SB 70 and HB 282 to increase access to primary care for your constituents and for all Alaskans.

Sincerely,

Abby Laing NDC .

Re: Support for SB 70 and HB 282

Dear Legislator,

I am writing to ask for your support of SB70 or HB 282, which would expand the scope of practice of Naturopathic Doctors (ND's) in Alaska. As I'm sure you know, Alaska has a serious deficit in primary care physicians, which will continue to worsen in the foreseeable future. Allowing Naturopathic Doctors to practice their full scope of training would greatly help to alleviate this shortage of primary medical care. To me, it seems foolish, and a waste of good resources, to not allow any professional to do the work they were trained to do whether they be architects, lawyers or Naturopathic Doctors.

Naturopathic doctors have all completed a 4-year university degree plus 4 years of an accredited medical school, the same duration as their allopathic counterparts, and have passed rigorous board testing. In most Western states, ND's are board certified primary care providers. They are trained in, and proficient in all the basic sciences, conventional diagnostics, and management of disease in conventional allopathic methods as well as naturopathic treatment modalities. This training includes 1 year of pharmacology, minor surgery, and complete physical exam and assessment. All have clinical experience as part of their training.

ND's face a huge obstacle in delivering primary care within Alaska since they are not allowed to practice using their full scope of training, which including prescribing medications such as antibiotics, performing minor surgery (including mole removals, biopsies, and superficial laceration repairs). Even nurse practitioners who have much less training than ND's have these rights.

ND's have been licensed to practice medicine in Alaska since 1986, but the legal scope of practice does not recognize the full extent of their training. Granting Naturopathic Doctors the legal ability to practice to the full extent of their training will increase the number of practitioners able to travel to remote Alaska villages, increase availability to specialists when they are needed, decrease undue burden on emergency rooms, increase access to education, prevention and primary care, and likely slow the increase of statewide healthcare costs.

I urge you to support SB 70 and HB 282 I hope you consider endorsing to increase access to primary care for your constituents and for all Alaskans.

Sincerely,

Tom Laing

March 8, 2010

In support of SB 70 and HB 282

Dear Legislators,

There is a severe doctor shortage in Alaska. Many Medicaid patients in the state today are unable to find a doctor who accepts Medicaid assignment. Naturopathic physicians, who graduate from federally accredited medical schools with doctorate-level training, would like to serve this population without legal barriers.

Some of the challenges in delivering more care for less cost can be met by expanding the scope of practice for naturopathic physicians, a highly trained group of mid-level health care professionals who currently operate under a restricted legal system.

Consider the benefits Alaskans have enjoyed by legislating increased scope for advanced nurse, dental hygienists and optometrists. Chronic, and non-emergency medical, dental and vision problems can now be resolved without costly referrals.

Nurse practitioners were granted prescription endorsement because they made the case that expanding their scope of practice would better serve. This has proven to be true. There are, at this time, fewer naturopathic physicians in Alaska than ANPs and therefore we have less lobbying power. Nevertheless, naturopathic physicians, who have been licensed to practice medicine in Alaska since 1986, have significantly more medical training than nurse practitioners (doctorate level natural medical training – whereas advanced nurse practitioners hold masters level degrees).

We would like to bring our laws into line with our training. We see no controversy in this proposal. We are the most highly trained experts in preventive medicine. We are critically important in helping to change the currently unsustainable model of health care, which is increasingly expensive disease management.

Naturopathic physicians offer an alternative to drugs as a first choice for medical intervention. We will always choose safer, effective therapies (such as diet changes, or plant remedies) before going to drugs or riskier interventions. However, it is inconvenient, inefficient and potentially dangerous (because of delay in service) to refer a patient needing minor surgery or a short-term legend drug remedy to another doctor when we are perfectly capable of effectively providing these services to our patients, usually for significantly less cost.

I have a personal interest in returning to Alaska, my home state, to practice medicine. I was in the top my class at Bartlett High School in Anchorage, graduated with a B.S. in Zoology with honors from Northern Michigan University, and I am now pursuing a doctorate degree in naturopathic medicine at the National College of Naturopathic Medicine (a federally accredited college) in Portland, OR. However, the restrictions placed on naturopathic doctors in Alaska have provided me with reservations about ever being able to return and practice as a physician. I hope that this will change, and that I will be able to consider practicing medicine in Alaska one day.

Thank you for your consideration to endorse SB 70 and HB 282, which will allow holistically oriented physicians, with deep and rigorous scientific training and an excellent safety record, to more fully serve your constituents.

Sincerely,

Jessica McCord
Naturopathic Medical Student
Born and raised in Alaska (Hope, Seward and Anchorage)

Kendra Kloster

From: Rep. Cathy Munoz
nt: Friday, January 22, 2010 3:21 PM
o: Kendra Kloster
Subject: FW: Thank you for HB 282

From: cidickess@gci.net [mailto:cidickess@gci.net]
Sent: Thursday, January 21, 2010 11:51 AM
To: Rep. Cathy Munoz
Cc: Daniel J. Young
Subject: Thank you for HB 282

Dear Representative Cathy Munoz,

I'm writing to thank you for your interest in natural medicine and for your belief in freedom of choice in health care and working creatively towards a solution to our national health care crisis. I want to share with you my personal experience with naturopathic medicine with the vested interest in seeing it expand its benefit to me and others.

I am fortunate to have access to a Naturopathic Physician, Dr. Daniel Young at the Center for Natural Medicine (CNM), as my primary care provider. Although I qualify for Indian Health Services through Southcentral Foundation and the Alaska Native Medical Center at no cost to me, I have chosen to change my primary care to CNM since August, 2009. The difference in the quality of care has been worth the \$6,000 out of my pocket that I paid to CNM for medical services in 2009.

In my experience, naturopathic physicians practice medicine the way it should be practiced—with the patient's needs as the driving force, rather than meeting system needs first. For example, as a patient at the Primary Care Center (PCC) run by Southcentral Foundation, I was allocated 15 minutes for an office visit, regardless of the presenting issue. I could request 30 minutes to be seen for more than one issue, but the visits rarely lasted longer than that. When I see Dr. Young, the visits are as long as they need to be to address the issue(s) at hand. At the PCC, for over a year, I never saw the same care provider twice and when I was seen, the provider didn't have my chart to reference. Since I started seeing Dr. Young in August, he has gotten to know me better than any other provider I've seen since I was a child. The care is clearly patient-centered.

Another positive difference in the quality of care I've received via ND vs. MD or traditional practitioner is that Dr. Young listens to what I tell him about my experience with my own body. ND's respect the patient's knowledge of his/her own body, whereas the traditional practitioner will follow the results of a lab test regardless of any evidence to the contrary provided by the patient.

There are so many other reasons that I'm supporting the cause of naturopathic physicians to expand their ability to practice as they have been trained to do through companion bills SB70 and HB 282, not the least of which is that the practice of ND's is ultimately sustainable. ND's promote wellness, which reduces our dependency on late-stage disease management. This standard of practice not only saves money and valuable resources, but it also improves the patient's quality of life.

Again, thank you for your forward thinking in expanding access to all qualified health care providers in Alaska.

Sincerely,
Clarice Stewart

January 31, 2010

RE: HB 282

Dear Representative Cathy Munoz:

Thank you so much for your support of naturopathic care! Over the years, I have had two naturopathic care doctors – Dr. Torrey Smith/Anchorage and Dr. Daniel Young/Eagle River. Both have provided excellent care. I actually prefer “alternative” care since I do not wish to be on prescription medications unless absolutely necessary, but most of all, Dr. Smith and Dr. Young actually listen to my concerns.

In March of 2008, I started going to Dr. Young. Since my husband and I are both retired teachers, he was able to accept my health insurance. Needless to say, I was thrilled! The most wonderful thing was the time he spent with *speaking* with me regarding my health concerns. No hurry-hurry, no rush-rush. Here was a doctor who fully listened to my questions and concerns. He asked me questions and had me fill out a survey so that he could see me as a “whole” patient.

At that point, I had two main concerns – an ear problem and what seemed to be something like irritable bowel syndrome. I had spent Christmas 2007 a nervous wreck taking Imodium AD to relieve symptoms, and I was particularly nervous about flying.

Before going to Dr. Young, I had gone to 3 different ear specialists. One doctor was extremely rude – so rude in fact, I wrote a letter to him to express my dismay with his personal comments during an appointment. I was so shocked at his comments that I didn’t even speak. By the way, his response to my letter consisted of six, hand-written, rambling pages assuring me that he got 1,500 new patients each year, and basically said I just didn’t understand his *sense of humor*. Really?

Dr. Young used acupuncture to treat my ear, but my insurance did not cover acupuncture, so he recommended an ear specialist that I now trust and go to regularly.

As for my other concern, Dr. Young was able to diagnose and help me almost immediately through office treatments and herbal formulas.

Currently I am on Medicare and since he does not accept Medicare, I have to pay Dr. Young out of pocket. Even with that, I prefer to go to him because of his excellent, personal care.

Please, please work to expand access to *all qualified health care providers in Alaska*. As Alaskans, we are so blessed to have their devoted care.

Thank you so much.

Sincerely,

Sharon Sellens/Wasilla
ssellens2008@gmail.com

 **WELLSPRING**
Integrative Medical Center

January 21, 2009

Dear Alaskan Legislators:

I write in support of establishment of a Naturopathic Medical Board consisting of three (3) Naturopathic Doctors (ND), one (1) pharmacist and one (1) member of the public. This board is needed to assure the Alaskan public of safe naturopathic care complying with the regulations of ND practice in Alaska.

Wellspring, an Integrative Medical Center, located in Juneau, Alaska, has employed a naturopathic doctor for nine years. Patients constantly acknowledge their gratefulness for this option. However, he has been unable to fully practice his profession in Alaska because there is no ND Board overseeing the totality of his practice for which he was educated for four years, post-baccalaureate degree.

Please support this ND bill to improve wellness and health care for Alaskans, to increase access to ND care and to provide cost-effective options for our communities.

Please contact me if you have further questions.

Sincerely,

C. Trollan, ANP
Advanced Nurse Practitioner
Owner

February 5, 2010

In support of SB 70 and HB 282

Dear Legislators,

There is a severe doctor shortage in Alaska. Many Medicaid patients in the state today are unable to find a doctor who accepts Medicaid assignment. Naturopathic physicians, who graduate from federally accredited medical schools with doctorate-level training, would like to serve this population without legal barriers.

Some of the challenges in delivering more care for less cost can be met by expanding the scope of practice for naturopathic physicians, a highly trained group of mid-level health care professionals who currently operate under a restricted legal system.

Consider the benefits Alaskans have enjoyed by legislating increased scope for advanced nurse, dental hygienists and optometrists. Chronic, and non-emergency medical, dental and vision problems can now be resolved without costly referrals.

Nurse practitioners were granted prescription endorsement because they made the case that expanding their scope of practice would better serve. This has proven to be true. There are, at this time, fewer naturopathic physicians in Alaska than ANPs and therefore we have less lobbying power. Nevertheless, naturopathic physicians, who have been licensed to practice medicine in Alaska since 1986, have significantly more medical training than nurse practitioners (doctorate level natural medical training – whereas advanced nurse practitioners hold masters level degrees).

We would like to bring our laws into line with our training. We see no controversy in this proposal. We are the most highly trained experts in preventive medicine. We are critically important in helping to change the currently unsustainable model of health care which is increasingly expensive disease management.

Naturopathic physicians offer an alternative to drugs as a first choice for medical intervention. We will always choose safer, effective therapies (such as diet changes, or plant remedies) before going to drugs or riskier interventions. However, it is inconvenient, inefficient and potentially dangerous (because of delay in service) to refer a patient needing minor surgery or a short-term legend drug remedy to another doctor when we are perfectly capable of effectively providing these services to our patients, usually for significantly less cost.

Thank you for your consideration to endorse SB 70 and HB 282, which will allow holistically oriented physicians, with deep and rigorous scientific training and an excellent safety record, to more fully serve your constituents.

Sincerely,

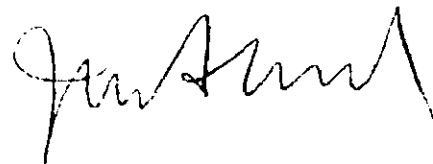

Dr. Emily A. Kane
serving Juneau since 1995

Wayne Aderhold

RECEIVED
MAR 10 2010

Testimony to House L&C Committee
March 10, 2010
Re: HB 282

- I am 60 yrs old, resident of AK since '74 and utilize Naturopathic Physicians as my primary care providers since approx 1993. I see HB 282 as primarily a benefit to consumers like me.
- There are currently at least 2 practicing ND's on the Kenai Peninsula serving many residents of both Homer and Kenai/Soldotna with primary care by traveling between our communities on a weekly basis.
- There is currently a troubling shortage of primary care physicians both nationwide (ref Newsweek of March 8th) and statewide (ref current legislation by AK Senate to offer monetary incentives to lure primary care physicians to AK)
- Improvement of primary care is the documented solution to containing and even reducing overall healthcare cost to the community.
- HB 282 is the culmination of many year's effort by the ND community and others to both increase the services provided by ND's and improve their governance structure (via a Board) with NO ADDITIONAL COST to the State. It is as close to perfection as it can get now.
- Personally, I could have benefitted from both the prescriptive and minor surgical provisions of this bill between '02 and now, had it been enacted earlier. Sooner than I might like to admit, the Medicare provision will also apply to me.
- There is no logical reason not to move this bill forward immediately and assure it's passage during this session. Doing so, you will be **safely increasing the utilization** of these skilled and dedicated professionals who have already committed themselves to serving our community and the State of Alaska. Please move HB 282 forward now.

Plus 3 page backup.

A CRITICAL SHORTAGE OF PRIMARY-CARE PHYSICIANS IS YET ANOTHER SYMPTOM OF OUR AILING HEALTH-CARE SYSTEM.

BY MARY CARMICHAEL

AFTER TAKING A MONTH TO REGROUP, the White House has put health care back at the top of its agenda, asking Republicans for new ideas and trying to regain momentum for old ones. But last week's summit came down mostly to the same old talking points. And even if the president does manage to get some version of health-insurance reform passed

in the next few months, he and the country are still going to be dealing with the related crisis of America's doctor shortage. Primary-care physicians, family docs, general practitioners—whatever you call them, they're the country's first line of defense, the ones responsible for promoting preventive care, finding ways to keep people from getting sick in the

first place, and thus bringing down costs throughout the system. If every American went to one of these doctors regularly, health-care costs might come down as much as 5.6 percent a year, saving \$67 billion, according to one estimate. Yet we don't have nearly enough doctors to make that happen, and fewer are being produced every year.

48 N MARCH 6, 2010

... covered by
... No. 100 Ad. 10. 10

**IN SOME SURVEYS,
AS MANY AS HALF
OF PRIMARY-CARE
PROVIDERS HAVE
STOPPED TAKING
NEW PATIENTS.**

The annual number of American medical students who go into primary care has dropped by more than half since 1997. It's hard to get an appointment with the doctors who remain. In some surveys, as many as half of primary-care providers have stopped taking new patients. The other half are increasingly overworked and harried. Clearly we need to find a way to increase their ranks, and both the congressional health-care bills and President Obama's reform proposal make moves in that direction. But those efforts are somewhat limited, and a more comprehensive solution could be thwarted by the same thing that's stalled the rest of health-care reform so far: politics.

The reason behind America's doctor gap is a matter of money. The average income in primary care is somewhere in the mid-\$100,000s, which sounds like a lot but is less than half what specialists such as radiologists and dermatologists make. Given that doctors may graduate with as much as \$200,000 in med-school debt, it's easy to see why primary care started hemorrhaging recruits more than a decade ago and why radiology and other well-paid, high-tech specialties took off in popularity.

The field has since entered a vicious cycle. As fewer people have entered primary care, the doctors who are left have been forced by tight schedules to short-change some patients, forgoing the long, meandering chats that used to be a big part of checkups in favor of 15-minute, checklist-style appointments. The close relationships that general practitioners once had with patients drew many idealistic students into the field. Now recruiters face an extra-tough sell: they have to convince bright young would-be docs to pursue a career that won't pay very well and won't be as emotionally fulfilling as it once was.

How can schools entice more aspiring doctors into primary care? The Tufts University School of Medicine, to take one example, offers a \$25,000-per-year scholarship for med students who agree to work in primary-care practices in rural Maine for much of their training period. Students on this Maine Track start shadowing doctors on the third day of orientation. This year's program drew 257 applicants for just 36 slots.

The problem with the Maine Track is that it doesn't actually require med students to enter primary care after they graduate. It can't, says Peter Bates, chief medical officer at Maine Medical Center, which jointly administers the program with Tufts. "If you're a bright kid with a great future, being told you have to be a family physician in rural Maine—even if that's what you want to do [now]—might strike you as confining," Bates says. "Why would you close down your opportunities?"

There are dozens of training programs like Tufts's around the country, as well

as the National Health Service Corps, which pays back loans and hands out scholarships and stipends in exchange for a few years of service in rural areas, where the shortage of primary-care providers is most acute. Obama and the Senate have both called for an expansion of the program in their proposals for reform, which has already received \$200 million in stimulus funds. Several new medical schools, including some that focus on primary care, have also recently opened. But all those changes may not be enough to fill the gap. "We need more than half of doctors in this country doing primary care," says Harris Berman, interim dean of the medical school at Tufts. "It's a bigger problem than we can solve with programs like ours."

So what else can be done? Lately, some policymakers have argued that instead of having a primary-care doctor, more people—especially young, healthy patients with simple medical needs—should see a nurse or physician assistant who administers routine care and kicks more complex problems up to a doctor when they arise. "If you're just coming in to have your blood pressure checked and your pulse taken, you really don't need to see a doctor, and you might not need to see a nurse, either," says David Barrett, president and CEO of the Lahey Clinic in Burlington, Mass. "There are three-stripe military sergeants with two-year degrees who can provide excellent primary care. There's absolutely no reason to force all primary-care providers to have an M.D."

The Lahey Clinic is an "integrated group practice"—one of the teamwork-oriented organizations, like the Mayo Clinic and the Cleveland Clinic, that have been lauded for cutting costs and eliminating waste in the health system. In its primary-care service, a "team captain" physician supervises nurses,

SOUTH FLORIDA—BOB BENTLEY/ST. LAMBERT

PAs, and other health-care professionals who perform tasks like checking blood pressure but don't necessarily make formal diagnoses on their own. The problem with taking this approach nationwide is that nurses and PAs are subject to the same economic forces that drive medical students. Almost half of current nurse practitioners and physician assistants work in specialty practices, where the money is. Then there's the fact that the country already has a nursing shortage. How are nurses going to replace doctors if there aren't enough nurses to begin with?

There's one more group of people, foreign medical graduates, who could theoretically fill in for the missing primary-care providers. The trouble is, they're already doing that. More than a quarter of primary-care doctors currently practicing in the United States have gotten their diplomas abroad. Increasing their numbers would be problematic for both the left (which might object to poaching doctors from developing countries that need them) and the right (which would surely object to recruiting non-Americans to do a job that reliably pulls in six figures, especially when unemployment is high).

Inevitably, then, the solution to the primary-care crisis is going to have to involve something simpler: paying primary-care providers more, so as to draw more bright young physicians into the field. At least it sounds simpler. But even this turns out to be maddeningly complex.

Most primary-care doctors, like all other physicians, are paid bit by bit for each medical task they perform (unless they work somewhere like the Lahey or the Mayo, which pay set annual salaries). Private insurers decide how much they'll reimburse docs for each task partly by looking to Medicare's policies for guidance. Medicare, in turn, makes its decisions by committee. Here is the bad

news for primary-care docs: most of the physicians on the committee that sets the reimbursement rates are specialists. Medicare—and, consequently, private insurance—doesn't reimburse primary-care doctors as lavishly as it does their more specialized counterparts. That's why primary-care incomes are relatively low in the first place.

Changing anything about the way primary-care providers are paid will be immensely complicated. For one thing, rural doctors sometimes perform specialized procedures because no one else is available—would they still qualify for a raise? And then, what exactly constitutes a task that should be reimbursed? For a high-tech specialist, this is often clear-cut: each scan or chemical test counts. But what about all the things primary-care doctors do that don't involve technology? "You don't get paid to talk to people and tell them to stop smoking. Nobody values my time to do that," says Joe Gravel, a family physician and chief medical officer at the Greater Lawrence Family Health Center in Massachusetts. "They'll pay for the lung transplants, but they won't pay to prevent 50 people from needing them."

In January, Medicare raised reimbursement rates for some primary-care services by about 4 percent, and its payment committee will call for another small increase this week. That's a good start, says Lori Heim, president of the American Academy of Family Physicians, but "if you're talking about changing the way students view primary care, it needs to be more like 25 percent, and that's on the low side." Both the House and Senate reform bills also include a slight increase in primary-care payments—5 and 10 percent, respectively.

To fund such a pay raise, Congress would either have to spend more money on health care or pinch some from the specialists by lowering their pay rates. The first strategy is clearly controversial—no one wants to increase health-care costs further. The second, budget-neutral strategy is bound to tick off the specialists. Peter Mandell, a spokesman for the American Academy of Orthopaedic Surgeons, sent a clear message last year when the Medicare reimbursement committee suggested a 10 percent shift in payments toward primary-care docs and away from specialists. Telling *The New York Times* that his group had "a problem" with the idea,

Mandell added, "If there's less money for hip and knee replacements, fewer of them will be done for people who need them." It's a short step from his polite, reasonable statement to rallies over the specter of rationing.

So here is the fundamental dilemma of the primary-care crisis: One of the solutions with the best chance of working is politically unpalatable, and even those who support it admit it's a bureaucratic nightmare. But without it, we may be heading for an even bigger disaster that nobody wants. Does this sound familiar? The cure for primary care, it turns out, is ultimately going to be the same thing that's needed to fix the rest of the health-care system: political will.

ONE GROUP THAT COULD THEORETICALLY FILL IN FOR THE MISSING DOCS: FOREIGN MEDICAL GRADUATES.

Subject: HB 282

Dear Rep. Munoz,

Alaska experiences a critical shortage of primary care physicians, yet excludes naturopathic physicians from providing care at the level of training and skill they have acquired. Expanding the scope of care provided by these licensed health care practitioners will increase the supply of primary care providers in Alaska. It will also ensure that Alaskans have the opportunity to receive medical care from their provider of choice, and possibly help reduce overall health care costs. I support HB 282 and SB 70.

Thank you,

Jacqui Yeagle

Subject: HB 282 - expand access to naturopathic medicine this session

Dear Cathy,

I am writing in support to expand access to naturopathic medicine in Alaska. Companion bills SB70 and HB282

Alaskans deserve to have access to the services of a variety of licensed health care practitioners. I believe that in the many areas of the State where primary care medical doctors are scarce or overextended, having access to other types of qualified and licensed primary care professionals, including naturopathic physicians will be of great service to those people.

It has been our family's experience that naturopathic care makes sense. After being diagnosed with arthritis by a medical doctor and prescribed expensive pharmaceuticals with a long list of side effects, that I was expected to take for the rest of my life, I decided to seek naturopathic care. The treatment included mainly changes on my diet and lifestyle; which, in a short period of time, reduced significantly the symptoms and improved my overall health. I did not need those pharmaceuticals any more. Other chronic illnesses I suffer since I was a teenager have been successfully managed by alternative medicine. So far I have avoided surgery my medical doctor anticipated 20 years ago. Since then, my two children, now 18 and 14, have mostly been cared by naturopathic and other alternative care professionals, who have worked with our family to promote wellness and prevent diseases that run genetically through our family, such as diabetes and heart disease.

Please ensure that the Alaskan people have freedom of choice in health care by allowing naturopathic physicians to be recognized as primary care physicians by the US Department of Labor and update outdated laws in the State of Alaska to allow them to create an Alaska Naturopathic Medical Board; allow Medicaid patients to access naturopathic care, and support continuing medical education.

By recognizing naturopathic physicians the State would also increase the supply of primary care providers and reduce overall health care costs.

Thank you for your continued support for children and families in our State,

Lupita

Statement Supporting SB70 and HB282

I am testifying as a consumer of health care. For the last 25 years, the primary health care providers for my family have been naturopathic doctors. We have been successfully treated for numerous ailments, including sinus infections, earaches, urinary tract infections, and insomnia. I have worked with a number of naturopaths and have found them all to be extremely competent and highly professional.

As far as I am concerned, this legislation should be completely non-controversial. Every other state on the West Coast has a Naturopathic Board. Naturopaths are highly trained health care providers whose focus is on wellness, education and prevention. It seems to me that this is exactly the kind of health care that we need more of.

