On behalf of the Alaska Eskimo Whaling Commission (AEWC), I wish to thank you for sponsoring House Bill 74 on the Alaska Coastal Management Program (ACMP). The AEWC supports the committee substitute adopted by the Senate Community and Regional Affairs Committee on February 5, 2009.

House Bill 74 would restore the effectiveness to the ACMP that has been lost as a result of recent changes to the program. The bill would make it clear that coastal districts may establish local enforceable policies, it would bring air and water quality considerations back into ACMP project reviews, and it would establish a coastal policy board composed of state agencies and coastal districts.

The bill would also restore provisions that ensure states' rights are duly considered during reviews involving federal activities or permits, including activities on the federal Outer Continental Shelf (OCS). One of the major reasons the Alaska State Legislature enacted the Alaska Coastal Management Act in 1977 was to take advantage of provisions in the federal Coastal Zone Management Act (CZMA) that give the state and coastal districts their most powerful tools to influence federal decision making. The remainder of our comments addresses these issues.

Section 19 of the bill would require review of seismic survey activities for consistency with the ACMP. Although scientific studies demonstrate that seismic surveys can profoundly affect marine mammals, these activities have been excluded from the scope of some ACMP reviews, including the review of a multi-year offshore drilling program in 2007.

Re: HB 74

To: House Community and Regional Affairs Committee
Senate Resources Committee
Representative Thomas
Senator Kookesh

HB 74 and the companion bill in the House address issues raised by Coastal Management Zone planners at the ACMP workshop in December, 2008, in Anchorage. The bills establish a coastal policy board, bring DEC back into the consistency review process, and allow coastal districts to have enforceable policies as long as they are not specifically barred by state or federal law.

Please support this bill.

Thank you.

Anne Cervenka
City Planner

Responsibility to Tribe

Dear Representative Joule;

The Native Village of Kotzebue writes in strong support of the House Bill 74 relating to strengthening the ACMP and establishing the Alaska Coastal Policy Board.

The Tribe was disappointed with the changes made to the program under previous Governor Frank Murkowski. The ability of the program to provide for real local involvement in development projects affecting the coastal environment of Alaska is very important to assure that projects are compatible with the needs and concerns of local communities. The changes to the program as envisioned under HB 74 would go a long way towards reaffirming the State's commitment to responsible development and local input as a vital component of such projects.

The Tribe supports the Coastal Policy Board as envisioned because it will provide an essential balance to the Alaska Coastal Management Program (ACMP). Currently, the commissioner of DNR makes all ACMP decisions, including approving district plans, which has been shown to be non-compatible with the needs of local communities as the recent wholesale rejection of the proposed Northwest Arctic Borough (NWAB) Enforceable Policies demonstrates. It is our understanding that the new board would be responsible for approving coastal district plans and any changes to the ACMP regulations, which should allow for a more responsive approach to approving local priorities as stated through Enforceable Policies.

Section 9 and Section 14 of the bill are especially useful in this regard, as they would clarify the criteria for Coastal District Enforceable Policies so as to obviate interpretation by DNR, because as the wholesale rejection of the NWAB District Plan relating to Enforceable Policies should show, it is currently not clear what the criteria are. The statutes currently allow districts to establish Enforceable Policies, but as it has been interpreted and implemented by the DNR, only one of the 50 enforceable policies proposed by the NWAB was approvable, which speaks to the disconnect between what local communities need and what the program is believed (by the DNR) to allow for. The bill would also allow coastal districts to address air and water quality issues during ACMP project reviews. Currently, activities permitted by DEC are unfortunately excluded from the coordinated consistency review of a project, which negatively impacts the ability of local communities to be able to take into account and fully mitigate the broadest range of impacts from any specific project falling under ACMP review.

We appreciate your leadership on ACMP revision and look forward to passage of this important Bill.

Sincerely,

Alex Whiting

Honorable Mark Newman
Alaska State House
Capitol Building
Juneau, AK 99801

Re: House Bill 74, Changes to Alaska Coastal Zone Management

Dear Representatives Johnson and Newman,

The mining industry has been involved in the Alaska Coastal Zone Management Program (ACMP) for many years. Several companies have raised concerns regarding the CSHB-74(CRA). They agree that ACMP is not working well but they cannot support the changes being proposed in CSHB-74(CRA). **The bottom line is that this bill would create an administrative quagmire for the state permitting process and would create tremendous uncertainty for all permittees.**

As proposed by CSHB-74(CRA), the coastal districts would be in charge of the program and control what is done. In this situation, **the coastal districts would be in a position to set the rules and enforce them without accountability to the Legislature or the Administration.** The bill would re-establish the Coastal Policy Council (calling it the Coastal Policy Board) with 5 public members and 4 state agencies (DNR, DF&G, DEC, & DCEED). The governor would choose the public members but must select them from a list supplied by the Coastal Districts. **The effect is that the districts would control the outcome of the selection process. This is not a good situation for ACMP or any other public policy issue.**

Further under CSHB-74(CRA), the Coastal Policy Board (CPB) would approve or disapprove all plans and regulations. If the board feels that an agency is not interpreting the policies the way they want, it would have the authority to order the agencies to change, irrespective of State statue or regulation. **The CPB would thereby effectively have authority over both the Legislature and the Administration.**

CSHB-74(CRA) would also eliminate what has been called the DEC "carve-out". It would allow districts to interpret state statutes and regulations relating to air quality, water quality, solid waste disposal, water injection, land issues, sanitation, food service, public health, etc. Many of these statutes and regulations have been developed over many decades of detailed technical evaluation by the agency and through a tremendous amount of public process and input. Others are nation-wide standards developed over many years by federal government scientists at the cost of millions of dollars. **The coastal districts do not and will not have the technical expertise to fully evaluate these issues.**

regulate something the legislature has not given them, the district could simply write it themselves and DNR, DF&G, DCEED would have to comply.

A second conclusion is that many of the examples mentioned above would raise constitutional questions. Because the CPB has the authority to go beyond state law, the bill has the effect of delegating legislative law-making to a public-dominated board. This delegation is not constitutionally allowed. Similarly, it removes interpretation of state regulations from the administrative branch — where the interpretations constitutionally belong — and gives this authority to the CPB. While some of these constitutional issues existed before passage of HB-191 in 2003 (specifically the homeless stipulations), CSHB-74(CRA) greatly magnifies and expands these legal problems.

A third conclusion is that the bill essentially does away with the concept of state interest. There are some decisions — whether and how a gasline should be constructed, expansion of the railroad, even oil development on the North Slope — that should be decided by the state, without a veto by local authorities. It is critical that local land-use issues and local concerns be taken into account by the permitting agencies, but some issues affect the entire state and must be determined on a state-wide basis. CSHB-74(CRA) essentially does away with this concept.

A final conclusion is that the changes proposed would create tremendous uncertainty for the regulated public. There is no way to escape a great deal of uncertainty as individual coastal districts have the final say in what was previously agency matters.

Thank you for the opportunity to address our concerns to you.

Sincerely,

Steven C. Borell, P.E.
Executive Director

Testimony of Patricia Phillips
Mayor, City of Pelican

House Resources Committee
House Bill 74 – Alaska Coastal Management Program
April 15, 2009

Co-Chair Johnson, Co-Chair Neuman and House Resources Committee, my name is Patricia Phillips; I am Mayor of the City of Pelican.

The City of Pelican supports House Bill 4 because it reinstates essential components to the Alaska Coastal Management Program (ACMP).
The State of Alaska and local coastal districts were once closely affiliated when the ACMP was first put into effect. However, more recently, the role of coastal districts has been impaired. HB 74 restores the ability of coastal districts to establish meaningful enforceable policies, discuss air and water quality issues during coastal management reviews, and provides a forum for coastal districts and state agencies through a "Coastal Policy Board". The main purpose is to reinstate local determination and due deference on matters of local concern regarding resources in coastal areas.

As a mayor of a small rural coastal community, I understand economic development is the driver to keep our communities vibrant and healthy. I see first-hand the onerous requirements of federal and state environmental reviews and permitting procedures. The ACMP is not just another regulatory program; rather, it coordinates the management authorities of state and federal agencies and local governments. The coordinated consistency review process allows all parties to consult with one another to work out issues early in the process prior to permits being finalized.

The ACMP Re-Evaluation process initiated by the Alaska Department of Natural Resources ended without consensus. I attended the December re-evaluation workshop in Anchorage and thought DNR missed an opportunity for consensus on many of the proposed changes to state statutes and regulations.

An important aspect of the ACMP is the ability of coastal districts to establish enforceable policies to address local conditions and concerns. Unique to Alaska is ANILCA which protects subsistence use on Federal public lands. Coastal districts need enforceable policies for subsistence and important habitat related to subsistence. Governor Palin recognized this when during her campaign for governor she pledged, "I would also revisit the change in regulations on the Alaska Coastal Zone Management program in which the past administration by eliminating the rights of local districts to write specific local enforceable policies on important issues like subsistence" (www.palinforgovernor.com). SB 4 establishes clear criteria for local policies that do not conflict with state or federal laws.

HB 74 establishes a Coastal Policy Board. This board is necessary to ensure the views of coastal districts and state agencies are considered for major coastal policy issues. The Coastal Management Program was designed to encourage the states to exercise their full authority over the lands and waters in the coastal zone by assisting the states, **in cooperation with** Federal and local governments and other vitally affected interests, in developing land and water use programs for the coastal zone [....], and giving of timely and effective notification of, and opportunities for public and local government participation in, coastal management decision-making.

HB 74 eliminates the "DEC carve-out" by bringing Department of Environmental Conservation permits into the project consistency review process. The draft statutes issued by the Alaska Department of Natural Resources last November supported elimination of the carve-out. Air and water quality affects nearly all coastal issues, so it makes sense to include these factors in the ACMP consistency review process.

Thank you for the opportunity to testify on this important bill, and I urge you to pass it out of committee at your earliest convenience.

Testimony of Carol Smith

Coastal Program Coordinator for the City of Valdez

Senate Resources Committee

Senate Bill 4 Alaska Coastal Management Program

Good Afternoon! My name is Carol Smith, I am the Coastal Coordinator for the Valdez Coastal District and member of the ACMP Re-evalution Stakeholder Group. Thank you for this opportunity to provide comments on HB 4 regarding changes to the Alaska Coastal Management Program (ACMP).

Because of the major regulation changes in 2003, the Valdez Coastal Management Plan went from 41 enforceable policies to 14. The updated Valdez Coastal Management Plan was approved even though a number of our meaningful policies were not approved. We felt it was important to be a part of the Alaska Coastal Management Program and it has been our hope that new regulations would be introduced to give the districts back more local input through meaningful policies. We believe the most affective coastal plan is a balance of Federal, State, Applicant and Local cooperation.

PROPOSED Coastal Policy Board: Section 1 of the bill would establish the Coastal Policy Board. We agree that the old Coastal Policy Council of 17 members did not always work well as it was too large and was made up of political representatives who were not always aware of everything that was happening with the ACMP. This proposed board is much smaller and would be made up of representatives of coastal districts and state agencies, and unlike the former council, it would not be responsible for project consistency reviews. The new board would only address ACMP issues. Appeals are now handled by the DNR Commissioner and the CPB would be a much fairer process.

ENFORCEABLE POLICIES: Sections 9 and 14 of the bill would make the criteria for district enforceable policies much clearer. A major problem since the 2003 changes has been varied interpretation of the new regulations by DNR. Districts need to be able to write meaningful enforceable policies that address local concerns. The bill would allow coastal districts to establish policies as long as they do not duplicate an existing law and do not address a matter preempted by a state or federal agency. The Alaska coastline is very vast and different so one shoe does not fit all situations.

DEC CARVE-OUT: The City of Valdez supports Section 37 of the bill which eliminates the "DEC Carve-out." At the November Workshop, the Alaska Department of Natural Resources and other state agencies indicated their support for bringing DEC back into the ACMP review process. Doing reviews on DEC projects has been very confusing and hard to coordinate for the state agencies as well as the coastal districts. It worked much better with the "one-stop shop" approach. We believe this change is very positive.

We realize this bill may not be perfect but it is a very positive step towards fixing problems that have been created by the 2003 regulations changes. The Coastal Districts want to see positive cooperation among all entities involved in the Coastal Management Plan.

Thank you for the opportunity to testify on Senate Bill #4. This concludes my testimony.

Testimony of Carol Smith
Coastal Program Coordinator for the City of Valdez

House Community and Regional Affairs Committee
House Bill 74 Alaska Coastal Management Program

Good Morning. M y name is Carol Smith, and I am the coastal coordinator for the City of Valdez. I appreciate this opportunity to provide comments on House Bill 74 on the Alaska Coastal Management Program (ACMP).

Before the regulation changes in 2003, the Valdez Coastal Management Plan had 41 enforceable policies and now has 14. The Valdez Coastal Management Plan was approved because we felt it was important to be a part of the Alaska Coastal Management Program even though we lost most of our policies. It was our hope that new regulations would be introduced to give the districts back more local input through meaningful policies.

My testimony will address four issues, the "DEC Carve-out," the renewal requirement for district plans, the proposed coastal policy board, and district enforceable policies.

DEC CARVE-OUT: The City of Valdez supports Section 37 of the bill which eliminates the "DEC Carve-out." At the November Workshop, the Alaska Department of Natural Resources and other state agencies indicated their support for bringing DEC back into the ACMP review process. Doing reviews on DEC projects has been very confusing and hard to coordinate for the state agencies as well as the coastal districts. It worked much better with the "one-stop shop" approach. We believe this change is very positive.

RENEWAL: Section 37 would also eliminate the requirement for coastal districts to update their plans every 10 years. If a plan is still current, there is no reason to update it. It is very costly and time consuming to update the plans.

PROPOSED CPB: Section 1 of the bill would establish the Coastal Policy Board. We agree that the old Coastal Policy Council of 17 members did not always work well as it was too large and made it very hard to setup meetings. Also, it was made up of political representatives who were not always aware of everything that was happening with the ACMP. This proposed board is much smaller, and unlike the former council, it would not be responsible for project consistency reviews. The new board would be made up of representatives of coastal districts and state agencies. This board would only address ACMP issues, so it would not be able to overrule an agency's authority. The new board would be made up of representatives of coastal districts and state agencies. This would be a fairer representation for the appeals process.

ENFORCEABLE POLICIES: Sections 9 and 14 of the bill would make the criteria for district enforceable policies much clear. Districts need to be able to write meaningful enforceable policies that address local concerns. The bill would allow coastal districts to establish policies as long as they do not duplicate an existing law and do not address a matter preempted by a state or federal agency. The Alaska coastline is very vast and different so one shoe does not fit all situations.

"Example: The Valdez Planning Commission wanted to address a gap in the clean air act between the different regulations. This request was denied as district plans cannot have policies on Air Quality.

Thank you for the opportunity to testify on HB 74. This concludes my testimony.

Testimony in Support of HB74
Yakutat Coastal District

The National Coastal Zone Management Act of 1972 created a program for balancing human actions within identified coastal districts. Noting the increase in population, decreasing space and diminishing resources the act attempted to create a system for making development decisions based on cooperation.

Local governments are specifically identified as cooperators in the CZMA. Under current regulations I feel we function merely as another public commenter and are not serving as empowered cooperators. We have no board to which we can bring disagreements and no ability to enact policies important locally. There were several projects that have occurred in recent years where the local district provided far more oversight then either the state or federal agencies involved. The problems were identified but there was no regulatory avenue for local districts to declare the actions as inconsistent which would have provided leverage to steer the project to a place within the spirit of the CZMA. Instead we had to stand by and watch or utilize other avenues to make our voices heard.

The ideas of local control, small government and self determination are intrinsic to American philosophy. Sometimes it is necessary to enable large government oversight to deal with problems such as coal emissions drifting from China to Alaskan shores. Other times it is appropriate to have management guided at the state level because some resources such salmon and waterfowl are migratory in nature and can be harvested across district boundaries. However, issues such as water quality, construction, mining, timber harvest, etc. are sedentary in nature and the people within the Coastal District will have to live with the short and long term consequences of the action. Sometimes the impacts can last for generations, long after the profit and jobs have moved on, so overall results should be positive not negative. Geographically bound projects, such as these, must be evaluated with strong local cooperation to ensure this happens.

Empowered local participation brings four benefits to the table;

1.) Site specific knowledge of local areas and ecological processes
2.) Rapid feedback loops by observing changes in local socioeconomic and environmental conditions
3.) One more check and balance emanating from a different perspective then visiting State or Federal regulators
4.) Respect

There must be strong policy at the local level that embodies the vision of those living there. The current situation leaves us as powerless bystanders or forces us to become antagonists; HB 74 reinstates the possibility that we can repair the Alaska Coastal Program, reinvigorate the public process, avoid unnecessary controversy and create a sustainable model for the state's future development.

Thank you for the opportunity to comment

Bill Lucey
Coastal Planner - Yakutat

LOCAL COOPERATION

Sec. 304 COASTAL ZONE MANAGEMENT ACT OF 1972

(4) to **encourage the participation and cooperation of** the public, state and **local governments**, and interstate and other regional agencies, as well as the Federal agencies having programs affecting the coastal zone, in carrying out the purposes of this title;
(5) to **encourage coordination and cooperation with** and among the appropriate Federal, State, and **local agencies**, and international organizations where appropriate, in collection, analysis, synthesis, and dissemination of coastal management information, research results, and technical assistance, to support State and Federal regulation of land use practices affecting the coastal and ocean resources of the United States; and
(6) to **respond to changing circumstances** affecting the coastal environment and coastal resource management by encouraging States to consider such issues as ocean uses potentially affecting the coastal zone.
(16 U.S.C. 1452)

THE SPIRIT OF THE COASTAL PROGRAM

SEC. 302. The Congress finds that—

(a) There is a national interest in the **effective management**, beneficial use, protection, and development of the coastal zone.
(b) The coastal zone is rich in a variety of natural, commercial, recreational, ecological, industrial, and esthetic resources of immediate and potential value to the present and **future well-being** of the Nation.
(c) The **increasing and competing demands** upon the lands and waters of our coastal zone occasioned by population growth and economic development, including requirements for industry, commerce, residential development, recreation, extraction of mineral resources and fossil fuels, transportation and navigation, waste disposal, and harvesting of fish, shellfish, and other living marine resources, **have resulted in** the loss of living marine resources, wildlife, nutrient-rich areas, **permanent and adverse changes to ecological systems,** decreasing open space for public use, and shoreline erosion.

TESTIMONY OF TOM LOHMAN
NORTH SLOPE BOROUGH DEPT. OF WILDLIFE MANAGEMENT
HOUSE RESOURCES COMMITTEE
HB 74
APRIL 15, 2009

Thank you to Co-Chairs Johnson and Neuman, members of the Committee, my name is Tom Lohman. I've been with the North Slope Borough, first with the Law Department and now with the Wildlife Department, for almost 22 years. Our local district plan was approved in 1988, my 2nd year with the Borough...so I've been at this for a long time.

First off, the ACMP is not like other regulatory schemes, it was never been intended to be like, and should not be like other regulatory schemes. It is unique, and was created that way beginning at the federal level with the Coastal Zone Management Act. It is a voluntary partnership, and any party that opts to become involved expects to benefit from their participation. States that opt into the national program agree to meet certain general conditions, and in return get federal dollars and the very unique commitment that federal activities and permits will be consistent with the different terms and conditions of the federally approved state programs. In return for that yielding to the authority and differing dictates of the various states, the federal government gets the protection of coastal resources and uses the Congress wisely recognized as being environmentally, economically, culturally, and otherwise of critical value to the country as a whole.

DNR and should stop trying to make the ACMP a one-size-fits-all statewide program like most other statutory and regulatory programs.

Now, mirroring the wisdom of Congress the Alaska Legislature in crafting our state program adopted an approach unique among participating states. Authority was further transferred down to the local level...to local districts...recognizing the uniqueness of Alaska, the great size and diversity of our coastal areas, and a certain spirit the makes communities bristle when told by remote decision makers what's best for them...in the same way every Alaska state administration has had reasons at various times to tell federal decision makers in DC, Seattle, or San Francisco to back off when they try to implement general nationwide regulations that may work elsewhere but don't make sense here.

DNR has been wrong when it has testified that the districts are seeking local "control" that would usurp state powers. It's important to distinguish between the ability of districts to adopt local policies, and have those policies approved at the state level...and the districts' role in project reviews. DNR testimony has mixed the two....as it has done with question about traditional and contemporary local knowledge.

At the district plan approval level, districts ought to be able to bring any relevant information in support of a proposed policy to the attention of the Board, including any information understood by local people that may not yet have been formalized in a western scientific report. Sometimes this can be traditional knowledge, passed down through generations. Increasingly, it's critical information about local environmental conditions and trends in the ecosystem. The Board members will not be idiots or sheep. They should and will critically probe the credibility of all information presented in favor and against a proposed policy, and will render their judgment accordingly. This kind of thing occurs all the time in the context of Game Board decisions, where differing local conditions require differing management prescriptions.

When we ask that districts be able to adopt policies that are more specific than one-size-fits-all state statutes or regulations, we are not advocating a wholesale redistribution of state authority to municipalities that would result in rejection of large numbers of projects or the imposition of unattainable standards that would drive development away from entire areas of the state. We are talking about the ability of districts to apply useful local information to proposed development under the specific local environmental and other conditions of their areas, in most cases to IMPROVE the design of projects and REDUCE conflicts earlier in planning processes.

An example would be, for instance, a district seeking a policy requiring that storage tanks of a certain size have 20% more secondary containment capacity than is required under state law if they know and can demonstrate at the plan/policy approval stage before the Board that such added capacity is necessary in the interests of environmental safety because there periodically is heavy local rainfall in the area. It may be that the heavy rainfall can be documented by western scientific evidence, or it may be that local conditions have so changed in recent years that only local contemporary information can be presented. It would be up to the Board, balancing its perception of the credibility of the information, the project's economics, the

ability or lack thereof to retrofit the tanks after construction, and other factors, to decide whether to approve the policy. Everyone, the community, developer, and state agencies, benefit from that kind of local input.

I think it's critical to continually reinforce that districts ARE NOT anti-development, districts ARE NOT trying to attain more influence than we had for most of the pre-2003 history of the ACMP, districts ARE NOT crazy. DNR has been asked for specific examples of districts using their broad and varied pre-2003 policies to significantly delay or halt a problem-free project that was not also being delayed or halted by some other agency under some other regulatory scheme. DNR has been asked if there are a large number of policies that districts have proposed that DNR sees as being .impediments to development in the state. DNR has been asked to identify any such policies. On all counts, DNR has yet to respond to these requests...by districts and your fellow legislators.

DNR has offered misleading testimony regarding districts' implementation of their plans during individual project reviews should this bill pass. DNR has alleged that industry will lack the certainty it needs to operate if different rules apply in different areas. That's already the case, as the oil industry, for instance, operates on both state and federal lands and waters, and in areas governed by the local ordinances of different local municipalities. Industry applicants can read maps. They know where the lines between jurisdictions are. The certainty they seek is in how established rules will be applied over time. They will have that certainty once district policies are approved.

The proposed Coastal Policy Board will play no role in individual project reviews. That was an issue before, with the old Council, but the Legislature solved the problem. There was a concern under the old system that third parties could use district policies by enlisting a few local residents as partners to delay or halt individual projects. The Legislature solved that problem. Nothing in the current bill will reverse those actions of the Legislature.

I want to remind you that "we" in the districts are not some outside group looking to affect development in the state. We are the state. We are your communities. We are your constituents. Under the districting concept, yes, there has been a limited grant from the state to local communities of some real voice and influence when it comes to deciding what is best in their own back yards. That small measure of influence is really important...not just to

the 28 or so active local districts across the state, but to the 150 or more communities and 2/3 of state residents we districts represent.

This bill tries to correct some of the damage that has been done to the program beginning six years ago now. When HB 191 passed in 2003, the Legislature, districts, and all of the residents that legislators and districts represent were assured that districts would be able to adopt meaningful local enforceable policies dealing with a broad range of coastal resources and uses. That simply hasn't happened, and despite years trying to play by the new rules after 2003, districts have been left with a greatly diminished role in the program.

It's been extremely frustrating that despite a couple of years of tremendous good faith effort and expense on the part of districts, the current administration has been slow to restore the program. DNR has testified in previous hearings about a lot of process, but has taken no action, and has revealed no plans, to actually do anything to fix the problems it admits do exist.

Commissioner Irwin gave his personal assurance at the statewide district meeting in Juneau in April of 2007 that DNR would fix what he acknowledged to be a broken program, but nothing was done. It was only when ACMP-related bills were filed in 2008 that DNR announced in February of that year that it would begin a formal reevaluation of the ACMP. Still, the reevaluation did not begin until July 2008. Department officials openly acknowledged that it was the bills that got them to act.

Again, in good faith, many districts put a lot of effort into our participation in the reevaluation. We met for three days in July. We submitted extensive written initial comments in August, attended 4 full-day meetings in September and October, and a 3-day intense meeting in early December to discuss proposed DNR legislation. We scrambled to prepare extensive comments yet again over the holidays, and were told that the goal was for DNR to file a bill at the start of this session.

DNR officials have acknowledged on multiple occasions that there are significant problems with the ACMP. There has been testimony that DNR has not yet reached "consensus", and so hasn't introduced a bill. What does that mean? Who can't reach consensus? Is it a problem within DNR? Between DNR and the Governor's Office? It's never explained. There has

been testimony that some "fix" may be possible short of statutory changes, but that is never explained either.

It's just baffling why, after so much effort on the part of the districts, that DNR cannot clearly explain its intentions with respect to the ACMP. It requires different skill sets to govern and to take pot shots at those who are trying to govern. Despite years of awareness of problems with the program, and the apparent waste of enormous effort on the part of the districts, DNR has offered no solution of its own, and done nothing this session except criticize the bills that others have introduced.

In vague explanation of its opposition, DNR has argued that there are some mysterious legal constraints on the executive branch's ability, either through the agency itself or a newly created coastal policy board, to approve district policies that are more specific than laws passed by the legislature. We think that's ridiculous, and have asked repeatedly for a more detailed legal briefing on the issue. We've seen none. DNR ought to provide for the Legislature and for districts a written legal opinion on this point, or should stop asserting it. No district is looking to adopt policies that conflict with or are preempted by state or federal law. None of us are anti-development, and never used our local plans to advance an anti-development agenda prior to the 2003 amendments. We just want some ability to shape the development that does occur to meet local needs, conditions, and concerns.

I commend Rep. Joule and the others who have sponsored this bill, ask that you move it, and thank you for the opportunity to testify today.

Juneau, Alaska 99810-1182

Re: HB 74 Alaska Coastal Management Program

Dear Representatives Johnson and Neuman:

The City and Borough of Juneau supports the proposed changes to the Alaska Coastal Management Program (ACMP) in House Bill 74. The bill addresses the most serious problems in the ACMP which resulted from major changes to the program in 2003. Specifically, the bill would establish a Coastal Policy Board to provide local input in decision-making; the bill would restore the district role in the program by allowing greater flexibility to develop meaningful local policies; and the bill would bring the Department of Environmental Conservation (DEC) back into the review process.

Background. HB 191, approved by the Legislature in 2003, required revision of local coastal management programs to conform with new statutory and regulatory requirements. The legislature approved the bill with the assurance that districts would be able to retain local policies and a strong role in the program. This has not been the case. The Department of Natural Resources (DNR) has acknowledged that subsequent regulations were more restrictive than the legislature intended. As a result, districts across the state have lost 50-95 percent of their previously approved policies. The Juneau Coastal Management Program (JCMP) was reduced from 99 policies to 16. Twelve of these policies were approved only after a lengthy and costly mediation process with the state.

As an example, Juneau's policy requiring a 50-foot setback from catalogued salmon streams could not be accepted under the 2003 program changes. This policy has support from state and federal agencies, it is accepted by developers, and it is non-controversial. However, the policy cannot be approved in the revised ACMP because it addresses water quality issues covered by DEC, because mapping requirements are too restrictive, and because various other hurdles in the program, including the "important habitat" designation, cannot be met.

The Juneau Assembly and Planning Commission decided to retain important coastal management policies in the city land use code even though those policies were rejected by the state in the ACMP. As a result, local habitat policies are now reviewed through an entirely separate local process rather than through a coordinated process with the state. This adds significant time and expense to applicants, especially if the project description is modified through the course of the local review. Furthermore, it is contrary to one of the major goals of the ACMP, which is to streamline and coordinate review processes for development.

ACMP as a Management Tool. CBJ has formally participated in the ACMP since our local plan was first approved in 1986. We have used the program to develop our local waterfront areas and to expedite development on lower-value wetlands, in addition to protecting certain sensitive habitat areas. Specifically, the JCMP has established Special Waterfront Areas, which are areas set aside for development. These areas have lower habitat standards, and developments must be approved if basic requirements to minimize impacts have been met. The Special Waterfront Area designation has allowed us to develop four major cruise ship ports, a seafood processing plant, the Alaska Marine Highway Ferry Terminal, and many harbors and marine cargo and transport facilities.

Similarly, the Juneau Wetlands Management Plan, a component of the JCMP, categorizes wetlands into high value and low value. JCMP policies on low value wetlands have much lower review standards to expedite development. These standards must be respected by the Corps of Engineers and other reviewing entities who might otherwise take a more restrictive approach to development.

These policies are very important to CBJ and allow local needs for development to be carried forth formally through the ACMP review process. CBJ has a vested interest in a strong local economy. The ACMP has never been used to slow or stop development, only to manage it in accordance with local needs. DNR has never been able to site an example, anywhere in the state, of a halted or delayed project from ACMP. Quite simply, there is no justification for reducing or eliminating the district role in the program. There is every reason to restore it, in accordance with the Alaska State Constitution mandate, for maximum local self-governance.

Project Examples. Legislators from both the House and Senate have requested specific local examples of where coastal districts have been prohibited from participating in project reviews under the current program. An example in the CBJ is the Taku River Tulsequah Barging Project. This barge project would use a combination of shallow-draft river tugs and tracked and tired low ground pressure vehicles to tow or push Air Cushion Barges along the Taku River. This project is controversial because the Taku River is the largest and most productive salmon stream in Southeast Alaska, and the river is heavily used for both commercial fishing and recreational use. CBJ has no local policies in the current ACMP with which to review this project. Under the previously approved JCMP, prior to 2003, CBJ would have reviewed the proposal under four different policies. CBJ has participated in the current review, but our comments are limited to review of the statewide standards. These standards are very limited in scope, and CBJ will not

have deference regarding project conformance with state policies. Local enforceable policies are critical for meaningful participation in this review.

ACMP Re-evaluation. In August through December 2008, DNR conducted a four month re-evaluation effort in response to proposed legislation from the previous session. CBJ actively participated throughout this effort. DNR stated that the goal of the re-evaluation was to address problems with the program and to introduce new legislation at the beginning of the 2009 session. DNR also stated that the goal was not to reach consensus but rather to develop a constructive dialogue. During the stakeholder meetings, participants found many points of agreement and asked DNR to record those points, but DNR declined.

DNR now states that legislation has not been proposed because of lack of consensus, and because program changes may not be necessary. The recent ACMP statewide conference, held in Juneau March 3-5, did not include the re-evaluation effort on the agenda. The stakeholder group and ACMP Working Group discussions on the issue have come to a halt. DNR shows no sign of addressing the serious problems with the program and continues to be resistant to active district participation in the program. This is why CBJ supports the current legislation; it appears to be our best hope of restoring a local role in the program.

How HB 74 Helps Local Districts. HB 74 would allow coastal districts to establish local enforceable policies in the program as long as those policies are not pre-empted by state or federal law and do not interfere with an issue of state concern. It's important to note that with the pre-emption clause, local policies cannot override state or federal authority. Furthermore, all policies must have full scientific support for approval. The changes proposed in HB 74 promote active, meaningful local input, not local control.

The proposed Coastal Policy Board would approve local coastal management programs, approve ACMP regulations, and administer the ACMP grant program. Establishment of this board is critical for restoring balance in the program and a fair review of district policies. As described in the Background section, district plans were drastically reduced by the 2003 changes and DNR has been resistant toward an active district role in the program. The proposed nine-member board would address this imbalance and bring local community representatives back into the decision-making process. The board would not override agency authority because the board would not conduct project reviews, because district policies cannot pre-empt state or federal law, and lastly because the board would have full agency representation.

Restoring DEC's role in the ACMP is equally important to districts. Separating DEC and all air and water quality issues from ACMP reviews has resulted in a fragmented review process for applicants and has once again limited local district policies. CBJ lost many valuable enforceable policies in our local program simply because the policies indirectly addressed water quality. These included such minimum protections as Best Management Practices to control erosion. During one project review regarding gravel mining in a salmon stream, the project was approved through the full ACMP review process and then denied by DEC, which added significant time and expense for the applicant.

In closing, CBJ encourages the House Resources Committee and subsequent committees to move this bill forward. This legislation is critical for restoring a meaningful role for local communities in coastal management and resource development decisions. Thank you for the opportunity to comment.

Sincerely,

Rod Swope

NORTHWEST ARCTIC BOROUGH
RESOLUTION 09-07

A RESOLUTION OF THE NORTHWEST ARCTIC BOROUGH ASSEMBLY SUPPORTING HOUSE BILL 74 (HB-74) AND SENATE BILL 4 (SB-4) REGARDING THE ALASKA COASTAL MANAGEMENT PROGRAM (ACMP)

WHEREAS: The Alaska Legislature is reviewing two bills, HB-74 introduced by Representative Joule and SB-4 introduced by Senator Olson, that would allow coastal districts to propose enforceable policies for coastal uses and resources that address local knowledge of the areas as long as the policies do not conflict with state or federal laws; and

WHEREAS: HB-74 and SB-4 would establish a coastal policy board (CPB) for public involvement in the program and include representation from the Alaska Department of Natural Resources, Department of Fish & Game, Department of Environmental Conservation, Department of Commerce, Community and Economic Development as well as coastal districts; and

WHEREAS: A subsistence way of life is a very important matter of local concern to the Northwest Arctic Borough, but subsistence use areas and subsistence enforceable policies were disapproved by the State of Alaska for the Northwest Arctic Borough's coastal management plan; and

WHEREAS: Governor Sarah Palin made campaign promises to revisit the ability of coastal districts to write enforceable policies, especially for subsistence; during her campaign for governor; and

WHEREAS: HB-74 and SB-4 would bring air and water quality issues back into the coordinated ACMP consistency review process because almost all coastal resources and uses are related to air and water quality and should be considered during project reviews to consolidate efforts and reduce duplication.

NOW THEREFORE BE IT RESOLVED that the Northwest Arctic Borough Assembly supports the legislative changes proposed in HB-74 and SB-4, which would allow coastal districts across the State of Alaska to create meaningful enforceable policies including policies for subsistence uses and resources; and

BE IT FURTHER RESOLVED, that the Assembly supports the proposed legislation as it would restore a Coastal Policy Board (CPB), which would provide a streamlined planning and policy review process with effective public engagement.

PASSED AND ADOPTED THIS 31st DAY OF MARCH 2009.

Honorable Craig Johnson
Honorable Mark Neuman
Co-Chairs, House Resources Committee
Alaska State Capitol
Juneau, Alaska 99801

Dear Representative Johnson and Representative Neuman:

The Prince William Sound Regional Citizens' Advisory Council supports House Bill 74 (HB 74) and urges the Resources Committee to hold a hearing on this important bill. HB 74 would restore the effectiveness to the Alaska Coastal Management Program (ACMP) by bringing the Alaska Department of Environmental Conservation (ADEC) back into the coordinated consistency review process.

The Prince William Sound Regional Citizens' Advisory Council was pleased that the Alaska Department of Natural Resources (ADNR) supported elimination of the "ADEC carve out" in its November 24, 2008 proposed amendments to the ACMP statutes. Although ADNR did not introduce a coastal management bill this session, HB 74 would implement the agency's recommendation to bring air and water quality issues back into project consistency reviews.

We recommend a minor amendment to the bill that would re-establish regional citizens' advisory councils as review participants during project consistency reviews when a project requires an oil discharge prevention and contingency plan. Prior to removal of the ADEC from the ACMP, consistency review process in 2003, the ACMP regulations gave regional citizens' advisory councils special status as a review participant.

Specifically, we recommend changes to AS 46.40.096(d) and AS 46.40.096(q) as detailed below. Although review participants are currently recognized in the ACMP regulations, we believe it would be important to include them to the ACMP statutes with the addition of regional citizens' advisory councils.

Printed on Recycled Paper

Amend AS 46.40.096 (d) as follows:

(d) In preparing a consistency review and determination for a proposed project, the reviewing entity shall

(1) provide an opportunity for review participants to request additional information and request consistency review comments for the proposed project from review participants [STATE RESOURCE AGENCIES, AFFECTED COASTAL DISTRICTS] and other interested parties as determined by regulation adopted by the department;

Add a definition to AS 46.40.096(q):

(3) "review participant" means

(A) a state resource agency, a state agency that has requested participation in a consistency review, an affected coastal resource district; and

(B) if a project includes an oil discharge prevention and contingency plan required under AS 46.04.030, an affected regional citizens' advisory council as established under 33 U.S.C. 2732(d), in addition to the persons listed in (A) of this paragraph.

Thank you for this opportunity to express our support of HB 74. We look forward to the Resource Committee hearings on this bill.

Sincerely,

Donna Schantz

KODIAK ISLAND BOROUGH
RESOLUTION NO. FY2009-21

A RESOLUTION OF THE ASSEMBLY OF THE KODIAK ISLAND BOROUGH SUPPORTING THE LEGISLATIVE AMENDMENTS PROPOSED IN HB-74 AND SB-4 TO RESTORE CERTAIN CHECKS AND BALANCES TO THE ALASKA COASTAL MANAGEMENT PROGRAM (ACMP) THAT FAVOR THE MEANINGFUL PARTICIPATION OF LOCAL COMMUNITIES AND COASTAL DISTRICTS IN THE PROJECT REVIEW PROCESS

WHEREAS, the Alaska Coastal Management Act of 1977 created a sixteen member Alaska Coastal Policy Council (CPC) comprised of seven State-agency heads and nine local elected officials whom the governor appointed from a list of names submitted by local officials in each of nine coastal regions defined in the Act; and

WHEREAS, the CPC, with support of the former Division of Governmental Coordination in the Alaska Governor's Office, was responsible for approving coastal district policies, approving coastal district management plans and hearing appeals from decisions on coastal development projects; and

WHEREAS, the CPC was omitted from the legislative revision of the Alaska Coastal Management Program in 2003 and the statutory and regulatory changes required the Kodiak Island Borough to rewrite its coastal management plan and enforceable policies; and

WHEREAS, the resulting KIB Coastal Management Plan cannot have enforceable policies addressing a resource or subject matter that is regulated by another state or federal agency, leaving very little for the Borough to comment on as project comments are likewise restricted to only those matters for which the KIB has enforceable policies; and

WHEREAS, the Kodiak Island Borough does not regulate environmental factors such as air, water and habitat; however, it would still benefit the KIB to have meaningful and reasonable coastal policies addressing these and other areas of concern as a basis for inter-agency coordination with those state and federal agencies which exercise these authorities; and

NOW, THEREFORE BE IT RESOLVED BY THE ASSEMBLY OF THE KODIAK ISLAND BOROUGH that the Kodiak Island Borough, concurrently acting as the Kodiak Island Coastal District in this matter, supports the legislative changes proposed in HB-74 and SB-4, which would restore a Coastal Policy Board (CPB), in lieu of the former CPC, which would provide a more streamlined planning and policy review process than the former CPC and which would provide balance and intellectual independence from the centralized policy, planning and permitting program administered by the Division of Coastal Ocean Management (DCOM) within the Alaska Department of Natural Resources (ADNR); and

BE IT FURTHER RESOLVED that the proposed legislation would: 1) create a CPB consisting of five public members appointed by the governor including one at-large and one member from each of four coastal district regions which are Northwest, Southeast, Upper Cook Inlet and Southwest; and, four commissioners from the departments of environmental conservation, fish and game, natural resources and commerce, community and economic development, which would be responsible for approving coastal grant allocations, coastal district policies, and approving coastal district plans; 2) would restore the ability of coastal districts to adopt meaningful plan policies even if they involve technical environmental issues or resources regulated solely by a state or federal agency as a basis for local dialogue during project reviews and coordination with those same state and federal agencies which are responsible for regulating said environmental factors and resources; and 3) would restore subsistence use of animal and vegetative resources as a use of state concern in the coastal zone; and

BE IT FURTHER RESOLVED that these bills would promote economic development by bringing local, state, and federal agencies closer together to ensure early resolution of issues related to a development project. Although the Kodiak Coastal District still has a "seat at the table" with state and federal agencies, the currently approved plan policies do not allow any overlap with the regulations or jurisdiction of said agencies, leave very little for the Kodiak Coastal District to comment on because comments can only flow from the districts adopted policies, thereby discouraging local input into the project review process and the minimizing the agency coordination which is intended to be the hallmark of the coastal project review process.

ADOPTED BY THE ASSEMBLY OF THE KODIAK ISLAND BOROUGH
THIS FIFTH DAY OF MARCH, 2009

Rep. Craig Johnson, Co-Chair
Rep. Mark Neuman, Co-Chair
House Resources Committee
Alaska State Legislature
State Capitol (MS 3101)
Juneau, Alaska 99801-1182

Dear Reps. Johnson & Neuman,

We're writing on behalf of the Alaska Support Industry Alliance to urge you to oppose House Bill 74 relating to Alaska's coastal management program.

As you know, the program was reformed in 2003 to address inconsistencies, ambiguities and time-consuming redundancies that hampered resource development projects and discouraged investment. The reforms have worked, without compromising environmental standards. If it's fixed, don't break it.

The Alliance's growing membership now includes more than 460 organizations that provide goods and services to Alaska's oil, gas and mining industries - the industries whose investments not only are the backbone of our state's economy, but also are most susceptible to the regulatory roadblocks embodied in HB 74.

Our members and their 35,000-plus Alaska employees - your constituents - already are suffering the effects of reduced investment driven by the global economic downturn, lower oil prices and an uncompetitive state tax structure for oil and gas. Hundreds of Alaska workers in the industry have been laid off from their jobs in recent weeks; thousands more are vulnerable. Margins of Alaska contractors and suppliers also are being squeezed as oil companies seek to reduce operating and capital costs.

Reps. Johnson and Neuman, don't jeopardize even more Alaska jobs and businesses by recreating regulatory and permitting obstacles in the coastal management program and making Alaska an even less attractive place to invest. We urge you to just say "no" to HB 74. Thank you.

Sincerely,

Jeanine St. John
President

OFFICE OF PLANNING AND COMMUNITY DEVELOPMENT

February 23, 2009

HB 74: House Resources Committee
Committee Co-Chairs: Representative Mark Neuman and Representative Craig Johnson

Dear Representative Neuman and Representative Johnson,

The purpose of this letter is to express my support for House Bill 74 and Senate Bill 4. As the Coastal Coordinator for the Ketchikan Gateway Borough I was fully immersed in the coastal plan amendment process, an extremely lengthy and frustrating experience. Ketchikan's plan was approved in March of 2008. The end result was a watered down plan with very few enforceable policies. The aspects of the plan that the Ketchikan District deemed most important and applicable to the average permittee were relegated to the appendix of the plan, or had to be labeled as "non-enforceable." The proposed legislation contained in HB 74 would restore the ability for the coastal district to establish more meaningful policies that address our local concerns, without duplicating existing state or federal law.

As Coastal Coordinator for the Ketchikan District, I would also like to advocate for the Coastal Policy Board proposed in the legislation. Reinstating the Coastal Policy Board would provide a much needed check and balance system to the Alaska Coastal Management Program (ACMP), and most importantly, offer the coastal districts a seat at the table regarding coastal policy decisions. The board would approve coastal district plans, approve overall grant programs, and approve changes to the ACMP regulations prior to adoption by the Department of Natural Resources. Currently all ACMP decisions and responsibility lies with the DNR Commissioner, not leaving much room for compromise and collaboration from the districts and state agencies.

Lastly, I support eliminating the "DEC Carve-out." It has been extremely confusing to have DEC permits in a separate permit process, as well as inefficient. The proposed legislation would allow DEC to retain authority for air and water quality statutes and regulations, making the permitting process streamlined and easier to navigate.

Thank you for the opportunity to comment.

Sincerely,

Leslie Jackson
Associate Planner

PIONEER
NATURAL RESOURCES ALASKA

March 10, 2009

Representative Craig Johnson, Co-Chair
Representative Mark Neuman, Co-Chair
House Resources Committee
State Capitol
Juneau, Alaska 99810-1182

Re: House Bill 74 – Alaska Coastal Management Program

Dear Representatives Johnson and Neuman:

On behalf of Pioneer Natural Resources Alaska, Inc. (Pioneer), I am writing to express our concern with House Bill 74 – a bill that would significantly alter the existing Alaska Coastal Management Program (ACMP.)

Pioneer is an independent oil and gas exploration and production company headquartered in Dallas, Texas with operations in the United States, Tunisia and South Africa. In Alaska Pioneer operates the Oooguruk Unit on the North Slope and the Cosmopolitan Unit in Cook Inlet. The company also maintains a substantial leasehold position in the state. With first production from our Oooguruk Unit in June 2008, Pioneer became the first independent company to operate a field on the North Slope. Pioneer brought the project online in five years – from exploration wells to first production – an unprecedented timeline for a North Slope offshore project.

In Pioneer's experience, the ACMP isn't broken and does not warrant the substantial overhaul contemplated in House Bill 74. In fact, the successful development of our Oooguruk project under the existing ACMP is a strong endorsement of the current program. Pioneer worked extensively with local, state and federal regulatory agencies and stakeholders to ensure the project was designed to minimize impact to the coastal environment and resources while maximizing its benefits.

Pioneer responded to more than 200 comments, many from local stakeholders, during the state's coastal consistency review and the federal project review. Additionally, the North Slope Borough adopted a "re-zone" ordinance specific to the Oooguruk project which addressed a number of issues of importance to the Borough, including subsistence, Native allotments and cumulative impacts. Finally, the public had multiple opportunities to comment on the project throughout the Alaska Department of Environmental Conservation's (ADEC) processing of Oooguruk's air permit and oil spill contingency plan.

700 G STREET, SUITE 600 - ANCHORAGE, AK 99501 - MAIN 907-277-2700 - FAX 907-343-2190

Working with government regulators and other stakeholders, Pioneer undertook a number of initiatives to ensure Oooguruk did not have a detrimental impact to the coastal environment and resources. Many of these actions were developed to respond to issues and concerns raised during the project's consistency review.

- The company has conducted numerous studies to determine the project's possible impacts to bowhead whales, caribou and fish. We monitor polar bear, caribou, fox and bird activity continually and train our employees to avoid any interference with the subsistence activities of local residents.

- Pioneer designed Oooguruk's development wells on 7ft centers limiting the size of our drilling island to a mere six acres, reducing our need for gravel and minimizing the project's surface footprint. From a six-acre drill site we will develop a subsurface reservoir of roughly 10,000 acres.

- To minimize the potential for leaks produced fluids travel through the project's sub-sea flowline bundle in a pipe-in-pipe design. Sophisticated pressure monitoring allows for precise detection of leaks. The flowline bundle is the first of its kind on the North Slope.

- To accommodate caribou crossings the vertical support members (VSM) used to elevate the onshore section of the project's flowline are 7ft high – the highest VSMs on the North Slope.

Taken as a whole, the ACMP provides a robust regulatory process – one that provides the public and interested stakeholders with meaningful opportunities to engage with project sponsors and helps ensure development in Alaska's coastal zone is done right.

Compared to the current program, House Bill 74 creates an ACMP with significantly broader scope, increased bureaucracy, a number of poorly defined and undefined terms and less schedule certainty for project sponsors. It is unclear whether any of these changes will produce corresponding benefits to the coastal environment. On the other hand, project developers are likely to face increased costs as coastal consistency determinations become more complicated and time intensive.

- *Scope Growth*
  House Bill 74 expands the state's coastal zone into the federal waters of the outer continental shelf as well as lands inland of the coastal zone. This change dramatically increases the program's jurisdiction and increases the uncertainty regarding when and where the program will be applied.

- *Bureaucratic Expansion*
  The legislation creates the Alaska Coastal Policy Board (Board) adding an additional layer of bureaucracy and costing the state hundreds of thousands of dollars annually. The new entity, with limited staff and resources, will assume some of the duties and

responsibilities currently vested in the Alaska Department of Natural Resources (ADNR) and ADEC – state agencies properly equipped to handle the workload.

- *Definitions*
  House Bill 74 adds a new term to the statute – "special management area" – which is defined so broadly as to likely include the state's entire coastal zone. This term is sure to cause disputes among the Board, state agencies and project sponsors over interpretation and applicability. Such disputes will only increase the time and cost needed to conduct a consistency review.

- *Schedule Certainty*
  The legislation removes the time limitations currently used by the resource agencies in issuing consistency determinations for any federal activity or authorization. Since few, if any, development projects in Alaska's coastal zone do not require at least one authorization from a federal agency, the practical effect of this language is to eliminate schedule certainty for essentially all proposed projects.

  Additionally, the bill sets aside a provision in the current program which specifies the air, land and water quality standards administered by ADEC constitute the standards for the purposes of the ACMP. Elimination of this provision will require ADEC permits to undergo consistency review leading to possible disagreements regarding interpretations, as well as project delays due to the significant lead times associated with many ADEC permits.

The net effect of the changes proposed in House Bill 74 will be to increase the cost, complexity and time needed for a project sponsor to acquire a consistency determination. Making the regulatory process in Alaska more burdensome sends a negative signal to prospective investors particularly if there are not clear corresponding benefits to the coastal environment and resources. Today at Oooguruk, Pioneer operates under roughly 250 permits and authorizations issued and enforced by more than a dozen different local, state and federal agencies. We do not believe the facts warrant a more expansive and complicated ACMP.

Put simply, the current program is not broken. In fact, proponents of the legislation have not been able to identify a single project authorized under the current system which they believe to be inconsistent with state or coastal district standards. Meanwhile, projects like Oooguruk stand as testament to the balance and success of the current system.

The concerns of coastal zone stakeholders are important and their participation in the permitting process helps assure development is done right. Pioneer's experience with the current ACMP program has been largely positive. The program is a critical piece in the state's regulatory regime and it successfully balances rigorous permitting standards and public access with a process that is reasonably efficient from the standpoint of project sponsors. Pioneer does not see a need for the substantial changes proposed in House Bill 74 and we do not support moving the bill forward.

Thank you for your consideration of our position on this important issue. Please feel free to contact me if I can answer any questions or provide you with additional information.

Sincerely,

Tadd Owens
Director, Government & Public Affairs

Alaska Republican Party
Resolution # 2009-A

TITLE: Support for the Current Alaska Coastal Management Program (ACMP)

POSITION STATEMENT: The Alaska Republican Party strongly supports retaining the current Alaska Coastal Management Program (ACMP) because it provides concise and predictable permitting for business development opportunities in Alaska's coastal zone. Any modifications to the ACMP should reflect the following principles: clarity in the applicability and scope of consistency reviews, procedural streamlining, non-duplication of state and federal laws and regulations in local district policies, limited locally-designated areas based on special or unique local conditions, and "carve out" of the Alaska Department of Environmental Conservation (ADEC).

SUPPORT FOR POSITION:

1. After the ACMP program was first adopted in 1978, federal and state environmental laws and regulations evolved, becoming more rigorous, thus making the scope of consistency reviews, statewide standards and district enforceable policies redundant or duplicative. Conflicting requirements between ACMP and state and federal programs also created numerous complexities in complying with the program.
2. The ACMP program underwent a complete and thorough review in 2003 that resulted in several changes removing many of the obstacles for the business community by establishing clear triggers for applicability, identifying the information necessary for a complete application and setting clear deadlines for requesting additional information, establishing applicable standards for consistency reviews, and establishing firm deadlines for completion of consistency reviews.
3. One of the most significant permit streamlining benefits in the 2003 changes is what is known as the "ADEC carve out" which provides that ADEC's air, land, and water quality standards are the exclusive standards of the ACMP. This means that ADEC's standards adequately address those regulatory matters, and coastal districts may not establish any enforceable policies that lie within the regulatory purview of ADEC's environmental programs.
4. Additionally, the current ACMP program establishes clear boundaries on the scope and subject matter of statewide policies and district enforceable policies. The program requires coastal districts to focus their enforceable policies on "matters of local concern", which need to be appropriately justified in clear and concise language.
5. Maintaining the current ACMP program is supported by many in the regulated community, including the oil and gas industry, mining industry, and several Native corporations.

ACTION REQUIRED for the POSITION:

Alaska Republican Party members will work with the regulated community in evaluating any proposed statutory and/or regulatory changes to the ACMP program to ensure the core principles described above are retained. Potential involvement may include, but not be limited to, testifying at public hearings, submission of written comments and devoting public forum and/or publication space to provide information about the ACMP.

February 3, 2009

Senator Donny Olson
Alaska State Legislature
State Capitol, Room 514
Juneau, Alaska 99801

Sent by fax: _____

RE: **SB 4 Alaska Coastal Management Program**

Dear Senator Olson:

Thank you for pre-filing SB 4 about the Alaska Coastal Management Program (ACMP). I understand the Senate Community and Regional Affairs Committee will be considering adopting a committee substitute similar to the version of this bill in the House. The North Slope Borough (Borough) supports the committee substitute because it will restore meaningful local involvement in the ACMP, implement checks and balances and streamline project reviews.

The Borough appreciates the sections of the proposed committee substitute that clarify the ability of coastal districts to establish enforceable policies, especially the provisions in AS 46.40.030 and 070. While the 2003 legislative changes to the ACMP allowed coastal districts to establish policies for matters not adequately addressed by state or federal law, many of our proposed enforceable policies were denied on the basis that they addressed an agency's authority. We made an extra effort to focus our proposed policies on matters that were not addressed by existing laws, but still they were denied.

The committee substitute for SB 4 would restore checks and balances to the ACMP by establishing the Coastal Policy Board. This body would represent coastal districts and state agencies. It would be responsible for approving changes to ACMP regulations, amendments to coastal district programs and overall grant programs. This body is similar to the former Coastal Policy Council except that it has fewer members and it is not responsible for project consistency reviews. Restoring the responsibility for project elevations to the three state resource agencies will ensure these agencies have a seat at the table.

The Borough also supports the sections of the proposed committee substitute that streamline project reviews. The ACMP used to be an effective program that resolved issues among local, state and federal agencies, but changes to the program statutes and regulations reduced its effectiveness. Bringing the Alaska Department of Environmental Conservation back into the consistency review process will bring air and water quality issues back into ACMP project reviews. Likewise, allowing coastal districts to have meaningful policies will encourage their participation in the coordinated consistency review process. These changes will streamline project reviews because issues can be resolved early in the process by all parties. The changes will also encourage permitting agencies to ensure their permit stipulations are compatible and reasonable.

Again, the North Slope Borough thanks you for introducing SB 4, and I look forward to testifying on this bill as it moves through the committee process.

Sincerely,

Edward S. Itta

Good Morning

My name is Karol Kolehmainen and I am the Program Coordinator for the Aleutians West Coastal Resource Service Area. I am here today to bring testimony from my elected seven member Board of Directors which is largely in favor of HB74 as I will describe. The AWCRSA Board represents the entire western Aleutian area from Unalaska Island west to Attu Island, an area that is 20 to 60 miles in width and roughly 1000 miles long. This area, bounded by the Pacific Ocean to the south and the Bering Sea to the north, has a wealth of natural resources including some of the richest fishing grounds in the state.

We are here today because HB 191 mandated significant changes to the Alaska Coastal Management Program and our local district program. I would like to provide a brief overview of our current coastal management plan. The AWCRSA coastal management plan became effective February 11, 2007. Of the 44 enforceable policies we had at the beginning of the revision process, 10 remain. We no longer have any habitat policies, mitigation policies, or policies that mention air, land, or water quality. Also, we have designated subsistence use areas but no enforceable subsistence policies. Many of our previous enforceable policies have been moved to an unenforceable appendix and classified as "advisory" policies.

The ACMP prior to the passage of HB 191 was a networked program where local reviewers were on a par with state and federal reviewers. Following passage of HB 191 the program became centralized in DNR. We do not feel that it was the intent of HB 191 to silence the local voice or result in a disconnected program but it has had this effect. Passage of HB 74 will return us to a more meaningful position within a networked program.

The AWCRSA is in support of a Coastal Policy Board that incorporates the positive aspects of the former Coastal Policy Council. HB 74 accomplishes this by creating a policy board that includes representation from the coastal districts, the resource agencies and the DCCED Division of Community and Regional Affairs. We agree that the Board's mission should include the ability to approve local district plans, program related funding, and especially program and regulatory changes. We also agree that the Board would not be responsible for consistency reviews and would not hear elevations but rather they would be heard within a review panel of the resource agencies and not solely by the DNR Commissioner as is now the case. The new Board would serve as a public forum that should result in more public involvement and a more equitable decision making process. Also, it would provide an outreach component that is sorely lacking in the post HB 191 amended program.

The DEC carveout has confused the consistency review process especially where the scope of the project requires permits from more than one agency. The removal of the DEC has been interpreted as the removal of any matter relating to

air, land, or water quality through the program implementing regulations. As I stated earlier, it became impossible to craft any acceptable policies related to air, land or water quality or that even mentioned the words air or land. This negated not only policies that were clearly within regulation of DEC but also policies related to habitat that might touch on water issues. The return of DEC to the coordinated ACMP program is integral to a meaningful program and the AWCRSA Board supports the inclusion of DEC in the networked ACMP.

The AWCRSA does not support the change made in Sec 46.40.190 relating to cooperative administration. The proposed wording has totally reversed the meaning of the paragraph and has the potential to undermine the existence of CRSA's. We request that the original wording be retained.

Time has shown that not all of the changes required by HB191 have worked and we appreciate the sponsor's efforts to address the problems in the current program. Passage of HB 74 will go a long way to restore the role of coastal districts in the ACMP, increase public involvement and oversight, and bring consistency reviews back into a coordinated and networked program.

Thank you for your time.

Program Director

Honorable Representative Reggie Joule
Capitol, Room 502
Juneau, Alaska 99801

Re: SB 4 and HB 74 Alaska Coastal Management Program

Dear Senator Olson and Representative Joule:

The Northwest Arctic Borough (NWAB) would like to thank you for the introduction of SB 4 and HB 74 on the Alaska Coastal Management Program (ACMP). On behalf of the Borough, I would like to address the substance of HB 74 because we understand the Senate Community and Regional Affairs Committee will consider adoption of the provisions of HB 74 into a senate committee substitute.

The NWAB supports the proposed legislation that would restore the ability of coastal districts to effectively participate in the program and establish meaningful policies under the ACMP; therefore providing valuable local input to development that happens in a very large and unique state. Another important provision in the bills would establish a board made of Alaskans to oversee the major aspects of ACMP as a publicly funded program. The proposed board would jointly represent state agencies and local coastal districts thereby restoring effective public engagement in the ACMP.

Currently, only the Alaska Department of Natural Resources (DNR) as a single agency makes all coastal management decisions. This has proved to be very one-sided and frustrating. For example, as you may know, during 2008 the NWAB attempted mediation with DNR to improve the decisions regarding our coastal management plan. Unfortunately, the mediation ended in an impasse with the majority of the proposed plan flat out denied. According to the

NORTHWEST ARCTIC BOROUGH

P.O. Box 1110

Kotzebue, Alaska 99752

(907) 442.2500 or (800) 478.1110

Fax: (907) 442.3740 or 2930

ACMP now, our only re-course for a fair review is again to go back to the DNR commissioner for re-consideration of a decision that has already been made by the commissioner and his staff. As you can see, the ability to obtain a third party review that involves the public is not possible under the current program, and the new provisions in this bill will help prevent such a future problematic situation and provide state staff the clear criteria and direction for approval of coastal district policies with involvement of the coastal policy board.

The NWAB also supports the addition of subsistence to the ACMP objectives in AS 46.40.020. Until changes made by the Murkowski Administration, the ACMP has been an effective tool balancing resource development and protection of our coastal resources that support healthy subsistence. It is very important that Alaskans have the ability to propose local policies that demonstrate the real life connection of people and communities to coastal areas and actually reflect the close relationship Alaskan residents have to this land, the coastal zones and our valuable subsistence way of life. For the NWAB, the ability to cooperatively work with developers and the state to address subsistence impacts is the primary reason for participating in the ACMP so that development honors our long-time and permanent Alaskans lifestyles.

We also support provisions in the bill that would bring activities covered by the Alaska Department of Environmental Conservation back into the ACMP consistency review process. Impacts to air and water quality also affect habitat and subsistence, and it makes sense to address these issues together in a consolidated format during a single consistency.

The NWAB encourages responsible development of our natural resources. We recognize the economic importance of development in providing new revenues to fund local public services and facilities, and to provide steady employment opportunities in rural areas. However, it is important that local coastal districts have a role in voicing valid concerns and potential impacts to subsistence and other coastal uses and resources - all to ensure that we are doing resource development the right way.

In closing, these bills restore a meaningful role for coastal districts to facilitate effective future development opportunities. I appreciate your interest in improving the ACMP, and I look

Re: **Alaska Coastal Management Program Re-Evaluation**

Dear Mr. Bates,

Ukpeagvik Inupiat Corporation (UIC) was created under the Alaska Native Claims Settlement Act (ANCSA) in 1972 to serve the social and economic interests of the Native Village of Barrow, Alaska, the northern most coastal village in the United States. In light of expanding resource exploration and development both onshore and offshore in our region, the UIC Board of Directors has developed the following policy statement:

> *In our interactions with the oil and gas industry, we will leverage our position to benefit the Ukpeaġvik Iñupiat Corporation Family of Companies, its shareholders and the community. We acknowledge the inevitability of exploration and development by the oil and gas industry and we will support exploration activities as long as they are done in a way that ensures:*
>
> - *Protection and preservation of the Iñupiat culture and subsistence lifestyle*
> - *Economic benefit for our community*
> - *Employment for our shareholders and their families, and*
> - *Contract opportunities for our companies*

UIC shares the interests of the North Slope Borough, as our coastal district governing body, to create a robust and growing industrial sector in Alaska's arctic. UIC also shares an interest in protecting our Inupiat customary and traditional way of life through local participation in project planning by implementing sound environmental regulations and policies under a flexible and reasonable Alaska Coastal Management Program. UIC is favorable to empowering local coastal districts to enforce locally driven environmental policies through a predictable and streamlined public process under the expertise of a coastal management plan.

Each coastal district or region in Alaska is so unique and special both geographically and ecologically, it makes sense to empower well thought and reasonable district specific enforceable policies to help guide project development beyond general state and federal regulations. For example, a local policy that fits the needs of Cook Inlet or Southeast communities, such as pipeline setbacks, cannery operations, cruise industry ports of call, general water use and waste discharge, or tank farm requirements, may not apply similarly in the unique arctic environment.

Before 2004, the original statutes and regulations of ACMP worked moderately well, allowing coastal districts to participate and include local expertise in the permitting process. With a few procedural modifications to the older, pre-2003 system, such as a streamlined Coastal Policy Board, as envisioned in

the North Slope Borough (NSB) recent recommendations, we believe the ACMP can achieve the intent of the Coastal Zone Management Act and the intent of the Alaska Constitution to maximize local control and governance.

UIC believes future statutory language should support an ACMP regime that allows multiple agencies such as DNR, DEC, ADF&G, and DCCED to participate in a meaningful consistency review. This broad challenge requires well defined language that should reflect flexible regulatory structure so as not to create the potential for arbitration and delay. If piecemeal decision-making is framed by restrictive state policy and tedious legislative review, higher probability for arbitration and delay of important commercial activity will result from special interest group interpretations of the environmental regulations governing proposed coastal economic development projects.

UIC believes sound natural resource management and environmental conservation are best served under "performance based policies", innovative solutions driven, flexible, and incorporating predictable regulations that guide industrial development – dispelling notions that local policies should apply only to specific designated areas and resources. This philosophy recognizes potentially large shifts in ecology and subsistence resource migration, which in turn defines public access and uses of resources, especially in light of climate change, global warming, arctic sea ice retreat, and cumulative industrial growth.

UIC is economically dependant, in large part, on a healthy oil and gas industry, but we are also dependant on a healthy arctic marine ecosystem which supports the Inupiat subsistence way of life. As a critical stakeholder in the ACMP regulatory process we thank you for this opportunity to comment on the ACMP reevaluation.

Respectfully submitted,
UKPEAGVIK INUPIAT CORPORATION

February 20, 2009

Honorable Bob Herron and Honorable Cathy Munoz
Co-Chairs House Community and Regional Affairs Committee
Capitol, Room 415
Juneau, Alaska 99801

Dear Co-Chairs Herron and Munoz:

The City of Pelican wishes to support House Bill 74 which would improve the Alaska Coastal Management Program (ACMP). Changes made to the program in 2003 have reduced the effectiveness of the ACMP.

As a mayor of a small rural coastal community, I see first-hand the onerous Federal and State Environmental reviews and permitting processes. These bills would allow coastal districts to establish meaningful enforceable policies, but in my opinion, they would not lead to significant additional burdens for project applicants because coastal districts need economic development.

The City of Pelican supports creation of the Coastal Policy Board. This board would lead to a better balance in decisions because it would represent state agencies and coastal districts. Nothing in the proposed legislation would allow the board to overrule agency decisions.

We also support integration of the Department of Environmental Conservation into the ACMP consistency review process.

Thank you for the opportunity to comment on House Bill 74.

Sincerely,

Patricia Phillips

Marilyn Crockett, Executive Director

ALASKA OIL AND GAS ASSOCIATION
TESTIMONY ON
HB 74 – ALASKA COASTAL MANAGEMENT PROGRAM
BEFORE
HOUSE COMMUNITY & REGIONAL AFFAIRS COMMITTEE
FEBRUARY 10, 2009

Mr. Chairman and Members of the Committee: My name is Marilyn Crockett and I am Executive Director of the Alaska Oil and Gas Association (AOGA). AOGA is a private, nonprofit trade association whose 16 member companies account for the majority of oil and gas exploration, development, production, transportation, refining and marketing activities in Alaska.

Because virtually all operations of the members of AOGA take place within, or adjacent to, Alaska's coastal zone, we have been actively engaged in development and implementation of provisions of the Alaska Coastal Management Act (ACMA) and the subsequent Alaska Coastal Management Program (ACMP) since the program's inception in 1977. We provide these comments today as part of our ongoing involvement in deliberations related to this program.

Over the last 30 years there has been a significant evolution in federal and state environmental laws and regulations. In the late 1990s and early 2000s it became clear that the ACMP had become unmanageable in terms of process and scope, leading to confusion, misinterpretations and significant delays in processing permits, largely due to the significant evolution of environmental laws and regulations. The revisions to the program adopted by the Legislature in 2003 resolved these challenges and transformed the program into one that provides certainty for the State, local districts and the regulated community.

Unfortunately, HB74 as currently drafted effectively eliminates the certainty put into place by the Legislature in 2003. I will address a few specific examples.

Elimination of the "DEC Carve Out": One of the most problematic provisions of HB74 is elimination of the DEC Carve-out. This provision in existing law implements the original intent of the ACMP...that the air, land and water standards and permits administered by the State are inherently consistent with the ACMP and therefore the additional step of securing a consistency determination isn't necessary or required. These standards were developed after years of technical evaluation, and are implemented through permits that are

comprehensive and time-consuming, carrying with them statutory and regulatory requirements for extensive public comment, the time periods of which fall outside of the ACMP review schedules. The ADEC carve-out in no way diminishes a coastal district's opportunity to comment and provide input on a specific ADEC permit application.

As experienced in the program prior to the 2003 revision, elimination of the carve-out will result in consistency determinations on projects being held up until permits with long lead times are finalized, resulting in considerable delays in projects moving forward and a tremendous amount of uncertainty as to final approval for applicants to move forward.

Simply put, the ADEC carve-out avoids duplication of process and effort, eliminates the potential for inconsistent and conflicting permitting results, and improves the efficiency of the consistency review process.

Creation of a Coastal Policy Board: We are very concerned about the establishment of the Coastal Policy Board and the extensive responsibilities that will be vested with this Board. HB74 empowers the Board to approve all district programs and enforceable policies, changes to the coastal zone boundaries, statewide standards and changes to the program. The Department of Natural Resources may still adopt regulations, but only after approval of the Board, which will result in endless back-and-forth as DNR attempts to mesh its requirements under the Administrative Procedure Act with Board approval.

Further, experience under the previous Coastal Policy Council demonstrates that insertion of a Board into this process will result in considerable delays in program implementation because of the time required for action, given the infrequency of Board meetings, and the addition of another layer of approvals.

Predictability in timelines is eliminated: One of the most challenging aspects of any permitting program is the ability to rely on timelines for decision-making. This is especially true for operations in Alaska which often are faced with limited operating seasons where a delay in securing permits may result in a one-year delay in a project proceeding forward. Unfortunately, HB74 exempts activities proposed by a federal agency and activities permitted by a federal agency from the required deadlines for decisions. Virtually every project requires at least one federal permit, so the impact of this provision is dramatic. Further, oil and gas and other resource development activities are not the only activities that will be affected. Given the abundance of wetlands in Alaska's coastal zone, almost any activity, from homebuilding to construction of public facilities, will require a permit from the federal Corps of Engineers and therefore will be subjected to this timeline uncertainty.

Performance based enforceable policies are allowed: HB74 allows coastal districts to adopt performance-based enforceable policies. Applicants and districts are better served by clear and concise requirements because it eliminates the potential for misinterpretation and disagreements between parties as to whether a particular action proposed by the applicant will meet the performance based policy. Further, this will be especially challenging for districts with minimal resources to administer the program.

The coastal zone boundary will be expanded: HB74 expands the reach of review of activities from not only the coastal zone but also to "inland of the coastal zone if the activities would cause direct and significant impacts to a coastal use or resource". During testimony at last week's hearing on SB4 we heard a coastal district representative state that it is their desire to weigh in on projects adjacent to their district even if it means "over the mountain". Such an expansion of the coastal zone boundary was never envisioned by the federal Coastal Zone Management Program or the State Program. This is another example of the uncertainty that faces project applicants in trying to determine whether their project is in or out of the ACMP.

To be successful and serve all entities in Alaska, any permitting program, and in particular the Alaska Coastal Management Program, must embody the following principles:

- Provide for development of Alaska's resources for the benefit of all Alaska residents
- Contain clear and concise requirements
- Be unambiguous and avoid opportunities for misinterpretation
- Provide predictable and firm timelines
- Provide predictability regarding applicable requirements and scope
- Avoid duplication of other state and federal permitting programs
- Contain clear limits so that district policies not require agencies to implement authorities that were not granted them by the legislature or that contradict agency regulations.

At the end of the day, the challenge before you is achieving the necessary balance between development of state-owned resources for the benefit of all Alaskans while protecting unique coastal resources. We believe the program in place today strikes that important balance.

Thank you for the opportunity to testify this morning.

RE: Proposed Senate Bill No. 4
An Act Relating to the Alaska Coastal Management Program (ACMP)
Establishment of the Alaska Coastal Policy Board
State Statutes AS 46.39 and AS 46.40

Dear Senator Olson:

ConocoPhillips Alaska, Inc. (CPAI) has prepared this formal response to proposed Senate Bill No. 4, an act relating to the Alaska Coastal Management Program (ACMP) and establishment of an Alaska Coastal Policy Board, and offers the following comments for your consideration.

Retention of the Current Program

CPAI has been, and remains, a supporter of the centralized ACMP process which resulted from the passage of House Bill (HB) 191 in 2003 and was later implemented by regulations and statutory amendments. In 2003, the Alaska Legislature concluded that "the Alaska coastal management program (ACMP) is intended to function with a minimum of delay and avoid regulatory confusion, costly litigation, and uncertainty regarding the feasibility of new investment." In addition, the legislature stated that statewide standards "be clear, and concise and provide the needed predictability as to the application, scope, and timing of the consistency review process of the program."

Proposed changes in Senate Bill (SB) No. 4 would allow districts to restrict selected activities within their coastal district; these activities will undoubtedly involve uses of state concern and/or may involve matters already adequately addressed by existing regulatory programs. Decision-making authority concerning the management and use of state resources vests with the State.

The current program's approach eliminates enforceable policies which may be conflicting between coastal districts, state, and federal agencies, and which could result in a loss of

conformity of district policies that currently exists in the ACMP program. The existing statewide standards provide clear and concise predictability to the ACMP process. Coastal districts are still afforded the ability to propose enforceable policies that conform to the district plan approval criteria and requirements outlined in 46.40.040 and 46.40.070; or those that are not duplicative, restate existing state or federal policies, and do not redefine, replace, or otherwise modify existing standards. From an applicant's perspective, the retention of the centralized ACMP will provide applicants with assurances of an efficient permitting process.

Elimination of the Alaska Department of Environmental Conservation (ADEC) Carve Out (AS 46.40.040 and 46.40.096)

CPAI believes the ADEC carve out should be retained in its present form and the carve out should not be eliminated from the ACMP program. CPAI believes there is significant misunderstanding by many stakeholders on this matter. Approvals for air, water, and C-Plan permits require public notice and public comment periods which allow for public input. The public notice and comment periods for these permits were not negatively affected by carving out the ADEC permits. Timelines associated with these approval processes are at least six months in duration, far longer than the existing 50- to 90-day ACMP coordination process. In addition, the timelines for public participation do not align with the intent or the process of the ACMP program which is one of thoughtful timely coordination and decision-making.

Eliminating the ADEC carve out will re-introduce conflicting regulatory mandates between ADEC and the ACMP process, and will delay the start of the consistency review process. Adequate public participation and opportunities for review by coastal districts is provided in the existing program. Adequate environmental protection is being provided by ADEC, regardless of whether or not their approvals are part of a consistency review process.

In closing, as we look at the substantial nature of the changes proposed in SB 4, we ask the question: Why? Since the passage of HB 191, have resource development projects been permitted by the state where a coastal district's input and concerns have not been accommodated? Is this change going to help motivate resource development projects in this state? We suggest that the current program is working as intended and changes are neither necessary nor desirable.

Sincerely,

Dale Summerlin

February 9, 2009

Honorable Reggie Joule
Alaska State House
Capitol Building
Juneau, AK 99801

Re: House Bill 74, Changes to Alaska Coastal Zone Management

Dear Representative Joule,

The mining industry has been involved in the Alaska Coastal Zone Management Program (ACMP) for many years. Several companies have raised concerns regarding House Bill 74 and its companion SB-4. They agree that ACMP is not working well but they cannot support the changes being proposed in HB-74. The bottom line is that this bill would create an administrative quagmire for the state permitting process and would create tremendous uncertainty for all permittees.

As proposed by HB-74, the coastal districts would be in charge of the program and control what is done. In this situation, the coastal districts would be in a position to set the rules and enforce them without accountability to the Legislature or the Administration. The bill would re-establish the Coastal Policy Council (calling it the Coastal Policy Board) with 5 public members and 4 state agencies (DNR, DF&G, DEC, & DCEED). The governor would choose the public members but must select them from a list supplied by the Coastal Districts. The effect is that the districts would control the outcome of the selection process. This is not a good situation for ACMP or any other public policy issue.

Further under HB-74, the Coastal Policy Board (CPB) would approve or disapprove all plans and regulations. If the board feels that an agency is not interpreting the policies the way they want, it would have the authority to order the agencies to change, irrespective of State statue or regulation. The CPB would thereby effectively have authority over both the Legislature and the Administration.

HB-74 would also eliminate what has been called the DEC "carve-out". It would allow districts to interpret state statutes and regulations relating to air quality, water quality, solid waste disposal, water injection, land issues, sanitation, food service, public health, etc. Many of these statutes and regulations have been developed over many decades of detailed technical evaluation by the agency and through a tremendous amount of public process and input. Others are nation-wide standards developed over many years by federal government scientists at the cost of millions of dollars. The coastal districts do not and will not have the technical expertise to fully evaluate these issues.

3470

something the legislature has not given them, the district could simply write it themselves and DNR, DF&G, DCEED would have to comply.

A second conclusion is that many of the examples mentioned above would raise constitutional questions. Because the CPB has the authority to go beyond state law, the bill has the effect of delegating legislative law-making to a public-dominated board. This delegation is not constitutionally allowed. Similarly, it removes interpretation of state regulations from the administrative branch — where the interpretations constitutionally belong — and gives this authority to the CPB. While some of these constitutional issues existed before passage of HB-191 in 2003 (specifically the homeless stipulations), HB-74 greatly magnifies and expands these legal problems.

A third conclusion is that the bill essentially does away with the concept of state interest. There are some decisions — whether and how a gasline should be constructed, expansion of the railroad, even oil development on the North Slope — that should be decided by the state, without a veto by local authorities. It is critical that local land-use issues and local concerns be taken into account by the permitting agencies, but some issues affect the entire state and must be determined on a state-wide basis. HB-74 essentially does away with this concept.

A final conclusion is that the changes proposed would create tremendous uncertainty for the regulated public. There is no way to escape a great deal of uncertainty as individual coastal districts have the final say in what was previously agency matters.

Thank you for the opportunity to address our concerns to you.

Sincerely,

Steven C. Borell, P.E.
Executive Director

ALASKA MUNICIPAL LEAGUE
Alaska Conference of Mayors

217 Second Street, Suite 200 • Juneau, Alaska 99801

February 9, 2009

Representative Cathy Munoz
Representative Bob Herron
State Capitol
Juneau, Alaska 99801

Dear Representative Munoz and Representative Herron,

The Alaska Municipal League would like to go on record in support of HB 74 and SB 4. These bills would serve to resolve some of the major problems that communities and the State continue to deal with after the changes made to the ACMP statutes back in 2003 and 2004.

These bills would specifically establish and Alaska Coastal Policy Board to represent coastal districts, as well as the commissioners of Natural Resources; Fish & Game; Environmental Conservation; and Commerce and Community Development.

The Alaska Municipal League, first and foremost, supports a strong district role in decisions made about and for specific districts within our state.

It is important that local voices be heard when decisions are made about local areas.

Sincerely,

Kathie Wasserman

Kathie Wasserman
Executive Director

Testimony of Steve de Albuquerque
Health, Safety & Environmental Director
ConocoPhillips Alaska
House Community & Regional Affairs Committee
HB 74
February 10, 2009

Mr. Chairman, members of the House Community & Regional Affairs Committee, good morning. My name is Steve de Albuquerque and I am the Director of Health, Safety & Environment, for ConocoPhillips Alaska. My group is responsible for all local, state & federal land use and environmental permitting for ConocoPhillips operations in Alaska.

Mr. Chairman, ConocoPhillips respectfully opposes the passage of HB74. Simply put, we do not think ACMP legislative reform is needed at this time and question the need for the significant changes proposed by HB74. During testimony last week on Senate Bill 4, we heard coastal districts say many times that these proposed changes to the ACMP will streamline the permitting process and save applicants time. As the person in charge of permitting for the state's largest oil & gas explorer, developer and producer, let me assure you Mr. Chairmen that this simply would not be the case.

This morning I'd like to focus my comments on three areas:

1. The existing ACMP permitting process;
2. The creation of the Coastal Policy Board; and
3. Retention of the Alaska Department of Environmental Conservation carve out.

The Existing ACMP Process:

Alaska is one of the most complex and rigorously regulated permitting and business environments in the world. We work very closely on a daily basis with local, state, and federal agencies, as well as private landowners, native village and regional corporations, communities and the public to seek input on our permit activities.

While we have heard the frustration expressed by the coastal districts with the way the 2003 statutory changes were implemented, we cannot point to a single example, with respect to our projects, where any district's input or concerns were not adequately addressed in the project decision. We work closely and well with the coastal districts and the Administration. In my four years serving as permitting director for ConocoPhillips under the revised program, I can't think of an instance where we and the coastal districts were not able to satisfactorily resolve an issue.

In 2003, the Alaska Legislature concluded that "the Alaska coastal management program is intended to function with a minimum delay and avoid regulatory confusion, costly litigation, and uncertainty regarding the feasibility of new investment." Furthermore, the legislature said that statewide standards must be "clear, concise, and provide the needed predictability as to the application, scope, and timing of the consistency review process of the program." This is the streamlined process we have today. From the applicant's perspective, the ACMP process as we know it today provides the assurances of an efficient permitting process. Existing statewide standards are clear and concise. We are able to establish relatively firm timelines.

Coastal districts are afforded the ability to propose enforceable policies that conform to the district plan approval criteria and requirements. Districts can also propose enforceable policies that are not duplicative, do not restate existing state or federal policies, and do not redefine, replace, or otherwise modify existing standards. In contrast, this bill would allow districts to restrict selected activities within their coastal district; these activities will undoubtedly involve uses of state concern and would involve matters already adequately addressed by existing regulatory programs. Decision-making authority concerning the management and use of state resources vests with the State. The current approach avoids enforceable policies which may be conflicting between coastal districts, state, and federal agencies, and which could result in a loss of conformity of district policies that currently exists in the ACMP program.

If there is one take-away for the Committee Mr. Chairman, ConocoPhillips simply desires a clear and consistent permitting process. We just want to be clear on the rules and be in a position to accurately estimate time lines. As you know, resource development in Alaska already is burdened with many seasonal constraints and uncertainties. We have short winter drilling and work windows as well as limitations on logistics and restrictions on travel to protect tundra, wildlife and subsistence activities. Our work is extremely time-sensitive. From an applicant's perspective, the existing process provides applicants with a coordinated review and approval process and assurances of an efficient, predictable and timely permitting process.

The Creation of the Coastal Policy Board:

ConocoPhillips thinks the creation of a Coastal Policy Board is unnecessary and would unduly complicate the program add another layer of complexity. The current program provides clear, concise and consistent statewide standards for resource development activities in Alaska. The existing process prevents conflicts in the regulatory process and provides applicants and stakeholders with assurances of an efficient permitting process. The creation of a Policy Board, with approval and decision-making authority, could lead to an inconsistent permitting landscape.

From the public comment and input perspective, interested stakeholders currently have ample opportunity to review and comment on proposed projects during the mandated public comment periods associated with obtaining local, state, and federal permits. Applicants must comply with municipal codes, enforceable policies, statewide standards, and existing state and federal regulations to obtain final approvals for any proposed project.

Retention of the Alaska Department of Environmental Conservation Carve Out:

ConocoPhillips does not support elimination of the ADEC carve out. We believe there is significant misunderstanding by stakeholders on this matter. Approvals for environmental permits, air and water included, and oil spill contingency plans have well-documented and clear public notice and comment requirements which allow for public input. The public notice and comment periods for these permits have not been negatively affected by carving out the ADEC permits. Again, the current process works well.

Eliminating the ADEC carve out will re-introduce conflicting regulatory mandates between ADEC and the ACMP process, and will, as in the past, delay the start of the consistency review process and overall project timelines. Adequate public participation and opportunity for review by coastal districts is provided in the existing streamlined program. It is important to note that adequate environmental review and protection is being provided by ADEC as part of the consistency review process.

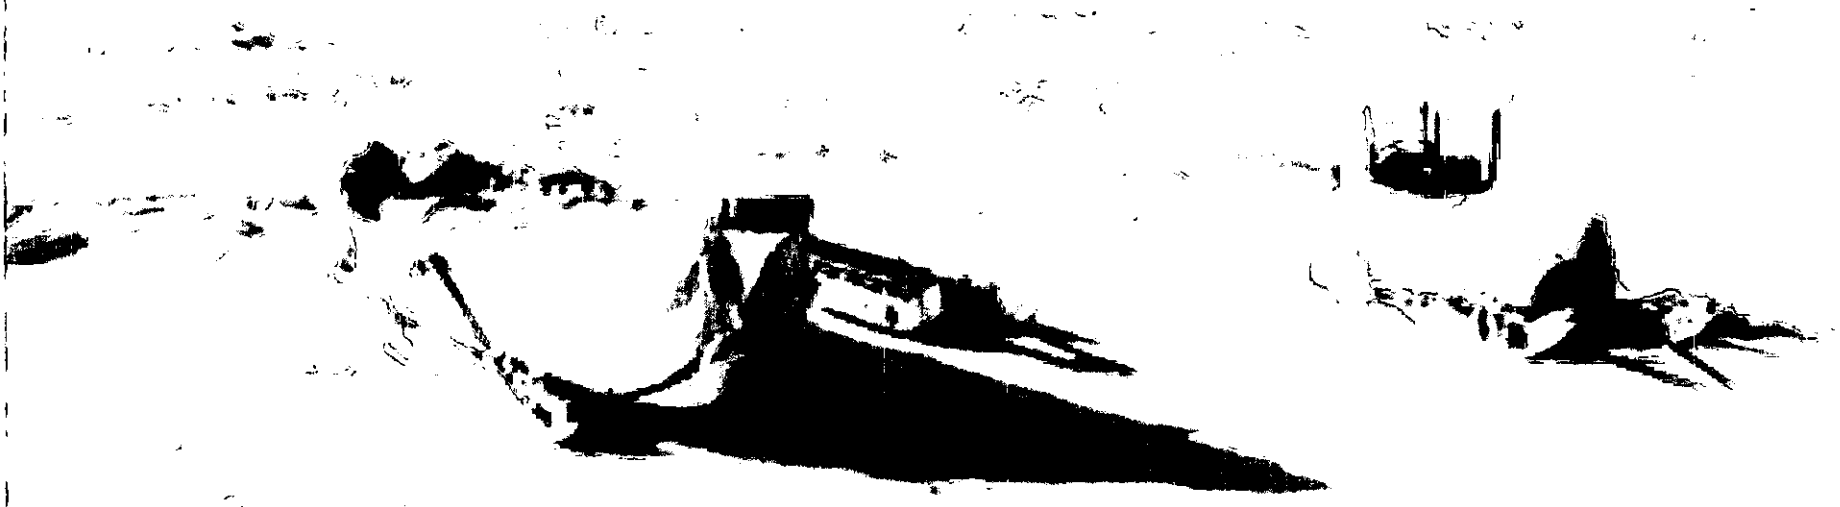
In closing, Mr. Chairman, ConocoPhillips simply desires a clear and consistent permitting process. We're not trying to reduce the level of environmental protection of the places we work or the subsistence resources upon which so many of our stakeholders depend. We want to understand the rules and to accurately estimate time lines.
As we look at the substantial nature of the changes proposed in HB74, we ask the question: Why?

- Since 2003, the existing consistency review process has ensured that both the state's and coastal districts' concerns have been met prior to permits being issued for development projects in Alaska's coastal zone.
-

We suggest that the current program is working as intended and changes are neither necessary nor desirable.

Thank you for the opportunity to testify, Mr. Chairman. At this point I'd be happy to answer any questions you might have.

House Bill 74
Alaska Coastal Management Program
March 22, 2010



Edward S. Itta
Mayor, North Slope Borough

HB 74: North Slope Borough Testimony

- Testimony will address the following topics:
  - Why the NSB supports this bill
  - How HB 74 does not stop development
  - How the ACMP is broken
  - Why the Legislature should care
  - How HB 74 promotes responsible development
  - Why a meaningful role for coastal districts makes sense for Alaska

Edward S. Itta, Mayor

February 3, 2009

Representative Reggie Joule
Alaska State Legislature
State Capitol, Room 102
Juneau, Alaska 99801

Sent by fax:

RE: **HB 74 Alaska Coastal Management Program**

Dear Representative Joule:

Thank you for pre-filing HB 74 about the Alaska Coastal Management Program (ACMP). The North Slope Borough (Borough) supports this bill because it will restore meaningful local involvement in the ACMP, implement checks and balances, and streamline project reviews.

The Borough appreciates the sections of the bill that clarify the ability of coastal districts to establish enforceable policies, especially the provisions in AS 46.40.030 and 070. While the 2003 legislative changes to the ACMP allowed coastal districts to establish policies for matters not adequately addressed by state or federal law, many of our proposed enforceable policies were denied on the basis that they addressed an agency's authority. We made an extra effort to focus our proposed policies on matters that were not addressed by existing laws, but still they were denied.

HB 74 would restore checks and balances into the ACMP by establishing the Coastal Policy Board. This body would represent coastal districts and state agencies. It would be responsible for approving changes to ACMP regulations, amendments to coastal district programs and overall grant programs. This body is similar to the former Coastal Policy Council except that it has fewer members and is not responsible for project consistency reviews. Restoring the responsibility for project elevations to the three state resource agencies will ensure these agencies have a seat at the table.

The Borough also wishes to thank you for including in the bill the sections that streamline project reviews. The ACMP *was* an extremely effective program that resolved issues among

local, state and federal agencies, but changes to the program statutes and regulations reduced its effectiveness. Bringing the Alaska Department of Environmental Conservation back into the consistency review process will bring air and water quality issues back into ACMP project reviews. Likewise, allowing coastal districts to have meaningful policies will encourage their participation in the coordinated consistency review process. These changes will streamline project reviews because issues can be resolved early in the process by all parties. The changes will also encourage permitting agencies to ensure their permit stipulations are compatible and reasonable.

Again, the North Slope Borough thanks you for introducing HB 74, and I look forward to testifying on this bill as it moves through the committee process.

Sincerely,

Edward S. Itta

Honorable Senator Donny Olson
Capitol, Room 514
Juneau, Alaska 99811

Honorable Representative Reggie Joule
Capitol, Room 502
Juneau, Alaska 99801

Re: SB 4 and HB 74 Alaska Coastal Management Program

Dear Senator Olson and Representative Joule:

The Northwest Arctic Borough (NWAB) would like to thank you for the introduction of SB 4 and HB 74 on the Alaska Coastal Management Program (ACMP). On behalf of the Borough, I would like to address the substance of HB 74 because we understand the Senate Community and Regional Affairs Committee will consider adoption of the provisions of HB 74 into a senate committee substitute.

The NWAB supports the proposed legislation that would restore the ability of coastal districts to effectively participate in the program and establish meaningful policies under the ACMP; therefore providing valuable local input to development that happens in a very large and unique state. Another important provision in the bills would establish a board made of Alaskans to oversee the major aspects of ACMP as a publicly funded program. The proposed board would jointly represent state agencies and local coastal districts thereby restoring effective public engagement in the ACMP.

Currently, only the Alaska Department of Natural Resources (DNR) as a single agency makes all coastal management decisions. This has proved to be very one-sided and frustrating. For example, as you may know, during 2008 the NWAB attempted mediation with DNR to improve the decisions regarding our coastal management plan. Unfortunately, the mediation ended in an impasse with the majority of the proposed plan flat out denied. According to the

NORTHWEST ARCTIC BOROUGH

P.O. Box 1110

Kotzebue, Alaska 99752

(907) 442.2500 or (800) 478.1110

Fax: (907) 442.3740 or 2930

ACMP now, our only re-course for a fair review is again to go back to the DNR commissioner for re-consideration of a decision that has already been made by the commissioner and his staff. As you can see, the ability to obtain a third party review that involves the public is not possible under the current program, and the new provisions in this bill will help prevent such a future problematic situation and provide state staff the clear criteria and direction for approval of coastal district policies with involvement of the coastal policy board.

The NWAB also supports the addition of subsistence to the ACMP objectives in AS 46.40.020. Until changes made by the Murkowski Administration, the ACMP has been an effective tool balancing resource development and protection of our coastal resources that support healthy subsistence. It is very important that Alaskans have the ability to propose local policies that demonstrate the real life connection of people and communities to coastal areas and actually reflect the close relationship Alaskan residents have to this land, the coastal zones and our valuable subsistence way of life. For the NWAB, the ability to cooperatively work with developers and the state to address subsistence impacts is the primary reason for participating in the ACMP so that development honors our long-time and permanent Alaskans lifestyles.

We also support provisions in the bill that would bring activities covered by the Alaska Department of Environmental Conservation back into the ACMP consistency review process. Impacts to air and water quality also affect habitat and subsistence, and it makes sense to address these issues together in a consolidated format during a single consistency.

The NWAB encourages responsible development of our natural resources. We recognize the economic importance of development in providing new revenues to fund local public services and facilities, and to provide steady employment opportunities in rural areas. However, it is important that local coastal districts have a role in voicing valid concerns and potential impacts to subsistence and other coastal uses and resources - all to ensure that we are doing resource development the right way.

In closing, these bills restore a meaningful role for coastal districts to facilitate effective future development opportunities. I appreciate your interest in improving the ACMP, and I look

February 20, 2009

Honorable Bob Herron and Honorable Cathy Munoz
Co-Chairs House Community and Regional Affairs Committee
Capitol, Room 415
Juneau, Alaska 99801

Dear Co-Chairs Herron and Munoz:

The City of Pelican wishes to support House Bill 74 which would improve the Alaska Coastal Management Program (ACMP). Changes made to the program in 2003 have reduced the effectiveness of the ACMP.

As a mayor of a small rural coastal community, I see first-hand the onerous Federal and State Environmental reviews and permitting processes. These bills would allow coastal districts to establish meaningful enforceable policies, but in my opinion, they would not lead to significant additional burdens for project applicants because coastal districts need economic development.

The City of Pelican supports creation of the Coastal Policy Board. This board would lead to a better balance in decisions because it would represent state agencies and coastal districts. Nothing in the proposed legislation would allow the board to overrule agency decisions.

We also support integration of the Department of Environmental Conservation into the ACMP consistency review process.

Thank you for the opportunity to comment on House Bill 74.

Sincerely,

Patricia Phillips

Subject: HB 74 Support

Dear members of the House Community and Regional Affairs Committee:

I would like to voice my strong support for HB 74, which would subject proposed Coal Bed Methane projects to coastal zone management reviews. Coal Bed Methane should never have been exempted from these reviews (which they were in 2003), and it is high time this gross error was fixed.

I live in the Mat-Su Valley. You are probably aware of the huge public outrage that erupted in the Valley in 2003 and 2004, when Kohring, Green, Ogan, Masek greased the skids and it looked like Evergreen Resources was going to drill in everybody's back yard. The legislation that passed at that time gutted any responsible oversight (e.g., CBM was exempted from a DNR Best Interest Finding requirement), CBM was exempted from local zoning), and public participation in the decisions was virtually eliminated.... I could go on and on.

Suffice it to say, again, it is high time the all the errors of 2003 were corrected. HB 74 helps with that, and I hope you will support the bill.

Thank you,

John Strasenburgh

To: Rep. Cathy Munoz
Subject: RE: HB 74 - Coastal Management

Cathy:
Thank you for the update. I hope any amendments to the bill will have adequate discussion before adoption.

There were a few statements made at the committee meeting that need some clarification.

1. DNR should explain how it believes the coastal board would overrule state agencies. I don't see any language that would give the board authority to approve anything that conflicts with state or federal laws.
2. Neither the former Coastal Policy Council nor the proposed board is meant to be a stakeholders group. Only state agencies and coastal districts manage the program. The public gets involved at the board meetings.
3. The issues raised by AOGA about the DEC carve out can be fixed in regulation (i.e., removing the requirement to have a draft air/water quality permits before starting ACMP review).

Thanks again, and please call me if I can help explain anything. It is a tough program to understand

Subject: HB 74 - Coastal Management

Dear Representative Munoz:

I am writing to you to express my support for HB 74 on the Alaska Coastal Management Program (ACMP). This bill would fix a lot of the problems that resulted from changes made to the ACMP statutes in 2003 and the regulations adopted by the Murkowski Administration in 2004.

As a land use consultant, I had the privilege to work on the coastal management plans for 8 coastal districts throughout Alaska. Previous to my work as a consultant, I worked as a senior staff person for the ACMP for 10 years.

I would like to request a meeting with you to discuss this bill. I know you are busy, but I believe I could provide considerable insight into how this bill will improve the ACMP.

Sincerely,

Glenn Gray

JUNEAUEMPIRE.COM

Local governments criticize state coastal management program

Bill supporters say state has too much power over area development

Monday, February 16, 2009
By Kate Golden | **JUNEAU EMPIRE**

State and local districts continue their fight this year over the power to influence local development in coastal areas.

Lawmakers this session are faced with a complex bill - overwhelmingly supported by local governments in coastal areas, and opposed by the oil industry, the governor and the Alaska Department of Natural Resources - that would overhaul the Alaska Coastal Management Program for the second time in six years.

Development projects in coastal zones must go through the program, which does two things: ACMP reviewers coordinate federal, state and local permits; and they decide whether projects are consistent with state standards and local environmental policies.

Coastal planners from the North Slope to Juneau told lawmakers Tuesday they'd like the program to return roughly to how it worked before the Legislature-approved, Murkowski-administration-written overhaul in 2003.

They want more local control.

Murkowski's 2003 rewrite was aimed to promote development, and industry reps tend to support the current program.

But local districts like the North Slope and the Northwest Arctic Borough say they know of no projects that were held up because of the pre-2003 process.

Rep. Reggie Joule, D-Kotzebue, introduced his bill in committee Tuesday with slides showing how drilling sites in Prudhoe Bay have burgeoned over the years, much of the development before 2003.

"The notion that we will stop development is not accurate," Joule said.

DNR doesn't support the bill because it would "override DNR authority," according to Division of Ocean and Coastal Management director Randy Bates, who participated in the 2003 rewrite and runs the ACMP.

He said the bill would favor coastal districts but wouldn't adequately represent other stakeholders, naming the state, industry, and the public.

"That's been one of the biggest challenges we have, trying to find the right balance to the program,"

Bates said.

Local districts lost control

A big chunk of the fight is over coastal districts' so-called local enforceable policies.

These policies are tailored to districts' "unique concerns." Juneau, for example, has pro-development policies regarding Special Waterfront Areas, where environmental regulations are looser.

Districts decide whether projects are consistent with those policies. The state has to defer to that interpretation.

The policies are local districts' most powerful hook into projects.

But DNR must approve those policies. And the department and the districts have been fighting for five years over how much overlap district policies can have with areas the state regulates.

"The district role was drastically reduced in 2003," said Teri Camery, planner for the city and borough of Juneau.

DNR says the policies can't be about anything the state already addresses, such as subsistence.

But the districts disagree with DNR over what it means to "adequately address" an issue.

Much of the combat is over local say on subsistence areas.

A statewide standard for subsistence says development must avoid or minimize harm to subsistence areas. The North Slope wanted to get more specific, to protect special subsistence areas. Planners wrote policies that restricted development in those areas during certain seasons, and banning some types of development outright.

DNR told them that because there's a statewide standard, the local policies couldn't address subsistence. Alaska's 27 districts ended up having a lot less say than they wanted. Several went to mediation, and a few districts have declared an impasse with DNR.

Juneau coastal district proposed 99 policies and got 14. The Northwest Arctic Borough proposed 50, most about subsistence, and got one, which addressed wind farms. Anchorage proposed more than 100 and got five.

Juneau planners retained some denied policies by incorporating them into the local land use code.

"That adds time and expense to the developer," said Camery, because they have to go through a separate review.

"Our plan was flat-out denied by the state," said Tom Okleasik, planning director of the Northwest Arctic Borough. "Our only recourse is to go back to the DNR commissioner," he said - who denied the plan in the first place.

Districts see the problem as a lack of check on DNR's power.

Their solution: Create a coastal policy board external to DNR, in the governor's office - five coastal district representatives plus the commissioners of Natural Resources, Fish and Game and Commerce -

to approve coastal districts' plans. A similar council existed before the 2003 rewrite.

DNR acknowledges the districts' frustration about policies, but doesn't agree there should be an outside board. In its own draft revisions of the program, DNR suggested local districts could appeal to the Legislature, an equally controversial idea.

Mixed views from industry

The oil and gas industry says the current ACMP isn't broken.

"We cannot find any examples of when a coastal district's concerns were not addressed," said Steve Albuquerque of ConocoPhillips, who called the current process streamlined and efficient.

ConocoPhillips just wants a clear and predictable permit process, he said.

But not all developers are satisfied with the current program.

Redfern Resources Ltd., a Canadian company that is applying to haul a barge year-round on the Taku River south of Juneau, has complained about the process. Redfern first applied for permits in late 2007 and hasn't finished the process yet.

The project's original permit application was canceled by state ACMP reviewers when Redfern changed the tow vehicles for the barge. And it has been delayed several times while state permitters ask the company for more information on the project.

Redfern has not commented on the proposed bill, but has criticized the current permit process.

"If you review the historical notes with the legislation from 2003, it specifically speaks toward the purpose of the ACMP: to provide a predictable procedure or consistency review. And we're finding this process very unpredictable," said Tim Davies, Redfern's regulatory affairs manager, in January.

"We're talking about a very significant project," he said. "Over $300 million to develop the mine, and $24 million a year coming into the Juneau economy. Do we really want to have such an unpredictable process in place for making these type of decisions?"

Local districts promote the new bill as fixing that.

"The predictability industry wants would be in place, once the districts have policies," said Tom Loman, Anchorage city planner.

DNR's promised rewrite missing

DNR has been working on a revision of the program since February last year, when the Legislature was considering a similar coastal-district-friendly ACMP overhaul.

The state opposed that bill, too. Bates told lawmakers the state would re-examine the program with help from districts and industries, find consensus and produce its own bill for the next session.

So far, no bill.

This week, Bates said he couldn't rule out the introduction of a DNR-sponsored bill.

But the department doesn't see anything wrong with the current program - other than the "instability" resulting from coastal districts' criticism of it.

"We believe no change is necessary, particularly in the form of the bills offered," Bates said.

The department has been working with the districts since last summer. In November the department released a draft set of statutes. Bates on Tuesday characterized them as "conversational" and said it shouldn't be taken as the department's actual view.

According to local planners, the draft statutes further restricted coastal districts' ability to write policies. Some planners said they were looking forward to the state's final compromise - but without it, they're pinning their hopes on the current bill.

Palin supports DNR

Gov. Sarah Palin seemed to criticize the Murkowski ACMP rewrite in a 2005 campaign promise:

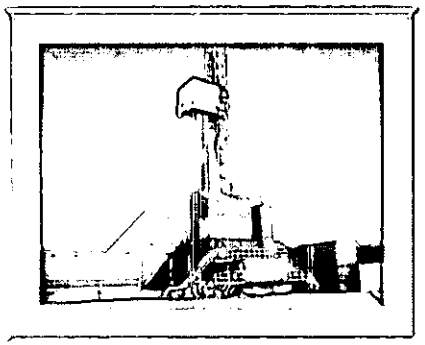
"I would ... revisit the change in regulations on the Alaska Coastal Zone Management Program in which the past administration by eliminating (sic) the rights of local districts to write specific local enforceable policies on important issues like subsistence," her campaign Web site said then.

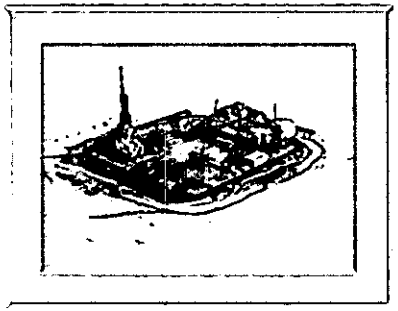
Palin said at a press conference Wednesday that she's aligned with DNR on its ACMP stance: no changes yet deemed necessary.

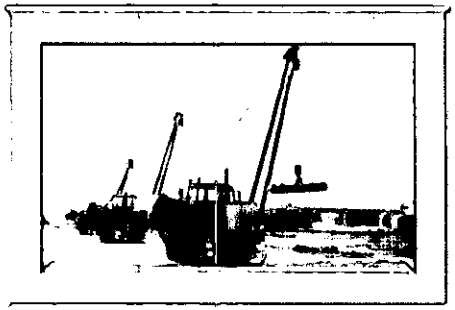
Click here to return to story:
http://juneauempire.com/stories/021609/loc_388380643.shtml

Why the NSB Supports HB 74

- It restores meaningful participation
  - State agencies & coastal districts
- It brings air and water quality back into project review
- It restores state's rights







HB 74 Does Not Stop Development

- The ACMP has always promoted development
  - Coastal districts have not stopped projects through the ACMP
  - Before 2003, <1% of projects appealed
  - All of coastal development since 1977 has been approved under the ACMP
- HB 74 will not override legislative or agency authority
- HB 74 does not allow citizen or third-party lawsuits
  - Citizen lawsuits eliminated in 2003
  - Citizen petitions eliminated in 2002

The ACMP is Broken

- The ACMP has lost its value to review participants
  - Agencies and coastal districts have expressed frustration with the ACMP
- Few meaningful opportunities to resolve conflicts that arise at the local level
  - The ACMP used to be a tool to identity and resolve conflicts early in the process
  - Resolving conflicts early avoids lawsuits

HB 74: Legislative Intent

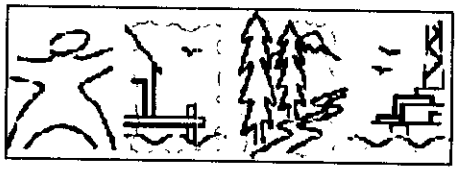
- **2003 Legislative intent is being ignored**
  - **DEC Carve-Out**
    - 2003 intent was to exclude only matters addressed by DEC laws
    - In practice, no air or water quality issues may be addressed during project reviews
  - **Enforceable policies**
    - DNR denied most policies proposed by local districts
    - Sample approvable policies requested by the Legislature are no longer allowable
  - **Regulations More Stringent**
    - DNR testified to the Legislature in 2008 that the regulations were "more stringent" than the Legislature intended
    - Since then, no changes have been made to the regulations

3497.

HB 74: Legislative Intent

- <u>Regulatory confusion</u>
  - HB 191 (2003) directed DNR to "avoid regulatory confusion"
  - 2004 regulations are costly and confusing
    - The designated area requirement delays reviews
      - Subsistence impacts can't be considered unless they are in a designated area
      - DNR disapproved most district proposed subsistence use areas
  - OCS project review process is not clear
    - DNR–DEC coordination procedures are confusing
    - There is no regulatory provision for public comment on the DEC finding (draft DEC findings are only "advisory")

HB 74: Leadership Needed



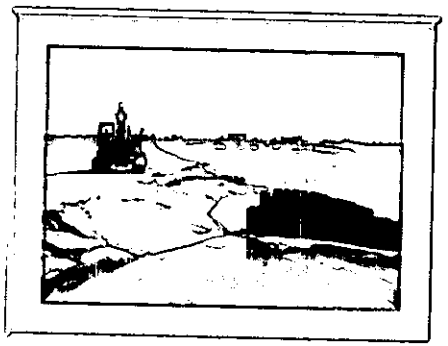
- **ACMP Re-evaluation**
  - Announced in February 2008
  - Not initiated until July 2008
  - Extensive multi-stakeholder involvement in 2008
  - Process abruptly ended after December 2008 with no explanation to participants
  - No way forward to resolve important issues
- **Legislation**
  - Leadership is needed to restore the ACMP's effectiveness

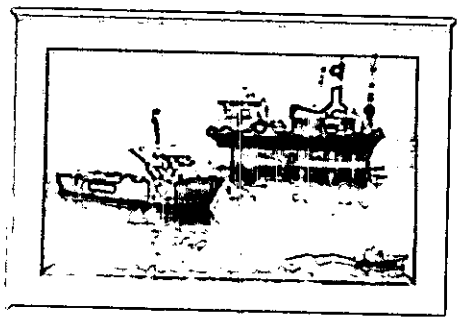
HB74: Why Should You Care?

- **Effective Stakeholder Participation**
  - Promotes responsible development
  - Reduces delays during project reviews
  - Reduces lawsuits
  - Improves relations
    - Between state and federal agencies and local government
      - When a project does not require an EIS, the ACMP provides an efficient forum for agency coordination

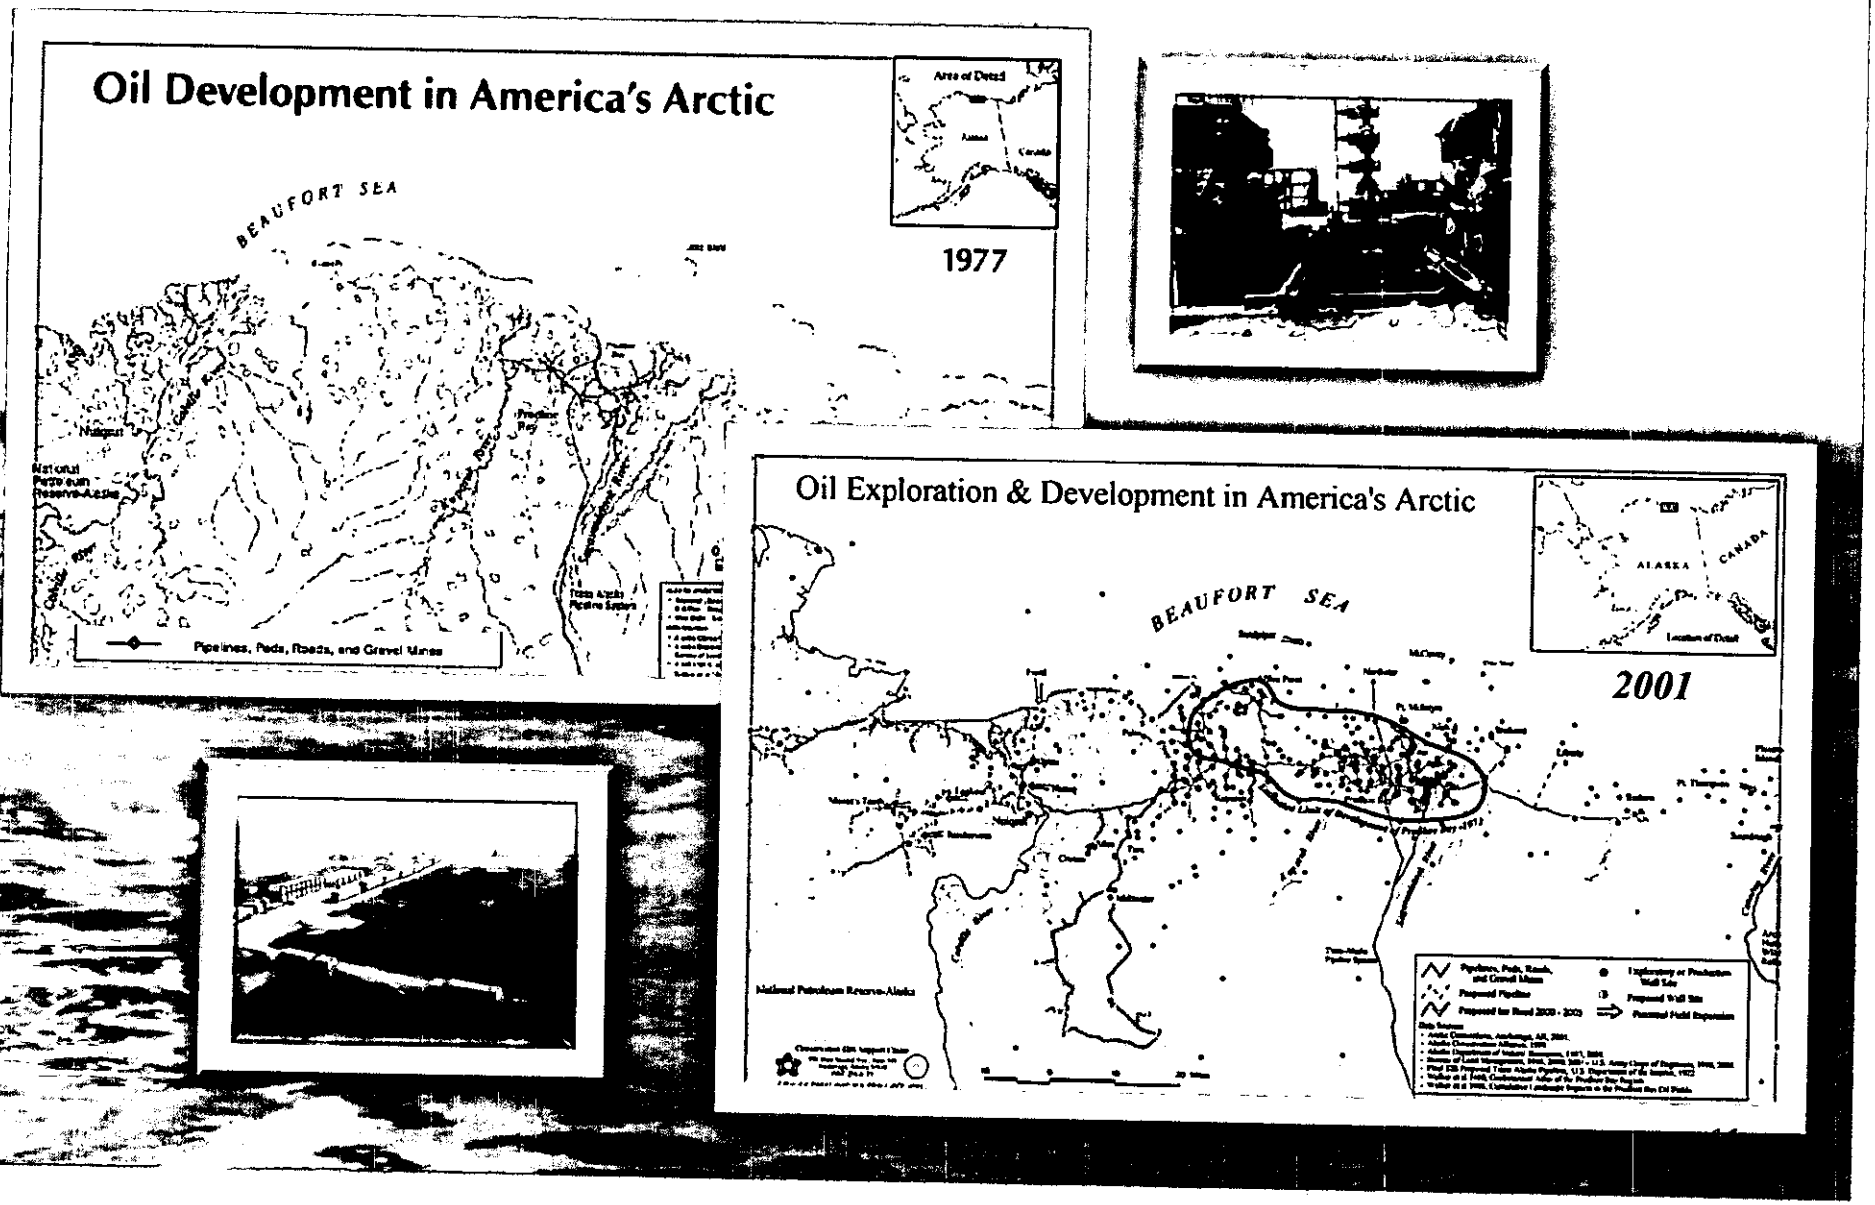
HB74: Why Should You Care?

- HB 74 will promote cooperation and approval of responsible development
- Congress requires states to have coastal programs in order to receive Coastal Impact Assistance Program (CIAP) funds
  - CIAP will bring $79.8 million to Alaska





25 Years of Growth Under ACMP



What HB74 Does

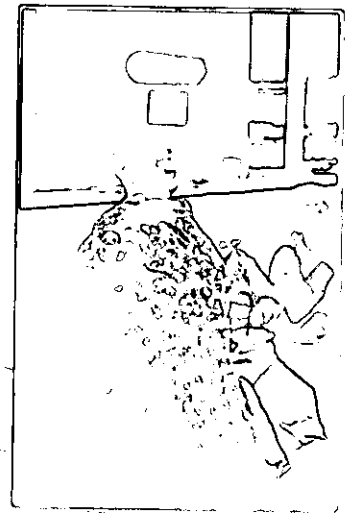
- Restores meaningful participation
- Brings air and water quality back into project review
- Restores state's rights

Restoring Meaningful Participation

- <u>Coastal Policy Board</u>
  - Gives districts and agencies a seat at the table
  - Restore checks and balances
  - More streamlined than the Coastal Policy Council
    - Fewer members (9 rather than 17)
    - Limited responsibilities
      - Approve coastal district plans, grant programs & regulations
    - The new board would <u>not</u> have any oversight over project "consistency reviews"

Restoring Meaningful Participation

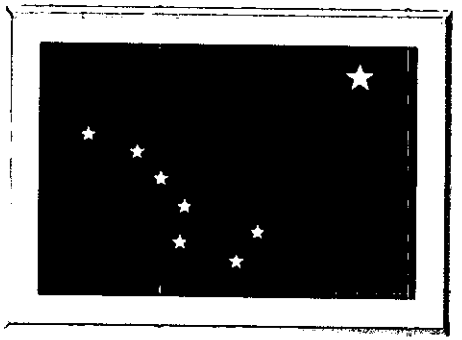
- <u>District enforceable policies</u>
  - HB 74 would allow policies that:
    - Do not conflict with state or federal law
    - Address issues not preempted by state or federal law
    - Address a local concern



HB 74: Air and Water Quality

- **Eliminating the "DEC Carve-Out"**
  - Avoids confusion about scope of ACMP reviews
  - Reinstates public comments for OCS reviews
    - Currently because DEC has no permit for OCS waters, there is no opportunity for public involvement
  - Allows consideration of air and water quality impacts not addressed by DEC's laws
    - For example, oils spill plans do not address effects of spill
  - DNR's December 2008 draft statutes eliminate the DEC Carve-Out

HB 74: State's Rights



- **HB 74 Restores State's Rights**
  - **2003-2004 ACMP changes removed some rights provided by the Coastal Zone Management Act**
  - **HB 74 would:**
    - **Allow review of all projects that would have coastal impacts**
    - **Remove 90 day limit for reviews with federal permits**
      - **Most reviews would be completed in 30 or 50 days**
    - **Allow consideration of impacts to coastal resources on federal lands and waters**
      - **Designated area requirements limits the State's ability to influence decisions on federal lands and waters**

Why a Meaningful Role for Coastal Districts Makes Sense for Alaska

- "One size fits all" does not work for Alaska
- Restoring the ability for districts to influence local projects is consistent with Alaska's position against federal intrusion
- Local communities know best what is works, and their expertise improves projects
- Most project impacts are felt at the local level
- Local involvement through enforceable policies improves project designs and reduces litigation

HB 74: Summary

- **This bill should be passed because it:**
  - **Encourages coastal partnerships**
  - **Promotes responsible development**
  - **Restores states' rights**
  - **Reduces regulatory confusion**

CS FOR HOUSE BILL NO. 74(CRA)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES JOULE, EDGMON AND BUCH

A BILL

FOR AN ACT ENTITLED

"An Act relating to the Alaska coastal management program; and establishing the Alaska Coastal Policy Board."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 46.39 is amended by adding a new section to article 1 to read:

Sec. 46.39.005. Alaska Coastal Policy Board. (a) There is created in the Department of Natural Resources the Alaska Coastal Policy Board. The board consists of the following:

(1) five public members appointed by the governor, including one at-large member from any coastal district and four members from a list composed of at least three names from each region, nominated and submitted by the coastal districts of each region; one public member shall be appointed from each of the following regions:

(A) northwest Alaska, including, generally, the area of the North Slope Borough and the Northwest Arctic Borough; and the Bering Strait

area, including, generally, the area of the Bering Strait regional educational attendance area;

(B) southwest Alaska, including, generally, the area within the Lower Yukon, Lower Kuskokwim, and Southwest regional educational attendance areas and the Lake and Peninsula and Bristol Bay Boroughs; and the Kodiak-Aleutians area, including the Kodiak Island and area of the Aleutians East Boroughs and the area of the Aleutian, Adak, and Pribilof regional educational attendance areas;

(C) Upper Cook Inlet area, including the Municipality of Anchorage and the Matanuska-Susitna Borough; the Lower Cook Inlet area, including, generally, the Kenai Peninsula Borough; and the Prince William Sound area, including, generally, the area east of the Kenai Peninsula Borough to 141 West longitude; and

(D) Southeast Alaska, generally the area east of 141 West longitude;

(2) each of the following:

(A) the commissioner of environmental conservation;

(B) the commissioner of fish and game;

(C) the commissioner of natural resources; and

(D) the commissioner of commerce, community, and economic development.

(b) Each public member appointed by the governor under (a)(1) of this section serves a term of two years and until a successor is appointed and qualified. A public member may be reappointed.

(c) The board shall designate co-chairs, one of whom shall be selected from among the public members appointed under (a)(1) of this section and one from among the members designated in (a)(2) of this section.

(d) Each member of the board shall select one person to serve as a permanent alternate at meetings of the board. If a member of the board is unable to attend, the member shall advise the alternate, who may attend and act in the place of the member. The alternate for each public member appointed under (a)(1) of this section shall be

approved by the coastal districts in the region from which the public member was appointed. The alternate for a commissioner serving under (a)(2) of this section shall be a deputy commissioner or the director of a division in the commissioner's department. The names of alternates shall be filed with the board.

(e) Three public members and two designated members of the board constitute a quorum, but the board may delegate to one or more of its members the power to hold hearings. All decisions of the board shall be by a majority vote of the members present and voting.

(f) Members of the board or their alternates are entitled to per diem and travel expenses authorized by law for members of boards and commissions.

(g) Administrative support for the board shall be provided by the division in the department responsible for coastal and ocean management. The director of the division in the department responsible for coastal and ocean management, under direction of the co-chair designated by the board from the individuals listed in (a)(2) of this section, may contract with or employ persons as necessary to assist the board in carrying out the board's duties and responsibilities.

* **Sec. 2.** AS 46.39.010(a) is amended to read:

(a) The Department of Natural Resources shall render, on behalf of the state, all federal consistency determinations and certifications authorized by 16 U.S.C. 1456 (Sec. 307, Coastal Zone Management Act of 1972), and each conclusive state consistency determination when a project requires a permit, lease, or authorization **from the department or** from two or more state resource agencies.

* **Sec. 3.** AS 46.39.010(b) is amended to read:

(b) The department may adopt regulations **approved by the board** necessary to implement this chapter.

* **Sec. 4.** AS 46.39.030 is amended to read:

Sec. 46.39.030. Powers of the board [DEPARTMENT]. The **board** [DEPARTMENT] may

(1) apply for and accept grants, contributions, and appropriations, including application for and acceptance of federal funds that may become available for coastal planning and management;

(2) contract for necessary services;

(3) consult and cooperate with

(A) persons, organizations, and groups, public or private, interested in, affected by, or concerned with coastal area planning and management;

(B) agents and officials of the coastal resource districts of the state, and federal and state agencies concerned with or having jurisdiction over coastal planning and management;

(4) take any reasonable action necessary to carry out the provisions of this chapter or AS 46.40.

* **Sec. 5.** AS 46.39.040 is amended to read:

Sec. 46.39.040. Duties of the board [DEPARTMENT]. In conformity with 16 U.S.C. 1451 - 1464 (Coastal Zone Management Act of 1972), as amended, the **board** [DEPARTMENT] shall

(1) **approve** [DEVELOP] statewide standards for the Alaska coastal management program [,] and criteria for the preparation and approval of district coastal management plans **developed by the department** in accordance with AS 46.40;

(2) establish continuing coordination among state agencies to facilitate the development and implementation of the Alaska coastal management program; in carrying out its duties under this paragraph, the department shall initiate an interagency program of comprehensive coastal resource planning for each geographic region of the state;

(3) assure continued provision of data and information to coastal resource districts to carry out their planning and management functions under the program.

* **Sec. 6.** AS 46.39.900 is amended to read:

Sec. 46.39.900. Definitions [DEFINITION]. In this chapter, unless the context requires otherwise,

(1) "board" means the Alaska Coastal Policy Board established in AS 46.39.005;

(2) "department" means the Department of Natural Resources.

* **Sec. 7.** AS 46.40.010 is amended to read:

Sec. 46.40.010. Development of Alaska coastal management program. (a) The **Alaska Coastal Policy Board** [DEPARTMENT] shall approve, in accordance with this chapter, **program changes to** the Alaska coastal management program.

(b) The **board** [DEPARTMENT] may approve the Alaska coastal management program for a portion or portions of the coastal area before approving the [COMPLETE] program **changes** under (a) of this section. Portions of the program approved under this subsection shall be incorporated into the Alaska coastal management program.

(c) The Alaska coastal management program shall be reviewed by the **board** [DEPARTMENT] and, when appropriate, revised to

(1) add newly approved district coastal management plans [,] or revisions and amendments to the Alaska coastal management program;

(2) integrate newly approved district coastal management plans [,] or revisions and amendments of district coastal management plans [,] with existing approved plans and with plans developed by state agencies;

(3) add new or revised state statutes, policies, regulations, or other appropriate material;

(4) **evaluate** [REVIEW] the effectiveness [OF IMPLEMENTATION] of district coastal management plans; and

(5) consider new information acquired by the state and coastal resource districts.

(d) All reviews and revisions shall be in accordance with the statewide standards and district plan criteria adopted under AS 46.40.040.

* **Sec. 8.** AS 46.40.020 is amended to read:

Sec. 46.40.020. Objectives. The Alaska coastal management program shall be consistent with the following objectives:

(1) the use, management, restoration, and enhancement of the overall quality of the coastal environment;

(2) the development of industrial or commercial enterprises that are

consistent with the social, cultural, historic, economic, and environmental interests of the people of the state;

(3) the orderly, balanced utilization and protection of the resources of the coastal area consistent with sound conservation and sustained yield principles;

(4) the management of coastal land and water uses in such a manner that, generally, those uses **that** [WHICH] are economically or physically dependent on a coastal location are given higher priority when compared to uses **that** [WHICH] do not economically or physically require a coastal location;

(5) the protection and management of significant historic, cultural, natural, **subsistence,** and aesthetic values and natural systems or processes within the coastal area;

(6) the prevention of damage to or degradation of land and water reserved for their natural **and subsistence** values as a result of inconsistent land or water usages adjacent to that land;

(7) the recognition of the need for a continuing supply of energy to meet the requirements of the state and the contribution of a share of the state's resources to meet national energy needs; and

(8) the full and fair evaluation of all demands on the land and water in the coastal area.

* **Sec. 9.** AS 46.40.030 is amended to read:

Sec. 46.40.030. Development of district coastal management plans. (a) Coastal resource districts shall develop and adopt district coastal management plans in accordance with the provisions of this chapter. The plan adopted by a coastal resource district shall be based upon a municipality's existing comprehensive plan or a new comprehensive resource use plan or comprehensive statement of needs, policies, objectives, and standards governing the use of resources within the coastal area of the district. The plan must meet the [STATEWIDE STANDARDS AND] district plan criteria adopted under AS 46.40.040 and must include

(1) a delineation within the district of the boundaries of the coastal area subject to the district coastal management plan;

(2) a statement, list, or definition of the land and water uses and

activities subject to the district coastal management plan;

(3) a statement of policies to be applied to **all** [THE] land and water uses subject to the district coastal management plan **as well as policies that apply only to special management areas**; **and**

(4) [A DESCRIPTION OF THE USES AND ACTIVITIES THAT WILL BE CONSIDERED PROPER AND THE USES AND ACTIVITIES THAT WILL BE CONSIDERED IMPROPER WITH RESPECT TO THE LAND AND WATER WITHIN THE COASTAL AREA; AND

(5)] a designation of **any special management** [, AND THE POLICIES THAT WILL BE APPLIED TO THE USE OF,] areas **under** [WITHIN] the **district** coastal **management plan and enforceable policies that will be applicable within those special management areas** [RESOURCE DISTRICT THAT MERIT SPECIAL ATTENTION].

(b) In developing enforceable policies in its coastal management plan under (a) of this section, a coastal resource district shall **ensure that the enforceable policies are**

(1) clear and concise as to the activities and persons affected by the policies and the requirements of the policies whether the policies are prescriptive or performance-based;

(2) necessary given local conditions; and

(3) supported by evidence, including contemporary or traditional local knowledge, if the policies are more specific than state or federal statutes or regulations [MEET THE REQUIREMENTS OF AS 46.40.070 AND MAY NOT DUPLICATE, RESTATE, OR INCORPORATE BY REFERENCE STATUTES AND ADMINISTRATIVE REGULATIONS ADOPTED BY STATE OR FEDERAL AGENCIES].

* **Sec. 10.** AS 46.40.040(a) is amended to read:

(a) Except as provided in [(b) OF THIS SECTION AND] AS 41.17, the department shall**, after approval by the board,**

(1) by regulation, adopt**,** under the provisions of AS 44.62 (Administrative Procedure Act) for the use of and application by coastal resource

districts and state agencies for carrying out their responsibilities under this chapter, statewide standards and district coastal management plan criteria for

(A) identifying the boundaries of the coastal area subject to the Alaska coastal management program;

(B) determining the land and water uses and activities subject to the Alaska coastal management program;

(C) developing policies applicable to the land and water uses subject to the Alaska coastal management program;

(D) developing regulations applicable to the land and water uses subject to the Alaska coastal management program;

(E) developing policies and procedures to determine whether specific proposals for the land and water uses or activities subject to the Alaska coastal management program shall be allowed;

(F) designating and developing policies for **special management areas** [THE USE OF AREAS OF THE COAST THAT MERIT SPECIAL ATTENTION]; and

(G) measuring the progress of a coastal resource district in meeting its responsibilities under this chapter;

(2) [DEVELOP AND MAINTAIN A PROGRAM OF TECHNICAL AND FINANCIAL ASSISTANCE TO AID COASTAL RESOURCE DISTRICTS IN THE DEVELOPMENT AND IMPLEMENTATION OF DISTRICT COASTAL MANAGEMENT PLANS;

(3) UNDERTAKE REVIEW AND APPROVAL OF DISTRICT COASTAL MANAGEMENT PLANS IN ACCORDANCE WITH THIS CHAPTER;

(4) INITIATE A PROCESS FOR IDENTIFYING AND MANAGING USES OF STATE CONCERN WITHIN SPECIFIC AREAS OF THE COAST;

(5) DEVELOP PROCEDURES OR GUIDELINES FOR CONSULTATION AND COORDINATION WITH FEDERAL AGENCIES MANAGING LAND OR CONDUCTING ACTIVITIES POTENTIALLY AFFECTING THE COASTAL AREA OF THE STATE;

(6)] by regulation, establish a consistency review and determination or

certification process that conforms to the requirements of AS 46.40.096.

* **Sec. 11.** AS 46.40.040 is amended by adding a new subsection to read:

(d) Except as provided in AS 41.17, the board shall

(1) develop and maintain a program of technical and financial assistance to aid coastal resource districts in the development and implementation of district coastal management plans;

(2) undertake review of and, after public hearing, approve district coastal management plans in accordance with this chapter;

(3) initiate a process for identifying and managing uses of state concern within specific areas of the coast;

(4) develop procedures or guidelines for consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state.

* **Sec. 12.** AS 46.40.050(b) is amended to read:

(b) Within 30 months after certification of the organization of a new coastal resource district, the coastal resource district shall complete and submit to the **board** [DEPARTMENT] a proposed district coastal management plan. If, after receipt of a written request for extension from the coastal resource district, the **board** [DEPARTMENT] considers an extension proper, the **board** [DEPARTMENT] may grant an extension to a date that is within 54 months after certification of the results of the coastal resource district's organization. A request under this subsection must include the reasons for the extension.

* **Sec. 13.** AS 46.40.060 is repealed and reenacted to read:

Sec. 46.40.060. Review and approval. (a) A coastal resource district shall submit its district coastal management plan for review by the department. The division in the department responsible for coastal and ocean management shall attempt to reach a consensus with a coastal resource district concerning any changes required to comply with the district plan criteria approved by the department and the board.

(b) If a consensus between the division and the coastal resource district is reached, the division shall forward a recommendation to the commissioner, and the commissioner shall submit the recommendation to the board.

(c) If a consensus between the division and the coastal resource district is not reached, the division shall forward a recommendation to the commissioner with an explanation of the reasons for its recommendation and, if applicable, offer recommended changes to the district coastal management plan that would meet the district plan criteria. The coastal resource district may request that the commissioner reconsider the division's recommendation before the commissioner submits the recommendation to the board.

(d) If, after receiving the commissioner's recommendation, the board finds that the district coastal management plan meets the provisions of this chapter and the district plan criteria adopted by the department, the board may approve the district coastal management plan or may approve portions of the district coastal management plan that meet those requirements.

(e) If the board finds that a district coastal management plan is not approvable or is approvable only in part under (d) of this section, the board shall direct the department to meet with officials of the coastal resource district to resolve differences. If requested by a coastal resource district, the board shall direct that deficiencies in the district coastal management plan submitted by the coastal resource district be resolved through mediation conducted by a neutral third party. During mediation, the board may call for one or more public hearings in the district.

(f) If, after mediation, the differences have not been resolved and mutually agreed to by the coastal resource district and the board, the board shall enter findings and, by order, may require

(1) that the district coastal management plan be amended to satisfy the provisions of this chapter or meet the statewide standards and district plan criteria approved by the board;

(2) that the district coastal management plan be revised to accommodate a use of state concern; or

(3) any other action be taken by the coastal resource district, as appropriate.

(g) An order of the board entered under (f) of this section is a final administrative order that the coastal resource district may appeal to the superior court

under AS 44.62 (Administrative Procedure Act). The attorney general, at the request of the board, may file an action in superior court to enforce an order issued under (f) of this section.

* **Sec. 14.** AS 46.40.070 is repealed and reenacted to read:

Sec. 46.40.070. Requirements for board review and approval. (a) The board shall approve a district coastal management plan submitted for review and approval if the

(1) district coastal management plan meets the requirements of this chapter and the district plan criteria adopted by the department; and

(2) enforceable policies of the district coastal management plan

(A) do not duplicate, restate, or incorporate by reference state or federal statutes or regulations;

(B) are not preempted by federal or state law; and

(C) do not arbitrarily or unreasonably restrict a use of state concern.

(b) In (a)(2)(B) of this section, an enforceable policy of the district coastal management plan is preempted

(1) by federal statutes or regulations if the United States Congress expressly declares that local law or regulation is preempted, if the United States Congress demonstrates the intent to occupy the field exclusively, or if there is an actual conflict between federal and local law or regulation;

(2) by state law if it is prohibited, either by express legislative direction or direct conflict with a state statute or regulation, or where a local law or regulation substantially interferes with the effective functioning of a state statute or regulation or the underlying purposes of a state statute or regulation.

* **Sec. 15.** AS 46.40.096(a) is amended to read:

(a) The department shall, by regulation **approved by the board**, establish a consistency review and determination process that conforms to the requirements of this section.

* **Sec. 16.** AS 46.40.096(d) is amended to read:

(d) In preparing a consistency review and determination for a proposed

project, the reviewing entity shall

(1) request consistency review comments for the proposed project from state resource agencies, affected coastal resource districts, and other interested parties as determined by regulation adopted by the department;

(2) prepare proposed consistency determinations;

(3) coordinate **elevations** [SUBSEQUENT REVIEWS] of proposed consistency determinations prepared under (2) of this subsection; **an elevation** [A SUBSEQUENT REVIEW] of a proposed consistency determination under this paragraph

(A) is limited to a review by **state resource agencies** [THE DEPARTMENT];

(B) may occur only if requested by

(i) the project applicant;

(ii) a state resource agency; or

(iii) an affected coastal resource district; and

(C) shall be completed by the **resource agencies** [DEPARTMENT] within 45 days after the initial request for subsequent review under this paragraph;

(4) render the final consistency determination and certification.

*** Sec. 17.** AS 46.40.096(g) is amended to read:

(g) The reviewing entity shall exclude from the consistency review and determination process for a project

(1) **an aspect of** an activity that

[(A)] is **specifically** authorized under a general or nationwide permit that has previously been determined to be consistent with the Alaska coastal management program; [OR

(B) IS SUBJECT TO AUTHORIZATION BY THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION UNDER THE REQUIREMENTS DESCRIBED IN AS 46.40.040(b);]

(2) activities excluded from a consistency review under AS 41.17; and

(3) the issuance of an authorization or permit issued by the Alaska Oil

and Gas Conservation Commission.

* **Sec. 18.** AS 46.40.096(k) is amended to read:

(k) Except as provided in (g) of this section, AS 41.17, [AS 46.40.040(b),] and AS 46.40.094, the scope of a consistency review of a project, once triggered under (j) of this section, is limited to activities that are located within the areas described in (*l*) of this section and that either are subject to a state resource agency permit, lease, authorization, approval, or certification or are the subject of a coastal resource district enforceable policy approved by the **board** [DEPARTMENT] under this chapter. The scope of a consistency review subject to 16 U.S.C. 1456 is determined under 16 U.S.C. 1456 and 15 C.F.R. Part 930.

* **Sec. 19.** AS 46.40.096(*l*) is amended to read:

(*l*) The regulations adopted under (a) of this section apply, as authorized by 16 U.S.C. 1456(c), to

(1) activities within the coastal zone **or inland of the coastal zone if the activities would cause direct and significant impacts to a coastal use or resource**; and

(2) activities on federal land **and water**, including the federal outer continental shelf, that would affect any land or water use or natural resource of the state's coastal zone; for purposes of this paragraph, those activities consist of any activity on the federal outer continental shelf**, including seismic survey activity,** and any activity on federal land that are within the geographic boundaries of the state's coastal zone notwithstanding the exclusion of federal land in 16 U.S.C. 1453(1).

* **Sec. 20.** AS 46.40.096(m) is amended to read:

(m) As part of the regulations adopted under (a) of this section, the department shall establish a list of permits, certifications, leases, approvals, and authorizations issued by a state resource or federal agency that will trigger a consistency review under (j) of this section. In addition, the department shall establish in regulation categories and descriptions of uses and activities that, for purposes of evaluating consistency with the Alaska coastal management program, are determined to be categorically consistent or generally consistent after the inclusion of standard alternative measures. These categories of uses and activities must be as broad as

possible so as to minimize the number of **routine** projects that must undergo an individualized consistency review under this section.

* **Sec. 21.** AS 46.40.096(o) is amended to read:

(o) The time limitations in (n) of this section

(1) do not apply to a consistency review involving

(A) the disposal of an interest in state land or resources;

(B) an activity proposed by a federal agency; or

(C) an activity permitted by a federal agency;

(2) are suspended

(A) from the time **a review schedule is modified in response to** [THE REVIEWING ENTITY DETERMINES THAT THE APPLICANT HAS NOT ADEQUATELY RESPONDED IN WRITING WITHIN 14 DAYS AFTER THE RECEIPT OF] a written request from the reviewing entity for additional information, until the time the reviewing entity determines that the applicant has provided an adequate written response;

(B) during a period of time requested by the applicant;

(C) during the period of time a consistency review is undergoing a subsequent review under (d)(3) of this section;

(D) for 30 days if requested by an affected coastal resource district exercising authority under AS 29 to accommodate the adjudication process of an authorization issued by a coastal resource district pending the results of the adjudication.

* **Sec. 22.** AS 46.40.096(q)(1) is amended to read:

(1) "affected coastal resource district" means a coastal resource district **with a publicly reviewed draft or approved plan** in which a project is proposed to be located or **that** [WHICH] may experience a direct and significant impact from a proposed project;

* **Sec. 23.** AS 46.40.096 is amended by adding a new subsection to read:

(r) Notwithstanding any provision of this section, for federal agency activities defined in 15 C.F.R. 930.31, including Outer Continental Shelf lease sales and development projects, the department shall conduct a full consistency review and

provide its consistency response with respect to proposed uses or activities involved in the project regardless of whether an earlier consistency review for a similar project has been completed.

* **Sec. 24.** AS 46.40.100(b) is amended to read:

(b) A party that is authorized under (g) of this section may file a petition showing that a district coastal management plan is not being implemented. A petition filed under this subsection may not seek review of a proposed or final consistency determination regarding a specific project. On receipt of a petition, the **board** [DEPARTMENT], after giving public notice in the manner required by (f) of this section, shall convene a hearing to consider the matter. A hearing called under this subsection shall be held in accordance with regulations adopted under this chapter. After **the** hearing, the **board** [DEPARTMENT] may order that the coastal resource district or a state resource agency take any action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary, except that the **board** [DEPARTMENT] may not order that the coastal resource district or a state agency take any action with respect to a proposed or final consistency determination that has been issued.

* **Sec. 25.** AS 46.40.100(c) is amended to read:

(c) In determining whether an approved district coastal management plan is being implemented by a coastal resource district that exercises zoning authority or controls on the use of resources within the coastal area or by a state resource agency, the **board** [DEPARTMENT] shall find in favor of the district or the state resource agency, unless the **board** [DEPARTMENT] finds a pattern of nonimplementation.

* **Sec. 26.** AS 46.40.100(e) is amended to read:

(e) The superior courts of the state have jurisdiction to enforce lawful orders of the **board and the** department under this chapter.

* **Sec. 27.** AS 46.40.100(f) is amended to read:

(f) Upon receipt of a petition under (b) of this section, the **board** [DEPARTMENT] shall give notice of the hearing at least 10 days before the scheduled date of the hearing. The notice must

(1) contain sufficient information in commonly understood terms to

inform the public of the nature of the petition; and

(2) indicate the manner in which the public may comment on the petition.

* **Sec. 28.** AS 46.40.100(h) is amended to read:

(h) If the **board** [DEPARTMENT] finds a pattern of nonimplementation under (c) of this section, the **board** [DEPARTMENT] may order a coastal resource district or a state resource agency to take action with respect to future implementation of the district coastal management plan that the **board** [DEPARTMENT] considers necessary to implement the district coastal management plan. The **board's** [DEPARTMENT'S] determination under (c) of this section and any order issued under this subsection shall be considered a final administrative order for purposes of judicial review under AS 44.62.560.

* **Sec. 29.** AS 46.40.180(b) is amended to read:

(b) If a city or village within a coastal resource service area fails to approve a portion of the district coastal management plan prepared and submitted for approval under (a) of this section, the governing body shall advise the coastal resource service area board of its objections to the proposed plan and suggest alternative elements or components for inclusion in the district coastal management plan. New matter submitted by a city or village that meets the [STATEWIDE STANDARDS AND] district plan criteria adopted under this chapter **may** [SHALL] be accepted **by the district** and the district coastal management plan modified accordingly. If a city or village fails to provide objections and suggested alternatives within the time limits established in this section, the coastal resource service area board may adopt the district coastal management plan as initially offered.

* **Sec. 30.** AS 46.40.190(b) is amended to read:

(b) This chapter does not restrict or prohibit cooperative or joint administration of functions between a municipality and a coastal resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose. [A CITY THAT ELECTS TO BE EXCLUDED FROM AN ADJACENT COASTAL RESOURCE SERVICE AREA UNDER (a) OF THIS SECTION SHALL ENTER INTO A MUTUAL AGREEMENT FOR

COOPERATIVE OR JOINT ADMINISTRATION OF FUNCTIONS WITH THE COASTAL RESOURCE SERVICE AREA BOARD FROM THE ADJACENT COASTAL RESOURCE SERVICE AREA.]

* **Sec. 31.** AS 46.40.210(4) is amended to read:

(4) "coastal zone" means the coastal water including land within and under that water, and adjacent shoreland, including the water within and under that shoreland, within the boundaries approved by the former Alaska Coastal Policy Council and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465 (Coastal Zone Management Act of 1972, as amended); "coastal zone" includes areas added as a result of any boundary changes approved by the **board** [DEPARTMENT] and by the United States Secretary of Commerce under 16 U.S.C. 1451 - 1465; "coastal zone" does not include

(A) those lands excluded under 16 U.S.C. 1453(1); or

(B) areas deleted as a result of any boundary changes by the **board** [DEPARTMENT] in conformance with 16 U.S.C. 1451 - 1465;

* **Sec. 32.** AS 46.40.210(7) is amended to read:

(7) "district coastal management plan" means a plan developed by a coastal resource district, including enforceable policies of that plan, setting out policies and standards to guide public and private uses of land and water within that district and approved by the **board** [DEPARTMENT] as meeting the requirements of this chapter and the regulations adopted under this chapter;

* **Sec. 33.** AS 46.40.210(8) is amended to read:

(8) "enforceable policy" means a policy established by this chapter or approved by the **board** [DEPARTMENT] as a legally binding policy of the Alaska coastal management program applicable to public and private activities;

* **Sec. 34.** AS 46.40.210(9) is amended to read:

(9) "project" means all activities that will be part of a proposed development **and includes all federal agency activities as defined in 15 C.F.R. 930.31, including lease sales and development projects affecting a coastal use or resource**;

* **Sec. 35.** AS 46.40.210 is amended by adding new paragraphs to read:

(13) "board" has the meaning given in AS 46.39.900;

(14) "special management area" means a delineated geographic area within the coastal area that is sensitive to change or alteration and that, because of plans or commitments or because a claim on the resources within the area delineated would preclude subsequent use of the resources to a conflicting or incompatible use, warrants special management attention, or that, because of its value to the general public, should be identified for current or future planning, protection, or acquisition; these areas, subject to the board's definition of criteria for their identification, include:

(A) areas of unique, scarce, fragile or vulnerable natural habitat, cultural value, historical significance, or scenic importance;

(B) areas of high natural productivity or essential habitat for living resources;

(C) areas of substantial recreational value or opportunity;

(D) areas where development of facilities is dependent upon the utilization of, or access to, coastal water;

(E) areas of unique geologic or topographic significance that are susceptible to industrial or commercial development;

(F) areas of significant hazard due to storms, slides, flooding, earthquakes, active faults, tsunamis, volcanoes, liquefaction, ice movement or snow avalanches, or erosion; and

(G) areas needed to protect, maintain, or replenish coastal land or resources, including coastal flood plains, aquifer recharge areas, beaches, and offshore sand deposits;

* **Sec. 36.** AS 46.40.040(b), 46.40.040(c), 46.40.050(a), 46.40.096(i), 46.40.205, and 46.40.210(1) are repealed.

ANALYSIS: *(Attach a separate page if necessary)*

HB 74 will have the following fiscal impact:

1. Travel - It is expected that the Coastal Policy Board (CPB) will need to meet at least four times annually to fulfill the obligations and provide the services outlined in HB 74. Travel (including air, hotel, and per diem) for appointed members, designated members, and state agency staff is included.
2. Contractual - In order to re-write the guiding regulations, DNR must secure contractual services for the promulgation and final Department of Law review of the regulations (FY 2010 only). In addition, contractual services for the CPB meetings must be procured, and will be an annual expense.
3. Supplies - The CPB meetings will require some level of supplies for ensuring the members have proper materials.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB074
2009 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

4. Although not contemplated above as an additional expense, it is expected that coastal districts will choose to revise, amend, and seek approval for their coastal district plans. No funding is included in this fiscal note for Coastal District Plan revisions. DNR does not typically set aside any funding for plan revisions.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends Alaska statutes related to the Alaska Coastal Management Program (ACMP). The bill requires that the Department of Environmental Conservation process its permits in accordance with the ACMP coastal consistency review procedures where permits are currently processed independent from those procedures. The increased work load for existing staff is estimated at one-half of the salary cost of a Range 19 position.

In addition to increasing the effort required to process a permit, the changes require a new half-time position to serve as ACMP lead for DEC with responsibility for internal and external coordination of ACMP matters. The fiscal note reflects the personnel and support costs of a new, part-time (0.5 FTE, Range 20) position to serve as DEC's ACMP Program Coordinator. First-year costs include one-time supply costs that are not reflected in subsequent years.

MEMORANDUM February 25, 2009

SUBJECT: Draft CSHB 74(CRA); minor edits
(Work Order No. 26-LS0322\E)

TO: Representative Bob Herron
Chair of the House Community and Regional Affairs Committee
Attn: Rob Earl

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft of CSHB 74(CRA). Please read this draft carefully to ensure that it is consistent with the committee's intent.

Since you requested a work draft of the CS, I made some nonsubstantive edits in Amendment 2 to conform with AS 46.40.070(a)(2)(B) as that subparagraph appears in sec. 14 after being amended by the first part of Amendment 2. Thus, the term "state law" replaced "state statutes or regulations" and "state statute or regulation" replaced "state statute." These changes were made to make the amendment internally consistent.

Also, in Amendment 2, what do you mean by "local law"? Do you mean municipal ordinances or municipal regulations? Is "local law" intended to mean something different than municipal ordinances and regulations?

The effect of Amendment 3 on AS 46.40.190(a) in sec. 30 of the draft bill effectively changes sec. 30 to only amend AS 46.40.190(b). The draft CS reflects that effect.

Amendment 4 withdraws all changes proposed in sec. 31 of the bill. Thus, that section has also been eliminated in this draft version.

If I may be of further assistance, please advise.

Enclosure

AMENDMENT 1

OFFERED IN: The House Community & Regional Affairs Committee

TO: HB 74 (HCRA)

OFFERED BY: Representative Joule

Delete at pg. 7 (b)(2), lines 20-23.

Add at pg. 7 line 20 the following:

(b)(2)(a) are necessary given local conditions, and

(b)(2)(b) are supported by evidence, including contemporary or traditional local knowledge, if the policies are more specific than state or federal statutes or regulations.

EXPLANATION:

This amendment brings clarity to the existing bill section, which is confusing. It omits the word "stricter," which may have instigated fear among opponents of the bill that this bill will allow coastal districts to create enforceable policies that undermine the authority of the state and federal governments.

AMENDMENT 2

OFFERED IN: The House Community & Regional Affairs Committee

TO: HB 74 (HCRA)

OFFERED BY: Representative Joule

At pg. 11, line 13 **delete** the following from sec. 46.40.070:

(B) are not preempted by federal statutes or regulations; and

Add the following at pg. 11, line 13:

(B) are not preempted by federal or state law.

At pg. 11, line 20 **add**:

(c) In (a)(2)(B) of this section, an enforceable policy of the district coastal management plan is preempted by state statutes or regulations if it is prohibited , either by express legislative direction, or direct conflict with a state statute, or where a local law or regulation substantially interferes with the effective functioning of a state statute or regulation or its underlying purpose.

EXPLANATION:

This amendment clarifies that district enforceable policies cannot override state law or render state law moot by further articulating when a district policy oversteps its bounds, i.e. when it is preempted by state law. Much of the discontent with the ACMP involves a lack of consensus regarding what district enforceable policies are "approvable." For stakeholders to work together and for DNR to promulgate regulations that implement the ACMP as the legislature intends[1], it needs adequate guidance. This amendment seeks to provide more thorough guidance than does the existing bill.

[1] "The ACMP regulations ended up more stringent than what was intended under HB 191. Coastal districts were limited in their ability to craft enforceable policies that address coastal uses and resources that were important to local residents. This limitation manifested itself into severely strained relationships between OPMP [Office of Project Management and Permitting], DCOM, and many districts." Statement by Randy Bates, minutes from SB 161, 2008 version of bill, first hearing.

AMENDMENT 3

OFFERED IN: The House Community & Regional Affairs Committee

TO: HB 74 (HCRA)

OFFERED BY: Representative Joule

Delete pg. 16, lines 21-28.

Add at pg. 16, line 21 the following:

(a) A city within the coastal area that is not part of a coastal resource service area shall be included for purposes of this chapter within in adjacent coastal resource service area unless its governing body, by resolution adopted by a majority of its membership, chooses to exclude the city from an adjacent coastal resource service area and a copy of the resolution is filed with the commissioner of commerce, community, and economic development.

EXPLANATION: This restores the original wording of the law. This bill section flips the meaning of the existing statute by creating the possibility for the elimination of coastal resource service areas, which is not the intent of the sponsor.

AMENDMENT 4

OFFERED IN: The House Community & Regional Affairs Committee

TO: HB 74 (HCRA)

OFFERED BY: Representative Joule

Delete at pg. 17, lines 8-23.

Add at pg. 17 line 8 the following:

"coastal resource district" means each of the following that contains a portion of the coastal area of the state:

(A) unified municipalities;

(B) organized boroughs of any class that exercise planning and zoning authority;

(C) home rule and first class cities of the unorganized borough or within boroughs that do not exercise planning and zoning authority;

(D) second class cities of the unorganized borough, or within boroughs that do not exercise planning and zoning authority, that have established a planning commission, and that, in the opinion of the commissioner of commerce, community, and economic development, have the capability of preparing and implementing a comprehensive district management plan under AS 46.40.030;

(E) coastal resource service areas established and organized under AS 29.03.020 and AS 46.40.110 – 46.40.180;

EXPLANATION: This bill section might have unintended consequences, such as disallowing a district that is currently in an unorganized borough from continuing its status as a coastal resource district if it formed a borough that does not exercise planning and zoning authority.

COASTAL IMPACT ASSISTANCE PROGRAM

Section 384 of the Energy Policy Act of 2005 established the Coastal Impact Assistance Program (CIAP). The Act authorizes the U.S. Department of Interior, Minerals Management Service to distributed $250 million annually for the years 2007 through 2010 to Outer Continental Shelf (OCS) oil and gas producing states and coastal political subdivisions (CPSs) to mitigate the impacts of OCS oil and gas activities.

Per a formula prescribed by the Act, Alaska's eight eligible CPSs will receive a combined total of 35 percent of Alaska's allocation. The remaining 65 percent is allocated directly to the state.

In 2007 and 2008 Alaska was allocated 1 % of the national CIAP funds. Due to the recent Chukchi Lease Sale, MMS has projected that Alaska's allocation will increase to be between 12% and 17 % of the national CIAP allocation in 2009 and 2010. MMS will announce final allocation in April 2009.

The tables below show the annual and total projected CIAP allocations to the state and the CPSs for both the high and low estimates.

Allocation Directly to State (65% of total to state)

	Total	2007	2008	2009	2010
Low end (12% of total federal funds for 2009 and 2010)	40,982,500.00	1,576,250.00	1,576,250.00	18,915,000.00	18,915,000.00
High end (17% of total federal funds for 2009 and 2010)	56,745,000.00	1,576,250.00	1,576,250.00	26,796,250.00	26,796,250.00

Allocation Directly to CPSs - Low end (35 % of total to state)

	Total	2007	2008	2009	2010
Municipality of Anchorage	**3,581,586.76**	137,767.88	137,767.88	1,653,025.50	1,653,025.50

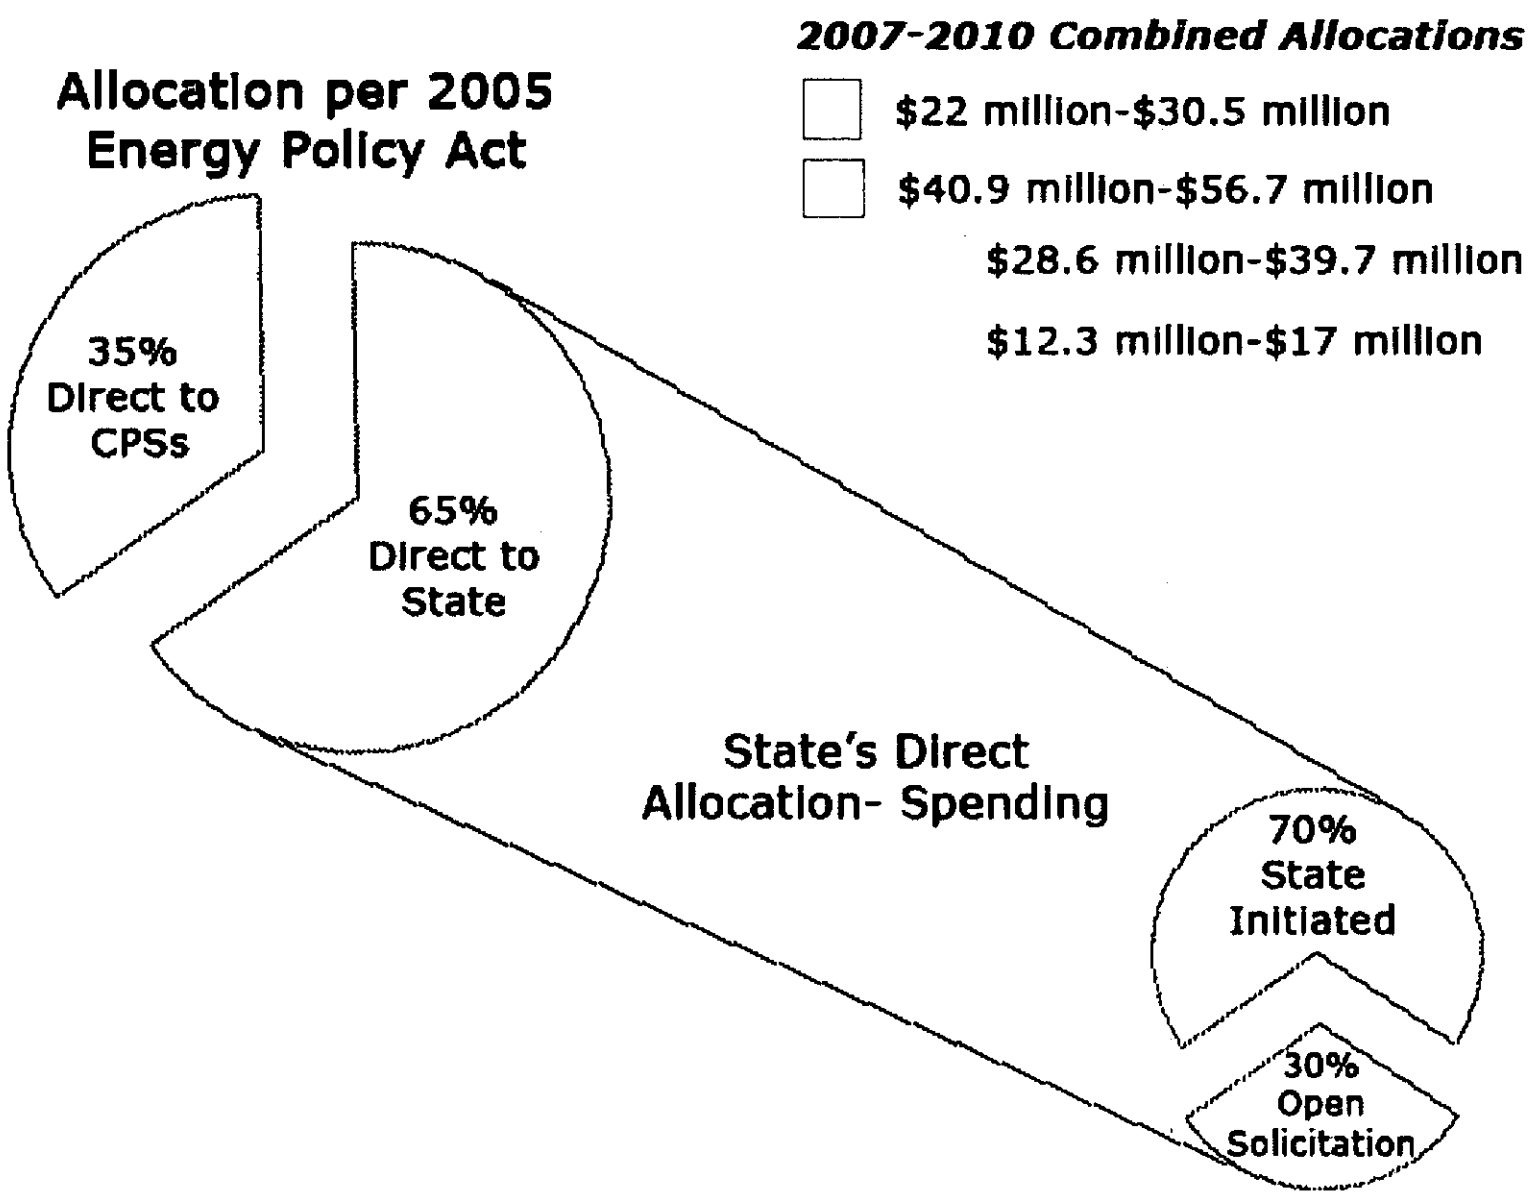
DNR/Division of Coastal and Ocean Management
July 2008

Alaska CIAP Allocation



Coastal Impact Assistance Program
(CIAP)

Schedule

(Subject to change - last updated 1/22/09)

Project Solicitation: State-Initiated Projects

- December 3, 2008: Initiate solicitation of state projects
- February 2, 2009: Close solicitation of state projects – start to review and rank state initiated projects

Open Solicitation: Public initiated projects

The Alaska Department of Commerce, Community, and Economic Development (Commerce) is currently developing regulations to establish the open solicitation grant procedures for the 30% of available funds affecting the public. The Schedule below regarding the open solicitation of projects from the public is dependant on the progress of the regulations.

- January 26, 2009: Commerce initiates 30-day public comment period on regulations establishing the grant procedures affecting the public.
- March 2, 2009: Initiate open solicitation of projects from the public
- April 24, 2009: Regulations in effect
- April 25, 2009: Close solicitation of projects from the public – start to review and rank non-state initiated projects

Plan Amendment Schedule

- April 15, 2009: MMS determines final allocation for FY 2009 and FY 2010
- May 31, 2009: Finalize project recommendation to Ocean Policy Cabinet
- June 30, 2009: Initiate 30-day public review of draft Amended CIAP Plan
- June 30, 2009: Submit draft Amended CIAP Plan to MMS for review and comment
- October 11, 2009: Submit final Amended CIAP Plan to MMS
- October 31, 2009: MMS deems Amended CIAP Plan complete and initiates 90 day review
- January 29, 2010: MMS approves Alaska's Amended CIAP Plan

Coastal Impact Assistance Program

The Energy Policy Act of 2005 (Public Law 109-58) was signed into law by President Bush on August 8, 2005. Section 384 of the Act establishes the Coastal Impact Assistance Program (CIAP), which authorizes funds to be distributed to Outer Continental Shelf (OCS) oil and gas producing states to mitigate the impacts of OCS oil and gas activities.

Under the CIAP, the Secretary of the Interior is authorized to distribute to producing states and coastal political subdivisions (CPS's) $250 million for each of the Federal fiscal years (FY) 2007 through 2010. This money will be shared among Alabama, Alaska, California, Louisiana, Mississippi, and Texas and will be allocated to each producing state based upon allocation formulas prescribed by the Act. Further, the CIAP allocates money to the eligible CPS's of the states identified above.

Pursuant to the Act, a producing state or CPS shall use all amounts received under this section for one or more of the following five authorized uses:

Authorized Uses:

1. Projects and activities for the conservation, protection, or restoration of coastal areas, including wetland.

2. Mitigation of damage to fish, wildlife, or natural resources.

3. Planning assistance and the administrative costs of complying with CIAP.

4. Implementation of a federally-approved marine, coastal or comprehensive conservation management plan.

5. Mitigation of the impact of OCS activities through funding of onshore infrastructure projects and public service needs.

Coastal Impact Assistance Program (CIAP) Themes for Open Solicitation – applicable to all projects considered under the open solicitation (30%)

Approximately 70% of the CIAP allocation will be used for state initiated projects. Approximately 30% of the allocation will fund projects identified through an open solicitation process and will include both state and non-state initiated projects. In order to ensure that non-state initiated projects still focus on state priorities while addressing community needs, the Ocean Policy Cabinet and Department of Natural Resources/Division of Coastal and Ocean Management identified five themes. All non-state initiated projects must address one of these themes. In addition, those state projects that did not make the state-initiated (70%) project cut are automatically bumped into the open solicitation (30%) process and must also meet one of the five themes to be considered.

Themes

1. Waste Management and Clean Up
    a. Marine debris clean-up projects (e.g., projects to collect, transport and dispose of marine debris from shorelines, etc).
    b. Clean harbor projects to improve water quality at harbors (e.g., sewage pump-out stations and waste oil collection facilities, etc.).
    c. Waste management projects (e.g., projects to collect, consolidate, transport, and dispose of household hazardous waste present in remote communities, etc.).

2. Data Collection, Data Analysis, Planning, and Mapping
    a. Community-based assessment and monitoring of environmental and habitat variables in order to evaluate and/or mitigate impacts of development (e.g., water quantity and quality monitoring; collection of traditional knowledge regarding changes in natural ecosystems; data collection and/or analysis; habitat mapping for baseline information, long-term monitoring, and/or detection of change in order to evaluate impacts of development, etc.).
    b. Collection and/or analysis of baseline data on fish or wildlife and/or their habitat that is needed to evaluate or develop mitigation strategies for potential impacts from oil and gas, mining, and other development activities.
    c. Projects that would analyze or prepare for the impacts of climate change or natural hazards on communities.

3. Habitat Restoration and Rehabilitation Projects
   (e.g., stream bank restoration projects, prescribed burning to restore moose habitat, replacement of culverts that impede fish passage, wetland restoration projects, etc.).

4. Mitigation Projects
   Projects to mitigate impacts from development activities and/or climate change.

5. Community Environmental Education Projects, Not to Exceed $35,000
   Projects to educate the public about environmental issues/topics (e.g., educational materials, signage, targeted conferences, etc.). Projects proposed under this category will be evaluated separately from the other project categories. Up to $1,500,000 will be allocated to this category.

Tier 1 Projects for Fiscal Years 2007 - 2010 Proposed by STATE OF ALASKA

Coastal Impact Assistance Program Allocations

Alaska Coastal Management Program

Program Goals and Objectives

The Alaska Coastal Management Program (ACMP) oversees the responsible development of coastal uses and resources, federal activities within the coastal zone, and activities on the Outer Continental Shelf.

ACMP Structure and Organization

The ACMP is a voluntary State program, authorized by the Coastal Zone Management Act of 1972, as amended. The Division of Coastal and Ocean Management (DCOM), within the Department of Natural Resources, is the lead agency for the ACMP. Several State departments and agencies participate in the implementation of the ACMP. In addition, several coastal municipalities and service areas (collectively known as coastal districts) voluntarily participate in the implementation of the ACMP. This structure and organization of State agencies and coastal districts provides for a networked implementation scheme designed to comprehensively manage coastal uses and resources.

The primary tool used to implement the ACMP is the consistency review process at 11 AAC 110. Through this process, proposed resource development activities are reviewed for consistency and compliance with the State's coastal management program which includes State laws, State standards, and district enforceable policies.

Value of ACMP

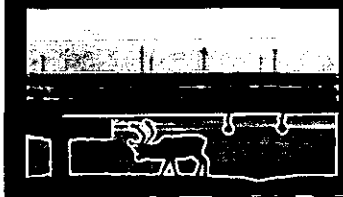
Having a federally-approved coastal management program allows the State the opportunity to:

- Balance the need for economic investment and development in coastal areas with the need to protect and manage the uses and resources of coastal areas
- Act as the State's liaison to federal agencies (1) conducting/permitting activities within the State's coastal area and the Outer Continental Shelf; (2) involving federal laws/initiatives that effect development of the coastal zone, waters, uses or resources of the State
- Act as the department's lead on issues affecting or addressing the coastal waters affecting the State
- Apply State ACMP enforceable policies to federal agency activities
- Provide project applicants with a single point of contact for the State's review of resource development permit applications
- Incorporate coastal district input and knowledge for reasoned decisions

Key FY 2008 and FY 2009 Priorities and Needs

- Educate and train participants on implementation of ACMP
- Re-evaluate the ACMP Statutes (AS 46.39 and 40) and Regulations (11 AAC 110, 112, 114), so to strengthen the ACMP as a State program
- Implement the approved Coastal Impact Assistance Program (CIAP) and act as the liaison between the federal government and the State of Alaska

A Program of the Division of Coastal and Ocean Management



"The Alaska Coastal Management Program provides stewardship for Alaska's rich and diverse coastal resources to ensure a healthy and vibrant Alaskan coast that efficiently sustains long-term economic and environmental productivity."