I have heard that some members of the medical community are concerned that ND's might practice outside of their area of competence. I think this is a red herring. There is no evidence this has been a problem in other states. And I am not aware that it has been a problem in Alaska either.

I can tell you from my own experience that the NDs I have worked with are well aware of their limitations, and have referred me to other providers when that was appropriate.

In fact, a few years ago, I came back from a trip to Africa with a bad case of what I thought was traveler's diarrhea. I had been staying in a place with notoriously bad water and had gotten the runs from drinking the water earlier in my trip.

After several days, I wasn't getting any better and was experiencing alternating fever and chills. It was a naturopathic doctor, Emily Kane, who recognized that I might have something more serious. So she came over to my house during her lunch hour and drew my blood and sent it away to be tested for malaria. It came back positive the next day.

I went to Bartlett hospital and ultimately ended up at the University of Washington Hospital in Seattle to be treated for a nasty case of cerebral malaria. It was because of Dr. Kane's alert intervention that I was diagnosed with a life threatening condition in time to be successfully treated.

Two things about this. Number one, it illustrates the highly personalized form of medical care that is typical of the naturopathic profession. How many doctors do you know who make house calls? Yet Dr. Kane is not the first naturopath to make a house call at my house.

Number two, it is an example of a naturopath making a correct diagnosis and referring a patient to appropriate care. Dr. Kane did not suggest that I treat my cerebral malaria with colloidal silver or wormwood. She urged me to go to the hospital and get treated. And when it turned out that Bartlett hospital did not have the appropriate drugs or expertise to treat my condition, I was transferred to the University of Washington, where I had the good fortune to be treated by one of the leading malaria experts in North America.

ND's clearly have a role to play in our health care system. They are primary care providers who can treat many if not most of the common conditions that people go to a doctor for. The care they provide is personalized, cost effective, and prevention oriented.

Perhaps most important, it is focused on individuals taking responsibility for their own wellness. I firmly believe that we will never get medical costs under control until we acknowledge that all of us need to start taking better care of ourselves. Helping people do this is one thing NDs do best.

I urge you to support this legislation.

David Ottoson

Juneau, AK 99801

Alaska Pharmacists Association

March 8, 2010

Re: HB 282

The Alaska Pharmacists Association represents Alaska Pharmacists, technicians, and others interested in improving medication use and advancing patient care. Alaska Pharmacists Association members provide care in all practice settings, including community pharmacies, hospitals, long-term care facilities, community health centers, managed, care organizations, hospice settings, and the military.

The Alaska Pharmacists Association (AkPhA) would support the establishment of an Alaska Naturopathic Board with the purpose of regulation of the practice of the Naturopathic Doctors in the State of Alaska. We appreciate the inclusion of pharmacists in the development of the Naturopathic Board.

AkPhA appreciates the rigorous education and training many Naturopath Doctors have completed. We also understand that all Naturopath Doctors do not complete the same level or quality of training. Our hopes are that the development of a Naturopathic Board would develop standards for Naturopathic practitioners within the State of Alaska, including post graduate residency training and mandatory continuing education. AkPhA does not view naturopaths as an alternative to allopathic health care providers, but an addition to traditional practice. Naturopathic medicine is not meant as a replacement in areas where health care providers are of short supply or where there are not physicians accepting Medicare patients.

Finally, prescription endorsement regulations need to be developed in extensive detail beyond what is described in HB282. AkPhA, with the assistance of the Board of Pharmacy, is willing to open a dialog concerning prescriptive authority guidelines for Naturopathic Doctors.

Respectfully,

Barry Christensen, RPh

RE: HB282 "An Act Relating to Naturopaths"

Dear Representative Munoz:

As Chief of Staff of Fairbanks Memorial Hospital, I appreciate the opportunity to present my concerns and the concerns of our medical staff regarding House Bill 282, which would give prescribing rights to naturopathic physicians. We are convinced that naturopaths do not have the training or the expertise to safely and effectively prescribe medications to the public.

Medical Doctors and Osteopathic Doctors spend a minimum of 7 years in an intense academic environment (including both Medical School and Residency) learning both the art and the science of medicine. This process includes, but is certainly not limited to, learning both when to use and when not to use medications in an appropriate manner. Though the use of medicines is just one piece of an enormous therapeutic armamentarium, it is not a piece that can easily be mastered without the rest of the fund of knowledge that is involved in the intense training that MDs and DOs currently undertake. Though medications have a tremendous ability to improve the lives of the patients that we care for, they also have equally profound ability to cause harm.

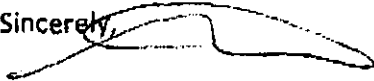

This letter is not meant to serve as an attack on the naturopathic profession. There are many health professionals in addition to naturopaths, such as chiropractors, physical therapists, acupuncturists, and others, who provide

benefit and care to the health of the public. However, we do not believe that naturopaths possess either the training or expertise to prescribe medications in a safe and effective manner for patients.

Thank you for your time.

Please feel free to contact me at any time.

Sincerely,

Michael R. Burton, MD
Chief of Staff
Fairbanks Memorial Hospital

Banner Health

Tanana Valley Clinic

1001 Noble Street
Fairbanks, AK 99701
Phone 907-459-3500
Fax 907-459-3583

Representative Olson,

We, the Board of Directors at Tanana Valley Clinic, are writing in opposition of House Bill 282. While we find the specific treatments that naturopathic doctors provide patients valuable, we do not support any expansion of a naturopath's scope of practice, specifically the designation as a 'primary care physician.'

HB282 proposes that naturopaths are allowed to write and administer prescriptions, perform minor surgeries, and enable full primary-care practices for naturopathic doctors. However, it does not take into account the distinct differences between the education and training of an MD or DO, and a naturopath. This new bill would allow naturopaths to practice well beyond the scope of their education. To earn his or her degree, an MD or DO must attend a rigorous four-year medical school, perform a *required* 3-5 year residency, oftentimes complete a 3-5 year fellowship, and pass multiple boards; a naturopath completes a four-year program at a naturopathic medical college – many of which are offered online – and passes a licensing exam, with an *optional* residency program for a specialty. The difference between these two educational backgrounds is distinct, in both quantifiable time requirements and practical experience. Allowing the recipients of both degrees to practice under the same title – 'primary care physician' – is not only inappropriate but erroneous.

This bill also puts forward a state-authorized prescription endorsement; it is our opinion that this is not in the best interest of patients. Sixty hours of pharmacology education is not a sufficient amount of training to earn prescribing rights, and will allow naturopaths to practice beyond their scope. Many states whose licensed naturopaths have prescriptive rights limit their abilities (see attachment). We believe that these limits are indicative of proactive checks and balances that recognize naturopaths' lack of prescription training, and prevent them from causing potential harm to patients. These limitations should be considered before granting Alaska's naturopaths prescribing rights under HB282.

Alaska may be facing a shortage of primary care physicians, but filling these positions with under-qualified naturopaths is not the answer. Patients in Alaska have a deserved expectation

Banner Health

Tanana Valley Clinic

Phone 907-459-3500
Fax 907-459-3583

that when they visit a 'physician,' they are being seen by someone with extensive medical training and expertise. Ultimately, the training received by both bodies of providers is not the same; allowing naturopaths to have prescribing rights, perform minor surgeries, and be called 'primary care physicians' would allow them to practice beyond their scope, endangering patients and devaluing MDs and DOs. We strongly urge you to consider our concerns, and oppose HB282.

Washington State	Yes			x	x		Yes
Puerto Rico	No						No

¹ Prescriptive authority is the ability to prescribe controlled substances as identified in schedules I-IV of the Controlled Substance Act (21 USC, Sections 801-971). Maine's law refers to the "legend" and "non-legend" classifications of the official United States pharmacopoeia, rather than to the Controlled Substance Act. "Legend" drugs are those for which a prescription is required by federal law. In 2005, Washington State added some schedule 3-5 drugs to "legend" drugs that naturopathic doctors may prescribe.

² The schedules of the Controlled Substance Act are available on the US Drug Enforcement Agency's website at www.usdoj.gov/dea/pubs/scheduling.html.

³ Pursuant to California Code §3640.5, NDs may only prescribe controlled drugs under the supervision of a medical doctor.

⁴ In Maine, NDs are permitted to prescribe "non-controlled legend drugs" only after a twelve-month period of review by an allopathic physician. Such drugs may only be from the following categories: homeopathic remedies, vitamins and minerals, hormones, local anesthesia and immunizations that are designated by rule.

⁵ Vermont only allows NDs to prescribe only testosterone from schedule III and codeine from schedule IV.

STATE OF ALASKA
DEPARTMENT OF
COMMERCE
COMMUNITY AND
ECONOMIC DEVELOPMENT

Sean Parnell, Governor
Emil Notti, Commissioner
Lynne Smith, Director

Division of Corporations, Business and Professional Licensing

1 March 2010

The Honorable Sean Parnell
Governor of Alaska
Post Office Box 110001
Juneau AK 99811-0001

Governor Parnell, the Alaska State Medical Board urges you and your colleagues in the legislature to defeat House Bill 282 that creates a "naturopathic medical board" and gives certain rights and recognitions to naturopaths in Alaska.

In a recent Alaska State Medical Board meeting, board members were unanimous in their strong opposition to the proposed legislation for a variety of reasons.

The principles of naturopathy are based on the belief that the body is self-healing, that the patient's "vital force" is restored by ridding the body of "toxins." As scientists, we find this simplistic approach to human ailments to be in direct conflict with the science-based knowledge of body physiology and pathology as taught to medical physicians (M.D.s) and osteopathic physicians (D.O.s). The danger of this approach is that patients with serious diseases will rely solely on the treatments provided by practitioners of naturopathy ignoring the treatments proven to be safe and effective by a science-based medical physician. All forms of naturopathic education include concepts incompatible with basic science, and do not necessarily prepare a practitioner to make appropriate diagnosis or referrals.

In 1968, in a report entitled "Independent Practitioners under Medicare," the United States Department of Health, Education, and Welfare concluded:

"Naturopathic theory and practice are not based on the body of basic knowledge related to health, disease, and health care which has been widely accepted by the scientific community. Moreover, irrespective of its theory, the scope and quality of naturopathic education do not prepare the practitioner to make an adequate diagnosis and provide appropriate treatment."

Doctors of naturopathy, unlike medical and osteopathic physicians, are not required to obtain a minimum level of education that includes a bachelor's degree before entering into school to become a naturopath. There is little requirement for pharmaceutical education beyond the "natural" products typically used by naturopaths. There is little to no training to perform surgical procedures. And yet, naturopaths want to be allowed to perform surgical procedures and to prescribe medications for which they have received little or no education or training.

In a paper entitled "Naturopathy: A Monograph," Kimball C. Atwood, MD, Massachusetts Medical Society for the Massachusetts Special Commission on Complementary and Alternative Medical Practitioners, April, 2001, wrote:

"Licensure offers regulation to protect the public. Regulators must hold health professions to a very high standard, since considerable damage can occur as a result of treatment by incompetent practitioners. To be considered a *health* profession, an occupation must be able to demonstrate an objective, scientific, and ethical basis. Naturopathy fails to meet this standard."

PO Box 110806, Juneau, AK 99811-0806
Telephone: (907) 465-2550 Fax: (907) 465-2974 Website: www.commerce.state.ak.us/occ

We are also very concerned with doctors of naturopathy being allowed to call themselves "physician." The title of physician has been historically reserved for medical doctors and osteopathic doctors. To permit others to use the title will serve only to confuse the public into thinking they are receiving care from someone whose education equals that of a medical or osteopathic doctor. We urge you to reject this attempt to grant greater recognition to the practitioner of naturopathy profession that it is due. The public will not be served.

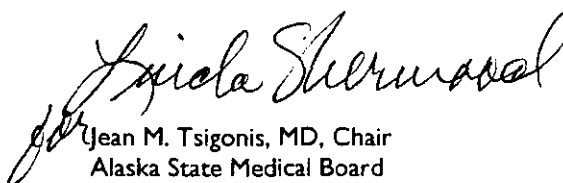

As the regulatory body entrusted with the responsibility for the licensure and discipline of physicians in our state, it is our opinion that the education and training attained by those who practice naturopathy does not prepare them adequately in modern pharmacology nor are they sufficiently trained and skilled to perform surgical procedures. Contrast the four-year education received by the naturopath consisting of two years of didactic training and two years of clinical training against the typically eight to twelve years of education and training received by allopathic and osteopathic physicians.

While some would give the impression that naturopathy is a widely accepted and approved form of health care, only 20 states license naturopaths in this country. Many of those 20 states do not permit naturopaths to prescribe controlled substances or perform surgeries.

Naturopaths are currently licensed in Alaska. They are regulated but there is no formal, appointed board that provides oversight. With the predominance of remote practice and the lack of on-site supervision or support, it would not serve the Alaskan public well to be in the lead for states to expand the scope of practice for other health care practitioners. In fact, the board believes that the safety of our patients would be at risk.

In the best interests of our patients, we urge you, Governor Parnell, and our legislators, to defeat these bills.

On behalf of the members of the Alaska State Medical Board, and all physicians in the state, thank you, sir, for your support.

Jean M. Tsigonis, MD, Chair
Alaska State Medical Board

xc: Members, Alaska State Senate
Members, Alaska State House of Representatives

1. Concerns over the unintended consequences of applying the term "Physician"
 - a. Quick internet search shows the term "physician" is used 238 times in current law. I would like to know what affect applying "physician" to naturopath's has on current laws?
 - b. Understanding is currently Medicare will not pay for naturopaths. We have a shortage of physicians that accept Medicare. This committee just passed a bill to provide incentives to "physicians" – will that bill now apply to naturopaths? Concern is that we may lose the impact on our Medicare problems. That is just an example. Believe a thorough examination of current law needs to be done so we know all effects.

2. Concerns over patient protections.
 - a. Is there a difference in the standard of care determination between a naturopath and physician? Standard of care being the threshold question for liability as to whether the physician acted negligently.
 - b. Is there a difference in liability insurances or are they exactly the same? Can we get someone to discuss the different insurance requirements for physicians and naturopaths and what that means for patients?
 - c. Do we have an attorney from legislative legal that can explain the standard of care that will be required under this bill? If a physician performs a minor surgery or a naturopath will it change the legal standard of care that a court will look at if something was done improperly? Same question on a miss-diagnosis that prescribes medication – are the standards of care the same? Are naturopath's ok with being judged under a "physician" standard of care? Why not?
 - d. Believe we should get a memo from legislative legal that fully outlines what differences there are for patient protections or recommend this go to Judiciary.

HB 282

April 1, 2009

Testimony by Patrick Neary, ND to the Alaska Legislature House of Representatives', Health and Social Services committee.

Honorable Representatives, thank you for making time in your busy schedules to hear from us on House Bill 282, a bill relating to Naturopathic Doctors.

This bill will increase choice and access to safe natural healthcare services for the Alaskan people.

I am Dr. Patrick Neary and I present today in support of passage of House Bill 282. I have lived in Juneau with my family for the past 15 years and make my livelihood in service as a Naturopathic Doctor. I work at the Wellspring Clinic in collaboration with three Advanced Nurse Practitioners.

As you know, NDs have been licensed to practice as independent primary care doctors in Alaska since 1986.

House bill 282 is a clarification of our Naturopathic licensing statutes. It brings Alaska up to the current standard of Naturopathic medical care offered in the other licensed States.

House bill 282 provides Alaskan families with increased access to care and increased freedom of choice in their health treatment while at the same time increasing safety and oversight of our profession.

The provisions of this bill allow for inclusion of Naturopathic Medical services in the Medicaid (Denali KidCare program), aligns the prescriptive authority of Naturopaths in Alaska with the national norms for licensed states in keeping with our medical training. This bill also creates a Naturopathic Medical board to protect public safety through regulatory and disciplinary powers.

Shortage of Primary Care Providers in Alaska

It is no secret that there is a shortage of primary healthcare providers nationally and particularly in Alaska. Primary care providers act as the medical home for patients. The provider patient relationship aims to improve patient health and avoid the life and financial costs of chronic disease and expensive unnecessary emergency room treatment.

There is a shortage of providers even here in Juneau. Currently in Juneau there is only one medical clinic accepting new adult patients and the wait is reportedly three weeks for a first appointment.

In Alaska, there are now approximately 40 Naturopathic Doctors licensed as primary care providers. The average length of practice of the NDs in Alaska is 10 years. We are seasoned care providers, who stand ready to assist with the current unmet need for primary health care.

Will this bill solve the primary care shortage? No. However for patients and families who chose a more natural or alternative approach to their health care, HB 282 provides Naturopaths with a safe and cost effective scope of practice to offer patients.

Although prescription medication will seldom be our first offering, HB282 allows Naturopaths to prescribe or adjust the dose of prescription medications without a patient having to wait and reschedule with a medical prescriber. This time savings will alleviate physical and financial suffering.

Our inclusion in the Denali Kid care program will allow low income parents of children with chronic health problems access to Naturopathic diet and lifestyle information which may improve the health of their child for a lifetime.

There is resistance to allowing complete scope of practice for all midlevel providers.

The passage of this bill is a free market solution to availability of healthcare in Alaska. In a capitalist society competition is a good thing. It provides freedom of choice, improved quality at lower costs.

However, professional medical trade unions oppose competition with their monopoly status. They are fighting legislative efforts to complete licensing of midlevel providers across the country.

The American Medical Association has sent this legislature, copies of its Scope of Practice Campaign document against Naturopathy. This document has out dated information and is part of a National campaign to thwart the free market competition from 15 classes of midlevel medical practioners.

The American Medical Association and its state medical associations in 2009 have fought to limit the scope of practice legislation of midlevel providers in more than 150 state legislative efforts.

As you can see on Attachment 1, across the country the AMA's Scope of Practice Campaign efforts sought to restrict or deny licensure to 15 classes of midlevel providers. Acupuncturists, Advance Nurse Practitioners(26), Audiologists, Chiropractors, Dentists, Midwives, Optometrists, Pharmacists, Physician assistants, Physical therapists, Podiatrists, Psychologists, Naturopaths (15), Speech pathologists, Surgical assistants These midlevel providers have moved for legislation that allows them to practice to the full extent of their training and expertise.

All of these providers have had their practice licensing efforts targeted by the AMA to fail because they are not in the interest of the AMA members.

Medical dissatisfaction with its own practice

During the same timeframe, in the Fall of 2008 a representative survey of 12,000 Medical Doctors by the Physicians Foundation painted a grim picture of primary healthcare. This survey was reported nationally and in the Fall 2008 Heartbeat, newsletter from the Alaska Medical Association.

This survey found that 78% of doctors believe there is a shortage of primary care doctors. 49% of Physicians (>150,000 doctors) said that they plan over the next three years on reducing the number of patients they see or stop work altogether. 33% have closed their practices to Medicaid. 45% would retire today if they had the resources. 60% of doctors would not recommend medicine as a career to young people.

According to this the primary care shortage is going to become a lot worse.

Maybe the service provided by the all of the trained midlevel providers mentioned above would reduce our growing shortfall in primary care if given a chance.

Naturopathic scientific medical education

Medical doctors claim that the education that Naturopaths receive is not scientifically and clinically adequate to allow competent clinical practice. This is patently wrong.

The current educational standard for a Naturopathic Physician is a 4 or 5 year doctoral program of basic and clinical medical sciences on top of a Bachelors degree. My Bachelors of Science degree is in Chemical Engineering from the oldest engineering school in the Nation, Rensselaer Polytechnic Institute.

I can personally attest to the rigor of the sciences required in the Bastyr Naturopathic Medical School from which I graduated in 1993. Many of our basic science and clinical instructors were PhDs and MDs who were also on the teaching staff of the University of Washington, Medical School or had taught at other regular medical schools. All of the modern Naturopathic Medical colleges are regionally and nationally accredited by appropriate governing agencies.

Attachment 2 is the curriculum of the Bastyr University. This represents the current National standard of the four year study of science based natural medical care leading to an ND degree. The first two years encompass approximately 1400 hours of modern basic and clinical diagnostic science. Of note is the 55 hours of class time in Pharmacology. Specific instruction in pharmacology and prescribing are also presented in each specialization course. Please note that none of the course hours of natural medical nature and none of the third and fourth year hours are included in the above total.

Attachment 3 is the two year Masters Degree curriculum from University of California, San Francisco. This degree qualifies Advanced Nurse Practitioners in Alaska to practice independently with full prescribing rights. The pharmacology class work for this degree is in the 40 hour range. Please note that the total graduate educational hour requirements of the Masters degree Advanced Nurse Practitioners are approximately half of those required for a Naturopathic degree.

Advanced Nurse Practitioners are independently licensed and provide safe, cost effective primary care in Alaska. Attachment 4 is an Executive Proclamation issued by our Governor Sean Parnell attesting to the excellent service Advanced Nurse Practitioners have provided Alaskans for over 35 years.

The prescribing abilities of both Naturopaths and Advanced Nurse Practitioners are not meant to be on the same par as Medical Doctors. Medical Doctors faster paced practice requires a higher degree of skill and experience. Their training prepares them for this.

Both Naturopaths and Nurse Practitioners and are aware of the limit of our knowledge and training. We see fewer patients and spend longer with them. Generally one to three patients an hour is the norm for either Naturopaths or Advanced Nurse Practitioners.

We strive to maintain appropriate, professional referral relationships with our respected Medical colleagues. We confer with and refer our patients to Medical Doctors often.

Naturopathic prescribing a remarkable record of safety

A committee comprised of three Medical doctors, three Naturopaths, and three Registered Pharmacists produced the document Findings and Recommendations Regarding the Prescribing and Furnishing Authority of a Naturopathic Doctor. This was presented to The California State Legislature in January 2007 by the California Bureau of Naturopathic Medicine. Attachment 5 is page 11 of this report.

This table shows that of the thirteen states that then licensed Naturopathic Doctors, Alaska was one of only three states that did not allow Prescriptive Authority.

Attachment 6 presents the pristine record of safety that this committee discovered. None of the state licensing agencies reported any patient harm or disciplinary action due to ND prescribing nor were any agencies aware of any civil actions against ND's.

The Medical malpractice insurance company NCMIC reported that "In the five years that they had been insuring Naturopathic Physicians and the Naturopathic Colleges they had never opened a claim against a Naturopathic Physician involving prescriptive medications." Additionally a search of the legal data bases of Oregon and Washington the states with the highest number of and years of service of Naturopaths (since 1919 and 1927 respectively) there were no legal cases against Naturopaths for prescription negligence or for anything at all!

Attachment 7 is a quote from my malpractice insurance company NCMIC for the \$1 million, \$3 million policy that I carry. This is the level required by Bartlett Hospital that allows me to order diagnostic and outpatient services there. Please note that the costs of this coverage in Alaska, Washington and Arizona are all very close. In Washington, Naturopaths have a large list of prescription drugs which they are licensed prescribe. Arizona allows NDs the almost complete prescribing authority available to Medical doctors. This parity of cost demonstrates that the insurance market does not recognize any increased risk with Naturopathic prescribing.

Closing

Naturopathic Doctors strive to provide freedom of medical choice and access to care for Alaskans. Yet the extent of our effort is hampered by our current legislation.

Naturopathic Doctors are trained in a rigorous 4 year long scientific clinical education to offer a broad spectrum of natural and medical primary care. Our training is on par with Advanced Nurse Practitioners who offer excellent medical care in Alaska. We strive to work collaboratively with our Medical colleagues for the best interest of our patients.

Naturopaths practicing to the completeness of our training offer safe primary medical service including medical prescription. The state agencies who regulate Naturopaths report no problems with Naturopaths prescribing medication. The malpractice insurance industry does not realize any increased risk of Naturopaths with prescribing authority.

House Bill 282 will allow Naturopathic Doctors to safely offer services to the full scope of our educational training as true primary care doctors. It will provide increased oversight and accountability through formation of a Naturopathic Board.

Alaskans, especially low income Alaskan families will benefit from more freedom of medical choice and access to care. Please support the passage of this important legislation.

Thank you

Scope of Practice Campaign
Trends for 2009 State Legislative/Regulatory Sessions
(By state)

State	Scope of Practice Issue
Alabama	Advance Practice Nurses: independent prescribing rights
Arizona	Optometrists: mandatory PreK vision screenings
Arkansas	Advance Practice Nurses: independent practice
California	Advance Practice Nurses: independent practice
California	Naturopaths: prescribing privileges
California	Physical Therapists: direct access (or expansion thereof)
California	Psychologists: independent prescribing rights
Colorado	Advance Practice Nurses: Certified Nurse Anesthetists: independent practice
Colorado	Advance Practice Nurses: independent prescribing rights
Colorado	Chiropractors: ability to refer to selves as "physicians"
Colorado	Naturopaths: licensure
Connecticut	Advance Practice Nurses: independent practice
Delaware	Midwives: Lay Midwives: licensure
Delaware	Pharmacists: collaborative management (similar to NPs)
Florida	Advance Practice Nurses: authority to prescribe controlled substances
Florida	Optometrists: authority to perform surgery
Florida	Optometrists: mandatory PreK vision screenings
Florida	Physical Therapists: direct access (or expansion thereof)
Florida	Podiatrists: authority to treat the ankle and all soft tissue structures below the knee governing the function of the foot and ankle
Florida	Psychologists: independent prescribing rights
Georgia	Nonphysician Providers (generally): use of lasers
Georgia	Psychologists: independent prescribing rights
Hawaii	Optometrists: mandatory PreK vision screenings
Hawaii	Psychologists: independent prescribing rights
Idaho	Midwives: Lay Midwives: licensure
Idaho	Naturopaths: licensure
Idaho	Optometrists: authority to perform surgery
Idaho	Optometrists: expansion of authority to perform injections

STATE OF ALASKA

Executive Proclamation by *Sean Parnell, Governor*

WHEREAS, there are more than 125,000 licensed Nurse Practitioners (NPs) in the United States with more than 650 licensed in Alaska, providing high-quality, cost-effective, personalized healthcare to Alaskans for more than 35 years; and

WHEREAS, Alaska has one of the highest numbers of NPs per capita of any state in the nation; and

WHEREAS, NPs work to achieve advanced education, most hold master's degrees, and many hold doctorates - including advanced clinical training beyond their initial registered nurse preparation; and 24 percent of practicing NPs in Alaska have received their graduate nursing education through the University of Alaska's Family Nurse Practitioner Program; and

WHEREAS, NPs are partners in the healthcare of their patients, so that, in addition to clinical services, NPs focus on health promotion, disease prevention, and health education and counseling, guiding patients to adopt smarter health and lifestyle choices; and

WHEREAS, NPs can provide excellent, skilled, cost-effective care; and

WHEREAS, NPs offer services in the areas of family practice, women's health, pediatrics, geriatrics, psychiatric mental health, midwifery services, and other specialties; and

WHEREAS, NPs provide healthcare to people of all ages throughout the State of Alaska, and in diverse healthcare settings which include community clinics, health department clinics, public health centers, schools, university student health centers, private practice, emergency departments, home health care, long-term care facilities, and hospitals; and

WHEREAS, about 40 percent of NPs in Alaska practice in rural settings, an estimated 35 percent practice in medically underserved areas of Alaska, and nearly ten percent are the sole licensed providers in their communities; and

WHEREAS, NPs bring a unique perspective to health care service delivery by emphasizing both nursing and medical care.

NOW, THEREFORE, I, Sean Parnell, Governor of the State of Alaska, do hereby proclaim November 8-14, 2009 as:

Alaska Nurse Practitioner Week

in Alaska, and encourage Alaskans to recognize the many contributions that this dedicated group of healthcare professionals makes to the health and well-being of the people in the communities they serve.

Dated: October 16, 2009

Sean Parnell

Sean Parnell, Governor
who has also authorized the
seal of the State of Alaska to
be affixed to this proclamation.

COMMITTEE FINDINGS

Formulary Laws from Other States

As the scope of practice for NDs varies from state to state, so do the laws and regulations regarding prescribing. Of the 13 other states that license NDs, 9 of those states allow NDs to prescribe independently, without any MD supervision or protocol. Only one state, Kansas, which instituted licensure in 2003, requires MD supervision, and Maine requires collaboration with a physician for one year prior to independent prescribing.

State	ND Licensure Enacted	# of Current Active NDs	Prescriptive Authority	MD Supervision Required
Alaska	1986	40	No	No
Arizona	1935	375	Yes	No
Connecticut	1920	210	No	No
Hawaii	1925	85	Yes	No
Idaho	2005	8	Yes	No
Kansas	2003	11	Yes	Yes
Maine	1995	27	Yes	1 year
Montana	1991	67	Yes	No
New Hampshire	1994	57	No	No
Oregon	1927	715	Yes	No
Utah	1997	18	Yes	No
Vermont	1995	117	Yes	No
Washington	1919	802	Yes	No

The formularies for each state vary greatly. A brief summary is given below. The actual formularies may be viewed in the Appendix.

Arizona has the broadest formulary in the nation. Arizona NDs are allowed to independently prescribe all classes of prescription drugs, with 4 exceptions:

- IV medications (except vitamins, chelation therapy, and drugs used in emergency resuscitation and stabilization, which are allowed).
- Controlled substances listed as Schedule I or II (except morphine is allowed).
- Cancer chemotherapeutics classified as legend drugs.
- Antipsychotics.

To support this broad prescribing authority, Arizona passed HR 2028 in 2002. This bill required, as of January 1, 2005, that all NDs complete a 60-hour series of pharmacy courses and pass an examination. After that date, only NDs who have completed the additional training and passed the test in

Safety Record of ND Prescribing

In preparation for this report, the Bureau contacted the licensing agencies for each of the states that allow NDs to prescribe. None of the states reported any patient harm or disciplinary action due to ND prescribing. In addition, the states were not aware of any civil actions against NDs for prescribing.

The Bureau also contacted NCMIC Insurance Company. NCMIC insures NDs in all of the licensing states and also insures the naturopathic medical schools. In a letter to the Bureau dated June 7, 2006, NCMIC stated: "In the five years that NCMIC has been insuring Naturopathic Physicians and the colleges, we have never opened a claim against a Naturopathic Physician involving prescription medications." [See Appendix.]

Additionally, the Committee contacted Jury Verdicts Northwest (JVN) to see if there were any civil actions filed against a licensed ND. JVN covers both Oregon and Washington, the two states with the greatest number of NDs and that have been licensing NDs for a considerable length of time (since 1919 and 1927, respectively). JVN responded "Upon reviewing cases contained in Jury Verdicts Northwest's database we found no cases against naturopaths for prescription negligence, or for that matter our database contained no cases against naturopaths at all." [See Appendix.]

Why Do NDs Need to Prescribe?

The NIH National Center for Complementary and Alternative Medicine considers naturopathy a "major Western whole medical system" that "involves complete systems of theory and practice that have evolved independently from or parallel to allopathic (conventional) medicine." In 1987, the American Association of Naturopathic Physicians (AANP) began work on a consensus definition of naturopathic medicine for the modern era. The definition, unanimously adopted by the AANP's House of Delegates in 1989, focused on the guiding naturopathic principles and philosophy rather than specific therapeutic modalities or treatments. The definition reads:

"Naturopathic medicine is a distinct system of primary health care - an art, science, philosophy and practice of diagnosis, treatment and prevention of illness. Naturopathic medicine is distinguished by the principles which underlie and determine its practice. These principles are based upon the objective observation of the nature of health and disease, and are continually reexamined in the light of scientific advances. Methods used are consistent with these principles and are chosen upon the basis of patient individuality. Naturopathic physicians are primary health care practitioners, whose diverse techniques include modern and traditional, scientific and empirical methods."

ALASKA STATE LEGISLATURE

REPRESENTATIVE NANCY DAHLSTROM
REPRESENTATIVE LES GARA
REPRESENTATIVE BOB HERRON

House Bill 284

"An Act requiring the Department of Health and Social Services to accept federal prescription drug benefits or to provide comparable benefits for residents of the Alaska Pioneers' Home, including residents eligible for discount or free benefits from the United States Department of Veterans Affairs or the Indian Health Service of the United States Department of Health and Human Services."

In April of this past year, Veterans residing at Pioneer Homes across Alaska were caught in the middle of a bureaucratic dispute. Officials at the Pioneer Homes could not accept prescription drugs from the Veterans Administration because of safety concerns with how those drugs were delivered. The VA refused to change how they sent drugs to the Pioneer Homes. Veterans who were unable to self-administer drugs had to pay the Pioneer Homes' pharmacy out-of-pocket for drugs they needed, prescriptions that they would otherwise receive for free from the VA.

A joint effort between the Department of Health and Social Services, the Department of Military and Veterans Affairs, local public veterans' advocates and legislative involvement appear to have fixed the problem at the policy level with the Dept. of HSS. State administrators found a solution to safely administer prescription drugs from the VA and veterans began to receive their free drugs once again.

House Bill 284 would stop this from happening again. Administrators could only prevent residents from receiving Federal prescription drug benefits if there was a safety concern. If they did prevent residents from receiving those drug benefits, the Pioneer Homes would step in to cover the value of the denied benefit.

This bill would protect not only Veteran residents, but all Pioneer Home residents receiving Federal prescription drug benefits, including benefits from Indian Health Services. The Pioneer Homes have always worked with residents eligible for IHS benefits to receive their prescription drugs. However, if something changes in the future with the distribution of IHS drugs, the Homes could stop accepting them but would need to cover the cost to affected residents.

With the passage of House Bill 284 veterans and other groups who have earned Federal drug benefits will no longer have to worry about not receiving their much needed prescription medications because bureaucrats are unable reach, what should be, a simple agreement.

ALASKA STATE LEGISLATURE

REPRESENTATIVE NANCY DAHLSTROM
REPRESENTATIVE LES GARA
REPRESENTATIVE BOB HERRON

HB 284

Sectional Analysis

Section 1: Amends AS 47.55.010(c), maintenance and operation of Alaska Pioneers' Home and Alaska Veterans' Home, to require the Department of Health and Social Services to accept Federal prescription drug benefits earned and due to Pioneers' Home residents.

Section 2: Adds a new subsection to AS 47.55.020, admission to home, to provide the Department of Health and Social Services the option of providing comparable prescription drug benefits to pioneers and veterans.

ANALYSIS: (Attach a separate page if necessary)

HB 284 ensures that eligible Pioneer Home residents will continue to have access to federal prescription drug benefits available from the Veterans Administration or Indian Health Services. There is no fiscal impact to this bill as the Pioneer Homes are already allowing residents to access their federal prescription benefits.

Thanks everyone. We have been trying to make this work, but with little success so far. We would be glad to problem solve with you. Can you work with Wilda Laughlin on our end to set up a meeting? Thanks, Bill

Subject: Disabled Veterans Prescription Drug Benefit/Pioneer Home Problem - a heads up

Hi Bill and Dave. I hope all's well. I just want to give you a heads up on the attached letter you'll receive from me, Rep. Dahlstrom & Sen Wielechowski. A number of folks in that veterans community have also agreed that we should send the letter, as the prescription drug benefit issue we've tried to work on this summer for our disabled veteran constituents remains unresolved.

Rather than taking an unjustifiably acerbic approach that the Pioneer Homes are doing terrible things (we do understand your concerns, and have been trying to working around them), we have been careful and purposeful in keeping the letter (and a press release we've sent) conciliatory. Our point, and we perceive your point - is that there has to be a solution out there that addresses the Homes' safety and other concerns, the relative non-cooperation by the VA, and the interest in honoring the right of disabled veterans to their hard-earned free prescription medicine benefit.

We've proposed a few alternative solutions, which we'd like to work with you to settle upon. When you have had the time to analyze the approaches, we'd like to sit down with you soon to figure out a plan of action to solve the problem.

Thank you for all your work. I know we may presently disagree about some of the issues, but hope we can work towards a timely solution. We don't plan on taking an aggressive stance against the Pioneers Homes if the press follows up on the story - just that we believe there is a solution, and want to achieve it.

Thanks. I'll call. Les

Re: Veterans at the Pioneer Homes Who Cannot Receive Their Free VA Prescription Drug Benefit

Dear Mr. Cote:

We are writing to recommend a solution to the problem facing disabled Veterans at Alaska's Pioneer Homes. As you know from work with our offices, we are concerned that the Pioneer Homes will not administer prescription drugs veterans receive for free from the Veterans Administration. As a result, Veterans entitled to no-cost prescription medicine have to purchase it from the Pioneer Homes pharmacy. So far in correspondence, and work on the matter, we have not found a solution that is acceptable to the Pioneer Homes. However, we are writing because we do believe a solution can be achieved, and will present some recommendations. Our hope is that you will agree to support one or more of them, and we would like to work with you on what you determine is the best solution to this problem.

We've attached the correspondence, and legal memoranda between the Pioneer Homes and Rep. Gara's Office, as it may help you. And we do respect the difficulties the Homes face, including the lack of cooperation from physicians and staff in the VA system that Pioneer Homes staff have experienced (sometimes physicians do not accept concerns from Pioneer Homes Staff about the appropriateness of prescriptions; the VA won't send prescriptions in blister packages).

The basic problem is that the Pioneer Homes like to administer all a patient's medicines in a blister package, rather than from prescription bottles. The Pioneer Homes like to do this for safety reasons, and current law does not let the Pioneer Homes repackage bottled drugs into a blister package. Here are some proposed solutions. We will work with you to implement one, or accept a separate proposal from the Pioneer Homes. But the current status – that veterans who are entitled to free prescription medicine are not allowed to use that benefit – begs a solution.

1. Change in the law. We will write the Board of Pharmacy to change the regulations to allow the Pioneers Homes to repackage medicine into blister packages. If they decide not to allow this, we will write legislation to achieve this.
2. Alternatively, under current law, the Pioneer Homes may re-package medicine if it receives a "manufacturers license". We would ask that the Pioneer Homes look into determining whether achieving this license is feasible.
3. Alternatively, the Pioneer Homes could ask for the staff you have advised us you would need to safely administer prescription medicine in the form it comes in from the Veterans Administration. That is, the Homes have a safety concern about administering medicine from drug canisters. While nursing staff are certainly qualified to administer medicine from a bottle, you have advised us you may need additional staff to make sure this can be done safely, and that you are too short on staff to do this safely with current personnel. If this is the approach you would like to take, let us know.
4. Finally, it just might be less expensive, given the small number of affected patients, to adopt a policy as follows, that would require no change in staff or packaging: To provide free prescription medicines to any Pioneer Home resident who qualifies for free medicines that the Pioneers Home decides it cannot administer. That is, if you do not accept medicines from another institution that are provided to the resident for free, then the Pioneer Homes would have to supply that resident free medicine at cost to the Pioneer Home.
5. We will consider legislation that allows Pioneer Home repackaging, and that allows the Pioneer Homes to choose the most acceptable method for providing free prescription medicine to those who would otherwise qualify for it.

Thank you for working with us. So far we have not been able to find a solution that is acceptable to you. This letter expresses our intention that we continue to work to find one that will work as soon as practicable. We look forward to your response.

Best Regards,

Rep. Les Gara

Sen. Bill Wielechowski

Veterans in Pioneer Homes will get their medicines from VA FREE OR LOW COST: Issue of distribution safety resolved.

By ROSEMARY SHINOHARA

rshinohara@adn.com

(11/14/09 02:47:41)

The state announced Friday that it has found a solution that will allow veterans who live in state-run Alaska Pioneer Homes to get the free or low-cost medicines they are entitled to from the VA, but have been denied in recent months.

The state will also refund the money the affected veterans had to pay to fill prescriptions through the Pioneer Homes pharmacy, according to officials from the state Department of Health and Social Services.

The Pioneer Homes quit accepting medicine from the VA last April for veterans who need help from staff to take their pills. The decision affected about a dozen veterans in the Anchorage Pioneers' Home, and perhaps a couple of veterans at the Palmer home.

Pioneer Homes director Dave Cote said the VA medicine wasn't packaged in the right kind of packs to make sure staff could safely distribute it. The Pioneer Homes wanted the medicine to come in blister packs labeled with the patient's name, with foil on one side and plastic on the other and each pill ready to be popped out individually. That way it would be easy to tell if the pill had been administered.

But Cote said after a high-level meeting with Veterans Administration last week, it became clear "they could not be flexible. ... There was not anything they were going to do on their side of things."

Ken Strum, pharmacy chief for the Veterans Administration in Anchorage, said the VA doesn't have equipment needed to package medicine in blister packs as the Pioneer Homes wanted. And, Strum said, it would be against state regulation for the Pioneer Homes pharmacy to repackage in blister packs medicine it receives from the VA pharmacy.

So Cote and the Pioneer Homes nurses instead figured out the safest way to distribute VA medicine from the bottles it comes in, Cote said. Basically, they're going to be more careful.

The Pioneer Homes nursing staff will keep the pills in the original bottles, instead of transferring all of a veteran's pills into a pill box where all meds to be taken at a time would be mixed together. That's to prevent a problem in case certain prescriptions are discontinued, which happens often with older folks, Cote said.

Also, instead of allowing aides to dispense VA pills, nurses will do it, he said.

The dispute between the VA and the Pioneer Homes gained attention this fall after Bea Combs, stepdaughter of Pioneers Homes veteran Melvin Ertwine, went to a legislator's office seeking to get the free or low-cost medicines re-instated.

State Reps. Les Gara of Anchorage and Nancy Dahlstrom of Eagle River and Sen. Bill Wielechowski of Anchorage began sending letters and meeting with state administrators about it.

"I think it's a great solution," Wielechowski said Friday. "It was sort of two large bureaucracies clashing with each other. Somebody had to give."

The state was able to be "a little more nimble," he said. "One reason we were able to do it is it's a small number of people."

ALASKA STATE COUNCIL

February 5, 2010
Representative Gara
REF: HB284

Rep Gara:

As one of the Veteran Service Organizations that worked through a number of meetings last year with you and other Members of our State Legislature including Rep Les Gara and Rep Nancy Dahlstrom and staff, I wanted to ensure each of you know how appreciated for your efforts and your willingness to step up for our veterans is as they face ongoing issues in relation to their care both at our State Pioneer Homes and the Alaska Veterans Home.

Each of you became intimately aware of the knot veterans face with differing government agencies attempting to untie their regulatory webs to meet the real day-to-day needs of our veterans. It was difficult, complex, and troubling. The leadership of this team of Legislators and the Commissioner of Health and Social Services in finding a solution was most welcome and appreciated. It will be remembered.

We are delighted you have decided to formally codify this new understanding in state law by the introduction of HB284. We have read the bill and discussed it with your staff and others and wanted you to know that you have the full support and appreciation of the veterans of Alaska, and specifically those Vietnam Veterans we represent here in Alaska and nationally. We will be forwarding this bill to other states that also face similar challenges.

I hope to be able to testify in support of this bill when it is before the various committees, but travel and work may keep me away. Please advise the members of any committee this bill is heard before that HB284 has our strong support and is listed as one of our top state legislative priorities for 2010.

If there is anything we can do to assist in moving this bill through this session, just ask.

It is an honor,

Ric Davidge
President

MEMORANDUM

March 9, 2010

SUBJECT: Does AS 21.42.345 cover dependents for dental care?
(HB 309, Work Order No. 26-LS1315\R)

TO: Representative Bill Thomas
Attn: Cecile Elliott

FROM: Dennis C. Bailey *DCB*
Legislative Counsel

You have asked whether AS 21.42.345, which requires an insurer to insure the children of an insured under a policy with dependent coverage, would override the proposed provision of HB 309, which would prohibit insurers from setting a minimum age under which a child would not receive coverage for dental care. This memorandum reviews the terms of AS 21.42.345 and the proposed change to AS 21.42.392 in HB 309 and concludes that the two provisions conflict.

AS 21.42.385.

AS 21.42.345 provides:

Sec. 21.42.345. Required provision for coverage of dependents.

(a) A health care insurance plan providing coverage for a dependent of a covered individual shall, as to the dependent's coverage, also provide that the health care insurance benefits applicable for dependents shall be payable with respect to

(1) a newly born child of a covered individual from the moment of birth;

(2) a child adopted by a covered individual from the date of adoption;

(3) a child placed with a covered individual for adoption from the date of placement for adoption; and

(4) a spouse from not later than the first day of the first month beginning after the date the request for enrollment is received, but the insurer may require that a request for enrollment be received within 31 days of the date of marriage.

(b) The coverage for a newly born child under this section shall consist of coverage of injury or sickness, including the necessary care and treatment of medically diagnosed congenital defects and birth abnormalities.

To paraphrase, AS 21.42.345 requires that a health care insurance plan that provides for dependent coverage must include coverage for newborn children, adopted children, and new spouses. This section only applies to policies that provide dependent coverage, and would not apply, for example, if a group plan sponsored by an employer either did not provide coverage for an employee's dependents or allowed the insured to elect coverage without dependent benefits.

AS 21.42.345, however, does not state whether dental care is included in the required coverage for dependent children. That question is answered by AS 21.12.050, which defines health care insurance as follows (emphasis added):

Sec. 21.12.050. Health and health care insurance defined.

(a) Health insurance is insurance of human beings (1) against bodily injury, disablement, or death by accident or accidental means; (2) against the resulting expenses of the injury, disablement, or death; (3) against disablement or expense resulting from sickness or childbirth; (4) against expense incurred in prevention of sickness; (5) for dental care; and (6) including every insurance that applies to injury, disablement, or death. Transaction of health insurance includes disability insurance and stop-loss insurance but does not include workers' compensation insurance. Health care insurance described in (b) of this section is a type of health insurance under this subsection.

(b) Health care insurance means that part of health insurance that provides benefits for medical care whether provided directly, through reimbursement, or other method.

...

Under subsection (a), the meaning of that health care insurance includes coverage for dental care. Also, under subsection (b), health care insurance includes coverage for "medical care." The definition of "medical care" includes amounts paid for "diagnosis, care, mitigation, treatment, or prevention of disease, or amounts paid for the purpose of affecting any structure or function of the body." See, AS 21.90.900(30). Under these definitions, it is reasonable to conclude that health care insurance would include dental services.

In summary, one may conclude that AS 21.42.345 requires coverage, including dental coverage, for newborn and adopted children under a health care insurance plan that covers dependents.¹

¹ AS 21.42.385 requires a health care insurer to offer a plan sponsor or individual minimum dental coverage "not less than the dental . . . coverage provided on January 1, 2009, to an individual entitled to medical benefits under AS 39.35.535 (public employees retirement system of Alaska)." AS 39.35.535 identifies who is eligible for the coverage but does not describe the coverage provided as of that date.

Representative Bill Thomas
March 9, 2010
Page 3

AS 21.42.392.

HB 309 proposes amendments to AS 21.42.392 to prohibit a health care insurer who provides coverage for dental care from setting a minimum age for receiving dental care coverage in a health care insurance plan. Under this prohibition, a health care insurer presumably would not be allowed to limit coverage based on an age set by an insurer and could not restrict coverage for newborn children, the lowest age limit possible. Therefore, the proposed amendment prohibiting a health care insurer from setting a minimum age for dental care coverage conflicts with AS 21.42.345.

Keep in mind, though, that AS 21.42.345 only applies to a plan that includes dependent coverage. Conversely, if the plan did not provide dependent coverage, an insurer is not obligated to provide coverage for newborn children, adopted children, and new spouses and the conflict would not longer exist.

The last question presented is whether the date of coverage for dependents begins at birth or at the time of adoption. Coverage for a newly born child is required from the moment of birth and, for an adoption, from the date of adoption under AS 21.42.345(a).

If I may be of further assistance, please advise.

Juneau, Alaska 99801-1182

Dear Representative Thomas:

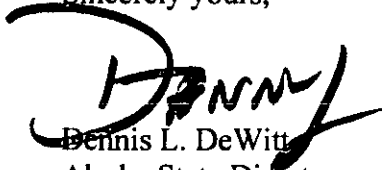

RE: HB 309 Proposed Committee Substitute

On behalf of the National Federation of Independent Business/Alaska, I wish to respectfully remove our opposition to House Bill 309. The National Federation of Independent Business is the largest small-business advocacy group in Alaska.

We want to express our appreciation of your willingness to address our previous concerns and to propose a committee substitute that eliminates the portion of the bill that we opposed.

Thus, the NFIB/AK no longer has any concerns with House Bill 309.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

HB 309 prohibits insurance companies from setting fee limits on noncovered procedures and also prevents them from setting age limitations for covered services.

A national trend has developed where dental managed care insurance plans are setting caps on dentist's fees for services that are not covered by the insurance plan. Dental managed care plans offer a service providing consumers with dental care at reduced rates. The insurance company sets a fee limit for a service and the consumer knows upfront how much will be covered and how much he or she will have to pay out of pocket. The problem arises when an insurance carrier tries to set fee limits on services that are *not* covered. Insurance companies have begun setting fee limits for certain noncovered services, forcing dentists to reevaluate their decision to participate in the insurance plan thus decreasing the number of dentists participating in the managed care plan. This leaves consumers with fewer dental care options, which usually ends up costing the consumer financially as well as in quality of care.