Alaska Coastal Management Program

Key 2008 Calendar Year Accomplishments

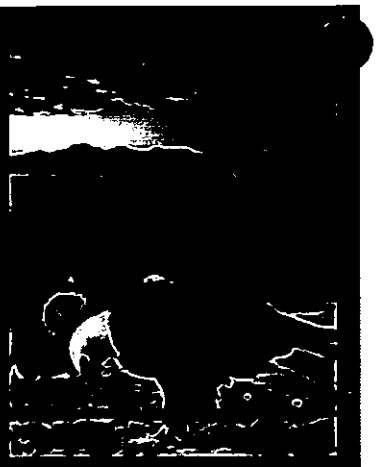
- In June 2008, DNR/DCOM initiated a series of workshops to review the current ACMP statutes (AS 46.39 and 46.40) and regulations (11 AAC 110, 112, and 114). The purpose of the re-evaluation is to strengthen the ACMP as a State program, that will benefit applicants and the public in the coordinating project reviews and that will enhance coastal district participation regarding activities occurring in the coastal area and on the outer continental shelf.

- DNR is currently revising the list of expedited consistency reviews using the ABC List. This revision was initiated to meet the legislative intent of identifying and broadening categories of activities subject to the expedited consistency review process. AS 46.40.096(m) SB 102 (2005) requires that DNR establish in regulation the state resource agency permits and federal permits that would trigger a consistency review. The ABC List categorizes development activities in the Coastal Zone according to expected levels of impact on uses and resources in the Zone. The last time the ABC List was substantively amended was in 1995. The current revision initiative will clarify the review process for certain resource development projects that are "de minimis" in nature or that are routine and can be made consistent with standard alternative measures. By updating the ABC List and developing new expedited consistency reviews for routine activities, DNR expects to reduce the workload for State agencies and coastal districts.

- In September 2008, the federal Minerals Management Service approved the State of Alaska Coastal Impact Assistance Program (CIAP) plan, making Alaska eligible to receive approximately $9.7 million in federal funds under the CIAP initiative. Due to an increase in OCS revenue off the coast of Alaska, the state's portion of CIAP funds will increase by more than $53 million in the next two fiscal years. DCOM is currently working on amending the CIAP plan to reflect Alaska's new allocation. A portion of the funds will go to 8 municipalities that are within 200 nautical miles of OCS development, and a portion will be offered to State agencies and the public through a competitive grant process.

- During the 2008 calendar year, nine more coastal district plans went into effect, bring the total of approved coastal district management plans to 25.

- During the 2008 calendar year, DCOM performed 262 coordinated or expedited consistency reviews, issued 415 No Additional Reviews and 29 Single Agency Reviews for resource development projects within the coastal zone.



ACMP Originally Approved:

House Bill 74 – Alaska Coastal Management Program (ACMP)
Sectional Analysis
January 27, 2009

Section 1: Establishes the Alaska Coastal Policy Board (Board), composed of 5 public members representing coastal districts and commissioners of natural resources, fish and game, environmental conservation, and commerce, community and economic development.

Section 2: Clarifies that the Department of Natural Resources (Department) coordinates project consistency reviews for projects with only Department permits or for projects that involve two or more other state resource agency permits.

Section 3. Establishes authority for the Department to adopt regulations after approval by the Board.

Section 4: Establishes powers for the Board including the ability to accept grants and take reasonable action to carry out provisions of AS 46.39 and AS 46.40.

Section 5: Establishes duties of the Board to approve statewide ACMP standards and criteria for district plan approval.

Section 6: Defines Board in AS 46.39.900.

Section 7: Provides for approval of ACMP program changes by the Board.

Section 8: Adds subsistence to the list of resources included in the ACMP objectives.

Section 9: Subsection (a) removes requirement for district enforceable policies to meet the statewide standards. Clarifies that district enforceable policies apply to all land and water issues subject to the plan. Removes requirement to describe proper and improper uses. Changes the term "areas meriting special attention" to "special management areas." Subsection (b) requires district enforceable policies to be clear and concise, either prescriptive or performance-based, and stricter or more specific than state or federal laws.

Section 10: Makes conforming changes for board approval of ACMP regulations. Deleted language in AS 46.40.040(a)(2) – (5) moved to a new subsection (d).

Section 11: Moves language deleted from AS 46.40.040(a) to a new section outlining responsibilities of the Board.

Section 12: Makes conforming amendments by clarifying district plans must be approved by the Board.

Section 13: Establishes the review and approval process for coastal district plans including provisions for districts to work with the Department to resolve issues before the Board approves a plan. Allows districts to request mediation of the Board's decision.

Section 14: Establishes criteria for board approval of district plans and clarifies that district enforceable policies may not address matters preempted by state or federal laws.

Section 15: Makes conforming changes for board approval of ACMP regulations.

Section 16: Changes the term "subsequent review" to the commonly used term "elevation" and clarifies that the three state resource agencies make the final decision on a project elevation.

Section 17: Clarifies that aspects of an activity covered by a general or nationwide permit are excluded from a consistency review (rather than the entire activity). Eliminates language exempting Department of Environmental Conservation permits from consistency reviews.

Section 18: Makes conforming changes for Board approval of district enforceable policies.

Section 19: Allows ACMP consistency review of projects inland of the coastal zone if there would be direct and significant effects to coastal uses or resources. Clarifies that seismic survey activities in federal waters are subject to consistency reviews.

Section 20: Clarifies that categorically or generally consistent activities are for routine projects.

Section 21: Exempts federal activities and federally-permitted projects the 90-day consistency review time limit. Allows extension of the time limit for adjudication of coastal district permits.

Section 22: Clarifies that the term "affected coastal resource district" includes districts with a publicly-reviewed draft plan or approved plan.

Section 23: Requires an individual consistency review for each Outer Continental Shelf lease sale.

Section 24: Gives the Board authority to act on a petition regarding non-implementation of a coastal district plan.

Section 25 - 28: Makes conforming amendment regarding Board action for a petition regarding non-implementation of a coastal district plan.

Section 29: Clarifies a coastal resource service area (CSRA) may accept new matter submitted by a city or village into its coastal management plan.

Section 30: Clarifies that municipalities are part of a CRSA unless they choose to be excluded.

Section 31: Removes language about boroughs that do not exercise planning and zoning authority.

Section 32: Makes conforming amendment clarifying the board's role in coastal boundary changes.

Section 33 - 34: Makes conforming amendment regarding the board's role in approving district plans and district enforceable policies.

Section 35: Clarifies that the term "project" includes federal activities and federally-permitted activities.

Section 36: Adds new definitions for the terms "Board" and "special management areas."

Section 37: Repeals exemption of Department of Environmental Conservation permits from consistency reviews (AS 46.40.040(b)–(c) and AS 46.40.096(i)). Removes requirement for re-submittal district plans every 10 years (AS 46.40.050(a)). Removes exemption of shallow gas projects from ACMP reviews (AS 46.40.205). Removes definition for "areas meriting special attention" (AS 46.40.210(1)).

Representative John Harris

MEMORANDUM March 1, 2009

TO: Representative Mark Neuman
Representative Craig Johnson
House Resources Committee

FROM: Representative John Harris

SUBJECT: HB134, Cruise Ship Discharge

Thank you for scheduling HB134 for a hearing in the House Resources Committee on Monday, March 2nd.

HB134 will allow the Alaska Dept. of Environmental Conservation the ability to regulate and administer Alaska Water Quality Standards governing pollution discharge permits for large commercial passenger vessels. The current state law administering discharge permits was established as a part of a substantial initiative in 2006 to regulate the cruise ship industry.

During the 2006 election process, the *Anchorage Daily News* wrote an editorial (August 16, 2006) that said "vote yes, then fix it." Since 2006, there have already been two bills amending the initiative to clarify certain provisions.

HB134 is an attempt to amend the initiative to provide the DEC reasonable latitude to enforce pollution standards. It removes language from the initiative that has proven to be too stringent of a standard for cruise ships.

With passage of this bill, DEC will be expected to enforce high quality standards and continue to develop technology that will allow ships to have the cleanest possible discharges.

HB 134 has no fiscal impact on the Department of Environmental Conservation.

Prepared by: Lynn J. Tomich Kent
Phone (907) 269-7599
Division: Water
Date/Time 2/13/09 3:00 PM
Approved by: Dan Easton
Deputy Commissioner
Date 2/13/2009

(Revised 9/10/2008 OMB)

Department of Environmental Conservation
Testimony of the Division of Water before the
House Community and Regional Affairs Committee on HB 134
February 17, 2009

The Department of Environmental Conservation (DEC) has been implementing the Cruise Ship Initiative that was passed by Alaskan voters in 2006. The initiative included three main environmental provisions:

- A requirement to have an Ocean Ranger on board
- A requirement for vessels to report their location hourly to DEC
- A requirement for vessels that intend to discharge wastewater to obtain a permit from DEC.

I would like to provide an update on the environmental requirements of the initiative including the new Ocean Ranger program, the permit requirements, and the impact of HB 134.

Citizen's Initiative - Ocean Rangers

The initiative required an Ocean Ranger (a U.S. Coast Guard-licensed marine engineer) to be on board all large cruise ships entering Alaska waters to observe vessel compliance with state and federal environmental, sanitation, health and safety requirements. The program is funded by a $4/berth fee that nets approximately $4.0 million/year.

DEC implemented a pilot program during the 2007 cruise ship season, using marine engineers and environmental professionals on board some vessels to evaluate training needs for the Ocean Rangers; to develop an Ocean Ranger checklist for observations; and to learn about the issues surrounding reservation of berths, scheduling of Ocean Rangers, and communications between Ocean Rangers and DEC.

Full implementation of the Ocean Ranger program started with the 2008 season:

- An Ocean Ranger was on-board 88% of the voyages for the full time they were in Alaska waters.
- Other vessels were visited by an Ocean Ranger via in-port inspections.
- DEC received over 2,000 daily Ocean Ranger reports with 126 incidents that required follow-up. Most of the issues were immediately resolved by the vessels.

Citizen's Initiative - Vessel Tracking

The citizen's initiative requires the ships to provide hourly location information to DEC. All vessels complied with this requirement and DEC has been able to use the information to verify vessel compliance.

Citizen's Initiative - Wastewater Discharge Permit

The initiative required large cruise ships to obtain a wastewater discharge permit from DEC and to comply with Alaska's water quality standards "at the point of discharge."

Alaska's water quality standards describe how clean Alaska's fresh and marine waters have to be to protect the various uses – drinking water, contact recreation, and protection of aquatic life. The standards apply to the waterbody and not directly to a wastewater discharge, except in the case of discharges from large cruise ships where the discharge must meet the water quality standards at the point of discharge.

DEC issued a general permit on March 25, 2008. The permit contains "long term" effluent limits for ammonia, copper, nickel, and zinc based on the water quality standards. These strict effluent limits must be met by the 2010 cruise ship season.

The permit also contains a compliance schedule and "interim limits" that are less stringent for the 2008 and 2009 cruise ship seasons.

HB 134

The effect of HB 134 would be to allow DEC, under certain circumstances, to authorize mixing zones for treated wastewater discharged from cruise ships. A mixing zone is an area where water quality standards can be exceeded while the wastewater has a chance to mix with receiving waters.

We have been looking at the science around cruise ship wastewater for years. For the last few years we have been engaged in a series of studies, some in conjunction with the U.S. Environmental Protection Agency, about how cruise ship discharges mix with receiving waters. We are currently investigating potential wastewater treatment technologies. In fact, we have a draft report out on cruise ship wastewater treatment technologies and are sponsoring a public work shop on that topic tomorrow.

Based on our work to date, the following are some of the facts as we know them.

1. Quality of treated wastewater

All large cruise vessels discharging in Alaska waters have installed Advanced Wastewater Treatment systems that produce a high quality effluent.

During the 2008 cruise ship season, 20 of the 31 large cruise ships discharged in State waters. Cumulatively, these vessels took a total of 206 effluent samples to satisfy the terms of the wastewater discharge permit. Each sample was analyzed to determine the concentration of nine parameters.

Focusing just on the parameters of concern (ammonia, copper, nickel and zinc)--out of 824 data points (206 samples with 4 parameters), there were 36 exceedances of interim permit limits noted on 11 vessels. That means approximately 4% (36/824 * 100 = 4.4%) of the data points exceeded the interim limits for ammonia, copper, or zinc. The most frequent exceedance was for ammonia (21 of the 36 exceedances).

If we look at exceedances of the stricter long term limits, we see a different picture. Based on 2008 effluent monitoring, there would be 563 exceedances of the long term permit limits for those same parameters. That means approximately 68% (563/824*100 = 68.3%) of the data points would exceed the long term limits.

2. Dilution Studies

It is important to understand the effects of cruise ship discharges on Alaska waters. In order to do that, DEC must evaluate both the quality of the wastewater discharge in conjunction with the dilution that it is subject to. This information can then be used to estimate whether the wastewater would cause exceedances of Water Quality Standards in the receiving waters.

DEC convened a Science Advisory Panel[1] to evaluate the results of a field study that EPA conducted in 2001 to determine the effect of discharges on Alaska waters when the vessel is underway. The Science Panel determined that when a typical large cruise ship is moving at a minimum speed of 6 knots, the wastewater discharged is subject to tremendous dilution. For wastewater discharged at 200 cubic meters/hour, the dilution factor is 50,000. When the sample results of the cruise ship wastewater are divided by the 50,000 dilution factor, the Science Panel concluded that the wastewater would almost instantaneously meet Alaska Water Quality Standards in the receiving water.

During the 2008 legislative session, the legislature directed DEC to evaluate how treated cruise ship effluent mixes with and dilutes into receiving waters. We conducted the study in Skagway this past season in conjunction with research the

[1] See the following website for more information: http://www.dec.state.ak.us/water/cruise_ships/scienceadvisory.htm

U.S. Environmental Protection Agency was performing with its Ocean Research Vessel "Bold." We provided an interim report of the study to the legislature on January 12, 2009.

The study last summer was designed to collect field data in order to calculate the dilution that occurs to wastewater when it is discharged under worst case conditions -- from a stationary cruise ship into a confined receiving environment with limited flushing. A ship moored in Skagway Harbor represents a worst case situation for dilution.

The results of the study were mixed. Under certain assumptions, Water Quality Standards would be met in the receiving water within 15 meters of the vessel. Using other assumptions, it will take a greater distance from the vessel to meet Water Quality Standards.

While the dilution study work is not complete, there is some suggestion that in certain worst cases, mixing zones may not be appropriate for moored vessels.

3. Technology Review

DEC is not currently aware of treatment systems that are readily available to be installed on all vessels by 2010 and that would produce effluent meeting water quality standards without mixing zones.

We are in the process of evaluating the cruise line's efforts to reduce ammonia, copper, nickel, and zinc in their wastewater effluent by evaluating potential source reduction and, as necessary new treatment technologies.

We have retained a consultant to evaluate new and emerging technologies that could potentially be installed on cruise ships to meet the water quality standards at the point of discharge. A draft report is available for review and a technology workshop is scheduled for Wednesday, February 18. Information from the workshop will be incorporated into a final report expected April 13.

4. Existing Regulations

DEC has existing regulations that allow a wastewater discharge permittee to apply for a mixing zone with their permit. The regulations include a 19 part test that must be met before DEC can authorize a mixing zone, including:

- That the effluent is first treated to remove, reduce and disperse the pollutants using the most effective, technologically and economically feasible methods.

The anti-degradation policy also requires the use of "methods of pollution

prevention, control, and treatment found by the department to be the most effective and reasonable" and that wastes and other substances to be discharged "be treated and controlled to achieve . . . the highest statutory and regulatory requirements."

If mixing zones were allowed, DEC would modify the cruise ship wastewater discharge general permit to include mixing zones where appropriate. Any proposed permit modifications would require a public review. Mixing zones may be prohibited in some areas and would only be allowed in other areas and under conditions that would fully protect aquatic life and other uses of Alaska's waters.

The modified permit would still require use of best available treatment technologies. Existing water quality regulations prohibit backsliding in treatment technology or decreases in effluent quality.

Every five years when the general permit is renewed, DEC must reevaluate what comprises best available treatment technologies. Renewed permits are modified to reflect any new, commercially available treatment technologies.

Fiscal Impact - HB 134 has no fiscal impact for the Department.

Responsible Cruising in Alaska

February 2, 2009

Dear Alaska Legislators,

The session has started and cruise industry lobbyists are once again filling the capitol. As non-profit, public organizations, CSAW and RCA cannot match the hours the cruise industry and their allies will spend to change important provisions of the cruise ship initiative passed by voters in 2006. The cruise industry wants you to (1) repeal the ban on "mixing zones" for large vessels (current law requires these floating cities to meet Alaska's Water Quality Standards (WQS) at the point of discharge), and (2) reduce the tax levies on the passengers and the cruise lines.

Here are the facts: the cruise lines have not installed any new wastewater treatment equipment on their ships since 2006. Instead, the industry has directed their lobbyists to try and repeal state law rather than comply with our pollution requirements. The industry claims the new law cannot be met, yet many ships are already meeting most of the discharge standards without mixing zones. In fact, most pollution problems appear to be related to older ships in the cruise fleet. Significantly, the Alaska Department of Environmental Conservation (ADEC) has given the cruise industry until 2010 to comply with the WQS without penalty.

As part of this thoughtful approach to implementing the law, ADEC is hosting a technology conference on cruise ship discharges on February 18 in Juneau, where vendors and scientists will present treatment technologies that can resolve the few remaining discharge issues without changing the mixing zone rule. ADEC has a worthy goal — working with the cruise industry, science, the public, and interested organizations to identify ways to improve discharge performance and ensure the health of our marine resources. Repealing the rule related to diluting discharges before these technologies are evaluated and perhaps included in pilot programs in 2009 is clearly premature. If the cruise industry wants decisions to be based on science (as they claim) they should cooperate with DEC's technology evaluation process and be open to trying to meet the standards, rather than working to repeal them before the department's scientific evaluation has been completed.

Segments of the cruise industry have criticized the passenger fee or "head tax" sanctioned by Alaska's voters in 2006. An independent economic review of the 2007 cruise season by the McDowell Group demonstrated that the taxes and fees passed in 2006 did not cause <u>any</u> decrease in cruise ship passenger visitation to Alaska or passenger spending in ports of call. The $50 head tax paid by cruise passengers is a tiny fraction of the total costs incurred by a passenger when they visit Alaska. The visitor head tax and the other cruise-related revenue (the corporate income tax on marine operations and the cruise gambling tax) have been successfully collected and disbursed by the Alaska Department of Revenue in a competent and efficient manner since 2007. The allocation of a portion of these revenues is restricted by federal law, and the Alaska Legislature has properly appropriated the revenue to comply with both state and federal laws. This revenue has greatly benefited Alaskan communities impacted most by cruise operations.

Revenue from these new taxes has been extremely helpful in financing new docks, harbors and port facilities – the very infrastructure that allows cruise visitors to enjoy their trip to Alaska while ensuring the cruise industry remains successful. Without these cruise passenger revenues, funds for construction of safe & efficient tourism infrastructure would need to be cobbled from local property and sales taxes, bonding and other erratic sources. At a time when many Alaska families are struggling to make ends meet, asking the one million summer tourists and Miami-based cruise companies to pay their fair share for needed tourism infrastructure makes sense.

The comprehensive initiative passed by Alaska voters in 2006 addressed critical shortcomings related to taxation and wastewater treatment oversight for the cruise industry. The Alaska Department of Revenue has done an exemplary job collecting the new taxes without unnecessary fees and costs. Enacting reasonable taxes on the cruise companies and passengers to build necessary tourism infrastructure makes far more sense than having coastal communities fund the construction of cruise wharfs, docks and tourist roadways themselves.

DEC now issues discharges permits for cruise ships, as they do for all other dischargers, and the Ocean Ranger program has given Alaskans needed assurance that the State's pollution rules are being followed. The approach adopted by DEC has been measured and appropriate, and affords the cruise industry ample time to comply with regulations that protect Alaska's incomparable marine resources. Given the state's reliance on commercial and sport fishing, subsistence, and the many uses of marine waters for local recreation and tourism, Alaska must protect its coastal waters by preventing the discharge of heavy metals like copper and other substances known to negatively impact salmon and other aquatic resources.

We urge members of the Alaska Legislature not to heed the cries of the Miami-based cruise industry. This luxury industry registers all their ships in foreign ports to avoid U.S. income taxes and labor laws. They should not now ask Alaska for local tax-relief and weaker pollution rules because they fear the US economy and its potential, future impact on their bottom line.

Let's keep Alaska waters clean and continue to appropriate cruise tax revenues for worthy projects that benefit the cruise passengers, the companies and impacted Alaska communities.

Please contact us to discuss any of these issues in more detail. Thank you,

Gershon Cohen Ph.D.

Re: HB 134 Testimony of Gershon Cohen Ph.D.

Dear Chairmen and Members of the Alaska House of Representatives Committee on Community and Regional Affairs,

Thank you for accepting this testimony in opposition to HB134, which seeks to remove the ban on mixing zone authorizations for cruise ship discharges established by majority vote of the people of Alaska in 2006.

The State of Alaska has traditionally been generous in allowing dischargers to circumvent the State's Water Quality Standards (WQS) through the application of mixing zones, which permit polluters to dilute contaminated wastewater within public waters. Nevertheless, the frequency of mixing zone use in the past should not be presumed to indicate that (1) the practice is consistent with the fundamental goals of the Clean Water Act to make all waters fishable and swimmable and eliminate the discharge of pollutants, or (2) such regulatory negligence adequately protects Alaska's aquatic resources.

I agree with the intent of the sponsors of HB134 that discharge permits be based on the best scientific evidence available. By definition, the State's WQS represent the best scientific information regarding the protection of aquatic life. Assigning mixing zones to mobile dischargers such as cruise ships does not represent the best science available, it will create multiple regions in our marine waters which cannot be tested for toxicity, where wastes may or may not disperse well depending upon the location of the discharge due to local currents, tides, salinity, temperature, and/or topography, and will likely contain the waste from multiple ships using the same water for dilution. Worst of all, it will risk contaminating any fish or other marine life unfortunate enough to be within the mixing zone at the time of discharge.

Mixing zones are not based on biological science or toxicology; they are engineering-based risk analyses that assume, or at least hope, that organisms will either not be present when the discharge occurs, not be harvested and consumed, or represent a small enough percentage of the population as to not result in long term harm to the overall ecosystem.

The cruise industry believes it should be given mixing zones because some other dischargers have mixing zones. Poor performance by other dischargers does not

gershon@aptalaska.net Box 956 Haines, AK, 99827 Ph: 907-766-3005 Fax: 766-2921 www.earthisland.org/c-saw

justify allowing the cruise lines to seek the lowest common denominator of waste treatment. It is important to note that many of their "peers" are using equipment designed in the 1950's, built in the 1970's, and perhaps in a few cases marginally improved in more recent years. Many of these communities and private dischargers have not had the financial resources to even begin trying to improve their performance. The cruise industry has recorded billion dollar profits year after year – they can afford to do the job right, and in doing so they will show others how they can improve their performance.

Alaska's WQS not only contain provisions for authorizing mixing zones, they also include an Antidegradation Policy (18AAC70.015) requiring the State to prohibit lowering the quality of a receiving water unless the best possible treatment methods are applied. The cruise industry claims to be using the best treatment methods available, but in fact, the industry has not tested or installed any new equipment on their ships since 2006 to address pollutants such as heavy metals or ammonia even though they have known since the initiative election that State law would eventually require them to either improve their performance, discharge on-shore, or discharge outside of Alaska waters. Rather than invest the time and money necessary to improve their performance they have chosen to spend their resources on lobbyists and lawyers to try and get the law changed. Many of those lobbyists and lawyers are probably sitting in your chambers today.

Regardless of your feelings about the authorization of mixing zones, it cannot be honestly argued that this bill is anything but premature. Tomorrow morning DEC will host a meeting at which scientists and high-tech companies will present their ideas on how cruise ships can meet the WQS without mixing zones. These technologies may not be ready to be installed in the fleet immediately for the simple reason that waste treatment firms have never been asked to build such devices for ships. That does not mean the fundamental science and technology does not exist, or cannot be adapted for ships within a reasonable period of time.

I'm sure you recall that in 2001 we heard the same cry from this industry when Alaska demanded they do a better job of removing fecal bacteria from their wastestreams. They said such performance was impossible. They said no applicable technologies existed. They threatened that imposing the requirement would mean the death of their industry in Alaska and along with it the demise of the Alaska tourism economy. But what was the result of our demand for better treatment? Several companies immediately launched efforts to build better machines for removing solids and bacteria on ships. Today, two thirds of the fleet that comes to Alaska has these improved technologies on board.

There is little doubt that if the cruise lines made the effort to comply with our rules they would succeed. Furthermore, not only has DEC recently initiated a process to identify technologies that have been improved in recent years, DEC has given the industry a pass on meeting the no-mixing zone discharge rules until at least 2010. No fines or penalties have been assessed to this point, and the bill before you today seeks to remove an achievable performance requirement that will not come due for another year at minimum. There is simply no harm whatsoever to this industry in

gershon@aptalaska.net Box 956 Haines, AK, 99827 Ph: 907-766-3005 Fax: 766-2921 www.earthisland.org/c-saw

keeping the present law in place while new and better treatment methods are adapted for ship board use. For these reasons, it is clear that HB134 is premature, and should not move forward at this time.

The authorization of mixing zones is fundamentally illogical. Our oceans are finite and putting more pollutants into our waters must at some point result in deleterious impacts on our fisheries. One would hope we'd have learned this lesson by now, given the result that similar applications of the "dilution-solution" have had on our atmosphere.

I apologize I cannot be here in person to testify today, but I am traveling to Juneau this afternoon to participate in DEC's cruise ship technology conference that begins on Wednesday morning.

Sincerely,

Gershon Cohen PhD.

Gershon Cohen PhD, Project Director, CSAW

ALASKA CRUISE ASSOCIATION

February 10, 2009

Rob

The Honorable Bob Herron
House of Representatives
State Capitol Rm 415
Juneau AK 99801-1182

Dear Representative Herron:

In has come to my attention a letter was recently distributed to the Legislature inaccurately describing the actions and goals of the cruise industry. I am writing to set the record straight.

The cruise industry shares the Department of Environmental Conservation's goal to improve and protect water quality in Alaska. Ever since 2002, Alaska has had the highest standards in the world for large ship wastewater discharges. To meet these standards, the cruise industry has invested over $200 million to improve onboard processing of wastewater. If you have not seen this impressive technology, I invite you to tour one of our ships this season.

In 2006, the sponsors of Ballot Measure 2 promised Alaskans, the initiative would hold the cruise industry to the same standards as other industries. However, the initiative ties the hands of the environmental regulators. The Initiative prohibits the established scientific practice of measuring the effects of diluted discharges into a body of water. The initiative mandates DEC hold the cruise industry to a much higher standard and one that has not proven to be reasonably obtainable in a marine environment or onboard a cruise ship. It is important to remember that it is not uncommon for a cruise ship to take on municipal drinking water that exceeds the initiative standards and would require processing prior to discharge.

On February 18, the DEC will be holding a workshop with the goal of "producing an inventory and evaluating existing and innovative new control technologies to further reduce and/or remove ammonia and metals from treated waste water effluent of large cruise ships." We support DEC's effort to learn more about existing technologies and our members will be participating in that workshop. Our research departments continue to work with water treatment manufacturers to evaluate new technology. However, DEC's open invitation to manufacturers, engineers, scientists, etc. is a new approach. We will be interested to discover any new emerging technologies.

The identification and evaluation of new technology should be part of a long-term and ongoing process. We are certainly committed to participating with DEC, EPA, local communities, and the environmental organizations in this ongoing process.

360 K Street, Suite 300 · Anchorage, Alaska · 99501 · (907) 743-4529 · (907) 743-4553 fax

I hope you will agree, the DEC's workshop and the long-term effort to study new technology should not be used as a distraction to the very important goals that can be accomplished this legislative session. We have the opportunity to level the playing field and treat the cruise industry the same as other industries by: giving DEC professionals the tools to use science to set their discharge standards; creating a regulatory environment where the industry has the ability to comply based on proven technology; and establishing the rules by this spring prior to deployment decisions for the 2010 cruise season.

Our members look forward to working with you this session to accomplish these goals. I hope you will join us, the Alaska State Chamber of Commerce, the Alaska Municipal League, Southeast Conference and 35 other local communities and organizations in support of these important legislative goals. It is also my hope that the initiative sponsors will focus their efforts on assisting the legislature in their authority to review public policy rather than criticize legislators for acting prematurely.

If you have any questions regarding this letter, I would enjoy the opportunity to discuss these issues further.

Sincerely,

John Binkley
President
ACA

360 K Street, Suite 300 · Anchorage, Alaska · 99501 · (907) 743-4529 · (907) 743-4553 fax

ALASKA CRUISE ASSOCIATION

Thank you for taking the time to meet with us.

In 2006, the Alaska voters passed a cruise ship initiative. The area of concern for the cruise ships is the new permit standards that were created.

Since 2002, Alaska has had among the highest standards in the world for waste water discharge from large cruise ships. We acknowledge being held to a higher standard and have invested over $200 million in the technology to achieve those levels. In May of 2008, ADEC adopted new standards for the final large cruise ship general permit. Not only are these standards far higher than any community in Alaska; the technology to implement them is not commercially available or is impractical for ships. This is despite the promise from initiative sponsors that the initiative would simply "level the playing field."

The initiative language tied the hands of ADEC and does not allow them to set the permit limits based on science. We are asking the legislature to follow the will of the people and "level the playing field," to untie the hands of ADEC and let them do their job.

Attached you will find several documents that we feel make a compelling case to use similar methods of measurement in order to "level the playing field."

Sincerely,

John Binkley
President

Quote from Gershon Cohen and the Campaign to Safeguard America's Waters issued press release (Alaska Cruise Ship Initiative Certified for 2006 Ballot).

"If passed, the new initiative will level the economic and environmental playing fields between the cruise ship industry and other major dischargers of polluted wastes into Alaska waters."

Quote from Joe Geldhof, Juneau Attorney, co-author of Alaska Cruise Ship Initiative, Skagway News story (Ballot Measure Two, the cruise initiative, raises voices in ship-happy Skagway).

"There's nothing radical on here," said Geldhof, adding that the measure would make the cruise industry adhere to the same pollution standards as fisheries, municipalities, and gas and oil companies. Drafting techniques to adopt the similar basic body of law makes it long. "It's not meant to be long, onerous and punitive."

Quote from an Alaska Department of Environmental Conservation issued press release (State Issues First Discharge Permit for Cruise Ships in Alaska).

"The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems."

"The department has determined that as long as ships comply with the interim effluent limits there will be no impacts on water resources or aquatic life."

Comparable EPA NPDES Discharge Permits in Alaska and Associated Effluent Limits

The following table compares the effluent guidelines in the ADEC General Cruise Ship Permit with effluent limitations within existing wastewater discharge permit limits in Alaska. Analytical data from the EPA cruise ship sampling project is compared with minimum permitted levels for land-based plants within typical large cruise ship itineraries and various other communities in Alaska. For cases where land-based permits indicated analysis for total recoverable metals, these limits were compared to cruise ship dissolved metals concentrations. For land-based permits that include variable effluent limitations based on monthly averages, weekly averages, or daily maximums, the most stringent level was chosen. The synopsis indicates that the final 2010 effluent limitations of the ADEC General Cruise Ship permit are stricter than the limits in the permits of any land-based municipal treatment plants in Alaska.

	2002			2006			
	Fecal Coliform (fc/100 ml)	BOD (mg/L)	TSS (mg/L)	Diss Copper (ug/L)	Diss Nickel (ug/L)	Diss Zinc (ug/L)	Total Ammonia (ug/L)
Cruise Ship Permit (interim)	14	30	30	66	180	230	80.4
Cruise Ship Permit (2010 final)	14	30	30	3.1	8.2	81	2.9

Soldotna	100	30	30				

Interim Levels

2010 Initiative Limits

Comparison of Effluent Volumes between Land-based Municipal Treatment Plants and Cruise Ships

The average volume of discharge from a cruise ship was also compared to the average discharge volume of each land-based plant in order to evaluate the cumulative effects of cruise ship discharges within Alaska waters. Advanced wastewater systems on cruise ships operate efficiently and generally produce a small volume of treated effluent compared to land based plants. The following chart lists the permitted effluent for Alaska land-based treatment plants, and the equivalent number of cruise ships required to match the volume of daily effluent in each community.

	Permitted daily discharge in gallons	Equivalent number of large cruise ships to equal one day of each city's permitted waste water discharge
Average Cruise Ship Daily Discharge	143,600	1
Anchorage	36,000,000	251
Eagle River	2,500,000	17
Girdwood	600,000	4
Haines	1,900,000	13
Juneau Douglas/Mendenhall	7,660,000	53
Kenai	1,330,000	9
Kennecott Greens Creek mine	2,390,000	17
Ketchikan	4,000,000	28
Palmer	950,000	7
Seward	900,000	6
Sitka	1,800,000	13
Skagway	630,000	4
Soldotna	1,080,000	8

For average cruise ship effluents, 2004 EPA cruise ship study data, available at http://www.epa.gov/owow/oceans/cruise_ships/results.html

*** Section 1.** AS 43 is amended by adding a new chapter to read:

Chapter 52. Excise Tax on Travel Aboard Commercial Passenger Vessels.

Sec. 43.52.010. Levy of excise tax on overnight accommodations on commercial passenger vessels. There is imposed an excise tax on travel on commercial passenger vessels providing overnight accommodations in the state's marine water.

Sec. 43.52.020. Rate of tax. The tax imposed by AS 43.52.010 - 43.52.095 is levied at a rate of $46 a passenger per voyage.

Sec. 43.52.030. Liability for payment of tax. A passenger traveling on a commercial passenger vessel providing overnight accommodations in state marine

water is liable for the tax imposed by AS 43.52.010 - 43.52.095. The tax shall be collected and is due and payable to the department

(1) by the person who provides travel aboard a commercial vessel for which the tax is payable; and

(2) in the manner and at the times required by the department by regulation.

Sec. 43.52.040. Disposition of receipts. (a) The proceeds from the tax on travel on commercial passenger vessels providing overnight accommodations in the state's marine water shall be deposited in a special "commercial vessel passenger tax account" in the general fund. The legislature may appropriate money from this account for the purposes described in (b) and (c) of this section, for state-owned port and harbor facilities, other services to properly provide for vessel or watercraft visits, to enhance the safety and efficiency of interstate and foreign commerce, and such other lawful purposes as determined by the legislature.

(b) For each voyage of a commercial passenger vessel providing overnight accommodations, the commissioner shall identify the first five ports of call in the state and the number of passengers on board the vessel at each port of call. Subject to appropriation by the legislature, the commissioner shall distribute to each port of call $5 per passenger of the tax revenue collected from the tax levied under this chapter. If the port of call is a city located within a borough not otherwise unified with the borough, the commissioner shall, subject to appropriation by the legislature, distribute $2.50 per passenger to the city and $2.50 to the borough. Each port of call receiving funds under this section shall use the funds in a manner calculated to improve port and harbor facilities and other services to properly provide for vessel or watercraft visits and to enhance the safety and efficiency of interstate and foreign commerce.

(c) A "regional cruise ship impact fund" consisting of 25 percent of the proceeds from the tax on travel aboard commercial passenger vessels providing overnight accommodations in the state's marine water shall be established as sub-account of the funds established in (a) of this section and deposited in the general fund. Subject to appropriation by the legislature and regulations adopted by the Department of Revenue, the commissioner shall distribute funds to municipalities or

other governmental entities within the Prince William Sound Region, Southeast Alaska, or any other distinctive region impacted by cruise ship related tourism activities but not entitled to receive funds based on port of call visitation as allowed by (b) of this section, provided that any funds used from this account shall be used to provide services and infrastructure directly related to passenger vessel or watercraft visits or to enhance the safety and efficiency of interstate and foreign commerce related to vessel or watercraft activities.

Sec. 43.52.050. Administration. (a) The department shall

(1) administer this chapter; and

(2) collect, supervise, and enforce the collection of taxes due under this chapter and penalties as provided in AS 43.05.

(b) The department may adopt regulations necessary for the administration of this chapter.

Sec. 43.52.060. Local levies. Any municipality, whether home rule or general law, that receives passenger ship fee funds under this chapter may not impose an additional form of tax on travel on commercial passenger vessels engaged in activities involving overnight accommodations for passengers in state marine waters. Any form of tax on travel on commercial passenger vessels engaged in activities involving overnight accommodations for passengers in state marine waters enacted by a municipality, whether home rule or general law, prior to the effective date of this section shall expire one year after enactment of this law if that municipality elects to receive funds under this chapter.

Sec. 43.52.095. Definitions. In this chapter,

(1) "commercial passenger vessel" means a boat or vessel that is used in the common carriage of passengers in commerce; "commercial passenger vessel" does not include

(A) vessels with fewer than 250 berths or other overnight accommodations for passengers;

(B) noncommercial vessels, warships, and vessels operated by the state, the United States, or a foreign government;

(2) "marine water of the state" and "state marine water" have the

meaning given to "waters" in AS 46.03.900, except that they include only marine waters;

(3) "passenger" means a person whom a common carrier has contracted to carry from one place to another;

(4) "voyage" means any trip or itinerary lasting more than 72 hours.

* **Sec. 2.** AS 05 is amended by adding a new chapter to read:

Chapter 16. Games of Chance and Contests of Skill on Ships Operating on Waters within the Jurisdiction of Alaska.

Sec. 05.16.010. Gambling activities aboard commercial vessels purportedly authorized by federal law. This chapter applies to the use of playing cards, dice, roulette wheels, coin-operated instruments or machines, or other objects or instruments used, designed, or intended for gaming or gambling used in the waters under the jurisdiction of the State of Alaska on a voyage described in 15 U.S.C. 1175(c)(2), and to any other gambling activities taking place aboard large passenger vessels in the state.

Sec. 05.16.020. Tax on gambling activities authorized by AS 05.16.010. There is imposed on the operator of a gaming or gambling activities aboard large passenger vessels in the state a tax of 33 percent of the adjusted gross income from those activities. "Adjusted gross income" means gross income less prizes awarded and federal and municipal taxes paid or owed on the income. The tax shall be collected and is due and payable to the Department of Revenue in the manner and at the times required by the Department of Revenue.

Sec. 05.16.030. Disposition of receipts. The proceeds from the tax on gambling operations aboard commercial passenger vessels in the state's marine water shall be deposited in a special "commercial vessel passenger tax account" in the general fund.

* **Sec. 3.** AS 43.20.021 is repealed and reenacted to read:

Sec. 43.20.021(a). Internal Revenue Code adopted by reference. (a) Sections 26 U.S.C. - 1399 and 6001 - 7872 (Internal Revenue Code), as amended, are adopted by reference as a part of this chapter. These portions of the Internal Revenue Code have full force and effect under this chapter unless excepted to or modified by

other provisions of this chapter.

(b) Nothing in this chapter or in AS 43.19 (Multistate Tax Compact) may be construed as an exception to or modification of 26 U.S.C. 883.

(c) The provision in (b) of this section does not apply to commercial passenger vessels as defined in AS 43.52.095.

* Sec. 4. AS 46.03.462 is repealed and reenacted to read:

Sec. 46.03.462. Terms and conditions of discharge permits. (a) An owner or operator may not discharge any treated sewage, graywater, or other wastewater from a large commercial passenger vessel into the marine waters of the state unless the owner or operator obtains a permit under AS 46.03.100, which shall comply with the terms and conditions of vessel discharge requirements specified in (b) of this section.

(b) The minimum standard terms and conditions for all discharge permits authorized under this provision require that the owner or operator

(1) may not discharge untreated sewage, treated sewage, graywater, or other wastewaters in a manner that violates any applicable effluent limits or standards under state or federal law, including Alaska Water Quality Standards governing pollution at the point of discharge;

(2) shall maintain records and provide the reports required under AS 46.03.465(a);

(3) shall collect and test samples as required under AS 46.03.465(b) and (d) and provide the reports with respect those samples required by AS 46.03.475(c);

(4) shall report discharges in accordance with AS 46.03.475(a);

(5) shall allow the department access to the vessel at the time samples are taken under AS 46.03.465 for purposes of taking the samples or for purposes of verifying the integrity of the sampling process; and

(6) shall submit records, notices, and reports to the department in accordance with AS 46.03.475(b), (d), and (e).

* Sec. 5. AS 46.03.463 is amended to read as follows:

Sec. 46.03.463(d) is repealed.

Sec. 46.03.463(e) is repealed and reenacted to read: An owner or operator may

not discharge any treated sewage, graywater, or other wastewater from a large commercial passenger vessel into the marine waters of the state unless the owner or operator obtains a permit under AS 46.03.100 and 46.03.462, and provided that the vessel is not in an area where the discharge of treated sewage, graywater, or other wastewaters is otherwise prohibited.

Sec. 46.03.463(g) is repealed.

* **Sec. 6.** AS 46.03.465 is repealed and reenacted to read:

Sec. 46.03.465. Information-gathering requirements. (a) The owner or operator of a commercial passenger vessel shall maintain daily records related to the period of operation while in the state, detailing the dates, times, and locations, and the volumes and flow rates of any discharges of sewage, graywater, or other waster into the marine waters of the state, provide electronic copies of such records on a monthly basis to the department no later than five days after each calendar month of operation in state waters.

(b) While a commercial passenger vessel is present in the marine waters of the state, the owner or operator of the vessel shall provide an hourly report of the vessel's location based on Global Positioning System technology and collect routine samples of the vessel's treated sewage, graywater, and other wastewaters being discharged into marine waters of the state with a sampling technique approved by the department.

(c) While a commercial passenger vessel is present in the marine waters of the state, the department, or an independent contractor retained by the department, may collect additional samples of the vessel's treated sewage, graywater, and other wastewaters being discharged into the marine waters of the state.

(d) The owner or operator of a vessel required to collect samples under (b) of this section shall ensure that all sampling techniques and frequency of sampling events are approved by the department in a manner sufficient to ensure demonstration of compliance with all discharge requirements under AS 46.03.462.

(e) The owner or operator of a commercial passenger vessel shall pay for all reporting, sampling, and testing of samples under this section.

(f) If the owner or operator of a commercial passenger vessel has, when complying with another state of federal law that requires substantially equivalent

information required under (a), (b), or (d) of this section, the owner or operator shall be considered to be in compliance with that subsection so long as the information is also provided to the department.

* Sec. 7. AS 46.03 is amended by adding new sections to read:

Sec. 46.03.476. Ocean Rangers. (a) An owner or operator of a large commercial passenger vessel entering the marine waters of the state is required to have a marine engineer licensed by the United States Coast Guard hired or retained by the department on board the vessel to act as an independent observer for the purpose of monitoring state and federal requirements pertaining to marine discharge and pollution requirements and to insure that passengers, crew, and residents at ports are protected from improper sanitation, health, and safety practices.

(b) The licensed marine engineer shall monitor, observe, and record data and information related to the engineering, sanitation, and health related operations of the vessel, including but not limited to registration, reporting, record-keeping, and discharge functions required by state and federal law.

(c) Any information recorded or gathered by the licensed marine engineer shall be promptly conveyed to the Alaska Department of Environmental Conservation and the United States Coast Guard on a form or in a manner approved by the commissioner of environmental conservation. The commissioner may share information gathered with other state and federal agencies.

Sec. 46.03.481. Citizens' suits. (a) Any citizen of the State of Alaska may commence a civil action (1) against an owner or operator of a large passenger vessel alleged to have violated any provision of this chapter, or (2) against the department where there is an alleged failure to perform any act or duty under this chapter which is not discretionary. No civil action may be commenced under this section, however, prior to 45 days after the plaintiff has provided written notice of the intent to sue to the Attorney General of Alaska.

(b) Subject to appropriation, as necessary, up to 50 percent and not less than 25 percent of any fines, penalties, or other funds recovered as a result of enforcement of this chapter shall be paid to the person or entity, other than the defendant, providing information sufficient to commence an investigation and enforcement of this chapter

under this provision.

* Sec. 8. AS 46.03.480 is amended as follows:

Sec. **46.03.480** is amended by adding a new subsection to read:

(d) An additional fee in the amount of $4 per berth, is imposed on all large commercial passenger vessels, other than vessels operated by the state, for the purpose of operating the Ocean Ranger program established in AS 46.03.476; said program shall be subject to legislative appropriation.

Sec. **46.03.480(d)** shall be repealed and reenacted as AS 46.03.480(e).

* Sec. 9. AS 46.03.760 is amended as follows:

Sec. **46.03.760** is amended by adding a new subsection to read:

(f) An owner, agent, employee, or operator of a commercial passenger vessel, as defined in AS 43.52.095, who falsifies a registration or report required by AS 46.03.460 or 46.03.475 or who violates or causes or permits to be violated a provision of AS 46.03.250 - 46.03.314, 46.03.460 - 46.03.490, AS 46.14, or a regulation, a lawful order of the department, or a permit, approval, or acceptance, or term or condition of a permit, approval, or acceptance issued under AS 46.03.250 - 46.03.314, 46.03.460 - 46.03.490, or AS 46.14 is liable, in a civil action, to the state for a sum to be assessed by the court of not less than $5,000 nor more than $100,000 for the initial violation, nor more than $10,000 for each day after that on which the violation continues, and that shall reflect, when applicable,

(1) reasonable compensation in the nature of liquidated damages for any adverse environmental effects caused by the violation, that shall be determined by the court according to the toxicity, degradability, and dispersal characteristics of the substance discharged, the sensitivity of the receiving environment, and the degree to which the discharge degrades existing environmental quality; for a violation relating to AS 46.14, the court, in making its determination under this paragraph, shall also consider the degree to which the discharge causes harm to persons or property; this paragraph may not be construed to limit the right of parties other than the state to recover for personal injuries or damage to their property;

(2) reasonable costs incurred by the state in detection, investigation, and attempted correction of the violation;

(3) the economic savings realized by the person in not complying with the requirement for which a violation is charged; and

(4) the need for an enhanced civil penalty to deter future noncompliance.

Sec. 46.03.760(f) shall be repealed and reenacted as AS 46.03.760(g).

* **Sec. 10.** AS 45.50.474 is repealed and reenacted to read:

Sec. 45.50.474. Required disclosures in promotions and shoreside sales on board cruise ships. (a) A person may not conduct a promotion on board a cruise ship that mentions or features a business in a state port that has paid something of value for the purpose of having the business mentioned, featured, or otherwise promoted, unless the person conducting the promotion clearly and fully discloses orally and in all written materials used in the promotion that the featured businesses have paid to be included in the promotion. All such written notice of disclosure shall be in a type not less than 14-point typeface and in a contrasting color calculated to draw attention to the disclosure.

(b) A person or other entity aboard a cruise ship conducting or making a sale of tours, flightseeing operations, or other shoreside activities to be delivered by a vendor or other entity at a future port of call shall disclose, both orally and in writing, the amount of commission or percentage of the total sale retained or returned to the person making the sale. The person or entity aboard a cruise ship making or attempting to make a sale of services or goods provided by a shoreside vendor shall disclose the address and telephone number of the shoreside vendor if asked by a consumer. All such written notice of disclosure shall be in a type not less than 14-point typeface and in a contrasting color calculated to draw attention to the disclosure.

(c) Each violation of this section constitutes an unfair trade practice under AS 45.50.471, and shall result in a penalty of not more than $100 for each violation. In this section, "cruise ship" means a ship that operates at least 48 hours in length for ticketed passengers, provides overnight accommodations and meals for at least 250 passengers, is operated by an authorized cruise ship operator, and is certified under the International Convention for the Safety of Life at Sea or otherwise certified by the United States Coast Guard.

* **Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SEVERABILITY. It is the intention of the people of Alaska that any portion of this legislation that is declared unlawful shall be stricken in a manner that preserves the remaining portion of the remaining legislation to the maximum extent possible.

* **Sec. 12.** EFFECTIVE DATE. This Act takes effect 90 days after enactment.

The Alaska Statutes - 2006

Sec. 46.03.462. Terms and conditions of discharge permits.

(a) An owner or operator may not discharge any treated sewage, graywater, or other wastewater from a large commercial passenger vessel into the marine waters of the state unless the owner or operator obtains a permit under AS 46.03.100 , which shall comply with the terms and conditions of vessel discharge requirements specified in (b) of this section.

(b) The minimum standard terms and conditions for all discharge permits authorized under this section require that the owner or operator

(1) may not discharge untreated sewage, treated sewage, graywater, or other wastewaters in a manner that violates any applicable effluent limits or standards under state or federal law, including Alaska Water Quality Standards governing pollution at the point of discharge;

(2) shall maintain records and provide the reports required under AS 46.03.465(a);

(3) shall collect and test samples as required under AS 46.03.465 (b) and (d) and provide the reports with respect those samples required by AS 46.03.475 (c);

(4) shall report discharges in accordance with AS 46.03.475 (a);

(5) shall allow the department access to the vessel at the time samples are taken under AS 46.03.465 for purposes of taking the samples or for purposes of verifying the integrity of the sampling process; and

(6) shall submit records, notices, and reports to the department in accordance with AS 46.03.475 (b), (d), and (e).

FEASIBILITY STUDY:

REDUCING CONCENTRATIONS OF DISSOLVED METALS AND AMMONIA IN LARGE PASSENGER VESSEL WASTEWATER DISCHARGES

DRAFT
February 16, 2009

DRAFT

Prepared for:

Alaska Department of Environmental Conservation
Cruise Ship Program

AND SUB-CONTRACTOR TEAM

EXECUTIVE SUMMARY

ADEC issued the Large Commercial Passenger Vessel Wastewater Discharge General Permit in March 2008 to meet the requirement of Alaska Statute 46.03.462. ADEC analysis indicated that cruise ships could not immediately comply with the statute's strict "point of discharge" effluent limits in the General Permit for ammonia, copper, nickel, and zinc. Therefore, the permit contains interim effluent limits that are less stringent for the 2008 and 2009 cruise ship seasons. The permit contains long term effluent limits for these parameters based upon the water quality standards that must be met by the 2010 cruise ship season.

An analysis of this 2008 data reveals that under current operational practices, the existing wastewater treatment systems installed on large cruise ships cannot consistently treat wastewater to the long term effluent limits.

Although it is the cruise ships' responsibility to comply with the terms of the General Permit, it is important for ADEC to be knowledgeable about the types of technology that may exist to enable cruise ships to meet the long term effluent limits. Therefore, ADEC hired the OASIS team to evaluate successful shore-based technologies as well as new and emerging technologies that could potentially be adapted for use on cruise ships. In this first public draft of the study, the OASIS team evaluates nine current technologies that may be able to reduce concentrations of the four pollutants of concern: ammonia, dissolved copper, dissolved nickel and dissolved zinc. It also includes five experimental technologies. Of the nine current technologies, three treat all four pollutants, three treat only ammonia and three treat only dissolved metals.

The information on these technologies comes from a variety of research sources and also from manufacturers, vendors, and researchers. A solicitation to these groups was accomplished by direct e-mailing and through e-mail blasts to the wastewater industry and the maritime industry. Approximately 60 interested parties were in contact. A total of 10 contacts submitted white papers describing potential solutions for meeting the new limits.

In order to make conclusive determinations about whether achieving the proposed limits by 2010 is possible, more information is needed such as detailed waste stream characterization and analysis, treatability studies, potential pilot plants, and conceptual designs for ship adaptation. However, this draft study finds that technologies exist in land-based applications that appear to be able to treat the pollutants (ammonia, nickel, copper or zinc) to the necessary levels for discharge. These technologies include ion exchange, reverse osmosis, electrodialysis, chemical precipitation, air/steam stripping, aerobic biological oxidation / nitrification and breakpoint chlorination.

Although land-based technologies exist that can reduce the pollutants to the long term permit limits, further investigation by the cruise lines will be required to determine whether the technologies evaluated in this draft study will be able to be adapted for use on board cruise ships. Ship space, inclination, and other constraints must be considered,

3590

as well as investigating what technological processes will provide the most efficient system by evaluating the system balance, operational costs, and other parameters.

This draft study found that technologies currently used in some manner on ships such as reverse osmosis (RO) and aerobic biological oxidation/nitrification (MBR) would likely provide the most adaptable systems to achieve the limits. RO would be able to treat both ammonia and metals while MBR would only treat ammonia. It is possible that ion exchange, combinations of ion exchange and RO, and electrodialysis could meet the limits for both ammonia and metals and have good potential for being adapted for on-board use. The vendor-submitted white papers suggest that chemical precipitation, ion exchange, reverse osmosis, electrodialysis and breakpoint chlorination may also be able to treat cruise ship wastewater to the permit levels for discharge.

Each of these technologies would be used in conjunction with current systems and would require a significant amount of design and retrofitting for sizing along with marine regulatory approval. It is likely that a full system approach would be needed to coordinate multiple technologies at multiple stages of the water and wastewater flow.

ALASKA MUNICIPAL LEAGUE
RESOLUTION #2009-08

A RESOLUTION OF THE ALASKA MUNICIPAL LEAGUE URGING THE ALASKA STATE LEGISLATURE IN 2009, TO MODIFY, BASED ON SCIENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER SUCH THAT THOSE STANDARDS WILL CONTINUE TO PROTECT AQUATIC LIFE AND THE ENVIRONMENT; AND ESTABLISHING AN EFFECTIVE DATE.

WHEREAS, during the 1990s, the size and number of cruise ships visiting Alaska coastal communities grew dramatically and became an increasingly important component of the local and regional economies; and

WHEREAS, in 1999, the Alaska Department of Environmental Conservation, U.S. Coast Guard, U.S. Environmental Protection Agency, members of the Southeast Conference, representatives of the cruise ship industry, and local concerned citizens formed a group to explore ways to improve environmental standards for the cruise ship industry in Alaska; and

WHEREAS, the Alaska Cruise Ship Initiative (ACSI) group was created in 2000 to 1). Identify waste streams from cruise ships; 2). Develop pollution prevention and waste management solutions; 3). Assess and verify compliance with volunteer wastewater sampling; and 4). Keep the Alaska public informed; and

WHEREAS, in late 2000, the ACSI commissioned a Science Advisory Panel with expertise in oceanography, bacteriology, chemistry, aquatic and human toxicology, marine biology, ecology and vessel engineering to address issues concerning treatment, discharge, dispersion, fate, and effects of wastewaters produced by commercial cruise ships; and

WHEREAS, the work of the groups noted above led to the enactment of laws (AS 46.03.460 – AS 46.06.490) by the Alaska Legislature in 2001 establishing wastewater discharge standards for cruise ships and creating the Commercial Passenger Vessel Environmental Compliance Program; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined laws enacted in 2001 (AS 46.03.460 – AS 46.06.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following the adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharge from large cruise ships operating in Alaska waters; and

WHEREAS, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel and zinc; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, compelling cruise ships to postpone discharge of wastewater until outside Alaska waters will likely shorten the time cruise ships are in port and result in fewer ports of call, which will negatively impact Alaskan businesses.

NOW, THEREFORE BE IT RESOLVED that the Alaska Municipal League urges the Alaska State Legislature in 2009, to modify, based on science, the standards governing the discharge of cruise ship wastewater such that those standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment.

FURTHER BE IT RESOLVED that the Alaska Municipal League requests that this resolution becomes effective immediately upon adoption by the State Legislature.

PASSED AND APPROVED by the Alaska Municipal League on this 14th day of November, 2008.

Signed: _____
Denise Michels, President, Alaska Municipal League

Attest: Kathie Wasserman
Kathie Wasserman, Executive Director, Alaska Municipal League

The Honorable Sarah Palin
Governor
State of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

January 21, 2009

Dear Governor Palin,

The Alaska State Chamber of Commerce supports and endorses efforts to have the Alaska State Legislature amend the "point of discharge" standard governing the cruise ship wastewater permits. The State Chamber membership has adopted as one of our top five Legislative Priorities, support for changes to the "point of discharge" standard governing cruise ship wastewater permitting. The Alaska State Chamber of Commerce urges you and the Alaska State Legislature to delete the "point of discharge" standard governing the cruise ship wastewater permits. The State Chamber Commerce asks the State to apply the best available data and technology when setting standards for cruise ship wastewater discharge permits.

The State Department of Environmental Conservation (ADEC) holds not only cruise ships but also ships such as our ferries to a different standard than it holds every other discharger in Alaska. This new permit measures effluent at the point of discharge instead of allowing a dilution zone, which every state in the United States allows, and State of Alaska statutes contemplate. This is a different standard from what is required for coastal communities, the fishing industry or the oil platforms in Cook Inlet.

The State Chamber supports State efforts to investigate the standards governing the discharge of cruise ship wastewater. We strongly urge the Alaska State Legislature to give due consideration to modifying the standards governing the discharge of cruise ship wastewater for a lower level based on science that will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical.

Should the cruise ship industry need to comply with the statutes of this permit, ships will have to hold their wastewater discharges until they are out of Alaska waters. Not only will this shorten time in port, and may result in fewer ports of call, but both results may negatively affect Alaska businesses and financially harm port communities. Small businesses that offer services to tour related businesses may well go out of business without these suggested changes.

The permit requirement is part of the cruise ship initiative that voters approved in 2006. That initiative imposed a number of environmental provisions, including one that requires ships to have a "discharge permit and meet all Alaska water quality standards".

Voters were told that the ships would be held to the same standards that "every other industrial and municipal discharger" must meet and that "no new permitting program is necessary." However, the permit ADEC issued holds the ships to a much different standard, one that may cost Alaska communities, Alaska ferries and businesses unnecessarily.

Alaska's water quality standards contemplate the use of dilution factors, such as mixing zones or short-term variances. According to ADEC, "mixing zones are provided for by the Clean Water Act and used by every state in the Nation." Without mixing zones, wastewater would have to be treated to the point where it could serve as a source of drinking water before being discharged and that just is not feasible here or anywhere else. Sewage treatment plants and seafood processors in Alaska could not operate without a mixing zone. This is also true for the cruise ships.

Alaska should hold cruise ships to the same stringent standards as its coastal communities. It is not in the state's best interest to shorten the time cruise visitors have ashore or to force the elimination of some ports of call.

I genuinely appreciate your thoughtful consideration and careful attention to this matter.

Yours in economic prosperity,

Wayne A. Stevens

cc: Members of the Alaska State Legislature

Alaska State Chamber of Commerce
2009 Priority

Title: A Resolution to urge the Governor and the Alaska State Legislature to delete the "point of discharge" standard governing the cruise ship waste water permits.

Position Statement:

1.) The State Chamber Commerce resolve to ask the 2009 legislature to apply the best available data and technology when setting standards for cruise ship wastewater discharge permits.

Position:

This resolution is consistent with the Alaska State Chamber Mission of having a positive impact on Alaska businesses by not limiting or interfering with ports of call. This is of high interest to all communities throughout Alaska to maintain a good business climate of welcoming ship visitors into their shops and on shore excursions. This action will allow the Alaska Department of Environmental Conservation to determine, by applying science, the wastewater permit standards.

Support for Position:

1.) In 2002 Alaska set the highest standards in the world for large cruise ship waste water discharge to protect state water ways. These standards were change in 2006 by a head tax ballot initiative in such a way that some of the new standards are technologically unfeasible by the cruise lines. During the ballot initiative process no public hearings or state agency input given on these newly imposed standards.
2.) Initiative sponsors misled voters by stating that the permit portion of the initiative would only "level the economic and environmental playing fields between the cruise ship industry and other major dischargers".
3.) If the permit guidelines are not amended ships could be required to go out into federal waters to discharge; thus less time in port cities which will allow less time in port for the visitors. This will have a negative impact on local government, retail business and shore based business operations.
4.) Cruise ships should be under the same guidelines on discharge as any other industry or land based operations in Alaska.
5.) Other constituencies who support this are local chambers, governments and business owners.
6.) Persons who may not support his position are the authors of the ballot initiative and uninformed members of the public.

Statewide Impact Position: High

Supporting documents attached:

1.) Support Information Packet

Action Required:

1.) Through legislative action amend "point of discharge" permit requirements.

Fiscal Impact:

1.) This action will not require money from the state; however it will have a continued positive impact on local governments and businesses in Alaska.

Southeast Conference

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" PERMIT STANDARD BASED ON SCIENTIFIC CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION.

Resolution 09-07

WHEREAS, Southeast Alaska has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are currently technologically not feasible and such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port, and such changes will impact local governments, small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers"; and

NOW THEREFORE, BE IT RESOLVED: The Board urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

THIS RESOLUTION WAS ADOPTED BY THE SOUTHEAST CONFERENCE BOARD OF DIRECTORS THIS 14TH DAY OF JANUARY, 2009.

ALASKA TRAVEL INDUSTRY ASSOCIATION

ALASKA TRAVEL INDUSTRY ASSOCIATION
BOARD OF DIRECTORS
RESOLUTION 0901

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" PERMIT STANDARD.

WHEREAS, the travel industry is a vital part of Alaska's economy; and

WHEREAS, Alaska has over 1,000,000 cruise passenger visitors annually spending almost $1 billion in the state; and

WHEREAS, travel businesses throughout Alaska, the majority of which are small and Alaskan-owned, are major economic benefactors of cruise visitor expenditures; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, the "point of discharge" standard, applicable only to cruise ships, are currently technologically unfeasible; and

WHEREAS, such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standard would mean that by 2010, cruise ships will depart Alaska waters to discharge, which would result in reduced time in Alaska ports; and

WHEREAS, such changes will impact local governments ability to collect dock usage fees and sales taxes, increasing the need for revenue sharing from the state, and

WHEREAS small businesses, which rely on cruise ship visitors, and crew expenditures to support local jobs and the local economy will have a reduced sales opportunity; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers; and

NOW THEREFORE, BE IT RESOLVED BY THE ALASKA TRAVEL INDUSTRY ASSOCATION (ATIA) BOARD OF DIRECTORS, that:

ATIA urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

RESOLUTION OF THE CITY AND BOROUGH OF JUNEAU, ALASKA

Serial No. 2458

A Resolution Urging the Alaska State Legislature to Modify the Standards Governing the Discharge of Wastewater from Cruise Ships.

WHEREAS, during the 1990s, the size and number of cruise ships visiting Alaska coastal communities grew dramatically and became an increasingly important component of the local and regional economies; and

WHEREAS, in 1999, the Alaska Department of Environmental Conservation, U.S. Coast Guard, U.S. Environmental Protection Agency, members of the Southeast Conference, representatives of the cruise ship industry, and local concerned citizens formed a group to explore ways to improve environmental standards for the cruise ship industry in Alaska; and

WHEREAS, the Alaska Cruise Ship Initiative (ACSI) group was created in 2000 to (1) Identify waste streams from cruise ships; (2) Develop pollution prevention and waste management solutions; (3) Assess and verify compliance with volunteer wastewater sampling; and (4) Keep the Alaska public informed; and

WHEREAS, in late 2000, the ACSI commissioned a Science Advisory Panel with expertise in oceanography, bacteriology, chemistry, aquatic and human toxicology, marine biology, ecology and vessel engineering to address issues concerning treatment discharge, dispersion rate, and effects of wastewater produced by commercial cruise ships; and

WHEREAS, the work of the groups noted above led to enactment of laws (AS 46.03.460 - AS 46.06.490) by the Alaska Legislature in 2001 establishing wastewater discharge standards for cruise ships and creating the Commercial Passenger Vessel Environmental Compliance Program; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined the laws enacted in 2001 (AS 46.03.460 - AS 46.06.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has reportedly invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharge from large cruise ships operating in Alaska waters; and

WHEREAS, according to the Alaska Department of Environmental Conservation, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge - much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters - ammonia, copper, nickel and zinc; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, water quality standards in Alaska contemplate the use of dilution factors, such as mixing zones or short-term variances, and are not applied at the point-of-release except in the case of the Alaska cruise ship wastewater standards; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, compelling cruise ships to postpone discharge of wastewater until outside Alaska waters will likely shorten the time cruise ships are in port and result in fewer ports of call, which will negatively impact Juneau businesses.

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE CITY AND BOROUGH OF JUNEAU, ALASKA:

Section 1. That the City and Borough of Juneau urges the Alaska Legislature in 2009, to examine, based on science, the standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical, and establish an effective date.

Section 2. Effective Date. This resolution shall be effective immediately upon adoption.

Adopted this 12th day of January, 2009.

KETCHIKAN GATEWAY BOROUGH

RESOLUTION NO. 2111

A RESOLUTION OF THE ASSEMBLY OF THE KETCHIKAN GATEWAY BOROUGH URGING THE ALASKA STATE LEGISLATURE IN 2009 TO MODIFY, BASED ON SCIENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER SUCH THAT THOSE STANDARDS WILL CONTINUE TO PROTECT AQUATIC LIFE AND THE ENVIRONMENT BUT WILL NOT BE TECHNOLOGICALLY AND FINANCIALLY UNREASONABLE OR IMPRACTICAL

RECITALS

WHEREAS, during the 1990s, the size and number of cruise ships visiting Ketchikan and other Alaska coastal communities grew dramatically and became an increasingly important component of the local and regional economies; and

WHEREAS, in 1999, the Alaska Department of Environmental Conservation, U.S. Coast Guard, U.S. Environmental Protection Agency, members of the Southeast Conference, representatives of the cruise ship industry, and local concerned citizens formed a group to explore ways to improve environmental standards for the cruise ship industry in Alaska; and

WHEREAS, the Alaska Cruise Ship Initiative (ACSI) group was created in 2000 to (1) identify waste streams from cruise ships; (2) develop pollution prevention and waste management solutions; (3) assess and verify compliance with volunteer wastewater sampling and; (4) keep the Alaska public informed; and

WHEREAS, in late 2000, the ACSI commissioned a Science Advisory Panel with expertise in oceanography, bacteriology, chemistry, aquatic and human toxicology, marine biology, ecology and vessel engineering to address issues concerning treatment, discharge, dispersion, fate, and effects of wastewaters produced by commercial cruise ships; and

WHEREAS, the work of the groups noted above led to the enactment of laws (AS 46.03.460 - AS 46.03.490) by the Alaska Legislature in 2001 establishing wastewater discharge standards for cruise ships and creating the Commercial Passenger Vessel Environmental Compliance Program; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined laws enacted in 2001 (AS 46.03.460-46.06.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following the adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharges from large cruise ships operating in Alaska waters; and

WHEREAS, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters -- ammonia, copper, nickel and zinc;

and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel, and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, water quality standards in Alaska contemplate the use of dilution factors, such as mixing zones or short-term variances, and are not applied at the point-of-release except in the case of the Alaska cruise ship wastewater standards; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, compelling cruise ships to postpone discharge of wastewater until outside Alaska waters will likely shorten the time cruise ships are in port and result in fewer ports of call, which will negatively impact Alaska businesses; and

WHEREAS, the Constitution of the State of Alaska represents the will of the people because the voters of Alaska: (1) elected the 55 delegates who crafted the Constitution in 1955 – 1956, (2) ratified the Constitution on April 24, 1956 in a record turnout by a margin greater than two to one; (3) ratified amendments to the Constitution on separate 28 occasions during the nearly 50 years of Statehood; and (4) rejected proposed amendments to the Constitution on 12 occasions during the nearly 50 years of Statehood; and

WHEREAS, provisions in Article XI, Section 6 of the Constitution of the State of Alaska concerning the repeal and amendment of initiated laws – specifically the provisions that state "[a]n initiated law . . . may not be repealed by the legislature within two years of its effective date [and] may be amended at any time" has stood the test of nearly 50 years of Statehood in terms of the will of the people.

NOW THEREFORE, IN CONSIDERATION OF THE ABOVE FACTS, IT IS RESOLVED BY THE ASSEMBLY OF THE KETCHIKAN GATEWAY BOROUGH as follows:

Section 1. The Ketchikan Gateway Borough Assembly hereby urges the Alaska State Legislature in 2009 to modify, based on science, the standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical.

Section 2. This resolution shall take effect immediately.

CITY OF SEWARD, ALASKA
RESOLUTION 2009-003

A RESOLUTION OF THE CITY COUNCIL, OF THE CITY OF SEWARD, ALASKA, URGING THE ALASKA STATE LEGISLATURE TO MODIFY, BASED ON SCIENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE-SHIP WASTEWATER BY USING THE CRITERIA THAT APPLY TO MUNICIPAL SHORE-BASED WASTEWATER FACILITIES AND ALL OTHER VESSELS TRANSITTING ALASKA WATERS

WHEREAS, the Seward community has a strong marine-based economy with transportation routes historically used by the U.S. Navy, Coast Guard, and state law enforcement vessels; large and small passenger vessels; a commercial fishing fleet; and other passenger-bearing vessels; and

WHEREAS, Seward's marine-based economic activity occurs in proximity to the Kenai Fjords National Park, the Chugach National Forest, Caines Head State Park, and other protected lands; and

WHEREAS, between 2001 and 2006, agencies of the State of Alaska, through the legislative process, have enacted statutes and regulations establishing wastewater discharge standards and created the Commercial Passenger Vessel Environmental Compliance Program as means of supporting cruise ship activity in Alaska in an environmentally-sound manner; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships, leading to the first ever general permit for wastewater discharges from large cruise ships operating in Alaska; and

WHEREAS, the standards now imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, including Seward's facility and those in effect for all other fishing, freight, and passenger vessels; and

WHEREAS, the cruise ship point-of-release standards are unfeasible and will require prohibitive financial investment in research to establish methods of meeting the standards; and

WHEREAS, these standards could mean that cruise ships would defer all discharges until they are out of Alaska waters, which would result in reduced length of time in port, and elimination of ports situated far from International waters; and

CITY OF SEWARD, ALASKA
RESOLUTION 2009-003

WHEREAS, such changes would impact Seward's small business, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, implementing policy based on inconsistent standards for a specific sector of the maritime economy establishes a dangerous precedent.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF SEWARD, ALASKA, that:

Section 1. Seward City Council urges the Alaska State Legislature in 2009 to modify the standards governing the discharge of cruise ship wastewater.

Section 2. Seward City Council suggests the modifications be scientifically based and similar to the criteria that apply to municipal shore-based wastewater facilities and all other vessels transiting Alaska waters.

Section 3. This resolution shall take effect immediately upon its adoption.

PASSED AND APPROVED by City Council of the City of Seward this 12th day of January 2009.

Anchorage Soil and Water Conservation District
Board of Supervisors
Resolution 2009-01

WHEREAS, the mission of the Anchorage Soil & Water Conservation District (ASWCD) is to conserve Alaska's natural resources by providing technical, financial and education resources to property owners and participating in community endeavors,

WHEREAS, an important component of the ASWCD's mission is to educate the public on best environmental practices, particularly those that support a healthy economy,

WHEREAS, the Alaska cruise ship industry has developed model wastewater treatment systems and implemented other best practices to improve the environmental performance of vessels and have voluntarily adopted higher standards than those required by law,

WHEREAS, the cruise industry also brings significant financial benefits to the Municipality of Anchorage and to the State of Alaska,

WHEREAS, current cruise ship standards are far in excess of shore-based municipal wastewater facilities standards; and

WHEREAS, attaining the "point of discharge" standard is only applicable to cruise ships and compliance is currently technologically unfeasible; and

WHEREAS, standards for cruise ship wastewater discharge permits should be based on best available data and science, set by Alaska Department of Environmental Conservation; and

WHEREAS, the result of the "point of discharge" standard could mean that by 2010 cruise ships will have to depart Alaska waters to discharge, resulting in reduced length of time in port, further impacting local governments and small businesses that rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy.

NOW THEREFORE BE IT RESOLVED, the Board of Supervisors of the Anchorage Soil and Water Conservation District urges Governor Sarah Palin and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

Passed and approved the 16th day of January, 2009

Greg Bell, Chair

Anchorage Chamber of Commerce
Board of Directors
Resolution 2008/09-01
In Support of Modifying Cruise Ship Point of Discharge Permit Standards

WHEREAS, one aspect of the mission of the Anchorage Chamber of Commerce is to protect and promote a healthy business community, to include a strong and growing tourism business base; and

WHEREAS, more than 370,000 cruise passenger visitors annually spend $26 million in the Anchorage area,

WHEREAS, cruise lines directly spend $76 million in Anchorage, have paid more than $5 million in local bed tax revenue and made purchases from 849 Anchorage businesses in 2007 alone; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, current cruise ship standards are far in excess of shore-based municipal wastewater facilities standards; and

WHEREAS, attaining the "point of discharge" standard is only applicable to cruise ships and compliance is currently technologically unfeasible; and

WHEREAS, standards for cruise ship wastewater discharge permits should be based on best available data and science, set by Alaska Department of Environmental Conservation; and

WHEREAS, the result of the "point of discharge" standard could mean that by 2010 cruise ships will have to depart Alaska waters to discharge, resulting in reduced length of time in port, further impacting local governments and small businesses that rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy.

NOW THEREFORE BE IT RESOLVED, the Anchorage Chamber of Commerce urges Governor Sarah Palin and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

AND BE IT FURTHER RESOLVED, that copies of this resolution be sent to Anchorage Chamber members. Governor Sarah Palin. the Alaska Legislature. statewide chambers of commerce and statewide media.

Approved the 5th day of December. 2008

RESOLUTION 09-01-05

A RESOLUTION OF THE GREATER FAIRBANKS CHAMBER OF COMMERCE URGING THE ALASKA STATE LEGISLATURE IN 2009 TO MODIFY, BASED ON SCIENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER SUCH THAT THOSE STANDARDS WILL CONTINUE TO PROTECT AQUATIC LIFE AND THE ENVIRONMENT BUT WILL NOT BE TECHNOLOGICALLY AND FINANCIALLY UNREASONABLE OR IMPRACTICAL; AND ESTABLISHING AN EFFECTIVE DATE

WHEREAS, the Greater Fairbanks Chamber of Commerce recognizes the economic importance of the cruise ship industry throughout the state of Alaska, and tourism is the second-largest industry in the State, providing jobs and a large positive economic multiplier; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined laws enacted in 2001 (AS 46.03.460-46.06.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following the adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharge from large cruise ships operating in Alaska waters; and

WHEREAS, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are

RESOLUTION
11-08

A RESOLUTION OF THE JUNEAU CHAMBER OF COMMERCE URGING THE ALASKA STATE LEGISLATURE IN 2009, TO MODIFY THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER

WHEREAS, during the 1990s, the size and number of cruise ships visiting Alaska coastal communities grew dramatically and became an increasingly important component of the local and regional economies; and

WHEREAS, in 1999, the Alaska Department of Environmental Conservation, U.S. Coast Guard, U.S. Environmental Protection Agency, members of the Southeast Conference, representatives of the cruise ship industry, and local concerned citizens formed a group to explore ways to improve environmental standards for the cruise ship industry in Alaska; and

WHEREAS, the Alaska Cruise Ship Initiative (ACSI) group was created in 2000 to 1). Identify waste streams from cruise ships; 2). Develop pollution prevention and waste management solutions; 3). Assess and verify compliance with volunteer wastewater sampling; and 4). Keep the Alaska public informed; and

WHEREAS, in late 2000, the ACSI commissioned a Science Advisory Panel with expertise in oceanography, bacteriology, chemistry, aquatic and human toxicology, marine biology, ecology and vessel engineering to address issues concerning treatment, discharge, dispersion rate, and effects of wastewaters produced by commercial cruise ships; and

WHEREAS, the work of the groups noted above led to the enactment of laws (AS 46.03.460 – AS 46.06.490) by the Alaska Legislature in 2001 establishing wastewater discharge standards for cruise ships and creating the Commercial Passenger Vessel Environmental Compliance Program; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined laws enacted in 2001 (AS 46.03.460 – AS 46.06.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of

Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following the adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharge from large cruise ships operating in Alaska waters; and

WHEREAS, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel and zinc; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, compelling cruise ships to postpone discharge of wastewater until outside Alaska waters will likely shorten the time cruise ships are in port and result in fewer ports of call, which will negatively impact Juneau businesses.

NOW, THEREFORE BE IT RESOLVED that the Juneau Chamber of Commerce urges the City and Borough of Juneau Assembly to adopt this or a similar resolution, and urges the Alaska State Legislature in 2009, to modify, based on science, the standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical and establish an effective date.

FURTHER BE IT RESOLVED that the Juneau Chamber of Commerce requests that this resolution becomes effective immediately upon adoption by the State Legislature.

PASSED AND APPROVED by the Juneau Chamber of Commerce on this 10th day of November, 2008.

Signed: 
Cathie Roemmich, CEO

GREATER WASILLA CHAMBER OF COMMERCE & CONVENTION/VISITOR BUREAU
BOARD OF DIRECTORS
RESOLUTION #1208

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" PERMIT STANDARD BASED ON SCIENTIFIC CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION.

WHEREAS, the Wasilla community has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHEREAS, the Mat-Su Valley has over 124,000 cruise passenger visitors and cruise lines spend annually $16.4 million, with over $860,000 paid in bed tax revenue; and

WHEREAS, in 2007 cruise lines made purchases from 90 area businesses; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are currently technologically unfeasible and such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port, and such changes will impact local governments, small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers"; and

NOW THEREFORE, BE IT RESOLVED BY THE WASILLA CHAMBER OF COMMERCE BOARD OF DIRECTORS, that:

The Board urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

PASSED AND APPROVED BY THE WASILLA CHAMBER OF COMMERCE BOARD OF DIRECTORS THIS 9TH DAY OF DECEMBER, 2008.

KENAI CHAMBER OF COMMERCE

Resolution 02-08

A RESOLUTION OF THE KENAI CHAMBER OF COMMERCE BOARD OF DIRECTORS TO URGE THE GOVERNOR AND ALASKA LEGISLATURE TO DELETE THE 'POINT OF DISCHARGE' STANDARD GOVERNING THE CRUISE SHIP WASTE WATER PERMITS.

WHEREAS, Alaska's cruise ship industry is an important element to our economic well-being statewide and regionally; and

WHEREAS, cruise ships should be under the same guidelines on discharge as any other industry or land based operations in Alaska; and

WHEREAS, in 2002, Alaska set the highest standards in the world for large cruise ship waste water discharge to protect state water ways. In 2006, a head tax ballot initiative changed these standards in such a way that some of the new standards are technologically unfeasible by the cruise lines. During the ballot initiative process no public hearings or state agency input was given on these newly imposed standards; and

WHEREAS, the standards currently imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than short0based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel and zinc; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel, and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, cruise ships will be compelled to shorten their stays in Alaska waters; and

WHEREAS, this will have a negative impact on our regional and statewide economic health.

NOW, THEREFORE, BE IT RESOLVED that the Kenai Chamber of Commerce Board of Directors hereby urges the Governor and the Alaska State Legislature to modify the standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment, but will be technologically and financially reasonable or practical.

Homer, AK 99603

Homer Chamber of Commerce

***Resolution Passed 1/15/2009**

The Homer Chamber of Commerce urges the Alaska State Legislature to vest the Alaska Department of Environmental Conservation with the authority to issue discharge permits to cruise ships, as they determine will meet all Alaska water quality standards.

*Note: Full body of resolution will be forwarded when received.

GREATER SITKA CHAMBER OF COMMERCE
RESOLUTION 08-01

A RESOLUTION OF THE GREATER SITKA CHAMBER OF COMMERCE URGING THE ALASKA STATE LEGISLATURE TO MODIFY THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE-SHIP WASTEWATER SUCH THAT THOSE STANDARDS ARE NO MORE RESTRICTIVE THAN MUNICIPAL SHORE BASED WASTEWATER FACILITIES.

WHEREAS, the Greater Sitka Chamber of Commerce is a nonprofit trade association made up of members of the business community invested in the economic health of Sitka; and

WHEREAS, the economic health of Sitka is, in large part, based on a healthy cruise industry visitors and commercial fishing industry, which are both ocean-based industries; and

WHEREAS, the cruise ship industry is an integral part of the health of Sitka's economy whose visits provide jobs to Sitkans; and

WHEREAS, the cruise ship industry, through its visits to Sitka, provides a critical piece of sales tax revenue that helps pay for local government jobs and functions such as schools and roads; and

WHEREAS, Sitka will be experiencing a significant economic impact already with the loss of one major cruise line for the 2009 summer which will negatively impact an already downward turn in sales tax revenue; and

WHEREAS, the cruise industry, through the Alaska Cruise Ship Initiative, along with the State of Alaska Department of Environmental Conservation (DEC) and the Environmental Protection Agency, formed a Science Advisory Panel to address waste streams from cruise ships, develop pollution prevention and waste management solutions, assess and verify compliance with volunteer wastewater sampling, and methods to keep the public informed; and

WHEREAS, the Alaska State Legislature enacted laws in 2001 establishing wastewater discharge standards that were refined in 2004 and implemented in 2006 by the state DEC; and

WHEREAS, the cruise industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, a voter approved initiative further imposed standards on cruise ships that are far in excess of those imposed on municipal shore-based wastewater facilities, as was recognized by the state DEC public statement announcing a March 2008 permit issuance, which stated:

> *"The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel, and zinc."*

And

WHEREAS, the City and Borough of Sitka wastewater discharge system cannot meet these voter initiative standards if they were to be imposed on municipalities. The key is due to the city being allowed a mixing zone where quality of discharge is measured at the edge of the mixing zone.

The voter initiative standards require cruise ships to measure quality of discharge at the point of release (at the pipe) before it drops into a mixing zone; and

WHEREAS, the state DEC elected to postpone implementation of parts of the voter initiative standards because it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel, and zinc parameters; and

WHEREAS, the Greater Sitka Chamber of Commerce believes that water and wastewater quality standards are important to the health of the community and to the industries that rely on a healthy ocean; and

WHEREAS, the Greater Sitka Chamber of Commerce believes that the State of Alaska, Department of Conservation has the professional and technical resources to provide for clear regulatory guidance such that the ocean and marine life are protected while providing for practical, technological, and financially achievable regulations for cruise ships visiting Alaskan port that are similar in nature to the regulations that Alaskans live with every day.

NOW THEREFORE BE IT RESOLVED that the Greater Sitka Chamber of Commerce urges the 2009 Alaska State Legislature to, based on science, modify the standards governing the discharge of cruise ship wastewater such that those standards will reflect Alaska municipal standards, will continue to protect aquatic life and the environment, yet will not be technologically and/or financially unreasonable or impractical.

Adopted this 30th day of October, 2008.

Cory Baggen, President

Sheila Finkenbinder, Executive Director

KETCHIKAN CHAMBER OF COMMERCE
BOARD OF DIRECTORS
RESOLUTION 1008

A RESOLUTION URGING THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" STANDARD GOVERNING THE DISCHARGE OF CRUISE-SHIP WASTEWATER.

WHEREAS, the Ketchikan community has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHEREAS, the community of Ketchikan has over 897,000 cruise passenger & crew spending $115 million, cruise lines purchases of $32 million, with sales tax revenues of $4 million, dock moorage revenues of $7.6 million

WHEREAS, between 2001 and 2006, agencies of the State of Alaska, through the legislative process, have enacted statutes and regulations establishing wastewater discharge standards and creating the Commercial Passenger Vessel Environmental Compliance Program as means of supporting cruise ship activity in Alaska in an environmentally-sound manner; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships, leading to the first ever general permit for wastewater discharges from large cruise ships operating in Alaska; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are technologically unfeasible; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which will result in reduced length of time in port, and elimination of ports situated far from International waters;

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers; and

WHEREAS, such changes will impact local governments, small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, maintaining unrealistic standards for a specific sector of the marine-based economy establishes dangerous precedent for managing the balance between economy and environment; and

NOW THEREFORE, BE IT RESOLVED BY THE KETCHIKAN CHAMBER OF COMMERCE BOARD OF DIRECTORS, that:

The Board urges the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard of cruise ship wastewater such that those standards are based on scientific data and continue to protect Alaska water ways.

Haines Chamber of Commerce
Resolution On

Large Commercial Passenger Vessel Wastewater Discharge General Permit

Position Statement

This permit issued in March 2008 by the Alaska Department of Environmental Conservation (ADEC) holds cruise ships to a different standard than it holds every other discharger in Alaska. This new permit measures effluent at the point of discharge instead of allowing a dilution zone, which every state in the United States allows, and the State of Alaska statutes contemplate. This is a different standard from what is required for coastal communities or the fishing industry or the oil platforms in Cook Inlet.

Action: To urge the Alaska State Legislature to investigate modifying the standards governing the discharge of cruise ship wastewater for a lower level based on science that will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical.

We also believe that ports of call which have cruise ships taking on water from the community should be allowed to use head tax revenues from the cruise ship initiative to improve the water quality for the community as a way to assist the cruise industry in complying with the waste water standards.

Support for the Position

Small businesses that offer services to tour related businesses will stay in business.

Should the cruise ship industry need to comply with the statutes of this permit, ships will have to hold their wastewater discharges until they are out of Alaska waters. Not only will this shorten the time in port, which may negatively impact Alaska businesses but may result in fewer ports of call, which will financially harm port communities.

The negative impacts from utilizing community water in the cruise ship discharge should be corrected at the point of origination.

The permit requirement is part of the cruise ship initiative that voters approved in 2006. That initiative imposed a number of environmental provisions, including one that requires ships to have a "discharge permit and meet all Alaska water quality standards".

Voters were told that the ships would be held to the same standards that "every other industrial and municipal discharger" must meet and that "no new permitting program is necessary." However, the permit ADEC issued holds the ships to a much different standard, one that may cost Alaska communities, Alaska ferries and businesses.

Alaska's water quality standards contemplate the use of dilution factors, such as mixing zones or short-term variances. As ADEC explains that mixing zones "are provided for by the Clean Water Act and used by every state in the Nation. Without mixing zones, wastewater would have to be treated to the point where it could serve as a source of drinking water before being discharged and that just isn't feasible here or anywhere else. Sewage treatment plants and seafood processors in Alaska could not operate without a mixing zone." Neither can the cruise ships.

Alaska should hold cruise ships to the same stringent standards as its coastal communities. It is not in the state's best interest to potentially shorten the time the cruise visitors have ashore or to eliminate some ports of call.

Therefore, the Haines Chamber of Commerce urges the Alaska Legislature to amend the ADEC general permit and to base its permit on sound science and common sense.

Greg Stuckey, President
Haines Chamber of Commerce

SOLDOTNA CHAMBER OF COMMERCE

RESOLUTION 03-08

A RESOLUTION OF THE SOLDOTNA CHAMBER OF COMMERCE BOARD OF DIRECTORS IN SUPPORT OF THE MODIFICATION OF THE 'POINT OF DISCHARGE' PERMIT STANDARD TO CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION.

WHEREAS, Alaska has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

NOW THEREFORE, BE IT RESOLVED BY THE SOLDOTNA CHAMBER OF COMMERCE BOARD OF DIRECTORS, that:

The Board urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard to be based on scientific criteria which is determined by Alaska Department of Environmental Conservation.

BE IT FURTHER RESOLVED that this resolution be distributed to:

GREATER WHITTIER CHAMBER OF COMMERCE
RESOLUTION 2009-01

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE PERMIT STANDARD GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER BASED ON SCIENTIFIC CRITERIA AND CONTINUE TO PROTECT AQUATIC LIFE AND THE ENVIRONMENT.

WHEREAS, Alaska has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHERE AS, the Whittier community has a strong marine-based economy with transportation routes historically used by cargo fleets; large and small passenger vessels; a commercial fishing fleet; and other passenger-bearing service vessels; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships far exceeds those imposed on shore-based municipal wastewater facilities as recognized in the Department of Environmental Conservation press release announcing the march 2008 permit which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel, and zinc; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are currently technologically unfeasible and such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, these standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port, and elimination of ports situated far from International waters; and

WHEREAS, such changes will impact Whittier's small businesses, which rely on cruise ship visitors, crew and service requirements to support local jobs and the local economy:

WHEREAS, maintaining unrealistic standards for a specific sector of the marine –based economy establishes dangerous precedent for managing the balance between economy and environment; and

NOW THEREFORE, BE IT RESOLVED BY THE GREATER WHITTIER CHAMBER OF COMMERCE, that:

We urge the Governor and the Alaska State Legislature in 2009 to modify the permit standards governing the discharge of cruise ship wastewater such that those standards be scientifically-based and continue to protect aquatic life and the environment.

PASSED AND APPROVED BY THE GREATER WHITTIER CHAMBER OF COMMERCE THIS 19TH DAY OF JANUARY, 2009

Chamber of Commerce
Resolution 2009-01

A RESOLUTION OF THE CHAMBER OF COMMERCE BOARD OF DIRECTORS OF THE MUNCIPALITY OF SKAGWAY, ALASKA REGARDING THE POINT OF DISCHARGE STANDARD TO BE MODIFIED BASED ON SCIENTIFIC CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENIVRNMENTAL CONSERVATION.

WHEREAS, One aspect of the mission of the Skagway Chamber of Commerce is to protect and promote a healthy business community, to include a strong and growing tourism business base; and

WHEREAS, The Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, Current cruise ship standards are far in excess of shore-based municipal wastewater facilities standards; and

WHEREAS, Attaining the "point of discharge" standard is only applicable to cruise ships and compliance is currently technologically unfeasible; and

WHEREAS, Standards for cruise ship wastewater discharge permits should be based on best available data and science, set by Alaska Department of Environmental Conservation; and

WHEREAS, The result of the "point of discharge" standard could mean that by 2010 cruise ships will have to depart Alaska waters to discharge, resulting in reduced length of time in port, further impacting local governments and small businesses that rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy.

NOW THEREFORE BE IT RESOLVED by the Skagway Chamber of Commerce Board of Directors of the Municipality of Skagway, Alaska that the Alaska State Legislature in 2009 should modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

AND BE IT FURTHER RESOLVED, that this resolution shall become effective immediately upon adoption.

SEWARD CHAMBER OF COMMERCE, CVB
BOARD OF DIRECTORS
RESOLUTION 2008-03

A RESOLUTION URGING THE ALASKA STATE LEGISLATURE TO MODIFY, BASED ON SCIENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE-SHIP WASTEWATER SUCH THAT THOSE STANDARDS USE THE SAME CRITERIA AS THE ONES THAT APPLY TO MUNICIPAL SHORE-BASED WASTEWATER FACILITIES AND ALL OTHER VESSELS TRANSITTING ALASKA WATERS.

WHEREAS, the Seward community has a strong marine-based economy with transportation routes historically used by the U.S. Navy, Coast Guard, and state law enforcement vessels; large and small passenger vessels; a commercial fishing fleet; and other passenger-bearing service vessels; and

WHEREAS, Seward's marine-based economic activity occurs in proximity to the Kenai Fjords National Park, the Chugach National Forest, Caines Head State Park, and other protected public lands; and

WHEREAS, between 2001 and 2006, agencies of the State of Alaska, through the legislative process, have enacted statutes and regulations establishing wastewater discharge standards and creating the Commercial Passenger Vessel Environmental Compliance Program as means of supporting cruise ship activity in Alaska in an environmentally-sound manner; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships, leading to the first ever general permit for wastewater discharges from large cruise ships operating in Alaska; and

WHEREAS, the standards now imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, to include Seward's and those in effect for all other fishing, freight, and passenger vessels; and

WHEREAS, these point-of-release standards, applicable only to cruise ships, are unfeasible, and will require prohibitive financial investment in research to establish methods of meeting the standards; and

WHEREAS, the unrealistic standards could mean that cruise ships will have to depart Alaska waters to discharge, which will result in reduced length of time in port, and elimination of ports situated far from International waters; and

WHEREAS, such changes will impact Seward's small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, maintaining unrealistic standards for a specific sector of the marine-based economy establishes dangerous precedent for managing the balance between economy and environment; and

NOW THEREFORE, BE IT RESOLVED BY THE SEWARD CHAMBER OF COMMERCE/CVB BOARD OF DIRECTORS, that:

The Board urges the Alaska State Legislature in 2009 to modify the standards governing the discharge of cruise ship wastewater such that those standards be scientifically-based and continue to protect aquatic life and the environment.

PASSED AND APPROVED BY THE SEWARD CHAMBER OF COMMERCE/CVB BOARD OF DIRECTORS THIS 15th DAY OF DECEMBER, 2008.

RESOLUTION 2009-01
A Resolution In Support of and Approval of

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" PERMIT STANDARD.

WHEREAS, the travel industry is a vital part of Alaska's economy; and

WHEREAS, Alaska has over 1,000,000 cruise passenger visitors annually spending almost $1 billion in the state; and

WHEREAS, travel businesses throughout Alaska, the majority of which are small and Alaskan-owned, are major economic benefactors of cruise visitor expenditures; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, the "point of discharge" standard, applicable only to cruise ships, are currently technologically unfeasible; and

WHEREAS, such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port; and

WHEREAS, such changes will impact both local governments and small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers; and

NOW THEREFORE, BE IT RESOLVED BY THE ANCHORAGE CONVENTION & VISITORS BUREAU (ACVB) BOARD OF DIRECTORS, that: ACVB urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation. ACVB approves and supports the modification of the "point of discharge" permit standard.

KETCHIKAN

Our lifestyle, your reward

A RESOLUTION OF THE KETCHIKAN VISITORS BUREAU TO SUPPORT MODIFICATION OF THE TERMS AND CONDITIONS OF STANDARDS FOR PASSENGER VESSEL DISCHARGE PERMITS.
RESOLUTION NUMBER 08-04

WHEREAS, THE KETCHIKAN VISITORS BUREAU'S MISSION IS "TO PROMOTE THE GREATER KETCHIKAN AREA AS A VISITOR DESTINATION AND MEETING SITE; TO ENHANCE THE ECONOMY OF THE COMMUNITY, AND ASSIST IN PROMOTION OF THE AREA'S ATTRACTIONS AND EVENTS"; AND

WHEREAS, THE VISITOR INDUSTRY PLAYS A VITAL ROLE IN THE ECONOMIC WELL BEING OF THE COMMUNITY, WITH AN ESTIMATED 138.2 MILLION DOLLARS IN REVENUES ATTRIBUTED TO CRUISE INDUSTRY EXPENDITURES TO LOCAL BUSINESSES AND LOCAL GOVERNMENT; AND

WHEREAS, IN 2001 THE STATE OF ALASKA ADOPTED THE ALASKA CRUISE SHIP INITIATIVE'S RECOMMENDATIONS FOR THE COMMERCIAL PASSENGER VESSEL ENVIRONMENTAL COMPLIANCE PROGRAM, ENACTING THE MOST STRINGENT STANDARDS FOR DISCHARGE PERMITS WITHIN THE STATE, FAR SURPASSING ANY MUNICIPALITY'S REQUIREMENTS FOR SHOREBASED WASTEWATER FACILITIES, AT A COST OF OVER $200 MILLION BY THE CRUISE INDUSTRY TO INSTALL STATE-OF-THE ART WASTEWATER TREATMENT SYSTEMS ONBOARD THEIR VESSELS TO VOLUNTARILY COMPLY WITH THE STATE'S REGULATIONS; AND

WHEREAS, THE COMMERCIAL SHIP VESSEL TAXATION ACT PASSED BY VOTERS IN 2006 INCLUDED LANGUAGE THAT REQUIRED EVEN MORE STRINGENT REGULATIONS FOR CRUISE SHIPS IN ORDER TO SECURE DISCHARGE PERMITS, BUT DID NOT INCREASE THE REQUIREMENTS OF ANY OTHER PERMIT HOLDER IN THE STATE; AND

WHEREAS, STANDARDS FOR CRUISE SHIP WASTEWATER DISCHARGE PERMITS SHOULD BE BASED ON THE BEST AVAILABLE SCIENCE AND REGULATED BY THE ALASKA DEPARTMENT OF CONSERVATION, AS WITH ALL OTHER WASTEWATER PERMIT HOLDERS; AND

WHEREAS, UNLESS THE REGULATIONS ARE CHANGED BY EITHER ADMINISTRATIVE OR LEGISLATIVE ORDER, CRUISE LINES WILL LIKELY NOT BE ABLE TO COMPLY WITH THE NEW STANDARDS AND WILL BE FORCED TO LEAVE ALASKAN WATERS IN ORDER TO LEGALLY DISCHARGE WASTEWATER, IMPACTING THEIR LENGTH OF STAY IN PORT AND SUBSTANTIALLY DECREASING THE ECONOMIC BENEFITS ENJOYED BY COMMUNITIES WHERE SHIPS CALL.

NOW, THEREFORE, BE IT RESOLVED THAT:
THE KETCHIKAN VISITORS BUREAU CONSIDERS THE WASTEWATER DISCHARGE PERMIT REGULATIONS ENACTED UPON THE CRUISE LINES BY THE PASSAGE OF THE COMMERCIAL SHIP VESSELS TAXATION ACT TO BE ONEROUS, AND A DIRECT THREAT TO THE ECONOMIC WELL BEING OF OUR COMMUNITY AND URGE IMMEDIATE ACTION TO MODIFY THE REGULATIONS SET FORTH IN THE COMMERCIAL SHIP VESSEL TAXATION ACT.

PASSED AND APPROVED BY THE KETCHIKAN VISITORS BUREAU BOARD OF DIRECTORS, ON OCTOBER 23, 2008.

GREATER WASILLA CHAMBER OF COMMERCE & CONVENTION/VISITOR BUREAU
BOARD OF DIRECTORS
RESOLUTION #1208

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY THE "POINT OF DISCHARGE" PERMIT STANDARD BASED ON SCIENTIFIC CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION.

WHEREAS, the Wasilla community has a strong tourism business base and wants a positive business atmosphere to grow tourism: and

WHEREAS, the Mat-Su Valley has over 124,000 cruise passenger visitors and cruise lines spend annually $16.4 million, with over $860,000 paid in bed tax revenue; and

WHEREAS, in 2007 cruise lines made purchases from 90 area businesses; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are currently technologically unfeasible and such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port, and such changes will impact local governments, small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers"; and

NOW THEREFORE, BE IT RESOLVED BY THE WASILLA CHAMBER OF COMMERCE BOARD OF DIRECTORS, that:

The Board urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

PASSED AND APPROVED BY THE WASILLA CHAMBER OF COMMERCE BOARD OF DIRECTORS THIS 9TH DAY OF DECEMBER, 2008.

(Signature of Chapter Secretary)

KETCHIKAN
CHAPTER
ALASKA TRAVEL INDUSTRY
ASSOCIATION

A RESOLUTION OF THE ALASKA TRAVEL INDUSTRY ASSOCIATION - KETCHIKAN CHAPTER TO SUPPORT MODIFICATION OF THE TERMS AND CONDITIONS OF STANDARDS FOR PASSENGER VESSEL DISCHARGE PERMITS

RESOLUTION NUMBER 2008-01

WHEREAS, the Alaska Travel Industry Association – Ketchikan Chapter operates under the corporate veil of the Alaska Travel Industry Association, Inc., which is a non-profit membership based organization. The Ketchikan Chapter's goal is to regain Alaska's competitive position as a visitor destination through advocacy, improving community awareness and relations, acting as an education link statewide as well as local networking; and

WHEREAS, the visitor industry plays a vital role in the economic well being of the community, with an estimated 138.2 million dollars in revenues attributed to cruise industry expenditures to local businesses and local government; and

WHEREAS, in 2001 the State of Alaska adopted the Alaska Cruise Ship Initiative's recommendations for the Commercial Passenger Vessel Environmental Compliance Program, enacting the most stringent standards for discharge permits within the state, far surpassing any municipality's requirements for shore based wastewater facilities, at a cost of over $200 million by the cruise industry to install state of the art wastewater treatment systems onboard their vessels to voluntarily comply with the state's regulations; and

WHEREAS, the commercial ship vessel taxation act passed by voters in 2006 included language that required even more stringent regulations for cruise ships in order to secure discharge permits, but did not increase the requirements of any other permit holder in the state; and

WHEREAS, standards for cruise ship wastewater discharge permits should be based on the best available science and regulated by the Alaska Department of Conservation, as with all other wastewater permit holders; and

WHEREAS, unless the regulations are changed by either administrative or legislative order, cruise lines will likely not be able to comply with the new standards and will be forced to leave Alaskan waters in order to legally discharge wastewater, impacting their length of stay in port and substantially decreasing the economic benefits enjoyed by communities where ships call.

NOW, THEREFORE, BE IT RESOLVED THAT:

The Alaska Travel Industry Association – Ketchikan Chapter considers the wastewater discharge permit regulations enacted upon the cruise lines by the passage of the commercial ship vessels taxation act to

be onerous, and a direct threat to the economic well being of our community and urge immediate action to modify the regulations set forth in the commercial ship vessel taxation act.

Approved at the Alaska Travel Industry Association - Ketchikan Chapter Meeting on December 11, 2008.

Dragon London, Secretary

ATIA – Ketchikan Chapter

Kari Erickson, President

ATIA – Ketchikan Chapter

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY, BASED ON SCIENTIFIC EVIDENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER TO BE DETERMINED BY THE ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

WHEREAS, the travel industry is a vital part of Juneau's economy; and

WHEREAS, Juneau has nearly 1,000,000 cruise passenger visitors annually spending approximately $186 per person (figures from a 2005 survey by the McDowell Group) while in port; and

WHEREAS, Juneau's travel business, the majority which are small and Alaskan owned, are the major economic benefactors of cruise visitor expenditures; and

WHEREAS, the Alaska cruise ship industry has invested more than $200,000,000 to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed by cruise ships, and the 2010 standard are far in excess of those imposed on shore based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation (DEC) press release announcing the March 2008 permit, which stated:

> The majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel and zinc; and

WHEREAS, such standards should be set by the Alaska DEC; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the above four parameters, the Alaska DEC applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, the unrealistic standard would mean that by 2010, cruise ships will depart Alaska's waters to discharge, which would result in reduced time in Alaska's ports and the possible reduction in the number of port calls; and

WHEREAS, such changes will impact local government ability to collect dock usage fees and sales taxes, increasing the need for revenue sharing from the state; and

WHEREAS, Juneau's small businesses, which rely on cruise ship visitors, and crew expenditures to support local jobs and the local economy will have a reduced sales opportunity; and

WHEREAS, the ballot initiative sponsor's intent implicitly stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major discharges";

NOW THEREFORE, BE IT RESOLVED BY THE JUNEAU CHAPTER OF THE ALASKA TRAVEL INDUSTRY ASSOCIATION;

HEREBY URGE THE GOVERNOR AND THE ALASKA STATE LEGISLATURE IN 2009 TO MODIFY, BASED ON SCIENTIFIC EVIDENCE, THE PERMIT STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER TO BE DETERMINED BY THE ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

PASSED AND APPROVED BY THE JUNEAU CHAPTER OF THE ALASKA TRAVEL INDUSTRY ASSOCATION THIS 7th DAY OF January 2009.

TRAVEL INDUSTRY
ASSOCIATION
Golden Circle Chapter

A RESOLUTION TO THE ALASKA STATE LEGISLATURE TO MODIFY, BASED ON SCIENTIFIC EVIDENCE, THE STANDARDS GOVERNING THE DISCHARGE OF CRUISE SHIP WASTEWATER

Resolution 08-03
12-11-2008

WHEREAS, during the 1990s, the size and number of cruise ships visiting Skagway, Haines and other Alaska coastal communities grew dramatically and became an increasingly important component of the local and regional economies; and

WHEREAS, in 1999, the Alaska Department of Environmental Conservation, U.S. Coast Guard, U.S. Environmental Protection Agency, members of the Southeast Conference, representatives of the cruise ship industry, and local concerned citizens formed a group to explore the way to improve environmental standards for the cruise ship industry in Alaska; and

WHEREAS, the Alaska Cruise Ship Initiative (ACSI) group was created in 2000 to (1) identify waste streams from cruise ships; (2) develop pollution prevention and waste management solutions; (3) assess and verify compliance with volunteer wastewater sampling and; (4) keep the Alaska public informed; and

WHEREAS, in late 2000, the ACSI commissioned a Science Advisory Panel with expertise in oceanography, bacteriology, chemistry, aquatic and human toxicology, marine biology, ecology and vessel engineering to address issues concerning treatment, discharge, dispersion, fate and effects of wastewaters produced by commercial cruise ships; and

WHEREAS, the work of the groups noted above led to the enactment of laws (AS 46.03.460 – AS 46.03.490) by the Alaska Legislature in 2001 establishing wastewater discharge standards for cruise ships and creating the Commercial Passenger Vessel Environmental Compliance Program; and

WHEREAS, in 2002, the Alaska Department of Environmental Conservation adopted regulations (18 AAC 69) to implement and interpret the laws enacted by the Legislature in 2001; and

WHEREAS, in 2004, the Alaska Legislature refined laws enacted in 2001 (AS 46.03.460-46.03.490); and

WHEREAS, in 2006, following a two-year rule-making effort, the Alaska Department of Environmental Conservation adopted regulations to interpret and implement the 2004 statutory changes; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, in 2006, following the adoption of regulations by the Alaska Department of Environmental Conservation, Alaska voters approved an initiative further governing the operation and regulation of large cruise ships; and

WHEREAS, in March 2008, as a major step toward fulfilling the terms of the 2006 initiative, the Alaska Department of Environmental Conservation issued the first ever general permit for wastewater discharge from large cruise ships operating in Alaska waters; and

WHEREAS, the standards imposed on cruise ships are far in excess of those imposed on shore-based municipal wastewater facilities, as was recognized in the Department of Environmental Conservation press release announcing the March 2008 permit, which stated:

> The Majority of large cruise ships operating in Alaska have advanced wastewater treatment systems that produce a very high quality discharge – much higher, for example, than shore-based municipal sewage treatment systems. Even so, cruise ship discharges are expected to have trouble meeting water quality standards for four parameters – ammonia, copper, nickel and zinc; and

WHEREAS, recognizing that it is currently unfeasible or impractical to meet discharge standards for the ammonia, copper, nickel and zinc parameters, the Alaska Department of Environmental Conservation applied more lenient standards during the 2008 and 2009 seasons and postponed implementation of the stricter standards until the 2010 season; and

WHEREAS, the point-of-release standards could mean that beginning in 2010, cruise ships will have to defer all discharges until they are out of Alaska waters; and

WHEREAS, compelling cruise ships to postpone discharge of wastewater until outside Alaska waters will likely shorten the time cruise ships are in port and result in fewer ports of call, which will negatively impact Alaska businesses.

NOW, THEREFORE BE IT RESOLVED by the members of the Alaska Travel Industry Association Golden Circle Chapter, including Haines, Skagway and Whitehorse members, hereby urges the Alaska State Legislature in 2009 to modify, based on science, the standards governing the discharge of cruise ship wastewater such that those standards will continue to protect aquatic life and the environment, but will not be technologically and financially unreasonable or impractical.

RESOLUTION NO. 2009-01
CRUISE SHIP DISCHARGE STANDARDS

A RESOLUTION URGING THE GOVERNOR AND THE 2009 ALASKA STATE LEGISLATURE TO MODIFY DISCHARGE STANDARDS BASED ON SCIENTIFIC CRITERIA TO BE DETERMINED BY ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

WHEREAS, the Alaska Campground Owners' Association (ACOA) represents an association of over 45 small family operated camper park businesses statewide in addition to over 50 associate members; and

WHEREAS, the independent long haul RV traveler to Alaska has been in decline for the past six years; and

WHEREAS, State of Alaska Department of Commerce, Community and Economic Development research has shown that 24% of all Alaska cruise passengers return to Alaska on an independent itinerary, often traveling through-out Alaska in an RV; and

WHEREAS, numerous Alaska cruise passengers debark from their cruise ship and rent an RV for their ground tour portion of their Alaska vacation; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million to install some of the most advanced wastewater treatment systems in the world; and

WHEREAS, the standards now imposed on cruise ships, and the 2010 standard are far in excess of those imposed on shore-based municipal wastewater facilities; and

WHEREAS, this "point of discharge" standard applicable only to cruise ships, are currently technologically unfeasible and such standards should be set by Alaska Department of Environmental Conservation; and

WHEREAS, the unrealistic standards could mean that by 2010, cruise ships will have to depart Alaska waters to discharge, which could result in reduced length of time in port, and such changes will impact local governments, small businesses, which rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, the ballot initiative sponsors stated that the permit portion of the head tax initiative would only "level the economic and environmental playing field between the cruise ship industry and other major dischargers"; and

NOW, THEREFORE, BE IT RESOLVED that the Alaska Campground Owners'Association recognizes the economic benefit of a strong viable cruise ship program in Alaska ; and

NOW, THEREFORE BE IT FURTHER RESOLVED that the Alaska Campground Owners' Association urges the Governor and the Alaska State Legislature in 2009 to modify the "point of discharge" permit standard based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

PASSED and APPROVED by the ALASKA CAMPGROUND OWNERS' ASSOCIATION this 9th day of February 2009.

ATTEST: ACOA Government Affairs- Scott Reisland

ADP RESOLUTION 2009-01

ANCHORAGE DOWNTOWN PARTNERSHIP, LTD.

ANCHORAGE DOWNTOWN PARTNERSHIP, LTD. Resolution In Support of Modifying Cruise Ship Point of Discharge Permit Standards

WHEREAS, one component of the Anchorage Downtown Partnership, Ltd. mission is to generally stimulate economic development in downtown Anchorage; and

WHEREAS, the visitor industry is a vital part of the downtown Anchorage economy; and

WHEREAS, more than 370,000 cruise passenger visitors spend $26 million in Anchorage annually; and

WHEREAS, cruise lines directly spend $76 million in Anchorage, have paid more than $5 million in local bed tax revenue and made purchases from 849 Anchorage businesses in 2007 alone; and

WHEREAS, the State of Alaska already has the highest standards in the world for discharge of wastewater from large cruise ships; and

WHEREAS, the Alaska cruise ship industry has invested more than $200 million on advanced water treatment systems on new ships and retrofitted older ones wastewater purification systems that treat water to standards higher than most land-based operations; and

WHEREAS, attaining the 2010 "point of discharge" standard is unfeasible with current technology and could force cruise ships to depart Alaska waters to discharge; and

WHEREAS, forcing ships out of Alaska waters will result in reduced port time, further impacting local governments and small businesses that rely on cruise ship visitors, crew, and service requirements to support local jobs and the local economy; and

WHEREAS, standards for cruise ship wastewater discharge permits should be based on best available data and science, set by Alaska Department of Environmental Conservation; and

NOW THEREFORE, BE IT RESOLVED, Anchorage Downtown Partnership, Ltd. urges Governor Palin and the Alaska Legislature in 2009 to modify the "point of discharge" permit standard to ensure that discharge standards are based on scientific criteria to be determined by Alaska Department of Environmental Conservation.

Approved this 5th day of February, 2009

Responsible Cruising in Alaska

TO: House Resources Committee
FR: Chip Thoma, RCA
RE: HB 134
DATE: March 2, 2009

Chairman Neuman, members of the committee, I am Chip Thoma, Responsible Cruising in Alaska, Box 21884, Juneau, 99802. The RCA is an advocacy group that helped win the 2006 initiative measure on cruise ship pollution, fair taxes, and consumer protection. This initiative passed 52-48%. 82,000 Alaskans voted Yes.

The Alaska cruise law has been a great success for state taxes, revenue sharing, capital projects in cruise ports, pollution controls, monitoring by Ocean Rangers, and consumer protection for passengers.

Regarding HB 134, un-amended, my initial comment is that this legislation is premature and unnecessary. Many ships in the Alaska cruise fleet are already meeting our Water Quality Standards on both ammonia & copper, those discharged substances that most harm salmon and other marine life. Many ships need only make a few attachments and adjustments to their present systems, to make them legal and fully compliant with the 2010 law.

I recently reviewed the Notices of Violations (NOV's) issued by DEC for 2008 cruise ship discharges, and was amazed to find that ¾ of the fleet were not cited for any metals violations, but that 5 of the 7 metals violators are Princess ships. I believe the copper problem has now been identified: those high metal discharges are centered in OLDER ships, like the Princess fleet, whose copper plumbing is leaching into treated discharge water. Dissolved copper is a big problem: it never goes away, it builds up in the water, and dis-orients returning salmon.

Most other ships have solved their on-board copper problems, by using flex-hose plastic plumbing, a 21st century fix for a 20th century problem.

Rather than get into details of ship plumbing and on-board water-making machinery, suffice it to say that copper pipes leach, and miles and tons of copper pipe leach a lot. However, suspended metals removal technology is improving at a very rapid pace, pioneered by the need for absolutely clean water in US computer manufacture. I'm confident that copper can soon be removed from all cruise ship discharges. That's why HB 134 is premature, because solutions are close at hand, both on-board ships and in plants on shore.

Regarding ammonia, the sole source is urine. Ammonia removal has been achieved, and this technology is readily available, on-board and on-shore. Ironically, the relatively high ammonia counts are likely due to low-flow toilet systems on some ships, where little water is used to flush. Since water dissolves urine and ammonia to manageable levels, I am also confident that all ammonia problems can also be solved on-board, as most ships in the Alaska fleet are doing right now.

In conclusion, HB 134 is premature, because copper & ammonia discharge problems will be solved soon, with science, funding, and plastic plumbing. The cruise passengers want clean ships. Alaska subsistence, commercial & sport users want clean ships, that take no chances to harm Alaska fish & marine resources. We should all agree to fully protect clean, marine waters, by statute.

The cruise laws passed in 2006 accomplish that. However, HB 134, un-amended, rolls back those protections and allows potentially harmful discharges. Also, 134 primarily exempts one cruise line from the water quality standards being met by most of the 28 ships in Alaska fleet. HB 134 would financially penalize those cruise lines that make discharge improvements, and now comply with Alaska cruise law. Finally, Alaskans want these discharge problems solved, either on-board cruise ships, or at on-shore plants, but not mixing in our pristine waters. Thank you.

Re: CS HB 134 Testimony of Gershon Cohen Ph.D.

Dear Chairmen and Members of the Alaska House of Representatives Committee on Resources,

Thank you for accepting this testimony in opposition to HB134, which seeks to remove the ban on mixing zone authorizations for cruise ship discharges established by majority vote of the people of Alaska in 2006.

The State of Alaska has traditionally been generous in allowing dischargers to circumvent the State's Water Quality Standards (WQS) through the application of mixing zones, which permit polluters to dilute contaminated wastewater within public waters. Nevertheless, the frequency of past mixing zone use should not be presumed to indicate the practice is consistent with the fundamental goals of the federal Clean Water Act or our State's water quality objectives to make all waters fishable and swimmable and eliminate the discharge of pollutants.

I agree with the intent of the sponsors of HB134 that discharge permits should be based on the best scientific evidence available. By definition, the State's WQS represent the best scientific information regarding the protection of aquatic life. Assigning mixing zones to mobile dischargers such as cruise ships would not represent the best science available. This practice would create multiple regions in our marine waters that cannot be tested for toxicity, often in places where wastes may or may not disperse efficiently depending upon the location of the discharge due to local currents, tides, salinity, temperature, and/or topography. It is entirely likely the waste from multiple ships might use the same water repeatedly for dilution. Worst of all, this practice will risk contaminating any fish or other marine life unfortunate enough to be within the mixing zone at the time of discharge. Mixing zones are not based on biological science; they are engineering-based risk analyses that presume organisms will either not be present when the discharge occurs, not be harvested and consumed, or represent a small enough percentage of the population so as to not result in long term harm to the overall ecosystem.

The cruise industry asserts it should be allowed to use the mixing zone loophole because some other dischargers have mixing zones. Poor performance by other dischargers, be they private or municipal, does not justify allowing the cruise lines to seek the lowest common denominator of wastewater treatment. It is important to

gershon@aptalaska.net Box 956 Haines, AK, 99827 Ph: 907-766-3005 Fax: 766-2921 www.earthisland.org/c-saw

note that many of their "peers," in particular many Alaskan communities, are using equipment designed in the 1950's and built in the 1970's and struggle to find the money to improve performance, which usually only occurs through property tax increases and the selling of municipal bonds to match federal dollars received through the under-funded State Revolving Loan Fund. The Alaska cruise fleet probably averages ten or at most fifteen years in age and the cruise industry has recorded billion dollar profits year after year – they can afford to do the job right now, and in doing so they will show others how they can improve their performance.

Alaska's WQS implementation rules, in addition to containing provisions for authorizing mixing zones, also include an Antidegradation Policy (18AAC70.015) requiring the State to prohibit lowering the quality of a receiving water unless the best possible treatment method(s) is applied. On February 17th, DEC released a draft feasibility study describing multiple technologies capable of meeting WQS at the point of discharge. The study stated that while some of the technologies were not ready to be installed on ships immediately, there appeared to be no reason the technologies could not be adapted for shipboard use in the near future. On Feb 18th, DEC hosted a technology conference in Juneau on the same issue. Vendors and scientists testified throughout the day on their ability and willingness to re-engineer existing land-based treatment systems that can meet all WQS at the point of discharge for use in the cruise fleet. The draft report and the conference directly contradicted the cruise industry's claim that no such technologies exist or are likely to be available in the foreseeable future.

In fact, there is little (if any) evidence to support any recent testing or installation of new equipment in the cruise fleet to address pollutants such as heavy metals or ammonia, even though the industry has known since the initiative election in 2006 that State law would eventually require them to either improve their performance, discharge on-shore, or discharge outside of Alaska waters. Rather than invest the time and money necessary to improve their performance they have chosen to spend their resources on lobbyists and lawyers to try and get the law changed. HB134 (as passed out of HCRA) is the industry's vehicle for achieving this objective. Regardless of the opinion one might have on the broad question of mixing zone authorization, it cannot honestly be argued that this bill is anything but premature given the information released in the recent DEC report and at the technology conference the following day.

I trust you recall that in 2001 we heard the same cry from this industry when Alaska demanded better performance on the removal of fecal bacteria from their wastestreams. They said such performance was impossible. They said no applicable technologies existed. They threatened that requiring cleaner discharges would result in the death of their industry in Alaska, and along with it the demise of the Alaska tourism economy. What was the result of our demand for better treatment? Several companies immediately launched efforts to build better machines for removing solids and bacteria on ships. Today, two thirds of the fleet coming to Alaska has these improved technologies on board.

gershon@aptalaska.net Box 956 Haines, AK, 99827 Ph: 907-766-3005 Fax: 766-2921 www.earthisland.org/c-saw

There is little doubt that if the cruise lines had already been making the effort to comply with our rules they would have succeeded by now. Even so, DEC has given the industry a pass on meeting the no-mixing zone discharge rules until 2010, and that date could be extended to accommodate the added research, design, and testing phases necessary to bring the new technologies on line. No fines or penalties have been assessed to date and that allowance could be extended as well, provided an honest effort to comply was underway. In other words, the bill before you today seeks to remove an achievable performance requirement that will not come due for another year *at minimum.* There is simply no harm whatsoever to this industry in keeping the present law in place while new and better treatment methods are adapted for ship board use. For these reasons, it is clear that HB134 is premature, and should not move forward at this time.

Our oceans are finite. Discharging more pollutants into our waters, regardless of their potential for dispersal, will eventually result in deleterious impacts on our fisheries resources. One would hope we'd have learned this lesson by now, given the result that similar applications of the "dilution-solution" have had on our atmosphere.

I apologize I cannot attend the hearing to testify in person today. I coach the Haines High School Debate/Drama/Forensics team, and I am traveling with the team today as we return from the State championships where I am proud to say Haines High placed second in the State for 1A/2A/3A schools.

Thank you for considering my comments on this important issue.

Sincerely,

COMMENTS ON HB 134 – CRUISE SHIP MIXING ZONES
To: House Resources Committee
March 2, 2009

From: Stacy Studebaker
Kodiak Audubon Society – Conservation Chair
P.O. Box 970
Kodiak AK 99615
(907) 486-6498

Dear Representatives,

My name is Stacy Studebaker and I've lived in Alaska for nearly 40 years, 30 of that in Kodiak. I'm a biologist, a retired science teacher and the Conservation Chair of the Kodiak Audubon Society, established in 1982. Our mission is to conserve Alaska's natural ecosystems focusing on birds, other wildlife, and their habitats for the benefit and enjoyment of current and future generations.

Kodiak has been receiving more interest from the cruise ship industry recently with 24-27 visits scheduled this year. That is nearly double what we had just a few years ago. As cruise ships enter our waters that support our fishery economy, we must hold them to the strictest standards for water quality. Cruise ships will come and go, but our fishery economy is what sustains us. If we are going to give the cruise ship industry the benefit of visiting our beautiful island then they need to reciprocate by investing in better on-board technology that ensures that their wastewater doesn't pollute our marine ecosystem and jeopardize our seafood industry.

We oppose HB 134. The bill is premature and unnecessary. If it passes, it removes the ban on mixing zones and would allow harmful pollutants from cruise ship wastewater such as copper and ammonia to be directly discharged into marine waters.

Research has identified copper as specifically affecting salmon. Given the nature of the main pollutants associated with cruise ship operations, such as metals, it is imperative that these discharges are regulated and that every effort is made to minimize discharge directly into the marine environment so that our seafood remains safe to eat and our marine food chain in tact for all marine life.

Mixing zones are rules that allow for pollutants to be discharged directly into the environment and diluted before water quality is tested. Mixing zones are not science based. They are engineering-based risk analyses that assume that organisms will either not be present when the discharge occurs, not be harvested and consumed, or represent a small enough percentage of the population as to not result in long-term harm to the environment or people. When the water you are impacting supports the food you eat, the base of your economy, and the habitat of wildlife, missing zones are unacceptable.

The cruise ship initiative was passed by a majority vote of the people in 2006 with the intent to protect water quality from the harmful impacts of cruise shop wastewater pollution. In a recent poll conducted by Anchorage Channel 2 News, 81 percent of respondents asked if they think the state should loosen waste water regulations for cruise ships answered no. The 2006 initiative was a major milestone towards realizing the fundamental goals of the Clean Water Act to protect our marine ecosystem and the integrity and image of our Alaskan fishery industry.

The Alaska voter initiative created the demand for a solution to the problem: advancing technology to deal with removing pollutants from cruise ship wastewater either on-board or on shore. HB 134 would remove the incentive that is currently driving these advances.

The voter initiative created the original deadline for cruise ships to meet the new standards. We are in favor of extending the deadline a couple of years which would allow developers more time to work on better and more innovative waste water methods to fit on board ships. In the mean time, cruise ships must comply with existing laws.

Thank you,

Stacy Studebaker

Testimony OPPOSING HB 134

Dear Chairman and members of this committee my name is Albert Judson, a Registered Voter and resident of Haines, Alaska. I disagree with HB 134 and in my following statements I hope that you would re-consider any prior actions and eliminate this bill from the legislative process of this legislature.

Question: "What would happen if the Enviromental Protection Agency reversed their Decision of 1973 when they exempted vessel discharges requiring a Federal Permit?"

CONSIDERATIONS

1. Historical:

HB 134 was introduced by seven republican Representatives. It was introduced at the request of the cruise ship industry. This bill deletes part of an Initiative submitted by Alaska people and approved by Alaska Voters in 2006. "At the point of discharge" is what they want to delete.

In the 1990's a major conference was called because of wastewater and air pollution fines on cruise ships in Alaska. The Alaska department of Enviromental Conservation asked the U.S. Enviromental Protection Agency, Southeast Communities to join with cruise ship representatives, Alaska Tribes, environmental groups, and concerned Alaska citizens to join public discussion about cruise ship pollution. This resulted in the Alaska Cruise Ship Initiative which was dissolved in 2001 and formed the Cruise Passenger Vessel Enviromental Compliance Program within the Alaska Department of Enviromental Conservation.

2. The Alaska initiative process is very strict. The initiative of 2006 satisfied all the requirements certified by Lieutenant Governor Loren Leman and put on the ballot. The people voted for it and it became law. The reason for the words "at the point of discharge" is because of the ship's mobility and areas that they travel.

3.The Cruise Ship Industry has until 2010 to comply with this initiative. Technological Advancements have already occurred and more are likely to occur especially in the Green Industry. This Cruise Ship Industry numbers in the billion dollar bracket so, eventually Compliance is NOT impossible.

4. The impact on Harbors and Docks to allow adequate space for Alaska people has yet to be determined.

5. To allow dumping by Cruise Ships in mixing zones would conflict with commercial and subsistence efforts by Alaska's people.

6. The negative impact portrayed in the New York Times, 2/15,/2009 by Jennifer Conlin is what Alaskans are confronting. Cruise Ships emit twice as much carbon dioxide as airplanes, most ships use bunker fuel the cheapest and dirtiest fuel oil, a one week voyage on a large ship produces 210,000 gallons of sewage, a million gallons of graywater (from sinks, baths, showers, laundry and galleys) 25,000 gallons of bilge water, 11,550 gallons of sewer sludge and more than 13,000 gallons of hazardous waste.

HB 134 should be eliminated from the legislative process by this Legislature.

Signed, Albert Judson

(Albert Judson)

The Honorable Mark Neuman
Co-Chair, House Resources Committee
State Capitol, Room 432
Juneau, AK 99801

RE: HB 134 An Act relating to the terms and conditions of commercial passenger vessel permits for the discharge of graywater, treated sewage, and other wastewater

Dear Chairman Neuman:

We are writing to express our support for HB 134 as originally proposed, and our concern with Representative Seaton's pending amendment. We appreciate your request for input from impacted communities.

As you know, the original intent of HB 134 was giving ADEC the authority to examine all options for protecting our water and marine environment and using the best science available to establish appropriate and effective wastewater discharge standards for cruise ships. While we support efforts to improve the environment, in our opinion, the amendment from Representative Seaton departs from that intent in a couple of ways.

The amendment appears to make significant changes in environmental policies for coastal communities without seeking input from the coastal communities which would be affected. The top priorities in our community for use of the cruise ship head tax revenue are improvements that make Seward a better port for cruise ships and their passengers. The proposed amendment limits our ability to accomplish needed port infrastructure because a substantial portion of the revenues is redirected- to a purpose not prioritized by Seward. The amendment will almost certainly increase community operating costs for wastewater treatment plants - i.e., it is an unfunded (state) government mandate.

It is also important to remember that future court action could find that many current appropriations of the regional impact tax are not legal. The State or communities could conceivably be required to return improperly expended funds to the passengers who paid the taxes.

As you know, we have a public and open process to identify and prioritize local capital improvement projects. With input from the public, we have developed the priorities that we believe will improve services to cruise ships, their passengers, and our communities. With declining oil revenue and limited budgets, it is safe to say that upgrading municipal wastewater treatment plants to ultra high standards would not be the top priority of the majority of our residents.

For the reasons stated above, we respectfully request you oppose the amendment and move the bill from committee in its current form. Thank you for your consideration.

Representative Mark Neuman
Co-Chair, House Resources Committee
State Capitol, Room 432
Juneau, AK 99801

RE: HB 134, An Act relating to the terms and conditions of commercial passenger vessel permits for the discharge of graywater, treated sewage, and other wastewater

Dear Chairman Neuman:

I am writing to express my support for HB 134 as originally proposed, as well as my concern with Representative Seaton's pending amendment.

As you know, the original intent of HB 134 is to give the Alaska Department of Environmental Conservation the ability to look at all options and use the best science to establish discharge standards that will protect our water and marine environment. This amendment accomplishes the exact opposite.

The amendment appears to make significant changes in environmental policies for coastal communities without any input from coastal communities, and I appreciated your suggestion that input be solicited from potentially impacted port communities.

My concerns with the amendment include:

1. The priorities for port communities are improvements to port infrastructure. For example, Ketchikan's top priority for port-related development is a $25-30 million upgrade to replace two old wooden cruise berths downtown. Unfortunately, major port communities such as Ketchikan and Juneau do not receive a regular annual distribution from the first five ports of call distribution formula that was in the initiative.

334 Front Street / Ketchikan, AK 99901 / PH: 907-225-3111 / FX: 907-225-5075

I find it very interesting that those who cleverly designed the initiative to exclude port communities such as Ketchikan and Juneau from the receipt of passenger tax funds are now trying to induce the port communities to accept funds only for expenditures on treatment plants. This further limits our ability to access the passenger tax revenue for needed port infrastructure by diverting a substantial portion of the revenue to a purpose which was never considered by the voters.

2. While the amendment proposes to allocate up to 50% of the passenger tax revenues to the design and construction of wastewater plants in port communities, it appears to saddle the communities with any increased operating costs. For your information, our community received a preliminary estimate last week that an upgrade to its plant would cost $20-40 million, and operational costs would increase by $1-3 million per year. Furthermore, the upgrade would not be to the 2010 standard arbitrarily imposed by the initiative on cruise vessels.

3. Section 7 seems to be a "poison pill." It appears to state that, if a court finds the excise tax unconstitutional, two sections are repealed, and there is a return to the status quo on vessel discharge. This appears to be the case even if substantial funds had already been expended on shore-based facilities. I believe that, based upon how the state is distributing proceeds of the passenger tax, federal restrictions on its use are being violated and litigation may be both appropriate and likely.

As you know, local communities such as Ketchikan have a very open process to identify and prioritize local capital improvement projects. With input from the public, we have developed our top priorities that we believe will improve the lives of our citizens. With declining oil revenue and limited budgets, it is safe to say that upgrading municipal wastewater treatment plants to such ultra high standards would not be the top priority of the majority of our residents; we are more interested in funding to repair bridges and trestles, expand our hydro resources, and replace aging facilities such as fire stations, hospitals, and libraries. My familiarity with the state appropriations process is such that I believe that receipt of significant funds for unwanted projects such as wastewater plant upgrades would result in a decrease of funding that otherwise might be available for other capital projects which have actually been requested by our communities.

Furthermore, I have tried - with little success to date - to engage the initiative sponsors in a process to sit down and develop a fair way of distributing the proceeds of the passenger fees to benefit the ports of call actually impacted by the ships and their passengers and crews. I am still willing to do that.

I am not willing, however, to have them tell us what out capital priorities should be.

For the reasons stated above, I respectfully request that you oppose the amendment and move the bill from committee in its current form.

Thank you for your consideration.

Sincerely,

Bob Weinstein

REPRESENTATIVE JOHN HARRIS

March 11, 2009

Governor Sarah Palin
Office of the Governor
Juneau, Alaska

Subject: Large Commercial Passenger Vessel Wastewater Discharge Permits

Dear Governor Palin:

This is to call your attention to legislation relating to wastewater discharge permits for large passenger vessels operating in state waters. Policy direction from your office would be helpful to the legislature, coastal communities, vessel owners, and many interested individuals toward resolving this issue.

House Bill 134 would provide the Department of Environmental Conservation with the same authority to regulate wastewater discharges of large vessels that it has with other entities. Current law – which was established by voter initiative in 2006 – requires testing of vessel wastewater specifically at the point of discharge.

Testing at the point of discharge imposes a different methodology than that which exists for any other industry or municipality in Alaska. For example, mining operations, seafood processing, and coastal communities have their discharges tested at a reasonable distance away from the discharge point. Be that as it may, clean water itself should be our standard, and if someone is polluting our waters, then DEC must step in and stop them.

In spite of the initiative's language, DEC issued a general permit for all large commercial passenger vessels on March 25, 2008 that provides interim effluent limits and recognizes that vessels need time to make changes to their operations or equipment. The compliance schedule provides a deadline of 2010 to fully meet new standards for ammonia, copper, nickel, and zinc.

I believe this first discharge permit was a good first step. It complies with the citizens' initiative, and it establishes a reasonable approach toward developing vessel treatment systems that will keep our marine water clean.

Two bills have already been signed into law that have amended the citizens' initiative. One, by former Sen. Kim Elton, removed state ferries and other vessels of similar size from the initiative's requirements. Another, by Rep. Lindsey Holmes, removed certain passenger disclosure provisions. HB 134 – if enacted – would not be the first change to the initiative.

As the prime sponsor of HB 134, I have confidence that DEC is fully qualified to evaluate the best available methods and technologies and apply them to the operational permits that cruise ships must obtain. A technology session recently held by DEC revealed several approaches that could result in protecting Alaska waters; however, it found that not all systems could work on all vessels, not all vessels could discharge to shore, and all this is a developing field needing further evaluation by DEC. The bottom line is that your administration is working right now toward bringing the best treatment systems possible on board vessels as quickly as possible.

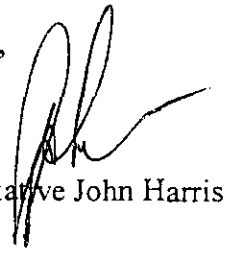
By having confidence in DEC's ability and efforts, I sponsored HB 134. Giving the agency broad authority does nothing to diminish water quality standards. Its officials are working hard to implement the best treatment technology as quickly as possible, and they will hold vessels to high water quality standards.

Unless a bill is enacted this session that amends the testing requirement "at the point of discharge," both large commercial passenger vessels and DEC will face a difficult decision. Either the agency will have to continue to issue permits that don't meet the requirements of the citizens' initiative or large commercial passenger vessels will have to abide by standards for which technology is not now available.

HB 134 returns that authority to the agency. Your support for the legislation will convey your confidence that the agency will do the job that we expect it to do.

Thank you for your time and consideration of this important issue.

Sincerely,



Representative John Harris

Examples of Mixing Zones in Alaska Today

Nearly every wastewater discharge to Alaska's surface waters has a permit that includes provisions for a mixing zone. The most common are for municipal wastewater treatment systems. Under current regulations mixing zones may be authorized in streams and rivers that that contain salmon, but may not be authorized in spawning areas for salmon and specified resident fish in these waters. Mixing zones are also commonly authorized in marine waters. Below are some examples of mixing zones authorized in Alaska today.

General Permit for Shore-based Seafood Processing Facilities

The large majority of seafood processing facilities operate under a general permit. The mixing zone is for residues, dissolved gas, oil and grease, pH, color, turbidity, fecal coliform, total residual chlorine and temperature. The mixing zone is defined as a cylindrical volume with a horizontal radius of 100 feet from the diffuser and the full depth of the waterbody.

Mendenhall Wastewater Treatment Plant – Juneau

A mixing zone for municipal wastewater is allowed in the Mendenhall River for fecal coliform bacteria, dissolved oxygen, pH, metals, nutrients, and whole effluent toxicity (WET). The mixing zone for this discharge is defined as the area within a rectangle centered over the diffuser with a width of 30 meters and extending both upstream and downstream from the diffuser a distance of 150 meters, and to the full depth of the river. The mixing zone size is based on a 10-year, 7-day low river flow. The mixing zone provides a dilution of 10:1.

Soldotna Wastewater Treatment Facility – Soldotna

A mixing zone for municipal wastewater is allowed in the Kenai River for fecal coliform bacteria, dissolved oxygen, temperature, total chlorine residual, pH, metals, nutrients, and whole effluent toxicity (WET). The mixing zone for this discharge is defined as the area extending downstream from the diffuser a distance of 47 meters and having a width of 5 meters. The mixing zone provides a dilution of 30:1.

Mixing Zones
Fact Sheet

What is a mixing zone?

Even with the best treatment technology, wastewater discharges from sewage treatment and industrial facilities (i.e. mining, seafood processing, oil exploration or production, etc.) sometimes have low levels of pollutants. Most wastewater discharges permitted in Alaska are to surface waters such as the ocean, lakes, streams, or rivers. The area where treated wastewater is authorized by DEC to mix with a water body is called a mixing zone.

How do they work?

All wastewater discharges into surface water require a permit that may contain authorization for a mixing zone. Mixing zone authorizations take into consideration habitat and aquatic life, water flow, water quantity, natural currents, and the quantity and quality of the wastewater that's being discharged. If the circumstances surrounding a proposed mixing zone do not meet the State's standards, a mixing zone cannot be authorized. Requiring an authorization for mixing zones ensures that they are carefully designed using waterbody-specific information, water quality is monitored, and that water quality standards are met outside the mixing zone boundary so as not to create long-term impacts to people or the environment.

Who uses mixing zones?

Most mixing zones are authorized for sewage treatment plants run by local governments, as well as seafood processors, fish hatcheries, oil and gas facilities, mining operations and other industrial facilities.

Why are mixing zones used?

Mixing zones are an important tool regulators use to control water pollution. They allow Alaska to have very high standards for water quality. Without the authority to issue mixing zones, the State would have to use other methods to adjust for current limitations in treatment technologies, which could result in lowering the overall standards. Without mixing zones, sewage treatment plants would have to treat raw sewage to a level that could serve as a source of drinking water before being discharged into a water body. Although this goal may be technically achievable by NASA standards, it is not yet an economically feasible option for most communities or industries. There are no sewage treatment plants or seafood processors in Alaska that discharge wastewater to a surface water body (and the vast majority do) that could operate without a mixing zone.

What does the law say about mixing zones?

States have authority to allow mixing zones under the Clean Water Act; the Environmental Protection Agency has published mixing zone guidance; and all other states use them in addition to Alaska. Mixing zones have been included in the Alaska water quality standards regulations since 1973.

By State statute, the department must designate specific uses of water and establish standards for quality and purity to protect those uses. The water quality standards, which include mixing zone provisions, must protect the growth and propagation of aquatic life, the public health of those who consume the water or the aquatic organisms, and other water uses such as industrial, agricultural and recreational use. State statute also directs the Departments of Natural Resources and Fish and Game to protect salmon and resident fish habitat quality and establishes requirements for construction in, or use of waters (for example, as a mixing zone) that are important to fish.

Division of Water

Water Quality Standards

2003-2006 Triennial Review

Lynn Kent, Water Division Director (907) 269-6281
Nancy Sonafrank, Program Manager (907) 451-2726

Mixing Zone Requirements in Regulation (as of March 23, 2006)

In determining whether to authorize a mixing zone, DEC must consider:

- the characteristics of the receiving water
- the characteristics of the effluent
- the effects, including cumulative effects of multiple discharges, along with nonpoint sources of pollution on the uses of the water
- any measures that would mitigate potential adverse effects to aquatic resources
- any other relevant factors

In order to authorize a mixing zone DEC must find that the:

- effluent will be treated to remove, reduce and disperse the pollutants using the most effective, technologically and economically feasible, and at a minimum consistent with statutory and regulatory treatment requirements
- designated and existing uses of the waterbody as a whole will be maintained and protected
- overall biological integrity of the waterbody will not be impaired
- mixing zone is as small as practicable

To obtain a mixing zone approval, the mixing zone can <u>not:</u>

- result in an acute or chronic toxic effect in the water column, sediments, or biota outside the boundaries of the mixing zone
- create a public health hazard that would preclude or limit existing uses of the waterbody for water supply or contact recreation
- preclude or limit established processing activities, commercial, sport, personal-use, or subsistence fish and shellfish harvesting
- result in a reduction in fish or shellfish population levels
- result in permanent or irreparable displacement of indigenous organisms
- adversely affect threatened or endangered species except as authorized under the Endangered Species Act
- form a barrier to migratory species or fish passage
- contain pollutants that bioaccumulate, bioconcentrate, or persist above natural levels in sediments, water, or biota
- present an unacceptable risk to human health from carcinogenic, mutagenic, teratogenic, or other effects
- settle to form objectionable deposits
- produce floating debris, oil, scum and other material in concentrations that form nuisances
- result in undesirable or nuisance aquatic life
- produce objectionable color, taste, or odor in aquatic resources harvested from the area for human consumption
- cause lethality to passing organisms
- exceed acute aquatic life criteria beyond a smaller initial mixing zone surrounding the outfall

Submitted by UFA in response to questions about copper & salmon

Summary of:
Copper: Effects on Freshwater Food Chains and Salmon
A literature review

Highlights of a published scientific literature review of potential effects of increasing copper to salmon and their freshwater food chains.

Dr. Carol Ann Woody
Fisheries Research and Consulting

Sources of Copper

Copper occurs naturally in the environment at low levels. High levels are recorded for regions where hard rock and coal mining, smelting and refining occur and in areas near industrial and municipal waste sites.

The proposed Pebble mine would be a large-scale copper-gold-molybdenum mine with characteristics similar to other mines that increased copper and other pollutants harmful to fish in the surrounding environment and waters. The proposed Pebble site has sulfide rock that when exposed to air and water creates acid that can increase copper and other harmful pollutant concentrations downstream. Rain, which is acidic, can also mobilize and wash copper and other metals into salmon habitat from mining regions.

Copper and Salmon

While copper is a necessary trace element for all living organisms, hundreds of studies show that copper in small amounts can be lethal and have many sub-lethal effects that increase mortality rates and decrease fish survival and production. Salmon and their food sources can have a very low tolerance for this pollutant. The harmful effects of long-term, low-level exposure to copper may be difficult to detect compared to mass fish kills caused by a single toxic spill.

Copper can:

1. Impair a salmon's sense of smell.
   Salmon use their keen sense of smell to identify predators, prey, kin, and mates. Mixing up any of these relationships could be detrimental or fatal to salmon.
2. Interfere with normal salmon migration.
   If salmon cannot smell, or if the chemical signature changes in streams where salmon hatch, then fish will likely stray to and spawn in non-natal habitats to which they are not adapted. This could cause lower salmon survival and reduce the biodiversity that supports Bristol Bay fisheries.
3. Impair a salmon's ability to fight disease.
   a. Copper is a biological stress agent which depresses immune system function. Fish, like humans, tend to get sick when stressed.
   b. Copper can impair salmon's breathing and brain function.
   c. Copper also disrupts osmoregulation in salmon, the process by which cells maintain fluid and electrolyte balance with their surroundings. This can stress salmon and make them more susceptible to disease.
4. Impair salmon's ability to sense vibrations in the water which helps them avoid predators.

5. Change salmon's enzyme activity, blood chemistry and metabolism, which can cause death and impair reproduction.
6. Delay or accelerate natural hatch rates, which can reduce salmon survival rates.
7. Kill or harm salmon food sources, including algae, zooplankton, aquatic insects and fish.

Copper and Other Toxins

Numerous elements, in addition to copper, such as zinc, cadmium, mercury, iron, lead, aluminum, and selenium are released at hard rock mining sites in a unique cocktail. The combined effect of exposure to copper and other metals, such as zinc, can be more deadly than exposure to copper alone.

1. Studies of the effects of these chemical cocktails show depressed immune systems in rainbow trout and other fish.
2. Federal and State water quality limits for metals do not take these effects into account.

Alaska's Water Quality Regulations, Copper and Salmon

The State of Alaska's water quality standard for protection of freshwater species, including salmon, is 9 micrograms of copper per liter or parts per billion (ppb). This is roughly equal to ¼ teaspoon in a 40,000 gallon swimming pool. The human drinking water standard for copper is 144 times higher than the level allowed for salmon, at 1,300 ppb. [Alaska Department of Environmental Conservation 18 AAC 2006.]

Harmful and even deadly effects of dissolved copper are documented throughout the food chain, from salmon to algae, at lower copper concentrations than the State of Alaska allows in waterways. For example:

1. Some algae, at the base of the salmon food chain, are harmed at $1/9^{th}$ the level of copper allowed by the State of Alaska. Declines in algae translate to less food for sockeye.
2. Zooplankton, aquatic insects and other salmon prey are harmed within 48 hours at copper concentrations $1/3^{rd}$ the allowed level.
3. Many species of freshwater plants and animals die within 96 hours at waterborne copper concentrations starting at just over ½ the allowed level. Studies have found that sensitive species of mollusks, crustaceans and fish can die at $1/26^{th}$ the allowed level.
4. An increase of copper less than $1/3^{rd}$ the allowed levels interferes with a juvenile coho's ability to smell. King salmon avoided waters with copper levels $1/12^{th}$ the allowed level.

The State of Alaska uses a formula to calculate acceptable copper pollution levels that doesn't take into account many factors that affect toxicity to salmon, including age, size, and reproductive condition of fish, and water quality measures like temperature, pH, salinity, and dissolved particle concentrations.

This summary fact sheet is based on a paper prepared by Dr. Carol Ann Woody, founder of Fisheries Research and Consulting. Dr. Woody has a PhD in Fisheries Science from the University of Washington and over 20 years of Alaskan experience including 14 years researching salmon in both the Kvichak and Kasilof River watersheds of Alaska. She served as a technical expert for the US Geological Survey to other federal agencies for both the Galore Creek and Pebble mines and their implications to aquatic resources. She has published more than 25 scientific papers on salmon and a recent book on advances in sockeye salmon research. Dr. Woody is a past-President of the Alaska Chapter of the American Fisheries Society and currently serves on the Environmental Concerns Committee. She is adjunct faculty at the University of Alaska, Fairbanks, and the University of Idaho, Moscow.

Representative Chris Tuck
State Capitol Building Rm 426
Juneau, AK 99801-1182
Representative_Chris_Tuck@legis.state.ak.us

Dear Mr. Tuck,

Thank you for you interest in preserving Alaska clean waters. The Alaska Independent Tenderman's Association is totally opposed to using "mixing zones" for the discharge of waste water. After dealing with cruise ships and their discharges for 30 years now I can assure you they need no more loopholes to use to discharge their waste. They have gotten better in the last few years only because of pressure brought to bare upon them. They still discharge when they think they can get away with it. See passed state fines. Mixing zones are just that, mixing zones, the waste does not go away it just gets diluted.

It is not just the discharges it is the effect upon the worlds perception of "Pristine Alaskan Seafood". If the world thinks that cruise ships are dumping their wastes in the water that salmon migrate through then we loose the reputation for clean, pure seafood. Once the perception of pollution it never goes away. Prince William Sound is a good example of that. World perception is that it is still oiled long after visual traces have disappeared.

We are a small organization representing 60-70 tenders throughout the state. Unfortunately we have no hard data concerning cruise ship discharges. We have a hard enough time keeping track of ourselves. As you know hard data rarely wins out over perception in any advertising campaign. Let's all do our part to keep our seafood clean and pure. "Keep it clean, Keep it cold, Keep it Moving" ASMI's Motto not ours.

Sincerely,

Jim Edson, President

SARAH PALIN

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

March 19, 2009

The Honorable John Harris
Alaska State Legislature
State Capitol, Room 403
Juneau, AK 99801

Dear Representative Harris:

Thank you for your letter requesting my help clarifying expectations for the Department of Environmental Conservation (DEC) should your legislation, known as HB 134, pass the Legislature and become law. I share your confidence in DEC's abilities and efforts, and agree that DEC officials are working hard to implement the best treatment technology as quickly as possible.

I would like to assure you, and anyone else interested in this issue, that in the event that this legislation passes, DEC will retain the ability to preserve and protect water quality through their existing permitting authority. While discharge permits could be modified to include mixing zones where appropriate, cruise ships would still have to obtain and comply with permits that will fully protect aquatic life and other uses of Alaska's waters. Permits could include a variety of conditions to ensure water quality is protected.

DEC would retain the authority to prevent backsliding by assuring that any standards currently achieved must continue to be met and would have the ability to mandate that the best and most feasible treatment technology be used. As you may know, DEC is aware of no technologies currently available for widespread shipboard use that would allow standards to be met. From DEC's technology conference held last month, it appears there are new waste reduction and treatment options that could become commercially available in the future. We want to encourage improvement, and continue to explore these options.

I appreciate your interest and efforts in this issue and hope this information is helpful as you continue hearings on this legislation.

Sincerely,

Sarah Palin
Governor

Department of Environmental Conservation
Testimony before the House Resources Committee
on AMENDMENTS TO CS HB 134 (CRA) (Bill Version 26-LS0570\E.6)
March 25, 2009

Introduction

DEC appreciates Representative Harris and the Co-chairs of the House Resources Committee giving DEC the opportunity to provide input on an amendment to CS HB 134 (CRA). We believe our discussions have been fruitful and the amended bill (Bill Version 26-LS0570\E.6) the committee has before you is an improvement to the original bill.

At the point of Discharge Requirement

The amendment to CS HB 134 (CRA) (Bill Version 26-LS0570\E.6) leaves the requirement for waste water discharges to meet Alaska water quality standards "at the point of discharge" in AS 46.03.462 unchanged, but allows DEC to grant exceptions under section 3 (e) where cruise ships, despite employing the most effective and reasonable pollution prevention, control and treatment measures, cannot currently meet this standard. The discharges would still have to meet all other DEC regulatory requirements. The environment will still be protected while industry works to meet the "at the point of discharge" standard for all pollutants.

Technology Forcing Requirements

The amendment includes two significant technology forcing requirements that are designed to make continuous progress towards meeting the Alaska water quality standards at the point of discharge.

1. When issuing or re-issuing permits the department would need to determine that a permittee is using the most effective methods of pollution prevention, control and treatment that are technologically and economically feasible, but the permittee is still unable to meet the water quality standards at the point of discharge; and

2. DEC would:

   - Convene a science advisory panel of select experts to advise the Department on methods to reduce sources of contaminants and on current and emerging treatment technologies for the onboard or onshore treatment of wastewater form cruise ships.

- In conjunction with the advisory panel, DEC will:
    - hold one or more technology conferences to look at progress in treatment technologies, again, including both on-board and on-shore options.
    - Evaluate the quality of waste water effluent the cruise ships have been able to achieve;
    - Estimate timeframes for implementation of new technologies based on the technical requirements and economic factors;
    - Evaluate potential economic impacts to transitioning to new technologies; and
    - Evaluate the environmental improvements and costs anticipated from the new technologies.

DEC will provide an interim report to the legislature in January 2012 and a final report in January of 2014 which provides an opportunity for the legislature to evaluate the progress and determine if any additional changes should be made to the statutes prior to the 2014 cruise ship season.

Anti-backsliding

The cruise ship industry in Alaska has been able to achieve a relatively high quality effluent already. They are meeting state water quality standards "at the point of discharge" for many pollutants. The pollutants that have been more difficult to reduce or remove are ammonia, copper, and to a lesser degree nickel and zinc. Even here, some vessels have come close to meeting the "at the point of discharge" requirement.
The anti-backsliding provision in the bill amendment prohibits DEC from relaxing an effluent limit established in a previous permit, ensuring that any gains made in wastewater quality will be maintained.

DEC anticipates, if HB 134 passes, it will be issuing a modified general permit for cruise ship wastewater that reflects the changes called for under the bill. Once that permit is modified, the "anti-backsliding" requirement in section 3 (g) of the amended bill would assure that any ground already gained in reducing pollutants in wastewater discharges from cruise ships would not be lost.

Future Action

At the start of the 2014 Legislative Session, the Legislature will have DEC's final report regarding on-board and on-shore treatment technologies applicable to treating wastewater from cruise ships. It will also know the track record on what the cruise ship industry has been able to achieve to date and the time and estimated economic impacts of implementing any new treatment technologies.

The Legislature can modify AS 46.03.462 to impose any appropriate requirements as to those pollutants that may still not be treated to the "at the point of discharge" standard, or if the Legislature believes DEC's existing requirements are sufficient, do nothing further. Under section 6 of the amended bill, the Science Advisory Panel would sunset.

It is important to understand that under this amended bill, cruise ships would continue to be subject to the anti-backsliding requirement. They would also be required, at a minimum to use "the methods of pollution prevention, control, and treatment found by the DEC to be the most effective and reasonable." Finally, they would still have to meet all of the other permitting requirements of DEC.

Fiscal Impact

DEC anticipates it would not need an increment or new positions in FY 2010. An increment might be needed for work in later years, but DEC would try to fund all work out of cruise ship registration fees. This was the funding source for past studies and ongoing permitting costs.

Conclusion

Again, DEC appreciates the opportunity to provide input on the amendment.

CS FOR HOUSE BILL NO. 134( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES HARRIS, Kelly, Millett, Johansen, Foster, Keller, Chenault, Coghill, Johnson, Wilson, Muñoz, Hawker

A BILL

FOR AN ACT ENTITLED

"An Act relating to the terms and conditions of commercial passenger vessel permits for the discharge of graywater, treated sewage, and other waste water; establishing a science advisory panel on wastewater treatment in the Department of Environmental Conservation; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE INTENT. It is the intent of the legislature that the minimum standards for the terms and conditions of wastewater discharge permits for large commercial passenger vessels meet all applicable state and federal effluent limits or standards, including Alaska Water Quality Standards, governing pollution at the point of discharge if the Department of Environmental Conservation, in consultation with its science advisory panel on wastewater treatment, determines that compliance with those limits or standards is the most effective technologically and economically feasible.

* **Sec. 2.** AS 46.03.462(b) is amended to read:

(b) The minimum standard terms and conditions for all discharge permits authorized under this section require that the owner or operator

(1) may not discharge untreated sewage, treated sewage, graywater, or other wastewaters in a manner that violates any applicable effluent limits or standards under state or federal law, including Alaska Water Quality Standards governing pollution at the point of discharge**, except as provided in AS 46.03.462(e)**;

(2) shall maintain records and provide the reports required under AS 46.03.465(a);

(3) shall collect and test samples as required under AS 46.03.465(b) and (d) and provide the reports with respect those samples required by AS 46.03.475(c);

(4) shall report discharges in accordance with AS 46.03.475(a);

(5) shall allow the department access to the vessel at the time samples are taken under AS 46.03.465 for purposes of taking the samples or for purposes of verifying the integrity of the sampling process; and

(6) shall submit records, notices, and reports to the department in accordance with AS 46.03.475(b), (d), and (e).

* **Sec. 3.** AS 46.03.462 is amended by adding new subsections to read:

(e) When issuing, reissuing, renewing or modifying a permit required under (a)(1) of this section, the department may include effluent limits or standards less stringent than those required under (b)(1) of this section for no more than two years duration if the department finds that a permittee is using methods of pollution prevention, control and treatment found by the department to be the most effective, technologically and economically feasible in controlling all wastes and other substances in the discharge but is unable to achieve compliance with Alaska Water Quality Standards at the point of discharge.

(f) In developing an effluent limit or standard under (e) of this section, the department shall

(1) require use of methods of pollution prevention, control and treatment found by the department to be the most effective, technologically

economically feasible; and

(2) apply all other applicable provisions of state law and this section.

(g) When reissuing, renewing, or modifying a permit required under this section that was issued after the effective date of this bill section, the department may not include effluent limits or standards less stringent than the comparable effluent limitations in a previous permit issued under this section.

(h) Nothing in this section shall be construed to limit the authority of the department to

(1) restrict the areas in which discharges permitted under this section may occur; or

(2) impose additional terms and conditions on the manner in which discharges permitted under this section may be made in a specific area.

* **Sec. 4.** AS 46.03 is amended by adding a new section to read:

Sec. 46.03.464. Advisory panel on wastewater treatment; commissioner's reports to the legislature. (a) A science advisory panel is established in the department. The panel consists of 11 members selected by the commissioner. Members of the panel serve without compensation but are entitled to transportation expenses and per diem as authorized for members of boards and commissions under AS 39.20.180. Each of the individuals the commissioner selects will serve for up to a five-year period and have expertise in the design, operation or function of wastewater management and treatment systems; among the 11 panel members, the commissioner will select at least one individual from each of the following groups:

(1) coastal community domestic wastewater management;

(2) cruise ship industry;

(3) commercial fishing industry; and

(4) a non-governmental organization with an interest in water quality matters.

(b) The panel shall

(1) meet at the call of the commissioner and give public notice of meetings of the panel as required under AS 44.62.310 and 44.62.312;

(2) hold one or more public conferences or workshops before 2012,

with at least one public conference or workshop to be held between January 1, 2012, and January 1, 2014, if the department issues, renews, or modifies a permit required under AS 46.03.462(a)(1) after January 1, 2012; and

(3) assist and advise the commissioner in conducting the analyses and preparing the reports required in (c) and (d) of this section.

(c) On or before January 1, 2012, the commissioner, in consultation with the panel, shall provide a preliminary report to the legislature that summarizes

(1) methods of pollution prevention, control, and treatment in use and the level of effluent quality achieved by commercial passenger vessels;

(2) additional methods of pollution prevention, control, and treatment that could be employed to provide the most effective, technologically and economically feasible measures to control all wastes and other substances in the discharge; and

(3) the environmental benefit and cost of implementing additional methods of pollution prevention, control and treatment identified in (c)(2) of this section.

(d) On or before January 1, 2014, the commissioner, in consultation with the panel, shall provide a final report to the legislature that includes the topics identified in (c)(1) - (3) of this section.

* **Sec. 5.** AS 46.03.465 is amended by adding a new subsection to read:

(h) On request, the owner or operator of a commercial passenger vessel discharging wastewater under AS 46.03.462(b) shall provide the department with information relating to wastewater treatment, pollution avoidance, and pollution reduction measures used on the vessel, including testing and evaluation procedures and economic and technical feasibility analyses.

* **Sec. 6.** AS 46.03.464 is repealed.

* **Sec. 7.** Section 6 of this Act takes effect June 1, 2014.

* **Sec. 8.** Sections 1 through 5 of this Act take effect immediately under AS 01.10.070(c).

(4) shall report discharges in accordance with AS 46.03.475(a);

(5) shall allow the department access to the vessel at the time samples are taken under AS 46.03.465 for purposes of taking the samples or for purposes of verifying the integrity of the sampling process; and

(6) shall submit records, notices, and reports to the department in accordance with AS 46.03.475(b), (d), and (e).

* **Sec. 3.** AS 46.03.462 is amended by adding new subsections to read:

(e) When issuing, reissuing, renewing or modifying a permit required under (a)(1) of this section, the department may include effluent limits or standards less stringent than those required under (b)(1) of this section for no more than two years duration if the department finds that a permittee is using methods of pollution prevention, control and treatment found by the department to be the most effective, technologically and economically feasible in controlling all wastes and other substances in the discharge but is unable to achieve compliance with Alaska Water Quality Standards at the point of discharge.

(f) In developing an effluent limit or standard under (e) of this section, the department shall

(1) require use of methods of pollution prevention, control and treatment found by the department to be the most effective, technologically

economically feasible; and

(2) apply all other applicable provisions of state law and this section.

(g) When reissuing, renewing, or modifying a permit required under this section that was issued after the effective date of this bill section, the department may not include effluent limits or standards less stringent than the comparable effluent limitations in a previous permit issued under this section.

(h) Nothing in this section shall be construed to limit the authority of the department to

(1) restrict the areas in which discharges permitted under this section may occur; or

(2) impose additional terms and conditions on the manner in which discharges permitted under this section may be made in a specific area.

*** Sec. 4.** AS 46.03 is amended by adding a new section to read:

Sec. 46.03.464. Advisory panel on wastewater treatment; commissioner's reports to the legislature. (a) A science advisory panel is established in the department. The panel consists of members selected by the commissioner. Members of the panel serve without compensation but are entitled to transportation expenses and per diem as authorized for members of boards and commissions under AS 39.20.180.

(b) The panel shall

(1) meet at the call of the commissioner and give public notice of meetings of the panel as required under AS 44.62.310 and 44.62.312;

(2) hold one or more public conferences or workshops; and

(3) assist and advise the commissioner in conducting the analyses and preparing the reports required in (c) and (d) of this section.

(c) On or before January 1, 2012, the commissioner, in consultation with the panel, shall provide a preliminary report to the legislature that summarizes

(1) methods of pollution prevention, control, and treatment in use and the level of effluent quality achieved by commercial passenger vessels;

(2) additional methods of pollution prevention, control, and treatment that could be employed to provide the most effective, technologically and economically feasible measures to control all wastes and other substances in the

discharge; and

(3) the environmental benefit and cost of implementing additional methods of pollution prevention, control and treatment identified in (c)(2) of this section.

(d) On or before January 1, 2014, the commissioner, in consultation with the panel, shall provide a final report to the legislature that includes the topics identified in (c)(1) - (3) of this section.

*** Sec. 5.** AS 46.03.465 is amended by adding a new subsection to read:

(h) On request, the owner or operator of a commercial passenger vessel discharging wastewater under AS 46.03.462(b) shall provide the department with information relating to wastewater treatment, pollution avoidance, and pollution reduction measures used on the vessel, including testing and evaluation procedures and economic and technical feasibility analyses.

*** Sec. 6.** AS 46.03.464 is repealed.

*** Sec. 7.** Section 6 of this Act takes effect June 1, 2014.

*** Sec. 8.** Sections 1 through 5 of this Act take effect immediately under AS 01.10.070(c).

Representative Craig Johnson, Co-Chairman
House Resources Committee
State Capitol, Room 126
Juneau, Alaska 99801

Re: House Bill 162 – Establishing the Southeast State Forest

Dear Representative Johnson,

Please accept this request for your consideration to schedule HB 162 before the House Resources Committee at your earliest convenience.

This bill would establish a new Southeast State Forest (SESF) in Southeast Alaska. The SESF would be managed as part of the State Forest System under AS 41.17.200-.230. Designated lands include 20 parcels totaling approximately 25,291 acres on Prince of Wales, Tuxekan, Kosciusko, Heceta, Revilla, and Gravina islands, and on the mainland at Crittenden Creek. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management, and enable thinning to increase timber volumes.

The bill is supported by the Alaska State Forest Association, hunting and recreation groups as well as all surrounding land owners. Attached are a Sectional Analysis, DNR's zero fiscal note and background materials and maps.

If you have any questions regarding the bill, feel free to contact Melanie Lesh, Special Assistant, Department of Natural Resources' and Legislative Liaison at 465-4730, or Marty Freeman, the Forest Resources Program Manager at 269-8473.

Sincerely,

for Thomas E. Irwin
Commissioner

"Develop, Conserve, and Enhance Natural Resources for Present and Future Alaskans."

Briefing: **HB 162**

Southeast State Forest

DEPARTMENT OF NATURAL RESOURCES -- DIVISION OF FORESTRY

Alaska Department of NATURAL RESOURCES

March 2, 2009

Background. The state Department of Natural Resources manages over 156,000 acres of forest land in Southern Southeast (SSE) Alaska. Of this land, timber management is allowed on approximately 49,000 acres. The state actively manages this timber base to supply wood to local processors. Remaining land is designated primarily for other uses including land sales, recreation, water resources, and fish and wildlife habitat, including over 25,000 acres of legislatively designated state parks, refuges, and public use areas.

In SSE, demand for state timber exceeds supply. The majority of timber in SSE is on federal land, but federal timber sales have declined drastically. Local mills now depend heavily on state timber for survival. The state is committed to finding long-term solutions by:

- maximizing the sustainable supply of timber from the small state timber base.
- working with the US Forest Service to increase economically feasible federal timber sales, and
- accelerating the transition from old-growth harvesting to harvesting second-growth.

There is broad support for shifting timber harvesting in SE Alaska from old growth to second-growth stands. Actively-managed second-growth stands provide more timber volume per acre on shorter rotations, and have less impact on wildlife. Much of the state timber land was inherited from the USFS with young second-growth stands. We can accelerate the shift to second-growth harvesting and increase timber volume on state land by thinning these stands. However, thinning is a long-term investment, and is only justified if the land will continue to be available for forest management. Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management.

Purpose. This bill would establish a new Southeast State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

Proposed State Forest land. The proposed Southeast State Forest includes 20 parcels totaling approximately 25,291 acres (see chart). Parcels are General Use lands on Prince of Wales, Tuxekan, Kosciusko, Heceta, Revilla, and Gravina islands, and on the mainland at Crittenden Creek. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

State Forest Management. The Southeast State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. State Forest lands would be managed consistent with the management intent under the current Prince of Wales Island and Central Southeast area plans. Changes to management intent would require public and interagency review through adoption of a State Forest Management Plan under AS 41.17.230.

Municipal Entitlements. The City and Borough of Wrangell boundary encompasses three parcels in the proposed state forest (Crittenden Creek and Bradfield Canal East and West). A State Forest designation will not affect the amount or location of land the Wrangell Borough can select. That determination is based on the maximum total acreage of vacant, unappropriated, unreserved land in the borough boundaries within two years after the date of incorporation (AS 29.65.030). However, a borough would not normally be able to select land within a State Forest. To avoid conflicts with the Wrangell entitlement, the Southeast State Forest bill specifies that the Wrangell Borough may select State Forest land within the borough boundary.

If new municipalities are incorporated before June 30, 2019, lands that were vacant, unappropriated, unreserved land before establishment of the State Forest will be included in the calculation of the municipal entitlement acreage, but may not be selected.

PROPOSED SOUTHEAST STATE FOREST

Sectional Analysis
HB 162
Establishing the Southeast State Forest and relating to the Southeast State Forest; and providing for an effective date

This bill would establish a new Southeast State Forest (SESF). The SESF would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. The State Forest designation would not affect the Wrangell Borough municipal entitlement, nor would it affect calculation of entitlement acreage for future municipalities in southeast Alaska.

Section 1 – Southeast State Forest.

Legal descriptions. Section 1, subsections (a) and (d) provide legal descriptions for the lands to be designated as the Southeast State Forest (SESF). Designated lands include 20 parcels totaling approximately 25,291 acres (see chart) on Prince of Wales, Tuxekan, Kosciusko, Heceta, Revilla, and Gravina islands, and on the mainland at Crittenden Creek. These parcels are an important part of the state timber base, but are classified as General Use land, which may be sold in the future. Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management, and enable thinning to increase timber volumes. Designated lands exclude areas identified as important sites for future state land disposals.

Management plan and transportation corridor. Subsection (b) directs DNR to prepare a management plan for the Southeast State Forest. Under AS 41.17.230 a management plan is required within three years after a State Forest is established. State Forest management plans must consider and permit multiple uses, include recreation and tourism, mining, use of fish and wildlife, and other traditional uses, unless the Commissioner issues a site-specific written finding that a use in incompatible with one or more other uses. Public, interagency, and Board of Forestry review is required prior to adoption of a State Forest management plan. As in other state forests, Subsection (c) states that the DNR Commissioner may also establish transportation corridors within the State Forest.

Municipal entitlements. Subsection (e) clarifies the relationship of the Southeast State Forest to current and potential municipal entitlements. State Forests can affect the amount of land a municipality is entitled to select, and the land

available for selection. The amount of land a municipality may select is based on the maximum total acreage of vacant, unappropriated, unreserved (VUU) land in the borough boundaries within two years after the date of incorporation (AS 29.65.030). Municipal selections are limited to VUU land. Land classified as General Use land is VUU land, but State Forests are not.

The SESF is designed to have no impact on Wrangell Borough land selections. The amount of land that Wrangell Borough may select is already fixed by its date of incorporation, and this bill specifies that the Wrangell Borough may select State Forest land within the borough boundary. Three parcels in the SESF are within the Wrangell Borough boundary.

If new municipalities are incorporated before June 30, 2019, the SESF will not affect the amount of land that they can select. The bill specifies that State Forest lands that were VUU land before establishment of the State Forest will be included in the calculation of the entitlement acreage. However, parcels in the SESF may not be selected. If municipalities form after 2019, the amount and location of their entitlement would be based on the VUU land at that time.