A second, more recent trend in dental managed care plans is minimum age restrictions. Before benefits are allowed, some insurance companies require that a child be at least four years old. This presents a huge problem in young children obtaining necessary dental care. Dental cavities in very young children continue to be a problem in Alaska and arbitrarily setting minimum age requirements will handicap efforts to restore dental health to this vulnerable population. Tooth decay is highly preventable through early and sustained home care and regular professional preventive services. In May 2003, the American Academy of Pediatrics issued a policy statement urging dental exams for very young children. The policy recommends that infants receive an oral health assessment from a health care professional by six months and be referred to a dental health professional by one year. This important statement recognizes that oral health problems can begin long before a child reaches the age of three.

HB 309 goes a long way towards preventing the above mentioned problems and will ensure that Alaskans continue to receive the dental care that they need. I strongly urge your support of HB 309.

ANALYSIS: (Attach a separate page if necessary)

This bill would prohibit health care insurers that provide dental care coverage from setting a minimum age for receiving dental care coverage, allow those insurers to set a maximum age for receiving dental care coverage as a dependent, and prohibit those insurers from setting fees that a dentist may charge for dental services not covered under the insurer's policy.

The department does not expect additional operating expenses as a result of this legislation.

HB309

HB309 will prohibit dental managed care insurance plans from setting fee limits on noncovered procedures and setting minimum age limitations for covered services. A national trend has developed where dental managed care insurance plans are setting caps on dentists' fees for services not covered by the insurance plan. Dental managed care plans offer a service providing consumers with dental care at reduced rates in exchange for limitations on the numbers of dentists who participate and services that are covered. The insurance companies' actions are causing dentists to reevaluate their decision to participate in plans due to philosophical opposition to insurance companies dictating fee levels for services not covered and the economic impact on their practices. The result is increasing numbers of dentists stopping their participation in managed care plans leaving the consumers with fewer choices for participating providers. Patients could then lose the benefit provided and either have to pay more to stay with their dental home, or seek care from another practitioner causing disruption to treatment.

A second, more recent, trend is dental managed care plans setting minimum age restrictions before benefits are allowed. Dental cavities in very young children continue to be a problem in Alaska and arbitrarily limiting the age dependants receive covered benefits will handicap efforts to restore dental health to this vulnerable population.

The insurance companies are requiring state plans to amend provider contracts in a way that allows the managed care plans to control what dentist's charge, even for services they DO NOT cover. The contract amendment says that dentists serving covered patients will not be able to charge the patient a fee in excess of the managed care plans prescribed fee for the non-covered service. It should be noted the two services that fee caps have been set for are orthodontics and veneers, services that are generally discretionary and rarely covered under any insurance plan.

The managed care plans decision to set fee limitations for noncovered services raises questions about the sincerity of their most recent approach to lowering costs. Managed care plans artificially capping a dentist's fee without providing a concurrent benefit for the patient amounts to a subsidy from participating dentists for the insurance companies marketing. At the outset, the reduced fees help the insurer attract customers and, therefore improves the insurer's bottom line. Dentists front the costs of this marketing approach and have a tough decision to make when faced with a contract amendment that caps the non-covered fees

HB309

- Encourages increased access to dental care
- Prevents insurance companies from intruding on patient-dentist relationship
- Ensures at risk children will continue to receive dental benefits
- Prohibits insurance companies from setting fees on services they do not provide dental benefits for
- Insures dental plans work for the patients best interest not the insurance companies best interest

20 January 2010

To whom it may concern:

On behalf of the members of the Alaska Dental Society I urge the swift passage of HB309

HB309 will prohibit dental managed care insurance plans from setting fee limits on noncovered procedures and setting minimum age limitations for covered services. A national trend has developed where dental managed care insurance plans are setting caps on dentists' fees for services not covered by the insurance plan. Dental managed care plans offer a service providing consumers with dental care at reduced rates in exchange for limitations on the numbers of dentists who participate and services that are covered. The insurance companies' actions are causing dentists to reevaluate their decision to participate in plans due to philosophical opposition to insurance companies dictating fee levels for services not covered and the economic impact on their practices. The result is increasing numbers of dentists stopping their participation in managed care plans leaving the consumers with fewer choices for participating providers. Patients could then lose the benefit provided and either have to pay more to stay with their dental home, or seek care from another practitioner causing disruption to treatment.

A second, more recent, trend is dental managed care plans setting minimum age restrictions before benefits are allowed. Dental cavities in very young children continue to be a problem in Alaska and arbitrarily limiting the age dependants receive covered benefits will handicap efforts to restore dental health to this vulnerable population.

The insurance companies are requiring state plans to amend provider contracts in a way that allows the managed care plans to control what dentist's charge, even for services they DO NOT cover. The contract amendment says that dentists serving covered patients will not be able to charge the patient a fee in excess of the managed care plans prescribed fee for the non-covered service. It should be noted the two services that fee caps have been set for are orthodontics and veneers, services that are generally discretionary and rarely covered under any insurance plan.

The managed care plans decision to set fee limitations for noncovered services raises questions about the sincerity of their most recent approach to lowering costs. Managed care plans artificially capping a dentist's fee without providing a concurrent benefit for the patient amounts to a subsidy from participating dentists for the insurance companies marketing. At the outset, the reduced fees help the insurer attract customers and, therefore improves the insurer's bottom line. Dentists front the costs of this marketing approach and have a tough decision to make when faced with a contract amendment that caps the non-covered fees

Sincerely,

Gary A. Moeller, DDS

Noncovered services: House supports legislative action to counter trend

Posted Nov. 12, 2009

By Arlene Furlong

Honolulu—Seeking legislative action to prevent dental plans from capping the amount dentists can charge for services a plan doesn't cover, the 2009 House of Delegates adopted Resolution 59H-2009.

Dental plans began implementing contract provisions holding dentists to maximum allowed fees for services for which no benefit is available with increasing frequency last year.

Many dentists fear such provisions limit access.

"Why should insurance companies be able to charge for things that aren't even in their benefit packages?" asked Dr. Robert Plage, chair of the ADA Dental Benefit Information Service. "If dentists aren't reimbursed for services, the insurance companies won't suffer but the public may. Exercising this contract provision doesn't cost insurers a dime."

ADA News has heard from insurers on the issue. Insurers say including a maximum allowable fee as part of the benefit or plan design allows patients access to services that otherwise would not be covered. They also say the competition is doing it—a reason for employing the provision.

In its first provision, Res. 59H-2009—Maximum Fees for Noncovered Services—establishes ADA policy supporting legislative action to stop the capping of fees for nonscheduled dental services. It resolves that:

- as a matter of policy, the American Dental Association opposes any third-party contract provisions that establish fee limits for nonscheduled dental services.

"The importance of having ADA policy calling for legislative action on this is to let the insurance companies and our members know exactly where we stand on this," said Dr. Plage.

The second resolving clause says the ADA will continue to actively pursue federal legislation to prohibit ERISA covered plans from applying such provisions (ERISA supercedes state plans) and the third directs the ADA to encourage individual states to pursue legislation to prohibit insurance plans from applying noncovered services provisions. (In June, Rhode Island passed a bill preventing dental plans there from capping the amount dentists can charge for services the plan doesn't cover.)

The Employee Retirement Income Security Act of 1974 is a federal law that sets minimum standards for retirement and health benefit plans in private industry.

The second and third clauses of Res. 59H-2009—Maximum Fees for Noncovered Services—resolves as follows:

- that the American Dental Association continue to actively pursue passage of federal legislation to prohibit ERISA covered plans from applying such provisions;
- that the American Dental Association encourage constituent dental societies to work for the passage of state legislation to prohibit insurance plans from applying such provisions.

The Council on Dental Benefit Programs prioritizes the noncovered services issue as one of dentists' top concerns and is working with the Council on Government Affairs to introduce federal legislation that would get directly at the issue for ERISA plans (federally regulated plans). State legislatures cannot effect changes to ERISA.

"This resolution accomplishes a lot," commented Dr. Plage. "It formally establishes our policy, while giving our members and our respective state dental societies direction on what to do."

Non-Covered Services

Non-Covered Services Talking Points

WSDA has proposed legislation for the 2010 session which would prohibit dental insurers from limiting fees for services not included in dental benefit plans.

Why is legislation necessary?

In July 2009 Washington Dental Services, the state's largest dental insurer, announced new provider contract provisions, allowing it to limit fees charged by its contracted dentists for services that are not covered by the insurer's dental plans. WDS said it was doing so to stay competitive with other insurers implementing similar provisions, however WDS also indicated it disagreed with this policy and was forced to implement it due to its alliance nationally with the Delta Dental system.

- Unless prohibited by insurance law, these provisions constitute an unjust interference in the financial affairs of dental practices.
- Some dental insurers have also added contract provisions to force dental practices to reduce charges when patients reach annual benefit maximum limits.
- Non-covered services vary by insurer and include such items as use of nitrous oxide to control dental fear and anxiety, implants, and posterior composite restorations. While a complete list from WDS is not yet available, WSDA understands these will likely be elective procedures that are consented to by the patient after discussion with the dentist.
- Limiting fees for non-covered services will force dental practices to cost shift. This will result in higher fees charged to uninsured patients and reduced participation in low-reimbursement plans, such as a Medicaid.
- Rhode Island enacted a prohibition on non-covered fee limits in June 2009.
- The National Conference of Insurance Legislators is now considering model legislation to prohibit non-covered service fee limits. Federal legislation is also being pursued to prohibit this practice by ERISA plans not regulated under state laws.

Putting Caps on Fees for Non-Reimbursed Services

Several major dental benefits carriers are adding language to provider participation agreements to allow them to set fees for dental services that they do not pay for, i.e., non-covered services. That is, if a dentist agrees to the contract language, he or she will be required to charge the patient what the carrier has told him or her to charge even when the carrier will not pay for the service.

To enact a fee cap on non-covered services, a dental benefits carrier must amend the current contract it has with its existing providers. Here's an example of such an amendment:

Dentist may bill a Member for non-covered services (which are defined as any service for which no payment is made under the applicable plan or arrangement for any reason, including but not limited to, services in excess of contractual maximums, services not covered under plan design, and services denied due to contractual limitations). Dentist's charge to Member for non-covered services may not exceed the Maximum Allowable Charge for the applicable CDT code as specified in the most current Maximum Allowable Charge schedule. Fees for all non-covered services will be collected from the Member, and not billed to the Carrier.

Note that this is just one of many variations of such a provision that you may find in your participation contract. The provider then has the choice of signing the new contract, thus accepting the new fee caps, or terminating his or her contract. If the provider elects not to sign, then he or she will be excluded from the provider networks presented to patients by that carrier's dental plans.

What are the non-covered services?

Non covered services are those services that a patient's dental plan has chosen not to pay for. Note that a carrier may offer numerous dental plans. Often however, dental plans without coverage for expensive, cosmetic, or other dental services are cheaper for employers to purchase for their employees. This is especially attractive to employers in the current economic climate. Each dental plan may have a different list of non-covered services, and therefore one cannot specify any particular services as universal "non-covered services."

Scope of the issue

Because dental benefits carriers can fall under the protection of the Employee Retirement Income Security Act of 1974 (ERISA), this is both a national and state issue. ERISA is a federal law that sets minimum standards for retirement and health benefit plans in private industry. Insurers that cover large employee groups who self-insure will more likely fall under ERISA. Some state laws do not exempt dentists from ERISA dental insurance plans that want to implement this policy change.

Rationale of carriers enacting such policy

To stay competitive with one another, dental benefits carriers use the argument of market pressure or gaining a marketing advantage as one of the reasons they are implementing this policy. Market need, the carriers assert, is being driven by patients who can save money on services not covered by their dental benefits plan and see value in limiting their out-of-pocket expenses. However, limiting dentists' charge to patients for non-covered services allows these carriers to market their dental plans as costing patients less without bearing any of the financial risk of the discount; that is, these carriers gain the marketing advantage by shifting the risk to the providers. Therefore, the market trend will drive all carriers to implement similar restrictions in order to avoid a competitive disadvantage. Accordingly, any legislation enacted against the practice of fee-capping for non-covered services must be sufficiently broad to prevent all carriers from engaging in this practice.

Impact to Patients and the Practice of Dentistry

As primary care providers of oral health care, general dentists strive first and foremost for access to quality care for all as the ultimate goal of the profession. However, to serve its patients, a dental office must be viable and sustainable. Today, more patients than ever rely upon dental insurance to be able to afford oral health care. Studies have shown that, without dental insurance, far fewer persons will choose to see a dentist. Understandably, in the present economy, each of us must make cutbacks to our expenses in order to survive. Public awareness and understanding of the impact of oral health on systemic health issues such as diabetes and cardiovascular afflictions is still at its fledgling stages. Therefore, out-of-pocket expenses for oral health are often among the first to be avoided by the public.

Concurrently, businesses including those of dental benefits carriers and employers are also seeking cutbacks. Carriers striving to maintain or increase their revenues and marketshare in this economy offer employers cheaper plans for their employees by covering fewer services and paying less than true market value even for those services they cover. However, by covering fewer services, carriers compel patients to pay for more services out-of-pocket, which they may be unable or unwilling to do. Second, by paying less for the services they do cover, carriers compel dentists to function at a net loss when providing these covered services.

Therefore, today's dentist must often rely upon billing at market rates for non-covered services to compensate for the loss he or she absorbs in accepting paltry fees from carriers for covered services. However, unlike the carriers' actions of limiting services they cover, the dentists' actions do not impose an undue burden upon patients. Here's why. In the absence of fee-caps for non-covered services, dentists work with each patient on a case-by-case basis to charge what each patient may be able to afford with an understanding that some patients may be able or willing to afford more than others.

Fee capping takes away this opportunity! If fees for non-covered services are capped across the board without regard to what each patient can afford, the practice of the participating dentist may become unsustainable. The result may be two-fold. He or she may no longer be able to offer that specific service to that carrier's patients, thus limiting the patients' treatment options. In some markets, providers may feel compelled to stop participating with certain carriers in order to survive. In either case, the patients would face decreased access care.

Oral Health 2000: Facts and Figures

- The oral health of children has improved significantly over the past few decades.
- Today most American children enjoy excellent oral health, **but a significant subset suffers a high level of oral disease. The most advanced disease is found primarily among children living in poverty, some racial/ethnic minority populations, disabled children, and children with HIV infection.**
- We know enough about health promotion and disease prevention measures to improve the oral health and well-being of all children.
- Tooth decay remains one of the most common diseases of childhood – 5 times as common as asthma and 7 times as common as hay fever.
- More than half of children aged 5-9 have had at least one cavity or filling; 78 percent of 17-year-olds have experienced tooth decay.
- By age 17, more than 7 percent of children have lost at least one permanent tooth to decay.
- Each year, 8,000 babies are born with cleft lip and/or cleft palate, making these among the most common birth defects. Cleft lip and cleft palate interfere with normal appearance, eating, and speech.
- Injuries to children, intentional and non-intentional, often involve trauma to the head, neck, and mouth. The leading causes of oral and head injuries are sports, violence, falls, and motor vehicle crashes.
- Tobacco-related oral lesions are common in teenagers who use spit (smokeless) tobacco. The lesions occur in 35 percent of snuff users and 20 percent of chewing tobacco users.
- One in four American children are born into poverty (annual income of \$17,000 or less for a family of four). Children and adolescents living in poverty suffer twice as much tooth decay as their more affluent peers, and their disease is more likely to go untreated.
- **Children from families without medical insurance are 2.5 times less likely than insured children to receive dental care. Children from families without dental insurance are 3 times more likely than insured children to have unmet dental needs.**
- **For every child without medical insurance, *there are 2.6 who lack dental insurance.***
- **Fewer than one in five Medicaid-covered children had a preventive dental visit during a recent year-long study.**
- The daily reality for children with untreated oral disease is often persistent pain, inability to eat comfortably or chew well, embarrassment at discolored and damaged teeth, and distraction from play and learning.

***Surgeon General fact sheet on oral health Children's Oral Health, National Center for Chronic Disease Prevention and Health**

- More than 51 million school hours are lost each year because of dental-related illness.
- Pregnant women should get prenatal care and eat a healthy diet that includes folic acid to prevent neural tube defects and possibly cleft lip/palate. During pregnancy avoid tobacco and alcohol, and check with a doctor before taking any medications.
- Put only water in your baby's bottle at bedtime or naptime. Milk, formula, juices, and other drinks contain sugar. Prolonged exposure to sugary drinks while baby sleeps – when saliva flow is reduced – increases the risk of tooth decay.
- **Take your child for an oral health assessment between ages 1-2, and every six months thereafter.**
- Protect your child's teeth with fluoride. Use a fluoridated toothpaste, putting only a pea-sized amount on your child's toothbrush. If your drinking water is not fluoridated, talk to a dentist or physician about the best way to protect your child's teeth.
- Encourage your children to eat regular nutritious meals and to avoid frequent between-meal snacking.
- Talk to your child's dentist about dental sealants, which protect teeth from decay.
- Make sure your child wears a helmet when bicycling and uses protective headgear and mouth guards in other sports activities.
- The nation's oral health is the best it has ever been, yet oral diseases remain common in the United States.
- The burden of oral diseases is spread unevenly throughout the population. Many more poor people and some racial/ethnic minority groups have untreated oral disease than does the population as a whole.
- Safe and effective measures for preventing oral disease are underused. These include water fluoridation, dental sealants, and regular professional care, as well as tobacco cessation.
- Tooth decay is one of the most common childhood diseases—5 times as common as asthma and 7 times as common as hay fever in 5-to-17-year-olds.
- **18 percent of 2-to-4-year-old children have experienced tooth decay, and 16 percent have untreated decay.**
- Only 23 percent of 8-year-old children have at least one dental sealant on their molar teeth.
- By age 17, 78 percent of young people have had a cavity, and 7 percent have lost at least one permanent tooth.
- Among adults aged 35 to 44 years, 69 percent have lost at least one permanent tooth.
- Among adults aged 65 to 74, 26 percent have lost all their natural teeth.

***Surgeon General fact sheet on oral health Children's Oral Health, National Center for Chronic Disease Prevention and Health**

- Untreated tooth decay remains a problem. About one-third of persons across all age groups have untreated decay.
- Among adults aged 35 to 44, 48 percent have gingivitis, and 22 percent have destructive gum disease. Tobacco use increases the risk of gum disease.
- In the U.S., 30,000 people are diagnosed with mouth and throat cancer each year, and 8,000 die of these cancers.
- Mouth and throat cancers are the sixth most common cancers in U.S. males and the fourth most common in African American men.
- Oral clefts are one of the most common birth defects in the United States. The prevalence of cleft lip/palate in the general population is about 1 per 1,000 births.
- Community water fluoridation reaches over 144 million people, or 62 percent of Americans on public water supplies. One hundred million Americans do not have fluoridated water.
- In 1998, a total of \$53.8 billion was spent on dental care—48 percent was paid by dental insurance, 4 percent by government programs, and 48 percent was paid out-of-pocket. Expenditures in the year 2000 are expected to exceed \$60 billion.
- More than 108 million Americans do not have dental insurance. For every child without medical insurance, there are 2.6 without dental insurance.

February 18, 2010

The Honorable Bob Herron and Wes Keller
Co-Chairs, House Health & Social Service Committee
The Alaska State Legislature
Capitol Building
Room 106
Juneau, Alaska 99801

Dear Chairmen Herron and Keller;

The National Association of Dental Plans (NADP) would like to comment on Alaska House Bill 309 regarding oral health, specifically Section 1 (a) (4) on dental non-covered services. The bill is on the agenda to be discussed by the House Health & Social Service Committee on February 11, 2010.

NADP is the largest non-profit trade association focused exclusively on the dental benefits industry, i.e. dental HMOs, dental PPOs, discount dental plans and dental indemnity products. NADP's members provide dental benefits to over 82% of the 176 million Americans with dental benefits, including 282,000 consumers with private policies in the state of Alaska. Our members include major commercial carriers, regional and single state companies, as well as companies organized as non-profit plans.

HB 309 prohibits a dental plan from requiring a dentist to accept a negotiated fee set by the dental plan unless the dental plan compensates the dentist for such services. This type of payment agreement is common in many dental carriers' provider contracts, a standard aspect of their contractual relationship that serves to defray the cost of dental care for plan enrollees when they need services that the purchaser or employer may have chosen not to cover in the interest of keeping their group dental premium affordable. Dentists knowingly enter into contracts with these provisions in return for the increased patient volume that comes with joining a dental plan network.

NADP respectfully opposes the HB 309, and encourages the Health & Social Service Committee to fully investigate the ramifications this bill may have on their constituents and employers in the state.

- Consumers' out-of-pockets expenses may increase due to the loss of the discounts on certain dental procedures.
- Employers may experience complaints due to employee dissatisfaction at increased costs for non-covered services.

[The text in this section is extremely faint and illegible, appearing to be a list of names or entries.]

Background:

- Dentists choose to join a dental network and accept the contracted fees in return for increased access to patients who are customers of the dental carrier.
- While most policies cover the majority of frequently utilized procedures, a range of dental benefit plans, with appropriately varied premium ranges, is available in the marketplace to meet employer and employee budgets.
- Employers' demand for flexibility and affordability means not every dental plan design covers every single procedure on a dentist's contracted fee schedule. Often, the insurer pays 80% and the insured pays 20% of the contracted fee for a category of procedures that is selected and specified by the purchaser, in consultation with a benefits broker, consultant or the dental carrier. For other categories of specified services, the insurer pays 100% and the insured pays 0% of the contracted fee. Non-covered services are those for which the insurer pays 0% and the insured pays 100%. The value of having dental coverage when choosing these services lies in the lower rate the dentist has agreed to when collecting 100% of the contracted fee.

In short, prohibiting contracted discounts for non-covered services is financially harmful to the consumer, leads to higher costs and ultimately is confusing for individuals and families.

Attached is a detailed overview of non-covered services which was developed for the National Conference of Insurance Legislators as they deliberated a non-covered services draft model last November. The draft model was tabled until this March due to voiced concern from several legislators on the interference of business contracts by the draft model. This legislation is a stated priority of organized dentistry at state and national levels, with the primary purpose to increase dentist income which ultimately raises out of pocket costs directly from consumers. In Virginia, opposition has been heard from state groups such as the local chamber of commerce, AFL-CIO, the state employees, and more.

NADP greatly appreciates the opportunity to share our views, and we are available to answer any of the Committee's questions. In addition to the NCS summary, we have also attached our Alaska State Fact Sheet for your review. Please feel free to contact me directly at 972.458.6998x111 or khathaway@nadp.org.

Sincerely,

Kris Hathaway
Director of Government Relations

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The document outlines the various types of records that should be maintained, including receipts, invoices, and bank statements. It also discusses the importance of regular audits and the role of internal controls in ensuring the accuracy of the records.

The second part of the document focuses on the role of the auditor in the financial reporting process. It describes the various types of audits that can be performed, including internal audits, external audits, and forensic audits. It also discusses the importance of the auditor's independence and the need for a strong audit culture. The document outlines the various steps involved in the audit process, from planning to reporting, and discusses the various challenges that auditors may face.

The third part of the document discusses the importance of transparency and accountability in the financial reporting process. It emphasizes that transparency is essential for the confidence of investors and other stakeholders in the financial system. The document outlines the various ways in which transparency can be achieved, including the use of clear and concise financial statements, the disclosure of all relevant information, and the establishment of strong internal controls. It also discusses the importance of accountability and the need for individuals and organizations to take responsibility for their actions.

An Overview of Dental Non-Covered Services

NCOIL is considering an Act that would prohibit a dental insurance plan from requiring a contracted dentist to accept a payment fee set by the dental plan unless the dental plan compensates the dentist for such services. While prohibiting discounts on non-covered services does not impact the plan's revenue, it will have a direct and lasting negative impact on a consumer's out-of-pocket costs.

Dental plans cover a wide array of dental services; however, most have an annual maximum benefit per plan year. After the annual maximum amount is met, consumers can continue to benefit from insurance coverage when discounts are afforded to them through contracted fees between their dental plan, and that plan's contracted dentists.