Section 2. Regulations. This section authorizes DNR to immediately adopt regulations to implement the bill.

Section 3. Effective date for regulations. Under Section 3 the authority to adopt regulations (Section 2) takes effect immediately.

Section 4. Effective date for State Forest. Section 4 provides for an effective date of July 1, 2008.

ANALYSIS: *(Attach a separate page if necessary)*

This bill establishes a 25,291-acre State Forest in Southern Southeast Alaska by redesignating certain state-owned parcels. A timber management plan would be developed to actively manage the parcels for higher timber volumes per acre, shorter rotations and less impact on wildlife. This would involve thinning young second-growth stands; a long-term investment not justified for undesignated lands.

Implementation of this bill will not require new positions or funding. The bill will have no short-term impact to the revenue stream, but will provide for long-term increases in forest productivity and subsequent increased timber revenues.

February 16, 2009

The Honorable Governor Sarah Palin
PO Box 110001
Juneau, AK 99811-0001

Governor Palin;

The Southeast Conference (SEC) is a broad based association of communities in Southeast Alaska with a mission of undertaking and supporting activities that promote strong economies, healthy communities and a quality environment throughout the region. In furthering that mission, SEC would like to lend its support for the concept of creating a new State Forest in southern southeast.

In southern southeast the demand for state supplied timber far exceeds the supply. The majority of the timber in the area is on federal land; however federal timber sales have declined dramatically. For their survival, the few remaining, local mills now depend heavily on state supplied timber from the 49,000 state acres where timber management is allowed.

Many of the states' managed acres support either second-growth stands on lands previously harvested by the U.S. Forest Service prior to state selection or new-growth on lands that have recently been harvested through state sales. Thus, for a future timber supply from state lands in southeast, the emphasis must be on active management of second-growth stands with higher volumes per acre, less impact on wildlife, and shorter harvest rotations.

In order for the state to expend funds to enter into intensive second-growth management on its timber lands, there must be assurance that the acres will be managed for timber over the long term. That assurance can best come through the designation of the lands as a State Forest with a management plan calling for extended, intensive timber management. With that designation, the Division of Forestry would be able to manage the lands for a reliable, long-term supply of timber to local processors and retain the land in state ownership for multiple uses.

Approximately 3,800 acres of state lands potentially included in a new State Forest are within the new Wrangell Borough. SEC understands that the establishment of State Forest lands within the new borough would not adversely affect the amount of land Wrangell may select. AS 29.65.030 states that borough selections are based on the maximum total acres

ARDOR

of vacant, un-appropriated, unreserved land within the borough boundaries within two years following the date of incorporation. SEC would hope that any legislation designating a new Southern Southeast State Forest would provide for this situation.

In conclusion, SEC would like to lend its support for the establishment of a Southern Southeast State Forest and would like to encourage your administration to advocate its establishment. Further, in order to increase the supply of timber available to the dependent industry in the region, we urge you to take advantage of any opportunities to increase the acreage of timberland managed by the Division of Forestry.

Sincerely,

Shelly Wright

March 10, 2009

Honorable Sarah Palin
State of Alaska Governor
PO Box 110001
Juneau, AK 99811

Dear Governor Palin,

Only about 12% of the commercial timberlands in Southeast Alaska are comprised of young-growth timber. Most of these stands are less than 50-years old and will not be mature for another 30 to 50-years. Therefore, for the next few decades, our industry will have to continue harvesting old-growth timber. However, well managed stands of young-growth timber can produce faster growing, high quality timber on fewer acres than unmanaged stands. *Consequently, we applaud your legislative proposal to add some State General Use lands to the State Forest in Southeast Alaska so that the Division of Forestry can more intensively manage those lands.*

The Division of Forestry has done an excellent job of preparing timber sales to keep a small portion of our industry alive in recent years, but they cannot increase their timber sales level without acquiring more timberlands or by departing from their long-term sustained yield requirement. There is opportunity however for increased timber sales from the Mental Health Trust and the University of Alaska timberlands. *We ask that you encourage both of these land managers to increase their timber sales program.* This would provide additional timber to our industry, would lessen the amount of State funding needed to sustain these two entities and create real, private sector jobs in Alaska.

Lastly, we want to thank you for making State personnel available to assist in the restoration of a viable federal timber sale program. That effort is already producing good results and provides our beleaguered industry some hope for our future.

Sincerely,

Brian Brown
President
Alaska Forest Association

OFFICE OF THE GOVERNOR

City of Coffman Cove
Resolution 09-18

A RESOLUTION SUPPORTING A STATE FOREST IN SOUTHEAST ALASKA

WHEREAS, the State of Alaska has Timber harvest plan regulated by the State Forestry Guidelines, and

WHEREAS, the economy of Southeast Alaska has suffered with the decline in the logging industry, and

WHEREAS, a stable timber supply with good management practices benefits all Alaskans, and

WHEREAS, THE CONCEPT OF THE State Forest provides stability, jobs and resource management,

NOW THEREFORE BE IT RESOLVED the Coffman Cove City Council supports the Alaska Department of Natural Resources State Forest proposal as presented.

RE: SB127-An Act to Establish the Southeast Alaska State Forest

Dear Senator Olson:

The Resource Development Council (RDC) is writing to support SB 127, the establishment of the Southeast Alaska State Forest.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The bill would establish a new state forest in Southeast Alaska from state lands presently used for timber harvest. The Division of Forestry would be able to manage the state forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple use. The forest would be managed as part of the State Forest System and under the current Prince of Wales Island and Central Southeast area plans.

In Southeast Alaska, demand for state timber exceeds supply and local mills are dependent on a consistent supply to stay in business. The majority of the timber in Southeast Alaska is on federal land, but federal timber sales have declined sharply, oftentimes due to incessant litigation from anti-logging groups as well as the federal government consistently putting forward uneconomic timber sales. Subsequently, the demand for state timber has increased significantly.

Much of the proposed forest was inherited from the U.S. Forest Service with young second-growth stands. Establishment of the Southeast Alaska State Forest will help provide a sustainable timber supply to local mills and accelerate the harvest of second-growth timber. Actively managed second-growth stands will provide more timber volume per acre on shorter rotations, and have less impact on wildlife. The shift to second-growth harvesting can be accelerated and timber volume increased on state land by thinning these stands. However, thinning is a long-term investment and is only justified if the land will continue to be available for forest management. A legislatively designated State Forest would ensure that land would remain available for long-term forest management. Thank you for the opportunity to provide comment on SB 127.

Sincerely,

Carl Portman, Deputy Director

STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

BOARD OF FORESTRY

SARAH PALIN, GOVERNOR

550 West 7th Avenue, Suite 1450
Anchorage, AK 99501

March 20, 2009
Senator Lesil McGuire, Co-chair
Senate Resources Committee
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, Alaska 99801-1182

Dear Senator McGuire,

The Alaska Board of Forestry is pleased to convey its support for Senate Bill 127 to establish a Southeast State Forest. The Board of Forestry provides a forum to discuss and resolve issues on forest practices and management of forests on state land (AS 41.17.947(b)). Board members represent diverse constituencies – the timber, fishing, and mining industries, Native Corporations, professional foresters and fish and wildlife biologists, and environmental and recreational organizations.

The Board of Forestry was briefed on the concept of a Southeast State Forest at the November 12, 2008 Board meeting, and on the specifics of Senate Bill 127 at the March 18-19, 2009 Board meeting. SB127 would establish a 25,291-acre state forest consisting of 20 parcels in southeast Alaska. This land is currently part of the state timber base, but susceptible to future changes in land use designations. Dedication to long-term management helps provide for long-term forest management to support the southeast timber industry and ensure continued multiple use. It also secures a land base suitable for thinning to increase the volume of second-growth timber and reduce impacts on wildlife habitat.

I am pleased to report that on March 18, 2009 the Board unanimously voted to support passage of Senate Bill127.

Sincerely,

Chris Maisch, State Forester
Chair, Alaska Board of Forestry

MEMORANDUM April 13, 2009

SUBJECT: ANGDA, CSHB 163(RES), Draft Version "R"
(Work Order No. 26-GH1057\R)

TO: Representative Craig Johnson
Co-Chair of the House Resources Committee
Attn: Debra Higgins

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft of CSHB 163(RES) that incorporates the conceptual amendments offered in your committee. This draft incorporates the conceptual amendment when appropriate within the context of the bill.

HB 163 addresses the route for a gas pipeline project developed by the Alaska Natural Gas Development Authority (ANGDA) as well as where the gas to be transported in the pipeline is produced. The amendment to AS 41.41.010(a) in sec. 1 of HB 163 appears to address the route for an ANGDA project; under current law, the purpose is to transport "from the North Slope" to market." In HB 163, the amendment to AS 41.41.010(a) would allow ANGDA to develop a project that could bring gas from the North Slope *or* other regions of the state, basically from anywhere in the state. By adding "outer continental shelf" in this context, the authority would seem to have acquired the authority to build a pipeline to the outer continental shelf. I do not believe that was the intent of the conceptual amendment; if this is incorrect, I can correct this in the final.

The amendment in sec. 1 of HB 163 to AS 41.41.010(a)(1) removes the reference to "North Slope" and authorizes ANGDA to acquire and condition natural gas without regard to the source of the gas. This provision would allow for the acquisition of gas from the outer continental shelf or anywhere else for transport in the project developed by ANGDA.

The conceptual amendments seem to address the source of gas to be put into the ANGDA pipeline project, as opposed to the route. The amendment to AS 41.41.010(d) in sec. 2 of this draft, addresses the source of gas that may be transported, and adding the outer continental shelf in this context recognizes that gas as gas that may be transported in the ANGDA project.

Similarly, the amendment to the definition for "project" in AS 41.41.990(3) by sec. 2 of HB 163 addresses route and not the source of gas for the project. There is no change between sec. 3 of HB 163 and sec. 3 of this draft.

If the enclosed draft CSHB 163(RES) is inconsistent with the intent of the conceptual amendment, please let me know so that the bill may be rewritten to conform to the committee's intent.

CS FOR HOUSE BILL NO. 163(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act clarifying the purpose of the Alaska Natural Gas Development Authority; and relating to the definitions of certain terms that relate to a project that may be developed by the Alaska Natural Gas Development Authority."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 41.41.010(a) is amended to read:

(a) There is established the Alaska Natural Gas Development Authority, the purpose of which is to provide one or more of the following services and functions in order to bring natural gas from the North Slope **or other regions of the state** to market, including

(1) the acquisition and conditioning of [NORTH SLOPE] natural gas;

(2) the design and construction of the pipeline system;

(3) the operation and maintenance of the pipeline system;

(4) the design, construction, **and** operation [,] of other facilities necessary for delivering the gas to market**, including markets in the state** [AND TO

SOUTHCENTRAL ALASKA]; and

(5) the acquisition of natural gas market share sufficient to ensure the long-term feasibility of the pipeline system project.

*** Sec. 2.** AS 41.41.010(d) is amended to read:

(d) The acquisition of natural gas from the North Slope **and other regions of the state, including the Alaska outer continental shelf,** and its delivery to **markets in the state for use by markets in the state or to** tidewater for shipment to market by the authority **are** [IS AN] essential government **functions** [FUNCTION] of the state.

*** Sec. 3.** AS 41.41.990(3) is amended to read:

(3) "project" means the gas transmission pipeline, together with all related property and facilities, to extend from [THE PRUDHOE BAY AREA ON] the North Slope of Alaska **or other regions of the state to markets in the state, or** [EITHER] to tidewater at a point on Prince William Sound [AND THE SPUR LINE FROM GLENNALLEN TO THE SOUTHCENTRAL GAS DISTRIBUTION GRID] or [TO TIDEWATER AT A POINT ON] Cook Inlet, and includes planning, design, and construction of the pipeline and facilities as described in AS 41.41.010(a)(1) - (5).

*** Sec. 4.** AS 41.41.990 is amended by adding a new paragraph to read:

(4) "North Slope" means that part of the state that lies north of 68 degrees North latitude and includes the Brooks Range foothills.

SUBJECT: Review of Authority to Seek Professional Services forms submitted by ANGDA

You asked us to review several proposed contracts that ANGDA submitted to the Department of Revenue for approval. In particular, you asked whether those contracts are consistent with ANGDA's statutory framework.

Short answer

Our review of the "Authority to Seek Professional Services" forms supplied by your administrative director, as well as a cost recovery agreement between ANGDA and the BLM concludes that these agreements are within the scope of ANGDA's authority.

Background

ANGDA was created in 2002 by voter initiative and codified in Title 41.

Title 41 sets out a broad list of purposes for the Authority, but appears to contain some internal inconsistencies, or at least ambiguities.

AS 41.41.010 sets out the overarching purpose of ANGDA - to bring natural gas from the North Slope to market. Subsumed within that broader purpose are the specific services and functions provided by ANGDA, such as acquiring North Slope natural gas; designing and constructing a pipeline system; designing, constructing and operating other facilities necessary for delivering "the gas" – presumably this article refers to North Slope gas -- to market and to Southcentral Alaska; and acquiring a natural gas share sufficient to ensure the long-term feasibility of the pipeline system.

By comparison, AS 41.41.200 (7) gives the Authority the power to issue bonds or incur indebtedness to pay for the costs of a "project." "Project," in turn, is defined somewhat more narrowly than the purpose described above:

> "[P]roject" means the gas transmission pipeline, together with all related property and facilities, to extend from the Prudhoe Bay area on the North Slope of Alaska either to tidewater at a point on Prince William Sound and the spur line from Glennallen to the Southcentral gas distribution grid or to tidewater at a point on Cook Inlet, and includes planning, design, and construction of the pipeline and facilities as described in AS 41.41.010 (a)(1) - (5). AS 41.41.990 (3).

AS 41.41.070(d) provides broad authority to ANGDA to "contract for and engage the services of bond counsel, consultants, experts, and financial advisors the authority considered necessary for the purpose of developing information, furnishing advice, or conducting studies, investigations, hearings, or other proceedings."

Finally, ANGDA is given the power "in furtherance of its corporate purpose" to "make and execute contracts and other instruments" without any limiting language as to the project. AS 41.41.200(4).

"It is a basic rule of statutory construction that courts must attempt to harmonize the specific provisions of an act with the legislature's expression of its intent." *Commercial Fisheries Entry Com'n v. Apokedak,* 680 P.2d 486, 490 (Alaska 1984). Because ANGDA's authority to make and execute contracts is broad and not specifically limited to the defined "project," in our view the Authority's power to make and execute such contracts applies to the broader purposes expressed in AS 41.41.010.

With that in mind, we have reviewed the "Authority to Seek Professional Services" forms provided by your director of Administrative Services to determine whether they are consistent with the broad purposes of ANGDA, as expressed in AS 41.41.010.

Analysis

1. Authority to Seek Professional Services for Pipeline Alignment and Construction Engineer. Agency reference number: Asps 09-0030 RFP 2009-0400-8336.

This contract involves hiring a contractor to refine alignment of a high pressure gas spur line connecting Delta Junction to Beluga. The form states that this contact is sought "[i]n conjunction with ANGDA's "on-going work to bring natural gas to market."

Entering into a contract related to delivering natural gas to the Alaska market clearly fits within the broad authority of ANGDA if the gas is North Slope natural gas, as

specified in AS 41.41.010. If the gas is not North Slope gas, the connection is more problematic and the Department of Revenue may want to request additional information from ANGDA to determine whether work under this contract will ultimately relate to delivering North Slope natural gas.

2. Authority to Seek Professional Services for Enterprise Coordinator. Agency reference number: Asps 09-0031 RFP 2009-0400-8363.

This contract involves hiring a contractor to develop a business and financial management framework to deliver natural gas to the Alaskan market. This includes management of a financial plan to include a combination of utility rates, bonding and legislative funding to finance the project.

We understand ANGDA's general plan is to tap into a main line to Canada with a spur line that would bring some of the North Slope gas to markets in Southcentral Alaska. The contract's purpose appears consistent with both the broad purposes of ANGDA, set out in AS 41.41.010, as well as the definition of project in AS 41.41.900(4).

3. Authority to Seek Professional Services for Permitting Coordinator. Agency reference number: Asps 09-0029 RFP 2009-0400-8335.

This contract involves hiring a permitting coordinator to execute a pipeline permitting plan to "bring North Slope natural gas to market in Alaska." This purpose appears consistent with both the broad purposes of ANGDA, set out in AS 41.41.010, as well as the definition of project in AS 41.41.900(3).

4. Standard Agreement Form for Professional Services. Agency Encumbrance Number 491017

This is an agreement with EJG Enterprises, awaiting signature of the DOR director of administrative services.

This contract for EJG Enterprises is to revise and update a business plan for ANGDA programs. This contract, under which EJG is to assist ANGDA in, among other things, work with a financial advisor in pursuit of project financing, is within the scope of ANGDA's authority to acquire gas, and design and build a pipeline.

5. Cost Recovery Agreement between ANGDA and the BLM.

Your administrative director also provided us with a copy of a cost recovery agreement between ANGDA and BLM for payment of costs for processing an ANGDA

right-of-way application for a natural gas pipeline between Palmer, Glennallen and Delta Junction and Fairbanks.

We understand that ANGDA's plan is to tap into a main line to Canada with a spur line that would bring some of the North Slope gas to markets in Southcentral Alaska, and, in this case, Fairbanks. This purpose appears consistent with both the broad purposes of ANGDA, set out in AS 41.41.010, as well as the definition of project in AS 41.41.900(4), though not necessarily consistent with the definition of "project" in AS 41.41.990(3). Accordingly, if ANGDA gets to a point where it may issue bonds "in order to pay for costs of the project" we recommend that the definition of project in AS 41.41.990(3) be amended to remove any ambiguity as to whether bonds can be issued for purposes of a line to interior Alaska.

We hope this answers your questions. If you have any questions, or if there are additional authorizations that you would like us to review, please let us know.

cc Harold Heinze

MEMORANDUM April 9, 2009

SUBJECT: Public Law 111-11 (Omnibus Public Land Management Act of 2009) (CSHB 210(RES); Work Order No. 26-LS0788\R)

TO: Representative Mark Neuman
Co-Chair of the House Resources Committee
Attn: Rex Shattuck

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is CSHB 210(RES) that incorporates the amendment adopted by the committee. Please review this draft carefully to ensure that it is consistent with the committee's intent.

Since HB 210 was introduced, the Omnibus Public Land Management Act of 2009 has been designated as Public Law 111-11.[1] References to the Omnibus Public Land Management Act of 2009 have been edited in the bill to reflect the Public Law number. The changes are nonsubstantive.

An editorial change was also made in sec. 11 to correctly reference effective date sections in the bill that provide for effective dates that are not immediate.

If you have any questions, please call me.

A BILL

FOR AN ACT ENTITLED

"An Act designating Kinzarof Lagoon as part of the Izembek State Game Refuge; authorizing a land exchange with the federal government in which state land adjacent to the Izembek National Wildlife Refuge and within the Alaska Peninsula National Wildlife Refuge is exchanged for federal land to serve as a road corridor through the Izembek National Wildlife Refuge and federal land located on Sitkinak Island; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PURPOSE. In accordance with P.L. 111-11 (Omnibus Public Land Management Act of 2009), the purposes of this Act are to

(1) add state land and water within and adjacent to Kinzarof Lagoon near Cold Bay to the Izembek State Game Refuge; and

(2) authorize the Department of Natural Resources to exchange land near Cold Bay and on Sitkinak Island near Kodiak with the federal government.

*** Sec. 2.** AS 16.20.030(a)(14) is amended to read:

(14) Izembek Refuge, including the tide and submerged land described as follows:

(A) Township 58 South, Range 91 West, Seward Meridian

Sections 1 - 4

Sections 9 - 12

(B) Township 58 South, Range 90 West, Seward Meridian

Sections 1 - 9

Section 16

(C) Township 57 South, Range 91 West, Seward Meridian

Section 13

Sections 24 - 26

Sections 35 - 36

(D) Township 57 South, Range 90 West, Seward Meridian

Sections 1 - 36

(E) Township 57 South, Range 89 West, Seward Meridian

Sections 5 - 6

Section 12, N1/2, N1/2N1/2S1/2

(F) Township 56 South, Range 87 West, Seward Meridian

Sections 1 - 6

Sections 10 - 11

Sections 26 - 35

(G) Township 56 South, Range 88 West, Seward Meridian

Sections 1 - 23

Section 25

Sections 27 - 32

Section 36

(H) Township 55 South, Range 87 West, Seward Meridian

Sections 1 - 36

(I) Township 56 South, Range 89 West, Seward Meridian

Sections 1 - 36

(J) Township 55 South, Range 89 West, Seward Meridian

Sections 1 - 36

(K) Township 55 South, Range 88 West, Seward Meridian

Sections 1 - 36

(L) Township 55 South, Range 86 West, Seward Meridian

Sections 6 - 7

Sections 18 - 19

Sections 30 - 31

(M) Township 56 South, Range 90 West, Seward Meridian

(entire township)

(N) Township 57 South, Range 88 West, Seward Meridian

Sections 1 - 6;

*** Sec. 3.** AS 16.20.030(a)(14), as amended by sec. 2 of this Act, is amended to read:

(14) Izembek Refuge, including the tide and submerged land described as follows:

(A) Township 58 South, Range 91 West, Seward Meridian

Sections 1 - 4

Sections 9 - 12

(B) Township 58 South, Range 90 West, Seward Meridian

Sections 30 - 31

(M) Township 56 South, Range 90 West, Seward Meridian

(entire township)

[(N) TOWNSHIP 57 SOUTH, RANGE 88 WEST, SEWARD MERIDIAN

SECTIONS 1 - 6];

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EXCHANGE OF STATE LAND FOR FEDERAL LAND. (a) Notwithstanding any other provision of law, the Department of Natural Resources shall convey all right, title, and

interest of the state to certain land adjacent to the Izembek National Wildlife Refuge, described as: Township 53 South, Range 85 West, Seward Meridian, and Township 54 South, Range 85 West, Seward Meridian, and totaling 43,000 acres more or less, to the federal government in exchange for federal land conveyed to the state. The federal land expected to be received in the exchange is described in (b) of this section.

(b) The land expected to be received from the federal government is

(1) all right, title, and interest in 206 acres more or less of federal land located within the Izembek National Wildlife Refuge for the purpose of a corridor for the construction and operation of a road between the communities of King Cove and Cold Bay, Alaska, in accordance with P.L. 111-11 (Omnibus Public Land Management Act of 2009), described as follows:

(A) Township 56 South, Range 87 West, Seward Meridian

Sections 19 - 21

Sections 26 - 28

Section 30

Section 35

(B) Township 56 South, Range 88 West, Seward Meridian

Sections 23 - 27

Section 34

(C) Township 57 South, Range 89 West, Seward Meridian

Section 2

Sections 10 - 11

Sections 14 - 15; and

(2) all right, title, and interest of 1,600 acres more or less of federal land on Sitkinak Island in Township 42 South, Range 31 West, Seward Meridian, Sections 9, 10, 15 - 17, and 20 -21.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EXCHANGE OF LAND NOT SUBJECT TO AS 38.50. The exchange of state land under sec. 4 of this Act is not subject to AS 38.50, including any requirement that relates to the valuation or equalization of land.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EFFECT OF VOIDED LAND EXCHANGE. If the land exchange authorized by sec. 6402(a), P.L. 111-11 (Omnibus Public Land Management Act of 2009) is null and void under sec. 6405, P.L. 111-11 (Omnibus Public Land Management Act of 2009),

(1) the land added to the Izembek State Game Refuge under sec. 2 of this Act and removed under sec. 3 of this Act shall be returned to its land management status in effect before the enactment of sec. 2 of this Act; and

(2) the land conveyed by the state under sec. 4 of this Act shall be returned to its ownership status as it existed before the conveyance.

*** Sec. 7.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT AND NOTIFICATION. (a) Sections 1, 2, 4, and 5 of this Act take effect only if the United States Secretary of the Interior determines that the land exchange described in sec. 4 of this Act is in the public interest under secs. 6401 - 6406, P.L. 111-11 (Omnibus Public Land Management Act of 2009). The commissioner of natural resources shall notify the lieutenant governor and the revisor of statutes of the determination and the date of the determination by the United States Secretary of the Interior described in this subsection.

(b) Sections 3 and 6 of this Act take effect only if the land exchange authorized by sec. 6402(a), P.L. 111-11 (Omnibus Public Land Management Act of 2009) is null and void under sec. 6405, P.L. 111-11 (Omnibus Public Land Management Act of 2009). The commissioner of natural resources shall notify the lieutenant governor and the revisor of statutes if the land exchange authorized by sec. 6402(a), P.L. 111-11 (Omnibus Public Land Management Act of 2009) is null and void under sec. 6405, P.L. 111-11 (Omnibus Public Land Management Act of 2009) and the date on which the land exchange is null and void.

*** Sec. 8.** If secs. 1, 4, and 5 of this Act take effect under sec. 7(a) of this Act, they take effect on the date the United States Secretary of the Interior determines the land exchange is in the public interest under sec. 6402, P.L. 111-11 (Omnibus Public Land Management Act of 2009).

*** Sec. 9.** If sec. 2 of this Act takes effect under sec. 7(a) of this Act, it takes effect on the

date the exchange of land described in sec. 4 of this Act is executed by the Department of Natural Resources and the United States Department of the Interior. The commissioner of natural resources shall notify the lieutenant governor and the revisor of statutes of the date the exchange of land is made.

*** Sec. 10.** If secs. 3 and 6 of this Act take effect under sec. 7(b) of this Act, they take effect on the date the land exchange authorized by sec. 6402(a), P.L. 111-11 (Omnibus Public Land Management Act of 2009) is null and void under sec. 6405, P.L. 111-11 (Omnibus Public Land Management Act of 2009).

*** Sec. 11.** Except as provided in secs. 8 - 10 of this Act, this Act takes effect immediately under AS 01.10.070(c).

Memorandum

Date: April 3, 2009

To: House Resources Committee Co-Chair Craig Johnson

From: Representative Bryce Edgmon

RE: HB210 Hearing Request

I respectfully request a hearing in the House Resources Committee on HB 210—Izembek State Game Refuge Land Exchange.

HB 210 will grant state authorization for a land exchange—already approved by Congress—between the State of Alaska and the federal government to allow a single-lane, unpaved road through the Izembek National Wildlife Refuge, connecting the village of King Cove to the Cold Bay airport.

However, it is important to note that at the federal level there are still two major processes that need to be completed before this transaction is final. These are the completion of an environmental impact statement and a finding by the Secretary of the Interior determining that the land exchange is in the public interest.

HB 210 therefore does more than execute at state level the transaction endorsed by Congress; it also provides compelling evidence to the Secretary of the Interior that the State of Alaska approves of this agreement to establish dependable access for King Cove residents to the Cold Bay airport primarily for health and safety purposes.

The following materials accompany this request:

- HB 143
- Sponsor Statement
- Sectional Summary
- Back-up documentation and correspondence from agencies and organizations

I thank you for your consideration of this request.

Sincerely,

Representative Bryce Edgmon

Sponsor Statement

Representative Bryce Edgmon

HB 210: Izembek State Game Refuge Land Exchange

On March 30th President Obama signed the Omnibus Public Lands Management Act of 2009. This act includes Congressional approval for a land exchange between the State of Alaska and the federal government to allow a single-lane, unpaved road through the Izembek National Wildlife Refuge, connecting the village of King Cove to the Cold Bay airport.

HB 210 will grant state authorization for that exchange.

However, it is important to note that at the federal level there are still two major processes that need to be completed before this transaction is final. These are the completion of an environmental impact statement and a finding by the Secretary of the Interior determining that the land exchange is in the public interest.

HB 210 therefore does more than execute at state level the transaction endorsed by Congress; it also provides compelling evidence to the Secretary of the Interior that the State of Alaska approves of this agreement to establish dependable access for King Cove residents to the Cold Bay airport primarily for health and safety purposes.

In the agreement, the State will transfer approximately 43,000 acres of land in the Alaska Peninsula National Wildlife Refuge to the federal government in exchange for approximately 206 acres for the road corridor. The legislation also agrees to the receipt of 1600 acres of federal land located on Sitkinak Island to the State and provides for the designation of Kinzarof Lagoon as part of the Izembek State Game Refuge.

The residents of King Cove and Aleutians East Borough have strived toward this goal for more than a decade. The King Cove Corporation has agreed to provide approximately 19,000 acres of its ANCSA land to the federal government, at no cost, as part of this exchange. The Alaska Department of Natural Resources supports the transaction. Senator Murkowski, Congressman Young, and former Senator Stevens have championed this endeavor at the federal level over many years. Senator Begich also backs the plan.

It is now the State of Alaska's role to take this next important step. I respectfully ask for your support in concluding this agreement while also sending an important message to the Secretary of the Interior that Alaska endorses this exchange and all that it entails for the improved safety and quality of life for citizens in Southwestern Alaska.

MEMORANDUM April 1, 2009

SUBJECT: Sectional summary for HB 210 that adds additional state land to the Izembek State Game Refuge and authorizes state land to be exchanged for federal land under the Omnibus Public Land Management Act of 2009 (Work Order No. 26-LS0788\A)

TO: Representative Bryce Edgmon
Attn: Tim Clark

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. States that the purpose of the Act is to add state land and water near Kinzarof Lagoon to the Izembek State Game Refuge.

Section 2. Amends AS 16.20.030(a)(14) by adding the descriptions of land and water to be added to the Izembek State Game Refuge.

Section 3. Provides for the removal of the land added to the Izembek State Game Refuge in sec. 2 of the Act if the conditions in sec. 7(b) of the Act are satisfied.

Section 4. Requires the Department of Natural Resources to transfer land adjacent to the Izembek National Wildlife Refuge in exchange for federal land. Describes the land to be transferred by the department and the federal land expected to be received in exchange.

Section 5. States that the land exchange in sec. 4 of the Act is not subject to the provisions in AS 38.50 that would normally apply to an exchange of state land.

Section 6. Provides for the land added to the Izembek State Game Refuge in sec. 2 of the Act and the land conveyed under sec. 4 of the bill to be returned to its original status if the land exchange authorized by sec. 6402(a) of the Omnibus Public Land Management Act of 2009 becomes null and void under sec. 6405 of the federal Act.

Section 7. Subsection (a) makes secs. 1, 2, 4, and 5 of the Act take effect only if the United States Secretary of the Interior determines that the land exchange described in sec. 4 is in the public interest. Subsection (b) makes secs. 3 and 6 of the Act take effect if the land exchanged is voided under sec. 6405 of the Omnibus Public Land Management Act of 2009. Requires the commissioner of natural resources to notify the lieutenant governor and the revisor of statutes if and when the conditions in sec. 7 are satisfied.

Section 8. If secs. 1, 4, and 5 of the Act take effect, identifies the date on which those sections take effect.

Section 9. If sec. 2 takes effect, identifies the date on which sec. 2 takes effect.

Section 10. If secs. 3 and 6 take effect, identifies the date on which those sections take effect.

Section 11. Except as provided in secs. 7 - 10 of the Act, makes the Act take effect immediately.

The Honorable Jeff Bingaman
Chairman
U.S. Senate Committee on Energy and Natural Resources
302 Dirksen Senate Building
Washington, D.C. 20510

The Honorable Pete Domenici
Ranking Member
U.S. Senate Committee on Energy and Natural Resources
302 Dirksen Senate Building
Washington, D.C. 20510

Re: S 1680 – the Izembek and Alaska Peninsula Refuge and Wilderness Enhancement Act and King Cove Safe Access Act

Dear Chairman Bingaman and Ranking Member Domenici:

The State of Alaska supports S 1680, legislation that would authorize a land exchange between the State of Alaska, the U.S. Fish and Wildlife Service and King Cove Corporation to secure road access between the Alaskan communities of King Cove and Cold Bay. These communities are located on the Alaska Peninsula and are accessible only by air or water.

A priority for the Agdaagux Tribe of King Cove, the City of King Cove and the Aleutians East Borough is to construct a 27-mile road to Cold Bay, through the Izembek National Wildlife Refuge, to access the larger and safer airport at Cold Bay.

This overland link is necessary because both air and water access to King Cove is treacherous in the frequent stormy weather so common on the lower Alaska Peninsula. Cold Bay has a much larger, safer airport and the residents of King Cove need reliable access to the Cold Bay airport facility for health and safety, including emergency medical evacuations. A combination road and hovercraft system, established under the King Cove Health and Safety Act passed by Congress several years ago, has not safely nor efficiently resolved access problems.

The need for this road link has been identified in land and transportation plans for at least twenty-five years, including the Alaska Department of Transportation's Southwest Alaska Transportation Plan, adopted in 2004.

The land exchange would add valuable and significant acreage to the Izembek and Alaska Peninsula National Wildlife Refuges. Much of the land that would be added to the refuges is currently owned by the State of Alaska. Specifically, the State of Alaska is offering to exchange 43,093 acres, or all of the state-owned land contained in two townships located northeast of Izembek Refuge, in exchange for a 206 acre easement dedicated to the State of Alaska, through the Izembek National Wildlife Refuge and Wilderness. The undeveloped state land being offered to the Refuge is surrounded on three sides by refuge lands and is habitat for brown bears and caribou. This state land includes the lower portion of the Cathedral River, which drains the western flanks of Pavlof Volcano. It is de facto wilderness land. This state land was included in a recent state oil and gas lease sale, although no bids were received on these tracts.

The 7,900 acres being offered to the Izembek Refuge by King Cove Corporation includes valuable waterfowl habitat that straddles Kinzarof Lagoon at the head of Cold Bay. This land is an inholding within the existing Izembek Wilderness area. The Corporation is also offering to sell an additional 10,800 acres of private lands to the U.S. Fish and Wildlife Service for the Refuge.

The road easement that the state would acquire will run approximately 13 miles through the Izembek National Wildlife Refuge. More than half of this road already exists as primitive roads that were originally built during World War II. The total length of new road through the Wilderness area is 6.3 miles. The exact location of the easement will be determined in consultation with the U.S. Fish and Wildlife Service.

The combined offers from the State of Alaska and the King Cove Corporation would add 51,000 acres to the Izembek and Alaska Peninsula National Wildlife Refuges. All of the state land that is being offered in this exchange would be designated Wilderness by this legislation.

The state would acquire approximately 206 acres that encompass the road. The state would also acquire a 1,600-acre federal inholding on Sitkinak Island, a predominantly state-owned island located south of Kodiak Island.

The State of Alaska recognizes the unique value of the Izembek National Wildlife Refuge. In 1972, the Alaska Legislature set aside the state-owned tidelands within Izembek Lagoon and adjacent offshore state lands as a State Game Refuge. These state lands contain eel grass beds that are the very heart of Izembek Refuge.

As part of this proposal, the state would add more than 4,000 acres of state-owned tidelands in Kinzarof Lagoon, at the head of Cold Bay, to the State Game Refuge. The exchange will require approval by our state legislature as the state lands are quite likely of unequal, but greater, fair market value that the federal lands being exchanged.

The state is well aware of concerns expressed by various groups who are opposed to this legislation. Some are concerned about the precedent set by building a road through a Wilderness Area. Yet, when the Alaska National Interest Lands Conservation Act was passed in 1980, Congress specifically recognized that transportation facilities may be needed across the 58 million acres of federal Wilderness lands in Alaska. The Alaska Lands Act requires Congressional approval for such transportation corridors through Wilderness.

There are also concerns about increased public access to the refuge wilderness. The refuge and wilderness area are already accessible from Cold Bay by existing local roads. Through planning and enforcement of existing refuge regulations, the impacts of the limited number of new users from King Cove can be mitigated.

The State of Alaska supports this legislation and stands ready to commit over 43,000 acres of state land to the National Wildlife Refuge and Wilderness system. We urge the Committee to approve this bill.

Thank you for the opportunity to comment on this legislation.

Sincerely,

Tom Irwin, Commissioner
Alaska Department of Natural Resources

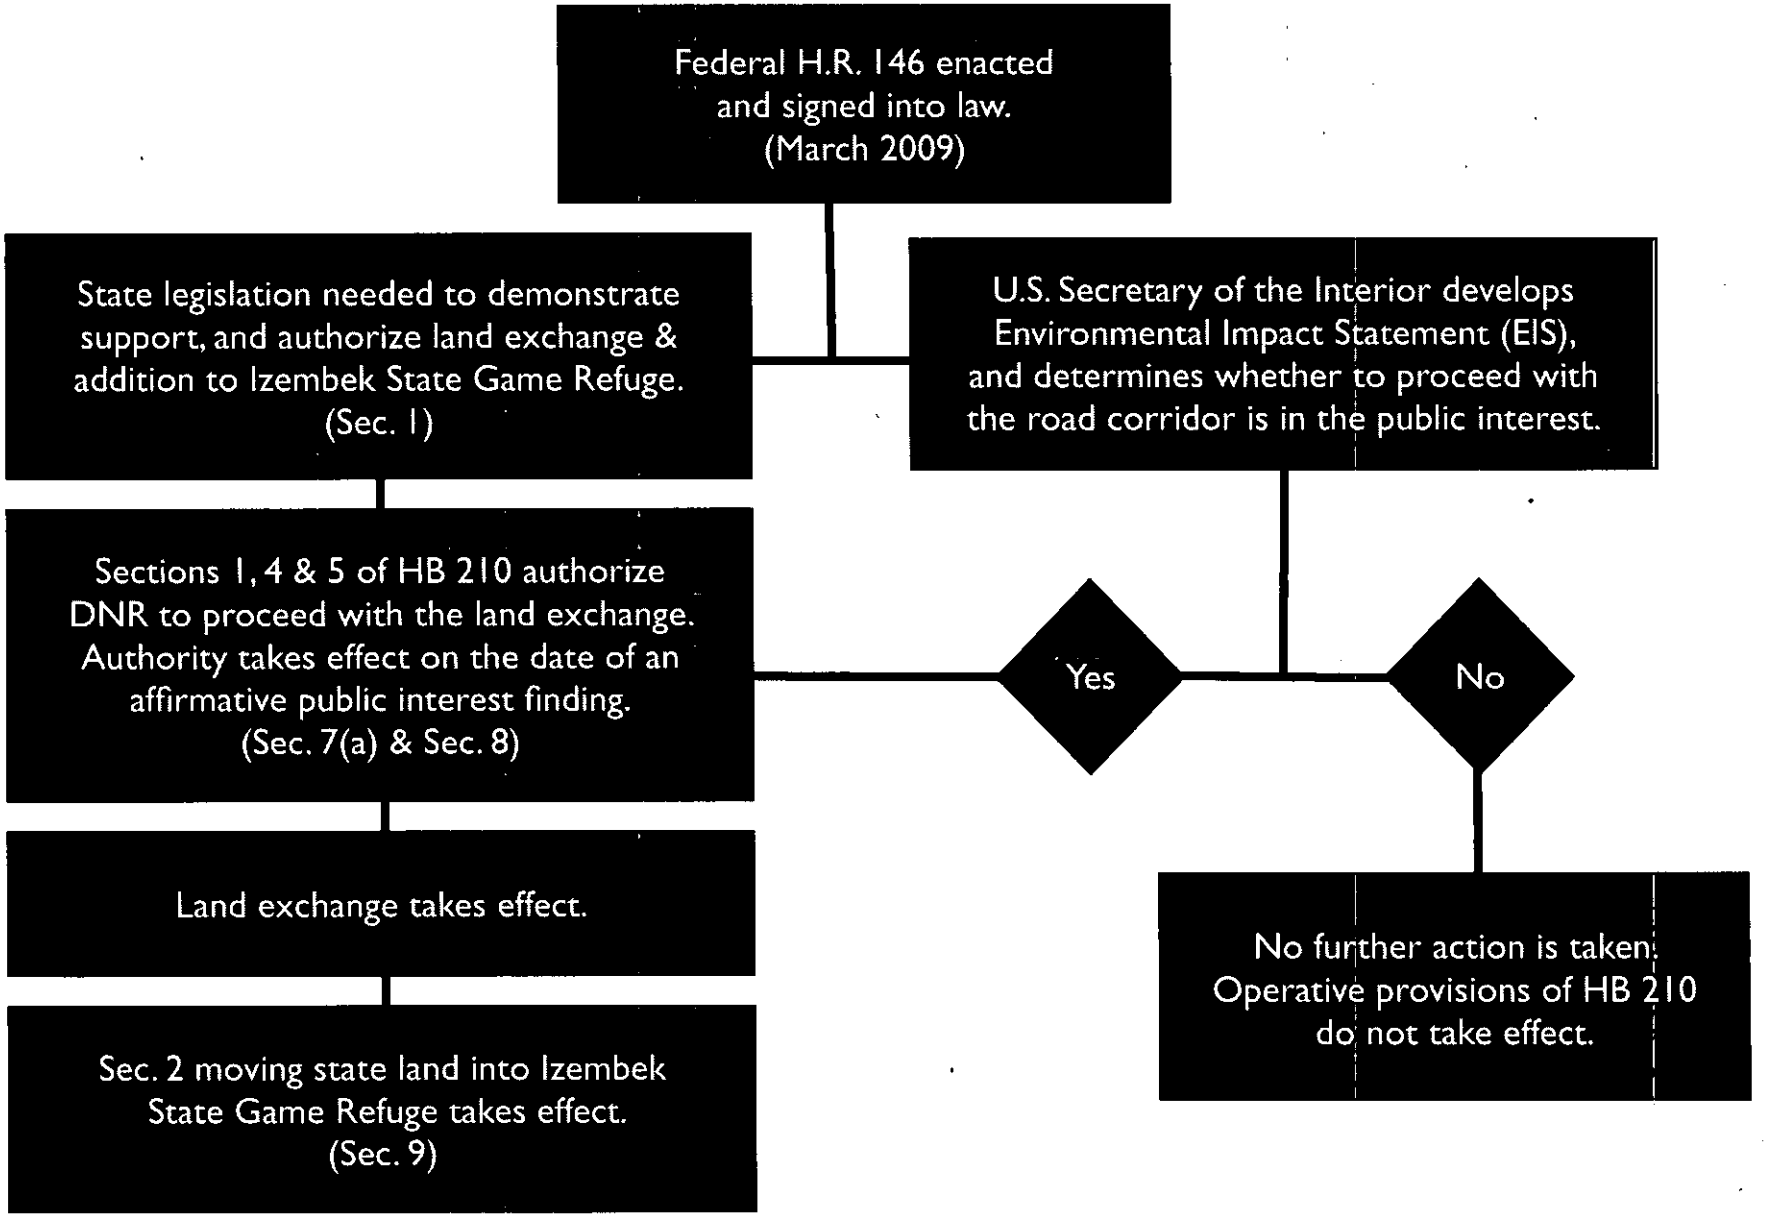
HB 210 - King Cove Land Exchange Process



OMNIBUS PUBLIC LAND MANAGEMENT ACT OF 2009

Izembek National Wildlife Refuge Land Exchange

This summary and map document the lands that will be exchanged between the Federal Government, State of Alaska, and King Cove Corporation when the requirements contained in this act are completed, including final approval of State HB 210.

The State of Alaska will convey to the Federal government a total of 43,093 acres. These acres come from the following State-owned lands (see attached map):

1. Map Ref. ID #1 – T 53S R85W-SM – 22,498 acres
2. Map Ref. ID #2 – T 54S R85W-SM – 20,595 acres

The King Cove Corporation (KCC) will convey and/or relinquish approximately 18,730 acres of KCC lands to the Federal government. These acres are as follows:

1. Map Ref. ID #4 – Portion of land adjacent Kinzarof Lagoon referred to as the "bookends" - approximately 2,500 acres.
2. Map Ref. ID #3 – Portion of land surrounding Mortensen's Lagoon, north to Cold Bay, but not including any road section from Cold Bay to Mortsensen Lagoon (17(b)(2) easement per ANCSA) - approximately 10,800 acres.
3. Map Ref. ID #5 – King Cove relinquishes selections totaling approximately 5,430 acres of their ANSCA entitlement within the Izembek National Wildlife Refuge.

The Federal government will convey the following lands to the State of Alaska:

1. Map. Ref. ID #A – 100' to 150' wide corridor of land through a portion of the Izembek National Wildlife Refuge consisting of approximately 206 acres.
2. Approximately 1,600 acres of federally-owned lands on Sitkinak Island adjacent to Kodiak Island (not shown on the map).

Prepared by the Office of Rep. Edgmon. *Regarding HB210 (26-LS0788\A).*

STATE OF ALASKA

SARAH PALIN, GOVERNOR

MEMORANDUM

TO: Kerry Howard, Director
Division of Habitat

Doug Larsen, Director
Division of Wildlife Conservation

FROM: Mark Fink, Division of Habitat, Special Areas Plar
Joe Meehan, Division of Wildlife Conservation, L
Coordinator

DATE: February 12, 2009

SUBJECT: Kinzarof Lagoon and additions to the Izembek Stat

F/I could be something that was not intended by sponsor.

Per your request, this memo confirms our support for adding Kinzarof Lagoon to the Izembek State Game Refuge. Like Izembek Lagoon, Kinzarof supports important eelgrass beds and other habitats used by a variety of fish and wildlife species. "The eelgrass beds at Izembek and Kinzarof Lagoons are extremely important foraging habitat for many migratory waterfowl species as well as other species of animals. Prominent grazers of eelgrass include brant, Canada goose, emperor goose, tundra swan, northern pintail, and American wigeon. Mallards, northern pintails, and green-winged teal forage on eelgrass seeds. Snails and crabs are abundant invertebrate grazers. The invertebrate fauna that live attached to or amongst the eelgrass are food for benthic and demersal fishes, sea stars, crabs, Steller's eiders and other ducks, gulls, shorebirds, and sea otters." "In addition to eelgrass habitat, the nonvegetated mud and sand flats and sandy beaches associated with Izembek and Kinzarof Lagoons are important habitats for intertidal invertebrates, shorebirds, terns, and gulls." (Izembek National Wildlife Refuge, Final Report of the 2004 Biological Program Review, 10 June 2008). Birds often move back and forth between Izembek Lagoon and Kinzarof Lagoon during fall staging in response to tide levels between the two lagoons. In winter, birds frequent Kinzarof Lagoon during periods of increased ice cover in Izembek Lagoon (2008 pers. comm. K. Sowl, FWS).

The addition of Kinzarof Lagoon to the state refuge is compatible with the protection of the fish and wildlife resources of the existing state refuge and administratively would compliment our current refuge management efforts.

Should legislative action move forward on this addition, we have several refuge boundary adjustments that we would also like to address. The statutory boundary does not include all of the state tidelands in Izembek Lagoon. Parcels that were inadvertently left out of the original state refuge boundary should be added to the refuge. In addition, we recommend the inclusion of three marine areas adjacent to the

refuge that provide important habitat for fish and wildlife: 1) nearshore habitat along the Bristol Bay coast to the northeast and southwest of the Izembek Lagoon entrance, 2) Big, Middle and Small lagoons at the head of Morzhovoi Bay, and 3) the northern portion of Bechevin Bay, including Hook Bay. All these areas contain eelgrass beds or other habitats critical to the perpetuation of the fish and wildlife species dependant on Izembek Lagoon. Protection of these areas through legislative designation would compliment the conservation efforts of both the state game refuge and the Izembek National Wildlife Refuge programs.

If you have any questions or need more specific details on these areas, please let us know.

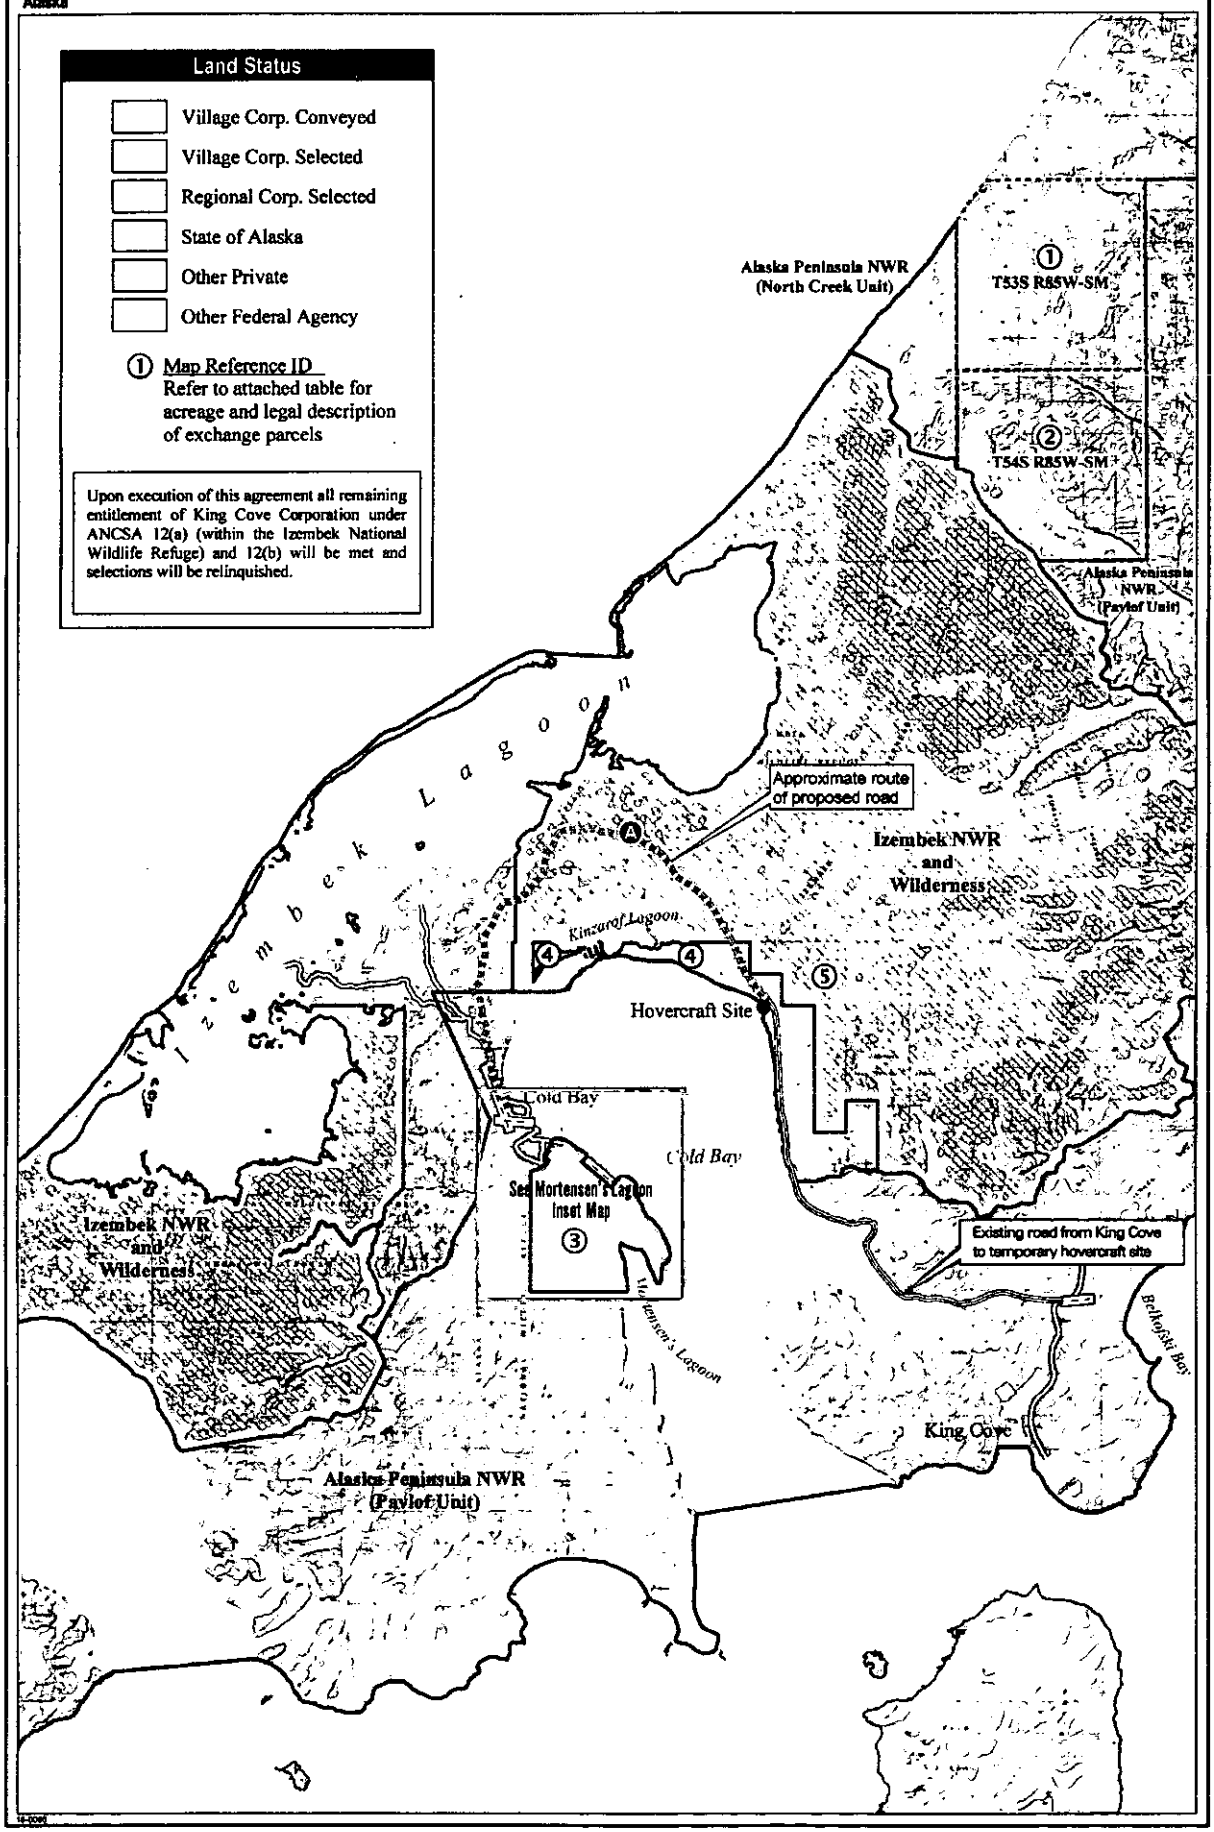
Proposed Land Exchange Between USFWS and King Cove Corporation

Izembek and Alaska Peninsula National Wildlife Refuges
Alaska



#1

AMENDMENT

OFFERED IN THE HOUSE RESOURCES COMMITTEE

To: HB210 Introduced by Representative Edgmon

Insert a new section after sec. 4 to read:

"Notwithstanding any other provision of law, the road described in sec. 4 (b) of this Act is deemed compatible with state fish and game management of the Izembek State Game Refuge."

Renumber subsequent sections accordingly.

Omnibus Public Land Management Act of 2009

Subtitle E--Izembek National Wildlife Refuge Land Exchange

SEC. 6401. DEFINITIONS.

In this subtitle:

(1) CORPORATION- The term `Corporation' means the King Cove Corporation.

(2) FEDERAL LAND- The term `Federal land' means--

(A) the approximately 206 acres of Federal land located within the Refuge, as generally depicted on the map; and

(B) the approximately 1,600 acres of Federal land located on Sitkinak Island, as generally depicted on the map.

(3) MAP- The term `map' means each of--

(A) the map entitled `Izembek and Alaska Peninsula National Wildlife Refuges' and dated September 2, 2008; and

(B) the map entitled `Sitkinak Island-Alaska Maritime National Wildlife Refuge' and dated September 2, 2008.

(4) NON-FEDERAL LAND- The term `non-Federal land' means--

(A) the approximately 43,093 acres of land owned by the State, as generally depicted on the map; and

(B) the approximately 13,300 acres of land owned by the Corporation (including approximately 5,430 acres of land for which the Corporation shall relinquish the selection rights of the Corporation under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) as part of the land exchange under section 6402(a)), as generally depicted on the map.

(5) REFUGE- The term `Refuge' means the Izembek National Wildlife Refuge.

(6) SECRETARY- The term `Secretary' means the Secretary of the Interior.

(7) STATE- The term `State' means the State of Alaska.

(8) TRIBE- The term `Tribe' means the Agdaagux Tribe of King Cove, Alaska.

SEC. 6402. LAND EXCHANGE.

(a) In General- Upon receipt of notification by the State and the Corporation of the intention of the State and the Corporation to exchange the non-Federal land for the Federal land, subject to the conditions and requirements described in this subtitle, the Secretary may convey to the State all right, title, and interest of the United States in and to the Federal land. The Federal land within the Refuge shall be transferred for the purpose of constructing a single-lane gravel road between the communities of King Cove and Cold Bay, Alaska.

(b) Compliance With National Environmental Policy Act of 1969 and Other Applicable Laws-

(1) IN GENERAL- In determining whether to carry out the land exchange under subsection (a), the Secretary shall--

(A) comply with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.); and

(B) except as provided in subsection (c), comply with any other applicable law (including regulations).

(2) ENVIRONMENTAL IMPACT STATEMENT-

(A) IN GENERAL- Not later than 60 days after the date on which the Secretary receives notification under subsection (a), the Secretary shall initiate the preparation of an environmental impact statement required under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(B) REQUIREMENTS- The environmental impact statement prepared under subparagraph (A) shall contain--

(i) an analysis of--

(I) the proposed land exchange; and

(II) the potential construction and operation of a road between the communities of King Cove and Cold Bay, Alaska; and

(ii) an evaluation of a specific road corridor through the Refuge that is identified in consultation with the State, the City of King Cove, Alaska, and the Tribe.

(3) COOPERATING AGENCIES-

(A) IN GENERAL- During the preparation of the environmental impact statement under paragraph (2), each entity described in subparagraph (B) may participate as a cooperating agency.

(B) AUTHORIZED ENTITIES- An authorized entity may include--

(i) any Federal agency that has permitting jurisdiction over the road described in paragraph (2)(B)(i)(II);

(ii) the State;

(iii) the Aleutians East Borough of the State;

(iv) the City of King Cove, Alaska;
(v) the Tribe; and
(vi) the Alaska Migratory Bird Co-Management Council.

(c) Valuation- The conveyance of the Federal land and non-Federal land under this section shall not be subject to any requirement under any Federal law (including regulations) relating to the valuation, appraisal, or equalization of land.

(d) Public Interest Determination-

(1) CONDITIONS FOR LAND EXCHANGE- Subject to paragraph (2), to carry out the land exchange under subsection (a), the Secretary shall determine that the land exchange (including the construction of a road between the City of King Cove, Alaska, and the Cold Bay Airport) is in the public interest.

(2) LIMITATION OF AUTHORITY OF SECRETARY- The Secretary may not, as a condition for a finding that the land exchange is in the public interest--

(A) require the State or the Corporation to convey additional land to the United States; or

(B) impose any restriction on the subsistence uses (as defined in section 803 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3113)) of waterfowl by rural residents of the State.

(e) Kinzaroff Lagoon- The land exchange under subsection (a) shall not be carried out before the date on which the parcel of land owned by the State that is located in the Kinzaroff Lagoon has been designated by the State as a State refuge, in accordance with the applicable laws (including regulations) of the State.

(f) Designation of Road Corridor- In designating the road corridor described in subsection (b)(2)(B)(ii), the Secretary shall--

(1) minimize the adverse impact of the road corridor on the Refuge;

(2) transfer the minimum acreage of Federal land that is required for the construction of the road corridor; and

(3) to the maximum extent practicable, incorporate into the road corridor roads that are in existence as of the date of enactment of this Act.

(g) Additional Terms and Conditions- The land exchange under subsection (a) shall be subject to any other term or condition that the Secretary determines to be necessary.

SEC. 6403. KING COVE ROAD.

(a) Requirements Relating to Use, Barrier Cables, and Dimensions-

(1) LIMITATIONS ON USE-

(A) IN GENERAL- Except as provided in subparagraph (B), any portion of the road constructed on the Federal land conveyed pursuant to this subtitle shall be used primarily

for health and safety purposes (including access to and from the Cold Bay Airport) and only for noncommercial purposes.

(B) EXCEPTIONS- Notwithstanding subparagraph (A), the use of taxis, commercial vans for public transportation, and shared rides (other than organized transportation of employees to a business or other commercial facility) shall be allowed on the road described in subparagraph (A).

(C) REQUIREMENT OF AGREEMENT- The limitations of the use of the road described in this paragraph shall be enforced in accordance with an agreement entered into between the Secretary and the State.

(2) REQUIREMENT OF BARRIER CABLE- The road described in paragraph (1)(A) shall be constructed to include a cable barrier on each side of the road, as described in the record of decision entitled `Mitigation Measure MM-11, King Cove Access Project Final Environmental Impact Statement Record of Decision' and dated January 22, 2004, unless a different type barrier is required as a mitigation measure in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2).

(3) REQUIRED DIMENSIONS AND DESIGN FEATURES- The road described in paragraph (1)(A) shall--

(A) have a width of not greater than a single lane, in accordance with the applicable road standards of the State;

(B) be constructed with gravel;

(C) be constructed to comply with any specific design features identified in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2) as Mitigation Measures relative to the passage and migration of wildlife, and also the exchange of tidal flows, where applicable, in accordance with applicable Federal and State design standards; and

(D) if determined to be necessary, be constructed to include appropriate safety pullouts.

(b) Support Facilities- Support facilities for the road described in subsection (a)(1)(A) shall not be located within the Refuge.

(c) Federal Permits- It is the intent of Congress that any Federal permit required for construction of the road be issued or denied not later than 1 year after the date of application for the permit.

(d) Applicable Law- Nothing in this section amends, or modifies the application of, section 1110 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3170).

(e) Mitigation Plan-

(1) IN GENERAL- Based on the evaluation of impacts determined through the completion of the environmental impact

statement under section 6402(b)(2), the Secretary, in consultation with the entities described in section 6402(b)(3)(B), shall develop an enforceable mitigation plan.

(2) CORRECTIVE MODIFICATIONS- The Secretary may make corrective modifications to the mitigation plan developed under paragraph (1) if--

(A) the mitigation standards required under the mitigation plan are maintained; and

(B) the Secretary provides an opportunity for public comment with respect to any proposed corrective modification.

(3) AVOIDANCE OF WILDLIFE IMPACTS- Road construction shall adhere to any specific mitigation measures included in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2) that--

(A) identify critical periods during the calendar year when the refuge is utilized by wildlife, especially migratory birds; and

(B) include specific mandatory strategies to alter, limit or halt construction activities during identified high risk periods in order to minimize impacts to wildlife, and

(C) allow for the timely construction of the road.

(4) MITIGATION OF WETLAND LOSS- The plan developed under this subsection shall comply with section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) with regard to minimizing, to the greatest extent practicable, the filling, fragmentation or loss of wetlands, especially intertidal wetlands, and shall evaluate mitigating effect of those wetlands transferred in Federal ownership under the provisions of this subtitle.

SEC. 6404. ADMINISTRATION OF CONVEYED LANDS.

(1) FEDERAL LAND- Upon completion of the land exchange under section 6402(a)--

(A) the boundary of the land designated as wilderness within the Refuge shall be modified to exclude the Federal land conveyed to the State under the land exchange; and

(B) the Federal land located on Sitkinak Island that is withdrawn for use by the Coast Guard shall, at the request of the State, be transferred by the Secretary to the State upon the relinquishment or termination of the withdrawal.

(2) NON-FEDERAL LAND- Upon completion of the land exchange under section 6402(a), the non-Federal land conveyed to the United States under this subtitle shall be--

(A) added to the Refuge or the Alaska Peninsula National Wildlife Refuge, as appropriate, as generally depicted on the map; and

(B) administered in accordance with the laws generally applicable to units of the National Wildlife Refuge System.

(3) WILDERNESS ADDITIONS-

(A) IN GENERAL- Upon completion of the land exchange under section 6402(a), approximately 43,093 acres of land as generally depicted on the map shall be added to--

(i) the Izembek National Wildlife Refuge Wilderness; or

(ii) the Alaska Peninsula National Wildlife Refuge Wilderness.

(B) ADMINISTRATION- The land added as wilderness under subparagraph (A) shall be administered by the Secretary in accordance with the Wilderness Act (16 U.S.C. 1131 et seq.) and other applicable laws (including regulations).

SEC. 6405. FAILURE TO BEGIN ROAD CONSTRUCTION.

(a) Notification To Void Land Exchange- If the Secretary, the State, and the Corporation enter into the land exchange authorized under section 6402(a), the State or the Corporation may notify the Secretary in writing of the intention of the State or Corporation to void the exchange if construction of the road through the Refuge has not begun.

(b) Disposition of Land Exchange- Upon the latter of the date on which the Secretary receives a request under subsection (a), and the date on which the Secretary determines that the Federal land conveyed under the land exchange under section 6402(a) has not been adversely impacted (other than any nominal impact associated with the preparation of an environmental impact statement under section 6402(b)(2)), the land exchange shall be null and void.

(c) Return of Prior Ownership Status of Federal and Non-Federal Land- If the land exchange is voided under subsection (b)--

(1) the Federal land and non-Federal land shall be returned to the respective ownership status of each land prior to the land exchange;

(2) the parcel of the Federal land that is located in the Refuge shall be managed as part of the Izembek National Wildlife Refuge Wilderness; and

(3) each selection of the Corporation under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) that was relinquished under this subtitle shall be reinstated.

SEC. 6406. EXPIRATION OF LEGISLATIVE AUTHORITY.

(a) In General- Any legislative authority for construction of a road shall expire at the end of the 7-year period beginning on the date of the enactment of this subtitle unless a construction permit has been issued during that period.

(b) Extension of Authority- If a construction permit is issued within the allotted period, the 7-year authority shall be extended for a period of 5 additional years beginning on the date of issuance of the construction permit.

(c) Extension of Authority as Result of Legal Challenges-

(1) IN GENERAL- Prior to the issuance of a construction permit, if a lawsuit or administrative appeal is filed challenging the land exchange or construction of the road (including a challenge to the NEPA process, decisions, or any required permit process required to complete construction of the road), the 7-year deadline or the five-year extension period, as appropriate, shall be extended for a time period equivalent to the time consumed by the full adjudication of the legal challenge or related administrative process.

(2) INJUNCTION- After a construction permit has been issued, if a court issues an injunction against construction of the road, the 7-year deadline or 5-year extension, as appropriate, shall be extended for a time period equivalent to time period that the injunction is in effect.

(d) Applicability of Section 6405- Upon the expiration of the legislative authority under this section, if a road has not been constructed, the land exchange shall be null and void and the land ownership shall revert to the respective ownership status prior to the land exchange as provided in section 6405.

Road from King Cove to Cold Bay clears hurdle

YEARS AWAY: Lands bill OK'd by Senate, but it still faces House, federal review.

By ERIKA BOLSTAD
ebolstad@adn.com

WASHINGTON — Many people watched closely Thursday as the U.S. Senate passed a massive lands bill designating more than 2 million acres of wilderness in nine states, but none with as much focus as the Alaskans from King Cove.

The legislation, which pulls together 150 public lands, parks and water bills in one package, also includes a provision that authorizes a land swap and allows planning to begin for a 25-mile gravel road through a national wildlife refuge from the community of King Cove to the airport in Cold Bay.

The community of King Cove has sought the road for the past decade as an alternative to the hovercraft used to travel across the bay to get to the airport in Cold Bay. The World War II-era airport in Cold Bay is home to the third-longest runway in the state; unlike the smaller King Cove airport, it stays open in all weather conditions.

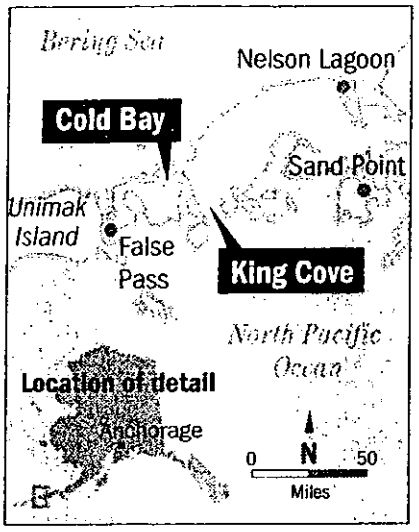
From the Senate gallery, Della Trumble and others from the community watched the Senate vote 73-21. They've worked for years to get the road, which they say is necessary for medical emergencies.

"I watched the vote 12 years ago, and watching the vote today, (it) brought a lot back, just realizing that this has been a long process," said Trumble, referring to the first vote that authorized the hovercraft for the community.

The road, which cuts a controversial swath through the Izembek National Wildlife Refuge, is just one of hundreds of projects in the 1,200-page bill. It also authorizes water projects on Indian reservations, declares some rivers as wild and scenic and designates 2 million acres of wilderness in nine states.

Critics who voted against the bill include Sen. Tom Coburn, R-Okla., who complained about the proposed spending in the package. Coburn cited the road through the refuge as well as $5 million on botanical gardens in Hawaii and Florida and $3.5 million to celebrate the 450th anniversary of the founding of St. Augustine, Fla., six years from now.

The Alaska portion of the legislation gives the state a seven-mile easement through the Izembek National Wildlife Refuge. The easement allows the state to complete a 25-mile gravel road that will link Cold Bay with King Cove. In exchange, the state is expected to transfer more than 61,000 acres to the federal government. Much of that land would go to the Izembek refuge; part would be designated as wilderness.



RON ENGSTROM / Anchorage Daily News

Residents have access to a hovercraft to cross the bay, but say they need the road to evacuate people with health emergencies during inclement weather.

Some conservationists say that it is unprecedented to allow a road through a wildlife refuge and that cars and trucks on the road will disrupt migratory birds in the refuge as well as other wildlife that pass along the narrow isthmus. However, the bill requires an extensive federal environmental review before it can be built. It also prohibits the road from being used by commercial traffic.

"What we've created through this bill is a process," said Alaska Sen. Lisa Murkowski. "This moves the community a step forward in the process of someday getting the road."

A road is still years away, Trumble said, and that has been hard to explain to people at home.

"We've achieved an ability to start a process," she said, chuckling at her own bureaucratic-speak.

As a whole, conservation groups supported the package because it had so many provisions to protect rivers and designate wilderness. The package did not have support from groups such as the Independent Petroleum Association of America, which complained that the bill could curtail domestic energy development by designating so many federally owned acres as wilderness.

The bill goes next to the House of Representatives, which has pledged to take up the Senate version and send it on to the president.

"Izembek & Alaska Peninsula Refuge & Wilderness Enhancement Act"

(S. 1680 & H.R. 2801)

This is a winter 2008 update of the key issues, circumstances and aspirations of the Izembek Partnership in our continuing pursuit for a land exchange of over 61,000 acres to the federal government from the King Cove Corporation and State of Alaska in exchange for about 1800 acres for a road easement (207 acres) through a portion of the Izembek National Wildlife Refuge.

This bill is about access for the residents of King Cove – so they can drive to the all-weather, 24-hour airport in Cold Bay, a distance of about 30 miles. King Cove lives with 20' seas and winds in excess of 50 mph year round; it is weather at its brutal best. The result is that King Cove's small airport, precariously perched adjacent volcanic mountains, is unusable for about 30-40% of the time for single-engine planes making scheduled flights in and out of the community. Eleven air fatalities in the King Cove-Cold Bay air corridor over the last 25 years attests to this situation.

Ten years ago, Congress tried to resolve our transportation access problem by providing capital funding for a state-of-the-art hovercraft. Unfortunately, this solution has not resolved the problem. The hovercraft also has significant weather constraints, and even larger constraints of financial sustainability. Our small population base (less than 1,000 residents) and remote location is accruing a net annual operating loss in excess of $1.5 million. We can only operate the hovercraft on a limited basis. A road is our real answer for residents who need to get in or out of the community, no matter the reason, but especially for medical and health reasons requiring medical attention which is not available in King Cove. This status quo is not sustainable; without a road this community continues to be trapped and isolated against its will. This is not right.

In 1980 Congress passed the Alaska National Interest Lands Conservation Act (ANILCA) and a short year later Congress formally moved forward to classify 303,000 acres of the Izembek National Wildlife Refuge as "wilderness" – a designation which brings with it the definition that bars significant human activity. In this instance, ANILCA simply memorialized a 1960 Public Land Order which previously established this wilderness designation. This decision was made law without the most basic outreach, consult or notice to the indigenous people who live there, have always lived there and will go on living there. The decision has also prevented King Cove residents from having a surface transportation access to Cold Bay This is not just inequitable; it is a blow to due process and respect for indigenous cultures.

This is about history and redress and hope for the future. Names on maps change, members of Congress change, and the environmental lobbyists come and go with the political tides, but for 4,000 years we've been living here on the Alaskan Peninsula – the Russians named it Izembek and the Congress named it Refuge but before there labels were ever applied, these were our aboriginal lands, preserved in their present day form because we know how to live on land and leave no mark. Aleuts have grown up, hunted and fished, and died on these Refuge borders. It is obvious to us, as it is not to our opponents, who are busy at work in their high rises or pushing carts down the aisles of their neighborhood supermarkets, that the healthy survival of this Refuge, with its eelgrass rich lagoons and wide diversity of wildlife, is more linked to our survival than any other constituency on the planet, and yet no one had the courtesy to ask us about its creation.

We have been seeking a Congressional okay for a low volume, one-lane road, with steel cable barriers on both sides to prevent any motorized vehicle from departing the roadway. And, after years of asking, we've been consistently told no - hearts will be pierced and wildlife will suffer beyond measure if we construct a road. But the Aleut hearts, which beat a little faster at the prospect of delays in access to medical care because the weather has turned bad, that suffering matters naught. This is not just inequitable, it is cruel.

Today, starting out from Cold Bay there are about 35 miles of gravel roads in the Refuge with about 15 miles of roads/trails in the wilderness. We are asking for a 7-mile easement to have a one-lane gravel road with pullouts (i.e. for two cars to pass) that requires approximately 200 acres. We have agreed to a steel cable being placed on both sides of this road to prohibit any off-road access. King Cove has about 250 vehicles in the entire community and we estimate the daily traffic going to the Cold Bay Airport to be about 15- 20 vehicles.

Many visitors gain access to the Refuge on pre-existing roads. They land safely in Cold Bay, they rest comfortably in one of 9 lodges that exist to make their stay pleasurable, and their access by pre-existing gravel road to the shores of the Izembek Lagoon is assured on one of the many roads that remained after their military use was over. When their Alaskan adventure is over and they are ready to return to their jobs and their loved ones, they hop on a jet and take off from the third largest runway in Alaska. And they accomplish this travel while the residents of King Cove look across the wind-whipped bay in frustration. This is not just inequitable, it is unconscionable.

The value of the land that we propose to exchange for this easement is considerable. But, don't take our word for it. .We are biased, both because we want this road to become a reality and because we know the lands in question. We urge you to go directly to the USF&WS for their opinion about the value of our proposed land exchange. They will tell you that you have before you an exemplary deal: a proposal that greatly enhances the existing refuge, by adding the valuable wetlands found in Mortenson's Lagoon, as well as adding 45,000 new acres of new wilderness - the first such addition in Alaska in 25 years. It is a transaction that goes beyond equitable to generous.

The passage of this bill is a win-win for everyone with a stake in its outcome, and that includes the wildlife that depends upon the Refuge for food, safety and shelter for their off-spring. We relate to all of those interests: they are the same as our own. As good stewards and good citizens of this country, our values are closely aligned with those of the conservation movement – with all due respect for those who argue otherwise, we believe that our experience qualifies us as experts in the ways of humans living on land and leaving no mark. With the construction of a road we gain the transportation corridor that we would have asked for initially, had anyone shown us the respect to inquire. We will agree to supervise this project from its first moved rock to its last engineering detail. This road will be designed with a minimal footprint, built to the highest standards and driven on with respect to our wildlife neighbors in our every turn. In exchange, we propose to donate land that greatly enhances the existing refuge and provides safe, reliable surface transportation for the residents of a King Cove: At long last, a genuinely equitable outcome is within our reach. You can help us get there from here.

Please support our efforts! Visit our website at http://www.izembekenhancement.org

OMNIBUS PUBLIC LAND MANAGEMENT ACT OF 2009

Izembek National Wildlife Refuge Land Exchange

This summary and map document the lands that will be exchanged between the Federal Government, State of Alaska, and King Cove Corporation when the requirements contained in this act are completed, including final approval of State HB 210.

The State of Alaska will convey to the Federal government a total of 43,093 acres. These acres come from the following State-owned lands (see attached map):

1. Map Ref. ID #1 – T 53S R85W-SM – 22,498 acres
2. Map Ref. ID #2 – T 54S R85W-SM – 20,595 acres

The King Cove Corporation (KCC) will convey and/or relinquish approximately 18,730 acres of KCC lands to the Federal government. These acres are as follows:

1. Map Ref. ID #4 – Portion of land adjacent Kinzarof Lagoon referred to as the "bookends" - approximately 2,500 acres.
2. Map Ref. ID #3 – Portion of land surrounding Mortensen's Lagoon, north to Cold Bay, but not including any road section from Cold Bay to Mortsensen Lagoon (17(b)(2) easement per ANCSA) - approximately 10,800 acres.
3. Map Ref. ID #5 – King Cove relinquishes selections totaling approximately 5,430 acres of their ANSCA entitlement within the Izembek National Wildlife Refuge.

The Federal government will convey the following lands to the State of Alaska:

1. Map. Ref. ID #A – 100' to 150' wide corridor of land through a portion of the Izembek National Wildlife Refuge consisting of approximately 206 acres.
2. Approximately 1,600 acres of federally-owned lands on Sitkinak Island adjacent to Kodiak Island (not shown on the map).

Prepared by the Office of Rep. Edgmon. *Regarding HB210 (26-LS0788\A).*

The Honorable Pete Domenici
Ranking Member
U.S. Senate Committee on Energy and Natural Resources
302 Dirksen Senate Building
Washington, D.C. 20510

Re: S 1680 – the Izembek and Alaska Peninsula Refuge and Wilderness Enhancement Act and King Cove Safe Access Act

Dear Chairman Bingaman and Ranking Member Domenici:

The State of Alaska supports S 1680, legislation that would authorize a land exchange between the State of Alaska, the U.S. Fish and Wildlife Service and King Cove Corporation to secure road access between the Alaskan communities of King Cove and Cold Bay. These communities are located on the Alaska Peninsula and are accessible only by air or water.

A priority for the Agdaagux Tribe of King Cove, the City of King Cove and the Aleutians East Borough is to construct a 27-mile road to Cold Bay, through the Izembek National Wildlife Refuge, to access the larger and safer airport at Cold Bay.

This overland link is necessary because both air and water access to King Cove is treacherous in the frequent stormy weather so common on the lower Alaska Peninsula. Cold Bay has a much larger, safer airport and the residents of King Cove need reliable access to the Cold Bay airport facility for health and safety, including emergency medical evacuations. A combination road and hovercraft system, established under the King Cove Health and Safety Act passed by Congress several years ago, has not safely nor efficiently resolved access problems.

The need for this road link has been identified in land and transportation plans for at least twenty-five years, including the Alaska Department of Transportation's Southwest Alaska Transportation Plan, adopted in 2004.

The land exchange would add valuable and significant acreage to the Izembek and Alaska Peninsula National Wildlife Refuges. Much of the land that would be added to the refuges is currently owned by the State of Alaska. Specifically, the State of Alaska is offering to exchange 43,093 acres, or all of the state-owned land contained in two townships located northeast of Izembek Refuge, in exchange for a 206 acre easement dedicated to the State of Alaska, through the Izembek National Wildlife Refuge and Wilderness. The undeveloped state land being offered to the Refuge is surrounded on three sides by refuge lands and is habitat for brown bears and caribou. This state land includes the lower portion of the Cathedral River, which drains the western flanks of Pavlof Volcano. It is de facto wilderness land. This state land was included in a recent state oil and gas lease sale, although no bids were received on these tracts.

The 7,900 acres being offered to the Izembek Refuge by King Cove Corporation includes valuable waterfowl habitat that straddles Kinzarof Lagoon at the head of Cold Bay. This land is an inholding within the existing Izembek Wilderness area. The Corporation is also offering to sell an additional 10,800 acres of private lands to the U.S. Fish and Wildlife Service for the Refuge.

The road easement that the state would acquire will run approximately 13 miles through the Izembek National Wildlife Refuge. More than half of this road already exists as primitive roads that were originally built during World War II. The total length of new road through the Wilderness area is 6.3 miles. The exact location of the easement will be determined in consultation with the U.S. Fish and Wildlife Service.

The combined offers from the State of Alaska and the King Cove Corporation would add 51,000 acres to the Izembek and Alaska Peninsula National Wildlife Refuges. All of the state land that is being offered in this exchange would be designated Wilderness by this legislation.

The state would acquire approximately 206 acres that encompass the road. The state would also acquire a 1,600-acre federal inholding on Sitkinak Island, a predominantly state-owned island located south of Kodiak Island.

The State of Alaska recognizes the unique value of the Izembek National Wildlife Refuge. In 1972, the Alaska Legislature set aside the state-owned tidelands within Izembek Lagoon and adjacent offshore state lands as a State Game Refuge. These state lands contain eel grass beds that are the very heart of Izembek Refuge.

As part of this proposal, the state would add more than 4,000 acres of state-owned tidelands in Kinzarof Lagoon, at the head of Cold Bay, to the State Game Refuge. The exchange will require approval by our state legislature as the state lands are quite likely of unequal, but greater, fair market value that the federal lands being exchanged.

The state is well aware of concerns expressed by various groups who are opposed to this legislation. Some are concerned about the precedent set by building a road through a Wilderness Area. Yet, when the Alaska National Interest Lands Conservation Act was passed in 1980, Congress specifically recognized that transportation facilities may be needed across the 58 million acres of federal Wilderness lands in Alaska. The Alaska Lands Act requires Congressional approval for such transportation corridors through Wilderness.

There are also concerns about increased public access to the refuge wilderness. The refuge and wilderness area are already accessible from Cold Bay by existing local roads. Through planning and enforcement of existing refuge regulations, the impacts of the limited number of new users from King Cove can be mitigated.

The State of Alaska supports this legislation and stands ready to commit over 43,000 acres of state land to the National Wildlife Refuge and Wilderness system. We urge the Committee to approve this bill.

Thank you for the opportunity to comment on this legislation.

Sincerely,

Tom Irwin, Commissioner
Alaska Department of Natural Resources

THE COMMUNITIES OF THE Aleutians East Borough

ALEUTIANS EAST BOROUGH

The Aleutians East Borough includes the westernmost portion of the Alaska Peninsula and a number of Aleutian Islands. The area is remote and economic opportunities are few. There are five incorporated cities and one village administered by the tribal council. The area has been inhabited by the Unanga (Native Americans) since the last ice age. The Native people had early contact with Russian fur traders. During the early 1900s, whaling, fishing and cannery operations drew an influx of Scandinavian and European fishermen to the area. And today, commercial fishing and fish processing dominate the Borough's economy. However, since the late 1990s, the region's mainstay industry has fallen on hard times because of competition from foreign fisheries, the growth of farm-raised salmon and an increase in fishing restrictions. Approximately 32 percent of the population is unemployed, and nearly 22% of the Borough's population is below the poverty level. For that reason, the Borough is looking to diversify the region's economy.

Population: 2,697 • Ethnic Makeup: 37% American Indian or Alaska Native, 27% Asian, 24% Caucasian and 12% other.

Sand Point

Sand Point is located on Popof Island, off the Alaska Peninsula. It is home to one of the largest fishing fleets in the Aleutian Chain. Commercial fishing is the dominant economic activity. Marine facilities include a 25-acre boat harbor with four docks, a barge off-loading area and a 150-ton lift. In addition, an 18-acre harbor extension accommodates 37 large vessels of up to 150 feet. The community also offers a state-owned airport with a 4,700-foot paved runway.

Population: 952 • Ethnic Makeup: 42% Native American, 28% Caucasian, 23% Asian and 7% other.

King Cove

King Cove is located on the south side of the Alaska Peninsula. The city's economy depends on the year-round commercial fishing and seafood processing industries. Peter Pan Seafoods, in King Cove, is one of the largest cannery operations in Alaska. Up to 500 non-residents are brought up to work in the cannery as needed. The city's North Harbor provides moorage for 90 boats and is ice-free all year. By September 2007, the new Babe Newman Harbor will provide additional moorage for 60-foot to 150-foot fishing vessels.

Population: 792 • Ethnic Makeup: 47% Native American, 27% Asian, 15% Caucasian and 11% other.

Cold Bay

Cold Bay is located in the Izembek National Wildlife Refuge at the western end of the Alaska Peninsula. State and federal government and airline support services provide the majority of local employment. Because of its central location and modern airport, Cold Bay serves as the regional center for air transportation on the Alaska Peninsula and as an international hub for private aircraft. The community offers a state-owned 10,415-foot long paved and lighted runway, a 5,125-foot long paved crosswind runway, FAA Flight Service and weather service stations.

Population: 88 • Ethnic Makeup: 72% Caucasian, 17% Native American and 11% other.

Nelson Lagoon

Located on the northern coast of the Alaska Peninsula, Nelson Lagoon sits on a narrow sand spit that separates the lagoon from the Bering Sea. Nelson Lagoon is situated in the middle of a rich and productive salmon fisheries area. The community's dock, boat ramp, harbormaster's office and warehouse were completed in the late 1990s. Nelson Lagoon has excellent docking facilities available as well as boat and gear storage. A state-owned 4,000-foot long lighted gravel runway serves the community with regularly scheduled flights.

Population: 83 • Ethnic Makeup: 78% Native American, 13% Caucasian and 9% other.

False Pass

False Pass is situated on the eastern shore of Unimak Island on a strait connecting the Pacific Gulf of Alaska to the Bering Sea. The community is the only remaining Aleut village on Unimak Island. The local economy is driven by commercial salmon fishing and fishing services. False Pass is an important refueling stop for Bristol Bay and Bering Sea fishing fleets. Bering Pacific and Peter Pan Seafoods process the commercial catch. The community offers a state-owned gravel airstrip. A dock and boat ramp are available. The harbor will be complete in 2008.

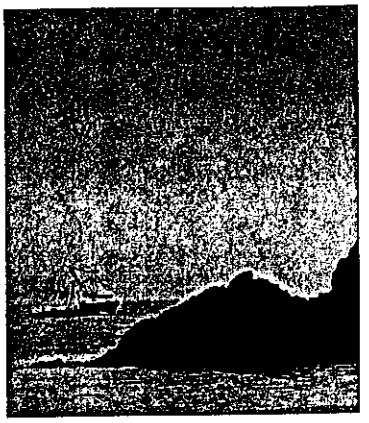
Population: 64 • Ethnic Makeup: 63% Native American, 27% Caucasian and 10% other.

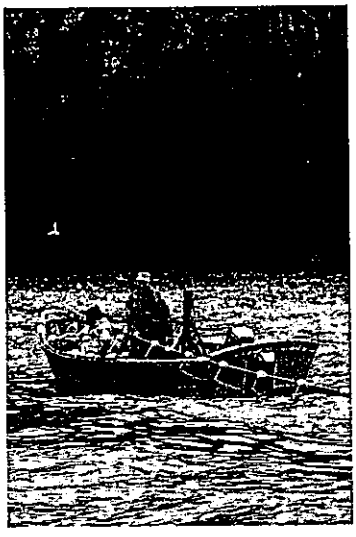
Akutan

Akutan is located on Akutan Island in the eastern Aleutians. It is 35 miles east of Unalaska and 766 air miles southwest of Anchorage. Akutan is one of the busiest fishing ports in the country. Trident Seafoods operates a large plant and processes cod, crab, pollock and fish meal. Air service is provided from nearby Unalaska with PenAir's historic Grumman Goose seaplane. A 200-foot dock and a small boat mooring basin are also available. In addition, the city owns and operates a landing craft, the M/V Akutan.

Population: 713 • Ethnic Makeup: 39% Asian, 24% Caucasian, 21% Hispanic or Latino and 16% Native American.

For more information, please contact the Aleutians East Borough office at (907) 274-7555, fax (907) 276-7569 or visit our Web site at www.aleutianseast.org





There are no roads between the Aleutians East Borough communities, and distances are vast. The Borough communities are closer to Provideniya, Russia and to Tokyo, Japan than they are to major cities within the lower 48. Travel to the communities is by small plane and by the Alaska State Ferry during the summer. In addition, the Borough operates a hovercraft between King Cove and Cold Bay.

Distances between Aleutians East Borough Communities

	False Pass	Cold Bay	Sand Point	Akutan	King Cove	Nelson Lagoon
False Pass		37	120	108	46	115

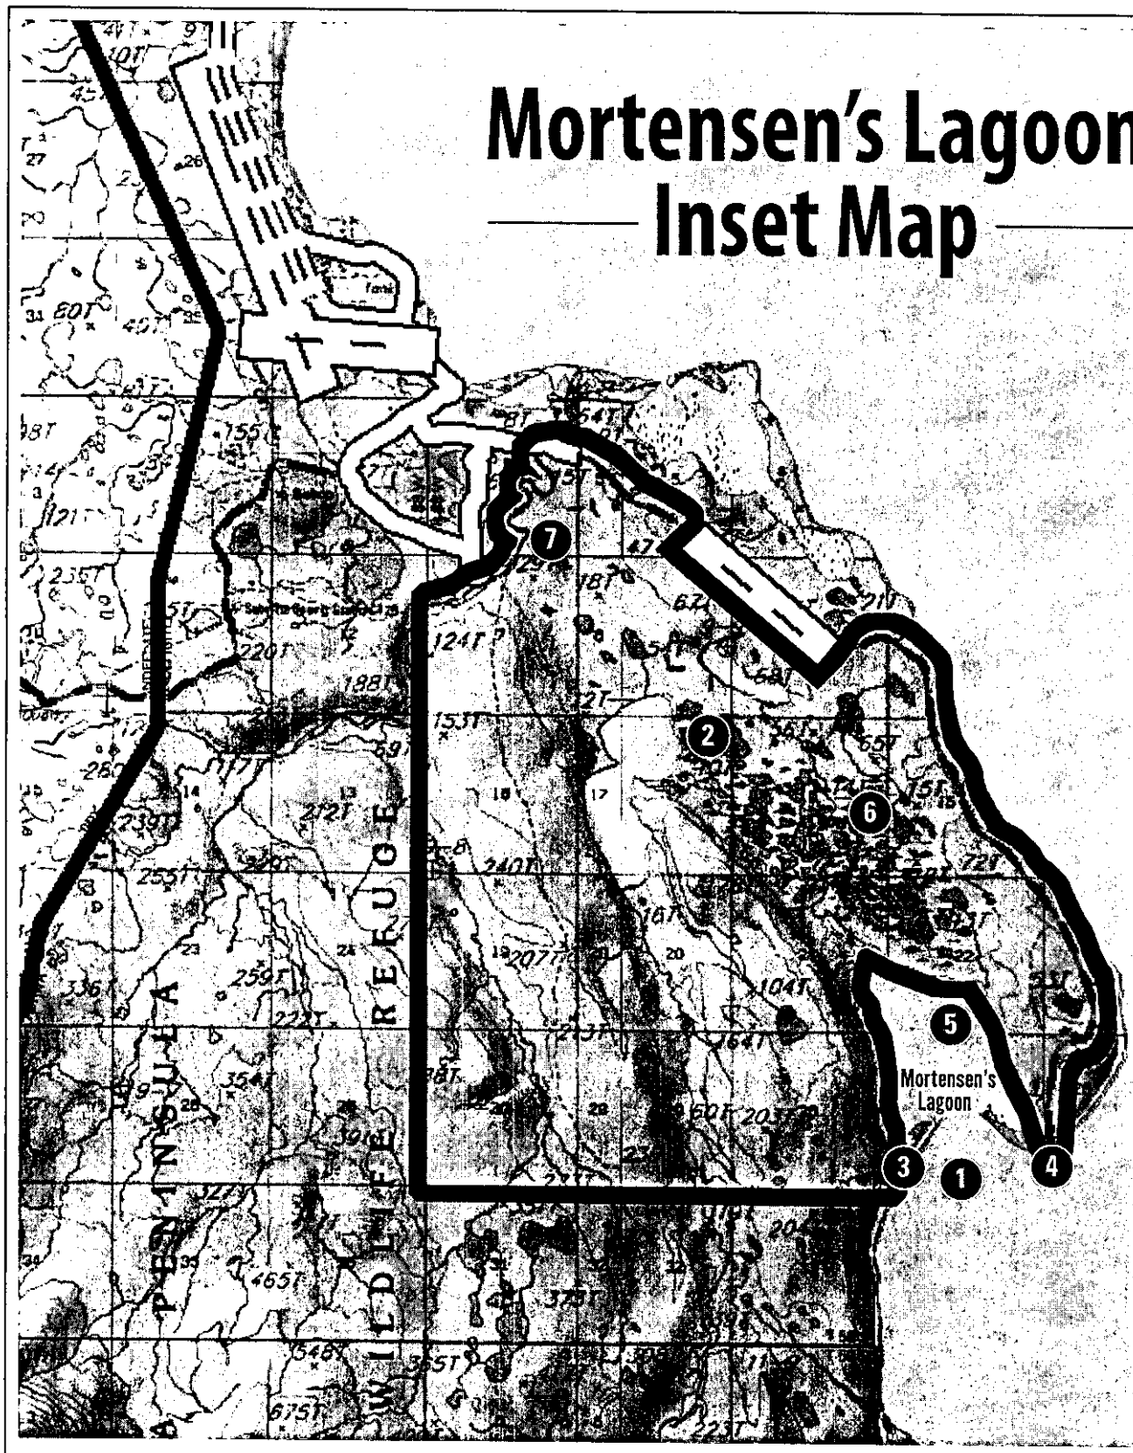
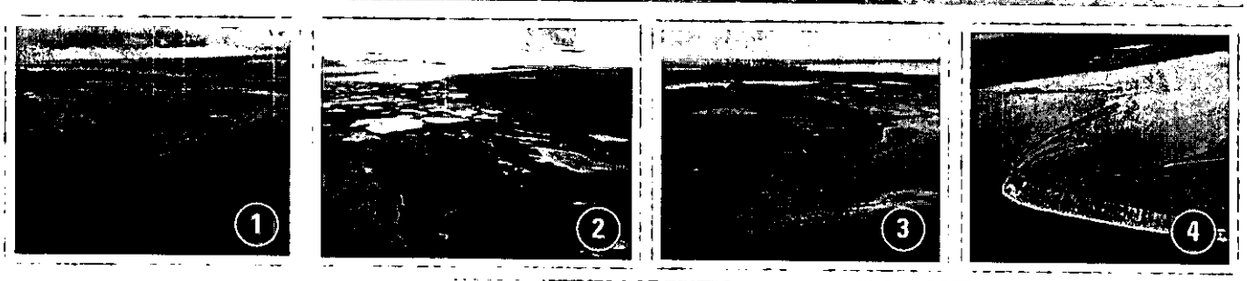
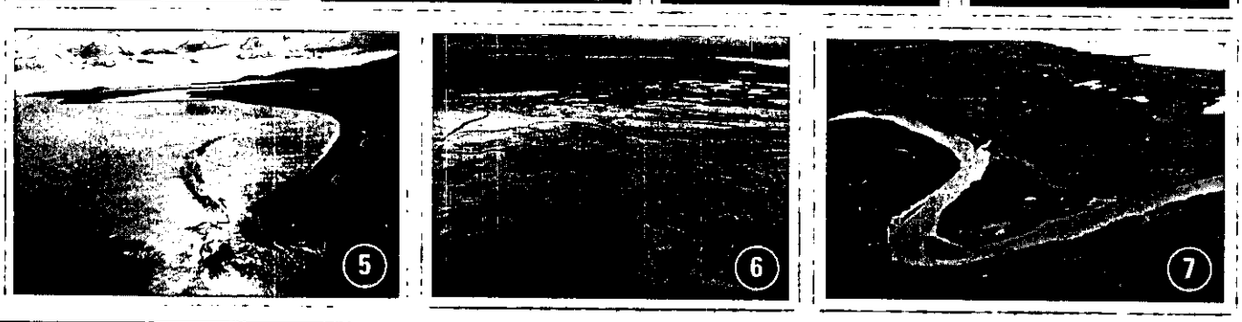
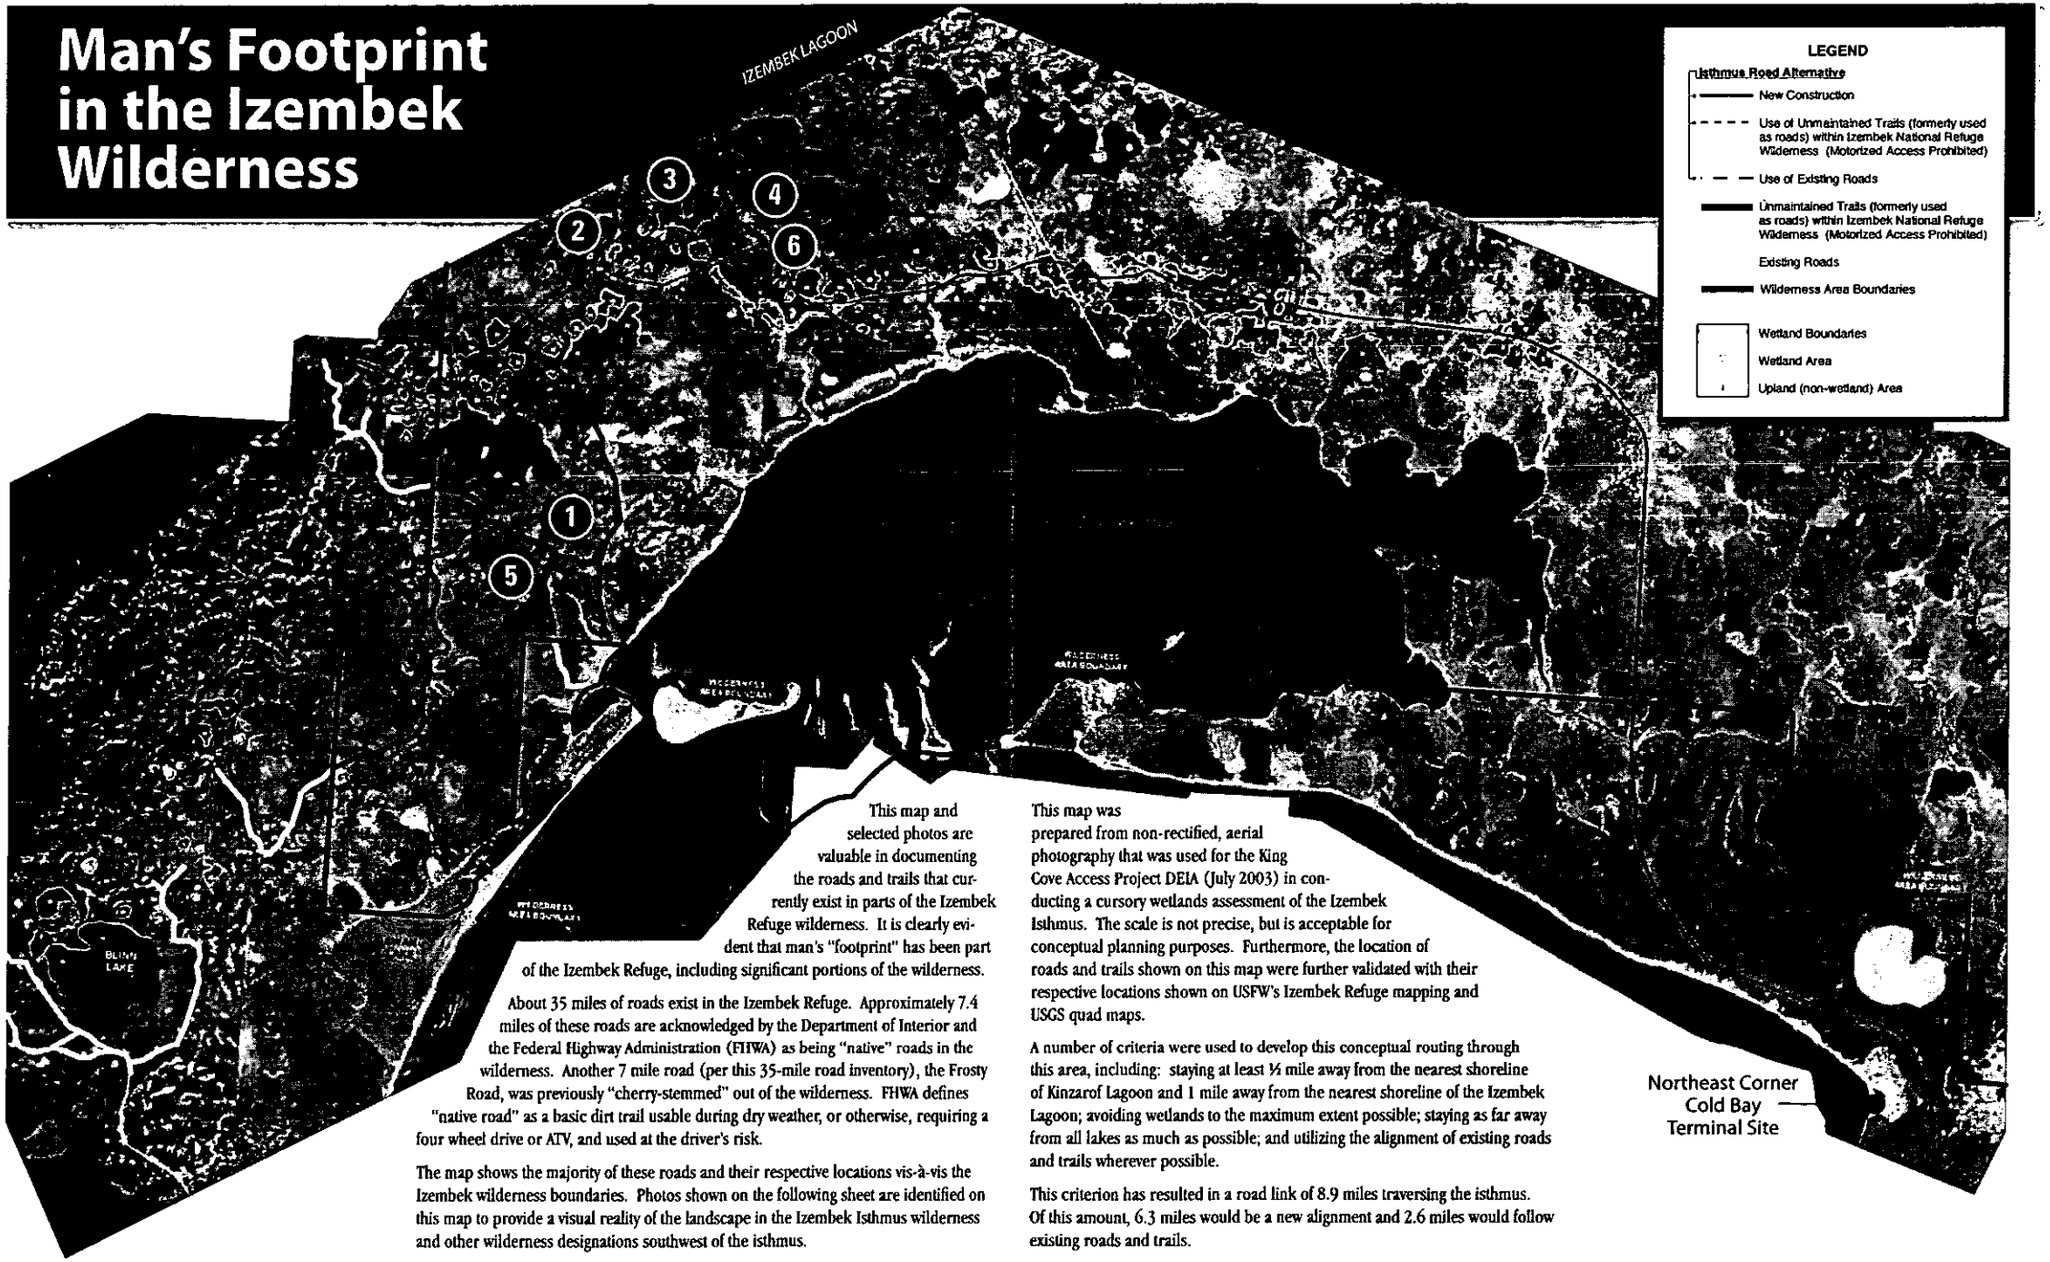
Mortensen's Lagoon Inset Map







Man's Footprint in the Izembek Wilderness



This map and selected photos are valuable in documenting the roads and trails that currently exist in parts of the Izembek Refuge wilderness. It is clearly evident that man's "footprint" has been part of the Izembek Refuge, including significant portions of the wilderness.

About 35 miles of roads exist in the Izembek Refuge. Approximately 7.4 miles of these roads are acknowledged by the Department of Interior and the Federal Highway Administration (FHWA) as being "native" roads in the wilderness. Another 7 mile road (per this 35-mile road inventory), the Frosty Road, was previously "cherry-stemmed" out of the wilderness. FHWA defines "native road" as a basic dirt trail usable during dry weather, or otherwise, requiring a four wheel drive or ATV, and used at the driver's risk.

The map shows the majority of these roads and their respective locations vis-à-vis the Izembek wilderness boundaries. Photos shown on the following sheet are identified on this map to provide a visual reality of the landscape in the Izembek Isthmus wilderness and other wilderness designations southwest of the isthmus.

This map was prepared from non-rectified, aerial photography that was used for the King Cove Access Project DEIA (July 2003) in conducting a cursory wetlands assessment of the Izembek Isthmus. The scale is not precise, but is acceptable for conceptual planning purposes. Furthermore, the location of roads and trails shown on this map were further validated with their respective locations shown on USFW's Izembek Refuge mapping and USGS quad maps.

A number of criteria were used to develop this conceptual routing through this area, including: staying at least ½ mile away from the nearest shoreline of Kinzarof Lagoon and 1 mile away from the nearest shoreline of the Izembek Lagoon; avoiding wetlands to the maximum extent possible; staying as far away from all lakes as much as possible; and utilizing the alignment of existing roads and trails wherever possible.

This criterion has resulted in a road link of 8.9 miles traversing the isthmus. Of this amount, 6.3 miles would be a new alignment and 2.6 miles would follow existing roads and trails.

(Revised 11/6/2009 OMB)

ANALYSIS CONTINUATION

Bill Language: This bill makes two changes to the oil and gas production tax under AS 43.55:

(1) Election of tax treatment for gas used in state. This bill creates an election allowing producers to choose whether to have natural gas used in state taxed at the Cook Inlet tax rate of $0.177 per thousand cubic feet (mcf) with credits and lease expenditures allocated to gas used in state, or to have the gas taxed under the 25% net profits tax without the allocation of credits and lease expenditures. Under current law, the $0.177 per mcf tax rate for Cook Inlet and gas used in state will expire after 2022.

(2) Manufacturing added to definition of gas used in state. This bill expands the definition under AS 43.55.900 (24) of natural gas used in the state to include gas "used as fuel or feedstock in a manufacturing process creating and end product in the state, regardless of the final disposition of the manufactured end product." Manufacturing is not currently defined in the bill and this may create uncertainty for the Department and taxpayers.

Revenues:

Revenues from this bill are indeterminate because we do not know the quantity of natural gas that would qualify for the election. Further, the revenue effect would be influenced significantly by the economics of the producer supplying the gas and its relation to other oil and gas produced by the company. This legislation could result in either an increase or a decrease in state revenue from companies providing gas for in state use. Without a development plan for a specific in state gas or manufacturing project, it is not possible to provide detailed revenue projections for this bill at this time.

The revenue impact could be viewed as a reduction in state revenue because this bill provides for a potentially lower tax liability for gas used in state, including manufacturing. If the gas would be provided regardless of the tax preference, then state revenue would be decreased by the value of the tax preference.

The revenue impact could be viewed as an increase in state revenue if the tax preference helps to incentivize gas sales and manufacturing facilities. Revenue would increase by the amount of production tax received from the gas, and there would also be increased corporate income tax and property tax revenues. Additionally, there could be economic development potentially creating thousands of jobs and millions of dollars in payroll.

If producers believe that the current 2022 expiration date will eventually be extended or lifted, the election for a lower tax rate for gas used in state may affect a producer's decision about whether to sell North Slope gas instate as opposed to an export gas pipeline. The range of production tax revenue impacts may be illustrated with three examples:

In one scenario, if sales of gas used in state are relatively small, there maybe only a minimal impact on production tax revenue because there would also be sufficient gas for a major export gas pipeline. In this case, in-state manufacturing projects complement a major gas export pipeline.

In a second scenario, there could be more substantial volumes of gas used in state. This could reduce the amount of gas that would otherwise be available to be shipped in a major gas export pipeline, thereby increasing the pipeline's tariff costs which are deducted in calculating production tax values. The reduced production tax revenues would not be made up for through revenues from the gas used in state incentivized by this bill.

In a third scenario, the potential for a lower tax rate for gas used in state coupled with the addition of manufacturing to the definition of gas used in state could cause taxpayers to abandon a gas export pipeline in favor of in-state sales. In that case, the impact on production tax revenue would be substantial because the volume of gas that would likely be developed could be as little as one-quarter of the volume developed in conjunction with a major gas export pipeline.

Expenditures:
The provisions of this bill can be implemented using existing resources.

ANALYSIS: *(Attach a separate page if necessary)*

This bill would define gas "used as feedstock in a manufacturing process creating an end product in the state" as gas "used in the state" for purposes of AS 43.55, even if that end product was exported out of state. Examples of such export projects include the manufacture of fertilizer in a plant like the Agrium plant in Nikiski and liquid hydrocarbon fuels, i.e., jet fuel, diesel, heating fuel, in a gas-to-liquids (GTL) plant. A taxpayer selling feedstock gas to these manufacturers would enjoy a tax per-mcf that would not exceed $0.18.

The in-state tax limit applied to sales of gas to in-state manufacturers may affect a producer's decision about whether to sell North Slope gas in-state as opposed to an export gas pipeline. The range of royalty revenue impacts may be illustrated with three examples: First, if the sales to in-state manufacturers of export products were less than say 500 mmcfd, there may

(Revised 11/6/2009 OMB)

3796

ANALYSIS CONTINUATION

be only a small impact on royalty revenue because there will still be sufficient gas for an export gas pipeline. There will also be royalty revenues associated with sales to in-state manufacturers. In this case, in-state manufacturing projects complement an export pipeline.

Second, if substantial volumes of gas subject to the tax benefit under HB 217 go to in-state manufactures of export products could compete for gas that would otherwise be shipped in an export pipeline. In this case, lost royalty revenue associated with a decrease in sales volumes of gas in an export pipeline are not made up by sales of gas to the in-state manufacturers of export products. For example, a GTL plant built in Valdez or Southcentral Alaska to make low-sulfur diesel fuel for export might require a billion cubic feet per day of gas to make 100,000 barrels of product per day to achieve economies of scale. If gas for a GTL plant were committed before design and construction of the pipeline, redirecting a billion cubic feet of gas from an export line to Alberta to a GTL plant in Valdez, would cost the state in royalty revenue on an NPV5 basis around $400 million due to the higher tariffs on the remaining gas going to Alberta. (Not included in this estimate is the royalty revenue that the state would receive from sales to the GTL project .)

Third, should the tax benefit of HB 217 cause taxpayers to abandon an export pipeline in favor of in-state sales to export projects, the impact on royalty revenue will be substantial. (Furthermore, HB 217 would mean that ALL of the future North Slope gas production would be taxed at just $0.18 per mcf). A 4.5 bcf/day gas export pipeline could, assuming a $8.70/mmBtu price for gas in 2020 yield a netback price of around $5.00 per mmBtu, and an income stream of over a billion dollars a year in royalty revenues. A GTL project at around $100,000 per barrel/day capacity (2010 dollars) would equate to over a $50 per barrel GTL processing fee, and would yield a lower netback of around $3.00 per mmBtu. Not only would the netback be lower, the total per-day production of gas would be as little as one-quarter that of an export pipeline.

The relative economics might change: the cost of in-state manufacturing projects (like a GTL plant) might come down, the price of export products might command a sufficient premium to generate a higher netback price of North Slope gas than that realized from an export pipeline. For these reasons, the impact on State royalty revenue is indeterminate negative.

MEMORANDUM February 8, 2010

SUBJECT: An election to subject gas used in the state to the tax cap applicable to gas produced in the Cook Inlet sedimentary basin (CSHB 217( ); Work Order No. 26-LS0816\R)

TO: Representative Mark Neuman

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a work draft of a bill that would allow the producer of gas used in the state, and produced in the state from a lease or property outside of the Cook Inlet sedimentary basin, to elect to limit the tax on the production of that gas.

Please review this draft carefully to ensure that it is consistent with your intent.

If an election is made under AS 43.55.014, which would be enacted by sec. 4 of the draft bill, the tax on production of gas subject to the election would be limited to the cap applicable to Cook Inlet gas production under AS 43.55.011(j). If the election is not made, the gas production would be taxed the same as gas not used in the state.

If I may be of further assistance, please advise.

CS FOR HOUSE BILL NO. 217( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVE NEUMAN

A BILL

FOR AN ACT ENTITLED

"An Act relating to the tax applicable to the production of certain natural gas used in the state."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.55.011(e) is amended to read:

(e) There is levied on the producer of oil or gas a tax for all oil and gas produced each calendar year from each lease or property in the state, less any oil and gas the ownership or right to which is exempt from taxation or constitutes a landowner's royalty interest. Except as otherwise provided under **(f), (j), and (k) of this section and AS 43.55.014** [(f), (j), (k), AND (o) OF THIS SECTION], the tax is equal to the sum of

(1) the annual production tax value of the taxable oil and gas as calculated under AS 43.55.160(a)(1) multiplied by 25 percent; and

(2) the sum, over all months of the calendar year, of the tax amounts determined under (g) of this section.

New Text Underlined [DELETED TEXT BRACKETED]

3799

* **Sec. 2.** AS 43.55.011(f) is amended to read:

(f) The levy of tax under this section for oil and gas produced north of 68 degrees North latitude, other than oil and gas production subject to (i) of this section and gas subject to **an election made under AS 43.55.014** [(o) OF THIS SECTION], may not be less than

(1) four percent of the gross value at the point of production when the average price per barrel for Alaska North Slope crude oil for sale on the United States West Coast during the calendar year for which the tax is due is more than $25;

(2) three percent of the gross value at the point of production when the average price per barrel for Alaska North Slope crude oil for sale on the United States West Coast during the calendar year for which the tax is due is over $20 but not over $25;

(3) two percent of the gross value at the point of production when the average price per barrel for Alaska North Slope crude oil for sale on the United States West Coast during the calendar year for which the tax is due is over $17.50 but not over $20;

(4) one percent of the gross value at the point of production when the average price per barrel for Alaska North Slope crude oil for sale on the United States West Coast during the calendar year for which the tax is due is over $15 but not over $17.50; or

(5) zero percent of the gross value at the point of production when the average price per barrel for Alaska North Slope crude oil for sale on the United States West Coast during the calendar year for which the tax is due is $15 or less.

* **Sec. 3.** AS 43.55.011(m) is amended to read:

(m) Notwithstanding any contrary provision of AS 38.05.180(i), AS 41.09.010, AS 43.55.024, or 43.55.025, the department shall provide by regulation a method to ensure that, for a calendar year for which a producer's tax liability is limited by **(j) or (k) of this section or by an election made under AS 43.55.014** [(j), (k), OR (o) OF THIS SECTION], tax credits otherwise available under AS 38.05.180(i), AS 41.09.010, AS 43.55.024, or 43.55.025 and allocated to gas subject to the limitations in **(j) and (k) of this section and an election made under**

AS 43.55.014 [(j), (k), AND (o) OF THIS SECTION] are accounted for as though the credits had been applied first against a tax liability calculated without regard to the limitations under (j) and (k) of this section and an election made under AS 43.55.014 [(j), (k), AND (o) OF THIS SECTION] so as to reduce the tax liability to the maximum amount provided for under (j) of this section or applicable to an election made under AS 43.55.014 [(j) OR (o) OF THIS SECTION] for the production of gas or (k) of this section for the production of oil. The regulation must provide for a reasonable method to allocate tax credits to gas subject to (j) of this section and subject to an election made under AS 43.55.014 [(j) AND (o) OF THIS SECTION]. Only the amount of a tax credit remaining after the accounting provided for under this subsection may be used for a later calendar year, transferred to another person, or applied against a tax levied on the production of oil or gas not subject to (j) or (k) of this section or an election made under AS 43.55.014 [(j), (k), OR (o) OF THIS SECTION] to the extent otherwise allowed.

*** Sec. 4.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.014. Special election for gas used in the state. (a) Notwithstanding the provisions of AS 43.55.011, a person producing gas that is used in the state from a lease or property outside the Cook Inlet sedimentary basin during a calendar year before 2022 may elect to limit the amount of tax due on the production of that gas, as provided in this section.

(b) The maximum amount of tax applicable to the production of each 1,000 cubic feet of gas that is subject to the election authorized by this section may not exceed the maximum amount of tax applicable to the production of each 1,000 cubic feet of gas determined under AS 43.55.011(j)(2).

(c) A person choosing to make the election authorized by this section shall make the election at the time the return is due under AS 43.55.030(a) for the calendar year for which the election is made.

(d) The provisions of AS 43.55.011(m), 43.55.160(a)(1)(E), 43.55.160(a)(2)(E), and 43.55.160(e) apply to the production of gas for which an election is made under this section.

*** Sec. 5.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to **an election made under AS 43.55.014** [AS 43.55.011(o)], other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from the leases or properties during the month for which the installment payment is calculated;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained

by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from those leases or properties during the month for which the installment payment is calculated;

(C) for oil and gas produced from each lease or property subject to **AS 43.55.011(j) or (k) or an election made under AS 43.55.014** [AS 43.55.011(j), (k), OR (o)], the greater of

(i) zero; or

(ii) the sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible under AS 43.55.160 for oil or gas, respectively, produced from the lease or property from the gross value at the point of production of the oil or gas, respectively, produced from the lease or property during the month for which the installment payment is calculated;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to **AS 43.55.011(j) or (k) or an election made under AS 43.55.014** [AS 43.55.011(j), (k), OR (o)] may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or **the election made under AS 43.55.014** [43.55.011(o)], as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or **43.55.014** [43.55.011(o)], as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by

AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the calendar year of production.

*** Sec. 6.** AS 43.55.160(a) is amended to read:

(a) Except as provided in (b) of this section, for the purposes of

(1) AS 43.55.011(e), the annual production tax value of the taxable

(A) oil and gas produced during a calendar year from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to **an election made under AS 43.55.014** [AS 43.55.011(o)];

(B) oil and gas produced during a calendar year from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less the producer's lease

expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to **an election made under AS 43.55.014** [AS 43.55.011(o)];

(C) oil produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a calendar year from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a calendar year from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(2) AS 43.55.011(g), the monthly production tax value of the taxable

(A) oil and gas produced during a month from leases or properties in the state that include land north of 68 degrees North latitude is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph

does not apply to gas subject to **an election made under AS 43.55.014** [AS 43.55.011(o)];

(B) oil and gas produced during a month from leases or properties in the state outside the Cook Inlet sedimentary basin, no part of which is north of 68 degrees North latitude, is the gross value at the point of production of the oil and gas taxable under AS 43.55.011(e) and produced by the producer from those leases or properties, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil and gas produced by the producer from those leases or properties, as adjusted under AS 43.55.170; this subparagraph does not apply to gas subject to **an election made under AS 43.55.014** [AS 43.55.011(o)];

(C) oil produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the oil taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the oil produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(D) gas produced during a month from a lease or property in the Cook Inlet sedimentary basin is the gross value at the point of production of the gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to the gas produced by the producer from that lease or property, as adjusted under AS 43.55.170;

(E) gas produced during a month from a lease or property outside the Cook Inlet sedimentary basin and used in the state is the gross value at the point of production of that gas taxable under AS 43.55.011(e) and produced by the producer from that lease or property, less 1/12 of the producer's lease expenditures under AS 43.55.165 for the calendar year applicable to that gas produced by the producer from that lease or property, as adjusted under AS 43.55.170.

*** Sec. 7.** AS 43.55.160(e) is amended to read:

(e) Any adjusted lease expenditures under AS 43.55.165 and 43.55.170 that would otherwise be deductible by a producer in a calendar year but whose deduction would cause an annual production tax value calculated under (a)(1) of this section of taxable oil or gas produced during the calendar year to be less than zero may be used to establish a carried-forward annual loss under AS 43.55.023(b). However, the department shall provide by regulation a method to ensure that, for a period for which a producer's tax liability is limited by **AS 43.55.011(j) or (k) or an election made under AS 43.55.014** [AS 43.55.011(j), (k), OR (o)], any adjusted lease expenditures under AS 43.55.165 and 43.55.170 that would otherwise be deductible by a producer for that period but whose deduction would cause a production tax value calculated under (a)(1)(C), (D), or (E) of this section to be less than zero are accounted for as though the adjusted lease expenditures had first been used as deductions in calculating the production tax values of oil or gas subject to any of the limitations under **AS 43.55.011(j) or (k) or an election made under AS 43.55.014** [AS 43.55.011(j), (k), OR (o)] that have positive production tax values so as to reduce the tax liability calculated without regard to the limitation to the maximum amount provided for under the applicable **provisions** [PROVISION] of **AS 43.55.011(j) or (k) or 43.55.014** [AS 43.55.011(j), (k), OR (o)]. Only the amount of those adjusted lease expenditures remaining after the accounting provided for under this subsection may be used to establish a carried-forward annual loss under AS 43.55.023(b). In this subsection, "producer" includes "explorer."

*** Sec. 8.** AS 43.55.165(h) is amended to read:

(h) The department shall adopt regulations that provide for reasonable methods of allocating costs between oil and gas, between gas subject to **the election made under AS 43.55.014** [AS 43.55.011(o)] and other gas, and between leases or properties in those circumstances where an allocation of costs is required to determine lease expenditures that are costs of exploring for, developing, or producing oil deposits or costs of exploring for, developing, or producing gas deposits, or that are costs of exploring for, developing, or producing oil or gas deposits located within different leases or properties.

*** Section 9.** AS 43.55.900(24) is amended to read:

(24) "used in the state" means delivered for consumption as fuel in the state, including as fuel consumed to generate electricity**, or used as fuel or feedstock in a manufacturing process creating an end product in the state, regardless of the final disposition of the manufactured end product**.

*** Sec. 9.** AS 43.55.011(o) is repealed.

ANALYSIS: *(Attach a separate page if necessary)*

The passage of this legislation would expand the preferential tax treatment for in-state use of natural gas to include natural gas that is used in creating an end product without regard to whether the product is destined for domestic consumption or export.

Depending on the volume of qualifying natural gas and the future price of natural gas, the foregone revenues to the state caused by passage of this legislation could be substantial and range into the millions of dollars.

The fiscal impact of this legislation cannot be accurately determined at this time.

ANALYSIS: *(Attach a separate page if necessary)*

HB 217 relates to a tax applicable to in-state natural gas production. The definition of "used in the state" is amended in AS 43.55.900(24) to include gas used as fuel or feedstock in a manufacturing process creating an end product.

There is no anticipated fiscal impact to the Division of Oil and Gas.

Sponsors Statement for House Bill 217

"An Act relating to the tax applicable to the production of natural gas used in the state as fuel or feedstock in producing a manufactured end product."

"Alaska is facing a critical shortage of energy and a declining economy." We've heard this from academics, economists, and members of the business community.

Families are watching with great concern their energy costs increase while the unemployment rate has climbed to 8.8%. Alaskan's are experiencing a growing concern about our economy.

Our efforts need to focus on providing Alaskans opportunities to work, a sense of security, and a quality of life they can enjoy.

HB 217 incentivizes the development of the state's gas resources by lowering the current production tax on gas "used as fuel or feedstock" within the state of Alaska.

Currently as defined in AS 43.55.900 (24), "used in state" means delivered for consumption as fuel in state, including fuel consumed to generate electricity.

This bill adds to the definition of "in state use" the following: "or used as fuel or feedstock in a manufacturing process creating an end product in the state, regardless of the final disposition of the end product."

HB 217 enhances the interest in the development of the state's gas resources, it maximizes the economic and physical recovery, encourages competition to explore and develop, and provides Alaskans the opportunity to prosper. All these are in the best interest of Alaskans and the State.

Southcentral Residents Asked to Scale Back on Energy Use for 2 Hours Oct. 21

ANCHORAGE-HOMER-MAT-SU- As part of an effort to prepare for a possible natural gas shortage this winter, Southcentral Alaska residents are being asked to voluntarily reduce their energy consumption for two hours on the evening of Wed., Oct. 21.

The test is being coordinated by the Municipality of Anchorage, with cooperation from Chugach Electric Association, Municipal Light and Power, Matanuska Electric Association, Homer Electric Association, ENSTAR, and the Mat-Su and Kenai Peninsula Boroughs. The entities have worked together this fall on Energy Watch, a campaign designed to call attention to the possibility of a natural gas delivery problem.

Residents of the Mat-Su Borough, the Municipality of Anchorage and the Kenai Peninsula Borough are being asked to participate in the voluntary test.

Between the hours of 6 p.m. and 8 p.m. on Oct. 21, residents are being asked to reduce their energy consumption. The steps include lowering the thermostat to 65 degrees; shutting off unnecessary lights and electronics; setting the water heater to "warm" or "vacation"; postponing washing dishes and doing laundry; and reducing natural gas range use.

The goal of the conservation test is to see what kind of effect voluntary actions might have on overall energy consumption. In the event of a real energy deliverability problem, one of the first steps will be to ask residents to take voluntary steps similar to ones being proposed for the October 21 trial run.

The utilities and agencies involved in the Energy Watch campaign have stressed that a natural gas delivery problem this winter is not likely. However, in case it does happen, it is prudent to have a plan in place.

For additional information about the Energy Watch campaign, please visit
http://www.homerelectric.com/ (Homer)
http://www.mea.coop/ (Mat-Su)
http://www.muni.org/ (Anchorage).

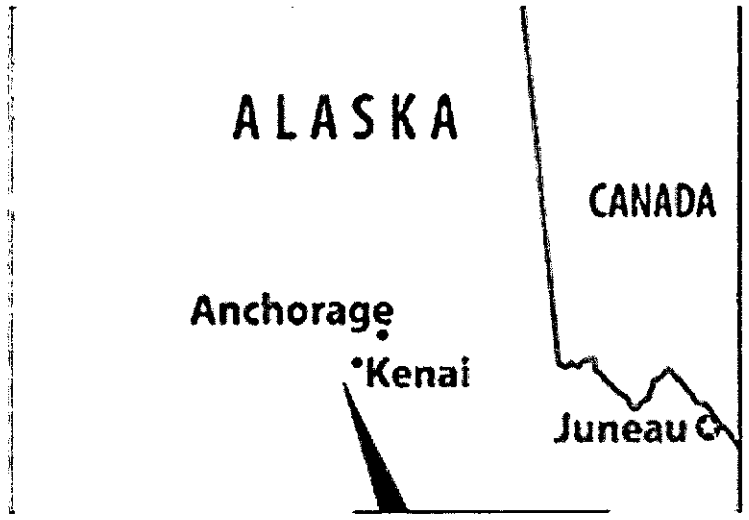
The CHRISTIAN SCIENCE MONITOR

In oil-rich Alaska, an energy crunch

A shortage of natural gas besets the state's most populous area. In rural outposts, energy costs spike.



By Yereth Rosen Correspondent of The Christian Science Monitor
posted January 23, 2008 at 12:00 am EST

Kenai, Alaska —
On the shore of Cook Inlet, site of Alaska's oldest oil- and gas-producing basin, the Agrium Inc. fertilizer plant for four decades produced a steady supply of urea and ammonia for international agricultural and industrial clients. Agrium's exports supported a prosperous petrochemical business, employing hundreds and bolstering local tax rolls.

But operations ceased in December. The reason? Lack of natural gas, the feedstock for Agrium's products. Despite its perch atop a petroleum basin, Agrium couldn't secure enough natural gas to stay in business.

Agrium's woes symbolize a larger energy dilemma: Raw resources are in the ground, but lack of infrastructure and poor economies of scale hinder access to them, putting Alaska in an energy crunch.

Natural gas at the North Slope – America's largest known but untapped conventional natural-gas supply – is 700 miles away and unavailable. There's no pipeline to convey North Slope natural gas to consumers, in or out of Alaska.

So Alaska's most populous region relies on local energy – Cook Inlet natural gas – for heat and power. But natural gas known to be in Cook Inlet is expected to last eight more years, and local utility costs have risen as markets tighten.

"It's the goofiest thing in the world, to be sitting on top of some of the biggest energy reserves in the world and have these challenges," says Bill Popp, president of the Anchorage Economic Development Corp.

Reviving exploration in Cook Inlet

Except for the mile of road that holds the Agrium plant, a liquefied natural-gas (LNG) facility, a Tesoro refinery, and a BP facility, few obvious signs remain that Kenai was the "Oil Capital of Alaska," as an old Chamber of Commerce slogan boasted.

The first major Cook Inlet natural-gas discovery – and still the biggest – came in 1959. Since then, most of the known natural gas was found while explorers were seeking oil, and almost all was discovered before 1970.

Until recently, having enough gas to supply local needs was not a worry. The worry was, rather, that local needs were too minuscule. This part of Alaska may hold most state residents, including the far-north metropolis nicknamed "Los Anchorage," but as a natural-gas market, it is a lightweight. Dramatic seasonal swings in demand make it a tricky market to serve.

Consequently, industrial users are deemed essential to anchor production in this so-called "stranded" market. But industrial users are now down to one: North America's sole LNG export facility, next door to Agrium. The plant, owned by ConocoPhillips and Marathon, has shipped LNG to Japan since 1969, soaking up Cook Inlet natural gas that had no other market.

Cook Inlet's proven reserves are down to 1.7 trillion cubic feet. But the basin holds potential for another 13 trillion to 17 trillion cubic feet of undiscovered reserves, according to the US Department of Energy.

Interest is finally perking up, with companies in recent years drilling specifically for natural gas. A new agreement among ConocoPhillips, Marathon, and the state should stimulate more exploration, officials say. The pact trades state backing of a renewed federal LNG export license for increased natural-gas searches and promises to give residential utilities first dibs on gas in times of shortages. "Hopefully the new development will ensure that there's no further decline in the reserve base," Marty Rutherford, Alaska's deputy natural resources commissioner, said at a recent news conference.

In rural outposts, 'energy refugees'

While Anchorage residents fret about future energy supplies, rural Alaskans face a dire situation right now. Skyrocketing prices for diesel and other fuels, compounded by costly air and barge transport, have created "energy refugees."

"[Energy] is so expensive in the villages that people are being forced to leave, especially people with young families, because they cannot afford to make ends meet," says Meera Kohler, president of the Alaska Village Electric Cooperative, which provides electricity to 53 remote villages where electrical costs can be four times those in Anchorage.

Costs of electricity, heating, and transportation fuel can account for up to 40 percent of family expenses in rural Alaska, Ms. Kohler says.

Some pioneers are seeking long-term solutions in alternative energy.

Geothermal, wind, hydro, and tidal power may hold the most promise in a state dotted with volcanoes, scoured by stiff breezes, and surrounded by water. Alaska's Division of Oil and Gas is soliciting bids for leases to develop geothermal energy beneath Mount Spurr, a volcano on the Anchorage skyline. Fairbanks's Chena Hot Springs Resort is renown for putting the underground heat that warms its pools to a variety of other uses.

A handful of native villages have erected wind turbines, and Anchorage's electricity cooperative has wind-power plans. Solar energy – seemingly a long shot because of daylight-deprived winters – is getting a look, with panels installed in some communities. Even fish oil has fueled generators at Denali National Park.

Such small-scale projects face economic hurdles, however.

"Alternative energy is very expensive capital-wise," says Kohler, whose cooperative includes wind-powered villages. Federal grants have funded villages' alternative-energy projects, but prospects are dim for future aid, she says.

Another energy option is coal. Alaska is overflowing with it – from the Arctic, where the Inupiat Eskimo village of Atqasuk is named for "the place to dig the rock that burns," to the Kenai Peninsula's Kachemak Bay, where dark seams are exposed on coastal bluffs. Some officials tout coal gasification as an option to restart Agrium's operations.

Others consider coal a misstep. "Coal is the dirtiest fossil fuel out there," says Bob Shavelson of Cook Inlet Keeper, an environmental group. "We can go backward to coal and climate change ... and habitat destruction, or we can go forward to renewable energy and long-term jobs."

Gas rush: with shortages looming, Alaska firms seek new deposits
Published Mon, 01/03/2005 - 08:00
by Anchorage Daily News

TYONEK -- Andy Clifford retreats to the "designated smoking area" maybe 100 yards back from the drilling rig and lights up a cigar. He's wearing a Hooters T-shirt and a very cool set of Ray-Bans. His face shows no apparent sign of anxiety.

"We're living our dream," he says. "But when you see the bills we're paying -- $5,000 here and $50,000 there -- you go, wow, we've got to find a lot of gas."

Clifford, 49, is an oil man, one in a growing stable of risk takers hunting new supplies of natural gas around Cook Inlet. They're drawn by a big surge in gas prices, plus forecasts of a looming shortage for gas-addicted Southcentral Alaska.

The rig juts up from a dusty square of bulldozed ground in the middle of bear-infested woods on the west side of the Inlet, about 13 miles outside the Athabascan village of Tyonek.

Normally Clifford, a geologist from Houston, Texas, wouldn't be around for the dirty work of actual drilling.

But this is a special day.

Rig workers are preparing for a routine but dangerous test that involves blasting knotholes into the well casing some 3,400 feet down, giving the gas a way to rush into the well and up to the surface.

With luck, Clifford and his partners in Aurora Gas -- a tiny company built on life savings, loans, frequent-flier miles and $25 million from a low-profile Oklahoma billionaire -- will hear gas roar out of the Long Lake No. 1 well like jet exhaust.

Government and industry leaders hope Aurora hears the roar too.

Cook Inlet gas is nearly gone, experts warn, jeopardizing the energy security for the state's most populous region.

Gas shortage stirs pols

Governor, mayor, senator seek energy security as CI natural gas runs low

Wesley Loy

For Petroleum News

Alaska political leaders are seizing on what's fast becoming a burning issue: the potential for electric power or heating outages this winter in the state's population center as supplies of Cook Inlet natural gas tighten.

"Woe unto the policymaker who didn't do something," said state Sen. Hollis French, an Anchorage Democrat who is calling for a Strategic Gas Initiative.

Anchorage mayor forms energy task force

Anchorage Mayor Dan Sullivan has created a task force to address a looming energy crisis.

"We look to this blue-ribbon task force to address both immediate and long-term energy needs, including making sure Anchorage residents have an uninterrupted supply of gas to heat their homes this winter," Sullivan said in a statement.

The task force includes a range of industry representatives, along with a variety of planning and business professionals. The same panelists were part of the mayor's transition team; indeed, they jointly authored

Aside from French, Gov. Sean Parnell and Anchorage Mayor Dan Sullivan also have announced moves in recent days to deal with what Sullivan's office termed a "looming energy crisis."

Stoking the urgency was a July 29 public meeting of the Regulatory Commission of Alaska. One commissioner, Anthony Price, spoke of "a real possibility of rolling blackouts" this winter should a cold snap overtax the available gas supply and force a shutdown of gas-fired electric power plants.

Parnell announcement

The governor's office on Aug. 4 said Parnell had directed his gas advisory team to "explore the best possible options for producing and delivering in-state natural gas."

"We need to make gas available to Alaskans as soon as possible," Parnell said in a press release. While efforts continue toward a major pipeline under AGIA, the Alaska Gasline Inducement Act of 2007, to carry huge volumes of North Slope gas out of state, other sources must be considered to serve the needs of Interior, Southcentral and rural Alaska, he said.

Parnell mentioned the the energy portion of the transition report.

In recent winters when temperatures dipped below zero the city has come dangerously close to failing to meet the needs of its gas customers, the mayor's office said. The administration, including emergency management personnel, is developing contingency plans for such an event. Municipal Manager George Vakalis is examining this issue as a standalone challenge.

Immediate and long-term

The task force will develop longer-term recommendations — three to five years and 10 years and longer — separately from the immediate issue of winter deliverability. Findings and recommendations will be reported directly to the mayor.

Members of the Energy Task Force include:

• Judy Brady, former executive director, Alaska Oil and Gas Association;

• Dan Coffey, Anchorage Assembly liaison and private attorney;

• Dave Harbour, former commissioner, Regulatory Commission of Alaska;

• Tony Izzo, co-chair of TMi Consulting and former CEO of

undeveloped Gubik field in the Brooks Range Foothills, the Nenana basin and Cook Inlet, which geologists believe could yet yield significant new finds.

Parnell, who took over for former Gov. Sarah Palin on July 26, said he has directed his administration to evaluate three specific options for in-state gas. They include a standalone pipeline from the North Slope and the Foothills south to Fairbanks and Southcentral; a spur line to Southcentral off the proposed major pipeline from the North Slope to the Lower 48; and a pipeline from either Cook Inlet or one of the Interior basins through the state's Railbelt.

"Additionally, opportunities to distribute gas to Western Alaska, and propane production and delivery will be considered," the press release from the governor's office said. "Economic models created by the departments of Revenue and Natural Resources will be used along with agency personnel to perform the necessary analysis and identify the tariffs and fees associated with each option."

French, who has announced he'll run against Republican Parnell next year, sent a letter to the governor on Aug. 5 calling for a Strategic Gas Initiative.

Enstar;

• Arden Page, mediator/private attorney;

• Mary Ann Pease, Knik Arm Bridge and Toll Authority;

• Bill Popp, president and CEO, Anchorage Economic Development Corp.;

• Steve Pratt, energy consultant; and

• Bob Stinson, president, Conam Construction Co., past president of the Alaska Support Industry Alliance.

—Petroleum News

"In recent years there has been a growing chorus of voices warning of decreasing volumes of Cook Inlet gas available for distribution during periods of peak demand," French's letter said.

In an Aug. 4 interview with Petroleum News, French said his plan would emphasize developing gas storage capacity in the Cook Inlet region. Stored gas could be used to handle peak demand or deal with an emergency, he said.

French said all the industry and government players need to figure out a way to develop storage. One possibility is creation of an industry consortium, he said, or perhaps an authority of some kind.

French, who once worked for several years on a Cook Inlet oil and gas platform and later on the North Slope as a production operator in the Kuparuk field, said he hopes the administration will look at options such as reconfiguring the liquefied natural gas export terminal at Nikiski to also receive LNG, building gas storage vessels of some type, or identifying reservoirs for underground storage.

As for funding, the state might provide help such as backing a bond sale, French said.

French, who chairs the Senate Judiciary Committee and holds a seat on the Resources Committee, said he expects hearings on the Cook Inlet gas issue, and possibly legislation when the next regular session opens in January.

"Heat shut off to Anchorage homes would be shocking to the world," French said. "It would be shameful if we were having to hustle our folks into a Superdome situation."

A major challenge to solving the energy crunch is overcoming the relatively small market size of the Anchorage area, where roughly half the state's population lives, French said. The minor market doesn't give gas explorers much incentive, he said.

One idea French doesn't favor is having the state itself drill for Cook Inlet gas.

"Wildcatting a well," he said, "that would be way, way down on my list."

Mayor appoints task force

On July 31, Anchorage Mayor Sullivan announced a new task force to look at keeping Southcentral energized when temperatures drop below zero.

The nine-member task force generally includes past and

present energy industry, regulatory and economic development players. A press release from the mayor's office didn't indicate when the panel would present its report to Sullivan, who called the energy situation "one of the most pressing issues" the city faces.

Alaska unemployment rate still rising

Associated Press - January 22, 2010 4:14 PM ET

JUNEAU, Alaska (AP) - Alaska's unemployment rate hit 8.8 percent last month, its highest level since September 1992. The rate was 6.8 percent in December 2008.

The state labor department cites several factors for the increase over the year, including job losses in the oil, construction, hospitality and leisure industries. It also attributes the rise in part to the growth in job seekers from other states coming to Alaska to find work.

The department says the state stayed below the national unemployment rate for 12 months, something it says hasn't happened since the early '80s, when the U.S. was going through a recession and Alaska was enjoying a boom.

The national unemployment rate in December was 10 percent.

MANUFACTURE

This word is used in the English and American patent laws. This term includes two classes of things; first, all machinery which is to be used and is not the object of sale; and, secondly, substances (such, for example, as medicines) formed by chemical processes, when thevendible substance is the thing produced, and that which operates preserves no permanent form. In the first class, the machine, and, in the second the substance produced, is the subject of the patent. 2 H. Bl. 492. See 8 T. R. 99; 2 B. & A. 349; Day. Pat. House Bill 227: Holitna River Basin Hunting, Fishing & Trapping Reserve

CS HB 227 (Version D) establishes the Holitna River Basin Hunting, Fishing & Trapping Reserve. The boundary of the reserve is roughly equal to the watersheds of the Holitna and Hoholitna Rivers and more precisely defined as DNR Management Area Plan 15, excluding the land north of Kuskokwim River.

In the original bill, the Reserve's purpose was defined as promoting game and habitat management activities to maintain sustainable levels of human consumption of fish and game in the area. The new CS expands this purpose to also include perpetuation of other public uses of the area, including oil & gas and mineral entry and development. These resource exploration and development uses will not be disallowed, but will be balanced against the utility and benefit to the state of Alaska of preserving the fish and game resources.

This bill also addresses several major areas of identified needs in protecting or furthering the management concepts embodied within the state's intensive management policies.

Although limited active management programs have been implemented with the support of past gubernatorial administrations, this bill is intended to strengthen statutory, constitutional-related active management principles.

The bill is cooperatively written to be compatible with other "Breadbasket" areas within the state's Intensive Management Areas which exemplify high quality habitat and productivity contributions to entire GMU sub-regions.

This proposed reserve concept was initiated by the Sleetmute Traditional and Orutsararmiut Native Councils; there are records of support from the Lower Kuskokwim, Central Kuskokwim, Stony/Holitna and Anchorage Fish & Game Advisory Committees, Kuskokwim Salmon Management Working Group, and the Association of Village Council Presidents; and the concept has undergone legal review through the Board of Game process, twice receiving their endorsement.

Sponsor(s): REPRESENTATIVES HERRON, Neuman

A BILL

FOR AN ACT ENTITLED

"An Act relating to the establishment of state fish and game reserves; creating the Holitna River Basin Hunting, Fishing, and Trapping Reserve; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 16.20 is amended by adding new sections to read:

Article 6. Fish and Game Reserves.

Sec. 16.20.700. Purposes. The purposes of establishing a fish and game reserve are

(1) to promote management activities to rebuild or enhance fish and wildlife populations and habitats to maintain historical and sustainable harvest levels for continued high levels of human consumptive use of these resources; and

(2) to perpetuate other public uses of the area, including forest management, mineral entry and development, oil and gas entry and development, and other forms of public use of public land not incompatible with the purpose stated in (1)

of this section.

Sec. 16.20.710. Regulations. The Board of Fisheries or the Board of Game, where appropriate, shall adopt regulations each considers advisable for conservation and protection of fish and game to carry out the purposes of AS 16.20.700 and 16.20.720.

Sec. 16.20.720. Holitna River Basin Hunting, Fishing, and Trapping Reserve established. (a) All state-owned land and water and all land acquired in the future by the state within the watershed of the Holitna River and Hoholitna River is designated as the Holitna River Basin Hunting, Fishing, and Trapping Reserve.

(b) The Holitna River Basin Hunting, Fishing, and Trapping Reserve is established to

(1) ensure management and protection of fish and wildlife populations and habitat to perpetuate subsistence use, commercial use, and other consumptive uses of the area's fish and wildlife;

(2) implement maximum use and benefit, sustained yield, and common use principles by using effective management techniques for conserving and developing the area's fish and wildlife resources to regain or maintain historical harvest levels with human consumptive use of these resources as a priority;

(3) maintain and enhance healthy and abundant fish and wildlife populations commonly used for consumption by humans to provide high levels of human consumptive use in keeping with amounts determined by the Board of Fisheries and the Board of Game to be reasonably necessary to provide for subsistence uses and with other population and use goals or objectives set by the appropriate board;

(4) allow for long-term scientific research and management study areas to determine the effectiveness of management activities under this section in providing for current and future human harvest needs.

(c) To fulfill the purposes of this section, the Department of Fish and Game, the Board of Fisheries, and the Board of Game shall manage the fish and game resources of the area to provide for high levels of human harvest and, subject to priorities among areas in which intensive management actions are carried out as

determined by the Department of Fish and Game, the Board of Fisheries, and the Board of Game, shall

(1) control predation and adjust predator and prey population ratios through whatever methods or means are considered appropriate to particular circumstances;

(2) conduct management actions designed to further the purposes of this section so long as the appropriate board has not found, based on substantial evidence, that the challenged management actions are counterproductive or ineffective in maintaining or enhancing healthy and abundant fish or wildlife populations commonly used for consumption by humans for food to provide for high levels of human consumptive use;

(3) consider scientific evidence augmented by historical and local environmental knowledge when evaluating management activities.

(d) The Department of Natural Resources may not acquire by eminent domain privately owned land within the Holitna River Basin Hunting, Fishing, and Trapping Reserve but may acquire privately owned land by purchase, exchange, or other means for inclusion in the reserve.

(e) Public access to the Holitna River Basin Hunting, Fishing, and Trapping Reserve by boat, aircraft, dog team, snow machine, all-terrain vehicle, or other means consistent with the purposes of this section may be regulated by the Department of Natural Resources, in consultation with the Department of Fish and Game, as necessary to meet the purposes of this section and to protect access to and development of other natural resources within the reserve.

(f) Access to and from private property within the Holitna River Basin Hunting, Fishing, and Trapping Reserve shall be guaranteed through access corridors established by the Department of Natural Resources, in consultation with the Department of Fish and Game and a private property owner.

(g) Entry upon the Holitna River Basin Hunting, Fishing, and Trapping Reserve for purposes of exploration and development of nonrenewable resources is subject to approval by the Department of Natural Resources, in consultation with the Department of Fish and Game. Exploration and development activities must be

conducted in a manner that is compatible with the purpose of this section.

(h) Except as otherwise provided in this section, the Department of Fish and Game and the Department of Natural Resources shall exercise each department's respective authority over the Holitna River Basin Hunting, Fishing, and Trapping Reserve through a fish and game management plan prepared by the Department of Fish and Game in consultation with the Department of Natural Resources.

(i) All state-owned surface and subsurface land and water within the parcels described in this subsection are established as the Holitna River Basin Hunting, Fishing, and Trapping Reserve:

(1) Township 4 North, Range 48 West, Seward Meridian

Sectional Analysis
Holitna River Reserve
CS for SSHB 227 – Version D

Section 16.20.700. Purpose

States that the purpose of establishing a fish and game reserve is to promote sustainable levels of human consumption of fish and game; and also to perpetuate other public uses of the area, including forest management, mineral entry and development, and oil & gas entry and development.

Section 16.20.710. Regulations

Gives authority to the Board of Game or Board of Fish (whichever is more appropriate) to adopt regulations designed to conserve fish and game; and to carry out the purpose as set forth in sections 16.20.700 and 16.20.720.

Section 16.20.720 (a)

All present and future state-owned land and water within the Holitna and Hoholitna River watersheds is designated as part of the Reserve.

Section 16.20.720 (b)

The Reserve is established to ensure:

1. Management and protection of fish and game populations and habitat to perpetuate subsistence use, commercial use, and other consumptive uses;
2. Management techniques that promote maximum use with sustained yield to maintain historical harvest levels with human consumptive use as a priority;
3. Maintenance of fish and game populations to provide for high levels of human consumptive use (within limits set by Fish and Game Boards);
4. Allowance for scientific research elucidating the effectiveness of management activities in this section in providing for current and future human harvest needs.

Section 16.20.720 (c)

The Department of Fish and Game, the Board of Fisheries and the Board of Game shall manage fish and game resources within the Reserve to provide for high levels of human harvest and, subject to priorities among intensively managed areas for which these entities set policy, shall:

1. Control predation and adjust predator and prey population ratios thru appropriate means;

2. Conduct management actions designed to further the purposes of this section so long as the appropriate board has not found such actions to be ineffective at maintaining fish and game populations commonly harvested for food by humans;
3. Consider scientific evidence augmented by local environmental knowledge when evaluating management activities.

Section 16.20.720 (d)
The Department of Natural Resources may acquire privately owned land within the Reserve by purchase or exchange, but not thru eminent domain.

Section 16.20.720 (e)
Public access to the Reserve may be regulated by DNR, in consultation with DFG, as necessary to meet the purposes of this section and to protect access to, and development of, other resources within the Reserve.

Section 16.20.720 (f)
Access corridors established by DNR, in consultation with DFG and a private property owner, shall guarantee access to and from private property within the Reserve.

Section 16.20.720 (g)
Entry into the Reserve to explore or develop nonrenewable resources must be approved by DNR, in consultation with DFG, and such activities must be compatible with the purpose of this section.

Section 16.20.720 (h)
Except as otherwise provided in this section, DFG and DNR shall exercise their respective authority over the Reserve thru a management plan prepared by DFG in consultation with DNR.

Section 16.20.720 (i)
Reserve boundaries are defined as including all the sections (listed beneath their respective township and range designations) on the last eight pages of this bill.

ANALYSIS: *(Attach a separate page if necessary)*

The bill requires ADF&G to prepare a land use plan. DNR will review and comment on the proposed plan and will annotate the department's lands records system to display the new Reserve, however DNR anticipates no need for additional funding to accomplish these tasks.

ANALYSIS: *(Attach a separate page if necessary)*

Indeterminate fiscal impact to Department of Fish and Game. If the planning effort for this new reserve were one similar to what we do in concert with the Alaska Board of Fisheries whereby we hold and solicit public input and craft specific regulations for this area that could be done with existing functions and resources. However, if the planning effort involved a suite of meetings and staff travel from Goodnews to McGrath and points in between then the department would incur some one time additional costs.

SSHB 227, Holitna River Basin Hunting, Fishing and Trapping Reserve

– Questions and Answers

Q: How are state sanctuaries, public use areas, and refuges defined in statute? How would the proposed reserve differ in HB 227?

A: There are refuges in Alaska that are set aside by the legislation primarily to protect fish and game habitat – these areas where traditionally the preservation of hunting and fishing opportunities are the primary purpose. Within existing refuges, ADFG has land use permitting authority that is in addition to DNR's land use authority. This would be the first state fish and game reserve in Alaska. HB 227 would define a reserve as including a greater emphasis on active management to produce high levels of consumptive human use. A reserve is not just a place where you preserve hunting and fishing as an on-going activity, but a place where you are encouraging state management for high levels of that activity. It's analogous to the Tanana Valley State Forest, where the production of timber is the primary identified purpose in the statutes. A public use area is state land designated under Title 41 to be managed by DNR for multiple use where the state intends to keep the land in the public domain and not offer any land sales. ADFG has no land management responsibilities in Public Use Areas. Sanctuaries, historically, have been areas set aside to preserve wildlife habitat where hunting is not allowed and viewing and preservation are the primary purposes.

Q: What does it mean for an area to be actively managed?

A: Intensive management is defined in statute as active management that is designed to produce high levels of game for human harvest. It specifically includes both habitat manipulation and predator control. Given the bill is written with deference to scientific study, as is done in state forests, you would expect some experimentation on other means of active management in this area.

Q: What is the history of active management in the Holitna Watershed?

A: Predator control has been going on from 2004 – Present. All of the moose populations in the area have been identified as important to be intensively managed. A predator control program is in place for essentially the northern half of the

watershed, but that is a temporary program. HB 227 would not require predator control to be permanent but it would require that the area be permanently managed to produce high levels of game and fish for human consumptive use. At high levels of abundance, the taking of moose females might be appropriate to ensure the habitat's carrying capacity is not exceeded. Different active management techniques are appropriate at different levels of abundance. Other methods such as habitat manipulation, such as prescribed burns to increase moose forage, might also be deemed appropriate here in the future.

Q: Please describe where local and non-local use is prevalent in the area.

A: Unit 19B (roughly the southern half of the watershed) is primarily used by non-locals for fly-in hunting use. There are some local users who travel that far up-river as well. The northern half is primarily accessed by the two rivers in small boats by people from communities along the Kuskokwim River.

Q: Would HB 227 establish a priority for any one user group or type of use?

A: No, this bill establishes the enhancement of the fish and game resource as a priority, not a preference for any user group.

Q: By specifying a specific purpose and use for state land, does HB 227 possibly conflict with the state constitution?

A: No, quite the opposite. The constitution says:

Constitution: Article VIII, Section 4: "Fish, forests, wildlife, grasslands, and all other replenishable resources belonging to the State shall be utilized, developed, and maintained on the sustained yield principle, subject to preferences among beneficial uses."

For example, preference for specific uses has been put in statute for the Tanana Valley State Forest, and McNeil River State Game Sanctuary (preservation of brown bear populations and habitat are priorities and hunting is disallowed).

Also, Article VIII, Section 7, "Special Purpose Sites" specifically allows the legislature to set aside state lands for specific uses.

Q: Does HB 227 require changes to the DNR permitting process for nonrenewable resource exploration or extraction?

A: HB 227 doesn't change any existing requirements for permitting. Mining claims and certain types of small scale mining exploration activity don't even require a permit at present. More extensive exploration activities do require permits, and DNR already does consult with DFG on those permits.

Q: Would HB 227 affect DNR's proposal to lease different areas to big game guides? (DNR is currently taking public comments on a new proposal to limit the number of big game guides using state land. This is in response to a request by the Big Game Commercial Services Board.)

A: HB 227 would not affect this proposal in any way, no more than creation of a state park or state forest would. As long as hunting is allowed, and as long as it's state-owned land, DNR would be able to include this area in its guide services areas proposal.

Q: Would this bill restrict access by private property owners?

A: No. If statute requires a management plan be drafted, this plan may have specific language addressing access needs. For access that we don't know about yet, the owner would have to approach DNR, who (in consultation with DFG on how best to limit impacts on habitat and animal migration) would determine the best route for their access. This bill would not materially change the way that process already takes place. If people do have in-holdings this bill does not restrict access, but in fact ensures that they will have some sort of access to their land.

Q: Please thoroughly describe the recent permitting request for a natural gas exploration license.

A: The DNR, Division of Oil and Gas (DO&G) received an application for a gas only exploration license proposal for the Holitna basin under the oil and gas exploration license program set out at AS 38.05.131-.134. Holitna Energy Co., LLC (HEC) initiated a proposal for a gas only exploration license for 26,791 acres in the Holitna area under this program. Before issuing an exploration license, ADNR must issue a written finding that concludes that the state's best interests would be served (AS 38.05.133(f), and AS 38.05.035(e) and (g)).

In its August 1, 2005 preliminary best interest finding, ADNR concluded that HEC's exploration license proposal would best serve the interests of the State. In its final best interest finding issued October 2, 2006 (after public comments), the division concluded that the project was not in the state's best interest because the small size of the license area would make it difficult to condition the license in a manner that allowed exploration activities to occur harmoniously with the other uses in the area and without impact to sensitive fish and wildlife resources. ADNR also concluded that the license was not in the state's best interest because the project had very little local support and the project proponent had not proactively garnered such support.

On October 5, 2006, HEC asked the ADNR Commissioner to reconsider the final finding, under ADNR's appeal regulations (11 AAC 02.010 et seq.). On June 20, 2007, the commissioner affirmed the final finding denying HEC the exploration license.

On July 20, 2007, HEC appealed ADNR's decision to superior court, arguing that ADNR's decision with respect to the final best interest finding, and its denial of HEC's request for reconsideration, lacked a reasonable basis, and failed to show that ADNR gave the requisite "hard look" at all the salient facts and issues raised. HEC asked the court to remand the case to ADNR.

On March 18, 2008, ADNR submitted an unopposed motion to remand HEC's appeal, saying that it had reviewed HEC's opening brief, and based on that review, requested that the court remand this case to ADNR so that the commissioner may reexamine the facts and conclusions in both the final finding and his decision on reconsideration. On March 19, 2008, the court remanded the case to ADNR.

On reconsideration, the commissioner determined (December 9, 2009) that a gas only exploration license to HEC is in the state's best interest.

Q: Does HB 227 make the bar higher for non-renewable resource exploration and extraction in the region?

A: As it is now, DNR would have to decide on a case by case basis which is in the state's best interest: the development or the preservation of fish and game. With HB 227, DNR would clearly have to side with the preservation of fish and game, and if the exploration or extraction was deemed to not be compatible with the purpose of this bill to protect and enhance fish and game habitat and populations, then the permit would not be forthcoming. For example, if oil and gas exploration in a certain area would preclude access for hunting, with HB 227 DNR would have to rule in favor of the hunting, without HB 227, if the exploration was deemed more important for the state, DNR might rule favorably toward permitting the exploration. However, the DNR Kuskokwim Area Plan already does call for preservation of fish and game. The legislative establishment of this would make this plan more permanent, since land use plans are administrative actions and can be changed more easily. In addition, DNR oil and gas leasing decisions are not governed by Area Plans.

Q: How much of the 4,000,000 acres would possibly be of interest for mining development?

A: The area has not been that intensively explored. At present mining claims are confined to less than 5%, as an estimate, of the area. There are no known large mineral deposits within the area, but considerable exploration has occurred in recent years. There are highly mineralized areas to the south, west, and northwest of the proposed Reserve.

Q: Is it true no oil and gas wells have been drilled within the area?

A: Yes, no wells have been drilled.

Q: Is the area a possible corridor for energy transmission?

A: For natural gas it has never been looked at as a corridor. If Pebble and Donlin Creek were intertied, the energy intertie would cross the region.

Q: Would HB 227 prohibit an energy transmission corridor or add a layer of bureaucracy to its permitting?

A: The bill might add some requirements to minimize a corridor's impact on fish and game populations or access to hunting and fishing.

UNIT 15: HOLITNA RIVER

Background

Location and Land Ownership. The Holitna River management unit encompasses the watersheds of Holitna and Hoholitna Rivers. This is the largest management unit in the planning area, and is nearly al state owned. The land along the Kuskokwim River near Sleetmute is Native owned, and there are three parcels of Native selections near Sleetmute, two of which overlap with state selections. Three small parcels of federal land complete the ownership pattern in the Sleetmute area. The remaining land -- over 90 percent of the total area -- is state owned. Sleetmute, located at the confluence of the Holitna and Kuskokwim, is the only village in the unit. However, there are approximately 165 parcels of private land in or adjacent to this unit. They are a mixture of Native allotments, and federal homesites, headquarters sites, and trade and manufacturing sites.

Resources and Land Use. The central and northern portions of the unit are broad lowlands; western, southern, and eastern boundaries are defined by the Chuilnuk and Kiokluk mountains, the highlands dividing the Kuskokwim basin from Bristol Bay, and the mountains surrounding Sparrevohn Air Force Station. The upper elevations of these ranges are approximately 4,000 feet. The Holitna and Hoholitna rivers, and the lower Chukowan, Kogrukluk, Shotgun, Taylor, and Titnuk waterways are lined by relatively broad bands of white spruce and hardwood forest that are one-half to two miles wide on each side of the river. Some south-facing hillslopes scattered throughout the unit also support hardwood forest that are one-half to two miles wide on each side of the river. The rest of the lowlands is dominated by black spruce woodlands, grading into shrublands on the upper slopes, and alpine tundra on the highest mountains.

The Holitna basin contains the greatest concentration of salmon spawning areas in the entire Kuskokwim drainage and the most productive moose habitat. In addition, these lands support concentrations of bear and waterfowl, and provide winter range for caribou and extensive habitat for furbearers. The fish and wildlife resources of the Holitna basin attract residents of communities from McGrath to Bethel, and sportsmen and guides from throughout Alaska and the continental U.S. The greatest concentration of subsistence activities in the planning area occurs in the Holitna basin. It is used for hunting, trapping, fishing, berry picking, houselog harvest, and firewood collection. It is also the most intensively used part of the basin for sport hunting for moose. Twelve registered hunting guides, six fishing guides, and an unknown number of outfitters use this drainage, targeting moose, caribou, salmon, and sheefish. There are two lodges in the unit, and a third is planned for construction. Salmon from the Holitna drainage provide about 20 percent of the annual salmon harvest for Kuskokwim basin subsistence and commercial fishermen. The king salmon stocks from this and other Kuskokwim drainages are fully allocated at present.

The Holitna basin is rich in other resources as well. The riparian forestlands are among the most productive in the Kuskokwim basin. These forests are highly suitable for settlement and timber harvest for personal and commercial use. The Taylor Mountains and the Kuskokwim Mountains along the western boundary of the unit have moderate to very high mineral potential, a number of existing claims, and two mines that have been active in recent years. Gravel bars in the Kuskokwim River near Sleetmute also have provided materials for local construction projects.

Access. The main access to the unit is by boat on the Kuskokwim, Holitna, and Hoholitna rivers and their major tributaries. Small planes can also land on sections of the Holitna River, numerous lakes, and natural landing areas in the tundra. A public airstrip is maintained at Sleetmute, and there are strips of mining claims at Forty-seven Creek and in the Taylor Mountains. A number of trails cross the unit along major rivers or overland routes into the Kuskokwim Mountains.

Management Intent:

The emphasis of state land management in the Holitna management unit is protection of the fish and wildlife habitat, and support for continued subsistence, commercial, and sport use of these resources. Forestlands will continue to be available for personal and commercial timber harvest. Most of the unit will remain in public ownership, but opportunities for private use of state lands may be made available through a land disposal near Sleetmute, and a land disposal and remote cabin sites along the southern perimeter of the unit and in the Door Mountains. The remote cabin sites and land disposals are located to offer sites that can support private recreation and settlement, while avoiding the main public use areas and most important habitat lands. Land disposal offerings total approximately 3,600 acres of land and there are 56 remote cabin sites.

Most state lands will remain open to mineral entry. However, to protect important salmon populations, spawning beds and rearing areas in known mineralized zones will be closed to new mineral entry. Closures include portions of Portage, Bakbuk, Mukslulik, Taylor, Kiknik, and Chuilnuk creeks, a portion of the Gemuk River, Gemuk Lake, part of an unnamed tributary to the Holitna between Bakbuk and Portage Creeks, and an unnamed tributary of the Hoholitna in the Door Mountains. Uplands along the Gemuk River, Gemuk Lake, Mukslulik Creek and unnamed tributaries of the Holitna and Hoholitna river drainages will be subject to leasehold location requirements to ensure compatibility of mining with salmon spawning and king salmon rearing areas.

In addition to state-owned uplands, the beds of the Kuskokwim, Holitna, Hoholitna, and other navigable waters are state owned and are subject to the guidelines of this plan.

Subunit 15a - Holitna-Hoholitna Corridors

Subunit 15a contains the main stems of the Holitna and Hoholitna rivers, the core of the Holitna basin. It receives more use for subsistence and sport hunting for moose than any other subunit in the planning area, and is important for salmon spawning, and harvest of salmon and resident fish. The Department of Fish and Game's only Kuskokwim weir for estimating the size of salmon runs is located at Kashegelok in the southern part of the subunit. The forests along the rivers are the most productive in the Holitna basin, and some of the best in the entire planning area. This subunit is state owned except for a number of Native allotments along the river. Three permits for trapping cabins have been issued within the subunit. Subunit 15a is accessible by boat and small plane.

The Holitna and Hoholitna Corridors will be kept in public ownership and managed to protect the fish and wildlife habitat and populations, and to support continued use of these resources. The forest lands will be managed to provide timber for personal and commercial and timber harvest. Other uses of this land are permitted when compatible with the primary intent of protecting the fish and wildlife resources. Most state lands in this subunit will remain open to new mineral entry; however, portions of Whitewater Creek, Kiknik Creek, and from unnamed tributaries to Kiknik Creek will be closed to protect salmon rearing areas.

In recognition of the outstanding habitat, forestry, and human use values of this area, it is also recommended that the legislature consider designating it as a state Public Use Area. The Public Use Area would contain subunit 15a and the adjacent portions of subunits 15b and 15c that are rated A-2 ("special value") habitat (see in Appendix A). This designation would be intended to keep these lands in permanent public ownership; protect the fish and wildlife habitat; promote forest management; and ensure that fish, wildlife, and forest resources continue to be available for personal and commercial use. Other uses will be allowed whenever compatible with the intent to protect and manage habitat and forest resources. The Public Use Area would be managed by DNR under a management plan prepared with the concurrence of the Department of Fish and Game.

Re: Proposal for Holitna River Basin Hunting, Fishing and Trapping Reserve

Dear Mr. Roczicka:

Thank you for allowing Calista Corporation to review and comment on the proposed legislation to establish the Holitna River Basin Reserve.

The proposed legislation focuses chiefly on fish and wildlife resource and habitat management. Passage of such legislation will be most successful if it is not complicated with side issues, such as development restrictions on non-wildlife resources, which could distract from the main purpose of the proposal.

The Kuskokwim Area Plan for Management Area 15 – Holitna River, states that all areas within Area 15 are open to leasable minerals and most areas are open to locatable minerals with the exception of certain named and identified streams designated as important for salmon spawning and rearing. These waters are already closed to new locatable mineral entry through the Kuskokwim Area Plan.

While Calista does not have a problem with the proposal as presently written, Calista would have concerns should the proposal affect our access to our land holdings in the Holitna River basin.

Please keep us informed of the status of the proposed legislation and particularly of any revisions to the proposed language.

Thank you for your consideration and attention.

Sincerely,

CALISTA CORPORATION

Andrew J. Guy

P.O. BOX 219 • BETHEL, ALASKA 99559 • PHONE 543-3521

42ND ANNUAL CONVENTION
BETHEL, ALASKA OCTOBER 3-5, 2006

RESOLUTION 06-10-04

TITLE: SUPPORT FOR THE CREATION OF A HOLITNA BASIN HUNTING, FISHING, AND TRAPPING RESERVE

WHEREAS The Association of Village Council Presidents (AVCP) is the recognized tribal organization and non-profit Alaska Native regional corporation for its fifty-six member indigenous Native villages within Western Alaska and supports the endeavors of its member villages; and

WHEREAS AVCP fully supports its member villages in all aspects of their self-determination, health and well-being; and

WHEREAS The Holitna basin contains the greatest concentration of salmon spawning areas in the entire Kuskokwim drainage and the most productive moose habitat that are extremely important to subsistence harvest needs of all residents throughout the Kuskokwim Drainage; and

WHEREAS Recent research has shown that the Holitna Basin provides spawning and rearing habitat for up to 70% of the sockeye salmon and up to 51% Chinook salmon for the Kuskokwim Drainage, and great but at this time unknown numbers of chum and coho salmon; and

WHEREAS Recent surveys show that approximately 50% of the subsistence Chinook salmon harvest for the entire State of Alaska occurs in the Kuskokwim Drainage, and the Holitna River provides a large portion of those salmon for both subsistence and commercial salmon harvests; and

WHEREAS Recent studies have shown that several whitefish species use the Holitna Drainage for spawning and rearing, and that these Holitna River whitefish travel throughout the Kuskokwim Drainage and provide subsistence opportunity for all Kuskokwim River residents; and

WHEREAS For generations the Holitna Basin has maintained abundant moose populations that provided a high level of annual subsistence harvest for residents throughout the Kuskokwim Drainage; and

Resolution 06-10-04

WHEREAS In the last decade, these moose populations have substantially declined primarily due to lack of active management brought about by outside administrative and political interference, that has caused extreme hardships in meeting subsistence needs in communities throughout the Kuskokwim Drainage and resulted in the state Board of Game closing the Holitna Basin to moose hunting entirely in 2006 due these depleted numbers; and

WHEREAS The Holitna Basin is currently included in an active predator management plan area that is threatened with being prematurely shut down due to another lawsuit recently filed by animal welfare advocates in August, 2006; and

WHEREAS The magnitude and fundamental support of the Holitna River system for sustained yield and harvest of fish stocks & wildlife populations throughout the entire Kuskokwim drainage, and their importance to residents of the region cannot be over emphasized; and

WHEREAS The Kuskokwim Area Plan adopted by DNR in 1988 stated, "The emphasis of state land management in the Holitna management unit is protection of the fish and wildlife habitat, and support for continued subsistence, commercial, and sport use of these resources.", recommending further that the Holitna & Hoholitna be especially managed area to protect these uses "In recognition of the outstanding habitat, forestry & human use values of the area"; and

WHEREAS In March of 2006 the Board of Game approved the creation of The Holitna Basin Hunting and Trapping Reserve with the purpose of focusing management to protect and help moose populations recover and be maintained in the future to provide for amounts necessary for subsistence and reasonable harvest opportunities; and

WHEREAS A proposal is before the Board of Fisheries to create a Holitna Basin Fishing Reserve to ensure long-term protection and sustainable harvest of Kuskokwim fish populations that is scheduled to be considered at their January, 2007 meeting; and

WHEREAS Any action of the State Board of Game or Board of Fisheries to create a Reserve is subject to approval by the State Legislature; and

WHEREAS The primary intent and purpose of the creation of this Reserve is specifically to emphasize and ensure the conservation, maintenance and enhancement of healthy and abundant fish and game populations important to providing established amounts necessary for subsistence,

Resolution 06-10-04

reasonable harvest opportunity, and other identified population goals and harvest objectives that promote or maintain these populations at the high levels they have provided for generations.

NOW THEREFORE BE IT FURTHER RESOLVED THAT AVCP urges support by all residents of the region that have utilized the resources of the Holitna Drainage in fulfilling their annual subsistence needs over the generations, the State Board of Fisheries, its State House and Senate representatives, the Alaska State Legislature, and State Administration for the creation of a Holitna Basin Hunting, Fishing & Trapping Reserve, and future implementations serving its primary purpose and intent.

BE IT FURTHER RESOLVED THAT these management actions furthering the primary intent will not be interrupted, curtailed, over-ridden or discontinued, unless it has been first fully documented scientifically, and conclusively proven that such actions are counter-productive or ineffective in promoting, maintaining or enhancing fish and game populations for maximizing sustained yield or providing for reasonable harvest opportunity.

ADOPTED by the Association of Village Council Presidents during its Annual Convention held at Bethel, Alaska, this 4th day of October 2006 with a duly constituted quorum of delegates.

RESOLUTION NO. 06-16

A RESOLUTION OF THE NATIVE VILLAGE OF SLEETMUTE TRADITIONAL COUNCIL, THE GOVERNING BODY FOR THE NATIVE VILLAGE OF SLEETMUTE TO URGE SUPPORT FOR THE CREATION OF THE HOLITNA BASIN HUNTING, FISHING, AND TRAPPING RESERVE

WHEREAS: The Native Village of Sleetmute Traditional Council is the federally recognized governing body of the Native Village of Sleetmute; and

WHEREAS: The Holitna basin contains the greatest concentration of salmon spawning areas in the entire Kuskokwim drainage and the most productive moose habitat that are extremely important to subsistence harvest needs for all residents throughout the Kuskokwim Drainage particularly the residents of Sleetmute and surrounding villages.

WHEREAS: The Upper Kuskokwim Region is one of the few regions in the State where subsistence still plays a larger role in the local economy than cash does.

WHEREAS: Recent research has shown that the Holitna Basin provides spawning and rearing habitat for up to 70% of the sockeye salmon and up to 51% Chinook salmon for the Kuskokwim Drainage above Kalskag, and great but at this time unknown numbers of chum and coho salmon.

WHEREAS: Recent surveys show that approximately 50% of the subsistence Chinook salmon harvest in the State of Alaska occurs in the Kuskokwim Drainage, and the Holitna River provides a large portion of the salmon taken by both the subsistence and commercial salmon harvest.

WHEREAS: The magnitude and fundamental support of the Holitna River system for sustained yield of fish stocks throughout the entire Kuskokwim drainage, and the importance of those fish stocks to residents of the Kuskokwim cannot be over emphasized.

WHEREAS: Recent studies have shown that highly used subsistence whitefish species humpback whitefish and least cisco, and likely as well broad whitefish use the Holitna Drainage during their fall spawning season and that these Holitna River whitefish travel throughout the Kuskokwim Drainage and provide subsistence opportunity for all Kuskokwim River residents.

WHEREAS: For generations the Holitna Basin has maintained abundant moose populations that provided a high level of annual subsistence harvest for residents throughout the Kuskokwim Drainage and across the State.

WHEREAS: In addition, these lands support concentrations of bear and waterfowl, and provide winter range for caribou and extensive habitat for furbearers.

WHEREAS: In the last decade, these moose populations have substantially declined primarily due to lack of active management brought about by outside administrative and political interference that has caused extreme hardships in meeting subsistence needs in communities throughout the Kuskokwim Drainage.

WHEREAS: The Kuskokwim Area Plan adopted in 1988 stated that, "The emphasis of state land management in the Holitna management unit is protection of the fish and wildlife habitat, and support for continued subsistence, commercial, and sport use of these resources."

WHEREAS: In March of 2006 the Board of Game closed the Holitna Basin to moose hunting entirely due to the depleted numbers and a lack of sustainable surplus for harvest.

WHEREAS: In March of 2006 the Board of Game also approved the creation of The Holitna Basin Hunting and Trapping Reserve with the purpose of focusing management to help moose populations recover and be maintained to provide for amounts necessary for subsistence and reasonable harvest opportunities.

WHEREAS: A proposal is before the Board of Fisheries to create The Holitna Basin Fishing Reserve to ensure long-term protection and sustainable harvest of fish populations and their habitat.

WHEREAS: The primary intent and purpose of the creation of this reserve is to ensure the conservation, maintenance and enhancement of healthy and abundant fish and game populations important to providing established amounts necessary for subsistence, reasonable harvest opportunity, and other identified population goals and harvest objectives that promote or provide for high levels of human consumptive use

WHEREAS: Prior to the Holitna Basin being designated as an "Intensive Management Area", management actions furthering the primary intent were interrupted, curtailed, pre-empted or discontinued.

WHEREAS: These board actions are subject to formal creation and final approval by the State Legislature.

NOW THEREFORE BE IT RESOLVED: That the Sleetmute Traditional Council gives its full support to the creation of The Holitna Basin Hunting, Fishing, and Trapping Reserve and requests the support of all communities in the region that utilize the Holitna Drainage to fulfill their annual subsistence needs.

THEREFORE BE IT FURTHER RESOLVED: That management actions furthering the primary intent will not be interrupted, curtailed, pre-empted or discontinued, unless it has been first fully documented scientifically, and conclusively proven that such programs are counter-productive or ineffective in promoting, maintaining or enhancing fish and game populations for maximizing sustained yield or providing for reasonable harvest opportunity.

THEREFORE BE IT FURTHER RESOLVED: The Sleetmute Traditional Council urges support of its House and Senate representatives, the Alaska State Legislature, and State Administration for the creation of this reserve and active support of its primary purpose and intent.

This will certify the foregoing resolution was approved at a Native Village of Sleetmute Traditional Council meeting held this 21st day of SEPT., 2006, at which a quorum were in attendance. The vote was 5 For and 0 Against.

Re: House Bill 227

January 31, 2010

Dear Representative Mike Chenault and Senator Gary Stevens,

The Alaska Board of Fisheries supports the language providing for resource protection found in House Bill 227 which would establish a fishing and hunting reserve in the Holitna River Basin. This action is consistent with the Board of Fisheries responsibilities in the conservation and development of fishery resources in the state.

Thank you for your interest in the conservation and development of Alaska's fisheries resources.

Sincerely,

Vince Webster
Chairman, Alaska Board of Fisheries

Subject: Regarding HB 227

Dear Representative Neuman:

In reference to HB 227:

This bill seems to be nothing short of unadulterated game farming under the guise of wildlife management.

It seeks to manage an area specifically for one species, an action that in the past has always shown itself to be disastrous.

It substitutes anecdotal evidence for proper scientific measurement and observation in determining the status of the area's wildlife..

It engages unlimited predator control in place of precise and biologically-indicated management.

It creates an area specifically tailored not to the best goals for the habitat and its fauna but for the sports hunter.

Eliminates ongoing public input on the matter.

Perhaps most telling is section C, item 3 of the bill in which is the following text:

(3) consider scientific evidence augmented by historical and local environmental knowledge when evaluating management activities.

Despite this statement the bill itself ignores input already presented by upper level staff of Fish and Game for the Holitna region at the recent Fbks. Board of Game meeting opposing expanding predator control due to the cost and social problems associated with intensive management.

This is a bill born not of scientific study and evaluation but rather as an extreme response to the fanatic efforts to substitute intensive management in place of genuine science wherever possible.

I strongly urge you to deny this bill.

Thank you,

Art Greenwalt

HB 227

Wade Willis / Anchorage Alaska
907-223-0218 / adventure@alaska.com

I ***oppose*** HB 227 for the following reasons:

1. The bill duplicates management policy and regulations already in place:
    a. ***What do we get with this bill?*** A boundary that will limit access to ALL Alaskan's – think of the long term. This is nothing but a controlled use area – every CUA limits harvest opportunity in one way or another. **That's ALL we get;**
    b. The state already manages for a subsistence priority for ***ALL*** fish and game resources on state lands (Tier I and II);
    c. The state already has the authority to conduct predator control on any state lands via a well considered public process that includes the Board of Game, scientific review, and public comment; (IM LAW)

2. The proponents of this bill believe that aggressive predator control is the ONLY option to manage for abundance – ***I strongly disagree***:
    a. Mandating the use of predator control ties the hands and limits the management options of the ADF&G;
    b. ***Mandating management policy is simply bad business*** – the legislature should not limit the ADF&G's options;
    c. Liberalizing and ***mandating*** the use of predator control based on "substantial evidence" clearly indicates that the proponents feel the current "scientific" justification is not necessary;
    d. Predator control is a very contentious issue in Alaska. This bill ***would remove important public comment opportunity and detailed intensive management plans from the authorization process*** – relegating the decision to close door decisions within the ADF&G;
    e. Significant social problems are occurring in other areas where predator control has been used, including GMU 20A and in the McGrath area. Harvest techniques in the absence of predators are not socially acceptable at this time, in particular, cow and calf hunting and increasing non local and nonresident opportunity.

3. This bill infringes upon the equal access clause for all Alaskans;
    a. ***I fully support protecting local subsistence resources and fully believe we currently have the regulations in place to accomplish this goal;***
    b. HB 227 simply establishes a boundary that can be used to deny residents equal access to our public resources – the bill recommends that other regions get "their own" bread basket area!

Subject: Please oppose HB227

Dear Representatives

Please vote against HB 227. Most Alaskan, myself included, are strongly opposed to predator control. As you know, This bill relegates the decision to use predator control to a single area biologist in the ADF&G instead of putting it through the public process. Predator control programs are not the answer to the ever-increasing numbers of human hunters – especially nonresident trophy hunting.

Deputy Commissioner Pat Valkenberg and the ADF&G are under increasing scrutiny right now for their outrageous actions regarding predator control in Alaska. This bill liberalizes the use of predator control by **eliminating the need for the Board of Game to develop an intensive management plan and allow public input on its use.**

Please oppose HB 227.

SSHB 227, Holitna River Basin Reserve
Changes from HB 227 Version S (10.1.09) to SSHB 227 Version K (1.19.10)

On October 12, 2009, Version S was presented to the House Resources Committee at their meeting in Bethel. On January 19, 2010 (the first day of Session) SSHB 227 Version K was read over the Floor for the first time. This document details the substantive changes between these versions.

On version K, P. 2, line 8, subsection (b)
Note "and sports use" was changed to "and other consumptive uses." This was not meant to exclude any user groups from the purpose of the bill (for the area to be managed to perpetuate abundance and use), but rather to be more inclusive.

P.2, line 23, subsection (c)
The phrase "and notwithstanding any other provision of law" was removed. If this phrase was not removed and the bill became law, the Holitna area would not subject to all the other intensive management laws already in statute. This was not the sponsor's intent, hence the deletion.

P. 2, line 25, subsection (c)
Inserted: "subject to priorities among areas in which intensive management actions are carried out as determined by Department of Fish and Game, Board of Fisheries, and Board of Game". Without this addition, HB 227 could be interpreted to cause the Holitna to have Intensive Management priority over other IM areas in the state. DFG has limited resources, and the sponsor felt it was best up to the Department to decide where to focus their IM efforts.

P.3, Line 16 subsection (e)
In version S, public access was regulated by DNR in agreement with DFG, version K it's changed to DNR regulating *in consultation* with DFG.

P.3, line 21 subsection (f)
In version S, access to and from private property was regulated by agreement *among* DNR, DFG, and the private property owner; now in version K it's regulated by DNR *in consultation with* DFG and the private property owner.

P.3, line 25, subsection (g)
In version S, entry for exploration and development of natural resources was subject to approval by both DNR and DFG, now in version K it's subject to approval by DNR *in consultation* with DFG.

P. 4, line 2, subsection (i)
Version K includes township range information that legally defines the Reserve boundary.

Sponsor Statement

House Bill 227: Holitna River Basin Hunting, Fishing & Trapping Reserve

This bill addresses several major areas of identified needs in protecting or furthering the management concepts embodied within the state's intensive management policies.

First, HB 227 establishes a burden of proof for legal challenges by animal welfare groups – legal challenges that may suspend or pre-empt active management programs designed to manage fish or game populations for human harvest benefit. It seeks to define legal avenues for process challenges in these designated areas by animal welfare entities that often emphasize political science over biological science within our state's management structure.

Second, although some limited active management programs have been implemented with the support of past gubernatorial administrations, this bill is intended to strengthen statutory, constitutional-related active management principles.

Third, the bill is specifically written to be compatible with other "Breadbasket" areas within the state's Intensive Management Areas which exemplify high quality habitat and productivity contributions to entire GMU sub-regions.

Finally, it intends to clearly establish the priority and primary management use of the area to protect the hunting, fishing & trapping activities for future generations. Frustration has been expressed throughout the state where it was thought these values were being protected through the creation of Refuges or Public Use Management Areas only to see these areas experience increasing restrictions, closures, or other actions such as banning of firearms.

This proposed reserve concept was initiated by the Sleetmute Traditional and Orutsararmiut Native Councils; has records of support from the Lower Kuskokwim, Central Kuskokwim, Stony/Holitna and Anchorage Fish & Game Advisory Committees, Kuskokwim Salmon Management Working Group, Association of Village Council Presidents and Calista Corporation; and has undergone legal review through the State Board of Game process, twice receiving their endorsement.

Sectional Analysis
Holitna River Reserve
SSHB 227 – Version K

Section 16.20.700. Purpose
States that the purpose of establishing a fish and game reserve is to promote sustainable levels of human consumption of fish and game.

Section 16.20.710. Regulations
Gives authority to the Board of Game or Board of Fish (whichever is more appropriate) to adopt regulations designed to conserve fish and game; and to carry out the purpose as set forth in sections 16.20.700 and 16.20.720.

Section 16.20.720 (a)
All present and future state-owned land and water within the Holitna and Hoholitna River watersheds is designated as part of the Reserve.

Section 16.20.720 (b)
The Reserve is established to ensure:

1. Management and protection of fish and game populations and habitat to perpetuate subsistence use, commercial use, and other consumptive uses;
2. Management techniques that promote maximum use with sustained yield to maintain historical harvest levels with human consumptive use as a priority;
3. Maintenance of fish and game populations to provide for high levels of human consumptive use (within limits set by Fish and Game Boards);
4. Allowance for scientific research elucidating the effectiveness of management activities in this section in providing for current and future human harvest needs.

Section 16.20.720 (c)
The Department of Fish and Game, the Board of Fisheries and the Board of Game shall manage fish and game resources within the Reserve to provide for high levels of human harvest and, subject to priorities among intensively managed areas for which these entities set policy, shall:

1. Control predation and adjust predator and prey population ratios thru appropriate means;
2. Conduct management actions designed to further the purposes of this section so long as the appropriate board has not found such actions to be ineffective at maintaining fish and game populations commonly harvested for food by humans;

3. Consider scientific evidence augmented by local environmental knowledge when evaluating management activities.

Section 16.20.720 (d)
The Department of Natural Resources may acquire privately owned land within the Reserve by purchase or exchange, but not thru eminent domain.

Section 16.20.720 (e)
Public access to the Reserve may be regulated by DNR, in consultation with DFG, as necessary to meet the purposes of this section and to protect access to, and development of, other resources within the Reserve.

Section 16.20.720 (f)
Access corridors established by DNR, in consultation with DFG and a private property owner, shall guarantee access to and from private property within the Reserve.

Section 16.20.720 (g)
Entry into the Reserve to explore or develop nonrenewable resources must be approved by DNR, in consultation with DFG, and such activities must be compatible with the purpose of this section.

Section 16.20.720 (h)
Except as otherwise provided in this section, DFG and DNR shall exercise their respective authority over the Reserve thru a management plan prepared by DFG in consultation with DNR.

Section 16.20.720 (i)
Reserve boundaries are defined as including all the sections (listed beneath their respective township and range designations) on the last eight pages of this bill.

MEMORANDUM

Date: March 11, 2010

To: Rep. Craig Johnson, Co-Chair House Resources
Rep. Mark Neuman, Co-Chair House Resources

From: Rep. Bob Herron

Re: HB 227, HOLITNA BASIN RESERVE

The following is a proposed change to HB 227 that should help satisfy the concerns both DNR and Calista Corporation have expressed on this bill. This amendment, by including mineral and oil & gas development within the purpose section, will give those activities equal priority with consumptive human uses of the fish and game resources.

Amendment to HB 227, Holitna Hunting, Fishing and Trapping Reserve

Sec. 16.20.700. Purpose. The purpose of establishing a fish and game reserve is to promote management activities to rebuild or enhance fish and wildlife populations and habitats to maintain historical and sustainable harvest levels for continued high levels of human consumptive use of these resources and to perpetuate other public uses of the area, including forest management, mineral entry and development, oil and gas entry and development and other forms of public use of public land not incompatible with the purpose stated in this section.

Date: February 4, 2010

To: Representative Craig Johnson, Co-Chair
Representative Mark Neuman, Co-Chair
House Resources Committee

From: Representative Bob Herron
House District 38

RE: House Bill 227, Holitna River Reserve

I respectfully request a hearing for HB 227, *"An Act relating to the establishment of state fish and game reserves; creating the Holitna River Basin Hunting, Fishing, and Trapping Reserve; and providing for an effective date."*

HB 227 intends to clearly establish the priority and primary management use of the Holitna River Basin to protect the hunting, fishing & trapping activities for future generations.

If you have any questions or need additional information, please call Rob Earl at 465-5141.

MEMORANDUM March 24, 2010

SUBJECT: Providing data to the Department of Natural Resources (Amendment to CSHB 229( ), Draft Version "E"; Work Order No. 26-LS0900\E.7)

TO: Representative Paul Seaton
Attn: Louie Flora

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is the amendment you requested that would require a person entitled to the credit in AS 43.20.043 to submit data to the Department of Natural Resources (DNR) under AS 43.55.025(f)(2) that would be required for a credit under AS 43.55.025.

In the amendment, a person *entitled* to the credit would be required to provide the data to DNR. Is your intent to require this of a person who is entitled to the credit, in other words who is making the qualifying investment or expenditure, or would you rather require the data submission only before the person actually applies the credit against a tax liability?

If you would like the information submitted to DNR only before taking the credit, you could add the following language after "**(3)**" in the amendment: "**before applying the credit against a tax liability under this chapter,**".

If I may be of further assistance, please advise.

REPRESENTATIVE MIKE CHENAULT
SPEAKER OF THE HOUSE

SPONSOR STATEMENT

HOUSE BILL 229: "*An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas for delivery and sale from a lease or property in the state; providing for an effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date.*"

House Bill 229 amends and extends the exploration and development incentive tax credit that was originally enacted in the 23rd legislature in 2003 as HB 61. This tax credit continues to be applicable, under the Alaska Net Income Tax Act, to operators and working interest owners directly engaged in the exploration for and development of natural gas, primarily in the Cook Inlet area.

To more strongly encourage companies to invest additional capital in exploring for and developing new natural gas reserves, this legislation makes four significant changes to current law:

1. Increases the amount of the credit to 25% (from 10%) of the amount of qualified capital investment and qualified services spending.
2. Removes the 50% limitation on the amount of credits that can apply in a single year.
3. Removes the "successful efforts" requirement that developers must find and deliver new gas resources to market to qualify for the credit.
4. Extends the sunset date of the investment tax credit from January 1, 2013 to January 1, 2020.

This legislation makes no changes to definitions of qualified capital investment or qualified services.

Annual natural gas production and supply in the Cook Inlet area have been declining for a number of years. During the same time, demand has been increasing steadily. Therefore, a sharp increase in drilling to find new reserves is drastically needed. The original Investment Tax Credit enacted in 2003, while modestly successful in stimulating new drilling, needs to be a more effective incentive to developers in order to increase capital spending. These changes will go a long way toward achieving that goal.

26-LS0900\E

CS FOR HOUSE BILL NO. 229( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Olson, Neuman

A BILL

FOR AN ACT ENTITLED

"An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas from a lease or property in the state; providing for an effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20.043(a) is amended to read:

(a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer that is an operator or working interest owner directly engaging in the exploration for and development of gas may apply as a credit against the state tax liability that may be imposed on the taxpayer under this chapter,

(1) for a tax year beginning after December 31, 2002, **and before**

New Text Underlined [DELETED TEXT BRACKETED]

L 3880

January 1, 2010,

(A) [(1)] 10 percent of the taxpayer's qualified capital investment; and

(B) [(2)] 10 percent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment **for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit** under **(A) of this paragraph; and**

(2) for a tax year beginning after December 31, 2009,

(A) 25 percent of the taxpayer's qualified capital investment; and

(B) 25 percent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit under (A) of this paragraph [(1) OF THIS SUBSECTION].

*** Sec. 2.** AS 43.20.043(b) is amended to read:

(b) Expenditures qualifying for the taxpayer's qualified investment credit under **(a)(1)(A) or (a)(2)(A)** [(a)(1)] of this section must be

(1) cash expenditures or binding payment agreements entered into after

(A) June 30, 2003**, and before January 1, 2010, if the claim of the credit is made under (a)(1)(A) of this section; or**

(B) December 31, 2009, if the claim of the credit is made under (a)(2)(A) of this section; and

(2) made for assets first placed in service in the state in or before the tax year in which the credit is claimed through the date the

(A) wells [RESERVES] produce gas for sale and delivery; for purposes of this **subparagraph** [PARAGRAPH], "placed in service in the state" means that the first use of the qualified investment is in this state; if the

property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify for the investment credit**; or**

(B) a gas well is determined not to be capable of production in commercial quantities.

*** Sec. 3.** AS 43.20.043(c) is amended to read:

(c) The credit **each** [PER] tax year allowed by (a) of this section may not exceed [50 PERCENT OF] the taxpayer's total tax liability under this chapter, but shall be calculated before the application of any other credits allowed under this chapter. An unused portion of the credit for the tax year

(1) may be carried forward into one or more of the following tax years, except that the unused credit from one tax year may not be carried forward for more than five following tax years;

(2) shall be applied to the taxpayer's tax liability under this chapter during the following tax year before allowance of a credit allowed by (a) of this section for that following tax year.

*** Sec. 4.** AS 43.20.043(f) is amended to read:

(f) A taxpayer is not entitled to a credit under this section for expenditures that are made or incurred for the qualified capital investment or for qualified services made for exploration and development of gas that occur in the area of Alaska lying north of 68 degrees North latitude or that are made or incurred to transport gas from reserves located in the area of Alaska lying north of 68 degrees North latitude **or for the delivery of Alaska North Slope natural gas to tidewater below 68 degrees North latitude**.

*** Sec. 5.** AS 43.20.043(i)(1) is amended to read:

(1) "qualified capital investment" means a cash expenditure or binding payment agreement, as described in (b)(1) of this section, for real property or tangible personal property used in this state in the exploration and development of **any** gas **reserve regardless of whether there has been commercial production in the area or whether the exploration and development activity results in the production of gas or a well not capable of production in commercial quantities** [RESERVES IN

A GAS RESERVOIR FOR WHICH THERE HAS NOT BEEN COMMERCIAL PRODUCTION IF THE RESERVES PRODUCE GAS FOR SALE AND DELIVERY]; in this paragraph, "property" includes

(A) property used in the operation or maintenance of facilities for exploration or development of gas;

(B) property that is placed in use under a capitalized lease or an operating lease; and

(C) the following property used for the exploration and development of gas:

(i) machinery, appliances, supplies, and equipment;

(ii) drilling rigs, wells, gathering lines and transmission lines, pumping stations, compressor stations, power plants, topping plants, and processing units;

(iii) roads, docks and other port facilities, and helicopter pads;

(iv) maintenance equipment and facilities, and maintenance camps and other related facilities; and

(v) communications facilities owned by a person whose principal business in the state is the exploration for or development of gas and whose operation of the communications facilities directly relates to the conduct of that business;

*** Sec. 6.** AS 43.20.043 is amended by adding a new subsection to read:

(j) A taxpayer shall claim the credit authorized in (a) of this section on a timely filed tax return for the year in which the qualified capital investment is made, on a timely filed amended tax return, or on a timely filed tax return for the year immediately following the year in which the qualified capital investment is made. The election to apply the credit authorized in (a) of this section may not be an irrevocable election.

*** Sec. 7.** The uncodified law of the State of Alaska enacted by sec. 3, ch. 61, SLA 2003, is amended to read:

Sec. 3. CLAIM OF GAS EXPLORATION AND DEVELOPMENT TAX

CREDIT CONTINUED. A taxpayer who, on the effective date of repeal of AS 43.20.043 by **secs. 2 and 5, ch. 61, SLA 2003, as amended by sec. 8** [SEC. 2] of this **2010** Act, claims the balance of any unused portion of the gas exploration and development tax credit as a carry-forward under AS 43.20.043(c), may, notwithstanding the repeal of that subsection, continue to claim the balance of the credit until the claim of the credit is exhausted or until the tax year ending December 31, **2024** [2017], whichever occurs earlier. The provisions of AS 43.20.043 as they read on the day immediately preceding the effective date of the repeal of that section apply to the claim of the credit if carried forward under this section.

*** Sec. 8.** Section 5, ch. 61, SLA 2003, is amended to read:

Sec. 5. Section 2**, ch. 61, SLA 2003,** [OF THIS ACT] takes effect January 1, **2020** [2013].

*** Sec. 9.** This Act takes effect immediately under AS 01.10.070(c).

SPEAKER OF THE HOUSE

SECTIONAL ANALYSIS

COMMITTEE SUBSTITUTE FOR HOUSE BILL 229: *"An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas from a lease or property in the state; providing for an effective date by amending the effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date."*

Section 1: Amends 434.20.043(a), Gas exploration and development tax credit. Adds before January 1, 2010, to the time in a tax year for which a credit against state tax liability may be applied. Also further adds language that for a tax year beginning after December 31, 2009, 25 per cent of the taxpayer's qualified investment and 25 per cent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit.

Section 2: Amends AS 43.20.043(b), Gas exploration and development tax credit. Adds before July 1, 2010, if a claim is made under (a)(1)(A) found in Section 1 or December 31, 2009, if the claim of credit is made under (a)(2)(A) also found in Section 1. Replaces the word "reserves" with wells and "paragraph" with "subparagraph". It adds language that includes expenditures for a gas well that is determined not to be capable of production in commercial quantities as qualifying for the taxpayer's qualified investment credit.

Section 3: Amends AS 43.20.043(c), Gas exploration and development tax credit. States the credit allowed will be made for each tax year rather than per year and eliminates the 50 per cent provision of the taxpayer's total tax liability.

Section 4: Amends AS 43.20.043(f), Gas exploration and development tax credit. Adds language that disallows a credit under this section for the delivery of North Slope gas to tidewater below 68 degrees north latitude.

Section 5: Amends AS 43.20.043(i)(1), Qualified capital invstment. Deletes "reserves in a gas reservoir for which there has not been commercial production if the reserves produce gas for sale and delivery". It adds language that includes any gas reserve regardless of whether there has been commercial production in the area or whether the

exploration and development activity results in the production of gas or a well not capable of production in commercial quantities.

Section 6: Amends AS 43.20.043, Adds a new subsection that reads: A taxpayer shall claim the credit authorized in (a) of this section on a timely filed tax return for the year in which the qualified capital investment is made, on a timely filed amended tax return, or on a timely filed tax return for the year immediately following the year in which the qualified capital investment is made. The election to apply the credit authorized in (a) of this section may not be an irrevocable election.

Section 7: Amends uncodified law enacted by Section 3, Chapter 61, SLA 2003. Adds secs. 2 and 5, ch. 61, SLA 2003 as amended by Section 8 of this bill. Also amends the carry forward of the tax xcredit from 2017 to 2024.

Section 8: Amends uncodified law enacted by Section 5, Chapter 61, SLA 2003. Adds ch. 61, SLA 2003 to take effect on January 1, 2020 instead of 2013.

Section 9: Immediate effective date.

LAWS OF ALASKA

2003

Source
SCS CSHB 61(RES)

Chapter No.
_____

AN ACT

Establishing an exploration and development incentive tax credit for operators and working interest owners directly engaged in the exploration for and development of gas for sale and delivery without reference to volume from a lease or property in the state; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

Establishing an exploration and development incentive tax credit for operators and working interest owners directly engaged in the exploration for and development of gas for sale and delivery without reference to volume from a lease or property in the state; and providing for an effective date.

*** Section 1.** AS 43.20 is amended by adding a new section to read:

Sec. 43.20.043. Gas exploration and development tax credit. (a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer that is an operator or working interest owner directly engaging in the exploration for and development of gas may apply as a credit against the state tax liability that may be imposed on the taxpayer under this chapter, for a tax year beginning after December 31, 2002,

(1) 10 percent of the taxpayer's qualified capital investment; and

(2) 10 percent of the annual cost incurred by the taxpayer for qualified

services in the state during each tax year for which a credit is allowable for a qualified capital investment under (1) of this subsection.

(b) Expenditures qualifying for the taxpayer's qualified investment credit under (a)(1) of this section must be

(1) cash expenditures or binding payment agreements entered into after June 30, 2003; and

(2) made for assets first placed in service in the state in or before the tax year in which the credit is claimed through the date the reserves produce gas for sale and delivery; for purposes of this paragraph, "placed in service in the state" means that the first use of the qualified investment is in this state; if the property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify for the investment credit.

(c) The credit per tax year allowed by (a) of this section may not exceed 50 percent of the taxpayer's total tax liability under this chapter, but shall be calculated before the application of any other credits allowed under this chapter. An unused portion of the credit for the tax year

(1) may be carried forward into one or more of the following tax years, except that the unused credit from one tax year may not be carried forward for more than five following tax years;

(2) shall be applied to the taxpayer's tax liability under this chapter during the following tax year before allowance of a credit allowed by (a) of this section for that following tax year.

(d) To obtain the credit allowed by this section, the taxpayer shall, with the taxpayer's tax return, submit, on a form prescribed by the department, information that demonstrates that the taxpayer is eligible for the credit and evidence of the expenses that are the basis of the claim of the credit. The taxpayer has the burden of demonstrating compliance with the requirements of this section to entitle the taxpayer to the claim of and the amount of the credit.

(e) A taxpayer entitled to a credit under this section

(1) may not convey, assign, or transfer the credit to another taxpayer or

business entity unless the conveyance, assignment, or transfer of the credit is part of the conveyance, assignment, or transfer of the taxpayer's business;

(2) forfeits the credit to which the taxpayer is entitled during the tax year and any carryover of it under (c) of this section, but does not forfeit the portion of the credit that accrued in a previous taxable year that may be carried over under (c) of this section, if the taxpayer

(A) disposes of the qualified capital investment;

(B) takes the qualified investment out of service; or

(C) transfers the qualified investment out of this state.

(f) A taxpayer is not entitled to a credit under this section for expenditures that are made or incurred for the qualified capital investment or for qualified services made for exploration and development of gas that occur in the area of Alaska lying north of 68 degrees North latitude or that are made or incurred to transport gas from reserves located in the area of Alaska lying north of 68 degrees North latitude.

(g) A taxpayer who obtains a credit under this section may not claim a tax credit or royalty modification provided for under any other title. However, a taxpayer may, at the taxpayer's election, forgo a credit under this section in order to continue to qualify for a credit provided for in another title.

(h) For purposes of determining allowable credits under this section, the department shall allow only expenditures and payments that are not inconsistent with the expenditures authorized under 26 U.S.C. (Internal Revenue Code) for exploration and development of natural resources.

(i) In this section,

(1) "qualified capital investment" means a cash expenditure or binding payment agreement, as described in (b)(1) of this section, for real property or tangible personal property used in this state in the exploration and development of gas reserves in a gas reservoir for which there has not been commercial production if the reserves produce gas for sale and delivery; in this paragraph, "property" includes

(A) property used in the operation or maintenance of facilities for exploration or development of gas;

(B) property that is placed in use under a capitalized lease or an

operating lease; and

(C) the following property used for the exploration and development of gas:

(i) machinery, appliances, supplies, and equipment;

(ii) drilling rigs, wells, gathering lines and transmission lines, pumping stations, compressor stations, power plants, topping plants, and processing units;

(iii) roads, docks and other port facilities, and helicopter pads;

(iv) maintenance equipment and facilities, and maintenance camps and other related facilities; and

(v) communications facilities owned by a person whose principal business in the state is the exploration for or development of gas and whose operation of the communications facilities directly relates to the conduct of that business;

(2) "qualified services"

(A) means expenditures for labor, seismic, and other services that are directly applicable to a qualified capital investment;

(B) does not include lease operating expenses.

*** Sec. 2.** AS 43.20.043 is repealed.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CLAIM OF GAS EXPLORATION AND DEVELOPMENT TAX CREDIT CONTINUED. A taxpayer who, on the effective date of repeal of AS 43.20.043 by sec. 2 of this Act, claims the balance of any unused portion of the gas exploration and development tax credit as a carry-forward under AS 43.20.043(c), may, notwithstanding the repeal of that subsection, continue to claim the balance of the credit until the claim of the credit is exhausted or until the tax year ending December 31, 2017, whichever occurs earlier. The provisions of AS 43.20.043 as they read on the day immediately preceding the effective date of the repeal of that section apply to the claim of the credit if carried forward under this section.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

REPORT ON EFFECT OF GAS EXPLORATION AND DEVELOPMENT TAX CREDIT. Not later than November 30, 2008, the Department of Revenue shall prepare and publish a report on the effect of the gas exploration and development tax credit authorized by AS 43.20.043, added by sec. 1 of this Act. The department shall advise the legislature of the availability of the report and, within the first 10 days of the First Regular Session of the Twenty-Sixth Alaska State Legislature, transmit copies of the report to the chairs or co-chairs of the House and Senate Resources Committees and the chairs or co-chairs of the House and Senate Special Committees on Oil and Gas, if established. The report must address

(1) the number of successful gas discoveries for which a tax credit is provided under AS 43.20.043;

(2) the volume or amount of new gas reserves brought into production for which a tax credit is provided under AS 43.20.043;

(3) the total credits allowed under AS 43.20.043 that are applied to the tax liability through the date of preparation of the report;

(4) the total credits applied for under AS 43.20.043 that are not yet approved as of the date of preparation of the report;

(5) royalties obtained and oil and gas property production taxes paid from new gas production and anticipated from gas production for production for which credits are allowed under AS 43.20.043; and

(6) any other information that, in the judgment of the commissioner of revenue, would evaluate the effectiveness of the gas exploration and development tax credit authorized under AS 43.20.043.

*** Sec. 5.** Section 2 of this Act takes effect January 1, 2013.

*** Sec. 6.** Except as provided in sec. 5 of this Act, this Act takes effect immediately under AS 01.10.070(c).

ALASKA DEPARTMENT OF REVENUE
TAX DIVISION

REPORT ON THE GAS EXPLORATION AND DEVELOPMENT TAX CREDIT UNDER AS 43.20.043

August 7, 2009

The uncodified law of Alaska requires the Department of Revenue to prepare and publish a report, not later than November 30, 2008, on the effect of the gas exploration credit under AS 43.20.043 Gas Exploration and Development Tax Credit.

The scope of the study is defined by

- legislation enacted in 2003
- tax year beginning after December 31, 2002
- NOT located in the area of Alaska lying north of 68 degrees north latitude

The metrics established to measure the effect are

- number of successful gas discoveries
- volume of new gas reserves
- credits allowed that are applied to the tax liability
- credits applied for that are not yet approved
- royalties obtained and production taxes paid

This report addresses each item in Sec. 4 according to the above metrics and scope.

(1) the number of successful gas discoveries for which a tax credit is provided under AS 43.20.043.

The Department has received claims for three operating units.

(2) the volume or amount of <u>new</u> gas reserves brought into production for which a tax credit is provided under AS 43.20.043.

None. The three operating units for which the Department received claims had already announced the discoveries prior to enactment of the legislation. The natural gas reserves associated with those discoveries are not considered new in the sense of being attributable to the legislation.

(3) the total credits <u>allowed</u> under AS 43.20.043 that are applied to the tax liability through the date of preparation of the report.

Confidentiality precludes disclosing the amount of credits claimed due to the number of credit claimants.

(4) the total credits applied for under AS 43.20.043 that are not yet approved as of the date of preparation of the report.

AS 43.20.043 does not contain any requirement for pre-approval. Pre-approval is not a customary provision for business tax credits in either the federal or state corporate income tax codes.

(5) royalties obtained and oil and gas property (and) production taxes paid from new gas production and anticipated from gas production for which credits are allowed under AS 43.20.043.

None. Companies applying for credits have not announced any new gas discoveries since enactment of the legislation. Without discoveries after the enactment of the legislation, there are no "new" reserves from which to produce "new" gas and thereby collect the associated royalties and taxes.

(6) any other information that, in the judgment of the commissioner of revenue, would evaluate the effectiveness of the gas exploration and development tax credit authorized under AS 43.20.043.

The Commissioner offers no additional information at this time.

Testimony of Carri Lockhart, Marathon Oil Co, in support of State of Alaska HB 229
House Resources Committee
March 15, 2010
DRAFT

Good afternoon. My name is Carri Lockhart and I am the Production Manager for Marathon Oil Company's Alaska Business. Before I begin, I would like to extend the appreciation of Marathon Oil Company, for this opportunity to testify in support of House Bill 229.

By way of background, Marathon Oil Company's Alaska operations are focused on natural gas production operations, limited to Cook Inlet. In 2009, our natural gas sales from Alaska averaged 87 mmcf/d. We sold to essentially every natural gas market available including the local utilities - Enstar and Chugach Electric, Tesoro, and the Department of Defense. We also provided natural gas to the ConocoPhillips/Marathon LNG plant. Marathon

has been in business in AK for over 55 years and we remain committed to serving the natural gas needs of SouthCentral AK through our various contractual commitments.

As you are aware, in 2003 the Legislature passed, and the Governor signed several bills directed at providing incentives for new exploration and development activities. Marathon was particularly interested in House Bill 61, which was intended to incentivize the exploration and development of natural gas reserves in the Cook Inlet. The bill under consideration by this committee, HB 229, will merely strengthen the incentives provided for by the earlier bill.

One might ask about the need to provide incentives for natural gas development in the Cook Inlet. The answer to this question is found by considering the long-term decline in natural gas reserves and deliverability which the Cook Inlet has experienced. What must be addressed is whether there is currently sufficient exploration and development activity to address such decline in reserves and deliverability, and not simply to ask whether the Cook

Inlet is running out of gas. At the current minimal level of Cook Inlet activity it is unlikely that Cook Inlet reserve additions will replace annual production on an ongoing long-term basis. As such, natural gas reserves and deliverability are at risk for continued decline in the Cook Inlet, resulting in the exposure to unmet utility needs in the future.

The lack of Cook Inlet activity (especially exploration) is an artifact of the historic oversupply of natural gas which kept prices well below lower-48 indexed prices, creating a lack of incentive for additional drilling. Furthermore the regulatory processes and deterioration in market availability have added to project uncertainty. The project economics and market uncertainties have made it difficult for projects to complete effectively for finite funding.

So how will HB 229 help?

As we are all painfully aware, Alaskan project economics are not considered solely on their absolute merit. They are also scrutinized on a relative scale in comparison to other worldwide opportunities in which companies such as Marathon may invest. The intent of HB 229 is to help level the playing field between Alaskan projects and other investment opportunities around the world.

HB 229 is intended to continue to provide an incentive to oil and gas exploration and development activities through an investment tax credit. You should have before you the committee substitute for HB229 (version E). Since this is the first hearing for HB229, let me walk through the main points of this new legislation: This legislation makes six significant changes to current law:

1. Section 1 increases the amount of the credit from 10% to 25% of the amount of qualified capital investment and qualified services spending as well as clarifying that the credits can apply to costs incurred for a gas reserve for which the taxpayer previously elected to claim a credit.

2. Section 2 adjusts the dates for when qualified expenditures must be made to qualify for the old 10% and new 25% credits. It also changes the term "reserves" to "wells" to clarify that "wells" produce gas whereas "reserves" are what is being produced.
3. Section 3 removes the 50% limitation on the amount of credits that can apply in a single year, increasing the time value of money for the credits.
4. Section 4 clarifies that the credits do not apply to North Slope gas that is brought into Southcentral.
5. Section 5 removes the "successful efforts" requirement that developers must find and deliver new gas resources to market to qualify for the credit. It also clarifies that the credits can be applied to a gas reserve regardless of whether or not there has been previous gas production in the area.
6. Section 6 clarifies that the credits can be taken on a current tax return, on a timely filed tax return or on a timely filed tax

return for the year immediately following the year the qualified capital investment is made.

7. Section 7 adjusts the date the credits expire from 2017 to 2024.
8. Section 8 extends the sunset date of the investment tax credit from January 1, 2013 to January 1, 2020.
9. Section 9 is gives this legislation an immediate effective date.

In summary, Marathon Oil Company believes HB 229 is one part of the equation to enhance Cook Inlet exploration and development activities, attempting to create more certainty in the overall natural gas deliverability in Cook Inlet. I would also add that timing is important. It takes multiple years to properly plan and execute drilling activity in Cook Inlet, which is necessary to meet future overall deliverability needs in SouthCentral AK.

I would be happy to answer any questions the committee may have.

REPRESENTATIVE MIKE CHENAULT

SPEAKER OF THE HOUSE

SECTIONAL ANALYSIS

COMMITTEE SUBSTITUTE FOR HOUSE BILL 229: *"An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas from a lease or property in the state; providing for an effective date by amending the effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date."*

Section 1: Amends 434.20.043(a), Gas exploration and development tax credit. Adds before January 1, 2010, to the time in a tax year for which a credit against state tax liability may be applied. Also further adds language that for a tax year beginning after December 31, 2009, 25 per cent of the taxpayer's qualified investment and 25 per cent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit.

Section 2: Amends AS 43.20.043(b), Gas exploration and development tax credit. Adds before July 1, 2010, if a claim is made under (a)(1)(A) found in Section 1 or December 31, 2009, if the claim of credit is made under (a)(2)(A) also found in Section 1. Replaces the word "reserves" with wells and "paragraph" with "subparagraph". It adds language that includes expenditures for a gas well that is determined not to be capable of production in commercial quantities as qualifying for the taxpayer's qualified investment credit.

Section 3: Amends AS 43.20.043(c), Gas exploration and development tax credit. States the credit allowed will be made for each tax year rather than per year and eliminates the 50 per cent provision of the taxpayer's total tax liability.

Section 4: Amends AS 43.20.043(f), Gas exploration and development tax credit. Adds language that disallows a credit under this section for the delivery of North Slope gas to tidewater below 68 degrees north latitude.

Section 5: Amends AS 43.20.043(i)(1), Qualified capital invstment. Deletes "reserves in a gas reservoir for which there has not been commercial production if the reserves produce gas for sale and delivery". It adds language that includes any gas reserve regardless of whether there has been commercial production in the area or whether the

exploration and development activity results in the production of gas or a well not capable of production in commercial quantities.

Section 6: Amends AS 43.20.043, Adds a new subsection that reads: A taxpayer shall claim the credit authorized in (a) of this section on a timely filed tax return for the year in which the qualified capital investment is made, on a timely filed amended tax return, or on a timely filed tax return for the year immediately following the year in which the qualified capital investment is made. The election to apply the credit authorized in (a) of this section may not be an irrevocable election.

Section 7: Amends uncodified law enacted by Section 3, Chapter 61, SLA 2003. Adds secs. 2 and 5, ch. 61, SLA 2003 as amended by Section 8 of this bill. Also amends the carry forward of the tax xcredit from 2017 to 2024.

Section 8: Amends uncodified law enacted by Section 5, Chapter 61, SLA 2003. Adds ch. 61, SLA 2003 to take effect on January 1, 2020 instead of 2013.

Section 9: Immediate effective date.

ANALYSIS CONTINUATION

Bill Language:

This bill extends the existing Gas Exploration and Development tax credit for investment in qualified capital expenditures and related qualified services, dealing with those capital expenditures. The Gas Exploration and Development tax credit is taken against the Corporate Income Tax (CIT), before any other federal or state credits are taken. One hundred percent of a company's tax liability can be offset by this credit in a given tax year. Additionally, credits from prior years must be used before current year credits can be used. A credit must be used within five years, otherwise it expires.

Currently, 10% of qualifying capital expenditures and operating expenditures can be taken as capital credits, sunsetting in 2013. The bill would increase the credit rate to 25% for qualifying capital and service expenditures incurred after June 30, 2011 for tax years beginning after December 31, 2010. The 25% rate would sunset on January 1, 2020. Under existing law all remaining tax credits under AS 43.20.043 expire December 31, 2017. This bill would change the sunset date to expire the tax year ending December 31, 2024.

In order for an expenditure to qualify for the 10% rate, cash expenditures or binding payment agreements must be made between June 30, 2003 and before July 1, 2011. Expenditures qualify for the 25% rate cash expenditures or binding payment agreements must be made after June 30, 2011.

The credit is limited to activities south of 68 degrees North latitude and exempts delivery of Alaska North Slope natural gas to tidewater.

Revenues:

It is difficult to determine the number of taxpayers who would take advantage of this tax credit, the degree to which the credit would be utilized, and other exogenous variables impacting the revenues the state would collect. Reduction in CIT are indeterminate at this time.

Additionally, the State of Alaska would most likely see a decline in the use of other credits. For example, since a taxpayer would have to utilize the Gas Exploration and Development tax credit first, it is likely we would see a reduction in the Education Credits. Especially, if the taxpayer has limited tax liabilities.

Expenditures:

The provisions of this bill could be implemented with existing state resources. No additional personnel or resources would be needed, since the DOR is already performing these duties.

REPRESENTATIVE MIKE CHENAULT

SPEAKER OF THE HOUSE
SECTIONAL ANALYSIS

HOUSE BILL 229: "*An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas for delivery and sale from a lease or property in the state; providing for an effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date.*"

Section 1: Amends 434.20.043(a), Gas exploration and development tax credit. Adds before January 1, 2011, to the time in a tax year for which a credit against state tax liability may be applied. Also further adds language that for a tax year beginning after December 31, 2010, 25 per cent of the taxpayer's qualified investment and 25 per cent of the annual cost incurred by the taxpayer for qualified services during each tax year for which a credit is allowable.

Section 2: Amends AS 43.20.043(b), Gas exploration and development tax credit. Adds before July 1, 2011, if a claim is made under (a)(1)(A) found in Section 1 or June 30, 2011, if the claim of credit is made under (a)(2)(A) also found in Section 1.

Section 3: Amends AS 43.20.043(c), Gas exploration and development tax credit. States the credit allowed will be made for each tax year rather than per year and eliminates the 50 per cent provision of the taxpayer's total tax liability.

Section 4: Amends AS 43.20.043(f), Gas exploration and development tax credit. Adds language that credits do not apply to North Slope gas that is brought into Southcentral.

Section 5: Amends AS 43.20.043(i)(1), Gas exploration and development tax credit. Deletes "if the reserves produce gas for sale and delivery".

Section 6: Amends uncodified law enacted by Section 3, Chapter 61, SLA 2003. Adds ch. 61, SLA 2003 as amended by Section 7 of this bill. Also amends the carry forward of the tax xcredit from 2017 to 2024.

Section 7: Amends uncodified law enacted by Section 5, Chapter 61, SLA 2003. Adds ch. 61, SLA 2003 to take effect on January 1, 2020 instead of 2013.

Section 8: Immediate effective date.

Representative.Mike.Chenault@legis.state.ak.us

Sec. 43.20.043. Gas exploration and development tax credit.

(a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer that is an operator or working interest owner directly engaging in the exploration for and development of gas may apply as a credit against the state tax liability that may be imposed on the taxpayer under this chapter, for a tax year beginning after December 31, 2002,

(1) 10 percent of the taxpayer's qualified capital investment; and

(2) 10 percent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment under (1) of this subsection.

(b) Expenditures qualifying for the taxpayer's qualified investment credit under (a)(1) of this section must be

(1) cash expenditures or binding payment agreements entered into after June 30, 2003; and

(2) made for assets first placed in service in the state in or before the tax year in which the credit is claimed through the date the reserves produce gas for sale and delivery; for purposes of this paragraph, "placed in service in the state" means that the first use of the qualified investment is in this state; if the property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify for the investment credit.

(c) The credit per tax year allowed by (a) of this section may not exceed 50 percent of the taxpayer's total tax liability under this chapter, but shall be calculated before the application of any other credits allowed under this chapter. An unused portion of the credit for the tax year

(1) may be carried forward into one or more of the following tax years, except that the unused credit from one tax year may not be carried forward for more than five following tax years;

(2) shall be applied to the taxpayer's tax liability under this chapter during the following tax year before allowance of a credit allowed by (a) of this section for that following tax year.

(d) To obtain the credit allowed by this section, the taxpayer shall, with the taxpayer's tax return, submit, on a form prescribed by the department, information that demonstrates that the taxpayer is eligible for the credit and evidence of the expenses that are the basis of the claim of the credit. The taxpayer has the burden of demonstrating compliance with the requirements of this section to entitle the taxpayer to the claim of and the amount of the credit.

(e) A taxpayer entitled to a credit under this section

(1) may not convey, assign, or transfer the credit to another taxpayer or business entity unless the conveyance, assignment, or transfer of the credit is part of the conveyance, assignment, or transfer of the taxpayer's business;

(2) forfeits the credit to which the taxpayer is entitled during the tax year and any carryover of it under (c) of this section, but does not forfeit the portion of the credit that accrued in a previous taxable year that may be carried over under (c) of this section, if the taxpayer

(A) disposes of the qualified capital investment;

(B) takes the qualified investment out of service; or

(C) transfers the qualified investment out of this state.

(f) A taxpayer is not entitled to a credit under this section for expenditures that are made or incurred for the qualified capital investment or for qualified services made for exploration and development of gas that occur in the area of Alaska lying north of 68 degrees North latitude or that are made or incurred to transport gas from reserves located in the area of Alaska lying north of 68 degrees North latitude.

(g) A taxpayer who obtains a credit under this section may not claim a tax credit or royalty modification provided for under any other title. However, a taxpayer may, at the taxpayer's election, forgo a credit under this section in order to continue to qualify for a credit provided for in another title.

(h) For purposes of determining allowable credits under this section, the department shall allow only expenditures and payments that are not inconsistent with the expenditures authorized under 26 U.S.C. (Internal Revenue Code) for exploration and development of natural resources.

(i) In this section,

(1) "qualified capital investment" means a cash expenditure or binding payment agreement, as described in (b)(1) of this section, for real property or tangible personal property used in this state in the exploration and development of gas reserves in a gas reservoir for which there has not been commercial production if the reserves produce gas for sale and delivery; in this paragraph, "property" includes

(A) property used in the operation or maintenance of facilities for exploration or development of gas;

(B) property that is placed in use under a capitalized lease or an operating lease; and

(C) the following property used for the exploration and development of gas:

(i) machinery, appliances, supplies, and equipment;

(ii) drilling rigs, wells, gathering lines and transmission lines, pumping stations, compressor stations, power plants, topping plants, and processing units;

(iii) roads, docks and other port facilities, and helicopter pads;

(iv) maintenance equipment and facilities, and maintenance camps and other related facilities; and

(v) communications facilities owned by a person whose principal business in the state is the exploration for or development of gas and whose operation of the communications facilities directly relates to the conduct of that business;

(2) "qualified services"

(A) means expenditures for labor, seismic, and other services that are directly applicable to a qualified capital investment;

(B) does not include lease operating expenses.

History -

(Sec. 1 ch 61 SLA 2003)

Postponed Repeal Effective Date -.

Delayed repeal of section. - Under Sec. 2 and 5, ch. 61, SLA 2003, this section is repealed January 1, 2013.

Cross References -

For provision relating to the manner of handling the unused portion of the tax credit as a carry-forward during the period on or after January 1, 2013, and until December 31, 2017, see Sec. 3, ch. 61, SLA 2003, in the 2003 Temporary and Special Acts. For obligation of the Department of Revenue to prepare a report to the legislature on the effect of the tax credit authorized by this section, and to present the report at the beginning of the First Regular Session of the 26th Alaska Legislature, see Sec. 4, ch. 61, SLA 2003, in the 2003 Temporary and Special Acts.

Effective Date Notes -

Section 6, ch. 61, SLA 2003 makes this section effective June 12, 2003, in accordance with AS 01.10.070(c).

Sponsor Statement

HB 246
SPORT FISH GUIDE LICENSES

HB 246 extends Alaska's sport fish guide licensing and reporting program for one year. The data collected through this program has been an important tool for the proper management of sport fisheries through a better understanding of our fish stocks and their harvest. In addition, the licensing has ensured a standard for professionalism and responsibility for sport fish businesses and guides, benefiting both consumer and businesses alike.

The data collected through the reporting program is important in Alaska's exemption from the National Saltwater Angler Registry which will prevent Alaskans from purchasing a certificate of registration.

The sport fish guide licensing program provides necessary data for the wise management of Alaska's fish resources while ensuring professionalism in the guiding industry and preventing the need for further licensing and registration for Alaskan anglers.

ANALYSIS: *(Attach a separate page if necessary)*

The division has budgeted $437.6 in the FY11 Governor's budget to administer the Sport Fish operator/guide/vessel program. The program generates average Fish & Game Fund revenues of $242.8, with the balance of program expenditures funded with Sport Fishing license sale revenue. Although potential cost savings measures are being implemented, it is untenable at this time to make accurate projections on what monetary savings will be realized for this program over the upcoming years.

(Revised 11/6/2009 OMB)

Brief for HB 246: SPORT FISH GUIDE LICENSES
(Reauthorization of Program/Repeal of Sunset)
March 16, 2010

Alaska Department of Fish and Game Contacts:
Charlie Swanton- Charles.Swanton@alaska.gov; phone: 465-6184 or 321-0955
Jennifer Yuhas - Jennifer.Yuhas@alaska.gov; phone: 465-6137 or 388-7951.

Background:

- Original legislation passed in May, 2004; effective January 1, 2005.

- Proposed by the Department for three main reasons:
  1. Information on guide numbers and their fishing activities was either not available or limited in many parts of the state;
  2. Establish minimum standards to operate a business or contract as a guide (safety, liability insurance, US Coast Guard license, etc.) as a means to increase professionalism and reduce speculative entry; and
  3. Provide comprehensive and credible data on guided sport fishing activities to regulatory agencies: Alaska Board of Fisheries (BOF), International Pacific Halibut Commission (IPHC), and North Pacific Fisheries Management Council (NPFMC).

Legislation:

Sec.16.40.260 Sport fishing operator license;
Sec.16.40.270 Sport fishing guide license;
Sec.16.40.280 Reports;
Sec.16.40.290 Penalties for violations.

These legislative sections include licensing provisions and fees (AS. 16.05.340(a)) for sport fishing business owners ($100), sport fishing guides working for the business ($50), and business owners who are also a guide (owner/operator combo $100). The mandatory reporting requirements, logbooks, are for both fresh and saltwater guide activities (freshwater logbooks were instituted in 2005). The penalties for sport fish guiding violations by business owners and guides include possible revocation of their license.

Companion Regulations:

5 AAC 75.075 Sport fishing services and sport fishing guide services; license requirements; regulation of activities.

5 AAC 75.076. Sport fishing services and sport fishing guides reporting requirements.

5 AAC 75.077. Sport fishing guide vessel registration requirements.

3917

Present Benefits and Utility:

- A comprehensive list of all sport fishing guides working in salt water is part of the data requirements that will allow Alaska to receive an exemption from participating in the National Saltwater Angler Registry (up to $25/saltwater angler in 2011).

- The logbook data for saltwater anglers has been used extensively within the IPHC and NPFMC for rule making on Pacific Halibut.

- Both freshwater and saltwater logbook harvest data has been presented and utilized by the Alaska Board of Fisheries. Harvest estimate verification studies are being conducted comparing logbook, statewide sport fish harvest survey, and dock side creel programs.

Participation Statistics:

- An average of **1,647 sport fishing business licenses** (including owner/operator combo) have been sold (2005-2009); 90% of owners are Alaskan residents.

- An average of **1,882 sport fishing guide licenses** have been sold (2005-2009); 73% of guides are Alaskan residents.

- Based on logbook data, over **2.1 million clients took 536,960 guided fishing trips** (from 2005 through 2009); 67% of clients fished in saltwater, 33% fished in freshwater and 88% of all clients were nonresidents.

- An average of **1,334 vessels in saltwater** were used for guided fishing trips (2005-2009).

Electronic Reporting (Modernization initiative):

- One of Commissioner Lloyd's initiatives is modernization and timely reporting of recreational harvest data. We have been actively working on this task:

    - In July, 2009 we developed a scannable saltwater logbook form which will reduce the time lag when logbook data is available from 2 to 3 months to 1 to 2 weeks. This new form will be employed for saltwater forms statewide in 2010. Ten public meetings were held across the state to explain this new format and received nearly unanimous support from user groups and public.

    - In April, 2010 the point of sale hunting and fishing licensing program will be launched at all ADF&G regional offices. This program will be made available to all license vendors shortly thereafter.

    - We will convert the freshwater logbook to a scannable format starting in 2011.

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

April 15, 2010

The Honorable Mark Neuman
House of Representatives
Alaska State Capitol, Room 432
Juneau, Alaska 99801

Representative Neuman,

It has come to my attention that yesterday's House Resources Committee hearing on Sportfish Guide Licensing yielded another discussion regarding a perceived neglect on behalf of the department to furnish documentation to your office regarding the report entitled "Economic Impacts and Contributions of Sportfishing in Alaska."

After multiple correspondence and lengthy debate with your office last year I had thought the issue was settled. You originally asked for a "draft" of the report which the department did not possess. My office referred you to the contractor responsible for the report on multiple occasions citing that the department did not possess any such document to meet your request. After many attempts to explain that while the report had undergone a formal peer review process, the department was only in possession of the final report and was in no way harboring a draft; my staff took extra time to compile a report for you outlining the changes made in the formal peer review process. The Legislative Legal memo you referred to in yesterday's bill hearing addresses the need to supply a "report" rather than a "draft." The report has been supplied, and the department possesses no such "draft" per your request.

I will again refer you to the contractor to discuss the existence and acquisition of any draft material you are seeking. I have attached last year's report to your office for reference along with a copy of e-mail correspondence from our contractor citing the peer review process. The attachment also includes contact information for the contractor so that you may pursue any avenues you require directly through the contractor.

This report clearly showed that sportfishing is an important component of the Alaskan economy. The department is proud of this report and stands behind it. It is my sincere hope that everyone interested in the use of Alaska's sportfishing resources will glean some useful information from this report and better recognize the contributions of sportfishing to Alaska's economy.

Sincerely,

Denby S. Lloyd
Commissioner

Representative Neuman
State of Alaska
State Capitol, Room 432
Juneau, AK 99801-11282

Dear Representative Neuman:

Attached is a report I had prepared for you, Representative Gatto and Senator Huggins addressing concerns regarding the "Economic Impacts and Contributions of Sportfishing in Alaska, 2007" study. This issue first surfaced when presenting the subject material at the public meeting held in Wasilla, January, 2009. It contains all of the questions/comments that were posed during the peer review process that would have or did result in changes to the numbers contained within the first draft report. Also included are explanations of how we responded to each question and the difference in what was reported between the draft and final study reports.

I sincerely hope that you and your colleagues find this information useful in responding to constituent requests regarding the final results of this study. Please do not hesitate to contact me if you have any questions or require additional information.

Sincerely,

Charles O. Swanton
Director, Sport Fish Division

Cc: Representative Gatto, Senator Huggins

"Economic Impacts and Contributions of Sportfishing in Alaska (2007)" Consolidated Technical Peer Review Comments for Draft Report

Prepared for: Alaska State Representatives Mark Neuman and Carl Gatto, and Senator Charlie Huggins

Content: Comments received from three Peer Reviewers that were related to reported estimates (numbers, calculations) within peer review copy of draft report (3 pages). Spelling, grammatical or layout/interpretation comments (the other 15 pages) are not included in this summary.

Summary: The Department of Fish and Game did NOT arbitrarily make any changes to estimates provided in the draft report. We did find an error in the equipment expenditure calculations during the peer review phase, but it changed the final estimates (downward) by only 2.3% ($11.5 million), which changed the total expenditure estimate by 0.8% from original estimates provided by Southwick. We also added several new appendices and important comparisons to other data and discussion of data limitations (which are included in the "Summary & Discussion" section of the technical report). Those are the only changes that occurred between the draft report which was peer reviewed to the final.

Reviewer Comment: The report is full of tables showing estimated totals for spending, contribution and impacts in 2007. Comparable data should be presented in as great or even greater, detail for estimated spending, contribution and impacts per angler day (trip expenditures) and per licensed angler (equipment and real estate).

Contractor Response: **Appendix L includes detailed estimates of per day trip and per angler equipment expenditures for each region. A footnote has been added to each report table of average spending in the report.**

Reviewer Comment: The report shows a very high estimate of equipment expenditures by resident anglers. This finding needs more discussion, attention, and investigation, in particular given the wide disparity between reported equipment expenditures in the Southcentral region and the other two regions.

Contractor Response: **Comparisons with other studies and corroborating estimates show that the estimates are not unreasonable. This is discussed in the "Summary and discussion" section.**

Reviewer Comment: A quick review of Table 37 (Detailed spending for sportfishing in Southcentral Alaska, by residency, 2007) shows the following equipment expenditures. I note that vehicles, boats, boat motors, camping trailers, etc. are major components. My instincts would be that there is potential for overestimation of fishing-related equipment expenditures over-attribution of the extent to which such expenditures are attributed to sport-fishing. I am *not* claiming that this happened, or that the expenditures are wrong. I am only suggesting that it is important to check and double-check how these expenditures were derived and to make sure that they are defensible.

Contractor Response: **The calculated values have been double-checked resulting in minor revisions (2% total reduction) to equipment spending. The needed revisions were the result**

3922

of small errors in the regional allocation of spending, and percentage of equipment attribution to use in sportfishing. A comparison of average spending per angler for boats to total retail boat sales in Alaska per household shows that the study estimate is not excessively high.

Reviewer Comment: In thinking about the high equipment expenditure estimates, particularly for cars and boats, I am concerned about the potential that the results could be biased by a higher response rate from sport-fishing enthusiasts—the type of people more likely to buy and use cars or boats specifically for sport-fishing—than from those who are more occasional anglers. I don't know any way to test for this or adjust for it. But I think it would be good to discuss this issue, and consider whether there is anything from the literature that suggests the potential for such a bias—because if it existed it could have a big impact on the results of the study.
Contractor Response: **This is discussed in the "Summary and discussion" as one of the limitations.**

Reviewer Comment: PAGE 27, PARAGRAPH ON OUT-OF-BOUNDS CHECKS, LAST SENTENCE. This sentence states that "the resulting maximum values used in the analyses are reported in Appendix I with the detailed mean expenditures estimates." I could not find any such maximum values in Appendix I.
Contractor Response: **Summary statistics, including maximum values, for each survey variable are now included in Appendix G.**

Reviewer Comment: PAGE 28, FIRST FULL PARAGRAPH. This paragraph implies that if there were two observations that each increased the statewide mean by 20% they would *not* have been eliminated as outliers. I find this a little worrisome. Coming back again to my concern with the potential that the equipment expenditures might be biased, I realize of course that only a fraction of anglers buy cars or boats each year, but that these expenditures are of course quite important in determining the total expenditures attributable to sport fishing. So even if only 2 anglers bought boats, but the expenditures were significant, that is relevant and should be included in the estimation methodology—but unfortunately the margin of error is greater.

For this reason, I think it would be good if the report could include—perhaps in an appendix, some discussion about the number of non-excluded responses that each type of expenditure estimate is based on (and perhaps also the percent of respondents reporting each type of expenditure).
Contractor Response: **Appendix G has been added to provide summary statistics (number of non-missing observations, mean response value, minimum response value, maximum response value, standard deviation of the response values) for each survey variable.**

Reviewer Comment: PAGE 28 & 29, DISCUSSION OF NON-RESPONSE BIAS. The last sentence says "the testing found no systematic differences." Because the issue of potential non-response bias is an important one for equipment (as I've suggested above) I'd like to see a little bit more discussion in this paragraph about what kind of testing was done at what level and how "no systematic differences" was defined. In particular, to what extent did this testing provide reassurance about my concerns about potential non-response bias for big-ticket items such as cars and boats?

Contractor Response: **Details about the statistical testing and the results have been added to this section.**

Reviewer Comment: PAGE 36, ALLOCATIONS OF BIG-TICKET EXPENDITURES TO SPORT-FISHING. I think it would be useful—perhaps in the "Discussion" section—to include some discussion of the problem associated with allocation of big ticket items such as cars and boats to sport fishing. Suppose I buy a pickup truck this year, and 45.1% of my driving is for sport-fishing trips. On the one hand, it would be perfectly reasonable to conclude that 45.1% of the expenditure was sport-fishing related. On the other hand, even if I had done no sport-fishing, I might still have bought the truck because I needed it for other things that I do as well (implying an allocation of 0% would also be reasonable as a lower bound). On the third hand, without all the sport fishing, the truck would last longer, so I would perhaps buy a truck only 45% as often (implying that 45% is reasonable). On the fourth hand, without the opportunity to fish, I might not even have chosen to live in Alaska—implying that 100% of my car expenditure is really due to sport fishing.

I think the allocation method used was reasonable and justifiable (except for my concerns about potential non-response bias). But I would like to see some discussion of the issues raised by the allocation-of-expenditures problem.
Contractor Response: **A discussion of the long list of potential expenditure scenarios and their interpretation would probably add more confusion than clarity to the results. The allocation procedure used in the study is reasonable and is clearly presented in the report.**

Reviewer Comment: Page 28, first full paragraph: With respect to the sentence that reads: "If any single observation increased the statewide mean by 25 percent or more then it was deemed an outlier and replaced by a missing value in order to prevent skewing the average" – what do you mean by "replaced by a missing value"? (e.g., was the observation dropped or was the observation replaced by another number such as the sample mean?)
Contractor Response: **This has been clarified and expenditure was removed from the analysis.**

Reviewer Comment: Page 28-29, bottom of page 28 and top of page 29: To test for non-response bias, could you also compare your results with other previous studies? Contractor Response: **Not clear how you could test response bias without detailed survey and response data from another survey – no recent comparable surveys for comparison.**

Reviewer Comment: Page 38, first paragraph: To what extent has the recent national real estate boom and bust affected the Alaska real estate market and expenditures?
Contractor Response: **The "real estate boom and bust" would pertain to real estate sales – we do not include sales in the analysis. Any AK information about a slowdown in construction and maintenance activity resulting from the national recession may not be applicable to recreational properties.**

Reviewer Comment: Page 100, first paragraph: It would be helpful to provide some explanation as to why the output, income and employment multipliers for the Cook Inlet subregion are greater than for the State of Alaska as a whole.
Contractor Response: **Explanation has been added.**

Respectfully submitted this 6th day of April, 2009 by:

Subject: RE: Release of peer review/draft documents regarding Economic Impacts and Contributions of Sportfishing in Alaska 2007.

Hello Charlie – I understand that some people somehow think the results of the study were tampered with. I can assure you that in no way was there any pressure to change the results during ANY stage of the project. The study was conducted by a team of qualified experts, including ADFG Sport Fish staff, who met throughout the project to review methods, data and worked to anticipate any potential problems before they arose. All procedures and methods used were chosen to ensure the results were reliable and defensible. Once the first draft was complete, following standard scientific procedure, we circulated the study to outside peer reviewers expert in economic impact analyses of fisheries. Their comments were not major and fully within bounds of normal professional feedback common to such dstudies. We made some adjustments that resulted in minor changes in the results – as is normal. All peer reviewer suggestions were very reasonable and resulted in a stronger, even more defensible study. I can proudly say this is one of the finest, most thorough and comprehensive economic studies we've conducted and that is largely due to the team approach in designing the project and reviewing preliminary results. I never once had the impression anyone tried to influence any team member into lowering the results or changing the methodology in a way that would minimize the outcome. Instead, the focus from all team members was clearly oriented towards developing the best economic study possible. If anyone has any doubts about my comments, they are welcome to call me with any specific questions.

Subject: Release of peer review/draft documents regarding Economic Impacts and Contributions of Sportfishing in Alaska 2007.

Rob: I need some documentation from you to me regarding the subject requests and your position on this issue. I presume this is not the first such request and likely not the last. Several legislators have and are continuing to ask about release of peer review or other drafts in order to assure their constituents that no "manipulation of values" was conducted without due cause. I certainly understand the distain one feels for this sort of specter of doubt but that does not absolve us from at least addressing it.

Unfortunately, this likely will come up sometime next week so a prompt reply would be greatly appreciated. We are still trying to solidify a time for you to present the results to a joint legislative session and will let you know as soon as possible.

Regards,
Charlie Swanton
Director, Sport Fish Division

Amendment Rationale

HB246: Sportfish Guide Licenses

Offered in (H)FISH
By: Representative NEUMAN

- HB246 is currently the technical companion of SB177 which passed the Alaska State Legislature last year and has already been signed into law.
- The passage of SB177 renders HB246 irrelevant without amendment
- The Sponsor made a commitment to the Commissioner of Fish & Game, which was recently reiterated, to amend this legislation to rectify this error .
- The proposed amendment allows HB246 to become a companion to SB294 and therefore viable this legislative session

Subject:	SB294 and HB246
Attachments:	saltwater_angler_registry_FINAL_press_release.pdf; ATT00001.htm

Dear Legislators,

HB246 and SB294 are both concerning the repeal of the termination of the sport fish guide license requirement. One of the primary justifications for the license according to public testimony from F&G game at the recent HB246 hearing is that it exempts the state from the national fisheries registration requirement for anglers in the state of Alaska. Since every citizen fishing federal waters in our great state must purchase a **state** fishing license and the state conducts a State Wide Harvest Survey (SWHS) it precludes the necessity for the national registry requirement. Since the state requires charters and guides to be licensed and collect data, clients using these service would also be **exempt** from the national registry license requirement. So my question is why are we requiring our saltwater fisherman using a charter to purchase a license and requiring the guide to fund the data collection when funds are being received from each guided fisherman in the form of a state fishing license that funds the SWHS.

According to Mr. Swanton Director of Sport Fish, the $100 sport fish license fee pays for about $250,000 of the $450,000 cost of the logbook program which was less then $100K in 2004. I'd suggest amending the license requirement to $200 to fully fund the logbook program and then removing the fishing license requirement for all fisherman utilizing a guided charter service as authorized under the national fishing registry. This would greatly benefit the guided business industry. The average non-resident or resident could forgo the cost of buying a fishing license if they only fish on a charter. This would save them money and promote tourism and charter services during this economic down turn.

Option two would be to continue the guide license requirement at the cost of $10/year to administer and provide a boat sticker and wallet size card. The logbook program can then be funded from the sport fish licensing requirement currently in place for all charter and guided fisherman.

The attached final rule on the saltwater angler registration requirement clearly states charter clients would be exempt from the licensing requirement. My opposition to these bills has alway been to the fact that F&G was double dipping when forcing guides to not only collect but fund data collection which they already receive funding for from the state license requirement. Option two has always been my initial stance but now that the final rule clearly states our clients aren't required to have a national registry license, I believe option one would be a much better action and cost savings to the public. If the state is going to justify the continuation of the excess guide license fee based on the "national fisheries registration exemption", then shouldn't the guides receive the added benefit associated with not requiring their clients to need a fishing license while fishing federal waters?

I'm pretty sure the department will oppose option one and we already know they favor continuing to charge the guides the excess license fee. However what have we seen as a return from our investment other then fewer fish in our rivers, lost jobs, and reduced bag limits all while the commercial industry continues to pilfer our public resource and pay less then half in licensing. I would be more then happy to pay the licensing if we seen

some return for our investment. If the state used our fees to promote sport fishing in Alaska like the state funds the Seafood Institute, maybe this tax would be easier to swallow. In 2008 the state received $3,908,673 from resident fishing license and $13,314,952 from non-resident fishing license totaling $17,223,625. The individual guides supported 446,669 angler days in both fresh and saltwater. At an average cost of $20/day in license fees it's safe to assume that $9M and most likely much more is attributed to the service guides provide. What other individual small business in Alaska, as a result of the service they provide, brings this much money directly into the state coffers while utilizing only about 10% of the available resource? I can't think of any and I hope you understand my frustration with the idea that the department feels this $100 fee is justified as a small price to pay for trying to make a living offering a quality service to the public so they can harvest **their** resource.

Thank you for your time and service.

REVISED SPONSOR STATEMENT – **CSHB 267 (TRA)**
Dalton Highway Access Bill

Since 1980, state law has prohibited virtually all off-road vehicle use within five miles of the Dalton Highway north of the Yukon River. Miners and oil workers are allowed to cross the corridor for business use and local resident snowmachine use is permitted. HB 267, as introduced, ended the prohibition on Alaskan's right to travel by snowmachine on this public land corridor during the winter months.

The House Transportation Committee amended the bill in 3 ways:

- Lift the prohibition for snowmachine use, but "only to south of Coldfoot" (milepost 176);
- Provides that after May 1, 2012 the existing prohibition would take effect again, effectively sunsetting the bill after two years; and
- Requires users to obtain a permit prior to accessing the Corridor by snowmachine, so the State can obtain reliable data before making long-term policy decisions for Dalton Corridor access in the future.

Many Alaskans believe that travel by snowmachine in the Dalton Corridor is prevented by federal law. Wrong. The problem is state law.

A February 20, 2010 *Fairbanks Daily News Miner* editorial stated (excerpt):

> *Some argue that the state must prohibit snowmachines in the corridor to protect wildlife from renegade hunters. If this is a reasonable argument, shouldn't the state apply the same five-mile buffer to the rest of its remote road system? Most of our highways traverse lightly populated areas where law enforcement is spotty.*
>
> *The Dalton Highway is more remote, yes, but that actually argues against more stringent regulation. Its remoteness, lack of services and unpaved surface discourage most Alaskans from venturing up it – fewer people, fewer enforcement problems.*

The blanket prohibition north of the Yukon River is overkill.

CSHB 267(TRA) will allow snowmachine use on the Dalton highway corridor from Oct. 1 to April 30 when soil is frozen and snow covered. The resulting impact on surface vegetation should be minimal. If CSHB 267(TRA) passes, the prohibition on other off-road vehicles would remain.

MEMORANDUM

DATE: **March 29, 2010**

TO: **Representative Mike Kelly**

FROM: **Derek Miller**

RE: **Changes to HB 267 in CSHB 267(TRA) (26-LS1207\K)**

Section 1.
Amended this section to limit access by snow machine within the Dalton Highway Corridor to south of Coldfoot, milepost 176. Also, inserted language clarifying access along the corridor to mean across the highway and on or across the highway corridor. The CS also included language in this section that defines "highway corridor" to mean land within five miles of the right-of-way of the highway.

Section 2.
New section of the bill inserting language prohibiting all off-road vehicles along the Dalton Highway Corridor after May 1, 2012.

Section 3.
New section of the bill requiring persons using a snow machine allowed under section 1 of the bill to obtain a permit. The permits will be issued at no fee and the Department of Transportation will use these permits to maintain an accurate count of the number of permits issued. A person found guilty of using a snow machine as permitted under section 1 of the bill, but who does not obtain a permit is punishable by a fine of not more than $375.

Section 4.
New section repealing the requirement to obtain a permit to use a snow machine along the Dalton Corridor as specified in section 1 of the bill and repealing language subjecting a person to face a fine of up to $375 for failing to obtain a permit after May 1, 2012.

Section 5.
Provides for an effective date for the prohibition of all off-road vehicles after May 1, 2012.

Allow access: Dalton Highway corridor closure should be loosened

Legislators in Juneau have before them a simple bill to end a longstanding, unreasonable limitation on Alaskans' right to travel across public land north of the Yukon River.

Reps. Mike Kelly of Fairbanks and Mark Neuman of Wasilla have proposed allowing snowmachine travel on the Dalton Highway corridor during winter months. Rep. Tammie Wilson of North Pole has signed on as a co-sponsor.

For many years, state law has prohibited virtually all off-road vehicle use within five miles of the highway. Miners and oil workers are allowed on business. And some local snowmachine use is allowed — crossings of the 10-mile wide corridor are permitted if the rider starts from outside the corridor and is on his way to somewhere on the other side. Starting or stopping a snowmachine trip within the corridor is not allowed.

This, of course, eliminates the use of the Dalton Highway as a take-off point for most travel via snowmachine.

The rule is something Alaskans might expect from Washington, D.C., not Juneau. But it has a long history of political compromises that have sustained it in state law.

Some argue that the state must prohibit snowmachines in the corridor to protect wildlife from renegade hunters. If this is a reasonable argument, shouldn't the state apply the same five-mile buffer to the rest of its remote road system? Most of our highways traverse lightly populated areas where law enforcement is spotty.

The Dalton Highway is more remote, yes, but that actually argues against more stringent regulation. Its remoteness, lack of services and unpaved surface discourage most Alaskans from venturing up it — fewer people, fewer enforcement problems.

The ban on off-road vehicles in the corridor was passed in part to discourage urban hunters from using the road and competing with villagers. If that's such an issue, the state could limit access in areas that might be considered too near to the few villages along the route. The blanket prohibition north of the Yukon River is overkill.

The legislation in Juneau would allow snowmachines on the highway corridor from Oct. 1 to April 30. That roughly matches the season of frozen soil and snow cover, so the resulting travelers would have minimal impact on tender surface vegetation.

Even if the legislation passes, the prohibition on all other off-road vehicles would continue. So, too, would state regulations that prohibit hunting, except with bow and arrow, and the transport of hunters using motorized vehicles in the corridor.

The proposal would simply offer Alaskans access during the winter months to public lands from a public highway, with far more limits than they face on any other remote Alaska road.

Fairbanks Daily News Miner – Editorial February 20, 2010

Dalton Highway snowmachine debate continues in Juneau

JUNEAU — A House subcommittee continued Wednesday to collect a blend of comments on a proposal to open thousands of square miles of land along the Dalton Highway to winter snowmachine use.

The bill would open the highway corridor to snowmachines during the seven coldest months. Snowmachines and ATVs are banned except for resource development work and travel by local residents.

About 150 people had commented by letter or e-mail or verbally by the time the subcommittee met shortly after noon. Comments were generally split, with 69 in favor and 80 opposed, according to the office of Rep. Tammie Wilson, R-North Pole.

The disagreement kept coming Wednesday afternoon.

Supporters said state law inappropriately bans almost all use of off-road vehicles of the highway north of the Yukon River. They said the soil there is generally frozen solid through the winter, so snowmachine travel from October through April would have little environmental impact.

"Many Alaskans believe that travel by snowmachine in the Dalton corridor is prevented by federal law," lead sponsor Rep. Mike Kelly, R-Fairbanks, said in a statement on the bill. "Wrong. The problem is state law."

Heidi Schoppenhorst, with Boreal Lodging in the Brooks Range, told the subcommittee the bill would open areas with few public safety personnel and difficult access to medical care. Schoppenhorst said increased snowmachine access also would conflict with a scenic byway plan for the area.

"I'm highly opposed to (House Bill) 267," she said.

Kelly said some have misinterpreted the bill as a move to change hunting regulations. The bill would not remove the prohibitions on rifle hunting within the Dalton Highway corridor or on the use of motorized vehicles to transport hunters anywhere within it (except on the highway and a few designated side roads); it only looks to improve people's opportunity to take advantage of outdoor opportunities already allowed, Kelly said.

"If this bill is passed it does not change any hunting along the Dalton Highway," Kelly said. "That was not the intent and it was never the intent."

Wilson, chairwoman of the subcommittee, said the group will meet again Monday to review options. Wilson is a co-sponsor of the bill.

Alaska Outdoor Council

310 K Street, Suite 200
Anchorage, AK 99501
Email: aoc@alaskaoutdoorcouncil.org
Website: www.alaskaoutdoorcouncil.org

March 9, 2010

Dear Representative Peggy Wilson and House Transportation Committee members,

Thank you for the opportunity to submit written testimony in support of House Bill 267 on behalf of the Alaska Outdoor Council (AOC). AOC has a statewide membership of over 10,000 Alaskans who regularly access public lands in order to gather public resource as well as travel on public lands for the sheer joy of being there.

Throughout the settling of North America by people of European descent outdoor's people have followed the trails laid down by developers. Fur trappers, gold miners, lumberjacks, and farmers all lead the way to public lands. The James Dalton highway is a latter day example of how today energy development is providing that same service to outdoors people. There are millions of acres of public lands along the Dalton highway north of the Yukon River that are inaccessible to the majority of people. Had it not been for the relatively inexpensive road access to Deadhorse thousands of tourist would have never been able to visit Alaska's North Slope. I personally had the privilege of driving the Haul road for 25 years while working for an Alaska big game guide in ANWR. He was able to make his remote guiding operation an economic success by reducing his air charter bill because he could drive his supplies into Deadhorse to fly out to camp. Access to public lands provides the State and its people with economic opportunity.

Today in Alaska we are witnessing an ever increasing loss of access to federal public lands as federal land managers are using federal law created by the Alaska National Interest Lands Conservation Act (ANILCA) to restrict travel. The opportunities for Alaskans to access federal public lands is being reduced at an alarming rate by the loss of RS 2477 right-of-ways, reductions in section 17(b) easements and sites, section 810 analyses of ANILCA, EIS determinations, and Records of Decisions regarding BLM Resource management planning.

The brunt of these federal closures will fall on State DNR land managers as they try to fulfill the constitutional mandates in Article VIII, Sections 1 and 2. The legislature will find it hard to meet their legislative mandate if they continue to allow State public domain to be locked up just five miles beyond the closed corridor.

AOC feels it will be in the State's best interest to allow seasonal (October – April) snow machine access to public lands north of the Yukon River along the James Dalton highway. Locking up access to public lands and resources is not what Alaskans want to see their legislators do. Rather AOC would like to see legislators support and fund sound scientific management of the habitat and the resources that depend on quality habitat, trail improvements, plus adequate enforcement necessary to ensure sustain-yield management of renewable resources.

AOC asks that you pass HB 267 out of H(TRA) committee with unanimous consent.

Thank you for your consideration of AOC's membership regarding access to public resources.

Subject: House Bill No. 267

Dear Legislators:

On behalf of the Alaska Outdoor Access Alliance (herein AOAA) I write to request your support of House Bill No. 267 "An Act relating to travel by snow machine within five miles of the right-of-way of the James Dalton Highway." This bill sponsored by Representative Mike Kelly and Representative Mark Neuman, and co-sponsored by Representative Tammie Wilson is a step in the right direction for the State to rescind its unnecessary and unfair limitations on snow machine use within 5-miles of the James Dalton Highway. I encourage you to pass this bill as written.

The AOAA endorses the concept of maximizing the sustainable use of Alaska's public lands and waters. We believe that Alaska's lands and waters should be managed in a way that maximizing the enjoyment for the most Alaskans possible. AOAA was created in 2004 and represents over a dozen clubs and associations related to recreation across the State.

Sincerely,

Scott C. Hala
President
Alaska Outdoor Access Alliance

HB 267 – DALTON HIGHWAY TALKING POINTS

FACTS:

- Highway built in 1974 as a pipeline construction service road.
- Starts at Livengood and ends at Deadhorse – Just over 400 miles in length.
- Along most of its length, you'll see no restaurants, no gift shops, no service stations – just forest, tundra, and mountains, crossed by a double ribbon of road and pipe.
- The highway was closed – by state law – in 1980 to all recreational off-road vehicle use within 5 miles of the road right-of-way north of the Yukon River (AS 19.40.210).
- Became a public highway in 1991 with open access to anyone traveling north.
- Named after James Dalton, arctic engineer involved in early oil exploration efforts on the North Slope.
- Almost all land along the route is public land (millions of acres) with two different land managers: Federal Bureau of Land Management and the Alaska Department of Natural Resources.
- Prohibition starts at mile 57 of the Yukon River Crossing and extending 357 miles north to the Arctic Ocean.
- Highway corridor means lands within five miles of the highway right-of-way. (10-mile stretch that you can't unload the snow machine off your truck and use it anywhere in there).

Q & A:

Q: Would HB 267 have an adverse affect on game management and destroy game populations?
No. HB 267 does not speak to game management along the Dalton Corridor. There are current regulations in place that establish the Dalton Hwy Corridor Management Area that prevents motorized vehicle use to transport hunters, hunting gear, or parts of game, within the DHCMA. This bill in itself does not change hunting regulations in the area and the Board of Game would still regulate the area.

Q: Won't there be a lack of enforcement of Fish & Game regulations?
No more than what we have currently. Life safety services and enforcement will expand proportional to demand, just as in other areas of the state.

Q: Won't the lack of pull-outs along the Dalton create a safety concern?
The Department of Transportation and Public Safety can work collaboratively on a public safety awareness campaign. We could also look for future money to go towards building pull-outs along the Dalton. Before we do that however, it would be important to determine how much actual use there will be following passage of HB 267.

Q: Will HB 267 negatively impact wildlife and subsistence hunting due to the disturbance caused by snow machines?
Millions of acres of land lie along both sides of the Dalton Highway, north of the Yukon River. There should be room for all Alaskans.

Points to Consider:

- Large chunk of public land with limited opportunities for public uses due to the restrictions on motorized vehicles.
- HB 267 makes sense because it provides for much better access while reducing potential conflicts and habitat damage concerns by its **seasonal provision and limitation of motorized access to snow machines.**
- Given the limitations on so much of Alaska's lands do to federal land management regulations, loss of access on lands transferred to Native corporations under the terms of the Alaska Native Claims Settlement Act, the impasse over RS2477 access recognition, and the limited State trails program, it is important to responsibly promote public access on State lands where and when it can be done. HB 267 does this.

CS FOR HOUSE BILL NO. 280( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES HAWKER AND CHENAULT, Johnson, Olson, Thomas, Ramras, Harris, Millett, Lynn

A BILL

FOR AN ACT ENTITLED

"An Act relating to a gas storage facility; relating to the Regulatory Commission of Alaska; relating to the participation by the attorney general in a matter involving the approval of a rate or a gas supply contract; relating to an income tax credit for a gas storage facility; relating to oil and gas production tax credits; relating to the powers and duties of the Alaska Oil and Gas Conservation Commission; relating to production tax credits for certain losses and expenditures, including exploration expenditures; relating to the powers and duties of the director of the division of lands and to lease fees for a gas storage facility on state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Cook Inlet Recovery Act.

* **Sec. 2.** AS 31.05 is amended by adding a new section to read:

Sec. 31.05.032. Certification of gas storage capacity. (a) An owner of a gas storage facility that seeks an exemption under AS 38.05.180(u) or a credit under AS 43.20.046 shall apply to the commission for certification of the facility's working gas storage capacity and certification of the facility's gas withdrawal capability. The application shall be on a form prescribed by the commission.

(b) Within six months after receiving an application under (a) of this section, the commission shall determine and certify

(1) the working gas storage capacity of the facility on the date the facility commences commercial operation rounded to the nearest 500,000,000 cubic feet; and

(2) whether the gas storage facility is capable of withdrawing a minimum of 10,000,000 cubic feet of gas a day.

(c) The commission shall provide a copy of the certifications required by (b) of this section to the owner of the gas storage facility that requested the certification, the commissioner of natural resources, and the commissioner of revenue.

(d) If a gas storage facility ceases commercial operation, an owner of the gas storage facility shall give written notice to the commission that commercial operation has ceased. The notice must be filed with the commission before April 1 of the year immediately following the year in which the gas storage facility ceases commercial operation.

(e) In this section,

(1) "ceases commercial operation" means that the gas storage facility fails to inject or withdraw more than 100,000,000 cubic feet of gas during a calendar year following the year in which a gas storage facility commences commercial operation;

(2) "commences commercial operation" means the first injection of non-native gas into a gas storage facility for purposes other than testing;

(3) "cushion gas" means native and non-native gas in a gas storage facility that is needed to pressurize the facility and that allows the facility to function;

(4) "gas storage facility" means a tank or a depleted or nearly depleted

reservoir or pool in the state that is available for the storage of gas;

(5) "native gas" means gas in a gas storage facility that was not injected;

(6) "non-native gas" means gas that is produced elsewhere and injected into a gas storage facility;

(7) "pool" has the meaning given in AS 31.05.170;

(8) "working gas storage capacity" means the maximum volume of non-native gas a gas storage facility may safely contain without creating or causing waste; the maximum volume of non-native gas does not include the volume of cushion gas present or the volume required for proper functioning of the gas storage facility at the working gas storage capacity certified under (b) of this section.

*** Sec. 3.** AS 38.05.035(a) is amended to read:

(a) The director shall

(1) have general charge and supervision of the division and may exercise the powers specifically delegated to the director; the director may employ and fix the compensation of assistants and employees necessary for the operations of the division; the director is the certifying officer of the division, with the consent of the commissioner, and may approve vouchers for disbursements of money appropriated to the division;

(2) manage, inspect, and control state land and improvements on it belonging to the state and under the jurisdiction of the division;

(3) execute laws, rules, regulations, and orders adopted by the commissioner;

(4) prescribe application procedures and practices for the sale, lease, or other disposition of available land, resources, property, or interest in them;

(5) prescribe fees or service charges, with the consent of the commissioner, for any public service rendered;

(6) under the conditions and limitations imposed by law and the commissioner, issue deeds, leases, or other conveyances disposing of available land, resources, property, or any interests in them;

(7) have jurisdiction over state land, except that land acquired by the

Alaska World War II Veterans Board and the Agricultural Loan Board or the departments or agencies succeeding to their respective functions through foreclosure or default; to this end, the director possesses the powers and, with the approval of the commissioner, shall perform the duties necessary to protect the state's rights and interest in state land, including the taking of all necessary action to protect and enforce the state's contractual or other property rights;

(8) maintain the records the commissioner considers necessary, administer oaths, and do all things incidental to the authority imposed; the following records and files shall be kept confidential upon request of the person supplying the information:

(A) the name of the person nominating or applying for the sale, lease, or other disposal of land by competitive bidding;

(B) before the announced time of opening, the names of the bidders and the amounts of the bids;

(C) all geological, geophysical, and engineering data supplied, whether or not concerned with the extraction or development of natural resources;

(D) except as provided in AS 38.05.036, cost data and financial information submitted in support of applications, bonds, leases, and similar items;

(E) applications for rights-of-way or easements;

(F) requests for information or applications by public agencies for land that is being considered for use for a public purpose;

(9) account for the fees, licenses, taxes, or other money received in the administration of this chapter including the sale or leasing of land, identify their source, and promptly transmit them to the proper fiscal department after crediting them to the proper fund; receipts from land application filing fees and charges for copies of maps and records shall be deposited immediately in the general fund of the state by the director;

(10) select and employ or obtain at reasonable compensation cadastral, appraisal, or other professional personnel the director considers necessary for the

proper operation of the division;

(11) be the certifying agent of the state to select, accept, and secure by whatever action is necessary in the name of the state, by deed, sale, gift, devise, judgment, operation of law, or other means any land, of whatever nature or interest, available to the state; and be the certifying agent of the state, to select, accept, or secure by whatever action is necessary in the name of the state any land, or title or interest to land available, granted, or subject to being transferred to the state for any purpose;

(12) on request, furnish records, files, and other information related to the administration of AS 38.05.180 to the Department of Revenue for use in forecasting state revenue under or administering AS 43.55, whether or not those records, files, and other information are required to be kept confidential under (8) of this subsection; in the case of records, files, or other information required to be kept confidential under (8) of this subsection, the Department of Revenue shall maintain the confidentiality that the Department of Natural Resources is required to extend to records, files, and other information under (8) of this subsection;

(13) when reasonably possible, give priority to and expedite the processing of an application for a lease or assignment of a lease of state land for development and operation of a gas storage facility, for a right-of-way to a gas storage facility, for a change to the allocation of production within a unit, and for a permit necessary for the operation of a gas storage facility; in this paragraph, "gas storage facility" has the meaning given in AS 31.05.032.

*** Sec. 4.** AS 38.05.180(u) is amended to read:

(u) To avoid waste or to promote conservation of natural resources, the commissioner may authorize the subsurface storage of oil or gas, whether or not produced from state land, in land leased or subject to lease under this section. This authorization may provide for the payment of a storage fee or rental on the stored oil or gas, or, instead of the fee or rental, for a royalty other than that prescribed in the lease when the stored oil or gas is produced in conjunction with oil or gas not previously produced. A lease on which storage is so authorized shall be extended at least for the period of storage and so long thereafter as oil or gas not previously

produced is produced in paying quantities. **Notwithstanding the authorization for payments under this subsection, when requested by a lessee, the commissioner shall exempt a gas storage facility that qualifies for a tax credit under AS 43.20.046 from any payment described in this subsection for the periods described in this subsection. The exemption is available for the calendar year in which the facility commences commercial operation and for each of the nine calendar years immediately following the first year of commercial operation; however, an exemption is not applicable for the calendar year after the facility ceases commercial operation or for any subsequent calendar year. The lessee shall provide the commissioner with any information the commissioner requests to determine if the exemption applies. The information related to state land leased for a gas storage facility under this subsection is public information and may be furnished to the Regulatory Commission of Alaska. On request, the commissioner shall provide the name of each person using state land leased for a gas storage facility under this chapter, the years for which an exemption was granted, and the amount of the exemption. Gas withdrawn from a gas storage facility is considered to be non-native gas and is not considered to be produced and subject to royalty until all non-native gas injected into the gas storage facility has been withdrawn from the gas storage facility. A person receiving an exemption for a payment under this section that contracts to store gas for a utility regulated under AS 42.05 shall reduce the storage price to reflect the value of the exemption. In this subsection, "ceases commercial operation," "commences commercial operation," "gas storage facility," and "non-native gas" have the meanings given in AS 31.05.032.**

*** Sec. 5.** AS 42.05.141 is amended by adding a new subsection to read:

(d) When considering whether the approval of a rate or a gas supply contract proposed by a utility to provide a reliable supply of gas for a reasonable price is in the public interest, the commission shall

(1) recognize the public benefits of allowing a utility to negotiate different pricing mechanisms with different gas suppliers and to maintain a diversified portfolio of gas supply contracts to protect customers from the risks of inadequate

supply or excessive cost that may arise from a single pricing mechanism; and

(2) consider whether a utility could meet its responsibility to the public in a timely manner and without undue risk to the public if the commission fails to approve a rate or a gas supply contract proposed by the utility.

*** Sec. 6.** AS 42.05.381 is amended by adding a new subsection to read:

(k) The cost to the utility of storing gas in a gas storage facility that is allowed in determining a just and reasonable rate shall reflect the reduction in cost attributable to any exemption from a payment due under AS 38.05.180(u) and the value of a tax credit that the owner of the gas storage facility received under AS 43.20.046. The commission may request the (1) commissioner of natural resources to report the value of the exemption from a payment due under AS 38.05.180(u) that the gas storage facility received; and (2) commissioner of revenue to report information on the amount of tax credits claimed under AS 43.20.046 for the gas storage facility. In this subsection, "gas storage facility" has the meaning given in AS 31.05.032.

*** Sec. 7.** AS 42.05.990(4) is amended to read:

(4) "public utility" or "utility" includes every corporation whether public, cooperative, or otherwise, company, individual, or association of individuals, their lessees, trustees, or receivers appointed by a court, that owns, operates, manages, or controls any plant, pipeline, or system for

(A) furnishing, by generation, transmission, or distribution, electrical service to the public for compensation;

(B) furnishing telecommunications service to the public for compensation;

(C) furnishing water, steam, or sewer service to the public for compensation;

(D) furnishing by transmission or distribution of natural or manufactured gas to the public for compensation;

(E) furnishing for distribution or by distribution petroleum or petroleum products to the public for compensation when the consumer has no alternative in the choice of supplier of a comparable product and service at an equal or lesser price;

(F) furnishing collection and disposal service of garbage, refuse, trash, or other waste material to the public for compensation;

(G) furnishing the service of natural gas storage to the public for compensation;

*** Sec. 8.** AS 42.05.990 is amended by adding new paragraphs to read:

(9) "natural gas storage facility" means a facility that receives natural gas volumes from customers, holds the gas volumes in a reservoir, and delivers the gas volumes to the customer; in this paragraph, "facility" includes

(A) all parts of the facility from the point at which the natural gas volumes are received by the facility from the customer to the point at which the natural gas volumes are delivered by the facility to the customer;

(B) a facility consisting of a reservoir, either underground or aboveground, and one or more of the following components of the facility:

(i) pipe;

(ii) compressor stations;

(iii) station equipment;

(iv) injection and extraction wells;

(v) on-site or remote monitoring, supervision, and control facilities;

(vi) gas processing plants, treaters, and separators;

(vii) other equipment necessary to receive, place into the reservoir, monitor, remove from the reservoir, process, and deliver natural gas;

(10) "service of natural gas storage" means the operation of a natural gas storage facility primarily or exclusively for the benefit of third-party customers, and not for the benefit of the owner, operator, or manager of the natural gas storage facility; "service of natural gas storage" does not include the storage of natural gas

(A) owned by or contractually obligated to the owner, operator, or manager of the natural gas storage facility;

(B) that is incidental to the production or sale of natural gas to one or more third-party customers; or

(C) for which the price of storage is not separately itemized.

* **Sec. 9.** AS 43.05.230 is amended by adding a new subsection to read:

(j) The name of each person claiming a credit and the amount of credit claimed by that person under AS 43.20.046 is public information. The commissioner shall furnish the information to the Regulatory Commission of Alaska on request.

* **Sec. 10.** AS 43.20 is amended by adding a new section to article 1 to read:

Sec. 43.20.046. Gas storage facility tax credit. (a) A person that is an owner of a gas storage facility described in (b) of this section that commences commercial operation after December 31, 2010, and before January 1, 2016, may apply for a refundable credit against a tax liability that may be imposed on the person under this chapter for the taxable year in which the gas storage facility commences commercial operation. The tax credit under this section shall be an amount equal to $1.50 for each 1,000 cubic feet of working gas storage capacity that is certified under AS 31.05.032 less any amount of credit received under this section taken in earlier tax years for that capacity. The total amount of the credit that may be received for a single gas storage facility under this section may not exceed $15,000,000. The tax credit in this section is in addition to any other credit under this chapter for which the person is eligible.

(b) A gas storage facility qualifying for the credit in this section

(1) must have a working gas storage capacity of at least 500,000,000 cubic feet of gas other than cushion gas;

(2) must have a minimum withdrawal capability of 10,000,000 cubic feet a day as certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032;

(3) must not have been in operation as a gas storage facility before January 1, 2011;

(4) must be available for the storage of gas that is owned by a utility regulated under AS 42.05; and

(5) if located on state land and leased or subject to a lease under AS 38.05.180, must be in compliance with the terms of the lease.

(c) To claim the credit, the person shall submit to the department a copy of the certification of working gas storage capacity and withdrawal capability issued under

AS 31.05.032, the date that the gas storage facility commenced commercial operation, and other information required by the department. A person applying the credit against a liability under this chapter shall claim the credit on the person's return.

(d) A person entitled to a tax credit under this section that is greater than the person's tax liability under this chapter may request a refund in the amount of the unused portion of the tax credit.

(e) The department may use available money in the oil and gas tax credit fund established in AS 43.55.028 to make the refund applied for under (d) of this section in whole or in part if the department finds that (1) the claimant does not have an outstanding liability to the state for unpaid delinquent taxes under this title; and (2) after application of all available tax credits, the claimant's total tax liability under this chapter for any taxable year ending before the date of the refund claim is zero. In this subsection, "unpaid delinquent tax" means an amount of tax for which the department has issued an assessment that has not been paid and, if contested, has not been finally resolved in the taxpayer's favor.

(f) For the purpose of determining the amount of the credit under this section, the working gas storage capacity on which the credit is based shall be the capacity certified by the Alaska Oil and Gas Conservation Commission under AS 31.05.032.

(g) A person may not receive a credit under this section for the acquisition of a gas storage facility for which a credit has been granted under this section.

(h) If the gas storage facility for which a credit was received under this section ceases commercial operation during the nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation, the tax liability under this chapter of the person who claimed the credit shall be increased. The amount of the increase in tax liability

(1) shall be determined and assessed for the taxable year in which the gas storage facility ceases commercial operation, regardless of whether the gas storage facility subsequently resumes commercial operation; and

(2) is equal to the total amount of the credit taken multiplied by a fraction, the numerator of which is the difference between 10 and the number of calendar years for which the gas storage facility was eligible for a tax credit under this

section and the denominator of which is 10.

(i) The issuance of a refund under this section does not limit the department's ability to later audit or adjust the claim if the department determines, as a result of the audit, that the person that claimed the credit was not entitled to the amount of the credit. The tax liability of the person receiving the credit under this chapter is increased by the amount of the credit that exceeds that to which the person was entitled. If the tax liability is increased under this subsection, the increase bears interest under AS 43.05.225 from the date the refund was issued.

(j) A person claiming a tax credit under this section shall, when contracting with a utility regulated under AS 42.05 to store the utility's gas, reduce the price it would otherwise charge the utility to reflect the value of any tax credits received under this section.

(k) A person claiming a tax credit under this section for a gas storage facility that ceases commercial operation within nine calendar years immediately following the calendar year in which the gas storage facility commences commercial operation shall notify the department in writing of the date the gas storage facility ceased commercial operation. The notice must be filed with the return for the taxable year in which the gas storage facility ceases commercial operation.

(*l*) A refund under this section does not bear interest.

(m) In this section, "ceases commercial operation," "commences commercial operation," "gas storage facility," and "working gas storage capacity" have the meanings given in AS 31.05.032.

*** Sec. 11.** AS 43.55.011(m) is amended to read:

(m) Notwithstanding any contrary provision of AS 38.05.180(i), AS 41.09.010, AS 43.55.024, or 43.55.025, the department shall provide by regulation a method to ensure that, for a calendar year for which a producer's tax liability is limited by (j), (k), or (o) of this section, tax credits **based on a lease expenditure incurred before January 1, 2011, that are** otherwise available under AS 38.05.180(i), AS 41.09.010, AS 43.55.024, or 43.55.025 and allocated to gas subject to the limitations in (j), (k), and (o) of this section are accounted for as though the credits had been applied first against a tax liability calculated without regard to the limitations under

(j), (k), and (o) of this section so as to reduce the tax liability to the maximum amount provided for under (j) or (o) of this section for the production of gas or (k) of this section for the production of oil. The regulation must provide for a reasonable method to allocate tax credits to gas subject to (j) and (o) of this section. Only the amount of a tax credit remaining after the accounting provided for under this subsection may be used for a later calendar year, transferred to another person, or applied against a tax levied on the production of oil or gas not subject to (j), (k), or (o) of this section to the extent otherwise allowed.

*** Sec. 12.** AS 43.55.020 is amended by adding a new subsection to read:

(i) Cushion gas in a gas storage facility is not considered to be gas used in the operation of a lease or property or gas used for repressuring as described in (e) of this section. Gas withdrawn from a gas storage facility is considered to be non-native gas until all non-native gas injected into the gas storage facility has been withdrawn from the gas storage facility. Non-native gas withdrawn from a gas storage facility is not considered to be gas produced for the purposes of AS 43.55.011 - 43.55.180. Gas withdrawn from a gas storage facility after all non-native gas previously injected into the gas storage facility has been withdrawn is gas considered to be produced from the lease or property for the purposes of AS 43.55.011 - 43.55.180. In this subsection, "gas storage facility," "native gas," and "non-native gas" have the meanings given in AS 31.05.032.

*** Sec. 13.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; **the full amount of the credit for a qualified capital expenditure incurred in the Cook Inlet sedimentary basin after December 31, 2010, may be applied for a single**

calendar year; however, not more than half of the tax credit **for a qualified capital expenditure incurred outside of the Cook Inlet sedimentary basin after December 31, 2010,** may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 14.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for transferable tax credit certificates. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the department shall, **except as provided in (n) of this section,** issue the applicant two transferable tax credit certificates, each for half of the amount of the credit**; the** [. THE] credit shown on one of the two certificates is available for immediate use. The credit shown on the second of the two certificates may not be applied against a tax for a calendar year earlier than the calendar year following the calendar year in which the certificate is

issued, and the certificate must contain a conspicuous statement to that effect; a [. A] certificate issued under this subsection does not expire.

*** Sec. 15.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) **or (n)** of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under AS 43.05.225 from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 16.** AS 43.55.023 is amended by adding new subsections to read:

(m) A producer or explorer may apply for a tax credit for a Cook Inlet well lease expenditure incurred after December 31, 2010, as follows:

(1) notwithstanding that a Cook Inlet well lease expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a Cook Inlet well lease expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 40 percent of that expenditure. A tax credit under this subsection may be applied for a single calendar year;

(2) a producer or explorer may take a credit for a Cook Inlet well lease expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS

43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

(n) For a lease expenditure incurred in the Cook Inlet sedimentary basin after December 31, 2010, that qualifies for tax credits under (a) and (b) of this section, and for a Cook Inlet well lease expenditure that qualifies for a tax credit under (m) of this section, the department shall issue a transferable tax credit certificate to the person entitled to the credit for the full amount of the credit. The transferable tax credit is available for immediate use and does not expire.

*** Sec. 17.** AS 43.55.028(a) is amended to read:

(a) The oil and gas tax credit fund is established as a separate fund of the state. The purpose of the fund is to purchase [CERTAIN] transferable tax credit certificates issued under AS 43.55.023**,** [AND CERTAIN] production tax credit certificates issued under AS 43.55.025**, and to pay refunds claimed under AS 43.20.046**.

*** Sec. 18.** AS 43.55.028(e) is amended to read:

(e) The department, on the written application of **a** [THE] person to whom a transferable tax credit certificate has been issued under AS 43.55.023(d) **or (n)** or **to whom** a production tax credit certificate has been issued under AS 43.55.025(f), may use available money in the oil and gas tax credit fund to purchase, in whole or in part, the certificate if the department finds that

(1) the calendar year of the purchase is not earlier than the first calendar year for which the credit shown on the certificate would otherwise be allowed to be applied against a tax;

(2) **except for the application of a person for the purchase of a transferable tax credit certificate issued under AS 43.55.023(n),**

(A) within 24 months after applying for the transferable tax credit certificate or filing a claim for the production tax credit certificate, the applicant incurred a qualified capital expenditure or was the successful bidder on a bid submitted for a lease on state land under AS 38.05.180(f);

(B) [(3)] the amount expended for the purchase would not exceed the total of qualified capital expenditures and successful bids described

in **(A)** [(2)] of this **paragraph** [SUBSECTION] that have not been the subject of a finding made under this **subparagraph** [PARAGRAPH] for purposes of a previous purchase of a certificate;

(3) [(4)] the applicant does not have an outstanding liability to the state for unpaid delinquent taxes under this title;

(4) [(5)] the applicant's total tax liability under AS 43.55.011(e), after application of all available tax credits, for the calendar year in which the application is made is zero;

(5) [(6)] the applicant's average daily production of oil and gas taxable under AS 43.55.011(e) during the calendar year preceding the calendar year in which the application is made was not more than 50,000 BTU equivalent barrels; and

(6) [(7)] the purchase is consistent with this section and regulations adopted under this section.

*** Sec. 19.** AS 43.55.028(g) is amended to read:

(g) The department may adopt regulations to carry out the purposes of this section, including standards and procedures to allocate available money among applications for purchases **under this chapter and claims for refunds under AS 43.20.046 when** the total amount of **the applications for purchase and claims for refund exceed** [WHICH EXCEEDS] the amount of available money in the fund. **The regulations adopted by the department may not, when allocating available money in the fund under this section, distinguish an application for the purchase of a credit certificate issued under AS 43.55.023(n) or a claim for refund under AS 43.20.046.**

*** Sec. 20.** AS 44.23.020(e) is amended to read:

(e) There is established within the Department of Law the function of public advocacy for regulatory affairs. The attorney general shall participate as a party in a matter that comes before the Regulatory Commission of Alaska when the attorney general determines that participation is in the public interest. **When considering whether participation is in the public interest, the attorney general shall consider the issues the Regulatory Commission of Alaska must take into consideration under AS 42.05.141(d).**

*** Sec. 21.** This Act takes effect immediately under AS 01.10.070(c).

House Bill 280
"The Cook Inlet Recovery Act"
Changes in Work Draft v. C

The changes from the House Labor and Commerce committee substitute (Ver. P) are:

- **Sec. 2.** Directs the Alaska Oil and Gas Conservation Commission to certify a natural gas storage facility's working gas capacity rounded to the nearest 500 million cubic feet instead of the nearest 1 billion cubic feet.

- **Sec. 2.** Increases to 100 million cubic feet the minimum annual injection or withdrawal of natural gas required for a gas storage facility to qualify for and retain its tax credit and state land lease fee exemption.

- **Sec. 2.** Eliminates pipelines as eligible for the gas storage facility tax credit.

- **Sec. 8.** Clarifies the boundaries and facilities of a gas storage facility that would be subject to regulation by the Regulatory Commission of Alaska, and specifies that RCA regulation extends only to gas storage facilities operated exclusively or primarily for the benefit of gas owned by third-party customers.

- **Secs. 10, 17 and 19.** Changes the tax credit offered for development of a gas storage facility from a transferrable tax credit to a refundable tax credit. The end result is the same — the taxpayer could receive a payment from the state for the full value of the refundable credit if the taxpayer does not have enough tax liability to fully use the credit. The Department of Revenue advised that a refundable tax credit would be easier to administer than a transferable tax credit.

- **Sec. 10.** Reduces the maximum tax credit for a gas storage facility to $15 million from $30 million in Version P.

Rep.Mike.Hawker@legis.state.ak.us • http://www.akrepublicans.org/hawker/

HB 280
"Cook Inlet Recovery Act"
Sectional Analysis (version C)

Prepared by Representative Mike Hawker's Office

Section 1: Sets out a short title for the legislation: Cook Inlet Recovery Act (CIRA).

Section 2: Establishes an application process, criteria and timeline for the Alaska Oil and Gas Conservation Commission (AOGCC) to certify that a gas storage facility (GSF) meets the minimum working gas storage capacity and daily delivery rate requirements to be eligible for the financial incentives provided in this bill.

Requires a GSF owner to notify the AOGCC if the facility ceases operation.

Provides definitions for terms used in CIRA.

Section 3: Requires the Director of the Division of Mining, Land and Water to give priority to and expedite "when reasonably possible" any applications, permits and lease assignments needed for development and operation of a GSF.

Section 4: Directs the Department of Natural Resources (DNR) to waive any state land lease fees or rents for the first 10 years of a GSF's operation. The waiver would stop if the storage facility ceases commercial operations.

States that any waivers of lease fees or rents would be public record.

Requires that the GSF pass on the financial benefits of any lease exemption to utilities that use its service.

Clarifies that any gas withdrawn from a GSF is considered to be non-native gas and not subject to royalty until all non-native gas is withdrawn.

Section 5: Directs the Regulatory Commission of Alaska (RCA), when considering the approval of a utility's gas supply contract, to consider the impact on consumers if the commission rejects a utility's gas supply contract and to recognize the value of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 6: Requires that a utility's cost of gas storage that is passed on to consumers reflect the financial benefits of any tax credits and state lease exemptions provided in this legislation.

Section 7: Specifies that the Regulatory Commission of Alaska has jurisdiction over natural gas storage services provided for gas that is owned by a regulated utility.

Section 8: Further defines "natural gas storage facility" and clarifies what is considered part of the storage facility.

3965

Further defines that RCA regulation of gas storage facilities is limited to facilities operated primarily or exclusively for third-party customers; regulation does not extend to a proprietary storage facility operated exclusively or primarily to hold gas owned by the storage facility owner or operator.

Section 9: Clarifies that the names of taxpayers and the amount of credits claimed for gas storage facilities under this legislation shall be public information. Requires the Department of Revenue (DOR) to furnish the information to the RCA.

Section 10: Establishes a credit against corporate income taxes of $1.50 per thousand cubic feet of new gas storage capacity opened in Alaska during 2011-2015. The credit is limited to $15 million per GSF. This section sets out minimum capacity and deliverability requirements to qualify for the credit, including that the GSF must be available for use by regulated utilities and, if utilizing state land, must be in compliance with its DNR storage lease. The credit can be refunded by the state at full value if the owner does not have enough taxable income to fully utilize the credit.

Section 11: Sunsets on Jan. 1, 2011, the rule that limits how certain tax credits arising from activity in Cook Inlet or from producing gas for in-state use are used. This would allow a Cook Inlet explorer or producer to explore or produce elsewhere in the state and have full access to the credits it earned from its Cook Inlet activities.

Section 12: Clarifies that any native gas in a gas storage facility shall be deemed not to be produced for production tax purposes until all of the non-native gas injected into the storage facility has been withdrawn.

Section 13: Allows explorers in Cook Inlet to receive their full production tax credit in the first year rather than over two years (as in current statute).

Section 14: Makes additional statutory changes to allow explorers in Cook Inlet to receive their full production tax credit the first year rather than over two years (as in current statute).

Section 15: Adds the new Cook Inlet-related well tax credits to the section in statute dealing with audits of transferred tax credits.

Section 16: Provides a 40% credit for exploration expenses in Cook Inlet against production taxes, rather than the two-tiered 30% / 40% credit in existing statute. In addition, all well-related lease expenditures in Cook Inlet, including non-capital and non-exploration related lease expenditures, also qualify for the credit.

Section 17: Allows the state to use funds from the oil and gas tax credit fund to refund the tax credits issued to a GSF.

Section 18: Makes additional changes to make it easier for a company to sell its Cook Inlet exploration credits to the state. Current law requires that before a company can sell credits back to the state it must prove it has spent an amount equal to the

3966

credit in Alaska. HB 280 would eliminate that requirement for Cook Inlet exploration credits.

Section 19: Authorizes the Department of Revenue to write regulations implementing certain aspects of Section 17.

Section 20: Directs the Office of Public Advocacy for regulatory affairs at the Department of Law, when considering whether to participate in a utility rate case regarding a utility's gas supply contract before the RCA, to consider the impact to consumers if the commission rejects a utility's gas supply contract and to recognize the value of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 21: Immediate effective date clause.

3967

HB 280
Cook Inlet Recovery Act (CIRA) - Overview
Prepared by Representative Mike Hawker's Office

CIRA provides a statutory framework and financial incentives for developing large-scale natural gas storage facilities and also makes changes to Cook Inlet exploration tax credits to encourage exploration and development of new gas discoveries.

Gas Storage Facilities

- Incentives include:
  - Land lease and fee exemption for 10 years
  - NEW income tax credit
    - Credit is based on capacity, certified by AOGCC: $1.50/1,000 cubic feet (cf) of working storage capacity
    - Maximum credit is $15 million per facility
    - Credit is fully refundable by the state
  - Expedited/priority processing of applications by DNR, when reasonably possible
- Incentives apply to gas storage facility that meets minimum capacity and delivery requirements, certified by AOGCC:
  - Minimum Working Storage Capacity: 500 million cf
  - Minimum Daily Delivery Capacity: 10 million cf
- Incentives are available for gas storage facilities that commence operations between Jan. 1, 2011, and Dec. 31, 2015
- All financial benefits and the names of those receiving the benefits are public information
- All financial benefits must be passed on to utilities, which then pass on to consumers
- All financial benefits stop when a project ceases operation
- CIRA also mandates RCA regulation of gas storage facilities that hold gas owned by regulated utilities.

Gas Exploration in Cook Inlet

- Changes to existing credits:
  - Allows 100% of credits earned by explorers in the Cook Inlet to be used elsewhere in the state; current statute generally limits those credits to be applied only to actual taxes paid on Cook Inlet production
  - Allows the full amount of the credit to be used in the year issued; current statute allows only half of the credit to be used in one year
  - Provides a 40% credit for exploration within Cook Inlet; current statute contains a variable (30% or 40%) credit based on the proximity of the exploration to an existing well

HB 280 Overview (cont.)
Definitions

Gas storage facility: A depleted or nearly depleted reservoir or aboveground tank used to store natural gas produced offsite and delivered to the storage facility to hold until needed. The owner of the gas — a utility, for example — would inject gas into the facility and would pay the facility operator for storage service.

Working gas storage capacity: The maximum amount of natural gas the storage facility could safely hold for its storage customers.

Cushion gas (also known as pad gas): The volume of gas that must be maintained in the storage facility to provide adequate pressure for operations. The storage operator, not the storage customers, would own the cushion gas.

Native gas: In the case of a nearly depleted reservoir, native gas is the natural gas that exists in the reservoir at the time it is developed for use as a storage facility. Native gas is used as cushion gas to maintain pressurization. If all of the non-native working gas that was injected for storage is withdrawn and native gas is eventually produced, state tax and royalty would be assessed.

Non-native working gas: Natural gas that is produced from another reservoir and delivered to the storage facility and held until needed. For example, a utility could purchase gas from a Cook Inlet producer and have it delivered to the storage facility for safekeeping until the utility needs the gas to meet customer demand. At that point, the utility would instruct the gas storage operator to deliver the quantity of gas required. The utility, not the storage operator, would own the gas in storage. State tax and royalty would be assessed on the non-native working gas when it is first produced and sold to the utility; no additional taxes or royalties would be due when it is withdrawn from storage for delivery to the utility.

HB 280 Overview (cont.)
FAQs

1. What are the minimum requirements for a gas storage facility (GSF) to qualify for financial incentives in the Cook Inlet Recovery Act? Who determines if a GSF meets these requirements?

   In order to qualify for the financial incentives in CIRA, a GSF must have the capacity to store more than 500 million cubic feet of working gas and deliver gas at a rate of at least 10 million cubic feet per day. The Alaska Oil and Gas Conservation Commission (AOGCC) will be required to certify these capacities within six months of receiving an application and provide the certification to the applicant, the Department of Natural Resources and the Department of Revenue.

2. What happens if the GSF stops operating?

   A GSF ceases operations if it doesn't inject or withdraw at least 100 million cubic feet of gas in a calendar year. The operator is required to notify the AOGCC by April 1st of the following year. If this happens, the GSF will no longer be eligible for state lease fees exemptions or tax credits.

3. Sections 4 and 12 of the bill state that gas withdrawn from a GSF is considered to be non-native gas and not considered to be produced until all non-native gas has been withdrawn. What does this mean and why do we need this language?

   This language requires that state follow last-in, first-out accounting rules for gas in a GSF. "Native gas" is any gas that is already in a storage facility and will be subject to existing royalty and production taxes when it is produced. "Non-native gas" includes all gas that is injected into the facility for temporary storage - royalty and production taxes were assessed when it was produced. By including this language, it is clear that non-native gas extracted from a GSF is not taxed twice and native gas is not subject to royalty and production taxes until all non-native gas is withdrawn.

4. Gas storage companies are receiving lease exemptions and tax breaks under CIRA. Are these savings passed on to the consumer?

   Yes. Language in sections 4, 6 and 10 require the owner of a GSF to reflect the savings of any financial benefits enacted in CIRA in their gas storage price.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 offers tax credits for Cook Inlet gas storage facilities and attempts to promote gas exploration and production in the Cook Inlet.

There is no anticipated fiscal impact to the Division of Oil and Gas for the management of gas storage on state land. However, Sec. 4 of the bill will provide a ten year "holiday" on all storage fees and rentals for the storage lease. Also, the accounting convention described means that "non-native" gas will be withdrawn from storage first and no royalty revenue will acrue to "native" gas until all non-native gas is withdrawn. How industry will respond to the tax credits offered by this bill is unknown, therefore, the impact on fees, rents, and royalty revenues is negative indeterminate.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 would make multiple changes to the existing law on tax credits and gas storage facilities. The portions of the bill that specifically apply to the Department of Revenue would change the treatment of credits under AS 43.55.023 (Qualifying Capital Expenditures) and create a credit against corporate income tax (CIT) for gas storage facilities (AS 43.20.046). The language relating to credits has the potential to be interpreted quite broadly with the potential for large reductions in state revenues when compared to future developments that might occur under the current law.

The Department is requesting a Corporate Income Tax Auditor III position (Range 22) to audit the tax credits and manage the approval, issuance and tracking of the new and modified state credits. (continued)

Prepared by: Cody Rice, Petroleum Economist II — Phone 907-269-1024
Division: Tax Division — Date/Time 03-04-10; 4:27pm
Approved by: Ginger Blaisdell, Director — Date 03-07-10; 1:31pm

(Revised 11/6/2009 OMB)

3973

ANALYSIS CONTINUATION

There are three gas storage facilities currently operating in the Cook Inlet region. None of the existing gas storage facilities would qualify for the corporate income tax credits under this bill as currently written. However, it is unclear if the existing gas storage facilities could qualify for credits if they shut-down and re-opened or changed ownership. Any estimate of the change in revenues to the state under this legislation would be based on hypothetical development in the future. As a result, the full revenue impact of this legislation cannot be accurately determined at this time.

The following scenarios may provide some perspective on the range of potential revenue impacts.

Scenario 1: Corporate income tax credit effects on a small facility

The first scenario assumes the construction of a small gas storage facility in a depleted reservoir similar to one of the smaller currently operating gas storage facilities. The facility is assumed to be capable of approximately 1.25 cycles a year and to have a working gas capacity of approximately 1Bcf. Under the terms of HB 280 this facility would be entitled to a credit of $1.5 Million against state CIT.

In 2004, the Federal Energy Regulatory Commission (FERC) estimated the median cost-of-service rate for firm storage service at $0.64/Decatherm. One Decatherm is equal to one Mcf of natural gas if the natural gas contains 1,000 Btu/cubic foot. Escalating this cost for inflation produces a 2009 cost-of-service rate of approximately $0.72/Mcf of firm storage service.

Given the estimated cost-of-service, volume of gas cycled and reasonable assumptions about debt to equity and other factors, the Department of Revenue estimates that this gas storage facility would owe approximately $95,000/year in state CIT. This rough estimate suggests that the corporate income tax credit for gas storage created under AS 43.20.046 of this bill would entirely offset the state corporate tax liability for nearly the first 16 years of operation. It is important to note that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded.

There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $550,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $550,000 in refundable state credits. Additionally, under HB 280, the facility would be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations. There is also some question about whether the existing statute of limitations would allow the state to exercise the clawback provision.

Under this scenario the reduction in state taxes to the state is $1.5 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 2: Corporate income tax credit effects on a large facility

Scenario two assumes the construction of a large gas storage facility in a depleted reservoir. The facility is assumed to be capable of cycling approximately one time each year and to have a working gas capacity of

ANALYSIS CONTINUATION

Under the terms of HB 280 this facility would be entitled to the maximum credit of $30 million against state corporate income tax.

Using the same cost-of-service and financial assumptions as scenario one, the Department of Revenue estimates that the gas storage facility owner would owe approximately $1.5 million annually in state CIT. This rough estimate suggests that the corporate income tax credit created under AS 43.20.046 would completely offset the state corporate income tax liability for about 20 years of operation. It is important to note again that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded. There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $15,000,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $15,000,000 in refundable state credits. The facility would also be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations.

Under this scenario the reduction in state taxes to the state is $30 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 3: Broader interpretation of HB 280 benefits

Previous scenarios have assumed gas storage facilities operated at nearly 100% of capacity, using 100% of certified storage capacity. This scenario assumes a gas storage operator takes full economic advantage of a broad interpretation of the language in HB 280. Specifically, the facility uses a reservoir with a working gas capacity of 20 Bcf and the operator only cycles the minimum amount of gas to prevent the loss of the credits: 10,000 Mcf of natural gas annually. Using the same cost-of-service and financial assumptions as the previous two scenarios, the Department of Revenue estimates that the gas storage facility owner would owe less than $1,000 annually in state CIT. The storage facility owner would be eligible for a credit of $30,000,000 for the facility based on the working gas capacity. In this scenario it would take nearly 4,000 years of operation under this scenario for a gas storage operator to exhaust the state corporate income tax credit provided under this bill. Alternatively, after 10 years of commercial operation the owner could shut the facility down and retain $29,990,000 in refundable state credits.

Scenario 4: Lost or deferred production and production tax revenue

Previous scenarios have assumed gas storage in a depleted reservoir. It is possible that an oil and gas lessee could elect to shut-in production at a currently producing field earlier than would have otherwise occurred in order to take full advantage of plentiful native gas for free cushion gas. Under this bill the remaining native gas could be produced at the end of commercial operations for the gas storage facility. This deferred or lost production tax revenue would be in addition to lost revenue impacts equivalent to any of the previous three scenarios. The time value of deferred production is not calculated but could be substantial.

Scenario 5: Tax Ceiling

Existing state law provides the benefit of a tax ceiling for certain production under AS 43.55.011(j)(k) and (o). The tax ceiling applies to Cook Inlet production as well as any natural gas produced for use in state. Currently, credits earned under AS 38.05.180(i), AS 41.09.010, AS 43.55.024 or AS 43.55.025 are required to be applied first to a producers tax liability under AS 43.55.011(e) as though it were not limited by AS 43.55.011(j)(k) or (o).

ANALYSIS CONTINUATION

Under HB280, the limitation on application of credits does not apply to Cook Inlet production after January 1, 2011. This change would allow credits from Cook Inlet expenditures to also be applied to other non-Cook Inlet tax liability. In essence producers would earn credits and apply their full value against state wide tax liability and also receive the benefit of the reduced tax rate resulting from the comparison of actual tax rate (using those credits) and the prior ELF rate or ceiling rate. This repeal is likely to have the effect of reducing Cook Inlet tax collections to zero and allowing Cook Inlet credits to be used to shield taxes due from operations in other parts of Alaska such as the North Slope. This provision would be a particular benefit to companies operating in both Cook Inlet and on the North Slope.

Scenario five entails a producer with production in both Cook Inlet and on the North Slope. Assume the producer is entitled to a credit of $12 million under AS 43.55.025 because of Cook Inlet Exploration Expenditures, and assume that the producer's total production taxes are approximately $18 million, with $16 million attributed to North Slope production and $2 million attributed to Cook Inlet production.

Under existing law, AS 43.55.011(m) requires the producer to apply the $12 million in Cook Inlet credits to the full value of its hypothetical .011(e) Cook Inlet tax liability even though the Cook Inlet tax ceiling rate is applicable. Applying the $12 million credit against $2 million of .011(e) Cook Inlet production tax leaves $10 million in excess credits that may be used to offset tax liability elsewhere in the state. The tax ceiling rate on Cook Inlet oil is zero; therefore $2 million of the credit is considered "used" under AS 43.55.011(m).

Under current law, the North Slope tax liability of $16 million would be offset by the $10 million in credits left over after application of AS43.55.011(m), leaving a production tax liability of $6 million. Under HB 280, the producer would not have to draw down its $12 million of Cook Inlet tax credits, and instead be allowed to apply the full $12 million to the $16 million North Slope tax liability. As a result, the producer would pay a total of $4 million in production tax under this scenario, or $2 million less than under the existing law.

This scenario is a simplified version of how HB 280 might affect state revenues. Because AS 43.55.011(m) applies to multiple types of credits, and multiple taxpayers, the revenue effects could be significant.

Additional Scenarios and Fiscal Impacts:

The effect of increasing the value of credits for well work in Cook Inlet to 40% under AS 43.55.023(m) is not quantified in this analysis but would reduce tax revenues.

There could be additional reductions in state tax revenues if other existing facilities or natural gas pipelines were certified as gas storage and eligible for credits. This bill does not limit the credit for gas storage to the Cook Inlet, and in fact could be applied to gas stored on the North Slope or other areas of the state.

Cook Inlet production tax and additional production caused by the injection or withdrawal requirements under this proposal are very unlikely to generate more than a small fraction of the revenue that would be required to fund this credit. This means production taxes from other areas of the state, such as the North Slope would likely be the source of funds to the tax credit fund for the state to repurchase this credit.

House Bill 280
"The Cook Inlet Recovery Act"
Sponsor Statement

Residents of South Central Alaska are at risk that in the near future there will not be enough natural gas produced in Cook Inlet to heat and light their homes and businesses. Legislative action now can help address this challenge before it becomes a crisis.

A critical and universally recognized part of the solution is large-scale gas storage, allowing utilities to purchase gas during lower demand periods; hold the gas in storage; then withdraw it when needed. Establishing gas storage is crucial, and the state needs to promote the rapid development of storage facilities. House Bill 280, the Cook Inlet Recovery Act (CIRA), provides tax incentives and regulatory assurances to attract the private investment necessary to develop storage facilities and help reduce the cost of storage to consumers.

Specifically, CIRA provides a 10-year exemption from state land lease fees and rents to owners of new gas storage facilities. Since storage is needed urgently, these financial incentives will be available only for facilities put into operation before December 31, 2015. CIRA sets standards, such as minimum size and access requirements, for qualifying projects. Consumers will benefit from increased energy security and lower energy costs, as any financial incentives are required to pass through the supply chain to utilities and, in turn, to their customers.

In addition to storage, South Central also needs new gas discoveries. CIRA increases the incentives for exploration in Cook Inlet and allows explorers and producers to take their full benefit in one year rather than over two years.

CIRA also provides statutory guidance to the Regulatory Commission of Alaska in its consideration of utility gas supply contracts to help ensure adequate supplies of reasonably priced gas in the years ahead.

2/5/10

HB 280
"Cook Inlet Recovery Act"
Sectional Analysis (version P)

Prepared by Representative Mike Hawker's Office

Section 1: Sets out a short title for the legislation: Cook Inlet Recovery Act (CIRA).

Section 2: Establishes an application process, criteria and timeline for the Alaska Oil and Gas Conservation Commission (AOGCC) to certify that a gas storage facility (GSF) meets the minimum working gas storage capacity and daily delivery rate requirements to be eligible for the financial incentives provided in this bill.

Requires a GSF owner to notify the AOGCC if the facility ceases operation.

Provides definitions for terms used in CIRA.

Section 3: Requires the Director of the Division of Mining, Land and Water to give priority to and expedite "when reasonably possible" any applications, permits and lease assignments needed for development and operation of a GSF.

Section 4: Directs the Department of Natural Resources (DNR) to waive any state land lease fees or rents for the first 10 years of a GSF's operation. The waiver would stop if the storage facility ceases commercial operations.

States that any waivers of lease fees or rents would be public record.

Requires that the GSF pass on the financial benefits of any lease exemption to utilities that use its service.

Clarifies that any gas withdrawn from a GSF is considered to be non-native gas and is not subject to royalty until all non-native gas is withdrawn.

Section 5: Directs the Regulatory Commission of Alaska (RCA), when considering the approval of a utility's gas supply contract, to consider the impact on consumers if the commission rejects a utility's gas supply contract and to recognize the value of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 6: Requires that a utility's cost of gas storage that is passed on to consumers reflect the financial benefits of any tax credits and state lease exemptions provided in this legislation.

Section 7: Specifies that the Regulatory Commission of Alaska has jurisdiction over natural gas storage services provided for gas that is owned by a regulated utility.

Section 8: Clarifies that the names of taxpayers, the amount of credits issued for gas storage facilities under this legislation, and how much, if any, of the credit was sold to the state is public information. Requires the Department of Revenue (DOR) to furnish the information to the RCA.

3978

Section 9: Establishes a credit against corporate income taxes of $1.50 per thousand cubic feet of new gas storage capacity opened in Alaska during 2011-2015. The credit is limited to $30 million per GSF. This section sets out minimum capacity and deliverability requirements to qualify for the credit, including that the GSF must be available for use by regulated utilities and, if utilizing state land, must be in compliance with its DNR storage lease. The credit can be transferred or sold to another taxpayer, or sold to the state at full value if the owner does not have enough taxable income to fully utilize the credit.

Section 10: Sunsets on Jan. 1, 2011, the rule that limits how certain tax credits arising from activity in Cook Inlet or from producing gas for in-state use are used. This would allow a Cook Inlet explorer or producer to explore or produce elsewhere in the state and have full access to the credits it earned from its Cook Inlet activities.

Section 11: Clarifies that any native gas in a gas storage facility shall be deemed not to be produced for production tax purposes until all of the non-native gas injected into the storage facility has been withdrawn.

Section 12: Allows explorers in Cook Inlet to receive their full production tax credit in the first year rather than over two years (as in current statute).

Section 13: Makes additional statutory changes to allow explorers in Cook Inlet to receive their full production tax credit the first year rather than over two years (as in current statute).

Section 14: Adds the new Cook Inlet-related well tax credits to the section in statute dealing with audits of transferred tax credits.

Section 15: Provides a 40% credit for exploration expenses in Cook Inlet against production taxes, rather than the two-tiered 30% / 40% credit in existing statute. In addition, all well-related lease expenditures in Cook Inlet, including non-capital and non-exploration related lease expenditures, also qualify for the credit.

Section 16: Allows the state to use funds from the oil and gas tax credit fund to purchase tax credits issued to a GSF.

Section 17: Makes additional changes to make it easier for a company to sell its Cook Inlet exploration credits to the state. Current law requires that before a company can sell credits back to the state it must prove it has spent an amount equal to the credit in Alaska. HB 280 would eliminate that requirement for Cook Inlet exploration credits.

Section 18: Authorizes the Department of Revenue to write regulations implementing certain aspects of Section 17.

Section 19: Directs the Office of Public Advocacy for regulatory affairs at the Department of Law, when considering whether to participate in a utility rate case regarding a utility's gas supply contract before the RCA, to consider the impact to consumers if the commission rejects a utility's gas supply contract and to recognize the value

of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 20: Immediate effective date clause.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 offers tax credits for Cook Inlet gas storage facilities and attempts to promote gas exploration and production in the Cook Inlet.

There is no anticipated fiscal impact to the Division of Oil and Gas for the management of gas storage on state land. However, Sec 3 of the bill will provide a ten year "holiday" on all storage fees and rentals for the storage lease. Also, the accounting convention described in this section means that "non-native" gas will be withdrawn from storage first and no royalty revenue will acrue to "native" gas until all non-native gas is withdrawn. How industry will respond to the tax credits offered by this bill is inknown, therefore, the impact on fees, rents, and royalty revenues is negative indeterminate.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 would make multiple changes to the existing law on tax credits and gas storage facilities. The portions of the bill that specifically apply to the Department of Revenue would change the treatment of credits under AS 43.55.023 (Qualifying Capital Expenditures) and create a credit against corporate income tax (CIT) for gas storage facilities (AS 43.20.046). The language relating to credits has the potential to be interpreted quite broadly with the potential for large reductions in state revenues when compared to future developments that might occur under the current law.

The Department is requesting a Corporate Income Tax Auditor III position (Range 22) to audit the tax credits and manage the approval, issuance and tracking of the new and modified state credits. (continued)

ANALYSIS CONTINUATION

There are three gas storage facilities currently operating in the Cook Inlet region. None of the currently existing gas storage facilities would qualify for the corporate income tax credits under this bill as currently written. However, it is unclear if the existing gas storage facilities could qualify for credits if they shut-down and re-opened or changed ownership. Any estimate of the change in revenues to the state under this legislation would be based on hypothetical development in the future. As a result, the full revenue impact of this legislation cannot be accurately determined at this time.

The following scenarios may provide some perspective on the range of potential revenue impacts.

Scenario 1: Corporate income tax credit effects on a small facility

The first scenario assumes the construction of a small gas storage facility in a depleted reservoir similar to one of the smaller currently operating gas storage facilities. The facility is assumed to be capable of approximately 1.25 cycles a year and to have a working gas capacity of approximately 1Bcf. Under the terms of HB 280 this facility would be entitled to a credit of $1.5 Million against state CIT.

In 2004, the Federal Energy Regulatory Commission (FERC) estimated the median cost-of-service rate for firm storage service at $0.64/Decatherm. One Decatherm is equal to one Mcf of natural gas if the natural gas contains 1,000 Btu/cubic foot. Escalating this cost for inflation produces a 2009 cost-of-service rate of approximately $0.72/Mcf of firm storage service.

Given the estimated cost-of-service, volume of gas cycled and reasonable assumptions about debt to equity and other factors, the Department of Revenue estimates that this gas storage facility would owe approximately $95,000/year in state CIT. This rough estimate suggests that the corporate income tax credit for gas storage created under AS 43.20.046 of this bill would entirely offset the state corporate tax liability for nearly the first 16 years of operation. It is important to note that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded. There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $550,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $550,000 in refundable state credits before starting the process over with a new facility. Additionally, under HB 280, the facility would be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations. There is also some question about whether the existing statute of limitations would allow the state to exercise the clawback provision.

Under this scenario the reduction in state taxes to the state is $1.5 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 2: Corporate income tax credit effects on a large facility

Scenario two assumes the construction of a large gas storage facility in a depleted reservoir. The facility is assumed to be capable of cycling approximately one time each year and to have a working gas capacity of approximately 20 Bcf. (continued)

ANALYSIS CONTINUATION

Under the terms of HB 280 this facility would be entitled to the maximum credit of $30 million against state corporate income tax.

Using the same cost-of-service and financial assumptions as scenario one, the Department of Revenue estimates that the gas storage facility owner would owe approximately $1.5 million annually in state CIT. This rough estimate suggests that the corporate income tax credit created under AS 43.20.046 would completely offset the state corporate income tax liability for about 20 years of operation. It is important to note again that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded. There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $15,000,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $15,000,000 in refundable state credits before starting the process over with a new facility. The facility would also be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations.

Under this scenario the reduction in state taxes to the state is $30 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 3: Broader interpretation of HB 280 benefits

Previous scenarios have assumed gas storage facilities operated at nearly 100% of capacity. This scenario assumes a gas storage operator takes full economic advantage of a broad interpretation of the language in HB 280. Specifically, the facility uses a reservoir with a working gas capacity of 20 Bcf and the operator only cycles the minimum amount of gas to prevent the loss of the credits: 10,000 Mcf of natural gas annually. Using the same cost-of-service and financial assumptions as the previous two scenarios, the Department of Revenue estimates that the gas storage facility owner would owe less than $1,000 annually in state CIT. The storage facility owner would be eligible for a credit of $30,000,000 for the facility based on the working gas capacity. In this scenario it would take nearly 4,000 years of operation under this scenario for a gas storage operator to exhaust the state corporate income tax credit provided under this bill. Alternatively, after 10 years of commercial operation the owner could shut the facility down and retain $29,990,000 in refundable state credits. The operator could then begin the process again.

Scenario 4: Lost or deferred production and production tax revenue

Previous scenarios have assumed gas storage in a depleted reservoir. It is possible that an oil and gas lessee could elect to shut-in production at a currently producing field earlier than would have otherwise occurred in order to take full advantage of plentiful native gas for free cushion gas. Under this bill the remaining native gas could be produced at the end of commercial operations for the gas storage facility. This deferred or lost production tax revenue would be in addition to revenue impacts equivalent to any of the previous three scenarios. The time value of deferred production is not calculated but could be substantial.

Scenario 5: Tax Ceiling

Existing state law provides the benefit of a tax ceiling for certain production under AS 43.55.011(j)(k) and (o). The tax ceiling applies to Cook Inlet production as well as any natural gas produced for use in state. Currently, credits earned under AS 38.05.180(i), AS 41.09.010, AS 43.55.024 or AS 43.55.025 are required to be applied first to a producers tax liability as though it were not limited by AS 43.55.011(j)(k) or (o).

ANALYSIS CONTINUATION

This provision does not apply to production occurring after January 1, 2011. The effect would be to allow credits earned on the full tax liability prior to the tax ceiling to be applied to the reduced or capped tax ceiling. In essence producers would earn credits on the full value of production but only pay taxes limited by the tax ceiling. This repeal is likely to have the effect of reducing Cook Inlet tax collections to zero and allowing Cook Inlet credits to be used to shield taxes due from operations in other parts of Alaska such as the North Slope.

Scenario five entails a producer with production in both Cook Inlet and on the North Slope. Assuming the producer is entitled to a credit of $12 million under AS 43.55.024(c)(1) and that the producer has average oil production of 3,000 Btu equivalent barrels a day, we can estimate the production taxes as approximately $18 million.

We further assume approximately $16 million in production tax liability for the North Slope production and approximately $2 million for the Cook Inlet production. The credit is apportioned similarly: $11 million for the North Slope and $1 million for the Cook Inlet.

Under existing law, AS 43.55.011(m) requires the producer to apply the $1 million in credits to the full value of their Cook Inlet tax before the application of the tax ceiling. After applying the $1 million credit against $2 million in Cook Inlet production tax, leaving a $1 million production tax liability in Cook Inlet. However, the tax ceiling for oil produced in Cook Inlet is zero.

The North Slope tax treatment is the same: applying the $11 million in credit apportioned to the North Slope to the $16 million in North Slope tax liability leaves a production tax liability of $5 million. Under HB 280, the producer is allowed to apply the Cook Inlet credit to the Cook Inlet tax liability after the tax ceiling is calculated. The Cook Inlet tax ceiling for oil is zero. This leaves all $12 million in tax credits intact for the producer to apply against the $16 million in production tax liability on the North Slope. As a result, the producer would pay a total of $4 million in production tax under this scenario, or $1 million less than under the existing law.

This scenario is a simplified version of how HB 280 might affect state revenues. Because AS 43.55.011(m) applies to multiple types of credits, and multiple taxpayers, the effects could be significantly more than the $1 million annual figure calculated in this example.

Additional Scenarios and Fiscal Impacts:

The effect of increasing the value of credits for well work in Cook Inlet to 40% under AS 43.55.023(m) is not quantified in this analysis but would reduce tax revenues.

There could be additional reductions in state tax revenues other existing facilities or natural gas pipelines were certified as gas storage and eligible for credits.

Cook Inlet production tax and additional production caused by the injection or withdrawal requirements under this proposal are very unlikely to generate more than a small fraction of the revenue that would be required to fund this credit. This means production taxes from other areas of the state, such as the North Slope would likely be the source of funds to the tax credit fund for the state to repurchase this credit.

ANALYSIS: *(Attach a separate page if necessary)*

The proposed legislation would provide financial incentives for natural gas storage facilities and for exploration in the Cook Inlet basin, and provide general guidance to the Regulatory Commission of Alaska (RCA) on natural gas pricing. Statutes governing the general powers and duties of the RCA would be revised to require the RCA, when considering whether approval of a natural gas supply contract is in the public interest, to (1) recognize the public benefits of a utility's ability to negotiate different pricing mechanisms with different suppliers and maintain a diversified portfolio of gas supply contracts to protect customers from the risks of inadequate supply or excessive costs that may arise from a single pricing mechanism, and (2) consider whether the utility could meet its responsibility to the public in a timely manner should the rate of gas supply contract not be approved.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSHB 280(L&C)

ANALYSIS CONTINUATION

This legislation would require that certain factors be recognized or considered when the RCA determines whether to approve natural gas supply contracts. The RCA expects to implement the provisions of this legislation with existing resources. The RCA can incorporate this review into the existing review process for natural gas supply contracts.

HB 280
Cook Inlet Recovery Act (CIRA) - Overview

Prepared by Representative Mike Hawker's Office

CIRA provides a statutory framework for developing large-scale gas storage facilities and also makes changes to existing Cook Inlet exploration tax credits in order to encourage exploration and development of new gas discoveries.

Gas Storage Facilities

- Incentives include:
  - Land lease and fee exemption for 10 years
  - NEW income tax credit
    - Credit is based on capacity, certified by AOGCC: $1.50/ 1,000 cubic feet (cf) of working storage capacity
    - Maximum credit is $30 million per facility
    - Transferable and can be sold back to the state
  - Expedited/Priority processing of applications by DNR, when reasonably possible
- Incentives apply to gas storage facility that meets minimum capacity and delivery requirements, certified by AOGCC:
  - Minimum Working Storage Capacity: 500 million cf
  - Minimum Daily Delivery Capacity: 10 million cf
- Incentives are available for gas storage facilities that commence operations between Jan. 1, 2011, and Dec. 31, 2015
- All financial benefits and the names of those receiving the benefits are public information
- All financial benefits must be passed on to utilities, which then pass on to consumers
- All financial benefits stop when a project ceases operation
- CIRA also clarifies RCA's role in regulating gas storage facilities

Gas Exploration in Cook Inlet

- Changes to existing credits:
  - Allows 100% of credits earned by explorers in the Cook Inlet to be used elsewhere in the state; current statute requires these credits to be applied only to taxes paid on Cook Inlet production
  - Allows the full amount of the credit to be used in the year issued; current statute allows only half of the credit to be used in one year
  - Provides a 40% credit for exploration within Cook Inlet; current statute contains a variable (30% or 40%) credit based on the proximity of the exploration to an existing well

HB 280 Overview (cont.)
Definitions

Gas storage facility: A depleted or nearly depleted reservoir, aboveground tank, pipeline or other structure used to store natural gas produced offsite and delivered to the storage facility to hold until needed. The owner of the gas — a utility, for example — would inject gas into the facility and would pay the facility operator for storage service.

Working gas storage capacity: The maximum amount of natural gas the storage facility could safely hold for its storage customers.

Cushion gas (also known as pad gas): The volume of gas that must be maintained in the storage facility to provide adequate pressure for operations. The storage operator, not the storage customers, would own the cushion gas.

Native gas: In the case of a nearly depleted reservoir, native gas is the natural gas that exists in the reservoir at the time it is developed for use as a storage facility. Native gas is used as cushion gas to maintain pressurization. If all of the non-native working gas that was injected for storage is withdrawn and native gas is eventually produced, state tax and royalty would be assessed.

Non-native working gas: Natural gas that is produced from another reservoir and delivered to the storage facility and held until needed. For example, a utility could purchase gas from a Cook Inlet producer and have it delivered to the storage facility for safekeeping until the utility needs the gas to meet customer demand. At that point, the utility would instruct the gas storage operator to deliver the quantity of gas required. The utility, not the storage operator, would own the gas in storage. State tax and royalty would be assessed on the non-native working gas when it is first produced and sold to the utility; no additional taxes or royalties would be due when it is withdrawn from storage for delivery to the utility.

HB 280 Overview (cont.)
FAQs

1. What are the minimum requirements for a gas storage facility (GSF) to qualify for financial incentives in the Cook Inlet Recovery Act? Who determines if a GSF meets these requirements?

   In order to qualify for the financial incentives in CIRA, a GSF must have the capacity to store more than 500 million cubic feet of working gas and deliver gas at a rate of at least 10 million cubic feet per day. The Alaska Oil and Gas Conservation Commission (AOGCC) will be required to certify these capacities within six months of receiving an application and provide the certification to the applicant, the Department of Natural Resources and the Department of Revenue.

2. What happens if the GSF stops operating?

   A GSF ceases operations if it doesn't inject or withdraw at least 10 million cubic feet of gas in a calendar year. The operator is required to notify the AOGCC by April 1st of the following year. If this happens, the GSF will no longer be eligible for state lease fees exemptions or tax credits.

3. Sections 4 and 10 of the bill state that gas withdrawn from a GSF is considered to be non-native gas and not considered to be produced until all non-native gas has been withdrawn. What does this mean and why do we need this language?

   This language requires that state follow last-in, first-out accounting rules for gas in a GSF. "Native gas" is any gas that is already in a storage facility and will be subject to existing royalty and production taxes when it is produced. "Non-native gas" includes all gas that is injected into the facility for temporary storage - royalty and production taxes were assessed when it was produced. By including this language, it is clear that non-native gas extracted from a GSF is not taxed twice and native gas is not subject to royalty and production taxes until all non-native gas is withdrawn.

4. Gas storage companies are receiving lease exemptions and tax breaks under CIRA. Are these savings passed on to the consumer?

   Yes. Language in sections 4 and 6 require the owner of a GSF to reflect the savings of any financial benefits enacted in CIRA in their gas storage price.

Subject: RCA and gas storage regulation

I prepared the following report from today's order issued by the Regulatory Commission of Alaska. The commission responded to a request for declaratory judgment from Cook Inlet Natural Gas Storage, which is looking for certainty on the question whether gas storage is or is not regulated by the RCA under state statute.

Larry, 465-6959

RCA says legislative answer would be best decision on gas storage regulation

The Regulatory Commission of Alaska Jan. 28 denied the request from Cook Inlet Natural Gas Storage (CINGS) for a declaratory judgment that gas storage is outside the regulatory jurisdiction of the commission. The RCA essentially said the Legislature is the best place for this decision.

There was no consensus among parties to the docket, with some arguing that state statute requires or at least allows the RCA to regulate a gas storage operation and others contending that state statute does not allow the RCA to regulate a storage operation.

"The most expeditious way to clarify our jurisdiction is through amendment to our statutes, explicitly authorizing us to regulate natural gas storage or exempting natural gas storage from our regulation," the commission stated in its order. "The Alaska Legislature is the only entity that has the power and the process necessary to provide CINGS the immediate certainty it seeks."

CINGS, a newly created subsidiary of TransCanada, is looking at developing a gas storage operation in a nearly depleted reservoir at the Cannery Loop Unit near Kenai. It would like to know before it commits to the project whether it would be directly regulated by the state or indirectly regulated when each utility that contracts for storage requests RCA approval of its costs before passing them on to their customers. State statute does not include "gas storage" in its definition of a utility subject to direct RCA regulation, though some have argued the commission could interpret its laws to assume such authority.

"We find that our statutes do not provide explicit authority to regulate natural gas storage, nor do they definitely set natural gas storage outside of our jurisdictional boundaries," the commission stated in its order. "With no consensus among interested persons on statutory interpretation and the question being a matter of legal interpretation, our own opinion on jurisdiction would hardly be the final word," the commission said.

A legislative decision would avoid the risk that a party could challenge an RCA interpretation of statute, possibly sending the issue to court and delaying development of gas storage for Southcentral gas customers.

"Despite their conflicting conclusions about our jurisdiction, all interested persons agreed that storage in the Cook Inlet area is a serious or even critical need," the commission said.

"Whether it is good public policy or bad public policy to regulate CINGS is not a valid factor in deciding whether we have jurisdiction to regulate CINGS," the commission added.

Rep. Hawker is reviewing the RCA order and will bring forward a proposal to deal with the issue when the Cook Inlet Recovery Act (HB280), co-prime sponsored by Speaker Chenault, comes before House Labor and Commerce Committee.

Energy

Gassing up

Rena Delbridge
Dec 27, 2009

Southcentral's 350,000 residents are snug this winter in homes with plenty of heat and Christmas lights twinkling.

But the sense of security fed by light and warmth is a false one in the state's major population area, where utilities are a step or two away from rolling power outages if the weather turns bitter cold -- cold enough to put out of order the complex metal machinery that pushes natural gas through lines and into homes; cold enough to push demand off the charts.

And by the winter of 2011-12, deliverability could be an issue beyond peak demand in the coldest spells.

Natural gas, used to heat buildings and to generate 90 percent of the region's electricity, is probably not going to be available in quantities enough to meet peak demand on cold winter days -- this winter, or next -- under certain scenarios.

Along with deliverability challenges, a recent state geological report shows there's about 10 years worth of gas left in Cook Inlet, should companies choose to invest their global dollars in production for a limited, small market.

One company, a TransCanada subsidiary, wants to build a storage facility to warehouse gas produced in summer months, when demand is one-fourteenth of peak winter loads. The resource could be drawn out in winter.

The company's proposal is a dream come true for some -- a private-sector solution that isn't seeking a dime from the government. All that Cook Inlet Natural Gas Storage, LLC, needs is assurance that the Regulatory Commission of Alaska will allow utilities -- its customers -- to recover storage fees in rates charged to consumers.

But lawmakers, state officials and even utility chiefs could tangle over whether gas storage facilities -- new to the 49th state -- should fall under the Regulatory Commission of Alaska's jurisdiction. If they take too long sorting that out, TransCanada's plans will be delayed -- possibly enough to leave Southcentral facing a nightmare by winter 2012 or 2013.

"On the coldest day of the year, what will we pay to stay warm?" Sen. Hollis French asked. "You'll probably pay anything, which is a bad place to be as a consumer. You don't have an alternate source for your natural gas supply. You want to have some oversight so there's not price gouging at a time when you are most vulnerable."

The problem

To be clear, Cook Inlet isn't near running out of gas next year, or in the next five years. On the contrary, the state estimates there are hundreds of trillions of cubic feet remaining, although that gas is more difficult to access -- and thus, more expensive to produce and purchase.

The real problem is deliverability. Utility and municipal managers, lawmakers and others are seriously concerned that when Southcentral soaks up huge amounts of gas to ward off Alaska's bitter winter temperatures, the supply may not hold.

Municipality of Anchorage Mayor Dan Sullivan drafted an energy task force that's studying the potential for emergencies and running tabletop exercises to test procedures in case of extreme shortages or -- more likely -- breakdowns in the machinery that pushes gas to pilot lights.

"If we had to go to that extent, to call upon people to conserve ... and go to rolling blackouts, at least we have a procedure in place," Municipal Manager George Vakalis said. "We know how to do it."

Since 1969, the liquefied natural gas export plant at Nikiski has provided a buffer for the supply and demand swings -- in essence, offering companies an outlet for gas that the Southcentral market couldn't absorb. However, a shortfall is annual production supply is anticipated in 2012 or 2013. The federal LNG export permit runs out in March 2011, and ConocoPhillips hasn't announced whether it will apply for an extension.

"We're faced with a unique environment in Cook Inlet with the demand swings," said John Sims, Enstar's spokesman. "The LNG facility is very important. It creates incentive for (companies) by having that large, industrial export customer."

ConocoPhillips, financially strapped after the past year's global economic downturn, hasn't said yet whether it will close or sell the facility, turn it into storage, or seek continued exports.

Solution on the table

Cook Inlet Natural Gas Storage, the newly formed TransCanada subsidiary, wants to build a 19 billion cubic foot gas storage facility near Kenai. A member of TransCanada's projec team, Bob Gibb said the company is working on land purchases and, if regulatory issues can be sorted out, is ready to start construction next summer

The timeline is tight, and critical work must be done in summer, Gibb said. He figured the schedule has enough to flexibility to still meet an in-service date for winter 2012-13, if politics delay immediate approval.

Gibb confirmed the company is talking with prospective clients Enstar, an anchor tenant; Municipal Light & Power; and Chugach Electric Association, which is representing two smaller electric utilities, Homer Electric Association and Matanuska Electric Association.

He isn't releasing cost estimates at this point.

CINGS wants to build 20-year contracts with its clients, with warehousing fees to be paid out equally over the full term -- also called levelized rates. The big question is whether the

RCA will allow some certainty that the long-term rates are acceptable, and that the utilities will be allowed to recoup their gas-warehousing costs from customers.

To regulate or not to regulate?

Attorneys, policymakers and company reps packed an RCA meeting room in Anchorage in early December for a daylong workshop on storage. The participation was significant, with nearly all parties involved discussing solutions, potential hangups and how rate payers could fare under different gas storage scenarios.

"We were very encouraged by the workshop," Sims said. "That not only shows the urgency that everyone realizes, but also how willing everyone is to work together and try to resolve the issues."

At the heart of the discussion was whether or not gas storage should fall under the RCA's jurisdiction, which would involve time-consuming hearings but, in return, offer consumers some protection in rates charged.

But the RCA statutes don't allow for regulation of storage facilities that supply to utilities. Instead, the commission's authority rests in regulating utilities that supply consumers, and approving the contracts those utilities make with suppliers to ensure customers are getting a reasonable deal.

TransCanada reps at the meeting said they don't mind being regulated, and in fact, storage operations in the Midwest are regulated. But they need to know, and soon, whether they'll face regulation and the filings, hearings and challenges that come with it and could soak up so much of the construction timeline that the company may have to forfeit next summer.

"There are pros and cons with both," Sims said. "The nice thing about it being regulated is there would be some sort of surety from Enstar's standpoint for rate recovery."

The utility needs to know whether it will be able to recover storage costs in rates -- and if so, to what extent. CINGS needs that assurance, as well.

"We need to have surety ... before we can close on some of the properties and move forward with some of the construction," Gibb said. "It is critical."

Lawmakers step in

Some lawmakers are heading out in front with bills they'll file when the session starts Jan. 19 enabling a storage facility and, ideally, additional drilling.

In December, Sen. Hollis French, an Anchorage Democrat, released a draft of a bill he plans to introduce during the session allowing a substantial tax credit of 20 percent of capital costs for companies who invest in storage to serve Southcentral gas needs. He expects to tack on a caveat once the session starts, enabling the credit only if the storage facility owner agrees to come under the RCA's jurisdiction.

The RCA issue is the biggest one for Southcentral's gas problems, French said.

"At least one avenue is to get away from the gas storage operation, and focus more on the contracts that CINGS strikes with the utilities, which is a function the RCA is far more experienced with," he said.

A farther-reaching bill, the Cook Inlet Recovery Act, was proposed last week by House Speaker Mike Chenault of Nikiski and Rep. Mike Hawker of Anchorage, both Republicans. Their working draft offers incentives for storage, but also smoothes state bureaucratic processes to spur private investment in finding new reserves.

"This bill is narrowly focused on Cook Inlet production," Hawker said. "It's all about the urgency of the issue. We need to address these challenges and address them now ... Every penny of cost relief or credit we can provide here ultimately flows through as savings to consumers. Adding storage, which is critical, is going to add money. It's not going to be cheap."

The bill also included direction for the RCA to consider the consequences of saying no to a matter -- something the commissioners haven't had the authority to do. Beyond that, changes to the commission's authority aren't addressed in the draft, in part because of the potential for prolonged conflict in the Capitol.

"If the extent of the RCA's authority becomes an uncertainty because the legislature has thrown it into the ping pong match, no one is going to move one step forward on any project until that issue is totally resolved," Hawker said.

Chenault said he couldn't say yet whether storage should be regulated.

"But if you have people out there interested in doing it, and you have a need, then the decision needs to be made," he said. "We can't wait around for years. The longer you wait, the less opportunities you have and, probably, the more it's going to cost."

Enstar and CINGS haven't formed opinions on the legislation yet.

"We are moving forward with our contracts as if there were no additional input from the Legislature," Gibb said. "If it comes into being, we'll consider it as it does."

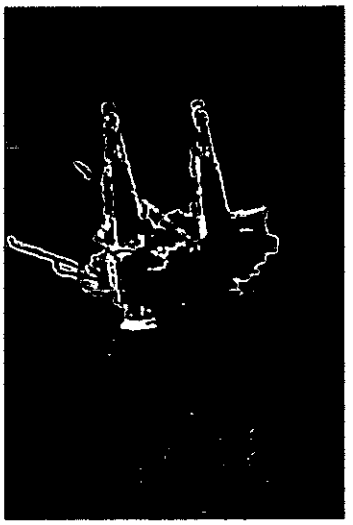
Lawmakers get another wake-up call on Inlet gas supply

By Tim Bradner
Alaska Journal of Commerce

It's a tough thing to say, but the days will start getting shorter soon and January is only six months away. The usual midwinter cold snap is almost surely in the cards, and the gas distribution system serving consumers and local electric utilities is likely to be strained once again. No one wants their supply of natural gas to be cut when it's minus 20 degrees.

There's nothing very secure, or simple, about the supply of natural gas in Southcentral Alaska, however. Aging gas fields in the region are being depleted and gas wells, many 30 years old, can't produce enough now to guarantee meeting midwinter demand.



Cook Inlet oil and gas platforms supply natural gas to local utilities as well as crude oil for the Tesoro Alaska refinery near Kenai. The platforms are more than 30 years old, and are approaching their economic limits. *Photo/Rob Stapleton/AJOC*

What keeps disaster at bay is the liquefied natural gas, or LNG, plant near Kenai, which stops making LNG in very cold weather so gas can be diverted to the local utilities. The LNG plant may close in 2011, however, when its federal license to export LNG expires.

So far the utilities have no plan B for that possibility, although they are working on one.

There are large reserves of gas on the North Slope, but without a pipeline there's no way to get the gas to the state's largest communities. Studies are now underway by the state for a 24-inch bullet pipeline to bring gas to Southcentral from the Slope but no one knows how much this will cost. It couldn't be finished until 2016 to 2018 in any event.

There's also more gas to be found in Cook Inlet but there's little new drilling, for a complex set of reasons.

State legislators got an earful about all this on June 5, when the Senate Resources Committee, meeting in Anchorage, listened to managers of gas producing companies, utilities, and state and federal officials, as well as private landowners.

State Sen. Bill Wielechowski set a sober tone for the meeting.

"Cook Inlet gas production has declined considerably," he said. "In the last three years it has declined by more than 50 billion cubic feet annually. Current demand is about 140 billion cubic feet per year, so this is significant."

By 2012, annual in-state demand will exceed supply from existing wells. This assumes no export of Cook Inlet gas, Wielechowski said.

"We have three years before we have a supply problem if we look at production from existing wells," he said.

State oil and gas director Kevin Banks said it's almost certain that oil and gas companies will add reserves in the producing fields if they drill more wells.

But petroleum companies told legislators too few new wells are being drilled, and that consumers and local utilities aren't doing enough to promote energy conservation, which is the cheapest was to ease the tight supply situation. Companies also said the Regulatory Commission of Alaska is too focused on price and should weigh energy security for consumers in its decisions as well.

John Zager, Chevron Corp.'s Alaska manager, said Cook Inlet is not attracting sufficient investment capital to offset the reserve declines, and that remaining resources are likely to be in smaller gas deposits that will be more expensive to drill.

Zager said he believes government estimates of remaining reserves in the Inlet are too optimistic. Estimates are that 1.3 trillion cubic feet to 1.7 trillion cubic feet of proven gas reserves remain in producing gas fields.

The State Division of Oil and Gas plans to have an updated estimate of gas reserves by early fall, said Kevin Banks, the division director.

For now, the economics just aren't right for drilling a lot of new production wells. "People have to accept the concept that the (gas) price must be high enough to encourage investment, and there are recent indications that this is not the case. The recent state lease sale in the Inlet was a no-show," in terms of bidding, Zager said.

Zager and Marathon Oil manager Carri Lockhart criticized regulatory agencies for inconsistencies and creating an environment of uncertainty as to whether gas sales contracts with utilities will be approved. The uncertainty that creates is almost as important as the price of gas.

A contract negotiated several years ago with Enstar Natural Gas Co., but rejected by the regulatory commission would have met all of Enstar's needs until 2016, Lockhart said. The utility now has short-term gas supply contracts and after 2011 it will have only two-thirds of the gas it needs under contract, Mark Slaughter, Enstar's gas supply manager, told legislators.

"It's a situation we don't like to be in," Slaughter said.

Lockhart also said regional electric utilities should focus more on power plant efficiency. "There should be dual-fuel capability when new generation capacity is built," she said, an indirect criticism of Chugach Electric Association for its plan to build a new gas-fired power plant in south Anchorage without also adding standby capability to use oil as a standby fuel. Anchorage's city-owned Municipal Light and Power has dual-fuel capability in one of its power plants.

Zager and others said there must be investment in gas storage, facilities that can store gas produced in the summer, when demand is low, for use during peak demand periods in

winter. Chevron and Marathon both maintain some storage capabilities of gas in depleted gas reservoirs for their customers, but this isn't enough to meet the total need.

The LNG plant near Kenai could play a long-term role in storage, or even imports of LNG if the export license ends in 2011.

Dan Clark, ConocoPhillips' asset manager for south Alaska, whose responsibilities include the LNG plant, said it is possible that facilities at the plant could be available for gas storage or even regasification of LNG that would be imported if LNG exports end in 2011.

"It's possible," Clark told the legislators. "There are marine terminal facilities and storage tanks, although added investment would be needed."

Zager said has producers have invested in some storage but in other U.S. states utilities invest in and operate gas storage. Suzanne Gibson, Chugach Electric's gas supply manager, said Chugach, ML&P and Enstar are working jointly to determine how much storage might be needed, but there are concerns as to whether enough suitable underground reservoirs are available, because not all depleted gas reservoirs can be efficiently to store gas.

Above-ground storage could supplement underground storage but that will be costly, she said. The utilities may need state assistance.

Also, gas stored underground in depleted reservoirs is usually withdrawn gradually as used to supplement gas wells through the winter. It's difficult to get large volumes of gas at short notice needed to meet unexpected needs during a cold snap.

Stored LNG is very efficient at meeting this "peaking need," however, because the LNG can be regasified fairly quickly. LNG regasification facilities have been built in many parts of the U.S. to handle mid-winter peaks.