- **Prohibiting contracted discounts for non-covered services is financially harmful to the consumer and leads to higher costs and confusion for individuals and families.**

Minimizing American's out-of-pocket health costs is one of the primary goals for federal health care reform. Dental consumers, dental plans and dentists have a responsibility to work together to offer competitive costs for dental services. Dentists who contract with a dental plan may agree to accept the fees for dental services specified in the contract, regardless of the payment source. The dental plan pays for covered services in part or in whole, and the consumer pays for non-covered services. Regardless of the payment source, the total the dentist receives is the agreed upon contracted fee, thus providing benefits to the consumer and the employer as described below:

- **Contracted Fees - Benefits to the Consumer:**
 - Consumers receive the contracted fee even if the service is not covered by their insurance plan. Without the contracted fees, consumer costs for non-covered services are generally higher.
 - Cost of dental care is predictable for the consumer when the same contracted fees are applied to needed services even after the annual maximum is met. Dental plans and consumers can better calculate expected costs up front when a single fee schedule is adopted for all services, covered or not, and this helps avoid surprised "sticker-shock" that might otherwise result from non-contracted fees for dental services.
 - Cost savings realized when consumers receive non-covered services at a contracted fee encourages them to seek treatment in a timely manner and not delay care due to cost restraints. Paying a higher, non-contracted fee can put significant financial strain on individuals and families.
- **Contracted Fees - Benefits to the Employer:**
 - Due to rising medical premiums, employers are facing hard choices with their health care benefit options. A dental plan's ability to offer a single contracted fee schedule for all services under a group employer dental plan increases the scope of benefits without increasing premiums, thereby increasing the overall value of the program for employees.
 - Employers review their employees' utilization and customize their dental plan selection accordingly. The design of the dental policy selected by the employer dictates what services are covered under a plan. This allows the employer to offer a plan at an affordable cost to both the employer and the consumer. Dental plans contract fees with dentists, and offer multiple policies based on the contracted fee. The Act being considered by NCOIL would limit employer flexibility, and reduce their product choices.
- **Contracted Fees - Dentist Topics:**
 - Dentists may be initially in favor of prohibiting discounts on non-covered services; however, there is little evidence to support increased revenue by supporting this measure. A recent study by Delta Dental Plans Association of all Delta plans showed only a .44 percent difference in total approved claims costs are even affected. Dentists can do their part in health care reform by holding their costs to the contracted fees already agreed to for patients covered by dental insurance.
 - Dentists have the choice to join a dental plan's network and accept the contracted fees for both covered and

National
Association

Alaska 2008 Dental Benefits Fact Sheet

NATIONAL

In 2007, at least 57% of all Americans had some form of dental benefits.

Nearly all enrollment in dental benefit plans is through group-sponsored plans while Discount Dental plans are offered more often directly to individuals.

ABOUT NADP

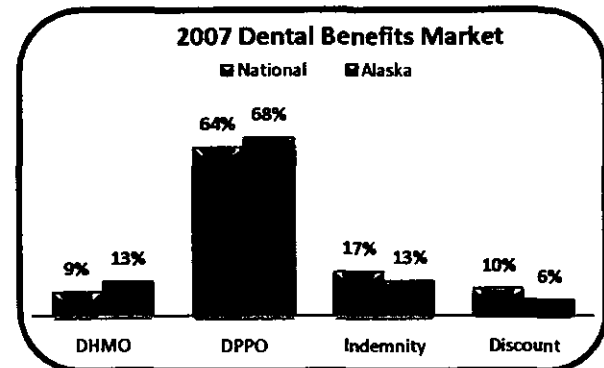

The National Association of Dental Plans (NADP), a nonprofit corporation with headquarters in Dallas, Texas, is the "representative and recognized resource of the dental benefits industry." NADP is the only national trade organization that includes the full spectrum of dental benefits companies operating in the United States.

STATE

In 2007, the estimated population of Alaska was 683,478.¹ NADP represents 35 plans operating both directly and indirectly in Alaska.

The chart below compares the prevalence of dental plan types based on total enrollment nationally and in Alaska.

Alaska Dental Benefit Fact Sheet

PROVIDERS & NETWORKS

To be adequately served there should be 3.33 practicing dentists per 10,000 population.¹ There are 490 dentists actively practicing in Alaska or 7.17 per 10,000 population.²

In total, Alaska consumers have access to an estimated 3 dental HMO providers, 163 dental PPO providers and 24 discount dental providers.

- 0.04 Alaska dentists provide services through a Dental HMO per 10,000 population statewide compared to 1.03 per 10,000 population nationally
- 2.39 Alaska dentists provide services through a Dental PPO per 10,000 population statewide compared to 3.42 per 10,000 population nationally
- 0.35 Alaska dentists provide services through a Discount Dental Plan per 10,000 population statewide compared to 2.34 per 10,000 population nationally

The ratio of dentists to population may vary by community.

MEMORANDUM

February 24, 2010

SUBJECT: Limiting dental insurer policy (HB 309)
(Work Order No 26-LS1315\R)

TO: Representative Bill Thomas
Attn: Cecile Elliott

FROM: Dennis C. Bailey *DCB*
Legislative Counsel

You have asked whether the provision in HB 309 that prohibits an insurer who provides coverage for medical care from setting a fee for a service that is not covered under the insurer's policy violates art. I, sec. 15 of the Alaska Constitution.

Article I, sec. 15, provides:

SECTION 15. Prohibited State Action. No bill of attainder or ex post facto law shall be passed. No law impairing the obligation of contracts, and no law making any irrevocable grant of special privileges or immunities shall be passed. No conviction shall work corruption of blood or forfeiture of estate.

I assume that you are concerned with the "contracts clause," which states that "no law impairing the obligation of contract . . . shall be passed."

The contracts clause prohibits the passing of a law that changes an existing contract. The rule is based on preventing retroactive changes to contracts already in place. *See, Hageland Aviation Servs. v. Harms*, 210 P.3d 444 (Alaska 2009) (retroactive removal of existing contract rights . . . violated the contracts clause). Several Alaska cases have interpreted the contracts clause.¹

¹ *See Stepanov v. Homer Elec. Ass'n, Inc.*, 814 P.2d 731, 736 (Alaska 1991) (rejecting the claim that a state commission's effective revision of the claimants' contracts violated the Alaska and federal contract clauses); *Wien Air Alaska v. Arant*, 592 P.2d 352, 363 (Alaska 1979) (dismissing the argument that the maximum rate table of a workers' compensation law impairs obligations under the claimant's insurance contract in violation of the Alaska and federal contract clauses), overruled on other grounds by

Representative Bill Thomas
February 24, 2010
Page 2

The state commonly regulates the contents of insurance policies in AS 21. The effect of changes to the law are usually prospective not retrospective in order to avoid impairment of existing policies. A statute is prospective unless it is expressly made retrospective. AS 01.10.090.

In my opinion, the change in AS 21.42.392(a) that prohibits an insurer that provides dental insurance from limiting a fee set by a dentist for a service unless the service is covered by the policy would not violate art. I, sec. 15 of the Alaska Constitution. The provision has a prospective effect and does not impair or affect an existing contract.

Although not required, in order to emphasize the prospective effect of the change, you could add an applicability clause similar to the following:

*Sec. **. The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. The amendments to AS 21.42.392 enacted in secs. 1 and 2 of this Act apply to an insurance plan, contract, or policy that is offered, issued for delivery, delivered, or renewed on or after the effective date of this Act.

If I may be of further assistance, please advise.

REPRESENTATIVE CRAIG JOHNSON
HOUSE DISTRICT 28

Sponsor Statement for HB 328

House Bill 328 establishes a traumatic or acquired brain injury program and registry in the Department of Health and Social Services. Alaska has no program specifically to deal with brain injury and yet Alaska has one of the highest rates in the nation. Annually, there are 800 Alaskans hospitalized with a traumatic brain injury each year resulting from falls, car crashes, domestic violence, All Terrain Vehicle crashes, and snowmachine crashes, among others. There are an approximately equal number of Alaskans suffering from acquired brain injuries resulting from stroke, aneurism, or tumors.

Alaska urban and rural residents, including military are being discharged to their homes with little understanding of brain injury or access to in-state rehabilitation, severely impacting their families. Limited education about the injury, learning to cope with a person who has changed, overwhelming stress from insurance, bureaucracy, and financial burdens and change in family roles may render families dysfunctional.

With appropriate and available care, rehabilitation, community and family support, even the individual who is most severely injured can live at home, return to school or work, or engage in meaningful and productive lives.

Funding a Traumatic or Acquired Brain Injury (T/ABI) Program gives authority to the department to collect data on the injured, positioning the state to access Medicaid funds for T/ABI. Medicaid services for T/ABI will be matched 50% by federal funds. The bill allows for streamlining department services and activities that are unique to T/ABI. This would better assist families and individuals with T/ABI in knowing how to access services and supports.

Early treatment may reduce future medical and social costs. Without appropriate services, some individuals with T/ABI may pose a threat to themselves or others. Without assistance, individuals with TBI often end up homeless, in jail or in nursing homes. Service coordination, rehabilitation, and appropriate supports can help to minimize these risks.

MEMORANDUM

February 9, 2010

SUBJECT: Sectional Summary (HB 328 (Work Order No. 26-LS1355\E))

TO: Representative Craig Johnson
Attn: Jeanné Ostnes

FROM: Jean M. Mischel
Legislative Counsel 

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds longitudinal data on traumatic or acquired brain injury from the registry established under sec. 5 of the bill to the list of databases that the Department of Health and Social Services is authorized to collect, analyze, and maintain.

Section 2. Adds case management services for traumatic or acquired brain injury to the optional services provided to recipients of state medical assistance (Medicaid).

Section 3. Defines "case management services for traumatic or acquired brain injury" and "traumatic or acquired brain injury" for purposes of the optional services added by sec. 2 of the bill.

Section 4. Requires the Department of Health and Social Services to provide medical assistance services under a waiver if approved by the federal government and if the legislature appropriates necessary funding for the services.

Section 5. Establishes a statewide traumatic or acquired brain injury program in the Department of Health and Social Services to evaluate the effectiveness and availability of information and services for the prevention and treatment of traumatic or acquired brain injury in the state. Requires consultation and collaboration with public and private entities to fulfill a list of programmatic requirements including development of a statewide service delivery plan and registry of information and evaluation of current laws and standards pertaining to traumatic or acquired brain injury.

COOK INLET
T R I B A L
COUNCIL, INC.

March 5, 2010

The Honorable Craig Johnson
Alaska State House of Representatives
State Capitol
Juneau, AK 99801-1182

Dear Representative Johnson:

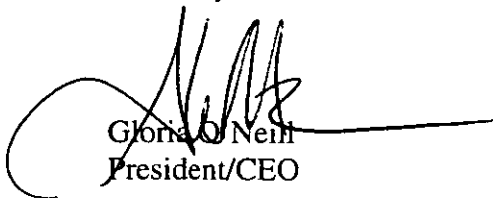

Thank you for your sponsorship of House Bill 328, which would establish a registry and program for Traumatic or Acquired Brain Injury (TABI) and provides for the inclusion of case management services to the Alaska list of optional Medicaid services. The reporting and data collection of Alaskans with these injuries is long overdue and would be of great benefit.

Cook Inlet Tribal Council (CITC) is about People, Partnership, and Potential. We serve 13,000 participants annually, administering 85 grants and contracts funded by federal, state, and private agencies. Our programs address many of the social, economic, and educational challenges faced by Native people in Anchorage and in the Cook Inlet Region. One of our main departments is Recovery Services. CITC provides outpatient services and also operates the Ernie Turner Center for residential care pertaining to alcohol and drug treatment.

CITC can attest to the high level of TABI cases in Alaska. Statistics from 2009 indicate that about 37% of our participants seeking intervention services (including brief treatment and outpatient recovery) report head trauma or have a history of TABI. From a sampling of 552 individuals seeking admission last year to the Ernie Turner Center (for detox or residential treatment), 46% of them had experienced some type of brain injury in their past.

If I can provide any further assistance with passage of this measure through the legislative process, please let me know. I would be willing to testify on the impact of TABI and the need for this bill to be enacted. On behalf of Cook Inlet Tribal Council and the many participants we serve, you have our full support for HB 328.

Sincerely,

Gloria O'Neill
President/CEO

www.alaskabraininjury.net

The Honorable Craig Johnson
House of Representatives
Alaska State Capitol, Rm 126
Juneau, Alaska 99801

Dear Representative Johnson,

Thank you for introducing HB 328, the act which relates to medical assistance coverage for traumatic or acquired brain injury services and which will establish a traumatic or acquired brain injury program and registry within the Department of Health and Social Services.

The Alaska Brain Injury Network, Inc (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury. ABIN's eighteen member board represents all regions of Alaska and at least 50 percent are TBI survivors or family members.

The primary ABIN mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for the survivors of traumatic brain injury and their families. ABIN also serves as a statewide resource navigation agency specializing in information and referral for brain injury services and supports available in Alaska. ABIN has heard from 600 Alaskans requesting brain injury services since 2007. In addition, ABIN has heard public testimony from hundreds of Alaskans from Anchorage, Juneau, Fairbanks, Kenai, Barrow, Nome, Kodiak, Dillingham, Bethel, Copper River Basin, Tok, Ketchikan, Sitka, and more.

In the past several years, ABIN has worked collaboratively with the State of Alaska, Alaska Mental Health Trust Authority, the Alaska Native Tribal Health Consortium, Alaska Federal Health Care Partnership, major hospital providers, community providers, and many more agencies to coordinate the development of brain injury services in Alaska. We have coordinated meetings with these agencies to identify:

1. the services we have available in the State,
2. the services we do not have available,
3. which providers have the capacity to develop different segments in the continuum of care,
4. barriers; and
5. solutions for the development of this care.

The agencies participating and the findings are depicted in a document titled "Demonstrating the Need for Community-Based Rehabilitation."

Barriers to treating brain injury include:

- Brain injury as a medical condition versus a long-term condition: Patient often enters an injury-based medical model to treat what may become a manageable, chronic condition.
- Post-acute/Treatment/Rehabilitation funding for those who are Medicaid eligible: Currently, Medicaid funding is available for acute care, but does not cover brain injury specialty residential and day programs, often resulting in a higher level of care (more expensive) than what is needed.
- Workforce capacity- Alaska is too small of a state, with a strong yet limited workforce, to support separate brain injury systems of care in each service sector: military, tribal, and civilian.

- Screening/assessment in all state programs and primary care clinics- appropriate identification begins with screening and then assessment. Behavioral Health is the only state program that includes brain injury screening questions.

HB328 provides many direct and indirect opportunities to resolve these barriers:

- Creates longitudinal data on persons with brain injury to identify demographics, cause of injury, severity, diagnosis, treatments, medical and social costs which will help determine future policy and budget recommendations.
- Increases access to case management for those who are Medicaid eligible.
- Evaluates the need for and scope of acute, post-acute, long-term, and community treatment, care, and supports.
- Positions the state to identify the best 'menu' of brain injury services to include under a Medicaid Waiver.
- Positions the state to access federal funding for TBI services and for targeted case management.
- Encourages a seamless transition from acute settings to transitional and community settings.
- Establishes standards and recommendations for improvement of prevention, assessment, treatment, and care.

Indirect Opportunities

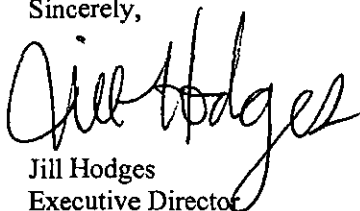

- Many Alaskans with undiagnosed or unrecognized brain injury currently access State of Alaska services and supports. The T/ABI program encourages screening and identification, as well as development of and access to appropriate treatment.
- A T/ABI program may create cost savings in acute care costs and existing state programs budgets, including behavioral health, juvenile justice, corrections, homeless initiatives, and long-term care in institutional facilities.
- Research shows, Medicaid funding specifically for brain injury services supports the growth of community-based rehabilitation programs (residential and day programs).
- Provides framework for the Department of Defense (DoD), Alaska Veterans Affairs Health System, Alaska Tribal Health System, State of Alaska, and private/non-profit entities to coordinate planning and implementation of rehabilitation and community re-entry programs.
- Development of these programs increases access for all Alaskans with a variety of pay sources, including insurance, private pay, and federal health care.
- Research shows early treatment and access to appropriate brain injury services may reduce future medical and social costs.

The Alaska Brain Injury Network has worked diligently to create a 'framework' for successful development of a seamless system of care for Alaskans with brain injury, including the development of a comprehensive plan and the coordination of the many key providers that will build the system. The State of Alaska T/ABI program will be the 'foundation' that will allow the 'entire state system' to develop and grow. The State T/ABI Program, the 'foundation', is the first step to resolving the barriers, so providers can act, and Alaskans will have an opportunity for a more successful and positive life.

The Alaska Brain Injury Network appreciates your ongoing support of this important legislation.

Our organization is made up of many professionals, providers, and specialists. If you have any questions I would be happy to answer them or connect you to someone with that knowledge.

Sincerely,

Jill Hodges
Executive Director

Attachment: ABIN Letter of Support for SB 219/HB 328

Why brain injury begins as an emergency medical condition and often becomes a social catastrophe?

Several decades ago brain injury was viewed solely as a medical condition, more specifically a life or death injury. Because of the advances in emergency medical services and intensive/acute care, more people are surviving very severe brain injuries. These advances have created an entire new system of care, a brain injury continuum of care. This system of care is essential because of the long-term cognitive effects caused by the injury. After 30 years of state and federal government recognition, research, and longitudinal studies, it is now understood that 'brain injury begins as an emergency medical condition, and often becomes a social catastrophe.' Because of the potential for many different social challenges, it is essential that those who survive brain injuries receive timely, appropriate services and ongoing supports.

How did other states develop brain injury programs?

In addition to the local networking, ABIN is well connected to many state brain injury programs (public and private) outside of Alaska. Through conferences and ongoing dialogue, ABIN has learned the role legislation (in other states) has played in developing a seamless, comprehensive service system for after hospital care for brain injury. In 1980 the first appropriation for brain injury funding for case management was accomplished in Missouri. Legislation for a T/ABI program soon followed. 2005 data shows at least 44 states had a formal T/ABI program in their state government or funded brain injury specific programs.

The following is an example of the order in which legislation and funding has progressed in other states.

Step 1: Establish a T/ABI program in statute

Step 2: Approve general funds for case management, position state to access federal funds to expand this service to more people (targeted case management).

Step 3: Approve a Medicaid brain injury waiver (50% Federal match)

Step 4: Prevention and concussion management legislation.

Step 5: Screening and case management for military

HB 328/SB 219 gives Alaska the opportunity to not only 'catch up' developmentally with other States, but it also positions Alaska to become a national leader in providing brain injury case management and treatment to rural and remote citizens across service sectors (military, tribal, civilian).

How do other states fund and sustain a T/ABI Program?

States use a variety and combination of funding streams for planning, policy, prevention and research activities, and to serve individuals with brain injuries and their families who have no other access to needed care or supports. Medicaid, Home and Community-Based Services and Medicaid Waivers, and Federal Block Grant programs are used to serve individuals with disabilities and special health care needs including people with brain injury. At the State level, common non-Federal funding sources for TBI service delivery include trust funds, general

revenue and special revenue. Often when two or more sources exist, funds from one are used to leverage funds from the other.

There are 24 States that have a Brain Injury Medicaid Waiver (2006). There are 20 states that have General Revenue or Special Revenue specific to brain injury (NASHIA 2005).

Medicaid waivers targeted to individuals with brain injuries operate in half of the states and are small when compared to waivers targeting other groups. These waivers provide significant cost savings, on average \$30,000 annually per person, when compared to institutional facility-based services (Rutgers 2008).

These waivers have been successful both programmatically and financially. In addition to cost savings, these waivers have provided other significant benefits. The existence of these waivers supports the growth of community non-profit brain injury agencies. There is clear evidence of the desirability of home and community-based services among those directly affected by brain injury: there has been growth of these waivers that has resulted in a doubling of the number of persons served over five years; in addition, there is a visible role played by advocates in encouraging states to develop these waivers. These waivers, over time, have contributed to states' efforts to create and grow an in-state service capacity to provide services to individuals with brain injuries.¹

Mat-Su Health Services, Inc.

February 25, 2010

The Honorable Craig Johnson
120 4th St, State Capitol, Room 126
Juneau, AK 99801

Dear Representative Johnson:

I am writing in support of House Bill 328, an act concerning traumatic or acquired brain injuries. As a health care professional who administers an agency that provides both primary health care and behavioral health care I and my Agency are well acquainted with the devastating consequences of even a mild brain injury can have on individuals and their families. The bill you have sponsored, if passed, will enable the State to take important, concrete steps that are necessary in creating evidence based, coordinated and effective services to this group of citizens in need. The creation of an operational definition, the development and tracking of important incident data, the promotion of waiver services and the building of case management capacity are all important first steps.

Sincerely,

Kevin Munson
CEO

The TRUST

The Alaska Mental Health Trust Authority

February 10, 2010

The Honorable Craig Johnson
Alaska State Representative
Alaska State Capitol, Room 126
Juneau, Alaska 99801

Re: **Letter of Support for HB 328**

Dear Representative Johnson,

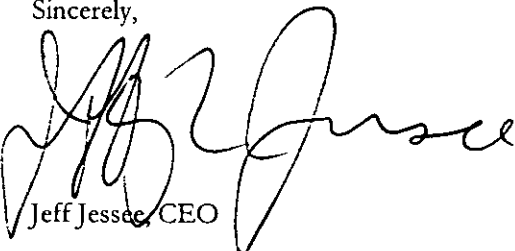

The Alaska Mental Health Trust Authority (The Trust) is pleased to support HB 328, an act establishing a traumatic or acquired brain injury program and registry within the Department of Health and Social Services (DHSS); and relating to medical assistance coverage for traumatic or acquired brain injury services. This bill is a significant step forward and will bolster the existing statewide efforts of a diverse and active committee which has been focused on brain injury services for several years.

The Trust is a state corporation that administers the Alaska Mental Health Trust, a perpetual trust managed on behalf of Trust beneficiaries who include individuals with mental illness, developmental disabilities, chronic alcoholism and those with dementia or other related disorders; many also have a co-occurring traumatic brain injury. Our goal is to partner with the Department of Health and Social Services as well as other state departments and branches of government, as a catalyst for change towards the improvement in Alaska's mental health continuum of care. The Trust has and will continue to partner with DHSS and the aforementioned statewide committee to ensure a system of care for Alaskans with brain injuries is developed.

It is an unfortunate reality that Alaska has one of the highest rates of TBI in the country. Upwards of 800 Alaskans are seriously injured or die from a TBI annually. It is estimated that at least 10,000 Alaskans are currently living with TBI in our communities, some with support services, most undoubtedly without. This bill will assure the development and implementation of services for Alaskans with brain injuries; specifically, it provides direction to the Department of Health and Social Services to assess prevalence, service gaps, and the development services in a targeted, effective, and fiscally responsible manner. Thereby, increasing and improving access to much needed services and supports for these Alaskans. Furthermore, this bill places the State of Alaska in position to access federal dollars for payment of these services through grants and Medicaid.

The Trust appreciates your leadership on this very important issue. Please let us know if there is anything we can do to further support your efforts and the successful passage of this bill.

Sincerely,

Jeff Jessée, CEO

February 11, 2010

To Whom It May Concern:

I worked for years as a Care Coordinator for people experiencing Alzheimer's and/or mental illness. As a professional in this field I helped many people find services and information. I didn't realize I'd be the one needing assistance so soon. For an unknown reason, I've lost my eyesight over the last couple of years. I'm in my 30's. While struggling to learn to live with a visual impairment, I lost my job. One of the dangers of living with a visual impairment that I had not anticipated was the numerous concussions I have experienced. The most serious of these was when my weed-whacker fell on my head causing a mild brain injury. It took me at least five to six months to feel "normal" again after that. I believe many people experiencing visual impairments are suffering brain injuries at a rather high rate.

Just as it is important for those with Alzheimer's to have access to services and information through a Care Coordinator, it is also important for those experiencing brain injury to have assistance. Accessing services is very difficult when your brain isn't functioning at its' best. Each person who has experienced a brain injury should be linked to a care coordinator so that they have help accessing services. It's hard enough for me to find the help with a visual impairment, it is even harder when I've suffered yet another concussion and can't remember who to call or don't know what services will help.

It's imperative that people with brain injuries have a good advocate. It can be very hard to access services even when they are available. Often times a person with a brain injury has difficulty remembering things, making phone calls, knowing how to ask the right questions to get an appointment, etc. Having strong advocates such as Alaska Brain Injury Network and a Care Coordinator is necessary for a good recovery.