Facilities at the existing ConocoPhillips-Marathon LNG plant could help support a long-term storage role, but some utility managers think the plant's facilities are too big, too aged, to be efficiently used to support a small regional market.

New, smaller LNG regasification units, like those commonly used in the Lower 48, might be more appropriate, said Jim Posey, manager of Anchorage's ML&P.

Storage will help resolve the issue of meeting mid-winter peaks but it's not a solution when overall annual production from the gas fields dips below annual demand. At that point new gas is needed from somewhere, wither from new discoveries, by pipeline from the North Slope, or through imports of LNG.

Summary of the 2006 Southcentral Energy Forum

Sponsored by Alaska Oil and Gas Conservation Commission

Anchorage • Sept. 20-21, 2006

Prepared by Peter Larsen, Pamela Cravez, and Scott Goldsmith
Institute of Social and Economic Research, University of Alaska Anchorage

Why Was There an Energy Forum?

Nearly 70% of Alaskans rely on relatively inexpensive natural gas from Cook Inlet. That gas heats homes and businesses, generates electricity, and fuels industrial processes.

Cook Inlet gas benefits the state economy not only because it provides inexpensive energy for homes and businesses but also because industrial uses of the gas create jobs and add to the local tax base. More than half the gas currently being produced is either processed and exported as liquefied natural gas (LNG) or used to create fertilizer for export.

But growing demand has depleted 80% of the known Cook Inlet gas reserves. Many Alaskans are concerned about where Southcentral Alaska will get affordable energy in the future.

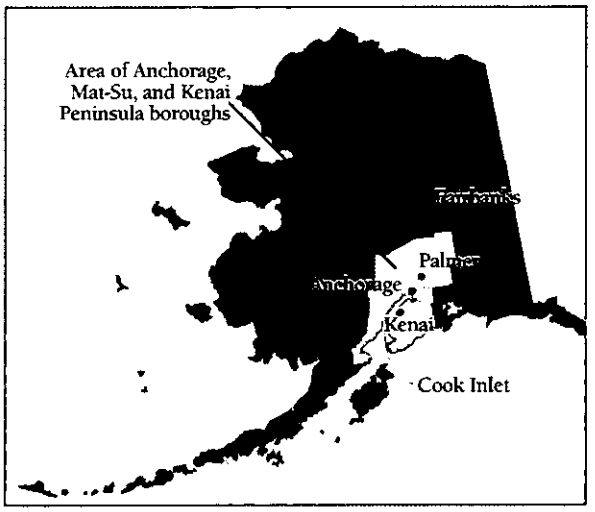
There are big unknowns. Will the Cook Inlet producers look for more gas? When will a natural gas pipeline from the North Slope be built, and will there be a spur line to bring gas to Southcentral? What will future industrial demand be? Will alternative energy sources help offset demand for gas?

In September 2006, the Alaska Oil and Gas Conservation Commission brought community leaders, gas producers, large consumers, geologists, engineers, economists, and the general public together at a two-day forum in Anchorage to talk about the problem and propose solutions for meeting the region's future energy needs.

The commission asked the Institute of Social and Economic Research (ISER) at the University of Alaska Anchorage to summarize forum proceedings. The information presented here is not a product of ISER research. It is a summary of statements, opinions, and projections of those attending the forum.

Why is This Gas "Inexpensive"?

"Inexpensive" natural gas from Cook Inlet means relative to prices of gas in the rest of the country and to prices of other energy sources in Alaska. The price residential customers pay for Cook Inlet gas has more than doubled since 1996—but it remains 30% to 50% below prices in other states, according to ENSTAR Natural Gas Company. It's also far cheaper than the diesel Alaskans without access to natural gas rely on.



The price of Cook Inlet gas has historically been low because oil companies incidentally found trillions of cubic feet in the 1950s and 1960s, while they were looking for oil. The absence of a ready market for that gas provided Alaskans with a much less expensive energy source, compared with oil, and it made some industrial development possible.

Who are Consumers and How Do They Use Gas?

Most of the consumers are in Anchorage and the Kenai Peninsula and Mat-Su boroughs—where more than 60% of all Alaskans live (see map). That regional population has almost tripled since 1970. Communities along the railbelt north to Fairbanks also use electricity generated by Cook Inlet gas, and some gas is super-chilled to a liquid form so it can be trucked to Fairbanks .

The biggest current uses of Cook Inlet gas are industrial– 37% is liquefied and exported and another 19% is used to produce fertilizer for export. Heating homes and businesses in Southcentral Alaska takes about 16% of production, and another 20% is used to generate electricity throughout Southcentral and into the Interior. The remaining 8% is used for oil and gas field operations and refining oil.

How Does Cook Inlet Gas Get to Consumers?

Current gas producers in Cook Inlet include Chevron, Marathon Oil, Conoco Phillips, and others. Most, but not all, the gas for heating goes through ENSTAR Natural Gas Company, a major public utility in Alaska and a subsidiary of Semco Energy, headquartered in Michigan. The producers themselves also market a small amount of gas directly to consumers.

ENSTAR is regulated by the Regulatory Commission of Alaska (RCA). ENSTAR and the producers negotiate, with RCA oversight, future prices and conditions for gas delivery from the producing fields to the consumer. The RCA must approve rates ENSTAR proposes to charge consumers.

ENSTAR supplies gas to about 325,000 commercial and residential users and also delivers gas to electric utilities. It has about 3,000 miles of distribution and transmission mains.

Municipal Light and Power and Chugach Electric Association are electric utilities also regulated by the RCA. They generate electricity almost entirely with gas. Together they serve about 473,000 residential and commercial customers from Southcentral into the Interior, either directly or through sales to other electric utilities.

Why Worry?

With the reserves declining, it's become harder to deliver gas to consumers as they need it, on a daily basis. Assuming no new investments in exploration or development, that problem is expected to worsen, especially in the winter. Consultants to the U.S. Department of Energy and others have projected the future demand for and supply of Cook Inlet gas.

The assumptions used in individual studies vary somewhat, but they all show the same general result: that the demand for Cook Inlet gas will soon exceed the current supply, even if industrial uses drop sharply.

Projections by Science Applications International Corporation (Figure 2), a consultant to the U.S. Department of Energy, are based on specific assumptions that other analysts may disagree with. Those include:

- Assumption: that the Agrium fertilizer plant will cease operating in the near future. Agrium hasn't run at full capacity since 2001, and it recently announced it will shut down during peak use winter months. Agrium has identified high gas prices as the main reason for the cutbacks—but high prices are related to short supply. (Agrium is, however, investigating alternatives to gas; see page 7.)
- Assumption: that the federal Office of Fossil Energy in the U.S. Department of Energy will not renew the export license for the LNG facility, which expires in 2009. To have the license renewed, the operator has to show that exporting LNG will not jeopardize local gas supplies.
- Assumptions: that a spur pipeline to carry North Slope natural gas to the Southcentral region will be built by 2015 and that most of the future demand will be residential and commercial, including the proposed Pebble mine in southwest Alaska.
- Assumption: that some industrial uses might be feasible, but that the cost of North Slope natural gas will make the current methane-intensive industrial uses (like producing fertilizer) uneconomic.

The projected decline in gas supply is essentially based on known reserves. Economists would argue that as supply shrinks, prices rise—and that rising prices would ultimately cause the producers to look for more gas. (But in the largely regulated Cook Inlet market, that might not happen).

Is There More Undiscovered Gas?

In the 1950s and 1960s, oil companies drilled as many as 30 wells a year in Cook Inlet (Figure 3). They were looking for oil—and found oil as well as trillions of cubic feet of natural gas. Those gas reserves, large enough to last for many years, left no need to look for more.

Then, in the late 1960s, world-class oil reserves were discovered at Prudhoe Bay, on the North Slope, and the petroleum industry's focus shifted away from Cook Inlet. The last commercial gas discovery in Cook Inlet was in 1979 and the last major oil discovery in 1991.

Net gas production—that is, production beyond what the producers re-injected to increase oil recovery—peaked in 1996 at 223 billion cubic feet. By 2005, net production had dropped to 208 billion cubic feet.

Many geologists think Cook Inlet basin is under-explored, compared with other gas exploration regions. Speakers at the forum said analysis of the distribution of field sizes in the basin suggests there may be large undiscovered fields remaining.

Figure 2 . Projected Supply of and Demand for Cook Inlet Gas

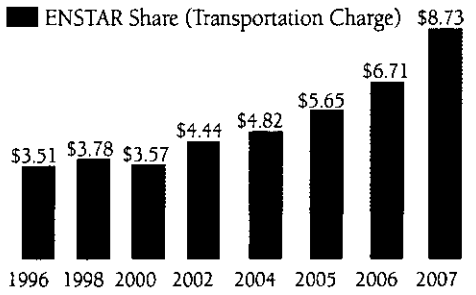
Figure 5. Residential Natural Gas Price
(Per Thousand Cubic Feet)



Source: ENSTAR Natural Gas Company

But no one is certain how much gas may be left in the basin, because few exploratory gas wells have been drilled there since the 1970s. Data from the Alaska Department of Revenue show that the bulk of the 240 exploration wells drilled in Cook Inlet since 1955 have been for oil. Only in the last five years has there been any focus on locating more natural gas—and that increased exploration coincides with rising gas prices (Figure 3).

The Alaska Department of Natural Resources estimates that 8.8 trillion cubic feet of gas have been found in Cook Inlet basin to date, with 7.1 already produced and 1.7 remaining. The U.S. Department of Energy estimates potential undiscovered natural gas reserves at between 13 and 17 trillion cubic feet. Other estimates are lower, with no analysis conclusively showing where new fields may be located. Whatever the remaining reserves, the level of future exploration will depend on gas prices.

How Have Prices Changed?

As the supply dwindles, the price of Cook Inlet gas has increased rapidly —although not as rapidly as elsewhere in the nation (Figure 4).

The price residential customers pay for Cook Inlet gas roughly doubled between 1996 and 2006, and it will increase another 30% in 2007 (Figure 5).

But that price includes both what the oil companies get for producing the gas and what ENSTAR charges for transporting it to customers.

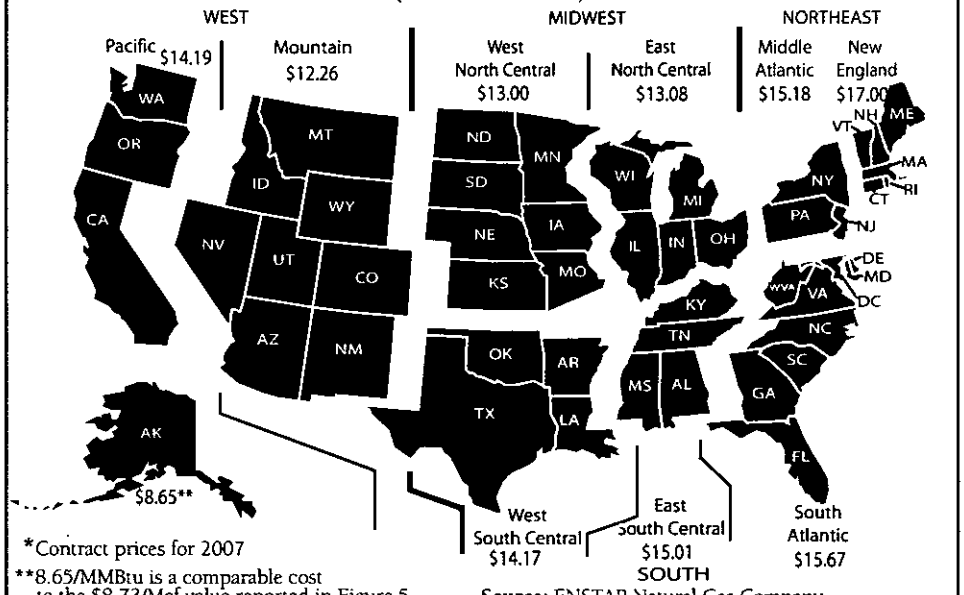
ENSTAR is a regulated utility, and it reports charging about the same (per thousand cubic feet) to transport gas today as in 1996. Virtually all the recent increase in the price to residential customers has gone to the producers.

ENSTAR also reports that despite sharp increases in what Alaskans pay for natural gas, they still pay about 30% to 50% less than other Americans.

Figure 6 compares 2007 contract prices for residential customers nationwide. In 2007 Alaskans will pay $8.65 per million Btus (British thermal unit, a standard energy measurement). Customers in the mountain states and the north-central states will pay $12 to $13. The highest natural gas prices will be in the mid-Atlantic, south-Atlantic, and New England states, where prices are expected to be nearly double the Alaska price.

Natural gas is also much less expensive than alternative ways of heating homes and businesses in Alaska. Figure 7, provided by ENSTAR, shows that natural gas for heating is about one-quarter to one-half the price of diesel, propane, or electricity, as measured by energy content.

Figure 6. Prices of Natural Gas for Residential Customers, 2007*
(Per Million Btu)

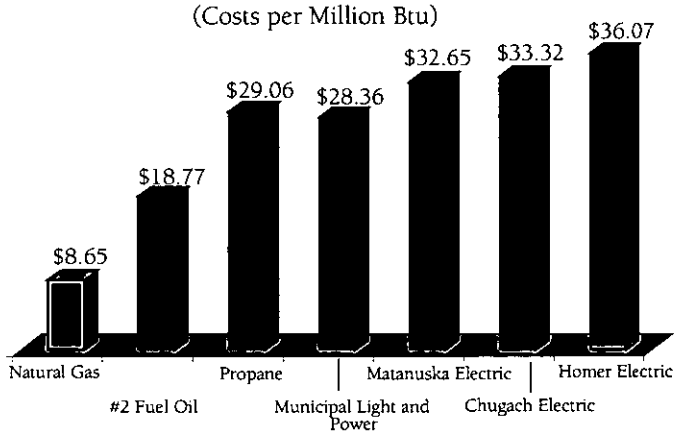


*Contract prices for 2007
**8.65/MMBtu is a comparable cost to the $8.73/Mcf value reported in Figure 5

Source: ENSTAR Natural Gas Company

Figure 7. Comparing Current Costs of Home Heating Sources for Southcentral Alaska

(Costs per Million Btu)



Source: ENSTAR Natural Gas Company

As for the electric utilities using Cook Inlet gas, Municipal Light and Power is not actively seeking new gas contracts now—because it owns part of a Cook Inlet gas field estimated to meet its demand for the next 10 to 15 years. Chugach Electric Association has sufficient gas under contract to meet demand only until 2011.

Where is the Price Headed?

As Figure 8 shows, the Alaska Division of Oil and Gas forecasts that the price of Cook Inlet gas will increase until 2008 and then drop, staying in the range of $6 per thousand cubic feet through 2016. (This forecast takes into account the recent ruling by the RCA.)

Figure 9 shows the division's estimates of the potential range of future demand from residential and commercial consumers, at higher or lower gas prices. The higher the price, the less consumption increases.

What Determines Price?

The price residential customers pay for Cook Inlet gas is actually the average of various prices in several contracts ENSTAR currently has with the producers. The contracts were all negotiated separately, and each has its own terms that can influence price.

In some contracts, for instance, the gas price is linked to oil prices. In two of the most recent contracts, Cook Inlet gas prices are linked to gas prices at what is known as the Henry Hub. That hub is in Louisiana, near where gas supplies from the Gulf of Mexico arrive. It is the pricing point for natural gas futures contracts traded on the New York Mercantile Exchange.

Increasingly, gas contracts in the U.S. are being set in relation to the Henry Hub benchmark price, with transportation and other charges added to that base to determine local prices.

Some analysts believe linking Cook Inlet prices to that hub will stimulate exploration, by raising those prices closer to the U.S. average.

However, application of Henry Hub prices to Cook Inlet gas has been controversial, and the RCA recently rejected a proposed new contract between ENSTAR and Marathon Oil Company, benchmarking a portion of ENSTAR's future purchases of Cook Inlet gas to that hub.

The RCA found that "responsibility for paying gas prices that encourage new gas exploration and production should not rest exclusively with gas ratepayers."

ENSTAR is now in the process of renegotiating that contract with Marathon, which—if successful—would give it enough gas to meet its projected requirements through 2017. Today the utility has enough gas contracted only through 2008.

Figure 8. Projected Price of Natural Gas

(Price per Thousand Cubic Feet)

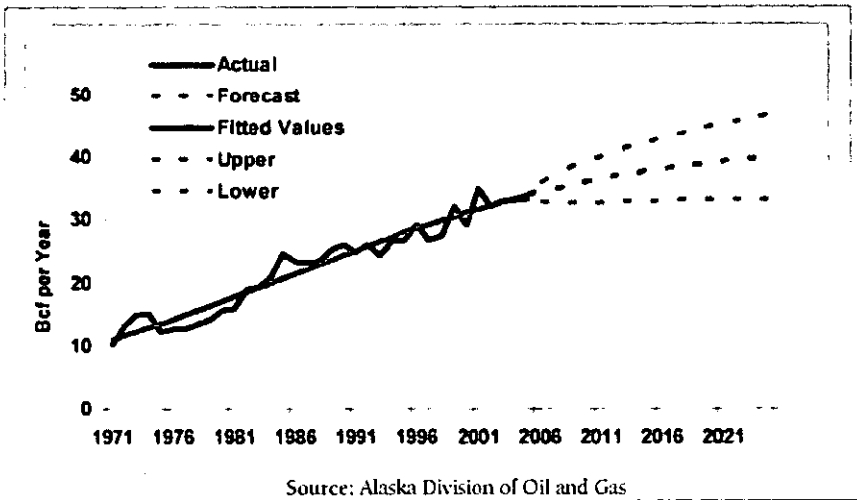
Source: Alaska Division of Oil and Gas

Figure 9. Projected Residential And Commercial Demand for Cook Inlet Gas

(In Billions of Cubic Feet per Year)



Source: Alaska Division of Oil and Gas

These forecasts are based on the best current information—but it is difficult to predict future costs of natural gas, because all public gas and electric utility contracts are subject to approval by the RCA.

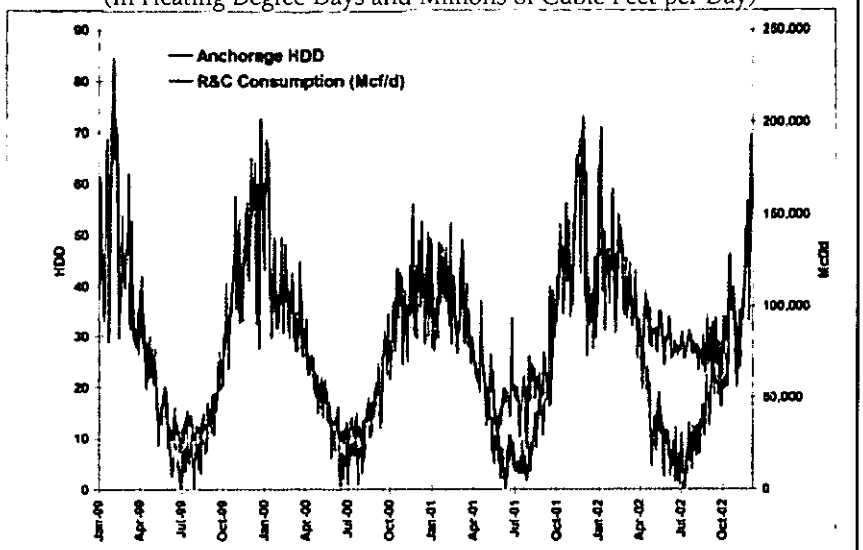
What is the Current Situation?

The Alaska Division of Oil and Gas reports that with gas reserves shrinking, increased residential and commercial consumption in the winter has occasionally outstripped the system's capacity to deliver. Figure 10 shows the sharp winter increases in demand for Cook Inlet gas. Spokesmen for the division say that if no new reserves are added, the number of days when peak demand exceeds the system's capacity will increase as time goes on.

Current industrial users—the Agrium and LNG plants and oil and gas field operations—consume almost two-thirds of the gas produced in Cook Inlet. (See Figure 1). Industry representatives at the forum said that industrial demand for gas is driven by export markets and depends on the availability of cheap gas to use in industrial processes.

Figure 10. Seasonal Residential and Commercial Demand for Cook Inlet Gas, 1999-2002

(In Heating Degree Days and Millions of Cubic Feet per Day)



Source: Alaska Division of Oil and Gas

The fertilizer plant has not run at full capacity since 2001. With the price of gas rising and supplies uncertain, Agrium reported at the forum that it is now making only year-to-year contracts for Cook Inlet natural gas. It is looking for long-term solutions—like coal gasification—to replace Cook Inlet gas.

The other big industrial user is the LNG plant at Nikiski, which currently uses more than a third of the gas produced. However, the plant needs approval from the federal Office of Fossil Energy to export LNG, and its current export license will expire in early 2009. (As of late 2006, no application to renew had been filed.)

To renew the license, the company needs to show that it is in the public interest to extend the contract and that exporting LNG would not jeopardize gas supplies for local consumers. Demonstrating that will become increasingly difficult as the supply of Cook Inlet gas declines.

However, representatives of the producers said at the forum that the loss of these big industrial users would reduce their incentive to explore and, consequently, hurt long-term stability of the supply of Cook Inlet gas

What are Short-Term Solutions?

One short-term way of meeting peak utility demand is temporarily storing gas. Since 2001, producers in Cook Inlet have stored their own gas underground in depleted reservoirs, to help meet utility demand.

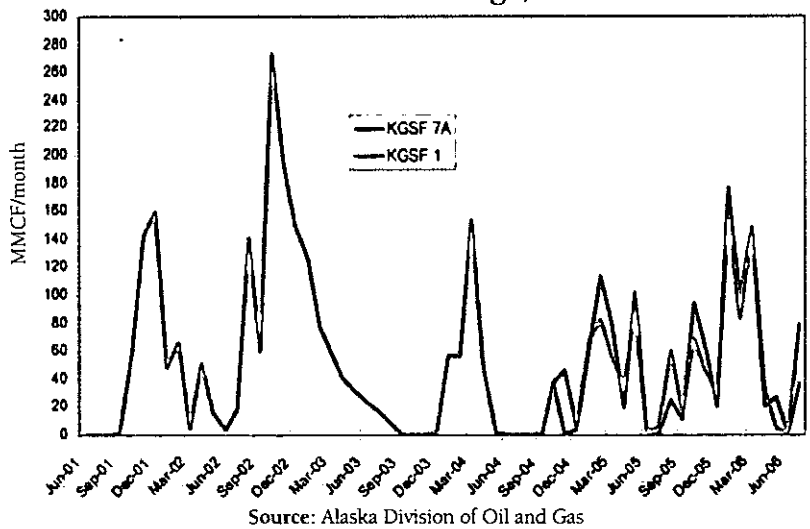
To date the federal Bureau of Land Management has approved three gas storage agreements with Chevron at the Swanson River field; two of those are currently storing and delivering gas. The Alaska Department of Natural Resources and the Alaska Oil and Gas Conservation Commission have approved two gas storage leases for active facilities at Chevron's Pretty Creek field and Marathon's Kenai field.

Figure 11 shows how draw-downs for utility demand from the storage facilities at the Swanson River field vary with the season, spiking in the winter.

Another way of easing short-term supply problems is interruptible contracts (allowing producers to curtail sales when demand is high). Agrium's fertilizer plant uses them to accommodate winter shutdowns. Also, as long as the LNG plant is operating, it can continue its historical role of providing "swing" gas that can be diverted to consumers when needed.

But industry speakers said at the forum that in the long run better solutions are needed—encouraging more exploration in Cook Inlet; bringing gas in from elsewhere (North Slope gas or imported LNG); or examining the feasibility of alternatives to natural gas—ranging from coal to tidal power.

Figure 11. Seasonal Draw-Downs for Utility Demand from Cook Inlet Storage, 2001-2006



Source: Alaska Division of Oil and Gas

Why Isn't There More Exploration?

There is some ongoing exploration in Cook Inlet basin. A number of both established and new companies are looking for oil and gas in the basin, according to petroleum industry presenters at the forum. Chevron, Marathon Oil, Aurora Gas, Forest Oil, and Conoco Phillips are among the Cook Inlet producers exploring for oil or gas.

Chevron reported in late 2006 that it has found about 150 billion cubic feet of gas since 2000, and that Chevron and its partner companies expect to spend $300 to $350 million for exploration and capital projects in Cook Inlet over the next several years.

Newer companies include Benchmark Oil and Gas, which is focusing on Upper Cook Inlet; Pioneer Natural Resources, which has one oil-producing project in Southcentral; and Rutter and Wilbanks, which is operating three projects: the Copper River project (gas), the Northern Lights project (oil), and the onshore Eagle/West Eagle project (oil and gas). Renaissance Resources and Stormcat Energy are also involved in exploration of undeveloped areas.

Many of the smaller companies are staying onshore, according to industry spokesmen, and all companies are affected by the higher costs of exploration in Alaska and the lower price of gas, compared with other areas of the country.

The number of exploratory wells in the past few years falls far short of the numbers in the 1960s, despite rising prices. At the forum, representatives of the gas producers said the price still hasn't offset the high costs of doing business in the inlet. The U.S. Department of Energy estimates the cost of identifying and developing just half the reserves it believes may remain in the inlet (13 to 17 trillion cubic feet) at more than $5 billion, in current dollars.

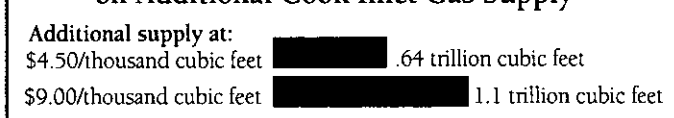
Figure 12 shows the U.S. Minerals Management Service's estimate of how much the supply of Cook Inlet gas would increase, at different wholesale prices for that gas. MMS estimates that at a price of $4.50 per thousand cubic feet, the additional supply might be 0.64 trillion cubic feet. But at double that price, the additional new supply would also nearly double—because the oil companies would have more incentive to explore.

The Cook Inlet producers also argue that they need more access to prospective fields. The producers estimate that between 30% and 50% of the prime exploration areas have restricted access or are entirely off limits, because they fall within protected areas of federal or state conservation units.

Industry spokesmen and representatives of the Minerals Management Service identified other things hindering large-scale exploration in Cook Inlet. Those include aging platforms, lack of a jack-up rig, regulatory matters—including gas well spacing and bonding requirements—and a general lack of 3-D seismic data of the basin. They say that these problems, as well as company reorganizations and the limited sale area in 1997, continue to hinder exploration.

The next Cook Inlet Special Interest lease sales are scheduled for 2009 and 2011.

Figure 12. Estimated Effects of Price on Additional Cook Inlet Gas Supply



Source: U.S. Department of the Interior, Minerals Management Service

What About Tax Incentives?

In 2006 the Alaska Legislature passed the Petroleum Production Tax (PPT), a major revision in the state's method of taxing oil and gas production. Among other things, the new PPT is intended to encourage more investment in oil and gas exploration.

The PPT operates differently on the North Slope and in Cook Inlet. It caps per-unit tax liability for Cook Inlet producers at the level of the old production tax system, during the year before the PPT was passed in April 2006. This means that even if the price of gas or production rises, Cook Inlet producers—current and future—will never pay more than the average per-unit tax rate in April 2006.

In essence, the PPT will not just limit or lower taxes in Cook Inlet—*it should also encourage new exploration and production*. Because the PPT is so new, it's too early to say what effect it might have on future gas supplies.

What are the Alternatives?

What about finding other energy sources or reducing consumption as a means of dealing with falling gas reserves? At the forum Dunmire Consulting discussed alternatives for increasing gas supplies from outside Cook Inlet, reducing consumption, and replacing gas with other sources.

The Dunmire analysis was funded by the Alaska Natural Gas Development Authority, which is a state corporation approved by Alaska voters in 2002 to promote construction of a natural gas pipeline from the North Slope. ANGDA has so far concentrated on plans for some sort of pipeline—either a spur from a main pipeline or a pipeline directly from the North Slope to Southcentral Alaska—to supply in-state consumers with North Slope gas.

Below we just report the alternatives Dunmire Consulting identified. Their order below doesn't indicate feasibility or the length of time they would take to develop, if they were feasible. Some could help ease potential gas shortages relatively soon, but many would have long lead times and uncertain capital costs.

• **Conservation.** If Alaskans conserved more natural gas and electricity, they could save anywhere from 3.0 to 7.5 billion cubic feet of gas a year, according to estimates of Dunmire Consulting. Conservation measures include things like upgrading residential and commercial appliances and improving weatherization of houses and businesses. Some analysts believe Alaskans won't conserve more unless the prices of residential and commercial heat and electricity increase more than they already have.

• **North Slope Gas.** A major uncertainty affecting the future of Cook Inlet gas development is when North Slope gas might be available to Southcentral consumers. That uncertainty makes it more complicated for Cook Inlet producers to decide how much to invest in exploration and development in Cook Inlet and for utilities and other consumers to decide about investing in gas-using equipment.

The North Slope has very large known reserves of natural gas. The North Slope oil producers have said they support construction of a pipeline to carry natural gas to world markets—although by the end of 2006 they hadn't actually committed to building a pipeline.

But at some future time, Southcentral consumers could get North Slope gas either through a spur line from a main pipeline or through a direct bullet line—that is, a pipeline direct from the North Slope to Southcentral. A pipeline bringing North Slope gas to Southcentral could also be enriched with hydrocarbons, to make certain kinds of industrial development feasible.

• **Coal Gasification**. Agrium is investigating a proposal to substitute synthetic gas from coal for natural gas from Cook Inlet. The proposed Project Blue Sky would take coal from Healy in the Interior south by rail, transfer it to barge, and ship it to a coal gasification plant on the Kenai Peninsula. The synthetic gas would be used to produce fertilizer and could also add electricity to the Southcentral power grid.

Proponents say coal gasification allows for efficient capture of concentrated streams of carbon dioxide (CO_2), virtually eliminating emissions of this greenhouse gas. The captured CO_2 could then be used for advanced oil recovery. It's estimated that 13 Cook Inlet oil fields might produce an additional 300 million barrels, through enhanced oil recovery using CO_2.

• **Other Potential Sources of Gas in Southcentral.** The Bristol Bay area and Alaska Peninsula have been estimated to hold anywhere from 7 to 23 trillion cubic feet of gas and the Nenana Basin 3 to 10. It's beyond the scope of this paper to describe how this gas could be brought to market.

• **Import LNG**. Southcentral Alaska could import LNG via the Kenai LNG plant, if the plant were modified to import rather than export LNG. This option would not have as long a lead time as some other alternatives and it would ensure ample supply—but Alaskans would be exposed to world market prices (which are significantly higher than current local prices). A big consideration in the feasibility of this option would be the capital costs of modifying the LNG plant.

• **Coal-Bed Methane**. Coal-bed methane is a form of natural gas that has been identified in the Susitna Basin north of Anchorage. However, the economic potential of coal-bed natural gas has not been established, and its development in Alaska has been controversial.

• **Coal**. Alaska has abundant sources of coal. An objection to coal is that it has higher CO_2 emissions than other energy sources. But the state government sponsored construction of a clean-coal plant at Healy, to help generate electricity. That plant has yet to be operated, because the utility originally planning to use the coal decided not to—but there are now plans to start it up, possibly within the next 18 months. It could offset some demand for gas to generate electricity. Additional coal supplies could further reduce natural gas use for electricity but at a high capital cost.

• **Wind Power**. With support from Chugach Electric, Municipal Light and Power, and others, the Fire Island Wind project is underway, with preliminary permitting and feasibility to be completed by 2011. This project would involve construction of wind turbines on Fire Island, just offshore from Anchorage. The turbines would be able to supply electricity to the Southcentral power grid and help offset demand for natural gas. However, there is uncertainty about how the wind turbines might affect air traffic at Anchorage's nearby international airport.

• **Hydropower**. Chugach Electric already uses hydropower to a small extent. Proponents say use of this renewable resource has relatively few effects on land and water systems. But further development of hydropower in this region would require a long lead time for licensing and a significant amount of capital for plant development.

• **Nuclear Power**. A small-scale nuclear "demonstration project" is being proposed for the community of Galena along the Yukon River. It would start up in 2012. Power from this facility, if it were built, would not be available for Southcentral. However, if it were successful it could promote more local interest in this abundant but controversial source of energy. Problems with nuclear power include long-term land use, the risk of accidents, and nuclear waste storage.

• **Tidal Power**. A demonstration project of tidal power in Knik Arm is scheduled to be under construction by 2015. Tidal power is a renewable resource—but it might affect aquatic life and boat traffic.

• **Geothermal Power**. A geothermal unit began operating at Chena Hot Springs Resort in the Interior in August 2006. Other potential geothermal sites, including Mt. Spurr in Southcentral, are under consideration. Geothermal power is a renewable resource, but the costs of connecting to the local electrical grid may make many sites uneconomic to develop.

• **Distributed Generation.** Distributed generation is the practice of replacing central gas-fired generation with on-site co-generation, or fuel cells. If those systems were fueled by sources other than gas, they could reduce gas consumption. Distributed generation may eventually become a realistic option in Southcentral, as the costs of the technology continue to fall.

What About Economic Contributions of Cook Inlet Gas?

So far in this summary we've talked about the importance of Cook Inlet gas to residential, commercial, and industrial consumers. The gas also broadly contributes to the state economy, because it is an inexpensive source of energy. ENSTAR estimates, for example, that it makes an annual economic contribution of $230 million to the economy.

People attending the forum pointed out that petroleum operations in Cook Inlet also create jobs for Alaskans and add to local tax bases. The economic effects of Cook Inlet gas are most concentrated in the Kenai Peninsula Borough.

In 2006, the oil and gas industry paid property taxes of over $10 million in that borough. The Cook Inlet producers and Agrium made up nine of the top ten taxpayers, with the highest assessed property valuations in the borough. In 2005, the industry supported 1,340 jobs, or 7.4% of borough employment, and 18.7% of total borough payroll.

Petroleum industry jobs also pay well—the average annual wage for oil and gas workers in 2005 was $88,764, compared with the average of $35,148 among all workers in the Kenai Peninsula Borough.

Statistics on the economic contribution of Cook Inlet gas for the other two boroughs were not provided at the forum. But it is clear that the petroleum industry also provides a significant wage and tax base for both Anchorage and the Mat-Su Borough.

What Did We Learn from the Forum?

In the past few decades, residents of Southcentral Alaska have enjoyed abundant gas supplies at low prices. Unfortunately for consumers, demand is now starting to run ahead of supply. Opinions differ on how much more gas is yet to be found in Cook Inlet and on the best way to stimulate exploration for new supplies.

Whether the two biggest current users of Cook Inlet gas—the LNG and fertilizer plants on the Kenai Peninsula—will keep operating in the face of shrinking supplies and rising prices makes the future market for gas uncertain. However, residential and commercial demand for both heating and gas-generated electricity are expected to keep growing.

Uncertainty also surrounds the future sources of gas supply (including gas from the North Slope) and the feasibility of developing alternative fuels that may be able to help offset some of the demand for natural gas. Many of the proposed alternatives come with long lead times and unpredictable costs.

But one thing is clear. Southcentral Alaska needs to find additional supplies of gas, or ways to offset demand. Otherwise, the region may soon see large-scale shortages.

A list of forum participants and transcripts of presentations are on AOGCC's Web site: www.aogcc.alaska.gov

Acknowledgments

The authors thank many people for help with this summary. AOGCC commissioners Dan Seamount and John Norman sponsored the preparation of the summary and tried to ensure that the forum's agenda was objective and represented as many stakeholders as possible. Bill Popp of the Kenai Peninsula Borough also helped the commission line up participants for this forum. The Oil and Gas Division of the Alaska Department of Natural Resources also contributed to the forum's success.

Jody Colombie and Ceresa Tolley at the AOGCC provided the forum with logistical support and helped the authors collect and disseminate information from the proceedings.

Dan Dieckgraeff of ENSTAR, Will Nebesky and Brian Havelock of the Alaska Division of Oil and Gas, and Charles Thomas of Science Applications International Corporation promptly answered follow-up questions from the authors.

The authors appreciate help from Fran Ulmer, Linda Leask, Clemencia Merrill, and Darla Siver of ISER.

Finally, the authors thank all the forum participants for taking the time to discuss this important issue.

RE: House Bill 280

I request that House Bill 280, the Cook Inlet Recovery Act (CIRA), be scheduled for a hearing in the House Resources Committee at your earliest convenience. CIRA would provide incentives for developing gas storage facilities and make changes to our current tax incentives for gas exploration in the Cook Inlet.

House Bill 280 is currently in the House Labor and Commerce Committee and scheduled for hearing on Monday, February 15th. If possible, I would respectfully request that HB 280 be scheduled, pending referral, for the House Resources next week.

I expect to see a House Labor and Commerce CS next Monday and will provide you with a current version of the bill and revised sponsor statement as soon as they are available. I have attached the current work draft and accompanying sectional, a Sponsor Statement, a few simple overview documents, and some background materials for your review. Please feel free to contact me or my legislative aide, Juli Lucky, if you need any additional information.

Rep.Mike.Hawker@legis.state.ak.us • www.housemajority.org/hawker

This bill requires DNR to convey title to 194,379 acres of specifically identified parcels of state land to the University of Alaska within two years of the effective date of the legislation. To satisfy the land conveyance proposed under this legislation, DNR will need to complete the conveyance process for these parcels, including a land title search, identify and reserve easements, identify and reserve navigable waters, and resolve any title conflicts. This will require some DMLW staff time to complete this research, finish the preparation of legal descriptions, prepare conveyance documents, and update the state's computerized records system. Because this effort was substantially completed by the department under the provisions of chapter 8, FSSLA 2005 prior to the State Supreme Court's invalidation of that statute, only a small amount of work remains to finalize the conveyances required under this bill.

FISCAL NOTE #2

STATE OF ALASKA **BILL NO.** HB 295
2010 LEGISLATIVE SESSION

ANALYSIS CONTINUATION

(Analysis cont.)

Accordingly, DNR does not anticipate any additional funds or positions will be required, and the department can implement the intent of this proposed legislation using existing staff and resources.

This bill is intended to expedite the conveyance of state lands, including the mineral estate, to the University of Alaska by conveying to the Board of Regents by quitclaim deed to those state lands identified for conveyance to the University in a document entitled "University of Alaska Land Grant List 2005" dated January 12, 2005. This "Land Grant List" includes lands that make up part of the Nenana oil and gas basin.

***Based on the subsurface information currently available, the Nenana basin is thought to be gas-prone. DNR believes that the gas potential of this basin ranges from moderate to good. The basin is also in close proximity to markets in Fairbanks. Andex Resources currently has an oil and gas exploration license for part of the Nenana Basin. It is impossible without further exploration to predict the exact fiscal impacts. However, the conveyance of part of the Nenana oil and gas basin to the University of Alaska could result in a significant new source of revenue and /or energy for the University with a corresponding decrease in general and permanent fund revenues.

There is a similar but lesser impact from transferring the surface and subsurface from other lands that DNR would otherwise sell or lease. That is, the Department anticipates an unspecified decrease in future revenues from the loss of these lands.

ANALYSIS: *(Attach a separate page if necessary)*

In the short term (6 years) this bill would provide very little operating revenue, due to the fact that the funding resulting from this bill is deposited into UA's Land Grant Trust Fund (LGTF, an endowment that has a payout policy similar to the POMV principles i.e., 5% of the prior five year endowment average), however, in the long term, after substantial additions to the LGTF endowment UA can see modest operating revenue i.e., in approximately 20 years UA anticipates annual investment earnings on new land sales to reach 1% of state general fund support or $2.6M.
UA Land Management will add minimal staff to accomplish management of the new lands as this land transfer would roughly replace land inventory available for sale. Land Management operating costs are already considered in the net revenue projections.

Re: Committee Substitute for House Bill 295(EDC)

Dear Representative Munoz and Representative Herron:

At the close of the February 18, 2010 Community and Regional Affairs Committee hearing on House Bill 295, you requested a written response from the Department of Law to testimony by Legislative Counsel Donald Bullock. Mr. Bullock testified that CSHB 295 (EDC) failed to address the Alaska Supreme Court's decision in *Southeast Alaska Conservation Council v. State*[1] that prior University land grant legislation was unconstitutional. Mr. Bullock testified that under the Alaska Supreme Court's holding in *SEACC v. State*, the Board of Regents lack the authority to set policy regarding the administration and disposal of University land. We have reviewed Mr. Bullock's materials from the February 18, 2010 hearing, as well as his March 30, 2009 memorandum to Representative Ramras regarding "Alaska Supreme Court decision on the conveyance of lands to the University of Alaska (Work Order No. 26-LS0818)."

[1] 202 P.3d 1162 (2009).

We disagree with Mr. Bullock's testimony. Article VII, section 2 of the Alaska Constitution states that the University "shall have title to all real and personal property now or hereafter set aside for or conveyed to it. Its property shall be administered and disposed of according to law." Article VII, section 3 of the Alaska Constitution empowers the Board of Regents as the governing body of the University, and states that "[t]he board shall, in accordance with law, formulate policy." In accordance with these constitutional mandates, the Legislature has established a statutory framework for administration and disposal of University land and University interests in land. Alaska Statute 14.40.170(a)(4) specifies that the Board of Regents "have the care, control, and management of all the real and personal property of the university" as well as land that would be conveyed under CSHB 295(EDC). This statute also requires that the Board of Regents "provide public notice of sales, leases, exchanges, and transfers of the land of the university or of interests in land of the university." AS 14.40.170(a)(8). Furthermore, the Legislature has established specific requirements for administration of University land in various sections of AS 14.40 (*see, e.g.,* AS 14.40.291 (specifying that University land is not public domain land); AS 14.40.350 and .360 (authorizing the Board of Regents to administer federal University land grant land); AS 14.40.366 (requiring land development and disposal plans as well as public notice and comment for development, exchange, or sale of University land)). Additionally, the Legislature has specifically exempted University land from the Alaska Land Act (*see* AS 38.05.030(f)) and the requirements of AS 30.04 (*see* AS 38.04.005(f)). The validity of these statutes has not been challenged.

In *SEACC v. State*, the Alaska Supreme Court held that University land is state land and therefore generates revenue subject to Article IX, section 7 of the Alaska Constitution.[2] In reaching this conclusion, the Court relied in part on its 1981 decision that the Legislature has ultimate authority to dispose of University trust land,[3] but it must reconstitute the trust.[4] In deciding that University land is state land subject to the dedicated funds clause, the Court stated that:

> [E]ven when the University has title to land, only the legislature can make laws effecting the disposal of land, not the Board of Regents. We further observed that the Alaska Constitution grants extensive powers to the legislature to control lands, which makes clear that the University lands received under the 1929 act 'belong' to the state. The

---

2 202 P.3d at 1172.

3 The University received two federal land grants in 1915 and 1929. This land was conveyed from the federal government to the state in trust for the University. This trust land was at issue in the Alaska Supreme Court's 1981 decision.

4 *See State v. University of Alaska*, 624 P.2d 807 (Alaska 1981).

> conclusion we reached in *State v. University of Alaska*, that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.[5]

In other words, the Court held that conveyance of state land to the University did not remove the land from the ultimate control of the Legislature, nor did it exempt University land revenue from the dedicated funds clause. The Court did *not* hold that University land must be managed under the same statutory framework as other state land, nor did the Court hold that the Legislature could not delegate to the Board of Regents the authority to develop policy for the day-to-day implementation of the University land program, including decisions regarding development and disposal of individual parcels. Because University land is state land, University land management practices must comply with the requirements of Article VIII, Natural Resources, of the Alaska Constitution. However, there is no basis for the conclusion that the Legislature may not enact separate laws governing the administration of University land, including delegation of day-to-day land administration responsibilities to the Board of Regents.

Sincerely,

DANIEL S. SULLIVAN
ATTORNEY GENERAL

MEMORANDUM March 22, 2010

SUBJECT: Transfer of land to the University
(HB 295; Work Order No. 26-GH2829)

TO: Representative Mark Neuman
Co-Chair of the House Resources Committee
Attn: Rex Shattuck

FROM: Donald M. Bullock Jr.
Legislative Counsel

HB 295 proposes to transfer land to the University of Alaska. The bill was introduced after the Alaska Supreme Court found that a prior bill conveying land to the University of Alaska (University) was unconstitutional.[1] The court found that ch. 8, FSSLA 2005 violated art. IX, sec. 7 by dedicating the proceeds from university lands to the endowment trust fund.[2]

HB 295 does not dedicate the proceeds from the land transferred to the University. Instead, the amendment to AS 14.40.491 in sec. 10 of CSHB 295(CRA) treats "receipts from lands conveyed to the University" as university receipts, subject to appropriation by the legislature.

A problem with the 2005 University Lands Act was that it dedicated all land proceeds to the University's endowment fund. Since the court struck down all dedication of funds generated by university lands as contrary to the prohibition of dedicated funds in art. IX, sec. 7, the court never discussed whether some of the proceeds should have been directed to the permanent fund under art. IX, sec. 15. The governor's bill attempts to provide for a dedication to the permanent fund, in sec. 13, where AS 37.13.010(a) is amended to require, "25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares derived from lands conveyed to the University of Alaska under AS 14.40.365 and 25 percent of all bonuses derived by the University of Alaska from mineral leases on these lands" to be deposited in the permanent fund. I write the bill "attempts" because the paragraph that is amended -- AS 37.13.010(a)(1) -- applies to certain payments received from leases issued on or before December 1, 1979 and bonuses from leases issued on or

---

[1] *Southeast Alaska Conservation Council v. State of Alaska*, 202 P.3d 1162 (Alaska 2009).

[2] 202 P.3d at 1177.

before February 15, 1980. Compare paragraph (1) with paragraph (2) in the same section; AS 37.13.010(a)(2) provides for inclusion in the permanent fund of payments received after the dates in AS 37.13.010(a)(1). Paragraph (2) makes no mention of deposits from land conveyed to the University. I suggest the administration should explain to the committee what is intended by the amendment to AS 37.13.010 in the bill. AS 37.13.010(a), in sec. 13, needs to be amended to at least address the time period issue and the obligation to contribute mineral-related proceeds to the permanent fund.

Another issue raised by *Southeast Alaska Conservation Council v. State of Alaska* relates to how land transferred to the University is to be managed. The court stated that, as state land, university land must be administered and disposed of according to law under art. VII, sec. 2, Constitution of the State of Alaska. That part of the decision, reads as follows:[3]

> We considered the meaning of article VII, section 2 in *State v. University of Alaska* [624 P.2d 807, 814]. There, we held that the state could take land that Congress had granted to the University to be held in trust for it under the federal 1929 act, but that the state had to compensate the University with monetary damages or equivalently valuable land. Our opinion emphasized article VII, section 2's command that "property shall be administered and disposed of according to law," and noted that "'according to law' refer[s] to the legislature's power to make laws." *Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents."* We further observed that "[t]he natural resources article of the Alaska Constitution grants extensive powers to the legislature to control lands," which makes "clear that [the University lands received under the 1929 act] 'belong' to the state." The conclusion we reached in *State v. University of Alaska,* that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.

CSHB 295(CRA) contains legislative findings and purpose in sec. 1. Paragraph (2) in that section refers to art. VII, sec. 2, Constitution of the State of Alaska, but paraphrases the constitutional provision in a somewhat confusing manner. Paragraph (2) states that the legislature finds:

> (2) article VII, sec. 2 of the Constitution of the State of Alaska provides that the University of Alaska shall have title to all real property conveyed to it and that *the legislature shall prescribe how university property shall be administered according to law;*

[3] 202 P.3d at 1171 (footnotes omitted, emphasis added).

(Emphasis added.) The actual constitutional provision, addressed in the court's opinion, is:

> SECTION 2. State University. The University of Alaska is hereby established as the state university and constituted a body corporate. It shall have title to all real and personal property now or hereafter set aside for or conveyed to it. *Its property shall be administered and disposed of according to law.*

Although the court stated, "Thus, even when the University has title to land, only the legislature can make laws effecting the disposal of land, not the Board of Regents[,]" the amendment to AS 14.40.291(a) in sec. 4 of CSHB 295(CRA) requires the land to be managed "**in accordance with** [AS NONTAXABLE TRUST LAND UNDER] AS 14.40.365 - 14.40.367 *and policies of the Board of Regents*." [Emphasis added.]

AS 14.40.366 is repealed and reenacted in sec. 6 of CSHB 295(CRA), and addresses the management requirements for university land to be transferred under the bill. That section gives general direction to the Board of Regents to manage the lands; the board is to "adopt policies that require the preparation of land development plans and land disposal plans," "offer first refusal to the closest municipality" on land offered for sale, and "adopt policies requiring public notice before approval of land development plans and land disposal plans." Whether this law -- AS 14.40.366 -- rises to the level of a law effecting the disposal of land under art. VII, sec. 2, in light of the discretion granted to the Board of Regents, should be examined as this bill progresses. When comparing AS 14.40.366 with AS 38.05 (Alaska Land Act), there is a considerable difference in the laws providing for the administration and disposal of state land. For example, AS 38.05.180 contains extensive provisions relating to oil and gas leasing. What provisions would apply to oil and gas leasing on land conveyed to the University in light of AS 38.05.030(f) that exempts "[l]and owned by the Board of Regents of the University of Alaska"?[4]

Section 15 of CSHB 295(CRA) would ratify conveyances that were made before the court's decision on ch. 8, FSSLA 2005. The Alaska Supreme Court remanded the case to the superior court with instructions to order reconveyances to the State of the land transferred under the act and order the return of any net proceeds received from the land.[5]

---

[4] Under art. VII, sec. 2, the university can hold title to land; AS 14.40.170(a), the Board of Regents is responsible for the care, control, and management of the land, but not ownership. CSHB 295(CRA) transfers land to the University, not the Board of Regents.

[5] 202 P.3d at 1177. The "net proceeds" part of the order is not clear. Since the court found that money from the land could not be dedicated, questions arise as to what funds were deducted in determining the "net proceeds" and whether costs associated with the management of the land had been appropriated by the legislature.

What follows below is an analysis of *Southeast Alaska Conservation Council v. State of Alaska* that may be helpful as you consider CSHB 295(CRA) in your committee.

***Southeast Alaska Conservation Council v. State of Alaska* and the conveyance of land to the University of Alaska under ch. 8, FSSLA 2005**

Introduction

On March 13, 2009, the Alaska Supreme Court issued a decision in *Southeast Alaska Conservation Council v. State.*[6] The decision concludes that the dedication of money to the endowment trust fund of the University of Alaska (University) generated from land conveyed to the University by ch. 8, FSSLA 2005 violated the prohibition against dedicated funds in art. IX, sec. 7 of the Alaska Constitution. The court declined to sever the land transfer provisions of the Act from the unconstitutional dedicated fund provisions because the court found the survival of those provisions "would not serve the act's main purpose and would operate strikingly differently from the original act."[7]

The court remanded the case to the superior court,

> with instructions (1) to order reconveyance to the State of the land transferred under the act, (2) to order the return of any net proceeds received from the land, and (3) to enter judgment in favor of the appellants in accordance with the views expressed in this opinion.[8]

The decision recognized the authority of the University to have title to real and personal property under art. VII, sec. 2, Constitution of the State of Alaska.[9] While the University may have title, the court concluded that the same section of the constitution requires that "[the University's] property shall be administered and disposed of according to law," and

---

[6] 202 P.3d 1162 (Alaska 2009).

[7] 202 P.3d at 1176. The court identified the main purpose of the act as follows:

> The legislative findings show that the main purpose of the act was to make a land grant that would operate in a manner similar to the way that the University's federal land grant has operated since before statehood: the University is partially supported by net earnings from the [endowment trust fund], which in turn is funded by net proceeds from revenues derived from the sale or use of land grant lands.

202 P.3d at 1174 (footnote omitted).

[8] 202 P.3d at 1177.

[9] 202 P.3d at 1171.

"according to law" refers to the legislature's power to make laws; [10] the Board of Regents does not have the power to effect the disposal of land outside of laws passed by the legislature. The court wrote:

> Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents." We further observed that "[t]he natural resources article of the Alaska Constitution grants extensive powers to the legislature to control lands," which makes "clear that [the University lands received under the 1929 act] 'belong' to the state." The conclusion we reached in *State v. University of Alaska,* that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.[11]

Following the finding that University land is state land, the court found that revenue from the land is state revenue for purposes of the dedicated funds clause and would be subject to appropriation. Revenue from state land conveyed to the University could be appropriated to the University or to any other state agency. On this point, the court wrote, in the context of is severability discussion:

> The land grant provisions of the act, if allowed to stand alone, would not enhance the University's endowment. With only the land grant provisions, the legislature would appropriate on an annual basis the net proceeds gained from the sale or use of the land. The appropriation could be directed in whole or in part to the University or any agency. The appropriated proceeds would be available for immediate use. They would not be capitalized and preserved. If the University were to sell the land, which would be likely given the legislature's goal of encouraging development, the land could be substantially disposed of within a few decades. Because the net proceeds from the land would be spent rather than saved, the benefits from the land grant, far from lasting in perpetuity, could be dissipated in a relatively short period of time.[12]

In summary, the case decided that the legislature had the exclusive power to pass laws effecting the disposal of land held by the University, revenue from the land conveyed by

[12] 202 P.3d at 1175.

the state may not be dedicated, and the revenue from state land conveyed to the University could be appropriated to the University or to any other state agency.

DISCUSSION

Bills conveying state land to the University

In 2000 and 2005 the Alaska legislature passed bills conveying approximately 250,000 acres to the University.[13] The 2000 legislation (SB 7) allowed the University to select 250,000 to 260,000 acres of land and required the "net income derived from the sale, lease, or management of the land selected by and conveyed to the University of Alaska" to be placed and held in the University's endowment trust fund (ETF).[14] Governor Knowles vetoed SB 7, the legislature overrode the veto by less than a three-fourths majority. The veto override was challenged on the basis that the conveyance of land was an appropriation requiring a three-fourths majority for override. On appeal, the Alaska Supreme Court concluded that the bill's provisions were not an appropriation and that the veto had been overridden by the legislature.[15] The case considering the veto of SB 7 did not address provisions of the Act relating to the dedication of funds.

In 2005, the legislature passed HB 130. HB 130 differed from SB 7 by identifying the specific land to be transferred to the University rather than have the University select the land. Similar to SB 7, HB 130 retained the requirement that net proceeds from the land be placed in the ETF. HB 130 also established a "University Research Forest" for advancing research into forest practices, ecology, wildlife management, and recreation.[16]

University land is state land; revenue from University land is state revenue

"Our case law establishes that University lands are state lands."[17] "Because University land is state land, revenue from University land is state revenue for purposes of the dedicated funds clause."[18] These two sentences are at the heart of the supreme court's decision. The two conclusions are critical for determining the laws that are applicable to

[18] 202 P.3d at 1172.

the management and disposition of University land and the use of revenue derived from University land.

The conclusion that University land is state land is grounded in art. VII, sec. 2, Constitution of the State of Alaska. Justice Matthews, writing for the court, wrote:

> Article VII, section 2 establishes the University, declares it a "body corporate," provides that the University "shall have title to all real and personal property now or hereafter set aside for or conveyed to it," and states that "[i]ts property shall be administered and disposed of according to law." We considered the meaning of article VII, section 2 in *State v. University of Alaska.*[19] There, we held that the state could take land that Congress had granted to the University to be held in trust for it under the federal 1929 act, but that the state had to compensate the University with monetary damages or equivalently valuable land.
>
> . . .
>
> The conclusion we reached in *State v. University of Alaska,* that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.[20]

The fact that University land is state land under art. VII, sec. 2 leads to the second conclusion, that revenue for University land is state revenue and therefore subject to the prohibition against dedicated funds in art. IX, sec. 7, Constitution of the State of Alaska. Two historical sources cited by the court further support the court's conclusion. First, the decision quotes Governor Egan's statement in 1959 that he made after vetoing a bill intended to reserve lands for the support of the University. The governor wrote:[21]

> I am vetoing [the bill], a bill intended to reserve lands for the support of the University of Alaska, because I believe it wrong in principle, inconsistent with constitutional concepts and not in the public interest. In so saying, I may add that I would act similarly on any bill which sought, as this does, to make special disposition of the proceeds of public lands in aid of one public function to the exclusion of others.
>
> . . . .

[19] *State v. University of Alaska,* 624 P.2d 807, 814 (Alaska 1981).

[20] 202 P.3d at 1171 (notes and citations by the court omitted).

[21] 202 P.3d at 1172, quoting Governor Egan's Statement in 1959 House Journal 1186, 1186 - 87.

> To return now, by the enactment of [this bill], to a proposal whereby lands are given piecemeal earmarking for various state functions would be a distinct step backward.
>
> If we are to return to the "internal improvement" concept of earmarking state lands, can we in good conscience limit the practice to the University? . . . Certainly, this bill invites similar treatment for other state responsibilities. By this bill the door would be opened to an unplanned disposition, or dissipation, of the resource without regard to relative need and without regard to the clear constitutional and congressional intent.

The second historical support for the court's conclusion is found in a letter from Senator Bob Bartlett to William Egan in 1964.[22] With regard to the position for further dedication of land after Alaska achieved statehood, Senator Bartlett wrote:

> [A]t many times during the consideration of the statehood bill, efforts were made to set aside this amount of land or that amount of land for the common schools and for other educational uses. I always resisted these and, as it turned out, successfully. My conviction was--and is--that notwithstanding the possible need for such reservations in the early statehood bills, the reasons for such have long since evaporated. . . . [I]f dedication is made for one institution or one purpose, what argument could be made against expanding? None, of course.[23]

Both historical quotes relate to both the dedication of land for a particular purpose and the disfavor of dedicating revenue from that land.

Proceeds from University land transferred from the state may not be dedicated

The lower court's decision found that the proceeds from state land are not "proceeds of any state tax, or license" that may not be dedicated under the literal reading of art. IX, sec. 7, Constitution of the State of Alaska.[24] That provision reads as follows:

> **Dedicated Funds.** ***The proceeds of any state tax or license shall not be dedicated to any special purpose***, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

---

[22] Letter from Bob Bartlett to William Egan (June 8, 1964), quoted and cited in 202 P.3d at 1172.

[23] *Id.*

[24] 202 P.3d at 1167.

(Emphasis added.) One of the three exceptions to the prohibition is art. IX, section 15, which authorizes the dedication of a certain amount of mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the State to the Alaska Permanent Fund.[25]

In analyzing the extent of the prohibition in art. IX, sec. 7, the court reiterated its statement in *State v. Alex*, that the prohibition is "intended . . . to prohibit not only the dedication of taxes, but also such revenue as the proceeds from the sale of state lands."[26] Regarding *Alex*, the court wrote:[27]

> We reaffirm the reasoning and language of *Alex.* In *Alex,* we struck down a statute authorizing aquaculture associations to collect assessments from commercial salmon fishermen because it violated the dedicated funds clause. Our opinion considered the meaning of the word "tax" and concluded that "the sense in which 'tax' is used in *article IX, section 7 of the constitution* must be determined from its context, both in the text and according to the discussion at the constitutional convention which adopted the wording." We then turned to constitutional history, noting that the studies on which Constitutional Convention delegates relied encouraged adopting a prohibition on earmarking because the dedication of funds "curtailed the exercise of budgetary controls and simply amounted to an abdication of legislative responsibility." We also remarked that the commission's studies "used the terms revenues, funds, and taxes interchangeably" in discussing this issue. We interpreted an amendment to the proposed provision that inserted "proceeds of any state tax or license" in the place of "all revenues" as an effort to "allow for the setting up of certain special funds, such as sinking funds for the repayment of bonds," rather than "to exempt some sources of revenue from the prohibition." Thus, we held "that since the constitution prohibits the dedication of any source of revenue," the assessments in question could not be earmarked.
>
> We see no reason to hold differently now. In addition to the history described in *Alex,* the amendment to *article IX, section 7* creating

---

[25] Although the court did not address the issue of dedicating similar revenues to the ETF rather than the Permanent Fund when generated from University land, I believe that such dedication would have also been unconstitutional under art. IX, sec. 15. The court did not need to reach this issue after concluding that no revenue from University land could be dedicated to the ETF.

[26] 202 P.3d at 1169 (quoting *State v. Alex*, 646 P.2d 203, 210 (Alaska 1982)).

[27] 202 P.3d at 1169 - 70 (footnotes omitted, emphasis added).

> an exception for the Permanent Fund indicates that the prohibition is meant to apply broadly. If only revenue collected as taxes or license fees were included, there would have been no need to expressly exempt "all mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments and bonuses received by the State" to ensure that placing those revenues in the Permanent Fund did not violate the constitution.

The court also rejected the arguments by the State that:[28]

> the grant of land and proceeds from it does not violate the dedicated funds clause because the grant of land and proceeds is not a dedication of revenue but rather an asset conveyance. The State asks us not to rely on *State v. Alex* but to rule that this case should follow what it contends is the reasoning of *Myers v. Alaska Housing Finance Corp.*

In *Myers v. Alaska Housing Finance Corp.*[29] the court "upheld the state's sale of future proceeds from settlement with tobacco companies against a challenge under the dedicated funds clause."[30] The court described the situation in *Myers* as legislative authorization of "the sale of the right to future proceeds from the settlement for a lump-sum amount based on the present value of the future proceeds."[31] The court continued:[32]

> The legislature appropriated the lump sum in a single year for various purposes. No dedicated fund was created nor were revenues placed in a pre-existing dedicated fund. Accordingly, we concluded that "[b]ecause the legislature sold the tobacco settlement and then appropriated the resulting income, it did not directly violate the anti-dedication clause." Nonetheless, we were concerned that the transaction might be contrary to the spirit of the clause; ultimately, however, we found no constitutional violation.
>
> Thus *Myers* neither holds nor suggests that revenue from state property can be placed in a dedicated fund. Likewise, it does not imply that there is an exception to the dedicated funds clause applicable to revenue from state property. *Instead, Myers suggests that the reach of the dedicated funds clause might be extended to statutes that, while not directly violating the*

[30] 68 P.3d at 391 - 393.

[31] 202 P.3d at 1170.

[32] *Id.*

> *clause by dedicating revenues, in some other way undercut the policies underlying the clause.*

(Emphasis added.)

The court distinguishes the dedication of funds specifically prohibited under art. IX, sec. 7 from the allocation of revenue by statutes that undercut the policy behind the section. The court seems to emphasize that in *Myers*, no dedicated fund was created and the revenues from the tobacco settlement were not placed into a dedicated fund. That situation is factually distinguishable from the University land conveyance in which the revenues from University land conveyed by the state were to be deposited in the University's endowment trust fund. The court described the nature of the trust fund as a dedicated fund by stating, "State law mandates that the principal of the trust fund be held in perpetuity and that '[t]he total return from the [ETF] shall be used exclusively for the University of Alaska.'"[33]

University land must be administered and disposed of according to law

As noted above, the court reiterated the requirement in art. VII, sec. 2 that University land "shall be administered and disposed of according to law" and "'according to law' refer[s] to the legislature's power to make laws."[34] The court continued, "Thus, even when the University has title to land, 'only the legislature can make laws effecting the disposal of land, not the Board of Regents.'"[35]

The Alaska Land Act, AS 38.05.005 - 38.05.990, was enacted pursuant to art. VIII, sec. 10, Constitution of the State of Alaska.[36] That section of the constitution reads as follows:

> No disposals or leases of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be prescribed by law.

Managing land conveyed to the University using the provisions in the Alaska Land Act would be consistent with the court's decision; managing University land under any policy established by the Board of Regents that is inconsistent with the Alaska Land Act or other laws passed by the legislature relevant to the management of State land violates the

[36] *Moore v. State*, 553 P.2d 8, 21 (Alaska 1976).

"according to law" requirement in art. VII, sec. 2.[37]

Conclusion and summary

While the legislature may convey land to the University and the University may hold title to that land, there seems to be little benefit to the University from the transfer. The land would continue to be "state land" and have no special status or exclusion from the requirement that the land be managed according to law. The University would have to manage the land consistent with laws passed by the legislature, such as the Alaska Land Act. Management pursuant to policies adopted by the Board of Regents that are inconsistent with law violates art. VII, sec. 2, Constitution of the State of Alaska.

Revenue from land conveyed to the University is state revenue for purposes of the prohibition against dedicated funds in art. IX, sec. 7, Constitution of the State of Alaska and is subject to appropriation. While revenue from University land may be appropriated to the University, appropriations could also be made for any other public purposes.

DMB:med
10-052.med

[37] The requirement that University land be "administered and be disposed of according to law" is consistent with the public trust doctrine adopted by the Alaska Supreme Court in *CWC Fisheries v. Bunker*, 755 P.2d 1115, 1117 - 18 (Alaska 1988) and AS 38.05.502. Both the doctrine and the statute reiterate that the state holds land in trust for the people of the state; the policies for management of that land determined by the legislature are consistent with that principle.

The Honorable Craig Johnson
House of Representatives
Co-Chair of House Resources Committee
State Capitol, Room 126
Juneau, Alaska 99811

Dear Representative Neuman and Representative Johnson:

I attended the hearing on Committee Substitute for House Bill 295 (CRA) before your Committee on March 17, 2010. During the hearing, Legislative Counsel Donald Bullock pointed out the awkward wording of Section 13 of the Bill. This Section starts on page 14 and continues on page 15. It describes a proposed amendment to AS 37.13.010 (a), the statute pertaining to the Alaska permanent fund.

I agree with Mr. Bullock that the amendment proposed in Section 13 is confusing, but I believe a small modification to the structure of the proposed amendment will address Mr. Bullock's concerns. The modification I suggest is to removed the added language in subsection (a)(1) of AS 37.13.010 and place that language in a separate and new subsection (2). Section 13 would then read:

Sec. 13. AS 37.13.010(a) is amended to read:

(a) Under art. IX, sec. 15, of the state constitution, there is established as a separate fund the Alaska permanent fund. The Alaska permanent fund consists of

(1) 25 percent of all mineral lease rentals, royalties royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the

state from mineral leases issued on or before December 1, 1979, and 25 percent of all bonuses received by the state from mineral leases issued on or before February 15, 1980;

(2) **25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares derived from lands conveyed to the University of Alaska under AS 14.40.365 and 25 percent of all bonuses derived by the University of Alaska from mineral leases on these lands;**

(3) 50 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the state from mineral leases issued after December 1, 1979, and 50 percent of all bonuses received by the state from mineral leases issued after February 15, 1980; and

(4) any other money appropriated to or otherwise allocated by law or former law to the Alaska permanent fund.

Creating a new subsection (2) for the added language removes the confusion caused by the reference to certain dates in the initial draft. Also maintaining the 25% contribution rate to the Alaska permanent fund complies with Article IX, Section 15 of the our constitution and preserves the Legislature's intent to provide resources to the university for higher education purposes.

Thank you for considering my suggestion.

Sincerely,

Larry Zervos

The Honorable Craig Johnson
The Honorable Mark Neuman
Co-Chairs, House Resources Committee
State Capitol
Juneau, Alaska 99811

Dear Representatives Johnson and Neuman:

Thank you for hearing House Bill 295, The University of Alaska Lands bill, in the House Resources Committee on Wednesday, March 17. I would like to address several of the concerns raised during that hearing.

First, let me assure you that the Department of Natural Resources (DNR) working with the University has thoroughly investigated the land status of all parcels on the land list. All of the parcels contained in HB 295 were included in the 2005 legislation (HB 130) passed by the legislature. After the 2005 legislation passed, DNR began the process to transfer lands to the University. This process included thorough land title research to confirm state ownership. In fact, at the time the Supreme Court issued an injunction barring further land transfers, DNR had already issued deeds for 30 of the 51 conveyable parcels and had prepared draft deeds for all of the other conveyable parcels. All of the land title issues raised at the March 17 hearing were addressed in that process.

The following are parcel specific issues and DNR's response.

Tenakee Springs lands. During the 2005 consideration of House Bill 130, the issue of the 1981 Settlement Agreement was specifically raised and addressed. The 1981 Settlement Agreement referred to by various Tenakee Springs residents and officials was settlement of a dispute between DNR and the City of Tenakee Springs regarding the city's municipal entitlement. In that agreement, DNR agreed to transfer certain state lands to the city and retain others in DNR ownership (rather than convey them to the city). The agreement needs to be considered in that context. This was not an agreement to retain these parcels in state ownership in perpetuity. Absent a legislative directive that these lands would be retained in perpetuity, DNR would not have such authority to have made that commitment.

Frying Pan Lake. During the Legislature's consideration of this parcel in the 2005 legislative session, numerous local residents expressed concern about protecting the dog mushing trails that crossed this parcel. In response, DNR committed to working with the local trail users and the Mat-Su Borough to identify important trails, establish easements for these trails and then make the land transfer subject to those easements. This was done, and we believe the results were quite satisfactory to local trail users. If this parcel is conveyed to the University, these trail uses are protected.

Cleveland Peninsula – Sunny Bay. DNR objected to the transfer of this parcel to the City and Borough of Wrangell because it had been already committed to the University. The parcel was not discussed when DNR and the City and Borough of Wrangell representatives met several weeks ago to consider increasing the Borough's entitlement under House Bill 273. Those discussions focused on specific, discrete lands that the City and Borough identified for development or community uses. The City and Borough's interest in the Sunny Bay parcel is to prevent use and development of the parcel, while the University is more likely to put the parcel to an economic use.

Sitka – Biorka Island. Regarding the Native Allotment on Biorka Island, one Native Allotment is noted on Biorka Island. The allotment belonged to Mr. Walton Rudolph and was certified on May 5, 1921. Due to the location of the island and its importance to the military for communications and navigation, the allotment was condemned in 1940 and acquired for fair market value in July of the same year. This case is closed. There is no active 1906 Native Allotment case file in the Bureau of Land Management's records for Biorka Island. The only other private land ownership file in BLM's records for Biorka Island is a homesite application that was filed by Kathleen and Howard Taubeneck that was rejected on April 19th, 1951.

The issue of a Native Allotment claim was considered as part of the debate surrounding HB130 in 2005. At that time then Director Bob Loeffler responded to inquires made by Representative Wilson in a letter dated March 7, 2005. In that letter the Director answered the question of the affect the University parcel would have on future actions taken by the heirs of Mr. Rudolph to reopen his Native Allotment file by saying that "...University ownership will not affect the fate of Mr. Walton's allotment. That fate rests with BLM."

The FAA's navigational facility located on Biorka Island is on federal land that is adjacent to the state land proposed for transfer to the University. Maintaining the parcel under DNR management would provide no greater security for the FAA facility than transferring the parcel to University management.

Finally, I would like to address Don Bullock's concerns that were submitted in writing to Committee members during the hearing.

1. Style – "Generally needs edits to conform with the drafting manual and style of Alaska Statutes". Much of the language contained in HB 295 is essentially the same as was continued in the 2005 legislation that was passed by the legislature, with modifications to remove the provisions that the Alaska Supreme Court found were unconstitutional. We agree that any edits necessary so that the bill conforms to appropriate drafting standards and style of the Alaska Statutes should be made.

2. Legal Substantive – "University land is state land". This issue was first raised by Mr. Bullock in the House Community and Regional Affairs hearing on HB 295. Both the Department of Law and University believe that the Legislature has provided a statutory framework for the administration and disposition of University land, and therefore disagree with Mr. Bullock's interpretation of the Supreme Court's decision on this issue. See attached February 25, 2010 letter to Representatives Munoz and Herron from Assistant Attorney General Anne Nelson.

3. Legal Substantive – "policy as to Percentage". As written, section 13 of the bill could be construed to apply only to University land proceeds in the form of lease rentals, royalties, royalty sale proceeds, and net profit shares from mineral leases issued on or before December 1, 1979, and bonuses from mineral leases issued on or before February 15, 1980. This interpretation would not capture all of the proceeds from the land to be conveyed to the University under this bill that are subject to the constitutional Permanent Fund contribution requirement. We agree that this section of the bill should be redrafted to accurately identify the proceeds from the land to be conveyed under this bill that are subject to the Permanent Fund contribution requirement. The University's counsel has submitted suggested language to address this issue.

4. Policy – The Legislature's purpose in passing the 2000 and 2005 legislation, and the intent behind HB 295, is to fulfill a commitment many believe was made at Statehood to more fully endow the University of Alaska with land. In addition to providing land that the University can use for educational purposes, the legislature has supported conveying appropriate parcels to the University because the University land office has better resources and fewer constraints than DNR to encourage the development of the land and resources.

We hope that the Committee will consider the bill again soon and pass the bill out of committee. Thank you for your consideration of this important legislation.

Sincerely,

Dick Mylius
Director

Re: Committee Substitute for House Bill 295(CRA)

Dear Representative Neuman and Representative Johnson:

We have reviewed Legislative Counsel Don Bullock's March 22, 2010 memorandum to Representative Neuman regarding "Transfer of land to the University (HB 295; Work Order No. 26-GH2829)," and wish to provide a response for consideration by your committee. We also wish to provide for you the attached February 25, 2010 letter from the undersigned to Representatives Munoz and Herron.

HB 295 was drafted in response to the Alaska Supreme Court's holding in *SEACC v. State*, 202 P.3d 1162 (2009) that dedication of university land revenue to the university's endowment trust created an unconstitutional dedicated fund. The Court also found that it could not sever the land conveyance provisions of the statute from the dedication provisions because it was unclear whether the legislature would have intended for the university to receive the land if the proceeds from the land were not dedicated to the endowment trust, but were instead managed as university receipts, subject to appropriation each year by the legislature. The Court therefore found the land grant

Printed on Recycled Paper

legislation unconstitutional in its entirety. HB 295 was drafted to specifically address the Alaska Supreme Court's ruling in *SEACC v. State*.

Two of the three legal issues that Mr. Bullock identifies in his March 30, 2009 and March 22, 2010 memoranda already have been addressed. The first issue, dedication of revenue from the conveyed land to the university endowment trust, is addressed in section 9 (deleting the provision dedicating land revenue to the endowment trust) and section 10 (specifying that land revenue is to be managed as university receipts, subject to appropriation each year by the legislature) of HB 295. In his March 24, 2010 letter to you, the Associate General Counsel for the University of Alaska proposed a technical edit to section 13 of the bill that would address the concerns Mr. Bullock raises on page 1 of his March 22, 2010 memorandum regarding the dedication of at least 25 percent of the land revenue to the permanent fund. The University and Department of Law both agree that Article IX, section 15 of the Alaska Constitution (which sets forth the types and amount of state revenue that must be dedicated to the permanent fund) applies to land conveyed under this bill.

The third issue raised by Mr. Bullock addresses the statutory requirements applicable to administration and disposal of university land. On page 3 of his March 22, 2010 memorandum, Mr. Bullock expresses concerns that the statutory framework for administration of university land, and AS 14.40.366 in particular, may not "rise[] to the level of a law effecting the disposal of land under art. VII, sec. 2 [of the Alaska Constitution], in light of the discretion granted to the Board of Regents." This concern is reiterated on pages 11 and 12. Mr. Bullock raises these same issues in his March 30, 2009 memorandum, which is largely repeated in his March 22, 2010 memorandum. While the Alaska Constitution requires that university land be "administered and disposed of according to law," it does not prohibit the legislature from delegating specific administrative functions (including decisions regarding management and disposal of individual parcels) to the Board of Regents. The legislature has delegated similar discretion to the Department of Natural Resources in administering state public domain land. *See Kachemak Bay Watch v. Noah*, 935 P.2d 816, 825-26 (Alaska 1997) ("The legislature's assignment of a task to an agency, such as the identification of districts at issue here, invariably involves the exercise of agency discretion.")

Mr. Bullock also states, on pages 11-12 of his March 22, 2010 memorandum, and page 9 of his March 30, 2009 memorandum, that the Alaska Constitution requires that university land be managed consistent with the Alaska Land Act. We disagree. The legislature has specifically exempted university land from the Alaska Land Act and from the statutes that govern use and classification of state land surface. *See AS 38.04.005(f); AS 38.05.030(f)*. The legislature's disparate treatment of university land, managed by the Board of Regents, and state public domain land, managed by the Department of Natural Resources, recognizes the different responsibilities and purposes of the land management

programs of each agency of the state. The legislature also has enacted statutes that provide land management authority to other state agencies that hold title to and manage state land outside the Alaska Land Act. For example, *see AS 19.05.040, AS 19.05.080-.120 (Department of Transportation) and AS 42.40.250(7)-(10), AS 42.40.285, AS 14.40.350-.465 (Alaska Railroad).* The validity of these statutes has not been challenged.

Thank you for considering these issues.

Sincerely,

DANIEL S. SULLIVAN

February 10, 2010

Alaska State House of Representatives

Representative Bill Thomas

Dear Rep. Thomas,

I want to thank you for your hard work representing us on HB 295. Last Thursday the Tenakee Springs City Council adopted Resolution 2010-16, relating to the community's desire to have ST 1003 excluded from the list of lands to be granted to the University of Alaska. The Resolution is enclosed. Also enclosed, are three pieces of correspondence between the City of Tenakee Springs and DNR, the Stipulation for Settlement Tenakee Springs vs. State of Alaska 1JU 80-1666, March 9, 1981, and three pages from the Northern Southeast Area Plan (NSEAP). Tenakee Springs strongly desires to be excluded altogether from the University Bill and if that is not possible to have an amendment inserted binding the University to the terms of the Stipulation for Settlement. We intend to convey this material to Senator Kookesh, and if you have the opportunity, hope you would urge him to help with the exclusion.

Much of the concern expressed at the public hearing on resolution 2010-16 and by the Council members centered around whether the Stipulation with the land-use restrictions cited in the March 9, 1981 Court Order would remain in effect if the land were transferred to the University. In 1977, when the US Forest Service wanted to build a road and log dump and cut three timber units within the corporate boundaries of Tenakee Springs, the City's objections resulted in a Memorandum of Understanding between the city of Tenakee Springs the State of Alaska and Alaska Pulp Corporation. The US Forest Service declined to participate. A part of the MOU promised that DNR would convey to Tenakee Springs the lands selected under statehood with the understanding some would be retained by the State. When the conveyance was not forthcoming the City sued the State and the end result was an court order approving the Stipulation for Settlement, 1JU 801666, March 9, 1981. In the Stipulation for Settlement paragraph 1.2 describes a tract of land to be retained by the state for "commercial, industrial, row right away and borrow pits purposes... containing 261 acres, more or less." This track is designated C34 in the NSEAP. Paragraph 1.4, describes a "public facilities reserve, 40 acres more or less" and is designated C30 in NSEAP. C30 encompasses C31 and C32. The University list erroneously adds the acreages of C30, C31 and C32 together totaling 80 acres when the actual acreages 40 as a result the total acreage in ST 1003 is 301 acres. In the correspondence from 2005 enclosed DNR stated that they do not believe this day to be bound by the terms of the stipulation for settlement as to land-use.

The community is very concerned about the potential increased burden for new services that may be placed upon us. Extending power lines, improved access, and snow removal are all

things that would overwhelm our limited budget. If the University is not bound by the Stipulation for Settlement and is able to privatize these lands that burden could be considerably

greater. A fiscal note to the bill from the University of Alaska indicates that the 20-year projected income from these lands might produce 1% of the annual income required by the University. The 301 acres in Tenakee comprises only .11% of the total land grant in HB 295. Consequently the income derived from this land would be less than .0013 percent of the University's annual requirement. The potential burden to the city, in our minds, far outweighs the potential gain to the University.

The City of Tenakee Spring would be grateful for any help that you could provide in excluding the Tenakee Lands from the University Bill. One of our Council members, in contact with your office, has indicated you might be willing to forward amendment language to the House Committee on Community and Regional Affairs for an exclusion amendment. The Community and Regional Affairs Committee is meeting this week. I know that you work closely with Senator Kookesh and hope that together you can get exclusion amendments in both HB 295 and SB 225.

Respectfully,

Don Pegues, Mayor

City of Tenakee Springs

Committee for Community and Regional Affairs

City of Tenakee Springs

RESOLUTION 2010-16

In the Council
February 11, 2010

Introduced by
Council President

A RESOLUTION FOR THE CITY OF TENAKEE SPRINGS, ALASKA, SUPPORTING AN AMENDMENT TO HB 295 AND SB 225, " UNIVERSITY LAND GRANT", EXCLLUDING PARCEL ST 1003 FROM CONVEYANCE TO THE UNIVERSITY OF ALASKA

WHEREAS, the Alaska Department of Natural Resources, (DNR) adopted the Northern Southeast Area Plan (NSEAP) on October 15, 2002; and

WHEREAS, the City of Tenakee Springs, the public, various stakeholders and other government agencies had input into the land-use designations for local state lands in the NSEAP; and

WHEREAS, the NSEAP acknowledges that the State of Alaska shall retain certain lands in state ownership and manage them for the purposes designated in the Stipulation of Settlement pursuant to the order of the Alaska Superior issued on March 9, 1981 in case number IJU-80-1666; and

WHEREAS, if these lands in ST 1003 are conveyed to the University of Alaska, the University remains bound by the management uses designated for these lands in the IJU-80-1666, March 9, 1981 court order; and

WHEREAS, the Parcel Number ST 1003 includes parcels identified in the NSEAP as C30 which includes C31 and C32, 40 acres more or less, is designated to be managed "as a public facilities reserve" by court order; and

WHEREAS, the NSEAP states, "Other than development that may be related to marine support at the boat harbor, further development of this parcel is not considered appropriate."; and

WHEREAS, Parcel Number ST 1003 also includes the parcel identified in the NSEAP further as C24, 261 acres more or less, and the NSEAP and March 9, 1981 Court Order declares that "Lands within this parcel are to be retained by the state"; and

WHEREAS, the Stipulation for Settlement, (para 1.4), Tenakee Springs vs. State of Alaska, IJU-80-1666, March 9, 1981 stipulates these retained lands to be managed for "Commercial, industrial, right of way, and borrow pits" uses; and

WHEREAS, DNR did not solicit public comment from residents of Tenakee Springs for the 2010 legislation (HB 295) when designating Parcel ST 1003 for conveyance to the University; and

WHEREAS, all of the parcels in ST 1003 are within the city limits of Tenakee Springs; and

WHEREAS, fiscal Note 3 of House Bill 295 indicates, "after substantial additions to the LGTF endowment UA can see modest operating revenue i.e., in approximately 20 years UA anticipates annual investment earnings on new land sales to reach 1% of state general fund support or $2.6M."; and

WHEREAS, the total acreage of land recommended for conveyance from the State of Alaska to the University of Alaska in HB 295 and SB 225 is 260,000 acres; and

WHEREAS, parcel number ST 1003 is approximately 301 acres in size, which equates to .0013 percent of the total acreage of land to be conveyed to the University; and

WHEREAS, the City of Tenakee Springs would be unduly burdened by conveyance of these lands compared to the relatively insignificant additional revenue this parcel would contribute to the University's budget;

THEREFORE BE IT RESOLVED by the Common Council of the City of Tenakee Springs, Alaska that we support an amendment to HB 295 and SB 225 either removing the transfer of ST 1003 to the University of Alaska or binding the University to the terms of the Stipulation for Settlement in IJU-80-1666, City of Tenakee Springs vs. State of Alaska, March 9, 1981

ADOPTED 7 Yes, 0 No THIS 11th DAY OF February 2010.

Ex officio MAYOR

ATTEST:

Mary M. Almy
Acting City Clerk

March 16, 2010

House Resources Committee

The Honorable Craig Johnson, Co-Chair
State Capitol
Juneau AK, 99801

The Honorable Mark Neuman, Co-Chair
State Capitol
Juneau AK, 99801

Dear Representatives Johnson and Neuman:

I am writing in regard to HB 295, which is scheduled to be heard before the House Resources Committee this week. That bill provides for the transfer of designated lands to the University of Alaska, as listed in the "University of Alaska Land Grant List 2005." Among the lands recommended for transfer are those contained in ST 1003, which fall within our city boundaries. The City was opposed to this proposed transfer in 2005, and still opposes it today. The Tenakee Springs City Council recently adopted Resolution 2010-16, expressing the community's desire to have ST 1003 removed from the list of lands to be granted to the University of Alaska.

This is not the first time these parcels have been the center of controversy. In 1977, when the U.S. Forest Service proposed a road, log dump and harvest of three timber units within the corporate boundaries of Tenakee Springs, the City's objections led to a Memorandum of Understanding between the City of Tenakee Springs, the State of Alaska and Alaska Pulp Corporation. That MOU, in part, provide that the Alaska Department of Natural Resources would convey to the City lands selected by the State, while some lands would be retained by the State. When the conveyances did not occur, the City sued the State. That litigation was resolved in a Judgment[1] against the State in 1981, adopting a Stipulation for Settlement entered into by the parties. That Judgment was subsequently reaffirmed and amended by the court in 1984 and 1986, again by stipulation of the parties.

The Stipulation for Settlement provides that the State "convey to the City . . . fee simple title to all selected lands within the City's boundaries conveyed to the state by the Bureau of Land Management, except for the sites and acreages set out below." The Settlement goes on to

1 The Judgment from the Superior Court orders that "the failure or refusal of either party to comply with the terms of the Stipulation for Settlement, the other party shall be entitled to specific performance, special damages sustained by reason of the other party's non-performance, and costs and attorney's fees incurred in enforcing this judgment."

designate specific parcels that would remain with the State but with restrictions on their use or or be transferred to the City for specified uses.

Two of those lands specifically excepted from the transfer to the City were lands designated as tracts C30 and C34 in the Northern Southeast Area Plan, adopted October 15, 2002. In 2005, DNR took the position HB 130 that tract C30 was not among the parcels in the 2005 list. The City is relying on DNR's position that C30 is, similarly, not included now in HB 295. However, if for some reason C30 is considered included in the 2010 legislation, the City objects. In reference to C30, DNR has noted:

> The classification of parcels within the Tenakee community is greatly affected by a court order dated March 9, 1981 that identifies state lands for conveyance to the community and assigns uses to the lands retained by the state. This parcel is affected by paragraph 1.4 of that order, which designates it as a "public facilities reserve".

With the restriction on C30 that it be used only as a "public facilities reserve," it is unlikely that the University would desire to possess it with such restrictions.

As to C34, DNR observed:

> This parcel includes all of those areas within Tenakee affected by paragraph 1.2 of the court order. It consists of two parts: an interior part within sections 15 and 22 situated eastward and upslope of the community, and a part within section 23 that stretches along the coast. The classification of parcels within the Tenakee community is affected by a court order dated March 9, 1981 that identifies state lands for conveyance to the community and assigns uses to the lands retained by the state. Paragraph 1.2 designates this parcel for "commercial, industrial, road right-of-way, and borrow pits".

Lastly, there are two smaller parcels, designated as tracts C31 and C32 in the Northern Southeast Area Plan, that comprise part of the ST 1003 lands. These parcels did not transfer from BLM to the State until 1986 and 2003, respectively. These delays were because of the existence of un-adjudicated claims to the land at the time the remaining selected lands were transferred to the City in 1982. Those two parcels, selected by and transferred to the State under the Statehood Act, are subject to the same obligation to transfer them to the City under the terms of the Settlement. To that end, the City is considering a quiet title action to resolve that oversight.

It appears that transfer of these parcels would not promote the intent of the legislation: to provide clear title to the lands and provide for management of revenue from that land as university receipts. Ownership of C31 and C32 is in dispute, and the remaining parcels are subject to the restrictions set forth in the Settlement. Consequently, the purposes of the proposed land transfer would be frustrated, if not unobtainable. Further, this community is very concerned about the potential increased burden for new services that may be placed upon us. Extending

power lines, improved access and snow removal are just a few of the possible things that would overwhelm our limited budget.

A fiscal note to the bill from the University of Alaska indicates that the 20-year out annual projected income from the total new land grant might produce 1% of the annual income required by the University. The acreage in Tenakee comprises only .11% of the total land grant in HB 295, meaning the income derived from this land would be less than .0013 percent of the University's annual requirement. When considering the restrictions the University would take this land subject to, the potential burden to the City far outweighs the gain to the University.

We ask that ST 1003 be removed from HB 295, and appreciate your attention to this matter.

Respectfully,

Don Pegues, Mayor
City of Tenakee Springs

Subject: requested testimony--sumdum--university lands bill
Attachments: sawta sanford cove ltr.doc

Good morning Resources Committee members.

At last night's hearing you requested I submit written testimony about the Sumdum parcel currently listed in the University Lands Bill. Thank you for the opportunity to testify and for considering my concerns. And sorry if I was a little long-winded last night. I'll attempt more brevity today.

Here's a summary of the important points related to Sumdum. Also, attached is a letter from 18 commercial tour operators that use the lands surrounding Sumdum and who strongly object to its privatization.

*Sumdum is in Endicott Arm, part of Holkham Bay. This is the only undeveloped mainland bay between Juneau and Frederick Sound, maybe even all the way to Petersburg. It's surrounded by 730,000 acres of federally designated wilderness.

*Privatizing Sumdum opens it to development and commercial activity like flightseeing, whale watching, charter fishing, catamarans to the glaciers, salmon bakes, etc, etc.. It would adversely impact the surrounding 730,000 acres of wilderness and the independent and commercial visitors that currently rely on the area.

*Currently DNR zones the parcel as Rec Undeveloped to be compatibile with surrounding land uses. Privatization and development is contrary to surrounding land uses.

*This place is important to local residents for fishing, hiking, hunting, camping, and more.

*This place is important to commercial operators of nature-based tourism. Commercial operators rely on undeveloped bays. The operators contribute significantly to the Southeast AK economy.

* If Sumdum cannot be removed from the bill, we recommend a stronger covenant than the one currently traveling with the bill. The current one prohibits mining and logging and assures educational, scientific, historical, cultural uses of the site. But it does not address development, which is the true threat to this parcel and the surrounding land. A covenant that would address the concerns of myself, my wife, and many commercial operators would prevent any development on the parcel. It also sounds like the University would not want the parcel with such a covenant, so perhaps removing it from the bill would be best.

Thank you again for the opportunity to comment

.

Tim and Barbara Lydon

To: Rep. Craig Johnson
Subject: Please Remove Lands in Tenakee Springs from House Bill #295

March 17, 2010
Honorable Representative Johnson,

As a member of the House Resources Committee you will soon be reviewing House Bill #295.

Please remove lands within the city of Tenakee Springs from HB 295. The Tenakee Springs City Council recently unanimously passed Resolution 2010-16 making an identical request. The specific parcel(s) is ST 1003 which includesC 30 (~40 acres) and C 34 (~261 acres). These parcels represent a very minor amount of the total acreage included in HB 295. Their inclusion in the bill, however, would have vastly disproportionate impacts on Tenakee Springs.

Thank you
for your work in government. Thank you for listening and for responding to the needs and concerns of our community.

Sincerely,
/s/ Rachel Myron

FROM LEG LEGAL
Don Bullock

Issues with CSHB 295(EDC)

1. (STYLE) Generally needs edits to conform with the drafting manual and the style of the Alaska Statutes. (Also, some sections were repealed and reenacted when there were only limited changes).

2. (LEGAL, SUBSTANTIVE) University land is state land. The bill does not provide the law for the administration and disposition of the land conveyed to the university. Administration and disposition may not be done under policies of the Board of Regents, only under laws passed by the legislature. See, e.g. AS 38.05, the Alaska Land Act.

3. (LEGAL SUBSTANTIVE; POLICY AS TO PERCENTAGE) The bill incorrectly describes proceeds from the land conveyed to the University that must be deposited into the Permanent Fund (Amendment to AS 37.13.010(a) in sec. 12, CSHB 295(EDC)).

4. (POLICY) Bottom line University can have title, but cannot manage the land except under laws passed by the legislature; University cannot have any money generated by the land without appropriation by the legislature. Begs the question, except for land that may be used for purposes related to the function of the university, why transfer the land? The same thing could be accomplished by keeping the land under the administration of DNR, identify the parcels, and provide that the income from the identified parcels may be appropriated to the Unviersity.

lands may be dedicated. The State and University argue, in effect, that article VII, section 2 of the Alaska Constitution creates an implied exception to the dedicated funds clause by authorizing the University to hold title to real property. Because, the appellees reason, University lands are not state lands, University land revenues are not state revenues, and therefore University land revenues can be dedicated. In addition to drawing this conclusion from the constitutional text, the appellees emphasize that the University's lands are distinct from state lands under certain statutes, such as the Alaska Land Act[42] and laws regarding public domain land.[43]

SEACC believes interpreting article VII, section 2 to permit ownership but deny control of proceeds harmonizes that provision with the dedicated funds clause without improperly reading an exception into the dedicated funds clause. Further, SEACC argues that the University is an instrumentality of the state for relevant purposes[44] and points out that the legislature controls the University's funding. Therefore, SEACC concludes, University revenues are subject to article IX, section 7.

Our case law establishes that University lands are state lands. Article VII, section 2 establishes the University, declares it a "body corporate," provides that the University "shall have title to all real and personal property now or hereafter set aside for or conveyed to it," and states that "[i]ts property shall be administered and disposed of according to law."[45] We considered the meaning of article VII, section 2 in *State v. University of Alaska*.[46] There, we held that the state could take land that Congress had granted to the University to be held in trust for it under the federal 1929 act, but that the state had to compensate the University with monetary damages or equivalently valuable land.[47] Our opinion emphasized article VII, section 2's command that "property shall be administered and disposed of according to law,"[48] and noted that "'according to law' refer[s] to the legislature's power to make laws."[49] Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents."[50] We further observed that "[t]he natural resources article of the Alaska Constitution grants extensive powers to the legislature to control lands," which makes "clear that [the University lands received under the 1929 act] 'belong' to the state."[51] The conclusion we reached in *State v. University of Alaska*, that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal-trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.

42. *See* AS 38.05.965.

43. *See* AS 14.40.291(a).

44. SEACC provides several examples of other purposes for which we have found that the University is part of the state, citing *University of Alaska v. National Aircraft Leasing, Ltd.*, 536 P.2d 121, 123-25, 127-28 (Alaska 1975) (holding that the University is protected by sovereign immunity and can be sued under statutes subjecting the state to suit); *University of Alaska v. Geistauts*, 666 P.2d 424, 427-28, 427 n. 3 (Alaska 1983) (holding that meetings of a university committee are subject to the Public Meetings Act); *Carter v. Alaska Public Employees Ass'n*, 663 P.2d 916, 920-21 (Alaska 1983) (holding that the University must comply with the requirements of the public records statute), and *Ellingstad v. State, Department of Natural Resources*, 979 P.2d 1000, 1007 (Alaska 1999) (holding that the University's treatment as a state entity under state law makes transfer of contractual rights to it distinct from transfer to a private entity).

45. ALASKA CONST. art. VII, § 2.

46. 624 P.2d 807, 814 (Alaska 1981).

Re: HB 295 – University Land Grant

Dear Resources Committee Chairmen,

Please accept this request for your consideration to schedule CS HB 295 (CRA) before the House Resources Committee at your earliest convenience.

This bill would convey approximately 197,600 acres of state land to the University of Alaska, and specify that revenue generated by the University of Alaska's management of the land be subject to appropriation each year by the Legislature.

Legislation passed in 2000 and 2005 made certain land grants to the University of Alaska and specified that the revenue generated from those lands would be deposited into the University endowment trust fund. In March 2009, the Alaska Supreme Court found these statutes violate the dedicated funds section of the Alaska Constitution, Art. IX, Sec. 7.

This bill seeks to remedy issues identified by the Court by specifying that the revenue generated from the land is to be accounted for as university receipts and therefore subject to appropriation each year by the Legislature. It also ratifies and reauthorizes the land conveyances authorized in the previously enacted legislation.

The land to be conveyed under this bill as proposed originally has been modified by amendment in the House State Affairs and Community and Regional Affairs Committees. As originally introduced the bill conveyed the lands identified by the Legislature in 2005 (ch. 8, FSSLA 2005), with the exception of two parcels that were conveyed under separate statutory authority to the University research forest. The amendments in the House Education Committee removed one parcel at Mite Cove on Lisianski Inlet, while amendments in House Resources Committee removed four parcels also in Southeast Alaska.

If you have any questions regarding the bill, please contact Melanie Lesh, Special Assistant to the Commissioner of the Department of Natural Resources at 465-4730, or Dick Mylius, Director, Division of Mining, Land, and Water at 269-8625.

Sincerely,

Thomas E. Irwin

January 15, 2010

The Honorable Mike Chenault
Speaker of the House
Alaska State Legislature
State Capitol, Room 208
Juneau, AK 99801-1182

Dear President Stevens,

Under the authority of Art. III, Sec. 18, of the Alaska Constitution, I am transmitting a bill relating to: the grant of certain State lands to the University of Alaska; the duties of the Board of Regents; the deposits made to the Alaska Permanent Fund received from lands conveyed to the University of Alaska; ratifying and reauthorizing certain prior conveyances of land to the University of Alaska; and making conforming amendments.

This bill will fulfill a promise made at the turn of the 20th century, when Congress promised 350,000 acres of land to the former Alaska Territorial College and School of Mines. However, since Statehood in 1959, most of this promised land has never materialized. Today, at 140,000 acres, the University of Alaska has one of the smallest land grants in the United States. Even Rhode Island's university land grant is larger. The intent of the land grants is to provide the university with a portfolio of land that will enhance its financial position and further its educational mission. Land grant colleges and universities are common throughout the United States.

Final resolution to this much overdue commitment is something I have and continue to strongly support. During my tenure in the Legislature I advocated for, and the Legislature passed, several pieces of University Land Grant legislation. By introducing this legislation I've committed to the purpose of the legislation passed in 2005 and removed constitutional issues created by that legislation.

The bill will convey approximately 199,838 acres of State land to the University of Alaska. The Legislature will specify revenue generated by the University of Alaska's management of the land be managed as university receipts, subject to appropriation each year by the Legislature. This bill ratifies and reauthorizes the land conveyances in legislation enacted in 2000 (ch. 136, SLA 2000) and 2005 (ch. 8, FSSLA 2005). These statutes were found by the Alaska Supreme Court, in *Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009)* to violate Art. IX, Sec. 7 (the dedicated funds section) of the Constitution of the State of Alaska, because the statutes specified that revenue generated from the University of Alaska's management of the land was to be deposited in the University of Alaska's endowment trust fund.

The Alaska Supreme Court found that the dedication provisions of the statutes could not be severed from the land conveyance provisions, rendering the entirety of the legislation unconstitutional, except for the provisions pertaining to the university research forest. The bill explicitly states the intent to convey the land to the University of Alaska, notwithstanding that revenue generated from the land may not be dedicated to

the University of Alaska's endowment trust. The bill addresses the constitutional infirmity by specifying that revenue generated from the University of Alaska's management of the land is to be managed as university receipts, subject to appropriation each year by the Legislature.

The land to be conveyed in this bill to the University of Alaska will be the land originally designated in the final 2005 legislation (ch. 8, FSSLA 2005), with the exception of two parcels that were conveyed under separate statutory authority and the university research forest. The bill refers to the land identified in the document titled, "University of Alaska Land Grant List 2005," dated January 12, 2005. This land list was arrived at after more than a year of intense work by the Department of Natural Resources (department) and the University of Alaska to identify land that may be conveyed to the University of Alaska without unreasonably conflicting with programs associated with, and uses of, State land managed by the department.

The land list in the bill reflects changes made by the Legislature during the 2005 session, including the Legislature's decision to drop certain parcels that were on the original list provided in January 2005. The bill will also include language added by the Legislature to protect land for possible municipal entitlement selections by the City and Borough of Wrangell and possible borough in the Petersburg area. Before the Alaska Supreme Court declared the prior land conveyance statutes unconstitutional (ch. 136, SLA 2000 and ch. 8, FSSLA 2005), the department had completed conveyance of 31 of the 52 available parcels identified in the land list. The bill ratifies and reauthorizes these conveyances, as well as provides authority for conveyance of the remaining 21 parcels.

The bill also includes requirements for management of university land, such as public notice and comment opportunities on proposals for land development, exchange, or sale. Additionally, the bill exempts certain sensitive business and economic information regarding sale, lease, or development of university land from the public records production requirements of AS 40.25.100 - 40.25.295 (Alaska Public Records Act). These provisions reflect the 2005 legislation.

The prior land conveyance statutes included a provision for establishment of a university research forest. This provision is not included in this bill since the Alaska Supreme Court found that the provision in the prior legislation could be severed from the unconstitutional dedication provisions, and it was therefore upheld as constitutional.

The bill also contains a provision authorizing the deposit to the Alaska Permanent Fund of 25 percent of receipts from certain lands conveyed to the University of Alaska. A copy of the "University of Alaska Land Grant List 2005" has been provided to the Legislature and is available upon request from the Department of Natural Resources.

I urge your prompt and favorable action on this measure, which will complete the State's efforts to provide a beneficial educational and income-producing land base to the University of Alaska, while complying with the dedicated funds section of the Constitution of the State of Alaska.

Sincerely,

Sean Parnell

June 15, 2009

Dear Governor Palin and State of Alaska Legislators,

The united leadership of the University of Alaska system seeks your assistance to remedy the financial injury caused to the State of Alaska's University system by the recent Alaska Supreme Court March 13, 2009, decision, Southeast Alaska Conservation Council v State of Alaska and University of Alaska. In this decision, the Alaska Supreme Court voided the Alaska Legislature's action in passing the 2005 University Land Grant Bill. The court held unconstitutional the restriction that any proceeds of the land must be placed into the University Endowment Trust Fund, and surmised that the legislature would not have intended to grant the land without that restriction. The court, therefore, invalidated the whole act except for the part establishing a research forest.

A great state needs a great university system. A great university system must have adequate resources sufficient to meet its responsibilities. A more woeful history of a land-grant college could hardly be found. The University of Alaska is a land-grant college without the land.

The State of Alaska's University system has been waiting almost 100 years with no appreciable land. For an interesting and concise account of this baneful history we would direct you to "A Land Grant College Without the Land: A History of the University of Alaska's Federal Land Grant"; a brief 20 page report by Terrence M. Cole, which we can provide to you upon request.

The united leadership of the University of Alaska system is requesting that in your capacity as the governing leadership of the State of Alaska, as Governor and Legislators, that you correct the court's conjecture that the legislature would not want the University to have the land that the legislature granted to it. We respectfully request your support for advancing higher education in the State of Alaska by reconveying these lands to the University of Alaska at the earliest possible opportunity without the dedicated funds clause that the Alaska Supreme Court found to be offensive to our State Constitution.

We the undersigned, the leadership of the University of Alaska system, thank you for your support of higher education in the State of Alaska.

Cynthia Henry, Chair
Board of Regents

Mark Hamilton, President
University of Alaska

SB 225 and HB 295: Grant of State Land to the University of Alaska

Prepared by Department of Natural Resources, January 2010

Summary of Bills: Transfer 199,838 acres of state land to the University of Alaska and address the March 2009 Alaska Supreme Court ruling that struck down previous university land grant legislation (2005 HB 130 and 2000 SB 7), which dedicated land revenue to the University Endowment Trust. These bills convey the entire HB 130 land list as amended by the legislature, ratifies conveyances already in place, and directs land revenue to the General Fund instead of the university's endowment trust.

The land to be conveyed includes:

- 29 parcels located throughout SE Alaska
- 5 parcels in Southcentral, including tract at McCarthy in Wrangell St Elias National Park
- 18 parcels in Interior – including tracts along the Dalton Highway, the 90,000 acre Nenena oil/gas tract, and numerous educational properties.

The bills also:

- Exclude from transfer 9 parcels in SE that were withdrawn by the legislature in 2005 due to public opposition;
- Identify 9 parcels in SE that would go to UA only if not selected by new Boroughs as part of municipal entitlements;
- Include specific language addressing the March 2009 Supreme Court ruling and a one-year statute of limitations period.

The March 13, 2009 Supreme Court Decision

- The Alaska Supreme Court in *S.E. Alaska Conserv'n Council v. State*, 202 P.3d 1162 (Alaska 2009) held that 2000 SB 7 and 2005 HB 130 violated the dedicated funds clause of the Alaska Constitution by dedicating land revenue to the University's endowment trust
- The Court held that the trust provisions of the legislation reflected the key intent of the legislature to enhance the University's permanent endowment and therefore were not severable from the land conveyance provisions.
- The Court upheld provisions of the legislation that conveys a research forest (near Tanana) to the University because the research forest is not income property and was addressed independently in the legislation. The Court declined to address the other non-income properties on the conveyance list (which included miscellaneous educational and infrastructure properties).

Related Legislation

- House Bill 234 would convey 12 of the approximately 50 parcels on the HB 130 land list, including the noncontroversial educational properties and the Nenana oil and gas tract.

Sectional Analysis

House Bill 295 – "An Act relating to the grant of certain state land to the University of Alaska; relating to the duties of the Board of Regents; relating to deposits made to the Alaska permanent fund received from certain lands conveyed to the University of Alaska; ratifying and reauthorizing certain prior conveyances of land to the University of Alaska; making conforming amendments; and providing for an effective date."

Section 1 – Findings and Purpose – Explains why legislation is necessary. Paragraphs (7) – (10) specifically address issues raised by Alaska Supreme Court regarding previous legislation.

Section 2 – Legislative Intent – Clarifies the intent of the Legislature to:

- respond to the Alaska Supreme Court decision in *S.E. Alaska Conserv'n Council v. State*, 202 P.3d 1162 (2009).
- convey state land to the University even though revenue from the land will be deposited in the general fund and be subject to annual appropriation by the Legislature.
- ratify conveyances that occurred under authority of SB 7 and HB 130. that the land should proceed even if any other provision in the bill is found to violate the dedicated funds clause of the Alaska Constitution.

Section 3 – Amends AS 14.40.170(a) by deleting the phrase "THE BOARD OF REGENTS IN TRUST FOR" before "the University" specifying the land conveyed under this legislation cannot be considered trust land managed by the Board of Regents.

Section 4 – Amends AS 14.40.291(a) similar to Section 3.

Section 5 – Creates a new AS 14.40.365 to replace the statute the Supreme Court found to be unconstitutional in its ruling in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009). Subsectional analysis of new AS 14.40.365 follows:

(a) Provides that DNR will convey land to University of Alaska by quitclaim deed within two years. Conveyance by quitclaim deed eliminates expensive land survey requirements. The two-year period should not be difficult for DNR to meet because most of the work to issue the deeds was already completed after the 2005 legislation.

(b) Defers conveyance of the University Research Forest in Tanana Valley State Forest until 2055 (50 years from passage of 2005 legislation). This deferral

was requested by the University as it allows the continued use of this area as Research Forest by University while at the same time allowing continued small timber sales and forestry management activities by DNR Division of Forestry.

(c) Allows that when federal mining claims that currently exist as inholdings to parcels conveyed by the state to the University are terminated and the land subsequently conveyed to the state (DNR), that DNR will in turn convey this land to the University.

(d) Ensures that the mineral estate is also conveyed to the University. This is an exception to AS 38.05.125 which requires, for most conveyances, DNR retain the mineral rights in state ownership due to provisions in Section 6(i) in the Alaska Statehood Act. Since the University is a state entity, transfer of mineral estate to the University does not violate the 6(i) provision.

(e) Requires that conveyances to the University recognize and protect all valid existing rights.

(f) Requires that DNR reserve access to and along navigable and public waters as required in AS 38.05.127, but limits the width of these easements on parcels along tidewater to a maximum of 25 feet (a provision specifically inserted by the legislature in the 2005 bill). These easements by regulation would otherwise have a 50-foot minimum width. This subsection also specifies that other provisions of AS 38.04 and AS 38.05 do not apply to these conveyances to the University.

(g) Sets out additional limitations or requirements regarding the land conveyed to the University, including Section 6(i) of the statehood act that prohibits the state's alienation of mineral estate; makes conveyance subject to RS 2477 and Omnibus Act rights of way; and excludes from the conveyance to the University any valid existing state mining claims.

(h) Requires that upon the termination of a state mining claim located within a parcel conveyed to the University under this bill, DNR will transfer that land to the University

(i) Establishes the date of the recording of a parcel as the time when the University takes over management responsibility for land transferred under this act.

(j) Establishes that upon conveyance to the University, all revenue and receipts accrue to the University as University receipts;

(k) Allows the University to return land to DNR up to ten years after conveyance if it contains hazardous waste; is located on a historic or archeological site; or the University and DNR agree to the re-conveyance.

(l) Requires University concurrence with any DNR conveyance of an irrevocable interest in a parcel to be conveyed to the University.

(m) Allows the Commissioner of DNR to make minor boundary adjustments to correct omissions and errors.

(n) Removes nine (9) parcels from the land list originally agreed to by DNR and the University. These 9 parcels were included in the original land list submitted to the legislature in 2005. They were removed by the legislature during committee review of the bill based upon public and community concerns.

(o) Defers conveyance of five parcels located within the potential boundaries of a Petersburg Borough so that if a Borough forms before July 1, 2012 (two years), these parcels could be selected by a future Borough as part of its

municipal entitlement under AS 29.65. If a borough does not form or the land is not selected by a future Borough, the land will be conveyed to the University. This provision was inserted in the 2005 legislation to specifically address this concern raised by the Cities of Wrangell and Petersburg during the 2005 legislative hearings.

(p) Defers conveyance of three parcels located within the City and Borough of Wrangell pending possible selection by the new borough under its municipal entitlement (AS 29.65). Provides the Borough until December 1, 2011 to select the land, which is the deadline for Borough selections under AS 29.65.040(d). A provision to defer these selections was inserted in the 2005 legislation to specifically address potential borough formation, a concern raised by the cities of Wrangell and Petersburg during the 2005 legislative hearings. Wrangell formed a borough after the 2005 legislation, but has not yet filed its land selections with DNR.

(q) Defers conveyance of one parcel located within the potential boundary of a Northern Chichagof Island Borough so that if a Borough forms before July 1, 2012 (two years), this parcel could be selected by a future Borough as part of its municipal entitlement under AS 29.65. If a borough does not form or the land is not selected by a future Borough, the land will be conveyed to the University. This provision was inserted in the 2005 legislation to specifically address this concern raised during the 2005 legislative hearings.

Section 6 – Repeals and reenacts AS 14.40.366 as passed in 2005. Sets forth management requirements for university land, including preservation of historic recent public uses, public notice and comment opportunities for land development or disposal plans, and right of first refusal to closest municipality.

Section 7 – Repeals and reenacts AS 14.40.367 as passed in 2005. Exempts certain proprietary and business sensitive information related to university land disposals from the Alaska Public Records Act.

Section 8 – Establishes a one-year statute of limitations for parties wishing to bring a lawsuit regarding this legislation.

Section 9 – Requires that revenue generated from the conveyed land be handled as University receipts subject to annual appropriation by the Legislature. This section deletes the provision in HB 130 that required revenue from the conveyed land be deposited in the University Endowment Trust, thereby correcting the dedicated funds violation found by the Alaska Supreme Court in *S.E. Alaska Conserv'n Council v. State*, 202 P.3d 1162 (2009).

Section 10 – Defines University receipts to include land transferred under this new legislation.

Section 11 – Specifies that University land conveyed under this bill is exempt from general taxation.

Section 12 – Ensures that a municipal entitlement of a future city or borough is not reduced by the conveyance of land to the University under this legislation.

Section 13 – Requires that 25% of mineral revenue from University lands granted under this legislation be deposited into the Permanent Fund.

Section 14 – Restores the repeal of AS 14.40.368 regarding encumbrances and trespasses on land to be conveyed. This statute was enacted by SB 7 and repealed by HB 130. This section confirms that AS 14.40.368 is to remain repealed.

Section 15 – Ratifies conveyances made to the University under the 2005 legislation, so that DNR does not have to re-issue deeds.

Section 16 – Adds a severability clause.

Section 17 – Establishes an immediate effective date.

Governor Sean Parnell
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell,
The Southeast Alaska Wilderness Tours Association (SAWTA) and the additional undersigned commercial tour companies are writing to inform you of the importance of the state-owned Sumdum property located near Endicott and Tracy Arms, Southeast Alaska. This property was included in the 2005 University of Alaska Lands Bill, House Bill 130, which the Supreme Court of Alaska ruled as unconstitutional. We understand that the Alaska Department of Natural Resources and the University of Alaska are encouraging you to introduce new legislation that would convey properties to the University. We ask that the Sumdum parcel not be transferred to the University of Alaska. We support Alaska's university system and fully funding it, but we believe the Sumdum parcel is not an appropriate selection for privatization.

SAWTA and the additional undersigned represent __ commercial tour companies that bring thousands of visitors to Southeast Alaska every year. Our businesses provide guided hunting and fishing, kayak expeditions, and week-long excursions aboard small and mid-size vessels. Our segment of Alaska's tourism industry provides vital and unique economic benefits to southeast Alaska, and many of us are local business people. We stand out among other segments of the tourism industry because many of us provision our excursions locally, and a high number of our clients dine and seek local accommodations before and after their trips. University of Alaska research shows businesses like ours pump millions of dollars into the Southeast economy annually.

Bringing clients to wild Alaskan landscapes is the backbone of our businesses, and it's the reason for our concern over the Sumdum parcel. The Sumdum parcel is in Sanford Cove, in the heart of the Tracy Arm-Fords Terror and Chuck River Wilderness Areas. For each of us, the area is a highlight of the services we provide. Many of us use Sanford Cove as a safe and scenic anchorage. With bears, wolves, salmon and cultural ruins, it is a common location for walks ashore, fishing, hunting and camping. Not only for our commercial clients, but for many independent and local travelers, too.

Tracy Arm-Fords Terror Wilderness is especially unique because it currently contains no lodges, private cabins, or other developments. Some of us have operated in southeast Alaska for several decades, long enough to know that such undeveloped anchorages are increasingly rare.

Privatization of the Sumdum parcel would displace many of us from long-standing business activities. It would also displace many independent and local recreationists and mar an undeveloped landscape. But removing the Sanford Cove parcel from House Bill 295 would have only a minor impact on university funding, one that could be compensated by other means.

Thank you for your consideration, and please help us maintain current use of this important part of southeast Alaska.

Sincerely,

John Swanson, President, Southeast Alaska Wilderness Tours Association (SAWTA)
SAWTA represents the following ten southeast Alaska commercial tour companies:

Subject: Bill 295, What is the highest and best use of the Moser Bay Parcel: Please remove this parcel from bill or restrict development to long-term selective timber harvest.

Dear Representative Tuck

My name is Mike Fay (254-1902). My only home is on Long Arm, Moser Bay near Ketchikan. To see the steep, waterfront parcel deep in Moser Bay slated to be handed over to the University of Alaska scares the heck out of me and many of my neighbors. We live in Moser Bay, and many thousands more visit it every year, because it is one of the most beautiful, tranquil, and ecologically intact places in all of North America. Yet, it is a stone's throw from an international airport and about 20 minutes by boat from Ketchikan. It is of enormous scenic value, on which our local economy depends, and it is extremely popular with the population of Ketchikan.

The question is what is the highest and best use of this parcel? Moser Bay is one of the most visited places in all SE Alaska for recreation. People come from all over the globe to this exact spot by the thousands every year to witness the beauty, and to fish, crab, shrimp, hike, and sight see from boats and planes and on foot. The Salmon Falls boats pass by three times a day in the summer because we are the closest place around Ketchikan to see a pristine forest landscape and bay. This has real, long term economic value. To clear cut or to subdivide this parcel would completely undermine the highest and best use of this land which is to retain its pristine state.

The proceeds from logging it would be one off and pale in comparison with one year's tourist revenue. You can clear cut this forest once in 100 years. The timber is marginal, mostly small hemlock. The second growth will be low grade hemlock. Look at what happened to the now clear cut Slide Ridge just outside Ketchikan as well as another former University parcel in the Mountain Point area south of town. They have become permanent eye sores for all residents of Ketchikan and the millions of tourists that will visit Ketchikan over the next decade. Not to mention the ecological problems of slides that come with these cuts. In January I was amazed to see huge rivers of water coming right down Slide Ridge in the steep cut areas. There is no restoration, no management, just clear cut and let Alcan export the wood out in the round to Asia with almost no local benefit. I do not see this as the vision for the future.

I support guys like Larry Jackson, Tongass Forest Enterprises http://www.akforestenterprises.com/, who would love to see a steady flow of selectively harvested trees from the forest that can be transformed locally into products with great value-added for the next 100 years both employing local people and maintaining the scenic and ecological values. This is the smart future for this parcel.

You might be thinking "this is what everyone says", but this is not just one more parcel. The depths of Moser Bay are the heart of the recreational tourist industry in Ketchikan. There are at least 30 boats that visit the bay on every day of the summer for months. To mar this landscape would be a blunder of huge proportion.

I respectfully ask you to please remove the Moser Bay parcel from bill 295 or restrict development to long-term selective timber harvest only.

Mike Fay

Subject: The proposed transfer of State land within Tenakee city limits to the University of Alaska

Dear
Rep. Bill Thomas,

The proposed
transfer of state land within Tenakee city limits to the University of Alaska is still in the pending legislation, despite the unanimous resolution of the Tenakee City Council calling for the elimination of both the 301 acre waterfront parcel at Indian River and the parcel near the harbor.
Although the last
committee removed the harbor parcel (at least temporarily), the large Indian River parcel (C-34) is still there.
the proposed
transfer would have a hugely disproportionate impact on this small community, while contributing very little to the overall U of A budget.
We support the City of Tenakee Springs position and ask that ALL proposed land transfers within the city limits of Tenakee Springs be eliminated from HB 295.

Respectfully,
Rudy
Ziel - Frances Jacobs

Subject: HB 295---please remove Tenakee Springs parcels

Re: HB 295

Honorable Representative Mark Neuman:

As a long-time resident of Tenakee Springs, I request that you remove all the lands within the city of TenakeeSprings from HB 295. The resolution (attached) recently passed by the Tenakee Springs City Council expresses the feeling of most of us in Tenakee-----we just can't afford the huge costs that developing these lands will impose on our tiny community, or the loss of flexibility to manage and develop our harbor facilities that may ensue.

Furthermore, stipulations contained in past legal settlements with the state seriously limit options for use by the University on lands along the Indian River corridor, stipulations that are enforceable, with legal costs borne by the state, and which dramatically reduce the value of this land to the University.

Thanks for listening and taking the needs, desires, and abilities of our small community into account. We look forward to hearing that HB 295 will proceed without the Tenakee parcels.

Sincerely,

Steve Lewis

Subject: University Land Disposition under HB 295

Honorable Friends on the House Resources Committee,

I write once again as a homeowner and registered voter in Tenakee Springs. Although removal of the Harbor parcel by the House Community and Regional Affairs Committee is appreciated, my previous arguments for removal of both parcels are still valid, but will not be repeated herein. Instead I will add my voice to that of our unanimous city council and urge you to consider that the University and State have little to gain, and much to lose by passage of HB 295. In our view what is at stake is the very character of our daily lives. While there are issues that might well justify such a mandate, this is not one of them and to make it so cheapens both our citizenry and the legislative process.

Respectfully yours,

Charles E. King

Subject: [SPAM] Tenakee parcels in HB 295 are strongly opposed

3/16/2010

Dear Representative,

I am writing to let you know that I strongly appose the Tenakee Parcel section included in the University of Alaska land reallocation in HB 295. Please remove the Tenakee Springs acreage from HB 295. I lived in Tenakee Springs for 17 years and return there often. The loss of this area of land would have a huge impact on the City of Tenakee and it's residents.

The Tenakee Springs land included in this bill is valuable land used by the residents of the city for recreation, access, and subsistence. It is an area that has been used for generations and should remain a part of the City of Tenakee Springs.

Apparently,the U of A fiscal note states that the UofA predicts that in 20 years, when the university's land sales program is fully going, revenue from all the lands will only generate roughly 1% of the University's annual budget. Using some simple math 346 (acres of Tenakee parcel) / 251,661 (total acres in 2005 lands list) = 0.1%. 0.1% of 1% equals 0.001%. This is an estimate of possible annual benefit to the University from getting the Tenakee parcel. As you can see, the financial benefit of having this parcel included is miniscule.

Although I support the University of Alaska and realize that it needs financial support, I do not believe that this should come at the expense of small towns. Please remove the Tenakee Springs Parcel from HB 295.

Thank you for your attention to this incredibly important matter.

Sincerely,

Darcie Ziel

Sent: Tuesday, March 16, 2010 9:13 PM
To: Rep. Mark Neuman
Subject: University Land Bill, HB 295

Dear Representative Neuman,

Our family lives in both Juneau and Tenakee. We are writing to voice our concerns over the proposed transfer of state land within Tenakee city limits to the University of Alaska (HB 295). We support the unanimous resolution of the Tenakee City Council calling for the elimination of both the 301 acre Indian RIver parcel and the acreage near the harbor from the bill. We appreciate the current removal of the harbor acreage, and ask that the Indian River lands also be removed.

The proposed transfer would have a tremendous impact on our very small community, potentially in many ways, and would have a minimal impact on the University's overall funding. The Indian River watershed provides critical forest and marine habitat for the subsistence lifestyles of residents and the land transfer and resulting development could seriously impact hunting and fishing stocks as well as public access to them. In addition, Tenakee lacks the infrastructure to deal with serious development and growth. Studies of potential hydropower development are ongoing, and the Indian River is the only viable, accessible source for adequate water flow.

People who have chosen to live in Tenakee do so because of the remote, subsistence, village lifestyle, the close-knit small community, and the beauty of the wild lands of the inlet. The proposed land transfer could have dramatic negative effects on a small community in exchange for minimal fundraising for the University.

Please support the removal of all Tenakee lands from HB 295.

Sincerely,

Jeff, Karen and Hannah Wilson

Subject: University Lands Bill HB295

Dear Representative Neuman,

As former residents of Tenakee Springs, who plan to return to live in Alaska within the next few years, we support the City of Tenakee Springs position and ask that all proposed land transfers within the
city limits of Tenakee Springs be eliminated from HB 295. The
proposed transfer would have a hugely disproportionate impact on this small community, while contributing very little to the overall University of Alaska budget. The sale of property in Sunny Cove, Tenakee Inlet would forever alter unfavorably the community of Tenakee Springs and its unique nature. We are in favor of supporting higher education, but not at the expense of small communities. The sale of property at this location would inevitably lead to a push for road connection to Hoonah, something the City of Tenakee Springs has always opposed, and something that the TTRA is supposed to protect.
Regardless of the possible road connection, a sale of land of this size would unfavorably alter the nature of the Tenakee Springs community. There are so few small, roadless communities in our nation. Tenakee Springs is a truly special place. Please do not let the sale of this land change that forever.

Although land for sale in Tenakee is scarce, it is our opinion that the natural progression of transfer from private owner to private owner from time to time is greatly beneficial to maintaining the small size and unique character of the community. A large transfer of multiple pieces of property by the state or university would
irrevocably alter Tenakee, and we would not want to see that happen.
Regardless of the purpose, whether commercial or residential, we are opposed to this transfer. While we are not against the City of Tenakee initiating its own development projects, if that's what its citizens want, we feel that this particular land transfer is a large scale imposition of development on the City of Tenakee Springs.

Sincerely yours,
Chris & Darius Mannino

16 March 2010

Dear Representative

I am writing to encourage you to oppose including any Tenakee Spring land parcels in HB295.

As a long time resident of Tenakee Springs I know how detrimental this would be to the community. Tenakee does not have the resources to support what would happen if these parcels were included in this bill.

Please support Tenakee Springs and keep our community out of this bill

Thank you

Subject: PLEASE REMOVE TENAKEE PARCELS FROM HB 295

Dear Representative Neuman:

My husband and I have homes in Juneau and in Tenakee Springs. We cherish our lifestyle in the small community of Tenakee Springs. We support the position of our City Council there that ALL proposed land transfers within the city limits of Tenakee Springs be eliminated from HB 295. (We understand that the harbor parcel has been removed; it is also important to remove the Indian River C-34 parcel).

Please support us, the Tenakee Springs City Council, and all Tenakee residents in removing these parcels from the bill. Our lifestyle in Tenakee is jeopardized by including the parcels in the UA land trade.

The proposed transfer would have a hugely disproportionate impact on this small community, while contributing very little to the overall U of A budget.

- **Fiscal Note 3 for HB 295 includes the following language: "in approximately 20 years UA anticipates annual investment earnings on new land sales to reach 1% of state general fund support or $2.6M."**
- **In other words, if it passes, the Lands Grant will generate approximately 1% of the University's annual income, 20 years from now.**
- **The bill's original lands list included approximately 260,000 acres.**
- **The Indian River parcel is approximately 302 acres, which is roughly .0012% of the total acreage listed in the bill.**
- **Removing this .0012% from the bill would not be burdensome to the University of Alaska; removing the parcel would be insignificant to the University's overall funding.**
- **Transfer of this parcel would be VERY significant to Tenakee residents for a variety of reasons.**

We sincerely thank you for considering our views and we urge you to act in support of the lifestyle and wishes of the Tenakee Springs community. Please remove our parcels from HB 295.

Sincerely,

Kim & Tracy Rivera

SB 225 and HB 295: Grant of State Land to the University of Alaska

Prepared by Department of Natural Resources, January 2010

Summary of Bills: Transfer 199,838 acres of state land to the University of Alaska and address the March 2009 Alaska Supreme Court ruling that struck down previous university land grant legislation (2005 HB 130 and 2000 SB 7), which dedicated land revenue to the University Endowment Trust. These bills convey the entire HB 130 land list as amended by the legislature, ratifies conveyances already in place, and directs land revenue to the General Fund instead of the university's endowment trust.

The land to be conveyed includes:

- 29 parcels located throughout SE Alaska
- 5 parcels in Southcentral, including tract at McCarthy in Wrangell St Elias National Park
- 18 parcels in Interior – including tracts along the Dalton Highway, the 90,000 acre Nenena oil/gas tract, and numerous educational properties.

The bills also:

- Exclude from transfer 9 parcels in SE that were withdrawn by the legislature in 2005 due to public opposition;
- Identify 9 parcels in SE that would go to UA only if not selected by new Boroughs as part of municipal entitlements;
- Include specific language addressing the March 2009 Supreme Court ruling and a one-year statute of limitations period.

The March 13, 2009 Supreme Court Decision

- The Alaska Supreme Court in *S.E. Alaska Conserv'n Council v. State*, 202 P.3d 1162 (Alaska 2009) held that 2000 SB 7 and 2005 HB 130 violated the dedicated funds clause of the Alaska Constitution by dedicating land revenue to the University's endowment trust
- The Court held that the trust provisions of the legislation reflected the key intent of the legislature to enhance the University's permanent endowment and therefore were not severable from the land conveyance provisions.
- The Court upheld provisions of the legislation that conveys a research forest (near Tanana) to the University because the research forest is not income property and was addressed independently in the legislation. The Court declined to address the other non-income properties on the conveyance list (which included miscellaneous educational and infrastructure properties).

Related Legislation

- House Bill 234 would convey 12 of the approximately 50 parcels on the HB 130 land list, including the noncontroversial educational properties and the Nenana oil and gas tract.

Explanation of Changes to CRA CS for HB295

1. Technical fix from EDU Committee amendment to remove Mite Cove and add back portion of the Pelican parcel. Page 8, line 22, Mite Cove is added to list of parcels removed. **Page 9, lines 29-31**, portion of Pelican parcel is added in place of Mite Cove. **Dick Mylius of DNR is here to speak to this change.**

2. **Page 9& 10,** - Covenants added to Sumdum parcel. After consideration of comments from DNR, including Judith Bittner who is the Chief History and Archaeology State Historic Preservation officer, and comments from the general public, and from adjacent land owner Sealaska, it was decided by the co-chairs to allow the Sumdum parcel to be allowed to transfer to the University with specific covenants to maintain cultural & historical characteristics of the area. **Dick Mylius of DNR is here to describe the covenants and answer any questions.**

   (excuse Mr Mylius if he has come forward)

3. **Page 8, lines-**23, 24,25- 3 parcels in upper Southeast are added here, Excursion Inlet, Lynn Canal, and William Henry Bay. These parcels were pulled from the land bill on behalf of Representative Thomas. With us is **Planning Commissioner Robert Venables from the Haines Borough, on behalf of Borough Mayor, who can speak to these particular parcels.**

4. Page 8, line 26, 27-Adds the Tenakee Springs parcel surrounding the Boat Harbor area to the list of parcels to be removed from transfer. **Rep. Munoz can explain this removal.**

CS FOR HOUSE BILL NO. 295(CRA)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to the grant of certain state land to the University of Alaska; relating to the duties of the Board of Regents; relating to deposits made to the Alaska permanent fund received from certain lands conveyed to the University of Alaska; ratifying and reauthorizing certain prior conveyances of land to the University of Alaska; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

FINDINGS AND PURPOSE. The legislature finds that

(1) an academically strong state university system is a cornerstone to the long-term development of a stable population and to a healthy, diverse economy in the state;

(2) article VII, sec. 2 of the Constitution of the State of Alaska provides that the University of Alaska shall have title to all real property conveyed to it and that the

legislature shall prescribe how university property shall be administered according to law;

(3) article VIII, sec. 9 of the Constitution of the State of Alaska authorizes the legislature to provide for the grant of state lands and interests in those lands;

(4) it is in the best interests of the state and the University of Alaska that the university take ownership of a significant and substantial portfolio of land in order to further the interests of public higher education and economic development in the state;

(5) renewable resources should be managed on a sustained yield basis, taking into account the total land grant;

(6) transferring to the University of Alaska a significant and substantial portfolio of land furthers the interests of public higher education by allowing campus development and expansion, by facilitating academic research, and by fostering economic development for the well-being of the University of Alaska and the state;

(7) the Alaska Supreme Court's ruling in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009) invalidated ch. 136, SLA 2000 and ch. 8, FSSLA 2005 because depositing revenues from land conveyed to the University of Alaska in the university endowment trust fund violated the dedicated funds section, art. XI, sec. 7, of the Constitution of the State of Alaska; the Alaska Supreme Court also held that, with the exception of the provision conveying the university research forest, the land conveyance provisions of the legislation could not be severed from the provisions that dedicated the revenue from the land to the university's endowment trust, and ordered that any land conveyed to the University of Alaska under the legislation be reconveyed to the state;

(8) it is in the best interests of the state and the University of Alaska to

(A) address directly the Alaska Supreme Court's ruling and enact curative legislation that conveys land to the University of Alaska without the unconstitutional dedication of revenue from the conveyed land to the University of Alaska's endowment trust; and

(B) authorize conveyance to the University of Alaska of the same land identified in ch. 8, FSSLA 2005;

(9) the state and the University of Alaska have expended substantial effort and money in connection with conveying lands to the university under ch. 136, SLA 2000 and ch. 8, FSSLA 2005 before the Alaska Supreme Court's ruling in Southeast Alaska Conservation

Council v. State, 202 P.3d 1162 (Alaska 2009), and it is in the best interests of the state and the University of Alaska to preserve that effort and money by ratifying the conveyances that had occurred before the Alaska Supreme Court ruling;

(10) through the amendment of AS 14.40.491 to explicitly define as university receipts the revenue received by the University of Alaska from lands conveyed to the university under AS 14.40.365, the legislature retains unfettered discretion to appropriate university receipts as it sees fit, without restrictions, on an annual basis; and that preserving the legislature's discretion to appropriate the receipts on an annual basis is in the best interests of the University of Alaska and the state.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE INTENT. It is the intent of the legislature

(1) to respond to the Alaska Supreme Court's ruling in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009), by passing legislation that conveys land to the University of Alaska and provides for management of revenue from that land as university receipts over which the legislature retains unrestricted authority to appropriate as it sees fit;

(2) to ratify the conveyances that were executed under ch. 136, SLA 2000 and ch. 8, FSSLA 2005 before the Alaska Supreme Court's ruling so that the university retains clear title to that land;

(3) if any provision of this Act or the conveyance of any parcel of land or class of lands under this Act is found to be an unlawful dedication of funds in violation of art. IX, sec. 7 of the Constitution of the State of Alaska or otherwise unlawful, that the land conveyances to the University of Alaska under this Act continue to the fullest extent possible;

(4) that the University of Alaska receive clear title to the land identified in AS 14.40.365, even though proceeds from those lands are not deposited into the University of Alaska's endowment trust fund and are instead subject to appropriation by the legislature each year in its discretion, without prior limitation upon the legislature's use and appropriation of the funds; and

(5) to have a stable University of Alaska system that provides a wide range of land-related curricula and extracurricular activities, including those activities that enhance

civic partnerships through community-based land management; expansion of campuses and training sites; and land management for economic development and benefit to the University of Alaska and the state.

*** Sec. 3.** AS 14.40.170(a) is amended to read:

(a) The Board of Regents shall

(1) appoint the president of the university by a majority vote of the whole board, and the president may attend meetings of the board;

(2) fix the compensation of the president of the university, all heads of departments, professors, teachers, instructors, and other officers;

(3) confer such appropriate degrees as it may determine and prescribe;

(4) have the care, control, and management of

(A) all the real and personal property of the university; and

(B) land

(i) conveyed to the Board of Regents by the commissioner of natural resources in the settlement of the claim of the University of Alaska to land granted to the state in accordance with the Act of March 4, 1915 (38 Stat. 1214), as amended, and in accordance with the Act of January 21, 1929 (45 Stat. 1091), as amended; and

(ii) conveyed to [THE BOARD OF REGENTS IN TRUST FOR] the University of Alaska by the commissioner of natural resources under AS 14.40.365;

(5) keep a correct and easily understood record of the minutes of every meeting and all acts done by it in pursuance of its duties;

(6) under procedures to be established by the commissioner of administration, and in accordance with existing procedures for other state agencies, have the care, control, and management of all money of the university and keep a complete record of all money received and disbursed;

(7) adopt reasonable rules for the prudent trust management and the long-term financial benefit to the university of the land of the university;

(8) provide public notice of sales, leases, exchanges, and transfers of the land of the university or of interests in land of the university;

(9) administer, manage, market, and promote a postsecondary education savings program, including the Alaska Higher Education Savings Trust under AS 14.40.802 and the Alaska advance college tuition savings fund under AS 14.40.803 - 14.40.817.

* **Sec. 4.** AS 14.40.291(a) is amended to read:

(a) Notwithstanding any other provision of law, university-grant land, state replacement land that becomes university-grant land on conveyance to the university, land conveyed to [THE BOARD OF REGENTS IN TRUST FOR] the University of Alaska under AS 14.40.365, and any other land owned by the university is not and may not be treated as state public domain land. Land conveyed to [THE BOARD OF REGENTS IN TRUST FOR] the University of Alaska under AS 14.40.365 shall be managed **in accordance with** [AS NONTAXABLE TRUST LAND UNDER] AS 14.40.365 - 14.40.367 and policies of the Board of Regents.

* **Sec. 5.** AS 14.40.365 is repealed and reenacted to read:

Sec. 14.40.365. University land grant. (a) Except as provided in (b) of this section, no more than two years after the effective date of this Act, the commissioner of natural resources shall convey to the University of Alaska, by quitclaim deed, the state land identified for conveyance to the university and described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005.

(b) As soon as practicable after June 30, 2055, the commissioner of natural resources shall convey to the University of Alaska, by quitclaim deed, the state land described as the "University Research Forest" and identified for conveyance to the university in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005.

(c) As soon as practicable after the receipt of patent from the United States, but not before the land is otherwise required to be conveyed under this section, the commissioner of natural resources shall convey to the University of Alaska, by quitclaim deed, federal land that has been selected for conveyance to the state under the Alaska Statehood Act but is subject to a federal mining claim, and that is identified in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, for conveyance to the university upon the state's acquisition of patent.

(d) Notwithstanding AS 38.05.125(a), and except as otherwise provided in this section, the transfer of ownership of land from the commissioner of natural resources to the University of Alaska under this section includes the interest of the state in the coal, ores, minerals, fissionable materials, geothermal resources, and fossils, oil, and gas that may be in or on the land.

(e) Land conveyed under this section to the University of Alaska is subject to any valid possessory interest or other valid existing right, including any lease, license, contract, prospecting site, claim, sale, permit, right-of-way, Native allotment, or easement held by another person, including a federal, state, or municipal agency, on the effective date of this section.

(f) Before conveying land under this section, the commissioner of natural resources shall reserve access under AS 38.05.127, but other provisions of AS 38.04 and AS 38.05 do not apply to the commissioner's preparation for conveyance of land to the University of Alaska under this section. In addition to access under AS 38.05.127, the commissioner may reserve in the conveyance document existing offshore uses such as aquatic fish farm sites, anchorages for vessels, fish buying stations, trails, roads, and other access routes that provide public access to adjacent land and public waterways; however, an easement along tidewater reserved by the commissioner under AS 38.05.127 may not exceed 25 feet.

(g) In addition to rights or an interest held by a person under (e) of this section, land conveyed to the University of Alaska under this section

(1) is subject to

(A) sec. 6(i) of the Alaska Statehood Act (P.L. 85-508, 72 Stat. 339);

(B) AS 19.10.010;

(C) any easement, right-of-way, or other access under former 43 U.S.C. 932 (sec. 8, Act of July 26, 1866, 14 Stat. 253);

(D) the provisions of any memorandum of agreement entered into between the University of Alaska and the commissioner of natural resources governing shared benefits or costs associated with land to be conveyed to the University of Alaska;

(E) any interest transferred to the state by quitclaim deed dated June 30, 1959, under authority of the Alaska Omnibus Act (P.L. 86-70, 73 Stat. 141); and

(2) excludes the mineral estate on land that is subject to a valid state mining claim.

(h) As soon as practicable after the extinguishment, release, or expiration of a valid state mining claim located on land to be conveyed under this section, but not before the land is otherwise required to be conveyed under this section, the commissioner of natural resources shall convey the mineral estate excluded from conveyance under (g)(2) of this section.

(i) The responsibility for the management of land conveyed to the University of Alaska under this section vests with the Board of Regents for the University of Alaska on the date of recording that conveyance.

(j) Any income derived from land conveyed to the University of Alaska under this section accruing after the date of conveyance, including any income accruing from an existing lease, license, contract, prospecting site sale, permit, right-of-way, easement, or trespass claim shall be received by the University of Alaska and accounted for as university receipts.

(k) Notwithstanding any other provision of this section, within 10 years after final conveyance of land under this section, the Board of Regents may reconvey to the Department of Natural Resources land

(1) containing hazardous waste that was present on the land before conveyance under this section;

(2) on which is located a historic or archeological site that is subject to management under AS 41.35; or

(3) that the Board of Regents and the commissioner of natural resources jointly agree is in the best interests of the state and the university to reconvey.

(l) After the effective date of this section and before the conveyance of a parcel of land to the University of Alaska under this section, the commissioner of natural resources may not convey, without consent of the university, any irrevocable

interest in a parcel that is required to be conveyed to the University of Alaska under this section.

(m) The commissioner of natural resources may make minor adjustments to the maps or legal descriptions of the state land identified for conveyance to the university and described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, to correct omissions or errors.

(n) Notwithstanding (a) of this section, the following state land described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, may not be conveyed to the University of Alaska under this section:

(1) Parcel Number CS.DI.1001, Duke Island;

(2) Parcel Number MF.1002, Idaho Inlet;

(3) Parcel Number CS.KI.1001, Kelp Island;

(4) Parcel Number HA.CH.1001, Haines-Chilkoot;

(5) Parcel Number KT.1004, Neets Creek;

(6) Parcel Number MA.KR.1001, Kodiak Rocket Range;

(7) Parcel Number ST.1002, Pelican, except that the portion of Parcel Number ST.1002, Pelican that is described as unit C-18 in the Northern Southeast Area Plan adopted by the commissioner of natural resources on October 15, 2002, may be conveyed to the University of Alaska subject to (q) of this section;

(8) Parcel Number PA.1001, Port Alexander;

(9) Parcel Number ST.1002, Warm Springs Bay;

(10) Parcel Number MF.1001, Mite Cove;

(11) Parcel Number NS.EX. 1002, Excursion Inlet;

(12) Parcel Number JU.1002, Lynn Canal;

(13) Parcel Number JU.1001, William Henry Bay; and

(14) the portions of United States Survey 2459 and United States Survey 6855 that are within Parcel Number ST.1003, Tenakee Springs.

(o) Notwithstanding (a) of this section, the state land identified in this subsection and described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, may not be conveyed to the University of Alaska under this section if the land is included in a borough formed before July 1, 2012, that

includes Petersburg. If a borough is not formed before July 1, 2012, land described in this subsection shall be conveyed to the University of Alaska on July 1, 2012. If a borough is formed before July 1, 2012, and the borough does not select land described in this subsection before January 1, 2016, the land not selected by the borough shall be conveyed to the University of Alaska on June 30, 2016. The following land is subject to this subsection:

(1) Parcel Number SD.1001, Beecher Pass;

(2) Parcel Number SD.1001, Favor Peak;

(3) Parcel Number CS.TL.1001, Three Lake Road;

(4) Parcel Number SD.1001, Read Island;

(5) Parcel Number SD.1001, Whitney Island.

(p) Notwithstanding (a) of this section, the state land identified in this subsection and described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, may not be conveyed to the University of Alaska under this section if the land is selected by the City and Borough of Wrangell. If the borough does not select land described in this subsection before January 1, 2013, the land not selected by the borough shall be conveyed to the University of Alaska on June 30, 2013. The following land is subject to this subsection:

(1) Parcel Number CS.EW.1001, Earl West Cove;

(2) Parcel Number CS.OV.1001, Olive Cove; and

(3) Parcel Number SD.1001, Thoms Place.

(q) Notwithstanding (a) of this section, the state land identified in this subsection and described in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, may not be conveyed to the University of Alaska under this section if the land is included in a borough formed before July 1, 2012. If a borough is not formed before July 1, 2012, the land described in this subsection shall be conveyed to the University of Alaska on July 1, 2012. If a borough is formed before July 1, 2012, and the borough does not select land described in this subsection before January 1, 2016, the land not selected by the borough shall be conveyed to the University of Alaska on June 30, 2016. The following land is subject to the provisions of this subsection: that portion of Parcel Number ST.1002, Pelican that is described as

unit C-18 in the Northern Southeast Area Plan adopted by the commissioner of natural resources on October 15, 2002.

(r) The state land identified as Parcel Number SD.1001, Sumdum in the document titled "University of Alaska Land Grant List 2005," dated January 12, 2005, that is transferred to the University of Alaska in (a) of this section,

(1) may not be open to commercial timber harvest or mineral development; development including but not ltd. to

(2) must be preserved for the purpose of historical, cultural, and scientific research and education and must be accessible for public interpretive study and education;

(3) may not be used for a purpose inconsistent with the significance of the parcel and adjoining land for the preservation of Alaska Native cultural knowledge and history. (4) It is intended that these covenants run with the land

* **Sec. 6.** AS 14.40.366 is repealed and reenacted to read:

Sec. 14.40.366. Management requirements for university land. (a) Before the conveyance or the disposal of an interest in the land to a third party, land conveyed to the University of Alaska under AS 14.40.365 shall be managed in a manner that, to the extent practicable, permits reasonable activities of the public, including historic recent public uses, that do not interfere with the use or management of the land by the university.

(b) For land conveyed to the University of Alaska under AS 14.40.365, the Board of Regents shall

(1) seek public comment on proposals for land development, exchange, or sale; and

(2) adopt policies that require the preparation of land development plans and land disposal plans.

(c) Before the Board of Regents of the University of Alaska offers a parcel of land for sale under this section, the board shall offer first refusal to the closest municipality.

(d) The Board of Regents shall adopt policies requiring public notice before approval of land development plans and land disposal plans. The policies must require

that the notice be provided not less than 30 days before the proposed action and that the notice be

(1) sent to local legislators, municipalities, and legislative information offices in the vicinity of the action and at other locations as the university may designate;

(2) published in newspapers of general circulation in the vicinity of the proposed action at least once each week for two consecutive weeks; and

(3) published on state and university public notice Internet websites.

(e) In this section, "development, exchange, or sale" does not include the grant of an easement or right-of-way or the development of a campus facility.

* **Sec. 7.** AS 14.40.367 is repealed and reenacted to read:

Sec. 14.40.367. Confidential records. Notwithstanding AS 40.25.100 - 40.25.295 (Alaska Public Records Act), on a determination that it is in the best interest of the University of Alaska or on the request of the person who has provided the information, the president of the university may keep the following confidential:

(1) the name of a person applying for the sale, lease, or other disposal of university land or an interest in university land;

(2) before the issuance of a notice of intent to award a contract relating to a sale, lease or disposal of university land or an interest in university land, the names of the participants and the terms of their offers;

(3) all geological, well, geophysical, engineering, architectural, sales, market, cost, appraisal, timber cruise, gross receipts, net receipts, or other financial information relating to university land or an interest in university land and considered for, offered for, or currently subject to disposal or a contract;

(4) cost data and financial information submitted by an applicant in support of applications for bonds, leases, or other information in offerings and ongoing operations relating to management of university land;

(5) applications for rights-of-way or easements across university land; and

(6) requests for information about or applications by public agencies for university land that is being considered for use for a public purpose.

* **Sec. 8.** AS 14.40 is amended by adding a new section to read:

Sec. 14.40.369. Statute of limitations. A person may not bring any judicial action challenging AS 14.40.365 - 14.40.367 or any conveyance authorized under AS 14.40.365 unless the action is commenced no later than one year after the effective date of this Act.

* **Sec. 9.** AS 14.40.400(a) is amended to read:

(a) The Board of Regents shall establish a separate endowment trust fund in which shall be held in trust in perpetuity all

(1) net income derived from the sale or lease of the land granted under the Act of Congress approved January 21, 1929, as amended; **and**

(2) [NET INCOME DERIVED FROM THE SALE, LEASE, OR MANAGEMENT OF THE LAND CONVEYED TO THE BOARD OF REGENTS IN TRUST FOR THE UNIVERSITY OF ALASKA UNDER AS 14.40.365; HOWEVER, THE AMOUNT DEPOSITED IN THE ENDOWMENT TRUST FUND UNDER THIS PARAGRAPH RESULTING FROM MINERAL LEASE ROYALTIES AND ROYALTY SALES PROCEEDS MAY NOT BE LESS THAN 25 PERCENT OF ALL SUCH MINERAL LEASE ROYALTIES AND ROYALTY SALES PROCEEDS RECEIVED BY THE UNIVERSITY; AND

(3)] monetary gifts, bequests, or endowments made to the University of Alaska for the purpose of the fund.

* **Sec. 10.** AS 14.40.491 is amended to read:

Sec. 14.40.491. Definition of university receipts. In AS 14.40.120 - 14.40.491, "university receipts" includes

(1) student fees, including tuition;

(2) receipts from university auxiliary services;

(3) recovery of indirect costs of university activities;

(4) receipts from sales and rentals of university property;

(5) federal receipts;

(6) gifts, grants, and contracts;

(7) receipts from sales, rentals, and the provision of services of educational activities; [AND]

(8) receipts attributable to amounts distributed from university endowments established and managed under AS 14.40.280 and from the endowment trust fund established and managed under AS 14.40.400; **and**

(9) receipts from lands conveyed to the University of Alaska by the commissioner of natural resources under AS 14.40.365.

*** Sec. 11.** AS 29.45.030(a) is amended to read:

(a) The following property is exempt from general taxation:

(1) municipal property, including property held by a public corporation of a municipality, [OR] state property, **property of the University of Alaska,** or land that is in the trust established by the Alaska Mental Health Enabling Act of 1956, P.L. 84-830, 70 Stat. 709, except that

(A) a private leasehold, contract, or other interest in the property is taxable to the extent of the interest;

(B) notwithstanding any other provision of law, property acquired by an agency, corporation, or other entity of the state through foreclosure or deed in lieu of foreclosure and retained as an investment of a state entity is taxable; this subparagraph does not apply to federal land granted to the University of Alaska under AS 14.40.380 or 14.40.390, [OR] to other land granted to the university by the state to replace land that had been granted under AS 14.40.380 or 14.40.390**, or to land conveyed by the state to the university under AS 14.40.365**;

(C) an ownership interest of a municipality in real property located outside the municipality acquired after December 31, 1990, is taxable by another municipality; however, a borough may not tax an interest in real property located in the borough and owned by a city in that borough;

(2) household furniture and personal effects of members of a household;

(3) property used exclusively for nonprofit religious, charitable, cemetery, hospital, or educational purposes;

(4) property of a nonbusiness organization composed entirely of persons with 90 days or more of active service in the armed forces of the United States

whose conditions of service and separation were other than dishonorable, or the property of an auxiliary of that organization;

(5) money on deposit;

(6) the real property of certain residents of the state to the extent and subject to the conditions provided in (e) of this section;

(7) real property or an interest in real property that is exempt from taxation under 43 U.S.C. 1620(d), as amended;

(8) property of a political subdivision, agency, corporation, or other entity of the United States to the extent required by federal law; except that a private leasehold, contract, or other interest in the property is taxable to the extent of that interest unless the property is located on a military base or installation and the property interest is created under 10 U.S.C. 2871 - 2885 (Military Housing Privatization Initiative), provided that the leaseholder enters into an agreement to make a payment in lieu of taxes to the political subdivision that has taxing authority;

(9) natural resources in place including coal, ore bodies, mineral deposits, and other proven and unproven deposits of valuable materials laid down by natural processes, unharvested aquatic plants and animals, and timber.

* **Sec. 12.** AS 29.65.030(d) is repealed and reenacted to read:

(d) For the purpose of determining the general land grant entitlement under (a) of this section, the maximum total acreage of vacant, unappropriated, unreserved land within the boundaries of the municipality between the date of its incorporation and two years after that date shall be increased by the amount of land located within the boundaries of the municipality that is transferred to the University of Alaska under AS 14.40.365.

* **Sec. 13.** AS 37.13.010(a) is amended to read:

(a) Under art. IX, sec. 15, of the state constitution, there is established as a separate fund the Alaska permanent fund. The Alaska permanent fund consists of

(1) 25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), **25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares derived from lands conveyed to the University of Alaska under AS 14.40.365 and 25 percent of all**

bonuses derived by the University of Alaska from mineral leases on these lands, and 25 percent of [AND] federal mineral revenue sharing payments received by the state from mineral leases issued on or before December 1, 1979, and 25 percent of all bonuses received by the state from mineral leases issued on or before February 15, 1980;

(2) 50 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the state from mineral leases issued after December 1, 1979, and 50 percent of all bonuses received by the state from mineral leases issued after February 15, 1980; and

(3) any other money appropriated to or otherwise allocated by law or former law to the Alaska permanent fund.

*** Sec. 14.** AS 14.40.368 is repealed.

*** Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RATIFICATION OF PRIOR CONVEYANCES. All of those interests in lands that were conveyed to the university under ch. 136, SLA 2000 and ch. 8, FSSLA 2005, before the Alaska Supreme Court's ruling in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009) are ratified and are deemed to have been conveyed under the authority of this Act.

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SEVERABILITY. Under AS 01.10.030, if any provision of this Act, or the application of this Act to any person or circumstance is held invalid, the remainder of this Act and the application to other persons or circumstances are not affected.

*** Sec. 17.** This Act takes effect immediately under AS 01.10.070(c).

Sectional Analysis

House Bill 295 – "An Act relating to the grant of certain state land to the University of Alaska; relating to the duties of the Board of Regents; relating to deposits made to the Alaska permanent fund received from certain lands conveyed to the University of Alaska; ratifying and reauthorizing certain prior conveyances of land to the University of Alaska; making conforming amendments; and providing for an effective date."

CSHB 295 - This analysis has been updated to include CSHB 295, passed out of the House Education Committee.

Section 5 (p) was amended to reflect a deferred conveyance date to January 1, 2013 rather than December 1, 2011.

Section 5 (q) was amended to delete parcel PA 1002, Mite Cove and substitute "parcel C-18", within the Pelican area. Please see the note below within this section for further explanation of the Committee's intent.

Section 1 – Findings and Purpose – Explains why legislation is necessary. Paragraphs (7) – (10) specifically address issues raised by Alaska Supreme Court regarding previous legislation.

Section 2 – Legislative Intent – Clarifies the intent of the Legislature to:

- respond to the Alaska Supreme Court decision in *S.E. Alaska Conserv'n Council v. State*, 202 P.3d 1162 (2009).
- convey state land to the University even though revenue from the land will be deposited in the general fund and be subject to annual appropriation by the Legislature.
- ratify conveyances that occurred under authority of SB 7 and HB 130.
- that the land should proceed even if any other provision in the bill is found to violate the dedicated funds clause of the Alaska Constitution.

Section 3 – Amends AS 14.40.170(a) by deleting the phrase "THE BOARD OF REGENTS IN TRUST FOR" before "the University" specifying the land conveyed under this legislation cannot be considered trust land managed by the Board of Regents.

Section 4 – Amends AS 14.40.291(a) similar to Section 3.

Section 5 – Creates a new AS 14.40.365 to replace the statute the Supreme Court found to be unconstitutional in its ruling in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009). Subsectional analysis of new AS 14.40.365 follows:

(a) Provides that DNR will convey land to University of Alaska by quitclaim deed

survey requirements. The two-year period should not be difficult for DNR to meet because most of the work to issue the deeds was already completed after the 2005 legislation.

(b) Defers conveyance of the University Research Forest in Tanana Valley State Forest until 2055 (50 years from passage of 2005 legislation). This deferral was requested by the University as it allows the continued use of this area as Research Forest by University while at the same time allowing continued small timber sales and forestry management activities by DNR Division of Forestry.

(c) Allows that when federal mining claims that currently exist as inholdings to parcels conveyed by the state to the University are terminated and the land subsequently conveyed to the state (DNR), that DNR will in turn convey this land to the University.

(d) Ensures that the mineral estate is also conveyed to the University. This is an exception to AS 38.05.125 which requires, for most conveyances, DNR retain the mineral rights in state ownership due to provisions in Section 6(i) in the Alaska Statehood Act. Since the University is a state entity, transfer of mineral estate to the University does not violate the 6(i) provision.

(e) Requires that conveyances to the University recognize and protect all valid existing rights.

(f) Requires that DNR reserve access to and along navigable and public waters as required in AS 38.05.127, but limits the width of these easements on parcels along tidewater to a maximum of 25 feet (a provision specifically inserted by the legislature in the 2005 bill). These easements by regulation would otherwise have a 50-foot minimum width. This subsection also specifies that other provisions of AS 38.04 and AS 38.05 do not apply to these conveyances to the University.

(g) Sets out additional limitations or requirements regarding the land conveyed to the University, including Section 6(i) of the statehood act that prohibits the state's alienation of mineral estate; makes conveyance subject to RS 2477 and Omnibus Act rights of way; and excludes from the conveyance to the University any valid existing state mining claims.

(h) Requires that upon the termination of a state mining claim located within a parcel conveyed to the University under this bill, DNR will transfer that land to the University

(i) Establishes the date of the recording of a parcel as the time when the University takes over management responsibility for land transferred under this act.

(j) Establishes that upon conveyance to the University, all revenue and receipts accrue to the University as University receipts;

(k) Allows the University to return land to DNR up to ten years after conveyance if it contains hazardous waste; is located on a historic or archeological site; or the University and DNR agree to the re-conveyance.

(l) Requires University concurrence with any DNR conveyance of an irrevocable interest in a parcel to be conveyed to the University.

(m) Allows the Commissioner of DNR to make minor boundary adjustments to correct omissions and errors.

(n) Removes nine (9) parcels from the land list originally agreed to by DNR and the University. These 9 parcels were included in the original land list submitted to the legislature in 2005. They were removed by the legislature during committee review of the bill based upon public and community concerns.

(o) Defers conveyance of five parcels located within the potential boundaries of a Petersburg Borough so that if a Borough forms before July 1, 2012 (two years), these parcels could be selected by a future Borough as part of its municipal entitlement under AS 29.65. If a borough does not form or the land is not

provision was inserted in the 2005 legislation to specifically address this concern raised by the Cities of Wrangell and Petersburg during the 2005 legislative hearings.

(p) Defers conveyance of three parcels located within the City and Borough of Wrangell pending possible selection by the new borough under its municipal entitlement (AS 29.65). Provides the Borough until January 1, 2013 to select the land. A provision to defer these selections was inserted in the 2005 legislation to specifically address potential borough formation, a concern raised by the cities of Wrangell and Petersburg during the 2005 legislative hearings. Wrangell formed a borough after the 2005 legislation, but has not yet filed its land selections with DNR.

(q) Defers conveyance of one parcel located within the potential boundary of a Northern Chichagof Island Borough so that if a Borough forms before July 1, 2012 (two years), this parcel could be selected by a future Borough as part of its municipal entitlement under AS 29.65. If a borough does not form or the land is not selected by a future Borough, the land will be conveyed to the University. This provision was inserted in the 2005 legislation to specifically address this concern raised during the 2005 legislative hearings. **NOTE**: this provision was amended in House Education to delete the reference to parcel PA 1002, Mite Cove and substitute "Parcel C-18". The intent of the amendment was to delete parcel MF 1001, Mite Cove from the land list and insert that portion of a parcel previously deleted, parcel ST 1002, Pelican, back into the list. The parcel to be added back is that portion of Parcel 1002 identified in the DNR Northern southeast area Plan as Unit C-18. DNR is working with the sponsor of the amendment to draft a revised amendment to correctly capture the intent of the House Education Committee.

Section 6 – Repeals and reenacts AS 14.40.366 as passed in 2005. Sets forth management requirements for university land, including preservation of historic recent public uses, public notice and comment opportunities for land development or disposal plans, and right of first refusal to closest municipality.

Section 7 – Repeals and reenacts AS 14.40.367 as passed in 2005. Exempts certain proprietary and business sensitive information related to university land disposals from the Alaska Public Records Act.

Section 8 – Establishes a one-year statute of limitations for parties wishing to bring a lawsuit regarding this legislation.

Section 9 – Requires that revenue generated from the conveyed land be handled as University receipts subject to annual appropriation by the Legislature. This section deletes the provision in HB 130 that required revenue from the conveyed land be deposited in the University Endowment Trust, thereby correcting the dedicated funds violation found by the Alaska Supreme Court in *S.E. Alaska Conserv'n Council v. State,* 202 P.3d 1162 (2009).

Section 10 – Defines University receipts to include land transferred under this new legislation.

Section 11 – Specifies that University land conveyed under this bill is exempt from general taxation.

Section 12 – Ensures that a municipal entitlement of a future city or borough is not reduced by the conveyance of land to the University under this legislation.

Section 13 – Requires that 25% of mineral revenue from University lands granted under this legislation be deposited into the Permanent Fund.

Section 14 – Restores the repeal of AS 14.40.368 regarding encumbrances and trespasses on land to be conveyed. This statute was enacted by SB 7 and repealed by HB 130. This section confirms that AS 14.40.368 is to remain repealed.

Section 15 – Ratifies conveyances made to the University under the 2005 legislation, so that DNR does not have to re-issue deeds.

Section 16 – Adds a severability clause.

Section 17 – Establishes an immediate effective date.

Representative Cathy Munoz, Co-Chair
House Community & Regional Affairs
State Capitol, Rm 409
Juneau, Alaska 99801

Re: House Bill 295 – University Land Grant

Dear Representatives Herron and Munoz:

Please accept this request for your consideration to schedule HB 295 before the House Community & Regional Affairs at your earliest convenience.

This bill would convey approximately 199,838 acres of state land to the University of Alaska, and specify that revenue generated by the University of Alaska's management of the land be subject to appropriation each year by the legislature.

Legislation passed in 2000 and 2005 made certain land grants to the University of Alaska and specified that the revenue generated from those lands would be deposited into the University endowment trust fund. In March 2009 the Alaska Supreme Court found these statutes to violate the dedicated funds section of the Alaska Constitution, art. IX, sec. 7.

This bill seeks to remedy those issues identified by the Court by specifying that the revenue generated from the land is to be accounted for as university receipts and therefore subject to appropriation each year by the legislature. It also ratifies and reauthorizes the land conveyances authorized in the previously enacted legislation. The land to be conveyed under this bill is the same as what was to be conveyed to the University of Alaska in the final 2005 legislation (ch. 8, FSSLA 2005), with the exception of two parcels that were conveyed under separate statutory authority and the university research forest.

The bill was amended in House Education Committee by removing one parcel at Mite Cove on Lisianski Inlet and by adding a portion of a parcel previously deleted, parcel ST 1002, Pelican, back into the list. The parcel to be added back is that portion of Parcel

1002 identified in the DNR Northern Southeast Area Plan as Unit C-18. The amendment that was adopted by House Education Committee failed to do what they intended so DNR is working with the Sponsor of the amendment to draft a revised amendment for consideration by House CRA to correctly capture the intent of the House Education Committee.

If you have any questions regarding the bill, feel free to contact Samantha Carroll, Department of Natural Resources Special Assistant at 269-8434, or Dick Mylius, Director of Division of Mining, Land, and Water at 269-8625.

Sincerely,

Thomas E. Irwin
Commissioner

Parcel Name	Parcel Number -- 2010 Land Use List	DNR Land Use Plan	Land Designation in Plan	Notes
Earl West Cove[1]	PT.1004	CSEAP	General Use	Management intent indicates parcel to be used for multiple uses, including settlement and future timber sales.
Mite Cove[2]	MF.1001	NSEAP	Dispersed Recreation	Management intent indicates that the parcel is to be used for public purposes; not appropriate for settlement.
Moser Bay	CS.MB.1001	CSEAP	Settlement, General Use	Management intent indicates western part of parcel to be managed for settlement; remainder is General use. Note: anadromous stream is Habitat.
Olive Cove[3]	CS.OV.1001	CSEAP	General Use, Dispersed Rec.	Adjoins state subdivision. Management intent indicates that portions of parcel may be appropriate for settlement.
Sumdum	SD.1001	NSEAP	Dispersed Recreation	Management intent indicates that only development related to recreation uses would be appropriate.
Tenakee Springs	ST.1003	NSEAP	Public Facilities, Settlement/ Commercial	Management intent indicates that development appropriate near harbor and, in some inland locations, for commercial, industrial, and road right-of-way purposes. Areas not used for this purpose should remain undeveloped.
Thoms Place[4]	SD.1001	NSEAP	Settlement, General Use	Management intent indicates that settlement should occur along coast. Timber harvest in General Use areas not appropriate except as related to land development. Adjoins state subdivision to south.

CSEAP – Central Southeast Area Plan

NSEAP – Northern Southeast Area Plan

[1] Affected by legislative provision allowing land to be conveyed to a borough under certain conditions.
[2] See footnote 1.
[3] See footnote 1.
[4] See footnote 1.

Identification of Parcels – 2005 Land List

Parcels were identified according to the needs of the University and the restrictions of state area plans. DNR also established some sideboards of properties that would not be considered, such as producing oil and gas properties (including the entire North Slope), areas where DNR had already started work on land sales, timber parcels critical to the DNR Forestry sales program and sustained yield calculations, parcels selected by municipalities, etc. (this is not a complete list). Three types of properties were identified as needed by the University.[5]

Investment Properties (73,865 acres). DNR and the University initially reviewed all available land throughout the state and all applicable area plans. Generally, both parties agreed that it would be preferable, except in cases related to educational development and research and oil and gas utilization, to exclude parcels that were designated in area plans as generally inappropriate for development or could not be conveyed to individuals or municipalities based on plan or statutory restrictions. Designations that included Water Resources, Habitat, and Forestry were avoided; these designations cannot, for example, be conveyed to municipalities under the Municipal Entitlement Act. Designations that provided for development of some type or are acceptable for municipal conveyance were used as the basis for initial selection. Our review therefore focused on state land designated Agriculture, Settlement, General Use (a multiple use designation) and, to a lesser extent, Public Recreation where some type of recreation development was envisaged. The management intent associated with these parcels (which sometimes constrains use and development) as well as specific parcel knowledge were then used to reduce the inventory of parcels to that contained in the 2005 Land List. In all cases DNR required that the entirety of state land in an area of selection be included; this avoided the selection of just the best areas (high-grading), leaving the state with areas of limited worth.

Educational Properties (35,973 acres). Parcels that augmented the holdings of current educational facilities (Sitka, Juneau, and Fairbanks) were included. Also included were parcels important to water and water quality research and forest research and management. The former included large areas near Fairbanks as well as portions of the Tanana Valley State Forest. The latter was conveyed as a University Research Forest under the previous legislation.

Oil and Gas Properties (90,000 acres). A large area near Nenana was included on the basis that this area has oil and gas potential and may be able to generate revenue.

[5] The acreage estimates given reflect the proposals of the 2005 Land List. Some parcels have been conveyed to the University. Especially significant is the University Research Forest (51,820 acres).

***Southeast AK Conservation Council v. State*, 202 P.3d 1162, 1171 (Alaska 2009).**

Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents."

Our case law establishes that University lands are state lands. *Article VII, section 2* establishes the University, declares it a "body corporate," provides that the University "shall have title to all real and personal property now or hereafter set aside for or conveyed to it," and states that "[i]ts property shall be administered and disposed of according to law." We considered the meaning of *article VII, section 2* in *State v. University of Alaska.* [624 P.2d 807, 814] There, we held that the state could take land that Congress had granted to the University to be held in trust for it under the federal 1929 act, but that the state had to compensate the University with monetary damages or equivalently valuable land. Our opinion emphasized *article VII, section 2*'s command that "property shall be administered and disposed of according to law," and noted that "'according to law' refer[s] to the legislature's power to make laws." Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents." We further observed that "[t]he natural resources article of the Alaska Constitution grants extensive powers to the legislature to control lands," which makes "clear that [the University lands received under the 1929 act] 'belong' to the state." The conclusion we reached in *State v. University of Alaska,* that University land is state land, applies even more readily to the present case because the University land involved here is not shielded by a federal trust obligation. Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.

Constitutional provisions referred to in ***Southeast AK Conservation Council v. State,* 202 P.3d 1162, 1171 (Alaska 2009):**

Article VII. HEALTH, EDUCATION AND WELFARE

SECTION 2. State University. The University of Alaska is hereby established as the state university and constituted a body corporate. It shall have title to all real and personal property now or hereafter set aside for or conveyed to it. ***Its property shall be administered and disposed of according to law.*** [Emphasis added.]

Article VIII. NATURAL RESOURCES

SECTION 2. General Authority. The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.

What law applies to the administration and disposal of land conveyed to the university?

Excerpts from Southeast AK Conservation Council v. State, 202 P.3d 1162, 1171 (Alaska 2009), quoted above:

Our opinion emphasized *article VII, section 2*'s command that "property shall be administered and disposed of according to law," and noted that "'according to law' refer[s] to the legislature's power to make laws." ***Thus, even when the University has title to land, "only the legislature can make laws effecting the disposal of land, not the Board of Regents."***

Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion.

"Statutory language treating University lands differently from other state land does not overcome this constitutionally based conclusion."

Chapter 38.04. POLICY FOR USE AND CLASSIFICATION OF STATE LAND SURFACE

Sec. 38.04.005. Policy.

. . .

(f) Land owned by the Board of Regents of the University of Alaska is not subject to the provisions of this chapter.

Chapter 38.05. ALASKA LAND ACT

Sec. 38.05.030. Exceptions.

. . .

(f) Land owned by the Board of Regents of the University of Alaska is not subject to this chapter.

. . . .

Additional problem with the above two excerpts: the Board of Regents does not own land. The board has "care, control, and management of land." CSHB 295(ED

Sec. 14.40.170. Duties and powers of Board of Regents. (a) The Board of Regents shall

. . .

(4) have the care, control, and management of

(A) all the real and personal property of the university; and

(B) land

(i) conveyed to the Board of Regents by the commissioner of natural resources in the settlement of the claim of the University of Alaska to land granted to the state in accordance with the Act of March 4, 1915 (38 Stat. 1214), as amended, and in accordance with the Act of January 21, 1929 (45 Stat. 1091), as amended; and

(ii) conveyed to the Board of Regents in trust for the University of Alaska by the commissioner of natural resources under AS 14.40.365;

. . . .

What law would apply for the oil and gas leasing on land conveyed to the university under the bill? See AS 43.05.180 for oil and gas leasing on state land.

Permanent Fund Issue:

Sec. 12 of CSHB 295(EDC) only applies to leases entered into before dates in the past:

* **Sec. 12.** AS 37.13.010(a) is amended to read:

(a) Under art. IX, sec. 15, of the state constitution, there is established as a separate fund the Alaska permanent fund. The Alaska permanent fund consists of

(1) 25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), **25 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares derived from lands conveyed to the University of Alaska under AS 14.40.365 and 25 percent of all bonuses derived by the University of Alaska from mineral leases on these lands, and 25 percent of** [AND] federal mineral revenue sharing payments received by the state from mineral leases issued on or before December 1, 1979, and 25 percent of all bonuses received by the state from mineral leases issued on or before February 15, 1980;

(2) 50 percent of all mineral lease rentals, royalties, royalty sale proceeds, net profit shares under AS 38.05.180(f) and (g), and federal mineral revenue sharing payments received by the state from mineral leases issued after December 1, 1979, and 50 percent of all bonuses received by the state from mineral leases issued after February 15, 1980; and

(3) any other money appropriated to or otherwise allocated by law or former law to the Alaska permanent fund.

The difference between AS 37.13.010(a)(1) and (2) is the time period when the applicable leases were issued. In AS 37.13.010(a)(1), the leases were issued on or before December 1, 1979 and February 15, 1980; in AS 37.13.010(a)(2), the relevant leases were issued after December 1, 1979 and February 15, 1980.

FIX: Either

(1) Treat university land as state land and make AS 37.13.010(a)(2) apply (50%)

or

(2) Add a new paragraph to AS 37.13.010(a) providing for payments and receipts from university leases with an appropriate percentage equal to or above the 25 percent required under Art. IX, sec. 15, Constitution of the State of Alaska.

CITY OF TENAKEE SPRINGS

Don Pegues
MAYOR

P.O. Box 52
Tenakee Springs, Alaska 99841

March 3, 2010

House Community & Regional Affairs Committee

The Honorable Cathy Munoz, Co-Chair
State Capitol Room 409
Juneau AK, 99801

The Honorable Bob Herron, Co-Chair
State Capitol Room 411
Juneau AK, 99801

Dear Representatives Munoz and Herron:

I am writing in regard to HB 295, which is scheduled to be heard before the House Community & Regional Affairs Committee next week. That bill provides for the transfer of designated lands to the University of Alaska, as listed in the "University of Alaska Land Grant List 2005." Among the lands recommended for transfer are those contained in ST 1003, which fall within our city boundaries. The City was opposed to this proposed transfer in 2005, and still opposes it today. The Tenakee Springs City Council recently adopted Resolution 2010-16, expressing the community's desire to have ST 1003 removed from the list of lands to be granted to the University of Alaska.

This is not the first time these parcels have been the center of controversy. In 1977, when the U.S. Forest Service proposed a road, log dump and harvest of three timber units within the corporate boundaries of Tenakee Springs, the City's objections led to a Memorandum of Understanding between the City of Tenakee Springs, the State of Alaska and Alaska Pulp Corporation. That MOU, in part, provide that the Alaska Department of Natural Resources would convey to the City lands selected by the State while some lands would be retained by the State. When the conveyances did not occur, the City sued the State. That litigation was resolved in a Judgment[1] against the State in 1981, adopting a Stipulation for Settlement entered into by the parties. That Judgment was subsequently reaffirmed and amended by the court in 1984 and 1986, again by stipulation of the parties.

The Stipulation for Settlement provides that the State "convey to the City . . . fee simple title to all selected lands within the City's boundaries conveyed to the state by the Bureau of Land Management, except for the sites and acreages set out below." The Settlement goes on to

1 The Judgment from the Superior Court orders that "the failure or refusal of either party to comply with the terms of the Stipulation for Settlement, the other party shall be entitled to specific performance, special damages sustained by reason of the other party's non-performance, and costs and attorney's fees incurred in enforcing this judgment."

designate specific parcels that would remain with the State but with restrictions on their use or be transferred to the City for specified uses.

Two of those lands specifically excepted from the transfer to the City were lands designated as tracts C30 and C34 in the Northern Southeast Area Plan, adopted October 15, 2002. In 2005, DNR took the position HB 130 that tract C30 was not among the parcels in the 2005 list. The City is relying on DNR's position that C30 is, similarly, not included now in HB 295. However, if for some reason C30 is considered included in the 2010 legislation, the City objects. In reference to C30, DNR has noted:

> The classification of parcels within the Tenakee community is greatly affected by a court order dated March 9, 1981 that identifies state lands for conveyance to the community and assigns uses to the lands retained by the state. This parcel is affected by paragraph 1.4 of that order, which designates it as a "public facilities reserve".

With the restriction on C30 that it be used only as a "public facilities reserve," it is unlikely that the University would desire to possess it with such restrictions.

As to C34, DNR observed:

> This parcel includes all of those areas within Tenakee affected by paragraph 1.2 of the court order. It consists of two parts: an interior part within sections 15 and 22 situated eastward and upslope of the community, and a part within section 23 that stretches along the coast. The classification of parcels within the Tenakee community is affected by a court order dated March 9, 1981 that identifies state lands for conveyance to the community and assigns uses to the lands retained by the state. Paragraph 1.2 designates this parcel for "commercial, industrial, road right-of-way, and borrow pits".

Lastly, there are two smaller parcels, designated as tracts C31 and C32 in the Northern Southeast Area Plan, that comprise part of the ST 1003 lands. These parcels did not transfer from BLM to the State until 1986 and 2003, respectively. These delays were because of the existence of un-adjudicated claims to the land at the time the remaining selected lands were transferred to the City in 1982. Those two parcels, selected by and transferred to the State under the Statehood Act, are subject to the same obligation to transfer them to the City under the terms of the Settlement. To that end, the City is considering a quiet title action to resolve that oversight.

It appears that transfer of these parcels would not promote the intent of the legislation: to provide clear title to the lands and provide for management of revenue from that land as university receipts. Ownership of C31 and C32 is in dispute, and the remaining parcels are subject to the restrictions set forth in the Settlement. Consequently, the purposes of the proposed land transfer would be frustrated, if not unobtainable. Further, this community is very concerned about the potential increased burden for new services that may be placed upon us. Extending

power lines, improved access and snow removal are just a few of the possible things that would overwhelm our limited budget.

A fiscal note to the bill from the University of Alaska indicates that the 20-year out annual projected income from the total new land grant might produce 1% of the annual income required by the University. The acreage in Tenakee comprises only .11% of the total land grant in HB 295, meaning the income derived from this land would be less than .0013 percent of the University's annual requirement. When considering the restrictions the University would take this land subject to, the potential burden to the City far outweighs the gain to the University.

We ask that ST 1003 be removed from HB 295, and appreciate your attention to this matter.

Respectfully,

Don Pegues, Mayor
City of Tenakee Springs

Hello All,
Attached please find some follow-up comments to my testimony at Friday's House Education Committee Hearing. I was the first (nervous) person to testify via teleconference.

I'm concerned that this bill will displace our fish-buying business, Shoreline, Inc. We've anchored in front of the Mite Cove parcel for 25 years and provide vital support for the troll fleet. Private ownership of the uplands would threaten our use of shorelines from the beach and a waterline from the uplands.

I'm also concerned that DNR's Northern Southeast Area Plan (NSEAP) is being disregarded by this bill. Please take a moment to read the attached letter. Louie Flora, staff to Rep. Wilson, has information and maps about a potential land substitution for the Mite Cove parcel.

Thank you for your consideration. Please contact me for any further information.

Regards,

Deb Spencer
Owner, Shoreline, Inc.

Subject: sumdum parcelt in hb295 (sanford cove)

Greetings Committee members. Thank you again for the opportunity to testify this morning about the Sumdum parcel included in the University Lands Bill, HB 295. As I tried to express in my testimony, the Sumdum parcel sits squarely in the middle of a federally designated wilderness that is important to many residents, business people and visitors to Southeast Alaska. It's also of great importance to salmon, bears, birds and other wildlife. Privatizing and developing the Sumdum parcel would have a deleterious effect on a wide array of users and resources.

Please include in today's testimony the statement below from the following 17 Southeast Alaska commercial tour businesses. These operators have taken the time and energy to put together this statement. They feel strongly about leaving the Sumdum parcel undeveloped. I hoped to present their statement in the course of my testimony today, but time did not allow for it.

I hope the committee recognizes the importance of this parcel to this wide array of people and businesses. Please delete the parcel from HB295. Thank you.

STATEMENT:

The undersigned seventeen commercial tour companies bring thousands of visitors to Southeast Alaska every year. Our businesses provide guided hunting and fishing, kayak expeditions, and week-long excursions aboard small and mid-size vessels. Our segment of Alaska's tourism industry provides vital and unique economic benefits to southeast Alaska, and many of us are local business people. We stand out among other segments of the tourism industry because many of us provision our excursions locally, and a high number of our clients dine and seek local accommodations before and after their trips. University of Alaska research shows businesses like ours pump millions of dollars into the Southeast economy annually.

Bringing clients to wild Alaskan landscapes is the backbone of our businesses, and it's the reason for our concern over the Sumdum parcel. The Sumdum parcel is in Sanford Cove, in the heart of the Tracy Arm-Fords

Terror and Chuck River Wilderness Areas. For each of us, the area is a highlight of the services we provide. Many of us use Sanford Cove as a safe and scenic anchorage. With bears, wolves, salmon and cultural ruins, it is a common location for walks ashore, fishing, hunting and camping. Not only for our commercial clients, but for many independent and local travelers, too.

Tracy Arm-Fords Terror Wilderness is especially unique because it currently contains no lodges, private cabins, or other developments. Some of us have operated in southeast Alaska for several decades, long enough to know that such undeveloped anchorages are increasingly rare.

Privatization of the Sumdum parcel would displace many of us from long-standing business activities. It would also displace many independent and local recreationists and mar an undeveloped landscape. But removing the Sanford Cove parcel from House Bill 130 would have only a minor impact on university funding, one that could be compensated by other means.

Thank you for your consideration, and please help us maintain current use of this important part of southeast Alaska.

Sincerely,

John Swanson, President, Southeast Alaska Wilderness Tours Association (SAWTA)

SAWTA represents the following ten southeast Alaska commercial tour companies:

Geoff Wilson	Alaska Yacht Charters
Richard Friedman	Alaskan Song
Christine Smith	Northwest Navigation
John Swanson	All Aboard Yacht Charters
Bill and Shannon Bailey	Pacific Catalyst
Meg Swimlear	Sikumi
Randy Burke	Bluewater Adventures
Butch Laughlin	Alaska Fly n' Fish Charters

Gary Carlson	Spirit Walker Expeditions
Dennis Rogers	Alaska Sea Adventures

The letter is also signed by the following companies:

Dan Blanchard	American Safari Cruises
Ronn Patterson	Dolphin Charters
Jeff Behrens	Fantasy Cruises
Ken Gerkin	The Boat Company
Dan Liden	Snow Goose
Jim Kyle	Alaska on the Home Shore
Rick Fleischman	Sound Sailing

Honorable Friends on the House Community and Regional Affairs Committee,

I write once again as a homeowner and registered voter in Tenakee Springs. My previous arguments are still valid, but will not be repeated herein. Instead I will add my voice to that of our unanimous city council and urge you to consider that the University and State have little to gain, and much to lose by passage of HB 295. In our view what is at stake is the very character of our daily lives. While there are issues that might well justify such a mandate, this is not one of them and to make it so cheapens both our citizenry and the legislative process.

Respectfully yours,

Dear Representative Cathy Munoz,

Please amend HB 295 and remove all Tenakee parcels from the selection of the University. I agree with Resolution 2010-16 passed unanimously by the City Council to remove these parcels.

The development of these parcels would create a burder to our infrastructure and the financial resonsibilities would be passed on to our citizens.

Thank you for this opportunity to testify.
Joan McBeen

Subject: [SPAM] UNIVERSITY LAND BILL

Dear Rep. Munoz & Herron, co-chairs of the House Community & Regional Affairs Committee:

I am writing to request you honor the Tenakee Springs City Council's request to have all proposed land transfers within the city limits of Tenakee Springs be eliminated from HB 295.

Removing this very small amount of land from the bill would not be burdensome to the University of Alaska; i.e. removing the parcel would be insignificant to the University's overall funding.

However, transfer of those lands for University fund-raising would be VERY significant to our city. Removing the lands within the city limits of Tenakee Springs is a chance to do something positive for one of the small villages in the State. We have struggled to keep the city viable and our long range plan includes utilization of the lands in question which are in the city limits. Please help us by honoring our City Council's request. If the State is ever to achieve the goal of having remote villages being more capable of "standing on their own feet" you have to help us!

Thank you for your consideration.

Sincerely,

Stan Moberly

THE FOLLOWING DOCUMENT(S) ARE POOR ORIGINAL COPIES

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

FIRST JUDICIAL DISTRICT AT JUNEAU

CITY OF TENAKEE SPRINGS, a Second Class City,

Plaintiff,

v.

STATE OF ALASKA,

Defendant.

No. 1JU-80-1666

STIPULATION FOR SETTLEMENT

It is hereby stipulated by and between the parties that all claims of the plaintiff set forth in its complaint dated December 4, 1980 are hereby compromised and settled in full according to the following terms:

1. The state agrees to convey to the City on or before July 1, 1981 fee simple title to all selected lands within the City's boundaries conveyed to the state by the Bureau of Land Management, except for the sites and acreages set out below. The land to be conveyed to the City, and the sites and acreages to be retained by the state, are set out in Exhibit 1 to this stipulation, which is expressly made a part of this agreement. As reflected in Exhibit 1, the state shall convey to the City fee simple title to 2958 acres, more or less; provided, however, that it is understood that it is the intent of the parties that the City receive under this stipulation fee simple title to all selected lands within the City's boundaries conveyed to the state by the Bureau of Land Management, except for the sites and acreages set out below, regardless of whether the acreage received by the City under this stipulation is more or less than 2958 acres. The state shall retain 1027 acres, more or less. All sites and acreages retained by the state will be subject to existing

EXHIBIT B

rights-of-way and easements. As reflected in Exhibit 1, the state shall retain the following sites and acreages for the purposes designated:

1. Public recreation area at Indian River, 201 acres more or less, described as follows:

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 15 SE 1/4 SW 1/4, SW 1/4 SW 1/4 SE 1/4

Sec. 22 E 1/2 NW 1/4, N 1/2 NE 1/4 SW 1/4, W 1/2 W 1/2 NE 1/4, S 1/2 NE 1/4 SW 1/4 NE 1/4, SE 1/4 SW 1/4 NE 1/4, N 1/2 SE 1/4, S 1/2 SE 1/4 NE 1/4, S 1/2 N 1/2 SE 1/4 NE 1/4,

And excluding:

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 22 S 1/2 SW 1/4 NE 1/4, NW 1/4 SW 1/4 NE 1/4, N 1/2 NE 1/4 NW 1/4 SE 1/4, N 1/2 NW 1/4 NW 1/4 SE 1/4,

Containing 40 acres, more or less.

The net acreage to be retained by the state is 201 acres, more or less. The 40 acres, more or less, to which the City shall receive title encompasses the campground presently maintained by the City. The City will have a continuing responsibility to maintain the campground and to provide for its use for public recreation purposes only. Any other use will result in reverter to the state. Further, the City may not manage the campground in a way so as to interfere with the state's tourism and recreation objectives as determined by the Commissioner of Natural Resources for the 201 acres, more or less, which the state will retain pursuant to this agreement. It is understood that, should the campground eventually receive

CARPENETI & COUNCIL
Attorneys at Law
810 Seventh Street, Suite 205
Juneau, Alaska 99801
907-586-1100

substantial use by tourists, title to the campground, and responsibility for its maintenance, may, subject to the state's concurrence, be transferred to the state.

1.2. Commercial, industrial, road right-of-way and borrow pits; 261 acres, more or less. It is understood that the state will allow the removal of reasonable amounts of material under reasonable conditions from all borrow pits, for the purpose of personal use in residential improvement or construction, driveway construction, and landscaping. The land to be retained by the state for commercial, industrial, road right-of-way and borrow pit purposes is described as follows:

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 15 SE 1/4 SE 1/4, E 1/2 SW 1/4 SE 1/4, NW 1/4 SW 1/4 SE 1/4

Sec. 22 NE 1/4 NE 1/4 NE 1/4

Sec. 23 W 1/2 NW 1/4, SE 1/4 NW 1/4, W 1/2 NE 1/4 NW 1/4, SE 1/4 NE 1/4 NW 1/4, S 1/2 NW 1/4 NE 1/4, SW 1/4 NE 1/4, W 1/2 SE 1/4 NE 1/4, NW 1/4 NE 1/4 SE 1/4,

Containing 261 acres, more or less.

1.3. State land disposal; 245 acres, more or less, described as follows:

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 24 N 1/2 N 1/2, N 1/2 S 1/2 NW 1/4, N 1/2 SW 1/4 NE 1/4, SE 1/4 NE 1/4,

Containing 245 acres, more or less.

1.4. Public facilities reserve; 40 acres, more or less, described as follows:

CARPENETI & COUNCIL
ATTORNEYS AT LAW
310 SEWARD STREET, SUITE 203
JUNEAU, ALASKA 99801
(907) 586-1726

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 21 S 1/2 SE 1/4 NE 1/4

Sec. 22 S 1/2 SW 1/4 NW 1/4, NW 1/4 SW 1/4,

Containing 40 acres, more or less.

1.5. Airport and personal use timber; 280 acres, more or less. It is understood that the state will allow removal of reasonable amounts of timber under reasonable conditions, for the purpose of personal use in residential improvement or construction. The land to be retained by the state for these purposes is described as follows:

All state owned uplands lying within:

T.47S., R.63E., C.R.M.

Sec. 15 SW 1/4 SW 1/4

Sec. 16 SE 1/4, E 1/2 SW 1/4,

Containing 280 acres, more or less.

1.6. The lands described in ADL No. 101700, consisting of 1 acre, more or less.

2. As provided in the September 26, 1977 Memorandum of Understanding, attached as Exhibit A to the complaint, fee simple title to the tidelands and submerged lands described in ADL No. 101019 will be transferred to the City. The lands shall be used for public purposes only. Any other use will result in reverter to the state.

3. As provided in the September 26, 1977 Memorandum of Understanding, the state will expeditiously consider the City's application for conveyance of tidelands and submerged lands adjacent to any selected lands conveyed to the state by the Bureau of Land Management. This paragraph applies to tidelands and submerged lands other than those described in ADL No. 101019, the conveyance of which is provided for in paragraph 2 above.

CARPENETI & COUNCIL
Attorneys at Law
310 Seward Street Suite 203
Juneau, Alaska 99801
(907) 586-1760

4. It is understood that conveyance of lands to the City under this stipulation will be accomplished without either party having to bear survey costs.

5. The state will grant pipeline rights-of-way to the City according to normal procedures. The state recognizes that the City is considering a hydroelectric and domestic water supply project near Indian River; the state acknowledges that the purpose of its retention of land in the public recreation area at Indian River does not preclude a pipeline right-of-way.

6. All state land sales will be subject to local zoning ordinances to the extent authorized by law.

7. This stipulation is to be construed subject to the September 26, 1977 Memorandum of Understanding, attached to the complaint as Exhibit A. The parties hereby reaffirm the provisions of that Memorandum of Understanding.

8. The parties will bear their own costs and attorney's fees.

9. The state agrees that judgment may be immediately entered in favor of the City on the terms set out in this stipulation, and the parties agree that upon failure or refusal of either party to comply with the terms of this stipulation, the other party shall be entitled to specific performance, special damages sustained by reason of the other party's non-performance, and costs and attorney's fees incurred in enforcing the terms of this stipulation.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

FIRST JUDICIAL DISTRICT AT JUNEAU

CITY OF TENAKEE SPRINGS, a Second Class City,

Plaintiff,

v.

STATE OF ALASKA,

Defendant.

FILED in the Trial Courts
State of Alaska, First District

MAR 9 1981

Barbara A. Howe, Clerk

By: Deputy

NO. IJU-80-1666

JUDGMENT

The parties to this action have entered into a Stipulation for Settlement dated ~~December----,-1980~~ February 26, 1981, agreeing that judgment may be entered against the defendant State of Alaska as set out in that Stipulation for Settlement.

IT IS ORDERED that the parties shall comply with the terms set out in the Stipulation for Settlement.

IT IS FURTHER ORDERED that upon the failure or refusal of either party to comply with the terms of the Stipulation for Settlement, the other party shall be entitled to specific performance, special damages sustained by reason of the other party's non-performance, and costs and attorney's fees incurred in enforcing this judgment.

DATED this 9th day of March, 1981.

CITY OF TENAKEE SPRINGS
BY

MEMORANDUM OF UNDERSTANDING

SUBJECT

The subject of this Memorandum is a proposal by Alaska Lumber and Pulp Company for timber harvesting and associated activities and developments pursuant to a long term contract with the United States Forest Service. Alaska Lumber and Pulp Company proposes to operate in the vicinity of the City of Tenakee Springs. The State of Alaska, Alaska Lumber and Pulp Company, and the City of Tenakee Springs recognize that multiple stipulations are necessary in order to permit the proposed operations to proceed in a climate of consensus and cooperation. This Memorandum sets forth said stipulations and constitutes an agreement by the parties to observe them in good faith.

PARTIES

The parties to this Memorandum are the State of Alaska [State], the City of Tenakee Springs [City], and the Alaska Lumber and Pulp Company [AL&P] (including its agents, employees, subsidiaries, and subcontractors).

JURISDICTION

Each party pledges to comply with and carry out the stipulations to the fullest extent possible regardless of whether it has complete jurisdiction or authority over the subject matter of each stipulation.

EXHIBIT A

DEFINITIONS

(1) The "operating area" means that portion of Chichagof Island southeast of a line from the mouth of Ten Mile Creek on Tenakee Inlet to the mouth of Freshwater Creek on Freshwater Bay, together with adjacent tidelands and submerged lands.

(2) The "five year plan" means the timber harvesting plan set forth in the Final Environmental Impact Statement for the Alaska Lumber and Pulp Company 1976-1981 Operating Period for the operating area, together with those additional elements, plans, and details represented to the City and the public.

(3) The "Indian River Road" means the road to be constructed for harvesting and removing timber from the Indian River drainage to Sunny Cove on Tenakee Inlet.

(4) The "dump site" means the log storage/transfer site to be located at Sunny Cove on Tenakee Inlet.

(5) The "Pavlov River Road" means the road to be constructed from the Pavlov River drainage to Kennel Creek on Freshwater Bay.

STIPULATIONS

(1) Timber Harvesting/Associated Developments

(a) Timber harvesting and associated developments will be permitted in the Indian River drainage in the amount and at the locations previously specified. Harvested timber will be removed via the Indian River Road to the dump site at Sunny Cove. Except for those individuals who are or who become permanent residents of

EXHIBIT A

the City, loggers and other AL&P personnel involved in the Indian River operation will reside at the logging camp at Corner Bay. However, one caretaker will be permitted to reside at a single wood frame dwelling to be constructed by AL&P on the worksite adjacent to the Indian River Road.

(b) Present and future timber harvesting and associated developments in the Pavlov River drainage and the Kennel Creek area shall be carried out consistent with understandings reached by the Alaska Department of Fish and Game and United States Forest Service.

(2) Duration of Operations

Timber harvesting and associated developments in the operating area shall be completed by December 31, 1981. Additional timber harvesting using the Indian River Road or the dump site at Sunny Cove shall not be permitted until January 1, 1996, unless the consent of the City and the State is previously obtained after public hearing, and in no event until January 1, 1986. This does not apply to timber harvesting required by the existing contract between AL&P and the Forest Service in the event of disease or blowdown to the extent necessary to remove it. Future plans for logging operations in the Tenakee Area shall be coordinated with the City, the Alaska Department of Fish and Game and other concerned agencies and organizations to the extent their interest may be affected.

(3) Consistency with Plans

(a) Timber harvesting and associated activities in the Indian

river drainage shall be confined to those described in the five year plan and other materials presented to the public describing proposed operations in the area. Substantial modifications affecting the interests of the City shall be cleared with the City and the State prior to implementation; this does not apply to modifications resulting from the Interdisciplinary Team process unless said interests are affected.

(b) Modifications of plans for timber harvesting and associated developments in Pavlov River drainage and Kennel Creek area, to the extent they affect understandings reached with the Alaska Department of Fish and Game, shall be coordinated with said Department.

(4) Road Connections

Except for the Indian River Road, no roads shall be constructed to terminate at the Sunny Cove dump site or elsewhere within the limits of the City or immediately adjacent thereto until January 1, 1996, unless consented to by the City and the State. No road shall be constructed which connects the City of Hoonah or any other community or settlement to the operating area in a manner which would cause an influx of persons into the City until January 1, 1996, unless prior consent of the City and the State is obtained. The Indian River Road will be retired following the five year plan (December 31, 1981) and made impassable to motor vehicles (including ORV's and ATV's) except as may be required for access to potential domestic water supply developments or other facilities and uses as formally requested by the City. The directive of the preceding sentence may be modified by a subsequent cooperative agreement between the City, the State, and the US Forest Service governing access to and use of the Indian River Road and general management objectives for the area.

Roadbeds and roadsides will be seeded or similarly treated where the likelihood of erosion or instability problems exists.

(5) Water Quality

The Indian River will not be subjected to any impacts which result in a violation of applicable State and Federal water quality standards, or which would otherwise impair its capability to serve as a source of domestic water supply. AL&P will, at its own expense, purchase and install water quality monitoring equipment [turbidometer] satisfactory to the City at a location specified by the City; monitoring will be conducted by the City, which may request the assistance of the Department of Environmental Conservation. In the event of deterioration in the quality of the water in contravention of this stipulation appearing to result from the operations of AL&P, AL&P shall restore said water to a condition sufficient to meet the first sentence of this stipulation as soon as possible and at its own expense.

(6) Blasting

Blasting activities in conjunction with the construction and maintenance of the Indian River Road and adjacent sites shall be carried out with the use of a sequential timer, and only between the hours of 8AM and 5PM. Prior notice of blasting activities shall be posted at a conspicuous place in the City. AL&P will employ guards or take other necessary measures to insure the safety of residents in the area of blasting activities.

(7) Tidelands and Corps of Engineers Permits

The State will issue tidelands permits for the dump site at Sunny Cove and for the camp/dump site at Kennel Creek; said permits may recite or otherwise refer to the stipulations in this memorandum as well as understandings previously reached with the Alaska Department of Fish and Game. The State will recommend to the U.S. Army Corps of Engineers that permits issue to AL&P for the dump site at Sunny Cove and for the camp/dump site at Kennel Creek.

(8) Conveyances

The State will convey to the City title to any selected lands conveyed to the State by the Bureau of Land Management, except that the State may retain title to those sites necessary for present or anticipated essential public purposes. The State will convey to the City all tidelands and submerged lands within or subjacent to the Sunny Cove dump, and will expeditiously consider the City's application for conveyance of other tidelands and submerged lands adjacent to any selected lands conveyed to the State by the Bureau of Land Management.

(9) Trail Maintenance

The trail east of Tenakee Springs will be properly maintained and protected by AL&P against impacts which would render it impassable or difficult to use. The trail may be reconstructed and relocated as may be required to the satisfaction of the City. AL&P will construct a log protection structure or other suitable installations in the worksite area and at the intersection of the trail with the Indian River Road (to be in place annually only during the winter

30

months) sufficient to prevent snowdrifts.

(10) Worksite

The worksite shall be restored by AL&P to a natural condition to the fullest extent possible following completion of timber harvesting operations. The area will be bladed and seeded and debris will be burned.

(11) Regulation of Motor Vehicles

The City may establish speed limits and other traffic regulations consistent with Title 29, Alaska Statutes, for the segment of the Indian River Road lying within City limits, which regulations shall be complied with by all vehicles (including those operated by AL&P).

(12) Noise Control

Vehicles and other machinery operated by AL&P will be muffled so as to comply with State, Federal and local standards for noise control and otherwise to the fullest extent possible in view of the residential nature of the area.

(13) Monitoring

The State and City will periodically monitor and inspect operations in the vicinity of the City to insure compliance with this Memorandu

(14) Future Operations

In the event a road is constructed connecting the Indian River drainage with the mouth of Ten Mile Creek on Tenakee Inlet, said road shall be used in any future operations to remove timber from the Indian River and adjacent drainages in lieu of the Indian River

Road/Sunny Cove log storage site.

MODIFICATION

The parties recognize that the essence of their mutual endeavor is to prevent (or where unpreventable, to minimize) adverse social and environmental impacts unacceptable to the residents of the City. It is, therefore, the intent of the parties that any subsequent modification of this Memorandum shall be consistent with this objective and shall require the agreement of all parties.

DATED this 26th day of September, 1977, at Juneau, Alaska.

Subject: RE: Re : Removal of MOSER BAY PARCEL from HOUSE BILL NO. 295

Dear Michael, thank you for contacting me. HB 295 is scheduled for a hearing in the Community and Regional Affairs committee on Thursday at 8:00 a.m. I would recommend that you contact Rep. Johansen to see if he is interested in offering an amendment on this parcel. I will be sure to include your comments in the committee file that will be presented to the CRA members on Thursday. If you have questions about the bill or the process, please contact Terry Harvey in my office at 465-5392. Thanks again, Cathy Munoz

Re : Removal of MOSER BAY PARCEL from HOUSE BILL NO. 295, University of Alaska Lands Bill

Dear Representative Munoz,

My name is Mike Fay. My only home is on Long Arm, Moser Bay, north of Ketchikan. To see the parcel of land deep in Moser Bay handed over to the University of Alaska scares the heck out of me and my neighbors. We live in Moser Bay, and many thousands more visit it every year, because it is one of the most beautiful, tranquil, and ecologically intact places in all of North America. Yet is a stone's throw from an international airport and about 20 minutes by boat from Ketchikan. It is of enormous scenic value that our local economy depends on.
The bottom line is this place is already one of the most popular spots in all SE Alaska for recreation. People come from all over the globe to this exact spot by the thousands every year to witness the beauty, and to fish, crab, shrimp, hike, and sight see from boats and planes and on foot. That represents millions of dollars a year for the local and Alaskan economy and lots of jobs for charter boats, fishing guides, airplanes. As places like this become more rare on Earth the value of keeping this parcel untouched is going to increase exponentially.

To log or to subdivide this particular parcel would completely undermine the highest and best use of this land which is to retain its natural beauty. The proceeds from logging are one off, and pale in comparison with one year's tourist revenue. You can cut this forest once in 100 years, killing the recreational value of the land that will produce more and more every year for 100 years. Look at what happened to the now clear cut Slide Ridge near Whipple Creek as well as another former University parcel in the Mountain Point area south of town. They have become permanent eye sores for the tens of millions of tourists that will visit Ketchikan over the next decade. Not to mention the ecological nightmare of slides and silatation that have come with these cuts. In January I was amazed to see huge rivers of water coming right down the side of these very steep cuts. Come to

Ketchikan and look at these slides. Look at how long it is going to take for timber to come back. We will never, ever get the cedar back, only weedy Hemlock forest. No restoration, no management just clear cut and send out the wood in the round and benefit a very few. I just do not see this as the vision for the future of my home town.

You might be thinking "that is what everyone says", but this is not just one more parcel. The depths of Moser Bay are the heart of the recreational tourist industry in Ketchikan. There are at least 30 boats that visit the bay on every day of the summer for months. To mar this landscape would be a blunder of huge proportion.

I implore you to remove the Moser Bay Parcel from the University of Alaska lands bill and to permanently preserve it as a DNR managed property for its landscape values.

If this land is handed over to the University I will protest with vigor any effort to log it. It is mostly hemlock located on very steep slopes. And in any case the majority of wood that leaves Ketchikan is still exported in the round, creating few jobs locally, but good revenues for a very few who have political connections. If we lose this battle I will move, selling my land and my home at a loss because its value will certainly evaporate with any logging plan that goes into this area. Why not let the people who live here decide the fate of this land? Clear cut is not an option here. Using my connections with National Geographic I would be willing to work with the State to increase tourist revenue, and to publicize this incredible place.. I am sure that most students at U of A would agree with our opinion.

ALASKA COASTAL QUEST

2-11-10

Representative Paul Seaton
Alaska State Legislature
Juneau, Alaska

Dear Representative Seaton:

I understand that you recently held hearings on the University Lands bill, HB 295. I would like to encourage you to delete Hook Arm on Dall Island from this legislation. Almost all of the outer coast of Dall Island is wilderness. The U.S. Forest Service recognizes this by placing in a scenic recreation category. Allowing Hook Arm to be sold for development destroys the wilderness integrity of the outer coast of this magnificent island. As a charter boat operator specializing in ecotourism, I see this area as having tremendous economic potential for water oriented outdoor wilderness recreation.

Yours truly,

Dale Pihlman

T'INAA GEI TLINGIT NATION

A Sovereign Tribe

February 17, 2010

The Tenakee Traditional Council is, once again, serving notice to all entities claiming a present or future interest in uplands, submerged lands, and waters in the vicinity of Tenakee, Alaska, that it protests and gives notice of objection to any proposed conveyance of an interest in such lands, including proposed conveyances of ADL 107311 and ADL 107312 to the City of Tenakee Springs and/or to the University of Alaska.

These traditional lands, waters and resources have been occupied by, used by, and claimed by the Tenakee Tribe as original Tlingit inhabitants. These lands, waters and resources were not conveyed to any other entity by the Tenakee Tribe at any time, nor has it been abandoned. The Tenakee Tribe has consistently and strongly objected to any such conveyance. The Tenakee Tribe never agreed to any provisions of the Alaska Native Claims Settlement Act or any other statute purporting to divest it of its interest in those lands. Moreover, the Tlingit village of Tenakee Springs was not granted land selection rights under ANCSA or any compensation for any taking of its lands. We maintain our inherent and aboriginal rights to those lands, waters and resources and because the Tenakee Tribe has been a sovereign Tribe since before the arrival of the non-natives on our lands, we intend to exercise our right as a sovereign tribe to maintain our land so as to confirm the existing title of the Tenakee Tribe. Any conveyance of rights to these lands, waters and resources is done subject to the superior and prior claim of the Tenakee Tribe to such lands, waters or resources. Any trespass upon those lands, waters or resources is objected to and is without the permission, explicit or implicit, of the T'inaa Gei Tlingit Nation.

President Hoover, in 1930, signed the Tongass National Forest document that listed Tenakee as a village. This is documented proof of the village's existence. The area proclaimed for Tenakee was much larger than the 17 acres set aside by President Roosevelt in 1935.

President Roosevelt recognized the existence of the Tenakee Tribe in 1935 by issuing an Executive Order 7179 to ensure that the Tribe was not disturbed in perpetuity! The Tenakee land has never been owned by the federal government. BLM surveyed it for the

P.O. Box 20403
Juneau, Alaska 99802

Telephone: (907) 780-6195
Fax: (907) 780-6195

E-Mail: *sharkey@acsalaska.net*

President of the United States so that our village people would not be bothered and to avoid controversies about ownership of the land. This land belongs to the Tenakee Tribe in perpetuity. The President referred to this Executive Order as a Skookum Paper. Now the state of Alaska has taken it upon themselves to change the content and the intent of the Executive Order. Our elders and Clan Leaders used to state that "everyone knows who this land belongs to." In a visit to Washington, D.C. Senator Ted Stevens stated that this claim has never been disputed.

There was a report done by the University of Alaska Fairbanks for the Southeast Alaska Landless Coalition referred to as the ISER Report. Tenakee is included in that report and gives a very clear description of the Tenakee Tribe's land and resource holdings.

The U.S. Solicitor's office expressed an opinion that went against the President's proclamation that the Tenakee land would belong to the blood descendants of the Tenakee land. The Solicitor stated "you can say anything you want to say to me, Congress can undo your opinion and make you like it."...which meant that Congress can take our land if it so wishes.

We have made several attempts to obtain relevant documents regarding the Tenakee Tribal lands to no avail. We have been informed by BIA that under the Freedom of Information Act, we have the right to file suit if our request is ignored. There is no stipulation as to how extensive the search has to be. We are aware that there is a deed. It was shown to us by a former BIA employee. Yet, we've been told that there are no documents. The same answer we received regarding the Executive Order, a copy of which is attached.

Tenakee is not listed under the Tlingit-Haida Court of Claims (Judgment Funds) nor is it a listed village under ANCSA.

As stated earlier, there are only three ways that trust land can be taken from the Indian Nation:

An act of abandonment
An act of conquest (war); or
A specific act of Congress WITH the consent of the owner Clan.

ANCSA also went against the Presidential proclamation of 1935 claiming that the ANCSA settlement included all Executive Orders in the bargaining with their treaties.

No one, aside from Tribal descendants, can just arbitrarily negotiate the Tenakee trust land. The Solicitor's opinion was that all Executive Order land was lost when ANCSA was initiated including the 7179 land. It was gone without any of the blood descendants knowing about that transaction. The Department of the Interior is mandated to include

the Realty Division on land transactions of this nature. Were they actually involved? If they were involved, did they look out for the best interests of the Tenakee Tribe?
Page Three

Executive Order 7179 land was never in the hands of the federal government. How can the State take the land from the federal government and arbitrarily give it up for sale when it never belonged to them in the first place. If our Congressional Delegation move from their homes in Alaska, does that give title to the State, thereby, allowing the land to be put up for sale? I think not! There is no difference except that this is Indian Trust Land.

We request that Tenakee land be withdrawn from the Governor's Lands Bill, HB 295 and SB 225. We are available to answer any questions that you may have.

Subject: Haines Lands Selection - HB 273

Dear Bill,

Attached are materials related to possible lands selections for Haines Borough via HB 273. There are maps for each of the proposed parcels, William Henry Bay property, Lynn Sisters property, Excursion Inlet properties, and Chilkoot Lake area. It should be noted that the first three properties are part of the University of Alaska lands selection within the Haines Borough, which are included in existing but separate legislation. Should the University land bill be amended to exclude these lands or not approved, these lands would then become available for the Borough. We do not have a good description nor do we know the status of the Chilkoot Lake lands. Bruce was unable to remotely access detailed maps from Talkeetna on Saturday when he called. These lands can be evaluated first thing Monday morning to determine their eligibility and possible acreage for selection.

Note: please disregard the last page of the pdf and instead use the word document.

Telephone: (907) 269-8600

March 31, 2005

The Honorable Representative Bill Thomas
State Capitol, Room 428
Juneau, AK 99801-1182

Dear Representative Thomas:

Thank you for forwarding Mayor Wilson's letter that discussed the City of Tenakee Springs' concerns about the University Lands Bill, HB 130. I would like to take the opportunity to address her concerns.

US 2459: 17-acres near the Tenakee Springs Harbor

Mayor Wilson provides that she believes that a parcel of land near the Tenakee Springs Harbor has been dropped from the bill. That is incorrect. Rather, we have used another solution to solve the issue for the City.

Earlier this year, the Department had told the Tenakee Springs that it would not process a lease application for a 17-acre tract near the Tenakee Harbor pending the Legislature's consideration of HB 130 and possible conveyance of the tract to the University of Alaska. At your request, I told you and I told Mayor Wilson separately by phone that DNR would be happy to adjudicate the application before any conveyance to the University.

Thus, assuming that the City does apply for the lease, and assuming that after public notice and comment DNR finds that the lease is in the best interest of the state, Tenakee will have a long-term lease to the parcel. If so, that lease becomes a valid existing right and if the land is conveyed to the University, the University would become the owner of the property, subject to the City's lease. I do not believe that the University would be a less congenial lessor; and in any case the City's rights would remain protected under the lease.

I testified to this effect during the House Resources Committee hearing on March 2nd, and I have attached the legislative transcript from that testimony to this letter.

I am pleased that we were able to find a solution to this concern.

Stipulation for Settlement of March 9, 1981

Mayor Wilson's letter provides a copy of a 1981 Stipulation for Settlement between the City and the State of Alaska. The settlement ended a lawsuit over Tenakee's municipal entitlement. I believe there is some confusion over the lands to which the settlement applies, and to the meaning of "retain in state ownership."

To what land does the Stipulation apply? The Stipulation of Settlement applies only to parcel C-34 in the Northern Southeast Area Plan. It does not apply to other lands proposed in HB 130.

HB 130 proposes to convey two parcels near Tenakee Springs to the University. The parcel nearest the Harbor includes parcels designated as C-31 and C-32 in the Northern Southeast Area Plan. The Stipulation of Settlement *does not* apply to these two parcels. It does apply to parcel C-30, as Mayor Wilson's letter indicates. However C-30 is not proposed for conveyance to the University.

HB 130 also proposed to convey what is designated as C-34 in the Northern Southeast Area Plan. The Stipulation of Settlement *does* apply to this parcel. The Stipulation of Settlement requires that the parcel will be retained by the state for "commercial, industrial, road right-of-way and borrow pit purposes."

Retained by the State. I would like to discuss the meaning of "retained by the state" in the context of the Stipulation of Settlement. While we have not completed a detailed review of the litigation that led up to the Stipulation, the court suit ended by this Stipulation was about Tenakee's municipal entitlement. The Stipulation provides that certain lands would be conveyed to the City and that certain lands would not be conveyed to the City and would instead be "retained by the state."

We note that it would be highly unusual, if not historically unique, for the Department to agree to retain a parcel of state land permanently in state ownership, absent an applicable directive from the legislature or a compelling constitutional imperative. Therefore, we believe that the phrase "retained by the state" communicates merely the proposition that the land simply would not be conveyed to Tenakee Springs as part of its municipal entitlement.

The settlement does not say or even imply that the state would never under any circumstances sell or transfer those lands. If that had been the intent, the Stipulation would almost certainly have outlined a process for doing so, as is characteristic of these types of Stipulations. It purpose of the Stipulation was to settle the municipal conveyance question that was in litigation. Thus, after brief consultation with the Department of Law, we believe that the Stipulation of Settlement does not bind DNR from disposing of title.

However, even if, after further review, we find the above interpretation to be in error, and the lands must retained by *the state,* the University is an agency of the state. Conveying land to the University of Alaska does not convey it out of state ownership. It is solely a transfer between agencies of the state, and is therefore not barred by the Stipulation of Settlement.

Management Purposes. We believe the provision in the paragraph 1.2 of the Stipulation settlement reflects the proposition that at the time of settlement the Department had the intention to continue existing uses of the parcel for the removal of reasonable amounts of material under reasonable conditions while the land remains in state ownership. However, we do not read the stipulation as a categorical commitment to permanently make those uses available even in the event that such uses become, for example, unreasonable when viewed together with the Department's obligation to manage these lands for other competing purposes, or a legislative determination to convey them to the University of Alaska. To the extent we are incorrect on this score, the University, of course, would be bound to permit the specified reasonable uses under its management.

Further, the management purposes outlined in the Stipulation of Settlement for parcel C-34 — "Commercial, industrial, road right-of-way and borrow pits" — are development purposes appropriate for University ownership and management. Should further review confirm that the state may not dispose of its title, the Stipulation of Settlement is a valid existing right that the University must respect. But these uses are appropriate for University management.

Summary. In summary, the Stipulation of Settlement provided by the City of Tenakee does not apply to the parcel proposed for transfer near the boat harbor, and does not restrict the legislature's ability to convey the remaining parcel, C-34, to University management. In fact, the purposes outlined in the Stipulation of Settlement are appropriate for University ownership and management.

Thank you for this opportunity to review the concerns. Please let me know if you have additional questions,

Sincerely,

Bob Loeffler

Alaska Department of Natural Resources
January 12, 2005

Revised 2010

4144

STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

SEAN PARNELL, GOVERNOR

550 WEST 7TH AVENUE, SUITE 1400
ANCHORAGE, ALASKA 99501-3650
PHONE: (907) 269-8431
FAX: (907) 269-8918

January 13, 2010

Dear Interested Alaskan:

This document, **University of Alaska Land Grant List 2005**, provides a description of state land proposed for transfer to the University of Alaska under legislation requested by Governor Parnell. The new legislation would transfer 199,838 acres of state land managed by the Department of Natural Resources to the University of Alaska.

The legislation ratifies and reauthorizes the land conveyances in legislation enacted in 2000 (ch. 136, SLA 2000) and 2005 (ch. FSS08, SLA 2005). These statutes were found by the Alaska Supreme Court in *Southeast Alaska Conservation Council & Tongass Conservation Society v. State of Alaska & University of Alaska*, 202 P.3d 1162 (Alaska 2009), to violate Article IX, section 7 (the dedicated funds clause) of the Alaska Constitution, because the statutes specified that revenue generated from the University's management of the land was to be deposited in the University's endowment trust fund. The new legislation addresses this by specifying that revenue generated by the University of Alaska's management of this land will be managed as University receipts, subject to appropriation each year by the legislature.

The new legislation requested by the Governor directs DNR to convey specific lands to fulfill the intent of previous legislations.

The types of land proposed for conveyance to the University are summarized below:

Type of Property	Approximate Acreage
Investment Properties, Southeast Alaska	34,643
Investment Property, other than Southeast	39,222
Nenana Basin Oil & Gas	90,000
Education Properties	35,973
Total	**199,838**

The parcels identified in the proposed legislation are the same parcels as those identified in the 2005 legislation (ch. FSS08, SLA 2005), and are described in the

attached document. This land list was arrived at after more than a year of intense work by DNR and the University to identify land that may be conveyed to the University without unreasonably conflicting with programs associated with, and uses of, state land managed by DNR.

This document lists all of the parcels originally considered in the 2005 legislation, but the proposed legislation removes some of these parcels from further consideration. Specifically, the land list in the proposed legislation reflects changes made by the legislature during the 2005 session, including the legislature's decision to drop certain parcels that were on the original list provided in January 2005. The bill also includes language added by the legislature to protect land for possible municipal entitlement selections by the City and Borough of Wrangell and a possible borough in the Petersburg area. In addition, two parcels were conveyed under separate statutory authority. The following table indicates which parcels have been removed from consideration in the proposed legislation and which parcels are deferred to address potential municipal entitlements.

The prior land conveyance statutes included a provision for establishment of a university research forest. This provision is not included in this bill because the Alaska Supreme Court found that the provision in the prior legislation could be severed from the unconstitutional dedication provisions, and it was therefore upheld as constitutional.

Sincerely,

Thomas E. Irwin
Commissioner

LAND LIST :
SUMMARY

Overview of The Land List
Revised 2010

This section provides a general description of the Land List and a table containing specific information related to the parcels in the Land List.

Geographic Distribution.

Most of the land proposed for transfer to the University of Alaska is in the Northern and Interior area of the state. This is primarily because the Nenana Oil and Gas Basin is in the Interior. Both South-central and Southeast have considerably smaller amounts of state land.

- Northern/Interior. Most state land on the Land List occurs in the Northern region, which comprises 150,953 acres or 75.5% of the total acreage. Most of this land is associated with oil and gas (90,000 acres) and coal (16,000 acres) resource values, or are intended for educational/research functions (35,961 acres). The oil and gas tract is situated west of Nenana and the coal tract, within an area known as 'Jarvis Creek', which is situated south of Delta Junction. Tracts with an intended education function are associated either with forestry research in the proposed Tok Research Forests (4,015 acres) or with watershed research in the Caribou and Poker creeks watersheds north of Fairbanks (24,250 acres). There is a small amount of investment properties in the Northern region, which are primarily intended for residential, commercial, or industrial development.

- Southcentral. South-central tracts total 14,230 acres (7.5% of the total) and consists mostly of investment properties near the Willow-Houston (1,730 acres) and McCarthy (12,500 acres) areas.

- Southeast. Southeast, with 34,655 acres or 17.3% of the total, consists largely of remote tracts and areas around communities, which have mostly settlement, general recreation, and some limited forestry values. These tracts are scattered throughout Southeast Alaska, extending from the Lynn Canal north of Juneau to Moira Sound/Nowiskay Cove southwest of Ketchikan. Most of these tracts are situated within Prince of Wales Island or near the communities of Wrangell, Sitka, and Tenakee Springs. Only a small amount (12 acres) of education properties occur in the Southeast (a research facility in Juneau and the Sitka Campus of the University).

Parcel Description

The table that follows gives a brief description of the each parcel proposed for transfer. It describes Investment and Oil and Gas tracts geographically by the three regions of Northern/Interior, South-central, and Southeast. A description of Educational Properties follow this listing. The table contains the following information: parcel number, parcel name, acreage, and a column titled 'Comments'. The Comments column indicates the general location of each parcel, describes the main features of the parcel, indicates its possible use, and indicates the land use designation(s) for the parcel based on existing DNR

land use plans. The land use designations contained in the DNR land use plans do not apply to the land after it is transferred to the University. Generally, the 'Investment Properties' parcels have been selected based upon their development potential and are designated in DNR land use plans for multiple use, settlement, or public recreation. These plan designations are italicized in the table.

This table is linked to the maps that follow the Land List. Parcel numbers and names are the same in the land list, table, and maps.

Summary of Parcel Resource Values

- Nenana Oil and Gas Tract (90,000 acres)

A 90,000 acre tract of state-owned land with oil and gas potential within the Nenana Basin is to be conveyed. This basin has a high probability for presence of gas source, and a high probability that reservoir quality rocks are also present. This tract excludes previous state subdivisions and DNR remote recreational cabin staking areas. Although the tract includes the remote recreational cabin staking area known as Teklanika II, where staking is still underway, buffers of state land will be retained by DNR before this tract is conveyed to the University. The area is part of the Oil and Gas License owned by Andex Corporation, and the land will be transferred subject to the License.

- Investment Properties *other than* in Southeast (39,222 acres)

Lands proposed for transfer include 39,222 acres of state land within the South-central and Northern/Interior regions that are considered to have investment potential. Certain of these tracts are probably best suited for commercial or industrial development; examples include the tracts along the Dalton Highway. The majority are probably best suited for some form of residential development, either for rural subdivisions near community areas (Willow Creek Road and Frying Pan Lake) or for remote recreational development (Lake Snohomish and Wien Lake).

The Jarvis tract provides a coal production potential. A 16,000 acre area near Jarvis Creek occupies the easternmost sub-basin of the Nenana Basin, a coal trend that holds the third largest coal reserve in Alaska. Identified resources are 75 million short tons with a hypothetical resource of 175 million short tons. The areas of Mental Health Trust Land and active mining claims are excluded from the tract. The 2,560 acres of coal leases would be conveyed, subject to the continuation of the lease for the period of their duration.

- Southeast Alaska (34,643 acres)

34,643 acres of state land in Southeast Alaska are to be conveyed. Because the state owns only a small amount of land scattered throughout Southeast, these tracts are comparatively small in size and are distributed throughout Southeast. Most of these tracts were acquired by the state for community and recreational development and may be developed by the University for community or remote recreational settlement; examples include state land at

Hollis, Ketchikan, or Edna Bay. There are also a few that have commercial potential; examples include Harris Road Junction, Ward Cove, and El Capitan South, although most of these could also be used for residential purposes. A limited number of tracts have commercial timber potential. The latter are not considered essential to the existing DNR Southeast Alaska value-added forestry program.

- Educational Properties (35,973 acres)

This category includes eight properties that are either important to current University educational or research programs or that can be developed for such programs. Their primary purpose is educational, not for revenue-generation. These state land tracts occur in the Northern Region, except for the Sitka Campus and Auke Weir tracts in Juneau. One tract constitutes the bulk of the acreage in this category: the Caribou-Poker creeks watershed, consisting of about 24,250 acres, located north of Fairbanks and used exclusively by the University for hydrologic research.

Public Access

Public access is retained across the state land conveyed to the University. DNR has identified known access routes, including Omnibus Roads, existing state or federal rights-of-way, and RS2477 trails). These routes are depicted on the parcel maps. Public access is also retained along coastlines, navigable rivers and lakes, routes traditionally used by the public for access, and along section-line easements. Except for section line easements, these access routes are depicted on the parcel maps.

On-line information and Contact Information

This report, including the parcel maps, may be viewed at the DNR website: http://www.dnr.alaska.gov

For general information regarding the Land List, contact either Dick Mylius or Marty Parsons (269-8600) in Anchorage. For more detail on specific parcels, contact Bruce Phelps at 269-8592 in Anchorage or email: bruce.phelps@alaska.gov

PARCEL DESCRIPTIONS

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
Non-producing Oil and Gas Resources			
OG.NE.1001	Nenana Gas Basin Tract	90,000	This parcel has oil and gas potential. Situated within the Nenana geologic basin, this area has a high probability for the presence of gas source rocks and a high probability that reservoir rocks are also present. Parcel excludes previous state subdivisions and DNR remote staking areas, and a current DNR remote staking area (Teklanika II). Buffer areas are to be created around this staking area, reducing the size of the parcel to about 90,000 acres. Public access, including future road access to state lands to the north and west of the parcel, are retained. *Wildlife Habitat and Forestry*.
	2010 Revised Oil and Gas Resources, Subtotal	90,000	
Investment Properties			
Northern/ Interior Region			
DH.IS.1001	Dalton Highway MP 48 to 54	1,360	This parcel is located adjacent to the south bank of the Yukon River and the Dalton Highway. It is rather rugged topography, but has road access and views of the Yukon. *Public Recreation and Wildlife Habitat.*
DH.SR.1001	Dalton Highway MP 345 to 347	880	This parcel is south of the old Sagwon airstrip, includes the Sagavanirktok River, the Dalton Highway, and the Alyeska pipeline. It is located near the intersection of winter trails to Umiat, proposed for a major road. The APSC 8" fuel gas line runs through the property. May be subject to AS 19.40.200(b) (2). *Transportation Corridor Land*.
MA.HR.1001	Haul Road Nodes-Coldfoot	1,700	This parcel includes portions of the Coldfoot development node on the Dalton Highway. *Settlement.*
M1.JC.1001	Jarvis Creek	16,000	This coalfield occupies the easternmost sub basin of the Nenana Basin, a coal trend that holds the third largest coal reserve base in Alaska. The coal bearing section of this field is about 2,000 feet thick. Identified resources are 75 million short tons with a hypothetical resource of 175 million short tons. Tract excludes Mental Health Trust Land and active mining claims are excluded.

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
FA.JC.1001	Jennie M. Creek C	5	Situated near Fairbanks, this small parcel has good access and gentle to level slopes. It is situated within a residential subdivision. Zoned General Use. It occupies a small lot south of Chena Hot Springs Road 3 miles east of Two Rivers School. *No current classification.*
N1.LS.1001	Lake Snohomish	740	Parcel is located 10 miles southwest of the airstrip at Lake Minchumina, with access by trail. Terrain is flat, surrounding Lake Snohomish. *Settlement.*
NZ.FA.1003	Noyes Slough (See Fairbanks Area Parcels map)	7	This parcel was added at the request of the University in order to resolve an old title problem created when DOT moved College Road to its current location. *No classification.*
N5.RS.1001	Summit Lake (Richardson Highway)	960	This parcel includes areas on the east and west side of Summit Lake, situated west of the Richardson Highway. This is a very popular winter recreation area, especially for snowmachiners. DNR land disposals are scheduled for other parts of lake. *Public Recreation and Wildlife Habitat*. Adjacent areas are designated *Settlement.*
FA.NS.1001	West Twin Lake	1,560	Situated in a remote area west of Nenana, this lake is considered to have recreation use potential and some recreational development already exists. Access via float plane or ATV. DNR land disposals are scheduled for other areas along the lake. *Settlement.*
N5.WL.1001	Wien Lake	1,780	This is a fly-in lake with access via snowmachine in winter located in the Kantishna area. Some property has been sold in the area. It is a popular Fairbanks recreation area. DNR land disposals are scheduled to occur along other parts of lake. *Settlement.*
	2010 Revised Northern Interior Region Subtotal	24,992	

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
Southcentral Region			
SU.DC.1001	Deception Creek	280	Situated east of Willow, this fairly level parcel is covered with mature birch with some spruce, and has some wetlands in its western part. There is road access to this parcel by way of state-maintained 4 Mile Road off the Willow Creek Road. ATV trails also provide some access. It is part of the land previously reserved for the Willow Capital Site. *Settlement*.
SU.FP.1001	Frying Pan Lake	450	Situated southeast of Willow, this lake has recreational potential for picnicking, swimming, and camping. It is located about a mile from the Parks Highway. It is part of the land previously reserved for the Willow Capitol Site. *Settlement.*
MA.MC.1001	McCarthy-Nizina	12,500	This large parcel is situated near the community of McCarthy, situated within the National Park. Considered good for settlement. Excludes area of possible land exchange and critical salmon spawning areas at Long Lake. *Wildlife Habitat and Public Recreation*.
SU.WC.1001	Willow Creek Road	1,000	Parcel is near Willow Creek Rd. and is part of the land formerly reserved for the Willow Capital Site. Tract is considered good for settlement. Deception Creek runs through this parcel. *Settlement.*
	2010 Revised Southcentral Region Subtotal	14,230	
	2010 Revised Investment Properties Total	39,222	

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
Southeast Region			
SD.1001	Beecher Pass	1,193	Parcel is located on Kupreanof Island, southwest of Petersburg. It consists of a gently sloping coastal plain, covered in parts by spruce bog. The steeper slopes inland contain dry uplands and are vegetated with hemlock and spruce forest. The parcel also contains part of a previous state subdivision (ASLS 81-9); areas within the subdivision remaining in state ownership and designated as Settlement are included. Another state subdivision (ASLS 81-8) occurs to the east. The parcel is considered appropriate for settlement. Beecher Pass State Park is situated immediately to the south. *General Use and Settlement*.
PA.1002	Biorka Island	438	This parcel, situated on Biorka Island southwest of Sitka, consists of two separate parts. The westerly parcel is situated northeast of an FAA radar facility, with access provided by a road which, in turn, accesses a landing/beach area for the island situated to the east. The easterly part is situated east of the main part of Biorka Island and is joined to it by a narrow beach area. Both parcels are flat and are covered by forested wetlands. Considered appropriate for settlement (remote cabin sites). *General Use*.
KT.1002	Cleveland Peninsula	4,055	This parcel consists of three distinct parts, all of which occupy the nothern part of the Cleveland Peninsula, located northwest of Ketchikan. The two large parcels occupy uplands at Spacious Bay and Sunny Bay, both of which are important recreational destinations. The third parcel occurs at Square Island, within Spacious Bay. The two larger parcels support hemlock and spruce along the coast and forested wetlands further inland. Both parcels contain commercial forest resources, most of which occur in the more inland, higher elevations. Square Island is a gently sloping and flat island covered by forest and muskeg, except for coastal rainforest along and near the coast. There is limited use of Square Island for recreation purposes. Considered appropriate for remote recreation or remote settlement. *General Use*.

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
PW.CC.1001	Coffman Cove	1,984	Parcel is situated in and near the community of Coffman Cove, on POW Island. It consists of three separate units of land, each of which is considered good for settlement or recreational development. University already owns land in area and this will infill around their existing holdings. Coffman Cove has protected waters and road access. *Settlement*.
CS.DI.1001	Duke Island *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	1,440	Parcel adjoins the southern coast and is generally flat, and has several good anchorages. It is considered best for commercial development related to marine services and associated residential uses. It is covered with mining claims. In selection status. *General Use.*
CS.EW.1001	Earl West Cove	3,564	Situated southeast of Wrangell, this parcel is considered good for land disposals and/or timber harvest. There is a hemlock and mixed hemlock/spruce forest that contains some commercial timber. An existing road system accesses previously harvested areas. An abandoned LTF provides water access. A crude ramp system also exists. *General Use*.
PW.ED.1001	Edna Bay	250	Parcel is situated in the community of Edna Bay, on POW Island. It includes fairly flat areas that are considered suitable for settlement. Parcel is near other University owned land. Roads access the parcel. Public docks are available and have improved the anchorage. *Settlement.*
PW.EC.1001	El Capitan North	1,847	Parcel occupies areas considered suitable for settlement and community recreation because of road access, terrain, and views of the protected waterway and Twin Lake. Parcel adjoins El Capitan Passage and Twin Island Lake. Parcel excludes Twin Island Lake and its islands. *Settlement.*
PW.ES.1005	El Capitan South	865	Parcel occupies most of El Capitan Island, which is strategically located in the protected waters of Sea Otter Sound. A small island, situated to the west, is also included in this parcel. Tract includes land suitable for commercial recreation and residential development. A particularly suitable site for commercial recreation development occurs in a sheltered bay on the south end of the island. Good anchorages exist. *Settlement/Commercial*.

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
NS.EX.1002	Excursion Inlet	477	This parcel, which consists of four separate parts, is situated north and east of the current subdivisions in Excursion Inlet. Access is provided by water, local roads, and an old Forest Service road. Topography varies from generally flat to moderately sloped. Vegetation consists of hemlock and spruce on the better drained soils and by wetlands in the wetter areas; portions of the parcel may be de-vegetated. Considered suitable for remote settlement. This parcel is the last holding of state land in Excursion Inlet. *Settlement and General Use*.
SD.1001	Favor Peak	1,290	This parcel is located on the southeastern tip of Mitkof Island, from Banana Point to Dry Strait. It is served by a well established road system (Forest Service Road 7). Several areas of commercial forest were harvested in the early 1970s and are dispersed throughout the unit. Areas of the parcel that adjoin the coast may be suitable for settlement. Areas north of the road are fairly steep, and contain areas of hemlock and spruce. *General Use*.
HA.CH.1001	Haines - Chilkoot *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	60	This parcel actually consists of four small individual tracts, all of which are situated south of the community of Haines. All adjoin existing residential areas and are accessed by road. *Settlement.*
CR.1001	Harris Road Junction	320	Parcel consists of fairly flat, vegetated terrain consisting of hemlock and spruce. It is situated along the main island road west of the community of Hollis, at its intersection with the Harris River. In selection status. Potential exists for residential development. *Settlement/Commercial*.
PW.HO.1001	Hollis	622	Parcel is situated in the community of Hollis, on POW Island. Parcel consists of three separate parts, two of which have direct road access (Klawock-Hollis highway) and adjoin areas of existing development. Land is suitable for residential development and, in some locations, commercial use. Previous state subdivsions occur throughout the Hollis. *Settlement*.

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
PW.HK.1001	Hook Arm	1,280	Parcel is situated on the west side of Dall Island, southwest of POW Island. This parcel has a good anchorage, high fish and game values, offshore commercial fishing activities, and resource development activities planned nearby. Tract may be suited for remote residential development or commercial use. In selection status. *General Use*.
MF.1002	Idaho Inlet *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	539	This parcel is situated on the east side of the Idaho Inlet, southeast of Elfin Cove. It has gentle to moderately sloping terrain near the coast and steeper terrain further inland. Parcel is heavily vegetated by spruce and western Hemlock, with scattered wetlands. A secure anchorage provides protection from northerly winds. This tract is considered a strategic site, allowing access to hearby active fishing and transportation waters. Considered appropriate for commercial recreation, general commercial, or remote residential. *General Use*.
JU.NL.1001	Ivanhoe	120	This parcel is comprised of patented mining claims in a known mineralized area north of Juneau. *Mineral and Habitat*
CS.KI.1001	Kelp Island *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	535	Kelp Island adjoins Duke Island and of the two locations, the best anchorage is situated here. It occupies a strategic location near a major navigation route. It would have the same type of commercial marine services and ancillary residential uses as Duke Island. In selection status. *General Use*.
CS.LE.1001	Leask Cove	460	Situated in upper George Inlet, north of Ketchikan, this parcel occupies relatively flat coastal areas, much of which has been previously harvested, and which has some potential for remote settlement. Most of the commercial forested area outside of the existing subdivision is in rotation. The cove provides a good anchorage. There are several previous state subdivisions nearby. *Settlement and General Use*.

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
JU.LM.1001	Lena Creek	610	This parcel is located near Lena Creek, north of downtown Juneau. This parcel excludes an approved municipal conveyance of approximately 100 acres to the CBJ. The exact location of this CBJ tract must still be surveyed, so the area conveyed to the UA is somewhat uncertain at this time. The parcel map indicates the general location. *Transportation, Settlement, Public Recreation--Dispersed.*
ST.LS.1001	Lisianski Peninsula	1,443	This parcel occupies the remaining areas of state land on the Lisianski Peninsula, situated directly north of Sitka. Portions of the parcel are relatively flat, although the central and southern parts are quite steep. Within areas along the coast and in some inland areas, hemlock and spruce forests predominate; other areas are occupied by scattered wetlands. Water access is available from Cedar Cove; a forest service road accesses the central portions of the parcel. Adjacent land to the north is part of the Tongass National Forest; MH Trust lands are situated to the east. Considered appropriate for remote residential. May have some limited commercial timber potential; some areas of previous harvest exist. *General Use*.
JU.1002	Lynn Canal	1,358	This parcel occupies a fairly flat area on the west side of Lynn Canal, north of Juneau, that is heavily vegetated with a mixture of wetlands in poorly drained areas and Western Hemlock and Sitka Spruce in drier, better drained sites. It is bounded on the west by the Tongass National Forest. The parcel is easily visible from the marine highway route in Lynn Canal, and is considered suitable for commercial recreation or settlement. *Public Facilities-Transfer, Public Recreation and Tourism-Undeveloped*.

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
ST.1001	Middle Island	665	This parcel includes the remaining state lands on Middle Island that are not part of the previous state subdivision (ASLS 87-129) or conveyed to the City/Borough of Sitka or the Mental Health Trust Authority. Middle Island is situated west of Sitka. The parcel occupies the central part of Middle Island, although portions front the water on the northwest and south. Except for areas near the coast on the south and northwest, which are considered suitable for settlement, the remainder of the parcel contains steep terrain. Forested wetlands cover most of the less severe terrain, while western Hemlock and Sitka Spruce cover the remainder. *Settlement, General Use*.
PA.1002	Mite Cove	320	This parcel occupies nearly 200 acres at the northeastern tip of Yakobi Island, at the end of Lisianski Inlet where the Inlet enters Icy Strait. Petican is the nearest community. Mite Cove is a regionally significant anchorage that is used by both recreational and commercial boaters. It is vegetated with Western Hemlock and Sitka Spruce, and is characterized by steeply sloping terrain throughout most of its eastern and southern parts. Areas along the coast in the northern part of the parcel and near/adjacent to Mite Cove are relatively flat. Considered appropriate for remote residential or commercial recreation marine services. *Public Recreation and Tourism-Undeveloped*.
PW.MS.1001	Moira Sound/Nowiskay Cove	160	This small parcel occupies patented federal mining claims. It may be suitable for a variety of uses, including timber harvest and settlement. It is situated on Sound on POW Island. *General Use*.
CS.MB.1001	Moser Bay	906	Parcel is steep in eastern section but the western portion, adjacent to the coast, can accommodate settlement. Other residential use occurs nearby. Access is by water and it is relatively close to Ketchikan. Contains areas of commercial timber that may be suitable for selective logging. *Settlement*.
PW.NA.1001	Naukati Sound	937	Situated in the community of Naukati on POW Island, parcel occupies areas of generally flat land considered good for settlement. Development would be infill around current residential uses or adjacent to current road system. Road and water access. State land disposal is scheduled in Naukati. *Settlement and General Use*.

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
KT.1004	Neets Creek *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	1,500	Located at the head of Neets Bay northwest of Ketchikan, this parcel generally consists of a fairly flat area adjacent to the coast, two lakes, and the floodplain of Neets Creek. The valley walls are covered by a mixture of hemlock and spruce forests. The parcel may be accessed by either water or air, although previous logging roads are scattered throughout the parcel. A portion of the tract is used by a regional aquaculture association. Contains both previously harvest and available commercial timber (1,800 acres total). Considered appropriate for remote residential use; may have some commercial timber value. *General Use*.
CS.OV.1001	Olive Cove	450	Parcel occupies flat coastal plain vegetated by hemlock and spruce forest good for settlement. Adjoins an existing subdivision. Situated southwest of Wrangell on Zimovia Island. Direct water access to Zimovia Strait. *General Use.*
ST.1002	Pelican *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	851	This parcel occupies almost all of the remaining state land in and around the community of Pelican, on Lisianski Inlet. Portions of this parcel are relatively flat to moderately sloping near the coast or coastal valleys, but are steeply sloped in most of the remaining areas. There are two distinct parts of the parcel; the first part occupies areas north of this community, some of which are accessed by road. The other part is situated south of the community proper and access is only by water. Both parts adjoin Lisianski Inlet and are heavily vegetated with hemlock and spruce. A previous state subdivision, ASLS 80-183, is situated immediately to the south. *Public Recreation - Dispersed, Settlement*.

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
PA.1001	Port Alexander *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	267	This parcel contains some of the last remaining state land in and adjacent to the community of Port Alexander, situated at the southern tip of Baranof Island. Two parts adjoin the community to the west and east, while a third occupies an area southwest of the community. It consists of flat to moderately sloping terrain and is heavily vegetated by spruce and hemlock, with scattered wetland areas. Access is primarily limited to trails to the western and eastern parts, while the southern has good water access. Several small off shore islands are included in this parcel. *General Use. Some areas of Public Recreation -- Dispersed.*
PA.1001	Port Conclusion (See Port Alexander map)	10	This parcel occupies an area near the end of Port Conclusion, which is situated to the west of the community of Port Alexander. Except for an area near the coast, the parcel is steep and heavily vegetated with western Hemlock, Sitka Spruce, and by areas of forested palustrine wetlands. Considered suitable for remote settlement. *General Use*.
PW.PD.1001	Port Delores	1,100	Port Delores is a protected anchorage with potential for commercial recreation and remote settlement. Some commercial timber exists in the interior of the parcel which may be accessed via Forest Service roads. *Settlement*.
SD.1001	Read Island	706	Situated south of Cape Fanshaw, parcel consists of Read Island and two smaller islands. These occupy the entrance to Farragut Bay, an important commercial tour destination. Read Island is fairly flat, and except for a few small knobs that support dry uplands, the entire island is covered by wetlands. *Public Recreation and Tourism-Undeveloped*.
CS.RB.1001	Rowan Bay	665	Parcel occupies flat and gently rolling coastal plain adjoining Rowan Bay, on the west side of Kuiu Island. Considered good for timber harvest and remote settlement. There have been previous timber harvests. Direct water and road access. *General Use.*
SD.1001	Sumdum	5	This small parcel occupies the head of Sanford Cove, and lies adjacent to a popular cruise ship, charter and recreational boat travel corridor to Endicott Arm. Considered a regionally significant recreational site. *Public Recreation -- Dispersed.*

01/11/2010

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
ST.1003	Tenakee Springs	346	This parcel consists of three distinct parts and constitutes the last remaining developable state land in Tenakee Springs. The first is situated at the end of the main area of community development near the ADOT/PF boat harbor. It abuts the harbor and is used for marine and other types of storage, and is fairly level and heavily vegetated. The second consists of a heavily vegetated, generally flat area that extends further east to Indian River and an old LTF. The third consists of an interior part within sections 15 and 22 situated eastward and upslope of the community, and a part within section 23 that stretches along the coast. This area, which is generally level and heavily vegetated, could be used for commercial and industrial development. *Public Facilities-Retain, Settlement-Commercial*.
SD.1001	Thoms Place	2,360	Situated south of the community of Wrangell, this parcel consists of fairly level to moderately sloping land situated to the west of the Thoms Place community. It is vegetated by hemlock and spruce forest. The unit adjoins Zimovia Strait, which is used as a route of the Alaska Marine Highway. A previous state subdivision and the Thoms Place State Marine Park exist to the south. Considered suitable for settlement. *Settlement, General Use*.
PW.TH.1001	Thorne Bay	2,557	Parcel consists of three separate tracts, two of which have direct road access and are near the community of Thorne Bay. These are considered good for commercial/industrial development. The other adjoins an existing subdivision and has direct road access. *Settlement/Commercial*.
CS.TL.1001	Three Lake Road	640	Situated south of Petersburg, this parcel is near popular fishing streams and adjoins Three Lake Road. Portions of this parcel are previously harvested and are heavily vegetated. It has commercial as well as residential potential. *General Use.*
CS.WA.1001	Ward Cove	3	Small parcel adjoining Tongass Highway north of Ketchikan. This OSL parcel is believed to be part of an old cannery. *Settlement/Commercial.*

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
ST.1002	Warm Springs Bay *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	267	This parcel consists of the remaining state land in the southern part of the Warm Springs community, a popular recreation area for the Sitka community. Area is generally flat and is covered by a mixture of forested wetlands and spruce/hemlock coastal rainforest in the drier parts. Considered suitable for commercial recreation or remote settlement. Previous state subdivision exists on the north side of Warm Springs Bay. *Public Recreation -- Dispersed*.
SD.1001	Whitney Island	316	This unit occupies the generally level southern end of Whitney Island, which is situated immediately west of Cape Fanshaw, an important commercial and recreational anchorage. Most of the island is covered by wetlands except for areas adjacent to the coast covered by spruce and hemlock forest where this parcel is situated. *Public Recreation and Tourism-Undeveloped*.
JU.1001	William Henry Bay	321	Parcel is situated on the west side of Lynn Canal, northwest of Juneau. It occupies the drainage of William Henry Creek in the northwestern part of William Henry Bay. Hemlock and spruce are the dominant vegetation. Areas adjoining the coast at the mouth of the creek are somewhat flat, but are steeper inland. Considered to have commercial recreation or remote settlement potential. *General Use*.

University of Alaska
Land Grant List 2010
Parcel Descriptions

Parcel #	Name	Approx. Area in Acres	Description/*Plan Designation*
Educational Properties			
JU.AU.1002	Auke Weir	6	Situated close to the UAJ campus along Auke Creek in Juneau, an anadromous fish stream, the parcel includes a fish weir and is suitable for academic and research projects of the UAJ. Includes existing UAJ facilities. *Public Recreation/Habitat*.
LG.PC.01	Caribou-Poker Creeks Drainage	24,250	Situated north of Fairbanks, parcel is currently used and administered by University for hydrologic and water quality research. Occupies portion of the current research watershed used by UA. *Watershed.*
MA.XS.1001	Delta Ag & Forestry Exp. Station	363	Parcel is currently patented to the UA (No. 15524) with restrictions on use to forestry an agricultural research, and contains a reverter. University wants to acquire unrestricted title to allow other uses. *Agriculture and Settlement.*
N2.FA.1004	Fairbanks Parking Garage (includes Court House conveyance) *COURTHOUSE CONVEYED UNDER OTHER AUTHORITY*	1	Parcel is already conveyed. UAF agreed to "count" the acreage should there be a State Land Grant. Parcel was acquired by DOT/PF with federal funds. Provides addition to the University campus. *Not classified.*
NZ.FA.1004	Key Bank Site (See Fairbanks Area Parcels map) *CONVEYED UNDER OTHER AUTHORITY*	1	This parcel adds land to UAF from an area of excess highway right-of-way. It was acquired by DOT/PF with federal funds; the University may be required to reimburse ADOT/PF, to compensate for the loss of federal highway funds. *Not classified.*
MA.KR.1001	Kodiak Rocket Range *DELETED FROM 2005 LAND LIST BY LEGISLATURE*	2,880	This parcel occupies an area on southern Kodiak Island that includes the Kodiak Launch Complex. Portions of the parcel are used for grazing. Conveyance would be subject to the current Inter-agency Land Management Agreement for the Rocket Launch Facility and the grazing lease. Current access and public use areas are retained, including access to Fossil Beach. *Grazing, General Use*.
MA.PF.1002	Poker Flat (Special Use Area)	6,680	This is a large area under permit that the University has reserved for a buffer for its Poker Flat research activities. *Resource Management, Forestry, Mining, Public Recreation, Wildlife Habitat.*
MA.PF.1001	Poker Flat Lease	533	This area is under lease (ADL 414207) from the state and contains university-owned facilities. *Forestry, Mining, Public Recreation*.

STATE OF ALASKA

FRANK H. MURKOWSKI, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

400 WILLOUGHBY AVENUE
JUNEAU, ALASKA 99801-1796
PHONE: (907) 465-2400
FAX: (907) 465-3886

550 WEST 7TH AVENUE, SUITE 1400
ANCHORAGE, ALASKA 99501-3650
PHONE: (907) 269-8431
FAX: (907) 269-8918

January 14, 2005

Dear Interested Alaskan:

The Governor is announcing new legislation that would transfer 260,000 acres of state land managed by the Department of Natural Resources to the University of Alaska. I am pleased to provide this list of lands for this transfer. The transfer will fulfill the intent of Senate Bill 7 passed by the 2000 Alaska Legislature as Chapter 136 SLA 2000. It will do so in a manner that is quicker, less expensive, and provides more valuable lands to the university than the process envisioned by SB 7.

Background — Senate Bill 7. In 2000, the Alaska Legislature passed SB 7, which provided a 10-year process during which the University of Alaska would select up to 260,000 acres of state-owned land to be conveyed to the university for the primary purpose of generating revenue for the university. Specifically, the bill provided that:

- "most land grant colleges in the western United States have obtained a larger land grant from the federal government than the University of Alaska has received;
- an academically strong and financially secure state university system is a cornerstone to the long-term development of a stable population and to a healthy, diverse economy in the state;
- it is in the best interests of the state and the University of Alaska that the university take ownership of a significant substantial portfolio of income producing land in order to provide income for the support of public higher education in the state;"

SB 7 had a 10-year fiscal note and forecast the need for approximately $1.7 million each year to complete the selection, decision, and transfer process.

Unfortunately, implementing the bill proved difficult, expensive, time-consuming, and subject to litigation. To date, no lands have been conveyed to the University of Alaska to implement the law. In addition, uncertainty over what state land the university may or may not select creates a disincentive for investment and development, and the 10-year conveyance process had the potential to discourage the development and use of state land.

Land List and Accompanying Legislation. Over the course of the past several years, the University of Alaska and the Department of Natural Resources (DNR) have worked to reach agreement on lands proposed for transfer to the university to fulfill the intent of SB 7. These lands include some that were not selectable under SB 7. However, the proposal includes a portfolio of lands that should produce income for the university both in the near-term and long-term, and will provide more income than was available to the university under the provisions of SB 7. The new

legislation requested by the Governor eliminates the lengthy selection process required under SB 7 and directs DNR to convey these specific lands to fulfill the 260,000-acre intent of SB 7.

This new legislation provides a single decision for determining what lands will be transferred to the University of Alaska, rather than a protracted 10-year decision process. This is a quicker and significantly less expensive process. It also eliminates the potential disincentive to development because once the legislation passes, the eventual land manager is immediately clear.

Summary of the Lands to be Transferred to the University of Alaska. The lands proposed to be conveyed to the university are summarized below:

Type of Property	No. of Parcels	Approximate Acreage
Investment Properties, Southeast Alaska	44	40,102
Investment Property, Other than Southeast	14	39,222
Nenana Basin Oil and Gas	1	90,000
Educational Properties	12	90,676
Total:	**71**	**260,000**

In developing a list of investment properties to be transferred, DNR and the University of Alaska focused primarily on lands that had been designated settlement, general use, or general public recreation in DNR Area Plans. The list does not include any lands designated for timber harvest in Southeast Alaska because conveying these to the university would decrease DNR's allowable cut there. Nor does it include lands tentatively scheduled for sale by DNR within the next five years, as conveying these would leave DNR unable to meet near-term land sale goals. The list does not include lands on which municipal selection applications have been filed. The list does not include any producing oil and gas or mineral properties, nor legislatively designated State Game Refuges, Critical Habitat Areas, Parks, or Public Use Areas.

The 44 parcels in southeast are expected to have the greatest near-term income potential. Because of the limited state land in southeast, these tracts are comparatively small and are distributed throughout southeast Alaska.

The remaining investment properties, distributed throughout the state, include some lands suited for commercial or industrial development, but the majority is suited for residential or recreational development.

The Nenana Basin Oil and Gas property is a single 90,000-acre tract within the Nenana Basin. It is located west of the Nenana River generally across the river from the City of Nenana. DNR and the University believe the tract has significant potential for gas development, and the area is part of the Oil and Gas License owned by Andex Corporation. The tract would be transferred to the University of Alaska subject to the Andex license.

The 12 educational properties are intended to strengthen the University of Alaska's education and research programs. Most are located in the Fairbanks area. The largest is a 51,820-acre tract southwest of Fairbanks within the Tanana Valley State Forest. This area, which includes the Bonanza Creek Experimental Forest, would become the University Research Forest. It will be one of the largest university-related forests in the country and will be an important asset to the university for forestry and related research. For at least the next 50 years, DNR would continue to manage the

public uses in this area, such as recreation, and would continue to use the area for commercial timber sales, consistent with the needs of the University Research Forest.

Land Transfer Process. Under the proposed legislation, DNR will convey the lands to the University of Alaska within three years of the bill's passage. During those three years, DNR will complete the required title search, and will reserve appropriate public access easements, navigable waters, etc. Actual authority for management will change on the date the deeds are recorded.

Conveying these lands will accomplish the goals of SB 7 in a manner that is faster and less expensive than the 10-year process previously envisioned. I am pleased to recommend this portfolio of lands for transfer to the University of Alaska. I believe that these lands will provide the university with significant value and future revenue to help fund public education. The transfer helps fulfill the promise of a land grant University.

Sincerely,

for Tom Irwin
Commissioner

Sponsor Statement – HB 306

"An act creating a state energy policy"

Creating a state energy policy is one of the first steps to meeting the state's energy current and future needs. A comprehensive energy policy in statute will serve as a blueprint for future generations of Alaskans.

The House Special Committee on Energy Co-chairs Rep. Bryce Edgmon, D-Dillingham and Rep. Charisse Millett, R-Anchorage used a unique method to draft the bill - they didn't write it.

Instead, they assembled a diverse group of Alaskans with decades of experience in energy policy to come together and write what they believed would make a good energy policy for Alaska.

Sixteen respected Alaskans participated in The House Energy Stakeholders Group:

Gwen Holdmann, Alaska Center for Energy & Power
Robert Venables, Southeast Conference
Scott Goldsmith, ISER
Jason Brune, Resource Development Council
John Davies, Alaska Cold Climate Housing Research Center
Ralph Anderson, Bristol Bay Native Association
Bill Popp, Anchorage Economic Development Council
Bob Pawlowski, Denali Commission
Denali Daniels, Denali Commission
Caitlin Higgins, Alaska Conservation Alliance
Stacy Schubert, Municipality of Anchorage
Kathie Wasserman, Alaska Municipal League
Marilyn Leland, Alaska Power Authority

Energy Policy for Alaska

Presented by:
Chris Rose, Renewable Energy Alaska Project
Bill Popp, Anchorage Economic Development Corporation

The House Energy Committee
January 26, 2010

The Stakeholder Advisory Panel

- Rep. Bryce Edgmon & Rep. Charisse Millett, House Energy Committee Co-Chairs
- Adam Berg, Jeff Turner & Larry Persily, Legislative Staff
- Gwen Holdmann, Alaska Center for Energy & Power
- Robert Venables, Southeast Conference
- Scott Goldsmith, ISER
- Jason Brune, RDC
- John Davies, Alaska Cold Climate Housing Research Center
- Ralph Andersen, Bristol Bay Native Association
- Bill Popp, AEDC
- Bob Pawlowski, Denali Commission
- Denali Daniels, Denali Commission
- Caitlin Higgins, Alaska Conservation Alliance
- Stacy Schubert, Municipality of Anchorage
- Marilyn Leland, Alaska Power Authority
- Meera Kohler, Alaska Village Electric Cooperative
- Ron Miller, Energy Consultant
- Chris Rose, REAP
- Kathy Wasserman, AML

The Purpose

- To develop a statewide energy policy as the basis for a long-term vision to address Alaska's energy challenges and opportunities
- Through adopted policy, align state government in a unified set of strategic goals for the State of Alaska
- Lead to the development of a comprehensive energy plan to achieve the strategic goals of the State of Alaska

The Key Steps

1. Establish the Energy Policy
2. Develop Strategic Goals
3. Create the Plan to Achieve the Goals
4. Implement Programs and Projects

Principles Guiding the Process

- The future success of Alaska's statewide economy is tied to available, reliable, and affordable energy for:
  - Residential users
  - Commercial users
  - Industrial users
- Worldwide supply and demand for fossil fuels and concerns about global climate change will affect the price of fossil fuels in the future

The Starting Point of the Policy

- Tri-Borough Commission Energy Policy
  - Matanuska-Susitna Borough Mayor Curt Menard
  - Municipality of Anchorage Mayor Mark Begich
  - Kenai Peninsula Borough Mayor John Williams
- Established a diverse 13 member task force to develop proposed energy policy in October, 2007
- Adopted Southcentral region energy policy proposal February 7, 2008

- **The House Energy Policy Stakeholders Advisory Panel agreed that many of the principles in this policy could be applied statewide**

The Fundamentals of the Policy

- Promotes energy efficiency and conservation
- Promotes development of renewable and non-renewable energy resources
- Promotes economic development through cost-effective, long-term sources of energy for communities statewide
- Supports energy research, education, and workforce development
- Supports coordination of governmental functions and promotes streamlining of regulatory processes, avoiding duplication of effort, and overall coordination of effort by all levels of government

The Key Steps Going Forward

1. Establish the Energy Policy
2. Develop Strategic Goals
3. Adopt the Plans to Achieve the Goals
4. Implement Programs and Projects

Meera Kohler, Alaska Village Electric Cooperative
Ron Miller, Energy Consultant
Chris Rose, Renewable Energy Alaska Project

The result of their hard work is House Bill 306. The draft energy policy carries five core fundamental principles to guide the state moving forward:

- Promote energy efficiency and conservation
- Promote development of renewable and non-renewable energy resources
- Promote economic development through cost-effective, long-term sources of energy for communities statewide
- Support energy research, education, and workforce development
- Support coordination of governmental functions, which promotes streamlining of regulatory processes and overall coordination of efforts by all levels of government

If passed, Alaska will join many other states in having a statewide energy policy on the books.

(Revised 11/6/2009 OMB)

ANALYSIS CONTINUATION

Bill Language:

This bill makes four major changes to Alaska's oil and gas production tax. Each of these changes are discussed below:

1. Decrease in tax rate for progressive surcharge. This bill would lower the tax rate used to calculate the progressive surcharge at AS 43.55.011(g) from 0.4% for every $1 the production tax value exceeds $30 per barrel to 0.2% for every $1 the production tax value exceeds $30 per barrel. This rate continues until the production tax value per barrel reaches $92.50, when the rate resumes the 0.1% tax rate that currently exists in statute.

2. Decrease in rate of credit for certain qualifying exploration expenditures from 40% to 30%. This bill would decrease the rate of credit for certain expenditures that qualify for the exploration credit at AS 43.55.025(a) from 40% to 30%.

3. Add a special credit for qualified well-related expenditures. This bill would add a separate credit for well-related expenditures. The credit would be 10% of capital expenditures for well drilling or seismic exploration and analysis, and 30% for noncapital expenditures for well drilling, seismic exploration and analysis, or well maintenance workovers for expenditures occuring after December 31, 2010.

4. Reduce the amount of time that auditors have to complete audits on tax returns from 6 years to 3 years.

Analysis of Changes

This bill would have both revenue impacts and Division staffing impacts. The changes to the tax rate and credits in 1 through 3 of the list above will have a combined impact as shown on page 1 of the fiscal note, using our Fall 2009 price, production, and cost forecasts. Because we were unable to ascertain the effective date of the decrease in tax rate, we assumed it would be effective 7/1/10 and the fiscal impact effects the entirety of FY11.

The change to reduce the amount of time that auditors have to complete production tax audits will have a direct fiscal impact on the Tax Division. Reducing the time the Audit Group has to complete audits by 3 years will require the hiring of 2 additional auditors, who are experienced in oil and gas operations, costing the Division approximately $235,000 per year. If the positions are not filled timely, either the audits will not be completed in time, or the Division will be forced to make defensive tax assessments and shift the burden to its Appeals Group, which could require adding more appeals officers.

The special credit for well-related expenditures will require auditors to undergo specific training in order to learn how to distinguish well-related expenditures from other expenditures. We can expect an extended regulations process to properly identify and code these expenditure differences. The cost to the Division for these additional duties is undetermined.

MEMORANDUM February 5, 2010

SUBJECT: Constitutional issues raised CSHB 308( )
(Work Order No. 26-LS1328\E)

TO: Representative Craig Johnson
Attn: Debra Higgins

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft CSHB 308( ) that, among other subjects, amends the rate and applicability of interest in AS 43.05.225 and provides a rebate to a taxpayer subject to tax under AS 43.55.011(e) that employs resident workers for 80 percent or more of the labor performed for qualified lease expenditures. Please read this draft carefully to ensure that it is consistent with your intent.

The incentive for the employment of resident workers by a reduction in tax burden raises constitutional issues because of the effect on workers who are not residents of the state.

There are constitutional issues raised by reducing the burden of the oil and gas production tax through a rebate based on resident employment. Providing an incentive for the employment of resident workers corresponds to a disincentive for employing workers who are not residents. This raises a question as to whether the inducement violates the privileges and immunities clause of the United States Constitution or the equal protection provisions in the United States and Alaska Constitutions.

If I may be of further assistance, please advise.

CS FOR HOUSE BILL NO. 308( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES JOHNSON, Neuman, Ramras, Millett, Johansen, Hawker

A BILL

FOR AN ACT ENTITLED

"An Act relating to the duties of the Department of Labor and Workforce Development; relating to the tax rate applicable to the production of oil and gas; relating to a rebate of the production tax on oil and gas based on the employment of resident workers; relating to credits against the oil and gas production tax; relating to the period in which oil and gas production taxes may be assessed; relating to the interest rates applicable on certain amounts due related to various taxes, penalties, payments, and the Alaska Gasline Inducement Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 05.15.095(c) is amended to read:

(c) A delinquent fee bears interest at the rate set by **AS 43.05.225(a)(2)** [AS 43.05.225].

*** Sec. 2.** AS 23.05.080 is amended by adding a new subsection to read:

(b) In addition to the records that must be kept under (a) of this section, an

employer subject to tax under AS 43.55.011(e) and claiming a rebate under AS 43.55.022 shall keep for each person who provides labor the cost of which is included in an allowable lease expenditure under AS 43.55.165 an accurate record of the name, address, and occupation of the person, of the daily and weekly hours worked by the person, of whether the person is a resident worker, of the total numbers of hours during a calendar year worked by resident workers, of the total number of hours during a calendar year worked by persons that are not resident workers, and of the wages paid each pay period to each person. A record required under this subsection shall be kept on file for at least three years and may be provided to the Department of Revenue by request. In this subsection, "resident worker" has the meaning given in AS 43.40.092.

*** Sec. 3.** AS 23.05.100 is amended to read:

Sec. 23.05.100. Inspections and examination of records. The department may

(1) enter a place of employment during regular hours of employment and, in cooperation with the employer, or someone designated by the employer, collect

(A) facts and statistics relating to the employment of workers; **and**

(B) information required to be kept under AS 23.05.080(b) for the purpose of verifying the eligibility of the employer for a rebate under AS 43.55.022;

(2) make inspections for the proper enforcement of all state labor laws;

(3) for the purpose of examination, have access to and copy from any book, account, record, payroll, paper, or document relating to the employment of workers.

*** Sec. 4.** AS 23.05 is amended by adding a new section to article 1 to read:

Sec. 23.05.135. Definition. In AS 23.05.010 - 23.05.135, "resident worker" has the meaning given in AS 43.40.092.

*** Sec. 5.** AS 34.45.470(a) is amended to read:

(a) A person who fails to pay or deliver property within the time prescribed by this chapter may be required to pay to the department interest at the annual rate

calculated under **AS 43.05.225(a)(2)** [AS 43.05.225] on the property or the value of it from the date the property should have been paid or delivered.

*** Sec. 6.** AS 43.05.225 is amended to read:

Sec. 43.05.225. Interest. Unless otherwise provided,

(1) when a tax levied in this title becomes delinquent, it bears interest in a calendar quarter at the rate of **two** [FIVE] percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District as of the first day of that calendar quarter, or at the annual rate of 11 percent, whichever is **lower** [GREATER], compounded quarterly as of the last day of that quarter;

(2) the interest rate is 12 percent a year for

(A) delinquent fees payable under AS 05.15.095(c); and

(B) [REPEALED

(C)] unclaimed property that is not timely paid or delivered, as allowed by AS 34.45.470(a).

*** Sec. 7.** AS 43.05.225 is amended by adding a new subsection to read:

(b) The unpaid amount of an increase in tax liability that is the direct result of the adoption of a regulation with retroactive application is not considered delinquent for the purposes of (a) of this section until 30 days after the effective date of the regulation with retroactive application.

*** Sec. 8.** AS 43.05.280(a) is amended to read:

(a) Interest shall be allowed and paid on an overpayment of a tax under this title at the rate and in the manner provided in **AS 43.05.225(a)(1)** [AS 43.05.225(1)].

*** Sec. 9.** AS 43.31.141 is amended to read:

Sec. 43.31.141. When tax due; [,] extension and interest. The tax imposed by this chapter is due and payable 15 months after the decedent's death and shall be paid by the executor to the department. If the department finds that the payment on the due date of tax or any part of the tax would impose undue hardship upon the estate, the department may extend the time for payment of any part, but no extension may be for more than one year and the aggregate of extensions with respect to an estate may not exceed five years from the due date. In that case, the amount in respect of which the extension is granted shall be paid on or before the date of the expiration of the period

of the extension unless a further extension is granted. If the time for the payment is extended, there shall be collected, as part of this amount, interest on the tax as provided in **AS 43.05.225(a)(1)** [AS 43.05.225(1)] from the due date of the tax to the date the tax is paid.

*** Sec. 10.** AS 43.50.570 is amended to read:

Sec. 43.50.570. Interest. A licensee who fails to pay an amount due for the purchase of stamps within the time required

(1) is considered to have failed to pay the cigarette taxes due under this chapter; and

(2) shall pay interest at the rate established under **AS 43.05.225(a)(1)** [AS 43.05.225] from the date on which the amount became due until the date of payment.

*** Sec. 11.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) per BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is determined by multiplying the monthly production tax value of the taxable oil and gas produced during the month by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value per BTU equivalent barrel of the taxable oil and gas for the month is not more than **$155** [$92.50], the tax rate is **0.2** [0.4] percent multiplied by the number that represents the difference between that average monthly production tax value per BTU equivalent barrel and $30; or

(2) if the producer's average monthly production tax value per BTU equivalent barrel of the taxable oil and gas for the month is more than **$155** [$92.50], the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value per BTU equivalent barrel and **$155** [$92.50], except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 12.** AS 43.55.020(g) is amended to read:

(g) Notwithstanding any contrary provision of **AS 43.05.225(a) and except as**

provided in (i) of this section [AS 43.05.225], an unpaid amount of an installment payment required under (a)(1) - (3) of this section that is not paid when due bears interest (1) at the rate provided for an underpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the date the installment payment is due until March 31 following the calendar year of production, and (2) as provided for a delinquent tax under **AS 43.05.225(a)(1)** [AS 43.05.225] after that March 31. Interest accrued under (1) of this subsection that remains unpaid after that March 31 is treated as an addition to tax that bears interest under (2) of this subsection. An unpaid amount of tax due under (a)(4) of this section that is not paid when due bears interest as provided for a delinquent tax under **AS 43.05.225(a)(1)** [AS 43.05.225].

*** Sec. 13.** AS 43.55.020(h) is amended to read:

(h) Notwithstanding any contrary provision of AS 43.05.280,

(1) an overpayment of an installment payment required under (a)(1) - (3) of this section bears interest at the rate provided for an overpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the later of the date the installment payment is due or the date the overpayment is made, until the earlier of

(A) the date it is refunded or is applied to an underpayment; or

(B) March 31 following the calendar year of production;

(2) except as provided under (1) of this subsection, interest with respect to an overpayment is allowed only on any net overpayment of the payments required under (a) of this section that remains after the later of March 31 following the calendar year of production or the date that the statement required under AS 43.55.030(a) is filed;

(3) interest is allowed under (2) of this subsection only from a date that is 90 days after the later of March 31 following the calendar year of production or the date that the statement required under AS 43.55.030(a) is filed; interest is not allowed if the overpayment was refunded within the 90-day period;

(4) interest under (2) and (3) of this subsection is paid at the rate and in the manner provided in **AS 43.05.225(a)(1)** [AS 43.05.225(1)].

* **Sec. 14.** AS 43.55.020 is amended by adding a new subsection to read:

(i) The unpaid amount of an installment payment required under (g) of this section that is the direct result of the adoption of a regulation with retroactive application does not bear interest until 30 days after the effective date of the regulation with retroactive application.

* **Sec. 15.** AS 43.55 is amended by adding a new section to read:

Sec. 43.55.022. Tax rebate for employing resident workers. (a) Subject to appropriation and the requirements of this section, a taxpayer subject to tax under AS 43.55.011(e)(1) that incurs labor costs that are allowable lease expenditures under AS 43.55.165 is entitled to a rebate if 80 percent or more of the labor is done by resident workers.

(b) The amount of the rebate is equal to a percentage of the tax paid under AS 43.55.011(e)(1) based on the percentage of labor done by resident workers the cost of which is included in an allowable lease expenditure under AS 43.55.165. The amount of the rebate is equal to the following percentage of the tax paid under AS 43.55.011(e)(1):

(1) two percent if the percentage of labor done by resident workers is at least 80 percent but less than 82.5 percent;

(2) four percent if the percentage of labor done by resident workers is at least 82.5 percent but less than 85 percent;

(3) six percent if the percentage of labor done by resident workers is at least 85 percent but less than 87.5 percent;

(4) eight percent if the percentage of labor done by resident workers is at least 87.5 percent but less than 90 percent;

(5) 10 percent if the percentage of labor done by resident workers is at least 90 percent but less than 92.5 percent;

(6) 12 percent if the percentage of labor done by resident workers is at least 92.5 percent but less than 95 percent;

(7) 14 percent if the percentage of labor done by resident workers is at least 95 percent but less than 97.5 percent;

(8) 16 percent if the percentage of labor done by resident workers is at

least 97.5 percent but less than 100 percent; and

(9) 20 percent if the percentage of labor done by resident workers is 100 percent.

(c) The percentage of labor done by resident workers is

(1) determined on a calendar year basis using the number of hours of labor the cost of which is a lease expenditure, and includes all hours of labor, regardless of whether a worker is paid on an hourly or some other basis; and

(2) a fraction the numerator of which is the number of hours of labor done by resident workers the cost of which is a lease expenditure, and the denominator of which is the number of hours of labor by all workers the cost of which is a lease expenditure, expressed as a percentage.

(d) To qualify for the rebate under this section, a person subject to tax under AS 43.55.011(e) shall file an application for the rebate at the time a statement must be filed under AS 43.55.030(a) for the calendar year for which the rebate is claimed. The application must include the following for the calendar year for which the rebate is claimed:

(1) the number of hours of labor, the cost of which is a lease expenditure;

(2) the number of hours of labor done by resident workers that are included in (1) of this subsection;

(3) the total cost of labor that is a lease expenditure; and

(4) other information required by the department in a regulation adopted to administer this section, including the names of the resident workers whose hours of labor are included in (1) of this subsection.

(e) At the same time an application is made to the department under (d) of this section, the person applying for a rebate shall file a report with the commissioner of labor and workforce development. The report must include the information in (d)(1) and (2) of this section and other information required by the commissioner of labor and workforce development by regulation. Any amendment to the application in (d) of this section that changes the information in (d)(1) and (2) of this section must also be filed with the commissioner of labor and workforce development. At the request of the

commissioner, the Department of Labor and Workforce Development shall audit the information reported in (d)(1) and (2) of this section and notify the commissioner of the results of the audit.

(f) A person claiming a rebate under this section has the burden of proving eligibility for the rebate, including a claim that an individual is a resident worker.

(g) The department shall report to the legislature the amount of rebates paid under this section and statistical information relating to the percentage of labor done by resident workers based on hours worked.

(h) In this section,

(1) "lease expenditure" means an expenditure allowed as a lease expenditure under AS 43.55.165;

(2) "resident worker" has the meaning given in AS 43.40.092.

*** Sec. 16.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under **AS 43.05.225(a)(1)** [AS 43.05.225] from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 17.** AS 43.55.023 is amended by adding a new subsection to read:

(m) A producer or explorer may take a tax credit for a well-related expenditure, as follows:

(1) notwithstanding that a well-related expenditure may be a deductible lease expenditure under AS 43.55.165 for purposes of calculating the

production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well-related expenditure may also elect to apply a credit against a tax levied by AS 43.55.011(e) in the amount of 30 percent of that expenditure;

(2) a producer or explorer may take a credit for a well-related expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2) for a credit under AS 43.55.025;

(3) In this section, "well-related expenditure" means a lease expenditure related to a well and includes a lease expenditure for the purposes of well sidetracking, well deepening, well recompletion, well workover, an injection well, and well-related seismic work, and an intangible drilling and development cost authorized under 26 U.S.C. (Internal Revenue Code), as amended, and 26 C.F.R. 1.612-4, regardless of the elections made under 26 U.S.C. 263(c), as amended, up to the flange connecting the well head to the well line.

*** Sec. 18.** AS 43.55.040 is amended to read:

Sec. 43.55.040. Powers of Department of Revenue. Except as provided in AS 43.05.405 - 43.05.499, the department may

(1) require a person engaged in production and the agent or employee of the person, and the purchaser of oil or gas, or the owner of a royalty interest in oil or gas to furnish, whether by the filing of regular statements or reports or otherwise, additional information that is considered by the department as necessary to compute the amount of the tax **or of the rebate under AS 43.55.022**; notwithstanding any contrary provision of law, the disclosure of additional information under this paragraph to the producer obligated to pay the tax does not violate AS 40.25.100(a) or AS 43.05.230(a); before disclosing information under this paragraph that is otherwise

required to be held confidential under AS 40.25.100(a) or AS 43.05.230(a), the department shall

(A) provide the person that furnished the information a reasonable opportunity to be heard regarding the proposed disclosure and the conditions to be imposed under (B) of this paragraph; and

(B) impose appropriate conditions limiting

(i) access to the information to those legal counsel, consultants, employees, officers, and agents of the producer who have a need to know that information for the purpose of determining or contesting the producer's tax obligation; and

(ii) the use of the information to use for that purpose;

(2) examine the books, records, and files of the person;

(3) conduct hearings and compel the attendance of witnesses and the production of books, records, and papers of any person;

(4) make an investigation or hold an inquiry that is considered necessary to a disclosure of the facts as to

(A) the amount of production from any oil or gas location, or of a company or other producer of oil or gas; and

(B) the rendition of the oil and gas for taxing purposes;

(5) require a producer, an explorer, or an operator of a lease or property to file reports and copies of records that the department considers necessary to forecast state revenue under this chapter; in the case of reports and copies of records relating to proposed, expected, or approved unit expenditures for a unit for which one or more working interest owners other than the operator have authority to approve unit expenditures, the required reports and copies of records are limited to those reports or copies of records that constitute or disclose communications between the operator and the working interest owners relating to unit budget matters;

(6) require a producer that has an average total production in the state of more than 100,000 barrels a day for a calendar year to report the gross value at the point of production of the producer's taxable oil and gas in the state for a calendar year and the total amount of lease expenditures in the state for that calendar year; and

(7) assess against a person required under this section to file a report, statement, or other document a penalty, as determined by the department under standards adopted in regulation by the department, of not more than $1,000 for each day the person fails to file the report, statement, or other document after notice by the department; the penalty is in addition to any penalties under AS 43.05.220 and 43.05.290 and is assessed, collected, and paid in the same manner as a tax deficiency under this title; the penalty shall bear interest at the rate specified under **AS 43.05.225(a)(1)** [AS 43.05.225(1)].

*** Sec. 19.** AS 43.55.060 is amended to read:

Sec. 43.55.060. Delinquency. When the tax provided for in this chapter becomes delinquent, it bears interest as provided in **AS 43.05.225(a)(1)** [AS 43.05.225(1)]. If any person fails to make a report required by this chapter, within the time prescribed by law for the report, the department shall examine the books, records and files of the person to determine the amount and value of the production to compute the tax, and the department shall add to the tax the cost of the examination, together with any penalties accrued.

*** Sec. 20.** AS 43.55.075(a) is amended to read:

(a) Except as provided in AS 43.05.260(c), **for a tax period ending before January 1, 2010,** the amount of a tax imposed by this chapter must be assessed within six years after the return was filed.

*** Sec. 21.** AS 43.77.020(d) is amended to read:

(d) A person subject to the tax under this chapter shall make quarterly payments of the tax estimated to be due for the year, as required under regulations adopted by the department. A taxpayer will be subject to an estimated tax penalty, determined by applying the interest rate specified in **AS 43.05.225(a)(1)** [AS 43.05.225] to the underpayment for each quarter, unless the taxpayer makes estimated tax payments in equal installments that total either

(1) at least 90 percent of the taxpayer's tax liability under this chapter for the tax year; or

(2) at least 100 percent of the taxpayer's tax liability under this chapter for the prior tax year.

* **Sec. 22.** AS 43.90.430 is amended to read:

Sec. 43.90.430. Interest. When a payment due to the state under this chapter becomes delinquent, the payment bears interest at the rate applicable to a delinquent tax under **AS 43.05.225(a)(1)** [AS 43.05.225].

* **Sec. 23.** AS 44.31.020 is amended to read:

Sec. 44.31.020. Duties of department. The Department of Labor and Workforce Development shall

(1) enforce the laws and adopt regulations under them concerning employer-employee relationships, including the safety, hours of work, wages, and conditions of workers, including children;

(2) accumulate, analyze, and report labor statistics;

(3) operate systems of workers' compensation and unemployment insurance;

(4) gather data reflecting the cost of living in the various election districts of the state upon request of the director of personnel under AS 39.27.030; in this paragraph, "election district" has the meaning given in AS 39.27.020(b);

(5) operate the federally funded employment and training programs under 29 U.S.C. 2801 - 2945 (Workforce Investment Act of 1998);

(6) administer the state's program of adult basic education and adopt regulations to administer the program; [AND]

(7) administer the programs of the Alaska Vocational Technical Center and adopt regulations to administer the programs, including regulations that set rates for student tuition and room and board and fees for the programs and services provided by the department regarding the Alaska Vocational Technical Center**; and**

(8) at the request of the commissioner of revenue, audit information described in AS 43.55.022(d)(1) and (2) that is submitted by a person applying for a rebate under AS 43.55.022.

* **Sec. 24.** Sections 11 and 15 of this Act take effect on the first day of the month immediately following the effective date of secs. 1 - 10, 12 - 14, and 16 - 25 of this Act.

* **Sec. 25.** Except as provided in sec. 24 of this Act, this Act takes effect immediately under AS 01.10.070(c).

Technical Aspects of CS for HB 308 (Version E)

Dan E. Dickinson CPA

House Resources Committee

Feb 8, 2010

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to resident hire
- 30% credit for well work
- Restore 3 year statute of limitations

2.8.2010

Structure of CS for HB 308

Structure of CS For HB 308 26-LS1328/E Key Provision Need 2011

6 Changes in CSHB 308

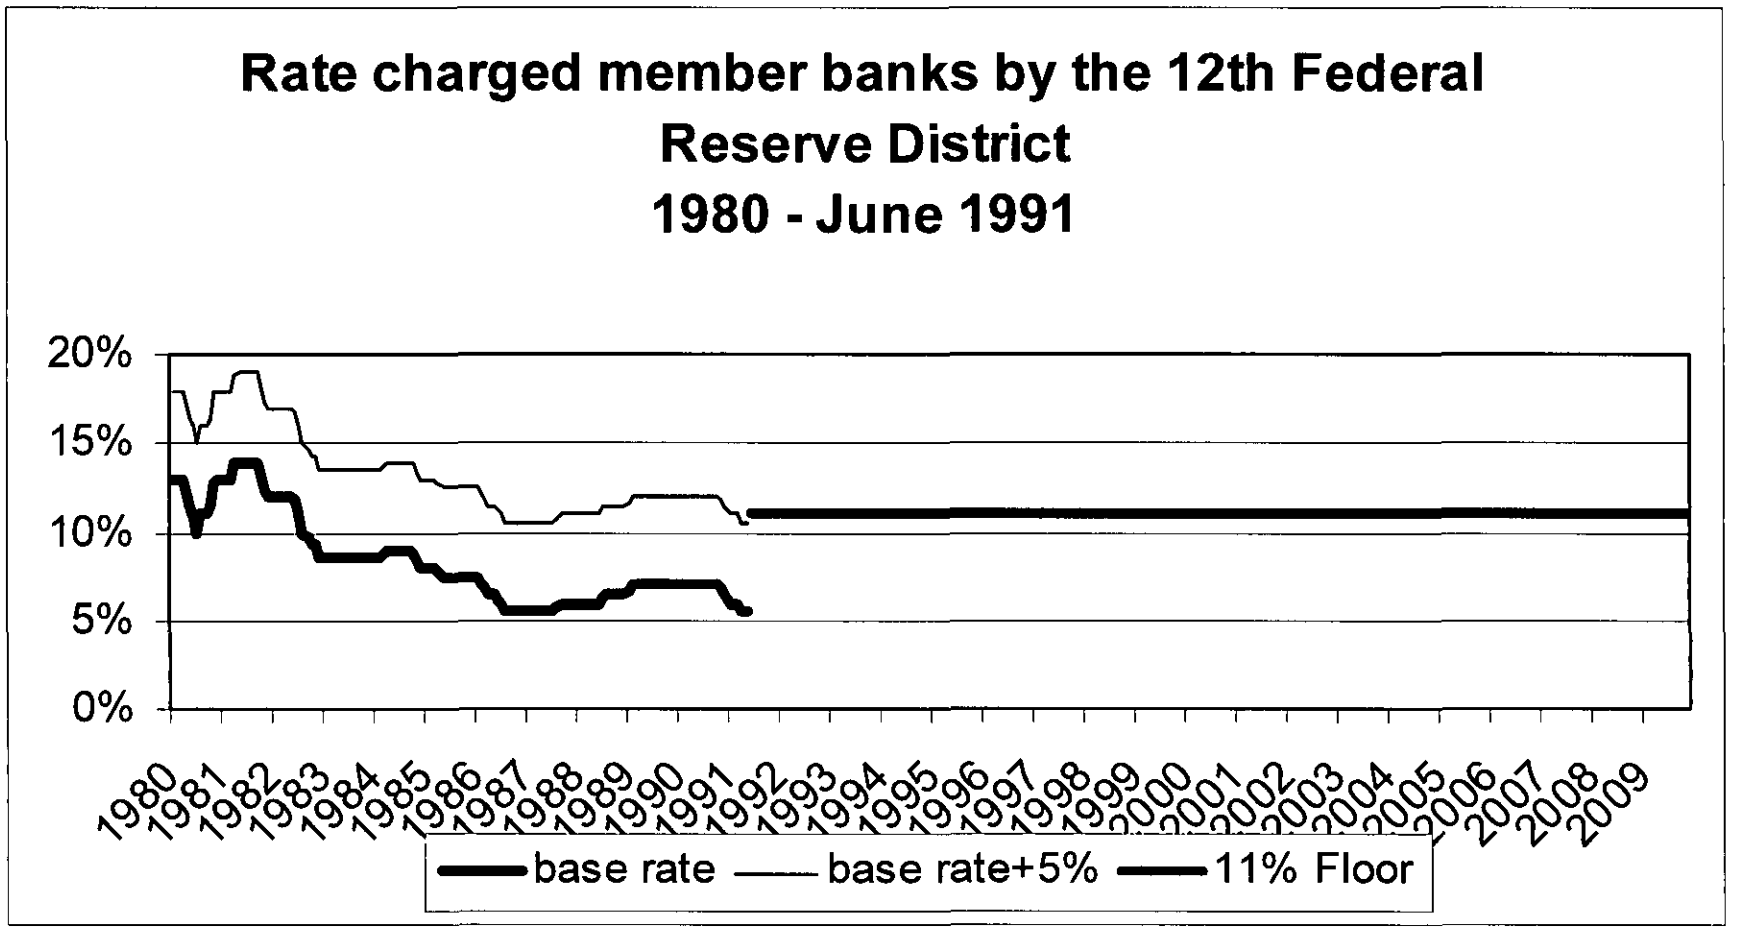
- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to resident hire
- 30% credit for well work
- Restore 3 year statute of limitations

2.8.2010

Interest rate in AS 43.05.225

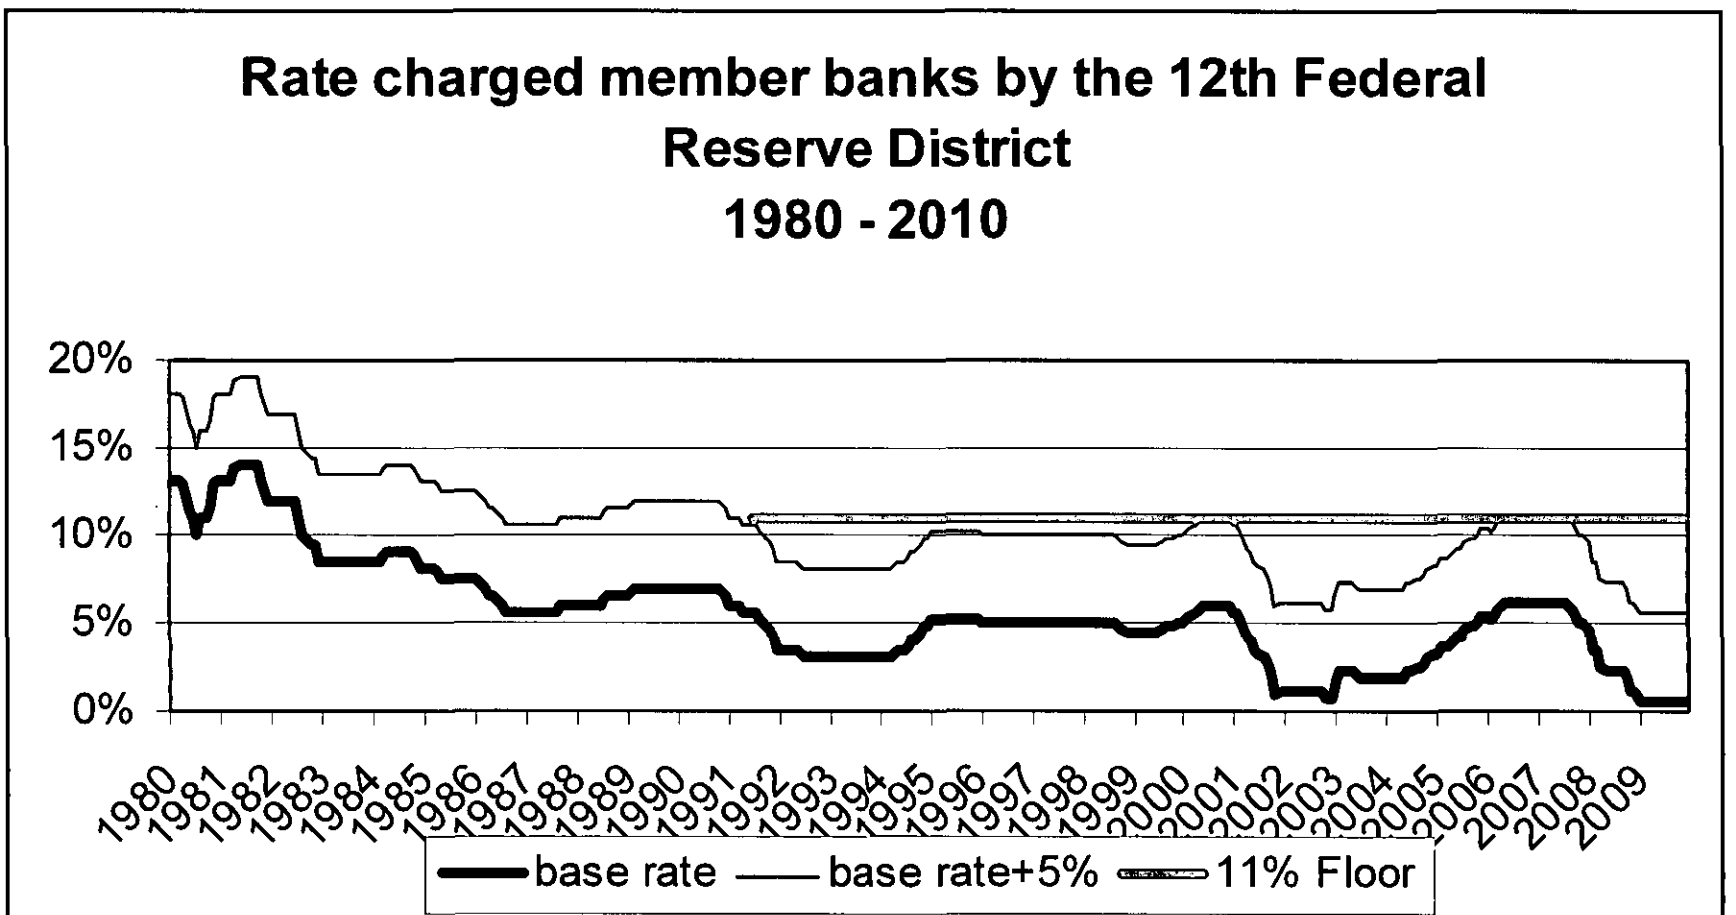
- Proposed interest would be lower of fed funds rate + 2 or 11%(section 6)
- The interest rate applies to all 20 Alaska Tax Types*
- Current law – higher of fed funds + 5 or 11%
- Also applies to late royalty payments.
- **Compounded** Quarterly
- Effective date should be end of year, or at the very least, quarter.
- Implemented in 1991 amidst settlement of major production tax and royalty litigation going back to 1977 and era of simple interest.

Interest Rates: The view from June 1991



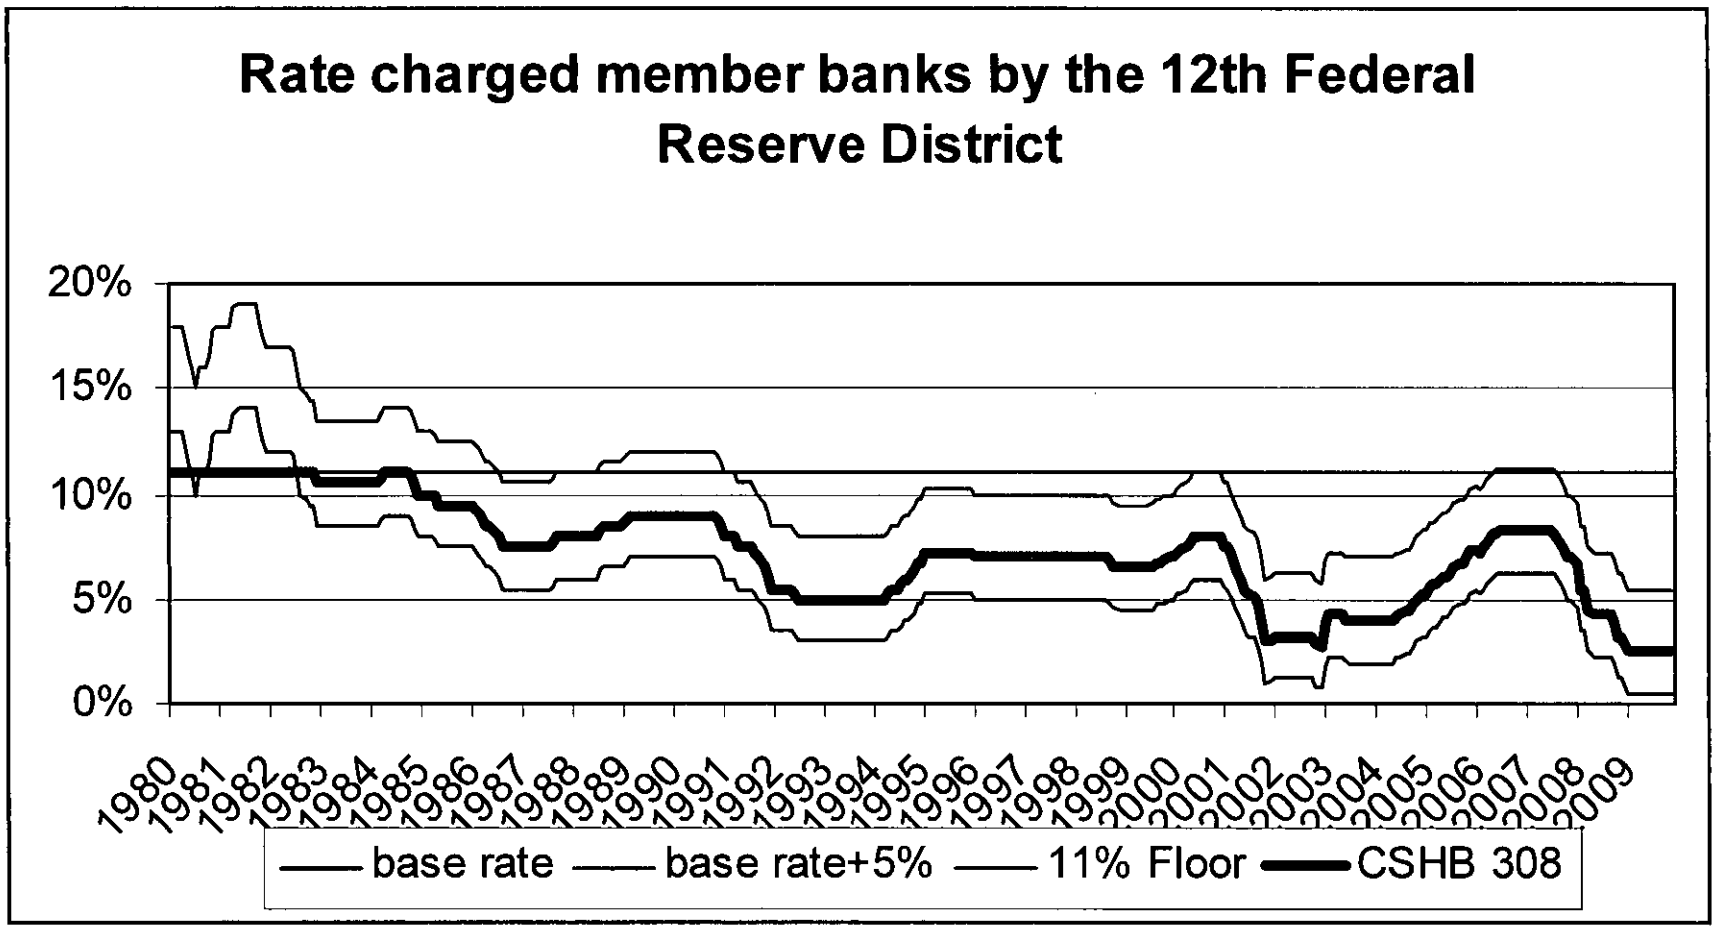
Source: Federal Reserve Bank of San Francisco (frbsf.org)

Interest Rates – The 11% floor since 1991



2.8.2010

Looking back: What would the rate have been under CS HB 308



Alaska compared with federal rate

- How are federal interest rates computed under IRC:

	Over Payments of Tax	Under Payments of Tax
Non- Corporate	Fed Funds + 3%	Fed Funds + 3%
Corporate	Fed Funds + 2%	Fed Funds + 3%
Corporate - Large	Fed Funds + ½%	Fed Funds + 5%

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to resident hire
- 30% credit for well work
- Restore 3 year statute of limitations

Governor Parnell's Proposal vs. HB 308

Governor Parnell press release January 14 2010:

"Allow for the waiver of interest charges on late payments due to the retroactive application of new regulations."

CS HB 308 mandates that interest will not accrue on "an increase in tax liability that is the direct result of the adoption of regulation with retroactive application" until 30 days after the effective date of the regulation. (section 7)

How is interest calculated?

- Production Tax is due on last day of the month following the month of production (AS 43.55.020 (a)).
- Amount of tax due change because of because of audit, revised reporting by taxpayer, retroactive revision of tariff due to a regulatory order in a rate case, retroactive change in regulations.
- Interest is charged back to when original tax is due.
- In a settlement Department can compromise amount of tax and amount of Penalty. (AS 43.55.070) – No mention of interest.

Regulations required retroactive to July 2007*

- In 2007 reforms ("ACES") Department charged with a number of specific responsibilities for regulations, as well as general implementation.
  - AS 43.55.150 "the department shall determine the reasonable cost of transportation, using the fair market value of like transportation, the fair market value of equally efficient and available modes of transportation or other reasonable methods.
  - AS 43.55.165(a) "…a producer's lease expenditures for a calendar year are … costs …allowed by the department by regulation…"
  - Production tax is a yearly tax – however, effective dates of most of 2007 reform was July 1, 2007, so ways of combining two half years had to be implemented.
  - New reporting requirements (AS 43.55.030 & .040)
  - *New rules for exploration credits (AS 43.55.025)

2.8.2010

Status of Regulations Affecting Returns after July 2007

	Discussion Draft 1	2	3	4	Public Comment Draft 1	2	Adopted

PV of oil					Jan-10		

2.8.2010

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

What is Progressivity?

- Base Production Tax rate is 25% (AS 43.55.011(e))
- Combined Progressivity Tax (on same base) can range from 0 to 50%
- Sum= Total tax rate can range from 25% to 75%
- Progressivity rate is calculated as net value of all the (oil and gas produced less royalty)/taxable barrels (boe)= PTV/per barrel
- No progressivity charge when PTV/bbl<$30,
- Current Law:
- For each dollar above $30, .4% added to tax rate
- At PTV/bbl of $92.5, rate drops to .1% for each dollar

HB 308: drop rate to .2%, increase bend-over point to $155 (Section 11)

Progressivity Effect

- FY 2008 Estimate (year of high prices)
- 25% Base tax – $4.2 billion
- Progressivity – $3.2 billion
- (less credits of $.5 billion)

- Compare to FY 2008
- Royalties (2.4 to GF, .8 to PF) $3.2 billion
- Oil and Gas Income Taxes $.6 billion
- Oil and Gas Property Taxes (State and Local) $.4 billion

Source: State of Alaska DOR Revenue Sources Book (Fall 2008)

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

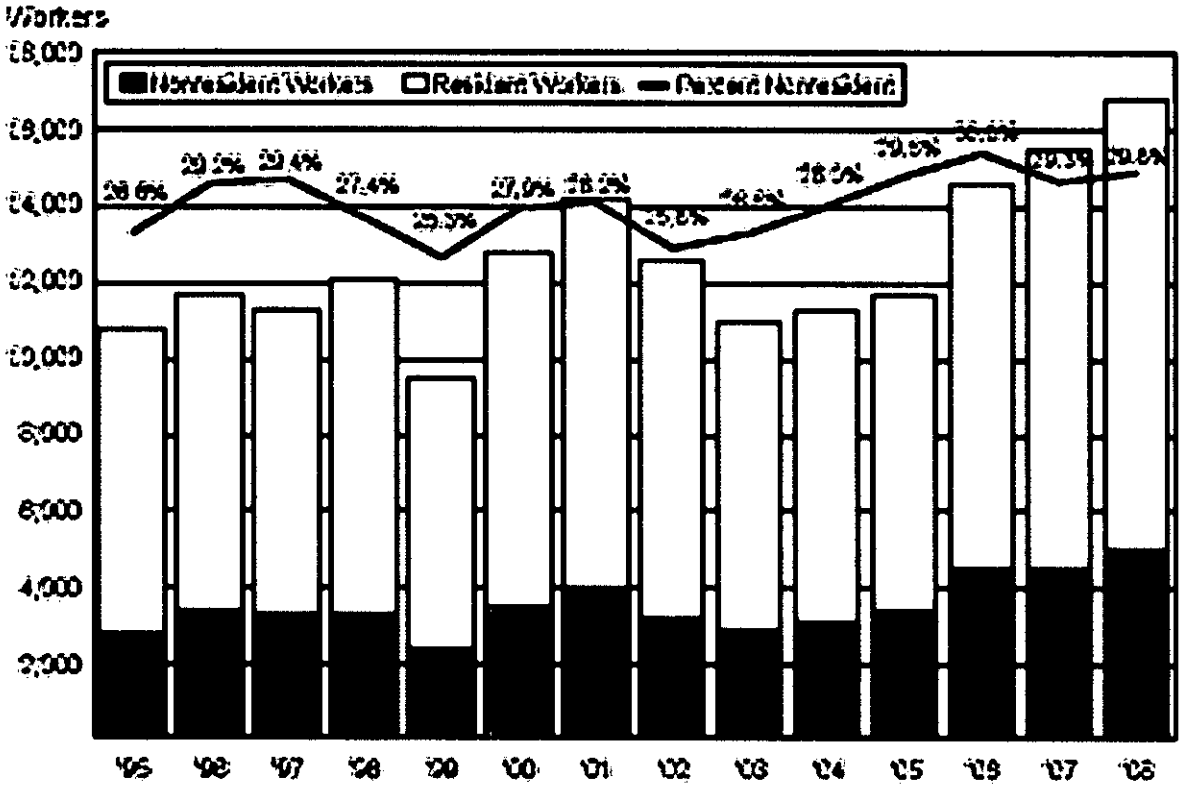
2.8.2010

Rate tied to Resident Hire

- General Approach – (section 15)
- Base Tax rate (in AS 43.55.011(e)) is 25%, and Taxpayers makes monthly payments at that rate
- Any direct labor that is a lease expenditure is accounted for as Resident or non-Resident.
- At the end of the year total hours of labor are used to calculate a ratio for the year: or resident hire %
- New effective rate is calculated:
  - 20% for a 100% Resident Hire ratio up to
  - 25% (current law) for an 80% Resident Hire ratio.
- Taxpayer can then apply for a rebate of the difference for the prior year.
- Note: effective date should be beginning of a year.

Non Resident Workers

6 Oil Industry
Number and Percent Nonresident Workers
Alaska 1995-2008



Note: Private Sector Only

Details to be Addressed

- Main Issue – What level of detail required?
- All payments are either a return to capital, labor or land
- How far down ought a taxpayer to drill –
  - Can a module just be module, or is it comprised of labor and machinery?
  - And is the machinery just machinery or is comprised of labor and smaller components?
  - Does a fixed priced contract end the inquiry?
- Structure of Industry in Alaska:
  - Producers (taxpayers) have employees & hire
    - Operator who has employees & hires
      - Contractors, and buys "stuff"

Who are the Employers in the Oil and Gas Industry

- EM, BP and CP are largest taxpayers

Ranking in Top 100		Total Employees			Non Resident %
5	ASRC	2250	2499	Oil Field Services	24.1%
8	CH2MHill	1750	1999	Oil Field Services	35.5%
9	BP Exploration			Oil & Gas Extraction	27.7%
17	Conoco Phillips	1000	1249	Oil & Gas Extraction	20.7%
36	Nabors Alaska Drilling	500	749	Oil Field Services	
43	Schlumberger Technologies			Oil Field Services	30.5%
49	Udelhoven Oilfied System Services			Oil Field Services	30.5%
52	Peak Oilfield Service Company	250	499	Oil Field Services	26.8%
69	Norcon			Oil Field Services	23.2%
73	Chevron			Oil & Gas Extraction	
78	Hallibturon			Oil Field Services	32.3%
95	Doyon Drilling			Oil Field Services	
	Veritas Dgc Land Inc				47.9%
	Baker Hughes Oilfield Operations Inc.				54.1%

NOTE: Does Not Include "Catering/Security", Engineering, Transportion, Communications, Construction

Sources: State of Alaska, Dept. of Labor and Workforce Development, 100 Largest Private Employers, 2008 (Alaska Economic Trends, July 2009),Nonresidents Working in Alaska, 2008 (Jan 2010)

Effect on Tax Receipts (for each 1% change in BPT)

	PTV est.	5%
	(in Millions of Dollars)	
FY2008	$ 16,837.7	$ 841.9
FY2009	9,313.1	465.7
CY 2008 (Avg.)		$ 653.8

Non Resident Workers in industry in 2008 5043

Direct cost for 100% compliance ($mm) $ 0.12964
Direct cost for 100% compliance ($) $ 129,639

Calculation of benefit to stay would be increase in local payroll, plus a multiplier effect.

Effect of 1% change in rate on tax ($mm)		
In This example (2008)		$ 130.8
Using DOR forecasted prices	closer to	$ 100.0

Sources: State of Alaska, Dept. of Labor and Workforce Development, Nonresidents Working in Alaska, 2008 (Jan 2010), derivations from figures in Dept of Revenue, Revenue Sources Book (Fall 2009)

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

2.8.2010

Investment Credits

- Section 17 adds 30% well work credit to investment credits
- Under Current Law –
- 30% Credit for exploration wells (AS 43.55.025)
- 40% Credit for seismic work outside of existing unit,
  - or exploration wells 25 miles from existing unit, and
  - 3 miles from any prior well (or with certification from DNR that it is for a new target in the Cook Inlet) (AS 43.55.025)
- 20% Credit for any capital investment (AS 43.55.023(a))

- No change to Exploration Credits AS 43.55.025 under this bill

Investment Credits

- Credit (i) only available under one program and (i) has to otherwise qualify as lease expenditure:
  - Proposed Change:
  - No change: 30% Credit for exploration wells (AS 43.55.025)
- 20% Credit for any capital investment (AS 43.55.023(a))
  - Would be boosted to 30% for well related capital
  - Well related operational costs also eligible for 30%
  - Costs include work for purposes of well "sidetracking, deepening, recompletions, workovers, injection, seismic
  - -"up to the flange connecting the well head to the well line"

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

2.8.2010

- Section 20 Restores statute of limitations to three years for production tax - time for the state to complete a production tax audit (or, agree to an extension with taxpayer or issue a blue sky assessment)
- Three year rule would begin with 2011 tax year
- Note: in the case of False or Fraudulent returns, or failure to file a return, may proceed "at any time"

- Prior to 2007, SOL was three years for all tax types under AS 43.05.260 –
- In 2007 production tax pulled out and extended to 6 years in AS 43.55.075

Thank You

CSHB 308 House Resources

What Labor Costs qualify as Lease Expenditures?

Deductible Lease Expenditures - Labor

- Basically, two classes of allowable employee expenses for the operator:
- 1st - any employee on site of oil or gas exploration, development, or production operations including infrastructure and support operations
- 2nd – employees having special and specific engineering, geological or other technical skills need not necessarily be "on-site", but costs are limited to handling of specific problems or operating conditions involving oil or gas exploration, development, or production operations, or the support of those operations and only that portion of time actually devoted to the exploration, development or production operations
- Contractor Labor is 100% deductible

Examples of Allowable Labor - Type 1

- Employees working on-site or in the field
  - Drillers
  - Roughnecks
  - Roustabouts
  - Electricians
  - Plumbers
  - Pipefitters
  - Welders
  - Mechanics

Examples of Allowable Labor - Type 1

- Employees working in infrastructure or support operations:
  - Camps
  - Operations centers
  - Staging pads, roads, bridges, landing areas, and similar transportation structures
  - Communications systems
  - Medical
  - Emergency
  - Security
  - Repair & maintenance shops

Examples of Allowable Labor – Type 2

- Employees with special and specific engineering, geological or other technical skills:
  - Engineers
  - Geologists
  - Environmental specialists
  - Employees engaged in field automation systems
  - Employees engaged in computer applications specific to the oil or gas operations

Overhead contains Labor Costs

- Joint operating agreements typically include a section to allow the operator to recover certain indirect and overhead costs incurred offsite of the exploration, development, or production operations but are still in support of and for the benefit of those operations. These costs are not directly billed but recovered through an overhead allowance or other mechanism. They do include labor costs.

Typical Overhead Labor

- Technical Supervisors
- Drafting, engineering aids
- Accounting
- Clerical
- Legal activities
- Off-site computer and communications activities

Non-deductible Lease Expenditures - Labor

Examples of Labor Not Allowed as Lease Expenditure:

- Tax
- Legal
- Accounting
- Labor expenses that are for the benefit of an individual lessee or producer only, and not necessarily for the benefit of the joint operations
- Community, public, and government relations

Interest Rate Changes

CSHB308 GOV Bill Comparison - Retroactive Interest Waiver

CSHB 308

Underpayment

- is not considered delinquent until after 30 days after the effective date of the reg. with retro-active application

Governor's Bill

Underpayment

- interest is waived before the 1st day of the 2nd month following the month in which the reg. became effective
  - (A) dept. determines that producer's underpayment was a result of the reg. not being in effect when the payment was due and
  - (B) the producer made a good faith estimate of tax obligation in light of the regs. then in effect, and paid the estimate . Underpayment not considered delinquent

CSHB308 GOV Bill Comparison - Retroactive Interest Waiver

CSHB 308

Overpayment

- is not considered delinquent until after 30 days after the effective date of the reg. with retro-active application

Governor's Bill

Overpayment

- if overpayment occurred because reg was not in effect, interest does not begin to accrue earlier than:
  - (A) the 1st day of 2nd month following the month in which the reg became effective
  - (B) 90 days after an amended return is filed, if the overpayment was for a period for which an amended return was required to be filed before the reg became effective

Under current law, interest is not allowed if an overpayment is refunded within 90 days - CS HB308 does change this long-standing rule)

injection well	rentals of personal property reasonably required for re-drilling, casing, cementing, or logging
well-related seismic work	Completing workover operations or other operations intended to increase or enhance well production from known/unknown production pool
intangible drilling and development costs	May not be for an injector well, or stratigraphic test well
up to the flange and connecting the well head to the well line	

CSHB 308 House Resources

Statute of Limitations Change for Production Tax Assessments

Production Tax Audit Status

Audit	*Current audit status*
8 PPT/ACES audits in progress (Apr – Dec 2006)	Est. 03/31/2010
2 PPT/ACES audits pending (2006 year)	Beyond 3/31/2010
1 ELF audit in process (2003, 2004, 2005)	Beyond 6/30/2010
3 - .023 Credit Audits (2006 ~$700M in expenditure)	Target 3/31/2010
All Taxpayers 2007 / 2008	Not started

3 versus 6 year assessment

Audit Information Requirements

Audit information required under ELF

- Production data
- Sales contracts / invoices
- Quality bank data
- Marine transportation detail
- Pipeline Tariffs data

Audit information required under ACES

- Production data
- Sales contracts / invoices
- Quality bank data
- Marine transportation detail
- Pipeline tariffs / reasonable cost data
- Lease expenditures (capex,opex)
- Facility sharing agreements
- Joint operating agreements
- Joint interest billing invoices
- Unit ballot agreements
- .023, .025, TIE, NOL credits

3 versus 6 year assessment

Audit Information Requirements

Factors to consider

- With a "net tax" more areas of audit exposure
- Delays in taxpayers providing data (e.g. marine data)
- Volume of lease expenditure detail (greater than 1 million lines of detail data for a tax year is not uncommon) all manually processed.
- Determinations that exclusions under AS 43.55.165 (e) not included in lease expenditures
- Processing, tracking and auditing tax credits absorbs audit resources (lack of automated tax system)
- Challenges associated with auditing Alaska hire compliance
- Shorter time frame will yield more appeals and litigation

Technical Aspects of CS for HB 308 (Version E) (part II – issues 2, 4, 5, & 6)

Dan E. Dickinson CPA

House Resources Committee
Feb 15, 2010

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11% (February 8, 2010 Testimony)
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2% (February 8, 2010 Testimony)
- Tax rate tied to resident hire
- 30% credit for well work
- Restore 3 year statute of limitations

Structure of CS for HB 308

Structure of CS For HB 308 26-LS1328/E Key Provision Need 2011 Eff Dt

2.15.2010

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to resident hire
- 30% credit for well work
- Restore 3 year statute of limitations

How is interest calculated?

- Production Tax is due on last day of the month following the month of production (AS 43.55.020 (a)).
- Amount of tax due change because of because of audit, revised reporting by taxpayer, retroactive revision of tariff due to a regulatory order in a rate case, retroactive change in regulations.
- Interest is charged back to when original tax is due.
- In a settlement Department can compromise amount of tax and amount of Penalty. (AS 43.55.070) – No mention of interest.

Regulations required retroactive to July 2007*

- In 2007 reforms ("ACES") Department charged with a number of specific responsibilities for regulations, as well as general implementation.
  - AS 43.55.150 "the department shall determine the reasonable cost of transportation, using the fair market value of like transportation, the fair market value of equally efficient and available modes of transportation or other reasonable methods.
  - AS 43.55.165(a) "…a producer's lease expenditures for a calendar year are … costs …allowed by the department by regulation…"
  - Production tax is a yearly tax – however, effective dates of most of 2007 reform was July 1, 2007, so ways of combining two half years had to be implemented.
  - New reporting requirements (AS 43.55.030 & .040)
  - *New rules for exploration credits (AS 43.55.025)

Status of Regulations Affecting Returns after July 2007

	Discussion Draft 1	2	3	4	Public Comment Draft 1	2	Adopted

PV of oil					Jan-10		

2.15.2010

Interest on Retroactive Regulatory Changes

- Governor Parnell's approach in AS 43.55.020(i):
  - Requires interest waiver – not discretionary
  - More thorough – explicitly recognizes that the absence of regulations is not the absence of any rules
  - Explicitly retroactive – deals with the 2007 -2010 regulatory delay
  - Does not require restructuring AS 43.05.225 (thus eliminates half the provisions in the CS for HB 308)
  - (although in current CS Version E, section 6, page 3 line 5 requires in the insertion of an "a" in any case.)

Gov Parnell's suggestion on interest from retroactive regs

- ***Section 1.** AS 43.55.020 is amended by adding a new subsection to read:
- (i) Notwithstanding any contrary provision of AS 43.05.225 or (g) or (h) of this section, if the amount of a tax payment, including an installment payment, due under (a) (a) (1) – (4) of this section is affected by the retroactive application of a regulation adopted under this chapter, the department shall determine whether the retroactive application of the regulation caused an underpayment or an overpayment of the amount due and adjust the interest due on the affected payment as follows:
  - (1) if an underpayment of the amount due occurred, the department shall waive interest that would otherwise accrue for the underpayment before the first day of the second month following the month in which the regulation become effective, if the department determines that
    - (A) the producer's underpayment resulted because the regulation was not in effect when the payment was due; and
    - (B) the producer made a good faith estimate of its tax obligation in light of the regulations then in effect when the payment was due, and paid the estimated tax;
  - (2) if an overpayment of the amount due occurred and the department determines that the producer's overpayment resulted because the regulation was not in effect when the payment was due, the obligation for a refund for the overpayment does not begin to accure [accrue] interest earlier than the following, as applicable:
    - (A) except as otherwise provided under (B) of this paragraph, the first day of the second month following the month in which the regulation became effective;
    - (B) 90 days after an amended statement under AS 34.55.030(a) and an application to request a refund of production tax paid is filed, if the overpayment was for a period for which an amended statement under AS 43.55.030(a) was required to be filed before the regulation became effective.

Interest on Retroactive Regulatory Changes

- Possible upgrades to Governor's Language:
- Don't require a departmental determination of good faith by the producer in each case. Assume it, and allow the department to prove otherwise if it finds egregious behavior.
- AS 43.55.020 (a)(1)-(3) are monthly "installment payments of estimated tax" using 1/12th of estimated credits and 1/12th estimated lease expenditures - so
  - No true up caused by retroactive regs except for annual true up already required under AS 43.55.020 (a) (4) and
  - First first day of month more than 90 days after effective date of regs.

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

Rate tied to Resident Hire

- General Approach – (section 15)
- Base Tax rate (in AS 43.55.011(e)) is 25%, and Taxpayers makes monthly payments at that rate
- Any direct labor that is a lease expenditure is accounted for as Resident or non-Resident.
- At the end of the year total hours of labor are used to calculate a ratio for the year: or resident hire %
- New effective rate is calculated:
  - 20% for a 100% Resident Hire ratio up to
  - 25% (current law) for an 80% Resident Hire ratio.
- Taxpayer can then apply for a rebate of the difference for the prior year.
- Note: effective date should be beginning of a year.

Rates in CS HB 308 proposed 43.055.022 (b)

For Resident Hire Ratios		Rebate of amount under AS 43.55.011(e)(1)	Tax Rate in AS 43.55.011(e)(1)	Rebate as % of PTV	Effective Tax Rate
equal or above	but below				
70.0%	72.5%	0.0%	25.0%	0.0%	25.0%

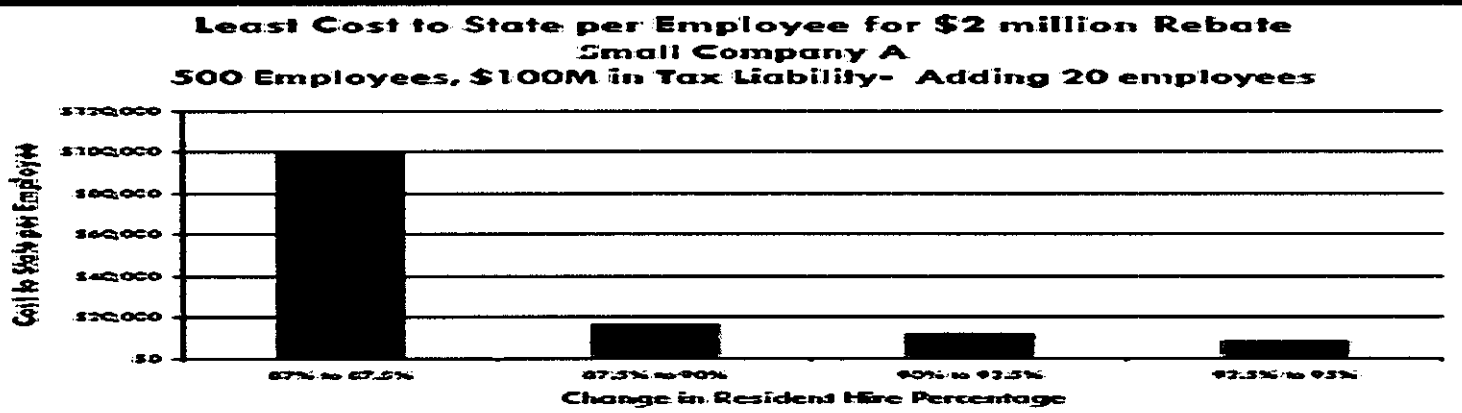
DOR Presentation 2/10/2010 Tables 5-8

Impact of Tax Rebate Provision



Change in rebate (dollars) is constant per category

		2%	2%	2%	2%
Change in employees is small in first category - large in all the rest					
	slide	Small Change	**BIG CHANGE**	**BIG CHANGE**	**BIG CHANGE**
Company A	6	87.0% - 87.5%	87.5% - 90.0%	90.0% - 92.5%	92.5% - 95.0%
Company B	7	82.0% - 82.5%	82.5% - 85.0%	85.0% - 87.5%	87.5% - 90.0%
Company C	8	79.5% - 80.0%	80.0% - 82.5%	82.5% - 85.0%	85.0% - 87.5%
Range		**0.50%**	2.50%	2.50%	2.50%
Resulting Dollars per employee:					
		Big	Small	Small	Small

2.15.2010

Resident Hire -- What will it cost per job?

- "In an extreme example, [according to DOR] hiring just one Alaskan could mean $30 million in tax savings" (Anchorage Daily News 2/11/2010, backpage (A-14))

- True: the bracket vs. formula issue
- DOR emphasized small employment change yielding large tax change – also true that large employment changes may not effect tax – formula fixes this feature.
- DOR emphasized employment changes about 80% however- Currently at 70%; no tax change until 80% achieved – formula preserves this feature

Resident Hire – What will it cost per job?

All figures in Millions of Dollars:	
FY2008 Estimated PTV ($millions)	$ 16,837.7
FY2009 Estimated PTV ($millions)	9,313.1
Average for CY 2009	13,075.4
Assumption: One company is responsible for half	6,537.7
AS 43.55.011(e)(1) taxes at 25%	1,634.4
If one incremental employee (hour) moves taxpayer by one bracket in between 80 - 97.5% then effect is (.5%)	**32.7**

Function of "brackets rate applied to base"
Opposite effect also occurs.

2.15.2010

Resident Hire – What will it cost per job?

Opposite effect also occurs.
Assumption: Company employees and contractors are 1/2 the workforce
(2009 Total Workforce of 13,000, so Company has 6,500)
(1) A company this big will be close to the average so 70% Resident

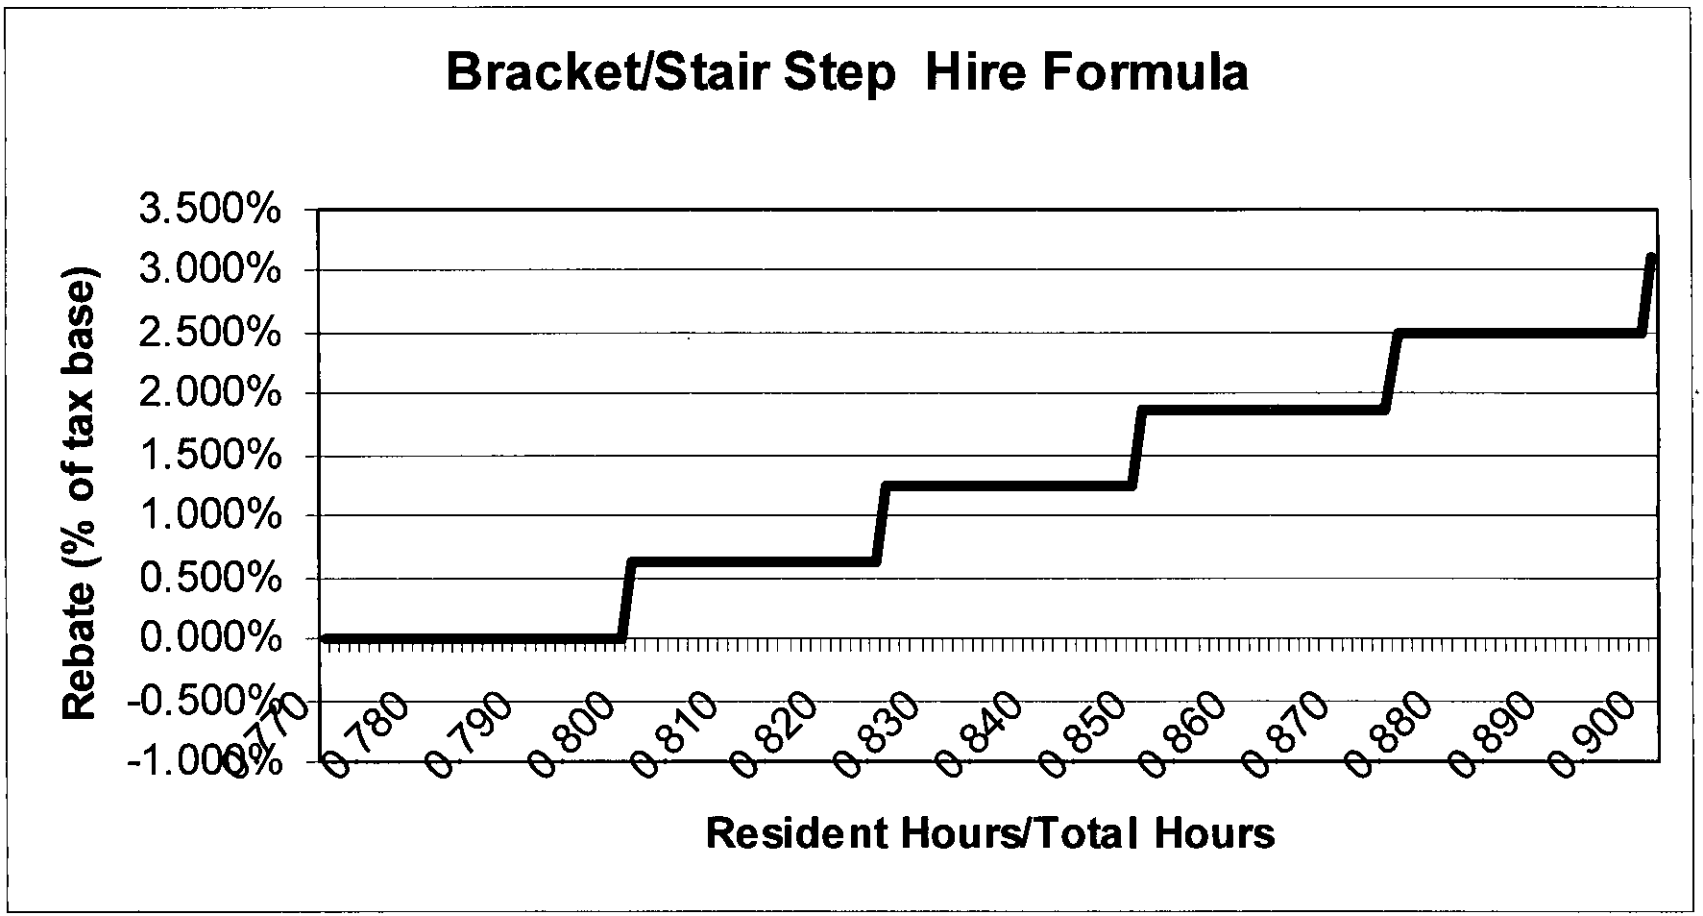
	Total Workers	Resident Workers	Ratio	Tax rate
year one	6,500	4,550	70.00%	25.0%
add		649		
year two	6,500	5,199	79.98%	25.0%

	Total Worker Hours	Resident Worker Hours	Ratio	Tax rate
year one	13,000,000	9,100,000	70.00%	25.0%
add		1,298,000		
year two	13,000,000	10,398,000	79.98%	25.0%

"need to be at 80% to start the conversation"

2.15.2010

Resident Hire – What will it cost per job?



2.15.2010

Resident Hire – What will it cost per job?

Opposite effect also occurs.

Assumption: Company employees and contractors are 1/2 the workforce (2009 Total Workforce of 13,000, so Company has 6,500)

(2)

	Total Workers	Resident Workers	Ratio	Tax rate
year one	6500	5200	80.00%	24.5%
add		162		
year two	6500	5362	82.49%	24.5%

	Total Worker Hours	Resident Worker Hours	Ratio	Tax rate
year one	13,000,000	10,400,000	80.00%	24.5%
add		324,000		
year two	13,000,000	10,724,000	82.49%	24.5%

2.15.2010

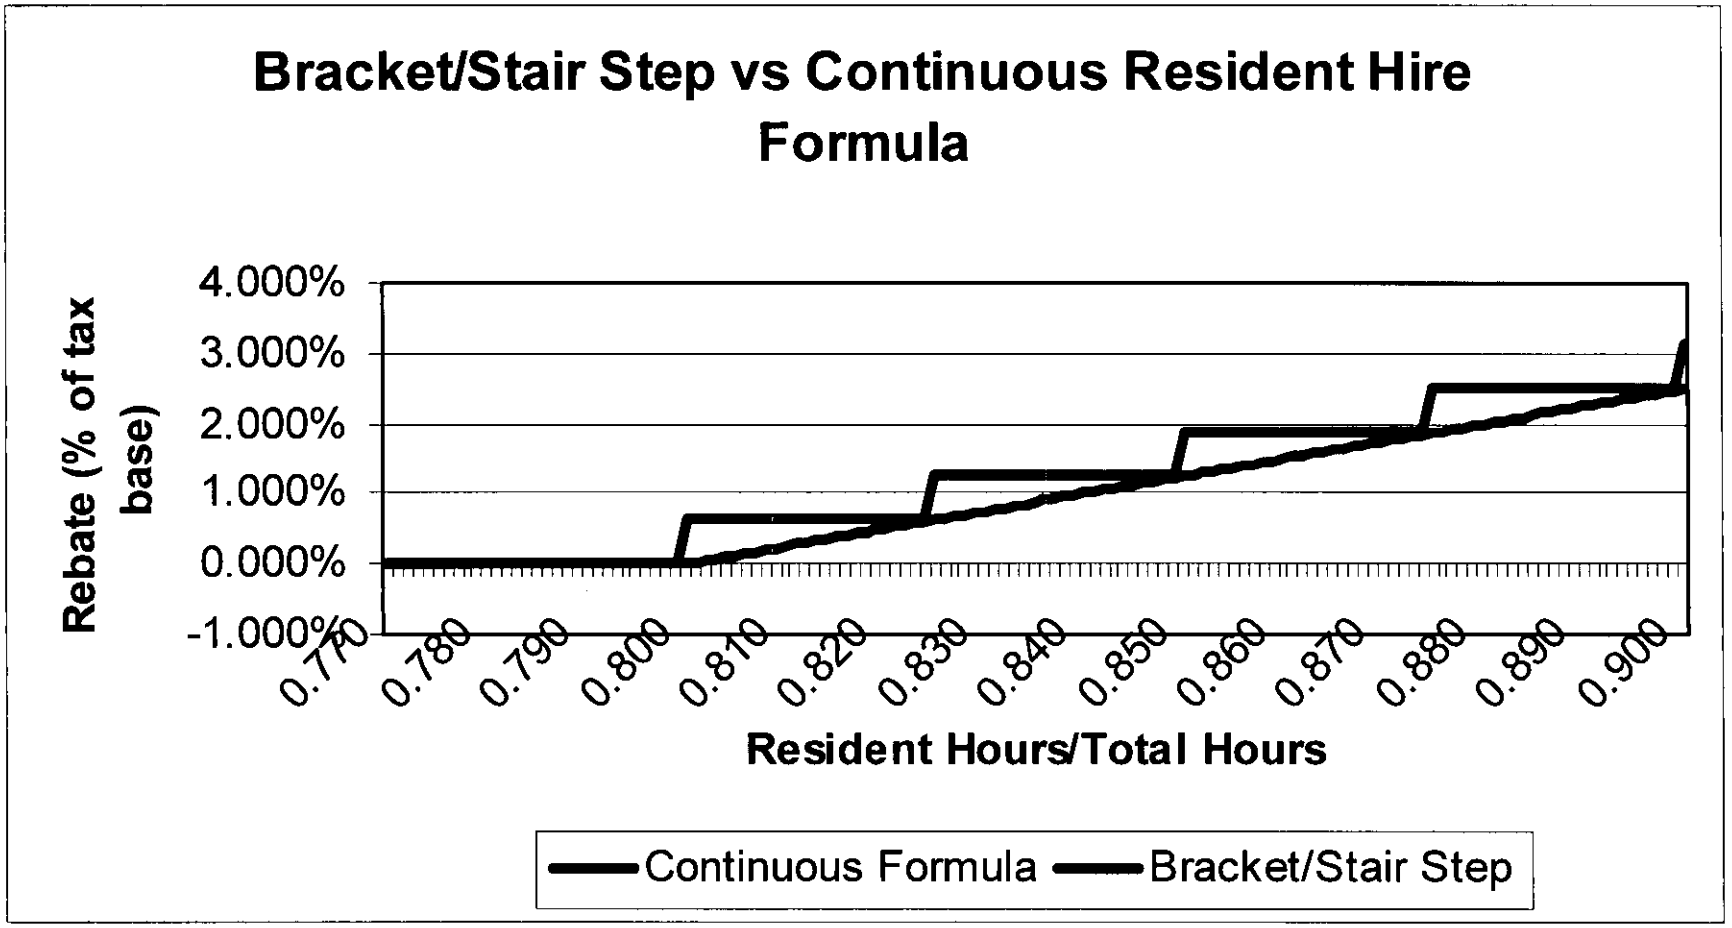
Stair Step versus Continuous Function

Solution – Continuous function (with rounding)

- Rebate equal to tax base (PTV) times
- Higher of ((Resident Hours/Total hours) or .8)
- Less .8

- That transforms Resident Hire rates between 80% and 100% into a series from 0% to 20%

2. Stair Step versus Continuous Function



Problem of "no reporting of nonresident wages"

		Actual	Rounded
FY2008 Estimated PTV ($millions)	$	16,837.7	
FY2009 Estimated PTV ($millions)		9,313.1	
Average for CY 2009		13,075.4	10,000
AS 43.55.011(e)(1) taxes at 25%		3,268.8	2,500
Maximum Rebate (20% of taxes, 5% of base)		653.8	500
Non Resident Workers in industry in 2008		5043	5,000
Average Wages (2008) per worker ($million)		0.083601	0.100000
Total Non- Resident Wages		422	500
Effect of not claiming Non resident wages as lease expense (25%) ($millions)		105.4	125
So by simply not reporting or deducting the 5043 non residents Decrease in taxes: ($millions)		548.4	375

Sources: State of Alaska, Dept. of Labor and Workforce Development, Nonresidents Working in Alaska, 2008 (Jan 2010), derivations from figures in Dept of Revenue, Revenue Sources Book (Fall 2009)

Some solutions to "no reporting of nonresident wages"

1. Shift the scale so maximum tax savings are not $500 million by $100 million and tax rate could range from 24% to 25%.
2. Require that for any labor to be allowed as a lease expense, all the labor from that company must be calculated in Resident Hire calculation – (with additional rules for pass through).
3. Focus on new hires only, and specific dollar rebate for every new resident hire.
4. Given structure of industry, have the DOR determine a tax rate every year based on the Resident Hire Ratios of 10 (20?) largest employers in the industry or largest generators of lease expenditures.

2.15.2010

Structure of Industry in Alaska

- Producers (taxpayers) have employees & hire
  - Operator who has employees & hires
    - Contractors, and buys "stuff"
- According to the Dept of Labor & Workforce Development (2008) employment in
- Oil and gas (direct) 4,055
- Oilfield Services 12,875
- Total 16,930

Sources: State of Alaska, Dept. of Labor and Workforce Development, Nonresidents Working in Alaska, 2008 (Jan 2010),

To be addressed by Regulations or Statute II

- Is the "overhead labor" that is replaced by a formula in 15 AAC 55.270 part of the resident labor calculation? (see DOR slides)
- If a contractor has a fixed price contract, or charges a fee that includes labor (such as for transportation, turnkey modules, any manufactured good) who determines, or how is it determined whether and to analyze the labor in that transaction for resident labor?
- Are billed professional services (say by an engineer) "labor" for the resident hire calculation.
- Should be effective on the first day of a year.

To be addressed by Regulations or Statute I

- If tax was not paid due to limitations in AS 43.55.011(j), (k) and (o) – CI or instate gas, can it be rebated?
- If tax was not paid due to applications of .023 Capitol and Loss Carry Forward Credits, .024 "Low Production" Credits and/or .025 Exploration Credits, can it be rebated?
- If times are tough and taxpayers have to pay the "alternative minimum tax" under AS 43.55.011(f), can that be rebated? It is a tax based on gross – but will still require the calculation of labor costs.
- If there is lots of investment activity and so that generates a loss – No resident hire issues if no tax base? Or should the rebate effect the loss carryforward. (Perverse incentive)

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

Investment Credits

- Section 17 adds 30% well work credit to investment credits
- Under Current Law –
- 30% Credit for exploration wells (AS 43.55.025)
- 40% Credit for seismic work outside of existing unit,
  - or exploration wells 25 miles from existing unit, and
  - 3 miles from any prior well (or with certification from DNR that it is for a new target in the Cook Inlet) (AS 43.55.025)
- 20% Credit for any capital investment (AS 43.55.023(a))

- No change to Exploration Credits AS 43.55.025 under this bill

- How does this compare with Governor's "Well Credits" proposal

-Both create a 30% credit for well work

-Both include pertinent capex and opex

-CS should be effective on the first day of a month (Gov's bill is July 1, 2010) year.

- Differences:
- CS for HB 308 places the credit among the .023 "Tax Credits for certain losses and expenditures" Governor's bill changes name of .025 from "Exploration" to "Exploration and Development" and places it there.
- Different definition of well related expense.
- (Other changes to AS 43.55.025 in Gov's bill)

Differences between AS .023 and .025

AS 43.55.023 – Tax credits for certain loses and expenditures	AS 43.55.025 – Alternative tax credit for oil and gas exploration
AS 43.55.023 deals with capital costs in (a), lease expenditures in (b), and both in sections (c), (d), (e), (g), (h) and (j). (note – (f) repealed and (i) and (k) deal only with capital).	AS 43.55.025 deals only with exploration costs –by explorers. Administration suggests totally re-writing and re-titling to cover this work by explorers and producers.
21 specific exclusions from lease expenditures listed in AS 43.55.165 (e) (1) – (21) including exclusion of 30 cents a barrel from any capital cost, and certain transactions with affiliates or related parties.	Prohibitions summed up in one paragraph (AS 43.55.025(b)(3)
Restrictions in AS 43.55.011(m) ("credits clawback") do not apply.	AS 43.55.011(m) ("credits clawback") does apply.

Question: Are we certain that the restructuring of AS 43.55.025 will not result in inadvertent changes to the rules?

2.15.2010

Definitions of well work compared

CS for HB 308 proposed AS 43.55.023(m)(3)	Governor's Language proposed AS 43.55.025(b) (3) and (4)
"Well-related expenditures" means	Development well expenditures are for
A lease expenditure	Goods, services and rentals of personal property reasonable required for
related to a well	
and includes a lease expenditure for the purposes of sidetracking, well deepening, well recompletion, well workover,	Re-drilling, casing , cementing or logging, Completing, workover operations or other operations intended to increase or enhance well production
	from known productive pool;
an injection well and well related seismic work and	And the well is not a service well [injector] or stratigraphic test well.
an intangible drilling and development cost authorized under 26 USC (IRC) as amended, and 26 CFR 1.612-4, regardless of the elections make under 26 USC 263(C0 as amended	
up to the flange connecting the well head to the well line.	