I encourage you to please support Senate Bill 219 presented by Senator McGuire and House Bill 328 presented by Representative Johnson. Having a brain injury program as they describe would benefit many Alaskans currently struggling on their own. There is also \$350,000 currently in the budget for brain injury. Please support the bill and leave the funding that is in the budget there. Thank you for your support. This is something that mattered to me as a provider and now it matters to me on a personal level.

Sincerely,

Fay Nakamura

2746 W 42nd Place Apt #1

Anchorage, AK 99517

Note: I had assistance writing this letter.

Dave Eubank
9527 Victor Rd.
Anchorage, AK 99515

Good afternoon:

My name is Dave Eubank and I approve this message. A few long years ago I sustained an acquired brain injury, not to be confused with traumatic; it was pretty traumatic to me but acquired? I didn't ask for any of this but it seems as though it was required because I see life through a different set of eyes and have been blessed with a different set of values. I, as well as a host of many others, have had to work twice as hard to get back half of what I lost but I appreciate life more than twice as much so in a sense, ... doesn't that make me twice the person I once was?

Just for starters I have an awful lot of admiration for the people who are in the health care industry for the support, care, and understanding they provide to others who are less fortunate than you. The T.B.I. Resource Navigator allows access to monitor a wealth of information for this silent minority. The DHSS provides additional funding for thankful services to a thankful people. I am not thankless; I am thankful, I am thankful I do not require such needful things but I know. I know exactly what it's like to be on the inside looking out and I know exactly what it's like to have the ability to absorb the incoming information but not having the capability to process it and I know exactly how frustrating that can be and for some people there is no way out and I know that too.

You see, once upon a time, in a land far, far, away, I collapsed as the result of a life threatening, death defying, brain aneurysm; grade 5. You name it and I did not have it but in comparison to what I had lost, I have gained a whole lot more and what it was that I really lost, really was not even worth having and I am thankful for the things I have gained rather than being resentful over the things I have lost but it literally turned my life upside down yet here I am ... 10 years post, standing right side up and sitting right side down, still there are an awful lot of questions and *not* many answers; however:

Would a T.B.I. Care Coordinator have been helpful in my own recovery? Absolutely! We all have to crawl before we can walk and we seem to forget all about that but not me because in the bitter end of this past century I tried to walk before I could crawl and I fell flat on my face. But when I went down, I got up and when I got up, I woke up, and when I woke up, I got a grip and I can see much more clear this second time around but instead of taking my life, it gave me a life *however*; I may have gotten it a whole lot quicker with a T.B.I. Care Coordinator.

Would the funding for T.B.I. Care Coordination and Case Management have been helpful in my situation? Absolutely! I as well as a host of many others often felt like beating my head up against a brick wall but soon discovered that there was nobody home but suddenly on one bright, sunny, and cheerful summer day, a light bulb went off, BING!!! And as I wondered my way through this maze of uncertainty, I realized that I could not change people. I could not change anything about them. The only thing I could change was *myself* and when I changed myself? Poof!!! It was magic because I would change the perception of how others perceived me. A T.B.I. survivor is scarred for life and even though it may not be the kiss of death, there is a distinction and it is *not* a real good one but, ... *By choosing the path of least resistance and combining the elements of good with that of the bad, you rise above the distinguished height of an unjust society and you still embrace it* (Martin Luther King).....and yet it works.

Do I have any regrets on how I've approached and sidestepped the obstacles that have obstructed my most difficult challenges? Absolutely not! Very few of us get out of here alive without being rudely slammed down by some sort of adversity but there's an old saying that adversity has a peculiar way of introducing you to yourself. Welcome to my world; we all make choices in life but I really don't know anyone who chose to walk a path which has no end and for some people there is no end but for others who wish to boldly go where many have gone before, with careful consideration of care coordination and case management there is. You probably think it's pretty easy for me to discuss this stuff; it's not easy, ... it's not easy at all. That's it, my work is done here.

Thank you

To Whom It May Concern:

With my son - before the brain injury

After my brain injury

Apx 3years ago I was a Flight Attendant with Alaska Airlines. Now I dont swim, drive or do ANYTHING because overnight my life was CHANGED. Basically I had an ARYCHNOID CYCST which the Doctors watched, at Providence Hospital, since I was a teenager (although I was born with it) and suffered horrendous headaches. Noone ever told me that it could change my life so. In any case, I have two kids with Autism, 11 and 12 and a 15yr old with ADD so my life has been in shambles for quite sometime in any case. As for Providence, the commercials they put on TV are GREAT however noone ever tells you the BAD SIDE of things. I underwent surgery to no avail. There was NO PROBLEM until I came down with STAFF INFECTIONS that the doctors couldnt stop it. Needless to say, There was NOTHING in Alaska for me then and I was medivacked to Seattle after suffering Staff Infections but where the doctors only do ONE TYPE of surgery , basically up here it is OK if you have a broken arm or something but Brain Injury is nothing you want to MESS WITH. Needless to say I was put in OT, PT and SPEECH services and the only thing to come out of it all was that I had BRAIN INJURY! I couldnt, or still cannot, walk a straight line, I lost my job, what good is a F/A who cannot walk a straight line, I wear Prisms in my glasses now as well as DARK GLASSES, the sun hurts my eyes, I am in a Wheelchair and I was destined to live a life of NO DRIVING! Not even to the Grocery Store. Because I was married it was ASSUMED that my husband could work all day, do all the housework and watch the kids. I had three kids and he had Three kids and the BRADY BUNCH IT WASNT! In any case, my marriage has ended in divorce because of many different reasons however Brain Injury was NOT the least of the worries I had come to deal with! Only recently there is a hospital up here that deals with Brain Injury, at the Bases. It is HARD to find a doctor who knows ANYTHING about Brain Injury, much less a PCA (Personal Care Attendant) who knows anything about Brain Injury. I have had two PCA's quit on me and

am on my third, mainly because they are UNTRAINED in the needs of TBI. They were good as PCA's however NOT at Brain Injury and finding a doctor is a FIASCO because no doctors know about Brain Injury either. In any case, I was set to retire and "lost" my job and cannot get another one without alot of work and someone who knows about TBI. Brain Injury is EXPENSIVE to say the least and I am on Medicaid and Medicare due to all the tests I have to have done and all the medication I am on. For years I advocated for my kids with Autism however that was NOTHING COMPARED to what I go through now. I have managed to get around my house and take my own showers. Needless to say, even as a CONSUMER now there are certain things I will NOT, I am too proud, to let people do for me. Help me go to the bathroom is one of them but it is HARD and I rely on my BARS in the bathroom plus a toilet that is up a little higher. I am destined to be in a Wheelchair and flying, I am the Chair of the Governors Council now and need someone to go with me WHEREVER I GO! My life has CHANGED to say the least and I dont have the ability to be SELF SUFFICIENT in any case, I used to go to Prince William Sound Halibut fishing and owned a TimeShare in Puerto Vallarta where I caught a WORLD RENOWNED SailFish. THANK GOD FOR THOSE DAYS AND THOSE MEMORIES of which I have to look at pictures or have to be TOLD to remember, remember I have TBI so those dont come NATURALLY to me! Those times are all but over for me and even though I still love Fishing, I HATE THE WATER so fishing and I dont go together so well. In any case, I used to advocate for my kids and AUTISM, which I still do, but now I am a CONSUMER FOR BRAIN INJURY which has opened my eyes big time. I still go to Key Campaign and am on the BOD (Board of Directors) of the Key Coalition which deals with Legislatures on an ongoing basis and am a founding mother for LINKS in the Mat-Su. We are a Community PTI and work very closely with MATSU SCHOOL DISTRICT, and am past Chair of the EIC (Early Intervention Committee) of the Gov. Council, however that will not take away my problems and makes being involved very difficult for me. THANK GOD also for the Flight Attendants of Alaska Airlines because without them my kids wouldnt have had a Christmas! I can only say my life has taken a TURN and Brain Injury only takes a SECOND but can ruin your ENTIRE LIFE! This is something I will live with EVERY DAY and not something that will ever GO AWAY! In closing. I can say that life DOESNT END HERE! I have taken the "bull by the horns" so to speak and have become quite the advocate of Brain Injury on top of it all. I joke about Disabilities and it was my own mother who said she thinks I AM GETTING BETTER! When I asked WHY she said BECAUSE I CAN JOKE ABOUT IT NOW where before I could NOT.

Please oh please take this to heart. It can happen in an instant and take your entire life away from you. PLEASE CONSIDER what you can do to help not only people with BRAIN INJURY but to also get the word out that this EFFECTS THE REST OF YOUR LIFE! It is EXPENSIVE MONETARILY and HARD ON FAMILIES and ON THE CONSUMER AS WELL. Thank you for your time.

The Honorable Craig Johnson
Alaska State Capitol, Room 126
Juneau, Alaska 99801

Dear Representative Johnson:

First, thank you for your interest in traumatic or acquired brain injury. Second, thank you for supporting the development of specific services addressing traumatic or acquired brain injury.

Anchorage Community Mental Health Services serves a number of clients impacted by brain injury. Some have been impacted by stroke while others have injuries resulting from accidents. The long lasting impact of brain injury results in some of our clients having great difficulty in adapting to normal life. Issues include things like being able to maintain housing, being able to work and self care. Additional focus on developing community based brain injury rehabilitative services will be invaluable to this population and their families.

So, thank you for introducing House Bill 328. Let us know if we can be assistance in promoting passage.

Sincerely,

John Fugett, MA, LPC

February 15, 2010

The Honorable Lesil McGuire
Alaska State Capitol, Rm 125
Juneau, Alaska 99801

Dear Senator Lesil McGuire:

I am writing to request your support of Senate Bill 219: An Act establishing a traumatic or acquired brain injury program and registry within the Department of Health and Social Services; and relating to medical assistance coverage for traumatic or acquired brain injury services. I wish to speak from two views:

- 1) I have worked in the healthcare field ever since I graduated from university
- 2) I have suffered two Traumatic Brain Injuries (TBI) and major surgery for a brain tumor in the last five years

I have worked in healthcare for many years, including ten years at the Bristol Bay Area Health Corporation in Dillingham and the past seven years at the Alaska Native Tribal Health Consortium. As such, I strongly believe that not only are there many people living in remote communities who have suffered a brain injury with no treatment available, I also believe that there are many people who have physical, mental and emotional problems as a result of an undiagnosed brain injury. The Trauma Registry only counts those that are hospitalized. It is critical that the people of Alaska have better access to brain injury prevention, treatment and rehabilitation services.

I suffered head and severe facial injuries from a bicycle fall in 2004. Though I spent many hours in the Emergency Room having many tests and 50 facial stitches, I received no information about head injuries. Eight months later, I was at a stop sign in downtown Anchorage and was hit in the driver's side by a van that came around the corner. This time I did not experience visible injuries. However, I suffered neck injuries and another TBI. It is not healthy to have another TBI so soon after the first one. It is also "easier" to have an injury that people can "see."

In spite of the fact that I am gainfully employed and insured, I have spent a great deal of out-of-pocket funds to try to "get better." While my insurer was quite willing to pay for physician visits and medications, which did not help me a great deal, they were not willing to pay for other therapies that have helped me. When I had out-of-state major neurosurgery two years ago, once again therapy modalities that helped me return to work and function at the level I am expected to by my employer, were denied.

My injuries and experiences are minor compared to some of the people in Alaska who now face a lifetime of problems so different from those that they had pre-TBI. The people of Alaska need to have prevention, treatment and rehabilitation services that can help increase awareness of preventing TBI's; treatment provided regardless of location or insurance availability and rehabilitation services that incorporate all programs and services that give the patient the best quality of life possible.

I never expected to be in a position of fighting to explain my difficulties as a result of a TBI or trying to find care that helped me get better. After all, being now defined as "average" should be ok. Right?

On behalf of myself and all the patients, families and providers who work to prevent TBI's, provide treatment and care for patients, I urge you to support SB 219.

Respectfully,

Christine A. DeCourtney

10/10/01

Honorable Craig Johnson
Alaska State Capitol, Rm 126
Juneau, Alaska 99801

Dear Representative Johnson,

Thank you for introducing the House Bill, establishing a traumatic or acquired brain injury program and registry within the Department of Health and Social Services; and relating to medical assistance coverage for traumatic or acquired brain injury services.

At St. Elias Special Hospital, we treat and assist many patients who are affected by brain injury. Our patients' stories are personal to them and to us. But the outcomes of their injuries effect us all. Frequently, many patients who have suffered from a brain injury will come to St. Elias on a ventilator and will be unable to speak, eat or walk. We have been fortunate to be able to watch many patients walk out of the hospital. Others have suffered significant injuries and are not that lucky. We are very concerned about the resources available to our patients after they leave St. Elias.

We, at St. Elias support the House Bill because it would provide a mechanism to better track the traumatic brain injury patients in Alaska. It would also identify services lacking for patients post hospital discharge. Sadly, some of our patients and their families are being required to leave the state for long term rehabilitative care because services are not always available in Alaska. This puts tremendous financial hardship on the families and patients both emotionally and financially and is also costly to the state. This House Bill would serve all Alaskans better by combining TBI reporting for all entities including those that are for profit and non-profit, including military and native services.

St. Elias Specialty Hospital is expanding its programs to better serve patients with traumatic and acquired brain injuries; however, this house bill could help us provide a better discharge plan for patients with brain injury, thereby allowing the patients to continue their recovery and lead

productive lives that could help TBI patients get early treatment and keep the patients healthier and more productive. Patients could become productive, contributing members of the Alaskan community.

Thank you, Representative Johnson, thank you so much for your support, consideration and concern for this issue in our state, hospitals and most importantly our patients.

Sharon Abatz, PhD
Chief Executive Officer
St. Elias Specialty Hospital

Sean & Dee Murphy
5745 Greece Dr.
Anchorage, AK 99516
Feb 3rd, 2010

Dear Representative Craig Johnson:

First, I would like to thank you for introducing the bill titled: An Act establishing a traumatic or acquired brain injury program and registry within the Department of Health and Social Services; and relating to medical assistance coverage for traumatic or acquired brain injury services.

My name is Sean Murphy and I am recovering from a traumatic brain injury from a skiing accident two years ago at Whistler/Blackcomb B.C. I hit a tree at nearly 30 MPH head first, thankfully I was wearing a helmet or the recovery process could have been much worse. I was air lifted down the mountain to the clinic at W/B where they kept me on life support until the second air medivac was available to transport me to Vancouver General Hospital. Three days later I awoke from my coma and my wife realized she would have to raise another child (husband) since I could not talk, walk or even feed myself.

The bill gives the Department of Health and Social Services many specifics to help address issues related to TBI which are all necessary here in Alaska. However, the main reason for writing you today is not for me or the treatment and support from my injury; but the needed support for family members dealing with TBI patients. TBI patients often have emotional issues that impact the entire family. It was extremely difficult to obtain any information, a single agency to assist in identifying resources, support groups, etc. would have been most beneficial for families in this situation.

As I found out weeks or understood months later, was the amount of stress that my wife had to endure. From first, being out of the country, then in Seattle and then again in Anchorage my wife had to continually start the processes over again to get me needed treatment. Again, having case management services to assist would have been extremely helpful in finding a neurologist, physical therapist, and the resources needed to aide in the recovery process. While researching these types of injuries, my wife and I noticed that the majority of states have facilities to assist people in obtaining the information and contacts needed. We could not find this in the state of Alaska. With the many outdoor activities and amount of highway accidents in Alaska we were surprised to find that this was the case.

Attached is a letter my wife wrote from my injury and the stress she endured and difficulties she encountered along the way.

Sincerely,

Sean Murphy

My husband Sean and I spent a week in Whistler/Blackcomb, BC. Sean was skiing expert terrain all week. On the last day of the trip, he and his buddies stopped for a bowl of soup before heading home. After lunch, he got into his skis and picked a casual groomed ski trail to head down the mountain. He was the first one back in his skis as they started down the mountain. When his friends started down the trail, they saw him veer across the trail over an embankment into the tree line. To this day, having lunch is the last thing that he remembers. They both called down to see if he was ok, when he doesn't respond, one friend came down to check on him and found that he was not conscious. The second friend began stopping others for assistance. A doctor and nurse happened to ski near the accident and began CPR and a ski instructor stopped and contacted ski patrol. Ski patrol arrived within minutes and provided an open airway and artificial respiration while packaging Sean for transport to a helicopter arriving. We believe that due to preparation for the Olympics, the response time of the ski patrol and helicopter was extremely quick, within minutes, Sean was transported to the clinic at the base of the mountain, examined and prepped for another helicopter ride to Vancouver General Hospital.

Our friends and I packed and drove from Whistler to Vancouver only to discover that he had still not awoken and they might have to drill into his brain to release some of the pressure due to swelling caused from severe bruising and 8 sub dermal hematomas. The good news was that after a full body CAT scan to determine the extent of his injuries, other than the head injury, he had a broken finger. After three unconscious days in the ER Sean finally came out of a coma. The doctors asked if he knew what happened, he shook his head no, he asked if he knew who was next to him. All he could do was say wife, but that was more than enough considering we were told that his long term memory would probably be affected by the injury.

On the evening of the third day, Sean was transferred to the Neurological Intensive Care Unit. He was unable to speak coherently, sit up, walk, and other basic motor functions. The doctors informed me that the recovery process would more than likely take months and that we would need to stay in Vancouver until the pressure on his brain decreased considerably and he was able to walk with assistance. The Neurologist stated that if he hadn't been wearing a helmet he would not be here today. In fact, his helmet was used during several meetings to encourage the use of helmets with the staff at VGH.

Sean began the process of recovery, and I began the process of notifying employers and family of our situation. Luckily for me, two of the friends that were on vacation with us offered to stay in Vancouver for support. I was surprised to find out that Canada does not accept health insurance, so having to figure out how to pay for this care, and my stay in Vancouver and trying to keep our daughter from knowing how serious the injury was since she was alone in Anchorage was almost more than I could tolerate. To this day, I cannot thank our friends enough who stayed with us in Vancouver.

The days following consisted of me massaging his legs and arms, little stretches to keep him from stiffening up and numerous trips to the nurse's station trying to reach the Doctor for an update. I was told that he did not see patients during visiting hours because time was allotted for surgeries. The only care provide for the first two days in NICU were hourly vitals check by the nursing staff and my attempts to do stretches with him lying in bed. After 3 days in the NICU, and dozens of requests to see the doctor, he finally stopped in to provide an update. He stated that the bruising was improving, but had not decreased enough for air travel and that air travel could cause further damage to his brain. I asked about road travel so that we could get back to the US, he indicated that since he was barely able to feed himself, had not walked yet, and could not speak more than a word or two when responding to questions, that we needed to realize that long term hospital care and physical therapy was required. I asked when physical therapy would begin, and he indicated that the physical therapist would be by to see us that day.

I increased our efforts to get him to do more on his own. I asked that he feed himself; even though he wore more of the food then he ate. I got him to stand next to the bed with me and our friend on either side to see if he was able. He was not able to take a step or stand on his own, but it strengthened my resolve to get him walking again. Later that date, the PT examined Sean and gave us stretches that we could do to help him improve and that we could attempt to get him to stand periodically throughout the day. We followed the regiment for two days, than were given approval to see if he could walk. We began walking him to the restroom, which was only about 8-10 steps from the bed. The following day the Physical Therapist was surprised to see how much he had improved. Much less food on his clothes, able to speak short sentences and could walk with assistance to the restroom. She then gave us permission to walk the halls as long as our friend and I were with him at all times. We began this trek immediately after she left and continued every hour if he was awake. Day 8, he can walk two times around the NICU floor and we attempt the stairs without the PT's knowledge. He was able to take two steps. We continued to walk as often as possible so that he could build up his strength and improve his balance. The following day, I asked that he be examined again to see if the bleeding and swelling had gone down. It had, I then ask the PT if we can attempt the 5 steps so that we could travel to Washington by car. Sean climbed 5 stairs with Danny and me on either side. The PT consulted with the doctor and they gave us authorization to travel to Washington after resting at the hotel for 1-2 days to ensure that he is able to travel. I asked that they provide a CD of his cat scan and all medical records; they indicated that they would fax the reports to the doctor in Seattle and would provide the CD prior to checkout. So with a stop by accounting, I paid the bill by check and credit card. (I had contacted our credit card company earlier in the week and told them of the situation. They agreed to increase our limit enough to cover the hotel and hospital bill). Sean rested in the hotel and our friends from Seattle came to pick us up. I felt we were one step closer to getting home.

In Seattle, I made numerous calls to Neurologists, but none would take a new patient without a referral. After several calls to Vancouver General and little success in

getting help, our friend Jane said she had an appointment and we could go with her, so we did. We explained to her doctor why we were crashing Jane's appointment, and to our surprise, she examined Jane in 10 minutes and the remainder of the appointment was Sean's. She was astounded that this accident was less than two weeks prior and immediately contacted a Neurologist that she knew and had an appointment for Sean the following day. Again, we were told that it would be several weeks before we could travel and were surprised that we were given approval to leave Vancouver as there were still several areas still swollen and bleeding on the brain. Three times a week, Sean and I went to see the Neurologist. They worked motor skills and did brain teasers and each visit seemed to be better than the last. At the end of the third week, we were given the green light to travel home to Anchorage.

I thought the process would be much easier in Anchorage, only to find out we had to start the process all over again. Neurologists and Physical Therapists require a referral. We went to our family physician and were referred. My Dad agreed to come to Alaska to help care for Sean since he could not be left alone and I needed to get back to work since we had used all of our vacation time and all that could be done now FMLA, which is family medical leave without pay. Without both our incomes, this was not an option.

Sean could not be left alone, could not cook, could not take stairs on his own, etc. So I was so thankful that my Dad was with me to care for him because I needed to get back to work at least part time. As I finish this letter, I have a tough time keeping my composure, I reflect on the stress that I had to endure due to Sean's accident and the fact there wasn't someone I could talk to that understood what we were going through. The angry outburst from Sean which are typical of head injuries, the fact that he was basically having to develop mentally and physically, newborn through adult hood all over again.

After two years, there are still outburst, but they are less frequent, and his short term memory has been affected where he must keep more detailed notes. But on a positive note, the recovery was much quicker than anyone thought it would be and physically he is in the best shape of his life. He is running under 6 minute miles now and he continues to improve emotionally, mentally and physically.

Subject: Traumatic Brain Injury Service Coordination

Thank you for sponsoring a House Bill relating to an act establishing a traumatic (or acquired) brain injury program. This legislation will make great strides towards providing needed services for Alaskans who have been impacted by brain injuries. We look forward to working with you on this important issue.

FOR IMMEDIATE RELEASE: Personal Stories and HB 328 and SB 219

March 2010 is Brain Injury Awareness Month!

Anchorage, Alaska –

March 2010 will mark the commencement of Brain Injury Awareness Month! The Alaska Brain Injury Network, Inc. (ABIN) encourages you to develop stories to raise awareness of "the silent epidemic."

Brain injury can affect any one of us...in an instant. Not only are the personal stories gripping, but the impact on the family can often end up inspiring or devastating. Families that endure life after brain injury need acknowledgement. Many of the strongest family units are torn apart after a traumatic injury. Why do Alaska families and communities end up devastated, torn apart, and defeated? Is this a personal issue or a system's issue? Often times it is both, but who is to blame families when the state does not have a single program specifically to deal with brain injury treatment, rehabilitation, and support? There are very few in-state resources to help individuals learn to live again and to support families through this often lifelong process. Alaskans deserve better.

ABIN is connected to hundreds of Alaskans and their families that have been affected by brain injury: Alaska natives, military, urban residents, children, adults, CEO's, nurses, teachers, and more. If you are looking for a heart-wrenching and news worthy story, we can connect you to these individuals and families across the State.

In addition to personal stories, there are two companion bills in the legislature that will build state capacity to develop brain injury specialty programs. House Bill 328, sponsored by Representative Craig Johnson, and Senate Bill 219, sponsored by Senator Lesil McGuire, establishes a traumatic or acquired brain injury (T/ABI) program and registry within the Department of Health and Social Services.

HB 328 and SB 219 provides the leadership and incentive to create a service delivery system where children, adults, and service members who sustain a brain injury and their families, will have the opportunities that all Alaskans desire; to learn, love and be loved, and find meaningful work or activities.