2.15.2010

6 Changes in CSHB 308

- Interest rate is lower of fed funds +2 or 11%
- Interest not due on retroactive regs changes prior to implementation
- Change progressivity from .4% to .2%
- Tax rate tied to Resident Hire
- 30% credit for well work
- Restore 3 year statute of limitations

2.15.2010

- Section 20 Restores statute of limitations to three years for production tax - time for the state to complete a production tax audit (or, agree to an extension with taxpayer or issue a blue sky assessment)
- Three year rule would begin with 2011 tax year
- Note: in the case of False or Fraudulent returns, or failure to file a return, may proceed "at any time"

- Prior to 2007, SOL was three years for all tax types under AS 43.05.260 –
- In 2007 production tax pulled out and extended to 6 years in AS 43.55.075

Presentation to Alaska Legislature House Resources Committee

March 10, 2010

SAVANT ALASKA

44103

A Brief History

- Founded in 2006 to invest on the North Slope of Alaska.
- Licensed over 190 square miles of 3-D seismic data and leased or acquired access to over 45,000 acres in focus area east of Prudhoe Bay field.
- Drilled the Kupcake #1 exploration well in 16' of water in the Beaufort sea in the winter of 2008 resulting in a dry hole.
- Entered into a farmout agreement with BP Exploration (Alaska) Inc. providing exclusive access to the Badami Unit.
- Opened Anchorage operations office in January 2009
- Commenced B1-38 (Red Wolf) exploration well in March 2009 – resumed operations in January 2010
- Have invested or caused to be invested over $43 million dollars in Alaskan exploration and development since inception

Why Alaska?

- The North Slope contains a prolific hydrocarbon system
- There are multiple oil targets in the geologic section
- The eastern half of the North Slope is lightly developed
- The State of Alaska under ACES legislation currently offers up to 45 cents per dollar of investment in tax credits (cash rebates) to Explorers
- The existing Badami infrastructure provides a significant competitive advantage

ACES Tax Credits

- Tax credit summary
  - $3,397,056 redeemed for cash to date
    - $280,010 in 2008
    - $3,117,046 in 2009
  - Currently have tax credits totaling $7.9 million which should be redeemed for cash in 2Q 2010
  - Application for $6.6 million to be filed in 1Q2010
  - Inception to date acquired, earned or redeemed $19 million in ACES tax credits
  - Secondary market for tax credit certificates is thin at best

Current Plans

- Finish 2010 winter well work program
- Restart the Badami facility and production summer 2010
- Evaluate results of new wells
- Potentially drill additional delineation and development wells in winter 2011

Our View of ACES

- Exploration Incentives
  - Tax credit system provides meaningful inducement to take risk in the state
  - Any enhancements will only improve our ability to continue exploring
  - We generally support the Governor's proposed Amendments
  - Not widely known or understood in the Lower 48

- Progressivity Feature
  - We've remained silent on this issue because we are not a "producer", yet
  - In general, the progressivity is a disincentive because it results in a diminishing return per incremental barrel produced as indicated by our economic modeling at Badami

Badami Redevelopment...

TESTIMONY OF THE

ALASKA OIL AND GAS ASSOCIATION

TO THE HOUSE RESOURCES COMMITTEE

REGARDING DRAFT CSHB 308(RES), Version E

March 10, 2010

Mr. Chairman and Members of the Committee:

My name is Marilyn Crockett and I am the Executive Director of the Alaska Oil and Gas Association ("AOGA"). AOGA is the trade association for the oil and gas industry in Alaska. Our 14 members account for the majority of oil and gas activities in the state. The testimony I am about to present has been prepared and approved without dissent by the members of the AOGA Tax Committee.

Let me begin by thanking you, Mr. Chairman, and the co-sponsors of House Bill 308 — Representatives Newman, Ramras, Millett, Johansen and Hawker — for introducing this Bill during these crucial times.

In light of the relentless and continuous decline in the rate of oil production, one of the great challenges facing Alaska is in getting from today to the time when a Gas Pipeline begins operating a full 10 years from now. ConocoPhillips, in testimony to the Senate Finance Committee on February 23rd, said that "[p]roduction from the Core Fields [on the North Slope] may require more than $40 billion of expenditures by the industry during the next decade."[1]

We welcome House Bill 308 as an essential first step in a comprehensive review of ACES to ensure that it can and will succeed, as intended, in keeping Alaska competitive for this additional $40 billion that needs to be invested here during this decade. At the same time, ACES must be reviewed to ensure that it has not overshot the optimum point where "the utilization, development, and conservation of [this] natural resource[ ] belonging to the State" achieves the "the maximum benefit of its people" in terms of total state revenues, Alaska jobs and economic growth over the remaining life of the fields, as the Alaska Constitution requires.[2] Our testimony today is in two parts in order to address each of these vital concerns.

Part I. Problems with ACES

Mr. Chairman, there are a lot of things wrong with ACES. AOGA and individual companies have together submitted nearly 200 pages of comments and testimony to the Department of Revenue about what is wrong with ACES and with the regulations that have been developed and are either already adopted or are in the process of being adopted. In the interest of time I'd like to highlight only a few of the most important ones now.

Problem A. Excessive tax rate

The Department of Revenue, in testimony to this and other legislative committees, presented a lot of statistics that fail to distinguish investment and jobs for new projects from investment and jobs for projects that had already been begun or committed to before ACES was enacted. A more telling statistic about ACES is the number of new in-field wells drilled and completed, because they can be approved, drilled and go into production within a matter of months instead of years. As a result, the figures for them are much less distorted by momentum from pre-ACES commitments. The number of new in-field wells decreased from 166 in 2007 to 155 in 2008 and 147 last year.[3] BP, as an operator on the North Slope, has publicly said its in-field drilling "will be more than 50% lower in 2010 vs. 2007" and it has reduced its rig count by 30% since January of last year. Industry added about 450 million barrel-of-oil-equivalents to North Slope reserves in the last five years, according to ConocoPhillips at the Meet Alaska Conference last January, but "only 35 million since ACES". Why? Larry Archibald, senior vice president of exploration and business development for ConocoPhillips, told Meet Alaska that even though "Significant potential remains in North Slope Giants[, ...] Giant fields have [the] worst fiscal terms" under ACES.

And the news on exploration wells isn't good either. The number of exploration wells being drilled on the North Slope declined from 11 in 2007, to 9 in 2008 and 8 in 2009.

During testimony on February 16, 2010, Division of Oil and Gas Director Kevin Banks reviewed oil and gas activity across the North Slope, observing that "independents are flocking to Alaska". However, the companies identified on his map have been in Alaska for several years. Which raises the question of just who could be coming to Alaska but isn't. Rigdata identified the top 20 U. S. drillers in terms of footage drilled in 2009. Only seven of those companies are currently operators or have interests in fields here in Alaska.

Another disturbing trend is emerging in the area of oil and gas lease acreage. According to their testimony, ConocoPhillips—the leading explorer on the north slope for the last decade and more—relinquished 880,000 acres of leases in NPR-A last year. A significant amount to be sure, but this accounts for *less than half* of the state and federal acreage which was closed across the arctic slope last year. Attached to my testimony is a map and chart depicting lease closures for the years 2005-2009. As you can see, in 2009, 371 leases were closed totaling more than 2 million acres. And in 2008, 142 leases totaling more than 1.2 million acres were closed.

Problem B. The impossible plight of non-operators

Time after time in the ACES regulations being adopted, the Department of Revenue places impossible expectations and demands on producers ("non-operators") in a field or unit that are not the operator of that field or unit. A non-operator receives only a monthly invoice or bill from the operator with a description of the cost items going into the amount that the WIO is to pay. There are no timesheets or other documentation that comes with the invoice, nor copies of billings from third parties that the operator has received and paid on behalf of all the non-operators in the field or unit. Yet the regulations expect non-operators to have the same details and documents that their operator has, because they have to file tax returns each month that depend on those details and documents in order to be filled out to compute the amount of tax.

Worse, the standards for what an operator may bill to the non-operators are set by the particular terms of the operating agreement for that field or unit. While the amounts that the operator bills out to the non-operators are generally close overall to what is deductible as lease expenditures under ACES, the details of individual costs do not correspond exactly to the edges of the specific categories the Department has created for allowable lease expenditures. There are over 20,000 cost codes under the system of accounts for the Prudhoe Bay Unit, for example, but the Department's regulations have only 336 categories. Due to the lack of definition and clarity, the inconsistent use of terms, and arbitrary percentages of costs being applied, there is virtually no way a Prudhoe Bay non-operator can possibly determine, for all of the 20,000 cost codes in that system of accounts, which ones fit into the 336 categories under this regulation. And for some cost codes, part of it may fit into one category and the rest into a different one. But a non-operator is likely not to have the particular information required under the regulations in order to determine whether this is the case for a given cost code. And even if the non-operator can determine which category a particular cost code straddles, it may very well lack the information required under the regulation in order to determine how much goes into each of those categories.

Problem C. Inability of Taxpayers to Determine with Certainty Amount of Tax

The regulations to implement ACES are set up so that it is impossible for a taxpayer to determine what the correct amount of its tax is. For instance, of the 87 times that

the words "the department" appear in the proposed regulations about costs for transporting oil and gas from the field to market, 80 of them are in the context of the Department of Revenue "determining" something — phrases like "determined by the department", "the department will determine", "the department may determine", etc. appear over and over and over.

None of these "determinations" is likely to be made before the taxpayer has to make its monthly tax payment. None of them is likely to be made by March 31st of the following year, when the taxpayer has to make its annual "true up" to match its estimated payments to the actual results for the year. In fact, for many of them, the Department might not make its "determination" until audit, which — with ACES' new statute of limitations — might be as long as 6 years after the taxpayer had to file its original monthly return.

The Department's other ACES regulations reflect this same approach, in which "the department" will make the "determination" for factors in the tax calculation that are essential to know in order to calculate the tax correctly.

This approach all but guarantees ACES' failure with respect to attracting the $40 billion of investment in the "Core Fields" on the North Slope that industry will need to make over this decade. The people making the go/no-go decision about an investment can only use the information they have at the time they make that decision.

While AOGA realizes this Committee is not considering tax regulations at this time, these examples illustrate the way that overly broad discretion for adopting regulations can substantially alter the nature and effects of the laws the Legislature passes. In this case, any benefits or incentives that may be offered under new legislation by this Legislature will be compromised and impaired by the regulations that have just recently been adopted or are in the process of being adopted as we speak. And this is before any new regulations that might be adopted, under this same broad discretion, to implement and interpret the new laws this Legislature may enact. It is crucial, therefore, that legislation like the CS for HB 308 be made as transparent, unambiguous and direct as possible if you want it to achieve the results you intend for it. We felt it is important to highlight just a few of the many issues the regulations create and why additional review of ACES as a whole is required.

Part II. Discussion of the Draft CS for HB 308 (Version E)

While the Committee's working-draft CS contains some 25 bill sections, the substance of the legislation boils down to just six matters:

1. Providing for a rebate of up to 20% of a taxpayer's basic 25% ACES tax, depending on the taxpayer's performance with "Alaska hire";
2. Making the "slope" for progressivity less steep;

3. Creating a 30% tax credit for "well-related expenditures";
4. Changing the statutory interest rate for underpaid or overpaid taxes so it is the lower of the "fed funds + 2" or 11%; currently it is the higher of "fed funds + 5" or 11%;
5. Providing that interest for an underpayment of tax directly resulting from the adoption of a regulation with retroactive application will accrue from the 30th day after the effective date of that regulation, instead of accruing from the original due date for the tax being retroactively changed by the regulation; and
6. Changing the statute of limitations for auditing tax returns under AS 43.55 and issuing an audit assessment, from six years back to three years as it was before the ACES legislation.

AOGA offers the following comments on these proposals.

The Alaska-hire rebate. AOGA members try to hire qualified Alaskans because it makes good business sense. They are making significant efforts and contributions to train more Alaskans to become qualified for industry jobs. The companies "subject to tax under AS 43.55.011(e)" who would stand to get this rebate already have a pretty good track record with Alaska-hire, and a number of them already have Alaska-hire rates over 80% according to the Alaska Department of Labor and Workforce Development.

However, if you are going to create an Alaska-hire rebate, we respectfully urge you to use Alaska-hire standards that the Department of Labor and Workforce Development is using, rather than creating a new and substantially different process based upon the number of hours worked by residents versus non-residents. There is already an almost hopeless degree of complexity merely to determine what labor costs are allowable as lease expenditures under the Department of Revenue's recently adopted regulations on deductible lease expenditures. Adding a rebate based on hours worked would threaten to redouble that complexity into a hopeless morass.

One other thing worth noting about the rebate is that the language in CSHB 308 seems to be silent about whether it is the operator's Alaska-hire performance that determines the size of the rebate, or the non-operator's. And, again, how this question gets answered will determine whether the rebate gets more complicated for non-operators or less complicated.

Over all, though, the rebate is generally a good idea, but it creates more complexity and ambiguity. In our opinion, if you want real results in terms of more jobs for Alaskans, then reduce the tax, make it clear and unambiguous, and let industry have the chance to make its investments. There will be more jobs, a healthier industry, and greater prosperity overall for Alaskans.

Changing the "slope" for progressivity. AOGA opposed the idea of progressivity when it was first introduced in Governor Murkowski's Petroleum Production Tax or PPT

legislation in 2006. We opposed it when it was carried forward in Governor Palin's ACES legislation in 2007.

While AOGA continues to oppose progressivity, we acknowledge that lessening the steepness of the slope for progressivity would reduce its negative effects, and to that extent the draft CS, if enacted, would represent an improvement over the present situation. And we would suggest putting progressivity on an annual basis instead of a monthly one. This would smooth out short-term peaks and valleys in prices during the year and reduce the progressivity rate. But the present monthly method creates a false margin by comparing a monthly price to an average cost for the year. This mismatch creates unnecessary uncertainty and doubt in the minds of the decision-makers about making new investments.

30% tax credit for "well-related expenditures". AOGA and its members support this provision.

Changing the statutory rate of interest. The justification for having interest accrue on tax underpayments or overpayments is to allow the State or the taxpayer, as the case may be, to recoup at least part of its loss from not having had the use of the money that it was entitled to have. The present statutory rate of interest is punitive in purpose and bears little if any relation to either side's actual harm from not having the money when it should have. The proposal in the draft CS reflects a more reasonable assessment of that harm, and AOGA endorses it.

No interest on tax underpayments arising from retroactive application of new regulations. AOGA agrees that it is highly unfair to have interest accrue retroactively on tax underpayments that arise directly from the retroactivity of a newly adopted tax regulation. In light of the punitively high rate of statutory interest under the current statute, the accrual of interest on such an underpayment starting from the date the original tax payment was due would also present constitutional issues as an *ex post facto* law if a taxpayer liable for such retroactive interest chose to raise those issues.

The draft CS avoids these difficulties by giving taxpayers 30 days from the date the retroactive regulation becomes effective after filing by the lieutenant governor, in which to pay the additional tax that directly results from the regulation's retroactivity. In light of the complexity of the tax regulations that the Department has adopted or is still proposing to adopt, 30 days is an unrealistically short period of time for a taxpayer to determine how much additional tax it owes for the all past periods to which the regulation retroactively applies. This would be especially so if such a retroactive regulation becomes effective during the first quarter of the year, when taxpayers are busy closing out the year just ended and preparing the annual true-up between their monthly estimated payments and the actual amount of their tax under ACES for that entire year — this true-up is due March 31st after the close of the tax year. Taxpayers simply do not have the tax staff to do, within the first calendar quarter, their annual true-up and simultaneously compute the additional tax for all the past tax periods to which a new regulation retro-

actively applies.

We recommend, therefore, that the due date for the additional tax be the end of the second calendar month after the month in which the retroactive regulation becomes effective, except when the regulation becomes effective in the first quarter of a calendar year, in which case the due date should be May 31st of that year. In both cases, this would give taxpayers at least two months in which to determine and pay the additional tax that is due as the result of a new regulation's retroactivity.

We would like to point out, however, the effective date of this provision needs to be made retroactive to the date ACES was made effective to ensure that this provision applies to any regulations adopted prior to the enactment of this provision.

Statute of limitations. AOGA endorses the proposal to shorten the statute of limitations for auditing taxpayers and assessing any additional tax found to be due, from six years back to the three years that it used to be before the ACES legislation. Three years is a reasonable time, and should it turn out that the Department needs more than that to complete an audit, taxpayers have historically been willing to extend the limitations period for a reasonable time to allow the audit to be completed. In fact, taxpayers often agreed to extend the statute more than once for a single audit. With a six-year statute of limitations, the Department could wait as long as five years before even starting an audit, and then asking the taxpayer under audit to extend the statute so the audit can be completed.

The purpose in having a statute of limitations, after all, is to allow issues to be raised, addressed and resolved while the evidence is still available and memories are still fresh. The present three-year statute of limitations has worked for all the other taxes under Title 43, including the present worldwide corporate tax for oil and gas taxpayers, the domestic or "water's edge income tax for other corporations, and even the former separate-accounting income tax. It is worth noting that separate-accounting involved not only determining net income from all of a taxpayer's interests in oil and gas fields and prospects, but also its income from interests in oil or gas pipelines as well. Like separate-accounting, ACES is challenging to administer and audit. However, if Alaska didn't need a longer statute of limitations for separate-accounting, we don't see why one is needed now.

Testimony Recap

In conclusion, Mr. Chairman, the draft CS which this Committee has before it will not eliminate all the problems that ACES has, either in the existing statutes or under the regulations the Department of Revenue has adopted or is proposing to adopt. Those problems are numerous and important. AOGA sees this CS — with the few changes we have suggested — as a first step in improving ACES. But, as we have stated, additional review and amendments are required to enable it to achieve what it was intended to

achieve, which is to be more effective as a tax than the prior ELF-based tax or the PPT while enabling new investments to be made to find, develop and produce more oil and gas in Alaska.

Production from all but the most recently developed fields in this state continues its inevitable decline as the physical resource in each field is depleted. As an industry, we have looked for — and found — new technologies and methods for recovering more from the existing fields, and from known, but very difficult-to-produce resources like heavy oil in the Ugnu formation. As an industry, we have also looked for — and found — new technologies and methods for discovering new oil and gas resources. These activities must continue, both for our future here and yours. Massive new investments will be needed each year, and they must not be deterred or discouraged needlessly.

In adapting the state tax structure to fit the future, please bear in mind that one of the most important attractions that Alaska can provide is a clear and stable tax system. All the tax incentives in the world won't make a bit of difference if the people deciding whether to invest in Alaska or not don't believe those incentives will be realized. By making the tax as clear is possible, the features in ACES for attracting investments here will not be discounted or disregarded by those decision-makers. There is a lot of work to do if this clarity is to be achieved, but it can be done. AOGA and its member companies look forward to working with this committee and the legislature to fully examine ACES to achieve this clarity.

Thank you on behalf of the members of AOGA for this opportunity to testify today and to share our thoughts with you about this particular legislation and about factors that will ultimately determine and shape the very future of our industry here.

ConocoPhillips Supports HB308

- **Reduced progressivity:**
  - Moves Alaska toward a more balanced risk / reward environment
  - Incentivizes investment in core and new fields
  - Supports increased long-term jobs & investment in riskier projects
- **Expanded credits for drilling/wellwork activity:**
  - Incentivizes activity in "core fields"
  - Increased drilling/workovers provide additional short-term jobs
  - Credits are only earned with investment
- **Audit period restored to 3 years:**
  - Provides improved tax payment accuracy & predictability for state and producers
  - Originally extended to 6 years due to state uncertainty with new net tax
- **Waiver of interest due to delayed regulations:**
  - Eliminates penalty for good faith tax filings

TESTIMONY OF DALE PITTMAN

ON PROPOSED CSHB 308

TO THE ALASKA HOUSE RESOURCES COMMITTEE

MARCH 11, 2010

INTRODUCTION

Mister Chairman, members of the committee:

Good afternoon. For the record, my name is Dale Pittman. I am the Alaska Production Manager for ExxonMobil, a position I commenced in June of last year. My wife and I have moved to Anchorage and are very happy to be part of the community of Alaska. I have been with ExxonMobil for nearly thirty years, the last fifteen of which were spent overseas, most recently managing operations in Sakhalin. Here in Alaska, I look forward to continuing the progress underway to develop and operate Point Thomson.

I want to thank the committee for the opportunity to express ExxonMobil's views regarding the proposed Committee Substitute to House Bill 308.

ExxonMobil has been working in Alaska for more than 50 years. We have been a key player in Alaska's oil industry development, spending and investing well over $20 billion dollars during that time. As you know, we are currently active with our co-owners at Prudhoe Bay, Kuparuk, Duck Island and Granite Point. We are also excited about our

progress at Point Thomson and remain on track to achieve a 2014 production startup. We look forward to being a part of Alaska for many years to come.

At the outset, let me say that ExxonMobil supports the presentation you heard today from the Alaska Oil and Gas Association. I do not intend to repeat the thorough technical comments from that testimony.

As for our specific comments, I would like to state, consistent with our prior testimony during the hearings on both the PPT and ACES, that ExxonMobil believes Alaska's current production taxes are too high to result in the additional investment needed to maximize the development of Alaska's resources. It is our belief that even the proposed 20 percent tax rate that was in the original PPT bill would not encourage the full development of Alaska's resources.

Alaska is rich in undiscovered resource potential. To date, Alaska has produced more than 15 billion barrels of oil from the North Slope, and according to the DNR there are approximately 6 billion barrels of known resources remaining. These resources represent a known opportunity, but their development is at risk under the current tax system. Oil production today is one-third of the peak oil production of more than 2 million barrels per day in 1988, and annual production continues to decline.

Spending on the North Slope has remained relatively flat since the enactment of ACES, as you have heard in prior testimony. But the majority of that investment has been for maintenance or production enhancement efforts for existing operations, not for new exploration and development opportunities. In fact, the industry currently invests more

than $1 billion per year just to maintain North Slope oil production at the current decline rate of about 6 percent annually. Without that continued investment, the annual production decline would not be 6 percent, but would actually be closer to 12-15 percent annually.

What this means is in just 10 years, the majority of future oil production will need to flow from new investments - investments that are at risk today under Alaska's current production tax regime.

Let me explain.

Time in the oil and gas industry is not measured in business cycles. It is measured in decades and in generations. Today's production rates are the product of government policies, technical work, and investment decisions that in many cases were made decades ago. Increasing production rates in the decades to come will result from sound policies, decisions, and commitments that are made today. As policy makers, you will need to decide whether Alaska's current high production tax regime is the right course for Alaska or – given the current high costs and steadily declining oil production rates we face – if another course is necessary to harness the remaining resource potential.

It is important to recognize that any decision made today impacts much more than tax revenue in the future. Decisions made today impact jobs for Alaskan workers, revenue for many Alaska businesses, and infrastructure that benefits Alaskan communities and extends the life of production in existing fields.

To encourage full development of Alaska's resources, we believe production taxes should be lowered. The high base tax rate and the higher taxes due to the additional progressivity tax are major disincentives to the high risk investment opportunities required in Alaska.

Companies like ExxonMobil are willing to accept the risks of long-term, capital intensive investments when there is a stable tax structure that allows and encourages investment and ensures a corresponding opportunity for upside potential. Upside factors such as increased production and higher prices should be a benefit for risks taken, because companies are certainly negatively impacted when lower than expected production or prices occur. When you take away the upside potential that companies can achieve you reduce the overall attractiveness of those capital intensive investments.

Alaska faces significant challenges. Costs are high, exploration is down and production continues to decline. We all need to work together to achieve the right balance - a balance that maximizes the benefit to Alaskans while encouraging industry to continue to invest in Alaska.

We advocate a collaborative approach to develop a sustainable long-term resource development policy that will encourage the needed investments to build the future of Alaska for many generations to come.

Alaska's resource development policy should identify and characterize state-wide resource potential, identify key issues challenging exploration and development, and

encourage investment needed to mitigate production decline. Such a policy should also consider key factors that impact resource value, such as research and technology, exploration and development costs, regulatory and environmental considerations, and land access. A reassessment of Alaska's high production taxes is a critical part of that long-term resource development policy.

Committee Substitute to House Bill 308 is best characterized as a first step toward what we believe should be a comprehensive examination of Alaska's production tax structure.

It will take everyone working together to achieve that long-term policy. Government leaders, industry representatives, contractors and citizens all stand to benefit from developing Alaska's resources.

ExxonMobil looks forward to working with the Administration, the legislators, industry and the people of Alaska in the future pursuit and development of Alaska's oil and gas resources.

Thank you again Mister Chairman for the opportunity to testify today.

Re: Committee Substitute for House Bill 308 – Oil and Gas Production Tax

Dear Representative Johnson:

On behalf of Pioneer Natural Resources Alaska, Inc. (Pioneer), I am writing to share our views on the Committee Substitute for House Bill 308 (CSHB308). In this letter I will provide you with; 1) a brief overview of Pioneer as a company and our activities in Alaska, 2) a high-level analysis of the effects Alaska's various fiscal regimes have had on our business and 3) specific comments regarding the provisions of CSHB308. Thank you for providing an opportunity to share this information with you.

Pioneer Overview

Pioneer is a large independent oil and gas exploration and production company headquartered in Irving, Texas. The company has operations throughout the contiguous United States and in both Tunisia and South Africa. Company-wide, Pioneer employs nearly 2,000 people and produces more than 100,000 barrels of oil equivalent per day.

In Alaska, Pioneer operates the Oooguruk Unit on the North Slope – currently producing approximately 9,000 barrels of oil per day – and the Cosmopolitan Unit in Cook Inlet – a discovered resource where the company continues to conduct appraisal activities. Since coming to Alaska in 2003, Pioneer has drilled 11 exploration wells, become the first independent company to operate a field on the North Slope at Oooguruk and has worked diligently to commercialize the resource at Cosmopolitan. Anchorage serves as the company's headquarters in Alaska and Pioneer employs 49 people in the state.

Evolution of Alaska's Oil & Gas Severance Tax System

Pioneer's business activities in Alaska have coincided with state government's recent debates regarding the proper structure for Alaska's severance tax system. In 2006, following a royalty modification decision from the Alaska Department of Natural Resources, Pioneer sanctioned its Oooguruk project. At that time, the Economic Limit Factor (ELF) served as Alaska's severance tax system. Due to the characteristics of the Oooguruk field and the structure of ELF, Pioneer expected its effective severance tax rate to be nearly zero on a gross basis.

In 2007, while Pioneer began construction at Oooguruk , the state Legislature passed the Petroleum Production Tax (PPT) a monumental shift in the state's severance tax structure. At its core, PPT combined a 22.5% tax on the net value of oil produced with a 20% credit for qualified capital expenses. During the debate over PPT, Pioneer testified that the capital credits resulted in a modest improvement for project economics.

In 2008, as production from Oooguruk began, the Legislature created yet another severance tax system – Alaska's Clear and Equitable Share(ACES.) In addition to raising the base tax on oil and gas from 22.5% to 25%, ACES created a new progressivity tax which adds 0.4% per $1/BOE when the production tax value is between $30 and $92.50. When the production tax value exceeds $92.50 the progressivity factor is reduced to 0.1% per $1/BOE. Pioneer believes the aggressive progressivity factor in ACES pushes the tax rate out of balance with the capital credit benefit and therefore does not optimize the balance between state revenues and industry investment over the long term.

Pioneer Comments on the Provisions of CSHB308

- 30% Credit for Well Work

With daily production flowing through the Trans Alaska Pipeline System at one-third of its historical peak, Alaska needs new barrels regardless of how or where they are developed on the North Slope. All things being equal, the increased credit for well work will lead to additional investment resulting in the production of new barrels. Pioneer supports this provision.

- Reduction in Progressivity from 0.4% to 0.2%

The aggressive nature of progressivity under ACES effectively takes away the price upside for Alaska projects making it more difficult for prospective Alaska investments to compete for capital. The bulk of Pioneer's current investments are being made in other areas of the United States where the severance tax regimes are much more favorable. While CSHB308 is a step in the right direction, Pioneer remains concerned that the progressivity tax negatively affects the ability of the industry in Alaska to attract capital.

- Reduction of Audit Period from 6 to 3 Years

Three years is ample time for the Alaska Department of Revenue to conduct and complete its audit work. Additionally, this language reduces tax-payer uncertainty – something that remains a problem with the ACES tax. Pioneer supports this provision.

- Waiver of Interest Due to Retroactive Regulations

Mandating that interest penalties related to regulations applied retroactively will not accrue until 30 days after the effective date of the regulation is a matter of fairness to the industry. Again, this language will help to reduce tax-payer uncertainty under ACES. Pioneer supports this provision.

- Interest Rate = Lower of Fed Funds + 2% or 11%

Alaska's current statutory rate of interest is punitive and is out of proportion when compared to other oil and gas producing states. For example, Pioneer has large operations in both Colorado and Texas where the current interest rates are 6% and 4.25% respectively. Pioneer supports this provision.

- Tax Rebate Related to Alaska Hire

Pioneer understands and supports the State's goal of maximizing the hiring of qualified Alaskans. Nevertheless, this is a complicated issue with a high potential for creating unintended consequences. Pioneer urges the committee to move carefully on this provision.

Conclusion

Pioneer has been an active investor since coming to Alaska in 2003. At Oooguruk, we are working to grow our production to a peak of 15,000 – 20,000 barrels per day. At Cosmopolitan we are striving to commercialize an oil resource estimated to be 30 – 50 million barrels. However, projects in Alaska continue to be challenged by the cumulative negative effects of geography, seasonality, cost structure, complex regulatory environment and long project cycle times.

Increasingly resource plays, such as shale gas, throughout the contiguous United States are attracting substantial interest and investment from both independent and vertically integrated companies alike. With significantly increased competition from lower risk, domestic resources and higher taxes in the change from PPT to ACES, the competitiveness of Alaska projects for investment has declined in recent years. CSHB308 is an important first step in ensuring Alaska remains an attractive place for industry investment.

Thank you again for the opportunity to provide you with Pioneer's comments. Please feel free to contact me or my staff with questions or if you need additional information.

Sincerely,

Ken Sheffield, President
Pioneer Natural Resources Alaska, Inc.

Capitol Building
Juneau, AK 99801

RE: HB 308

Co-Chairs & members of the House Resources Committee,

The Alaska State Chamber of Commerce strongly supports HB 308. The Chamber has been concerned about the continued decline in production of oil and gas here in Alaska. The production decline will ultimately offset any gains in state revenues made by recent tax hikes through ACES. The recent tax increases may even be detrimental to new oil and gas exploration as financial resources are limited in a faltering global economy. Without implementation of HB 308 or similar legislation, new oil exploration and new production will be limited altogether thus creating havoc for our state budgeting process through the loss of revenues from lacking oil production.

Although the ACES legislation passed two years ago raised the state's taxes on oil and gas, current trends in declining oil and gas production suggest that the state will not be able to balance its budget in 5 years or less. Simply, we cannot continue to hope that prices will rebound substantially enough for recent increases in taxes to fill future state budget expectations. Another option must be considered to increase oil production, which currently funds 90% of the state's general fund budget. HB 308 attempts to maintain much of the tax structure passed under ACES, while giving serious financial incentives for exploration and new drilling.

As are aware, we are just beginning to recover from a serious global economic meltdown. In some cases it may take years for a full recovery to be evident. Investment in exploration and prospectus drilling is paramount to increasing oil and gas development in the state. Under current economic conditions, most companies have entered a regressed approach to future investment in prospectus drilling, here in Alaska and elsewhere around the world. HB 308 counters by providing direct incentives for new drilling, up to a 30% recapture of new investment. While there is always resistance in providing tax breaks to industry, HB 308 balances the interests of the state with future production, which creates new state revenues.

ALASKA STATE CHAMBER OF COMMERCE

Headquarters
217 2nd Street
Suite 201
Juneau
Alaska 99801
(907) 586-2323
FAX 463-5515

Again, the State Chamber strongly supports HB 308. We are hopeful the committee will be deliberate and balanced in its approach and work on the legislation. Finding long-term sustainability for the oil industry while providing long-term sustainability for state budgeting should be of the utmost priority.

Respectfully,

Wayne A. Stevens

Re: HB308-Oil and Gas Production Tax

Dear Representative Johnson:

The Resource Development Council (RDC) would like to encourage the Legislature's efforts to develop an improved tax policy that enhances the State of Alaska's competitiveness for exploration and development investments. We support legislation that will encourage new exploration and development of Alaska's oil and gas deposits, as well as enhance production from existing fields. Only through equitable and predictable tax and royalty policies will we be able to reverse the trend that leaves our pipeline less than one-third full today.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

More and more, Alaska is becoming a less attractive place for the oil and gas industry to invest its capital. According to investors – the companies that take the risks involved in developing energy resources, Alaska's high cost environment coupled with its high tax regime discourage new investment. While some in state government and the Legislature may disagree, Alaskans need to listen to what the investors are telling us, since they are the ones making the decisions on where to invest their corporate capital.

While Alaska still holds much promise for significant oil and gas discoveries, there is a world of opportunity elsewhere for companies engaged in energy development. Investors will develop the prospects in their global portfolios that offer the best returns, whether here in Alaska, the Lower 48, or abroad.

It is not enough that Alaska is rich in oil and gas because industry faces substantial risks and high costs in the arctic. The economics of developing energy deposits in the far north are highly challenged, but the state can mitigate many of these challenges by creating a warmer business climate, one that has attractive and highly competitive fiscal terms that compel industry to invest here.

Given oil is the lifeblood of Alaska's economy and the pipeline is running at one-third its peak flow, it is imperative the state have the right tax and royalty policies in place to attract industry investment and sustain the economy. Approximately $40 billion in new investment will be required in the next ten years to develop new fields and prevent the current six percent annual decline in North Slope production from accelerating. Moreover, 38 percent of projected production in 2015 is expected to come from fields that are not yet in production.

Yet Alaska appears to be heading in the wrong direction. Capital spending by major oil producers has ebbed and a disproportionate share of spending has been directed to maintenance projects, which do virtually nothing to generate new production but remain important in maintaining the base production. 2010 will bring the number of exploratory and development wells to their lowest levels in a decade on the North Slope, where production is down 80,000 barrels since 2007.

RDC finds these trends alarming and the lack of investment where it matters most indicates the production decline is likely to accelerate well beyond state projections. The worrisome trends also indicate more than just tweaks are needed to restore Alaska's competitiveness and draw investment dollars back to our state.

RDC is closely tracking oil and gas production tax legislation and requests the opportunity to testify and comment on this issue as the session evolves. We appreciate your efforts to improve Alaska's competitive position in attracting new investment and we thank you for considering our concerns.

Sincerely,

Jason Brune

CS FOR HOUSE BILL NO. 308( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES JOHNSON, Neuman, Ramras, Millett, Johansen, Hawker

A BILL

FOR AN ACT ENTITLED

"An Act relating to the tax rate applicable to the production of oil and gas; relating to credits against the oil and gas production tax; relating to the period in which oil and gas production taxes may be assessed; relating to the interest rates applicable on certain amounts due related to various taxes, penalties, payments, and the Alaska Gasline Inducement Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 05.15.095(c) is amended to read:

(c) A delinquent fee bears interest at the rate set by **AS 43.05.225(2)** [AS 43.05.225].

*** Sec. 2.** AS 34.45.470(a) is amended to read:

(a) A person who fails to pay or deliver property within the time prescribed by this chapter may be required to pay to the department interest at the annual rate calculated under **AS 43.05.225(2)** [AS 43.05.225] on the property or the value of it

from the date the property should have been paid or delivered.

*** Sec. 3.** AS 43.05.225 is amended to read:

Sec. 43.05.225. Interest. Unless otherwise provided,

(1) when a tax levied in this title becomes delinquent, it bears interest in a calendar quarter at the rate of **three** [FIVE] percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District as of the first day of that calendar quarter, [OR AT THE ANNUAL RATE OF 11 PERCENT, WHICHEVER IS GREATER,] compounded quarterly as of the last day of that quarter;

(2) the interest rate is 12 percent a year for

(A) delinquent fees payable under AS 05.15.095(c); and

(B) [REPEALED

(C)] unclaimed property that is not timely paid or delivered, as allowed by AS 34.45.470(a).

*** Sec. 4.** AS 43.50.570 is amended to read:

Sec. 43.50.570. Interest. A licensee who fails to pay an amount due for the purchase of stamps within the time required

(1) is considered to have failed to pay the cigarette taxes due under this chapter; and

(2) shall pay interest at the rate established under **AS 43.05.225(1)** [AS 43.05.225] from the date on which the amount became due until the date of payment.

*** Sec. 5.** AS 43.55.011(g) is amended to read:

(g) For each month of the calendar year for which the producer's average monthly production tax value under AS 43.55.160(a)(2) per BTU equivalent barrel of the taxable oil and gas is more than $30, the amount of tax for purposes of (e)(2) of this section is determined by **subtracting the product of $30 multiplied by the number of BTU equivalent barrels of taxable oil and gas produced during the month from** [MULTIPLYING] the monthly production tax value of the taxable oil and gas produced during the month**, and multiplying that result** by the tax rate calculated as follows:

(1) if the producer's average monthly production tax value per BTU equivalent barrel of the taxable oil and gas for the month is not more than $92.50, the tax rate is 0.4 percent multiplied by the number that represents the difference between that average monthly production tax value per BTU equivalent barrel and $30; or

(2) if the producer's average monthly production tax value per BTU equivalent barrel of the taxable oil and gas for the month is more than $92.50, the tax rate is the sum of 25 percent and the product of 0.1 percent multiplied by the number that represents the difference between the average monthly production tax value per BTU equivalent barrel and $92.50, except that the sum determined under this paragraph may not exceed 50 percent.

*** Sec. 6.** AS 43.55.020(a) is amended to read:

(a) For a calendar year, a producer subject to tax under AS 43.55.011(e) - (i) shall pay the tax as follows:

(1) an installment payment of the estimated tax levied by AS 43.55.011(e), net of any tax credits applied as allowed by law, is due for each month of the calendar year on the last day of the following month; except as otherwise provided under (2) of this subsection, the amount of the installment payment is the sum of the following amounts, less 1/12 of the tax credits that are allowed by law to be applied against the tax levied by AS 43.55.011(e) for the calendar year, but the amount of the installment payment may not be less than zero:

(A) for oil and gas produced from leases or properties in the state outside the Cook Inlet sedimentary basin but not subject to AS 43.55.011(o), other than leases or properties subject to AS 43.55.011(f), the greater of

(i) zero; or

(ii) **the result obtained by taking** [THE SUM OF] 25 percent [AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g)] multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for the leases or properties under AS 43.55.160 from the

gross value at the point of production of the oil and gas produced from the leases or properties during the month for which the installment payment is calculated**, and adding that amount to the tax amount determined for the month under AS 43.55.011(g) for the leases or properties**;

(B) for oil and gas produced from leases or properties subject to AS 43.55.011(f), the greatest of

(i) zero;

(ii) zero percent, one percent, two percent, three percent, or four percent, as applicable, of the gross value at the point of production of the oil and gas produced from all leases or properties during the month for which the installment payment is calculated; or

(iii) **the result obtained by taking** [THE SUM OF] 25 percent [AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g)] multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are deductible for those leases or properties under AS 43.55.160 from the gross value at the point of production of the oil and gas produced from those leases or properties during the month for which the installment payment is calculated**, and adding that amount to the tax amount determined for the month under AS 43.55.011(g) for the leases or properties**;

(C) for oil and gas produced from each lease or property subject to AS 43.55.011(j), (k), or (o), the greater of

(i) zero; or

(ii) **the result obtained by taking** [THE SUM OF] 25 percent [AND THE TAX RATE CALCULATED FOR THE MONTH UNDER AS 43.55.011(g)] multiplied by the remainder obtained by subtracting 1/12 of the producer's adjusted lease expenditures for the calendar year of production under AS 43.55.165 and 43.55.170 that are

deductible under AS 43.55.160 for oil or gas, respectively, produced from the lease or property from the gross value at the point of production of the oil or gas, respectively, produced from the lease or property during the month for which the installment payment is calculated**, and adding that amount to the tax amount determined for the month under AS 43.55.011(g) for the lease or property**;

(2) an amount calculated under (1)(C) of this subsection for oil or gas produced from a lease or property subject to AS 43.55.011(j), (k), or (o) may not exceed the product obtained by carrying out the calculation set out in AS 43.55.011(j)(1) or (2) or 43.55.011(o), as applicable, for gas or set out in AS 43.55.011(k)(1) or (2), as applicable, for oil, but substituting in AS 43.55.011(j)(1)(A) or (2)(A) or 43.55.011(o), as applicable, the amount of taxable gas produced during the month for the amount of taxable gas produced during the calendar year and substituting in AS 43.55.011(k)(1)(A) or (2)(A), as applicable, the amount of taxable oil produced during the month for the amount of taxable oil produced during the calendar year;

(3) an installment payment of the estimated tax levied by AS 43.55.011(i) for each lease or property is due for each month of the calendar year on the last day of the following month; the amount of the installment payment is the sum of

(A) the applicable tax rate for oil provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the oil taxable under AS 43.55.011(i) and produced from the lease or property during the month; and

(B) the applicable tax rate for gas provided under AS 43.55.011(i), multiplied by the gross value at the point of production of the gas taxable under AS 43.55.011(i) and produced from the lease or property during the month;

(4) any amount of tax levied by AS 43.55.011(e) or (i), net of any credits applied as allowed by law, that exceeds the total of the amounts due as installment payments of estimated tax is due on March 31 of the year following the

calendar year of production.

*** Sec. 7.** AS 43.55.020(g) is amended to read:

(g) Notwithstanding any contrary provision of AS 43.05.225, an unpaid amount of an installment payment required under (a)(1) - (3) of this section that is not paid when due bears interest (1) at the rate provided for an underpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the date the installment payment is due until March 31 following the calendar year of production, and (2) as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225] after that March 31. Interest accrued under (1) of this subsection that remains unpaid after that March 31 is treated as an addition to tax that bears interest under (2) of this subsection. An unpaid amount of tax due under (a)(4) of this section that is not paid when due bears interest as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

*** Sec. 8.** AS 43.55.020 is amended by adding a new subsection to read:

(i) Notwithstanding any contrary provision of AS 43.05.225 or (g) or (h) of this section, if the amount of a tax payment, including an installment payment, due under (a)(1) - (4) of this section is affected by the retroactive application of a regulation adopted under this chapter, the department shall determine whether the retroactive application of the regulation caused an underpayment or an overpayment of the amount due and adjust the interest due on the affected payment as follows:

(1) if an underpayment of the amount due occurred, the department shall waive interest that would otherwise accrue for the underpayment before the first day of the second month following the month in which the regulation became effective, if the department

(A) determines that the producer's underpayment resulted because the regulation was not in effect when the payment was due; and

(B) does not find that the producer failed to make a good faith estimate of its tax obligation in light of the regulations then in effect when the payment was due and paid the estimated tax;

(2) if an overpayment of the amount due occurred and the department determines that the producer's overpayment resulted because the regulation was not in

effect when the payment was due, the obligation for a refund for the overpayment does not begin to accrue interest earlier than the following, as applicable:

(A) except as otherwise provided under (B) of this paragraph, the first day of the second month following the month in which the regulation became effective;

(B) 90 days after an amended statement under AS 43.55.030(a) and an application to request a refund of production tax paid is filed, if the overpayment was for a period for which an amended statement under AS 43.55.030(a) was required to be filed before the regulation became effective.

*** Sec. 9.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; [HOWEVER, NOT MORE THAN HALF OF THE TAX CREDIT MAY BE APPLIED FOR A SINGLE CALENDAR YEAR;]

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 10.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or

obtain a cash payment under AS 43.55.028 may apply to the department for **a** transferable tax credit **certificate** [CERTIFICATES]. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the department shall issue the applicant **a** [TWO TRANSFERABLE] tax credit **certificate** [CERTIFICATES, EACH FOR HALF OF THE AMOUNT OF THE CREDIT]. The credit shown on [ONE OF] the **certificate** [TWO CERTIFICATES] is available for immediate use. [THE CREDIT SHOWN ON THE SECOND OF THE TWO CERTIFICATES MAY NOT BE APPLIED AGAINST A TAX FOR A CALENDAR YEAR EARLIER THAN THE CALENDAR YEAR FOLLOWING THE CALENDAR YEAR IN WHICH THE CERTIFICATE IS ISSUED, AND THE CERTIFICATE MUST CONTAIN A CONSPICUOUS STATEMENT TO THAT EFFECT.] A certificate issued under this subsection does not expire.

*** Sec. 11.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by

AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under **AS 43.05.225(1)** [AS 43.05.225] from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 12.** AS 43.55.023 is amended by adding a new subsection to read:

(m) A producer or explorer may take a tax credit for a well-related expenditure, as follows:

(1) notwithstanding that a well-related expenditure may be a deductible lease expenditure under AS 43.55.165 for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well-related expenditure may also elect to apply a credit against a tax levied by AS 43.55.011(e) in the amount of 30 percent of that expenditure;

(2) a producer or explorer may take a credit for a well-related expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2) for a credit under AS 43.55.025;

(3) In this section, "well-related expenditure" means a lease expenditure related to a well and includes a lease expenditure for the purposes of well sidetracking, well deepening, well recompletion, well workover, an injection well, and well-related seismic work, and an intangible drilling and development cost authorized under 26 U.S.C. (Internal Revenue Code), as amended, and 26 C.F.R. 1.612-4, regardless of the elections made under 26 U.S.C. 263(c); during production, "well-related expenditure" includes the costs of operating a well and moving well fluids up to the wellhead.

*** Sec. 13.** AS 43.55.075(a) is amended to read:

(a) Except as provided in AS 43.05.260(c), **for a tax period ending before January 1, 2010,** the amount of a tax imposed by this chapter must be assessed within six years after the return was filed.

*** Sec. 14.** AS 43.77.020(d) is amended to read:

(d) A person subject to the tax under this chapter shall make quarterly payments of the tax estimated to be due for the year, as required under regulations adopted by the department. A taxpayer will be subject to an estimated tax penalty, determined by applying the interest rate specified in **AS 43.05.225(1)** [AS 43.05.225] to the underpayment for each quarter, unless the taxpayer makes estimated tax payments in equal installments that total either

(1) at least 90 percent of the taxpayer's tax liability under this chapter for the tax year; or

(2) at least 100 percent of the taxpayer's tax liability under this chapter for the prior tax year.

*** Sec. 15.** AS 43.90.430 is amended to read:

Sec. 43.90.430. Interest. When a payment due to the state under this chapter becomes delinquent, the payment bears interest at the rate applicable to a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

*** Sec. 16.** AS 43.55.028(e)(2) and 43.55.028(e)(3) are repealed.

*** Sec. 17.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. AS 43.55.020(i), added by sec. 8 of this Act, applies to taxes and installment payments of estimated tax due after February 27, 2007.

*** Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; RETROACTIVITY OF REGULATIONS. Notwithstanding any contrary provision of AS 44.62.240, if the Department of Revenue expressly designates in the regulation that the regulation applies retroactively to a specific date, a regulation adopted by the Department of Revenue to implement, interpret, make specific, or otherwise carry out AS 43.55.020(i), as added by sec. 8 of this Act, AS 43.55.023(a), as amended by sec. 9 of this

Act, or AS 43.55.023(d), as amended by sec. 10 of this Act, is retroactive to the effective date of those provisions.

*** Sec. 19.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. (a) AS 43.55.020(i), added by sec. 8 of this Act, is retroactive to February 28, 2007.

(b) AS 43.55.023(a), as amended by sec. 9 of this Act, AS 43.55.023(d), as amended by sec. 10 of this Act, and AS 43.55.075(a), as amended by sec. 13 of this Act, are retroactive to January 1, 2010.

*** Sec. 20.** AS 43.05.225, as amended by sec. 3 of this Act, takes effect on the first day of the calendar quarter immediately following the effective date of secs. 1, 2, 4, and 6 - 19 of this Act.

*** Sec. 21.** AS 43.55.011(g), as amended by sec. 5 of this Act, takes effect on the first day of the month immediately following the effective date of secs. 1, 2, 4, and 6 - 19 of this Act.

*** Sec. 22.** Except as provided in secs. 20 and 21 of this Act, this Act takes effect immediately under AS 01.10.070(c).

Sectional Analysis of CS for HB 308 (Version P)

Sec. 1. Housekeeping measure that refines the reference for interest rates.

Sec. 2. Housekeeping measure that refines the reference for interest rates.

Sec. 3. Changes the interest rate for delinquent taxes to the federal funds plus three percentage points and removes the 11 floor in current statute.

Sec. 4. Housekeeping measure that refines the reference for interest rates.

Sec. 5. Changes the tax base for the monthly calculation of progressivity to the same basis as is used to calculate the progressivity rate – that is the net value (or PTV) greater than $30 a barrel.

Sec. 6. Makes the same change to the progressivity portion of the monthly estimated payments.

Sec 7. Housekeeping measure that refines the reference for interest rates.

Sec. 8. Authorizes and requires the DOR to waive interest on tax liabilities that arise from retroactive regulations coming into force, for the period between when the payment would normally be due and the time the regulation was adopted.

Sec. 9. Removes the requirement that the application of certain capital investment credits be spread out over 2 years.

Sec. 10. Removes the requirement that the application of certain other credits be spread out over 2 years.

Sec. 11. Housekeeping measure that refines the reference for interest rates.

Sec. 12. Creates a new 30% credit for all well related expenditures.

Sec. 13. Returns the production tax to the same 3 year statute of limitations that apply to all other taxes.

Sec. 14. Housekeeping measure that refines the reference for interest rates.

Sec. 15. Housekeeping measure that refines the reference for interest rates.

Sec. 16. Repeals that portion of current law that required those producers selling credits to the state to spend an equal amount in lease sales or in capital investments within two years.

Sec. 17. Indicates that the changes to interest on liabilities that arise from retroactive regulations goes all the way back to taxes due in 2007.

Sec. 18. Authorizes the DOR, to write retroactive regulations in implementing the interest provisions related to retroactive regulations and the immediate use of certain tax credits.

Sec. 19. Contains the required clarification that the changes to interest on liabilities that arise from retroactive regulations is retroactive to 2007.

Sec. 20. Makes the interest provisions, which are based on a calendar quarter, effective the first first day of calendar quarter after the rest of the bill becomes effective.

Sec. 21 Makes the progressivity provision, which is a monthly calculation, effective the first first day of a month after the rest of the bill becomes effective.

Sec. 22 Makes the rest of the bill effective immediately.

ANALYSIS CONTINUATION

Bill Language and Revenue Impacts:
*** We cannot currently make a determination of the revenue impacts of the bill. For this reason, asterisks are include in our revenue estimates for this fiscal note.

This bill makes changes to Alaska's oil and gas production tax as well as to the interest rate applied to most taxes levied by the state of Alaska. The main provisions of the bill and potential revenue impacts are discussed below:

1. Change in base on which progressive surcharge is multiplied. This bill would retain the rates used to calculate the progressive surcharge as specified in AS 43.55.011(g), but it would change the base on which the progressive surcharge is applied. Instead of applying the progressive surcharge rate to the entire production tax value, this bill would apply the progressive surcharge rate only to that portion of the production tax value that exceeds the progressivity trigger of $30 profit per barrel. The progressivity rate remains unchanged at 0.4% per $1 of production tax value over $30 per barrel, then 0.1% per $1 of production tax value over $92.50 per barrel.

Had this provision been in place in FY 2008, the state revenues would have been reduced by over $1 billion, or 15% of the tax revenue collected. In FY 2009, state revenues would have been reduced by $400 million, or close to 13%.

Using the Department of Revenue Fall 2009 forecasted prices, had this provision been in place for all of FY 2010, the state would have received $300 million less in production tax revenue, or 14%. With oil price increases in later years of the Fall 2009 forecast, this provision would result in revenue reductions of $400 million in FY 2011 and up to $622 million in FY 2015.

2. Add a special credit for qualified well-related expenditures. This bill would add a separate credit for well-related expenditures. The credit would be 30% of capital expenditures for well drilling or seismic exploration and analysis (taken in lieu of the 20% credit for capital expenditures per AS 43.55.023 or the 30% credit per AS 43.55.025), and during production, 30% of costs of operating wells and moving fluids to the wellhead.

Under current projected spending levels, revenues would be expected to be reduced by at least $325 million in FY 2011. Given the broad definition of well-related expenditures in this bill, the impact could potentially be even greater. The Department of Revenue provides an indeterminate fiscal impact to revenues past FY 2011 because the new incentives will likely spur higher spending levels on development activity, which would result in more credits being earned, but would also be expected to increase production, thus providing an offsetting increase in revenue.

3. Reduce the amount of time that auditors have to complete audits on production tax returns. This bill would reduce the timeframe for audits from 6 years to 3 years beginning with returns for the 2010 tax year. This provision would require additional costs for the Department which are described in the Expenses section below.

4. Waive interest for changes in production tax liability as a result of retroactive regulations changes. Following adoption of retroactive regulations to the oil and gas production tax under AS 43.55, the Department of Revenue is required to determine whether the retroactive application of the regulation caused an overpayment or underpayment of the amount due in tax. For an underpayment, interest is waived as long as the underpayment was due to the regulation and the producer made a good faith estimation and payment of its tax obligation under regulations in place when the payment was due. For an overpayment, interest does not accrue until either the first day of the second month following the regulation taking effect, or 90 days after the Department receives an amended annual production tax return with request for refund. The interest provisions are retroactive to February 2007. At this time it is uncertain whether there would be any revenue impact from this change, since it is unclear whether there was any underpayment or overpayment due to the retroactive regulations. The Department of Revenue does not include interest payments in revenue projections, therefore this change would not affect the current revenue forecast.

5. Eliminate requirement that capital credits be spread over two years. Producers and explorers receive a capital expenditure credit in the amount of 20 percent of the qualified capital expenditure, 25% of a loss carryforward, and up to 40% of an exploration expenditure. This bill would remove the provision that no more than half of the tax credit may be applied for in a single calendar year. As a result, the entirety of credits could be applied in the year they are earned.

(continued on next page)

ANALYSIS CONTINUATION

The calculation of the revenue impact for this provision is difficult for two reasons: (1) the timing of the revenue impact will depend upon when the bill is signed into law; and (2) the amount the state may potentially be expected to pay to purchase credits is conditioned in part on removing the reinvestment requirement discussed in #6 below, and the timing of the payment will depend on whether companies will immediately seek reimbursement for their credits.

We assume for this provision a scenario where all credits held by companies with production tax liabilities are used in FY 2010 or FY 2011. This would cost the state approximately $225 million in reduced taxes between the two years.

For companies that are holding credit certificates and are not expected to incur a tax liability in FY 2010 or FY 2011, we estimate an additional liability of up to $150 million over previous expectations for the two fiscal years. These impacts could spill into FY 2012, should companies delay seeking reimbursement.

Beyond FY 2012, revenue impacts are expected to be negligible.

6. Remove reinvestment requirement for state purchase of capital credits. For companies applying for state purchase of capital credits, this bill would remove the requirement that the companies reinvest an amount equal to the amount of the credit purchased within 24 months after applying for a credit certificate.

This provision is expected to be revenue neutral as the credits will reduce revenue whether the state purchases the credits or other companies purchase and subsequently apply the credits against tax liabilities.

7. Change the rates for calculating interest for most tax types. This bill would change the way interest is calculated for most tax types administered by the Department of Revenue, including the production tax. Under current law, the interest rate is the greater of 11 percent or 5 percentage points above the discount rate at the 12th Federal Reserve Bank. Under this bill, the interest rate would be 3 percentage points above the discount rate. If this provision were in place today, the interest rate on taxes would fall from 11 percent to 3.75 percent.

The revenue reduction from this provision is indeterminate because the Department does not have a management information system capable of tracking interest for all taxes. Producing a revenue estimate would require manually compiling information from hundreds of tax returns. Since oil and gas settlements go to the Constitutional Budget Reserve Fund (CBRF), this provision would reduce revenue to both the general fund and the CBRF. This provision would require additional costs for the Department which are described below.

Expenses:
The change to reduce the amount of time that auditors have to complete production tax audits will have a direct fiscal impact on the Tax Division. Reducing the time the Audit Group has to complete audits by 3 years will require the hiring of 2 additional oil and gas auditor IV positions, costing the Division approximately $264,000 per year. If the positions are not filled timely, either the audits will not be completed in time, or the Division will be forced to make defensive tax assessments and shift the burden to its Appeals Group, which could require adding more appeals officers.

In addition, the changes in interest rates and other provisions of this bill would result in one-time costs of $100,000 in FY 2011 for changes to the accounting and tax examination system.

Effective Dates:
The effective date of the bill is immediate for all provisions except for four provisions as follows:
1. The change in progressivity is effective the month following the effective date of the other provisions in this bill.
2. The change in interest rates is effective the first day of the calendar quarter following the effective date of the other provisions of this bill .
3. The elimination of the credit split is effective January 1, 2010.
4. The elimination of the reinvestment requirement for state purchase of credits is effective January 1, 2010.

An immediate effective date would create an administrative burden for several provisions of the bill. In order to simplify revenue impacts, we assume that the progressivity and credit changes begin with FY 2011, on July 1, 2010.

7	Credits purchased without matching spend																16						22	
	Tax rate tied to Resident hire																							

8 Changes in CSHB 308 Version P

- Summary
- Progressivity – Leave the rate the same, change the base (Prior draft changed the rate)
- Interest rate – Fed Funds + 3, no ceiling, (Prior draft, Fed Funds +2, with ceiling)
- Interest not due on retroactive regs changes prior to implementation – Gov's Bill Approach
- NEW - Credits over One Year, not Two
- 30% credit for well work (one definition reword since prior draft)
- Restore 3 year statute of limitations (No change from prior draft)
- NEW - No "matching spend" required to purchase credits
- Tax rate tied to Resident Hire – Not in Current Draft

8 Changes in CSHB 308 Version P

- Progressivity
- Interest rate
- Interest not due on retroactive regs changes prior to implementation
- NEW - Credits over One Year, not Two
- 30% credit for well work
- Restore 3 year statute of limitations
- NEW - No "matching spend" required to purchase credits
- Tax rate tied to Resident Hire

3.17.2010

Progressivity in AS 43.55.011(g) vs. Personal Income Tax

- Under federal personal income tax rules rate is bracketed and only applied to certain income

Schedule X—If your filing status is Single

If your taxable income is: Over—	But not over—	The tax is:	of the amount over—
$0	$9,250	..... 10%	$0
9,250	33,950	$925.00 + 15%	9,250
33,950	82,250	4,675.00 + 25%	33,950
82,250	171,550	16,750.00 + 28%	82,250
171,550	372,950	41,754.00 + 33%	171,550
372,950	.....	109,216.00 + 35%	372,950

- Under current production tax law, all net value is taxed at highest rate – 25% + progressivity (which can range from 0% to 50%)

What is Progressivity?

- Under this CS – Two brackets.
- First bracket up to $30/bbl is 25%
- Second bracket above $30/bbl is 25%+ progressivity

.

Progressivity

- Tax = Rate * Base
- Current Law for Progressivity (AS 43.55.011(g) :
  - Rate: (PTV/bbl - $30) times .4% per dollar,
  - Base: PTV (net value)

- This CS (Version S):
  - Rate: (PTV/bbl - $30) times .4% per dollar,
  - Base: PTV less ($30 * bbl) (net value above $30)

- Prior Draft (Version E):
  - Rate: (PTV/bbl - $30) times .2% per dollar,
  - Base: PTV (net value)

3.17.2010

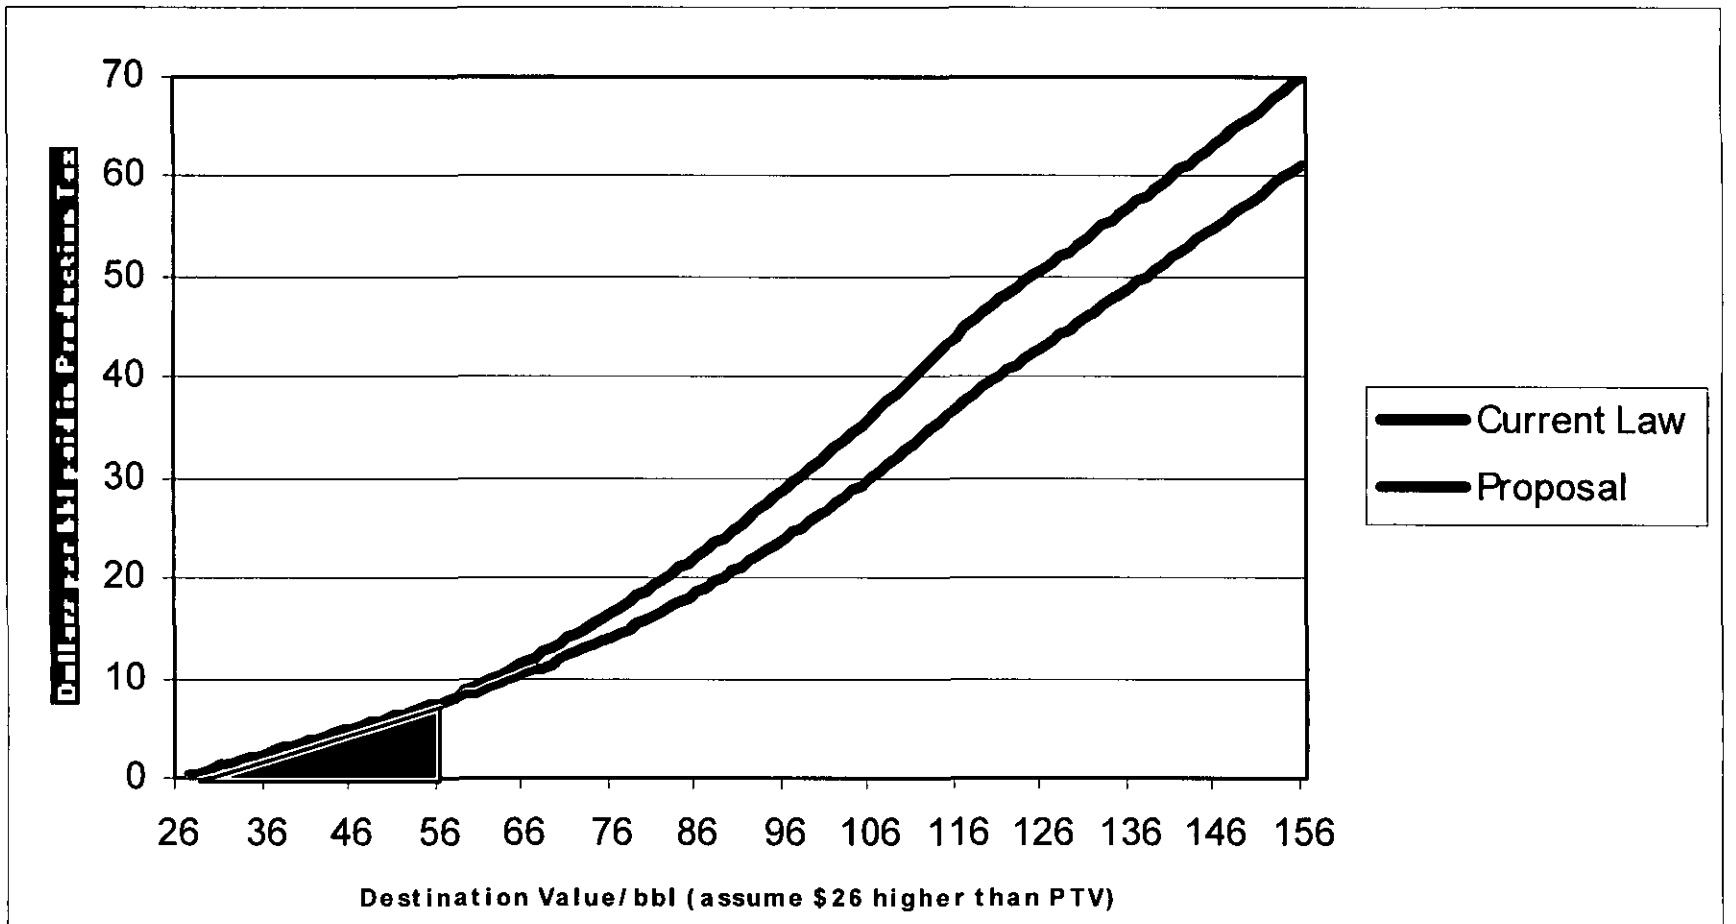
Dollar per Barrel in Production Tax at Various Prices



3.17.2010

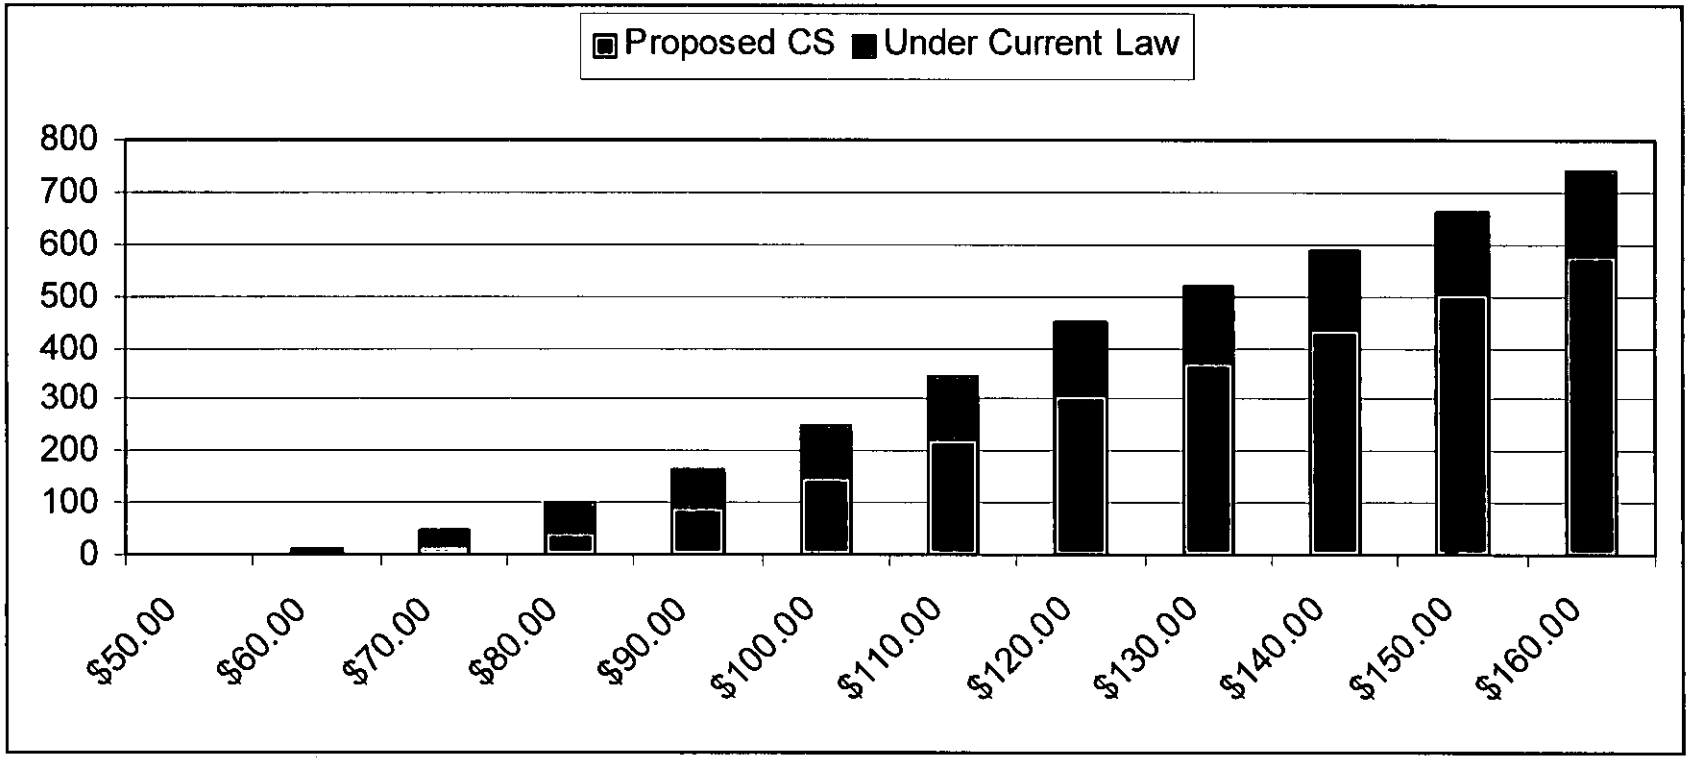
Total dollar effect at current volumes

- Consider a year in which each month the oil price averages $10 higher than the prior month (With current production and costs)



8 Changes in CSHB 308 Version P

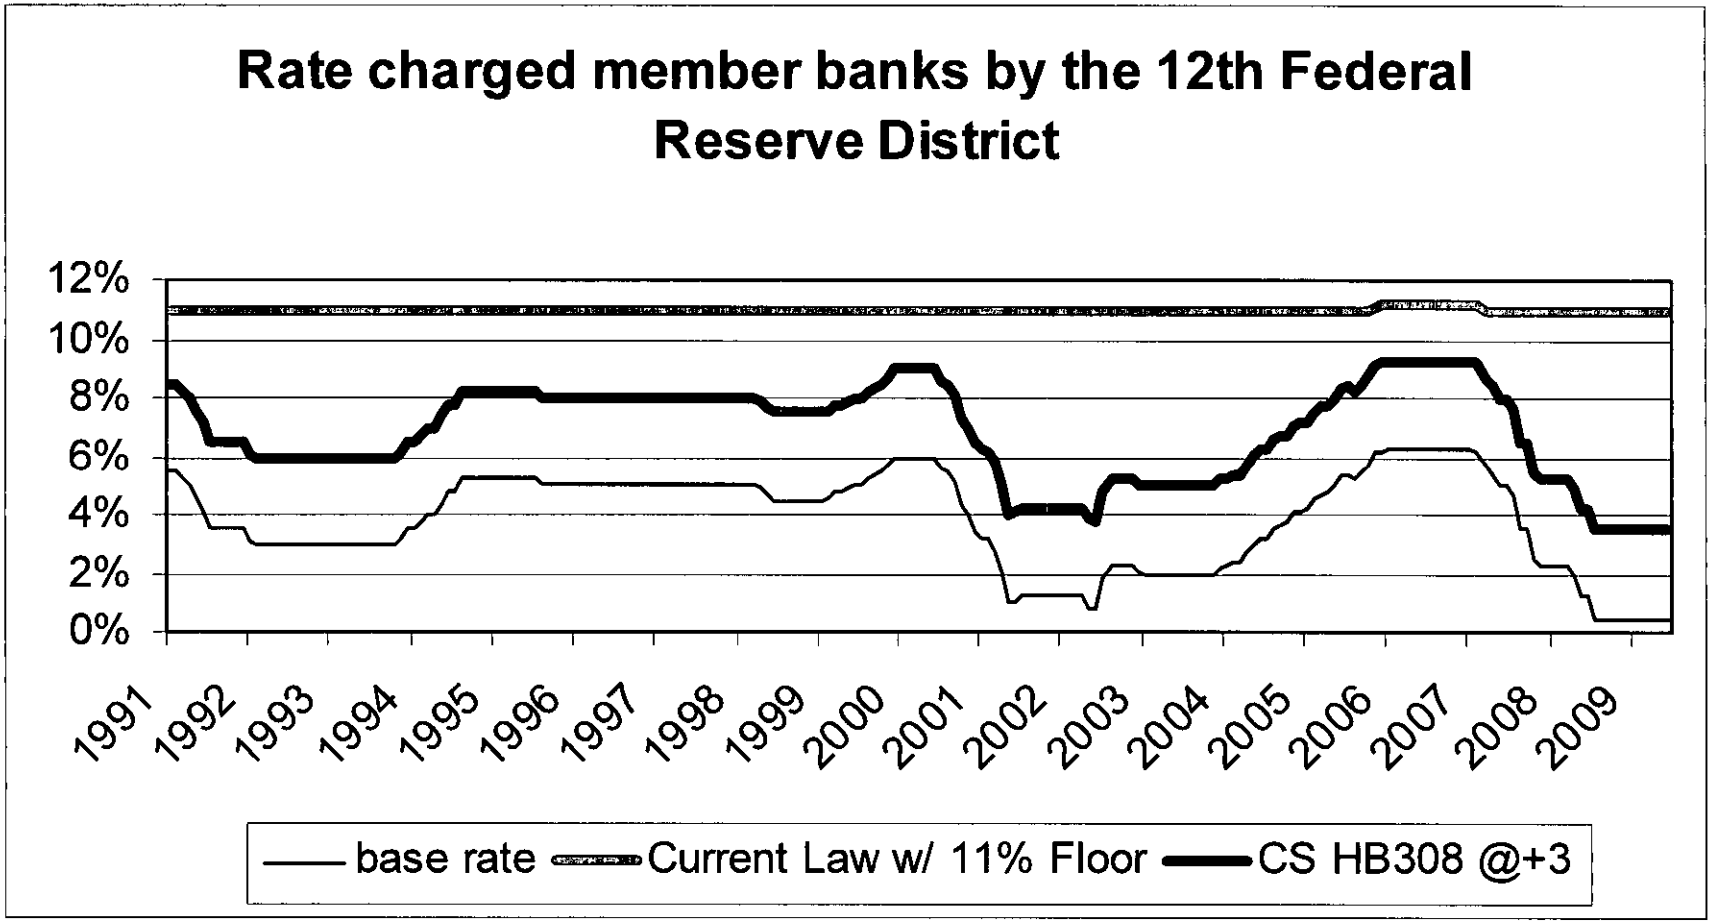
- Progressivity
  - Interest rate
  - Interest not due on retroactive regs changes prior to implementation
  - NEW - Credits over One Year, not Two
  - 30% credit for well work
  - Restore 3 year statute of limitations
  - NEW - No "matching spend" required to purchase credits
- Tax rate tied to Resident Hire

Interest Rate for Delinquent Taxes

- Current law is higher of fed funds rate + 5% or 11%
- This CS (Version S) does away with notion of a floor or ceiling and charges Fed Funds rate + 3%
- Applies to (almost) all taxes
- Because AS 43.05.225 specifies a quarterly reset, effective first day of first calendar quarter after rest of bill effective
- Prior CS was lower of fed funds rate + 2 or 11%

3.17.2010

Interest Rate On Delinquent Taxes



Interest from Retroactive Regulations

- Interest due back to last day of month after month of production
- Current Law – Commissioner cannot forgive interest
- This CS – Same approach as Governor's bill
  - DOR will waive interest between production and implementation of regulation
    - On underpayment that arise from regulation not being in effect when payment was due
    - If DOR does not find the producer failed to make a good faith estimate {Wording Change from Gov}
  - Contains provisions for overpayment
- Prior CS – "not considered delinquent"

Recovering credits over two years

- In 2006 "PPT" reforms, credits could be used as soon as earned (then applied 1/12 in each month) or certificate issued (then can be applied immediately)
- In 2007 "ACES" reforms period extended to two years
- This CS proposes to restore to one year
- DOR conclusion two year process was complex without adding significant value.

Investment Credits

- Credits for Capital Investments
- Under Current Law –
  - 30% Credit for exploration wells (AS 43.55.025)
  - 40% Credit for seismic work outside of existing unit,
    - or exploration wells 25 miles from existing unit, and
    - 3 miles from any prior well (or with certification from DNR that it is for a new target in the Cook Inlet) (AS 43.55.025)
  - 20% Credit for any capital investment (AS 43.55.023(a))
- This Bill (and prior CS – only change is to a definition)
  - adds 30% well work – both capital and operating - to investment credits

Definitions of well work compared

SB 267 proposed AS 43.55.023(m)(3)	Governor's Language in HB 337 for AS 43.55.025(b) (3) and (4)
"Well-related expenditures" means	Development well expenditures
A lease expenditure	Goods, services and rentals of personal property reasonable required for
related to a well	
and includes a lease expenditure for the purposes of sidetracking, well deepening, well recompletion, well workover,	Redrilling, casing , cementing or logging, completing, workover operations or other operations intended to increase or enhance well production
	From a known productive pool;
an injection well and well related seismic work and	And the well is not a service well [injector] stratigraphic test well, or an exploratory well
an intangible drilling and development cost authorized under 26 USC (IRC) as amended, and 26 CFR 1.612-4, regardless of the elections make under 26 USC 263(C) as amended	
During production "well-related expenditure" includes the costs of operating a well and moving well fluids to the wellhead.	

3.17.2010

3 Year SOL

- Statute of limitations time for the state to complete a production tax audit (or, agree to an extension with taxpayer or issue a blue sky assessment)
- Current Law
  - In 2007 production tax pulled out and extended to 6 years in AS 43.55.07
  - Prior to 2007, SOL was three years for all tax types under AS 43.05.260 –
- This Bill (no change from prior CS)
  - Three year rule would begin again with 2011 tax year
  - (all prior years for production tax would remain at 6 yrs

Matching Spend

- Current law: all producers producing less than 50,000 bbls a day may sell their credits to the state (AS 43.55.028) if the following conditions are met:

- (1) Not earlier than allowed on certificate (will become moot)
- (2) within 24 months of applying for a certificate, the taxpayer pays out similar amount in capital investment or lease bids.
- (3) No other outstanding tax liabilities

- This CS (not in prior CS) will delete item two

Matching Spend

- Currently all producers producing less than 50,000 bbls a day may sell their credits to the state (AS 43.55.028) if the following conditions are met:

- (1) Not earlier than allowed on certificate (will become moot)
- (2) within 24 months of applying for a certificate, the taxpayer pays out similar amount in capital investment or lease bids.
- (3) No other outstanding tax liabilities

- This CS (not in prior CS) will delete item two

3.17.2010

CSHB 308 Mechanism

	ACES TAX	HB 308 TAX
Base Tax	PTV x 25%	PTV x 25%
Progressive Tax	PTV x Progressive Tax Rate	Progressive PTV x Progressive Tax Rate

Progressive Tax Rate = Tax rate in excess of 25% when PTV > $30/BOE

Progressive PTV = Taxable Production x (PTV/BOE - 30)

CSHB 308 Example

Production: 700,000 bbl/d

PTV: $60/bbl

2

	ACES TAX	HB 308 TAX
Base Tax	$3.4 Billion *[$13.4 B x 25%]*	$3.4 Billion *[$13.4 B x 25%]*
Progressive Tax	$1.6 Billion *[$13.4 B x 12%]*	$0.8 Billion *[$6.7 B x 12%]*
TOTAL Tax	**$5.0 Billion**	**$4.2 Billion**

Tax Reduction: $800MM

Progressive Tax Rate = 12% [37% - 25%]

Progressive PTV = $6.7 Billion [700,000 x (1 – 12.5%) x 365 x (60 - 30)]

CSHB 308 Impacts

FY 2008 - $1,040 million (based on actual monthly prices and data)

FY 2009 - $400 million (based on actual monthly prices and data)

FY 2010 - $300 million (based on fall 2009 forecast)

FY 2011 - $400 million (based on fall 2009 forecast)

FY 2012 - $460 million (based on fall 2009 forecast)

Alaska State Capital, Room 432
Juneau, AK 99801-1182

The Honorable Craig Johnson
Co-Chairman, House Resources Committee
Alaska State Legislature
Alaska State Capitol, Room 126
Juneau, AK 99801-1182

Dear Co-Chairmen Neuman and Johnson:

Thank you for the opportunity to present to the House Resources Committee on March 10, 2010, regarding the State of Alaska's oil tax structure and our support for HB308 as a positive step towards improving the investment climate in Alaska.

Questions raised during the committee discussion are answered below with additional details provided in the referenced attachments.

Question #1: Can you tell the committee where else ConocoPhillips is doing business, and about that level of investment?

Response #1: Please refer to ConocoPhillips Senior Vice President of Exploration & Business Development Larry Archibald's January 22 presentation to the Alaska Support Industry Alliance. This presentation covers ConocoPhillips' global exploration plans and can be accessed at http://alaskaalliance.com/pdf/archibald_meet_alaska3.pdf. I have attached six slides from the same presentation (see Attachments #1-6) to demonstrate the significant worldwide exploration expenditures ($2 billion) by ConocoPhillips in a year when we will not be drilling an exploration well in Alaska for the first time in 45 years. Please also refer to http://www.conocophillips.com for additional details about our company and its investments.

Question #2: Do you have a graph looking at total North Slope investment, including Point Thomson?

Response #2: Please see Attachment #7 which charts the Department of Revenue's (DOR's) forecast for North Slope expenditures (red bars) and an estimate of the expenditure level without inflation (yellow bars), demonstrating that on an inflation-adjusted basis, oil and gas industry investment on the slope is flat. Attachment #8 is slide #16 from the DOR's February 4, 2010 presentation to the Senate Resources committee and depicts North Slope Expenditures for FY2007 through FY2011 forecast. Attachment #9 shows the anticipated total North Slope production decline rates under different investment scenarios.

The approximately $4 billion annual expenditure shown by the DOR on Attachment #8 will be required to maintain the historical decline rate of about 6% shown on Attachment #9. The DOR's production forecast represents an approximate 2.5% production decline rate over the next ten years. Significant investment beyond the ~$4 billion per year level will be required to approach that rate of decline. Investment incentives, such as increased tax credits and reduced progressivity, will be critical to stimulating additional investments. HB308 is a positive step in that direction.

HB308 is important in helping to reverse the troubling trend depicted in Attachment #10, which charts the most recent Alaska Department of Labor employment data for the Oil and Gas sector. The latest data, released earlier this month, illustrates a significantly different trend than previous data. The data now illustrates that employment in Alaska's oil and gas industry peaked in late-2008 and has been on a steeply declining trend since.

Attachment #11 is slide #22 from the DOR's February 16th presentation to the Senate Finance Committee. It presents both the DOR's 2008 and 2009 forecasts of capital expenditures at the North Slope currently producing properties for 2010-2012. In one year, the DOR reduced this forecast by $1.3 billion, approximately 20%. This, combined with the DOR's approximate 20% reduction in remaining production for the North Slope core fields of Prudhoe Bay, Kuparuk, and Alpine from its 2008 to 2009 forecasts, is a troubling indication that the fiscal regime created by ACES is in need of change.

Question #3: Do you have an expectation of what will happen to production tax now that the standard deduction expired at the end of 2009?

Response #3: Attachment #12 is slide #22 of the DOR's February 4, 2010 presentation to the Senate Resources committee. The brown portion of the bars represents the incremental tax collected as a result of the standard deduction. The total production tax collected would have only been about 5% less had the standard deduction not been in place.

Question #4: Please further explain the number of U.S. drilling rigs on slide #8, "Active Drilling Rigs in Core Fields 2005-2009."

Response #4: Please see Attachment #13, which compares the U.S. oil rig count to the oil rig count at the North Slope core fields, Prudhoe, Kuparuk, and Alpine. The green line depicts the US rig count which trended with oil price and ranged from 184 to 415 as depicted by the right axis. The red bars represent the core fields' rig count on the left axis, which did not trend with oil price. In fact, following the early-2009 oil price dip, the U.S. oil rig count increased about 75% while the North Slope core fields' rig count dropped by approximately 30%. The Committee commented that one rig is approximately 100 direct jobs. Increases in well-related tax credits and reduced progressivity will help stimulate additional rig activity.

Please do not hesitate to contact me if the Committee has further questions or requires additional information.

Respectfully,

Brian R. Wenzel

REPRESENTATIVE MIKE CHENAULT

SPEAKER OF THE HOUSE

SPONSOR STATEMENT
HOUSE BILL 312

"An Act authorizing an advisory vote on use of Alaska permanent fund earnings for an in-state natural gas pipeline; and providing for an effective date."

House Bill 312 places an advisory vote on either the primary or general election ballot the question of using permanent fund earnings, after dividends are paid and the fund is inflation proofed, to help offset the costs of an in-state natural gas pipeline.

I view this option as a potential piece of the puzzle in putting together a financing plan for possible state participation in an in-state gasline. With all the discussion of energy needs throughout the state, it is time that the Legislature and the Administration begin to focus on one or two viable projects. It is my hope that we can focus state funding on one or two of these projects rather than taking a shotgun approach and partially fund a large number of concepts that may or may not bear fruition in the future. Providing natural gas to Alaskans first will be a huge first step in creating jobs, providing a long term source of energy and create economic opportunities.

This bill was drafted to ensure that dividends are paid and the Permanent Fund is inflation proofed prior to the use of earnings. That part of the question needs to be particularly emphasized. I do not want Alaskans to believe or think that this advisory vote is a raid on the earnings of the Permanent Fund. A positive vote would allow the state to use earnings from the Permanent Fund which was initially developed from resource development within the state. I believe that future generations of Alaskans will benefit from making an energy investment now while still keeping their benefits from the Permanent Fund.

Representative_Mike_Chenault@legis.state.ak.us

CS FOR HOUSE BILL NO. 312(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES CHENAULT, Ramras, Peggy Wilson, Neuman, Olson, Johnson

A BILL

FOR AN ACT ENTITLED

"An Act authorizing an advisory vote on use of Alaska permanent fund earnings for an in-state natural gas pipeline; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ADVISORY VOTE. At the next statewide primary election, in substantial compliance with the election laws of the state, the lieutenant governor shall place before the qualified voters of the state a question advisory to the legislature and the governor. Notwithstanding AS 15.60.005 and other laws relating to preparation of the ballot proposition, the question shall appear on the ballot in the following form:

QUESTION

After paying annual dividends to residents and inflation-proofing the Alaska permanent fund, should permanent fund investment earnings be appropriated to help pay the costs of constructing an in-state natural gas pipeline?

Yes [ ] No [ ]

* **Sec. 2.** This Act takes effect immediately under AS 01.10.070(c).

HB320 - No Royalty On Geothermal Resource

"An Act removing the royalty obligation for geothermal resources."

Status: PREFILE RELEASED >> (H) RES : 2010-01-29

Electric power generated from geothermal sources is a clean, sustainable and environmentally friendly alternative to fossil fuels. It can play a major part in meeting the future energy needs of the railbelt and other regions of our state.

The problem for any company seeking to build a commercial grade geothermal plant in Alaska is high capital costs that could run 25-50 percent higher than the Lower-48. Operational costs could run 100 percent higher than the rest of the country because the plants will be located in remote locations.

House Bill 320 assists companies in developing geothermal resources discovered in commercial quantities on state land by lifting the 10 to 15 percent royalty payment obligation currently in state statute. In other western states, geothermal power plants rarely have to pay state royalties.

HB 320 is common sense legislation to finally make geothermal power projects economically viable so Alaska can take advantage of the more affordable and very reliable electric power they generate for homes and businesses.

Geothermal electrical generation is a mature and proven technology and has been used for decades all over the world. It creates "green" jobs and unlike other forms of renewable energy it can run 24 hours a day, 365 days a year.

Please join me in supporting HB 320 so our state can move a step closer to a more secure energy future.

MEMORANDUM February 3, 2010

SUBJECT: Sectional summary for HB 320 (Work Order No. 26-LS1402\A)

TO: Representative Charisse Millett
Attn: Jeff Turner

FROM: Donald M. Bullock Jr.
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends AS 38.05.181(c) to delete a reference to AS 38.05.181(g) that is repealed in sec. 6 of the bill.

Section 2. Amends AS 38.05.181(e) to eliminate royalty share as a factor in a competitive geothermal lease sale.

Section 3. Amends AS 38.05.181(e) by deleting authority for crediting rental payments for a prospecting permit or geothermal lease against royalties.

Section 4. Amends AS 38.05.181(f) to delete a reference to royalties due on a geothermal lease.

Section 5. Amends AS 38.05.182(a) to delete AS 38.05.181 from a spanned reference to provisions relating to royalty obligations.

Section 6. Deletes AS 38.05.181(g) that requires a royalty requirement as a condition of a geothermal lease.

Section 7. Adds a new section to uncodified law stating that secs. 1 - 5 of the Act apply to a lease for a geothermal resource or the renewal of a lease for a geothermal lease entered into on or after the effective date of the Act.

BRIEFING PAPER

THE CASE IN SUPPORT OF HB 320 FOR REMOVING ROYALTY OBLIGATIONS FOR GEOTHERMAL RESOURCES

EXECUTIVE SUMMARY

Geothermal power offers reliable baseload power that delivers consistent megawatt-hours 24 hours per day, 365 days per year, which is something that most other forms of renewable resources cannot provide. In fact, for a utility or regional transmission organization, a geothermal power plant shows up in a resource plan much like a conventional power plant. Geothermal power is also unique in its lack of emissions, minimal land use, low visual impact and other environmental merits.

Geothermal energy is extremely cost competitive when compared to other forms of renewable energy and fossil-fuel based processes (e.g. natural-gas based plants, as indicated by studies performed by the California Energy Commission[1] [2]).

Multiple western states (e.g. California, Nevada, Hawaii, Utah and Oregon) recognize the merits of geothermal power and have generated geothermal power for decades. These states, among many others, also have multiple new geothermal projects under development.

Although believed to be rich in geothermal resources in various regions around the state, Alaska has yet to develop a single utility-size geothermal power plant. One major hurdle for geothermal development is the relatively high capital cost associated with exploration, drilling and development, as well as high operation and maintenance costs due to the remoteness of resources and the harsh terrain and climate. While capital costs for development and construction of geothermal power plants in other states is typically around $4,000/kW[3], in Alaska estimates typically increase 25%-50%. Operation and maintenance costs of geothermal plants in Alaska are expected to be as much as 100% higher than the respective lower 48 states, again due to the typical remoteness of the plants.

In other western states, geothermal power projects rarely are required to pay State royalties. A report by the Geothermal Energy Association explains geothermal royalties vary depending on land ownership type (Federal, state, private) yet tend to range from 0.5% to 5.5% of revenues[4]. The majority of the geothermal projects currently under

[4] http://www.geo-energy.org/publications/reports/Socioeconomics%20Guide.pdf

development in the US are on Federal lands, where BLM regulations call for revenue royalties of 1.75% during the first 10 years and 3.5% thereafter.

In Alaska, despite the fact that geothermal development faces greater financial challenges compared to other states, the current statutes call for royalty rates of 10%-15%, similar to oil, gas and mineral regulations. Ormat believes this rate is cost-prohibitive and is one of the reasons no utility-size geothermal plant has ever been built in the state.

Financial analysis shows that removing the 10-15% royalty obligation will lower the operations and maintenance cost by 10-15%, therefore lowering the kWh cost by 10-15%. Removing royalty obligations from geothermal power plants in Alaska will serve to acknowledge the unusually high costs of geothermal development, operation and maintenance while incentivizing geothermal development in the state. This will ultimately lower the cost of clean, reliable power to the ratepayers.

Strategic Information for the Climate Change Industry

CLIMATE CHANGE BUSINESS JOURNAL®

Volume II, No. 4/5 April/May 2009

Global Geothermal Industry Balances Short-Term Development With Long-Term Investment in EGS

If the Low-Carbon & Renewable Power segment of the Climate Change Industry were a baseball team, geothermal energy would be the underrated veteran shortstop who doesn't hit many homers but fields consistently, rarely strikes out and scores runs on a regular basis. Let the stars like wind turbines and solar photovoltaic (PV) panels get the headlines; let the sports writers pump up the egos of rookies like thin-film PV, cellulosic biofuels and solar thermal power. Geothermal will be there to rack up solid stats and deliver for the team and the fans year after year.

Geothermal power's workmanlike quality stems from the fact that it offers something that wind and solar cannot provide: reliable baseload power that can be counted on to deliver megawatt-hours 24 hours a day, 365 days a year. In fact, for a utility or regional transmission organization, a geothermal power plant shows up on a resource plan grid like a conventional power plant.

In a broad context there are really three ways to look at geothermal energy:

1) Traditional steam-generated electricity generation, or hydrothermal, as it is often known, is site-dependent and has rather limited potential of perhaps 30,000 MW in the United States;

The Geothermal Energy Industry

Geothermal energy was a $6.8 billion global industry in 2008, generating 66,000 GWh of electricity worth close to $4.8 billion, $1.1 billion in equipment sales and $900 million in service revenues. The United States market is the world's largest at $2.3 billion, and forecasts are for high growth as a strong pipeline of projects are developed in the next few years when carbon regulations are expected to drive a subsequent wave of growth.

- ☼ *Profiles of Leaders Ormat, United Technologies, Raser, Turbine Air Systems, Exorka, Nevada 20-28*
- ☼ *The Future of EGS 29-31*

2) Enhanced geothermal systems (EGS) allow electricity generation from hot dry rock, thus opening up the map and the potential for geothermal power. But it is still early stages for EGS; and

3) Direct use geothermal encompasses space heating, hot water, process heat, pools, greenhouses and aquaculture. Direct use is exploited in more countries than electricity generation (see box on page 5), but CCBJ classifies it as an energy efficiency application in that it replaces conventional sources of energy. The main growth in direct use during the last decade has been geothermal or ground-source heat pumps for space heating.

Hence the focus of this review on electricity generation and its tie in with the power sector. Geothermal electricity "bridges both the conventional feedstock and renewable energy options for electric power generation rather uniquely," wrote **Deloitte** in a February 2008 report for the **U.S. Department of Energy (DOE)**. Geothermal's baseload characteristics allow "it to compete with other baseload feedstocks such as coal, natural gas and nuclear. At the same time, geothermal energy is a clean, renewable resource that competes with other renewable energy options such as wind and solar [making] it an attractive option for reliable and scalable generation while satisfying renewable energy voluntary or mandatory portfolio standards."

Yet, geothermal both in the United States and the rest of the world is not being deployed at a particularly brisk pace. At the end of 2008, cumulative worldwide installed capacity was between 9,900 and 10,500 MW, including 2,200 MW in operating capacity in the United States, according to estimates from **New Energy Finance** (NEF) and **Emerging Energy Research**. (Some 400-500 MW of capacity at the 1,400-MW Geysers project in California is on standby.)

Globally the pipeline of hydrothermal electricity projects currently in development exceeds the installed capacity by about 500 MW (see chart on page 2). The United States, Indonesia, the Philippines, Iceland and New Zealand account for 77% of the 10.7-MW pipeline, according to NEF estimates as of April 2009.

How Geothermal Stacks Up Against Other Renewables

Not only is geothermal's 10,000 MW in current global capacity easily less than 10% of the comparable capacity figure for wind power (121 GW worldwide) and less than two thirds of solar PV's installed capacity (15 GW), but geothermal electricity generation represents a comparatively anemic growth rate. At the end of 2003, global geothermal capacity was at 8,400 MW, meaning average annual growth from 2003-2008 was about 3.4%. Not bad if you're in the soup business, but in the clean energy business that kind of growth doesn't generate much excitement. By contrast, PV's 5.95-GW jump in 2008 as tallied by **SolarBuzz** represented one year growth of 110%. Wind power's leap forward in 2008 as tallied by the **Global Wind Energy Council** was 29%.

Even with the recent growth in wind and solar, renewable sources remain fairly insignificant in the 19 million GWh global electricity picture. In terms of electricity production, however, geothermal's superior capacity factor makes its contribution to global electricity generation more substantial than solar and close to half that of wind—at least in 2006, the most recent year for which the International Energy Agency publishes data. According to the IEA, geothermal electricity accounted for 59,200 GWh or 0.31% of global electricity generated, with wind at 0.7% and solar 0.2% in the same year. Coal (41%), gas (20%), hydro (16%), nuclear (15%) and oil (6%) made up 98% in 2006, according to IEA. Of course, lumping geothermal with the other renewables does de-emphasize its higher capacity factor (see table at right) and predictable baseload contribution valued by utilities.

As a business segment, CCBJ estimates the U.S. geothermal industry accounted for $2.3 billion in revenues in 2008, or 34% of the $6.8 billion global total. The $7 billion figure for the global geothermal industry compares to $56 billion for wind and $28 billion for solar (See dedicated CCBJ editions from 2008).

CCBJ defines the geothermal industry in three subsegments: electricity generation; equipment sales; and services. The latter includes exploration & resource assessment, well field drilling & development and plant design & construction. Electricity represents about 70% of the global total, but the ramping up of growth until the 2008 financial meltdown had corresponding investments in site evaluation, drilling, etc. that tilted the share of revenues more to services in growing mar-

Typical Market Drivers for Renewable Energy

Driver	Developed markets	Emerging markets
Power prices	+	++
Demand growth	++	+++
Reliance on energy imports	+++	++++
Environment	++++	+

Note: Each + indicates relative importance of market driver; Drivers are the same worldwide, but priorities vary.

kets, the U.S. included. CCBJ forecasts indicate that following a delay resulting from the freezing of credit and financing, the geothermal market will resume a growth trajectory and reach $5 billion in the U.S. and $16 billion globally by 2014.

Revenues available to specialist consulting & engineering firms could arguably be the total service amounts of roughly $1 billion globally the past few years, with a jump to $2-3 billion provided nothing further curtails the current pipeline or forecasted growth trajectory. A significant portion of these revenues, however, would be drilling or construction, meaning pure C&E project revenue would likely be closer to half these figures.

According to a variety of analysts and CCBJ interviews with industry leaders and experts, the growth of geothermal has historically been hampered by several constraints and challenges. In the first place, without a technological revolution like that promised by enhanced geothermal systems (EGS, also known as hot dry rock technology; see EGS/HDR feature on pages 29-31), geothermal power can only be developed in countries with suitable underground geothermal resources. Most geothermal resources are located along the seismically active Ring of Fire that roughly follows the coasts of the Pacific Ocean. Other resource areas include Eastern China and the Himalayan Belt, the Caribbean, Iceland, The Azores, Canary Islands, Italy, parts of Northern and Eastern Europe, the Eastern and Southern Mediterranean and Kenya, Tanzania and other countries is the East Africa Rift zone.

Investors prefer to buy geothermal companies or their operating power plants rather than invest in new projects.

In the second place, geothermal development is to a certain degree a speculative enterprise. Like wildcatters in the oil industry, geothermal developers must spend millions of dollars drilling for underground resources that they're not sure are present—or present in the quantities that will lead to their expected return on investment. "Geothermal projects have distinctly different challenges than other, more traditional, renewable technologies such as wind, solar, and biomass," notes the DOE's office of Energy Efficiency and Renewable Energy (EERE) in its *Geothermal Tomorrow* report. "Geothermal projects require subsurface exploration and well field development and have greater upfront risk because the geothermal resource is not confirmed without drilling."

Geothermal developers at Greenpower Conferences' March 2009 Geothermal Innovation and Investment conference in San Francisco said that typically 20% to 30% of the wells they drill—wells costing from $1.5 million to $10 million—end up hitting "dryholes." While not always physically dry, these dryholes are of sub-commercial enthalpy (heat energy). Compounding this dryhole risk is the fact that in the United States and some other regions, many of the best and most easily accessible geothermal resources—those with surface expressions like hot springs and fumaroles—have already been developed. To tap undeveloped resources for new power plants, developers must take on more risk in their drilling and development efforts.

As described in the developers roundtable article that follows this overview on page 9, as recently as the summer of 2008 developers could obtain debt financing to finance some of this resource and wellfield development work. Today the pendulum has swung the other way. Those lenders willing to finance geothermal projects require that developers sink wells and have proven resources—"steam behind the pipe" as they call it—before they will finance power plant construction. Separately with the depressed market caps of publicly held geothermal developers, private equity funders would rather buy companies or their assets than invest in new projects. Financial institutions in the market for tax credits are few and far between. And except for companies with a technology play in the emerging EGS segment, venture capitalists aren't interested in geothermal companies because of the lack of upside potential.

In this difficult environment, geothermal developers are urging the U.S.

Geothermal Energy: Opportunity and Challenge

Advantages from Utility Perspective

- Firm 24x7, not an intermittent resource
- Competitive cost
- Small physical footprint with minimal environmental impact
- 20-40 MW size does not require EHV transmission
- Credibility from years of success
- Recognized as a well-established industry

Some Development Challenges

- Financing uncertainty & heightened risk aversion
- Resource uncertainty
- Consolidating site control
- Prospecting/drilling cost on front-end
- Permitting
- Long lead-time
- Supply curve: progression to lower quality prospects

Challenges for Utilities

- Increasing RPS requirements puts pressure on utilities to turn to big projects
- Greenfield project failure an issue
- Uncertainties regarding amount, timing, and cost at odds with competitive resource procurement
- Operating plant/resource performance predictability an issue
- Few players in geothermal industry have the financial strength to go the distance

Direct Use Geothermal and Impacts on Climate Change

Electricity is produced from geothermal sources in 24 countries. Direct application of geothermal energy has been reported by 72 countries. In 2005, the worldwide use of geothermal energy was 57 TWh/yr of electricity and direct use was 76 TWh/yr, as reported by the **Intergovernmental Panel on Climate Change** (IPCC), a scientific intergovernmental body set up by the World Meteorological Organization and by the United Nations Environment Programme. Six developing countries are in the top 15 countries in direct use, with China at the top of the list. Direct use utilizes low-enthalphy geothermal fields that don't produce hot water at temperatures sufficient to generate power. While many firms engaged in geothermal electricity also work on direct-use projects, the segment is more driven by utilities, governments or companies using the heat directly. (Note: IPCC has released forecasts for geothermal electricity with global capacity reaching 24 GW in 2020, 46 GW in 2030, 90 GW in 2040 and 140 GW in 2050)

Direct Use Applications: Direct applications of geothermal energy are for space heating 52%, hot water (bathing and swimming) 30%, horticulture (greenhouses and soil heating) 8%, industry 4%, and aquaculture (mainly fish farming) 4%, according to John Lund in his paper *World-Wide Direct Uses of Geothermal Energy 2005*. Ground-source heat pumps are growing due to their ability to utilise groundwater or ground-coupled temperatures. According to IPCC, scenarios for future development show only a moderate increase in traditional direct use applications, but an exponential increase in heat pumps, as geothermal heat pumps can be used for heating and/or cooling in most parts of the world. In addition, geothermal heat pumps driven by fossil-fuel electricity reduce CO2 emissions by at least 50% compared with fossil-fuel fired boilers. If the electricity that drives the geothermal heat pump is produced from a renewable energy source like hydropower or geothermal energy the CO2 emission savings are up to 100%. The total CO2 emission reduction potential of geothermal heat pumps has been estimated to be 1.2 billion tonnes per year or about 6% of global CO2 emissions. Geothermal heat pumps will be covered in CCBJ's upcoming edition on energy efficiency and demand response.

Geographic and Application Breakdown of Direct Use Geothermal

Department of Energy to use some of its ARRA funding—$400 million for geothermal and $6 billion for innovative technology loan guarantees—to subsidize drilling. As of May 2009, DOE had not issued guidance on this question. In international developments, the recession's impact on Icelandic geothermal firms has been amplified by the collapse of Iceland's currency. With the krona almost worthless on the international market, Icelandic geothermal developers that had set their sights on developing projects in foreign markets have scaled back to focus on the significant potential in their homeland.

Western States' Near-Term New Geothermal Power Capacity

	Capacity MW	Number of Sites
Alaska	20	3
Arizona	20	2
Colorado	20	9
California	2,400	25
Hawaii	70	3
Idaho	860	6
Nevada	1,500	63
New Mexico	80	6
Oregon	380	11
Utah	230	5
Washington	50	5
Total	**5,630**	**138**

Source: Western Governors' Association, Geothermal Task Force of the Clean and Diversified Energy Initiative. The task force concluded that Western States have a capacity of 13,000 MW that can be developed on specific sites within a reasonable timeframe, of these, 5,600 MW are considered viable for commercial development by 2015.

Long-Term Market Drivers Look Solid

The phrase "when the economy recovers" is becoming a cliché of analysts and commentators looking at virtually all industries, but there's really no other way to say: When the economy recovers, and when the prices of oil and gas resume their inevitable rise into the $100-plus territory, the geothermal power industry's prospects will improve. The CCBJ global market forecast, not that dissimilar from the base-case capacity-growth scenario of Emerging Energy Research (EER), has 2011-2014 annual growth in the high teens, with double-digit growth persisting to 2020.

Market drivers for geothermal power are fundamentally sound: In the developed world, renewable energy standards and greenhouse gas caps are pushing utilities toward low-carbon generation, and geothermal's baseload qualities give it advantages over solar and wind. As outlined in the chart on page 3, energy supply and security are also drivers, as is power price in regions such as the Caribbean and parts of South Asia that are highly dependent on imported diesel oil for power supply. Some developing country markets are using feed-in tariffs popularized mostly for other renewables in Germany and other developed nations.

With renewed growth, however, the geothermal power segment will have to contend with a couple of looming challenges. One is lack of access to drilling rigs. When oil prices were in the stratosphere and demand was outstripping supply, geothermal developers had a difficult time contracting for rigs and crews. With the drop in prices and demand, that has gotten easier; but rising prices and demand will inevitably cause drilling demand to rise. Another challenge will be recruiting and training staff. "The professional staff available in geothermal is minute," said Doug Glaspey, CEO of U.S. Geothermal, at the March conference. "In order to grow, you have to have skilled professionals, and that's a very difficult thing to accomplish in this business today." Investment capital is also required, and although the flow of venture money into cleantech businesses was tallied at over $8 billion in 2008, geothermal is not the sexiest category.

EER states that geothermal power plant investment could reach $13-20 billion by 2020, representing cumulative investment in geothermal exploration, drilling, and power plant construction. In comparison with EER's broader power generation forecasts, geothermal is the fourth-largest market for cumulative renewable power generation investment between 2009 and 2020, behind onshore wind, solar PV, and biomass, but ahead of offshore wind, CSP, and small hydro globally by 2020.

EER's base-case growth scenario forecasts 20 GW of geothermal installed during the 2010s, with their high-growth scenario at about 1.5 times that or about 30 GW. The vast majority of growth in both scenarios is North America and Southeast Asia, although the rest of the world accounts for as much as 25-30% of growth in some years of EER's forecast. A few new markets are expected to see sustained growth, led by Chile, Turkey, Russia, East Africa, and Central America. Established markets in Iceland, Mexico, and New Zealand are also expected to

Regions Where Geothermal Companies Expect to Increase Their Work in 2009-2011

United States	69%
Europe	31%
Indonesia	31%
Central America	23%
Australia	15%
Africa	12%
China	12%
New Zealand	12%
Philippines	12%
Rest of Asia	12%
Canada	12%
Italy	8%
Japan	8%
Mexico	8%
India	8%
Chile	8%
Iceland	4%

Source: CCBJ 2009 Geothermal Survey conducted in April 2009. Question was:What countries or regions are you expecting to increase your work in over the next three years? n=26

continue to tap their potential. Australia is what EER calls the largest region of uncertainty, as its substantial goal of bringing online over 2 GW of geothermal by 2020 remains contingent on successful deployment of unproven EGS.

As mentioned, the United States leads the world in online capacity of geothermal energy and continues to be one of the principal countries to increase its geothermal growth. Geothermal electric power generation is centered in eight U.S. states: Alaska, California, Hawaii, Idaho, Nevada, New Mexico, Utah and Wyoming with Oregon and Colorado coming on line. Total U.S. installed capacity was 3,040 MW as of March 2009, according to GEA's *U.S. Geothermal Power Production and Development Update* that includes some units on standby. With a pipeline of now more than 4.4 GW of confirmed projects, the U.S. geothermal market is poised to more than double existing capacity over the next five years, says EER, with U.S. carbon legislation and national

Geothermal Industry Gameboard Not Too Crowded

The geothermal power industry consists of project developers that identify, finance and build geothermal power plants; consulting engineering and technical firms that identify and quantify geothermal resources, conduct environmental analyses, design, operate and maintain projects; drilling firms that drill wells for exploration and production; engineering, procurement and construction (EPC) firms that build geothermal power plants; manufacturers of turbine generator sets, heat exchangers and other equipment; and other specialty firms. Some firms perform multiple roles, for example, manufacturers sometimes develop their own projects and EPC firms often provide multiple technical services with in-house staff. Exploring for and developing geothermal power resources requires specialized expertise that is concentrated in a few countries including Japan, Iceland, the United States, Canada, New Zealand, Australia and the Philippines.

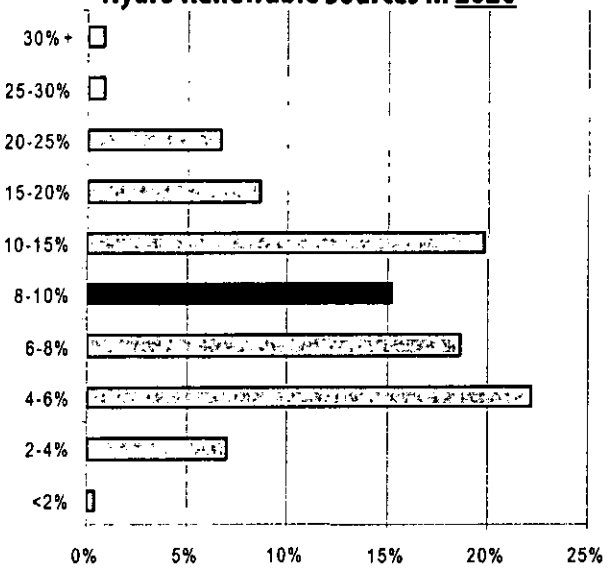
The number of firms in the industry is very small compared to other energy sectors. There are 11 manufacturers of geothermal turbine generator sets and related power plant components. They include: Alstom (France), Ansaldo (Italy), Fuji Electric (Japan), GE Energy (United States), Mitsubishi Heavy Industries (Japan), OAO Kalugo Energo (Russia), Ormat Technologies (United States), Siemens (Germany), Turboden (Italy), Toshiba (Japan) and UTC/Pratt & Whitney (United States). At the most recent international trade show of the **Geothermal Energy Association** in the United States, there were fewer than 100 exhibitors.

Geothermal project developers and power plant owners can be divided into two categories: 1) major independent power producers (IPPs) and utilities and 2) pure-play geothermal developers. The former category includes (U.S. companies unless stated): ArcLight Capital Partners/Terra-Gen Power, Calpine, Chevron, ENEL (Italy), EnBW (Germany), Geysir Green Energy (Iceland), LaGeo (El Salvador), Mid-American/CalEnergy, Ormat Technologies and PNOC EDC (The Philippines). Unocal and Chevron had historically been active developers of geothermal power in Southeast Asia. In 2005, Chevron acquired Unocal, and Chevron today is the world's largest private owner of geothermal power plants with combined capacity of 1,273 MW in the Philippines and Indonesia. Pure-play developers include: Magma Energy (Canada), Nevada Geothermal Power (Canada), Polaris Geothermal (Canada), Ram Power, Raser Technologies, Sierra Geothermal (Canada), U.S. Geothermal, Vulcan Power and Western GeoPower (Canada).

Enhanced geothermal systems (EGS) firms include AltaRock, Green Rock Energy (Australia), Panax Geothermal (Australia), Petratherm (Australia) and Potter Drilling. Leading technical and engineering consultancies and EPC contractors include AMEC, Enex (Iceland), GeothermEx, Geothermal Development Associates, Geothermal Resource Group, Horizon Well Logging, Hot Dry Rocks (Australia), Mannvit Engineering (Iceland), Ormat Technologies, Power Engineers, SAIC, SKM Consulting (Australia), West Japan Engineering Co. and Wood Group (United Kingdom)

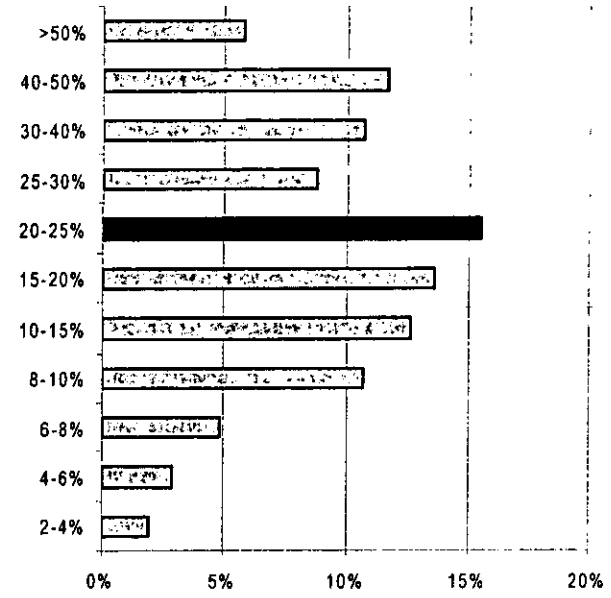
Leading drilling and drilling services companies include Baker Hughes, (United States), B.J. Services (United States), Boart Longyear (United States), Halliburton (United States), Iceland Drilling (Wales), Schlumberger (France, United States and The Netherlands), Thermasource (United States) and Weatherford (United States).

Percentage of U.S. Electricity Generation From Non-Hydro Renewable Sources in 2020



Source: Multiple CCBJ surveys with the same question conducted in 2008 and 2009 on the following topics: wind energy, CCS, snapshot and geothermal. Black bar indicates median range. Question was: U.S. DOE's Energy Information Administration says non-hydro renewable sources were responsible for 2.4% of U.S. electricity generation in 2006. What percentage of U.S. electricity generation do you believe non-hydro renewable sources will represent in 2020? (includes wood, municipal solid waste, landfill gas, sludge, biomass, geothermal, solar and wind).

Percentage of U.S. Electricity Generation From Non-Hydro Renewable Sources in 2050



Source: Multiple CCBJ surveys with the same question conducted in 2008 and 2009 on the following topics: wind energy, CCS and geothermal. The black bar indicates median range.

RPS expected to drive sustained growth from 2015-2020.

The global geothermal pipeline now exceeds 10 MW of projects under development, which if completed would almost double the installed global geothermal capacity of 10.5 GW built up over the past 30 years.

Currently, there are over 215 commercial geothermal electricity projects operating in 24 countries. The largest dry steam field in the world is The Geysers, 116 km north of San Francisco. The Geysers began in 1960 and has 1360 MW of installed capacity. **Calpine Corp.** now owns 19 of the 21 plants in The Geysers and is currently the United States' largest producer of geothermal energy. The other two plants are owned jointly by the Northern California Power Agency and the City of Santa Clara's municipal Electric Utility (now called Silicon Valley Power). Since the activities of one geothermal plant affects those nearby, the consolidation plant ownership at The Geysers has been beneficial because the plants operate cooperatively instead of in their own short-term interest. The Geysers is now recharged by injecting treated sewage effluent from the City of Santa Rosa and the Lake County sewage treatment plant. This sewage effluent used to be dumped into rivers and streams and is now piped to the geothermal field where it replenishes the steam produced for power generation.

Another major geothermal area is located in south central California, on the southeast side of the Salton Sea, near the cities of Niland and Calipatria, Calif. There were 15 geothermal plants producing electricity in the area. CalEnergy owns about half of them and the rest are owned by various companies. Combined the plants have a capacity of about 570 MW. The Basin and Range geologic province in Nevada, southeastern Oregon, southwestern Idaho, Arizona and western Utah is an area of rapid geothermal development. Several small power plants were built during the late 1980s during times of high power prices. Plants in Nevada at Steamboat near Reno, Brady/Desert Peak, now produce about 240 MW. As indicated on the chart on page 24, Nevada and Utah account for 86% of the new leases granted by the U.S. government in 2007-2008.

While geothermal electricity using existing technology indeed has good short-term prospects, the best sites are already snapped up. If geothermal is to make a big dent in renewables' inevitable penetration of the U.S. electricity business, EGS will have to play a role. Regardless, the manufacturers, consulting engineers, investors and policymakers in the CCBJ community believe that non-hydro renewables will account for roughly 8-10% of electricity by 2020 and 20-25% by 2050, according to compiled results of CCBJ surveys that incorporated the identical question (see charts above). How America reaches these thresholds remains to be seen, but it seems certain that there will be an ample supply of scientists, engineers, entrepreneurs, businessmen and corporations to chase the goal. ☼

Geothermal Developers Grapple With Financial Realities of 2009

For many geothermal power plant developers in North America, the worldwide economic free-fall that began in September 2008 has turned 2009 into a year of holding on, hunkering down and trying to survive. Despite holding leases to tens of thousands of acres of geothermal-rich land in the western United States, most developers lack risk capital to invest in the upfront geo-scientific work and exploratory drilling that is needed to verify the extent and quality of geothermal resources under the ground. (An exception to some degree is **Ormat Technologies**, which generated $252 million in revenues last year from its 505-MW portfolio of existing geothermal power plants; for more on Ormat see story on page 20.)

As recently as a year ago, developers could obtain debt financing before they had validated and drilled the production wells to tap geothermal resources—had "steam behind the pipe" in industry parlance. Not so today. "We've come out of a period in which there has been hyper-liquidity, a buyer's market for capital if you will. In the period we're in now, the pendulum has swung the other way," Ric Abel, Managing Director, Electric Finance Group, **Prudential Capital Group**, told CCBJ in April. "While in the past developers could get debt sooner in the life of a project and finance their drilling with a larger percentage of debt, today drilling and proving up the resource is seen as an equity risk."

Abel spoke at the March 2009 San Francisco Geothermal Innovation and Investment Forum sponsored by **Greenpower Conferences**. He was one of several representatives of lending institutions who discussed just how much financial conditions have tightened up for geothermal developers since the fall of 2008.

Investors had similarly bad news. Venture capitalists from **Google.org** and **KPCB** said they're only investing in technology firms with a strong upside potential, like those aiming to gain a position in the emerging enhanced geothermal systems (EGS) industry (also known as hot dry rock or HDR; for more, see feature on pages 29-31).

Private equity investors told the audience that because of the depressed market caps of publicly held geothermal developers, investors would prefer to buy geothermal companies or their operating power plants rather than invest in new geothermal projects. "Right now because of the large number of [geothermal] companies looking for financing as well as the significantly shrunken pool of available capital we expect that [development] deals will be few and far between going forward. The return hurdles and pre-requisites for successful private equity investment will be a lot higher," Paul Ho, managing director of **Hudson Clean Energy Partners**, told the audience.

New Wave of Developers

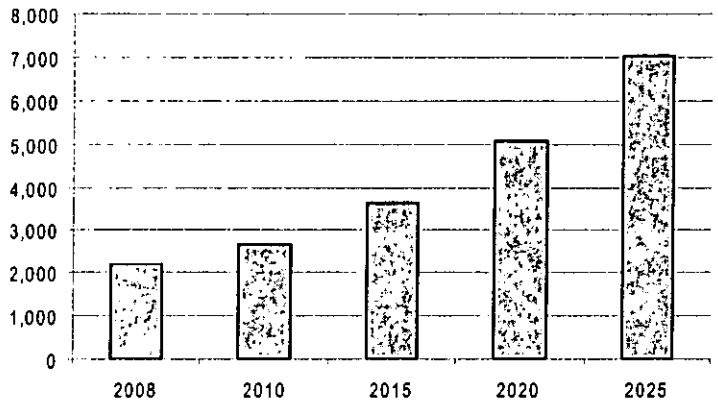
This was not news to the North American geothermal project developers who were in the audience, five of whom would later sit on a panel together representing their firms: **Magma Energy, US Geothermal, Ram Power, Nevada Geothermal Power** and **Sierra Geothermal Power**. These companies are part of a relatively new wave of pure-play geothermal project developers that emerged in this century, driven by the California energy crisis, the adoption of renewable energy standards in western states and the emergence of climate change and energy security concerns. Unlike Ormat and a handful of larger independent power producers and energy companies playing in U.S. geothermal project development—such as **CE Generation** and **Enel North America**—these firms are in the early stages of building their portfolios of geothermal projects. Tim Stephure, a geothermal expert at **Emerging Energy Research**, calls them "junior developers." Some have purchased existing plants with an eye toward expanding or repowering those facilities, but all are focused on new developments.

Hezy Ram, a longtime executive with Ormat who founded Ram Power last year, told an anecdote that while not literally true was nonetheless emblematic of the state of play for him and his counterparts. After leaving a meeting with an investor, he checked the visitor register at the front desk. Competing developer Doug Glaspey of U.S. Geothermal had been in just before him, while Brian Fairbank, CEO of developer **Nevada Geothermal Power** had just arrived for his appointment. (Both Glaspey and Fairbank were on the conference panel.) "We all go to the same private equity funds and financial institutions and talk to the same people," he said. "We need development capital. And as you know capital is very scarce today."

Development capital—lots of it—is needed for the upfront work that developers must do not only to verify that adequate geothermal resources lie under the ground they've leased or purchased, but also to sink wells accurately enough to tap those resources. In this economic environment, until they've got "steam behind the pipe," they can't access private equity funding, tax-credit equity or project-finance debt. And even when they can meet the risk requirements of such funders, funding is harder and more expensive to obtain than any time in recent memory.

As Abel pointed out, prior to the recession, developers could often obtain debt financing for some of this risky resource development activity. Not only is that no longer the case, but prospective equity investors are requiring more resource development work—more steam behind the pipe—before they'll invest in projects. And lenders are requiring higher levels of equity investment before they'll lend money for a project. One geothermal

Forecast of US Capacity for Conventional Hydrothermal Power



Source: CCBJ 2009 Geothermal Survey conducted in April 2009. Question was: Geothermal generating capacity in the United States was approximately 2,200 MW at the end of 2008. Given an economic revival by 2010 and adequate incentives, please estimate the US capacity for conventional hydrothermal power for 2010, 2015, 2020 and 2025. Result displayed is an average of the responses written in.

veteran who spoke to a CCBJ editor at the conference said: "The big economic problem affecting us now is the amount of debt you can get as part of your total project cost. This amount used to be 70-80%, and you'd only have to come up with 20-30% equity. First of all, nobody is really doing any deals right now. Banks don't have money they're willing to loan on such projects. But the numbers we're hearing tossed around [by lenders willing to lend] are more like 40-50% equity."

Panelists agreed that the last significant geothermal financing deal in the United States was Nevada Geothermal Power's $180 million line of credit to build a 50-MW project near Winnemucca, Nevada. But as CEO Brian Fairbank told CCBJ in an interview, the financing was much less favorable than what the company had anticipated. And in the current climate, the developer's success in getting steam behind the pipe for 50 MW has not led to any breakthroughs in financing an additional 50 MW at the same site. "Just at the time when we should have the light of success shining on us, we've run into the collapse in the credit market and a situation where the equity markets aren't working very well either." (For more on Nevada Geothermal Power, see page 28.)

Geothermal Land Rush

Before a developer worries about financing, however, it must have land leased for development, either from private owners, states or the federal Department of Interior, which controls through the **Bureau of Land Management** (BLM) millions of acres in the West. After May 2007, when the BLM finalized its rules for auctioning leases under the Energy Policy Act of 2005, there was a "land rush" as firms bid for favorable parcels. Auctions in 2007 brought in bids ranging from an historic high of $14,000 per acre for a 470-acre parcel adjacent to The Geysers in California to bids in the neighborhood of $300 to $500 per acre in Nevada, according to a BLM news release. Data compiled by Emerging Energy Research shows that since 2007 the three top lessees are Ormat, with about 150,000 acres; **Raser Power Systems** with some 75,000 acres; and Magma Energy with about 45,000 acres. These three are followed by some 20 developers with anywhere from a few hundred acres to 20,000-plus acres under lease. (See chart on page 24.)

The BLM has been paid more than $63 million for geothermal leases since 2007, according to Kermit Witherbee, national geothermal program manager for the agency. According to Witherbee, the perceived value of auctioned leases have dropped significantly. In the agency's last auction in December 2008, the average price was between $30 and $50 per acre.

For developers without existing leases or rights to private or federal lands, the prospects of gaining a toehold in geothermal development are increasingly slim. Most of the favorable geothermal sites—outside of off-limits areas like Yellowstone National Park—have already been developed or acquired. "Those of us who have been around for a few years kind of got the first pick on some of these prospects that that [already] had drilling [done] and had discoveries," said Doug Glaspey, CEO of U.S. Geothermal. "Those are the sites we went to first, and those are rapidly being consumed not only by ourselves but by new entrants in the market. So the quality of [geothermal site] prospects is going down. That means the risk to define and develop new resources is going higher and higher."

Drill, Baby, Drill (With DOE Money?)

While the output of wind, solar PV, biomass, hydropower and other renewable power plants can be predicted with a fair amount of certainty, geothermal developers face much more uncertainty as they search for steam supplies anywhere from 2,000 to 10,000 feet underground.

To find geothermal resources of sufficient enthalpy (heat energy) for power generation, they start with geological mapping that points to likely areas. They also consider distance to grid connections. Then they hire staff or consultants to perform geochemical analyses of hot springs and geophysical analyses such as seismic studies to refine models of likely resources. On many prospective geothermal properties, developers have the benefit of earlier explorations done by oil and gas companies that were investigating geothermal in a big way in the 1970s and 1980s.

Many of those prospective sites were not developed because the market drivers of that era diminished with the decline in oil prices. Additionally, the binary technology that can utilize lower-temperature geothermal resources was not available on a commercial scale at that time.

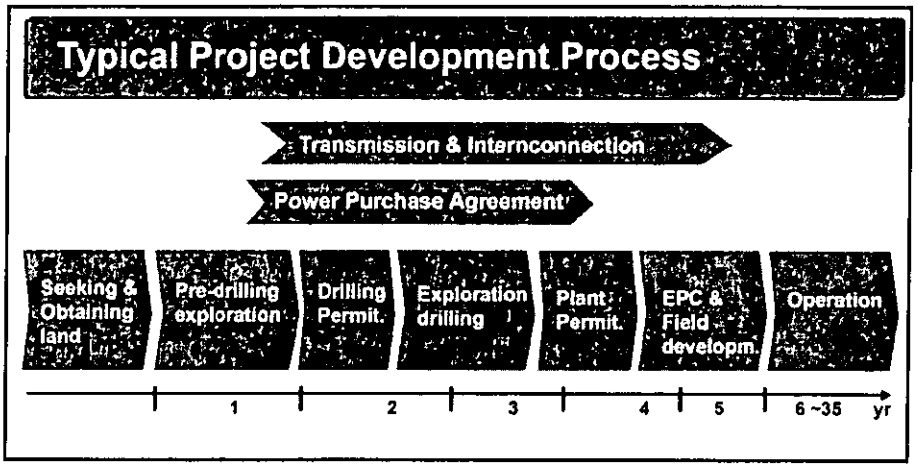
The costs for the geologic mapping, geochemical and geophysical work is generally in the hundreds of thousands of dollars for a 40 to 50 MW geothermal power project—add in permitting for the well drilling phase and you're looking at $2 million to $3 million, according to Brian Fairbank of Nevada Geothermal Power (see page 27).

Then the cash really starts to flow. Developers hire drilling contractors who come with rigs, equipment and personnel and charge $25,000 a day or more. Sometimes a drilling program start with slimhole test wells that can cost $2 million to $3 million each; in other cases developers and their contrators go straight to the production wells that can cost anywhere from $3 million to $10 million or more.

Like wildcat oil drillers, the geothermal prospectors are usually looking in areas without a history of geothermal production. They don't always hit paydirt, yet the drilling contractors must be paid. In fact, drilling "dry holes" is quite common. Developers estimated the risk at 20% to 30% on greenfield projects that haven't already been subjected to some exploratory drilling. "That scares a lot of people," said Glaspey.

"The drilling is really the wild card in geothermal," said Gary Thompson, CEO of Sierra Geothermal Power in response to a questions about average costs for developing a geothermal wellfield. "You have to have a fairly large contingency when you're talking about drilling because [the costs] are all over the map It could be $2 million, it could be $15 million to drill one of these wells. And your output varies [on the the same scale]. It could be two megawatts per well or 10 or 15 megawatts per well."

Typical Geothermal Project Develoment Process



Source: Geothermal Development in Emerging Markets by Rahm Orenstein, Ormat Technologies, Inc. Geothermal Innovation & Investment Conference, March 24th, 2009.

Given the risks of hitting dryholes and creating wells that produce less power than anticipated, the typical upfront capital required for a geothermal project of 40-50 MW with a typical life cycle of 30-35 years could be from $30 million to $50 million, according to developers. With the high risk profile of their endeavor and the difficulty of financing such activities, developers and other speakers at the conference pleaded with one particular person in attendance: Ed Wall, manager of the **U.S. Department of Energy's Geothermal Technologies Program.** What they asked for repeatedly is for Wall to use some of the $400 million for geothermal contained in the American Recovery and Reinvestment Act (ARRA) stimulus package to help developers mitigate this daunting dry-hole risk (see list on page 17).

"It's great to spend money on EGS. That's the future," said Glaspey. "But if you want megawatts on the ground today, you have to capitalize exploration. The way you do that is put it into drilling programs. Cost share [from the DOE] would be very nice for folks like us."

"There's a tremendous amount of conventional geothermal projects out there that desperately need assistance in order to do the drilling," said Abel from Prudential. "I think from a stimulus bill perspective, getting projects built, producing electricity and creating those jobs is where there's more bang for your buck."

Another option for DOE funding, according to Glaspey, is the loan guarantee program for renewable energy technology funded to the tune of $6 billion by the ARRA. "It may be possible for DOE to offer us loans at 3.5-4% interest," he said. "That's very encouraging, although we can't wait two years to get that kind of financing package," he added, referring to DOE's past difficulties with the loan guarantee program.

Long-Term Drivers

Despite the current difficulties, geothermal developers are operating in a marketplace with some very strong long-term drivers. Regardless of what happens with federal renewable energy standards and climate change legislation, utilities in western states are already under state laws requiring sharp increases in renewable generation. Because of its reliable baseload properties—in contrast to the intermittency of wind and solar—utilities and grid operators can more easily incorporate geothermal generators.

Those "junior developers" who can hang on through this difficult period will likely enjoy a more robust market envi-

ronment within one to two years. Prudential Capital Group's Ric Abel pointed out at the March conference and in a separate interview with CCBJ that institutional lenders like insurance companies still have a large appetite to finance long-term projects like geothermal power plants built with fixed-price EPC contracts and 20-year power purchase agreements. "There is money available, although it's a lot more expensive than it was a year ago," said Abel. "While drilling and proving up the resources is an equity risk, building the power plant and producing electricity for a PPA is more of a debt risk."

Abel said geothermal projects are financed in similar fashion to combined cycle gas turbine plants and other fossil fuel-fired power plants, with a waterfall structure designed to ensure that asset maintenance—including reservoir maintenance in the case of geothermal—is adequately funded and creditors are paid before plant equity owners. "This structure was developed and perfected primarily with gas-fired projects.... Most of the major law firms that focus on project finance are very familiar with this structure and the documents associated with it. At various times, including in the recent period of hyper-liquidity, people have deviated from that structure, but now the pendulum has swung back and lenders are approaching power projects in this more standard format."

For geothermal projects, a "disciplined operating budget" to maintain reservoir viability is critical to giving long-term lenders assurance. "You've got to have continued funding to maintain the geothermal resource, which is your fuel supply, on an ongoing basis," he said.

Emerging Energy Research's Stephure points to some recent investment highlights that show the underlying strength of the geothermal segment, but also point toward consolidation trends. He noted that Canadian energy company AltaGas recently purchased a 25% stake in

Leading Geothermal Power Market Participants

Power Plant Owners & Developers

Major IPPs And Utilities:
ArcLight Capital Partners
Calpine (USA)
Chevron (USA)
EnBW (Germany)
ENEL (Italy)
Geysir Green Energy (Iceland)
LaGeo (El Salvador)
Mid-American/CalEnergy (USA)
Mighty River Power (New Zealand)
Ormat Technologies (USA)

Magma Energy and Raser Technologies has recently executed a funding agreement with **Copper Canyon Mining**. Australian EGS geothermal developers **Geodynamix** and **Petratherm** have formed alliances and joint ventures with very large companies: Geothermix with Indian conglomerate **Tata** and Petratherm with Australian utility **TruEnergy** and oil & gas producer **Beach Petroleum**. "Companies with bigger balance sheets will be better positioned moving forward," said Stephure.

"There are definitely some opportunities for these players to take advantage of the economic situation. They can fund a lot of activity in house and pick up projects from developers who are struggling. M&A activities are likely to occur. We may also see utilities move into this space, either developing or owning their own projects or partnering to help develop projects." In chaos lies opportunity is how some observers are characterizing 2009 and the geothermal industry has both. ☼

Geothermal Power in Developing Countries

With the best geothermal resources located along the Pacific Ring of Fire, there are enormous opportunities for developing geothermal power in Asian and Latin American countries that currently have little or none. The eastern and southern Mediterranean and the East Africa Rift zone (Kenya, Ethiopia, etc.) also present large geothermal development opportunities.

But developing geothermal power plants in many emerging markets is an enterprise fraught with high risks—risks that are layered on top of the ordinary risks of hitting dryholes and drilling under-producing wells that confront geothermal project developers in the United States and other developed countries. To build geothermal wellfields and power plants, most developing countries (the exceptions being the Philippines, Mexico, El Salvador and Indonesia) need foreign experts, suppliers and development capital because they lack the internal capacity—yet foreign firms often find it difficult to work in many developing countries because of the lack of frameworks to manage risks, delays in administrative processing, frequent requests for local patronage, contracts being violated and projects being shut down for murky political reasons.

"In some of these markets you have to add political risk to the drilling risks and credit risks that exist in developed countries," said Rahm Orenstein, director of business development for internationally active **Ormat Technologies** in a talk at the March 2009 Geothermal Innovation and Investment Forum sponsored by **GreenPower Conferences** in San Francisco. "Then you have off-take risk. In some countries, there's a high risk that your electricity customer won't pay you."

Poor market conditions are also a barrier to geothermal development in many developing countries. These include: Electricity markets that have not been fully restructured to encourage competition by independent power producers (IPPs), low rates for electricity that price geothermal out of the market, and lack of incentives to subsidize the up-front investment costs of geothermal power projects. "In many countries, geothermal has to compete with fossil fuels that still get subsidies and incentives," explained Orenstein. Additionally, many developing countries that have restructured their state power monopolies to facilitate more competition still retain monopolistic elements. "Any place we go and compete as an IPP is a market that has been deregulated to allow merchant power suppliers like us to compete, which is good.... But in some cases we discover that market is still to some extent monopolistic. Utilities may have been broken into a generation company and a transmission and distribution company, so now they have two monopolies."

For developing countries desperate for more domestic power sources—and for the worldwide effort to mitigate carbon emissions—the consequences that these risks and barriers will forestall geothermal power development in emerging markets are immense. **West Japan Engineering Co.** (West JEC), which has extensive experience in Central America, estimates that 3,000 MW to 4,000 MW—about 10 times current installed geothermal capacity—of new geothermal could be developed in that region given proper market structures, incentives and policies.

Geothermal-rich Indonesia has set a goal of building more than 4 GW of geothermal power capacity by 2014 (It currently has less than 1 GW online), but many international companies are reluctant to work there because of its unfavorable power market, bureaucratic inertia and reputation for corruption. In Kenya, some 4 GW of geothermal capacity—triple the nation's current electrical generation capacity—could be developed in the Rift Valley given proper market conditions and incentives, according to a study by UN agencies and the national power generation utility.

Foreign firms have successfully developed geothermal power projects in all of these regions and other developing nations. But it hasn't been easy.

Case In Point: Kenya

Ormat began developing a geothermal project in Kenya in the late 1990s, soon after the former state-owned power monopoly was unbundled into generation and transmission-distribution units. "Kenya was still heavily reliant on several hydropower projects for its electricity generation, and in the late 1990s the country suffered a major drought that caused generation to drop by some 30 percent," said Orenstein. The reliable baseload characteristics of geothermal made it an ideal resource for the country's power needs, according to Orenstein.

A **World Bank** supervised international competitive bid was issued by the utility, which was won by Ormat. Nine months after signing of a 30-year 50 MW power purchase agreement (PPA), the first 8 MW plant came online, and was soon expanded to 12 MW. By May 2002, Ormat had completed and demonstrated a total of 48 MW of steam capacity from the wells, but then it had to wait an agonizing six years to wade through what Orenstein called "administrative and political issues" before it could complete its power plant to reach that capacity. Ormat invested $150 million of its own funds for the wells and the plant; only recently was it partially refinanced by a loan from the German DEG lead consortium.

Kenya has relatively high electricity tariffs—between $80 and $120 per MWh compared to $60 to $80 for the rest of sub-Saharan Africa, according to a report by Julie Rowlett of the **Columbia University School of International and Public Affairs**. So Ormat's wholly owned Kenyan

subsidiary OrPower is likely doing well. But according to Ormat's 2008 annual report, the firm, along with the handful of other IPPs operating in Kenya, is under pressure to reduce tariffs to allow the government to make good on campaign promises of cheaper electricity. Furthermore, its customer **Kenya Power and Light Company** is being re-organized. And the country is in a state of ongoing political turmoil between President Mwai Kibaki and Prime Minister Raila Odinga.

To manage the risks of operating in countries like Kenya, Ormat buys political risk insurance from the **Multilateral Investment Guarantee Agency (MIGA)** of the **World Bank Group** or from **Zurich Re**, for most of its foreign projects, according to the company's annual report.

Ranking Developing Country Markets

Research outfit **New Energy Finance** has ranked the favorability of geothermal markets in both developed and developing countries. NEF's four criteria are:

Stability – political, economic and social, including a reliable electricity grid.

Availability of **local partners** to handle licensing, permitting and obtaining power purchase agreements.

A positive **policy framework** with high energy demand and limited supply

Incentives or subsidies such as feed-in tariffs, renewable energy certificate trading schemes and tax exemptions.

Global Geothermal Markets Rating

Country	Stability	Local Partners	Policy Framework	Subsidies	Ranking
Chile	+	+	+	+	4.0
Greece	+	+	+	+	4.0
Hungary	+	+	+	+	4.0
Iceland	+	+	+	+	4.0
Australia	+	+	+	+	4.0
Austria	+	+	+	+/-	3.5
Slovakia	+	+	+	+/-	3.5
Nicaragua	+	+	+	-	3.0
US	+	+	+	-	3.0
Guatemala	+	+	+	-	3.0
Indonesia	+	+	+	-	3.0
Japan	+	+	+	-	3.0
Philippines	+	+	+	-	3.0
Germany	+	+	+	-	3.0
Italy	+	+	+	-	3.0
New Zealand	+	+	+	-	3.0
Turkey	+	+	+	-	3.0
Costa Rica	+	+	+/-	-	2.5
El Salvador	+	+	+/-	-	2.5
Poland	+	+	+/-	-	2.5
Portugal	+	+	+/-	-	2.5

Djibouti	+/-	+/-	-	-	1.0
Ethiopia	+/-	+/-	-	-	1.0

Source: New Energy Finance. Countries were ranked on a scale of 0 to 4 points. Each of the criteria presented in the four columns is worth 1 point. A + symbol signifies that country fully meets the criteria and 1 point. A +/- symbol indicates that a country only partially meets the criteria and is awarded a 0.5 point.

West JEC would probably add to that list a wholesale power market that is amenable to power purchase agreements (PPAs). Without PPAs, geothermal plants compete as merchant power producers, being dispatched only when their power is needed and their price is competitive. "Not all countries are like the United States where you can get PPAs," said Enrique Lima, general manager for overseas business. "In Central America, for example, it is difficult to get PPAs. You have to compete in the market where the price varies 24 hours a day. It can go from as low as 1 to 2 cents and as high as 10 to 13 cents at peak. But the duration of the peak is very short, so the average price you'll get is 3 or 4 cents. This makes it very difficult for geothermal to compete."

It's no suprise that Kenya is near the bottom of NEF's rankings with a 2.0 ranking out of 4.0 possible points. (See chart on left for all of NEF's rankings.) Many developing countries rank more highly, in NEF's view, including Chile, Hungary, Nicaragua, Guatemala, Indonesia, the Philippines and Turkey.

Indonesian Puzzle

But according to New Energy Finance Associate Mark Taylor—and research by CCBJ's parent company **Environmental Business International (EBI)** on behalf of the Organization for Economic Cooperation and Development—the level of risks and difficulties presented by certain countries can be as much a matter of perception or opinion as fact. Indonesia, for example, is widely perceived as a very difficult market to develop geothermal projects due to broken contracts, turgid bureaucracies, an unfriendly power market and corruption. According to an executive with an international engineering firm active in geothermal worldwide, wholesale power prices in Indonesia are tied to the price of coal power, essentially pricing geothermal out of the market. This individual (who was interviewed confidentially for EBI's OECD study) doesn't believe

that the government's plan to offer higher rates for geothermal and other renewables will succeed because of resistance within the electricity bureaucracy.

WJEC's Lima offered a more balanced perspective on Indonesia, telling CCBJ: "The Indonesian government is now thinking what kind of support is needed for geothermal and other renewables but they have not yet reached a conclusion." And Taylor says he has "talked to people who have developed projects there, and they say that if you know the people and the culture, it's not that bad." Indeed, **Chevron**, which calls itself the largest producer of geothermal energy in the world, has a 30-year history of geothermal work in Indonesia (through **Unocal** which Chevron acquired in 2004). According to Taylor, government officials in charge of boosting geothermal production to 4.4 GW by 2014 are aware of its reputation and working to ease some of the barriers and challenges.

A key insight that emerged from EBI's research is that some firms succeed handsomely in doing business in foreign markets where others fear to tread. One wind power developer told EBI that his firm avoided mature wind-power markets in OECD countries to focus on the opening markets in what he called "dodgy" countries with higher levels of political risk and corruption. While some firms reported avoiding China because of intellectual property risk and poor contract enforcement, several European wind power firms work quite successfully in China. It appears that a market which scares off some firms can offer opportunities to other firms that adapt to the country's business norms and market conditions.

For geothermal power developers, however, the higher levels of risk and difficulty imposed by operating in a "dodgy" country are much more formidable than for wind power because of the cost of quantifying and developing resources. While assessing the expected annual yield of a wind farm site is not a trivial matter, doing the drilling needed to prove and develop the geothermal resource for a 50-MW power project can run as high as $50 million or more.

Governments, Funding Institutions Step Up

Because of these high costs and the attendant risks of finding dryholes or hitting reservoirs with lower than expected power capacity, geothermal power development in emerging markets is often too risky for the private sector to do on its own. To offset these costs and risks, developed country governments, multilateral lending agencies like the World Bank and in some cases host country governments subsidize the exploration and resource development phase of creating a new geothermal power plant.

The impact of such subsidies can be seen in the contrast between the geothermal power development trajectories of the Philippines and Indonesia. The two countries are both rich in geothermal resources and both began developing them in the 1970s, yet the Philippines today has about 1900 MW of capacity online, meeting about 17% of total demand, while Indonesia has less than 1 GW meeting 5% of demand. According to multiple informants for EBI's OECD research, the Philippines' success story was based on a policy in which publicly owned **PNOC Energy Development Corporation (EDC)** took the exploration and drilling risk, selling steam to power plant developers.

By contrast Indonesia required foreign developers to fund exploration and drilling. "In the 1990s, you could do a geothermal power project in the Philippines for 4.5 cents to 5 cents U.S. per kilowatt-hour, but contracts in Indonesia were at 7.5 to 8 cents because developers were putting a big margin on for the risks being assigned to the projects," said EBI's source with the international engineering firm. (PNOC EDC has since been privatized and EBI's sources say the industry is watching closely to see how its development policies evolve.)

Looking forward, Taylor says that funding to underwrite the costs of resource exploration and wellfield development will be vitally important to building geothermal projects in most developing countries. "Right now, developing geothermal in these countries is so high-risk that there needs to be some sort of multilateral bank or government intervention to help out," he said.

He spoke recently with the head of the World Bank's $25 million GeoFund which subsidizes drilling and exploration and technology development. The official reported that the fund had lent $5 mil-

Developing Markets with Most Promise in Geothermal

- Brazil
- Canada (2 responses): political stability, history of resource development
- Chile (2 responses): resource and government support, great resource, new developers in area
- China (2): Universal carbon tax
- Iceland: size of resource
- India: universal carbon tax
- Indonesia (4) : lots of resources
- Japan
- Kenya
- Mexico
- Nevis Island (Antilles): great start, high electricity pricing
- Nicaragua: good resource
- Philippines (5): replace dependance on diesel powered generation; size of resource
- Turkey

Source: CCBJ 2009 Geothermal Survey conducted in April 2009. Question was: Many regions of the developing world such as Central America and parts of Africa have tremendous potential to develop more geothermal power, yet little internal capacity to develop their resources. In many cases, such countries present high risks for foreign geothermal developers and service providers. Please note the three developing countries that you think will grow their geothermal power capacity the most over the next 10 years and what factors will make those markets favorable for geothermal development.

lion and still had another $20 million to lend, which would likely go to subsidize three resource exploration efforts and five technology development programs. "The European Investment Bank and the European Bank for Reconstruction and Development have also offered funding, but the existing financing resources are absolutely not enough. To significantly ramp up geothermal power capacity in developing countries, it will be necessary for multilateral banks to step up their financing."

Enrique Lima of West JEC told CCBJ about a series of geothermal projects in countries such as the Philippines, Indonesia, Guatemala, Jordan, Panama, Colombia and other countries for which the initial stage of development were or are being financed by country-to-country development assistance programs. "This kind of financing through donations or soft loans may provide means to offset risk," said Lima.

Chile, Turkey, Hungary Entice Developers

According to Taylor, a country that has been particulary successful in turning around a negative reputation for geothermal development is Chile. Developers were plagued by long delays in receiving permits until the government streamlined the permitting by setting deadlines for administrative departments.

"Chile is one of the best markets now for two reasons," said Taylor. "It doesn't have a feed-in-tariff but it has an average wholesale electricity price of $115 per megwatt-hour, which is very high. The other reason is that it has an immense geothermal resource and developers who have looked at it are fairly confident that they can make projects work economically." The Chilean government is also offering a $5 million subsidy per geothermal project and is doing organized leasing and tendering of known geothermal resource areas.

"Many mining companies up in Northern Chile need a lot of electricity, and they're paying high rates for it," said Taylor. "There is a lot of geothermal [in the mining areas], with geysers and other surface expressions." Combining small distributed projects for mines and other remote industries with utility-scale projects, Chile can develop 2350 MW of geothermal power capacity according to an estimate provided by NEF from Bob Lawrence & Associates, a consulting firm.

Other developing-country markets have implemented feed-in-tariffs for geothermal, according to Taylor. These include Hungary with a $90 per MWh rate; Turkey with $70 per MWh; and the Central American Electrical Interconnection System (SIEPAC) linking Panama, Costa Rica, Honduras, Nicaragua, El Salvador, and Guatemala has set an $80 per MWh FIT (SIEPAC is still under construction as of April 2009). ☼

Trouble In Central America: One Company's Experience

CCBJ's parent company Environmental Business International (EBI) recently conducted a series of confidential interviews with geothermal market participants on behalf of the Organization for Economic Cooperation and Development to assess the market barriers in different countries. EBI's informants (interviewed confidentially) told stories of extra costs, obstacles and delays due to government procedures and local business culture. One of the most daunting experiences was related by an international developer doing its first project in Central America. As a result of these experiences, the company will raise its revenue requirements for future projects in the country by 10% to 20%. (The country is not identified to protect the company's confidentiality.) Among the challenges:

* A government anti-corruption law made customs clearance cumbersome and expensive. A mistake like classifying a pipe fitting as a pipe could result in fines and special treatment of all the company's imports for a year.

* Conflicts between labor unions in Mexico and Central America resulted in a *de facto* ban on Mexican trucks crossing the border. In spite of a regional free trade agreement, shipments are re-loaded at the border—a requirement that could not be safely met for a 50-ton heat exchanger the company was importing. A logistics contractor had to negotiate a special arrangement with the unions.

* The company had difficulty importing the isopentane needed for the binary steam cycle because customs officials didn't know how to classify it.

* Banking regulations prevented the company from opening an account unless it established a domestic company. This meant that the company could not establish credit at local vendors and had to get quotes, write purchase orders and process invoices through its home office for all purchases.

* The project tender document gave the client—a quasi-public utility—the right to travel at the developer's expense to inspect the production of components. While traveling to inspect heat exchanger or turbines was justifiable, client staff insisted on traveling to visit the makers of commodity items like transformers and pumps.

* For some site preparation work, the company was forced to employ laborers instead of heavy equipment.

* After a site engineer was murdered, the company hired an armed security service to accompany all foreign staff 24 hours a day.

ARRA Update: Federal Procurement Picks Up at GSA, DOD and DOI

Federal government agencies are flush with cash to spend quickly thanks to the American Recovery and Reinvestment Act (ARRA), also known as the Stimulus Package. And a great deal of that cash will go to services and products related to energy efficiency and renewable energy projects. While the U.S. Department of Energy (DOE) is the largest recipient and disburser of ARRA funds for energy efficiency and renewable energy, other federal, state and local agencies also have a great deal of new money to spend on these segments by September 30, 2010.

As noted in our first edition of 2009 (January/February/March 2009), given the size and the phased implementation of the ARRA, CCBJ will cover aspects relevant to our readers over several editions in 2009. In this edition, we focus on federal procurement for services and products associated with energy efficiency and renewable energy by three federal agencies: **General Services Administration** (GSA), **Department of Defense** (DOD) and **Department of Interior** (DOI).

According to CCBJ's estimates, these three agencies will directly spend about $5.5 billion on contracts for renewable energy and energy efficiency projects by September 30, 2010. (Note: this does not include funds being channel to states, local governments, housing authorities, tribes and school districts by the **Department of Education, Environmental Protection Agency, Housing and Urban Development** and DOE.)

Five and a half billion dollars is a rough estimate based on an educated guess about the amount of capital project funds that GSA, DOD and DOI agencies will spend on energy-related projects. Congress gave the agencies wide latitude, telling the Army, for example, to spend $1.47 billion to "improve, repair and modernize... facilities, restore and modernize real property to include barracks, and invest in the energy efficiency of ... facilities." All other DOD departments, including reserves, received similar marching orders. Similarly, the **Bureau of Land Management, Fish and Wildlife Service** and other DOI agencies have been given money for "repair of roads, bridges, property, and facilities and for energy efficient retrofits of existing facilities."

With that kind of discretion, the full scope of GSA, DOD and DOI spending on energy efficiency projects like upgraded lighting and replacement of inefficient HVAC equipment and renewable energy projects such as solar water heating systems and wind turbines won't be known for some time. But early indications are that spending from DOD at least will be very robust.

In a March 2009 report to Congress, DOD highlighted hundreds of energy efficiency and renewable energy projects that will be funded with ARRA money. Just a few examples: $4.7 million for wind turbines at the **Air Force's** Cape Newenham Long Range Radar site in Arkansas; $10.7 million for a PV system at Camp Pendleton Marine Corps Base in California; and $3 million to upgrade the HVAC system at Fort Leavenworth in Kansas.

Obviously, there's a lot of work on tap for equipment installers and integrators and engineering and construction firms. But DOD is also looking for consultants to do conceptual planning and analysis work. A whole section of ARRA DOD funding is devoted to research, development test and evaluation (RDT&E) projects, and DOD aims to spend much of that funding on energy related projects.

There are initiatives around designing more fuel-efficient military vehicles and developing renewable energy generation and energy devices for combat usage; contracts for those types of projects will prob-

Recommendations for DOE for Utilization of the $400 million in ARRA or Stimulus Funds for Geothermal Energy

Reduce drilling risk
Fund Exploration and Drilling
Incentives for exploration
Invest in exploration research
Create new test wells for deeper operations
Help finance geothermal development first cost
Construction loan capital for shovel-ready developments
Continue and Increase Loan Guarantees
Staff Up to Process Loan Guarantee Applications
Reduce development red-tape
Facilitate and ease permitting process
Concentrate on Hot Dry Rock Geothermal Energy
Invest in proving EGS technology
Fund EGS developments
Fund traditional deployment instead of EGS
Don't squander it on EGS
Invest in geothermal R&D
Advance hard-rock drill-bit development
Invest in cycle engineering and simulation
Advance hybrid solar/binary power plants
Fund new research for power conversion technology

Source: CCBJ 2009 Geothermal Survey conducted in April 2009. Question was:What three top recommendations would you give to US DOE for the $400 million it received in the American Recovery and Reinvestment Act (ARRA) specifically for geothermal.

ably go to firms' with prior experience in combat and weapons systems. But there are also RDT&E projects suitable for consulting engineering firms with expertise and capabilities in designing building energy systems. For example, the Army is looking to spend $3 million for planning of an ultra-low energy campus that can be a model for other facilities. The Navy and Marine Corps expect to spend $2.5 million on developing methods to integrate cogeneration into tactical systems. And the Air Force is in the market for ideas to maximize renewable energy development on its vast test ranges.

According to Chris Lippert, corporate initiative leader for energy efficiency at $2-billion consulting engineering firm **Tetra Tech**, federal agencies have pent-up demands for energy efficiency and renewable energy projects—demands that are finally being satisfied with ARRA funding. "DOD and all federal agencies have been under some form of federal mandate to reduce energy use for some time," said Lippert, citing the Energy Policy Act of 2005 and the Executive Order 13423 signed by former President George Bush in 2007. "But these mandates have not traditionally come with funding. Now that the stimulus package has made funds available, federal agencies are well positioned to implement a large wish list of projects to cut energy use and save on energy costs. There's a great opportunity for the private sector to provide those services."

While many businesses can become federal contractors, given the rigid timelines for spending in the ARRA, Lippert and others think that the vast majority of spending will go to existing contractors. "Existing contract vehicles are incredibly important," he said. "The contracting staff on the federal side is already overtaxed and now they're being asked to take on this significant chunk of work."

That doesn't mean that only those already in the federal doorway need apply because there is great scope for subcontracting work. In demand will be installers and integrators of renewable energy and energy efficiency equipment and projects, but also consulting firms with relevant expertise.

According to Lippert and other executives familiar with federal contracting, becoming a subcontract supplier to a federal contractor is not all that difficult. "As long as you can prove you have your relevant licensing, such as a plumber's license for installing solar water heating, you can start on day one," said Scott Sklar of the **Stella Group**, a firm that integrates solar, wind, geothermal and other renewable energy sources for public and private sector clients. "You may have to get some additional bonding and insurance."

Where to Find Opportunities

Sklar, Lippert and others agree that the best places to start looking for federal subcontracting opportunities are the federal websites, particularly GSA.gov and FedBizOpps.gov. "You have to take the time to troll through and look at all the opportunities," said Sklar. "The U.S. government is the biggest user of energy in the world and the biggest owner of buildings. I suggest focusing on the niches where you are most capable.... You may have done a lot of medium-sized business renovations and now you want to install solar systems for medium-sized buildings. Well, that's different from doing a giant base dormitory that is six square blocks. Focus on what your experience level is and look at the government through that lens."

Sklar takes note that energy efficiency and renewable energy contractors may be able to find significant opportunities with some of the 16 energy service companies (ESCOs) designated as primary energy service performance contractors by DOE in December (see list above). CCBJ's conversations with a couple of these entities indicate that they anticipate being in the market subcontracting vendors, but their needs are probably more skewed to implementation rather than planning and analysis. (Funding for many of these projects is not tied to ARRA but rather to cost savings achieved by energy conservation measures; CCBJ will cover ESCOs and energy service performance contracting in our upcoming edition on energy efficiency and demand response.)

DOE's Primary Energy Service Performance Contractors

Ameresco
Chevron Energy Solutions
Clark Realty Builders
Consolidated Edison Solutions
Constellation Energy Projects & Services
FPL Energy Service
Honeywell International
Johnson Controls Government Systems
Lockheed Martin Services
McKinstry Essention
Pepco Energy Services
Siemens Government Services
TAC Energy Solutions
The Benham Companies
Trane U.S.

The GSA handles purchasing and procurement for multiple federal agencies, and many federal contractors hold what are known as multiple award schedule contracts that GSA administers. "A multiple award contract schedule allows any federal government agency and some state agencies and some contractors to the federal government to access the products and services through the GSA," said Al Tattersall, a senior vice president of federal contractor **GP Physics**. "The advantage to agencies in doing it this way is that it reduces the amount of time for contracting." GSA schedules have already been analyzed and vetted for fair pricing of products and services, and individual agencies can essentially shop among GSA schedule holders for vendors, then work through GSA to execute the contract quickly.

According to Lippert, federal agencies have different preferences regarding whether to procure services through

a GSA schedule or handle their own procurement. "It really gets down to a specific branch of DOD, a region or even a specific base within that region," he said. "The preference may come down to a certain individual procurement officer's experiences."

The eLibrary on GSA.gov can be used to locate firms that hold multiple award schedule contracts. With stimulus money flowing, many of these firms will be already looking at how to ramp up their capabilities through subcontractors. "We have been approached by government agencies with which we have contracts, and we've been told that they are expecting stimulus funding that would expand the scope of work that we would provide through our existing contracts," said Tattersall.

There's also the option to look for specific contract opportunities being offered directly by federal agencies. GSA's FedBizOpps.gov website lists any contract greater than $25,000, according to Tattersall. "In this case, you're not looking for the contract vehicle but the types of procurement that are being opened for solicitation," he said. He suggests prioritizing solicitations based on NAICS codes and geography for regional firms, then contacting the relevant agencies directly.

For businesses that meet federal small business criteria (see SBA.gov/faqs), most federal agencies have liaison staff who can assist in locating prime contractors who may be bidding on specific projects. "You tell them the type of work you do and they will assist you, including telling you companies who are bidding on contracts where you could be a good subcontractor," said Tattersall. "Almost every military facility, including NASA, has someone responsible for getting small businesses involved in acquisition primarily because Congress sets targets for small business contracting."

Tetra Tech's Lippert says that such requirements will lead his firm to subcontract even when it possesses all the needed capabilities for a contract in-house. "We're a large firm and proud of our broad expertise, but since a number of federal clients have small business requirements in their contracting, we'll plan to exceed those," said Lippert. "There could also be niche technologies where we need to bring in a technical specialist."

(Tattersall and Lippert also noted that for small firms willing and able to become qualified as federal contractors, contracting requirements can put their firm in the prime contractor spot with larger firms acting as subcontractors. "Some of the small-business set-asides can be for quite sizeable contracts, so there's often a real need for the expertise and experience that a large business can provide. We are in mentor-protégé and joint-venture relationships with some small businesses that qualify for set-asides," said Lippert.)

As far as making contact with and cultivating a subcontractor relationship with a federal contractor, Tattersall recommends the additional step of registering as an interested party for solicitations of interest on FedBizOpps.gov. "They'll post your name as a company looking to subcontract."

Lippert underscores Tattersall's advice about using the small business liaisons at DOD facilities, but he says old-fashioned networking and marketing can be valuable as well. "Getting involved with groups, where they want to do business, that will give them insight and referrals is a good start." he said. "The Society of American Military Engineers, for example, has monthly meetings and is a great place to do business networking."

"We certainly get cold calls and have people sending us information, but even in this modern world where we're all tied together through technology, my preference would be to meet someone face to face at a SAME meeting or have an introduction facilitated by a small business liaison from one of the DOD branches." If such introductions lead to a potential relationship, it is always preceded by thorough vetting, said Lippert. "Just because we have this glut of funding, we'll still continue to do thorough vetting of subcontractors. The taxpayers don't want to see projects funded that aren't high quality." ☼

Reasons for Regional Variations in U.S. Geothermal Power Prices

- 1) Transmission Access; 2) Utility Attitude towards renewables; 3) RPS requirements; 4) Supply and Demand; and 5) Competition from other sources
- Regulatory structure, energy efficiency mandates, market manipulation of pricing
- RPS states, proximity to fuel, natural resource availablity, transmission constraints, labor costs
- RPS and transmission infrastructure
- States pushing RPS have higher prices; regions with marginal pricing based on natural gas-fired generation currently have lower pricing
- Transmission access, level of Renewable Portfolio Standards, utility attitude towards geothermal
- Transmission capacity/ installed power conversion technology
- Free market pricing is subject to the law of supply and demand, and stimulus/incentive. We are seeing voluntary standards causing some important rises in price paid for renewables, with incentives coming from contribution to portfolio in a utilities footprint, and what that utilty thinks it can safely pass to their rate base. A Federal Renewable Porfolio Standard will change the game significantly (at a cost to all rate payers). Time will tell, but in the meantime, there is sufficient demand and pricing to make hydrothermal projects work financially, and that is what it's all about.

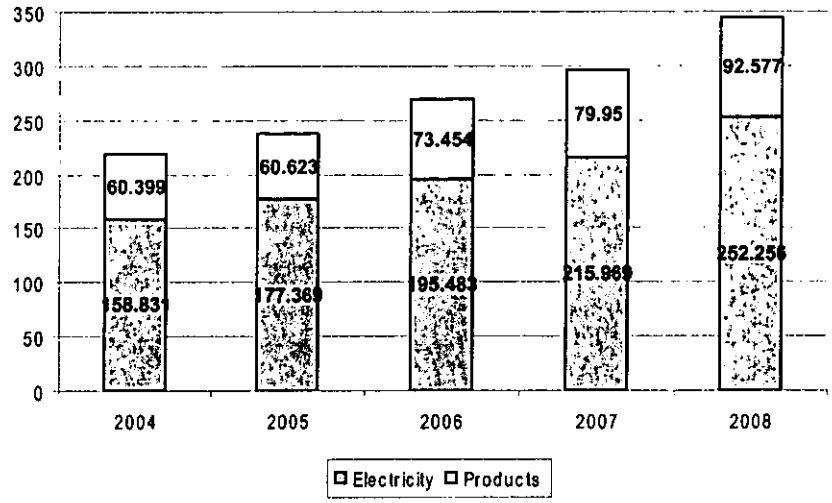
Ormat Leads Market With Technology and Vertical Integration

Ormat is the clear leader with $350 million in sales, but more competition is seen for low-temperature geothermal projects using binary technology

The geothermal power industry is made up of project developers and independent power producers (IPPs); scientific and technical consultants; drilling outfits and drilling technology firms; manufacturers of power plant equipment; and consulting engineers who explore for resources and design and build power plants. Many firms perform multiple roles in this value chain, but there is only one truly vertically integrated corporation whose activities and revenue streams stretch from resource exploration through equipment manufacturing to engineering, procurement and construction (EPC) contracting and power sales: Ormat Technologies.

According to its 2008 annual report, Ormat generated $344.8 million in revenues in 2008, 16.5% growth over 2007. Ormat's power sales revenues from its geothermal plants (both Ormat-built and acquired) and recovered energy generation (REG) plants (see below for more on REG) accounted for $252 million or 73.2% of revenues with product sales accounting for $92.6 million or 26.8% of 2008 revenues. Ormat built 109 MW of company-owned geothermal and REG capacity in 2008 and increased its portfolio to 505 MW. Ormat is on track to build between 82 MW to 94 MW by the end of 2010 for its own portfolio, according to a company spokesperson.

This cash flow from electricity sales puts Ormat in an enviable position relative to smaller developers that are struggling for needed upfront development capital in the current economic climate. "The cash flow generated by our portfolio of operating geothermal and REG power plants provides us with a robust and predictable base for our exploration, development and construction activities, to a certain level without the need to tap into external liquidity sources," notes the annual report. "We believe that this gives us a competitive advantage over certain competitors whose activities are dependent on external credit and financing sources, particularly in light of the current global credit and financial crisis."



Source: Ormat 10-K for fiscal year 2008 ended December 31, 2008. Products includes revenues from four groups: Power Units for Geothermal Power Plants; Power Units for Recovered Energy-Based Power Generation; Remote Power Units and other Generators; and Engineering, Procurement and Construction (EPC) of Power Plants. Electricity includes three groups: Energy and capacity; Lease portion of energy and capacity; and Lease income.

The company's reported highlights for the last year alone show just how broad and diverse its geothermal operations and revenues are. Among its accomplishments: Signing a $65 million contract to supply and oversee construction and startup of a geothermal power plant in Costa Rica; Starting commercial operation of 35 MW of new plant capacity in Kenya; Securing rights to some 150,000 acres of land in Alaska, California, Hawaii, Nevada, Oregon and Utah; Acquiring 51% ownership of a New Zealand geothermal plant; Signing a joint venture to develop a new geothermal project in Nevada; joining a power development consortium in Indonesia; Signing EPC contracts with developers in New Zealand and Nevada worth $42 million and $76 million; Signing a $16 million supply contract for a geothermal project in Turkey; And closing a $63 million tax credit financing deal for an existing plant.

Israeli Roots, But U.S. Was 72% of Ormat's Revenues in 2008

A U.S. company with Israeli roots, Ormat was founded to develop and market heat exchangers and turbines using the organic rankine cycle (ORC) which Ormat founder Lucien Bronicki and his collaborator Harry Zvi Tabor, both Israeli, developed in the early 1960s. ORC uses working fluids with boiling points lower than water to recover energy and generate steam and power from heat sources that would otherwise be insufficient to power steam generators. The original technology was developed at the National Physical Laboratory in Jerusalem in the frame-

Ormat 2008 Revenues ($mil)

	Electricity	Products	Total
Foreign	$45	$51	**$96**
USA	$207	$42	**$249**
Total	**$252**	**$93**	**$345**

Source: Ormat 10-K for 2008.

work of solar energy research. Lucien Bronicki formed Ormat in 1965 in Israel.

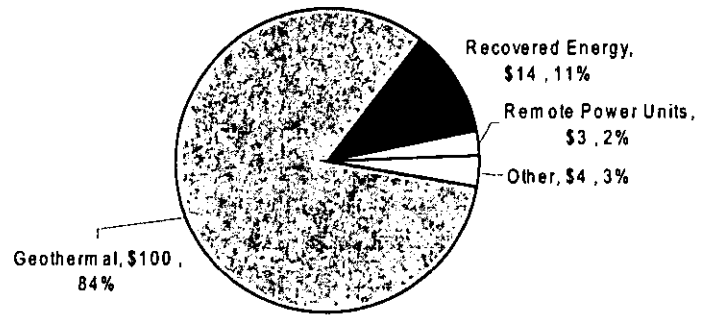
Bronicki originally targeted solar thermal applications in remote off-grid villages, but with that technology facing poor commercial prospects, what emerged from his work was the small Ormat Energy Converter (OEC), a power unit for remote telecom stations, offshore oil and gas rigs and other off-grid facilities that need small amounts of electrical power.

In 1972, Ormat was established in the United States where it supplied OEC units to the Trans Alaska Pipeline. According to material published on Ormat's website, for remote power applications the OEC uses natural gas, kerosene, diesel and other combustion fuels to heat the working fluids, which the hermetically sealed unit condenses and re-uses, allowing continuing operations for many years with periodic refueling and maintenance. More than 3,500 OECs of up to 7 kW capacity have been have been installed in 63 countries, according to Ormat's website.

Ormat turned its attention to geothermal, solar and biomass in the 1970s, with geothermal eventually becoming its major focus. Its business model has steadily evolved from that of a supplier of power systems and components to a vertically integrated firm that builds, owns and operates its own geothermal power plants as an IPP, as well as an EPC contractor that builds power plants for other geothermal project developers.

The company continues to market small OECs and REG systems. For its REG segment, Ormat foresees major growth by selling to North American natural gas pipeline operators who produce waste heat at compression stations driven by gas turbines. Ormat reports that the Federal Energy Regulatory Commission (FERC) is asking proponents of new or expanded pipelines to improve their energy efficiency.