Statistics: The Alaska's Department of Health and Social Services show that traumatic brain injury is a leading cause of death and disability among children and young adults in the State of Alaska; an estimated 12,000 people in the State of Alaska have suffered a traumatic brain injury; approximately 800 people in the State of Alaska report traumatic brain injuries each year; the number of Alaskans with a traumatic brain injury is increasing significantly as military service members injured overseas return home to Alaska; 20 percent of traumatic brain injuries result in death; many people who suffer traumatic brain injuries live with permanent disabilities; most cases of traumatic brain injury are preventable; and the lack of public awareness is so vast that traumatic brain injury is known in the disability community as the nation's "silent epidemic"

For general information or media information, contact Jill Hodges at (907) 274-2824 or jill@alaskabraininjury.net.

##

Figure 1: Males sustain TBI at twice the rate of females

Figure 2: TBI's are sustained primarily by White and Alaska Native populations

Figure 3: Alaskan Natives and rural residents sustain TBI at disproportionate rates compared to census data

TBI in Alaska, 1995-2005 Hospitalization greater than 24 hours

Figure 4: Highest incidence rates are among 15-24 year old males. The highest prevalence rates are among Elders who fall.

Figure 5: Highest incidence rates are among Anchorage, Mat-Su, and Southeast regions. The highest prevalence rates are in the Yukon-Kuskokwim Region.

Figure 6: Acute care costs are paid by major payers. Inpatient and post-acute rehabilitation is limited. There is not a post-acute rehabilitation facility in-state.

Figure 7: 72% of TBI survivors are sent home with no assistance. 1% of TBI survivors have access to rehab once they return home.

Traumatic Brain Injury:

A Guide for Criminal Justice Professionals

Many prison and jail inmates are living with traumatic brain injury (TBI)-related problems that complicate their management and treatment while incarcerated. Because most inmates will be released, these problems also pose challenges when they return to the community. The Centers for Disease Control and Prevention (CDC) recognizes TBI in prisons and jails as an important public health problem.

What is Traumatic Brain Injury?

- A traumatic brain injury (TBI) is defined as a blow or jolt to the head or a penetrating head injury that disrupts the function of the brain.¹
- Not all blows or jolts to the head result in a TBI. The severity of such an injury may range from "mild," with a brief change in mental status or consciousness, to "severe," with an extended period of unconsciousness or amnesia after the injury.¹
- A study of young adults found that those with a TBI were at risk for sustaining another,^{2,3} and that a history of multiple TBIs is associated with slower recovery.⁴

How many people have TBI?

- Each year, on average 1.4 million people in the United States sustain a TBI. Of this number, 50,000 die, 235,000 are hospitalized, and 1.1 million are treated and released from an emergency department.⁵
- At least 5.3 million Americans are living with TBI-related disabilities.⁶
- The number of people with TBI who are not seen in an emergency department or who receive no care is unknown.⁷

What are the causes of TBI?

- The leading causes of TBI are falls, motor vehicle-traffic crashes, struck by or against events, and assaults.⁵
- Blasts are the leading cause of TBI among active duty military personnel in war zones.⁸

What are the long-term consequences of TBI?

- A person with a TBI can experience short- or long-term problems, requiring help in performing activities of daily living.^{1,6}
- A TBI can cause a wide range of problems in thinking, sensation, learning, language, behavior, and/or emotions.⁹⁻¹¹
- Persons with TBI may experience mental health problems such as severe depression,¹² anxiety,¹³ difficulty controlling anger¹⁴ and alcohol or substance abuse.^{15,16}

- TBI can also cause epilepsy and increase the risk for both Alzheimer's and Parkinson's diseases and other brain disorders associated with increasing age.⁹

What is known about the extent of TBI and related problems within the criminal justice system?

General:

- According to jail and prison studies, 25-87% of inmates report having experienced a head injury or TBI¹⁷⁻¹⁹ as compared to 8.5% in a general population reporting a history of TBI.²⁰
- Inmates who reported head injuries are more likely to have disciplinary problems during incarceration.²¹
- Inmates with head injuries may have seizures¹⁹ or mental health problems such as anxiety²² or suicidal thoughts and/or attempts.^{22,23}
- Studies of inmates' self-reported health indicated that inmates with one or more head injuries have significantly higher levels of alcohol and/or drug use during the year preceding their current incarceration.²²
- The U.S. Department of Justice has reported that 52% of female and 41% of male offenders were under the influence of drugs, alcohol, or both at the time of their arrest,²⁴ and that 64% of male arrestees tested positive for at least one of five illicit drugs (cocaine, opioids, marijuana, methamphetamines, or PCP).²⁵
- Although more than half of prison inmates have a lifetime history of drug use disorders,²⁶ fewer than 15% receive substance abuse treatment services while in prison.²⁷

Women and Families:

- Female inmates who are convicted of a violent crime, are more likely to have sustained a pre-crime TBI and/or some other form of physical abuse.²⁸
- Children and teenagers who have been convicted of a crime are more likely to have sustained a pre-crime TBI²⁹ and/or some other form of physical abuse.²⁹⁻³¹

- Among male inmates, a history of TBI is strongly associated with perpetration of domestic violence and other kinds of violence during their lifetimes.³²

Corrections and Law Enforcement Officers:

- Corrections personnel and law enforcement officers are at risk for head injury or fatal head trauma.^{33,34}
- Interactions with suspects prior to arrest and with inmates during their incarceration are considered high risk situations for injury or death due to head trauma.³⁵

How might inmates with TBI and others be affected by TBI-related problems?

Within the correctional setting, TBI can contribute to situations that lead to disciplinary action. Here are some common TBI problems and strategies for management:

- Attention deficits may make it difficult for the inmate with TBI to focus on a required task or respond to directions given by a corrections officer. Either situation may be misinterpreted, thus leading to an impression of deliberate defiance on the part of the inmate.^{17,36}
 - Management strategies:
 - Ask the inmate to repeat what you have said to confirm that he or she has heard and understood your directions
 - Encourage the inmate to write down steps for the task
 - Allow extra time for the task to be done
 - Clear or reduce environmental distractions
- Memory deficits can make it difficult to understand or remember rules or directions, which may lead to disciplinary actions by jail or prison staff.²¹
 - Management strategies:
 - Explain rules or directions slowly, step-by-step

- Ask the inmate to repeat the steps and encourage him or her to write down the information
 - Provide examples and ask the inmate to provide his or her own
 - Teach the inmate to ask questions when he or she doesn't understand
- Slowed verbal and physical responses may be interpreted by corrections officers as uncooperative behavior.^{36,37}
 - Management strategies:
 - Give directions, or ask questions, slowly; repeat if necessary
 - Allow the inmate additional time to respond
- Irritability or anger may be difficult to control which can lead to an incident with another inmate or corrections officer. Such incidents can lead to further injury for the inmate with TBI and others.^{37,38}
 - Management strategies:
 - Avoid arguing with the inmate
 - Try re-phrasing the problem, breaking it down into parts
 - Reinforce positive behaviors
- Uninhibited or impulsive behavior, including unacceptable sexual behavior, may provoke other inmates or result in disciplinary action by jail or prison staff.^{36,39}
 - Management strategies:
 - Tell the inmate calmly that the behavior is unacceptable
 - Seek assistance from mental health professionals

How can the problem of TBI in prisons and jails be addressed?

A recent report from the Commission on Safety and Abuse in America's Prisons recommended increased health screenings, evaluations, and treatment for inmates and development of partnerships with community health providers to assure continuity of care and case management for released inmates.⁴⁰

In addition, TBI experts and some prison officials have suggested the following:

- Routinely screen jail and prison populations to identify a history of TBI.^{41,42}
- Screen inmates with TBI for possible alcohol and/or substance abuse and provide treatment for these co-occurring conditions.^{25,43,44}
- Conduct additional evaluations to identify specific TBI-related problems and determine how they should be managed.⁴¹ Special attention should be given to impulsive behavior, including violence,³⁹ sexual activity,³⁶ and suicide risk if the inmate is depressed.⁴⁵

How should TBI-related problems be addressed after release from jails and prisons?

Lack of treatment and rehabilitation for inmates with mental health and substance abuse problems while incarcerated increases the probability that they will again abuse alcohol and/or drugs when released.^{25,44} Persistent substance abuse can lead to homelessness,⁴⁶ return to illegal drug activities,⁴⁷ re-arrest,⁴⁸ and increased risk of death⁴⁹ after release. As a result, criminal justice professionals and TBI experts have suggested the following:

- Community re-entry staff should be trained to identify a history of TBI and have access to appropriate consultation with other professionals with expertise in TBI.^{29,41,42}
- Transition services should be capable of accommodating the effects of an inmate's TBI upon their release and return to the community.^{29,41,42}
- Released inmates with mental health and/or substance abuse problems should receive case management services and assistance with placement into community treatment programs.^{40,43,49}

CDC supports new research to develop better methods for identifying inmates with a history of TBI and related problems and for determining how many are living with such injury.

Summary: State Legislation on Returning Troops and Veterans

October 1, 2008

Overview

Increasingly, state legislatures and governors are calling for state leadership in providing outreach, information and resources to returning troops, veterans and their families with regard to traumatic brain injury (TBI), post traumatic stress disorder (PTSD) and related issues.

In July 2007, Illinois Governor Rod R. Blagojevich and the Director of the Illinois Department of Veterans' Affairs announced a first-of-its-kind program to screen every returning Illinois National Guard member for TBI and to provide a 24-hour toll-free psychological assistance for veterans suffering from PTSD. Similar efforts are beginning in other states. Below is a summary of legislation that has passed over the past two years pertaining to these and other efforts as reported in *State Watch* produced by the Federal HRSA TBI Program's Technical Assistance Center at NASHIA.

Study Commissions

NH – On June 26, 2008, Governor John Lynch signed H.B. 1335 establishing a commission to study the effects of PTSD and TBI suffered by New Hampshire soldiers and veterans returning from Iraq and Afghanistan.

NJ – In August 2007, Governor Jon Corzine signed A.B. 3281 requiring state officials to study community-based care alternatives for the state's disabled veterans to avoid placement in a nursing home or other long-term care facility.

WV – Legislators passed H.C.R. 75 requesting the Joint Committee on Government and Finance to make a study of the needs of soldiers and veterans who have been injured in the Iraq/Afghanistan wars for the purpose of making recommendations on how the State of West Virginia can assist in getting them the care they deserve. The Division of Veterans Affairs, West Virginia Congressional Delegation and the National Guard are to help with the study and recommendations.

Screening and Outreach

CA – On September 30, 2008, Governor Arnold Schwarzenegger signed S.B. 1401, requiring the

Department of Veterans Affairs and the Military Department to develop outreach plans to National Guard members or veterans returning to California from combat and assist them in obtaining a screening for PTSD and TBI. The bill takes effect January 1, 2009

MI – On May 28, 2008 Governor Jennifer M. Granholm signed S.B. 731, that requires the Department of Military and Veterans Affairs to administer a PTSD and a TBI questionnaire to an officer or enlisted person serving in the National Guard who has returned from Operation Iraqi Freedom or Operation Enduring Freedom, unless he or she has completed similar questionnaires approved by the US Departments of Veterans Affairs or Defense.

Referral, Counseling, Services and Coordination

MN – On May 29, 2008, Governor Tim Pawlenty signed H.B. 1812 appropriating \$500,000 for casework services for veterans, including in-home counseling. The bill also directed the veterans' agency to design a treatment program for veterans with TBI within the State Veterans Homes.

Other budget items included funding for the Linkvet telephone line service for veterans; a grant to the Minnesota Assistance Council for their work in helping veterans and their families affected by homelessness; for the veterans claims office for outreach and training to improve services and benefits; a pilot program for peer-to-peer counseling among combat veterans; and for an intergovernmental and veterans strategic planning study for the Minnesota Veterans Homes, with special emphasis on exploring alternative models to help veterans to live more independently.

In addition, the Department of Military Affairs received permanent funding for a "State Navigator" to coordinate state agency programs and activities to support and assist soldiers and their families during and after the reintegration process. The "State Navigator" position is viewed as an extension of the nationally recognized "Beyond the Yellow Ribbon" program.

VA -- The Virginia General Assembly appropriated \$4.5 million for wounded warrior legislation passed to provide assistance for soldiers with TBI. On March 12, 2008, Governor Tim Kaine signed H.B. 475 and on March 12, 2008, he signed S.B. 297, that requires the Department of Veterans Services, in cooperation with the Department of Mental Health, Mental Retardation and Substance Abuse and the Department of Rehabilitative Services to establish a program to monitor and coordinate mental health and rehabilitative services support for Virginia veterans, members of the Virginia National Guard and Virginia residents in the Armed Forces Reserves not in federal service. The program is to also support family members affected by covered military members' service and deployments.

The purpose of the program is to ensure that adequate and timely assessment, treatment and support for stress-related injuries and TBI resulting from service in combat areas are available to veterans, service members and affected family members. Subject to the availability of public and private funds appropriated for them, these services include case management services, outpatient, family support and other appropriate behavioral health and brain injury services necessary to provide individual services and support to military service members and their families.

VT -- Governor Jim Douglas signed H.B. 691, May 20, 2008, creating the Traumatic Brain Injury Fund to serve Vermonters with TBI, including residents who have served in the Armed Forces in Operation Iraqi Freedom and Operation Enduring Freedom.

TX -- On June 15, 2007, Governor Rick Perry signed S.B. 1058, relating to reintegration counseling services and related resources for military servicemembers. The legislation enabled veterans in parts of Texas that are served by the Texas Information and Referral Network (2-1-1) to call that service to receive information on services for veterans and military personnel. S.B. 1058 requires a comprehensive array of governmental agencies to identify state, local and private or government resources--medical, social and economic--that are available to military personnel and their immediate families.

Suicide Prevention and Mental Health Services CA -- On September 30, 2008, Governor Arnold Schwarzenegger signed A.B. 3083 to extend mental health services provided by the Adult and Older Adult Mental Health System of Care Act to include veterans, and requires counties to provide mental health services to veterans to the extent such services are available to other adults. The bill takes effect January 1, 2009

MN -- On May 4, 2007, Governor Tim Pawlenty signed H.B. 2227, an appropriations bill that appropriated \$50,000 to fund a study on the mental health needs of returning servicemen and women to be conducted by the National Guard Adjutant General and the Commissioner of Veterans Affairs, and \$30,000 to create a telephone hotline to refer veterans to available mental health services.

Resolutions

Several state legislatures have adopted resolutions to express gratitude for the sacrifices made by veterans who have sustained medical or mental health conditions or TBIs as the result of serving in the United States Armed Forces; and have urged Congress to ensure adequate funding for veterans' health care.

These states include Alaska (S.J.R. 11); Louisiana (H.C.R. 23); Vermont (H.J.R. 57); Texas (S.R. 594; H.C.R. 1) in 2007; and Michigan (H.R. 175) also in 2007.

Vermont lawmakers also urged the US Department of Defense to screen all military personnel leaving a combat theater for traumatic brain injury, urged the US Department of Veterans Affairs to create a traumatic brain injury registry; a comprehensive program to provide long-term traumatic brain injury rehabilitation; and a pilot program in Vermont to deliver traumatic brain injury screening, readjustment counseling, mental health services, and benefits outreach to rural veterans through mobile Vet Centers.

For copies of these cited bills or resolutions please contact the National Association of State Head Injury Administrators at:

NASHIA assists state government in promoting partnerships and building systems to meet the needs of individuals with brain injuries and their families.

Traumatic Brain Injury and Domestic Violence Facts:

What is Traumatic Brain Injury?

A traumatic brain injury (TBI) is an injury to the head that results from a blow to the head of sufficient force to create blunt trauma, such as being hit in the head with a baseball bat or having one's head slammed against a hard object, the result of trauma secondary to a penetrating object into the brain itself, for example, a bullet entering the brain or the result of rapid movement of the brain within the skull, e.g., repetitive shaking of the body/head.

What is Domestic Violence?

Domestic violence is a deliberate pattern of abusive tactics used by one partner in an intimate relationship to obtain and maintain power and control over the other. (Alabama Coalition Against Domestic Violence)

How are Traumatic Brain Injury and Domestic Violence linked?

Research studies on the incidence of traumatic brain injury in domestic violence cases have revealed greater than 90% of all injuries secondary to domestic violence occur to the head, neck or face region (Monohan and O'Leary 1999). In a 1998 study by Jackson and Phillips of 53 women living in a domestic violence shelter on average the women experience five (5) brain injuries in the prior year. Almost 30% reported 10 injuries the prior year. Valera, in 2003, found that of the 99 battered women he studied, 75% sustained at least one partner related brain injury and 50% sustained multiple partner-related injuries.

Unfortunately repeated brain injury is typical of ongoing domestic violence leading to increased thinking, physical and emotional dysfunction over time, with the most disabling problems in the thinking process.

How do Domestic Violence victims become Brain Injured?

For victims of domestic violence, physical assault and/or use of violence are the assumed major causes of traumatic brain injury. The following are some ways in which victims of domestic violence sustain a brain injury:

- Blow to the head with any object
- Pushed against a wall or any other solid surface
- Punched in the face or head
- Strenuous shaking of the body
- Falling and hitting your head
- Being strangled
- Near drowning
- Being shot in the face or head

How does a Brain Injury and Domestic Violence increase the victim's risk of continued harm?

Abused individuals typically lack the knowledge of the long-term consequences of a brain injury and therefore do not seek specialized services. In addition service providers are often unaware of the high risk of a traumatic brain injury in victims. As a result professionals fail to link the psychodynamic issues presented by the victims and the challenges emerging from an undiagnosed brain injury. Without linking domestic violence and brain injury, they fail to recognize brain injury so are unable to refer for appropriate brain injury services and related rehabilitation services. Thus the lack of knowledge about brain injury serves to increase the likelihood of failure in intervention and rehabilitation success. In addition, once individuals experience one TBI they have an increased risk of having another TBI. Several things may happen after a TBI: the person's reaction time may be slower, judgement may be off, she may be more impulsive and inattentive to what might increase her likelihood of a second injury. The risk of repeated TBI is even greater for individuals who are victims of domestic violence since the most common target of abuse is the head, neck, and face. Repeated brain injuries increase symptoms. Each time the domestic violence victim comes into the shelter they may be a less functional as a result of a traumatic brain injury.

What are the symptoms of a Brain Injury?

An individual sustaining a brain injury generally experiences a period of altered mental state or a brief loss of consciousness following the blow to the head. Some of the common initial symptoms are as follows:

- Headaches
- Dizziness
- Slowed processing of information
- Forgetfulness
- Fatigue
- Sensitivity to noise and lights

Most of the symptoms will disappear after a period of time.

What are the most common problems a victim of Domestic Violence and a Brain Injury might exhibit?

The person may be more difficult to engage in planning, and show poorer follow-through on tasks. She may have greater difficulty adjusting to group living with shared responsibilities. She may be more likely to "not remember" prior discussions or routines. She may exhibit greater behavioral control issues. These things can result in the person having difficulty profiting from a shelter program.

What are the most common problems after a Brain Injury?

Physical Changes: Specific physical changes are more frequently reported after a TBI. These changes include

- *Overall slowing/Clumsiness*-- A person can have motor difficulties, meaning that they have trouble moving their arms, legs, and so forth. This may be a generalized weakness or it can be very specific to one part of the body. In most cases motor difficulties tend to improve fairly quickly.
- *Decreased vision/hearing/smell*-- All can be affected by a TBI
- *Dizziness*-- A person can experience significant dizziness as a result of a head injury caused by trauma to the inner ear.
- *Headaches*-- A fairly common problem among people with traumatic brain injury; and can persist for

many weeks or months.

- **Fatigue**- It is not uncommon for people with traumatic brain injury to have significant fatigue to the extent that they tire very quickly. Things that are easy for us to do physically may require much more effort for them.
- **Increased sensitivity to noise or to bright lights**

The most common and persistent complaints are headache and excessive fatigue.

Thinking Changes: Reduced attention and processing speed are two common changes after a TBI.

- **Attention problems**- difficulties with concentration, paying attention to visual details, and dividing one's attention between two differing tasks.
- **Processing speed**- A person may report that all actions have slowed down. moving, talking, thinking and reading. They often feel that they are in slow motion.
- **Communication**- People may complain of problems with word finding and having trouble staying organized when talking with others.
- **Learning and memory**- These are almost universal problems after a brain injury. Information learned before the TBI remains intact, however memory for new information after the TBI is impaired.

Executive Functioning: A person often has an impairment in various combinations of the following that create the most difficulty in day-to-day functioning:

- difficulty planning and setting goals
- difficulty being organized
- difficulty being flexible
- difficulty problem solving
- difficulty prioritizing
- decreased awareness of thinking changes in self

The individual may still function under the idea of who they were before the injury without the same functioning ability.

Emotional/Behavioral/Social changes: The most common emotional changes following a brain injury are depression and anxiety. These are sometimes exhibited as sadness, loss of interest, feelings of worthlessness and hopelessness. These may be the result of difficulties in reasoning as a result of the TBI. If an individual is no longer able to do things they took for granted after a TBI they can become frustrated and even depressed. In addition, if an individual can't reason their way out of a situation they may become anxious.

After a brain injury an individual may have difficulty with self-monitoring. This may result in a rapid loss of emotional control. As adults the emotions we all feel, but not always express, are under control because of a gating mechanism. We may feel certain emotions but not necessarily exhibit them. When somebody has a significant brain injury, the gating mechanisms keeping those emotions under control are often disrupted. The gates are knocked askew and things come out that the person used to be able to control. Hence their emotions are displayed very readily. This can extend to the point of being irritable.

Other changes after a brain injury may include:

- Difficulty with self-initiation
- Impatience
- Inability to get along with others
- Increased risk taking
- Increased impulsivity
- Irritability or agitation

- Intolerance
- Socially inappropriate behavior

How do I recognize if my client experienced a Brain Injury?

A "Brief Screening for Possible Brain Injury" was developed for use by domestic violence shelter staff as a tool to pre-screen survivors who may have experienced a brain injury during the course of a domestic violence incident. This tool is the first step. Part 1 questions the victim about events where a blow to the head may have occurred. Part 2 concerns common post TBI symptoms. If the screening results are positive you should consider referral to the Alabama Head Injury Foundation at 1-800-433-8002 for further assessments.

What approach should be used to address challenges of resulting from a TBI?

Depending on the specific symptoms your client is experiencing, there are a number of things you can do to help them compensate for the brain injury. Examples of compensations for challenges individuals with a brain injury may experience are as follows:

Physical-

- Allow extra time for your client to get from place to place
- Keep the environment quiet with noises and bright lights to a minimum.
- Keep sessions with the client short.
- Schedule rest periods and breaks from planned activities.

Thinking-

- Work on one task at a time.
- Meet in a quiet room to limit distractions
- Have client become active in discussions and plan development, rechecking to ensure comprehension
- Slow down your speed of discussion to allow time for client to process what you are saying.
- Allow the client additional time to provide written and/or verbal responses
- Encourage client to prepare an "agenda" for your meetings in advance, when issues/questions occur to her.
- Cue client if she is experiencing difficulty finding the words to express her ideas or thoughts
- Provide written documentation/information to supplement verbal discussions.
- Encourage client to write down instructions/information in a notebook she keeps with her
- Present information in factual manner, avoid abstract concepts
- Provide several solutions to the problem and encourage client to make the best choice
- Help client to prioritize and organize tasks

Emotional/Behavioral-

- Minimize anxiety with reassurance, education and structure.
- Provide neutral, but direct feedback if client behaves inappropriately.

Where can I go for help in serving my client who acquires a brain injury?

If you suspect your client may have acquired a traumatic brain injury your first point of contact should be the:

Alabama Head Injury Foundation
HelpLine 1-800-433-8002

This statewide team of family resource coordinators serve all ages affected by brain injury.

CHAPTER 4: TBI IN ALASKA

OVERVIEW

Every 15 seconds someone sustains a traumatic brain injury (TBI) in the U.S. Thirty years ago, only half of all people with brain injury survived... now 78 percent survive. This means that many individuals now live with significant disability requiring a full range of services.

Every year the Alaska Department of Health & Social Services reports about 800 traumatic brain injury (TBI) cases resulting in hospitalization or death. The CDC estimates that almost 3,000 Alaskans visit the emergency department each year with a mild TBI. There are an estimated 10,000 plus Alaskans currently living with a disability due to their TBI.

Of recent significance and currently unknown, is the number of Alaskan service members returning with diagnosed and undiagnosed TBI.

TBI PYRAMID

Known 800 hospitalized or fatal TBI/year

Unknown About 3,000 Emergency Visits with mild TBI per year

Estimated 10,000+ Alaskans living with TBI

Unidentified Symptoms not recognized as TBI

ALASKA TRAUMA REGISTRY NON-FATAL TBI HOSPITALIZATIONS OF ALASKA RESIDENTS, 2001-2005

- The three top causes of TBI among those admitted to a hospital from 2001-2005 were falls, motor vehicle traffic crashes and assaults.
- Off-road motor vehicle crashes, snow machine and ATV combined, ranks a close fourth.
- The rate of TBI injury for males is nearly twice that of females. The male rates are significantly higher in all age groups and for all major injury categories.
- Data show that alcohol was involved in one-third of the TBI events.

CHAPTER 4: TBI IN ALASKA

OVERVIEW

The highest rates of TBI are among Alaska Natives, residents of rural Alaska, youth age 15-19 in motor vehicle crashes, and elder falls. The crude rate of non-fatal hospitalized TBI in Alaska for the five year period (2001-2005) was 98.6 per 100,000.

Non-Fatal TBI Hospitalization Rate per 100,000

All Alaskans.....	98.6
Males age 80+	301.3
Females 80+.....	217.2
Males age 15-19	215.7
Males age 70-79.....	200.9

Males 15-19

Males and females 80+

Hospitalized for TBI

TBI's among Alaska Natives and rural Alaskans are overrepresented. The Alaska Native population comprises about 16 percent of the population; however, the TBI population is 34 percent Alaska Native. Similarly, highest rates of TBI occur to the residents of the regions of the Northwest, North Slope, Norton Sound, and the rural Interior Region.

Alaska Native Atlas of Injury Morbidity and Mortality

Injury Deaths 1999-2005, and Injury Hospitalizations 1991-2003, reports the following statistics:

- Injuries (unintentional and intentional combined) were the leading cause of death among Alaska Natives.
- Unintentional injuries alone were the third leading cause of death. The rate was twice that of all Alaskans and three times greater than the rate among the U.S., all races, population.
- Falls were the leading cause of injury hospitalization and suicide attempt the second leading cause among Alaska Natives.
- 70 percent of all injury hospitalizations for Alaska Natives were among young persons (age 0-39).
- 80 percent of all injury hospitalizations for Alaska Natives 70 years of age or older were caused by falls.
- 13.5 percent of injury hospitalizations were for traumatic brain injury (TBI). The most common causes of TBI were falls, motor vehicles, assault, ATVs, and snow-machines.
- Alcohol was a factor in 69 percent of the assault injury hospitalizations.

CHAPTER 4: TBI IN ALASKA

SUCCESS HIGHLIGHTS

THE RATE OF TBI HAS FLUCTUATED OVER TIME BUT APPEARS TO BE DECLINING SINCE 2001.

The State of Alaska initiated programs to improve TBI awareness and services in the late 1990's.

ALASKA RATE OF HOSPITALIZED TBI BY YEAR

THE TBI RATE DUE TO MOTOR VEHICLE CRASHES ON THE HIGHWAY HAS DECREASED 38 PERCENT FROM 2001 TO 2005.

Primary Enforcement Seatbelt Law

On May 1, 2003 Alaska passed a law to change their seatbelt law from secondary to primary enforcement, i.e. a vehicle can be stopped solely for seat belt non-use by an occupant. A study of Alaska has seen a steady increase in seatbelt use in the last decade. In 2007, the percent use as seen in the annual observations study was 82.4 percent. The national rate is 82 percent. The NHTSA goal is 95 percent use.

HOSPITALIZATION TBI BY YEAR DUE TO MOTOR VEHICLE CRASH

SEATBELT USE OBSERVATION STUDIES ALASKA

States with primary seatbelt laws on average had seat belt use rates about 10 percentage points higher than States without primary laws in 2005. Wearing a seat belt is the best defense for an occupant in a motor vehicle crash and the single most effective measure to prevent serious traumatic brain injury. 56 percent of Alaskans with TBI resulting from motor vehicle crash on the highway were not wearing seat belts. If every state with a secondary seat belt law upgraded to primary enforcement, about 1,000 lives and \$4 billion in crash costs could be saved each year.

CHAPTER 4: TBI IN ALASKA

SUCCESS HIGHLIGHTS

BICYCLE HELMET USE INCREASES WITH HELMET ORDINANCES

Bicycle helmets are 85-88 percent effective in mitigating head and brain injuries. Every dollar spent on a bike helmet saves \$40 in direct medical costs and other costs to society. (NHTSA)

A baseline observation survey of bicycle rider's helmet use was conducted during the summer of 2000 by the Alaska Injury Prevention Center in nine communities and then repeated in 2006 in 12 communities. The mean average of bicycle helmet usage rate for all the communities surveyed was 39 percent, compared to 31 percent in 2000.

Four of the twelve communities surveyed in 2000 and in 2006 had recently passed ordinances requiring helmet use for children. The average change for bicycle helmet use in the "helmet ordinance" communities was +56 percent, while the communities with no ordinance had an average change of +17 percent.

[Alaska Bicycle Helmet Use Observational Surveys May-August 2006, Ron Perkins, Alaska Injury Prevention Center]

BICYCLE CRASH

Every dollar spent on a bike helmet saves \$40 in direct medical costs and other costs to society.

HOSPITALIZATION TBI BY YEAR DUE TO BICYCLE CRASH

PEDESTRIAN INJURY

There is no clear trend in pedestrian injuries.

HOSPITALIZATION TBI BY YEAR DUE TO PEDESTRIAN INJURY

CHAPTER 4: TBI IN ALASKA

CHALLENGES TO ADDRESS

FALLS

Falls are the leading cause of TBI among the elderly. Programs which emphasize a multidisciplinary approach for prevention have been found most effective. These programs address strength and balance conditioning, treatment of medical conditions, prescription evaluation, and modifying the environment.

HOSPITALIZATION TBI BY YEAR DUE TO FALLS

ASSAULTS

Data shows that alcohol was involved in one third of TBI events.

HOSPITALIZATION TBI BY YEAR DUE TO ASSAULT

ATV CRASHES

In rural Alaska helmet use is not always culturally or traditionally accepted and changes in behavior are the most challenging injury prevention model. Many programs have been piloted and implemented using role models, incentives, TBI advocates, local helmet use ordinances, and helmet clinics.

HOSPITALIZATION TBI BY YEAR DUE TO ATV CRASH

CHAPTER 4: TBI IN ALASKA

CHALLENGES TO ADDRESS

SNOW MACHINE CRASHES

Helmets must be warm and fog-free to meet the needs of Alaskans.

HOSPITALIZATION TBI BY YEAR DUE TO SNOW MACHINE CRASH

Rutgers Centers for State Health Policy, Issue Brief: A Survey of Medicaid Brain Injury Programs, March 2008

State	Waiver year ending	Number Served	Expenditures (GF and Federal match)	Annual Per Capita Costs	Average Length of Stay	Per Diem Costs
New York	2006	1953	\$79,029,120	\$40,465	310	\$131

Traumatic Brain Injury in Alaska

What is traumatic brain injury (TBI)?

TBI is a jolt, blow to the head, or penetrating head injury that disrupts the function of the brain. (TBI has many names: concussion, head injury, head trauma, bump on the head, bell rung, and hit my head and saw stars).

What are the top 5 causes of hospitalizations due to brain injury in Alaska? (highest to lowest incidence) ⁱ

1. Falls
2. Motor Vehicle Crashes
3. Domestic Violence/Assault
4. ATV/Snowmachine crashes
5. Bicycle crashes

Did you know?

- Brain injury is the leading cause of death and disability among children and youth in the nation and the world. ⁱⁱ
- Alaska has no program specifically to deal with brain injury.
- Only 1% of Alaskans have access to brain injury rehabilitation, and that is often outside the state. ⁱⁱⁱ
- Alaska's annual brain injury rates are more than new diagnoses for breast and lung cancer combined. ^{iv}

How many brain injuries occur statewide each year?

- An estimated 3,000 visit ERs and go home. ^v
- An additional 800 are hospitalized due to severe TBI. ^{vi}
- An estimated 22-32% of returning war-wounded have TBI. ^{vii}

Can the brain recover after a brain injury?

- With mild brain injuries, 80-90% of individuals recover fully.
- With moderate to severe injuries, recovery and relearning is possible with intensive treatment and rehabilitation.
- Long-term recovery is often a life-long process.

How is brain injury treated?

Once a severe brain injury occurs, rehabilitation greatly increases the probability of recovery.

Brain injury treatment includes a multidisciplinary array of services including cognitive, speech, occupational, and physical therapy; medication management; educational/vocational services; and counseling.

There is nowhere in the state to receive these services in a coordinated manner.

What other problems often result from untreated TBI?

People with TBI often have cognitive, behavioral, and emotional impairments. These can lead to short-term memory loss, aggressive social interactions, job loss, divorce, substance abuse, bankruptcy, incarceration, and homelessness.

How does brain injury affect families?

Alaskans are being discharged to their homes with little understanding of or access to rehabilitation. Alaskan families are often torn apart after brain injury because of limited access to in-state services, limited education about the injury, learning to live and cope with a person who has changed, change in family roles, and overwhelming stress from insurance, forms, bureaucracy, and financial burdens.

Can brain injury be prevented?

Some brain injuries can be prevented. TBI from motor vehicles crashes has decreased due to use of seat belts. Using helmets when riding ATV, snowmachines, and bicycles is having a positive effect.

Brain injuries caused by unforeseen accidents will continue to occur. ***Brain injury can happen to anyone, in an instant.***

Next steps will need State of Alaska support and leadership

We ask that Policy Makers...

- Support SB 219 and HB 328 related to a Traumatic/Acquired Brain Injury Program
- Support \$350,000 in FY11 Governor's Operating Budget for Brain Injury Service Coordination
- Provide feedback on the planning efforts and the 10 Year Plan for TBI in Alaska.
- Partner with Alaska Brain Injury Network and the various military, tribal, and private/public providers in determining TBI rehabilitation options including funding levels, eligibility, and how to best support military members.

TBI Program may consist of the following: A TBI Program will provide services and create a multiplier effect for additional funding and service providers.

- Pilot brain injury rehabilitation options: Adult NeuroRehabilitation, Adult NeuroBehavioral, Supportive Living, Adolescent Integration, and Host Home.
- Change Medicaid program and waivers to include residential TBI rehabilitation.
- Support and expand case management to support and educate families concerning available services and funding options.
- Establish brain injury screening across existing programs, i.e. emergency rooms, primary care, schools, juvenile justice, and corrections.
- Direct other Departments and Divisions to coordinate planning and service delivery.
- Support existing information and referral services.
- Support brain injury prevention and public awareness, including mandating sports concussion training.
- Improve workforce ability to identify TBI and provide appropriate treatment.

Results of funding a TBI Program

- Medicaid services for TBI will be matched 50% by federal funds by FY12.
- In addition to cost savings, brain injury waivers have provided other significant benefits. The existence of these waivers supports the growth of community non-profit brain injury agencies.
- Department of Defense, Alaska Veteran Affairs Health Systems, Alaska Tribal Health System, and private providers will have the opportunity to coordinate planning and implementation of rehabilitation and community re-entry programs.
- Alaska Veterans, Active Duty, National Guard members, civilian children/youth, adults, and Alaska Native/rural residents will be able to obtain coordinated, and much needed, brain injury education, screening, assessment, and treatment, without leaving the state.
- Alaskans with brain injury will have increased opportunity to return to work and school, maintain family roles, and positively participate in their community.
- Early treatment may reduce future medical and social costs.
- Potential cost savings in acute care, existing state programs; behavioral health, juvenile justice, corrections, homeless activities, and long-term care in institutional facilities.
- Prevention funding and public awareness efforts may help reduce the future escalation of costs for the TBI Program over time.

What planning has been completed to better meet the needs of Alaskans with brain injury?

1996-State of Alaska, DHSS, Public Health identifies traumatic brain injury has a public health crisis. Public Health applies for, but is unsuccessful in receiving, the Health Resource Services Agency TBI Planning Grant.

1999- State of Alaska, DHSS, Mental Health Developmental Disabilities (now Behavioral Health) applies for and is awarded the HRSA TBI Planning Grant (3 year grant).

2000-Alaska Traumatic Brain Injury Advisory Board is formed.

2001-Formal TBI Needs Assessment completed

2002-State TBI Action plan developed

2003-2nd TBI Needs Assessment completed (283 pages of information)

2004-2009 Senator McGuire sponsors resolution for Brain Injury Awareness Month.

2004- DBH receives HRSA TBI grant (additional 3 years)

2005- Behavioral Health mandates brain injury screening and data collection for all grantees.

2006-TBI Consumer Satisfaction Survey completed.

2007- AMHTA funds TBI information and referral

2007- ABIN organizes TBI Partnership to include all military partners in Alaska.

2008- \$100,000 for brain injury funding included in FY09 Governor's Budget, but moved to and approved in the MHTAAR budget

2008- Senior and Disabilities Services becomes lead agency for brain injury for State of Alaska

2008- The "10 Year Plan for TBI in Alaska" was developed by ABIN in conjunction with the Department of Health and Social Services, the Alaska Mental Health Trust Authority, and numerous public and tribal partners.

As a result of the "10 Year Plan for TBI in Alaska," 2009 activities have focused on brain injury rehabilitation

Senator McGuire and Senator Paskvan sponsor Senate Bill 118, Medicaid: Traumatic Brain Injury Services

2nd TBI Consumer Satisfaction Survey completed.

AMHTA (the Trust) funds TBI Care Coordination demonstration project.

Senior and Disabilities Services works with ABIN and consultant to develop TBI Care Coordination programs including policies and procedures manual.

Senator McGuire, Representative Johnson and ABIN host "Roundtable Discussion on Brain Injury Rehabilitation" with a focus on military research and programs.

ABIN hosts the Directors of the Defense and Veterans Brain Injury Center and the National Intrepid Center for Excellence for Psychological Health and Traumatic Brain Injury.

ABIN meets with Alaska Federal Health Care Partnership.

Senior and Disabilities Services applies for Federal HRSA TBI Implementation grant program.

10 Year Plan for TBI recognized by the North American Brain Injury Society as a model for other states to follow.

Received input from highest officials in Alaska and in the field of brain injury: Col. Michael Jaffee, Dr. James Kelly, Col. Paul Friedrichs, Mr. Alex Spector, Don Kasheveroff, Commissioner Bill Hogan, AMHTA Trustees and CEO.

ABIN researches other state brain injury programs, sustainable funding options, including Medicaid and grant programs.

ABIN drafts options for Governor Parnell's review and recommendations.

Projected savings when brain injury rehabilitation is available in-state

***Emergency Room and Acute Care Savings, length of stay and # visits^{viii}**

Because there is not a post-acute rehabilitation program in-state, Alaskans are using acute care beds longer than needed.

Also, Alaskans with brain injury are returning to emergency rooms and acute care more often than the general public because there are no community programs to support them.

The following information relates to TBI patients held in an acute care hospital due to non-availability of a rehabilitation facility.

	Average	Highest	Lowest
Costs	\$143,000	\$276,000	\$34,000
Hospital Stay	43 days	123 days	11 days

***State Budget Savings**

When programs specific to brain injury are not available other state programs are burdened.

Untreated or undiagnosed TBI may lead to individuals becoming functionally disabled in the society, and may fall into other state programs as their lives decline.

The following programs may see cost savings if a TBI Program were funded

State of Alaska	As relates to TBI	Funding ^{ix}
Corrections ^x	25-87% TBI history	GF \$212.2 million
Juvenile Justice ^{xi}	Significant portion	GF \$52.5 million
Behavioral Health ^{xii}	32% TBI history	GF \$66.3 million
Homeless	53% ^{xiii}	\$8 million total

***Long-Term Care Savings^{xiv}**

Brain injury waivers provide significant cost savings, on average \$30,000 annually per person, when compared to institutional facility-based services.

Costs associated with providing continuum of brain injury rehabilitation programs^{xv}

Continuum of Rehabilitation Program (Residential)	Range: Per Diem Costs	Annual Costs for eight participants (high range)
Adult NeuroRehabilitation	\$450-\$780	\$2.3 million
Adult NeuroBehavioral	\$450-\$780	\$2.3 million
Supported Living	\$300-\$595	\$1.8 million
Adolescent Integration	\$600	\$1.8 million
Host Home (no therapies included)	\$163-\$198	\$600,000
Total		\$8.8 million

National Medicaid Brain Injury Program Facts^{xvi}

# of States participating	24 states have a brain injury Medicaid program
Funding range	\$80.0 million-\$800,000
Numbers Served	3,600-26
Annual per capita costs	\$82,000-\$12,000
Per diem costs	\$247-\$45

Current State of Alaska Funding Levels^{xvii}

Programs	Prevalence	GF Funds
Seriously Mentally Ill	21,754	\$11.6 million
Behavioral Health (Grants)	17,000	\$13.7 million
Behavioral Health (Medicaid)		\$52.8 million
Severely Emotionally Disturbed Youth	12,725	\$11.6 million
Developmental Disabilities (Grants)	12,185	\$13.7 million
Traumatic Brain Injury	12,000	\$0.00

Alaskans share their story

William Barrington, teenager, Anchorage

- Memorial Day weekend – State Motocross Races – Kincaid Park, wearing all protective equipment including a helmet
- Set of triples – hit 2nd, headfirst into 3rd
- Unresponsive – rushed to Providence
- 3 hour surgery – bleeding and clotting in the brain – no external injuries
- Diagnosis – TBI – due to weakened blood vessels bursting in the brain
- **Cause of weakened blood vessels? Multiple sports injuries**

First 47 days in the hospital

- Day 1-12 Medicated Coma
- Day 13 Sign language/whiteboard

- Day 14 Learning to swallow
- Day 19 First real food and water
- Day 23 First sounds/ Day 24 words at a whisper
- Day 32 Walked with walker
- Day 46 First movement in arm system
- Day 47 Discharged from hospital

Life after hospital- Family search for resources takes one full year!

Will's schedule one year after injury

- Monday – 4 classes-West High , pickup by Dad-to Sylvan,3:30 I take to Counseling, 5-Acupuncture
- Tuesday – 4 classes at West High, pickup by uncle Nate-to Sylvan, 2pm mom takes to physical and speech therapy
- Wednesday - 4 classes-West High, pickup by Dad to Sylvan, 3:30 mom takes to wheelchair basketball
- Thursday - 4 classes-West High, pickup by Uncle Nate to Sylvan, 2pm mom takes to occupational therapy
- Friday – 4 classes-West – in office until 2, rides bus home, 3:30 mom takes to Acupuncture, 6 to wheelchair soccer
- Sunday – Youth group at church

What is next?

- Family is looking for new therapy ideas for Will's hand
- Will is in his senior year of high school. Preparing for college – studying for SAT/ACT; utilizing Accuplacer and King Career Center
- Will is deciding where to go for College – Possibly UAA or a college with wheelchair basketball?
- Will is learning to drive – preparing to get his driver's license

The Barrington Family

Why did their journey after brain injury have advantages as compared to the majority of Alaskans?

Advantage	Why is this important?
Will was unconscious; no doubt he had an injury to the brain.	<p>Within hours of the injury, there is an accurate diagnosis, focus on prevention of further injury, focus on minimizing the severity of the injury.</p> <p>Many brain injuries go undiagnosed leading to further injury, lack of understanding of changes, and inappropriate or no treatment.</p>
Family had comprehensive insurance, no question in receiving acute intensive care.	<p>Less than 6% of Alaskans hospitalized with TBI have access to inpatient rehabilitation. If there is a physical disability, it is easier to qualify for inpatient rehabilitation as compared to only a cognitive disability.</p> <p>Few Alaskan families are able to access the neurorehabilitation unit because of financial limitations (restricted or lack of insurance).</p>
Access to <u>inpatient rehabilitation</u> was challenged but allowed, due to Will's age.	<p>He was accepted into adult neuro-rehab program even though he was 14 years old.</p> <p>There are no inpatient neurorehabilitation programs for children/youth in Alaska.</p> <p>Families that do go out of state often have to be separated and bear greater financial burden maintaining two households. Only 1% of Alaskan families have access to outpatient rehabilitation.</p>
Will had mom to advocate and coordinate treatment, educational resources, emotional supports, and community support services	<p>Many Alaskans do not have a person to make this happen for them. Nature of their injury prevents them from doing it on their own.</p> <p>Mom starting from scratch. Took over a year to find resources that were appropriate and available in-state for Will.</p> <p>Brain injury rehabilitation program would have had all the resources coordinated and delivered soon after the injury which is when these services are most important.</p>
Will had access to some outpatient rehabilitation.	<p>There is not a residential/outpatient program specifically for brain injury in Alaska (children, adults, or service members)</p> <p>Had to be creative to get outpatient services at the level needed to support his recovery. Limited to 75 visits/year. Insurance was exhausted only 4 months into his rehabilitation. Had to find alternative treatments until the beginning of the calendar year when he could resume much needed therapies</p> <p>Will had the best insurance there is, and he was still limited in getting what he needed to recover.</p>
Will's injury was not a frontal lobe injury. It was a deep bleed in the temporal lobe (side of the brain).	<p>Didn't have the personality change, mood swings, that many people with brain injury have.</p> <p>Brain injury treatment teaches individuals and families how to recognize and cope with the cognitive, emotional, and behavioral changes after brain injury.</p>
Will had/has lots of community support and faith-based family.	<p>Depression is often an outcome after brain injury. Both individual and family need the support to keep moving forward with life after brain injury.</p> <p>There are many families that take care of their loved one with a TBI. With rehabilitation, treatment, and natural supports, individuals can get better.</p> <p>Families need access to these programs to support their efforts; brain injury is a lifelong process.</p>

Alaska organizations ready to see State of Alaska take a leadership role in brain injury rehabilitation

Department and Health and Social Services-
Senior and Disability Services and Behavioral
Health
Department of Labor- Vocational Rehabilitation
Alaska Mental Health Trust Authority
Alaska Federal Health Care Partnership
Elmendorf, 3rd Medical Unit
Alaska VA Health Systems
Alaska National Guard
Service/Family Resource Center -Warrior
Transition Battalion
Alaska Vet Centers
Representatives for the Marines
Alaska Native Tribal Health Consortium
Alaska Native Medical Center
Southcentral Foundation
Providence Alaska Medical Center
St. Elias Specialty Hospital
Mat-Su Health Services
Natural Health Center
Anchorage Community Mental Health Services
Alaska Brain Injury Network
Governor's Council on Disabilities and Special
Education
Alaska Commission on Aging
Alaska Mental Health Board/Advisory Board on
Alcoholism and Drug Abuse
Statewide Independent Living Council
Disability Law Center
Rural/Tribal Hospitals and Clinics

ABIN has heard from over 1000 Alaskans directly affected by brain injury

Alaska Communities ABIN has visited, who are asking for brain injury services and education include:

Anchorage, Atmautluak, Barrow, Bethel, Dillingham, Fairbanks, Galena, Juneau, Kenai Peninsula communities, Ketchikan, Kodiak, Kotzebue, Nome, Palmer, Prince of Wales, Sitka, Tok, and Wasilla.

For more information, contact Jill Hodges, Executive Director, Alaska Brain Injury Network (ABIN), www.alaskabraininjury.net or call (888)-574-2824.

At A Glance...

Who is ABIN?

The Alaska Brain Injury Network, Inc (ABIN) is a non-profit organization dedicated to Alaskans whose lives have been changed by brain injury.

ABIN's Board of 18 directors represents all regions of Alaska, and at least 50 percent are TBI survivors or family members.

The ABIN vision encompasses a lifetime of care and services, which are both affordable and close to home.

The ABIN mission is to educate, plan, coordinate, and advocate for a comprehensive service delivery system for the survivors of traumatic brain injury and their families.

History

Alaska's Division of Public Health received funding from the U.S. Centers for Disease Control and Prevention to initiate traumatic brain injury (TBI) surveillance beginning in 1998. This funding began to systematically quantify what had previously been believed anecdotally to be a significant and growing public health problem.

In 1999, the State of Alaska, Department of Health & Social Services, Division of Mental Health & Developmental Disabilities, now known as Behavioral Health (DBH), successfully applied for HRSA TBI Planning & Implementation Grants. DBH held the grant for 9 years. In 2009, Senior and Disabilities Services transitioned to the lead agency role.

The original HRSA grant required that Alaska fulfill the following:

- Identify a State Lead Agency: The State of Alaska, Department of Health and Social Services, Division of Behavioral Health (then DMHDD)
- Establish a Statewide Advisory Board: **Alaska Brain Injury Network, Inc.**, (Formerly, the Alaska Traumatic Brain Injury Advisory Board)
- Conduct a statewide needs and resources assessment
- Craft an implementation plan (completed March 2003)