Ormat Product Revenues: Expected Sales in 2009 ($mil)



Source: Ormat 10-K for 2008. Products include revenues from four groups: Power Units for Geothermal Power Plants; Power Units for Recovered Energy-Based Power Generation; Remote Power Units and other Generators; and Engineering, Procurement and Construction (EPC) of Power Plants.

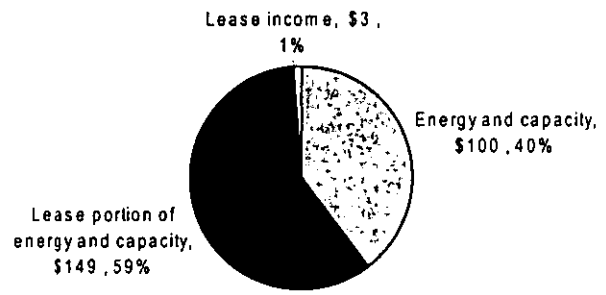
Ormat has begun building 5 to 6 MW REG systems along interstate natural gas pipelines and midstream gas processing facilities. The company also see opportunities for REG in the power sector in Colorado, Massachusetts, Ohio, Pennsylvania, Washington and other states where utilities can install REG systems on power plants and count the capacity toward their renewable energy standards. Additionally, North and South Dakota and the U.S. Department of Agriculture have qualified REG systems for low-interest loans. In North America, Ormat estimates the market potential for REG at 1,000 MW. After building out this domestic market, the company plans to target Europe which has "similar potential," according to the report.

By contrast, the potential for adding geothermal power in the United States is much larger. Ormat's Director for Policy and Business Development Paul Thomsen says the company sees the potential for geothermal power capacity to grow to 30,000 MW to 40,000 MW by 2050, or an order of magnitude larger than the less than 3,000 MW in 2009. As has been widely reported, a 2007 Massachusetts Institute of Technology study projected a potential of 100,000 MW of geothermal generating capacity if enhanced geothermal systems (EGS) can be deployed successfully. (For more on EGS, see page 29.)

More Competition for the Binary Technology Segment

Ormat built its geothermal power business by leveraging its ORC expertise to create what became known as binary geothermal power plant technology. When Ormat first entered the geothermal market in the early 1980s, its technology was an upstart contender.

Ormat Electricity Revenues: 2008 ($mil)



Source: Ormat 10-K for 2008

Most of the action was focused on using conventional flash steam generation with high-temperature geothermal resources of 350 degrees fahrenheit and above. But when Ormat's technology came on the scene, those high-temperature resources were starting to become more scarce because they were the most favorable for geothermal power and therefore developed first. By the mid-1980s, geothermal project developers increasingly needed energy conversion technology that could make use of lower-temperature resources. "Until then people had only been looking for resources that had high temperature steam," said Thomsen.

While Ormat grew its business over the next two decades, it also facilitated the growth of the geothermal industry. Its niche technology position grew into a commanding lead in the fast-growing binary power plant segment, leaving the steam segment to other players, mostly large turbine manufacturers. "Ormat has never tried to compete with Mitsubishi or GE or other manufacturers on huge steam turbines," said Thomsen.

One industry veteran estimated that binary technology accounts for about 10% of the existing stock of geothermal capacity worldwide, and that Ormat has built 95% of those plants. Despite its lower penetration in commissioned power plants, binary technology represents the greatest growth potential because of the prevalence of undeveloped geothermal resources under 350° F, according to many industry experts. (Other factors go into the choice between flash steam technology and binary technology; see Nevada Geothermal profile on page 27 for more information.)

"In the United States, the low-temperature resources are huge," said Enrique Lima, general manager for overseas business of **West Japan Engineering Co.** (West JEC), a prominent and globally active geothermal consulting engineering firm. "The amount of hot water available is very large and the temperatures are well suited to the application of binary power generation. This is why many companies are trying to tap these resources."

Lima points to other countries where binary geothermal development could be the pivotal enabling technology for geothermal because of the abundance of underground reservoirs of 350° F or lower. "Exploration and development of low-temperature resources is happening in countries as diverse as Australia and Greece, and in countries like Hungary, Romania, and Jordan, where oil and gas exploration has led to discoveries of hot water and interest in geothermal energy."

According to Tim Stephure, clean and renewable power generation analyst at **Emerging Energy Research**, binary technology is slightly more expensive than conventional flash steam generation technology, but Stephure says this disadvantage is mitigated by the fact that the exploration and drilling risks are reduced because developers have a better chance of tapping resources of sufficient enthalpy

(heat energy) for the binary process. "In cost comparisons to wind or varying solar technologies, binary geothermal technology is very economically favorable," said Stephure. "The low-temperature market will probably have the highest growth rate going forward as there are so many more areas that can be explored.... Nevada has tremendous opportunities in this regard as well as some other states like Utah."

Ormat's Thomsen underscored Stephure's viewpoint about the lower risk levels and costs of drilling for low-temperature geothermal reservoirs. "Probably 90 percent of the geothermal projects in existence today were built on top of reservoirs that had some kind of surface expression such as hot springs or rapidly melting snow," he said. "Now that most of these have been developed, the industry is looking for what we call blind resources."

"Geothermal is where the oil & gas industry was in the 20s and 30s when they thought they were running out of oil because most of the reservoirs with surface manifestations had been utilized," said Thomsen. "We're now looking at deeper more moderate temperature resources that aren't inherently obvious or haven't been developed previously. In this phase, the advantage of Ormat's technology being able to user lower temperature heat is critical."

Stephure noted that European countries are banking on using binary technology as well as emerging EGS technology to tap the lower temperature geothermal resources under their soil as well as hot dry rock (HDR) resources. "A lot of European countries don't have those high-temperature resources you see along the Pacific Ring of Fire," said Stephure. "Germany has implemented a feed-in tariff for geothermal of up to €0.27. The base is €0.20 with enhancements of €0.04 if you do combined heat and power and €0.03 if you do EGS. This is the first direct incentive of this kind." ☼

Technology Providers and Developers Vie to Compete With Ormat in Emerging Geothermal Niches

United Technologies, Raser, Turbine Air Systems, Exorka and others develop in manufacturing, the lab and in the field.

Although Ormat dominates the low-temperature binary segment of the geothermal power market today, competitors have emerged in the last several years. **United Technologies Corp.** is its most high-profile competitor on the power systems technology front. Since 2006, UTC has marketed its PureCycle binary technology systems for geothermal power. PureCycle is a 280-kW modular unit that can be deployed in arrays to create commercial-scale plants. According to Michael Ronzello, North American sales and business development manager for **PureCycle** (marketed by UTC's **Pratt & Whitney Power Systems** division), PureCycle promises faster construction cycles. "Our modular approach to power plant deployment drastically reduces construction time," said Ronzello, indicating that plants can be constructed in 6-12 months (after hot water supply is established). "We have the capability to leverage Pratt & Whitney Power Systems 20 plus years of expertise and experience in the power business to provide full turnkey geothermal power plants using PureCycle".

While UTC doesn't publicly disclose prices for its equipment, Ronzello said the company expects to compete with Ormat's cost per MW of capacity by sourcing components from a UTC-owned affiliate. "We use off-the-shelf components and technology from our sister division, Carrier, the leader in commercial HVAC equipment," he said. According to Ronzello, Carrier produces components for PureCycle "in a pre-engineered, pre-manufactured fashion that drives down costs, increases quality and allows customers to take advantage of the lead time that is common in Carrier."

Raser Gains Efficiency With Networking

UTC's largest customer and best advocate is **Raser Technologies** (Provo, Utah). Raser has leveraged its expertise in electric motor technology to develop methods of networking the modular UTC units for optimal performance and efficiency. "Just like there are people who make computers and people who network computers together to function better, we've figured out how to network [the UTC PureCycle units] together so they can work in harmony and produce electricity more efficiently," said Richard Putnam, Raser's director of investor relations.

It's not clear yet how UTC's PureCycle systems will compare with Ormat's in terms of performance, costs and reliability. The geothermal developer community, while not unhappy with Ormat's equipment and EPC work, would certainly welcome additional competition in binary technology. But with over 20 years of experience and a proven ability to execute the guaranteed EPC contracts that lenders need to see before financing projects, Ormat will not be an easy competitor to take market share from. "We have been able to simplify our processes over time," said Thomsen. "We have fewer moving parts. We have a low speed turbine that doesn't require a gear box. Our power plants have become much more efficient over time [and EPC] projects much more streamlined and more efficient [resulting in] longer run times, greater longevity, less wear and tear on turbines, less opportunity for pump failure, less piping."

The industry is watching closely to see how the first Raser-UTC plants perform and what their construction costs are. Raser brought its first project online in 2008, the 11-MW Thermo No. 1 plant in Beaver County, Utah. According to Putnam, production wells drilled for the

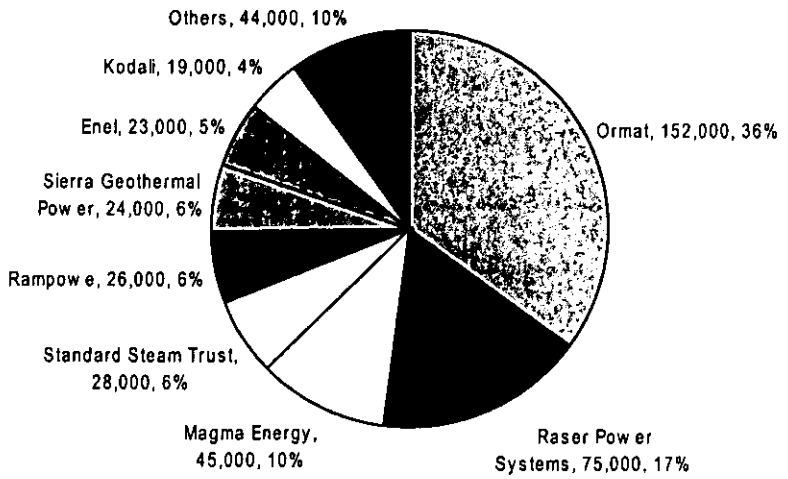
plant revealed a larger-than-expected geothermal reservoir capable of supplying steam for more than 200 MW of power plant capacity. "We had thought there were maybe 20 to 30 megawatts, but after doing some nice drill-out, GeothermEx, an independent geothermal consulting company, was able to verify and independently report that this is now a 230 megawatt resource," he said.

Raser's annual report for 2008 reported a capital cost for Thermo No. 1 of $88.1 million, with at least another $9.5 million needed to get the plant up to full operating capacity. That would seem to indicate a capital cost of about $7,000 per kilowatt of gross capacity. (After supplying its own pump loads Thermo No. 1 will produce 10 to 11 MW net from gross power capacity of 14 MW). That amount is far higher than the typical $4,000 per kW of gross capacity cited by developers at the recent Geothermal Innovation and Investment Conference or the $3,500 to $4,500 per kW range cited for Ormat plants by Ormat's Thomsen. (Those cost ranges include the highly variable cost of resource exploration and wellfield development. "We know the price of plants we build down to the penny. What we don't know is the cost of developing the resource," said Thomsen.)

But according to Putnam and Raser CEO Brent Cook, the nearly $100 million price tag for Thermo No. 1 included the production wells that revealed the reservoir's very large potential plus the cost of a larger transmission line to ship more electrons than anticipated to the company's electricity customers (currently the City of Anaheim, Calif.). "We are comfortable that the $57 to $59 million range is accurate for non–recurring development costs," wrote Cook in an email. "We expect our costs to be $3,800 to $4,200 per MW installed cost."

Raser's Beaver County development is just the opening salvo in a four-state development program that the company expects to yield hundreds of megawatts. Indeed, Raser aims to become a major developer and IPP operator of geothermal projects in the United States, Indonesia and elsewhere.

BLM Geothermal Competitive Leases by Acres, 2007–present



Source: Compiled by Emerging Energy Research; By state the 2007-2008 leases are 52% in Nevada, 34% in Utah and 9% in Oregon, 4% in Idaho. Others include Agua Caliente, Oski Energy, Geothermal Technical Partners, Silver State Geothermal, Vulcan Power, Geothermal Rail Ind. Dev., Miller Dusty, S4 Consultants, Montera Energy Ventures, US Geothermal, Calpine, First Covenant Construction, US Renewables Group, Kelsey South, High Valley. Figures in acres rounded to the nearest thousand acres. BLM is Bureau of Land Management.

After Ormat, Raser is the second largest acquirer of geothermal leases on federal land since 2007. According to figures compiled by **Emerging Energy Research**, Ormat purchased leases to about 150,000 acres (the company owns leases on a total of 220,000 acres according to its annual report), followed by Raser with approximately 75,000 acres and **Magma Energy** with about 45,000 acres (see chart above). "We have accumulated domestic geothermal interests in Nevada, New Mexico, Oregon and Utah," notes Raser's report. "With the help of internal and external geologists, we intend to continue to identify, evaluate and acquire additional interests in properties." And last year, Raser and **Indonesia Power** were the successful bidders on a geothermal concession in Indonesia that covers approximately 100,000 acres with potential resources. At CCBJ's deadline, Raser and Indonesia Power will still finalizing their joint venture agreement.

Turbine Air Systems Exploits Rankine Cycle

Another emerging potential Ormat competitor that some in the geothermal industry are excited about is **Turbine Air Systems** (TAS; Houston), an industrial cooling and heating systems manufacturer that has begun developing technology for geothermal applications. TAS already has a foothold in the power industry with its modular inlet chilling units that can increase the efficiency of gas-fired power plants in hot climates. "TAS has translated this modular construction to geothermal power and advanced waste heat recovery organic Rankine cycle systems," states a company brochure. The company aims to leverage its experience in the power sector to offer design and engineering services for geothermal developers rather than just off-the-shelf sales.

Halley Dickey, director of geothermal business development for TAS, told CCBJ that the company has developed a renewable energy division aiming to provide power plants to solar thermal power projects as well as geothermal and industrial heat recovery. "We've been working on the development of our organic Rankine cycle program for seven years," he said.

"We own some unique patents related to geothermal binary technology." The first plant to deploy a TAS system may be on the horizon, as Dickey said the company is negotiating with an undisclosed potential U.S. client to supply a 15-MW plant in 2010.

Kalina Has Backers & Detractors, Needs Manufacturer

A third competitor in the binary geothermal power systems segment is **Exorka** (Munich, Germany), which markets binary technology based on the Kalina system using an ammonia-water mixture as a working fluid. One speaker at the March 2009 geothermal industry conference disparaged the Kalina system from the lectern, saying that after promising to revolutionize the industry and unseat Ormat, the technology had gotten nowhere. The speaker claimed that there are only two Kalina plants worldwide and neither are operating. One conference participant speculated to CCBJ that the difficulties facing the Kalina process stemmed from its use of a mixture of ammonia and water; because the two fluids boiled at different temperatures, Kalina systems had to cope with constantly changing compositions.

But Exorka's CTO Gestur Bardarson reported that four of five Kalina cycle plants built since the late 1990s "have mostly shown high reliability, although some equipment problems have been present [but] no more ... than can be expected for new technology employed in the first commercial plants." A 2-MW plant in Husavik, Iceland, achieved a capacity factor of between 89% and 96% from 2005 to 2007, according to Bardarson. A 3.3 MW waste heat plant at a **Sumitomo Metal Industries** steel plant in Japan has been running smoothly since 1999 with an annual capacity factor as high as 99%, he said.

Raser's Richard Putnam told CCBJ that company staff has evaluated Kalina technology and visited some of the pilot plants. "We believe the technology has a positive operating history that should be discussed. It is unclear who will take the manufacturing lead on the technology, but we believe the technology is sound and proven."

There is also a prospective nano-technology entrant, Power Chips being developed by Gibraltar-based **Borealis Exploration**. The technology was announced in 2003 with a promise of superior power conversion for geothermal applications, waste heat recovery and other applications. A news release described Power Chips as "solid state thermotunnelling devices which use a combination of thermionic emission and quantum mechanical electron tunnelling to increase the rate of electron emission in solid-state converters." But Power Chips appears to either be in deep stealth mode or inactive since the last news relase posted on its website is more than two years old. (An email inquiry to Borealis was not returned by CCBJ deadline.)

Ormat, of course, is not standing still technologically. Thomsen says that the company's more than 25 years of experience designing, managing and operating geothermal plants gives it a technical edge over prospective competitors. "Converting heat to electricity is very expensive and hard to do," said Thomsen. "Some of our competitors have tried to do cookie-cutter type plants that they can produce rapidly. We started with small units and gradually built larger and larger units, refining our knowledge and expertise continually."

Ormat also has an operational edge that enables it to get the most MWh out of its plants for the lowest operating costs, according to Thomsen and Ormat's annual report. "Our intimate knowledge of the equipment that we use in our operations allows us to operate and maintain our projects efficiently and to respond to operational issues in a timely and cost-efficient manner," states the report. "Moreover, given the efficient communications among our subsidiary that designs and manufactures the products we use in our operations and our subsidiaries that own and operate our projects, we are able to quickly and cost effectively identify and repair mechanical issues and to have technical assistance and replacement parts available to us as and when needed."

Ormat Takes a Crack at EGS

Ormat is pushing the frontiers of geothermal technology in two key initiatives with the **U.S. Department of Energy**, one to explore the potential to exploit hot water that is co-produced with oil and gas and another to advance enhanced geothermal systems (EGS).

At the **Rocky Mountain Oilfield Testing Center** (RMOTC) in Wyoming, a 250-kW Ormat binary power unit started generating electricity in September 2008 using heat from 190° F water that is co-produced with oil. The potential to generate on-site power from such a set-up is enormous. RMOTC estimates that U.S. oil and gas wells that produce hot water along with hydrocarbons could generate "upwards of 5,000 MW of power," according to an RMOTC news release.

Ormat's Thomsen told CCBJ that the project is "over-producing what we had expected it to do." But moving ahead with co-production at oil and gas drilling sites will be a challenging endeavor. For one thing, there's the fact that according to RMOTC, the water recovered with oil or gas is usually only heated to a maximum of 220° F, far lower than what geothermal developers prefer to produce power economically. Furthermore the costs of operating such a system will depend on how the hot water is disposed of, i.e., through reinjection or surface dumping.

Probably much more significant to the future of geothermal power is Ormat's DOE-funded work on EGS with collaborators **GeothermEx**, **University of Utah**, **U.S. Geological Survey** and others on two

EGS demonstration projects.

As discussed in in the following feature on enhanced geothermal systems, EGS has the potential to vastly expand geothermal if it allows power to be produced successfully from hot dry rocks—as opposed to the conventional hydrothermal resources relied on for all geothermal power today, both flash and binary. The demonstration projects aim to hydraulically stimulate fractures that can enhance the production of hot water of sufficient enthalpy to generate additional power. "It's still very early stage R&D, but we're excited about not only developing technology to create standalone resources for EGS but also to create new life or viability for existing resources."

"We still need to prove the technical viability, and then get to the point of proving commercial viability," said Thomsen. "Ormat's experience has shown us that you can have complete technical success and zero commercial viability and vice versa." He also averred that it will be important to focus not just on the potential of EGS to greatly expand the pool of resources available for geothermal power but to look for ways to use the emerging technology to enhance existing geothermal power sites.

"If you can go back to wells that are less productive and, for lack of a more scientific term, tinker with them and produce more heat, we might determine that our potential hydrothermal resources may be much larger than we thought. For example, if you drill a well in a standard hydrothermal resource and don't get adequate permeability or heat, you might be able to use EGS technology to fragment back into the reservoir and stimulate adequate permeability and heat."

Growing Organically

With its healthy balance sheet and dominant vertically integrated position, Ormat might be expected to be on the hunt for project developers long on leases but short on capital. But according to Thomsen, the firm is reticent to diminish its third-party customer base through acquisition even though that might provide competitive advantages. "The only time we compete directly against another developer is when we're bidding on a resource at the federal land auctions," said Thomsen. "Once another developer is successful in achieving its resource position, we look to provide them with third-party power plant equipment."

Thomsen says that last year Ormat executives were asked by some in the geothermal industry whether they were considering making a bid for **Nevada Geothermal Power** when the developer was trying desperately to finance its Blue Mountain Project during the 2008 economic collapse. "People asked us 'Are you looking at this as potential acquisition?' We said no. We don't want potential third-party clients living in fear that we would acquire them when they run into financial difficulties."

Some financial analysts or deal-makers might argue Ormat is undervaluing the benefits of consolidation. But it's hard to argue with a business model in which Ormat's development arm pushes ahead with its own projects while earning revenues from equipment sales and EPC contracts—including $76 million from Nevada Geothermal for designing and building the Blue Mountain project.

Ormat's future is clearly tied to supplying and servicing a vigorous and growing geothermal industry, and to that end the company is a cheerleader for its counterparts as well as a competitor. Thomsen echoes a theme heard commonly in geothermal circles: The industry deserves more respect and recognition, and when elected officials, utility commissioners and activists talk about the importance of renewable energy, geothermal should be mentioned in the same breath as wind and solar.

"On one hand it can be frustrating that people don't recognize geothermal and its reliable baseload attributes as compared to wind and solar," said Thomsen. "But on the other hand, the investor-owned utilities we sell power to all know who we are and what we do. Geothermal might not be on the front page of the Wall Street Journal or the New York Times, but there are not many utilities who aren't familiar with geothermal. Serendipitously, after CCBJ interviewed Thomsen in April, Morgan Stanley put geothermal power on the cover of the *Wall Street Journal* on May 20, 2009, with a full-color ad touting geothermal as a sound investment, while promoting its expertise on the industry. "Unlike wind or solar energy, geothermal utilizes a constantly present energy source —the Earth. Just below our feet lies an industry that could reach $122 billion by 2030." While Morgan Stanley's 20-year valuation of the industry may be little more than an educated guess, the firm's promotion of its expertise harkens to what Thomsen says utilities have known for years: "To quote Michael Yackira, CEO of **NV Energy**, 'Geothermal projects don't look any different to an IOU than any other fossil fuel project,' While that's not sexy, it's a badge of honor for the industry. We're seen in their integrated resource plans as being just as reliable as coal or natural gas plants." ☼

Typical Geothermal Plant Development Costs ($/kw)

Development Stage	Cost ($/kW)
Exploration and resource assessment	400
Well field drilling and development	1,000
Poewr plant, surface facilities, transmission	2,000
Other dev't costs (fees, working cap, contingency)	600
Total development cost	4,000

Source: Geothermal Tomorrow, U.S.Department of Energy's Office of Energy Efficiency and Renewable Energy; Costs for a typical 20 MW plant or a total of $80 million; Does not include financing charges of interest rates 5-6% for some utilities or as high as 15% for IPPs."

Nevada Geothermal Power, Last in Before the Credit Freeze, Looks to Heat Up the Geothermal Market

Like several other pure-play geothermal developers, Nevada Geothermal Power (NGP) is a Canadian company with a U.S. subsidiary targeting development prospects in the lower 48. NGP became something of a celebrity in the small U.S. geothermal world last year because it secured project financing for its 49.5 MW Blue Mountain power plant near Winnemucca, Nevada, just before credit markets locked up in the third quarter of 2008. But the company's experience also illustrated just how difficult it is to finance a geothermal power project in this economic environment.

The credit facility NGP received from Trust Company of the West on August 29, 2008 enabled it to give Ormat Technologies a full notice to proceed on a previously negotiated $76 million engineering, procurement and construction (EPC) contract and to conclude a $4.5 million deal with Wilson Utility Construction for a transmission line to the regional grid. As of spring 2009, the project was on schedule and NGP expected Blue Mountain to be in commercial operation by the end of the year. The power buyer is investor-owned utility NV Energy.

"Our timing was perfect," said CEO Brian Fairbank in recounting his firm's dash for cash last summer. "We had been working with Morgan Stanley on a 30-month construction loan that would have then been replaced with production tax credits for permanent financing." With a proven resource of 50 MW (40 MWe) and the guaranteed turnkey EPC bid from Ormat, the project looked solid, until the credit markets started to unravel in mid-2008. "All summer we'd been sitting down with Morgan Stanley and the syndicating banks trying to close the deal, but it was apparent even then that the credit markets were not working. Around the end of July we were basically running out of time and needed to move forward." That's when NGP got its financing deal done with TCW—at 14 percent.

Cost of Developing a Geothermal Project

High front end costs

- High upfront confirmation costs, compared to other renewables
- Drilling, money, leasing, time

Phasing exploration mitigates risk

- Geochemistry, geology, geophysics and permitting: $2.5 million
- Temperature gradient drilling, slim-holes: $2.5 million
- Production test wells: $3.0 -$6.0 Million X 2
- $15 million plus to feasibility! Requires high risk upfront equity!

Source: Nevada Geothermal Power, presentation by CEO Brian Fairbank at Greenpower Conferences' March 2009 Geothermal Innovation and Investment conference

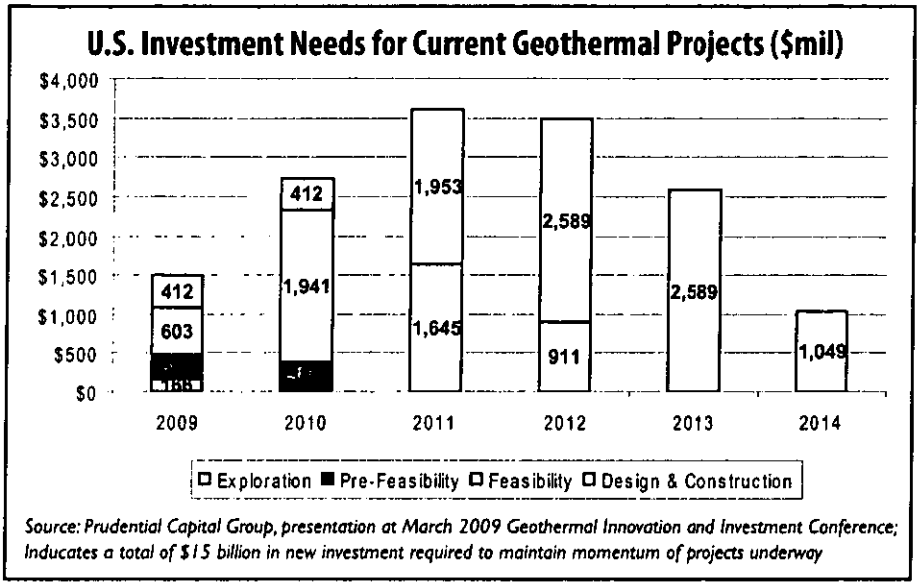
"In today's economic environment, this financing looks good," said Fairbank. "It's a facility up to $180 million that we draw as we need it." Fairbank says NGP is currently packaging a production tax credit (PTC) based financing, a task that is by no means easy since the tax credit capacity of U.S. financial institutions has shrunk dramatically with their declining profits. The American Recovery and Investment Act (ARRA) stimulus bill extended the "placed in service" date for tax credit qualification for geothermal projects to December 31, 2013, so Fairbank is confident that buyers will be found. The plant's commercial operation date (COD) looming—it could arrive by October 2009—and the impetus to take out the 14% debt is rather compelling.

Selling the PTCs is NGP's most preferable option; as noted in CCBJ's Q1 2009 edition, the House-Senate Joint Committee on Taxation estimates that PTCs taken over the 10-year qualification period are worth roughly 50 percent more than the investment tax credit that Blue Mountain and other renewable generators can also qualify thanks to ARRA. "The PTCs are worth $21 a megawatt-hour to start with, indexed to inflation. So if we're selling power at $75 to $80 per megawatt-hour, that's pretty significant," said Fairbank. Accelerated depreciation is also on offer, and combined with PTC value, Fairbank figures that NGP can offer a buyer about $100 million worth of tax benefits.

However, in today's climate, Fairbank acknowledges that he may have to go with the new tax credit option provided by the ARRA: a grant in lieu of a 30% investment tax credit (ITC). But like other geothermal developers eyeing the grant-in-lieu-of ITC, Fairbank is concerned about how much of the upfront exploration and drilling costs will be considered tangible costs by the U.S. Treasury for the purpose of calculating the ITC. At CCBJ's deadline, guidance on that issue had not come forth.

As is the case for many geothermal projects, in the process of drilling wells to tap the underground hot water resources at Blue Mountain, NGP ended up hitting one dry-hole—not literally dry but of sub-commercial enthalpy (heat energy)—and some "false starts" in Fairbank's words on injection wells (used to stimulate continuing flow of hot water). "We drilled a well to the north that didn't turn out."

At $3 million to $6 million per well, the ability to include unproductive wells in the investment cost basis that qualifies



Source: Prudential Capital Group, presentation at March 2009 Geothermal Innovation and Investment Conference; Inducates a total of $15 billion in new investment required to maintain momentum of projects underway

for the ITC is not trivial. According to Fairbank and other geothermal developers, typically 20% to 30% of the wells drilled on such a project end up not functioning as expected—but such dry-holes are an inevitable part of development, and they help the developer and its technical consultants understand more about their reservoir and target future drilling more accurately.

In fact, with the production drilling already completed, this gives Fairbank and his team reason to think that there is another 50 MW of geothermal power capacity to be tapped from the geothermal reservoir under their ground. "In oil and gas terms, there's an inferred or possible resource toward the mountain to the east," said Fairbank. Geoscientific and geochemical indications give strong hints of this. "The water we're producing now is 375 degrees Fahrenheit, but the chemistry of the water indicates that ultimate source temperatures greater than 400 Fahrenheit. In the long run we may not have found the hottest part of the resource." But more drilling is needed to prove it.

And speaking of temperatures, NGP's 375 degree Fahrenheit geothermal resource was hot enough to allow use of conventional flash steam technology—which would have resulted in a somewhat less costly power plant. But early on NGP chose the binary technology offered by Ormat, which uses working fluids and heat exchangers to capture the heat energy in lower temperature geothermal resources. According to Fairbank, the decision was based in part on the fact that while initial drilling turned up 375 degree Fahrenheit hot water, NGP couldn't be sure subsequent wells wouldn't be too cool for flash technology.

Plus, the closed-loop binary systems offered benefits for reservoir longevity and air quality permitting. "With binary you reinject 100% of the water and that helps maintain the overall resource's longevity because you're pressuring the reservoir," said Fairbank. "With flash, you're losing the vapor, about 30 percent of the water."

"Flash plants also have some slight air emissions in the vapor," said Fairbank. The most common is hydrogen disulfide—the rotten egg smell. "[To meet air quality regulations] you have to scrub that out. You can deal with it, but binary is absolutely emission free."

NGP is pursuing development of three other projects: Pumpernickel Valley and Black Warrior in Nevada and Crump Geyser in Oregon. With TCW funding for Blue Mountain only, NGP expects to be in the market for more financing soon. Because the expensive drilling programs must be funded by scarce equity—in the "hyperliquidity" era that ended last year, some debt funding might have been available—NGP is hoping that the U.S. Department of Energy (DOE) decides to use some of its $400 million in ARRA funding for geothermal to subsidize drilling programs. Either that or a piece of the $6 billion in new loan guarantee funds in the ARRA, hopefully made available in a process more streamlined that past DOE loan guarantees. "The existing established loan guarantee program is for technology [but for applicants] it has been more trouble than it was worth," said Fairbank. "My understanding is that the new program may be for other things, including geothermal drilling. The geothermal industry needs that." ☼

EGS Could Vastly Expand Geothermal Power But Funding of RD&D Projects Needed

Conventional geothermal industry competes with EGS for scarce funding.

In our page one overview for this edition, CCBJ characterized the geothermal power industry as the veteran journeyman shortstop on the baseball team of the Low-Carbon and Renewable Power Segment. Well, if one thinks of the geothermal power industry as a professional baseball team, **enhanced geothermal systems (EGS)** would be the 15-year-old phenom impressing the pro scouts. Only that metaphor is not grand enough. Imagine that the scouts have discovered a whole high school full of future all-stars who are destined to break every baseball record without using steroids and triple the size of Major League Baseball's fan base and revenues. That's just the kind of game-changing status that EGS is gaining in geothermal research and investment circles.

While the U.S. resources for conventional geothermal power—also known as "hydrothermal" because underground hot water provides the steam supply for power plants—are limited to the West and capable of growing to between 30,000 and 40,000 MW, geothermal plants using EGS could be built almost anywhere. A **Massachusetts Institute of Technology (MIT)** study projects that EGS technology could enable geothermal power to supply 100,000 MW of capacity in the United States, nearly 10% of current installed electrical generating capacity.

But as of 2009, EGS (which also stands for engineered geothermal systems and is alternately known as HDR, for hot dry rock) is more like a kid trying out for little league. After three decades of research and field testing, there are no EGS power plants pumping electrons to a utility grid. "So far there have only been test power plants run on true EGS experiments where they've actually fractured the rock and circulated the water," said EGS expert David Blackwell, co-author of the MIT report and a professor of geophysics at **Southern Methodist University** at the March 2009 Geothermal Innovation and Investment conference in San Francisco.

Blackwell acknowledged that European EGS projects in France and Germany are generating grid power, albeit in amounts of 3 MW or smaller. But he told the audience that those projects are not what he considers true EGS because their developers drilled into subterranean rock with existing fractures. "They didn't actually make the fractures," said Blackwell. In Blackwell's and many others view, the first company to accomplish a true EGS project will likely be **Geodynamics** of Australia, which looks ready to culminate six years of R&D with a 1-MW geothermal plant in South Australia's Cooper Basin. The pilot project will power the remote town of Innamincka as early as the summer of 2009, displacing a diesel generator that costs $15,000 a month to fuel. "That will be the first real long-term, large-scale test of EGS," said Blackwell.

EGS Basics

So what is EGS? In a nutshell, it is using hydraulic fracturing techniques—commonly deployed in the oil & gas industry—to open up sealed fractures in hot rocks far underground, then using injection wells to push cold water through the newly opened fractures where it is heated and returned to the surface to supply heat for power generation. EGS "emulates naturally occurring hydrothermal circulation systems—those now producing electricity and heat," wrote Jefferson Tester and co-authors of MIT's 2006 report, *The Future of Geothermal Energy*.

MIT's report has generated buzz in the media and in investment circles. Before the recession, EGS drew some venture capital, which had been rare to non-existing in the mature geothermal industry. **AltaRock Energy**, which aims to develop a pilot EGS project by drilling into granite below the hydrothermal reservoir that fuels The Geysers power plant in California, received $26.25 million from **KPCB, Khosla Ventures, Google.org** and **Vulcan Capital; Potter Drilling** has received $4 million from Google.org.

Not exactly big numbers in the clean energy field where solar took in 40%, biofuels 11% and wind 6% of $8.3 billion in global cleantech investing in 2008. Indeed, most money going into EGS has come from governments, including the United States, Germany and Australia. MIT's report authors warn that governments will have to keep putting up money for some time to come. "It is likely that government will have to fully support EGS fieldwork and supporting R&D. Later, as field sites are established and proven, the private sector will assume a greater role in co-funding projects—especially with government incentives accelerating the transition to independently financed EGS projects in the private sector."

Australia, which has little in the way of conventional hydrothermal resources, is one of the most aggressive EGS funders. The government has pledged about $45 million for pilot projects, and several hundred million dollars in shareholder investments have flowed into about 10 public companies. Along with Geodynamics, the leading firms include **Panax Geothermal** and **Petratherm**. Yet, in the United States, many in the geothermal industry would prefer that government keep the fledgling EGS phenom on a diet and feed them instead, or as the case may be, keep them alive through this current period of capital scarcity. "It's great to spend money on EGS. That's the future," said Doug Glaspey, CEO of **U.S. Geothermal**. "But if you want megawatts on the ground today, you have to capitalize exploration. The way you do that is put it into drilling programs."

Hot Dry Rock vs. Hot Wet Rock

To one pioneering EGS/HDR researcher, starving RD&D to support the existing geothermal industry would be a case of history repeating itself. Donald Brown was one of the three scientists from the U.S. DOE's **Los Alamos National Laboratory** who pioneered HDR and created a test project—one of the few "true EGS experiments" in Blackwell's rankings—at Fenton Hill, New Mexico. "HDR was actually Bob Potter's invention," Brown told CCBJ. "Mort Smith and I modified it, and I wrote the patent."

The Fenton Hill team developed two confined HDR reservoirs, the first from 1975 to 1977 and the second from 1983 to 1985. The first phase was centered at a depth of about 9,200 feet with a mean temperature of 385° F and the second phase was 11,500 feet underground with a mean temperature of 455° F. Contractors **Dowell Oil Well Services** and **Halliburton** fractured the rock with hydraulic pressure until fissures and cracks that had been long sealed by precipitation were forced open—a common technique in the oil & gas industry. This part of the process included a feat that still impresses Brown today: a massive hydraulic fracturing in which Dowell injected 5.7 millions over two and half days at a surface pressure of 7,000 PSI. "No EGS stimulation has ever approached those numbers."

Hoop stress created by the pressurization made the reservoirs tight at their margins. Injection wells pumped cool water down and through the fractures, where it was heated, then up to the surface—so the system operated in a closed loop, comparable to an automobile cooling system. "The stimulated joints were held open by reservoir pressure, a pressure greater than the joint closure stress so that the HDR reservoir was highly dilated," said Brown. "We were not at all worried about the joints plugging up again with dissolved minerals, since all the dissolved mineral species reached equilibrium in the pressurized close-loop circulating fluid within about two weeks. No precipitation occurred thereafter anywhere in the earth loop."

Years of testing concluded in 1995 showed the potential to generate about 1-MW of electric power, so the team began soliciting a partner from the geothermal industry. "It would have involved bringing in a company like Ormat to build a binary power plant," said Brown. "We got bids, the bids were evaluated and a winning contractor had been selected." The project would have provided invaluable information on "how to best produce heat in an engineered HDR reservoir," according to Brown.

"Our modeling suggested that the one-third cubic kilometer reservoir would last 10 to 20 years. It could be extended laterally or in depth, and I've got other tricks up my sleeve to increase the productivity and lifetime, but we would need to run a reservoir to demonstrate those." But Brown says DOE declined to fund the project at the last minute, instead directing money to building a 29-mile pipeline to carry recharge water to The Geysers, then owned by **Unocal, Calpine** and **Northern California Power Authority**. According to a report by some consulting engineers for the project, the $48 million project was 40% funded by DOE and other public agencies.

"It was frustrating," recalls Brown. With a change in leadership at DOE's geothermal program, he says the agency "didn't understand HDR. They didn't understand what we had done. They just wanted to get us as a thorn out from under their saddle. We kept saying how good HDR was and they kept saying 'but the industry doesn't like it so we're not going to fund it.'"

Echoing Blackwell's viewpoint, Brown contends that most existing EGS test programs are not true HDR, but rather HWR, or hot wet rock. Other industry sources and the MIT report confirm this, but note that the aim of these projects is to engineer those currently unproductive hot rocks to increase their permeability and make them productive for geothermal power. Brown contends HWR technology misses the true home run potential for geothermal, however. "Less than 1% of the geothermal resource is naturally occurring fluids in place, either along faults or in a steam dome like at The Geysers," he said. "The other 99% is HDR. When you can utilize HDR, you go from a few little fly specks on the world map to the rest of the map."

Regardless of disagreements over HDR vs. HWR, Brown agrees with the rest of the EGS crowd in saying that better drilling technology is needed to enable EGS to go forward on a large scale. While conventional hydrothermal drilling doesn't go much below 10,000 feet, candidate resources for EGS power plants start at 10,000 feet deep and can be as much as 30,000 feet below the surface.

The MIT report says both "evolutionary" and "revolutionary" techniques will be needed; in the former category, the report authors look for "more robust drill bits, innovative casing methods, better cementing techniques for high temperatures, improved sensors, and electronics capable of operating at higher temperature in downhole tools"; and in the second category, "new methods of rock penetration [with] lower production costs."

Brown, who has come back from retirement to work on HDR as a guest scientist at Los Alamos, likes the hard-rock polycrystalline diamond compact (PDC) drag bit now being developed by a company called **Novatek International**. "It can improve the drilling rate by a factor of three and will cut our front end costs down considerably so the economics of HDR become more attractive." Brown is also working with some undisclosed venture capital investors who are considering a demonstration project at Fenton Hill.

"The reservoir is still there, and one of the wells is still in decent shape," he said. "If we started today we would probably have power coming off the lines in three years." He says the investors would look to patent some of the technology coming out of the project and build on their first-in-class reputation and expertise to roll out more and larger EGS/HDR projects... They're willing to lose money on the first power generation demonstration. They know that we have to produce power to go to the bankers in order to get funding to step out into other areas and do this HDR."

This theme was echoed by speakers at the March geothermal conference in San Francisco. "We need to cross that first hurdle of getting some demonstration projects going," said Susan Petty, CEO of **AltaRock Energy**. Government funding will be key, according to Petty and others.

"Hydrothermal projects have high upfront capital costs, but EGS has an even higher upfront capital cost with the added difficulty that it's an emerging technology," she said. "We've going to have to rely on funds from the government to help us continue our R&D and to guarantee loans or to provide low-cost capital so we can get our wells through, set up demo sites and run these systems for a while so we can show they work."

Yet, North American conventional geothermal developers—with more 3,000 MW of capacity in the pipeline largely stalled by the recession—say they need DOE money to go forward. "It's very important that these hydrothermal development programs not get stalled," said Brian Fairbank, CEO of **Nevada Geothermal Power**.

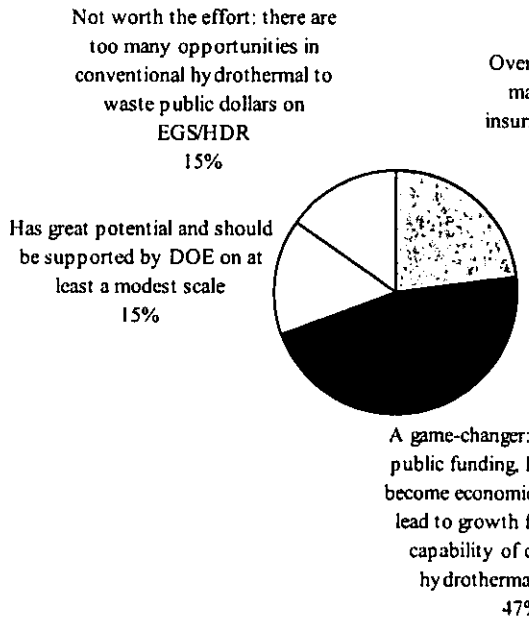
In other words, DOE's $400 million for geothermal is already overcommitted before the agency has had time to come up with disbursement guidelines.

Geothermal industry veterans, lenders and investors expressed a range of opinions to CCBJ about EGS's ultimate viability. "Do I think it can work, sure. But is it economic? I don't know enough to really comment one way or anther," said Ric Abel, managing director for electric finance at **Prudential Capital Group**. "When you start drilling holes 20,000 or 25,000 feet down, and you have to get a fluid down there and back up, you're talking about an enormous parasitic load. I just don't have a good feeling for how the economics will come together."

A veteran geothermal engineer who now consults for investors told CCBJ: "EGS is the holy grail, and like the holy grail it may be just a myth." But many who follow geothermal and other renewable energy technologies contend that with adequate public support, EGS/HDR will fundamentally change the geothermal game. "Work that we are doing in Canada suggests that with adequate investment we can utilize EGS successfully even when temperatures are between 125 and 150 celsius (257 and 302 Fahrenheit)," said Michal Moore, who is a senior fellow at the Institute for Sustainable Energy, Environment and Economy at the **University of Calgary** in Alberta, and a former member of the California Energy Commission. "With the impending changes to coal emission requirements and the retirement of a significant amount of nuclear baseload electric power, the potential of EGS geothermal is critically important."

Brown, who helped invent the concept of HDR geothermal energy, is now finishing a book covering the HDR Project at Fenton Hill and working with his project backers in Washington to get needed support from natural-resource agencies for restarting Fenton Hill (it's located in a national recreation area). At 77, his enthusiasm for EGS is as strong as that of a rookie slugger at the plate. "I want to see HDR out there commercialized and I'm working very hard to do that. Our plant can be online within three years, and from there, the future of HDR is almost unlimited." ☼

Opinions on Enhanced Geothermal Systems (EGS)



Source: CCBJ 2009 Geothermal Survey conducted in April 2009. Question was: Enhanced geothermal systems (EGS), also known as hot dry rock (HDR) technology, can vastly expand the use of geothermal power in the United States and elsewhere. Yet after more than 30 years of research, EGS has only been the subject of small-scale demonstration plants (and many observers say those projects are not using true HDR resources). Please check the category that best describes your general view of the future of EGS/HDR:

Volume 2, No. 4/5 CLIMATE CHANGE BUSINESS JOURNAL® April/May 2009

Let CCBJ Be Your Guide to the Climate Change Industry

A new era of climate change regulation is dawning, accompanied by extraordinary new risks and opportunities for business. Climate Change Business Journal® provides the strategic information that company managers, entrepreneurs and investors need to thrive in this rapidly evolving business environment.

What readers had to say about CCBJ

"A great product that deserves to be widely read."
(Joseph Pallant, Carbon Project Solutions)

"Very comprehensive and obviously the product of a lot of research."
(Jeff Caton, Cameron-Cole LLC)

"Strategically useful information."
(Chai McConnell, ZeroGen, Australia)

February 17, 2010

To Representative Millett:

I am writing on behalf of the Southwest Alaska Municipal Conference in support of HB320 and its goal of making geothermal energy more economically viable in Alaska. Currently in Southwest Alaska there are three geothermal projects being studied in Unalaska, Naknek and Akutan; however, there are plenty of opportunities for further development in this region as much of it is located on the Ring of Fire. By removing the royalty obligation for geothermal resources, this bill would help bring down capital cost impediments and facilitate the implementation of geothermal energy in Southwest Alaska and across the state. This in turn could curb the chronically high energy and heating costs seen in rural Alaska, as well as lay the groundwork for future sustainable energy throughout the state.

For rural Alaskans, there are many reasons this bill must be passed. High energy costs are threatening traditional ways of life in Native Villages and rural communities throughout the state, which are showing signs of decline because fewer career opportunities are available to young people. Implementing environmentally friendly energy with lower, stable costs will provide a chance for Alaska to grow economically while taking advantage of its plentiful renewable resources. Geothermal energy is a proven electrical technology, and removing any unnecessary barriers to its development should only help Alaska reach its renewable energy goals of the future. For this reason, HB 320 not only encourages geothermal development in rural Alaska, it could also provide major benefits to projects along the Railbelt as well.

SWAMC applauds your continued efforts to address the ongoing energy crisis in this state through fiscally responsible measures that promise to create opportunities for growth and sustainability. Please call on me if you have any questions.

Sincerely,

SOUTHWEST ALASKA MUNICIPAL CONFERENCE

MEMORANDUM

To: House Resources Co-chairs Rep. Craig Johnson, Rep. Mark Neuman

From: Rep. Charisse Millett

Subject: HB 320 scheduling request

Date: Wednesday, February 3, 2010

CC:

I am formally requesting a hearing on House Bill 320 at your earliest possible convenience.

I have included the information in this packet. I am waiting to receive letters of support for the legislation and they will be forwarded to you as soon as possible.

Jeff Turner is the staffer assigned to this legislation. Please have your staff contact him at (907) 465-6588 if you need any additional information.

Governor Sean Parnell
STATE OF ALASKA

February 9, 2010

The Honorable Mike Chenault
Speaker of the House
Alaska State Legislature
State Capitol, Room 208
Juneau, AK 99801-1182

Dear Speaker Chenault,

Under the authority of Art. III, Sec. 18 of the Alaska Constitution, I am transmitting a bill that proposes four discrete changes to Alaska's oil and gas production tax. The bill will provide incentives for explorers and producers to continue to invest in Alaska. The proposed changes will encourage investment and employment within the state, and ultimately, increase production of the state's oil and gas resources.

I remain committed to considering all proposals and ideas that will result in increased exploration and drilling that produce more oil and jobs for Alaskans.

First, the bill will encourage investment by creating a new 30 percent alternative tax credit for qualified costs closely related to well drilling and work over operations designed to enhance current well operations. The taxpayer will have to claim the 30 percent credit within six months of completing the qualifying activity, and will have to submit enough information for the Department of Revenue to determine that the expenditures qualify for the credit.

Second, the bill will allow qualified applicants, regardless of their future spending levels, to receive cash refunds for tax credits that the applicants received for qualified capital expenditures. Under current law, an applicant cannot qualify for a cash refund unless, within 24 months of receiving the tax credit certificate, the applicant incurred a qualified capital expenditure or successfully bid on a lease on State land. If the applicant is unable to meet either requirement, the applicant cannot receive payment for the qualified capital expenditures the applicant invested in the state. To solve this problem, the bill will eliminate the requirement that the applicant make additional capital expenditures or be the successful bidder for a lease on State land.

Third, the bill will allow producers and explorers who qualify for the 20 percent tax credit under AS 43.55.023 for capital expenditures to use the credit in the year that the credit is earned. Currently, producers and explorers are required to spread the benefit over two years. Allowing producers and explorers the full value of their credits in one year would increase the amount available for further exploration activities and for work on currently producing wells.

Finally, the bill will allow the Department of Revenue to waive interest for certain underpayments of taxes due before the effective date of certain regulations implementing the production tax. This provision will apply only if regulations to implement the production tax are not yet in effect at the time the annual tax payments are due, and only if the underpayment results from the producer's good faith estimation of the tax due. Should it be determined that the taxpayer overpaid the amount of tax due under the regulations in effect at the time of payment and that a refund is due, no interest will be due on a refund made within the time period specified in the bill.

With these changes, we will continue to responsibly maximize and invest in Alaska's oil and gas resources. I urge your prompt and favorable action on this measure.

Sincerely,

Sean Parnell
Governor

Enclosure

ANALYSIS: *(Attach a separate page if necessary)*

The bill will, first, change the current provision under AS 43.55.023(b) that only half the various tax credits could be taken in any one year. This limitation spreads the benefits of the credit out over a couple of years, thereby diluting the incentive that the credit provides to the extent that a producer/investor must wait before receiving the full benefit of the credit. This bill would also accelerate most investor's receipt of the full value of the credit. Second, the bill would extend the current 30% credit provided under 43.55.025 to include development drilling (this credit is available now only for exploration wells drilled beyond three-miles of another well. This credit will reduce the taxpayer's tax liability and, other things being equal, contribute to improved economics for development drilling. Finally, the bill allows a small producer to monetize the credit more easily by eliminating the requirement that the producer spend additional money before receiving the credit monies.

The effect on royalty revenue is an indeterminant positive.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB 337

ANALYSIS CONTINUATION

In these three ways, the bill will encourage additional investment in oil and gas development in Alaska, leading to an expected increase in the amount of oil and gas produced from State lands. This should increase the amount of royalty revenue collected, the exact amount of this increase is indeterminate. This bill also requires that the producer submit to the DNR withing 30 days of the request for a credit under AS 43.55.025 data on development well activity under Section 9. While the DNR currently reviews seismic and exploration well information, the requirement to look at development wells as well may take additional staff time. However, we think we will be able to undertake this review with current staff.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB 337

ANALYSIS CONTINUATION

Bill Language:

This bill makes four refinements to Alaska's oil and gas production tax. The refinements and the revenue impact of each are discussed below:

1. Increased credits for well related expenditures: This bill would modify AS 43.55.025 to allow a 30 percent credit against production tax for exploratory well expenditures and most development well expenditures. For wells more that 25 miles outside of existing units (or more than 10 miles outside of Cook Inlet units) the credit is 40 percent of exploratory well expenditures. These credits would also be an increase in credits for well related expenditures. Currently, companies are allowed a 20 percent credit for well related qualified capital expenditures under the provisions of AS 43.55.023. There are no current provisions for credits against operating expenditures and this bill would extend the 30% credit to well related operating expenditures as well as capital expenditures. This provision would take effect July 1, 2010.

Under current projected spending and production levels, revenues would be estimated to be reduced by $325 million in FY 2011, $335 million in FY 2012, and $350 million in FY 2013-2016. However, the Department of Revenue provides an indeterminant fiscal impact to revenues because the new incentives will likely spur higher spending levels on development activity, which would result in more credits being earned, but would also be expected to increase production, thus providing an offsetting increase in revenue.

2. Removing reinvestment requirement for state purchase of capital credits: For companies applying for state purchase of capital credits, this bill would remove the requirement that the companies reinvest an amount equal to the amount of the credit purchased within 24 months after applying for a credit certificate. This provision would take effect July 1, 2010.

This provision is expected to be revenue neutral as the credits will reduce revenue whether the state purchases the credits or other companies purchase and subsequently apply the credits against a tax liability.

3. Capital credits no longer required to be spread over two years: Producers and explorers receive a capital expenditure credit in the amount of 20 percent of the qualified capital expenditure. This bill would remove the provision that no more than half of the tax credit may be applied for in a single calendar year. As a result, the entire 20 percent credit could be applied in the year it is earned. This is retroactive to January 1, 2010.

There is a revenue reduction for FY 2010 of $120 million because of the immediate effective date of the changes to spreading of capital credits. For FY 2011-FY 2013, the revenue reduction from changes to the spreading of capital credits will be about $50 million per year. For FY 2014 and beyond, the revenue impacts will be negligible.

4. Interest waived for changes in tax liability as a result of to retroactive regulations changes: Following adoption of retroactive regulations to the oil and gas production tax under AS 43.55, the Department of Revenue is required to determine whether the retroactive application of the regulation caused an overpayment or underpayment of the amount due in tax. For an underpayment, interest is waived as long as the underpayment was due to the regulation and the producer made a good faith estimation and payment of its tax obligation under regulations in place when the payment was due. For an overpayment, interest does not accrue until either the first day of the second month following the regulation taking effect, or 90 days after the Department receives an amended annual production tax return with request for refund. The interest provisions are retroactive to February 2007. At this time it is uncertain whether there would be any revenue impact from this change, since it is unclear whether there was any underpayment or overpayment due to the retroactive regulations. The Department of Revenue does not include interest payments in our revenue projections, therefore this change would not affect our revenue forecast.

*** We cannot currently make a determination of the revenue impacts of the bill. For this reason, asterisks are include in our revenue estimates for this fiscal note.

Expenditures:
The Department will be able to implement the provisions of this bill using existing resources.

(Revised 11/6/2009 OMB)

ANALYSIS CONTINUATION

Bill Language:
This bill makes three changes to the credit provisions of Alaska's oil and gas production tax and two changes to interest as applied to tax payments. These changes and the potential revenue impact of each are discussed below:

1. Increased credits for well related expenditures: This bill would modify AS 43.55.023 to allow a 30 percent credit against production tax for the amount of well-related expenditures that represent an increase in well-related expenditures over an average of well-related expenditures in calendar years 2008 and 2009. Currently, companies are allowed a 20 percent credit for well related qualified capital expenditures under the provisions of AS 43.55.023. There are no current provisions for credits against operating expenditures and this bill would extend the 30% credit to the increase in well-related operating expenditures from 2008 and 2009 as well as capital expenditures. This provision would take effect July 1, 2010.

Our ability to place a reasonable estimate on this provision is limited by our lack of data specific to these types of expenditures. Our best estimate of this provision under current projected spending and production levels, is that revenues would be reduced by $50 to $100 million dollars per year through our current projections of FY 2013. However, the Department of Revenue provides an indeterminant fiscal impact to revenues because the new incentives will likely spur higher spending levels on development activity, which would result in more credits being earned, but would also be expected to increase production, thus providing an offsetting increase in revenue.

2. Removing reinvestment requirement for state purchase of capital credits: For companies applying for state purchase of capital credits, this bill would remove the requirement that the companies reinvest an amount equal to the amount of the credit purchased within 24 months after applying for a credit certificate. This provision would take effect July 1, 2010.

This provision is expected to be revenue neutral as the credits will reduce revenue whether the state purchases the credits or other companies purchase and subsequently apply the credits against a tax liability.

3. Capital credits no longer required to be spread over two years: Producers and explorers receive a capital expenditure credit in the amount of 20 percent of the qualified capital expenditure, 25% of a loss carryforward, and up to 40% of an exploration expenditure. This bill would remove the provision that no more than half of the tax credit may be applied for in a single calendar year. As a result, the entirety of credits could be applied in the year they are earned. This provision is retroactive to January 1, 2010.

The calculation of the revenue impact for this provision is difficult for two reasons: (1) the timing of the revenue impact will depend upon when the bill is signed into law; and (2) the amount the state may potentially be expected to pay to purchase credits is conditioned in part on removing the reinvestment requirement discussed in #2 above, and the timing of the payment will depend on whether companies will immediately seek reimbursement for their credits.

We assume for this provision a worse-case scenario where all credits held by companies with production tax liabilities are used in FY 2010 or FY 2011. This would cost the state approximately $225 million in reduced taxes between the two years.

For companies that are holding credit certificates and are not expected to incur a tax liability in FY 2010 or FY 2011, we estimate an additional liability of up to $150 million over previous expectations for the two fiscal years. These impacts could spill into FY 2012, should companies delay seeking reimbursement.

Beyond FY 2012, revenue impacts are expected to be negligible.

4. Interest waived for changes in tax liability as a result of to retroactive regulations changes: Following adoption of retroactive regulations to the oil and gas production tax under AS 43.55, the Department of Revenue is required to determine whether the retroactive application of the regulation caused an overpayment or underpayment of the amount due in tax. For an underpayment, interest is waived as long as the underpayment was due to the regulation and the producer made a good faith estimation and payment of its tax obligation under regulations in place when the payment was due. For an overpayment, interest does not accrue until either the first day of the second month following the regulation taking effect, or 90 days after the Department receives an amended annual production tax return with request for refund. The interest provisions are retroactive to February 2007. At this time it is uncertain whether there would be any revenue impact from this change, since it is unclear whether there was any underpayment or overpayment due to the retroactive regulations. The Department of Revenue does not include interest payments in our revenue projections, therefore this change would not affect our revenue forecast.

(continued on next page)

ANALYSIS CONTINUATION

5. **Change the rates for calculating interest for most tax types.** This bill would change the way interest is calculated for most tax types administered by the Department of Revenue, including the production tax. Under current law, the interest rate is the greater of 11 percent or 5 percentage points above the discount rate at the 12th Federal Reserve Bank. Under this bill, the interest rate would be 5 percentage points above the discount rate. If this provision were in place today, the interest rate on taxes would fall from 11 percent to 5.75 percent.

The revenue reduction from this provision is indeterminate because the Department does not have a management information system capable of tracking interest for all taxes. Producing a revenue estimate would require manually compiling information from hundreds of tax returns. Since oil and gas settlements go to the Constitutional Budget Reserve Fund (CBRF), this provision would reduce revenue to both the general fund and the CBRF. This provision would require additional costs for the Department which are described below.

This provision is effective July 1, 2010.

Expenditures:
The changes in interest rates and other provisions of this bill would result in one-time costs of $100,000 in FY 2011 for changes to the accounting and tax examination system.

"***Sec. 1.** AS.05.15.095(c) is amended to read:

(c) A delinquent fee bears interest at the rate set by AS 43.05.225(2) [AS 43.05.225].

Sec. 2. AS 34.45.470(a) is amended to read:

(a) A person who fails to pay or deliver property within the time prescribed by this chapter may be required to pay to the department interest at the annual rate calculated under **AS 43.05.225(2)** [AS 43.05.225] on the property or the value of it from the date the property should have been paid or delivered.

Sec. 3. AS 43.05.225 (1) is amended to read:

Sec. 43.05.225. Interest. Unless otherwise provided,

(1) When a tax levied in this title becomes delinquent, it bears interest in a calendar quarter at the rate of five percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District as of the first day of that calendar quarter, [OR AT THE ANNUAL RATE OF 11 PERCENT, WHICHEVER IS GREATER,] compounded quarterly as of the lst day of that quarter;

Sec. 4. AS 43.50.570 is amended to read:

Sec. 43.50.570. Interest. A licensee who fails to pay an amount due for the purchase of stamps within the time required

4595

(1) is considered to have failed to pay the cigarette taxes due under this chapter; and

(2) shall pay interest at the rate established under **AS 43.55.225(1)** [AS 43.05.225] from the date on which the amount became due until the date of payment.

Sec. 5. AS 43.55.020(g) is amended to read:

(g) Notwithstanding any contrary provision of AS 43.05.225, an unpaid amount of an installment payment required under (a)(1)-(3) of this section that is not paid when due bears interest (1) at the rate provided for an underpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the date the installment payment is due until March 31 following the calendar year of production, and (2) as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225]after that March 31. Interest accrued under (1) of this subsection that remains unpaid after that March 31 is treated as an addition to tax that bears interest under (2) of this subsection. An unpaid amount of tax due under (a)(4) of this section that is not paid when due bears interest as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

Sec. 9. AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017- 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under **AS 43.55.225(1)** [AS 43.05.225] from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 4355.011(e).

Sec. 10. AS 43.55.023 is amended by adding a new subsection to read:

(m) A producer or explorer may take a tax credit for a well-related expenditure incurred after June 30, 2010 and before July 1, 2016, as follows:

(1) notwithstanding that a well-related expenditure may be a deductible lease expenditure under AS 43.55.165 for purposes of calculating the production tax

value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well-related expenditure may also elect to apply a credit against a tax levied by AS 43.55.011(e) in the amount of 30 percent of that expenditure;

(2) a producer or explorer may take a credit for a well-related expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2) for a credit under AS 43.55.025;

(3) in this subsection, "well-related expenditure" means a lease expenditure

(A) directly related to an exploration well, a stratigraphic test well, a producing well, or an injection well other than a disposal well, if the expenditure is a qualified capital expenditure and an intangible drilling and development cost under 26 U.S.C. 263(c), as amended, and 26 C.F.R 1.612-4, regardless of the elections made under 26 U.S.C. 263(c); in this subparagraph, an expenditure directly related to a well includes an expenditure for well drilling, well sidetracking, well deepening, well testing, well stimulation, well completion or recompletion, or well workover, regardless as to whether the well is or has been a producing well; or

(B) for seismic work conducted within the boundaries of a production or exploration unit.

Sec. 12. AS 43.77.020(d) is amended to read:

(d) A person subject to the tax under this chapter shall make quarterly payments of the tax estimated to be due for the year, as required under regulations adopted by the department. A taxpayer will be subject to an estimated tax penalty, determined by applying the interest rate specified in **AS 43.05.225(1)** [AS 43.55.225] to the underpayment for each quarter, unless the taxpayer makes estimated tax payment in equal installments that total either

(1) at least 90 percent of the taxpayer's tax liability under this chapter for the tax year; or

(2) at least 100 percent of the taxpayer's tax liability under this chapter for the prior tax year.

Sec. 13. AS 43.90.430 is amended to read:

Sec. 43.90.430. Interest. When a payment due to the state under this chapter becomes delinquent, the payment bears interest at the rate applicable to a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

MEMORANDUM March 28, 2010

SUBJECT: Single subject issue (CSHB 337( );
Work Order No. 26-GH2057\R)

TO: Representative Craig Johnson
Attn: Debra Higgins

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft version of CSHB 337( ). Please read this draft carefully to ensure that it is consistent with your intent. Also, please verify the effective date sections, secs. 19 and 20, with the Department of Revenue to ensure that they are consistent with their advice to you.

Included in this draft are provisions that relate to the purchase of tax credit certificates by the Alaska Retirement Management Board (ARMB). These provisions are in sec. 3, 10, and 12 of the draft. Although the ARMB provisions relate to the purchase of tax credits authorized under the oil and gas production tax, the provisions relate to the powers of the board. Inclusion of these provisions may expose the enactment of the bill to a challenge under art. II, sec. 13, Constitution of the State of Alaska, which requires that bills be confined to one subject.

CS FOR HOUSE BILL NO. 337( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to credits against the oil and gas production tax; relating to the interest rates applicable on certain amounts due related to various taxes, penalties, payments, and the Alaska Gasline Inducement Act; relating to the use of the oil and gas tax credit fund to purchase certain tax credit certificates; authorizing the board of trustees of the Alaska Retirement Management Board to purchase and sell transferable tax credit certificates issued in conjunction with the production tax on oil and gas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 05.15.095(c) is amended to read:

(c) A delinquent fee bears interest at the rate set by **AS 43.05.225(2)** [AS 43.05.225].

*** Sec. 2.** AS 34.45.470(a) is amended to read:

(a) A person who fails to pay or deliver property within the time prescribed by

this chapter may be required to pay to the department interest at the annual rate calculated under **AS 43.05.225(2)** [AS 43.05.225] on the property or the value of it from the date the property should have been paid or delivered.

*** Sec. 3.** AS 37.10.220(b) is amended to read:

(b) The board may

(1) employ outside investment advisors to review investment policies;

(2) enter into an agreement with the fiduciary of another state fund in order to assume the management and investment of those assets;

(3) contract for other services necessary to execute the board's powers and duties;

(4) enter into confidentiality agreements that would exempt records from AS 40.25.110 and 40.25.120 if the records contain information that could affect the value of investment by the board or that could impair the ability of the board to acquire, maintain, or dispose of investments**;**

(5) purchase transferable tax credit certificates issued under AS 43.55.023 and 43.55.025 for 92 percent of the face value of a certificate, and sell transferable tax credit certificates to the Department of Revenue under AS 43.55.023(n) and 43.55.025(m) for a cash refund of the full face value of the certificate; under this paragraph, the board

(A) may

(i) engage in the purchase and sale of transferable tax credits; and

(ii) sell a transferable tax credit certificate only if the commissioner of revenue determines that economic conditions are acceptable for the state to purchase and pay for the credit; and

(B) shall apply the proceeds from a sale made under this paragraph to defray the unfunded pension liabilities of the systems for which the board has responsibility.

*** Sec. 4.** AS 43.05.225 is amended to read:

Sec. 43.05.225. Interest. Unless otherwise provided,

(1) when a tax levied in this title becomes delinquent, it bears interest

Conceptual Amendment #6

"Five"

in a calendar quarter at the rate of ~~three~~ [FIVE] percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District as of the first day of that calendar quarter, [OR AT THE ANNUAL RATE OF 11 PERCENT, WHICHEVER IS GREATER,] compounded quarterly as of the last day of that quarter;

(2) the interest rate is 12 percent a year for

(A) delinquent fees payable under AS 05.15.095(c); and

(B) [REPEALED

(C)] unclaimed property that is not timely paid or delivered, as allowed by AS 34.45.470(a).

*** Sec. 5.** AS 43.50.570 is amended to read:

Sec. 43.50.570. Interest. A licensee who fails to pay an amount due for the purchase of stamps within the time required

(1) is considered to have failed to pay the cigarette taxes due under this chapter; and

(2) shall pay interest at the rate established under **AS 43.05.225(1)** [AS 43.05.225] from the date on which the amount became due until the date of payment.

*** Sec. 6.** AS 43.55.020(g) is amended to read:

(g) Notwithstanding any contrary provision of AS 43.05.225, an unpaid amount of an installment payment required under (a)(1) - (3) of this section that is not paid when due bears interest (1) at the rate provided for an underpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the date the installment payment is due until March 31 following the calendar year of production, and (2) as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225] after that March 31. Interest accrued under (1) of this subsection that remains unpaid after that March 31 is treated as an addition to tax that bears interest under (2) of this subsection. An unpaid amount of tax due under (a)(4) of this section that is not paid when due bears interest as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

*** Sec. 7.** AS 43.55.020 is amended by adding a new subsection to read:

(i) Notwithstanding any contrary provision of AS 43.05.225 or (g) or (h) of this section, if the amount of a tax payment, including an installment payment, due under (a)(1) - (4) of this section is affected by the retroactive application of a regulation adopted under this chapter, the department shall determine whether the retroactive application of the regulation caused an underpayment or an overpayment of the amount due and adjust the interest due on the affected payment as follows:

(1) if an underpayment of the amount due occurred, the department shall waive interest that would otherwise accrue for the underpayment before the first day of the second month following the month in which the regulation became effective, if

(A) the department determines that the producer's underpayment resulted because the regulation was not in effect when the payment was due; and

(B) the producer demonstrates that it made a good faith estimate of its tax obligation in light of the regulations then in effect when the payment was due and paid the estimated tax;

(2) if an overpayment of the amount due occurred and the department determines that the producer's overpayment resulted because the regulation was not in effect when the payment was due, the obligation for a refund for the overpayment does not begin to accrue interest earlier than the following, as applicable:

(A) except as otherwise provided under (B) of this paragraph, the first day of the second month following the month in which the regulation became effective;

(B) 90 days after an amended statement under AS 43.55.030(a) and an application to request a refund of production tax paid is filed, if the overpayment was for a period for which an amended statement under AS 43.55.030(a) was required to be filed before the regulation became effective.

*** Sec. 8.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; [HOWEVER, NOT MORE THAN HALF OF THE TAX CREDIT MAY BE APPLIED FOR A SINGLE CALENDAR YEAR;]

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 9.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for **a** transferable tax credit **certificate** [CERTIFICATES]. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the

department shall issue the applicant **a** [TWO TRANSFERABLE] tax credit **certificate** [CERTIFICATES, EACH FOR HALF OF THE AMOUNT OF THE CREDIT]. The credit shown on [ONE OF] the **certificate** [TWO CERTIFICATES] is available for immediate use. [THE CREDIT SHOWN ON THE SECOND OF THE TWO CERTIFICATES MAY NOT BE APPLIED AGAINST A TAX FOR A CALENDAR YEAR EARLIER THAN THE CALENDAR YEAR FOLLOWING THE CALENDAR YEAR IN WHICH THE CERTIFICATE IS ISSUED, AND THE CERTIFICATE MUST CONTAIN A CONSPICUOUS STATEMENT TO THAT EFFECT.] A certificate issued under this subsection does not expire.

*** Sec. 10.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under **AS 43.05.225(1)** [AS 43.05.225] from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 11.** AS 43.55.023 is amended by adding new subsections to read:

(m) A producer or explorer may take a tax credit for a well-related expenditure after June 30, 2010, and before July 1, 2016, as follows:

Conceptual Amendment #7 Insert "Incurred"

(1) notwithstanding that a well-related expenditure may be a deductible lease expenditure under AS 43.55.165 for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well-related

expenditure may also elect to apply a credit against a tax levied by AS 43.55.011(e) in the amount of 30 percent of that expenditure;

(2) a producer or explorer may take a credit for a well-related expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2) for a credit under AS 43.55.025;

(3) in this subsection, "well-related expenditure" means a lease expenditure

(A) directly related to an exploration well, a stratigraphic test well, a producing well, or an injection well other than a disposal well, if the expenditure is a qualified capital expenditure and an intangible drilling and development cost under 26 U.S.C. 263(c), as amended, and 26 C.F.R. 1.612-4, regardless of the elections made under 26 U.S.C. 263(c); in this subparagraph, an expenditure directly related to a well includes an expenditure for well drilling, well sidetracking, well deepening, well testing, well stimulation, well completion or recompletion, or well workover, regardless as to whether the well is or has been a producing well; or

(B) for seismic work conducted within the boundaries of a production or exploration unit.

(n) Notwithstanding the limitation on the use of a transferable tax credit by a transferee in (e) of this section and subject to appropriations made by law, the department shall issue a cash refund to the Alaska Retirement Management Board for a transferable tax credit originally issued to a person under (d) of this section and purchased by the Alaska Retirement Management Board under AS 37.10.220(b).

*** Sec. 12.** AS 43.55.025 is amended by adding a new subsection to read:

(m) Subject to appropriations made by law, the department shall issue a cash refund to the Alaska Retirement Management Board for a transferable tax credit

originally issued to an explorer under (f) of this section and purchased by the Alaska Retirement Management Board under AS 37.10.220(b).

*** Sec. 13.** AS 43.77.020(d) is amended to read:

(d) A person subject to the tax under this chapter shall make quarterly payments of the tax estimated to be due for the year, as required under regulations adopted by the department. A taxpayer will be subject to an estimated tax penalty, determined by applying the interest rate specified in **AS 43.05.225(1)** [AS 43.05.225] to the underpayment for each quarter, unless the taxpayer makes estimated tax payments in equal installments that total either

(1) at least 90 percent of the taxpayer's tax liability under this chapter for the tax year; or

(2) at least 100 percent of the taxpayer's tax liability under this chapter for the prior tax year.

*** Sec. 14.** AS 43.90.430 is amended to read:

Sec. 43.90.430. Interest. When a payment due to the state under this chapter becomes delinquent, the payment bears interest at the rate applicable to a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

*** Sec. 15.** AS 43.55.028(e)(2) and 43.55.028(e)(3) are repealed.

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: APPLICABILITY OF SEC. 7 OF THIS ACT. Section 7 of this Act applies to taxes, including installment payments of estimated tax, due on or after February 27, 2007.

*** Sec. 17.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY OF REGULATIONS. Notwithstanding any contrary provision of AS 44.62.240, if the Department of Revenue expressly designates in a regulation to implement, interpret, make specific or otherwise carry out secs. 7, 8, or 9 of this Act, or AS 43.55.023(m) as enacted by sec. 11 of this Act that the regulation applies retroactively to a specific date, the regulation applies retroactively to that date.

*** Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

RETROACTIVITY OF SECS. 7 - 9 OF THIS ACT. (a) Section 7 of this Act is retroactive to February 28, 2007.

(b) Sections 8 and 9 of this Act are retroactive to January 1, 2010.

*** Sec. 19.** Sections 1, 2, 4 - 6, 10, and 13 of this Act and AS 43.55.023(m), enacted by sec. 11 of this Act take effect July 1, 2010.

*** Sec. 20.** Except as provided in sec. 19 of this Act, this Act takes effect immediately under AS 01.10.070(c).

Sectional Analysis of proposed CS for HB 337 (Version R)

Sec. 1. Housekeeping measure that refines the reference for interest rates.

Sec. 2. Housekeeping measure that refines the reference for interest rates.

Sec. 3. Authorizes the ARM board to purchase credits

Sec 4. Changes the interest rate for delinquent taxes by removing the 11 floor in current statute, leaving the federal funds rate + 5%.

Sec. 5. Housekeeping measure that refines the reference for interest rates.

Sec. 6. Housekeeping measure that refines the reference for interest rates.

Sec. 7. Directs DOR to waive interest on most tax liabilities that arise from retroactive regulations coming into force, for the period between when the payment would normally be due and the time the regulation was adopted.

Sec. 8. Removes the requirement that the application of certain capital investment credits be spread out over 2 years.

Sec. 9. Removes the requirement that the application of certain other credits be spread out over 2 years.

Sec. 10. Housekeeping measure that refines the reference for interest rates.

Sec. 11. (m) Creates a new 30% credit for all well related expenditures.

(n) Authorizes department to issue cash refunds to the ARM for AS 43.55.023 credits it has purchased

Sec. 12. Authorizes department to issue cash refunds to the ARM for AS 43.55.025 credits it has purchased

Sec 13. Housekeeping measure that refines the reference for interest rates.

Sec. 14. Housekeeping measure that refines the reference for interest rates.

Sec. 15. Repeals that portion of current law that required those producers selling credits to the state to spend an equal amount in lease sales or in capital investments within two years.
Housekeeping measure that refines the reference for interest rates.

Sec. 16. Indicates that the changes to interest on liabilities that arise from retroactive

regulations goes all the way back to taxes due in 2007.

Sec. 17. Authorizes the DOR, to write retroactive regulations in implementing the retroactive portions of the bill.

Sec. 18. Contains the required clarification that the changes to interest on liabilities that arise from retroactive regulations is retroactive to 2007 and the provisions related to taking credits in a single year is retroactive to January 1 , 2010.

Sec. 19. Makes all but the ARM provisions, the retroactive provisions and one of the housekeeping interest provisions effective July 1, 2010.

Sec. 20 Makes the rest of the bill effective immediately.

CS FOR HOUSE BILL NO. 337( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to credits against the oil and gas production tax; relating to the interest rates applicable on certain amounts due related to various taxes, penalties, payments, and the Alaska Gasline Inducement Act; relating to the use of the oil and gas tax credit fund to purchase certain tax credit certificates; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 05.15.095(c) is amended to read:

(c) A delinquent fee bears interest at the rate set by **AS 43.05.225(2)** [AS 43.05.225].

*** Sec. 2.** AS 34.45.470(a) is amended to read:

(a) A person who fails to pay or deliver property within the time prescribed by this chapter may be required to pay to the department interest at the annual rate calculated under **AS 43.05.225(2)** [AS 43.05.225] on the property or the value of it from the date the property should have been paid or delivered.

*** Sec. 3.** AS 43.05.225 is amended to read:

Sec. 43.05.225. Interest. Unless otherwise provided,

(1) when a tax levied in this title becomes delinquent, it bears interest in a calendar quarter at the rate of **three** [FIVE] percentage points above the annual rate charged member banks for advances by the 12th Federal Reserve District as of the first day of that calendar quarter, [OR AT THE ANNUAL RATE OF 11 PERCENT, WHICHEVER IS GREATER,] compounded quarterly as of the last day of that quarter;

(2) the interest rate is 12 percent a year for

(A) delinquent fees payable under AS 05.15.095(c); **and**

(B) [REPEALED AND

(C)] unclaimed property that is not timely paid or delivered, as allowed by AS 34.45.470(a).

*** Sec. 4.** AS 43.50.570 is amended to read:

Sec. 43.50.570. Interest. A licensee who fails to pay an amount due for the purchase of stamps within the time required

(1) is considered to have failed to pay the cigarette taxes due under this chapter; and

(2) shall pay interest at the rate established under **AS 43.05.225(1)** [AS 43.05.225] from the date on which the amount became due until the date of payment.

*** Sec. 5.** AS 43.55.020(g) is amended to read:

(g) Notwithstanding any contrary provision of AS 43.05.225, an unpaid amount of an installment payment required under (a)(1) - (3) of this section that is not paid when due bears interest (1) at the rate provided for an underpayment under 26 U.S.C. 6621 (Internal Revenue Code), as amended, compounded daily, from the date the installment payment is due until March 31 following the calendar year of production, and (2) as provided for a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225] after that March 31. Interest accrued under (1) of this subsection that remains unpaid after that March 31 is treated as an addition to tax that bears interest under (2) of this subsection. An unpaid amount of tax due under (a)(4) of this section that is not paid when due bears interest as provided for a delinquent tax under

AS 43.05.225(1) [AS 43.05.225].

*** Sec. 6.** AS 43.55.020 is amended by adding a new subsection to read:

(i) Notwithstanding any contrary provision of AS 43.05.225 or (g) or (h) of this section, if the amount of a tax payment, including an installment payment, due under (a)(1) - (4) of this section is affected by the retroactive application of a regulation adopted under this chapter, the department shall determine whether the retroactive application of the regulation caused an underpayment or an overpayment of the amount due and adjust the interest due on the affected payment as follows:

(1) if an underpayment of the amount due occurred, the department shall waive interest that would otherwise accrue for the underpayment before the first day of the second month following the month in which the regulation became effective, if

(A) the department determines that the producer's underpayment resulted because the regulation was not in effect when the payment was due; and

(B) the producer demonstrates that it made a good faith estimate of its tax obligation in light of the regulations then in effect when the payment was due and paid the estimated tax;

(2) if an overpayment of the amount due occurred and the department determines that the producer's overpayment resulted because the regulation was not in effect when the payment was due, the obligation for a refund for the overpayment does not begin to accrue interest earlier than the following, as applicable:

(A) except as otherwise provided under (B) of this paragraph, the first day of the second month following the month in which the regulation became effective;

(B) 90 days after an amended statement under AS 43.55.030(a) and an application to request a refund of production tax paid is filed, if the overpayment was for a period for which an amended statement under AS 43.55.030(a) was required to be filed before the regulation became effective.

*** Sec. 7.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital expenditure as follows:

(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; [HOWEVER, NOT MORE THAN HALF OF THE TAX CREDIT MAY BE APPLIED FOR A SINGLE CALENDAR YEAR;]

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 8.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for **a** transferable tax credit **certificate** [CERTIFICATES]. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was

received by the department. If, based on the information then available to it, the department is reasonably satisfied that the applicant is entitled to a credit, the department shall issue the applicant **a** [TWO TRANSFERABLE] tax credit **certificate** [CERTIFICATES, EACH FOR HALF OF THE AMOUNT OF THE CREDIT]. The credit shown on [ONE OF] the **certificate** [TWO CERTIFICATES] is available for immediate use. [THE CREDIT SHOWN ON THE SECOND OF THE TWO CERTIFICATES MAY NOT BE APPLIED AGAINST A TAX FOR A CALENDAR YEAR EARLIER THAN THE CALENDAR YEAR FOLLOWING THE CALENDAR YEAR IN WHICH THE CERTIFICATE IS ISSUED, AND THE CERTIFICATE MUST CONTAIN A CONSPICUOUS STATEMENT TO THAT EFFECT.] A certificate issued under this subsection does not expire.

*** Sec. 9.** AS 43.55.023(g) is amended to read:

(g) The issuance of a transferable tax credit certificate under (d) of this section or the purchase of a certificate under AS 43.55.028 does not limit the department's ability to later audit a tax credit claim to which the certificate relates or to adjust the claim if the department determines, as a result of the audit, that the applicant was not entitled to the amount of the credit for which the certificate was issued. The tax liability of the applicant under AS 43.55.011(e) and 43.55.017 - 43.55.180 is increased by the amount of the credit that exceeds that to which the applicant was entitled, or the applicant's available valid outstanding credits applicable against the tax levied by AS 43.55.011(e) are reduced by that amount. If the applicant's tax liability is increased under this subsection, the increase bears interest under **AS 43.05.225(1)** [AS 43.05.225] from the date the transferable tax credit certificate was issued. For purposes of this subsection, an applicant that is an explorer is considered a producer subject to the tax levied by AS 43.55.011(e).

*** Sec. 10.** AS 43.55.023 is amended by adding a new subsection to read:

(m) A producer or explorer may take a tax credit for a well-related expenditure after June 30, 2010, and before July 1, 2016, as follows:

(1) notwithstanding that a well-related expenditure may be a deductible lease expenditure under AS 43.55.165 for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that

expenditure is taken under (a) of this section, AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a well-related expenditure may also elect to apply a credit against a tax levied by AS 43.55.011(e) in the amount of 30 percent of that expenditure;

(2) a producer or explorer may take a credit for a well-related expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2); and

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2) for a credit under AS 43.55.025;

(3) in this subsection, "well-related expenditure" means a lease expenditure

(A) directly related to an exploration well, a stratigraphic test well, a producing well, or an injection well other than a disposal well, if the expenditure is a qualified capital expenditure and an intangible drilling and development cost under 26 U.S.C. 263(c), as amended, and 26 C.F.R. 1.612-4, regardless of the elections made under 26 U.S.C. 263(c); in this subparagraph, an expenditure directly related to a well includes an expenditure for well drilling, well sidetracking, well deepening, well testing, well stimulation, well completion or recompletion, or well workover, regardless as to whether the well is or has been a producing well; or

(B) for seismic work conducted within the boundaries of a production or exploration unit.

*** Sec. 11.** AS 43.77.020(d) is amended to read:

(d) A person subject to the tax under this chapter shall make quarterly payments of the tax estimated to be due for the year, as required under regulations adopted by the department. A taxpayer will be subject to an estimated tax penalty, determined by applying the interest rate specified in **AS 43.05.225(1)** [AS 43.05.225] to the underpayment for each quarter, unless the taxpayer makes estimated tax

payments in equal installments that total either

(1) at least 90 percent of the taxpayer's tax liability under this chapter for the tax year; or

(2) at least 100 percent of the taxpayer's tax liability under this chapter for the prior tax year.

*** Sec. 12.** AS 43.90.430 is amended to read:

Sec. 43.90.430. Interest. When a payment due to the state under this chapter becomes delinquent, the payment bears interest at the rate applicable to a delinquent tax under **AS 43.05.225(1)** [AS 43.05.225].

*** Sec. 13.** AS 43.55.028(e)(2) and 43.55.028(e)(3) are repealed.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: APPLICABILITY OF SEC. 6 OF THIS ACT. Section 6 of this Act applies to taxes, including installment payments of estimated tax, due on or after February 27, 2007.

*** Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY OF REGULATIONS. Notwithstanding any contrary provision of AS 44.62.240, if the Department of Revenue expressly designates in a regulation to implement, interpret, make specific or otherwise carry out secs. 6, 7, or 8 of this Act, or AS 43.55.023(m), as enacted by sec. 10 of this Act, that the regulation applies retroactively to a specific date, the regulation applies retroactively to that date.

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY OF SECS. 6 - 8 OF THIS ACT. (a) Section 6 of this Act is retroactive to February 28, 2007.

(b) Sections 7 and 8 of this Act are retroactive to January 1, 2010.

*** Sec. 17.** Sections 1 - 5, 9, and 11 of this Act and AS 43.55.023(m), enacted by sec. 10 of this Act take effect July 1, 2010.

*** Sec. 18.** Except as provided in sec. 17 of this Act, this Act takes effect immediately under AS 01.10.070(c).

ACES (Alaska's Clear & Equitable Share)

Note: The Tax Division is offering users an interactive option to **some** of the forms provided on this page. This means that you may either print a blank form to fill out manually, or you may enter your data directly onto the form and then print the completed form to sign and send to the Tax Division.

Forms that are interactive will have the (Fill-in Form) designation next to the form number. Before using the interactive forms, please review the instructions.

Alaska Department of Revenue AS 43.55 Monthly Information Report

Company Name:	COMPANY NAME
Month for Which Information Applies:	May
Report Year:	2008
Date Submitted:	Jun-08

General Instructions

This form is to be used to report monthly information relating to volumes and values of oil and gas produced, lease expenditures incurred for oil exploration, development, and production operations, production tax credits, and tax amounts remitted. Every entity (corporate level) involved in oil and gas operations is required to fill out and file this report monthly (see 15 AAC 55.520(f)).

For operations within a unit, report information at the Participating Area ("PA") level, except where information is requested only at the unit level. PA costs should include unit costs that are allocated to the PA, in addition to PA-specific costs. Information requested at the unit level should only reflect the producer's/ explorer's share of the unit.

Note that there is a separate worksheet for each current North Slope unit, and within each unit sheet, a column for each Participating Area (PA) or tract operation.

There are also three additional worksheets for 1) other/future North Slope units and operations outside units (tract identifiers), 2) Cook Inlet, and 3) non-North Slope/Cook Inlet areas. For these three areas, each column represents a unit or tract identifier. Please identify the unit or tract identifier in the column heading. Each unit column should include the activity from all the PA's within the unit.

A credit summary and tax totals worksheet provides space for the reporting of credits used, carried forward, transferred, and estimated future credits generated through expenditures during the reporting period. The monthly remittances section of the worksheet captures detail of the composition of the monthly payment.

The values reported should reflect the information underlying the tax payments or credit activity for the reporting period (month). Where a value may be affected by regulations yet to be adopted, report the value that was the basis for the tax payment or credit activity in the period.

THIS EXCEL WORKBOOK MUST BE USED TO FILE MONTHLY REPORTS, EXCEPT FOR THE ATTACHMENT REQUIRED BELOW. IT MUST BE UNPROTECTED AND FULLY EDITABLE, AND MUST BE SUBMITTED ELECTRONICALLY TO THE DOR TAX DIVISION THROUGH THE WEB PORTAL AT https://myalaska.state.ak.us/OTIS. ANY OTHER FORM OF SUBMITTAL IS A VIOLATION OF THE REPORTING REQUIREMENTS UNDER AS 43.55.030.

REQUIRED ATTACHMENT:
PLEASE ATTACH A COPY OF THE CALCULATIONS OF THE AMOUNT OF PRODUCTION TAX REMITTED

SPECIFIC INSTRUCTIONS

SERIES 100-300

Lines 101, 201, and 301	Volumes recovered equals volumes produced plus used for operations or repressuring (per AS 43.55.020(e))
	Volumes should be reported for the reservoir they are recovered from
	Where volumes are recovered more than once they should be reported whenever recovered
	Taxable volumes should be reported for the reservoir they are ultimately recovered from
	If onshore lease or property is on federal land report the entire volume
	If offshore lease or property is on both state and federal submerged land report the portion from state land
Lines 107, 211, and 307	Volume increases/decreases include pipeline losses/gains, marine shipping losses/gains, and ngl shrinkage
Lines 107-111, 211-213, and 307-311	Allocate to PA's based on relative volumes of oil recovered less oil used for operations or repressuring
Lines 203-204	Also includes authorized flared volumes
Line 213	Gas sales for export includes natural gas disposed out of state
Lines 307-311	Report only to the extent NGL's are measured separately from oil. If NGLs are not measured separately from oil leave blank

Series 400 & 500

Series 400 & 500	Report on unit basis only
Lines 401, 451, and 501	Destination value as defined in 15 AAC 55.151.
Lines 401-405	All North Slope volumes should have the same weighted average figure
Lines 403-411 & 453-461	TAPS and PS#1 values apply only to North Slope oil
Lines 406-410	All North Slope PA volumes within a unit should have the same weighted average figure
Lines 451-455	All North Slope volumes should have the same weighted average figure
Lines 456-460	All North Slope PA volumes within a unit should have the same weighted average figure
Series 400 & 500	Weighted average per barrel or per mcf figures for the period can be derived in one of two ways:
	a) Total applicable values for the period divided by total applicable volumes (for the appropriate values and volumes see instructions below on volumes for weighed averaging)
	b) Any other methodology approved by the Department that is consistent with the methodology used for monthly reporting
Lines 401, 451, and 501	Values for weighted averaging should equal the destination value under 15 AAC 55.151
	Volumes for weighted averaging should equal volumes sold or consumed at a refinery or plant owned by the producer
Lines 402, 452, and 502	Values for weighted averaging should equal total payments for marine shipping
	Volumes for weighted averaging should equal volumes subject to marine shipping
Lines 403 & 453	Values for weighted averaging should equal total payments for TAPS pipeline transportation
	Volumes for weighted averaging should equal volumes shipped on TAPS
Lines 404 & 454	Values for weighted averaging should equal net payments or receipts for TAPS quality bank adjustments downstream of PS # 1
	Volumes for weighted averaging should equal volumes shipped on TAPS
Lines 404 & 454	TAPS quality bank adjustments should be entered as a negative number
Lines 406 & 456	Values for weighted averaging should equal net payments or receipts for quality bank adjustments upstream of PS # 1
	Volumes for weighted averaging should equal volumes delivered to PS # 1
Lines 406, 410, 456, 460, & 505	Quality bank adjustments should be entered as a negative number if they increase gross value at the point of production, and as a positive number if they decrease gross value at the point of production
Lines 407 & 457	Values for weighted averaging should equal total payments for pipeline transportation to PS # 1
	Volumes for weighted averaging should equal volumes subject to pipeline transportation to PS # 1
Lines 451-461	Report only to the extent NGL value is measured separately from oil
	If NGLs are not measured separately use same values as in 401-411

SERIES 600-800

Line 601	Reported figure should be before applying exclusions in Lines 605 and 606
Line 602	Exploration and development costs are costs incurred prior to commencement of commercial production
Line 603	This should be the same amount as in Line 910a. If this is unknown at the time of monthly reporting, provide a good faith non-binding forecast.
Line 606	Report on unit basis only
Line 607	Describe basis for deriving reported monthly expenditures (i.e., actual, year-to-date, 1/12 of expected annual, etc.)
Lines 701-705	Should be reported as if AS 43.55.165(j) did not apply, for units subject to AS 43.55.165(j)
Line 701	Figure should include items reported in Lines 702, 704, and 705 before applying exclusions in line 703
Line 703	Report on unit basis only
Line 706	Report on unit basis only
Line 707	Describe basis for deriving reported monthly expenditures (i.e., actual, year-to-date, 1/12 of expected annual, etc.)
Line 801	Report on unit basis only

SERIES 900

Lines 901-902	Credits generated by the reporting company this period and subtracted this period in calculating estimated tax payments
Lines 903-909	Credits generated or purchased in a prior period and subtracted this period in calculating estimated tax payments
Lines 901-909	List amount of each kind of credit being used for this period
Lines 905 & 907-909	List credit certificate numbers used
Line 910	Sum of Lines 901-909
Line 911-912	List credits marketed to others
Line 911	Credits marketed to other companies
Line 912	Credits marketed to the State (cash refunds of credit certificates received from State)
Line 913	List activity this period that generated credits to be used in subsequent periods
Line 920	Summary of monthly installment payment calculation
Line 920a	Total gross value at the point of production of the oil and gas produced during the period for all leases and properties
Line 920b	Total 1/12 of the adjusted lease expenditures that are deductible for the calendar year for all leases and properties
Line 920c	Total sum of 25 percent and the tax rate calculated for the month under AS 43.55.011(g) for all leases and properties
Line 920d	Total credits subtracted this period in calculating monthly installment payment of estimated tax for this period for all leases and properties (Line 910)
Line 920e	Total monthly installment payment of estimated tax for the period, excluding conservation surcharges, for all leases and properties
Line 930	If the total remittance covers more than oil and gas production tax for the period (i.e., interest, amendments from prior periods, etc.), list on Lines 930a-930e the additional items covered and amounts
Line 940a	List AS 43.55.201 Conservation Surcharge liability for this period
Line 940b	List AS 43.55.300 Conservation Surcharge liability for this period
Line 950	Total amount remitted (sum of Lines 920-940)

Alaska Department of Revenue

OIL AND GAS INTERIM MONTHLY INFORMATION REPORT

COMPANY NAME, May 2008			Column Totals This sheet
PRODUCTION			
100		**Oil volume including NGLs (bbls.)**	
	101	Oil recovered from the reservoir (volumes produced plus used for operations or repressuring)	
	102	Oil used in lease operations per AS 43.55.020(e)	
	103	Oil used in lease operations - OCS	
	104	Non-Taxable Royalty Volume (in kind)	
	105	Non-Taxable Royalty Volume (in value)	
	106	Private royalty volume per AS 43.55.011(i)	
	107	Other oil volume increase/decrease	
	108	Taxable oil volume sold and not shipped in TAPS	
	109	Taxable oil volume sold and shipped in TAPS	
	110	Volumes in 109 subject to marine transportation	
	111	Volumes in 109 not subject to marine transportation	
	112		
200		**Gas volume (mcf)**	
	201	Gas recovered from the reservoir (volumes produced plus used for operations or repressuring plus authorized flare volumes)	
	202	Gas reinjected into the reservoir	
	203	Gas used in lease operations per AS 43.55.020(e)	
	204	Gas used in lease operations - OCS	
	205	Total flare volumes	
	206	Excess flare volumes in 205 per 15 AAC 55.071	
	207	Non-Taxable Royalty Volume (in kind)	
	208	Non-Taxable Royalty Volume (in value)	
	209	Private royalty volume per AS 43.55.011(i)	
	211	Other gas volume increase/decrease	
	212	Taxable gas sales - in state consumption	
	213	Taxable gas sales - export	
	214		
300		**NGL volume (bbls.)**	
	301	NGLs recovered from the reservoir (volumes produced plus used for operations or repressuring)	
	302	NGLs used in lease operations per AS 43.55.020(e)	
	303	NGLs used in lease operations - OCS	
	304	Non-Taxable Royalty Volume (in kind)	
	305	Non-Taxable Royalty Volume (in value)	
	306	Private royalty volume per AS 43.55.011(i)	
	307	Other NGL volume increase/decrease

February 23, 2007

The Honorable Paul Seaton
Alaska House of Representatives
State Capitol, Room 102
Juneau, Alaska 99801-1182

Dear Representative Seaton:

The trustees of the Alaska Retirement Management Board (ARMB) met today to consider the questions regarding HB 48 forwarded from you through Chief Investment Officer Gary Bader. At an earlier meeting this month the Board heard a legislative update with a brief synopsis of pending legislation that included this bill. The trustees also reviewed a memorandum from staff, a copy of which is attached.

The trustees agree that passage of HB 48, allowing the ARMB to purchase transferable tax credits established under the Petroleum Profits Tax (PPT) and obtain reimbursement of the credits through the Department of Revenue, is a valuable tool in addressing the retirement systems' unfunded liabilities and/or contribution rates. Trustees also concur with setting the discount rate at 92% for purchase of the investment tax credits.

We appreciate your continued support and efforts at finding solutions to fully fund our retirement system.

Very truly yours,

Gail R. Schubert, Chair

Attachment

ALASKA RETIREMENT MANAGEMENT BOARD

SUBJECT: Position on House Bill 48 ACTION: X

DATE: February 23, 2007 INFORMATION: ____

BACKGROUND:

House Bill 48 would allow the Alaska Retirement Management Board (ARMB) to purchase transferable tax credits established under the Petroleum Profits Tax (PPT) and obtain reimbursement of the credits through the Department of Revenue (DOR). The PPT created a direct refund of up to $25,000,000 in transferable tax credits per company each year. These transferable credits only arise when a company generates investment credit, but has insufficient production tax against which to take the credit.

Under HB 48, the ARMB would not be required to purchase the credits. However, if the ARMB purchased credits, it would be required to do so at 92% of the face value of the credit certificate. The opportunity to purchase a credit for $0.92 and sell it for $1.00 would result in an 8.69% (($1.00 - $0.92) / $0.92) return on investment. However, the annualized rate of return on investment would be considerably higher since funds for the purchase would only be utilized for a short time. Therefore, it is likely that investment staff would nearly always opt to purchase a credit.

STATUS:

HB 48 is currently being considered by the House Finance Committee. During the course of deliberations about the Bill, some committee members expressed a desire to know: (1) if the ARMB supports legislation that would include this tool in the ARMB investment toolbox; and (2) if the ARMB would favor pegging the transfer rate to the ARMB at 92%, or empowering the investment staff to negotiate the rate with potential sellers.

Staff assumes the ARMB would only be approached to purchase the credits if a taxpayer could not use the credit directly and the universe of potential buyers of the credit is extremely thin or non-existent. If the legislature empowers ARMB staff to negotiate each tax credit purchase, staff would have a fiduciary responsibility to purchase the credits at the lowest possible price.

Investment staff engages in the buying and selling securities on a daily basis. However, in most instances, staff is investing in markets with substantially more transparency than anticipated in this instance. From an annualized rate of return perspective, investment staff may find a purchase price higher than 92% attractive. However, without market transparency, staff would be reluctant to bid up the price without knowing there was in fact a higher bidder. Staff believes the ARMB should favor a set purchase rate of 92% for the credits based upon the assumptions that the purchased credits can be rapidly converted to cash and that the originator of the credit will bear any penalty for denial of the credit by DOR pursuant to a subsequent audit.

RECOMMENDATION:

That the Chair of the ARMB notify Representative Seaton in writing that the ARMB endorses the passage of HB 48 with a set discount rate of 92% for purchase of investment tax credits as a valuable tool to address PERS and/or TRS unfunded liabilities and/or contribution rates.

Re: House Bill 48 – Retirement Board Purchase PPT Credits

Dear Representative Seaton:

The undersigned oil and gas exploration and production companies, each with a significant land position in Alaska, support House Bill 48 – Retirement Board Purchase PPT Credits (HB 48) and we appreciate your work to move the bill through the Legislature.

Granting the Alaska Retirement Management Board (ARMB) the ability to purchase transferable credits under AS43.55.023 and AS43.55.025, and obtain reimbursement of the credits from the Department of Revenue creates a winning situation for both the State and those companies looking to monetize their transferable credits.

In setting a fixed price of 92% of the face value of the credit certificate, HB 48 provides the ARMB with a new investment tool that will guarantee a return on investment greater than 8%. Establishing a fixed price also eliminates the need for the ARMB's investment staff to engage in market research and purchase negotiations, greatly simplifying the transaction process. Furthermore, the price established by HB 48 will serve as a reasonable floor for those companies looking to sell their credits in a difficult marketplace – one with a shortage of potential buyers – guaranteeing a reasonably fair return relative to the true value of the certificates.

By making the process for redeeming tax credits more efficient, HB 48 builds on the State's goal of encouraging new investment in Alaska's oil and gas industry. It is this investment that will generate additional oil production and create new revenue to the State general fund. The undersigned companies support HB 48 fully and thank you for your leadership on this issue.

Sincerely,

Re: House Bill 48

Dear Mr. Seaton,

Thank you for introducing House Bill 48. I think that this legislation is a win-win for the State's Retirement Management Board and the independent Alaska oil and gas explorers.

Brooks Range Petroleum is a small North Slope exploration company that is operating on a $35,000,000 budget for 2007. We are currently drilling our North Shore prospect and will be moving onto our Sak River Prospect this weekend. In addition to drilling these two expensive prospects we are shooting 100 square miles of 3D seismic this winter.

The North Slope is very competitive and while we have good working relationships with the big three North Slope integrated oil companies, making fair and reasonable deals and trades with them is very tedious and often flat impossible. As an upstart company we would like to sell tax credit in advance of waiting to use them years later when our projects come to fruit with initial production. To quickly sell any earned credits, we currently have a very limited market. Given that market it is unlikely that we could successfully receive any more that 90 to 92 cents on the dollar.

As I am sure that you are aware that the State of Alaska would have to redeem any of our sold or traded credits at their full value. Your bill will direct those funds to the State's benefit. And this is the obvious win-win for both the small explorer and the State.

Good luck on advancing this legislation.

Sincerely,

Bo Darrah

MEMORANDUM April 7, 2008

SUBJECT: Single-subject requirement (HCS SB 254(FIN); Work Order No. 25-LS1367\E)

TO: Representative Paul Seaton
Attn: Louie Flora

FROM: Alpheus Bullard
Legislative Counsel

You have requested a legal opinion as to the constitutionality of a committee substitute that extends the termination date of the Alaska regional economic assistance program and adds to it language that extends the termination date for the authority of the Commercial Fisheries Entry Commission to maintain a vessel based limited entry fisheries system. The pertinent legal question is whether the extension of these two programs is a "single subject" under art. II, sec. 13, of the state constitution. The continuation of a Department of Commerce, Community and Economic Development program that encourages the formation of, and provides assistance and grants to, certain regional development organizations and the continuation of a vessel based limited entry fisheries system (as opposed to a system that limits the entry of natural persons) are arguably separate subjects and I do not know whether a court would interpret the shared nucleus of "termination date extension" as satisfying Alaska's single-subject requirement.

The single-subject requirement

Under art. II, sec. 13, Constitution of the State of Alaska, "[e]very bill shall be confined to one subject unless it is an appropriation bill or one codifying, revising, or rearranging existing laws." This provision of the Alaska Constitution is frequently referred to as the "single-subject requirement." Each bill may only contain provisions related to the bill's single subject.

The standard adopted by the Alaska Supreme Court in regard to the single-subject requirement states that an "act should embrace some one general subject; and by this is meant, merely, that all matters treated of should fall under some one general idea, be so connected with or related to each other, either logically or in popular understanding, as to be parts of, or germane to, one general subject." Gellert v. State, 522 P.2d 1120, 1123 (Alaska 1974). The Alaska Supreme Court has held that the purpose of this constitutional provision is to guard against legislative log-rolling, "the practice of 'deliberately inserting in one bill several dissimilar or incongruous subjects in order to

secure the necessary support for passage of the measure.'" Evans v. State, 56 P.3d 1046, 1069 (Alaska 2002), quoting Gellert, supra at 1122.

Alaska's single-subject rule has been interpreted by the Alaska Supreme Court to permit very broad subject matter in a bill without violating the single-subject requirement. In construing the single-subject rule, the court will "resolve doubts in favor of validity." Also, "in order to warrant the setting aside of enactments for failure to comply, the violation must be substantial and plain." Suber v. Alaska State Bond Committee, 414 P.2d 546, 557 (Alaska 1966); see also Evans and Gellert, supra and Short v. State, 600 P.2d 20 (Alaska 1970). Specifically, the court has held that bills relating to such broad themes as "civil actions", "taxation", "transportation", and "land" are acceptable.[1] Evans, 56 P.3d at 1070; North Slope Borough v. Sohio Petroleum, 585 P.2d 534, 545 (Alaska 1978); Yute Air Alaska, Inc. v. McAlpine, 698 P.2d 1173, 1181 (Alaska 1985); State v. First National Bank of Anchorage, 660 P.2d 406 (Alaska 1982).

If I may be of further assistance, please advise.

TLAB:med
08-258.med

[1] The single-subject rule has been so broadly construed by the court, that the court itself has expressed misgivings. Yute Air Alaska, Inc., supra at 1180-1183; and First National Bank of Anchorage, supra at 414-415. However, without this broad construction, "statutes might be restricted unduly in scope and permissible subject matter, thereby multiplying and complicating the number of necessary enactments and their interrelationships." Gellert, supra at 1122, and quoted by Galbraith v. State, 693 P.2d 880, 886 (Alaska App. 1985). The court appears reluctant to impose a stricter standard. See Yute Air Alaska, Inc., supra at 1180-1181.

LETTER OF INTENT/COMMITTEE RECOMMENDATION

FOR HB 365

TO: Representative Mike Chenault, Speaker
Alaska State House of Representatives

FROM: Rep. Craig Johnson
Co-Chair, House Resources

Rep. Mark Neuman
Co-Chair, House Resources

DATE: April 11, 2010

OFFERED BY THE HOUSE RESOURCES COMMITTEE

The House Resources Committee recognizes that passage of provisions in HB365 is a necessary step to enable a planned permit buyback program in the Southeast Alaska Salmon Seine fishery to move forward. Further, while the committee recognizes the value of reducing the number of permits in the Southeast Salmon Seine fishery, it is also concerned that the permit buyback program not remove more permits than necessary for the health and viability of the fishery, nor result in negative economic impacts to the region or state, including diminishment of the economic benefits of the investments that have been made in Southeast Alaska communities.

Specifically, the committee is passing this legislation with the understanding, and the assurance of the Southeast Revitalization Association, that the permit reduction program the association seeks to undertake for the Southeast Alaska Salmon Seine fishery and to implement through the provisions of this bill will not reduce the number of permits in that fishery to less than 260.

House Bill 365 – Fish Processor Fees, Licenses, and Records

Version 26-LS1413/A, February 3, 2010
STAFF: Genevieve Wojtusik, 465-4937

SPONSOR STATEMENT

HB 365 will enable fisheries that have elected to pursue a capacity reduction (permit buyback) program to have the legal mechanism in place to ensure proper accounting of the transactions involved. The steps taken by this bill are procedural in nature.

Policy regarding capacity reduction through self- imposed fee collections have already been made in both state and federal statute. While allowing the National Oceanic & Atmospheric Administration (NOAA) and the National Marine Fishery Service (NMFS) access to fish ticket data held by the state to monitor loan repayments, this bill puts the final pieces together so that fishermen can decide on their participation based on a complete program.

Fleet capacity reduction programs are mechanisms that allow for stabilization of effort within a fishery. They are intended to ensure the long-term economic sustainability of the fishery by addressing the problem of over-capitalization. Based on the pilot program, 80% of permits bought back were non-resident. Alaska's legal framework for these programs ensures that they are:

FISHERY SPECIFIC - by requiring an affirmative vote of the registered and licensed permit-holding fishermen in the fishery in question. This process is spelled out in AS 43.76.230-270, statutes that were generated by the Joint Legislative Salmon Industry Task Force in 2002. The concept behind that legislation was that each fishery in Alaska has its own specific set of economic

factors, and therefore the participants should have the right of group self-determination in legally meeting the challenges of their fishery. This legislation will not affect any fishery that does not meet the previously established guidelines for capacity reduction.

SELF-FUNDED - In the case of the Southeast Alaska Purse Seine fishery, for example, the fishermen will have to agree to a self-assessment of 3% on each sale of fish they catch to cover the costs of the program.

VOLUNTARY - only fishermen who choose to sell their permits may do so. There is no effort to force any fishermen out of the fishery.

HB 365 does not affect any of the previously enacted pieces of the program. It simply enables the federal NMFS and the state Commercial Fisheries Entry Commission (CFEC) to share required information from the fish tickets (receipts for fish delivery transactions) in order to monitor loan repayments. It also requires processors to remit the fees to NMFS, using the same method as is already in practice for remission of the Alaska Salmon Enhancement Tax.

This legislation takes care of the final procedural hurdles to enable permit capacity reduction programs to go forward in any fishery that chooses to pursue that option and passes the other strict statutory requirements.

House Bill 365 is supported by the Southeast Seiners' Association, the United Fishermen of Alaska, and the Alaska Commercial Fishery Entry Commission.

Excerpt from Magnuson-Stevens Act

104-297
SEC. 312. TRANSITION TO SUSTAINABLE FISHERIES **16 U.S.C. 1861a**

(a) FISHERIES DISASTER RELIEF.—

109-479
(1) At the discretion of the Secretary or at the request of the Governor of an affected State or a fishing community, the Secretary shall determine whether there is a commercial fishery failure due to a fishery resource disaster as a result of—

(A) natural causes;

(B) man-made causes beyond the control of fishery managers to mitigate through conservation and management measures, including regulatory restrictions (including those imposed as a result of judicial action) imposed to protect human health or the marine environment; or

(C) undetermined causes.

(2) Upon the determination under paragraph (1) that there is a commercial fishery failure, the Secretary is authorized to make sums available to be used by the affected State, fishing community, or by the Secretary in cooperation with the affected State or fishing community for assessing the economic and social effects of the commercial fishery failure, or any activity that the Secretary determines is appropriate to restore the fishery or prevent a similar failure in the future and to assist a fishing community affected by such failure. Before making funds available for an activity authorized under this section, the Secretary shall make a determination that such activity will not expand the size or scope of the commercial fishery failure in that fishery or into other fisheries or other geographic regions.

(3) The Federal share of the cost of any activity carried out under the authority of this subsection shall not exceed 75 percent of the cost of that activity.

109-479
(4) There are authorized to be appropriated to the Secretary such sums as are necessary for each of the fiscal years 2007 through 2013.

(b) FISHING CAPACITY REDUCTION PROGRAM.—

109-479
(1) The Secretary, at the request of the appropriate Council for fisheries under the authority of such Council, the Governor of a State for fisheries under State authority, or a majority of permit holders in the fishery, may conduct a voluntary fishing capacity reduction program (referred to in this section as the 'program') in a fishery if the Secretary determines that the program—

4650

(A) is necessary to prevent or end overfishing, rebuild stocks of fish, or achieve measurable and significant improvements in the conservation and management of the fishery;

(B) is consistent with the Federal or State fishery management plan or program in effect for such fishery, as appropriate, and that the fishery management plan—

(i) will prevent the replacement of fishing capacity removed by the program through a moratorium on new entrants, practicable restrictions on vessel upgrades, and other effort control measures, taking into account the full potential fishing capacity of the fleet; and

(ii) establishes a specified or target total allowable catch or other measures that trigger closure of the fishery or adjustments to reduce catch; and

(C) is cost-effective and, in the instance of a program involving an industry fee system, prospectively capable of repaying any debt obligation incurred under section 1111 of title XI of the Merchant Marine Act, 1936.

109-479

(2) The objective of the program shall be to obtain the maximum sustained reduction in fishing capacity at the least cost and in a minimum period of time. To achieve that objective, the Secretary is authorized to pay—

(A) the owner of a fishing vessel, if the permit authorizing the participation of the vessel in the fishery is surrendered for permanent revocation and the vessel owner and permit holder relinquish any claim associated with the vessel or permit that could qualify such owner or holder for any present or future limited access system permit in the fishery for which the program is established or in any other fishery and such vessel is (i) scrapped, or (ii) through the Secretary of the department in which the Coast Guard is operating, subjected to title restrictions (including loss of the vessel's fisheries endorsement) that permanently prohibit and effectively prevent its use in fishing in federal or state waters, or fishing on the high seas or in the waters of a foreign nation; or

(B) the holder of a permit authorizing participation in the fishery, if such permit is surrendered for permanent revocation, and such holder relinquishes any claim associated with the permit and vessel used to harvest fishery resources under the permit that could qualify such holder for any present or future limited access system permit in the fishery for which the program was established.

(3) Participation in the program shall be voluntary, but the Secretary shall ensure compliance by all who do participate.

109-479

(4) The harvester proponents of each program and the Secretary shall consult, as appropriate and practicable, with Councils, Federal agencies, State and regional authorities, affected fishing communities, participants in the fishery, conservation organizations, and other interested parties throughout the development and implementation of any program under this section.

109-479
(5) PAYMENT CONDITION.—The Secretary may not make a payment under paragraph (2) with respect to a vessel that will not be scrapped unless the Secretary certifies that the vessel will not be used for fishing in the waters of a foreign nation or fishing on the high seas.

109-479
(6) REPORT.—

(A) IN GENERAL.—Subject to the availability of funds, the Secretary shall, within 12 months after the date of the enactment of the Magnuson-Stevens Fishery Conservation and Management Reauthorization Act of 2006 submit to the Congress a report—

(i) identifying and describing the 20 fisheries in United States waters with the most severe examples of excess harvesting capacity in the fisheries, based on value of each fishery and the amount of excess harvesting capacity as determined by the Secretary;

(ii) recommending measures for reducing such excess harvesting capacity, including the retirement of any latent fishing permits that could contribute to further excess harvesting capacity in those fisheries; and

(iii) potential sources of funding for such measures.

(B) BASIS FOR RECOMMENDATIONS.—The Secretary shall base the recommendations made with respect to a fishery on—

(i) the most cost effective means of achieving voluntary reduction in capacity for the fishery using the potential for industry financing; and

(ii) including measures to prevent the capacity that is being removed from the fishery from moving to other fisheries in the United States, in the waters of a foreign nation, or on the high seas.

(c) PROGRAM FUNDING.—

(1) The program may be funded by any combination of amounts—

(A) available under clause (iv) of section 2(b)(1)(A) of the Act of August 11, 1939 (15 U.S.C. 713c-3(b)(1)(A); the Saltonstall-Kennedy Act);

(B) appropriated for the purposes of this section;

(C) provided by an industry fee system established under subsection (d) and in accordance with section 1111 of title XI of the Merchant Marine Act, 1936; or

(D) provided from any State or other public sources or private or non-profit organizations.

(2) All funds for the program, including any fees established under subsection (d), shall be paid into the fishing capacity reduction fund established under section 1111 of title XI of the Merchant Marine Act, 1936.

4652

16 U.S.C. 1861a
MSA § 312

109-479
(d) INDUSTRY FEE SYSTEM.—

(1) (A) If an industry fee system is necessary to fund the program, the Secretary may conduct a referendum on such system. Prior to the referendum, the Secretary shall—

(i) identify, to the extent practicable, and notify all permit or vessel owners who would be affected by the program; and

(ii) make available to such owners information about the industry fee system describing the schedule, procedures, and eligibility requirements for the referendum, the proposed program, and the amount and duration and any other terms and conditions of the proposed fee system.

(B) The industry fee system shall be considered approved if the referendum votes which are cast in favor of the proposed system constitute at least a majority of the permit holders in the fishery, or 50 percent of the permitted allocation of the fishery, who participated in the fishery.

(2) Notwithstanding section 304(d) and consistent with an approved industry fee system, the Secretary is authorized to establish such a system to fund the program and repay debt obligations incurred pursuant to section 1111 of title XI of the Merchant Marine Act, 1936. The fees for a program established under this section shall—

(A) be determined by the Secretary and adjusted from time to time as the Secretary considers necessary to ensure the availability of sufficient funds to repay such debt obligations;

(B) not exceed 5 percent of the ex-vessel value of all fish harvested from the fishery for which the program is established;

(C) be deducted by the first ex-vessel fish purchaser from the proceeds otherwise payable to the seller and accounted for and forwarded by such fish purchasers to the Secretary in such manner as the Secretary may establish, unless the Secretary determines that such fees should be collected from the seller; and

(D) be in effect only until such time as the debt obligation has been fully paid.

109-479
(e) IMPLEMENTATION PLAN.—

(1) FRAMEWORK REGULATIONS.—The Secretary shall propose and adopt framework regulations applicable to the implementation of all programs under this section.

(2) PROGRAM REGULATIONS.—The Secretary shall implement each program under *this section by promulgating regulations that, together with the framework regulations,* establish each program and control its implementation.

(3) HARVESTER PROPONENTS' IMPLEMENTATION PLAN.—The Secretary may not propose implementation regulations for a program to be paid for by an industry fee system until the harvester proponents of the program provide to the Secretary a proposed implementation plan that, among other matters—

(A) proposes the types and numbers of vessels or permits that are eligible to participate in the program and the manner in which the program shall proceed, taking into account—

(i) the requirements of this section;

(ii) the requirements of the framework regulations;

(iii) the characteristics of the fishery and affected fishing communities;

(iv) the requirements of the applicable fishery management plan and any amendment that such plan may require to support the proposed program;

(v) the general needs and desires of harvesters in the fishery;

(vi) the need to minimize program costs; and

(vii) other matters, including the manner in which such proponents propose to fund the program to ensure its cost effectiveness, as well as any relevant factors demonstrating the potential for, or necessary to obtain, the support and general cooperation of a substantial number of affected harvesters in the fishery (or portion of the fishery) for which the program is intended; and

(B) proposes procedures for program participation (such as submission of owner bids under an auction system or fair market-value assessment), including any terms and conditions for participation, that the harvester proponents deem to be reasonably necessary to meet the program's proposed objectives.

(4) PARTICIPATION CONTRACTS.—The Secretary shall contract with each person participating in a program, and each such contract shall, in addition to including such other matters as the Secretary deems necessary and appropriate to effectively implement each program (including penalties for contract nonperformance) be consistent with the framework and implementing regulations and all other applicable law.

(5) REDUCTION AUCTIONS.—Each program not involving fair market assessment shall involve a reduction auction that scores the reduction price of each bid offer by the data relevant to each bidder under an appropriate fisheries productivity factor. If the Secretary accepts bids, the Secretary shall accept responsive bids in the rank order of their bid scores, starting with the bid whose reduction price is the lowest percentage of the productivity factor, and successively accepting each additional responsive bid in rank order until either there are no more responsive bids or acceptance of the next bid would cause the total value of bids accepted to exceed the amount of funds available for the program.

(6) BID INVITATIONS.—Each program shall proceed by the Secretary issuing invitations to bid setting out the terms and conditions for participation consistent with the framework and implementing regulations. Each bid that the Secretary receives in response to the invitation to bid shall constitute an irrevocable offer from the bidder.

Specific Provisions for SE Salmon Seine Buyback

(2) the biomass rebuilding target previously applicable to such stock will be met or exceeded within the new time for rebuilding;

(3) the extension period is based on the status and biology of the stock and the rate of rebuilding;

(4) monitoring will ensure rebuilding continues;

(5) the extension meets the requirements of section 301(a)(1) of that Act (16 U.S.C. 1851(a)(1)); and

(6) the best scientific information available shows that the extension will allow continued rebuilding.

(b) AUTHORITY.—Nothing in this section shall be construed to amend the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1851 et seq.) or to limit or otherwise alter the authority of the Secretary under that Act concerning other species.

SEC. 121. SOUTHEAST ALASKA FISHERIES COMMUNITIES CAPACITY REDUCTION.

Section 209 of the Department of Commerce and Related Agencies Appropriations Act, 2005 (Public Law 108–447; 118 Stat. 2884) is amended—

(1) by inserting "(a) IN GENERAL.—" after "SEC. 209.";

(2) by striking "is authorized to" in the first sentence and inserting "shall";

(3) by striking "$50,000,000" and all that follows in the first sentence and inserting "up to $25,000,000 pursuant to section 57735 of title 46, United States Code.";

(4) by striking the third sentence and inserting: "The loan shall have a term of 40 years."; and

(5) by adding at the end the following:

"(b) SOUTHEAST ALASKA FISHERIES PROGRAM.—

"(1) CONDUCT OF PROGRAM BY RSA.—The program described in subsection (a) shall be conducted under Alaska law by the Southeast Revitalization Association.

"(2) TREATMENT UNDER CHAPTER 577 OF TITLE 46.—For purposes of section 57735 of title 46, United States Code, the program shall be considered to be a program established under section 312 of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a).

"(3) APPLICATION OF MAGNUSON-STEVENS ACT.—Notwithstanding paragraph (2), the program shall not be subject to section 312 of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a), except for subsections (b)(1)(C) and (d) of that section.

"(c) SOUTHEAST ALASKA FISHERIES PROGRAM APPROVAL AND REFERENDUM.—

"(1) IN GENERAL.—The Secretary of Commerce may approve a capacity reduction plan submitted by the Southeast Revitalization Association under subsection (b).

"(2) REFERENDUM.—The Secretary shall conduct an industry fee system referendum for the buyback under the program in accordance with section 312(d)(1) of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a), except that—

"(A) no Council request and no consultation shall be required; and

"(B) the fee shall not exceed 3 percent of the annual ex-vessel value of all salmon harvested in the southeast Alaska purse seine fishery.

"(d) DISBURSAL OF LOAN PROCEEDS.—If the industry fee system is approved as provided in section 312(d)(1)(B) of that Act (16 U.S.C. 1861a(d)(1)(B)), the Secretary shall disburse the loan in the form of reduction payments to participants in such amounts as the Southeast Revitalization Association certifies to have been accepted under Alaska law for reduction payments. The Secretary shall thereafter administer the fee system in accordance with section 312(d)(2) of that Act (16 U.S.C. 1861a(d)(2)), and any person paying or collecting the fee shall make such payments or collection such fees in accordance with the requirements of that Act (16 U.S.C. 1801 et seq.)". Certification. Fees.

SEC. 122. CONVERSION TO CATCHER/PROCESSOR SHARES.

(a) IN GENERAL.—

(1) AMENDMENT OF PLAN.—Not later than 90 days after the date of enactment of this Act, the Secretary of Commerce shall amend the fishery management plan for the Bering Sea/Aleutian Islands King and Tanner Crabs for the Northern Region (as that term is used in the plan) to authorize— Deadline. Alaska.

(A) an eligible entity holding processor quota shares to elect on an annual basis to work together with other entities holding processor quota shares and affiliated with such eligible entity through common ownership to combine any catcher vessel quota shares for the Northern Region with their processor quota shares and to exchange them for newly created catcher/processor owner quota shares for the Northern Region; and

(B) an eligible entity holding catcher vessel quota shares to elect on an annual basis to work together with other entities holding catcher vessel quota shares and affiliated with such eligible entity through common ownership to combine any processor quota shares for the Northern Region with their catcher vessel quota shares and to exchange them for newly created catcher/processor owner quota shares for the Northern Region.

(2) ELIGIBILITY AND LIMITATIONS.—

(A) The authority provided in paragraph (1)(A) shall— Applicability.

(i)(I) apply only to an entity which was initially awarded both catcher/processor owner quota shares, and processor quota shares under the plan (in combination with the processor quota shares of its commonly owned affiliates) of less than 7 percent of the Bering Sea/Aleutian Island processor quota shares; or

(II) apply only to an entity which was initially awarded both catcher/processor owner quota shares under the plan and processor quota shares under section 417(a) of the Coast Guard and Maritime Transportation Act of 2006 (Public Law 109–241; 120 Stat. 546);

(ii) be limited to processor quota shares initially awarded to such entities and their commonly owned affiliates under the plan or section 417(a) of that Act; and

FISCAL NOTE #2

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HB 365

ANALYSIS CONTINUATION

Bill Language:

This bill authorizes the department to withhold issuing a fisheries business license to applicants that fail to pay industry fees levied by NMFS under a fishing capacity reduction program.

Revenues:

The provisions of this bill will have no impact on tax collections.

Expenditures:

The provisions of this bill could be implemented with existing state resources. No additional personnel or resources would be needed.

The Long Road to Implementing a Consolidation Program for the Southeast Purse Seine Salmon Fishery

2002: Alaska State Legislature enacts AS 16.40.250 to allow permit holders to form non-profit associations for purpose of promoting consolidation of permits

2004: Creation of Southeast Revitalization Association (SRA) by permit holders

2005: Congress amends Magnuson-Stevens, SRA eligibility under Commerce Department & National Marine Fisheries Service

2006: Congressional appropriation;

Alaska State Legislature modifies AS 16.40.250

2008: Alaska State Legislature appropriates $3 million in federal grant monies, resulting in purchase and relinquishment of 35 permits (8.5% of total permits)

2009: NMFS advises it will proceed, but will require access to fish tickets and other records.

How the Program Will Work

1. SRA will establish proper reverse auction procedures
2. Permit holder volunteers to relinquish permit to CFEC
3. Independent audit
4. SRA incorporates bids for submission to NMFS
5. NMFS conducts referendum amongst all permit holders
6. If approved, remaining permit holders pay 3% assessment on ex-vessel of salmon harvested; assessment collected by first buyer and sent to NMFS
7. Minimum of 260 permits remaining in S01A fishery

WHY 260 PERMITS SATISFIES ANY LEGITIMATE OBJECTION VOICED BY SEAFOOD PROCESSING COMPANIES

WHAT THE BILL DOES

1. Amending AS 16.05.815(a) allowing NMFS access to confidential fish ticket and annual records to ensure that first buyers of the salmon are collecting the assessment.

There are already 12 other exceptions in this statute allowing release of this information.

2. Amending AS 43.75.020(a) to provide that when buyers of salmon apply for a fisheries business license – necessary to buy salmon – they must agree to collect and remit the assessment.

There are already five similar conditions in this statute requiring the applicant to pay state or municipal taxes to obtain or maintain a business license.

MEMORANDUM OF UNDERSTANDING

The Southeast Revitalization Association ("SRA") has entered into the following understanding with the undersigned seafood companies:

1. AS 16.40.250 allows permit holders in a salmon fishery to form non-profit associations for the purpose of promoting consolidation or reductions in the number of limited entry permits in a fishery for which the Commercial Fisheries Entry Commission ("CFEC") has issued limited entry permits.

2. The SRA is a duly qualified salmon fishery association under AS 16.40.250 and was organized for the express purpose of developing and implementing a consolidation plan for the Southeast purse seine salmon fishery.

3. Congress under Public Law 108-447, section 209 of the Consolidated Appropriations Act of 2005 amended the Magnuson-Stevens Act ("MSA") making the SRA eligible under a federal buyback loan program established under the U.S. Department of Commerce and administered through the National Marine Fisheries Service ("NMFS").

4. The SRA has developed a draft consolidation or fishing capacity reduction plan ("plan") for the fishery and has submitted that draft plan for approval by the Secretary of Commerce and then NMFS publication of rules to implement the plan.

5. The undersigned seafood companies have expressed concerns that the plan may unnecessarily result in the purchase and relinquishment of too many permits. This occurrence could result in too few fishermen and vessels operating and the potential to reduce the amount of salmon that could be purchased from fishermen by these companies.

6. To address these concerns, the SRA will revise the plan now under NMFS review to provide the following:

   The SRA will amend the plan to provide that under no circumstances will the SRA accept a bid that upon final implementation of the plan could result in fewer than 260 permits remaining in the fishery.

7. The NMFS has indicated it will consent to the proposed plan amendment to limit the number of permits that can be purchased and ultimately relinquished. However, it voiced a cautionary note that the plan is subject

to further review by legal counsel, the Office of Financial Management and Budget and others, which could cause further changes to the plan, including deletion of the proposed limit on the minimum number of permits that would remain in the fishery.

8. The SRA will maintain the position that limiting the number of permits to be purchased and relinquished under the amended plan to 260 is wholly consistent with the MSA, Section 312(b)(2) requirement to achieve the maximum sustained reduction in fishing capacity at the least cost.

9. The undersigned seafood companies agree to support passage of SB 255 and HB 365, as introduced, under the condition that the attached Letter of Intent, or a mutually acceptable revised version of it, is adopted and passed with the legislation by the Alaska Legislature

Rob Zuanich, Manager

Ocean Beauty Seafoods
Mark Palmer, President

Trident Seafoods
Joe Plesha, General Counsel

Attachment: Legislative Letter of Intent for HB365 / SB255

Legislative Letter of Intent for HB365/ SB255

The Alaska Legislature recognizes that passage of HB365/ SB255 is a necessary step to enable a planned permit buyback program in the Southeast Alaska Salmon Seine fishery to move forward. Further, while the Legislature recognizes the value of reducing the number of permits in the Southeast Salmon Seine fishery, it is also concerned that the permit buyback program not remove more permits than necessary for the health and viability of the fishery, nor result in negative economic impacts to the region or state, including diminishment of the economic benefits of the investments that have been made in Alaska communities.

Specifically, the Legislature is passing this legislation with the understanding, and the assurance of the Southeast Revitalization Association, that the permit reduction program the association seeks to undertake for the Southeast Alaska Salmon Seine fishery and to implement through the provisions of this bill will not reduce the number of permits in that fishery to less than 260.

RE: SUPPORT SB 255, FINALIZE SOUTHEAST ALASKA SEINE BUYBACK

Dear Senators McGuire and Wielechowski,

The Petersburg Vessel Owners Association (PVOA) is a diverse group of 100 commercial fishermen and businesses operating primarily in Southeast Alaska. Our members provide millions of meals to the public annually by participating in a variety of fisheries statewide. Most PVOA members are salmon harvesters, and are also active sport, personal use, and subsistence fishermen who depend on sustainable and conservative management of Alaska's fishing resources to ensure healthy fisheries for the future.

PVOA supports the work of Southeast Alaska Seiners (SEAS) and both HB 365 and SB 255 which will provide the necessary vehicle to specify the route and parameters of the National Marine Fisheries Service (NMFS) loan that fishermen will repay with a 3% assessment. Passage of HB 365 will allow a vote to support that commitment to the assessment as well as support of the program.

Petersburg is one of the top ports in Alaska and the Nation for both pounds landed (#6 in Alaska, #26 in the Nation) and dollar value of landings (#7 in Alaska, #26 in the Nation) due in large part to salmon landings. The Southeast Alaska Seine fleet is a vital component of Petersburg's socio-economic well being.

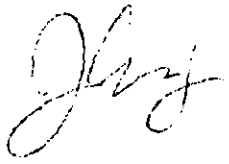
In 2009, there were approximately 70 southeast seine permits actively fished out of Petersburg (Petersburg listed as the mailing address). Each permit and vessel employs four crewmembers who contribute to the local economy and rely on income provided by salmon fishing. Fishing vessels, support businesses, and fishing families are sustained by salmon revenues that are essential to coastal economies. While Petersburg is the most

4670

active commercial fishing port in Southeast Alaska, not one of active permits will be extinguished in a mandatory manner as a result of SB 255.

Thank you for your time and attention to this important matter. If we can provide further information or answer any questions as you finalize the Southeast Alaska seine buyback, please feel free to contact us.

Sincerely,



Julianne Curry
Director

Re: Support for SB255

Dear Senators,

The United Fishermen of Alaska (UFA) supports passage of SB255/HB365.

The bill, while extremely timely and important to certain of our members, is nothing but a "housekeeping" bill that is needed as the last piece of work to finish off the SE fleet consolidation program for SEAS but will also set up a precedence and framework for any similar effort in the state of Alaska conducted at a later date. This legislation allows NMFS to confirm fish ticket/processor data to confirm that the assessment collected to pay back the federal government for the loan is correctly determined and allow for enforcement of those that don't pay the assessment. NMFS only has access to data for a specific fishery that has a federal loan program and not access to all salmon harvest data.

When UFA embraced the Legislative Salmon Task Force in 2001, we recognized that different regions require different solutions. Some groups wanted status quo. Other groups wanted market-oriented solutions. Others wanted to restructure their fishery, or basically re-limit limited entry. We want to acknowledge that many, probably most, of our state waters groups do not support a fleet consolidation program for their own region.

But when the Legislature embarked upon the Legislative Salmon Task Force, this was one of the major solutions that came out for each region to choose from. HB286, authored in 2002 by Drew Scalzi, was one of the resulting pieces of legislation. One of our groups, the Southeast Alaska Seiners Association (SEAS) chose to follow up on this and has already "permanently retired" around 20% of their consolidation target in 2008 with $3 million in NMFS grants that were authorized by the Alaska State Legislature.

Another piece of the pie here is HB484, passed in 2006 by the Alaska State Legislature that mandates a solution in the event of an "optimum number determination" in a court of law that causes retired permits to become reissued. HB484 allows that the Legislature "may" send the resulting funds back to the fleet consolidators, hence relieving fishermen of the uncertainty resulting from the "optimum number" issue.

In the case of SE seine fishery, the active fleet size has not exceeded the buydown goal of the buyback program since 2002. So this fleet consolidation is very unlikely to cost a single job or boat. The 3% assessment that these guys are paying is just an insurance policy for the fishermen (and processors) that there won't be a new "group" or company that will bring in some of the currently unused and dormant 140 permits. In fact there will be at least several dozen permits remaining on poor years and likely a dozen or so remaining even on good years.

UFA supports swift passage of this legislation, which is the wrap-up of the Legislative task force bill HB286 from 2002. It is now 2010 and it seems fitting that the Alaska State Legislature would be willing and able to support a "housekeeping" bill that brings to fruition a bill (nearly unanimous in passage in both the House and Senate) that was brought forth as a result of the Alaska State Legislative Task Force.

Thank you for your consideration of this legislation for one of our group members.

Sincerely

Mark Vinsel
Executive Director

Subject: HB 365

Dear Representative Hawker

Myself and my family are longtime residents of Girdwood. I am writing to urge your support for HB365. I have purse seined in Southeast Alaska since 1976 and an still seining in Alaska. Fishing is and has been my primary income source, In 2009, my oldest son, Andrew ,who is graduating from UAA this year, purchased and restored a 58 foot seiner with my help and a loan from the Alaska Division of Investments . He had a successful season last year in his first year operating his own vessel. We both currently hold Southeast Alaska Seine Permits and Area M seine permits . My youngest son Julian is currently enrolled at University of San Diego after graduating from South High . In addition to an academic scholarship from USD, Julian pays for the majority of his education from his income as a crew member on my vessel. With my wife Jody that makes four voters in your district that rely on Alaska salmon seining . This bill is important to my family for our livelihood and it comes at zero cost to the State of Alaska.

I have been involved in this buyback program since 2003. I was elected to the the Seine Vessel Revitalization Board whose purpose has been to design this program. If you have any concerns or question regarding supporting this Bill I welcome the opportunity to discuss it further.

Thank You

RE: SUPPORT SB 255, FINALIZE SOUTHEAST ALASKA SEINE BUYBACK

Dear Representatives McGuire and Wielechowski,

I am writing on behalf of Cordova District Fishermen United (CDFU), a member organization representing over 300 commercial fishermen in Prince William Sound, including 60 seine fishermen, to request your support of SB255.

CDFU is in alliance with the Southeast Alaska Seiners (SEAS) on this bill, and believes the passage of both HB 365 and SB 255 will provide a relatively simple solution in specifying the route and parameters of the National Marine Fisheries Service (NMFS) loan that fishermen will repay with a 3% assessment.

While not directly related to present seine activity in Prince William Sound, the adoption of SB255 will provide a solid framework for any group within the State looking into practical solutions to stabilize their fishery.

We trust that you will see the merits in supporting this bill.

Sincerely,

Rochelle van den Broek
Executive Director

The Honorable Lesil McGuire and Bill Wielechowski
Co-Chairs, Senate Resources Committee
Butrovich 205
Alaska State Capitol
Juneau, AK 99801-1182

Dear Senators McGuire and Wielechowski:

The Southeast Alaska Seiners Association (SEAS) fully supports SB 255 and would appreciate the opportunity to express such support before your Committee.

SEAS is a trade association of 127 member skippers (of 5 crew), who purse seine for salmon in Southeast Alaska, predominantly with 58 foot vessels. SEAS also has nearly 60 business members who support the fleet, consisting primarily of processors, fuel docks, grocery stores and marine suppliers, contractors, electronic suppliers, mechanics, shipyards and outfitters.

SB 255 Background

SEAS worked with the Congressional delegation to secure a $3 million grant that was spent in 2008, after being authorized to do so by the Alaska State Legislature, to retire 35 permits, or approximately 22% of our target permit reduction. The first part of our fleet consolidation was done under the supervision of the Commercial Fisheries Entry Commission (CFEC), the program was run by Elgee, Rehfeld, CPAs and we advertised throughout Southeast Alaska for a reverse auction. **These are the first ever Alaska state limited entry salmon permits retired under such a program.**

After the further repurchase of around 120-125 permits we expect to get to the 255-260 range of permits remaining available to fish. This time the fishermen are paying and the financing source is a National Marine Fisheries Service (NMFS) loan that fishermen will repay with a 3% assessment. A couple weeks into the 2010 legislative session the main NMFS Financial Services Division personnel came to Juneau to meet with the CFEC leadership as well as the state of Alaska in

○ PO Box 23081, Juneau, AK 99802 ○ 907-463-5030 ○ Fax: 907-463-5083 ○

order to prepare a bill that would work as the basic "closing document" on our loan.

SB 255 is exactly phrased and intently written with at least a dozen basic drafts prior to introduction. There is no fiscal note and should there be any concern to processors about extra paperwork, the processor can apply for compensation from the assessment. We do not believe at this time that the financial burden of adding a box to the fish ticket will cause any undue financial concern as this is already done in many Boroughs (such as Bristol Bay) and by enhancement taxation as well in the same section of the fish ticket.

This bill is the vehicle that specifies the route and parameters of this assessment and is necessary because this is not only Alaska's first, but it is likely that this is the first state water's fishery that has ever received a NMFS restructuring loan for fleet consolidation. According to NMFS, this bill cannot be changed in any fashion whatsoever - or our $20 million loan for Alaskan fishermen will fail.

When Southeast Alaska was rolled into the state's limited entry program in 1974, there was a **larger than average number of non-resident licenses due to the close proximity to Puget Sound and the Boldt Decision**, while not made until that very year, as well as the first shot at limited entry in 1969, made for a larger fleet than existed in the decade(s) prior to limited entry.

One other compelling reason seiners have sought out fleet consolidation is due to the amount of historical and traditional fishing area currently not available to access by the seine fleet. The Icy Strait corridor of about 100 miles of fishing shoreline was closed nearly simultaneously to the initiation of limited entry. Then in 1985, the 75 mile shoreline of Noyes Island and Dall Island outside of Prince of Wales Island was closed for most of the July fishery and has remained mostly closed by Treaty since then during the month of July. The fleet was bottled up in long line-ups (boats idling their engines while waiting for hours for the opportunity to set the net and catch fish) for much of the season save for the peak of some of our better runs. Certainly fuel savings and energy implications were there, but this was not our impetus.

Consequent to the major price crash in 1991 (12 cents per pound for pinks) after the introduction of Russian pink salmon into the Western world, another major price crash in 1996 (7-8 cents) and then again in 2002 (7-8 cents), SEAS decided to get rolling on a major fleet consolidation program. By 2003 and 2004 the fleet had been cut to around 225 boats from 360-375 during the prior decade. Most of these boats and crews no longer fishing were non-residents. **The fleet is a stable 225 average now with as little as 205 permits operated on poorer seasons while 240 is our high in recent years.**

With over 80% of the permits bought back in the first round having been owned by non-residents, the fleet has become even more 'Alaskan'. This trend is expected to continue in the next round, thereby resulting in strong and financially viable fishing families within Alaska.

SB 255 is an important bill because it is the final hurdle to clear in order to facilitate the NMFS Federal loan program so that it will work with Alaskan limited entry fisheries. While it is not a big bill, it is a huge bill for our members and is a necessary step towards stabilizing, modernizing, and maintaining our fishery here in Southeast Alaska.

Sincerely

Dan Castle
SEAS President

RE: Support SB 255

Southeast Alaska Fishermen's Alliance (SEAFA) supports HB 365/SB 255. This is legislation that simply allows NMFS to confirm that all the assessment collected from the fishermen by the Processors for a buyback program using federal loan programs has been collected and paid to the federal government and allows for enforcement against those who have not paid.

This legislation would not allow NMFS to collect information for programs that don't have a federal buy-back assessment. This legislation would allow this tool to be used in the future if another buyback with federal funds occurs. The other thing we would point out is that any buyback program has been created occurred by a vote of the fleet.

We support the legislation as a housekeeping measure to correct an oversight to the legislation previously passed to set up associations to conduct buy-back programs.

Southeast Alaska Fishermen's Alliance is a multi-gear/multi-species non-profit membership organization representing our members involved in the salmon, crab, shrimp and longline fisheries of Southeast Alaska. We represent salmon gillnet, seine and troll fishermen.

Sincerely,

Kathy Hansen, Executive Director

... from Bobby T.

re: HB 365

FINAL

MEMORANDUM OF UNDERSTANDING

The Southeast Revitalization Association ("SRA") has entered into the following understanding with the undersigned seafood companies:

1. AS 16.40.250 allows permit holders in a salmon fishery to form non-profit associations for the purpose of promoting consolidation or reductions in the number of limited entry permits in a fishery for which the Commercial Fisheries Entry Commission ("CFEC") has issued limited entry permits.

2. The SRA is a duly qualified salmon fishery association under AS 16.40.250 and was organized for the express purpose of developing and implementing a consolidation plan for the Southeast purse seine salmon fishery.

3. Congress under Public Law 108-447, section 209 of the Consolidated Appropriations Act of 2005 amended the Magnuson-Stevens Act ("MSA") making the SRA eligible under a federal buyback loan program established under the U.S. Department of Commerce and administered through the National Marine Fisheries Service ("NMFS").

4. The SRA has developed a draft consolidation or fishing capacity reduction plan ("plan") for the fishery and has submitted that draft plan for approval by the Secretary of Commerce and then NMFS publication of rules to implement the plan.

5. The undersigned seafood companies have expressed concerns that the plan may unnecessarily result in the purchase and relinquishment of too many permits. This occurrence could result in too few fishermen and vessels operating and the potential to reduce the amount of salmon that could be purchased from fishermen by these companies.

6. To address these concerns, the SRA will revise the plan now under NMFS review to provide the following:

   The SRA will amend the plan to provide that under no circumstances will the SRA accept a bid that upon final implementation of the plan could result in fewer than 260 permits remaining in the fishery.

7. The NMFS has indicated it will consent to the proposed plan amendment to limit the number of permits that can be purchased and ultimately relinquished. However, it voiced a cautionary note that the plan is subject

to further review by legal counsel, the Office of Financial Management and Budget and others, which could cause further changes to the plan, including deletion of the proposed limit on the minimum number of permits that would remain in the fishery.

8. The SRA will maintain the position that limiting the number of permits to be purchased and relinquished under the amended plan to 260 is wholly consistent with the MSA, Section 312(b)(2) requirement to achieve the maximum sustained reduction in fishing capacity at the least cost.

9. The undersigned seafood companies agree to support passage of SB 255 and HB 365, as introduced, under the condition that the attached Letter of Intent, or a mutually acceptable revised version of it, is adopted and passed with the legislation by the Alaska Legislature

Attachment: Legislative Letter of Intent for HB365 / SB255

Legislative Letter of Intent for HB365/ SB255

The Alaska Legislature recognizes that passage of HB365/ SB255 is a necessary step to enable a planned permit buyback program in the Southeast Alaska Salmon Seine fishery to move forward. Further, while the Legislature recognizes the value of reducing the number of permits in the Southeast Salmon Seine fishery, it is also concerned that the permit buyback program not remove more permits than necessary for the health and viability of the fishery, nor result in negative economic impacts to the region or state, including diminishment of the economic benefits of the investments that have been made in Alaska communities.

Specifically, the Legislature is passing this legislation with the understanding, and the assurance of the Southeast Revitalization Association, that the permit reduction program the association seeks to undertake for the Southeast Alaska Salmon Seine fishery and to implement through the provisions of this bill will not reduce the number of permits in that fishery to less than 260.

HB 365

MEMORANDUM OF UNDERSTANDING

The Southeast Revitalization Association ("SRA") has entered into the following understanding with the undersigned seafood companies or trade organizations:

1. AS 16.40.250 allows permit holders in a salmon fishery to form non-profit associations for the purpose of promoting consolidation or reductions in the number of limited entry permits in a fishery for which the Commercial Fisheries Entry Commission ("CFEC") has issued limited entry permits.

2. The SRA is a duly qualified salmon fishery association under AS 16.40.250 and was organized for the express purpose of developing and implementing a consolidation plan for the Southeast purse seine salmon fishery.

3. Congress under Public Law 108-447, section 209 of the Consolidated Appropriations Act of 2005 amended the Magnuson-Stevens Act ("MSA") making the SRA eligible under a federal buyback loan program established under the U.S. Department of Commerce and administered through the National Marine Fisheries Service ("NMFS").

4. The SRA has developed a draft consolidation or fishing capacity reduction plan ("plan") for the fishery and has submitted that draft plan for approval by the Secretary of Commerce and then NMFS publication of rules to implement the plan.

5. The undersigned seafood companies or trade organization have expressed concerns that the plan may unnecessarily result in the purchase and relinquishment of too many permits. This occurrence could result in too few fishermen and vessels operating and the potential to reduce the amount of salmon that could be purchased from fishermen by these companies.

6. To address these concerns, the SRA will revise the plan now under NMFS review to provide the following:

   The SRA will amend the plan to provide that under no circumstances will the SRA accept a bid that upon final implementation of the plan could result in fewer than 260 permits remaining in the fishery.

7. The NMFS has indicated it will consent to the proposed plan amendment to limit the number of permits that can be purchased and ultimately

relinquished. However, it voiced a cautionary note that plan is subject to further review by legal counsel, the Office of Financial Management and Budget and others, which coulds cause further changes to the plan, including deletion of the proposed limit on the minimum number of permits that would remain in the fishery.

8. The SRA will maintain the position that limiting the number of permits to be purchased and relinquished under the amended plan is wholly consistent with the MSA, Section 312(b)(2) requirement to achieve the maximum sustained reduction in fishing capacity at the least cost.

9. The undersigned seafood companies or trade organizations agree to support passage of SB 255 and HB 365 without further amendment.

SECTIONAL ANALYSIS

House Bill 365 – Fish Processors Fees, Licenses, and Records

Version 26-LS1514\A, February 23, 2010
STAFF: Genevieve Wojtusik, 465-4937

SECTION 1: Amends AS 16.05.815(a) by adding to the list of information items which may be released by the Department of Fish & Game and by the Alaska Commercial Fisheries Entry Commission. It adds fish ticket information, records, and reports of the total value purchased by each fisherman, buyer, or processor, and makes it available to the National Marine Fisheries Service. This strengthens the NMFS position as loan guarantor of the fleet reduction loan program.

SECTION 2: Amends AS 43.75.020(a) by adding a subsection which provides that an applicant for a fishery business license agrees to pay the 3% fee levied under the fleet reduction program.

SECTION 3: Amends AS 43.75.020(b) by adding final administrative determinations of the National Marine Fisheries Service to the list of judgments or determinations which, if not received by the Department, will not prevent the issuance of a fishery business license to an applicant.

SECTION 4: Provides for an immediate effective date.

Re: HB 365, Fish Processor Fees, Licenses, and Records

Dear Representative Millett:

Thank you for the opportunity to respond to your inquiry regarding HB 365, Fish Processor Fees, Licenses, and Records.

HB 365 is a continuation of a program established by the Alaska State Legislature in 2002 allowing Salmon Fishery Associations (AS 16.40.250) formed by fishermen for the purpose of promoting fleet consolidation and capacity reduction. That legislation (HB 286-2002) encourages the Commissioner of the Alaska Department of Fish and Game to assist fishermen in the formation of these associations among the various Alaska salmon fisheries. In 2006, the Alaska State Legislature modified AS 16.43.330 through HB 484 to allow reimbursement to Salmon Fishery Associations in the unlikely event the State of Alaska, through the Commercial Fisheries Entry Commission, issued more limited entry permits into a salmon fishery that has an outstanding loan for fleet consolidation and capacity reduction.

HB 365 is simply an accounting procedure modification to make the program operate more efficiently and allow the lender to monitor the capacity reduction loan repayment. It does not change the program established in 2002 in any way.

The Southeast Revitalization Association (SRA), the fishermen's association formed by the SE Alaska Salmon Purse Seine fleet under the 2002 legislation, is close to receiving federal funding in the form of a loan through the National Marine Fisheries Service (NMFS) to carry out the purposes of the Salmon Fishery Association legislation. NMFS will provide a long term loan to SRA to be paid back by Southeast salmon seine fishermen from future salmon harvests. NMFS requires a mechanism to be able to monitor the loan payback. HB 365 provides that mechanism.

HB 365 will allow NMFS access to confidential state records and reports through an exception to AS 16. 05. 815 (a) (Confidential nature of certain reports and records). This is not an unusual request since a dozen other exceptions have been granted in statute, including NMFS but for purposes of fishery management and enforcement. This legislation is necessary since it is the State of Alaska that maintains the fish ticket harvest data and fish processor annual reports. This exception will provide

assurance to NMFS that they are receiving the proper repayment of their loan. Similarly a requirement is added to AS 43.75.020(a), the Alaska Fisheries Business License, that the applicant in addition to other conditions, agrees to pay the fee assessment collected from the Southeast seine fleet to NMFS.

The original legislation in 2002 was supported by the Alaska fishing community and had overwhelming legislative support in both the House and Senate, as did the 2006 modification. This support stemmed from the fact that the program was initiated by fishermen for fishermen, it is a voluntary program (no one will be forced to sell their limited entry permit), the program requires a majority vote of all the fishermen to implement the loan agreement, the fishery association will have access to federal funds through the Magnuson-Stevens Fishery Conservation and Management Act, there is little State expense or administration, the State maintains all its responsibility to manage its fisheries in the future should conservation or economic conditions change, and the program has had a history of legislative support.

We have been pleased to work with the SRA on the establishment of their association and the success of their pilot program in 2008 which resulted in the buyback of 35 limited entry permits in the SE Alaska salmon purse seine fishery.

With the passage of HB 365 we look forward to a continuous working relationship with SRA and the Alaska fishing community.

Thank you for the opportunity to provide these comments.

Sincerely,

Frank Homan, Chairman
Peter Froehlich, Commissioner
Bruce Twomley, Commissioner

March 8, 2010

House Special Committee on Fisheries
Representative Bryce Edgmon, Chair
Alaska State Legislature; State Capitol, Room 124
Juneau, AK 99801

Representative Edgmon, Chair and committee members,

RE: Support for HB 365/SB 255

Southeast Alaska Fishermen's Alliance (SEAFA) supports HB 365/SB 255. This is legislation that simply allows NMFS to confirm that all the assessment collected from the fishermen by the Processors for a buyback program using federal loan programs has been collected and paid to the federal government and allows for enforcement against those who have not paid.

This legislation would not allow NMFS to collect information for programs that don't have a federal buy-back assessment. This legislation would allow this tool to be used in the future if another buyback with federal funds occurs. The other thing we would point out is that any buyback program has been created occurred by a vote of the fleet.

We support the legislation as a housekeeping measure to correct an oversight to the legislation previously passed to set up associations to conduct buy-back programs.

Southeast Alaska Fishermen's Alliance is a multi-gear/multi-species non-profit membership organization representing our members involved in the salmon, crab, shrimp and longline fisheries of Southeast Alaska. We represent salmon gillnet, seine and troll fishermen.

Sincerely,

Kathy Hansen, Executive Director

CAPACITY REDUCTION PROGRAM FOR THE SOUTHEAST ALASKA PURSE SEINE SALMON FISHERY

By Southeast Revitalization Association

SUMMARY: State and federal legislation authorized this fishing capacity reduction program for the Southeast Alaska purse seine salmon fishery. The program will reduce fishing capacity by permanently relinquishing permits, promote economic efficiency, improve flexibility in the conservation and management of the fishery and obtain the maximum reduction in permits at the least cost.

The program is voluntary and only permit holders of the fishery are eligible to participate. Participating permit holders must abide by the terms and conditions of the program set forth in the Bid Agreement and, if their bid is accepted, a Relinquishment Contract ("Contract") with the Southeast Revitalization Association (SRA) and the Alaska Commercial Fisheries Entry Commission (CFEC). The aggregate of all Bid Agreements and Contracts signed by permit holders whose bids are accepted, will together with supporting rationale, constitute the Reduction Plan ("Plan") to be submitted to the Secretary of Commerce ("Secretary") for approval. Permit holders participating in the program will receive up to $23.5 million in exchange for relinquishing permits.

To obtain the maximum capacity reduction at the least cost, SRA will use reverse auction procedures to rank and determine which bids to accept. If bids are accepted, the SRA will accept the bid with the lowest dollar amount and successively accept each additional bid with the next lowest dollar amount until it either elects not to accept a bid, there are no more bids to accept, or acceptance of the last bid with the next lowest dollar amount would cause the total cost to exceed $23.5 million. The SRA may conduct one or more separate auctions before determining whether the number of bids it elects to accept is sufficient to submit a Plan.

Following SRA submission of the Plan and approval by the Secretary, National Marine Fisheries Service ("NMFS") will conduct a referendum to determine the willingness of the permit holders to repay a fishing capacity reduction loan ("loan") to finance the Plan. A majority vote of all permit holders in favor would bind all permit holders. NMFS will issue a $23.5 million, 40-year loan to be repaid by those permit holders who continue operations in the fishery after implementation of the Plan.

In the event the aggregate amount of all accepted bids is less than $23.5 million, the remaining loan funds would be available for reduction payments as part of a later SRA submitted Plan, subject to approval by the Secretary, and after a successful referendum by the permit holders.

1. **Statutory Background**: The authority for the SRA to conduct the program is Alaska Statute 16.40.250. The program was established under the Consolidated Appropriations Act of 2005 (Act) authorizing the (NMFS) to establish up to a $50 million loan to finance the program and appropriated $500,000 for the cost of the loan. That law was subsequently amended by Section 121 of the Magnuson-Stevens (MSA) Reauthorization Act of 2006 (Public Law 109-447) reducing the loan amount to no more than $25 million and clarifying the respective roles of NMFS and SRA relative to development and implementation of the program. The sum of $235,000 was later appropriated for the cost of guaranteeing the loan amount. The authority for making the loan is sections 1111 and 1112 of the Merchant Marine Act, 1936. NMFS will implement the industry fee system to repay the loan under section 312(d)(2) of the MSA.

2. ***Purpose***. The program will reduce fishing capacity by permanently relinquishing permits, promote economic efficiencies, improve flexibility in the conservation and management off the fishery and obtain the maximum reduction in permits at the least cost by establishing reverse auction bidding procedures under the Plan.

3. ***Definitions.*** Unless otherwise defined, the following terms have the following meanings for the purpose of this program.

Acceptance means SRA acceptance of a bid.

Act means section 209 of Title II of Division B of Public Law 108-447 as amended by section 121 of Public Law 109-447.

Bid means a bidder's irrevocable offer under the Bid Agreement to relinquish a permit.

Bid Agreement means the form identifying the eligible bidder, procedures for the completion and submission of a bid; requirements upon acceptance of a bid and resulting relinquishment of the permit, and any other necessary implementation.

Bid Amount means the dollar amount of each bid by which SRA determines in what order to rank and potentially accept bids.

Final Plan means the aggregate of all Bid Agreements, Commercial Fisheries Entry Commission ("CFEC") documents, Relinquishment Contracts, and supporting documents and rationale; submitted to the Secretary for approval.

Conditional Notice means the CFEC form that any permit holder must sign and agree to abide upon submission of a Bid Agreement.

Conditional Relinquishment means the CFEC form that any permit holder agreeing to relinquish a permit must sign and agree to abide by upon SRA acceptance of the bid.

Fishery means the commercial taking of salmon with purse gear within the Southeast Alaska administrative area as defined under Title 5 Alaska Administrative Code Section 33.100.

Permit means a valid entry permit issued by CFEC to operate in the fishery.

Permit Holder means an individual at the time of bidding is the holder of record of a permit.

Relinquishment Contract means the contract that any permit holder agreeing to relinquish a permit pursuant to Alaska Statute (A.S. 16.43.150(i) must sign and agree to abide by upon acceptance of the bid, and before payment of the bid amount.

Secretary means the Secretary of Commerce or a designee.

Southeast Revitalization Association (SRA) is a qualified fishery association authorized to develop and implement this capacity reduction program under Alaska Statute 16.40.250 and federal law.

4. Eligibility and Application of permit holders

(a) Notification. A copy of the Bid Agreement, CFEC Conditional Notice and Conditional Relinquishment forms, and the Contract shall be mailed to each permit holder.

(b) Application. Any permit holder may apply to participate in the program, by submitting a fully completed and executed, Bid Agreement, including the necessary CFEC forms and the Contract.

5. **Withdrawal*:*** By submitting a completed and executed Bid Agreement, the person makes an irrevocable offer to relinquish a permit. No person, once having submitted the Bid Agreement, is entitled to withdraw or in any way amend the Bid Agreement.

6. Bid—(i) Binding agreement. A submitted Bid Agreement shall be an irrevocable offer to relinquish the permit for the bid amount, contingent on such offer being accepted by SRA. A bid that is submitted by the permit holder, but is not accepted by SRA, shall be deemed terminated and both the permit holder and SRA shall have no further obligation with respect to Bid Agreement.

> ***(ii)*** **Bid Content**. The submitted Bid Agreement shall include the following information: name, address, telephone number and (if available) electronic mail address of the submitting permit holder; permit number and whether any authorized party holds a security interest in the permit.

(iii) ***Bid submission***. Any permit holder may submit a Bid Agreement. If a permit holder holds a second permit, such permit holder may, but is not required to submit a Bid Agreement for such second permit. Each application must be submitted to the SRA, c/o Elgee, Rehfeld, Mertz, LLC, Professional Plaza Building B, 9309 Glacier Highway, Suite B-200, Juneau, AK 99801.

(iv) **Validity of Bid.** SRA in consultation with CFEC shall examine each Bid Agreement for consistency and the necessary elements. SRA shall notify the permit holder if the Bid Agreement is non-conforming. In such cases, the permit holder may submit a revised, conforming Bid Agreement if within the prescribed period.

7. Warranty. By submitting a Bid Agreement, the permit holder warrants and represents that the permit holder has read and understands the terms of the Bid Agreement, Contract, CFEC forms, and has had the opportunity to seek independent legal counsel regarding such documents and the consequences of submitting the Bid Agreement.

8. Bids—(i) Ranking. *The* SRA shall rank bids by using a reverse auction in which the SRA ranks the bid with the lowest dollar amount and successively ranks each additional bid with the next lowest dollar amount until there are no more bids or the ranking of the next lowest bid would cause the total program cost to exceed $23.5 million.

(ii) Acceptance and Post-acceptance transfers. Upon expiration of the bid closing date the SRA will determine whether the number of ranked bids it is willing to accept is sufficient to achieve a substantive reduction in harvest capacity and increased economic efficiencies for those permit holders remaining in the fishery. If the SRA makes such a determination and thereafter accepts bids, SRA will send *CFEC* the Conditional Notice form restricting transfer of the permit to any person whose bid was accepted.

9. Submission of Plan, including repayment. The aggregate of all Bid Agreements, the CFEC forms and Contracts will, together with supporting documents and rationale, constitute the Plan to be submitted to NMFS for final approval on behalf of the Secretary. The Plan shall identify as the proposed capacity reduction, the permits identified in the Bid Agreements.

10. **Selection of fishing capacity to be removed by Plan.** The fishing capacity removed under the Plan will be the permits voluntarily offered by permit holders and accepted by SRA up to an aggregate amount of $23.5 million.

11. Approval of the Plan. The criteria for NMFS, on behalf of the Secretary, to approve any Plan must include a finding by the Administrator of NMFS that the Plan is consistent with the Act and MSA, and that it will result in the maximum reduction in permits and fishing capacity at the least cost and in the minimum amount of time.

12. Referendum. NMFS will conduct a referendum to determine the permit holder's willingness to repay a fishing capacity reduction loan to purchase the permits identified in the Plan. A successful referendum by a majority of the permit holders will bind all parties and complete the reduction process.

13. Reduction Payments. Within 60 days of a successful referendum and CFEC receipt of the Contract, SRA through the Secretary will tender the accepted bid amount.

14. Later Pan The SRA may accept a total number of bids in an aggregate amount less than $23.5 million. If this occurs, any remaining funds would be available for reduction payments as part of a later Plan.

15. Reduction Loan —(i) Term. As authorized by the Act, the capacity Reduction Loan ("Loan") shall be amortized over a forty (40) year term. The Loan's original principal amount may not exceed $23.5 million, but may be less if the ultimate reduction cost is less. NMFS has promulgated framework regulations generally applicable to all fishing capacity reduction programs and the Loan shall be subject to the provisions of these regulations.

16. Loan Repayment Permit holders operating in the fishery shall be obligated to pay the fee in accordance with the regulations. Permit holders acknowledge that in the event payments made under the Plan are insufficient to pay the actual Loan, the term of the repayment shall be extended by NMFS until the Loan is paid in full.

> **(i) Interest.** The Loan's interest rate will be the U.S. Treasury's cost of borrowing equivalent maturity funds plus 2 percent. NMFS will determine the Loan's initial interest rate when NMFS borrows from the U.S. Treasury the funds with which to disburse the reduction payments. The initial interest rate will change to a final interest rate at the end of the Federal fiscal year in which NMFS borrows the money from the U.S. Treasury. The final interest rate will be 2 percent plus a weighted average, throughout the fiscal year, of the U.S. Treasury's cost of borrowing equivalent maturity funds. The final interest rate will be fixed, and will not vary over the remainder of the reduction loan's 40-year term. The Loan will be subject to a level debt amortization. There is no prepayment penalty.

(ii) Fees. The Loan shall be repaid by fees collected from the remaining permit holders operating in the fishery.

(A) The fee will be expressed as a percentage of the ex-vessel price of all salmon harvested and landed in the fishery. For example, if the fee is 3% and the ex-vessel weighted average round price is $0.50, then the fee per pound of salmon will equal to $0.015 per pound.

(B) Fees must be assessed and collected on all salmon harvested in the fishery. Although the fee could be up to 3 percent of the ex-vessel price of all post-reduction landings, the fee will be less than 3 percent if NMFS projects that a lesser rate can amortize the Loan over the 40-year term.

(C) It is possible that the fishery may not open during some years. Consequently, the fishery will not produce fee revenue with which to service the Loan during these years. However, interest will continue to accrue on the principal balance. When this happens, if the fee is not already at the maximum 3 percent, NMFS will increase the fee to the maximum 3 percent, apply all subsequent fee revenue first to the payment of accrued interest, and continue the maximum fee rates until the principal and interest payments become current. Once all principal and interest payments are current, NMFS will make a determination about adjusting the fee rate.

(D) Collection. The permit holder or the person who purchases and processes the salmon landed in the fishery shall be responsible for collecting and submitting the fees to NMFS.

(E) Record keeping and Reporting. The permit holder or the person who purchases and processes the salmon landed in the fishery shall be responsible for compliance with the applicable record keeping and reporting requirements.

17. Enforcement/Specific Performance. The parties to the Contract have agreed that the opportunity to develop and submit a capacity reduction program for the fishery under the terms of the Act is both unique and finite. The failure of a permit holder whose bid was accepted to perform the obligations under the Contract will result in irreparable damage to the SRA and the permit holders upon submittal of the Plan to the Secretary for approval. Accordingly, the parties to the Contract expressly acknowledge that money damages are an inadequate means of redress and agree that upon failure of the permit holder to fulfill his obligations under the Contract that specific performance of those obligations may be obtained by suit in equity brought by the SRA in any court of competent jurisdiction without obligation to arbitrate such action.

(3) rearing and sale of ornamental finfish for aquariums or ornamental ponds provided that the fish are not reared in or released into water of the state.

(c) In this section "ornamental finfish" means fish commonly known as "tropical fish," "aquarium fish," or "goldfish," that are imported, cultured, or sold in the state customarily for viewing in aquaria or for raising in artificial systems, and not customarily used for sport fishing or human consumption purposes. (§ 2 ch 91 SLA 1990)

Cross references. — For legislative findings in connection with the enactment of this section, see § 1, ch. 91, SLA 1990 in the Temporary and Special Acts.

Article 4. Fishery Associations.

Section
240. Regional dive fishery development associations
250. Salmon fishery associations

Sec. 16.40.240. Regional dive fishery development associations. (a) The commissioner shall assist in and encourage the formation of qualified regional dive fishery development associations for the purpose of developing dive fisheries in administrative areas of the state in which dive fisheries exist. A regional dive fishery development association is qualified if the commissioner determines that the regional association

(1) is incorporated as a nonprofit corporation under AS 10.20;

(2) represents commercial fishermen who participate in each dive fishery in the region; and

(3) possesses a board of directors that

(A) is representative of commercial dive fishermen who fish in each of the significant commercial dive fishing areas in the administrative area;

(B) has a member who is representative of fish processors who process dive fishery resources in the administrative area; and

(C) has a member who is representative of municipalities in the administrative area.

(b) In this section, "administrative area" has the meaning given in AS 43.76.210. (§ 1 ch 90 SLA 1997)

Sec. 16.40.250. Salmon fishery associations. The commissioner may assist in and encourage the formation of qualified salmon fishery associations for the purpose of promoting the consolidation of the fishing fleet in a salmon fishery for which the Alaska Commercial Fisheries Entry Commission has issued commercial fishing entry permits under AS 16.43. A salmon fishery association is qualified if the commissioner determines that the regional association

(1) is incorporated as a nonprofit corporation under AS 10.20;

(2) is comprised of interim-use permit and entry permit holders in the salmon fishery for which the association is established; and

(3) has a board of directors that is comprised of interim-use permit and entry permit holders in the salmon fishery. (§ 1 ch 134 SLA 2002)

Cross references. — For reimbursement of expenses of fleet reduction programs, see AS 16.43.330(c).

SEC. 121. SOUTHEAST ALASKA FISHERIES COMMUNITIES CAPACITY REDUCTION.

Section 209 of the Department of Commerce and Related Agencies Appropriations Act, 2005 (Public Law 108–447; 118 Stat. 2884) is amended—

(1) by inserting "(a) IN GENERAL.—" after "SEC. 209.";

(2) by striking "is authorized to" in the first sentence and inserting "shall";

(3) by striking "$50,000,000" and all that follows in the first sentence and inserting "up to $25,000,000 pursuant to section 57735 of title 46, United States Code.";

(4) by striking the third sentence and inserting: "The loan shall have a term of 40 years."; and

(5) by adding at the end the following:

"(b) SOUTHEAST ALASKA FISHERIES PROGRAM.—

"(1) CONDUCT OF PROGRAM BY RSA.—The program described in subsection (a) shall be conducted under Alaska law by the Southeast Revitalization Association.

"(2) TREATMENT UNDER CHAPTER 577 OF TITLE 46.—For purposes of section 57735 of title 46, United States Code, the program shall be considered to be a program established under section 312 of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a).

"(3) APPLICATION OF MAGNUSON-STEVENS ACT.—Notwithstanding paragraph (2), the program shall not be subject to section 312 of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a), except for subsections (b)(1)(C) and (d) of that section.

"(c) SOUTHEAST ALASKA FISHERIES PROGRAM APPROVAL AND REFERENDUM.—

"(1) IN GENERAL.—The Secretary of Commerce may approve a capacity reduction plan submitted by the Southeast Revitalization Association under subsection (b).

"(2) REFERENDUM.—The Secretary shall conduct an industry fee system referendum for the buyback under the program in accordance with section 312(d)(1) of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a), except that—

"(A) no Council request and no consultation shall be required; and
